Ebook Version of "Theory and History of Ontology"

[What's New](#): Last Update: February 10th, 2025.

About this Site

This version of "[Theory and History of Ontology](#)" can be downloaded as an ebook that can be read offline, stored on a pen drive, sent to a friend by e-mail, etc.

Pages can be read in sequence, starting from the beginning or end of the website, or by consulting the table of contents at the beginning (menu "Contents"), the detailed indexes at the end (menu "Last"), or the chapter index (menu "Section"); a "Search" option is also available.

I will update the e-book every time that the main website will change.

The e-book version does not contain the Essays in PDF format (that can be downloaded separately: see the [Index of PDF Essays](#)) and the external links that are available on the main version.

Ontology: Its Role in Modern Philosophy

Introduction: A Working Definition

Ontology is the theory of objects and their ties. It provides criteria for distinguishing different types of objects (concrete and abstract, existent and nonexistent, real and ideal, independent and dependent) and their ties (relations, dependencies and predication).

We can distinguish: a) *formal*, b) *descriptive* and c) *formalized* ontologies.

a) *Formal ontology* was introduced by [Edmund Husserl](#) in his *Logical Investigations* (1): according to Husserl, its object is the study of the genera of being, the leading regional concepts, i.e., the categories; its true method is the eidetic reduction coupled with the method of categorial intuition. The phenomenological ontology is divided into two: (I) Formal, and (II) Regional, or Material, Ontologies.

The former investigates the problem of truth on three basic levels: (a) Formal Apophantics, or formal logic of judgments, where the a priori conditions for the possibility of the doxic certainty of reason are to be sought, along with (b) the synthetic forms for the possibility of the axiological, and (c) "practical" truths. In other words it is divided into formal logic, formal axiology, and formal praxis.

In contemporary philosophy, formal ontology has been developed in two principal ways. The first approach has been to study formal ontology as a part of ontology, and to analyze it using the tools and approach of formal logic: from this point of view formal ontology examines the logical features of predication and of the various

theories of universals. The use of the specific paradigm of the set theory applied to predication, moreover, conditions its interpretation.

This approach is best exemplified by [Nino Cocchiarella](#); according to whom "Formal Ontology is the result of combining the intuitive, informal method of classical ontology with the formal, mathematical method of modern symbolic logic, and ultimately of identifying them as different aspects of one and the same science. That is, where the method of ontology is the intuitive study of the fundamental properties, modes, and aspects of being, or of entities in general, and the method of modern symbolic logic is the rigorous construction of formal, axiomatic systems, formal ontology, the result of combining these two methods, is the systematic, formal, axiomatic development of the logic of all forms of being. As such, formal ontology is a science prior to all others in which particular forms, modes, or kinds of being are studied." (2)

The second line of development returns to its Husserlian origins and analyses the fundamental categories of *object*, *state of affairs*, *part*, *whole*, and so forth, as well as the relations between parts and the whole and their laws of dependence -- once all material concepts have been replaced by their correlative form concepts relative to the pure 'something'. This kind of analysis does not deal with the problem of the relationship between formal ontology and material ontology." (3).

b) *Descriptive ontology* concerns the collection of information about the list of objects that can be dependent or independent items (real or ideal).

c) *Formalized ontology* attempts to construct a formal codification for the results descriptively acquired at the preceding levels.

Notes

(1) "To the best of my knowledge, the idea of a formal ontology makes its first literary appearance in Volume I of my *Logische Untersuchungen* (1900), [Chapter 11, *The Idea of Pure Logic*] in connexion with the attempt to explicate systematically the idea of a pure logic -- but not yet does it appear there under the name of formal ontology, which was introduced by me only later. The *Logische Untersuchungen* as a whole and, above all, the investigations in Volume II ventured to take up in a new form the old idea of an a

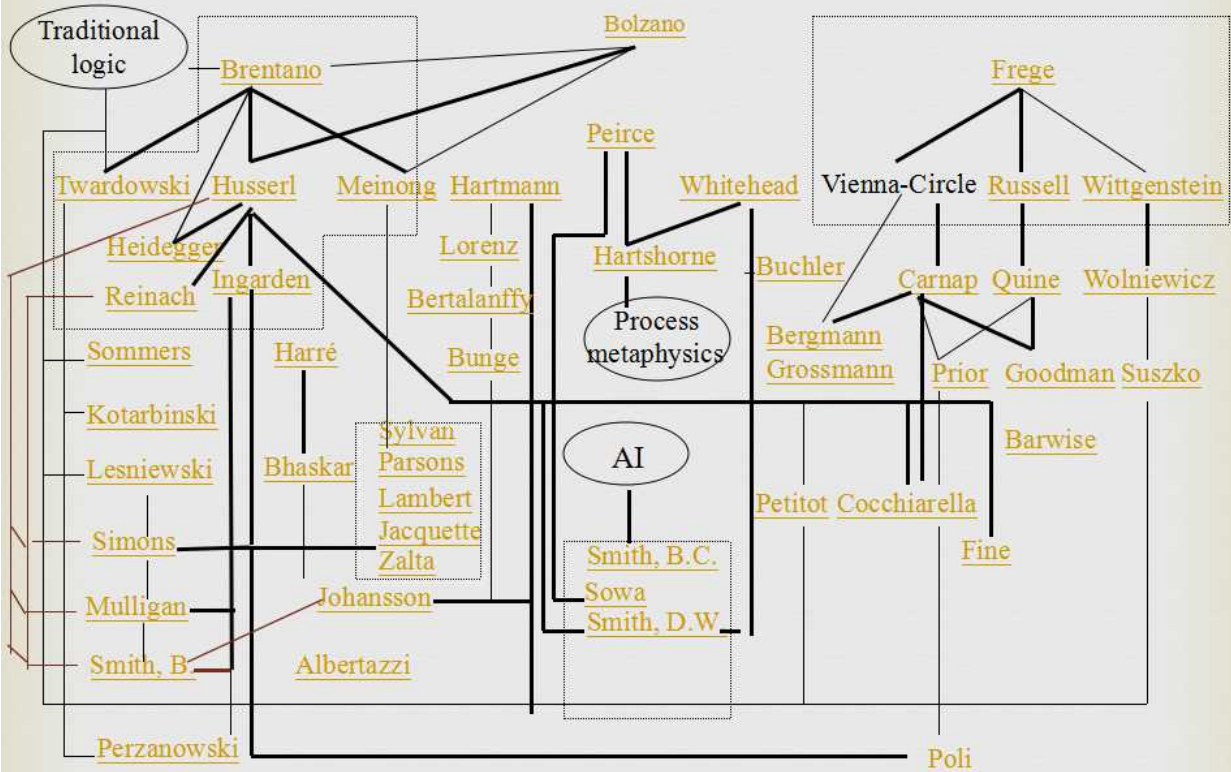

priori ontology -- so strongly interdicted by Kantianism and empiricism -- and attempted to establish it, in respect of concretely executed portions, as an idea necessary to philosophy." E. Husserl, *Formal and Transcendental Logic* (1929), English translation: The Hague: Martinus Nijhoff, 1969, 27, p. 86.

(2) *Formal Ontology*, in: Barry Smith, Hans Burkhardt (eds.), *Handbook of Metaphysics and Ontology*, Munich: Philosophia Verlag, 1991 p. 640.

(3) Liliana Albertazzi, *Formal and Material Ontology*, in: Roberto Poli, Peter Simons (eds.), *Formal Ontology*, Dordrecht: Kluwer, 1996 p. 199 (notes omitted).

Major Ontologists

The main intellectual links from the major ontologists of Nineteenth century: [Bernard Bolzano](#) (1781-1848), [Franz Brentano](#) (1838-1917), and [Gottlob Frege](#) (1848-9125) to contemporary thinkers are traced in the "Table of Ontologists":

Lines indicate two kinds of dependence: thick lines major dependences and thin lines less relevant dependences. A distinction between individual dependence (from scholar to scholar) and general dependence (from a (boxed) School, Movement or Topical Area to some individual -- or vice-versa) is also considered. Names are re-organized in a (roughly) top-down way according to Authors's birth-date.

For details see [Table of Ontologists of 19th and 20th Centuries](#)

Detailed information (bibliographies, abstract of relevant publications, and selections of critical judgments) for the thinkers mentioned in the *Table of Ontologists* are partly available and will be completed in the near future; I will publish also pages in French and Italian with selections of critical studies available in these languages, but not translated in English.

An important feature of this site will be the bibliographies about the history of ontology, selected authors and ontological topics that have not yet been covered in such detail; bibliographical entries will not only include the most relevant books, but also a selection of articles from about one hundred philosophical reviews; attention will be paid to the relations with logic, semantics and semiotics, in particular to the theories of predication and reference and to the relation between thought, language and the world.

The completion of this job will require some years; more than 15,000 bibliographic references are already available in the following languages, in decreasing order of frequency: English, French, German, Italian, Spanish, Portuguese; the Bibliographies will be constantly expanded and updated, and new abstracts of existing entries will be added.

I wish to apologize to readers of other languages, not included only because of my limited knowledge of foreign languages (my mother tongue is Italian), but I hope that students and researchers will find sufficient material for a more thorough study and will enjoy discovering many philosophical treasures, some little known, but in no way less significant.

Metaphysics and Theory of Objects

Metaphysics is the science that studies [being qua being](#) (Aristotle, *Metaphysics*, Book Gamma), in other words it considers reality, which is to say existent or actual objects; according to [Alexius Meinong](#), the *theory of objects* is an a priori science which concerns the whole of what is given, existent or nonexistent. Existent objects must be distinguished from subsistent or ideal objects, such as identity, diversity, or number. Existence and subsistence are the two forms of being, whereas the 'pure object' considered in the theory of objects is beyond being and nonbeing (*On the Theory of Objects*, 1904).

Before Meinong, the Polish philosopher [Twardowski](#) developed, according to Ingarden, in his *On the Content and Object of Presentations. A Psychological Investigation* (1894), "the first consistently constructed theory of objects manifesting a certain theoretical unity since the times of Scholasticism and the ' *Ontologia*' of Christian Wolff [1730]." (4)

"The relationship between Husserl's conception of ontology and the 'theory of objects' of Meinong has long been misunderstood. As conceived in the *Logical Investigations* [1900], the idea of ontology is not eidetic science of objects. The [mathesis universalis](#) is accordingly an ontology (only the word is avoided in the first edition). It is characterized as the a priori science of objects in general, and correlatively of meanings in general, i.e., of meanings which refer to

objects in general. Inasmuch as that is brought out clearly in both volumes, Husserl observes that no one is justified in trying to instruct him with regard to the 'object-theoretical' character of formal logic and mathematics. Indeed, the third investigation is explicitly declared to belong to the 'a priori theory of objects as such,' and Husserl suggests that it is this passage that led to the formation of the undesirable expression '*Gegenstandstheorie* [Theory of objects].'
Ontology, or the theory of objects in the present sense, not only comprises all that relates to the field of the pure *mathesis universalis*, but includes the first volume as well as the third and fourth investigations of the second volume." (5)

Notes

Formal Ontology as a Characteristica Universalis

"A system of logic can be constructed under two quite different aspects. On the one hand, it can be developed as a formal calculus and studied independently of whatever content it might be used to represent. Such a formal system in that case is only a *calculus ratiocinator*. On the other hand, a system of logic can be constructed somewhat along the lines of what Leibniz, called a *characteristica universalis*. Such a system, according to Leibniz, was to serve three main purposes. The first was that of an international auxiliary language that would enable the people of different countries to speak and communicate with one another. Apparently, because Latin was no longer a "living" language and new trade routes were opening up to lands with many different local languages, the possibility of such an international auxiliary language was widely considered and discussed in the 17th and 18th centuries. (...)

In any case notwithstanding its visionary goal, the idea of an international auxiliary language is not the purpose of a formal

ontology. The second and third purposes Leibniz set for his *characteristica universalis* are what distinguish it from its precursors and give his program its formal or logistic methodology. The second purpose that the universal character is to be based upon an *ars combinatoria*, i.e. an ideography or system of symbolization, that would enable it to provide a logical analysis of all of the actual and possible concepts that might arise in science. Such an *ars combinatoria* would contain both a theory of logical form, i.e., a theory of all the possible forms that a meaningful expression might have in such a language, and a theory of definitional forms, i.e., a theory of the operations whereby one could construct new concepts on the basis of already given concepts. The third purpose was that the universal character must contain a *calculus ratiocinator*, and in particular a complete system of deduction and valid argument forms, by which, through a study of the consequences, or implications, of what was already known, it could serve as an instrument of knowledge. These two purposes are central to the notion of a formal ontology." (6).

Notes

(6) Nino Cocchiarella, *Formal Ontology and Conceptual Realism*, Dordrecht: Kluwer, 2007 pp. 4-5.

Different Approaches

Two definitions from philosophers of the Analytic tradition:

"Ontology is intimately related to metaphysics, the theory of ultimate categories of things. Andronicus of Rhodes coined *meta ta physica* as meaning the writings coming "after the physics" in his collation of Aristotle, but metaphysics is really the study with which those writings deal. Some might say that the categories are ultimate differentiations of being and that ontology is the study of undifferentiated being. Now insofar as metaphysics is the study of the nature and existence of broad categories of things, ontology is a branch of metaphysics by logical courtesy. It deals, paradoxically, with the nature and existence of the "category" of undifferentiated being. But strictly speaking, ontology is transcategorial. Of course, if we say, "To be is to be material," we do equate the study of being with the study of matter. But the equation is transcategorial in its very

elimination of all categories other than matter. Of course, some ontologists admit different kinds or degrees of being. But even if every metaphysical category is also a kind of being and *viceversa*, so that the words "metaphysics" and "ontology" are coextensive, those words are still not synonymous. Certainly when they are used as I have explained them, they are not intersubstitutable *salva veritate* in every context of discussion.

What does the objective world include? Common-sensically, it divides into many objects: the Sun, the Moon, stars, trees, people, and so on. We also speak and think about thoughts, smiles, numbers, and many other things. There are many similarities and differences among all these things, and this makes hierarchies of classifications possible. Leo the lion and Felix the cat are both feline, and so on. Insofar as our classificatory purposes may vary, the genera of one system may be the differentia of another. Humans compared to cats are generically animal and differentially rational; humans compared to angels are generically rational and differentially animal. (...)

Any system of classifications, on pain of admitting an infinite series of classifications, will end with summa genera or ultimate classifications. This is the level of metaphysical categories. Where change consists of something of a given kind losing old properties and acquiring new ones, nothing can conceivably change in its metaphysical category. It is conceivable that Socrates can fall asleep, learn things, or even change into a rock or tree. But it is not conceivable that Socrates can change into time or into a number. We are not able to describe such transitions because we find nothing generically underlying them to persist through or undergo the transition. Perhaps that is only because such logic-metaphysical substrata have not been found yet in any plausible classificatory system. But I suspect the reason is that our most fundamental classifications are, at least in part, correct." (7).

"The word "ontology" has four established meanings in philosophy. There are two intersecting sets of distinctions. Pure philosophical ontology is different from applied scientific ontology, and ontology in the applied scientific sense can be understood either as a discipline or a domain.

Ontology as a discipline is a method or activity of enquiry into philosophical problems about the concept or facts of existence. Ontology as a domain is the outcome or subject matter of ontology as a discipline. Applied scientific ontology construed as an existence domain can be further subdivided as the theoretical commitment to a preferred choice of existent entities, or to the real existent entities themselves, including the actual world considered as a whole, also known as the extant domain. Ontology as a theoretical domain is thus a description or inventory of the things that are supposed to exist according to a particular theory, which might but need not be true. Ontology as the extant domain, in contrast, is the actual world of all real existent entities, whatever these turn out to be, identified by a true complete applied ontological theory. As a result, we must be careful in reading philosophical works on ontology, when an author speaks of "ontology" without qualification, not to confuse the intended sense of the word with any of the alternatives." (8).

In: *A Short Glossary of Metaphysics* by Peter Simons with additional entries by Ross P. Cameron (*), the following definition is given:

"ONTOLOGY. From *onto-logos*, the science of being. A surprisingly late coinage. The Latin term *ontologia* was felicitously invented in 1613, independently, by two German philosophers, Rudolf Gockel (Goclenius) in his *Lexicon Philosophicum* and [Jacob Lorhard](#) (Lorhardus), in his *Theatrum Philosophicum*, but first entered general circulation when popularized by [Christian Wolff](#) in his Latin writings, especially his *Philosophia Prima sive Ontologia* of 1730. The first known English use of the term "ontology" is 1720. (1) General as distinct from special metaphysics. (2) More limitedly, the list or table of basic kinds of entities. (3) Attributively, as in "Quine's ontology," the basic kinds of entities assumed by a given philosopher. (4) In [Ingarden](#)'s philosophy, the study of all possible general arrangements of the world, by comparison with metaphysics which concerns only what actually exists. (5) Recently and loosely, in computer science, a set of categories for programming and data representation which is independent of particular hardware, software or implementations."

This definition is historically inaccurate: the Latin word *ontologia* was created in 1606 by Lorhard (seven years before Gockel) and the first occurrence of "ontology" in English can be found in a work by

Gideon Harvey of 1663 (see "[Birth of a New Science: the History of Ontology from Suárez to Kant](#)").

Main Currents in Contemporary Philosophy

After Kant's rejection of the possibility of a general ontology (1), Bernard Bolzano was the first philosopher who contributed to the new ontological turn, but his work was rediscovered only in the Twentieth century by Husserl (2).

Bolzano's work influenced both Husserl (a disciple of Franz Brentano) and Frege, that are at the origins of the main traditions of contemporary ontology: the *Phenomenological*, the *Analytical*, and the *Austro-Polish* (Brentano was also the teacher of Twardowski, the founder of the Lvov-Warsaw School); the first work of Brentano *On the Several Senses of Being in Aristotle* (1862) and the *Logical Investigations* (1900) by Husserl were at the origin of the interest in philosophy of the most authoritative exponent of *Continental* ontology, Martin Heidegger (3).

Phenomenological

Bolzano and Brentano can be considered the forerunners of this School, founded by Edmund Husserl; the main exponents are Adolf Reinach, Roman Ingarden and Nicolai Hartmann.

Analytical

After C. S. Peirce and the classical works by Frege, Russell and the early Wittgenstein, at least Rudolf Carnap, Gustav Bergmann, Nelson Goodman and W.V.O. Quine should be mentioned.

Austro-Polish

The father of Polish philosophy was Twardowski; Kotarbinski and Lesniewski are ontologists of the first Polish generation (the Lvov-Warsaw School) and Roman Suszko and Jerzy Perzanowski of the most recent times.

Continental

After Heidegger, Merleau-Ponty, Levinas, Deleuze and Foucault, just to mention a few names, are the most debated thinkers; other prominent ontologists are listed in the *Table of Formal and Descriptive Ontologists*.

Notes

(1) "The Transcendental Analytic accordingly has this important result: That the understanding can never accomplish *a priori* anything more than to anticipate the form of a possible experience in general, and, since that which is not appearance cannot be an object of experience, it can never overstep the limits of sensibility, within which alone objects are given to us. Its principles are merely principles of the exposition of appearances, and the proud name of an ontology, which presumes to offer synthetic *a priori* cognition of things in general in a systematic doctrine (e.g., the principle of causality), must give way to the modest one of a mere analytic of the pure understanding." I. Kant, *Critique of Pure Reason* (A247/B304), Cambridge: Cambridge University Press, 1998, pp. 358-359.

(2) "With such illogicality did things happen in the history of logic which we are pursuing here that this great, born logician fell prey to a fate which beats the fate of Joachim Jungius. For the latter at least was read, and read by a Leibniz; but that cannot even be said of Bolzano. Hence we cannot even maintain in his case that he was forgotten. All the greater is the merit of Edmund Husserl who discovered Bolzano." Hermes Scholz, *Concise History of Logic* (1931), English translation: New York: Philosophical Library, 1961, p. 47.

(3) "The first philosophical text through which I worked my way, again and again from 1907 on, was Franz Brentano's dissertation: *On the Manifold Sense of Being in Aristotle*." Martin Heidegger, Preface to: William Richardson, *Heidegger. Through Phenomenology to Thought*, The Hague: Martinus Nijhoff, 1963. p. X.

Parmenides and the Question of Being in Greek Thought

Introduction

"Parmenides began Philosophy proper." G. W. F. Hegel, *Lectures on the History of Philosophy, Vol. I Greek Philosophy to Plato*, (1825), Lincoln: University of Nebraska Press 1995, p. 254

"In the beginning of Western thinking, the saying of Parmenides speaks to us for the first time of what is called thinking." Martin Heidegger, *What is Called Thinking?* (1954), New York: Harper & Row 1967, p. 196

This page is dedicated to an analysis of the first section of Parmenides' Poem, the *Way of Truth*, with a selection of critical judgments by the most important commentators and critics.

In the *Annotated Bibliography* (see the links at the end of the page) I list the main critical editions (from the first printed edition of 1573 to present days) and the translations in English, French, German, Italian and Spanish, and I give a selection of recent studies on Parmenides; in future, a section will be dedicated to an examination of some critical variants of the Greek text, with particular attention to corrections to the Diels-Kranz (abbreviated DK) edition of the *Fragmente der Vorsokratiker*.

The fragments of Parmenides' Poem are cited according to Diels-Kranz numbering system as adopted in the 6th edition, Berlin 1952; the Poem is divided into three parts: the *Proem* fr. I, 1-32; the *Way of Truth* (*Alethéia*) from fr. II to VIII, 49, and the *Way of Mortal Opinion* (*Doxa*) fr. VIII, 50 to XIX, 3.

Complete references of the texts cited are given in the *Annotated Bibliography*.

The Question of Being in Parmenides' Poem

"The problem of being was first posed in the West by the Greek Parmenides in the fifth century B.C. (...)

Parmenides flourished in Elea, a Greek colony on the west coast of Italy, south of the Gulf of Salerno. The colony had been founded about 540 B.C. by Greeks from Ionia, who evidently brought with them the Ionian interest in the origin and development of the visible universe. At any rate, some fifty years after the foundation of the colony, a philosophical poem composed by Parmenides handed down the first recorded Western attempt to account for the universe in terms of being, instead of through the Ionian way of change and growth. This poem of Parmenides had far-reaching effects on subsequent philosophic development, as is amply attested in later Greek writings. It continued to be read for about a thousand years, and its tenets were discussed penetratingly by thinkers of the stature of Plato, Aristotle, and Plotinus. Its influence on the thought of lesser figures is apparent. By the time the last copy of the complete poem had disappeared it had been quoted so abundantly by other writers that the sections and verses copied allow the general structure of the poem to be reestablished and permit the characteristic tenets attributed in tradition to Parmenides to be studied in the fragments themselves.

The poem had three parts, which formed a unified whole. The fragments that remain show how the second part followed in express sequence upon the first, and the third in express sequence upon the second. The first part was an introduction or proem, the second dealt with being, and the third with the way things appear to men. The composition fits into a recognized literary genre of the time. Somewhat as in Hesiod's *Theogony* (1-108) the goddesses appear to the poet at the foot of their sacred mountain and impart to him the truth about the way the immortal gods came into being, so Parmenides in the proem of his work introduces himself as being borne along in a chariot guided by sun maidens who 'leaving behind the dwellings of night, sped me toward light' (Fr. 1.9-10; DK, 28 B).

There Parmenides is warmly welcomed by a goddess into her home. She tells him he is to learn from her 'all things, both the unwavering heart of well-rounded truth, and the opinions of mortals, in which there is no true assurance.' (4) The two other sections of the poem go on then to show him first what the truth is, and second how things appear as they do to mortal men.

The tenses used by Parmenides in the proem indicate clearly enough that he was describing a journey made regularly, quite as a philosopher repeatedly journeys into the regions of his thought.(5) In consequence the poem is meant to describe the travel of the philosopher in his own proper world. The road traveled is characterized as "far away from the wandering of men. (6) On it Parmenides is to learn first the truth about all things, and then how the contrasted appearances are able to penetrate all in a way that makes them so readily acceptable to human cognition.(7) The contrast is clear between truth and appearance. Things are considered to appear to men in a way radically different from what the truth about them reveals. In this framework the second section of the poem intends to explain the truth, while the third section will explain how things are able to appear to men in a way different from the truth about them. The proem envisages truth as something unwavering, something firm and stable. The way men ordinarily think is, on the contrary, wandering,' unstable. Appearance -- the ordinary thinking of mortals -- is in this manner sharply contrasted with the inspired teaching of the goddess.

The fragment accepted as second in order, listed immediately after the proem and consequently as the first statement in our record of the poem's section on being, states that only two ways of inquiry can be thought of. One is that (it) is and that (for it) not to be is impossible. This is the way that follows truth. The other is that (it) is not and that (for it) not to be is of necessity. This path offers no possibility whatever for inquiry, since non-being cannot possibly be known or expressed (Fr. 2). The fragment accepted as third then gives the reason in a rather cryptic statement that translated word for word reads "For the same thing is to think and to be" (Fr. 3).

These assertions maintain that being follows upon or accompanies truth. Truth, as envisaged in the proem, is accordingly to be given in

terms of being. The stability or firmness required by the proem is here couched in the necessity involved by being. Being necessarily excludes non-being. No stronger type of stability could be found. This necessity is seen extended to everything that can be thought of or expressed. All that remains outside it is non-being, which likewise involves its own impossibility and in consequence is a path of inquiry that cannot even be entered. The basic reason given in the fragment is that non-being cannot possibly be known or expressed. If the third fragment followed immediately, it would confirm this reason with a positive statement: what is able to be known and what is able to be are the same thing.(8) That is the minimal bearing of the fragment, and seems entirely appropriate at this initial stage of the reasoning. So understood it appeals to an immediate evidence, namely, that whatever is known is known as a being. If you try to represent non-being you find it impossible.

Translated as "For thinking and being are the same," Fragment 3 gives a maximal sense that may well turn out to be in accord with Parmenides' overall thought. But can it be regarded as an immediate evidence?

Is it not rather part of a conclusion that being is a whole and is identified with all things, including thought? If that is its meaning, should not the fragment be located later in the poem, and not at the beginning of the

second section? Located immediately after Fragment 2, it should express a basic evidence that shows why the path of non-being cannot even be entered. This evidence is the immediate experience that whatever is thought of is necessarily thought of and expressed in terms of being. In consequence the alleged path of non-being cannot offer any possibility for inquiry.

However, mortals do in fact travel a path different from that of truth. It is readily observable. It seems to wander back and forth between being and non-being. It seems to assess them as the same yet not the same

(Fr. 6). Ordinary custom is regarded as urging men toward it. Yet it as well as the path of non-being is forbidden to Parmenides. Instead,

he is told by the goddess to judge by reason (logos) the controversial argument

given in her words (Fr. 7). The way of being is then sketched (Fr. 8). It shows that what exists cannot be engendered or destroyed and that it cannot change or be subject to differentiation, for any of these would

require the presence of non-being. Being is accordingly whole and entire, held firmly within its limits, neither more nor less in any direction. For it all things will be a name (or, in regard to it all things are named),(9) "whatever mortals have established believing that they are true, that they come to be and perish, that they are and are not, that they change in place and vary through range of bright color" (Fr. 8.39-41).

What is the notion of being that is offered under this rather difficult phrasing? It is something that necessarily excludes non-being from its range, and on the other hand includes everything that is or exists. Any

distinction between "is" and "exists" is bound to prove futile in this context. There are only two sides to the division. One is utter nothingness, and cannot even be thought of. All else, whether expressed in terms of being or in terms of existence, falls on the other side.

But precisely what is it that is or exists? In most cases no subject at all is expressed in the Greek. In those cases in which it is expressed, the participial or infinitive form of the verb "to be" is used. Nothing other than being seems envisaged as the subject. The question accordingly returns to the original formulation: What is the notion of being that is intended in the phrases of Parmenides? Modern views differ widely.(10) However, the text does not give any subject other than being, and usually does not feel any necessity to express even that. This indicates plainly that Parmenides is seeing no distinction in fact between being and the subject that is or exists. They are regarded by him as one and the same. He writes as though this is a matter of immediate intuition. If this analysis of the beginning of the section on being is correct, Parmenides is immediately intuiting being as something necessarily different from non-being. It is a

matter of just looking and seeing. You see at once that you think in terms of being, and cannot think or express non-being. Under intense philosophical scrutiny, being seems intuited after the manner in which the ordinary mortal considers himself to be intuiting color or extension or movement.

But precisely what is this being that is so intuited? Is it something corporeal or something incorporeal, something ideal or something real? The historical background against which Parmenides did his thinking would tend to limit it to the corporeal and the real. The Ionian as well as the Pythagorean thought which Parmenides could be expected to have absorbed as he grew up could hardly have directed his attention to anything beyond the visible and extended world. It was that world that his predecessors had been striving to understand and explain. It is that world that Parmenides expressly endeavors to understand and explain in the final section of his poem. He offers, it is true, an unexpected and utterly original explanation of it. But nothing else in all the poem seems indicated as the object of his study. In the setting in which Parmenides thought and wrote, anything other than the visible and tangible universe would seem incongruous as a subject for philosophizing. In the composition of the poem, moreover, the poem envisages Parmenides as located in a world of change and highly differentiated objects, and using them as a means to rise to light. The starting point of the philosophical journey seems in this way to be represented as a world of plurality and change, a world already known in the opinions of mortals but now to be explained from the viewpoint of truth." (pp. 17-21)

From: Joseph Owens, *Being in Early Western Tradition*, in: Mervyn Sprung (ed.), *The Question of Being. East-West Perspectives*, University Park and London: Pennsylvania State University Press 1995.

"Parmenides of Elea, a revolutionary and enigmatic Greek philosophical poet, was the earliest defender of Eleatic metaphysics. He argued for the essential homogeneity and changelessness of being, rejecting as spurious the world's apparent variation over space and time. His one poem, whose first half largely survives, opens with the allegory of an intellectual journey by which Parmenides has succeeded in standing back from the empirical world. He learns, from the mouth of an unnamed goddess, a dramatically new perspective on being. The goddess's disquisition, which fills the remainder of the poem, is divided into two parts; the Way of Truth and the Way of Seeming. The Way of Truth is the earliest known passage of sustained argument in Western philosophy. First a purportedly exhaustive choice is offered between two 'paths' - that of being, and that of not-being. Next the not-being path is closed off the predicate expression '... is not' could never be supplied with a subject, since only that-which-is can be spoken of and thought of. Nor, on pain of self-contradiction, can a third path be entertained, one which would conflate being with not-being - despite the fact that

just such a path is implicit in the ordinary human acceptance of an empirical world bearing a variety of shifting predicates. All references, open or covert, to not-being must be outlawed. Only '... is' (or perhaps '... is ... ') can be coherently said of anything.

The next move is to seek the characteristics of that-which-is. The total exclusion of not-being leaves us with something radically unlike the empirical world. It must lack generation, destruction, change, distinct parts, movement and an asymmetric shape, all of which would require some not-being to occur. That-which-is must, in short, be a changeless and undifferentiated sphere.

In the second part of the poem the goddess offers a cosmology - a physical explanation of the very world which the first half of the poems has banished as incoherent. This is based on a pair of ultimate principles or elements, the one light and fiery, the other heavy and dark. It is presented as conveying the 'opinions of mortals'. It is deceitful, but the goddess nevertheless recommends learning it, 'so that no opinion of mortals may outstrip you'." (p. 229)

The motive for the radical split between the two halves of the poem has been much debated in modern times. In antiquity the Way of Truth was taken by some as a challenge to the notion of change, which physics must answer, by others as the statement of a profound metaphysical truth, while the Way of Seeming was widely treated as in some sense Parmenides' own *bona fide* physical system." (Vol. VII, p. 229)

From: David Sedley, *Parmenides (early to mid 5th century B.C.)* in: Edward Craig (ed.), *Routledge Encyclopedia of Philosophy*, New York: Routledge 1998.

"Parmenides expressed his ideas in a poem, but his work has been irreparably lost for at least fifteen centuries. Nothing remains of Parmenides' original Poem. The work was probably written at the end of the sixth or beginning of the fifth century B.C. Without any doubt, it was copied and recopied (always by hand) over the course of many years, but all traces of it were lost in the sixth century of our era, that is, practically a millennium after it was written by Parmenides. The last concrete reference to the book appears in the

neo-Platonic philosopher Simplicius (who is known to have left Athens in 526 A.D. because the Platonic Academy was closed down).

After quoting some lines from the Poem, Simplicius explains that he is taking that liberty 'because of the rarity (*dià ten spânin*) of Parmenides' book' (*Commentary on Aristotle's Physics*, p. 144)

From then on, nothing is known about Parmenides' work. (...)

Attempts to reconstruct Parmenides' Poem began shortly after the Renaissance, but although they were very praiseworthy, there were classical texts still unknown at that time, and the quotations from Parmenides contained in them were not discovered until several centuries later. These attempts at reconstruction go from Henri Estienne (*Poesis philosophica*, 1573) to Hermann Diels (*Die Fragmente der Vorsokratiker*, 1903). Thanks to their work, which went on over many centuries, today we can read a good part of Parmenides' Poem. Nineteen different quotations were found (one of them translated into Latin!). These were unfortunately labeled 'fragments,' which is why, for the sake of convenience, works on Parmenides speak about 'fragment 3' or 'fragment 5'. As each fragment includes a number of lines, it is customary to write 'fr. 8.34', for example, when quoting line 34 of 'fragment' 8.

From what I have said, it can be seen that the version of Parmenides' Poem we possess is not complete. Passages that weren't quoted by anybody will remain unknown forever. Of course, the authors we use today as sources (perhaps abusively, because these authors were writing to express their own ideas, rather than to leave testimonies of other thinkers, except in the case of historians' of thought such as Theophrastus) quoted only those passages that interested them. There is nothing more subjective than a scholar's interest. A paradigmatic case is the vital Parmenides text, our present fragment 2, which postulates the existence of being, quoted for the first time by Proclus (*In Tim.* 1.345) a thousand years after it was written. Probably the discovery of the fact of being by Parmenides seemed so 'obvious' that nobody thought to quote it. Perhaps the same thing happened with other passages of the Poem; we will never know. Even so, today we possess nearly 152 lines of Parmenides, and these are an inexhaustible source of reflection. So let us take advantage of them." (pp. 12-14 notes omitted)

From: Néstor-Luis Cordero, *By Being, It Is. The Thesis of Parmenides*, Las Vegas: Parmenides Publishing 2004.

"Sextus Empiricus and Simplicius have preserved to us the most important fragments from the poems of Parmenides; for Parmenides also propounded his philosophy as a poem.

The first long fragment in Sextus (*adv. Mat.* VII, 111) is an allegorical preface to his poem on Nature. This preface is majestic; it is written after the manner of the times, and in it all there is an energetic, impetuous soul which strives with being to grasp and to express it." (Vol. I, p. 250)

(...)

Since in this an advance into the region of the ideal is observable, Parmenides began Philosophy proper. A man now constitutes himself free from all ideas and opinions, denies their truth, and says necessity alone, Being, is the truth. This beginning is certainly still dim and indefinite, and we cannot say much of what it involves; but to take up this position certainly is to develop Philosophy proper, which has not hitherto existed. The dialectic that the transient has no truth, is implied in it, for if the determinations are taken as they are usually understood, contradictions ensue." (Vol. I, p. 254)

Relative chronology of Parmenides and Heraclitus

External evidence.

Most of what is needful to say on this subject has been said recently with exemplary clarity by M. Marcovich.⁽¹⁾ Once the workings of the mind of the Hellenistic chronological versifier Apollodorus are understood, the ancient external evidence for the date of Heraclitus is seen to be mere fabrication, with no visible foundation in fact. It follows that it cannot be used to date Heraclitus before Parmenides, any more than it can be used to date Heraclitus absolutely. The date

of Heraclitus must rest purely on conjecture, and his relative chronology must rest on internal evidence, for whatever such evidence may turn out to be worth. Few oddities in the history of scholarship have so piquant an irony as the still all-too-frequent reliance on the external evidence to date Parmenides after Heraclitus.

Apollodorus dated Heraclitus in the sixty-ninth Olympiad, placing his ἀκμῆ at that time. Evidence for this is to be found in Diogenes Laertius, the *Suda*, and (possibly with less accuracy) in Eusebius' Canon.(2) The form it takes in the *Suda* has apparently been responsible for some unwary theorizing. The *Suda* says, after giving Heraclitus' Olympiad, that this was in the time of Darius the son of Hystaspes. So far as I can see, it is on this basis and on no other that Jacoby, discussing this part of Apollodorus, supposed the chronologer to have derived Heraclitus' date not only from a well-known synchronism with Parmenides but also from good evidence that connected Heraclitus with this particular king of Persia. Jacoby supposed that Apollodorus for this reason fixed Heraclitus in the middle of Darius' reign. All this is baseless. No one has ever shown that any tradition of Heraclitus' connection with Darius ever existed before the forged Letters of Heraclitus or that these Letters rested on a genuine tradition of such a connection. Jacoby apparently relied upon a passage of Clement of Alexandria(3) to show the existence of such an independent tradition, but there is no reason, chronological or other, to doubt that the very learned Clement had access to the Letters or to some intermediary source. What the *Suda's* source was, we can only guess, but there is no need to postulate one earlier than, or independent of, the Letters. The Letters themselves could easily be explained as reflecting not a tradition but a forger's romantic notion, the choice of Persian king being based on—of course, the Apollodoran chronology of Heraclitus and (doubtless) of Darius the Great. The Hellenistic age sometimes (not unnaturally) expected its philosophers to be so unworldly as to refuse royal invitations and readily projected its notions into the past; the biographies of the philosophers are full of romances of this sort.

This being so, there is no shadow of a reason for supposing Apollodorus to have been motivated in his dating of Heraclitus by anything but the above-mentioned synchronism with Parmenides.

Placing Xenophanes' *floruit* at the foundation date of Elea, Apollodorus no doubt recognized not only Parmenides but also Heraclitus as pupils of Xenophanes (4) and therefore placed the birth of each in the year of their master's *floruit*, giving them a *floruit* forty years later. Heraclitus was sometimes regarded as a pupil of Xenophanes, and the interval between them is duly ten Olympiads, if the majority of our sources have the correct numbering. There is no good reason to doubt that such was Apollodorus' motivation: it would be entirely consistent with what else we know of his work.

But the majority of scholars now cast doubt, and rightly so, on the Apollodoran dating of Parmenides.(5) The evidence of Plato's Parmenides shows pretty conclusively that, in the fourth century at least, Parmenides was thought to have been born about a generation later than Apollodorus reckoned; Kirk and Raven plausibly suggest a date of birth for Parmenides of "about 515-510."(6) The normal acceptance of this doctrine shows how little value is normally placed on the constructions of Apollodorus.

Yet it is still that same chronology of Apollodorus that is invoked to place Heraclitus before Parmenides. We are confronted with the ironic truth that a dating originally designed with the purpose of making these two philosophers contemporaries is now used to put one many years before the other. It has not been sufficiently observed that, if Apollodorus could be wrong by twenty-five years on Parmenides, he could be equally

wrong on Heraclitus. It has not been sufficiently observed that references by Heraclitus to other writers do not serve to date him exactly and certainly do not allow us to choose between (say) 490 and (say) 485 for the composition or first dissemination of his work. (7) Nor is there any good evidence to show at what time of his life Parmenides first wrote or recited his poem.(8) For this also we cannot tell whether (say) 485 or (say) 480 is the date on which it would be safest to bet. Scholarly guessing in this particular case is worthless. So far as the external evidence goes, we do not know, and should freely admit that we do not know, whether Heraclitus wrote before Parmenides and, if he did, whether it was sufficiently before Parmenides' composition to have had any effect on him. If we are to

be told these things, it will have to be on the basis of internal evidence alone.

Furthermore, that internal evidence will have to be taken from the extant remains of Parmenides and Heraclitus themselves, and of them alone. The references to Heraclitus by other writers and the imitations of Parmenides by later thinkers offer us no useful dating for the philosophical activity of either. Epicharmus? If we knew the date of the plays in question, were sure that the fragments were authentic, and also knew how long it would take Heraclitus' work to become known in Sicily and Italy, we should be able to use the evidence of Epicharmus; but we are sure of none of these things, and, if we were, we should still have to show that Epicharmus' jokes were not sufficiently comprehensible without any reference to Heraclitus—a point on which the learned differ and will no doubt continue to differ.(9) All in all, it will be more profitable to discuss the actual argument of Parmenides and see if at any point it clearly reflects a knowledge of Heraclitus' work or doctrine.(10)" (pp. 109-111)

Notes

(1) Marcovich s.v. Herakleitos, cols. 247ff.

(2) D. L. 9.1, *Suda* s.v. 'Ἡράκλειτος', Euseb. *Chron.* s. Ol. 70.1 (for variants see Jacoby, *Apollodors Chronik*, Berlin 1902, p. 229 n. 4).

(3) Clem. Al., *Strom.* 1.65.4 (p. 41 Stahlin-Fruchtel), see Jacoby, *Apollodors Chronik*, p. 228 n. 3. Jacoby himself demolishes Bernays' contentions that Epictetus referred to Heraclitus' connection with Darius at *Ench.* 21 W., that Eudemus referred to it also, and that it was probably in any case historical. Most of what Bernays said on this topic (*Die Heraklitischen Briefe*, Berlin 1869, pp. 13f) is uncharacteristically in the air. Zeller (*Die Philosophie der Griechen in ihrer geschichtlichen Entwicklung*, I Teil, Leipzig, 1919-20, p. 914 n. 2), admitting that Bernays' remarks did not make the Persian invitation to Heraclitus more than a possibility, suggested that the forged letters proved the story known beforehand to their author. A clear *non sequitur*, surprisingly accepted by Kirk, *Heraclitus, The Cosmic Fragments*, Cambridge 1954 p. 1. Heinemann at RE Suppl. 5 col. 229 plausibly suggested that the tale of Darius' invitation to Heraclitus was an imitation of the late story concerning Diogenes

and Alexander the Great, for which the first extant source is Cicero (see Natorp at RE 5 col. 767)."

(4) Cf Sotion ap. D. L. 9.5. and *Suda* s.v. *Ἡράκλειτος* (cited by Jacoby).

(5) To take only English examples, see Burnet, *Early Greek Philosophy*, 4th edition, London 1930 pp. 169f; Kirk and Raven, *The Presocratic Philosophers* 2nd impression, Cambridge 1960 (much more cautiously) pp. 263 f.; Guthrie, *A History of Greek Philosophy*, Cambridge 1962, vol. II pp. If.

(6) See last note; Jacoby was prepared (*Apollodors Chronik*, p. 233) to stretch the limit for Parmenides' birth as far back as 520; I know nothing solid against this.

(7) Marcovich (s.v. *Herakleitos*, cols. 248f) remarks with justice that Ion of Chios and the vaticinium post eventum of *Letter 4* supply termini ante quem to place Heraclitus at any rate in the first half of the fifth century. But whether Heraclitus' interest in Pythagoras and Hecataeus is sufficient to place his activity around 490 is doubtful: both these thinkers were the object of much interest later in the century, and we are in no position on this account to rule out a date for Heraclitus' writing as late as (say) 480.

(8) The suggestion (e.g., Kirk and Raven p. 268) that the goddess' address to Parmenides as *κουρε* dates the poem in Parmenides' youth is rash; see Taran, *Parmenides*, Princeton 1965, p. 16.

(9) For bibliography see Marcovich s.v. *Herakleitos*, col. 249.

(10) This procedure is in effect followed by Calogero, *Eracrito*, at *Giornale Critico della Filosofia Italiana* 4 (1936) 195, who accepts that Heraclitus and Parmenides were contemporaries, if not coevals.

Ontological questions in Parmenides' Poem

"If we are to examine Parmenides' reasoning profitably, an indispensable preliminary is to establish at least a provisional reading for the Greek words translated "is" or "it is" (*esti*), "what is"

or "being" (*on, to on*), "to be" (*einai*). For while it is evident enough that in his poem Parmenides purports to be delivering an insight of the utmost significance concerning to *eon* (as he calls it), still the construction which he puts upon the term and its cognates, and the understanding which he expects of his listener, are not so clear and have been topics of dispute.

Especially notable, and often noted, is the fact that Parmenides' discussion of 'being' shows no sign of the conceptual distinction considered elementary nowadays, between the "is" linking subject and predicate and the "is" of existence; and in fact it needs no documentation here that this distinction was not reflected in either ordinary or philosophical Greek idiom until, at least, a much later date than his, the word *esti* expressing both concepts. Also highly visible in the poem is the abundance of occurrences of *esti* used absolutely, unaccompanied by any predicate expression. As a result of this last, the poem can create in the contemporary reader the impression that to *eon* is being used to mean 'what is' in the existential sense only, to mean what there is; indeed some students of the poem conclude not only that Parmenides is unwittingly confining himself to the existential meaning, but even that his confusion on this score is responsible for his entire doctrine. (2)

Such scant basis as there is for the latter idea will be adequately treated below; (3) but it is important to understand from the outset that the notion of 'being' studied by Parmenides and by early Greek philosophy in general, is not 'confined' to either of our two distinct concepts, that of existence and that of being something-or-other in the sense of having such-and-such properties (being a man, being green); rather, these notions are impacted or *fused* in the early Greek concept of being. A result is that a Greek inquiry *ti to on*, 'what is being?', frequently must be interpreted as concerned simultaneously with the concepts of being = existence and of 'being Φ ' for variable Φ . To approach a Greek thinker, even as late as Aristotle, without keeping this in mind is to risk serious misunderstanding of his concerns.

This fusion of the ideas of existence and of being-of-a-certain-sort does not merely show itself in the early use of the word *esti*, but seems to be part of a more general situation having other

manifestations also; these have such close bearings on the interpretation of Parmenides that the matter should be explored a little further. First let us recall -- what has often been pointed out -- tendency in ancient philosophy, (a) to take as the ideal or paradigm form of fact-stating assertion the ascription of a property to an object, and the further tendency (b) to take as the ideal or paradigm form of ascription of a property to an object the use of a subject-predicate sentence with subject and predicate linked by the copula. (5) In this way the predicative use of *esti* can come to be thought of as paradigmatic for asserting that anything at all is the case, or obtains. And once we see this we can discern a considerable variety of assimilations at points where nowadays it is customary to make distinctions; thus, a running together of

1a) being-the case (*on*) with (1b) existence (*on*),

2a) facts (*pragmata, tynchanonta, etc.*) with (2b) objects (*pragmata, tynchanonta, etc.*)

3a) coming-to-be (the case) (*gigenesthai*) with (3b) coming-to-be (= coming to exist) (*gignesthai*).

Parallel to the fusion of the notions of fact and object as items of the world, is a tendency at the semantical level to run together properties of sentences with properties of singular and general terms. Here the common element is an expression's 'corresponding (or failing to correspond) to something that is' in the two senses of "is"; thus *truth* for sentences, describing what is (the case), can tend to fuse with *applying to something* for singular and general terms, denoting something that is (= exists), and conversely falsehood for sentences tends to merge with failure to apply to anything for terms. In this case the assimilation is rather conceptual than fully visible in the vocabulary; for example, terms (*onomata*) that apply to or denote something are not for this reason (6) called "true" (*alethe*); the fusion is evidenced when the notions are being explained: thus truth as 'saying, indicating in speech, that which is,' and falsehood as 'saying, indicating in speech, that which is not.' In these terms we can put the assimilation in this way:

4a) saying, indicating in speech, that which is (= stating truly) with (4b) saying, indicating in speech, that which is (designating

something that exists),

5a) saying, indicating in speech, that which is not (= stating falsely) with (5b) saying, indicating in speech, that which is not (= designating something that does not exist)." (pp. 112-114, notes omitted)

The uniqueness of Being according to Parmenides

"Having pursued Parmenides' argument to the end, we may now pause to consider the function within it of the predicate ἐν applied to Being at the opening of the argument. We have observed that it is not a predicate that is formally announced as requiring proof. The nearest Parmenides comes to putting this predicate in the programme is to say that (8.4) the subject is μονογενής, unique of its kind, or (quite simply) unique, single. But he nowhere devotes a separate paragraph to the proof of its μονογενής nature alone. So much there is to be said for Cornford's assertion that Parmenides does not prove his Being to be one. (115) Where Parmenides does, however, prove it is in the middle of a paragraph (8.34ff) ostensibly aimed at proving that the only thought is the thought of the subject's existence, and it is the immediate premiss from which that conclusion is deduced. The subject's singleness is proved from another predicate (οὔλον) in its turn derivable from the original decision to speak or think of nothing save one thing, namely, what is. The assertion that Being is one is for Parmenides the statement that it is alone and single. This statement he bases on the assumption that one can think of nothing else, which in turn is based on the assertion that there is nothing else there to be thought of. Parmenides recognizes that the oneness of Being in this sense is an intermediate stage in his argument when he summarizes the thought of his opening denial of becoming by saying that "it was once" and "it will be" are inapplicable, since it is now all together, one and continuous, and when he goes on to argue at 8.22ff, as a necessary supplement to the argument against becoming, that it is indivisible and continuous. That Being is single follows from the fact that it is οὔλον and

συνεχες, that there is nothing else. That it will remain single and unique is the result of its being unchanging and unmoving; but it must be unchanging and unmoving because there is nothing else for it to change into and no other place for it to move to. The singleness of Being is central to the argument and depends in its turn directly on the original disjunction ἐστὶν ἢ οὐκ ἐστὶν. It depends on the doctrine that you cannot talk or think about the non-existent and therefore cannot discourse about anything other than the existent. The only place where the impossibility of anything other than the existent is explicit is at 8.36ff, but it is nevertheless an important, indeed a cardinal, point.

Nowhere in the poem does Parmenides start from "what is one" and deduce anything about its nature; he appears to be doing so in the opening demolition of becoming and perishing, but this is illusory, in that Being's singleness is dependent in turn on the negation of nonexistence. Further, Parmenides has nothing to say about "plurality" arising from unity. He would agree (or indeed argue) that his subject is one and cannot become many, but it is not in virtue of its unity that it cannot become many. It cannot become many, he would agree, because there never will be more than one thing; and there never will be more than one thing because that would infringe the rule that only Being can be thought of, and nothing else, either now or at any other time. Even if at B8.22 the denial of divisibility were a denial that the subject can become many, the reason given is not that it is one but that it is, all in a like degree. To say this is not to state that Parmenides would have agreed that what is one can become many-- he would have excluded this or any other kind of becoming. It needs still to be said that Parmenides is concerned with becoming in general and that there is no reason in his text to suppose that the specific kind of becoming in which a unity gives rise to a plurality ever entered his head. Previous thought might have given him the idea, but his poem shows, and in logic need show, no trace of it whatever.

Nor does Parmenides show that what is one cannot be many.¹¹⁶ For again, if οὐλον, συνεχες, εν, μονογενες, οὐ διαιρετον, ταῦτον, and so forth constitute a denial of plurality, as they do, it is still not in virtue of its initial unity that Parmenides' subject has these predicates hung on it but in virtue of its own existence, as being the only thing that

can be talked or thought about. It is not so much that what is one cannot be many (though Parmenides would certainly have agreed, if pressed, that it cannot) as that what is must be one, single, continuous whole. Again, Parmenides does not start from unity. As long as in $\pi\alpha\nu \acute{\epsilon}\sigma\tau\iota\nu \acute{\omicron}\mu\omicron\iota\omicron\nu$ the word $\acute{\omicron}\mu\omicron\iota\omicron\nu$ was taken adjectivally, there was some sort of case for supposing that line to infer the negation of plurality from the assertion of unity. But the case even then was not strong; for, though $\acute{\omicron}\mu\omicron\iota\omicron\nu$ is in Aristotle a kind of $\acute{\epsilon}\nu$, the two words are not interchangeable in Presocratic thought. Further, if $\acute{\omicron}\mu\omicron\iota\omicron\nu$ be adjectival and equivalent here in Parmenides' mind to $\acute{\epsilon}\nu$, one would still have to search for the argument that led Parmenides to postulate the unity (in this sense) of his subject. Parmenides would then be found guilty of proceeding from the proposition that the subject all is ($\pi\alpha\mu\pi\alpha\nu$ line 11) to the statement that it is all alike. The basis for this could of course be the original $\kappa\rho\iota\sigma\iota\varsigma$; the abolition of difference being equated with the abolition of not-Being. But this interpretation, apart from ignoring the stylistic difficulties of taking $\acute{\omicron}\mu\omicron\iota\omicron\nu$ adjectivally, would have the philosophical disadvantage of making Parmenides less explicit and harder to follow. And, even if one followed it, one would still, it seems, be compelled to admit that unity was not an assumption for Parmenides but something he thought he had proved. One would also have to admit that Parmenides was not specially concerned to prove that what was one in general could not be many but was rather seeking to show that his subject in particular, since it was one, could not be many. There should therefore be no more heard of the hypothesis that Parmenides proved that what was one (in the sense of being homogeneous) could not have gaps in it and thus be many. It will be observed in subsequent chapters that, if Parmenides' successors did find such a proof in his text, at any rate they ignored it.

It is important in this context to notice that Parmenides did not have to prove in particular that what was one could not become many, or that homogeneity could not give rise to a varied multiplicity, in order to invalidate cosmogonies of the type produced by his Ionian predecessors. There is no reason to suppose that he had them specially in mind; but, even if he had, his general argument refutes them along with the rest of mankind. For, to make a varied world

arise from a substantially homogeneous beginning, clearly something must change, or homogeneity will be the only result. So that, quite apart from the Parmenidean wholesale rejection of the world perceived by the senses, a cosmogony of the Ionian kind was impossible. If becoming and perishing went, this sort of cosmogony went with them. Parmenides, even if he were specially concerned with his Milesian predecessors, and even if they had enunciated the principle that one thing could be or become many things, did not have to oppose them on that particular ground." (pp. 141-143)

From: Michael Stokes, *One and Many in Presocratic Philosophy*, Cambridge: Harvard University Press 1971.

Aristotle's criticism of Eleatic philosophy

"The criticism of the Eleatic unity of Being is highly instructive for the study of the method by which Aristotle built up his own doctrine of matter; and the very inclusion of the critique in the *Physics* shows that he was conscious of the logical character of the origin of his theory.

He first attacks the concept of Being from the point of view of the categories, (259) showing that, if it is substance, quality, and quantity, it is many and, if it be all quantity or quality, the axiom that only substance is separable is violated. The truth of this principle is indicated by the fact that everything is predicated of substance as subject, an example of the grammatical orientation of Aristotle's thought which determines the whole passage.

Since Melissus called Being infinite, he must have considered it to be a quantity since this is the category in which infinity occurs; (260) and, if it is both substantial and quantitative, it is two, not one; while, if it is substantial alone, it cannot be infinite or have any magnitude.

Since the notion of the unity of Being collides with the doctrine of the categories, Aristotle next examines the possible meaning of "one" as applied to Being. (261) Of the three possible interpretations of Eleatic unity-continuity, indivisibility, unity of definition or essence-the first would result in multiplicity since the continuous is infinitely divisible and would also raise the question concerning the part and the whole, for discontinuous parts taken in themselves, if identical with the

whole, would be identical with one another. If this unity be that of indivisibility, there will be no quantity or quality and Being will be neither infinite with Melissus nor finite with Parmenides. And, if the unity is unity of definition, the Eleatics will arrive at the conclusion of Heraclitus that all things are identical, and their theory will be concerned not with the unity of Being but with its non-existence and the identity of quality and quantity. (pp. 63-64)

(...)

The general critique of the Eleatics is followed by a special refutation of Melissus and Parmenides (p. 67)

(...)

At the beginning of the specific criticism of Parmenides (296) Aristotle says that the same type of argument is valid against him, a statement which confutes the notion that Aristotle supposed the "Being" of Parmenides and Melissus to have been differently conceived. (297) Parmenides falsely assumed that "Being" is an absolute concept whereas it really is ambiguous; he then argued falsely because he did not see that even an inseparable predicate is essentially different from the subject of which it is predicated. This explanation of the error of Parmenides is equivalent to the logical critique of Plato's *Sophist*; but here the language of Aristotle's correction is accommodated to his own physical terminology, and the way is prepared for a transition from the theory of predication, which is the result of the Eleatic criticism in the *Sophist*, to the doctrine of substrate and inhering accident. Aristotle implies that ignorance of the logic of predication led Parmenides to a mistaken notion of the physical world. The concept of Being as held by Parmenides is then subjected to a criticism which, by the process of showing that it will not fit into a logical proposition, is intended to prove that it cannot represent anything. If this Parmenidean Being is substantial Being and substantial Unity, it cannot be predicated of any subject since such a subject would be non-existent if "Being" were not an equivocal term; but neither can it act as subject, for, if anything else were predicated of it, the predicated attribute would have to be non-Being and non-Being would then be predicated of Being. Aristotle tacitly assumes that Parmenides would have to think of Being as an element in a proposition; he fails to consider the

possibility that Parmenides may have fallen into error just because, having envisaged the concept of transcendental Being, he denied the possibility of existence on any lower scale. Aristotle, in trying to press the Parmenidean " Being " into service in the physical world and in rejecting its possibility because it cannot fulfil such service, is guilty of the same kind of error as Parmenides was, for he too assumes that the concept of Being must be fitted to one scale only. But his conclusion is the contrary of that of Parmenides in that he holds to the exclusive reality of phenomenal Being which Parmenides completely rejected.(298)

When Aristotle proceeds to the objection that substantial Being cannot have magnitude because as magnitude it would have parts which must then be essentially different from one another, he is using an argument resting finally on his doctrine of categories and considering the Eleatic Being as a spatial continuum equivalent to the substantial infinity which he attributes to the Pythagoreans and against which he uses the same argument.(299) The same doctrine derived from the categories forms the transition from the refutation of the possibility of the Eleatic Being as spatially continuous unity to that of its interpretation as essential and indivisible unity. Being, as substantial, must consist of parts which are themselves substantial, as is proved by the definition of such a thing.(300) That the elements of the definition cannot be accidental attributes rests upon the axiom that substance itself cannot be an attribute of any subject; and this axiom depends finally upon the exclusive character of the categories. The implication for the Eleatics is that, whatever is meant by their Being, it must, as a substantial existence, be defined by other substances which fact destroys its presumed unity.(301) But here again Being for Aristotle is conceivable only as phenomenal, for substance and propositional subject are treated as equivalent and exhaustive." The Eleatic argument (302) seemed cogent to some people who felt constrained thereby to admit the necessity for the existence of non-Being and to posit atomic magnitudes.(303) But, Aristotle says, even if *Being* is unequivocal, nothing prevents non-Being from existing, not as absolute non-Being but as "not being a particular thing." For Being in and for itself is simply substantial Being which may be manifold.

There is throughout this critique an apparent confusion of logical and physical concepts which is due to the dependence of Aristotle's physics upon his logic. At one time he said that the Eleatic error was due to the ignorance of the meaning of relative or *accidental* non-Being,(304) that is of logical privation which is the essence of the negative proposition; but such a concept, which in its Platonic origin was simply logical, is at once transformed into a physical doctrine by Aristotle, so that he can say shortly thereafter that an understanding of the nature of substrate would have solved the difficulties of the Eleatics.(305) Privation is, in effect, the immediate material of generation (306) and the logical subject of privation is transmuted by means of the concomitant potentiality into the physical substrate. (307) The notion that privation of a quality requires in the substrate the potential presence of that quality is a rule of logic (308) transferred to descriptive physics. It is this connection of the matter of generation and of thought, this equivalence of the proposition of logic and the description of physical change which makes Aristotle think the *Physics* an appropriate place to discuss the Eleatic doctrine which on his own reckoning falls outside the sphere of physics." (pp. 72-76)

Notes

(259) *Physics* 185 A 20-B 5.

(260) Cf. page 23, note 85, 2 *supra*.

(261) *Physics* 185 B 5.186 A 3. Cf. for the different meanings of "things called one in and for themselves," *Metaphysics* 1015 B 36-1017 A 2.

(296) *Physics* 186 A 22-B 35.

(297) Ross in his commentary on the *Metaphysics*, 986 B 19, Vol. I, p. 153, supposes that Aristotle made a distinction with regard to the subject-matter and treatment of Parmenides and Melissus (cf. page 67, note 273 *supra*) ; such a distinction, however, occurs only in the *Metaphysics* and for a particular purpose (cf. page 220, note 15 *infra*),

(298) It is not necessary to assume that Parmenides had clearly conceived transcendental Being in itself; Aristotle himself had an

inkling that Parmenides was trying to get at something essentially different from phenomenal existence (cf. page 66, note 270 *supra*), and Plato's frequently expressed respect for the Eleatic doctrine seems to be due to his feeling that it really aimed at the static certainty of the super-phenomenal world (e.g. *Theaetetus* 183 E 3 ff.). It is enough, for the moment, to understand that the Eleatics were stressing the immutable reality which is manifested in thought and the objects of thought as opposed to the instability of physical phenomena, and that, in the manner of those who make a startling discovery, they reserved to the new concept the sole right to consideration. But it is not impossible that they should still have considered this transcendental Being as somehow physical, though they certainly held it to be different from anything perceptible.

(299) See pages 24-25 *supra*.

(300) Aristotle's own solution is that no universal term has substantial existence, cf. *Metaphysics* 1041 A 3-5. But the argument only proves that the Eleatic Being is indefinable and transcendent; not that there is no transcendent Being. The Eleatics might well have used Aristotle's own admission that Being "runs through all the categories" (*Metaphysics* Gamma, chap. 2) to prove that merely because the concept will not fit into any one of the categories one cannot argue that it does not exist or that it is meaningless.

(301) The origin of Aristotle's criticism is clearly Plato, *Sophist* 245 B-D; but the presumption of the doctrine of categories has restricted the application of the critique to physical existence. It is strange that Aristotle failed to see the similarity of the Eleatic Being and his own God in respect of the problems of existence. Reflection upon this similarity should have made it apparent that any attempt to apply the categories to Eleatic Being must miss the fundamental motive of the conception.

(302) *Physics* 187 A 1-10.

(303) The Greek commentators, Simplicius, Themistius, Philoponus, Alexander, understood the sentence to refer to Plato and Xenocrates, the first of whom is then charged with positing non-Being in answer to Parmenides, the second with setting up indivisible lines. Further, the two Eleatic arguments are divided, the first being given to

Parmenides, the second (by Simplicius, Themistius, Philoponus) being identified with Zeno's first paradox. But since Plato posits absolute non-Being no more than does Aristotle (cf. Plato, *Sophist* 258 A 11B 3; D 7-E 3; E 6 ff.), since Aristotle does not use ατομα μεγεθη specifically for Xenocrates' ατομοι γραμμαι, and since he represents the two Eleatic arguments as the incentives to the Atomic theory of Leucippus (cf. *De Generatione* 325 A 2 ff., especially 26-29), it seems certain that the ενιοι of the present passage are the Atomists. (For the other view see Robin, *La Théorie Platonicienne des Idées et des Nombres*, note 272, IV, pp. 300 ff.)

The second Eleatic argument here mentioned, the dichotomy, was referred by Porphyry to Parmenides; since the simple term is used by Aristotle of Zeno's first paradox (*Physics* 239 B 22), it is most likely to refer to the same argument here, although it has not previously been mentioned in this passage.

In *Metaphysics* 1089 A 2-6 Aristotle refers to some who made the "indeterminate dyad" an element in the generation of things, influenced by the argument of Parmenides to prove that non-Being exists. Ross suggests that he has in mind such passages as *Sophist* 237 A, 256 E, 241 D. In that case he overlooks the limitations η θατερου φυσις, κατα τι, πη in these passages which make the sense equivalent to his own ον τι ειναι το μη ον.

(304) *Physics* 191 B 13-16.

(305) *Physics* 191 B 33-34.

(306) *Physics* 191 B 15-16. Yet 191 B 35 ff. he reproaches the Platonists for making matter "non-Being" and claims himself to differentiate privation and matter.

(307) The transformation is carried so far that στερηρεσις becomes, instead of simple negation of form, a positive reality, a kind of form itself (*Physics* 193 B 19-20). Cf. Baeumker, *Problem der Materie*, pp. 218-219.

(308) Cf. its use in *Topics* 148 A 3-9. It is a mistake to define a thing by privation of that which is not potentially predicable of it. The logical basis of the physical doctrine, as well as some of the

difficulties involved in the development, is to be seen in *Metaphysics* 1055 A 33-B 29.

Parmenides of Elea: Critical Editions and Translations

Ancient Editions

1. Estienne, Henri (Henricus Stephanus). 1573. *Poesis philosophica, sed saltem, Reliquiae poesis philosophicae, Empedoclis, Parmenidis, Xenophanis, Cleanthis, Timonis, Epicharmi. Adiunta sunt Orphei illius carmina qui a suis appellatus fui o theologos. Item, Heracliti et Democriti loci quidam, et eorum epistolae*. Genève.

The first printed edition; see pp. 41-46, with notes of J. J. Scaliger, p. 217.

Contains citations from texts by Sextus, Clement of Alexandria, Plutarch, Proclus and Theophrastus, with the following fragments: I, 1-30 (two times I, 29-30), II, 1-8, II, 1-4, VII, 2-6, VIII. 1-2a, VIII. 3-4, VIII, 43-45, X, 1-4, XIII, 1, XIV, 1, XV, 1 and XVI, 1-4 (sixty-seventh verses).

(Nestor-Luis Cordero, *L'histoire du texte de Parménide*, in *In Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 3-24. Paris: Vrin 1987, p. 6).

"Estienne's reconstitution (composed of sixty-seven verses) comprised, according to the present numbers, the fragments 1 (Sextus), 7 (Sextus), 10 (Clement), 4 (Clement), 8.3-4 (Clement and Plutarch), 8.43-5 (Plato), 13 (Plato), 15 (Plutarch), 14 (Plutarch), 2 (Proclus version) and 16 (Theophrastus version)." Cordero, *The "Doxa of Parmenides" Dismantled*, *Ancient Philosophy*. no. 30, 2010, pp. 231-246)

2. Scaliger, Justus Joseph. 1597-1600. MS Scal. 25.

"The first attempt of reconstitution of the poem was made by Henri Estienne(7). This was further pursued few years (about 1600) by Joseph Scaliger. Unfortunately, his version was never published; and it remained little known until 1982, when I published a report of its readings that differ from those in Diels-Kranz(8). Both Estienne and Scaliger had grouped the quotations according to their source (for example, "ex Sexto", "ex Clemente", "ex Platone", "ex eodem", etc.)."

(7) H. Estienne, *Poesis Philosophica*, Genevae, 1573.

(8) N. L. Cordero, "La version de Joseph Scaliger du Poème de Parménide", *Hermes*, 110 (1982), pp. 391-398.

"*Scaliger's Arrangement*. Scaliger's text of the poem is considerably more involved, and more coherent, than Estienne's. Unfortunately, Cordero's report of it, "1 (Sextus), 7 (Sextus), 8 (Simplicius), 2 (Proclus and Simplicius), 6 (Simplicius), 13 (Plutarch and Simplicius), 15 (Plutarch), 14 (Plutarch), 7.1-2 (Plato), 17 (Galen), 4 (Clement), 10 (Clement), 16 (Aristotle version) and 18 (Caelius Aurelianus)", inadvertently leaves out DK 9 and 12. (21) Fragments 9 and 12 (both from Simplicius) should also be included, in that order, between fragments 8 and 2. (22)." (Christopher Kurfess, "Restoring Parmenides' Poem: Essays toward a New Arrangement of the Fragments Based on a Reassessment of the Original Sources", University of Pittsburgh, 2012. Unpublished Ph. D. thesis available at <https://d-scholarship.pitt.edu/16704/>

(21) 21 Cordero (2010 ["The 'Doxa of Parmenides' Dismantled". *Ancient Philosophy* 30: 231-246.) p. 233. At first glance, it even appears as though Cordero is mysteriously giving the order of Brandis' 1813 edition rather than Scaliger's. In praise of Scaliger's accomplishment, Cordero introduces Brandis' book as the first work, after about two centuries during which Scaliger's work was unknown or ignored, "to return to the level of Scaliger's work". (This too might be slightly misleading, since Fülleborn, whose work preceded Brandis' by almost 20 years, gives a comparably full collection of fragments (though without DK 17). It would be more accurate to say that it was not until Brandis' work, which included additional material from

Simplicius' *in Cael.*, that the completeness of Scaliger's work was surpassed.) Next, Cordero recounts the order quoted above, in a sentence beginning, "Brandis' book followed this order:", from which the reader might easily conclude that the order that follows is that found in Brandis' work, and may or may not be repeating the order of Scaliger. In fact, the list given does not match the order in Brandis' edition, and Brandis' arrangement differs markedly from Scaliger's.

In an earlier article bringing attention to Scaliger's work, Cordero listed the order of his arrangement as follows: DK 1 (1-30), 7 (2-6), 8, 9, 12, 2, 6, 13, 15, 14, 7 (1-2), 17, 4, 10, 16, 18 (see Cordero (1982) p. 398). The order in the 2010 article, quoted above, thus appears to omit fragments 9 and 12. The order in Brandis' edition, according to the numeration of DK, is: 1, 7.2-7a, 2, 6, 7.1-2, 8.1-15, 4, 8.16-61, 9, 12, 13, 10, 11, 15, 14, 16, 18, 22, 19 (see Brandis (1813)). The most significant difference from Scaliger, in addition to the material added from Simplicius' *de Caelo* commentary, is the placement of fragment 8 after 2 and 6, which reflects an improved appreciation of the testimony of Simplicius about the placement of the fragments, as shall be discussed later.

(22) See the preceding footnote. An overview of the different early arrangements of the fragments is given in the appendix to this chapter, Synopsis A, page 190 below.

3. Fülleborn, Georg Gustav. 1795. *Parmenidou tou Eleatou leipsana. Fragmente des Parmenides. Gesammelt, übersetzt und erläutert von Georg Gustav Fülleborn.* Züllichau: F. Frommann.

Greek text and German translation (102 pages).

Contains 147 verses; v. I 31-32; III, 1; V, 1-2; XI, 1-4; XVII, 1; XIX, 1-3 are lacking (13 verses)

(Nestor-Luis Cordero, *L'histoire du texte de Parménide*, in *In Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 3-24. Paris: Vrin 1987, p. 13).

"In 1795, G.G. Fülleborn published a work on Parmenides, which for the first time proposed an arrangement of the

fragments of the *Poem* into two “parts”: *Alétheia* (fr. 1 to 8.50 DK) and *Dóxa* (fr. 8.51 to 18 DK). The author was inspired by Simplicius, and this division became canonical. However, the criterion used by Simplicius is a consequence of the “platonization” of Parmenides already made by Aristotle, who found in the Eleatic a dichotomy between the sensible and the intelligible. Consequently, the Poem would be characterized by a theory on seeming and being. It is enough to look at what Parmenides himself considered to be “truth” and “dóxa” to refute this interpretation and to find in the Poem a place for the “physical” texts outside of the “dóxa,” provided that they are neither misleading nor deceiving.” (N.-L. Cordero, La place de la « physique » de Parménide dans une nouvelle reconstitution du Poème, *Revue de philosophie ancienne*, 2017/1 (Tome XXXV), p. 3-13. English abstract)

"We need to ask two questions regarding the "canon" that has been accepted almost unanimously: (a) did Parmenides arrange himself this sequence of forty-nine verses? Moreover, (b), if "Not", from what point in time did this group of verses start being called "Doxa" ?" (N.-L- Cordero, The "Doxa of Parmenides" Dismantled, *Ancient Philosophy*, 2010, 30, pp. 231-246, pp. 231-232)

(...)

"Let us now examine the forty-nine verses of the Doxa, in order to answer question (b). At what point in time did this set of verses begin to be called "The Doxa"? Answer: from 1795, when Georg Gustav Fülleborn published his book *Fragmente des Parmenides* (Züllichau). In this edition, the poem was divided into three parts: a Prologue (fragment 1); a section Fülleborn titled "περι τοῦ νοητοῦ ἢ ταῦ προῶς ἀληθεῖαν"; and one he titled "ταῦ προῶς δόξαν" (fragment 8.52 to fragment 18; fragment 19 was unknown at the time). Here we have the birth certificate of Parmenidean Doxa.

What was the *communis opinio* before 1795? Except for the prologue (fragment 1, today) we do not know in which order the other eighteen passages actually were in the original text. The ancient quotations' sources are not precise, and in most cases

their authors limit themselves to affirming, before each purported quotation, that "then Parmenides said X", or that "in another place he said Y", but they never point out any kind of "parts" in the Poem. There is no doubt that Parmenides presented his theory about "truth", and that he had also taken care to expound the "doxai of mortals" (indeed, we can even verify this today, because the word "doxa" appears on three occasions in the preserved texts). Nevertheless, we are truly ignorant as to which place and which importance "the doxai" of mortals" held in the poem." (p. 233)

"The common notion of Parmenides' Doxa as a presentation of Parmenidean 'physics' or natural science, Cordero claims, involves just such an accident. It just so happened, he says, that in the early attempts of Henri Estienne (in 1573) and Joseph Scaliger (c. 1600), in which lines drawn from the same ancient author were grouped together, fragments of a more 'physical' character were placed at the end of their collections. In time, this chance concatenation received the misleading title Doxa, a designation that Cordero dates to G.G. Fülleborn's 1795 *Fragmente des Parmenides*. That presentation would prove decisive for how Parmenides would be read thereafter: 'the poem was divided into three parts: A Prologue (fragment 1); a section Fülleborn titled περι τοῦ νοητοῦ ἢ ταῦ προῶς ἀλήθειαν; and one he titled ταῦ προῶς δόξαν (fragment 8.52 to fragment 18; fragment 19 was unknown at the time). Here we have the birth certificate of Parmenidean Doxa' (2010, 233).

That is not to say that the familiar division of the poem into a Proem, a Way of Truth, and a Way of Seeming was Fülleborn's invention. Cordero recognizes that the division between an Aletheia and a Doxa is an ancient and genuine one. What he disputes is that fragments that appear to be concerned with 'physics' belong in the Doxa, claiming about the distribution of fragments, 'we simply do not know today which verses belong to which section' (233). Still, Cordero's story might mislead his readers, for neither did Fülleborn invent the names that serve as titles for the sections in his edition, nor were the earlier editors, in their arrangements, simply grouping together fragments preserved by the same author. In fact, both

Fülleborn, in applying the titles, and the earlier editors, in arranging the fragments as they did, were guided by the evidence they found in the authors who quoted the fragments." (Christopher Kurfess, 2016. "The truth about Parmenides' « Doxa »." *Ancient Philosophy*:13-45.)

4. Peyron, Amedeo. 1810. *Empedoclis et Parmenidis fragmenta ex codice Taurinensis Bibliothecae restituta et illustrata ab Amedeo Peyron. Simul agitur de genuino graeco textu Commentarii Simplicii in Aristotelem de coelo et mundo.* Leipzig: August Gottlieb Weigel.

The text of Parmenides is at pp. 55-61.

This edition contains for the first time the verses found in the *codex Taurinens* of Simplicius' Commentary on *De caelo*: I , 31-32; III, 1; V, 1-2; XI, 1-4; XVII, 1; XIX 1-3).

(Nestor-Luis Cordero, *L'histoire du texte de Parménide*, in *In Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 3-24. Paris: Vrin 1987, p. 13).

5. Brandis, Christian August. 1813. *Commentationum Eleaticarum.* Altona: J. F. Hammerich.

Pars prima: Xenophanis, Parmenidis, et Melisii doctrina et propria philosophorum reliquis veterumque auctorum testimoniis exposita.

Sectio secunda: *De Parmenide* pp. 85-182.

This edition contains all the fragments with the exception of the followings: III; V, 1-2; XVII (five verses). (Nestor-Luis Cordero, *L'histoire du texte de Parménide*, in *In Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 3-24. Paris: Vrin 1987, p. 14).

"Brandis' book followed this order: 1 (Sextus), 7 (Sextus), 8 (Simplicius), 2 (Proclus and Simplicius), 6 (Simplicius), 13 (Plutarch and Simplicius), 15 (Plutarch), 14 (Plutarch), 7.1-2 (Plato), 17 (Galen), 4 (Clement), 10 (Clement), 16 (Aristotle version) and 18 (Caelius Aurelianus)." (N.-L- Cordero, The "Doxa of Parmenides" Dismantled, *Ancient Philosophy*, 2010, 30, p. 233)

Second edition 1906; third 1912; fourth 1922; fifth by Walther Kranz 1934; sixth 1952 (many reprints).

Parmenides is the author number 28, pp. 217-246 of the sixth edition.

English translations

1. Cornford, Francis Macdonald. 1939. *Plato and Parmenides. Parmenides' Way of truth and Plato's Parmenides Translated, with an Introduction and a Running Commentary*. London: K. Paul, Trench, Trubner & co. Ltd.

Reprinted by Routledge & Kegan Paul, 1980.

Contents: Preface V; List of abbreviations XI; Introduction. Chapter I. The earliest Pythagorean cosmogony 1; Chapter II. Parmenides' *Way of Truth* 28; Chapter III. Zeno and Pythagorean Atomism 53; The *Parmenides* 63; Index 247.

"This book was undertaken with the hope that a close study of the whole chain of argument [of Plato's *Parmenides*] would

bring to light some method of interpretation that would give the dialogue a serious significance, worthy of its author and consistent with its position in the history of Greek thought. I could find not the faintest sign of any theological revelation. On the other hand there were innumerable features whose presence could not be accounted for in a mere parody or light-hearted polemic. The conclusion reached was that the second part of the dialogue is an extremely subtle and masterly analysis, dealing with problems of the sort we call logical, which we know to have been much in Plato's mind in his later period. The assumptions required to yield this conclusion will be set out in the commentary introducing the dialectical exercise.

As a general rule, Plato's predecessors and contemporaries (including Aristotle) throw a surer light upon his meaning than his remote successors, whose systems betray the influence of many centuries of religious and philosophical development. Accordingly, in a somewhat long introduction I have tried to fill in the historical background. The conversation in the dialogue arises out of a reading of Zeno's controversial treatise, directed against critics who had derided what seemed to them the absurd consequences of Parmenides' reasoning. It is necessary to form some picture of the position held by these critics themselves and of the nature of Zeno's counter-attack. Behind this controversy, again, lay Parmenides' own system; and this, in its turn, had involved the rejection of the Pythagorean doctrine he had learnt in his youth.

I have therefore begun with an attempt to reconstruct the earliest Pythagorean cosmogony. The second chapter gives an account of Parmenides' *Way of Truth* and of its relation to the rest of his poem. The third deals with Zeno and his opponents. All these topics are relevant to the understanding of the dialectical exercise, which not only includes a searching criticism of Eleatic dogma, but indicates the lines on which Plato would remodel the Pythagorean system." (Preface, IX-X)

2. Freeman, Kathleen. 1946. *Ancilla to the Pre-Socratic Philosophers: A Companion to Diels' Fragmente der Vorsokratiker*. Oxford: Basil Blackwell.

A complete English translation of the 'B' passages (the 'Fragments') from *Die Fragmente der Vorsokratiker* (Fifth edition).

Reprinted in 1983 by Cambridge University Press.

3. Tarán, Leonardo. 1965. *Parmenides. A Text with Translation, Commentary and Critical Essays*. Princeton: Princeton University Press.

Contents: Foreword VII-IX; List of bibliographical abbreviations X-XIV; Part I: Parmenides' life 1; Fragments I-XIX: Text, translation, and commentary 7; Part I: Critical essays 173; Chapter One: Parmenides concept of Being 175; Chapter Two: *Aletheia* and *Doxa* 202; Chapter Three: The world of appearance described in the *Doxa* 231; Chapter Four: Parmenides in the ancient philosophical tradition 269; Appendix I 296; Appendix II 299; Index of Fragments of Parmenides 303; Index of passages 305; Index of proper names 309-314.

"Parmenides' doctrine represents a turning-point in Greek philosophy, one that can truly be said to determine the course of Greek thought until the time of Aristotle. Not only Empedocles, Anaxagoras, and the Atomists but also Plato and Aristotle tried to answer the dilemma put forward by Parmenides, namely, that since any difference from Being is absolute non-Being, and as such unthinkable, no account of the world of difference and change can be valid. But this doctrine not only invalidates any explanation of the sensible world, it asserts that this world insofar as it is different from Being is non-existent. Because it seems of fundamental importance for the understanding of Greek philosophy to determine exactly what Parmenides thought, I decided to study all available evidence about his work. My decision was based on the conviction that only such a study can be of value today, for Parmenides' philosophy is one in which all is in all and any interpretation of part of it risks, by not taking into consideration other aspects of his thought, being contradicted by the results of another partial study.

I have devoted the first part of the book to a line by line commentary on the fragments. I have edited the text only to facilitate reference and to complete in part the critical apparatus given by Diels-Kranz. I have made use of the best available editions of the ancient authors who quote Parmenides' text. A fresh study of the manuscripts of Simplicius' commentaries to Aristotle's *Physics* and *De Caelo* may still add to our knowledge, but I am convinced that even such a study would not drastically change the status of the text of Parmenides. The variant readings given in the critical apparatus and sometimes in the commentary are selective and are especially meant to illustrate the places where a variant reading may be of importance for the interpretation of the text.

The translation has no pretension to literary value and has been added as a complement to the commentary, to reduce as much as possible the number of ambiguities in the construction of the Greek. Each fragment is followed by its commentary, but in a few places discussion of the text is postponed till the second part of the book to preserve the unity of the first three chapters. These chapters deal with more general aspects of Parmenides' thought: his notion of Being, the relation of *Aletheia* to *Doxa*, and the content of the second part of the poem. The fourth chapter attempts to determine what the ancients took Parmenides' philosophy to be and what value this testimony has for the historical reconstruction of Parmenides' thought.

Since such a study as the present is by its very nature largely polemical, I wish to emphasize here my indebtedness to the scholars who have devoted themselves to the study of Parmenides and not least to those with whose interpretations I happen to disagree. In particular I would like to mention the pioneering work of H. Diels, E. Zeller, W. A. Heidel, and H. Frankel. The book, with some changes of form and content, is a doctoral dissertation submitted to the Faculty of Princeton University in September 1962. But I have taken into consideration studies on Parmenides that reached me up to December 1963." (from the Preface)

4. Lombardo, Stanley. 1982. *Parmenides and Empedocles: The Fragments in Verse Translation*. San Francisco: Grey Fox

Press.

Contents; Preface VII; Parmenides. Introduction 1; The Fragments 11; Empedocles. Introduction 23; *On Nature* 31; *Purifications* 57-65.

"The interpretation of Parmenides' poem implicit in-my translation differs from Mourelatos' interpretation (and most others) in important respects. But interpretation of a text such as Parmenides' is primarily a matter of emphasis. My hope is simply that the poem which I, as an added artificer, have made out of Parmenides' Greek will contribute to the reinstatement of his text as poetry.

In making over the twenty fragments of Parmenides' philosophical epic the translator is assisted by the contemporary poetic convention that fragments take on an enhanced significance by their very fragmentary nature.

Everyone who works with Parmenides in any way must be tempted to alter the arrangement of the fragments provided by Diels in his standard edition. I certainly tried to do so. In the end I was impressed with the poetic sense of Diels' order and retained it for that reason. This also facilitates comparison with the Greek text and with the standard prose translations. It would be interesting to experiment with versions that run the fragments together, reassemble them or imbed them in the matrix of another poem, but I have not done any of these things here. Parmenides' fragments very happily constitute a poem for us in their traditional scholarly arrangement." (pp. 1-2)

5. Kirk, Geoffrey Stephen, Raven, George Earle, and Schofield, Malcolm. 1983. *The Presocratic Philosophers. A Critical History with a Selection of Texts*. Cambridge: Cambridge University Press.

Second revised edition by M. Schofield; first edition 1957 by K. G. Kirk and J. E. Raven.

See Chapter VIII - *Parmenides of Elea* - pp. 239-262.

"This book is designed primarily for those who have more than a casual interest in the history of early Greek thought; but by

translating all Greek passages, and confining some of the more detailed discussion to small-type notes at the end of paragraphs, we have also aimed to make the book useful for those students of the history of philosophy or science who have no previous acquaintance with this important and fascinating field.

Two points should be emphasized. First, we have limited our scope to the chief Presocratic 'physicists' and their forerunners, whose main preoccupation was with the nature (physis) and coherence of things as a whole. More specialized scientific interests were simultaneously developing throughout the sixth and fifth centuries B.C., especially in mathematics, astronomy, geography, medicine and biology; but for lack of space, and to some extent of evidence, we have not pursued these topics beyond the interests of the chief physicists. We have also extruded the Sophists, whose positive philosophical contribution, often exaggerated, lay mainly in the fields of epistemology and semantics. Secondly, we have not set out to produce a necessarily orthodox exposition (if, indeed, such a thing is conceivable in a field where opinion is changing so rapidly), but have preferred in many places to put forward our own interpretations. At the same time we have usually mentioned other interpretations of disputed points, and have always tried to present the reader with the main materials for the formation of his own judgement.

(...)

Where the evidence is fuller and clearer - particularly where considerable fragments survive, as for example in the case of Parmenides the commentary can naturally be shorter; where the evidence is sparser and more confusing, as for example in the case of Anaximander or the Pythagoreans, our own explanations must be longer and more involved. Chapter 1 in particular, which deals with a part of the subject which is often neglected, is perhaps more detailed in parts than its ultimate importance demands, and nonspecialists are advised to leave it until last.

Only the most important texts have been quoted, and those in an inevitably personal selection. For a nearly complete collection of fragments and testimonies the reader should turn to H. Diels, *Die Fragmente der Vorsokratiker* (5th and later editions, Berlin, 1934-54, edited by W. Kranz)." (from the Preface to the First edition)

"It is now more than twenty-five years since *The Presocratic Philosophers* first appeared; it has been through many printings since, with minor corrections until 1963 and subsequently without change. (...)

There are major and important changes in this new edition. M. Schofield has completely rewritten the chapters on the Eleatics and Pythagoreans, principally because of work by analytic philosophers on the former and by Walter Burkert (in particular) on the latter -- work which has called for some reassessment of the Cornford-Raven view on the interrelations between the two schools. Alcmaeon has been incorporated in these chapters." (From the Preface to the 1983 revised edition).

6. Gallop, David. 1984. *Parmenides of Elea. Fragments*. Toronto: University of Toronto Press.

Contents: Acknowledgments VII; Preface IX; Abbreviations XI; Introduction 3; Glossary 41; Text and translation of the Fragments 45; Fragment contexts 95; Testimonia on Parmenides' life and teaching 104; Sources and authorities 124; Bibliographical note 133; Select bibliography 135; Index 141-144.

"This volume contains a text and a new translation of the extant fragments of Parmenides' philosophical poem. It also offers the first complete translation into English of the contexts in which the fragments have come down to us, and of the ancient *testimonia* concerning Parmenides' life and thought. All of these secondary materials are collected in the comprehensive work of Diels-Kranz, *Die Fragmente der Vorsokratiker* (6th edition, Berlin 1951), hereafter referred to as D-K, and all have been included here.

The purpose of the translation is to provide an English version that will be of service to modern readers who wish to explore the poem in detail. All the fragments have been translated in full, and appear in the order that has become canonical since the fifth edition of Diels-Kranz. References to the fragments are given in the conventional style derived from this order. thus, 8.50 refers to line 50 of fragment 8.

As far as differences of word-order allow, the translation of the poem has been arranged in lines corresponding to those of the Greek text. This style has been adopted purely for ease of reference, and not with the aim of producing a poetic version. No attempt has been made to capture the literary qualities of Parmenides' verse or the archaism of his language.

Richard Robinson, in the introduction to his translation of Aristotle's *Politics* III-IV (Oxford 1962, p. XXX), has characterized a translation as 'a shameful form of book.' For by offering a translation of each sentence in his original, the translator 'implies that he knows that this is what the original sentence means. But sometimes he does not know what it means, and is only guessing as well as he can.' In publishing a fresh version of Parmenides' poem the present translator makes no claim to know what every sentence in the original means. To signal the worst uncertainties, alternative renderings have been appended for passages whose meaning is disputed, or where major questions of interpretation hinge upon the text or translation adopted. In these places the reader will find it instructive to compare alternatives. He will then quickly discover how completely he puts himself at the translator's mercy, if he relies entirely upon any single version. He may also find it useful, especially if he is wholly dependent upon translation, to consult the short glossary of terms that present special problems of translation or interpretation.

The introduction advocates one plausible, modern interpretation of Parmenides. It also tries to bring out the more important points still in dispute, and some major philosophical questions raised by the poem. It has seemed better to write an extended essay, cross-referenced to the translation, than to

provide a separate series of exegetic and critical notes. This arrangement, regrettably, has made it necessary to skate all too lightly over much significant detail. But it also avoids dispersing editorial comment too widely for convenient use; and by allowing a more continuous exposition of the poem than is possible in separate notes, it may better help the explorer to find his bearings in the Eleatic jungle.

The notes to the introduction occasionally qualify or enlarge upon points made in the text. Their main purpose, however, is to provide guidance to the secondary literature, supportive either of views adopted in the text without argument or of defensible alternatives. Almost every line of Parmenides is controversial, and it is not possible, in the space available, to discuss every problem, let alone to argue for definitive solutions. Although the present exposition is thus unavoidably 'partisan,' it attempts to air disagreements sufficiently to provide some awareness of what is at issue. Given this limited aim, the use of secondary sources is necessarily selective. Fuller treatment of the literature would have incurred the risk of producing a work impenetrable to all but specialists. And of such works Parmenides has perhaps received his due share already.

Discussion has therefore been confined mainly to a small number of leading studies in English. All sources used, together with others readily accessible, have been listed in the Bibliography." (from the Preface)

7. Coxon, Allan Hartley. 1986. *The Fragments of Parmenides. A Critical Text with Introduction, Translation, the Ancient Testimonia and a Commentary*. Assen: Van Gorcum.

Contents: Preface V-VI; Introduction 1; Text and translation of the Fragments 41; The ancient Testimonia 95; Commentary 156; Appendix 257; Index 267-277.

"The text of the fragments of Parmenides was placed on a firm foundation by Diels (*Simplicii in Aristotelis Physicorum Libros quattuor priores Commentaria*, 1882; *Parmenides Lehrgedicht*, 1897; *Poetarum Philosophorum Fragmenta*, 1901). Since the latest editions of *Die Fragmente der*

Vorsokratiker depart in several places from Diels' own text, it seemed desirable to re-examine the tradition, and the following pages were originally planned as a simple text with fuller critical apparatus than has appeared since *Poetarum Philosophorum Fragmenta* and with epic parallels. A revised collection of testimonia was then added, incorporating the Platonic, Aristotelian and Neoplatonic discussions, mostly written with knowledge of the complete text and essential for understanding the fragments, but in the main omitted by Diels. Finally it seemed inescapable to complete the work with an introduction and commentary.

(...)

The inclusion among the testimonia of philosophical as well as of purely doxographical material necessitated the substitution of a broadly chronological order for the analytical order adopted by Diels. I have made use of the standard printed editions, but have modified the text in numerous places, particularly in Proclus' commentary on the Parmenides, where the readings are based on my own collations. Textual notes are added only where clarity demands it. In citing the text of Aetius after *Doxographi Graeci* I have included short forms of the chapter-headings, which formulate the questions which the information extracted from the original works has been adapted to answer, and apart from which it cannot be evaluated." (from the Preface)

See the Review of the first edition of the book by Malcolm Schofield in *Phronesis* 32, 1987, pp. 349-359.

8. Sider, David, and Johnstone Jr., Henry. 1986. *The Fragments of Parmenides*. Bryn Mawr: Thomas Library, Bryn Mawr College.

"This Bryn Mawr Commentary differs from most in that the text has been prepared especially for this edition (by D.S.) and the commentary has had to take account of the fact that there are major disagreements among scholars over the manuscript readings, the meanings, and even the syntax of many passages crucial for an understanding of Parmenides' meaning. Hence, the number of places where we offer several possibilities

(tending to put our preferred interpretation first)." (From the Preface)

"Metrical Note

Parmenides wrote in dactylic hexameter, the meter of Homer and Hesiod, whom he followed also in matters of dialect and morphology. Each line of this verse scheme consists of six feet, each either a dactyl (a long syllable followed by two short syllables, _ ◡ ◡) or a spondee (two long syllables, _ _). The sixth foot is always treated as a spondee; the first five are more often dactyls than spondees, especially the fifth foot, where spondees are rare (cf. 1.7).

A syllable is long if it contains a diphthong or long vowel, η and ω are always long; α, ι, and υ are either long or short (check LSJ [Liddell-Scott-Jones Greek-English Lexicon]); ε and ο are always short. A syllable containing a short vowel is long if the vowel is followed by two consonants (including the double consonants ζ, ξ, and ψ). Thus, in 1.1, although Ἴπποι contains a short iota, the first syllable is long. *Exception*: a plosive (ηβφ κγχ τδθ) followed by a liquid (λρ) or nasal (μν) need not produce a long syllable; examples are at 8.3, 8.46, 16.1.

Note the two following provisos with the above rules. (1) If a word ends in a naturally long syllable or diphthong and is followed by a word beginning with a vowel, the final vowel or diphthong may be shortened (e.g., 1.26 ἐπει` οὔτι). This process is called correption and may also occur within a word. (2) Two vowels in succession not forming one of the usual diphthongs may be read as one long syllable (e.g., 1.17 πυλέων). This process is called synizesis."

9. Henn, Martin. 2003. *Parmenides of Elea. A Verse Translation with Interpretative Essays and Commentary to the Text*. Westport: Praeger Publishers.

Contents: 1. Parmenides and his Predecessors 1; 2. Translation of the Diels B-Fragments 23; 3. The Question of Being: a dialectic of alternative paths 31; 4. Fragment B3: the metaphysical unity of Thinking and Being 51; 5. Parmenides' closed-loop concept of time and the illusion of linear time-

consciousness 67; 6. Necessity, possibility, and contingency 85; 7. The teachings of the Goddess 101; 8. The Diels and Kranz Greek text in the order translated 109; 9. Commentary on the Greek 115; Select bibliography 143; Index locorum: the Diels B-Fragments of Parmenides 145-147.

"Parmenides recounts a dream voyage through the stars in a chariot drawn by swift chargers and beautiful attending maidens. Traveling through profound darkness the train arrives at the gates of the ways of Night and Day. Avenging Justice holds the keys; yet the maidens persuade her to open the gates to insure safe passage to the palace of the Goddess, who teaches Parmenides the Truth of Being.

The Goddess instructs Parmenides on two ways of thinking inquiry: The one, that Being is, and must always be; the other, that Being is not, and cannot ever be. She then counsels him not to follow the second path, the Way of Opinion, as it represents the errant path of mortal minds, which do not recognize the eternal Essence of all that is. But by following the Way of Truth, Thinking and Being are found to be the same; while the unlimited source of all there is is ungenerable, indestructible, systematic, and whole, subsisting in one eternally present "now" which transcends the passage of time. The circumference of the cosmos holds the clue to Being's unified simplicity. The Goddess then tells Parmenides to learn the opinions of mortals, so that he may never be outmatched in argument. Finally, the Goddess speaks of Destiny who rules sexual intercourse and painful birth. She warns that everything contained in the mortal cosmology is bound by Necessity to inevitable decay; but Being shall never cease to be.

The following translation recognizes Hermann Diels' original numbering of the B-fragments from *Parmenides Lehrgedicht* (1897), which are listed on the left in parentheses. But Diels' original ordering of the B-Fragments has been modified to register a coherent flow of ideas and images." (p. 23)

10. Geldard, Richard G. 2007. *Parmenides and the Way of Truth*. Rhinebeck: Monkfish Book Publishing Company.

Table of Contents: Introduction VII-XI; Chapter 1. Parmenides of Elea 1; Chapter 2. The Fragments 20; Chapter 3. Wrestling with Parmenides 52; Chapter 4. The Way of Truth 92; Chapter 5. From Being to Consciousness 109; Glossary 127; Suggested reading 128; Endnotes 129-131.

"Parmenides wrote a long poem entitled "On Nature." We have several fragments of the poem, preserved by later historians, philosophers and commentators.

Two-thirds, possibly more, is lost. We know a little more about the whole, fortunately, from Plato's dialogue "Parmenides," which describes a visit by the aging philosopher to Athens, where he meets with interested intellectuals, including a young Socrates. A small industry of interpretation has evolved out of the complexity of Plato's dialogue, leading to varied conclusions about the missing sections. But, more of that below.

The "Nature" of the title is the Greek *physis* [foo-sis], a term that expresses a visionary concern for "the nature of things," not just the tangible facts of physical nature. It appears, in fact, that most Presocratic truth-seekers expressed their views in a similar way, entitling their work "On Nature" as a sign that they were not writing a poem entitled "On the Gods." *Physis* was the general topic, and each thinker made a contribution, some in more abstract language than others. That Parmenides chose the verse form was also an accepted means of expression, following Hesiod and, to some extent, Homer. Verse was the language of revelation. The rhythm and sound of the hexameters' elevated thought above ordinary discourse. In more recent times, we have the example of Shakespeare, who employed prose in his plays only for fools and madmen. Iambic pentameter was reserved for rational (albeit sometimes brutal) discourse.

It is also useful to remember that the Greeks spoke their verse aloud. Silent reading was unknown until the Roman era. The eye followed the unbroken line of letters, the words rolled off the tongue, were caught by the ear, and only then could meaning be grasped by the understanding. Since Greek is an inflected language, word order depends on sound, how the words flow together, how vowels and consonants combine to

produce a smooth, harmonic measure. As a result, the hard consonants do not bump into one another. A vowel invariably intercedes to smooth the way. Word order then, is based on auditory effect, not grammar, and meaning arises as much from this effect as from the vocabulary, making translation into English a challenge, especially from poetry to poetry. Poetic licence is required, even encouraged.

As flawed as the following transliterated verse is, it is a serious attempt to capture both the sound and sense of Parmenidean revelation, which is what his poem was meant to be. The result, hopefully, is revealed truth, arrived at in communion with divine communion, at least insofar as Parmenides experienced it. The poem emerges from the force of Persuasion, the goddess who keeps company with Justice, whose task it is to guard the gates giving access to the realm of higher knowledge. The youth, or *kouros*, gains admittance to this realm through his desire for truth and comes from the strength of eros in his soul. It is access that anyone who is worthy and who deeply desires such communion can attain. On the basis of what is traditionally called the 'proem,' his journey into the cosmos to the goddess, we are asked to accept that Parmenides was granted admittance to a special realm and once in the presence of divinity, received the Way of "Truth." (pp. 20-21)

11. Coxon, Allan Hartley. 2009. *The Fragments of Parmenides: A Critical Text with Introduction and Translation, the Ancient Testimonia and a Commentary*. Las Vegas: Parmenides Publishing.

Revised and expanded edition edited with new translations by Richard McKirahan and a new Preface by Malcolm Schofield.

Contents: Preface to the revised and expanded edition by Malcolm Schofield VII; Editor's Note by Richard McKirahan XI; Preface XIII-XIV; Introduction 1; Text and translation of the Fragments 45; The ancient *Testimonia* with English translation 99; Commentary 269; Appendix 389; Concordance 400; Indexes & Glossary 403-461.

"The book's other major contribution to scholarship is its collection of *testimonia*. Coxon's is a much fuller selection than

was provided by Diels and Kranz in *Die Fragmente der Vorsokratiker*. It is ordered not thematically (as in Diels-Kranz), but in chronological sequence of the writers who transmit the information: whether in their own extant texts (as with Plato or Aristotle), or -- where those texts do not survive -- as recorded in later authors (e.g. for Eudemus, in Simplicius; for Posidonius, in Strabo: though here Coxon usefully refers in the first instance to a standard modern collection of fragments and testimonia of the cited author wherever possible). To enhance the accessibility of the new edition, an English translation facing the original Greek or (occasionally) Latin has been prepared by Richard McKirahan.

Coxon himself indicated -- in handwritten notes on two copies of the book -- where he thought revisions or corrections were needed to the first edition. In this second edition any such instance amounting to more than correction of a typographical error is pointed out in a corresponding footnote (above Richard McKirahan's initials). One extra testimonium is added: Xenocrates, T16a. Really substantial revisions are in fact few and far between. The most significant comes in the commentary on lines 34-41 of Fragment 8, where Coxon had revised his understanding of Parmenides' grammatical construction at lines 35-36, and had rethought the overall purpose of the passage. Here as elsewhere the text of the first edition is preserved in a footnote.

Richard McKirahan's translation of the *testimonia* is not the only extra help offered to the reader. There are *also* English translations of all Greek words and phrases throughout the Introduction, Commentary and Appendix, and line numbers have been inserted in the *testimonia* themselves to enhance ease of reference. Highly abbreviated forms of names of ancient authors and works have been spelled out more fully. New supplementary material includes the Greek-English Index and an English-Greek glossary to the translations of the *testimonia*. Finally, as a way of enabling the looking up of page references based on the pagination of the first edition, the original page numbers are provided here in square brackets inside the margins." (pp. VIII-IX)

12. Palmer, John. 2009. *Parmenides and Presocratic Philosophy*. New York: Oxford University Press.

Appendix: *The Fragments of Parmenides' Poem*. Introduction 350; Text and translation of the Fragments 362; Textual notes 376-387.

"The notes that follow discuss those places in the fragments where any real uncertainty remains about what Parmenides wrote. Since their aim is merely to explain why the readings printed above have been adopted (in places where this has not already been made clear in the appendix's introduction), I have tried to keep these notes as brief as possible. For the most part, readings reflecting the emergence of scholarly consensus have been printed without comment. Since, for reasons already indicated, it has not been possible to furnish an *apparatus criticus*, manuscript variants are recorded here when necessary and as reported in recent editions. Instances where the manuscripts preserve viable alternatives, or even readings genuinely useful for determining what Parmenides himself wrote, are less numerous than one might suppose." (p. 376)

13. Graham, Daniel W., ed. 2010. *The Texts of Early Greek Philosophy: The Complete Fragments and Selected Testimonies of the Major Presocratics*. Cambridge: Cambridge University Press.

Translated and edited in two volumes by D. W. Graham.

Vol. I, Chapter 6 *Parmenides* pp. 203-244.

14. Mckirahan, Richard. 2011. *Philosophy before Socrates. An Introduction with Texts and Commentary*. Indianapolis: Hackett.

Second revised edition (first edition 1994).

See Chapter 11, *Parmenides of Elea*, pp. 145-173.

Concluding remarks: "Parmenides' *Truth* left a lasting mark on philosophy. The present account has been generous in its assessment of this section of his poem. It would be easy to fault him for making our task more difficult than it need be. His

language is frequently obscure, as is his argumentation. It is frequently an uphill battle to discern how his train of thought proceeds. There are gaps in the reasoning and extensive use both of terms that may (or may not) be intended as near-synonyms (but how near?) and of figurative, even metaphorical language that needs to be interpreted. Objections can be raised against the arrangement of the arguments, since it is not always clear where one topic leaves off and another begins. In general, it requires a great deal of sympathy to find a way for the arguments go through. My reason for interpreting Parmenides charitably is that only in this way can we appreciate the interest, the potential, and the challenge of his ideas and arguments. Only if we make the effort to unravel his tortuous reasoning and fill in the gaps in ways congenial to his point of view can we hope to understand his enormous influence on philosophy,(57) And enormous it was. With Parmenides Greek philosophy began to become more systematic. Argument played an increasingly important role in the exposition of theories. The subsequent history of Presocratic philosophy is often seen in terms of responses to Parmenides: Zeno and Melissus developed his ideas, while Anaxagoras, Empedocles, and the Atomists (to name only the most important figures) accepted that there is no generation from or perishing into nothing and composed their cosmologies on this basis, even while disagreeing on other points of Eleatic doctrine." (p. 173)

(57) One of Melissus's virtues is that he presents his numerical monism in a clearer and more systematic way. See Ch. 15. [Melissus of Samo, pp. 293-302]

15. Campbell, Edward H. 2011. *The Poem of Parmenides. A new translation with text and commentary*. Bozeman, MT: Inopibus Press.

Preface: "For those who are concerned with such matters, in English, no good translation of the Poem of Parmenides has been produced; the John Burnet (1892) translation being incomplete, and, from what was done, is not even close to good enough for the contemporary student. I have, therefore, produced one. I will not reiterate the biography of Parmenides, whereas it is available elsewhere in many places, and will not

interpret his philosophy, which has been done poorly, with meager knowledge of it; since a good translation has, until now, been non-extant. I have rendered only his poem, in translating it putting in enough of myself by translating. The student should note, moreover, that, of his poem, what is extant comes to us in fragments; the enumeration of those fragments in the table of contents to this work is a supposed logical order handed over to us by the textual critics of the 19th century. We accept as correct their text as an article of faith; if they did their work right, and we believe they have, then what we do have is the best text we shall ever have. Keep in mind, however, each part of the poem is a fragment. We cannot, therefore, know what went before or what came after each of them, leaving context to conjecture. Like all things mortal, my translation and commentary are flawed; I must confess my philological powers often failed me. To the best of my knowledge, nevertheless, is the best English translation, ad hoc, you will find. In view of the foregoing, let it, then, be a spring-board for a new study of this worthy author. For my part, I shall rely on my readers to supply the necessary corrections when needed."

19. *Parmenides*, pp. 3-151.

"Parmenides is the author of a single poem in dactylic hexameters. Its text was preserved in its entirety at least until the time of Simplicius (sixth century AD), who seems to have recognized that he was making more probable its survival, at least in part, by citing large extracts from it. One hundred sixty-one lines have reached us, the vast majority of these thanks to him. We possess almost the entirety of the introduction (or "proem"), a very large part (90 percent, according to Diels) of the first of the two grand sections announced at the end of this introduction, and a small fraction (barely 10 percent, again according to Diels) of the second part. It is probable that the whole poem did not exceed the length of one of the shorter books of Homer's epics, between three hundred and four hundred lines." (pp. 3-4)

(...)

"Although we possess only few verses originally belonging to the second part of the poem, two programmatic passages (D8, D9) and the doxographic reports give us a fairly precise idea of its contents. This part was in any case Parmenides' attempt to improve on his predecessors' attempts to explain the world. His starting point is constituted by two principles, which he calls "forms" (*morphai*), Fire (or Light) and Night, which mortals are said to have posited (this implies a certain arbitrariness). Each principle is in a relation of identity to itself, in the image of being, but it is also opposed to the other one: the fire of day is mild and light, the night is dense and heavy. Their mixture, out of which the world has progressively issued, is the work of a divinity with a demiurgic function. The domain covered by the explanations given was broad, reaching from the nature of the stars and their trajectories to the reproduction of living beings. It is understandable that antiquity could have considered Parmenides as a full-fledged "natural philosopher," despite the Platonic-Aristotelian tendency to consider only the first part of his poem and to treat his cosmophysiology as being at best secondary. It is true that Parmenides' immediate disciples, Zeno and Melissus, renounced all explanation bearing on the world, which they considered simply inconsequential from the point of view of the doctrine of being." (p. 6)

17. McKim, Richard. 2019. "Parmenides: The Road to Reality. A New Verse Translation." *Arion* no. 27:105-118.

"parmenides divided his poem into two parts, traditionally called "The Way of Truth" and "The Way of Seeming". The first, presenting his vision of being, has almost entirely survived.

It begins by describing a magical airborne chariot ride that transports the poet to the home of a nameless goddess who reveals the vision to him. It concludes as she introduces her cosmological account of the sensory world. This cosmology of illusion occupied the second, much longer part of the poem, but the ancients were apparently too bedazzled by the first to take much notice, and so the second is almost entirely lost.

Many commentators feel baffled as to why the goddess bothered with such an elaborate account of a world she disparages as unreal, but she supplies the answer herself at the end of part one: “in order that none among mortals shall ever surpass you in knowledge.” Parmenides has anticipated the objection that his theory of being leaves the sensory world unexplained, and responds in effect: “I can explain it better than anyone—by explaining why you think it exists when it doesn’t!” Ancient Greek culture was nothing if not competitive.

Nevertheless, I bow to the indifference of antiquity by omitting the few tattered remnants of part two. My translation consists of all the major fragments of part one, which I’ve retitled “The Road to Reality” and which, with a bit of arranging, can be read as a continuous text that’s pretty much complete.” (pp. 107-108)

French translations

1. Riaux, Francis. 1840. *Éssai sur Parménide d'Élée suivi du texte et de la traduction des fragments*. Paris: Librairie De Joubert.

Texte et traduction pp. 206-230.

2. Beaufret, Jean. 1955. *Parménide. Le Poème*. Paris: Presses Universitaires de France.

Reprint 1966: Table. Avertissement de l'éditeur V; Avant-propos VII-VIII; Introduction è al lecture du *Poème* de Parménide 1; Fragments 75-93.

Avant-propos (1955) "L'origine du présent travail est une traduction du Poème de Parménide laissée par Jean-Jacques Riniéri, lorsqu'en août 1950 il quitta Paris pour le voyage en Hollande dont il ne devait pas nous revenir.

La traduction de Riniéri, relevée par Olivier Revault d'Allones, me fut remise en 1951 par Roger Stéphane, qui me demanda d'écrire quelques pages d'introduction.

Le projet d'introduction convenu au départ se transforma, au cours des années qui suivirent, en une méditation presque incessante et souvent découragée des difficultés de plus en plus

redoutables du texte parméniénien. Cette méditation m'amena à reprendre d'un bout à l'autre la traduction de Riniéri. Il semblait d'abord qu'il y avait lieu surtout de la compléter. N'étaient pas traduits en effet les Fragments IX, X, XI et XVIII. Mais la traduction des vers 30 et 35 du Fragment I et des vers 60 et 61 du Fragment VIII manquait également. Or l'interprétation de ces vers a été historiquement décisive pour l'ensemble, car c'est en eux que se concentre toute la difficulté du texte dont ils déterminent l'ajointement. C'est ainsi qu'un travail qui voulait n'être d'abord que la mise au net d'une traduction a finalement abouti à une autre traduction, caractérisée par une situation différente de la *doxa* par rapport à l'*aletheia* et du *noein* par rapport à l'*einai*.

Cette traduction nouvelle est une aventure qui n'aurait sans doute jamais été tentée sans l'entreprise initiale de Riniéri. Elle a été menée à son état actuel avec le concours de Michel Gourinat, Francis Olivier, André Wormser.

Plusieurs entretiens avec Martin Heidegger ont été d'une aide inestimable en ce qui concerne l'essentiel.

Jean-Jacques Riniéri avait suivi le texte que proposait Diels (*Die Fragmente der Vorsokratiker*, t. I, 1912). Les Fragments sont présentés ici selon l'ordre adopté par Walther Kranz dans la récente réédition du même ouvrage (1952). Le texte grec est celui de Kranz, sauf quelques modifications (vers 7, 12, 19, 36, du Fragment VIII ; cf. notes aux passages indiqués).

Qu'il me soit permis de penser que l'interprétation proposée dans les pages qui suivent demeure fidèle à l'initiative, à la passion qui portaient Jean-Jacques Riniéri à la découverte de Parménide."

Les variations du texte 234; Partie III: Bibliographie parménidienne 237-272; Table thématique 273; Supplément de la bibliographie 276; Oridre chronologique du Supplément de la bibliographie 288; Ouvrages cités 289; Auteurs cités 294; Passages cités 298-300.

"Notre propos n'est pas d'embrasser la totalité de la pensée de Parménide. Les fragments de son Poème qui ont été conservés offrent un champ propice à l'orientation de la recherche dans des directions très diverses: c'est d'ailleurs ce qui fait la richesse de Parménide. La preuve la plus convaincante de la pérennité d'un système philosophique est le fait qu'il est inépuisable. Là où l'exégète a cru trouver le noyau de l'enseignement d'un penseur déterminé, une analyse effectuée dans une autre direction découvre de nouveaux éléments sur lesquels se fonderont de nouvelles théories. Dans ce sens, le cas de Parménide est particulièrement représentatif. Pour l'antiquité classique, sa place a été assurée par sa défense véhémement de l'unité de l'Être (4), grâce à laquelle le philosophe d'Élée est devenu "vénérable et redoutable" (5). Plusieurs siècles plus tard, en revanche, la philosophie idéaliste a cru trouver dans l'identification de l'être et de la pensée le noyau central de la philosophie parménidienne, et, avec lui, un antécédent illustre de son propre système. Enfin, dans les dernières années, ainsi que l'a observé Ch. H. Kahn, on préfère faire de Parménide soit "un philosophe du langage au sens de Frege ou Wittgenstein", soit "un métaphysicien de l'Être, à la manière de Hegel ou de Heidegger" (6).

Nous ne prétendons pas avoir trouvé la solution, c'est-à-dire le point de vue à partir duquel la philosophie de Parménide révélera la clé de sa fertilité. L'état fragmentaire dans lequel nous est parvenu son Poème nous place en état d'infériorité par rapport aux penseurs classiques pour émettre un jugement sur la totalité de son oeuvre. C'est pour cela que nous avons préféré limiter notre étude à un seul problème. Toutefois, nous avons choisi un problème qui, à notre avis, occupe une place de choix dans les fragments du Poème que nous possédons actuellement: le problème des chemins de la connaissance, des voies de la recherche. Ces *odoi dizhsios*; sont de véritables thèses que la Déesse révèle au poète (et que le poète, à savoir Parménide, révèle au lecteur-auditeur), le long desquelles la pensée peut s'acheminer pour obtenir soit une explication cohérente de la réalité, soit une "trompeuse série de paroles" (fr. 8,52). C'est dans cette alternative, présentée sous forme de thèses contradictoires, que réside l'enseignement parménidien; et c'est précisément cet aspect dichotomique de la présentation des problèmes de la part de Parménide que nous tenterons de mettre en relief dans notre travail.

Pour atteindre cet objectif, nous proposons d'analyser certains éléments généralement admis dans la pensée de Parménide, mais qui, dans la plupart des cas, ne sont pas poursuivis jusqu'à leurs conséquences extrêmes. Dans ce sens, nous pouvons affirmer que nous allons tenter de donner une version 'extrémiste' de Parménide, même au risque de tomber sous le coup de la critique de R. Kent Sprague, pour laquelle les érudits qui étudient la philosophie éléatique sont généralement plus éléates que les philosophes en question (7). La quasi totalité des chercheurs qui se sont intéressés à la philosophie de Parménide s'accordent sur le fait que sa pensée est structurée autour du principe de la non - contradiction (8). Nous n'affirmons pas ni ne nions pour autant que Parménide ait "inventé" ce principe, ni qu'il ait eu conscience de son utilisation, mais il ne faut pas oublier que le principe du tiers exclu apparaît également chez Parménide (9) -- principe qui renforce celui de la non-contradiction et rend contradictoires toutes les oppositions que nous rencontrons tout au long de son Poème. Sur la base de

cette constatation, dont nous fournirons des exemples tout au long de notre travail, nous trouvons chez Parménide un dualisme méthodologique rigoureux qui sépare, "comme d'un coup de hache", l'espace conceptuel, ainsi que l'a remarqué P.M. Schuhl à juste titre (10), en deux régions opposées. Cette dichotomie, véritable transposition sur le plan philosophique de la bifurcation mystique que nous trouvons dans les récits orphiques et pythagoriciens (11), constitue, à notre avis, la structure primordiale du raisonnement parméniénien. C'est à cette dichotomie qu'obéit la présentation de son enseignement sous la forme de deux thèses contradictoires: les deux chemins de la recherche.

Notre analyse cherchera à établir le contenu de ces thèses contradictoires ainsi que leur portée, c'est-à-dire le domaine auquel elles s'appliquent et les conséquences qui dérivent de leur acceptation rigoureuse (12). Nous partirons pour cela du fr. 2, où apparaît la première énonciation des "deux seuls chemins de la recherche", et, une fois établie la valeur des deux thèses, nous étudierons leur réapparition (reliée à des problèmes différents) dans les fr. 6, 7 et 8. Ensuite, nous tenterons de découvrir quelques correspondances possibles entre ces chemins de la recherche et le récit mythique du voyage entrepris par le poète-philosophe, tel qu'il figure dans le fr. 1. Enfin, nous analyserons la nouveauté que présente le système de Parménide par rapport à la pensée de ses prédécesseurs." (pp. X-XIII).

5. Conche, Marcel. 1996. *Parménide. Le Poème: Fragments*. Paris: Presses Universitaires de France.

Table des matières: Introduction 5; Abréviations bibliographiques. Bibliographie 9; Présentation. Les deux gestes de Parménide 23; I. L'allégories 41; II. La vérité 75: III. Le mythe 187; Conclusion 269; Index des sources 273; Index des mots grecs 277; Index des passages d'auteurs anciens 283-288.

"Pourquoi un poème? Sans doute parce que le poème, plus que la prose, est bâti pour s'inscrire dans les mémoires et pour durer: le support de l'affirmation l'être éternel doit, autant que possible, échapper à la puissance dissolvante du temps. De ce Poème ne subsistent que des fragments, dont l'un, conservé par

Sextus Empiricus, a toutefois trente vers, un autre, que l'on doit à Simplicius, plus de soixante.

Avec eux, les deux premières parties de l'ouvrage ont été préservées, semble-t-il, pour l'essentiel: d'abord le prooemium, le prélude, à teneur allégorique; ensuite la partie *pros Alethéia*, ou la révélation, par la seule voie du discours (*logo*), de la vérité de l'être. De la troisième partie de l'ouvrage, où était exposée la genèse mythique (au sens du *Timée*) du monde sensible, ne restent que des bribes. Notre travail, qui tient compte des éditions essentielles de Karsten (1835) et de Diels (1897), mais aussi de nombre d'autres travaux, vise à donner une interprétation philosophique de l'ensemble. Dans le Sophiste, en 217c, Socrate déclare, disions-nous, avoir entendu Parménide "procéder par interrogations". C'est pourquoi, en 237a, Parménide est dit s'exprimer "aussi bien en prose qu'en vers: le mot prose renvoie aux discussions orales auxquelles il a été fait allusion dans ce même dialogue. Il n'a pas valeur de témoignage quant à une oeuvre écrite de Parménide autre que son Poème (même si l'auteur byzantin de la Suda, s.v. "Parmenides", a cru le contraire)." (pp. 7-8)

6. Cassin, Barbara. 1998. *Parménide. Sur la nature ou sur l'étant. La langue de l'être?* Paris: Éditions du Seuil.

Table: Présentation 9; Parménide, *Sur la nature ou sur l'étant*. Texte et traduction 69; Glossaire 119 Dossier 252; Bibliographie 295; Index des mots grecs 305; Index des passages cités de Parménide 313-317; Remerciements 318.

"Pour nous modernes, c'est la grande philologie allemande du xixe siècle qui est le maître d'oeuvre de cette restauration créatrice de Parménide, en particulier grâce à Hermann Diels. Car Diels opère à toutes les étapes requises pour bâtir. En amont : il édite les textes des principaux citateurs, essentiellement Simplicius qui, au vie siècle apr. J.-C., soit dix siècles après Parménide, a transmis dans son commentaire à la Physique d'Aristote et au Ciel dix des dix-neuf fragments du Poème, dont le plus long de tous (une séquence de 52 vers composant le fragment VIII) ; assez pour reconstruire un tout différencié, avec une première partie, sous le signe de la

"vérité", qui décrit la route de l'être et sa distinction d'avec celle du non-être [fr.II à VIII, 51], et une seconde partie, sous le signe de l' "opinion", qui expose les erreurs des mortels, sous forme d'une physique, d'une cosmogonie ou d'une cosmologie [VIII, 51-XIX]. Mais Diels a d'abord plus largement, dans les Doxographes grecs, élaboré une perception d'ensemble de la doxographie, c'est-à-dire des voies de la transmission des textes et des doctrines à travers toute l'Antiquité, ayant pour but de situer les sources, d'évaluer leur fiabilité et les types de déformation auxquels s'attendre. Puis il travaille au tissage même du texte : il recense et découpe les fragments en les distinguant des témoignages, les établit en comparant d'abord les sources, puis les manuscrits et les leçons, décide de leur ordre, les traduit aussi, en décidant des archaïsmes recevables. Il en produit pour finir une interprétation plus ou moins standard ou stabilisée, qui aboutit à la Bible toujours inégalee, Die Fragmente der Vorsokratiker, élaborée en 1903 et dont la sixième édition, améliorée par Walther Kranz en 1951-1952, n'a cessé d'être rééditée, traduite et adaptée en toutes les langues (1).

Mais toutes ces étapes constitutives, qui s'entourent d'un maximum de précautions réellement scientifiques, sont liées dans des enchaînements de procédures codouteuses et co-fictives d'une légitimité, au moins aussi, auto-proclamée. D'autant qu'elles sont, à la base même, bâties sur les pratiques doxographiques de la citation, qui travaillent le sens en ayant l'air de livrer la lettre ou le fait. C'est tout cet ensemble de pratiques et de procédures qui se trouve stratégiquement oublié et approprié dans les interprétations philosophiques ultérieures du Poème de Parménide, qui viennent ajouter leurs cartes à ce château.

Pour aborder un objet si redoutable et si construit, il me semble pourtant que la méthode est simple. Il faut aller aux points névralgiques, là où se partagent les interprétations. Et tenter d'en comprendre l'ancrage dans le texte: comprendre comment la phrase grecque de Parménide, et peut-être la langue grecque elle-même, est prise dans ce partage. Mon projet n'est pas, ou le moins possible, d'ajouter une auto-proclamation de plus: je

voudrais plutôt faire percevoir sur quelques paradigmes à enjeux lourds le degré d'ouverture maximal dans la fabrication du texte et du sens. Le plus facile, le plus utile peut-être aussi, même si de très nettes évolutions se font sentir qui disqualifient ces taxinomies à la serpe, est d'instruire l'antagonisme entre interprétations dites analytiques (anglo-saxonnes, avec Owen et Barnes par exemple) et herméneutiques (plutôt allemandes, ou germano-françaises, avec Heidegger et Beaufret (2). On verra que les points de partage des interprétations reconduisent effectivement à l'idée qu'on se fait de la langue : d'abord une langue naturelle, le grec, qui se mesure à une rationalité, donc à un formalisme, d'avaà la fois universels et perfectibles; ou d'abord une langue pensante, le grec, qui se mesure à l'historialité de la pensée." (pp. 12-14)

(1) De H. Diels: *Doxographi Graeci* (1879), *Simplicii in Aristotelis Physicorum Libros quatuor priores Commentaria* (1882), *Parmenides Lehrgedicht* (1897), *Poetarum Philosophorum Fragmenta* (1901). Le Diels-Kranz, *Die Fragmente der Vorsokratiker* (Dublin-Zürich, Weidmann), a été traduit et "édité" très tardivement en français, et de manière souvent fort peu satisfaisante, par J.-P. Dumont, avec la collaboration de D. Delattre et J.-L. Poirier, Paris, Gallimard, 1988. Sur la construction dielsienne, voir mon *Si Parménide*, Paris-Lille, 1980, p. 105-121.

(2) Voir en particulier, sur l'exemple du fr. III, l'entrée ANALYTIQUE/ HERMÉNEUTIQUE dans le Glossaire.

7. Bollack, Jean. 2006. *Parménide: de l'étant au monde*. Lagrasse: Verdier.

Table des matières: Avant-propos 7; Introduction 11; Notice 65; De l'étant au monde 69; Bibliographie 331-339; Répertoire des Fragments discutés 340; Index thématique 341-344.

"Ce livre-ci repose sur une lecture de ce que son auteur, Parménide, a considéré en premier lieu comme un livre, un ouvrage composé pour être déchiffré, suivant un plan d'ensemble très élaboré. Nous n'avons pas le livre, pas le tout. Une totalité mi-présente (à déchiffrer), mi-absente (à construire) se précise progressivement au cours du travail

d'élucidation des phrases. La composition de l'ensemble a sa logique. La matière de cet ensemble est finalement assez étendue pour faire voir dans le détail ce qu'était le projet, et donc suffisante pour découvrir la signification de l'oeuvre, pour son auteur, en son temps, dans la situation historique où elle a été conçue. Elle a visiblement été travaillée pour servir à une pratique savante de la lecture, se mettant elle-même livresquement en scène comme les oeuvres savent le faire partout d'elles-mêmes. Sinon, nous ne disposerions pas de ce réseau dense d'interrelations verbales, qui permet de relier un noyau à une fin, et d'arriver au bout du compte à faire parler une cohérence, malgré les lacunes.

On part de ce que nous avons, mais il faut y inclure, en dépit de sa fragmentation, l'idée que l'on se fait de ce que fut le livre quand il a été écrit; il importe de le dépouiller de tout prophétisme. Les textes que l'on lit, les fameux "fragments", cités par Plutarque (Ier-IIe siècles), Sextus (II siècle) ou Simplicius (Ve-VIe siècles), y aident. Les résumés anciens de la doctrine (la doxographie) les complètent tant bien que mal. On regrette d'autant plus ce qu'on n'a pas qu'on en soupçonne le contenu, sinon la façon. Nous avons les magnifiques résumés, les doxai (opinions), qui forment le corpus de ce que les spécialistes antiques et modernes appellent doxographie. Ces "opinions" répondent à une interrogation, appelée par les problèmes que l'on s'est posés sur la nature et sur l'homme, deux siècles plus tard.

Théophraste, le disciple d'Aristote, les a réunies dans un ouvrage perdu, intitulé *Les Opinions des physiciens*, largement utilisé dans l'Antiquité et assez merveilleusement reconstitué sur la base de ces utilisations stratifiées par la science moderne. L'ouvrage de Hermann Diels, qui les a éditées, est largement à l'origine de l'intérêt accru manifesté pour les "présocratiques" au début du XXe siècle, il y a maintenant plus d'une centaine d'années (les *Doxographi Graeci* sont de 1879). Le nom d'Aétius, qui signale le recueil le plus cohérent (100 ap. J.-C.), est celui d'un compilateur obscur (choisi par Diels), utilisateur d'une autre compilation, les *Anciennes Opinions (Vetusta Placita*, autour de 50 ap. J.-C.). La doxographie informe;

parfois elle reproduit ses sources, mais elle condense, elle aménage et elle simplifie aussi. Il faut tenir compte du point de vue de l'interrogateur. N'empêche que l'auteur du recueil, dont nous n'avons, encore une fois, que des fragments, avait, à la suite de Platon et d'Aristote, le maître de ces aperçus, un sens du résumé et des systèmes, et qu'il nous aide à les approcher. Parménide y tenait une place évidente, même si elle est moins importante que celle d'Empédocle et des atomistes. "Le Monde" (à savoir la cosmologie) lui doit ici pour une bonne part sa reconstitution. Son système était différent des autres, plus éloigné et autrement orienté, pouvant servir de contrepoint. Dans le meilleur des cas, par exemple dans celui de la genèse, les résumés reproduisent une lecture précise, un degré second qui nous ramène à l'oeuvre. L'accès à la chose même, serait-il indirect, nous arrache à l'idée que, souvent inconsciemment, on prête à l'auteur.

Le texte impose une lecture neuve. Il apprend ce qui s'est dit dans l'histoire, à l'époque de Parménide, avant qu'il ne figure dans une histoire de la philosophie. L'histoire existe pour nous, mais elle existait aussi pour l'auteur. Parménide s'est situé par rapport à elle. Il s'est séparé des philosophes ioniens, prouvant en même temps qu'il s'y rattachait en profondeur. L'invective (fr. 6 et 7) prend son sens. La coupure, ou la rupture, ne se comprend que si on la pose dans ces termes. Si la lecture critique tient un rôle essentiel, c'est d'abord que le poème s'est écrit d'une certaine façon, pour être lu de cette façon-là. L'écrit répond à une attente, et la suscite. Ce n'est pas seulement la communication d'un savoir, mais une initiation poétique, qui, pour libre et éclairée qu'elle soit, reproduit, dans leur style, les pratiques religieuses dont elle s'est détachée. Mais la poésie ne retraduit aucune pensée; c'est plutôt la pensée qui se dégage de la poésie." (pp. 12-15)

10. Année, Magali. 2012. *Fragments. Poème*. Paris: Vrin.

Texte et traduction de Magali Année; précédé de *Énoncer le verbe être* (pp. 9-146).

"Ce qui est proposé, dans ce bref ouvrage, est avant toute chose un commentaire linguistique du poème de Parménide. Aussi est-ce pourquoi c'est par lui qu'il commence. Comme on peut s'y attendre, c'est le fragment 8 DK qui y est le plus sollicité. Il ne fait pas, cependant, l'exclusivité.

Le texte des fragments, que l'on trouve à la suite du commentaire, n'est pas une édition critique. Consciente de la complexité d'une tradition où les variantes peuvent être imputables non seulement à l'inadvertance de quelques copistes, mais aussi, "dans le cas de Parménide, à des manipulations tendancieuses", à l'origine de "téléscopages" (1) bien connus des historiens de la philosophie, je me suis fiée pour l'essentiel à la dernière édition Diels-Kranz, toujours de référence, préférant cependant, comme d'autres, revenir parfois aux manuscrits.

Quant à la traduction, elle est nouvelle, comme peut l'être l'une des multiples traductions grammaticalement possibles, d'une langue poétique souvent linguistiquement ambiguë. Elle ne prétend donc à rien autre qu'à découler du commentaire, c'est-à-dire à laisser transparaître çà et là les rouages linguistiques du poème, révélé par celui-ci. C'est une traduction-substrat, en quelque sorte, qui courrait en deçà, sous, ou avec, les autres traductions possibles." (p. 7).

"Il Poema di Parmenide, insieme ai frammenti di Eraclito, costituisce un testo base di riferimento del pensiero occidentale. In particolare, il Poema di Parmenide apre quelle vie che il pensiero greco ha seguito in tutto il suo corso: la problematica dell'Essere e anche la problematica dell'Uno, sia pure con la preminenza della prima. I filosofi pluralisti immediatamente posteriori a Parmenide dipendono strutturalmente dall'Eleatismo. Platone e Aristotele, come ho già sopra ricordato, guadagnano i punti chiave del loro pensiero proprio nel tentativo di superare le aporie di Parmenide. Le due forme di metafisica in cui si esprime il pensiero greco, ontologia e benologia, hanno in Parmenide la loro fonte.

Dunque, il Poema di Parmenide si impone, in tutti i sensi, come uno dei testi-base per eccellenza del pensiero occidentale.

La traduzione del Poema che qui presento, è stata da me fatta e rifatta più volte nel corso di un ventennio, in parte già pubblicata in altri miei scritti, ma qui per la prima volta per intero. Alcuni punti sono anche stati da me ripensati e corretti, in seguito alle discussioni fatte con Ruggiu.

Tenga presente il lettore che tradurre Parmenide è una delle operazioni più difficili. E la ragione sta nel fatto che linguaggio e concetto, immagine e pensiero, per i motivi che sopra ho già chiarito, in lui sono inscindibilmente connessi. Parmenide lo si

può tradurre solo se lo si capisce, o, meglio, la traduzione del Poema Sulla natura dipende in toto dal modo in cui se ne intende il messaggio filosofico. Il puro filologo, anche se è un conoscitore eccelso della lingua greca, non lo rende mai bene. In altri termini: nella misura in cui si approfondisce la comprensione filosofica del Poema, si riesce a tradurre anche la parola parmenidea. La traduzione dei suoi termini non può essere se non anche eo ipso la traduzione dei suoi concetti.

Naturalmente, e proprio per tale motivo, avere accanto alla traduzione anche il testo greco è essenziale. E per questo lo abbiamo riprodotto a fronte della traduzione.

La temperie spirituale originaria si intende a fondo solo calandosi nel linguaggio originario.

Delle testimonianze indirette non è stato invece riportato il testo greco, perché questa necessità non si presentava."

7. Cerri, Giovanni. 1999. *Parmenide di Elea. Poema sulla natura*. Milano: Rizzoli.

Sommario: Premessa 1; Introduzione: la riscoperta del vero Parmenide 11; Pagine scelte di critica moderna 111; Bibliografia 127; Poema sulla Natura - Frammenti (testo greco e traduzione italiana) 145; Commento 163-292.

"Pervenuto, dopo anni di studi e di ricerche, alla convinzione o alla presunzione (questo lo giudicherà il lettore) di aver compreso il senso generale del pensiero di Parmenide e, nel suo quadro, il significato preciso di quasi ogni frammento e verso, mi sono dedicato in maniera esclusiva all'illustrazione diretta di questa mia ricostruzione, documentandola punto per punto con gli argomenti necessari, di ordine sia interno che esterno, mostrandone cioè la congruenza con quanto sappiamo del poema e delle sue singole parti, della cultura e del linguaggio poetico dal cui seno il poema è nato.

Mi sono viceversa volontariamente preclusa la strada più usuale soprattutto nel campo della filologia classica, da me stesso seguita in tante altre occasioni, consistente nel costruire il proprio discorso sull'esposizione e la disamina di quelli proposti dalla critica precedente. Nel caso specifico ciò mi

avrebbe portato a scrivere centinaia e centinaia, se non migliaia di pagine, con il bel risultato di contraddire nei fatti lo scopo che mi ero prefisso: offrire finalmente una lettura di Parmenide piana e persuasiva, perché filologicamente fondata." (p. 7)

8. Zucchello, Dario. 2015. *Parmenide. Sulla natura*. Monza: Limina Mentis.

9. Parmenide. 2023. *Dell'origine*. Milano: Feltrinelli.

Test greco e traduzione italiana di Angelo Tonelli.

"Non si può decifrare Parmenide con occhiali meramente filosofici, senza obliterarne l'essenza, perché Parmenide non era un filosofo, ma molto di più.

Era un sacerdote di Apollo *Oúlios*, l'Apollo delle Guarigioni, iatromante e maestro-sciamano di sacralità alla maniera dei corrispettivi d'Oriente, induisti, taoisti, buddhisti: per questo non lo si può intendere se non si riannoda il filo che già nell'epoca della sapienza tramandata oralmente connetteva la *sophia* d'Occidente con quella orientale. E insieme era politico illuminato, alla maniera dei Pitagorici, e raffinatissimo indagatore della Natura, e fu il primo, emergendo dallo sfondo della tenzone dialettica originaria, a fornire un modello per l'articolazione razionale del pensiero, attraverso l'uso del principio di non contraddizione, terzo escluso, e altro. Ma per lui la *ratio* e la "scienza" erano ancelle della conoscenza che si ottiene per visione e *contatto*, il culmine conoscitivo e frutto del *noùs*, l'intuizione metafisica, che è il vero centro: il resto, pur significativo, è periferia." (*Introduzione*)

Texto griego, traducción y comentario

Segunda edición: *El Poema de Parménides*, Santiago, Editorial Universitaria, 1999.

"La presente edición ha sido concebida para dos tipos distintos de lectores. A quien se inicia en la filosofía o se siente simplemente atraído por una obra importante de la cultura griega le ofrece una traducción completa de los fragmentos junto con un comentario en que se expone lo que a juicio de este traductor es el sentido de cada uno de ellos.

Al lector más especializado le ofrece, además, una edición revisada del texto griego y una sección de notas críticas en que se alude a otros estudios y se proponen argumentos que avalan la interpretación defendida en el comentario. La bibliografía, por último, está al servicio de cualquier lector que quiera adentrarse en el hoy exuberante bosque de los estudios parmenídeos." (p. 12)

5. Calvo, Agustín García. 2001. *Lectura presocráticas I*. Zamora: Editorial Lucina.

3° edición con el Parménides renovado (primera edición 1981).

Índice: Presentación 9; Primera parte. Tentativa de redacción escrita 19; Segunda parte. Otros registros de lectura 133; Tercera parte. Edición crítica y versión rítmica de los Fragmentos de Parménides 183; Nota para la nueva edición 184; Apéndice 221-230.

"En fin, la tercera parte es una edición crítica de todos los fragmentos del poema de Parménides, con aparato bastante numeroso, noticia en español sobre las fuentes de cada fragmento y ocasionalmente introducción de su cita por los transmisores, y una versión rítmica en castellano. Con loable esfuerzo por parte de 'Lucina' y de los tipógrafos, se ha procurado una presentación nítida y digna, en que aparecen enfrentados en una página el texto del poema con el aparato

crítico y en la otra la noticia sobre las fuentes seguida de la versión.

Para el conocimiento de la tradición del texto y su estado en la práctica editorial hasta el momento, he tenido presentes sobre todo, junto a los *Vorsokratische Denker* de Diels-Kranz (3. ed. Berlín 1964), las ediciones de M. Untersteiner, Florencia 1958, L. Tarán, Princeton 1965, y E. Heitsch, Munich 1974: de otras, como las viejas de Brandis, Karsten y Stein, o las más recientes de Covotti y Hölscher, sólo he recogido noticias indirectas. Agradezco especialmente a Aníbal González la amistosa diligencia y docto escrúpulo con que ha compulsado para mí las ediciones más autorizadas de Simplicio, Sexto, Proclo y los otros citadores principales a quienes debemos los versos conservados del poema, permitiéndome enriquecer y corregir en varios puntos la anotación crítica y aun en un par de ocasiones el texto mismo.

Este texto que ofrezco se aparta en una buena docena de sitios del recibido en el Diels-Kranz, el Kirk-Raven y las ediciones anteriores, y tengo cierta confianza en que la mayor parte de esos cambios sean para bien de la fidelidad; y así también las alteraciones en la ordenación de los fragmentos, que en tres o cuatro puntos se aparta de la seguida en las ediciones habituales. En todo caso, a la cabeza de cada fragmento, junto al número de esta edición, he colocado el correspondiente de la de Diels-Kranz.

En cuanto a la versión rítmica, que es fruto de muchas redacciones sucesivas, me he permitido esperar que, leída con igual cuidado y detenimiento, pueda dispensarme por ahora de prolijos comentarios interpretativos." (pp. 15-16)

6. Parménides. 2007. *Poema: fragmentos y tradición textual*. Madrid: Itsmos.

Traducción y notas al texto griego, Alberto Bernabé.
Introducción, notas y comentarios, Jorge Pérez de Tudela.
Epílogo, Néstor-Luis Cordero.

"Para la conciencia crítica actual, en cambio, son pocas ya las convicciones de ese jaez que aún pueden mantenerse en pie. Y

es que se impone progresivamente la urgencia de revisar, por venerable que nos parezca, ese cúmulo enorme de decisiones, voluntarias o involuntarias, que marcan inevitablemente las apuestas de cada editor. Fue así como vino a producirse, recientemente, ese auténtico terremoto en los estudios presocráticos que fue el ataque lanzado por Néstor-Luis Cordero, epiloguista de este volumen, contra la fiabilidad de la propia compilación Diels-Kranz (unánimemente considerada, recordamos, como la Biblia del especialista⁽²⁾); ataque a raíz del cual todo estudio responsable y nos sirven el tenor de tales obras secundarias (secundarias con respecto al objeto de nuestro estudio, no por lo que hace a su valor

particular) se presentaran ante nosotros con todas las garantías y la simple fe que pudiéramos depositar en una tarea crítica impecable, inatacable, firme. Quienquiera que se asome, sin embargo, a la historia de la confección de tales ediciones críticas -y hasta de ediciones universalmente tenidas por «canónicas»- tendrá pronto motivos para despertar, si alguna vez cayó bajo su influjo, de semejante sueño dogmático." (pp. 5-6)

(2) 2 Circunstancia que explica muy bien por qué Denis O'Brien y Jean Frère, firmantes de la traducción del Poema de Parménides incluida en la mayor (y mejor) obra colectiva sobre Parménides producida en Francia en los últimos años (los *Etudes sur Parménide* [1987] dirigidos por Pierre Aubenque), se creen en la obligación de disculparse expresamente (tomo I, p. XVI, nota 3), señalando que la falta de tiempo les ha impedido preparar una auténtica edición crítica, que supondría consultar personalmente los manuscritos. (Las críticas de Cordero a la compilación Diels-Kranz* [D.-K.], basadas en un nuevo examen atento de los

manuscritos colacionados en Berlín, se encuentran en su ya clásica obra sobre Parménides: «Les deux chemins de Parménide dans les fragments 6 et 7». [1979])

8. Parménides. 2011. *El origen de las cosas: Fragmentos*. Madrid: Gredos.

Presentación y traducción de Conrado Eggers Lan y Victoria E. Juliá.

9. Padilla Gálvez, Jesús. 2015. *Parménides, ΠΕΡΙ ΦΥΣΕΩΣ - Sobre la naturaleza. El desarrollo de una gramática metafísica*. Madrid: Ápeiron Ediciones.

"Este libro desarrolla una lectura analítica del poema de Parmenides titulado «Sobre la naturaleza» (ΠΕΡΙ ΦΥΣΕΩΣ). Consta de tres partes. En la primera parte, se edita el texto original y presenta un aparato crítico. Pretendemos reunir los pasajes existentes de la obra, compararlos con otras citas y recuperar su estado primitivo para producir una edición acorde con los criterios modernos. En la segunda parte, se traduce el texto al castellano componiendo un poema análogo al original reproduciendo su sentido e indicando la transformación que se produce en el idioma original. La tercera parte consta de un estudio titulado «El desarrollo de una gramática metafísica» en la que se propone una nueva lectura del texto original basándose en la metodología analítica. Con este fin se pone especial énfasis en el estudio del lenguaje usado por Parmenides y en presentar las estructuras lógicas de los conceptos que usa en su obra. En dicha lectura ponemos especial atención en la introducción y uso de nuevas estructuras gramaticales que tendrán especial relevancia para el desarrollo de las propuestas metafísicas. El libro muestra que los instrumentos analíticos permiten presentar una variedad de lecturas diferentes sobre las que se asienta la discusión contemporánea."

10. Zubiria, Martín. 2016. *El poema doctrinal de Parménides*. Mendoza (Argentina): Universidad Nacional de Cuyo Facultad de Filosofía y Letras.

Texto griego, traducción y notas por Martín Zubiria. Con la colaboración de Juan José Moral.

"La presente edición no pretende competir con las ya muy meritorias que existen en español: Gómez Lobo, Bernabé,

Cordero. El fin que persigue no es el de introducir al lector en los entresijos de la discusión filológica y se aparta deliberadamente de aquel modo de proceder que consiste en añadir, después de cada afirmación o pregunta, en materia textual o doctrinal, las afirmaciones o preguntas que al respecto formularon fulano, mengano, zutano y perengano, para dejar luego al lector librado a su desconcierto. Hemos procurado evitar, en la medida de lo razonable, la erudición farragosa. En nuestro caso hemos creído que era posible tomar decisiones y cuando, después del debido cotejo de las muchas ediciones y comentarios existentes, hemos hallado una explicación o interpretación persuasiva, la hemos hecho nuestra, consignando entre paréntesis el nombre del autor de quien procede, para tratar de ofrecer al lector antes un texto de cuya luz pueda nutrirse el pensamiento, que una palestra para el ejercicio de la discusión erudita. Quisiéramos contribuir así a mantener viva la verdad, la bondad e incluso la belleza de la intelección parmenídea. Porque si el comienzo histórico del mundo griego está representado por algo pleno, maduro y, en su género, perfecto: los poemas homéricos, así también el comienzo de la Historia de la Metafísica nos descubre algo no menos pleno, maduro y perfecto, “asombroso de ver” (θαῦμα ἰδέσθαι!): “lo que es”, el ente parmenídeo.” (p. 8)

11. Parménides. 2018. *Parménides*. Zamora: Lucina.

Edición crítica, versión rítmica y paráfrasis del poema por Augustin García Calvo.

Editadas con prolegómenos, comentario y textos de las fuentes y los testimonios indirectos por Luis-Andrés Bredlow.

"El Parménides que aquí ofrecemos se aparta, en muchos puntos de interpretación y aun de la constitución del propio texto griego, de otras ediciones del mismo texto que el lector podrá encontrar (entre las cuales, por otra parte, no habrá apenas dos que no discrepen entre sí en algún que otro detalle más o menos importante) y aun de las versiones previamente publicadas en las sucesivas ediciones de las *Lecturas presocráticas*." (p. 13)

(...)

"El II libro que aquí presentamos consta, en su parte principal, de la edición crítica y versión rítmica de los fragmentos del poema hechas por Agustín García Calvo, versión corregida y mejorada en muchos puntos de las tres anteriores que vieron la luz en las ediciones sucesivas de las *Lecturas presocráticas* (1981, 1992 y 2001), con el añadido de una «Paráfrasis a la moderna» que trata de hacer sonar las razones de la diosa en lenguaje corriente de nuestros días.

Para ello, Agustín García Calvo me ha invitado a contribuir con estos Prolegómenos y un Comentario, con noticia (y, donde procedía, traducción) de los contextos de cita, razonamiento de las variantes del texto y discusión de las interpretaciones: invitación que agradezco y a la que he tratado de corresponder lo mejor que he podido. He aprovechado para ello, con bastante libertad, lo que podía servir de mi tesis doctoral (2000), aunque prescindiendo —espero que para alivio del lector— de la mayor parte del aparato de referencias a las incon-tables interpretaciones modernas del texto, que he tratado de limitar a lo más sucinto e indispensable.

Por lo demás, este libro se ha hecho siguiendo más o menos los mismos criterios editoriales que se habían utilizado ya para la edición de los fragmentos de Heraclito (*Razón común*, 1985), y que allí se habían razonado y expuesto {ib.. Prolegómenos», pp. 25-28): esto es, ante todo, la división en dos partes destinarlas principalmente a dos públicos distintos: una, a los filólogos, que incluye el texto de los fragmentos del poema con su aparato crítico (a lo que he añadido titta transcripción de los contextos de cita, testimonios y posibles ecos del poema en otros autores —en general, los mismos que se encuentran traducidos en el comentario—, con las anotaciones de crítica textual que hacían falta), y otra que se dirige también y sobre todo a los lectores no familiarizados con el griego antiguo, y que comprende la versión rítmica, paráfrasis y comentario (en el cual, por consiguiente, las palabras o trozos de texto que era indispensable citar en su griego original se encuentran transliterados)." (p. 41)

Introdução e análise de António Monteiro e Miguel Real.

2. Parmênides. 2000. *Da natureza*. Brasília: Thesaurus Editora.

Tradução, notas e comentários de José Trindade Santos.

"A última parte do texto é integralmente dedicada ao comentário do poema. Começa por uma curta introdução que descreve sucintamente as vicissitudes pelas quais o texto passou até atingir a forma com

que é hoje apresentado ao público. A entrada no poema é assinalada pela paragrafação numérica, inserida à margem, de forma a salientar a integração dos tópicos, na ordem pela qual são abordados.

Estes são quatro: as três partes em que consensualmente se divide o poema, seguidas de um comentário ao modo como este foi recebido pelos filósofos e pelos sofistas gregos - 1. O próêmio; 2. A via da

Verdade; 3. A via da opinião; 4. Parmênides e a herança eleática (cada um deles articulado e subdividido em parágrafos distintos). A repetição dos algarismos iniciais significa que o parágrafo seguinte faz parte

do anterior enquanto a mudança indica a passagem à outra questão. A inclusão de notas com titulação centrada quer dizer que estas devem ser lidas como apêndices ao que se disse na seção em que se acham,

mas que a sua relevância para o argumento é marginal." (p. 14)

Parmênides de Eléia: Introdução aos Fragmentos do Poema de Parmênides 55; Fragmentos 77; Fragmentos duvidosos 119; Tábua de concordância¹²⁴; Fontes dos Fragments e suas edições 127-137.

O Poema de Parmênides traduzido por Gerardo Mello Mourão 143-146.

"Na maior parte das vezes, seguimos a edição Diels-Kranz, e apontamos em notas seja as diversas opções, quando as nossas diferem daquela, seja ainda outras variantes, quando nos apresentam algum interesse especial. Não foi, de modo algum, nossa intenção repertoriar todas as variantes que encontramos nas edições críticas consultadas. Nossas notas ao texto grego procuram ser ao mesmo tempo sucintas e claras; todas as siglas e abreviações são esclarecidas na tábua de abreviações (p. X). Indicamos sempre a proveniência das variantes, de fontes e edições críticas. Como a pontuação moderna é sempre uma escolha do editor, optamos por seguir os interesses de nossa interpretação.

Junto a cada fragmento, apontamos as fontes. A lista completa de fontes e suas edições, segundo as edições críticas consultadas, encontra-se nas páginas 127 a 137. Algumas edições das fontes foram diretamente tratadas, e constam na bibliografia.

A maioria de nossas referências a manuscritos das fontes são indiretas, segundo as edições críticas, estas serão creditadas quando divergentes. Pudemos consultar alguns códices, como o de Sexto Empírico, mas nada foi usado que já não tivesse sido repertoriado em alguma edição moderna.

Para facilitar o cotejo da tradução, mantivemos o texto grego na página esquerda." (p. 60)

5. Barbieri, Pedro. 2020. "Sobre a natureza, de Parmênide de Eleia." *Classica* no. 33:311-325.

"No caso dos fragmentos de Parmênides, como temos originalmente um texto poético, e não unicamente expositivo no sentido da tradição filosófica que tem início em Aristóteles, considero haver um ganho em uma tradução também poética. É de se imaginar que o modo de escrita escolhido por Parmênides não teria sido apenas um capricho, mas um componente necessário de sua equação, o que é passível de não ser contemplado, caso o nosso foco seja uma abordagem mais conteudista. No fim das contas, o risco é acabarmos perdendo de vista alguma substância atualizável do texto (se é que ela de fato existe) em favor das

palavras sobre o texto. A justificativa de buscar fazer uma tradução poética se funda nessa perspectiva de possibilitar um tipo diferente de experiência com relação ao que sobreviveu da obra. Embora possamos já estar acostumados com Parmênides, isso ocorre em geral por um ângulo relativamente prosaico: estamos acostumados com as ideias reportadas, com a interpretação de sua especulação, com o manejo instrumental de sua terminologia e estrutura discursiva (o proêmio, a via da verdade, a via da opinião). Proponho aqui apenas retornar ao texto original e experimentá-lo enquanto é: um poema. Tão somente o texto de Parmênides e os ecos de sua leitura individual, sem recorrer aos mais de dois mil anos de erudição que se impõem entre nós e os versos." (p. 313, omiti uma nota)

"Dr. Adluri argues for a "mortal philosophy," that is, a philosophy that is aware of and maintains the tension between the mortal desire for transcendence, whether understood as eternity or as the timeless truths of metaphysical propositions, and the irreducibly tragic "mortal condition" which implies a return from transcendence to our finitude. In my view, Dr. Adluri holds together these opposing elements admirably in his book and, in doing so, provides a thought-provoking and brilliantly original analysis of Parmenides' poem with extensive notes, written in a fresh and lucid style. His work, which is very interesting on the level of scholarly work, provides new insight into Parmenides' poem that goes well beyond the logical analyses to which one has attempted to reduce it over the most recent decades. Above all, he proposes a description of Parmenides' approach that does not reduce him to being the philosopher of Being and of Eternity. Parmenides speaks of the universe, and confronts not only immortality, but mortality as well. The importance of argumentation in the poem is considerable, and continues to be admitted by all, but the role played in it by myth is decisive in it." (From the Foreword by Luc Brisson, XIII)

3. Agassi, Joseph, and Bar-Am, Nimrod. 2014. "Meaning: from Parmenides to Wittgenstein: Philosophy as "Footnotes to Parmenides"." *Conceptus* no. 41:1-21.

Abstract: "This is a comment on G. E. M. Anscombe's suggestion that Wittgenstein consistently confronted the challenging Parmenidean idea that uttering false statements is (or should be) impossible. His work thus springs from the theory that meaning presupposes reference. Since we do not learn to communicate by mystically, instantly, projecting ourselves into a fully knowable world, as all traditional theories of meaning permit, any future alternative theory of meaning and of learning to communicate, we propose, should begin by accounting for the fact that learning to communicate is gradual."

5. Alcocer Urueta, Ricardo. 2023. "The Verb εἶμι and Its Benefits for Parmenides' Philosophy." *Rhizomata* no. 11:140-188.

Abstract: "Parmenides believed that he had found the most reliable way of theorizing about ultimate reality. While natural philosophers conceptualized phenomena differences to explain cosmic change, Parmenides used the least meaningful but most versatile verb in Ancient Greek to engage in a purely intellectual exploration of reality – one that transcended synchronous and asynchronous differences. In this article I explain how the verb εἶμι was useful to Parmenides in his attempt to overcome natural philosophy. First, I argue that the Eleatic philosopher regarded νοεῖν and εἶναι as equivalent because εἶμι-clauses enabled him to express arguably any conceivable content without providing significant additional meaning. I then show that Parmenides' concept of being implies the present tense and the imperfective aspect but is grounded in the lexical content of the verb εἶμι, which entails no inherent temporal limits. This explains why ἔστι, ἐόν, and εἶναι could be used to indicate unbounded actuality, regardless of whether these forms represented lexical predicates or auxiliaries for predication. Finally, I maintain that the suitability of εἶμι for talking about all kinds of things without introducing temporal limits allowed Parmenides to avoid what he saw as two mistakes made by natural philosophers: identifying ultimate reality with something that cannot cover the full extent of thought and confusing actuality with present occurrence."

6. Altman, William Henry Furness. 2015. "Parmenides' Fragment B3 Revisited." *Hypnos (São Paulo)* no. 35:197-230.

"Abstract: The justification for placing Parmenides fr. 3 (DK 28 B3) in "Truth" is weak, and both its ambiguity and capacity to

generate radically different interpretations suggest that it belongs to “Doxa.” The paper analyzes the fragment’s sources (Clement, Plotinus, and Proclus), the circumstances of its belated entry into any collection (1835), and argues that the ongoing debate between the reading of Diels and the reading of it introduced by Zeller arises from the presupposition—heretofore unquestioned—that it belongs in “Truth.”

The paper’s principal purpose is not to settle this famous interpretive dilemma nor to reinterpret B3 within “Doxa,” but rather to destabilize the currently unquestioned view that it belongs in “Truth,” and to call into question any global interpretations of Parmenides that make B3 a central component.”

7. Anagnostopoulos, Andreas. 2013. "Aristotle’s Parmenidean Dilemma." *Archiv für Geschichte der Philosophie* no. 95:245-274.

Abstract: "Aristotle’s treatment, in *Physics* 1.8, of a dilemma purporting to show that change is impossible, aims in the first instance to defend not the existence of change, but the explicability of change, a presupposition of his natural science.

The opponent fails to recognize that causal explanation is sensitive to the differences between merely coinciding beings. This formal principle of explanation is implicit in Aristotle’s theory that change involves a third, ‘underlying’ principle, in addition to the two opposites, form and privation, and it allows him to avoid the two horns of the dilemma. Aristotle’s treatment of the dilemma does not address the issues of persistence through change or generation ex nihilo, as is often thought."

9. Angioni, Lucas. 2021. "Aristotle’s solution for Parmenides’ inconclusive argument in *Physics* I. 3." *Peitho, Examina*

Antiqua no. 12:41-67.

Abstract: "I discuss the argument which Aristotle ascribes to Parmenides at *Physics* 186a23–32. I examine (i) the reasons why Aristotle considers it to be eristic and inconclusive and (ii) the solution (*lusis*) that he proposes against it."

10. Anscombe, Gertrude Elizabeth Margaret. 1968. "Parmenides, Mystery and Contradiction." *Proceedings of the Aristotelian Society* no. 69:125-132.

Reprinted in: *The Collected Philosophical Papers*, vol. I: *From Parmenides to Wittgenstein*, Oxford: Blackwell, 1981, pp. 3-8.

"If we take Parmenides as simply warning us off the path of thinking there are things that do not exist, then he seems no more than good sense. But when we combine this with the idea that *being* is an object, we get his wilder results. However, we should not move slickly here: "being" might be an abstract noun, equivalent to the infinitive "to be". But Parmenides does not treat *to be* as an object, but rather *being*, i.e. something being or some being thing. It is difficult to use the participle in English in the required way, and we might get closer to the sense by saying "what is".

There is a similar difficulty about Parmenides' description of the two paths for thought: "is, and cannot not be", and "is not and needs must not be". In English the lack of a subject may be found disturbing. But the Greek does not need a subject-expression. The subject - he, she, it, or they - is built into the verb, which therefore does not seem incomplete without a separate word for a subject. Therefore it is often translated "It is". But there is no indication in the Greek that "it" is the right subject. Therefore I would rather not give a subject word.

"These are the only ways of enquiry for thought: one 'is and cannot not be', . . . the other 'is not, and needs must not be'." That is: Whatever enquiry one is making, one's thoughts can only go two ways, saying 'is, and must be', or 'is not, and can't be'.

The noteworthy thing about this is not so much the ungiven subject, as the combination of "is" with "cannot not be" and of

“is not” with “cannot be”. This needs argument. We have seen what the argument is: what is not is nothing, and it is not possible for what is nothing to be; and so both whatever can be must be, and what can be thought of must be; for it is the same as what can be.” (from the *Introduction* to the reprint, p. X)

(...)

"It was left to the moderns to deduce what could be from what could hold of thought, as we see Hume to have done. This trend is still strong. But the ancients had the better approach, arguing only that a thought was impossible because the thing was impossible, or, as the *Tractatus* puts it. “Was man nicht denken kann, das kann man nicht denken”: an impossible thought is an impossible thought.

At the present day we are often perplexed with enquiries about what makes true, or what something's being thus or so consists in; and the answer to this is thought to be an explanation of meaning. If there is no external answer, we are apparently committed to a kind of idealism.

Whitehead's remark about Plato might, somewhat narrowly, be applied to his great predecessor:

Subsequent philosophy is footnotes on Parmenides." (from the *Introduction* to the reprint, pp.X-XI)

11. Attfield, Robin. 2016. "Popper's Parmenides." In *Global Ethics and Politics in Relation to ecological Philosophy*, edited by Adam, Maria, 1-38. Athens: Ionia Press.

Abstract: "Karl Popper composed a sequence of essays to explain how Parmenides came to hold two incompatible philosophies. In one of these philosophies reality is one, undifferentiated and unchanging, while in the other the world includes a plurality of earthly and heavenly bodies, for some of which, such as the phases of the moon, he supplied original explanations. Popper produced a hypothesis about Parmenides' development and the intellectual influences that shaped it, an account of his eventual epistemology, and a theory of why his empirically-based cosmology was not discarded but included in the otherwise monistic revelation from his goddess. Some of

Popper's theories, such as how Parmenides could have moved from scepticism about what our senses tell us about the moon to scepticism about sensory information in general, encounter formidable objections, some stemming from the work of G.E.L. Owen, but his overall account of Parmenides' development, and of how his reasoning led to its refutation by the first atomists, and thus to atomism, contribute significantly to the histories of both physics and philosophy, as do some strands of his theory of why Parmenides' empirical cosmology was included alongside his rationalist metaphysics in the revelation that he claimed to have received and transmitted."

12. Austin, Scott. 1983. "Genesis and Motion in Parmenides: B8.12-13." *Harvard Studies in Classical Philology* no. 87:151-168.

"The emendation τού for μη in Parmenides, fragment 8, line 12, proposed by Karsten, (1) has been adopted by (among others) Reinhardt, Tarán, Stokes, and, most recently, Barnes. (2) And yet, while there is no compelling reason to make the emendation, there are several good reasons why one should not make it. I want to claim that the unemended poem already does what the emendation is supposed to allow it to do. I also should like to venture some observations on Parmenidean method and on his use of the key concepts of change and motion." (p. 151)

13. ———. 1986. *Parmenides. Being, Bounds, and Logic*. New Haven: Yale University Press.

Contents: Acknowledgments IX-XI; Introduction 1; Chapter 1. Why not "is not"? 11; Chapter 2. Terms 44; Chapter 3. Modals, the Other, and Method 96; Chapter 5. Context and

contradiction 116; Chapter 6. The bounded and the unbounded 136; Appendix. Parmenides' *On Nature* 155; Notes 175; Bibliography 193; Index 199-203.

"In chapter 1, I attempt to describe what exactly the goddess requires and prohibits. One scholarly issue arises from the puzzling fact that, though the goddess prohibits discourse about what-is-not, her own discourse is full of negative words and expressions, thus seeming inconsistent. I try to arrive at an interpretation of her prohibition which does not make her rule out the language that she herself uses, which clears her of some inconsistencies by allowing her to mean what she says, negatively as well as positively. In the process I attempt to determine what Parmenides thought were the ultimate relationships among ontology, sentence structure, and logic. I also claim that Parmenides' attitude towards contextual relativity determines what is right about "Truth" and wrong about "Opinion." This claim, if correct, allows us to make connections between Parmenides, the Sophists, Plato, and Aristotle, connections which are taken up again and historically amplified in chapter 5. This first chapter is the most controversial in its claims. Chapter 2, taking as its premise the goddess's use of different sorts of positive and negative language, tries to determine just how many sorts of language there are, how comprehensive the coverage of them is, and why certain sorts occur in specific places in the poem. (...)

Chapters 3 and 4 make the same claim about comprehensiveness and determinacy for Parmenides' treatment of contraries, for his proof that there is nothing besides being, and for his use of metaphorical modal language. Here the method of elimination of alternatives has the same ontological outcome: a single, non contrary necessary being is rendered determinate and, to use Parmenides' own metaphor, is bounded by being the object of a discourse which operates by systematically examining the spectrum of possibilities. In chapters 2-4, then, logic and a comprehensive method of enumeration and variation appear intimately intertwined with ontology in a combination originated by Parmenides and (as chapters 5 and 6 try to show) decisive in subsequent philosophy

and in its own right. Chapter 5 attempts to trace the history, from Thales through Parmenides to Aristotle, of the Parmenidean logic of contextual variability, of the method of variation, and of the theory of negative language attributed to Parmenides in the first four chapters, thus to situate his thought in its immediate historical context while showing that later developments can be predicated retroactively in his terms. The concluding chapter meditates on the philosophical and theological significance of the views attributed here to Parmenides, especially in light of his identification of the transcendent with the determinate or bounded rather than with the unbounded, and in connection with the methodology and theory associated with that identification in earlier chapters." (pp. 7-8)

14. ———. 1990. "Parmenides' Reference." *Classical Quarterly* no. 40:266-267.

"The unity of morning and evening stars (one thing under two descriptions) has become a familiar example in abstract philosophical discussion. Here, however, I shall be concerned with this unity as a concrete feature of Parmenides' sketch of mortal opinions. It is a commonplace that opposites (e.g. fire and night, B8.56-9) predominate in the opinions of mortals, but what we learn from the morning and evening stars is that these opposites can be judged to be one."

(...)

"The moon, receiving light from the sun, is its contrary, but is also one with it because of the sharing of the sunlight. Thus this example, along with the morning and evening stars, shows how mortal thinking bifurcates unities into contraries.

One is accustomed to thinking of Parmenidean Being as beyond all opposites.

These fragments fill in a corner of the story. The opposites have different meanings, but both inadequately point to Being even though these meanings exile them from the possession of full reality." (p. 267)

15. ———. 2002. "Parmenides, double-negation, and dialectic." In *Presocratic Philosophy: Essays in Honour of Alexander Mourelatos*, edited by Caston, Victor and Graham, Daniel W., 95-100. Aldershot: Ashgate.

"I claim in this paper that Parmenides chose to negate as part of the most basic skeleton of his proof-structure: each predicate true of Being is not only proved, but also has its contradictory denied modally. And all sorts of negations (privations, denials, double-negations) have a necessary place in these proofs. Thus Parmenides' speech - a monistic speech - was already meaningfully negative, and the pluralism in philosophy that begins later on and culminates in the argument against Parmenides in the *Sophist* is unnecessary, at least on those grounds. In particular, I wish to show that Parmenides, like Plato's *Parmenides*, domesticates negation in a way that Plato and the subsequent tradition do not positively give him credit for. For Plato articulated the line of criticism which has been dominant ever since: Parmenides' discourse cannot be uttered without undercutting the goddess's own conditions for the intelligibility of meaningful speech; moreover, even if we could hear her speech and retain it for a moment, it would be useless to us. The criticism continues: a pure monism is, divorced from the needs of life, dialogue, or a path to goodness and beauty.

Parmenides' intention to speak negatively is visible from the beginning of the goddess' remarks about the canons for truth. Fragment 2 tells us that we are to say not only how or that being is, but also how it is not possible for it to be otherwise. This prescription in fragment 2 gets expanded into the list of signposts in fr. 8: 'how it is' in fr. 8.2, directly repeating the 'how it is' in fr. 2.3, is at once amplified into 'how it is ungenerable and unperishing, a whole of a single kind, unmoving, and perfect' - this amplification, along with the reading of Parmenides as an ironist, will remain one of Mourelatos' own most decisive contributions - and each signpost is then proved in fragment 8 in sequence by proving the impossibility of its contradictory in a manner I shall describe below. There is no such thing as a bare 'is' in Parmenides; the copula is always either explicitly predicational

or implicitly so (Austin, 1986, pp. 11-43). It is always a mistake to isolate the 'is' from the surrounding discourse and then attempt to guess at its significance." (p. 95)

16. ———. 2007. *Parmenides and the History of Dialectic: Three Essays*. Las Vegas: Parmenides Publishing.

Contents: Introduction IX; Acknowledgements XIII; Essay one: Parmenidean dialectic 1; Essay two: Parmenidean metaphysics 29; Essay three: Parmenides and the history of dialectic 51; Bibliography 85; Index 91-98.

"In [the] second essay, I would like to attempt a reconstruction of Parmenides in philosophical terms, not in methodological terms, as was tried in the first essay. But the philosophical issues will, I hope, be not only central, but also perennial. I shall set these out partly on the basis of the conclusions of the first essay, and partly on the basis of conclusions for which I have argued elsewhere. The attempt in this essay will, however, necessarily be incomplete, for the ramifications of Parmenides extend even into our own day. I shall attempt a study of this extension in the third essay.

I urge to begin with, as I urged in the first essay, that we abandon the attempt to figure out the motivations of Parmenides' argument by looking to fragment 2 first and then making conjectures about what the Parmenidean *esti* in that fragment means or could mean. No amount of research, amplification, or surgery is going to make this fragment specific enough. Instead, we should look to fragment 8 as an example of the discourse which fragment 2 makes both possible and necessary, and reason backwards instead of forwards. This may fail, but it is high time that it was tried." (p. 31)

17. ———. 2011. "Existence and Essence in Parmenides." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 1-8. Las Vegas: Parmenides Publishing.

Summary: "Parmenides' absolute monism puts existence and essence into an absolutely monistic Being as it joins levels in an ontological hierarchy that other philosophers, from the

Neoplatonists through Hegel, were later to separate. The result is a fusion of presentation and representation, a fusion not teased apart until the twentieth century."

18. ———. 2014. "Some Eleatic Features of Platonic and Neoplatonic Method." *Ancient Philosophy* no. 34:65-74.

"I have earlier tried to show that there is a determinate sequence of positives and negatives in the 'Truh' section of Parmenides' fragment 8, that the sequence correlates with elements in the structure of the second half of Plato's *Parmenides*, and that both sequences can be called 'dialectical' in the sense demanded by *Republic VI* (Austin, [*Parmenides and the History of Dialectic. Three Essays*] 2007). I shall here investigate the use of the notions of one and many in the poem and in the dialogue, and attempt to look forward to similar uses in the Plotincan hypostases and in Proclus' commentary on the dialogue. My aim is to expand and make more precise our understanding of ancient dialectic. A cursory survey of Google will reveal dozens of results for the joint keywords 'Parmenides dialectic'. But it is never clear just what this 'dialectic' is to consist in, nor how it was interpreted by those who thought themselves to be Plato's successors in our Western tradition. Here I shall attempt to show that alternations and jugglings of one and many turn out to be as important as those of positive and negative in this tradition at its outset."

19. Backman, Jussi. 2015. "Towards a Genealogy of the Metaphysics of Sight: Seeing, Hearing, and Thinking in Heraclitus and Parmenides" In *Phenomenology and the Metaphysics of Sight*, edited by Cimino, Antonio and Kontos, Pavlov, 11-34. Leiden: Brill.

"In this essay, we will first take a look at the background and the key theses of the Heideggerian account of Greek "metaphysics of sight" as it is manifested in Platonic thought; we will use the Heideggerian readings as a guideline and source of inspiration without concurring with all of their interpretive theses.(6)

On this basis, we can proceed to investigate the extent to which this account applies to the pre-Platonic texts, particularly to the

fragments of Heraclitus and Parmenides. Is there a primacy of vision and the visual, or of any of the other senses, before Plato? What is the relationship between thinking and the senses in pre-Platonic philosophy? Considering these questions will enable us to trace the initial context and function of the visualization of thinking and to thus draft a provisional genealogy of ocular metaphysics." (p. 12)

(6) One particularly problematic facet of Heidegger's readings of Heraclitus and Parmenides, and one that we will not discuss here, is his notion of φύσις, in the sense of "appearing" and "emerging into presence," as their basic word, even though the term is very sparsely attested in either thinker. Martin Heidegger, *Metaphysik und Nihilismus*, ed. Hans-Joachim Friedrich (Frankfurt am Main, 1999), p. 89: "[T]he thinking of Heraclitus and Parmenides is a 'physics' in the sense of a conceiving of the essence of φύσις as the being of beings."

20. ———. 2018. "Being Itself and the Being of Beings: Reading Aristotle's Critique of Parmenides (*Physics* 1.3) after Metaphysics." *Epoché. A Journal for the History of Philosophy* no. 22:271-291.

Abstract "The essay studies Aristotle's critique of Parmenides (*Physics* 1.3) in the light of the Heideggerian account of Platonic-Aristotelian metaphysics as an approach to being (*Sein*) in terms of beings (*das Seiende*). Aristotle's critique focuses on the presuppositions of the Parmenidean thesis of the unity of being. It is argued that a close study of the presuppositions of Aristotle's own critique reveals an important difference between the Aristotelian metaphysical framework and the Parmenidean "protometaphysical" approach. The Parmenides fragments indicate being as such in the sense of the pure, undifferentiated "is there" (το ἔόν)—as the intelligible accessibility of meaningful reality to thinking, prior to its articulation into determinate beings. For Aristotle, by contrast, "being itself" (αὐτο τὸ ὄν) has no other plausible meaning than "being-something-determinate as such" (το ὅπερ ὄν τι), which itself remains equivocal. In this sense, Aristotle can

indeed be said to conceive being in terms of beings, as the being-ness of determinate beings."

21. Badiou, Alain. 2015. "Heidegger's Parmenides." In *Division III of Heidegger's Being and Time: The Unanswered Question of Being*, edited by Braver, Lee. Cambridge, MA: The MIT Press.

"The thesis I maintain is as follows. First, I think, like Heidegger, that there is a Greek foundation of philosophy, and it is, indeed, a regime of Western discourse. So I will expose myself in a considered way to the charge of Western-centrism. A corollary of this thesis is that there are regimes of discourse and of thought, even some concerning being and nonbeing, that are not philosophical. This in no way detracts from their greatness and dignity: they are simply something else. This leads to the second major claim: strictly speaking, the philosophical decision does not exhaust the proclamation on being and nonbeing, since in some regimes this decision is not taken as philosophical. The third claim follows: a supplementary condition is required. Philosophy is conditional on something other than the decision regarding the path of being and of nonbeing. Fourth and last, I maintain that Parmenides is in fact the founder of philosophy, but not for the reasons that led Heidegger to assign him this role." (pp. 34-35)

This chapter was adapted from the lecture transcript of the October 29, 1985, session of a seminar on Parmenides.

22. Baldwin, Barry. 1990. "Parmenides in Byzantium." *Liverpool classical monthly* no. 15:115-116.
23. Ballew, Lynn. 1974. "Straight and Circular in Parmenides and the "Timaeus"." *Phronesis. A Journal for Ancient Philosophy* no. 19:189-209.

"For both Parmenides and Plato true thought pertains to "Being", and opinion and sensation pertain to "appearance."(3) In the present discussion I shall attempt to show generally that (1) in Parmenides' poem and in the *Timaeus*, both cosmology and epistemology are dealt with schematically, i.e. in terms of shapes - that the notions of straight and circular are applied both to the universe and to men's thought about it; and that (2)

both philosophers make extensive use of the principle that "like knows like." More specifically I intend to suggest, through an analysis of the language and imagery of the texts in question, that the following points hold good for both works: (1) Being, which is "spherical," is apprehended by mind whose motion is circular. (For Parmenides, Being is stationary; "well-circled Truth" is its circumference, along which νοῦς which thinks truly proceeds. In the *Timaeus*, the universe as a whole rotates upon its axis, and the mind which thinks truly not only moves forward in a circular path but also revolves upon itself in imitation of the universal motion.)

(2) Appearances, which shoot about in straight lines, are perceived by processes of opinion and sense perception which themselves consist of motion along straight paths." (pp. 189-190)

(3) For Parmenides opinion and sensation are eventually identified (in Fr. 8) with the way of not-being, and appearances, the things that seem, are shown simply "not to be."

24. Baracchi, Claudia. 2024. "Drifting to the Periphery of the Ancient Greek World on Images, Visions, and Dreams." *Research in Phenomenology* no. 54:31-51.

Abstract: "The essay articulates a rhapsodic reflection on the place of images, their surfacing, and the invisible that sustains them. By way of introduction, it focuses on (1) the initial scenes of Pasolini's *Medea* (1969). Following this spellbinding sequence, it addresses (2) the abiding philosophical attraction to the phenomenon of dreams and visions. This will lead to (3) the story of a momentous flight from the Eastern Mediterranean to the Western coast of Italy, sometime during the VI century BCE. One of the outcomes of this event was the founding of Velia, Elea in Attic Greek. These meanderings take us to the periphery of the region "we" call "the West." More precisely, they point to the periphery of a certain received way of thinking and may contribute to unsettle it. For what begins to emerge from this rhapsody is an unusual profile of the most celebrated pre-classical thinker: Parmenides."

" 'Exactly one thing exists'. That is the intoxicating thesis of 'real' monism. It is, of course, utterly distinct from its milksop homonym, 'material' monism, which maintains that everything is made of some single matter or stuff. As a philosophico-scientific thesis it is at best absurd and at worst unintelligible; yet beyond all doubt it was propounded by Melissus.

Almost to a man, scholars deny Melissus any monistic originality: he inherited real monism, together with most of the rest of his philosophy, from father Parmenides; and it was the uncouth verses of the Way of Truth which placed *tò en* at the centre of Eleatic metaphysics. A few heterodox students have quarrelled with that ascription, doubting the presence - or at least questioning the importance - of The One in Parmenides' thought; but their scruples have been unconvincingly expressed, and they have failed to shake the orthodoxy. And indeed, the orthodoxy has reason for complacency: the history of fifth century thought is often seen to hinge on Parmenidean monism; a luxuriant doxography is pretty well unanimous in ascribing *tò en* to Parmenidean; and the thesis of real monism is apparently both stated and argued for in the surviving fragments of Parmenides' poem.

In this paper, I shall argue that we have in reality no reason to make Parmenides a monist. My approach is negative and serial: I shall simply consider one by one the texts and suppositions which have been or might be adduced in the quest for monism, and I shall endeavour to show that their adduction is of no

avail. My aim is to prick the hide of orthodoxy: even the most sagacious elephant may benefit from the occasional gad-fly's sting." (pp. 2-3, notes omitted)

27. ———. 1979. *The Presocratic Philosophers*. London: Routledge & Kegan Paul.

Two volumes; revised edition in one volume 1989.

See Chapter IX: *Parmenides and the Objects of Inquiry*, pp. 122-138 and X: *Being and Becoming*, pp. 139-157.

"Parmenides of Elea marks a turning-point in the history of philosophy: his investigations, supported and supplemented by those of his two followers [Zeno and Melissus], seemed to reveal deep logical flaws in the very foundations of earlier thought. Science, it appeared, was marred by subtle but profound contradictions; and the great enterprise undertaken by the Milesians, by Xenophanes and by Heraclitus, lacked all pith and moment. The age of innocence was ended, and when science was taken up again by the fifth-century philosophers, their first and most arduous task was to defend their discipline against the arguments of Elea. If their defense was often frail and unconvincing, and if it was Plato who first fully appreciated the strength and complexity of Parmenides' position, it remains true that Parmenides' influence on later Presocratic thought was all-pervasive. Historically, Parmenides is a giant figure; what is more, he introduced into Presocratic thought a number of issues belonging to the very heart of philosophy. Parmenides' thoughts were divulged in a single hexameter poem (Diogenes Laertius, 1.16 = 28 A 13) which survived intact to the time of Simplicius (A 21). Observing that copies of the poem were scarce, Simplicius transcribed extensive extracts; and thanks to his efforts we possess some [B 6] lines of the work, including two substantial passages." (p. 122)

28. Barrett, James. 2004. "Struggling with Parmenides." *Ancient Philosophy* no. 24:267-291.

"... Parmenides' poem contains syntactical puzzles of extraordinary difficulty. (3) And yet, in spite of the fact that every student of the poem has experienced a form of vertigo in

coming to terms with this remarkable text, few have pursued this disorientation as anything other than a difficulty to be surmounted.

I argue, however, that the poem reaps benefits from the opacity we all confront and that our experience of vertigo is in fact consistent with the commentary of the fragments more broadly. I do not contend that the text presents unresolvable opacity as yet one more gesture toward inescapable aporia, or that none of the possible meanings necessarily have a greater or lesser claim to validity. Rather, I suggest that the poem offers its own difficulty—particularly in the 'Aletheia' (4) as a key part of its purpose and that the text's strong interest in epistemological method appears not only in the substance of its commentary, but also in its mode of expression." (p. 267)

(3) By 'poem' I mean the fragments as we know them.

(4) I follow convention in dividing the poem into three sections: proem (B1); 'Aletheia' B2-8: and Doxa' B9-19. For convenience I refer to the Aletheia' as the poem's 'first part' and to the 'Doxa' as the 'second'. I intend no judgments either by this terminology or by these divisions.

29. Basson, Anthony Henry. 1961. "The Way of Truth." *Proceedings of the Aristotelian Society* no. 61:73-86.

"More generally, almost all commentators assume (1) that there is just one premiss, (2) that the poem presents a single continuous chain of argument. If this were so, a single false step would suffice to destroy the whole. In fact, analysis does not support either of these assumptions.

The object of this paper is simply logical analysis, and this means ascertaining (1) which statements in fact function as premisses, and which as conclusions, (2) whether the conclusions are in fact validly deduced from the premisses. For this purpose I use Raven's (*)excellent English rendering, referring to the Greek text only where this is essential. I shall assume that Fragments 2 and 8 contain the whole argument, the remainder being repetitious or rhetorical; and further, that

propositions not proved in the extant fragments were not proved in those parts of the poem which have perished.

I first reproduce Fragments 2 and 8, arranged so as to show their logical structure. Thus Fragment 2 consists of five assertions, numbered 01-05, which form a single argument. But Fragment 8 consists of a sequence of forty-two assertions, and divides into no less than nine distinct arguments, numbered 11-13, 21-26, 31-36, 41-44, 51-55, 61-62, 71-74, 81-85, 91-97. Some preliminary observations are made on the articulation of each of these ten arguments, and their relations to one another. In Part III the principal conclusions are listed, which Parmenides seems to wish to draw. Then the various arguments for these are reconstructed, additional premisses being inserted where these are required for validity. It is found that two of these arguments (the proofs of assertions 22 and 72) are fundamental. In Part IV the argument of Fragment 2 (01-05) is examined in connexion with the proof of 22, and an interpretation of the former is offered. The outcome of this examination is that 71-74 is the fundamental argument, rather than 01-05." (pp. 74-75)

30. Beaufret, Jean. 2006. "Heraclitus and Parmenides." In *Dialogue with Heidegger*, 21-31. Bloomington: Indiana University Press.

First French edition: *Botteghe oscure*, 25, 1960, pp. 31-37; revised reprint in J. Beaufret, *Dialogue avec Heidegger. Philosophie grecque*, Paris: Les Éditions de Minuit, 1973.

"If the world that is said to be pre-Socratic is rich in original historical figures, Heraclitus and Parmenides are the most radiantly central figures of this world. With Heraclitus and Parmenides the very foundation of occidental thought is accomplished. It is to them that what is still alive and vivacious at the bottom of our thinking goes back, as if to the secret of its source. It can be said that it is through them that we think, even if we do not think of them, for they are the light in which the depth of our world is originally revealed—a depth which we

always and already are and which remains all the more enigmatic for us, and thus all the more concealed, in that we belong to it in the heart of the history that has come to us and that is still to come." (p. 21)

(...)

"If Parmenides is the thinker of being, we can understand now that this thinking of being overshadows change no more than a thinking of change, such as Heraclitus conceives it, destabilizes a fundamental permanence. Movement appears to Heraclitus only upon a background of permanence, and when Parmenides thinks the permanence of being against non-being, it is as an unmovable horizon of presence-absence that is the essence of all change. Far from rising from the dawn against each other like the champions of an inaugural polemic, Heraclitus and Parmenides are perhaps both, despite the difference of their words, listening to the same λόγος, to which they both lend the same ear at the origin of occidental thought. At bottom, there is perhaps no more immobilism in Parmenides' Poem than there is mobilism in the fragments of Heraclitus, or rather permanence and change are to be found to the same degree in both. In this way the two languages diverge without, however, contradicting each other. Both expose the Greek knowledge of being, a *knowing of being* that unfolds in the element of presence without forcing or tormenting anything, without shying away or becoming strained, without compromise or excess." (pp. 30-31)

31. ———. 2006. "Reading Parmenides." In *Dialogue with Heidegger*, 32-63. Bloomington: Indiana University Press.

French edition: *Lecture de Parménide*, in J. Beaufret, *Dialogue avec Heidegger. Philosophie grecque*, Paris: Les Éditions de Minuit, 1973.

"But in 1916 Karl Reinhardt, who taught at Frankfurt and whom I once had the chance to meet on the shores of Lake Maggiore just after the Second World War, dismisses the interpretations of both Diels and Wilamowitz. This is neither a polemical refutation nor a concessive hypothesis; what Parmenides explains, after having opposed truth to error, is

quite simply how it would be impossible for error not to seize the minds of men from the very beginning. The power of error over men responds, as Reinhardt says, "to a sort of original sin" of pre-history. (5) The site of this error, that is, opinion or δόξα, ceases to be, therefore, a mere adventitious juxtaposition to true knowledge, ἀλήθεια, in the Poem; it becomes an integral part of a whole to whose unity it belongs as that to which true knowledge is contrasted." (p. 33)

(...)

"The argument that there is a tripartition where a bimillenary tradition has only been able to see a bipartition, is, I believe, the veritable acquisition of Reinhardt's study. Yet whether this tripartition is exactly as Reinhardt determines it remains as questionable.

It falls to Heidegger to have raised such a question eleven years after the publication of Reinhardt's book, on page 223 of *Sein und Zeit* (1927), that is, four pages before the incomplete French translation published in 1964 by Gallimard as a supposed first volume of the text mysteriously comes to a halt. Heidegger says in a note: "Karl Reinhardt was the first to conceptualize and solve the hackneyed problem of how the two parts of Parmenides' poem are connected, though he did not explicitly point out the ontological foundation for the connection between ἀλήθεια and δόξα, or of the necessity of this connection." (p. 34)

(...)

"Is it a question, as Reinhardt thought, of the tripartition: truth, error, and truth of error as original sin? Is it a question of something other? But of what exactly? Can we draw it out from a simple translation? Yes, but on condition that this translation is not simply a movement of the text to us, but rather a movement on our part to Parmenides' words. Not, of course, in order to burden them with presuppositions that have come from elsewhere, but to attempt to hear in them the simplicity of what they say. And here philology, as erudite as it may be,

- remains insufficient. For it is above all philology that is far from being exempt from philosophical presuppositions." (p. 35)

Reprinted in S. Benardete, *The Archaeology of the Soul: Platonic Readings of Ancient Poetry and Philosophy*, Edited by Ronna Burger and Michael Davis, South Bend, IN: St. Augustine Press, 2012, pp. 200-228.

"Three things are conspicuously absent from Parmenides' poem, and a fourth is just as surprising for its presence. The goddess never ascribes eternity (αἰεῖ) to being or falsehood (ψευδός) to nonbeing; nonbeing disappears as soon as the goddess turns to Opinion, even though 'to be not' is as much a mortal name as 'to be' (8. 40), and the goddess promises that Parmenides will know (εἶση, εἰδήσεις [10. 1, 5]) and learn (μαθήσεται [8.31]) mortal opinions, but she herself never uses such verbs about Truth.

Parmenides is, to be sure, fated to hear of everything (πάντα πυθέσθαι) (1.28), but only he says that he was on a road that carries the man who knows (εἰδόντα φῶτα) (1. 3). The goddess says that mortals know nothing εἰδότες οὐδέν) (6. 4). That the goddess never speaks of the parts that should presumably constitute the whole of being might be thought a fifth cause of astonishment, but not if 'whole' means no more than 'one', and the likeness of being to a sphere does not grant it anything more than arbitrarily sliced homogeneous sections, and the difference between the surface and center of a sphere fails to apply to being. If being is also bereft of any magnitude, despite the equal measures the goddess assigns to it (8. 44, 49), being is no more than a point and as hypothetical as any other geometric entity. It is one thing for the goddess to speak of an articulated order (διάκοσμος) of opinions no less plausible

(εἰκῶς) than imagistic (εἰκῶς) (8. 60); it is quite another for being to transgress its own boundaries through an image (3).

Deception (ἀπατηλὸς κόσμος) should be an exclusive property of Opinion (8. 32). Plato's Eleatic Stranger, in believing that Parmenides' whole case collapses if phantom speeches (εἰδῶλα λεγόμενα) and the arts that produce them can be shown to exist, seems to be unaware that Parmenides had anticipated his counter-proof in the phantom speech his own poem was, despite the fact that the lines he himself quotes from it lodged the image within the account of being (4). The patricide he is about to commit and for which he asks Theaetetus's pardon is itself a phantom." (p. 194)

(3) The double meaning of εἰκῶς, which controls the account that Timaeus gives, first shows up in the *Odyssey*, where Nestor, in speaking of Telemachus, juxtaposes its two senses: ἦ τοι γὰρ μῦθοί γε εἰκότες, οὐδέ κε φαίης/νεώτερον ὧδε εἰκότα μυθήσασθαι (*Odyssey*, 3. 124-5).

34. Benzi, Nicolò. 2016. "Noos and Mortal Enquiry in the Poetry of Xenophanes and Parmenides." *Methodos. Savoirs et Textes* no. 16:1-18.

Abstract: "*Noos*, *noein* and their derivatives are of central importance to the development of epistemological conceptions in Presocratic philosophy. Already in Homer the terms indicate a special form of cognition, resembling sense perception in its non-inferential nature, which consists in discovering the truth beyond mere appearance. In this article, I focus on the role which *noos* and *noein* play in the poetry of Xenophanes and Parmenides, whose characterizations of noetic cognition, I argue, depend on their response to the problems stemming from the contrast between humans' epistemic limitations and divine omniscience, as traditionally depicted in Archaic Greek poetry. In particular, I consider Hesiod's poems and the implications of his claim to be able to "speak the mind (*noos*) of Zeus" (*Op.* 661), which hints at the universal truth he wants to convey through his poetry. However, Hesiod's dependence on the Muses, who can speak both false and true things (*Th.* 27-

28), renders his poetry inevitably ambiguous, as he and his audience cannot know whether what they learn from the divinity is actually true.

Xenophanes appropriates the motif of humans' epistemic limitedness by describing mortals as inevitably confined to opinion, and contrasting their condition with the all-powerful noetic capacities of the greatest god. However, I argue, despite mortals' belief-formation ultimately relies on divine disclosure, humans are not condemned to complete ambiguity as in the past poetic tradition, since Xenophanes' very conception of god's *noos* provides a reliable basis for mortal enquiry which guarantees the actual improvement of humans' opinions over time.

Even in Parmenides' poem human *noos* is repeatedly described as wandering astray, but error is not conceived as an ineluctable human condition. In fact, by stipulating that the correct path of enquiry which mortals' *noos* ought to follow to attain truth consists in the logical deduction of the attributes of What-Is, Parmenides allows for the actual possibility that humans achieve that universal and absolute truth to which traditionally they could not have access.

Thus, by introducing innovations to the traditional notion of divine and mortal *noos*, Xenophanes and Parmenides respectively assigned to critical enquiry and logical argumentation that essential role which they maintained in the following development of philosophy."

35. ———. 2021. "In Quest for Authority: Parmenides and the Tradition of *Katabasis* Narratives." In *Aspects of Death and the Afterlife in Greek Literature*, edited by Gazis, George Alexande and Hooper, Anthony, 89-104. Liverpool: Liverpool University Press.

"In this chapter I will focus on the use of the motifs belonging to *katabasis* narratives in early Greek philosophy, with special attention devoted to Parmenides' proem and the ways in which the philosopher appropriates the tradition of afterlife journeys therein as an authoritative framework for his work.

(...)

As I argue, Parmenides' adoption of the afterlife motif represents an original take on the tradition. For, by strikingly contrasting the narrative of the proem with the rigorous deduction contained in the Truth, Parmenides not only emphasises the unreliability of katabasis narratives as a ground for authority but also replaces them with a truth based on logical argumentation.

In the following analysis I will focus less on the actual content of such narratives – namely, what they tell us about the Greeks' beliefs about the Underworld – and more on the issues concerning their reliability and truth value. Indeed, the problem of truth is particularly relevant in didactic–philosophical contexts in which philosophers/sages claim to be in possession of it and thereby able to teach it. I will start by providing an overview of the use of katabasis narratives as a way to substantiate professions of wisdom in Archaic thought. Next, I will focus on Odysseus' *katabasis* as narrated in the *Nekyia* in order to illustrate the problem of such accounts' reliability and how it impacts on their use as sources of authority. Finally, I will consider Parmenides' appropriation of the *katabasis* model and show how it differs from that of his predecessors and eventually challenges the significance of the model itself." (pp. 89-90).

36. Berka, Karel. 1981. "Was there an eleatic background to pre-euclidean mathematics?" In *The Change, Ancient Axiomatics, and Galileo's Methodology: Proceedings of the 1978 Pisa Conference on the History and Philosophy of Science. Volume I*, edited by Hintikka, Jaakko, Gruender, David and Agazzi, Evandro. Dordrecht: Reidel.

"The basic ideas of a recent reconstruction concerned with the origin of deductive mathematics in the 6th and 5th centuries (cp. [9]-[12]) can be summarized briefly as follows: In its very beginning, there existed in Greece only a purely practical, empirical mathematics. The transformation of this empirical mathematics into theoretical mathematics, developed already in the pre-Euclidean period, could be achieved only by means

of extra-mathematical reasons. This change, which resulted in the elaboration of Euclid's *Elements*, was, in its principal features, determined by the philosophy of two Eleatics: Parmenides and Zeno. Mathematics was, therefore, at least initially, a branch or an inherent part of dialectics.

These ideas are supported by various arguments. Some of them, because of the lack of sufficient historical sources, are a matter of discussion, whereas others, as I shall attempt to show, are implausible or wrong. From what will follow, one might, of course, conclude that my approach is too destructive. However, taking into account that the known historical sources do not give us enough information about the development of mathematics in the discussed period, it seems to me to be more appropriate to abstain from any polished explanation than to suggest an unwarranted theory." 37. Berruecos Frank, Bernardo. 2020. "Parmenides and Heraclitus revisited. Palintropic Metaphysics, Polymathy and Multiple Experience." *Anais de Filosofia Clássica* no. 27:37-70.

Abstract: "Some scholars have supposed an influence of Heraclitus' philosophy in Parmenides' Poem, based on the correlations between their fragments in terms of lexicon, images, word-plays, and expression modes. This relationship has been analyzed through certain textual and historical evidences of uneven and undetermined value, and the focus of its comparison has been mainly the interpretation of both thinkers as essential parts of a tradition, the philosophical one, that was founded after their time, and that insisted in opposing

them, and a prior, and shared tradition, the poetical one, that both appropriated as a means to convey a radically new message.

The comparative study of fragments 5, 6, and 7 of Parmenides' Poem and some of Heraclitus' fragments reveals that a great part of the criticisms the Eleatic allegedly addressed to the Ephesian are traces of poetical tradition, through whose diverse appropriation both thinkers show similar epistemological and ontological conceptions (Nehamas, 2002), among which one can recognize a relationship of tension and partial rejection of the intellectual and discursive phenomenon of ἰστορίη. By using the word παλίντροπος, Parmenides does not criticize the doctrinal nucleus of Heraclitus' ontology nor he characterizes negatively the goddess' forbidden path, but instead he shapes a spatial metaphor of Being, and of the method to arrive to its knowledge.

At the same time, παλίντροπος operates as an image of the Poem within the poem, a sort of mirror that reflects its content and configuration."

38. Bicknell, Peter J. 1966. "Dating the Elatics." In *For Service to Classical Studies: Essays in Honour of Francis Letters*, edited by Kelly, Maurice, 5-14. Melbourne: F. C. Cheshire.

"Painfully little is known of the dates and life of most of the Pre- socratics. Such knowledge would often help to disprove or to confirm theoretical reconstructions of the influences of ancient thinkers upon each other. In the following an attempt will be made to assign dates to Parmenides and Zeno. The ancient evidence is used and some speculation added. Without the latter any attempt to deal with the Presocratics must be virtually hamstrung.

It is notorious that Apollodorus fixed the date of a philosopher by some outstanding event in his life and that he reckoned him forty years old at that date. Parmenides' 'floruit' is given as 504-500 b.c.¹ that of Zeno as 464-460 b.c.² It may be significant that the difference is forty years." (p. 5)

39. ———. 1967. "Parmenides' Refutation of Motion and an Implication." *Phronesis* no. 12:1-5.

"It is commonly maintained that Melissus was the major forerunner of atomism. This has been argued on a number of grounds, one of these being that Leucippus reacted to a Melissean rather than a Parmenidean refutation of locomotion. In the following short paper I shall challenge this view and point out that not only is one other argument for Melissus' influence on atomism insecure, but that Theophrastus (*), our most important witness, unequivocally states that Leucippus opposed a pre-Melissean eleaticism.

Discussion is preceded by quotation of the two relevant texts." [Parmenides DK 28 B8 and Melissus DK 30 B7.7] (p. 1)

"To return to motion and the void, it seems to me most likely that Leucippus in replying to *Parmenides* made explicit τὸ κενὸν implicit in Parmenides' gaps of what is not in what is and that Melissus attempted to refute Leucippus using atomism's own physical terminology." (p. 5)

40. ———. 1968. "A new arrangement of some Parmenidean verses." *Symbolae Osloensis* no. 42:44-50.

"Preface. There have been two important attempts at setting the extant fragments of Parmenides' poem in order; that by H. Diels in his 'Poetarum Philosophorum Fragmenta' and in the earlier editions of 'Die Fragmente der Vorsokratiker'; and that by W. Kranz in the later editions of the latter work. In many respects, the sequence proposed by Diels was followed by his successor, but the respective fragments 1 and 7 differ significantly. With the important exception of C. J. de Vogel, (1)

scholars appear unanimous in their approval of the Kranzian ordering. In the present paper, I intend to review the difference between Diels' and Kranz' constructions of fragments 1 and 7, and to suggest a new combination of verses which involves adding a line to fragment 1 as Diels constructed it and uniting three other fragments, namely fragment 6 (Diels and Kranz), fragment 2 (Diels) = fragment 4 (Kranz), and fragment 8 (Diels and Kranz)." (p. 44)

41. ———. 1968. "Parmenides, Fragment 10." *Hermes. Zeitschrift für Klassische Philologie* no. 96:629-631.

"Diels and Kranz assign these two fragments [B10 and B11] to Parmenides' Way of Seeming and evidently suppose that they belong to the same context. It would be strange however if Parmenides had felt it necessary to juxtapose two lists of contents of the second part of his poem." (p. 629)

(...)

"There is, I submit, only one plausible location. B10 belonged to the prologue where it immediately followed line 32 of B1. Having promised first to reveal to Parmenides the steady heart of Truth (B1 lines 28-9), the goddess adds that she will also give an account of the opinions of mortals in whose view it is necessary for mere appearances to be truly existent (lines 30-32). She quite naturally goes on to give a brief synopsis of the topics which the opinions of men embrace." (p. 631)

42. ———. 1979. "Parmenides, DK 28 B4." *Apeiron. A Journal for Ancient Philosophy and Science* no. 13:115.

"None of the citators gives any clue as to the location of the lines in Parmenides poem and Taran(1) pessimistically concluded that its context cannot be reconstructed.

It is certainly difficult to find room for the lines in the Way of Truth, where they are inserted in the latest editions of Diels-Kranz. There can be little doubt that 86 follows immediately after B3 which itself is to be dovetailed into B2. I have argued

elsewhere(2) that B5 is to be located immediately before B1. B7 comes straight after B6 and dovetails into B8 which takes us into the Way of Seeming.

My suggestion is that B4 is to be located at the end of Parmealdes poem and that it follows immediately upon B19."

43. ———. 1979. "Parmenides, DK 28 B5." *Apeiron. A Journal for Ancient Philosophy and Science* no. 13:9-11.

According to the common view, represented by Raven (1) and endorsed with little hesitation by Guthrie, (2) this fragment, whose context within Parmenides' poem is not evident from its only citation, (3) is to be interpreted in conjunction with B1.28 —29. In these lines from the prologue the goddess undertakes to reveal to the poet-seer Ἀληθείης εὐκυκλεος (4) or εὐγίεγγέος (5) or ενττειέθος (6) τ?τορ. Accepting the reading eUKiwXeoc, Raven explains that truth is described as well-rounded because wherever you pick up the chain of Parmenides' reasoning, you can follow it round in a circle, passing through each of the links in turn back to your starting point. At B5, Raven holds, the goddess spells out this feature of her subsequent argumentation. He translates "it is all one to me where I begin, for I shall come back there again in time".

Together with others this interpretation is rightly rejected in Tarán's (7) modern doxography. It is incompatible, Tarán claims, with the structure of B8. Only a brief scrutiny of the Way of Truth is required to appreciate that this is in fact the case. Five characteristics, ἀ-γένητον, ἀνωληθρον, οὐλον μουιχτηγενές, ἀτρεμές, ἀτελεστον, (8) of its subject are established in that order. (9) Only in the demonstration of the fourth, in one of its senses, (10) is the proof of others invoked. (11) None of the theorems of B8 leads back into the primary argument which occupies B2, B3 and B6 1-2. It apparently did not occur to Tarán, however, to contemplate an alternative translation for B5. Rendering "It is indifferent to me where I make a beginning; for there I come back again", he declare

himself agnostic as to the reason for, if not the authenticity of, (12) the goddess' observation." (p. 9)

44. Blachowicz, James. 2012. *Essential Difference: Toward a Metaphysics of Emergence*. Albany: State University of New York Press.

Chapter 2: *Parmenides' Challenge: Truth or Seeming*, pp. 23-39.

"In recent decades, there has been new growth in metaphysical inquiry within the analytic tradition – a surprising development for those who have associated that tradition with its older anti-metaphysical precursors." (p. 2)

(...)

"What counts as another contemporary development in metaphysics is the growth of theories of emergence, mostly within philosophy of science and concentrated, understandably, in philosophy of biology and philosophy of mind. Given that this area of inquiry has focused on explaining the nature of physical entities and what might be the distinctive causal conceptions that complex structure involves, it is surprising that it too is seldom examined in analytic metaphysics." (p. 3)

(...)

"I also offer in-depth analyses of major historical figures: Parmenides, Plato, Aristotle, Kant, Hegel.

I have found no recent books in metaphysics that discuss in any detail the reductionist issue that is the focus of my treatment here. Yet I would argue that an appreciation of this issue is essential, not only for a comprehension of the fundamental problem that lay at the bottom of the metaphysical explorations of Plato, Aristotle, Kant, and Hegel, but also for an understanding of the nature of metaphysics itself." (p. 3)

(...)

"In my treatment of this problem, I will construct a logical parallel between its ancient and modern forms. While the "crisis" of the possibility of metaphysics is often taken as originating with Hume's criticism, I will argue that much the same crisis occurred in ancient Greece, and in a remarkably similar form.

Parmenides and Hume each formulated a “fork” of two exclusive choices that presented a challenge for their respective successors: (a) analytic truths that are known as necessary (the Parmenidean identity “What Is is What Is” in his Way of Truth, and Hume’s “relations of ideas”), but which were, because of their formality, devoid of material content; and (b) synthetic truths rich in such material content (the Parmenidean Way of Seeming, which was the way of the Sophists, and Hume’s “matters of fact”), but which were only ever contingent. Could there be no knowledge with both necessity and material content, that is, no “essential difference”?” (p. 4)

45. Blank, David L. 1982. "Faith and Persuasion in Parmenides." *Classical Antiquity* no. 1:167-177.

"The debate between those who recognize a religious, mystical Parmenides and those who see Parmenides as a rationalist has had a long history, even when one begins its examination with Diels's shaman- and Reinhardt's logician Parmenides.(1)" (p. 167)

(...)

"This essay attempts to show not only that certain elements of the proem's imagery make sense in a religious light but that they go somewhat toward clarifying the purpose of the proem and its relation to the remainder of Parmenides' poem. The analysis centers on the motifs of faith and persuasion, πιστις and Πειθῶ. I shall argue that these motifs are used to stress the importance of Parmenides' message to his disciples by putting forward a claim to urgency on the level of his competition, the mystery religions and Pythagorean teachings to which the disciples were constantly exposed in southern Italy. Establishment of this claim is the ultimate goal of Parmenides' proem." (p. 168)

(...)

"If Parmenides wanted his philosophical project to be taken seriously or even to be heard at all over the confused frenzy of the pious, he was well advised to borrow some of their techniques. Thus, Parmenides begins by making his set of

alternatives, Truth and Seeming, as crucially important to the audience as the alternatives of the competing groups. Once he has gained the audience's attention and has got the audience to trust him, he demonstrates the method of persuasion by argument. "ἔστι, says Parmenides, is the Way of true faith; and although he argues for this logically, he begins by using the seductive power of persuasion and implies that those who hold the true faith will be happy, while those who do not are doomed to ignorance by their ἀπιστία." (p. 177)

46. Bodnár, István M. 1985. "Contrasting Images Notes on Parmenides B 5." *Apeiron. A Journal for Ancient Philosophy and Science* no. 19:52-59.

"A fragment, deprived of its context and so short as B 5 is, can pose notorious difficulties to those trying to interpret it. Tarán's verdict (which he formulates while elucidating the basic" meaning of this fragment) that "... while some of these conjectures go beyond the evidence so that there is no good reason to support one against the others, other conjectures are based on premisses that may be proved wrong" seems to suggest that we do not possess any criterion so as to choose among the interpretations which cannot be rejected: after all a certain amount of uncertainty is inevitable or even inherent in this fragment.

In the following sections I will try to show that in much the same way as in the case of, for example, Parmenides B 3 we are able to contrast and rank different interpretations of this fragment. This does not lead up to pure certainty in fact, and supposing we happen to find some longer quotations from Parmenides some day embedding B 5 in a continuous context, it is clear that such a development might be disastrous for the wealth of accumulated labours of scholastically on this fragment. But in principle this holds good in the case of the vast majority of the Presocratic authors, let alone some of the other fragments of Parmenides." (p. 52)

47. Bogaczyk-Vormayr, Małgorzata. 2016. "Parmenides' Poem: Riddle from B 5." *Ethics in Progress* no. 7:95-103.

"In this short essay I attempt to examine the poem of Parmenides from Elea – the text of unusual beauty which fascinates many scholars. The poem is full of unsolved mysteries and yet is capable of clarifying certain moments of Greek philosophical thought, or of enchanting us with a single piece in which we find something of utmost importance: a sentence, metaphor or an expression that becomes some kind of recurrent phrase when we reread the text. In my interpretation of the poem I give special attention to fragment B5." (p. 95)

(...)

"It seems plausible that the correct interpretation of Parmenides' poem should be taken from the perspective provided by the thesis of fragment B5, so we could intuitively capture "all things" announced in a presumed whole as referring to the circular, inner Way of Truth.(5) It is from this way that the reliable verification of discovery begins and so also begins the reflection upon any human experience." (p. 103)

(5) 5 Hermann Diels seems to present the interpretation which is the closest (cf. Bodnár ["Contrasting Image. Notes On Parmenides B5", *Apeiron* 19: 52-59] 1985, 58-59).

48. Bollack, Jean. 2011. "From Being to the World and Vice Versa." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 9-20. Las Vegas: Parmenides Publishing.

Summary: "The importance of the δόξα is accepted today by scholars; the problem is now the relation between the two parts of the poem. The most satisfactory solution is to consider the whole and to show that one part, the definition of Being, is made in reference to the other, as the projection of an organization of the world, and that both terms correspond perfectly to each other. This perspective allows us to reread the introduction as an initiation from a man who "already knows" better than anyone else, but lets himself be told everything by an honored authority: she discloses the truth of language and transmits, for the δόξα, the vision, in accord with Being, of a rigorous opposition."

49. Boodin, J. E. 1943. "The Vision of Parmenides." *The Philosophical Review* no. 52:578-589.

"The evidence is conclusive that Parmenides' contrast is that of fire and earth. That Parmenides means earth we need no more evidence than we have in the extant fragment: "The other is just opposite to it, dark night, a compact and heavy body. "That would be Anaximenes' way of characterizing the earth. But why did Parmenides choose earth to stand for the whole realm of what is not? We learn from Theophrastus that Parmenides "was the first to declare that the earth is spheroidal and situated in the middle of the universe".(19) The discovery of the spheroidal shape of the earth was capital. We find also that Parmenides observed that the moon shines with reflected light and revolves round the earth. Theophrastus does not seem to regard that observation as first "declared" by Parmenides, though it bears evidence of Parmenides being an observer and not merely a logician. If we can reconstruct Parmenides' discovery of the spheroidal shape of the earth, it would throw light upon his dualism of fire and earth.

I think that it is highly probable that Parmenides discovered the spheroidal shape of the earth from watching the shadow which the earth casts upon the heavens at twilight.

We can now conclude our argument, which we believe to be Parmenides' argument. The fire of heaven is the *It*, the truly existent, as it is also the truth of existence. At twilight we can see for ourselves how the earth darkens the sky, shuts off the fire of heaven. The earth which is the cause of the darkness -- and is in fact the darkness -- included for Parmenides, as it does for us who watch the same phenomenon, all that is part of the earth not only the solid core but water and mist. It is all the earth's shadow or darkness. We have here the key to Parmenides' dualism of fire and earth. The white, homogeneous light of heaven is *It*.

Color and all other variety is excluded by Parmenides, because he requires the unity of *It* in order to think *It*, and unity for him must be physical continuum such as white light seems to be.

(Newton first discovered that white light is composite.)" (pp. 587-588)

50. Bormann, Karl. 1979. "The Interpretation of Parmenides by the Neoplatonist Simplicius." *The Monist* no. 62:30-42.

"The doctrines of Parmenides of the one being and of the world of seeming were -- as is well known -- interpreted in different ways in the course of the history of philosophy, and even in twentieth-century historic-philosophical research, there is no agreement on the meaning of the two parts of the poem.

Regarding the one being there are four attempts of explanation to be distinguished: (1) The being is material; (2) the being is immaterial; (3) it is the *esse copulae* or must be seen as a modal category; (4) it is the entity of being ("Sein des Seienden"). This latter interpretation, if we can call it an interpretation, is chiefly influenced by Heidegger. The Doxa-part, however, is seen as (1) a more or less critical doxography; (2) a second-best, hypothetic explanation of phenomena which is not truth but verisimilitude; (3) a systematic unit together with the first part, the $\alpha\lambda\eta\theta\beta\iota\alpha$. We do not have to discuss the differences between the outlined explanations separately; (*) in the following, we shall show that some modern interpretations were already expressed in a similar way in antiquity. With this, we shall concentrate especially on the Neoplatonist Simplicius who in his commentary on Aristotle's *Physics* expounds the first part of the Parmenidean poem completely and, in addition, the most important doctrines of the second part." (p. 30)

"The interpretation of the Parmenidean doctrines by Simplicius has the following result: Parmenides distinguished two large regions, the sensible and the non-sensible.(133) The sensible is

the region of coming-to-be and perishing.(134) The non-sensible is divided into the levels of soul, intellectual, and intelligible. The $\epsilon\nu$ is not discussed on the occasion of the Parmenides interpretation. The Parmenidean being is identical with the intelligible.

In view of the high esteem that Simplicius shows for Plato and Aristotle, we now have to ask how he interprets their criticism of Parmenides. The answer is: Plato and Aristotle want to prevent misunderstandings.(135)

Therefore, Plato's criticism aims at the level of the intellectual, in which a plurality of beings is found together with the otherness.(136) Aristotle, however, shows by his criticism of Parmenides that the Parmenidean being is not identical with the sensible.(137) Parmenides was not convinced — as we could read by mistake from Aristotle, *De Caelo* 298 b 21— that the sensible and only the sensible would exist.(138) With all criticism of Parmenides given by Aristotle, we always have to consider that Parmenides in Aristotle's opinion "is obviously speaking with insight." (139)." (p. 38)

51. Bosley, Richard. 1976. "Monistic argumentation." In *New Essays on Plato and the Pre-Socratics*, edited by Shiner, Roger and King-Farlow, John, 23-44. Guelph: Canadian Association for Publishing in Philosophy.

"I seek to give an interpretation which is rich enough to disclose the springs of monism. I am primarily concerned to show how we may understand those arguments which leave us with the conclusion that there is only one thing to know.

We may be assured at the outset that to give an argument whose conclusion is as startling as is that of monism it is necessary either to forge or to use a certain way of arguing. Doing so, in turn, depends upon putting to philosophical or dialectical use words which were not before drawn into the service of philosophical argumentation. I shall argue that the Greek word translated as "way" is put to new service, its use making it possible to undertake an inquiry as to WHAT something is; I shall argue, in short, that Parmenides put the word "way" to the same kind of use to which Plato put "ousia" or "form", a use sustained by Aristotle in his use of "genos". These words help make it possible for a philosopher to put a What-question."

(...)

"My first task (section 1) is to give an interpretation; my second one (section 2) is to review some of what Simplicius says, my third one (section 3) is to reconstruct monistic argumentation; I do so to facilitate diagnosis and criticism. My final task (section 4) is to

comment briefly on the responses of Plato and Aristotle. In their responses we find additional tests of the adequacy of my interpretation and reconstruction." (pp. 23-24)

52. Bossi, Beatriz. 2015. "What Heraclitus and Parmenides have in common on reality and deception." *Logos (Madrid)* no. 48:21-34.

Abstract: "It is usually assumed that Heraclitus is, exclusively, the philosopher of flux, diversity and opposition while Parmenides puts the case for unity and changelessness. However, there is a significant common understanding of things (though in differing contexts), not simply an accidental similarity of understanding. Both philosophers, critically, distinguish two realms: on the one hand, there is the one,

common realm, identical for all, which is grasped by the 'logos that is common'(Heraclitus) or the steady *nous* (Parmenides) that follows a right method in order to interpret the real. On the other hand, the realm of multiplicity seen and heard by the senses, when interpreted by 'barbarian souls', is not understood in its common unity. Analogously, when grasped by the wandering weak *nous* it does not comprehend the real's basic unity. In this paper I attempt to defend the thesis that both thinkers claim that the common logos (to put it in Heraclitean terms) or the steady intellect (to say it with Parmenides) grasp and affirm the unity of the real."

53. Bostock, David. 2006. *Space, Time, Matter, and Form: Essays on Aristotle's Physics*. Oxford: Clarendon Press.

Chapter 6: Aristotle on the Eleatics in *Physics* I. 2–3, pp. 103-115.

"In the first half of chapter 2 of *Physics* I Aristotle explains why a work on physics should pay no attention to the thesis of Parmenides and Melissus that 'what is is one and unchangeable' (184b25–6). But he nevertheless goes on to pay it some attention. The discussions that follow in chapter 2 offer no difficulty in interpretation or in evaluation, so I treat them very briefly in my Section 1. But chapter 3 begins with a criticism of Melissus (186a10–22) that is certainly puzzling at first reading, so I treat this in Section 2. I argue that in this case Aristotle's reasoning can be elucidated in an entirely satisfying way. Then at 186a22 ff. we find a criticism of Parmenides that makes use of the obscure phrase το ὄπερ ὄν, and this certainly continues until at least b12. I treat of this in Section 3, and I argue that we can find good sense in his discussion, even if at times he does not say quite what he should have done. Finally, the overall structure of the discussion from there to the end of the chapter is obscure, and it is not altogether clear what Aristotle means to be attacking. I discuss this in Section 4, but without reaching any very useful conclusion." (p. 103)

54. Bowra, Cecil. 1937. "The Proem of Parmenides." *Classical Philology* no. 32:97-112.

Reprinted in: C. Bowra, *Problems in Greek Poetry*, Oxford: Clarendon Press, 1953 pp. 38-53.

"The origins of his method have been studied, but a knowledge of them does not explain either what he meant to say or what his contemporaries would see in his words. If we can understand what the Proem meant in the thought of his time, we may perhaps understand better how Parmenides viewed his calling as a philosopher." (p. 97)

"It may, then, be admitted that in his Proem Parmenides uses certain ideas and images which were familiar to his time, but he used them for a new purpose, and especially he narrowed their application to his own sphere of the search for knowledge. His Proem serves a purpose in making the reader feel that he is not embarking on something entirely outside his experience. But it also serves another purpose. It shows that Parmenides views his task in a religious or mystical spirit. His choice of imagery, his mention of a *daimon* and a *thea*, his use for new purposes of old elements in myths, his description of himself as an *eidota psota*, and, above all, his account of the celestial journey -- all give the impression that he writes not as a mere logician but as one who has had a very special experience like that of men who have consorted with the gods. His attitude to his subject is far from that of the *physiologos*, and we can understand why Plato, whose combination of gifts was not unlike his, held him in high reverence. Parmenides regarded the search for truth as something akin to the experience of mystics, and he wrote of it with symbols taken from religion because he felt that it was itself a religious activity." (p. 112)

55. Bredlow, Luis Andrés. 2011. "Aristotle, Theophrastus, and Parmenides' Theory of Cognition (B 16)." *Apeiron. A Journal for Ancient Philosophy and Science* no. 44:219-263.

Abstract: "This paper proposes a new interpretation of Parmenides B 16. After a short review of the status quaestionis (section 1), I will proceed to a detailed examination of the context of quotation in Aristotle (section 2) and Theophrastus, whose report will be shown to disclose some new possibilities for our understanding of the fragment. I shall argue that B 16 is

not a theory of sense-perception, but a fragment of a comprehensive theory of cognition (section 3). This theory is consistent with Parmenides' own claims to genuine knowledge of Being (section 4), once we recognize that neither a dualism of ontological domains ("intelligible" vs. "sensible") nor of cognitive faculties ("reason" vs. "the senses") can be consistently ascribed to Parmenides. Moreover, our discussion will provide some elements for a reappraisal of Aristotle and Theophrastus as interpreters of their predecessors."

56. ———. 2012. "Parmenides and the Grammar of Being." *Classical Philology* no. 106:283-298.

"The aim of this paper is to explore some grammatical and logical aspects of the word "is" (ἔστιν) in the fragments of Parmenides. I will argue that Parmenides' "is" is to be taken most plausibly, in its first and most immediate sense, as a copula of definitional identity, expressing the essence or nature of something. This definitional use implies both the absolute and the veridical sense of "is." This account will permit us to overcome some central difficulties inherent in other predicative interpretations of Parmenides' "is," such as those proposed by Alexander Mourelatos, Richard Ketchum, and Patricia Curd." (p. 283)

"So the two routes of inquiry of B2 ("It is, and cannot not be," and "It is not, and it is necessary for it not to be") form an exhaustive alternative, once we understand the argument as concerned with essential or definitional predication alone (where "x is F" is equivalent to "x is x"): either x is x, or x is not x, which is absurd. The other two modal forms of predication ("x is F, but can be not-F", and "x is not F, but can be F") are intentionally left aside as irrelevant to the issue of essential or definitional predication." (p. 295)

(...)

"In addition, this interpretation explains an apparent inconsistency of the goddess' wording. At B2.2 she presents the route of "is not" as one of the routes of inquiry that can be conceived (εἶσι νοῆσαι). Later on, however, she insists that "is not" cannot be conceived (B8.8–9), and the route of "is not" is

explicitly marked as “inconceivable” (B8.16). This is easily explained if “is not” stands for self-contradiction and hence logical impossibility. We cannot conceive, of course, that x is not x ; but we surely can—and must—conceive the impossibility of x not being x . Evidently, the recognition that a statement is self-contradictory entails the certainty that this statement is false. Thus the route of “is not” is indeed in a certain sense a legitimate way of inquiry: in logical terms, it is the method of *reductio ad absurdum*. But it is a route that ends as soon as it begins: once it is recognized as such, there is nothing more to find out on this route. So there remains only one route to talk about, namely, that of “it is” (B8.1–2). (49)" (p. 295-296)

(49) Moreover, if this interpretation is right, another often-stated problem can be dispensed with as well: if Parmenides does not rule out negative predication as such, but only negations of definitional predications (i.e., self-contradictory statements), then there will be no need to seek for justifications for the abundance of negative predicates in his own arguments.

57. Brémond, Mathilde. 2020. "How did Xenophanes Become an Eleatic Philosopher?" *Elenchos* no. 41:1-26.

Abstract: "In this paper, I investigate how Xenophanes was ‘eleaticised’, i.e. attributed theses and arguments that belong to Parmenides and Melissus. I examine texts of Plato, Aristotle and Theophrastus in order to determine if they considered Xenophanes as a philosopher and a monist. I show that neither Plato nor Aristotle regarded him as a philosopher, but rather as a pantheist poet who claimed, in a vague way, that everything is one. But Theophrastus interpreted too literally Aristotle’s claims and was the first to make Xenophanes a proper monist philosopher."

58. Bronstein, David, and Mié, Fabián. 2021. "Eleatic Ontology in Aristotle: Introduction." *Peitho, Examina Antiqua* no. 12:13-17.

Abstract: "The introduction summarizes the six new papers collected in Volume 1, Tome 5: *Eleatic Ontology and Aristotle*. The papers take a fresh look at virtually every aspect of Aristotle’s engagement with Eleaticism. They are particularly concerned with Aristotle’s responses to Parmenidean monism,

the Eleatic rejection of change, and Zeno's paradoxes. The contributions also focus on the ways in which Aristotle developed several of his own theories in metaphysics and natural science partly in reaction to Eleatic puzzles and arguments."

59. Brown, Lesley. 1994. "The Verb 'To Be' in Greek Philosophy: Some Remarks." In *Language: Companions to Ancient Thought. Vol. 3*, edited by Everson, Stephen, 212-236. Cambridge: Cambridge University Press.

"I examine key uses of 'to be' in Parmenides, Plato (especially *Republic V* and *Sophist*) and Aristotle. I argue against imposing modern distinctions (into predicative, existential or identity uses) on to the texts, showing that while Greek uses of *einai* may be partitioned into syntactically complete and incomplete (noted by Aristotle and perhaps at *Sophist* 255cd) the distinction was neither clear-cut nor perceived as philosophically important. I examine how these authors treated the inference from 'X is F' to 'X is' (compare that from 'X teaches French' to 'X teaches') and, more problematically (as Plato *Sophist* saw, correcting Parmenides and *Republic V*) from 'X is not F' to 'X is not'."

61. Bryan, Jenny. 2012. *Likeness and Likelihood in the Presocratics and Plato*. Cambridge: Cambridge University Press.

Contents: Acknowledgements VI; Abbreviations VIII; introduction 1; 1. Xenophanes' fallibilism 6; 2. Parmenides' allusive ambiguity 58; 3. Plato's *Timaeus* 114; 4. Imitation and limitation in *Timaeus' proemium* 161; Conclusion 192; Bibliography 196; Index locorum 205; General index 208.

"Many interpretations have been offered for Parmenides' εἰκώ `ς.

Some see it as a qualified endorsement, others as a warning that the cosmology to follow is specious. I will offer a summary

of the four main types of interpretation and argue that the best reading is that which incorporates elements of each. I will go on to present two aspects of Parmenides' use of this term that deserve closer attention than they have previously been afforded. The first is the possibility that Parmenides' vocabulary is influenced by forensic terminology. Several of Parmenides' key terms (σήματα; κρίσις; ἔλεγχος; πίστις) carry forensic connotations. I will argue that this juridical background should inform our understanding of Parmenides' εἰκω`ς. It is evidence in favour of taking one aspect of its meaning to be something like the notion of 'plausibility' widely employed in the second half of the fifth century BC. The second is the possibility that Parmenides B8.60 alludes to Xenophanes B35.

There is good evidence, in both the doxography and the verbatim fragments, that Parmenides was familiar with Xenophanes' poetry.

I will argue that B8.60 is a conscious allusion to Xenophanes and that, as with Xenophanes' allusion to Homer and Hesiod at B35, the significance of the allusion lies in the way that Parmenides alters Xenophanes' formula.

Parmenides' use of εἰκω`ς can be usefully compared to his choice of the term πίστις at B1.30 and B8.28. I will argue that, when the goddess claims that her cosmology is εἰκω`ς, she is attributing to her account a kind of persuasiveness that is subjectively convincing but ultimately false. This is in opposition to the true, objective cogency attributed to the *Aletheia* via the term πίστις.

I will conclude with some suggestions as to how such a reading can inform our understanding of the relation between the *Aletheia* and the *Doxa*. Here, my conclusions are necessarily limited by the fact that I will not be offering a detailed interpretation of either part. My interest is primarily in the characterization of the *Doxa* as εἰκω`ς and what this implies about its relation to the *Aletheia*.

The question of the precise import of, in particular, the *Aletheia* would take me far beyond the scope of this book. I will, so far as is possible, be attempting to sidestep many of the issues that have dominated recent scholarship on Parmenides. Most notably, I will not be engaging with the question whether or in what way Parmenides is a monist. I will, of course, be looking at some of the details of the *Aletheia* and offering interpretative suggestions but, in the end, my commitments here do not, I think, go far beyond reading it as an account of ‘the unmoving heart of persuasive truth’ (B1.29). (pp. 61-62)

62. ———. 2018. "Reconsidering the Authority of Parmenides' *Doxa*." In *Authors and Authorities in Ancient Philosophy*, edited by Bryan, Jenny, Wardy, Robert and Warren, James, 20-40. Cambridge: Cambridge University Press.

"This chapter considers the possibility of reading Parmenides' *Doxa* both as significant to his poem, and thus to his philosophy, as a whole, and as representative of Parmenides' own cosmological doctrine (in keeping with the overwhelming ancient tradition). It is, I think, possible to draw a useful distinction between ‘argumentative authority’ and ‘doctrinal authority’ within Parmenides' poem. The former can be attributed to the conclusions to which the goddess leads us in the *Aletheia*. The latter has a broader scope, in that it

identifies the content of the revelation, including its description of the cosmos (and presumably the fact of the revelation itself), as teachings to which Parmenides is committed as their author. (1) The *Doxa*'s doctrinal authority lies primarily in what it demonstrates about the way that mortals think about and explain the world and what this indicates about their own implicit attitudes towards plurality. This is compatible with its having a role to play in supporting the authority of the *Aletheia*'s arguments. It is also compatible with the possibility that Parmenides offered the *Doxa* as a genuine attempt at an explanation of sense experience. In fact, the *Doxa*'s cosmology can be seen to be more authoritative in its analysis of mortal thinking and in its support of the *Aletheia* precisely because

Parmenides, as a mortal, strives to provide a plausible account of the physical world." (p. 20)

(1) The goddess herself indicates an authority beyond that of reasoning as endorsed in B7.

63. ———. 2020. "The Non-Divinity of Parmenides' What-is." *Anais de Filosofia Clássica* no. 27:71-95.

Abstract: "It is often assumed that Parmenides what-is is, in some sense, divine.

This chapter considers the further assumptions that tend to underly such readings. It argues that neither appeals to a broader philosophical tradition nor the possible attribution of intelligence to what-is justify the assumption that what-is is divine. The divinities within Parmenides' poem are anthropomorphic agents and subjects of change. What-is, in excluding change, also excludes divinity. Divinity is not a relevant or necessary property of what-is."

64. Burkert, Walter. 2013. "Parmenides' Proem and Pythagoras' Descent (*)." In *Philosophy and Salvation in Greek Religion*, edited by Adluri, Vishwa, 85-116. Berlin: Walter de Gruyter.

Translated by Joydeep Bagchee.

(*) This chapter is a translation of Walter Burkert's 1969 article "Das Proömium des Parmenides und die Katabasis des Pythagoras" (*Phronesis* 14: 1–30). It includes a new preface added by Prof. Burkert, who also updated some of the citations, citing literature that has appeared since the original article. I thank Prof. Burkert for his corrections and suggestions; all errors of course are my own.

"To summarize: Parmenides' journey is neither a transition from night to light nor an ascent; it is also not a collection of heterogeneous symbols, which would only be comprehensible in relation to the theoretical content, and still less a purely literary device without deeper meaning. Parmenides travels on the path of the Daimon to the edge of the world, where at the boundary between heaven and earth a towering gateway divides this world from the beyond. The Heliades approach him from

the house of Night, they accompany him through the gate into the great "open," where the Goddess receives him. Everything falls into place as soon as one resolutely discards the path upward and the path to the light, those Platonic-Christian symbols. The journey might rather—with Morrison—be called a katabasis. More correct is to leave aside completely the vertical aspects, the above and below. The Beyond, in what is probably the oldest concept, is neither above nor below, but simply very, very far away. Odysseus too, in the *Neykia*, journeys neither skyward nor earthward, but simply into the distance. Something similar is true of Sumerian myth.(64)" (pp. 101-102)

(64) Cf. S. N. Kramer, "Death and Nether World according to the Sumerian Literary Texts," *Iraq* 22 (1960): 67, on the myth of Enlil, Ninlil, and the Underworld: "the word 'descent' is not used in this myth, only such words as 'come,' 'follow,' 'enter.'"

65. Burnet, John. 1930. *Early Greek Philosophy*. London: Adam & Charles Black.

Third edition (first edition 1892).

Chapter 4: *Parmenides of Elea*, pp. 169-196.

"In the First Part of his poem, we find Parmenides chiefly interested to prove that it is; but it is not quite obviouslit first sight what it is precisely that is. He says simply, What is, is. There can be no real doubt that this

is what we call body. It is certainly regarded as spatially extended; for it is quite seriously spoken of as a sphere (fr. 8, 43). Moreover, Aristotle tells us that Parmenides believed in none but a sensible reality. Parmenides does not say a word about "Being" anywhere,⁴ and it is remarkable that he avoids the term "god," which was so freely used by earlier and later thinkers. The assertion that it is amounts just to this, that the universe is a plenum; and that there is no such thing as empty space, either inside or outside the world. From this it follows that there can be no such thing as motion. Instead of endowing the One with an impulse to change, as Herakleitos had done, and thus making it capable of explaining the world, Parmenides dismissed change as an illusion. He showed once for all that if

you take the One seriously you are bound to deny everything else. All previous solutions of the question, therefore, had missed the point. Anaximenes, who thought to save the unity of the primary substance by his theory of rarefaction and condensation, did not observe that, by assuming there was less of what is in one place than another, he virtually affirmed the existence of what is not (fr. 8, 45). The Pythagorean explanation implied that empty space or air existed outside the world, and that it entered into it to separate the units (8 53).

It, too, assumes the existence of what is not. Nor is the theory of Herakleitos any more satisfactory; for it is based on the contradiction that fire both is and is not (fr. 6)." (pp. 178-179, a note omitted)

(4) We must not render τὸ ἕὸν by "Being," das *Sein* or l'*être*. It is "what is," das *Seiende*, ce qui est. As to (τὸ) εἶναι it does not occur, and hardly could occur at this date.

66. Bussotti, Paolo. 2023. "Parmenides, the Founder of Abstract Geometry: Enriques Interpreter of the Eleatic Thought." *Foundations of Science* no. 28:947-975.

Abstract: "The interpretation of Parmenides' Περὶ Φύσεως is a fascinating topic to which philosophers, historians of philosophy and scientists have dedicated many studies along the history of Western thought. The aim of this paper is to present the reading of Parmenides's work offered by Federigo Enriques. It is based on several original theses: (1) Parmenides was the discoverer of abstract geometry; (2) his critics was addressed against the Pythagoreans rather than against Heraclitus; (3) Parmenides discovered and applied the contradiction and the third excluded principles in the context of his research on foundation of geometry; (4) Parmenides's metaphysical and physical conceptions have their bases in his speculation on geometry; (5) Parmenides used the principle of sufficient reason. Enriques's reading is worth being expounded and discussed within the historical, philosophical and scientific context in which it is inserted. Since Enriques's ideas are not widely known and discussed, my research has the purpose to fill this gap. The article also aims to provide elements to

illustrate the discussion on Parmenides in the first half of the last century."

Parmenides of Elea. Annotated bibliography of the studies in English: C - De L

Bibliography

1. Calenda, Guido. 2020. "Epistemological Relevance of Parmenides' Ontology." *Anais de Filosofia Clássica* no. 27:96-120.

Abstract: "It is possible to understand Parmenides' *being* as the 'totality of what exists'. Parmenides' insight is that being is a compact continuum (fr. 4), and he gives a logical demonstration of this insight recognizing that non-being, which only could divide being in a plurality of beings, does not exist.

Therefore, knowledge of being could only be the holistic appraisal of the totality of being – a form of knowledge unconceivable for men.

Human knowledge is always articulated in concepts, images, relations..., expressed by their names. Men do not catch being itself, but, at best, some limited features of a minimal part of it, as they appear from human and personal perspectives. Thus, Parmenides' calls mortals 'two-headed' who claim that their truths represent the reality of being, since their pretense would imply the existence both of being and of non-being. This epistemological conception is the only relevant result of Parmenides' ontology. Parmenides' epistemology solves many of the philosophical riddles of his time, it shows that the so-called Zeno's paradoxes are sound arguments, and foreshadows the doctrines of Protagoras and Gorgias."

2. ———. 2023. "Parmenides' Structure of the Earth." *Peitho, Examina Antiqua* no. 14:13-28.

This paper is an updated English translation of the central chapter of my book *Un universo aperto [La cosmologia di Parmenide e la struttura della terra, Bologna.]* (Calenda 2017).

Abstract: "It is generally accepted that the enigmatic fragment 12 of Parmenides, supplemented by the first part of Aëtius II 7.1, represents an unlikely cosmos which comprises alternating spherical crowns of fire and night, surrounding the earth. A comparison of the fragment and Aëtius' text shows that the latter adds nothing substantial to the fragment. Thus, fragment 12 can actually represent the structure of the earth, which consists of a core of fire, is surrounded by the layers of the earth's crust, into which heat is transmitted from within, and on which the goddess of life dwells."

3. Calvo, Martinez Tomas. 1977. "Truth and Doxa in Parmenides." *Archiv für Geschichte der Philosophie* no. 59:245-260.

"It has been widely held, both by ancient and by modern commentators on Parmenides, that the distinction between Truth (αλήθεια) and Opinion (δόξα) which dominates the structure of his poem, can be properly interpreted as an opposition between two forms of cognition: pure thought or conceptual knowledge, on the one hand, and sense-perception, on the other, where the latter is understood as including images as well as perceptions.

(...)

In the first part of this paper I will try to show that this traditional interpretation of Parmenides fundamentally misrepresents the language and intention of his poem. In the second section I will propose an alternative interpretation based upon an opposition not between two epistemic states or faculties (intellectual knowledge versus sense-perception) but between two contrasting forms of language, as represented in the poem by the contrast between λόγος and ἔπος (or ἔπεα). Finally, I will sketch some lines in the post-Parmenidean

- evolution of the two conceptual systems that oppose Aletheia to Doxa and Logos to Epos." (pp. 245-246)
4. Capizzi, Antonio. 1984. "Opsis akoe. The sources of the problem of sensations in Heraclitus and Parmenides." *Museum Philologum Londiniense* no. 6:9-35.
 5. Casertano, Giovanni. 2011. "Parmenides -- Scholar of Nature." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 21-58. Las Vegas: Parmenides Publishing.

Summary: "Aristotle's influence on what we could name the philosophical historiography of pre-Aristotelian times and the one still felt up to present times is huge. We can safely argue that the work of freeing pre-Aristotelian thinkers from Aristotelian interpretation has only been developing since last century, and it is an ongoing process. I personally believe that this is the historiographic direction to be followed and that much has still to be made clear and explained in this very direction. This kind of research does not just better "historically contextualize" the thought of any pre-Aristotelian, Parmenides in our case, by setting its roots in a real world of debates, quarrels, and stand-takings on different philosophical and scientific questions, but it also better underlines its originality and speculative strengths. My paper will thus be divided into two parts. Since I just aim to discuss the special stand of Parmenides' thought in the history of scientific thought, I will try and show first of all Parmenides' complete belonging in the very lively world of scientific debates and discussions of the fifth century. Then I will try to show how Parmenides, like the other great Sicilian Magna Graecia native, Empedocles, has foreshadowed concepts and doctrines of contemporary science and physics, even if just in the shape of ingenious intuitions."

6. Cassin, Barbara. 2011. "Parmenides Lost in Translation." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 59-79. Las Vegas: Parmenides Publishing.

Summary: "I would like to show in this text the successive difficulties to be overcome when one tries to translate

Parmenides. Translation is the extreme degree of interpretation. For that purpose, one needs to triumph over the impossibility of confronting the original “venerable and awesome” as well as of confronting “historial” language such as Greek. Then, one must sort out the alternatives that make it possible to select and fix a fragmentary text. Finally it is necessary to explore all the connections permitted by semantics and syntax. My study is focused on the play of “θυμὸς ὁδοῖο / μῦθος ὁδοῖο,” and on possible interpretations of the text traditionally retained since the 5th edition of Diels, between the heroism of being, described as Odysseus, and the storytelling of language.”

7. ——. 2017. "The Muses and Philosophy: Elements for a History of the *Pseudos* [1991]." In *Contemporary Encounters with Ancient Metaphysics*, edited by Greenstine, Abraham Jacob and Johnson, Ryan J., 13-29. Edinburgh: Edinburgh University Press.

Translated from the French "Les Muses et la philosophie. Eléments. pour une histoire du 'pseudos'," in Pierre Aubenque (éd.), *Études sur le "Sophiste" de Platon*, Napoli: Bibliopolis 1991, pp. 292-316.

"The philosopher, guard-dog of the truth and of the desire for truth, is committed to *aletheia*. The sophist, this wolf for as long as there have been philosophers, is committed to the *pseudos*. *Pseudos* names, from its origin, and indissolubly, the "false" and the "lie" - the "falsehood," therefore, of one who deceives and/or deceives himself. It is the ethico-logical concept par excellence.

The *Sophist* of Plato explicitly marks this double bind, which joins the sophistic and *pseudos* in the eyes of philosophy: the sophist is an imitation, a feral counterfeit of the philosopher,(2) because the sophist chooses the domain of the false, the semblance, the phenomenon, opinion - in a word, all that is not.

Philosophy of appearances and appearance of philosophy:
sophist simulator/dissimulator.

I would like to attempt to pinpoint the *pseudos*, primarily through Parmenides and Hesiod, in order to determine the manner in which the sophistic lodges itself there, so as to understand, through Plato, how philosophy at its beginnings domesticates the very idea of *pseudos*, and organizes the place of the sophistic." (p. 13)

8. Cerri, Giovanni. 2011. "The Astronomical Section in Parmenides' Poem." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 80-94. Las Vegas: Parmenides Publishing.

Summary: "I have collected all the data (*testimonia* and *fragmenta*), which demonstrate that in Parmenides' poem *On Nature* there was a long section concerning astronomy, where he described the heavens and also illustrated recent, astonishing discoveries accomplished by astronomical research of his time. Such a section, which is very important in the history of ancient science, could not be a mere digression, not related to his general theory of nature. Therefore, every modern interpretation of his philosophical thought based on the removal of this aspect should certainly be considered inadequate to explain the whole doctrine in its very essence."

9. Chalmers, W. R. 1960. "Parmenides and the Beliefs of Mortals." *Phronesis* no. 5:5-22.

"The three main parts of Parmenides' poem are apt to receive rather unequal treatment at the hands of many historians of Ancient Philosophy. From early times there has been a tendency to concentrate attention upon the Way of Truth and rather to neglect the Prologue and the Beliefs of Mortals. The Prologue is frequently explained as an interesting example of archaic imagination intruding into a philosophical work, while the last part has been interpreted in a variety of ways. Some scholars have suggested that in it Parmenides is merely representing the views of other thinkers, while others believe that it does in some way describe Parmenides' own thought. There is as yet no general agreement about what the relationship is between the Beliefs of Mortals and the Way of Truth. Both are however parts of the same poem, and it is

reasonable to infer that a solution of this problem of their inter-relationship will throw light on the correct interpretation of the whole work. It is the purpose of this paper to consider in particular the last part of the poem and to try to establish what its status is in the context of the whole work." (p. 5)

10. Cherniss, Harold. 1935. *Aristotle's Criticism of Presocratic Philosophy*. Baltimore: Johns Hopkins Press.

Volume I (only published). Reprint New York: Octagon Books, 1964.

On Aristotle's criticism of Eleatic philosophy see in particular the First Chapter, *The Principles*, pp. 61-76.

"The Eleatic thesis so far as the physicist is concerned is refuted by experience, and it is not the business of a treatise on any particular science to refute those who deny the principles or axioms of that science. (257) With this exposition and the remark that Parmenides and Melissus proceed from false premises to argue illogically Aristotle has really excluded a discussion of their doctrine from the *Physics*. Yet he immediately introduces a long refutation of the Eleatic thesis on the ground that, although it is not concerned with physics, it results in difficulties which are physical.(258)

The criticism of the Eleatic unity of Being is highly instructive for the study of the method by which Aristotle built up his own doctrine of matter; and the very inclusion of the critique in the *Physics* shows that he was conscious of the logical character of the origin of his theory." (p. 62)

(...)

"The general critique of the Eleatics (273) is followed by a special refutation of Melissus and Parmenides." (p. 67)

(...)

"There is throughout this critique an apparent confusion of logical and physical concepts which is due to the dependence of Aristotle's physics upon his logic. At one time he said that the Eleatic error was due to the ignorance of the meaning of relative or *accidental* non-Being, (304) that is of logical

privation which is the essence of the negative proposition; but such a concept, which in its Platonic origin is simply logical, is at once transformed into a physical doctrine by Aristotle, so that he can say shortly thereafter that an understanding of the nature of substrate would have solved the difficulties of the Eleatics. (305) Privation is, in effect, the immediate material of generation (306) and the logical subject of privation is transmuted by means of the concomitant potentiality into the physical substrate. (307) The notion that privation of a quality requires in the substrate the potential presence of that quality is a rule of logic (308) transferred to descriptive physics. It is this connection of the matter of generation and of thought, this equivalence of the proposition of logic and the description of physical change which makes Aristotle think the *Physics* an appropriate place to discuss the Eleatic doctrine which on his own reckoning falls outside the sphere of physics." (pp. 75-76)

(257) *Physics* 184 B 25-185 A 14.

(258) *Physics* 185 A 17-20. a. *De Caelo* 298 B 14-24 where the Eleatic doctrine is rejected as unphysical. But the origin is differently explained. The Eleatics were the first to see that knowledge requires the existence of immutable substances; but, thinking that sensible objects alone existed, they applied to them the arguments concerning objects of thought. Aristotle derives this account by a literal interpretation of Plato, *Parmenides* 135 B-C. But cf. *Sophist* 249 B-D.

(273) Ross in his note on *Metaphysics* 986 B 19 implies that "the One as continuous and indivisible" refers to Melissus, "the One as unity of definition" refers to Parmenides. The appearance of *συνεχές* and *ὄν διαίρητόν* in *Parmenides*, the argument of "the part and the whole" in Plato's *Sophist* directed against Parmenides, and the express words of *Physics* 185 B 17-18, as well as the *αὐτοῖς* of 185 B 21 and 24 show that no division of the arguments can be made between Parmenides and Melissus.

(304) *Physics* 191 B 13-16.

(305) *Physics* 191 B 33-34.

(306) *Physics* 191 B 15-16. Yet 191 B 35 ff. he reproaches the Platonists for making matter "non-Being" and claims himself to differentiate privation and matter.

(307) The transformation is carried so far that ἀτέρησις becomes, instead of simple negation of form, a positive reality, a kind of form itself (*Physics* 193 B 19-20). Cf. Clemens Baeumker, *Das problem der materie in der griechischen philosophie*, Münster, 1890, pp. 218-219.

(308) Cf. its use in *Topics* 148 A 3-9. It is a mistake to define a thing by privation of that which is not potentially predicable of it. The logical basis of the physical doctrine, as well as some of the difficulties involved in the development, is to be seen in *Metaphysics* 1055 A 33-B 29.

11. Cherubin, Rose Mathilde. 2001. "Λέγειν, Νοεῖν and Τοῦ ἔόν in Parmenides." *Ancient Philosophy* no. 21:277-303.

"What does Parmenides tell us about τοῦ ἔόν? Commentators have understood Parmenides' fragments as attempting to provide an account of the nature of being, or of the nature of what is.

Recently, Parmenides and his goddess (θεά, B1.22) character have been interpreted as making a variety of conflicting claims: that being or what is is one; that it is dual; that it is identical to thought or to mind or to the contents of thought; that at least some of it is independent of our thought or awareness; and that all strictly human claims about what is rest on convention or agreement. In what follows, I will attempt to show that the fragments not only fail to support such views, but actually subvert them. Rather than provide unconditional assertions about τοῦ ἔόν, I will argue, the fragments explore the conditions of the possibility of inquiry itself, conditions whose acceptance poses paradoxes." (p. 277)

(...)

"I do not assert here that all is assumption. Rather, I have argued that on the θεά's account of what is, we do not seem to be able to know whether all is assumption. I do propose that to

acknowledge the conditions of inquiry includes recognizing that such an acknowledgment, like the conditions themselves, is made within the framework given us by our θέμις (literally, that which is laid down). Acknowledging the conditions of inquiry also includes recognizing (voεῖν) that the possibility of identification and the possibility of meaning appear to depend on contradictions or paradoxes." (p. 303)

12. ———. 2003. "Inquiry and What Is: Eleatics and Monisms." *Epoché* no. 8:1-26.

Abstract: "While Melissus argues for a numerical monism, Parmenides and Zeno undermine claims to unconditional or transcendental knowledge. Yet the work of Parmenides and Zeno is not merely critical or eristic, and does not imply that philosophical inquiry is futile. Instead it shows the importance of reflection on the way the requisites of inquiry are represented in its results, and entrains an axiological investigation to every ontological one."

"The earliest Greek philosophers sought understanding that went beyond what was given by the beliefs, customs, and ways of thinking familiar to their contemporaries. So Aristotle tells us, and since his time students of philosophy have generally agreed with this broad description.⁽¹⁾ But what were the earliest Greeks called philosophers trying to understand, and what kinds of understanding were they seeking? As we try to be more specific about the projects and nature of the earliest Greek philosophy, we encounter more difficulty and less agreement." (p. 1)

(...)

"The goddess in Parmenides' poem represents that which her pupil is not: she is female, and more crucially for purposes of this paper, she is immortal and as such does not need to inquire or seek. Our sense of lack, our mortality, is the spur and indeed the

substance of inquiry. We must make choices and we must seek, in order to supply our needs and desires. This is why we require consistency, in some things at least. A Greek goddess does not

have such limitations; she is self-sufficient. Such a symbol of what we conceive ourselves to lack is a most appropriate vehicle to convey to us the consequences of that lack, the fundamental conflicts in our conception of what is." (p. 16)

(1) *Metaphysics A 1-2.*

13. ———. 2004. "Parmenides' Poetic Frame." *International Studies in Philosophy* no. 36:7-38.

"Two difficulties confront the beginning of an interpretation of the fragments of Parmenides: how to understand the structure of the fragments taken together, and how to deal with the apparent contradictions and incongruities in the fragments.

The first is the question of what to make of the structure of the extant parts of Parmenides' poem." (p. 7)

(...)

"The second difficulty is the problem of how to handle the many apparent contradictions and incongruities within the fragments." (p. 8)

(...)

"I propose to look at the Goddess's discussions of *eon* or *to eon* (what is, being, what is so) in the contexts in which they appear in the fragments. This means that I will first consider the significance of the fact that the remarks about what is appear within discussions of roads of inquiry (Sections I and II). In these discussions of roads of inquiry the Goddess supports her claims about the characteristics of what is (with respect to certain roads) not only with deductive reasoning but also with explanatory assertions about *Dikē*, *Anankē*, and *Moirā*. Once we understand the basic sense of these assertions (Section III), we can turn to contemplate the meaning and the significance of the narrative frame, the tale of the journey (Section IV). The larger meaning of the fragments taken together, that which we can properly call the philosophy of Parmenides, will emerge from reflection on the juxtaposition of the narrative, mythic, and argumentative elements. By taking into due account the contexts in which the discussions of *eon* appear, we will find

that both the seemingly incompatible implications of the claims about *eon* and also the mixture of narrative, mythic, and argumentative elements are philosophically meaningful and illuminating." (pp. 9-10)

14. ———. 2005. "Light, Night, and the Opinions of Mortals: Parmenides B8.51-61 and B9." *Ancient Philosophy* no. 25:1-23.

"Recent studies of this passage have focused largely on two issues: what the goddess or Parmenides thinks is erroneous in mortals' beliefs concerning Light and Night, and what if any merit Parmenides finds in a cosmology based on the account of Light and Night in the fragments.

My main concern will be instead with two questions that have seen less attention: First, what would be ἀπατηλός in what the κοῦρος is to learn?⁵ Second, what could be εἰκώς in the Light-Night conceptual scheme that the goddess presents? Or, what would suggest that mortals do in fact find the scheme acceptable or useful?" (p. 3)

15. ———. 2009. "Ἀλήθεια from poetry into philosophy: Homer to Parmenides." In *Logos and Muthos. Philosophical Essays in Greek Literature*, edited by Wians, William, 51-72. Albany: State University of New York Press.

"The every features I have cited as Parmenides' best-known and most consequential contributions to philosophy—the central role of deductive argument and the thematic exploration of *to eon*—grow from his engagement with poetry.

Specifically, they are intimately connected to his view of *alētheia* as the orientation of a road of inquiry. Poets in and before Parmenides' time saw the apprehension and promulgation of *alētheia* as a central duty of poetry. Parmenides, I will show, significantly extended and developed the notion of *alētheia*. It is precisely this development that issues in his thematic exploration of *to eon* and in his use (and, conceivably, introduction) of explicit deductive inference.

Let us begin by opening the questions of the meaning and the role of *alētheia* in the fragments of Parmenides. Asking these

questions is crucial not only for our understanding of Parmenides, but also for our understanding of those ways of thinking today that claim him as a predecessor, and for our understanding of the possibilities of philosophy itself. In his references to *alētheia*, might Parmenides have intended something in addition to, or instead of, what has been attributed to him so far? If so, as I will argue here, then Parmenides will have shown us a road of inquiry to which we have been oblivious." (p. 52)

16. ———. 2018. "Parmenides, Liars, and Mortal Incompleteness." *Proceedings of the Boston Area Colloquium in Ancient Philosophy* no. 33:1-21.

Abstract: "On the road of inquiry that Parmenides' goddess recommends, one is to say and conceive that what-is is one, unmoving, continuous, ungenerated, undestroyed, complete, and undivided. Yet the goddess's arguments in favor of this road use negations, distinctions, divisions, and references to generation and destruction. The requisites of inquiry that she outlines are both defined on and at odds with other features that inquiry appears to require. This essay argues that the goddess's arguments manifest something like a liar paradox: She demonstrates on the basis of the opinions of mortals that mortals' opinions are flawed. If so, then the goddess's arguments do not establish that what is is one and unchanging. What they show is that what inquiry and inference seem to require, given the opinions of mortals, is at odds with itself. To refer to what-is is to make *aletheia* impossible to reach. To be mortal, for Parmenides, is to journey through that incompleteness."

17. ———. 2019. "Sex, gender, and class in the poem of Parmenides: difference without dualism?" *American Journal of Philology* no. 140:29-66.

Abstract: "Abstract: Parmenides has been criticized as denying and disparaging human diversity; anathematizing sex, reproduction, and bodies; supporting the suppression of women and others outside the Greek ruling classes; and silencing important concerns by excluding certain kinds of

thought and reasoning from philosophical and civil discourse. I argue that the fragments do not support these charges, and that instead Parmenides provides ideas and ways of thinking that subvert the kinds of doctrine and ways of philosophizing he is accused of promoting."

18. ———. 2020. "The Eleatics and the Projects of Ontology." *Anais de Filosofia Clássica* no. 27:146-175.

Abstract: "Parmenides provides the earliest surviving Greek example of a thematic reflection on *to eon*, being or what-is; and on *mē eon*, not-being or what-is-not. His work was crucial to the framing of ontological questions and statements in later work.

Zeno and Melissus made what-is or being (*to on* or *to eon*) a central focus and engaged directly with Parmenides' reasoning and concerns.

Within philosophy, the term 'ontology' may signify a study of the nature of being, or of what it is to be. Another important use of 'ontology' signifies a set of claims about the nature and number of being or what is, a kind of cataloguing. How best can we characterize what the Eleatics' work has to do with ontology? In what if any ways, and in what if any contexts, can Parmenides, Zeno, or Melissus be said to study the nature of being or of what is? In what if any senses can Parmenides, Zeno, or Melissus be said to provide an account of the nature or number of being or of what is? Does any of the three espouse such an account; or do they engage with that kind of account in some other way?

I will argue that we find in the Eleatics three distinct approaches to ontological questions. I will suggest that Parmenides and Zeno, and likely Melissus, investigated the possibility of research into the nature and number of being as a problem; and cautioned against espousing direct unconditional accounts of the nature of what-is."

19. ———. 2020. "Comments on Livio Rossetti, *Verso la filosofia. Nuove prospettive su Parmenide, Zenone e Melisso*." In *Eleatica Vol. 8: Verso la filosofia: Nuove prospettive su*

Parmenide, Zenone e Melisso, edited by Galgano, Nicola S., Giombini, Stefania and Marcacci, Flavia, 183-194. Baden-Baden: Academia Verlags.

"It is an honor and a privilege to have this opportunity to offer a response to Dr. Rossetti's magisterial Eleatica lectures of 2017. I hope this will show my deep appreciation of this work, both for its discoveries and for its courageous opening of questions: its roads of inquiry. Much of what I will offer here is questions, meant in a spirit of respect and gratitude.

The questions address the following topics: Parmenides' fragments in/as "virtual philosophy" and the role of inquiry therein (1. below); non-hierarchical distinctions in both the structure and the content of the fragments (with special attention to the account of sex, gender, and reproduction) (2.); and what if any relationships we might be able to show between Parmenides' astronomical and biological accounts, the Light and Night that the goddess says mortals "lay down" as fundamental, and the errant and untrustworthy opinions she also attributes to them (3.)." (p. 183)

20. ——. 2021. "Poetry, Argument, and Decolonizing Hellenic Philosophy: The Case of Parmenides's Fragments." In *The Poetry in Philosophy: Essays in Honor of Christos C. Evangeliou*, edited by Mitsis, Philip and Reid, Heather L., 33-56. Fonte Aretusa: Parnassos Press.

"In what follows I propose to show how Parmenides's verse supports inquiry and argument, and thus how inquiry, argument, and poetic creation work together in his fragments.

Many interpretations of Parmenides's fragments read the goddess's speech as containing a series of arguments without asking whether any other elements of the fragments—the tale of a chariot journey that leads up to that speech, the goddess's interactions with the young man of the chariot, the verse form, the references to divine forces, the verbal echoes of earlier poets—have any implications for the speech's meaning and thus for the apparent arguments within it. Some interpreters have challenged this mode of interpretation, holding instead that the poetic form and narrative are definitive with respect to content,

and that features of the framing imply that if Parmenides used what look like arguments, he did not use them to support, explain, or prove what he wished to convey." (pp. 35-36)

(...)

"The present essay will provide further support for the view that the passages that appear to be arguments really do argue. It will also endeavor to show that what might appear to be gaps are instead reasoned connections. These connections become visible only if we pay attention to the poetry and the epic references. That is, the very elements that are adduced in support of the position that Parmenides does not offer arguments, in fact show that he does offer arguments and reasoned inferences. At the same time, the poetic form, structure, references, and framework operate to support and illuminate the inferences." (p. 36)

21. Cherubin, Rose Mathilde, Galgano, Nicola, Pulpito, Massimo, and Santoro, Fernando. 2020. "Eleatic Ontology: origin and reception. Introductions." *Anais de Filosofia Clássica* no. 27:1-18.

Abstract: "The first volume of the project *Eleatic Ontology: Origin and Reception* focuses its gaze on ancient philosophy, where the main characteristics of a prospective Eleatic ontology have been forged. In ancient Greek thought, we find the origin of this theoretical perspective, in the work of Parmenides and the other Eleatics, who in their own way testify to a first reception of Parmenideanism. Thereafter, ancient philosophy has repeatedly shown examples of reception of this standpoint, and it was this *Nachleben* that was, in turn, the origin of the notion of Eleatic ontology in the following centuries."

22. Clark, Raymond J. 1969. "Parmenides and Sense-perception." *Revue des Études Grecques* no. 82:14-32.

Abstract: "What did Parmenides understand by the terms ἀλήθεια, εἶν and νοεῖν, δοκοῦντα and δόξα ? After reviewing past interpretations of B 1.28-32 (Diels-Kranz), the author suggests that these lines are part of the revelation by the goddess who offers to differentiate between the levels of

existence of εὖν and δοκοῦντα and to assess the status of their resultant states of knowledge ἀλήθεια and δόξα. The conclusion, tested against other fragments, is that ἀλήθεια arises from contemplation (νόος) about being (εὖν) : δοκοῦντα corresponds to οὐκ ἔστιν in B 8 but is « non-existent » only in the technical sense that this is not the object of thought. Δόξα is ἀπατηλοῦν only in a technical sense, and there can be right δόξα (first « false » path) which is based exclusively on sensory reality, or wrong δόξα (second « false » path) if sensory objects are confused with being.

Parmenides' Theory of Knowledge is then summarised and his cosmology is found to be consistent with it."

23. Clarke, Timothy. 2019. *Aristotle and the Eleatic One*. New York: Oxford University Press.

"This book is a study of Aristotle's engagement with Eleatic monism, the theory of Parmenides of Elea and his followers that reality is 'one'." (p. 1)

(...)

"At the beginning of the *Physics*, one of the first items on Aristotle's agenda is to examine the Eleatic theory. (He does not explicitly include Zeno as one of the proponents of this theory, perhaps because he leans towards seeing Zeno's aims as purely negative. Aristotle starts by telling us that the task of responding to the Eleatics is not in fact a task for the physicist or natural philosopher. But then he goes on to criticize their theory anyway, as a sort of prolegomenon to his philosophy of nature. So *Physics* 1 contains an extensive treatment of the Eleatics, with Aristotle responding at length to their arguments for monism and against the possibility of change.

My topic in this book is Aristotle's engagement with the first aspect of the Eleatics' theory, their monism. Aristotle discusses Eleatic monism in several places in the corpus, but the main text is *Physics* 1.2-3. This section of the *Physics* is extremely opaque and has received relatively little attention from scholars, despite its historical and philosophical interest. In what follows I offer a detailed reconstruction of the argument

of these chapters. My aim is to explain how Aristotle understands the Eleatics' monistic position and its motivation, how he attempts to refute their position, and how he thinks their arguments should be resisted." (pp. 3-4, notes omitted)

24. Clements, Ashley. 2014. *Aristophanes' Thesmophoriazusae: Philosophizing Theatre and the Politics of Perception in Late Fifth-Century Athens*. Cambridge: Cambridge University Press.

"In the following pages I shall argue that by appropriating both Parmenidean strictures and the intrinsically satirical imagery by which Parmenides enacts the fallaciousness of mortal doxa, and by employing an Eleaticizing sophistic interlocutor of the sort Plato pictures in the *Euthydemus* or *Sophist*, the prologue of our *Thesmophoriazusae* stages a comic transposition to theatre of Parmenides' revelations about reality and illusion.

In fact, the sophistic exchange of our opening lines transforms the physical path of its journeying protagonists into an Aristophanic version of the wandering metaphysical path trodden by all Parmenidean mortals as they characteristically fail to differentiate

clearly between what-is and what-is-not. And as its ludicrous steps are revealed, as we shall see, it not only casts Euripides as exemplar and perpetuator of the typical mortal predicament of intellectual ἀμηχανία ('helplessness') that belongs to those who flounder about on that confused Parmenidean way (now known as the Doxa) but also thereby lays the grounds quite precisely for a revelatory philosophizing of theatre as the very progenitor of the seductive illusions that hold tragic mortals fast in their helplessness, later encountered in the climactic comic epiphany of the 'Agathon scene' (101–209)." (pp. 47-48)

25. Conte, Bruno. 2020. "Doxa, Diakosmêsis and Being in Parmenides' Poem." *Anais de Filosofia Clássica* no. 14:176-197.

Abstract: "The modern edition of Parmenides' poem (from Fülleborn's 1795 work onwards) consolidated the well-known dichotomical scheme according to which its fragments are established and understood, i. e., attributing them to either one

of two main “parts”, following the Proem, that is, to Truth (*Alêtheia*) or Opinion (*Doxa*). A careful review of the doxographical testimonies, however, reveals sufficient indications to cast doubt over this well-accepted representation. In this paper, I analyze some of these testimonials – particularly those found in Simplicius – aiming to show the evidence for an important distinction between what the Ancients called a section “On Opinion” (*ta pros doxan*) and the Parmenidean Cosmogony properly. We shall see that this hypothesis implies a “deflationary” view of the *Doxa*, limited to verses 53-61 of fragment 8, in addition to the four verses of fragment 9. The cosmogonical account, moreover, as we would like to show, should not be simply understood as any collection of “mortal opinions” – in the sense of their devaluation in the first part of the poem (cf. B1,30; B6,4-9; B7,3-5) – but instead as importing epistemological features into the description of the origins of the present state of the universe. Finally, we extract from this picture some consequences for the understanding of the role of the argument on Being and the limits of Parmenidean “ontology”.

26. Conte, Bruno Loureiro. 2023. "The gap between Parmenides' argument on Being and his cosmology in the Aristotelian account." *Archæus. Studies in the History of Religions* no. 33:1-28.

Abstract: "In some of the Aristotelian accounts, Parmenides' thesis is construed in opposition to the philosophy of nature; on the other hand, he is also depicted, in a different context, as a cosmologist, to whom the Stagirite (and a long tradition afterwards, ending with Simplicius) ascribes a theory of becoming and its principles. In this paper, I exhibit and analyse the relevant passages from *Physics* I 1-3, *Metaphysics* I 3 and 5 and *On generation and corruption* I 3, providing an interpretation that aims to solve the apparent paradox, making sense of the information we can gather from Aristotle's and Simplicius' testimonies. Eventually, I propose a construal of the Two Ways of fr. 2 with an emphasis on the predicative reading of *einai*, which could hint at the Parmenidean approach to cosmology that runs in parallel with the argument on Being."

"Any new interpretation of Parmenides' philosophy, or any criticism of previous interpretations, must be based on a text that is as close as possible to the lost original. The titanic task carried out over centuries by philologists and codicologists offered us a firm starting point, but much still remained to be done. Passages of the Poem remained inexplicably obscure. (For example, why does the Goddess order withdrawal from a true way in line 6.3? How can it be said that thought is expressed in being, as line 8.35 appears to say?) For this reason, since my presence in Europe made it possible, I decided to check the manuscript tradition of citations (wrongly called "fragments") of the Poem, in order to propose a new version of it, purified of certain errors that had accumulated over the centuries. A first result of my search was presented in 1971 as a doctoral thesis. Some years later, my book, *Les deux chemins de Parménide* (1984, second edition, augmented and corrected, 1997) completed my work. New research on the manuscript sources of the first editions of the Poem, as well as a change of view in my assessment of "the two ways," allow me to present this new version of Parmenides' "thesis" today. In this work, I also take into account comments and criticism that my previous studies on Parmenides have raised, and when appropriate, (a) I defend myself, or (b) I accept and make certain corrections.

It is impossible to go into Parmenides' philosophy without being "bitten by the bug." I hope that readers of this book will feel the same." (pp. X-XI)

28. ———. 2010. "The 'Doxa of Parmenides' Dismantled." *Ancient Philosophy* no. 30:231-246.

"In most civilizations, fictional entities are the creations of anonymous popular imagination, or even of some special wise men. Greek civilization was not an exception: Centaurs, Sirens, Cyclops, and other such creatures can be found everywhere in Greek mythology. These imaginary creatures were put together out of elements that taken separately are real enough: human being and horse, as in the case of Centaur, woman and bird, in the case of the Siren. Philosophers, or rather, historians of philosophy, followed this creative example, and invented imaginary notions. 'The Doxa of Parmenides' is one of these imaginary notions.

It has never existed 'as such': for, even though it was constructed from elements that are real, the combination of these elements was illegitimate.

These mythological examples are useful as we seek to understand the capricious mixing that took place in the assemblage of 'Parmenides' Doxa'. It is true that the Doxa is present in Parmenides' poem, it is also true that Parmenides is a real entity and not an imaginary being; but 'the Doxa of Parmenides', the unification of these two terms (Doxa and Parmenides), is an invention of the historians of philosophy. That Parmenides presented some 'doxai' does not imply that these 'opinions', which comprise the Doxa, are his 'doxai', the 'doxai' of Parmenides.

This article aims to expose this combination as arbitrary and false." (p. 231)

"Part I of the present volume gathers together the set of papers presented at the Symposium, whose topics were divided up based on the "traditional" structure of the Poem: one section dedicated to the exposition of the way of truth, and the other to the description of the "opinions (δόξαι) of mortals."

(...)

"Other papers went deeply into the part of the Poem concerning the "opinions of mortals."

(...)

"The organizers of the meeting, which was open to the public, offered eight young and high-level Argentine researchers (graduate students, professors, or advanced students) the opportunity to present a short paper in front of the prestigious assembly of foreign authors. The exchange of ideas between them and their "teachers" was a very enriching experience. These eight papers are included in Part II of the present volume." (From the *Foreword* by Néstor-Luis Cordero, pp. IX-XI)

30. ——. 2011. "Parmenidean "Physics" is not Part of what Parmenides calls "δόξα"." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 95-113. Las Vegas: Parmenides Publishing.

Summary: "Parmenides, as were all the philosophers of his time, was certainly interested in "physical" questions, even if the response to these questions was necessarily conditioned by his big "discovery": that there is being. But the only way to respect the value of his "physical" theories is by keeping them out of the so-called "δόξα" because, for Parmenides, opinions are deceitful and not true. The hazardous reconstruction of Parmenides' text invites the researcher to find the "δόξα" between the end of fr. 8 and fr. 18. This prejudice, together with the anachronistic idea according to which Parmenides spoke of "appearances" (and the δόξαι would be their description), leads to the exaggerated place the δόξαι occupy in the present reconstruction of the Poem. Parmenides exposes—and criticizes—the δόξαι of "others." There are no Parmenidean δόξαι."

33. ———. 2016. Concerning a suggested new arrangement of Parmenides' fragments.

Available on Academia.edu.

"As we know, an arrangement of recovered quotations of Parmenides was proposed in 1795 by Georg G. Fülleborn, the first author who devoted a (short) book(1) entirely to the thought of the philosopher. Only minimal corrections were made to the order he proposed(2) and for that reason we can understandably speak today of an "orthodox" or "canonical" version (that which is an exception among the pre-Socratics, whose texts are readable *ad libitum* by the researcher).

However, a detailed (or even superficial) reading of Parmenides' quotations would show that the order proposed by Fülleborn is completely arbitrary, even if it may be clearly justified by Fülleborn's own philosophy that adopts the Kantian(3)

gnoseological separation of the senses and reason. Fülleborn divides the Poem (apart from a Proemium) in two "parts": the Truth and the Doxa, taking his cues from Simplicius' interpretation. As we know, this organization resulted from Aristotle erroneously attributing to Parmenides a "physics" that he himself criticizes as the opinions of "men who know nothing." This version of the Poem, while coherent if following the line of Kantian criticism, is anachronistic and inappropriate in regards to Parmenides himself." (p. 1)

(1) *Die Fragmente des Parmenides*, Züllichau, 101 pages.

(2) In 1810, it was necessary to add three new verses, the current fr. 19.

(3) We can even trace Fülleborn's Kantian ties back to a book he wrote on Kant's philosophy: *Immanuel Kant. Nebst einigen Bemerkungen über die Kantische Philosophie* (1880).

34. ———. 2018. Some examples of the authentic Parmenides' "physics": the Parmenides "ontologist" is the Parmenides *phusikós*.

English translation of *Quelques exemples de la "physique" contestataire de Parménide: le Parménide "ontologue" est le Parménide phusikós*, *Anais de Filosofia Classica*, vol. 12 n° 24, 2018, pp. 88-109.

"It is undeniable that Parmenides' philosophy, even if it implies problems of understanding for our post-modernity, shares the atmosphere of his presocratic colleagues. A careful reading of the fragments of his Poem -without taking into account the "citators" and commentators- shows us that distinguishing a "Parmenides ontologist" from a "Parmenides phusikós" is meaningless. There is "only one" Parmenides who explained reality (phúsis) first according to a very original principle (which supposes the rejection of "opinions", of what is "said" about things), and who then incited his disciple to carry out an explanation in a way that we today call "physical" but which, in his time, belonged also to a research on phúsis, that is, to the fact of being. We have just used the verb "to incite" because there remains almost nothing of the answers that Parmenides was able to give. In the recovered fragments of Parmenides we have found, alas, only four answers, which we will analyze towards the end of this work, because the avatars of the transmission of the Poem, starting already from Aristotle, have unfortunately mixed up what Parmenides criticized and what he affirmed. However, it is interesting to discover that an authentic "Parmenidean physics" arose naturally from his discovery of the fact of being." (p. 1)

35. ———. 2020. "Parmenides by himself." *Anais de Filosofia Clássica* no. 27:200-223.

Abstract: "In order to know the thought of a philosopher the surest method is to read what he wrote. In the case of the Presocratics, however, a direct unmediated reading of the texts is almost impossible, because the vast majority of works of this period have disappeared. We propose the following methodological procedure concerning the Presocratics in general, and Parmenides in particular: Once a recovered citation ("fragment") is confirmed as authentic, one must first attach oneself to it and try to pull from it the richest possible meaning. Only by this procedure can one understand the author on his own. The second step is to search for whether there are in a commentator some elements in accordance with the original text that are capable of enriching it.

We first consider Parmenides in his philosophical milieu, then outline the contents of the recovered fragments of his Poem. A Parmenides emerges who differs in many fundamental respects from that portrayed by Aristotle and his school. From an analysis of these fragments unburdened by Aristotelico-Simplician assumptions, we propose a new reading order for the fragments."

36. ———. 2020. Gianfrancesco d'Asola, the creator of the third way of Parmenides.

English translation available on Academia.edu of:
Gianfrancesco d'Asola, el "creador" de la tercera vía parmenídea.

37. ———. 2020. Parmenides *phusikós*, yes, but...

English translation of *Parmenides phusikós, oui mais...*, commentary to "lezioni" of Livio Rossetti, *Sulla filosofia virtuale di Parmenide*, published as *Verso la filosofia: Nuove prospettive su Parmenide, Zenone e Melisso*, in N. S. Galgano, S. Giombini, F. Marcacci (ed.), *ELEATICA* 8, Academia, 2020, pp. 195-198.

"Livio Rossetti finds in Parmenides "molti insegnamenti in cui si articola il sapere su cielo, terra e organismi viventi" (p. 70), and this "other" Parmenides would be found in the "part" of the poem known as 'the Doxa'. In fact, the Goddess "ha apertamente assimilato alle 'doxai'" the "sub-trattazioni naturalistiche" (p. 74). And he says once again that "l'annuncio della trattazione perì phúseos era fatta in termini di discorso sulle dóxai" (p. 73). Consequently, the natural phenomena that are treated from 8.50 onwards would be samples of the dóxai.

Obviously, the notion of dóxa is very important in Parmenides and already in the Introduction of the Poem (fr.1) the listener of the Goddess is supposed to know it, as well as the heart of the truth: "You must (kréo) be aware...". But -important detail- the Goddess already announces that in the dóxai brotôn there is no true trust (fr. 1.30). However, as Rossetti, forcefully points out, Parmenides "dopo i settantacinque esametri sull'essere", and despite its devalued character, he deals with "opinions".

In fact, it is precisely in his interpretation of the notion of dóxa, fundamental to Rossetti's analysis, where the weakest point of his excellent work lies, which, despite his efforts, is literally a "virtual" work: it is a very beautiful building, didactic, convincing, but built on something that does not exist; therefore, it collapses." (p. 1)

38. ——. 2020. Why Simplicius quoted the fr. 7.2 (DK) of Parmenides after the fr. 1.30 (DK)?

Available on Academia.edu.

Abstract: "Sextus is the only source of verses 1 to 28a of Parmenides fr.1. His quotation continues until verse 1.30, but from verse 1.28b the passage is also quoted by Simplicius, who adds at the end the verses 1.31-32, absent in Sextus. Instead of these two verses, Sextus copies five verses from fr.7 (7.2-6). How to explain this discrepancy? One could say that Sextus literally copied the text of the Poem. However, this explanation would be erroneous. Parmenides is the first philosopher who presents his ideas in a certain order, which obliges us to place some quotations before or after others. All the assertions of fr.7 presuppose a preliminary explanation: the notion of the "path

of research" (fr.7.2) as a path leading to truth or opinions had appeared before, in fr.2; the description of the authors of the rejected path (fr.7.1), and in particular their inability to see and listen (fr.7.4-5) had also been presented before, in fr.6, and, finally, *no polúderin élegkhos* (fr.7.5) "already pronounced" (*rhethenta*) can be found in the set fr.1.1-30. However, placing fr.2 and 6 after fr.7 is impossible. The explanation of the Sextus quotation is to be found in his interpretation of fr.1. As his exegesis of the images of the Proem shows, Sextus wants to show that Parmenides rejects sensations, the source of opinions, and privileges reason. Once presented the need to be aware of both truth and opinions (1.29-30) Sextus makes a collage: he does not quote verses 1.31-32, which would justify the study of opinions ("...and yet, all'empes) and adds a text that explicitly says that thought must be discarded from "this path of research" (fr.7.2), and that *lógos* must be used as a criterion (*logo krinai*, fr.7.5)."

39. ———. 2021. The unfortunate lacuna of Parmenides' verse 6.3 DK.

Available at Academia.edu.

Summary: "After having written that "it is possible to be; nothingness, on the other hand, does not exist" (fr. 6.1b-2a), which is an almost literal allusion to the "path of persuasion, which is accompanied by truth" (already presented in fr. 2, verse 3), Parmenides describes the path of "the opinions of mortals who know nothing" (fr. 6.4ff.), and, concerning both paths, gives his disciple some advice. Unfortunately, we do not know what he advises, because instead of a verb that would describe an activity, there is a lacuna in Simplicius' *Commentary on Aristotle's Physics*, which copies a text, alas, already mutilated, the verse 6.3. When the Commentary was edited in Venice in 1526, the person in charge of the edition proposed the verb "to remove", and this hypothesis was reinforced in 1892 by H. Diels. However, this verb is incompatible with Parmenides' dichotomous method, because, if it suggests that one must move away from two paths, a third path naturally emerges: the one to which one must cling. We present an analysis of the context that allows us to propose a

different verb, consistent with Parmenides' dichotomous thinking."

"The version proposed by us was this one:

πρώτης γὰρ τ' ἀφ' ὁδοῦ ταύτης διζήσιος <ἄρξει>(35)

"Because you'll <start> by this first path of research....."

(35) Cf. more precise details, as well as other examples, in N. L. Cordero op. cit. in Note 5 [*Les deux chemins de Parménide*, 1997², Vrin/Ousia, Paris/Brussels], pp. 168-175.

40. ——. 2021. The "opinions of mortals" of Parmenides and a possible eleatic pythagoreanism.

English translation of "Les 'opinions des mortels' de Parménide et un éventuel pythagorisme éléatique", *Archai*, 31, 2021, pp.1-24, available on Academia.edu.

Abstract:"The Goddess of Parmenides always announces that the δόξαι are a human product. But there is one point that has not generally been noticed in the studies devoted to the study of the δόξαι: they describe a human activity that consists in explaining reality by the presence of opposite principles, and that is always related to "nomination" (see fr. 8.51, fr. 8.38-41, fr 9, fr. 19.3). Was there a school in Parmenides' time which corresponded to this sketch, or is it a collage of Parmenides'? In any case, it is attested the presence of a branch of Pythagorism which was characterized, precisely, by "placing" names on things."

41. ——. 2022. The "opinions" in Parmenides and his ignorance of the unbearable weight of being.

Traduction of "Las 'opiniones' en Parménides y su desconocimiento del insoportable peso del ser" (*Hypnos*, 48, 2022, pp. 1-22).

Abstract: "The Greek language uses, to refer to things, the expression τὰ ὄντα, "things that are". Everyday language already establishes a relation between "something that is" and the fact of being. Parmenides' philosophy can be explained as a philosophical reflection on this linguistic fact. A non-

philosophical view of language ignores this and explains reality in terms of “the way things seem to be”, or “opinions”. As Parmenides demonstrates in his Poem, only a relativizing of the fact of being can justify an explanation of reality based on opinions."

42. Cornford, Francis Macdonald. 1933. "Parmenides' Two Ways." *Classical Quarterly* no. 1933:97-111.

"The object of this paper is to determine the relations between the two parts of Parmenides' poem: the Way of Truth, which deduces the necessary properties of a One Being, and the False Way, which contains a cosmogony based on 'what seems to mortals, in which there is no true belief.'

The poem presents two problems. First, why does the appearance of the world belie its real nature? To Parmenides himself, as to any other mortal, diversity in time and space, change and motion, seem to exist; what is the source of error here?

This is a philosophical question; and it may be doubted whether Parmenides could have given an answer that would satisfy us. The second is an historical question: Whose is the cosmogony in the second part of the poem? Is it Parmenides' own construction or a list of errors that he rejects? To this there must be one right answer, which Parmenides, if we could summon him, could give us in a moment.

This is the problem I propose to discuss. The solution may throw some light on the other problem." (p. 97)

43. ———. 1935. "A New Fragment of Parmenides." *Classical Review* no. 49:122-123.

"Plato, *Theaet.* 180D: ὀλίγου δε` ἐπελαθόμεν, ὦ Θεόδωρε, ὅτι ἄλλοι αὖ τάναντία τούτοις ἀπεφήναντο,

οἶον ἀκίνητον τελέθει τῷ παντι` ὄνομ' εἶναι

If we punctuate (with Diels at Simplicius, *Phys.* 143, 10)

οἶον, ἀκίνητον τελέθει. τῷ παντι` ὄνομ' εἶναι

it can be translated: 'It is sole, immovable. The All has the name " Being." So Plato, and so Simplicius after him, must have understood it. If they found this line in Parmenides, they might well accept it as a line that Parmenides might have written. It is no odder than several verses now accepted without question. The sense is good and relevant.' (p. 122)

44. ———. 1939. *Plato and Parmenides. Parmenides' Way of truth and Plato's Parmenides. Translated, with an Introduction and a Running Commentary.* London: Kegan Paul, Trench, Trubner & Co.

Reprinted by Routledge & Kegan Paul, 1980.

Chapter II: *Parmenides Way of Truth*, pp. 28-52. ("This chapter is partly based on an article, *Parmenides' Two Ways*, *Classical Quarterly*, xxvii (1933), 97-111, where some of the points are discussed at greater length.").

"Parmenides' premiss states in a more abstract form the first assumption common to all his predecessors, Milesian or Pythagorean: ultimately there exists a One Being. His thought is really at work upon this abstract concept ; he considers what further attributes can, or cannot, logically belong to a being that is one.

At the same time, this One Being is not a mere abstraction; it proves to be a single continuous and homogeneous substance filling the whole of space. So far, as it seemed to him, reason will carry us, but no farther. Such a being cannot become or cease to be or change; such a unity cannot also be a plurality. There is no possible transition from the One Being to the manifold and changing world which our senses seem to reveal. His work is accordingly divided, after the proem, into two parts. The *Way of Truth* deduces the nature of the one reality from premisses asserted as irrefragably true. It ends with a clear warning that the *Way of Seeming*, which follows, is not true or consistent with the truth.

This second part, accordingly, is not in the form of logical deduction, but gives a cosmogony in the traditional narrative manner. The starting-point is the false belief of mortals, who

trust their senses and accept the appearance of two opposite powers contending in the world. Unfortunately very few fragments of the second part survive ; but it is probable that we possess nearly the whole of the *Way of Truth*, thanks to Simplicius, who copied it out in his commentary on the *Physics* because the book had become very rare.

And it is with the *Way of Truth* that we are chiefly concerned." (pp. 29-30)

45. Cosgrove, Matthew R. 1974. "The ΚΟΥΡΟΣ Motif in Parmenides: B 1.24." *Phronesis. A Journal for Ancient Philosophy* no. 19:81-94.

"Why does the goddess of Parmenides' poem address her mortal guest ω κούρῆ (B 1.24)? The interpretations that have been proposed in answer to this question may be grouped generally under two opposed points of view. One finds in the goddess' address an *autobiographical* statement from the poet and a means of dating the poem's composition; the other takes it in some sense *to contrast* the humanity and/or discipleship of the κούρος *with the divinity* and/or teaching role of the goddess. Several other more recent and less widely noted suggestions have also appeared, but I think no satisfactory explanation of why the recipient of the goddess' discourse is presented as a κούρος has yet been found. The interpretation which I shall offer through an examination of previous answers to this question seeks for the goddess' address a more intrinsic meaning and coherent place within the poem and the whole of Parmenides' work." (p. 81)

46. ———. 2011. "The Unknown 'Knowing Man' : Parmenides, B1.3." *Classical Quarterly* no. 61:28-47.

"Commentators on Parmenides' poem have long read the words of B1.3, εἰδότες πάντα, with the secure assurance that this phrase must identify and praise the recipient of the divine discourse that is shortly to come. The journeying speaker of line 1, whom the goddess will greet in B1.24 as a κούρος, is assumed to be the 'knowing man'; or, more precisely, it is anticipated that the goddess is about to make him so by revealing to him the heart of truth (B1.29). This 'knowing man' (so the received view goes)

is the goddess's initiate,² in contrast to whom are the 'know-nothings', the βροτοι ἔιδότες οὐδέν (B6.4).

But I argue here that this is all a mistake, and one that undermines at every turn our ability to understand what is going on in the proem."

(...)

"I do not claim to break new ground on all or even any one of these details save by providing a consistent and coherent framework for choosing among answers to them. For I submit that only the correct identification of the φω ἔς εἰδώς and of the two separate journeys, as proposed here, in which the speaker of line 1 becomes involved, ties those details together, makes sense of them, and unifies the opening of the poem. In what follows I first develop this interpretation without defensive interruptions, as though it were obvious, so that readers may envision from the outset the picture of the proem I have in mind. Of course, I am aware that my interpretation is very far from being incontrovertible.

Accordingly, after the initial exposition, I shall circle back into the eristic thicket." (p. 28)

47. ——. 2014. "What are 'True' *Doxai* Worth to Parmenides? Essaying a Fresh Look at his Cosmology." *Oxford Studies in Ancient Philosophy* no. 46:1-31.

"In recent years the preserved portions of Parmenides' poem traditionally labelled 'Doxa' ¹ have received more nuanced attention, focusing on their content and not just on their presumed role as some kind of foil or supplement to 'Aletheia', 'Truth'. While the age-old question of the relation between these two parts of the poem has been neither settled nor abandoned, some scholars have put this and related issues to one side and concentrated instead on assessing the sometimes startling scientific innovations introduced in the context of the Doxa." (p. 1)

(...)

"These approaches pose various problems, which this paper intends to explore.

(...)

As posed explicitly by Cordero, but bearing implicitly on Graham's, Kahn's, Mourelatos's, and Sedley's views, is the question in what sense, if any, these innovations in physical matters might be 'true', in Parmenidean terms. If they are 'true' for *brotoi*, possibly including us latter-day mortals, are they also 'true' for the goddess, but only in some 'lesser' sense, which she does not define? And what could that be? Or do they just simply and finally fail to follow her *semata* for what-is, as much as do any of the merest falsehoods of mortals' world? And if so, what are they then worth to her? And, perhaps more tantalizingly, what are they then worth to Parmenides? Could he really have been 'enthralled' by such fatally flawed 'truths'? And if so, to what end?

With this last query we are firmly back in the midst of the dilemma that has bedevilled commentators on Parmenides since antiquity, concerning not just Parmenides' own attitude towards the possibly revolutionary and astronomically accurate, or 'true', portions of the *Doxa* but the overall question of the philosophical relation between Truth and *Doxa*. These are questions not just of historical/biographical psychology but, at least as posed here, they have another import, one related to and calling for explication of Parmenides' proper philosophical concerns. In effect, as I hope to show, asking 'What are true *doxai* worth to Parmenides?' is an especially useful and revealing way of posing anew the timeworn problem of the relation between the two parts of Parmenides' poem, and in particular that of the philosophical status of the cosmology propounded by the goddess." (p. 4, notes omitted)

48. Coxon, Allan H. 1934. "The Philosophy of Parmenides." *Classical Quarterly* no. 28:134-144.

"In the *Classical Quarterly* for April, 1933, Professor Cornford maintains that the 'Two Ways' of Parmenides are not meant as alternatives: "The Way of Truth and the Way of Seeming are no more parallel and alternative systems of cosmology, each

complete in itself, than are Plato's accounts of the intellectual and sensible worlds. (1)

I wish here to try to support his general view, which seems to me to be indisputably correct, while differing from Professor Cornford in some important details." (p. 134)

(1) p. 102.

(...)

"The unity of the whole poem should now be clear. It opens with Parmenides realization of the difference between knowledge and belief, symbolized by his entry into the realm of Day. There he is welcomed by Justice, or Destiny,(1) who narrates to him, first the features of the world he has just entered, then the nature of the world he has left. The former narrative he has himself to test of λόγος, the possession of which has gained him admission. The latter, she warns him, is a myth.(2) True, even those to whom the door remains shut can produce such; the point is that anyone who knows that this dark world is not the real world is likely to produce a better myth about it than those who believe it to be the only reality and their myth to be truth.

The thesis of this paper has been that Parmenides was, and was conscious of being, the first genuine philosopher in the Greek world. It follows that he was the founder of European philosophy; that, while his predecessors discovered the main principle of what we know as science, Parmenides was the first metaphysician. If that is true, it is a splendid achievement; and he deserves considerably more recognition than he has usually, since Plato, been given." (p. 144)

49. ——. 1969. "The Text of Parmenides fr. 1.3." *Classical Quarterly* no. 18:69.

"In all texts of the fragments of Parmenides printed in the last fifty years he begins his poem by speaking of "the way which"

(or, according to some, "the goddess who") "carries through all towns the man who knows"

(...)

"In fact ἄσθη, which is alleged to be the reading of the best manuscript of Sextus' books *Adversus Dogmaticos*, has no manuscript authority at all. ἄσθη first appeared in the text of the third edition of *Die Fragmente der Vorsokratiker* published in 1912, where it is attributed to the Ms. N (= Laur.85.19), so called by Mutschmann".

(...)

The "countless attempts at emendation" of [the readings of L and E et al., πάντα `τε and πάντα τη ` respectively] did not include *aste*. Variants from N were first published in 1911 by A. Kochalsky in his dissertation,...but his professedly complete list of new readings from N for these books of Sextus includes no reference to Parmenides 1.3. It follows that *aste* can hardly have appeared among the variants which he says he had already communicated to Diels. The word *aste* appears, however, as the reading of N in vol. II of Mutschmann's text of Sextus, which was published in 1914. It would seem, therefore, that Diels got the reading privately from Mutschmann, who collated N in 1909 and 1911. . . . In any case, the word is a simple misreading of the manuscript, which has *pant' ate*." (p. 69)

50. ——. 1969. "The Manuscript Tradition of Simplicius' Commentary on Aristotle's *Physics* I-IV." *Classical Quarterly* no. 18:70-75.

Abstract: "The following discussion' of the manuscript tradition of Simplicius' commentary on Aristotle's *Physics* I-IV originated in an examination of the tradition of the fragments of Parmenides. It is therefore illustrated not only from Simplicius but particularly from the texts of Parmenides quoted by him. This will not be misleading, since, though many of these texts are quoted by Simplicius more than once, there is little or no sign in any manuscript of interpolation from one passage to another and it is not likely that any scribe could have

interpolated the text from an independent manuscript of Parmenides."

51. ———. 2003. "Parmenides on Thinking and Being." *Mnemosyne* no. 56:210-212.

"The incomplete verse which constitutes Fragment B3 of Parmenides τοῦ γὰρ αὐτοῦ νοεῖν ἔστιν τε καὶ εἶναι is of central importance for the interpretation of his argument. Since what may be called the traditional understanding of the phrase, as opposed to that proposed by Zeller,(2) has been recently revived in *The Cambridge Companion to Early Greek Philosophy*(3) (CC) and elsewhere, it seems worthwhile to recapitulate the evidence on either side.

The sentence is cited only by Clement, Plotinus and Proclus, by all isolation from its context, and by all as asserting the identity of thinking with being. The English translation, 'For it is the same to think and be', is said to be "the only natural reading of the Greek" (CC, 120). is at least questionable, since it postulates a substantival use with no article, which would be unparalleled in the first half of the fifth century, and even later, and which its assumption by Clement and the Neoplatonists does nothing to guarantee." (p. 211)

52. ———. 2009. *The Fragments of Parmenides: A Critical Text with Introduction and Translation, the Ancient Testimonia and a Commentary*. Las Vegas: Parmenides Publishing.

Revised and expanded edition edited with new translations by Richard McKirahan and a new Preface by Malcolm Schofield (First edition Gorcum: Van Assen 1986).

"Parmenides' poem is dominated by his conviction that human beings can attain knowledge of reality or understanding (*nóos*). This faith is expressed in the apocalyptic form of the poem, which at the same time offers an analysis of its presuppositions,

and which may be regarded as an attempt to answer the questions, 'what must reality be, if it is knowable by the human mind, and what is the nature of human experience?'

The ontological part of the work comprises an account of two intellectually conceivable ways of discovering reality (*alethein*), followed by a summary analysis of its character as revealed by pursuing the only way allowed to be genuine. The ways are defined respectively by the formulae 'is and is not for not being', and 'is not and must needs not be', and the recognition that they are mutually exclusive and exhaustive is represented (in opposition to the evidence of the senses) as itself constituting the only criterion (fr. 7, 5) for determining what is real: nothing is to be so considered, unless it either is intrinsically something, or of necessity is not anything. Since the second way is argued to be concerned with nothing and to lead nowhere, reality is to be identified by pursuing the first, i.e. by asking what can and must be made the subject of an unconditional 'is'.

Although Parmenides defines his conception of philosophy in terms of the expressions 'is' and 'is not', he gives no explicit indication of the sense which he conceives these expressions to bear. Modern exegesis has in consequence saddled him with, most generally, an existential understanding of the verb, or else with an archaic failure to distinguish between its existential and copulative uses. It is better to recognise that his approach is purely formal or dialectical, i.e. that, so far from positing any given sense of the verb, he is concerned to determine what sense attaches to it, given its essential role in 'asserting and thinking'. In the prologue and in the cosmological part of the poem he uses the verb 'to be' either with an adverbial qualification or with a further predicate (e.g. fr. 1, 32; 8, 39, 57; 20, 1), but in defining 'the only ways of enquiry which can be thought' (fr. 3, 2), he isolates the expressions 'is' and 'is not' deliberately both from any determinate subject and from any further completion. In so doing he assigns to them no restricted sense but treats them as the marks of 'asserting and thinking', with the possibility and presuppositions of which he is concerned throughout (cf. fr. 3, 8n.). His aim in defining the

'genuine way of enquiry' as the expression 'is' is to discover (I) what, if anything, can be said and thought 'to be' something without the possibility of denial that it is that thing, and (ii) what this subject can further be said 'to be', i.e. what further predicates can be asserted of it. He answers these questions by converting the verb 'is' to the noun-expression 'Being' (eon) and then arguing for the nature of what this name must denote. The 'is' which constitutes the definition of the way is thus reformulated as the copula with 'Being' as its subject: 'Being is ungenerated and imperishable, complete, unique, unvarying' etc. (fr. 8, 3-5). Initially the nature and number of 'Being', like the sense of 'is', remain wholly undetermined except as what 'is and is not for not being'. Its further determination, culminating in its characterisation as non-physical, is argued in the account in fr. 8 of the many landmarks or monuments on the authentic way of enquiry, i.e. of the terms which can be asserted of the subject, and the question arises, 'how does Parmenides envisage the relation between the subject, 'Being', and the terms joined with it by the copula?'

Among the landmarks on the authentic way are the unity or indivisibility of Being and its uniqueness. If what is is one and unique, Parmenides cannot well suppose that the terms which he predicates of it are the names of distinct attributes, which would have their own being and so be eonta. He must therefore regard them as alternative names of Being. This was Plato's understanding of his meaning (cf. Sections 7 and 8 below), which is confirmed by Eudemus' assertion that it was Plato himself who first introduced two senses of the verb 'to be' by discriminating between its substantial and attributive uses (cf. Sect. 8). It is confirmed also by the Megarian view of predication as identification (cf. Sect. 6 ad fin.), for the Megarians were regarded as latter days (tt. 102, 132). Aristotle likewise insists (tt. 19, 21, 27) that Parmenides ascribed to 'being' only a single sense, whence he was led to suppose that what is other than Being itself has no being at all. Thus both the text and the Platonic and Peripatetic exegesis of it indicate that Parmenides' copulative use of 'is' in his account of the authentic

way signifies an identity which is the direct expression of the perfect identity of substantial Being." (pp. 19-21)

53. Crubellier, Michel. 2019. "Looking for a Starting Point—The Eleatic Paradox Put to Good Use." In *Aristotle's Physics Alpha: Symposium Aristotelicum*, edited by Ierodiakonou, Katerina, Kalligas, Paul and Karasmanis, Vassilis, 53-88. New York: Oxford University Press.

"After the general epistemological reflections in chapter 1, the opening lines of chapter 2 seem to mark the beginning of the inquiry of book I. The rest of the book shows an indisputable continuity; indeed, it consists mainly in one long argument in which an accurate and consistent model of natural change is built up step by step.

I have divided the chapter into five sections, which correspond to the paragraphs in Ross's edition except that in the last paragraph I take 185b5–25 and 185b25–186a3 to be two distinct units (that is, I do not see a particularly close relation between the mention of 'the more recent of the Ancients' and the part of the discussion preceding it immediately, about the many senses of 'one').

Actually, chapter 2, as it stands (i.e. as it has been articulated by Renaissance editors), is not a well-individuated unity. Its first section is linked to the subsequent chapters at least until I 5; the second is an introduction to the discussion of the immobilist monistic ('Eleatic') position, i.e. to chapters 2 and 3 taken together.

Only the last three sections form a distinct unity (which nevertheless is closely related to chapter 3).

I will spend much more time on the first two sections than on the rest, on account of their strategical importance."

54. Crystal, Ian. 2002. "The Scope of Thought in Parmenides." *Classical Quarterly* no. 52:207-219.

"Much has been written recently about the relation between thinking and what is thought in Parmenides.(1) Long has recently argued that the relation between the cognitive act and

its object is a weak form of identity in which thinking and being are coextensively related.⁽²⁾ Curd in her recent study of Parmenides argued for a weaker relation in which being constituted a necessary condition for thinking.³ In this paper, I want to argue that Parmenides offers a different account of the relation between thinking and what is thought. I shall argue that Parmenides puts forth a monistic thesis which entails the strict identification of the epistemic subject and object. I am not the first to posit the strict identity of thinking and being. Vlastos and, more recently, Sedley also attribute this view to Parmenides.⁴ However, the argument of this paper will be that the identity relation, *pace* Vlastos and Sedley, does not emerge until Parmenides' account of qualitative homogeneity in Fragment 8. As a result, we cannot attribute this position to Parmenides prior to Fragment 8.

My argument will proceed in two main stages. First (Section I), I shall argue that Fragments 1-7 do not establish the strong identity thesis. I shall do this by canvassing two possible interpretations of how it is that thinking relates to what can be thought in Fragments 1-7. These readings I shall refer to as 'realist' and 'idealist' respectively. Secondly (Section II), I shall turn to the Parmenidean account of what 'is' in Fragment 8 in order to show (Section III) how this does establish the strict identity between the thinker and that which is thought." (p. 207)

(1) To cite just a few recent examples on this subject matter, see A. A. Long, 'Parmenides on thinking being', in J. Cleary (ed.), *Proceedings of the Boston Area Colloquium in Ancient Philosophy* 12. (New York, 1996), 125-51; D. Sedley, 'Parmenides and Melissus'. in A. A. Long (ed.), *The Cambridge Companion to Early Greek Philosophy* (Cambridge, 1999), 113-33; P. Curd. *The Legacy of Parmenides* (Princeton. 1998), chs. 1 and 2.

(2) Long (n. 1), 140-6. .See n. 38 below.

(38) Long (n. 1), 140-6, I think, wrongly attributes a weak identity-relation between thinking and being in which, although identical, they are coextensively related. He maintains

that thinking and being do not connote the same thing or are different in semantic value just as the other attributes such as being ungenerated and everlasting are different in semantic value. However, even allowing for these differences in connotation or semantic value one nonetheless cannot avoid the problem that thinking cannot be treated like the other attributes in that it requires the differentiation outlined above; the sort of differentiation which Parmenides appears to rule out when he offers his complete account of being in Fragment 8. Moreover, as I have argued elsewhere, it would seem that Plato picked up on this point when setting out his account of mental faculties and their objects in Republic 5. That is, in the midst of a backdrop couched in allusions to Parmenides' Proem, Plato sets out an account of thinking and its objects which is based upon the sort of differentiation that Long talks about, namely as coextensive *relata*. But more to the point, it would seem that Plato is setting out his account in this manner in contrast to the Parmenidean account. See I. Crystal, 'Parmenidean allusions in Republic V', *Ancient Philosophy* 16 (1996), 351-63.

55. Curd, Patricia. 1991. "Parmenidean Monism." *Phronesis. A Journal for Ancient Philosophy* no. 36:241-264.

"Is Parmenides indeed a monist? If so, what sort of monist is he? This paper undertakes a re-thinking of these issues." (p. 242)

(...)

"I shall argue that Parmenides adopts neither material nor numerical monism; but that his arguments about the only true account of being show him to be committed to predicational monism.⁽¹⁰⁾ Whatever is must be a predicational unity; but this is consistent with there being many ones. I begin by considering the *esti* and its subject in B2, and by giving some attention to the setting and context of Parmenides' philosophical project. I next consider a number of the arguments of the *Alêtheia* section of the poem, and then turn to the relation to Parmenides of philosophers who came after him, especially the atomists and the pluralists." (p. 243)

(10) Barnes, for instance, is thus correct in denying that Parmenides adopts numerical monism (in "Eleatic One"). But because Barnes insists on an existential 'is' in Parmenides he does not give full weight to the metaphysical and methodological force of Parmenides' arguments; and so he does not see that Parmenides is indeed committed to a kind of monism. Parmenides himself speaks of the unity of being and argues that being is both *suneches* and *mounogenes*; my argument is that these claims are equivalent to predicational monism. I do not mean that Parmenides formulated a theory to which he gave the name 'predicational monism.' Rather, given that the three types of monism can be distinguished, it is crucial in understanding Parmenides to attribute this view to him.

56. ———. 1992. "Deception and Belief in Parmenides' "Doxa"." *Apeiron. A Journal for Ancient Philosophy and Science* no. 25:109-134.

"In this paper I examine the problem of the *Doxa*, and offer an account of it that is consistent with the claims of Aletheia and explains why Parmenides included it in the poem.(6) I shall argue that, while there is deception in the *Doxa* (though not in the goddess' account of it), nonetheless the *Doxa* does not in principle renounce all human belief. For, although Parmenides argues that the sensible world alone cannot be the source of knowledge of what is, he does not reject it completely. Moreover, I propose that, while Parmenides himself does not give such an account, a story about the sensible world that is consistent with the metaphysical and epistemological claims of Aletheia can be told. Thus, while I agree with those who argue that the particular account given in the *Doxa* fails, I also agree with those who see the *Doxa* as having something positive to say about mortal belief. But I go further, arguing that Parmenides supposes that a trustworthy cosmology may be possible and discloses what such a theory might be like and how it would be tested. I begin by considering some of the difficulties faced by interpretations of Parmenides' *Doxa*; I then consider the problems of deception and mortal belief." (pp. 110-111, two notes omitted)

(6) For a summary of views concerning the *Doxa* held earlier in the century, see W.J. Verdenius, *Parmenides: Some Comments on his Poem* (Groningen/Batavia 1942), 45-9.

57. ———. 1998. "Eleatic Arguments." In *Method in Ancient Philosophy*, edited by Gentzler, Jyl, 1-28. New York: Oxford University Press.

"In this essay I shall limit my discussion of philosophical method to issues connected with presenting and arguing for philosophical theories or with appraising the adequacy of theories. I shall suggest that there are three stages in the development of pre-Socratic method. First, there is the mere assertion of one's theory; second, there is the giving of arguments for first principles or against other theories. Finally, in the third stage, there are the development and application of criteria for acceptable theories, combined with using these criteria to rule out whole classes of competing theories. I shall argue that the second stage appears in a rough form in Xenophanes and Heraclitus (for they reject, but do not actually argue against, the views of others), but that the full-blown philosophical method of the second and third stages together first appears in Parmenides; it is he who first uses arguments directly in support of his philosophical position (and against the positions of others) and who first stresses the criteria for the acceptability of arguments about nature. But, as I shall also argue, since in Parmenides there is also the reliance on assertion as opposed to argument that characterizes nearly all pre-Eleatic philosophy, Parmenides himself is a transitional figure. I begin with a survey of pre-Eleatic pre-Socratic theories. I then examine the various roles played by assertion, argument, and theory evaluation in Parmenides' thought. Finally, I discuss some of the argumentative strategies in Parmenides' Eleatic followers, Zeno and Melissus." (p. 2)

58. ———. 1998. *The Legacy of Parmenides: Eleatic Monism and Later Presocratic Thought*. Princeton: Princeton University Press.

Second edition with a new *Introduction to the Paperback Version* (pp. XVII-XXIX), Las Vegas: Parmenides Publishing,

2004.

Parmenides' Monism and the argument of B8 64; III. *Doxa* and deception 98; IV. Pluralism after Parmenides 127; V. Atoms, void, and rearrangement 180, VI. Final remarks 217; Bibliography 243; Index locorum 257; Index nominum 264; General index 269-280.

"This book offers an alternative account of the views of Parmenides and his influence on later Presocratic thought, especially Pluralism and Atomism, in the period immediately preceding Plato's Theory of Forms. It challenges what has become the standard account of the development of Pluralism (in the theories of Empedocles and Anaxagoras) and Atomism (adopted by Leucippus and Democritus). This alternative interpretation places Parmenides firmly in the tradition of physical inquiry in Presocratic thought, arguing that Parmenides was concerned with the same problems that had occupied his predecessors (although his concern took a different form). Further, this account explains how Parmenides' metaphysical and cosmological doctrines had a positive influence on his successors, and how they were used and modified by the later Eleatics Zeno and Melissus.

In the course of this book, I shall argue against both the prevailing interpretation of Parmenides' monism and the usual explanation of the "is" in Parmenides. Instead, I shall claim that Parmenides' subject is what it is to be the genuine nature of something, thus linking Parmenides with the inquiries into nature of his philosophical predecessors. On the view for which I shall argue, the "is" that concerns Parmenides is a predicational "is" of a particularly strong sort rather than an existential "is." I accept that Parmenides is a monist, but I deny that he is a numerical monist. Rather, I claim that Parmenides is committed to what I call predicational monism. (5)

Numerical monism asserts that there exists only one thing: a complete list of entities in the universe would have only one

entry. This is the kind of monism that has traditionally been attributed to Parmenides and (rightly) to Melissus.

Predicational monism is the claim that each thing that is can be only one thing; and must be that in a particularly strong way. To be a genuine entity, something that is metaphysically basic, a thing must be a predicational unity, a being of a single kind (*mounogenes*, as Parmenides says in B8.4), with a single account of what it is; but it need not be the case that there exists only one such thing. What must be the case is that the thing itself must be a unified whole. If it is, say F (whatever F turns out to be), it must be all, only, and completely F. On predicational monism, a numerical plurality of such one-beings (as we might call them) is possible. (6) The interpretation of Parmenides' "is" becomes relevant here, for I argue that to be for Parmenides is to be the nature of a thing, what a thing genuinely is, and thus metaphysically basic. The arguments of Parmenides' fragment B8 concern the criteria for what-is, that is, for being the nature of something, where such a nature is what a thing really is. Those arguments purport to show that what-is must be whole, complete, unchanging, and of a single kind. Each thing that is can have only one nature, but there may be many such things that satisfy Parmenides' criteria.' These issues are the subjects of Chapters I and II." (pp. 4-5)

(5) Mourelatos (in *Route*) and Barnes ("Eleatic One") have also questioned the predominant view that Parmenides is a numerical monist; Barnes denies any sort of monism to Parmenides, and Mourelatos emphasizes Parmenides' anti-dualism.

(6) Thus, the failure of later Presocratic thinkers to argue for their pluralistic theories, while working within a Parmenidean framework and stressing the reality and predicational unity of their basic entities, is evidence for my view that it is possible for there to be a numerical plurality of entities each of which is predicationally one.

(7) In later terminology we might say that Parmenides is searching for an account of what it is to be the essence of something, although I have avoided the word essence because it

is an anachronistic term in Presocratic thought. There is, however, a connection between Parmenides' search for what-is and Aristotle's accounts of *ousia* and *to ti en einai*; the connection runs through Plato's Theory of Forms, which itself has Parmenidean roots.

59. ———. 2006. "Parmenides and After: Unity and Plurality." In *A Companion to Ancient Philosophy*, edited by Louise, Gill Mary and Pierre, Pellegrin, 34-55. Oxford: Blackwell.

"A helpful way to approach the question of Parmenides' importance for Greek philosophy is to examine questions of unity and plurality in pre-Socratic thought. seeing how these questions dovetail with those about the possibility of genuine knowledge and its object.(2) In this chapter, I shall argue that Parmenides' criticisms of his predecessors rest on the principle that what can be genuinely known must be a unity of a particular sort, which I call a predicational unity. On this view, anything that genuinely is (that truly can be said to be). and so can be known, must be of a single, wholly unified kind. Parmenides drew confusions from this that later philosophers took very seriously. One consequence is that what is genuinely real cannot come to be, pass away, or after, thus posing the problems of change and knowledge: How can we account for the appearance of change that we see in the world around us? And how can we have knowledge of such a changing world? An advantage of viewing Parmenides in this way is that it makes sense of the cosmological theorizing of post-Parmenidean figures such as Anaxagoras, Empedocles, and Democritus. All these philosophers were (in their different ways) pluralists, holding that there is a numerical plurality of metaphysically basic entities: and yet, I shall argue, all were working in the Parmenidean tradition because they all accepted Parmenides' criteria for what is genuinely real." (p. 34)

60. ———. 2011. "Thought and Body in Parmenides." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 115-134. Las Vegas: Parmenides Publishing.

Summary: "Parmenides' fragment B16 is a puzzle: it seems to be about thought, but Theophrastus uses it in his account of Parmenides' views on perception.

Scholars have disagreed about its proper place in Parmenides' poem: does it belong to *Alētheia* or to *Doxa*? I suggest that the fragment indeed belongs to *Doxa*, and in it Parmenides claims that mortals, who fail to use *noos* correctly, mistake the passive experiences of sense perception for genuine thought about what-is, and hence fail to understand the true nature of what-is. I argue that genuine thought (the correct use of *noos*) must go beyond sense experience and grasp what is truly intelligible; in doing so I explore the question of immateriality in Presocratic thinking."

61. ———. 2015. "Thinking, supposing, and « physis » in Parmenides." *Études platoniciennes* no. 12.

Abstract: "What could justify the Presocratic conviction that human beings can have knowledge? The answer that I am exploring in a larger project is that most Presocratic thinkers share a commitment to the possibility of a "natural fit" between the world and human understanding. Two claims underlie this commitment: the first is the basic intelligibility of the cosmos. The second is that human beings can come to know things beyond their limited sensory experience, for in properly exercising their capacities for perception, thought, and understanding, they can come to have the knowledge that earlier Greeks thought was reserved for the gods. Here I explore a small part of one chapter of the story I want to tell: Parmenides' accounts of what-is and of thinking and the implications of these views for the possibility of human knowledge about the world around us. The paper concentrates on Parmenides, beginning with a few comments about Heraclitus."

62. ———. 2023. "Aristotle, Parmenides, Melissus (and Plato?)." In *Eleatica Vol. 9: Aristotle and the Eleatics = Aristotele e gli Eleati*, edited by Pulpito, Massimo and Berruecos Frank, Bernardo, 147-156. Baden-Baden: Academia Verlags.

"While Aristotle is often praised as the first critical historian of philosophy, he is almost as often chided for his high-handed and almost frivolous accounts of his predecessors' views. Indeed, one might at times wonder who it is that Aristotle is actually discussing, given what we think we know of his philosophical elders.⁽¹⁾ In his lectures, "Aristotle and the Eleatics," Richard McKirahan gives (and defends) lively, evenhanded, and convincing accounts of the Eleatic thinkers and of Aristotle's interpretation of them. In thinking about how to respond to these lectures, my first inclination was to say, "yes, of course," and leave it that. While that would make for a (perhaps blessedly) short article from me, I think that I should expand upon those three words. So, there are two parts to this response. First, I say a few things about Richard's "Aristotelianizing Parmenides," and then I go on to make some suggestions about "Aristotle's Melissus." I think that in Aristotle's account of Melissus we can see the shadow of Plato's Parmenides." (p. 147)

(1) These claims, of course, are not made merely about Aristotle.

63. Dahlstrom, Daniel O. 2017. "Heidegger's initial interpretation of Parmenides: an excursus in the 1922 Lectures on aristotelian texts." *The Review of Metaphysics* no. 70:507-527.

Abstract: "In lectures and writings during the 1920s, Heidegger appropriates what he takes to be the basic insights expressed in Parmenides' Poem, even as he criticizes other decisive and fateful aspects of it. He gives his most ample, early account of major parts of Parmenides' Poem in 1922 lectures on Aristotle. The aim of this study is to review Heidegger's account in those lectures, with a view to showing how Heidegger's reading of Parmenides contributes to thinking that culminates in the project of fundamental ontology. To this end, following the detailed review of that account, the article addresses the

significance of Heidegger's references to Parmenides in *Sein und Zeit*."

"However, the idea of conversion is prominent in some of the early poets, and not only those who are usually called, with assumed anachronism, 'philosophers', like Parmenides or Empedocles, but also in some key passages of Hesiod's *Works and Days*. To locate these passages and identify the literary elements that characterize them is the purpose of this chapter." (p. 50)

(...)

"Our three poets fabricate the first elaborations of an idea of salvation that is valid in any circumstance, and that therefore demands a general conversion to it.

Nock's sharp distinction between philosophy and religion, therefore, is useless in these authors, since the divine authority is as essential as human argumentation in their presentation of an objective salvation.

For Hesiod such ideal is justice, for Parmenides a certain kind of knowledge, and for Empedocles a specific self-conscious behaviour.

Their proposals, notwithstanding the many formal parallels, are very different, and it is clear that being *κακός*, for instance, has a very different meaning in Hesiod or Empedocles. However, what they all have in common is that they turned the formulas and loose *topoi* of a didactic tradition into specific calls for conversion by elaborating a new idea towards which men should turn their lives. The divine was their source of legitimacy and traditional poetry was their vehicle for creating these first protrectic works. The first Greek ideas about an

objective salvation that transcends the realm of physical security and requires a complete change of thinking did not originate in the cabinet of bookish philosophers and rhetoricians. The first προτρεπτικοὶ λόγοι were pronounced by the Muses." (p. 69)

In *Politics and Performance in Western Greece: Essays on the Hellenic Heritage of Sicily and Southern Italy*, edited by Reid, Heather L., Tanasi, Davide and Kimbell, Susi, 217-231. Fonte Aretusa: Parnassus Press.

"This essay aims to challenge the skeptical position, and establish a direct link disseminating Ionian philosophy to Magna Graecia via Xenophanes and Parmenides.

The argument is straightforward. First, the ancient geographical and temporal evidence is noted, establishing that it was possible for Parmenides to have been influenced and/or taught by Xenophanes. Next, the metaphysical and epistemological parallels between these thinkers are considered. Despite notable differences, on balance, these close parallels suggest against the skeptical view, making it quite plausible to impute a direct intellectual link between these thinkers. Third, I consider ancient claims that both thinkers were engaging with religious topics, offering a sort of "rational theology." This evidence for a close intellectual relationship between these thinkers has been entirely ignored by modern scholars, and orthodox interpretative models cannot readily provide a charitable explanation for them. However, by reconsidering the theistic content in Parmenides's poem, a new interpretative approach is revealed which can. Once this evidence is considered in its totality, the case for imputing a close and direct intellectual heritage from Xenophanes to Parmenides proves quite substantial." (p. 217)

Parmenides of Elea. Annotated Bibliography of the studies in English: De R - Grae

Bibliography

1. de Rijk, Lambertus Marie. 1983. "Did Parmenides Reject the Sensible World?" In *Graceful Reason: Essays in Ancient and Medieval Philosophy Presented to Joseph Owens, CSSR on the Occasion of his Seventy-Fifth Birthday and the Fiftieth Anniversary of his Ordination*, edited by Lloyd, Gerson, 29-53. Toronto: Pontifical Institute of Mediaeval Studies.

"Two camps of scholars interpreting Parmenides' poem have recently been distinguished and labeled as the Majority and the Minority. The former holds that, unlike the *Alêtheia* part, the *Doxa* part presents an altogether untrue account of things that properly speaking have no real existence. According to the Minority, however, the *Doxa* was put forward as possessing some kind or degree of cognitive validity. I shall try to show that both these two positions are ambiguous and accordingly fail in giving a clear insight into what Parmenides intends to tell us. They both seem to need correction to the extent that Parmenides does distinguish the *Alêtheia* route from the *Doxa route(s)*, but there is nothing in the text to tell us that he makes a distinction between two separate domains. one true and the other untrue. As any genuine philosopher he was concerned about the sensible world, *our* world and it was *that* which he wanted to truly understand." (pp. 29-30)

(...)

One cannot deny that Heraclitus faced the primitive approach of the physicists in a radical way. So Parmenides in defending another steady inner nature ('Be-ing') sees in him his most dangerous rival. No wonder that his offences against Heraclitus are the most bitter. And indeed he tries to bring Heraclitus into the company of those who, two-headed as they are, are not able to make the great decision.

Subsequent thinkers had to take into account Parmenides' doctrine and in fact could not help digesting its rigidity. Plato was the first to take the big decision so seriously that he left the idea of one world as approached by mortals along two different Routes and settled on the assumption of two separate worlds, one of Unshakable Being, the other of Unreliable Becoming. Aristotle, for his part, thought it possible to dispose of Plato's *chorismos* and find the inner nature of things right in themselves. No doubt it is Parmenides, cited by Fr. Owens as 'one of the truly great philosophic geniuses in the history of Western thought,' (*) who was the catalyst of all subsequent metaphysics." (p. 53)

(*) Joseph Owens, *A History of Ancient Western Philosophy* (New York 1959) p. 76.

2. de Vivar, Carlos Montemayor Romo. 2006. *Time and Necessity in Parmenides* Astoria NY: Seaburn.

"This essay is not an exhaustive academic interpretation of Parmenides' work. Rather, it is an informal presentation of some of his most important ideas, intended to reach readers that have no previous philosophical training. One of the main goals of this text is to introduce the reader to Greek philosophy by focusing on one of philosophy's earliest expressions, which influenced thinkers from all times. The reason for choosing Parmenides' poem is that it was and still is considered a fundamental philosophical text, in spite of being highly controversial." (p. 9)

(...)

"Finally, it is important to acknowledge that although Parmenides' poem departs from previous philosophical texts in

its argumentative structure, it is continuous with these texts because it forms part of a tradition of thinking universally, without endorsing a particular political or theological agenda. This tradition, which started with Thales, is what we call today ancient Greek philosophy, and it is, without doubt, one of the most important events in our intellectual history.

I thus, thanks to these thinkers who called themselves philosophers (this term is reputedly coined by Pythagoras) because of their love of wisdom, knowledge was independent from any particular religion. For the first time, mankind's wisdom could be explored for its own sake because such wisdom depended exclusively on the permanent and necessary conditions of truth and reality. For the first time, knowledge was truly universal. In the remainder of this text I will present the contributions of one of the first and most important exponents of this way of thinking: Parmenides of Elea.

This book is structured in four chapters. The first is a presentation of pre-Parmenidean notions of time. Chapter 2 presents Parmenides' contributions to the relation between time and necessity. Finally, chapter 3 and 4 portrays some of Parmenides' influence in philosophy and science respectively." (p. 12)

3. Decker, Jessica Elbert, and Mayock, Matthew 2016. "Parmenides and Empedocles." In *The Cambridge Handbook of Western Mysticism and Esotericism*, edited by Magee, Glenn Alexander, 26-37. Cambridge: Cambridge University Press.

Chapter 3: *Parmenides and Empedocles*, pp. 26-37.

"There is no dialectical process of methodically arriving at the pure singularity of "what is." The interpretation that Parmenides intends us to "judge by reason" reflects a program of reading him that insists on limiting his focus.

Beyond the fact that there was no such conception of "reason" in Parmenides's time and that reason only operates through a dialectic of "is" and "is not" that defies the logic Parmenides advances, this reading asserts that he consigns appearances to the category of "is not," an unacceptable outcome as it would

eliminate the world of experiences in which we live and move. Nevertheless, the classical depiction of Parmenides's radical monism makes this assertion and can be traced back to Plato's reading in *Sophist*, which set the precedent of exclusively focusing on "Truth" without the surrounding context that would allow it to be recognized as the endpoint of irony. Having artificially banished appearances from Parmenides's account of what is, Plato retroactively generates the need to restore them to a role in philosophical inquiry, which he accomplishes by asserting them to be a mixture of "is" and "is not." The irony in all this is that Plato ostensibly "saves" the appearances from Parmenides when it is the latter, in actuality, who gives them a higher ontological status by weaving them into his account of the *eon*. It would be absurd for Parmenides to say that sense experience "is not," while maintaining that what "is not" cannot be experienced, recognized, or pointed out. But Plato's interpretation prevailed, ensuring that the scope of what counted as a reading of Parmenides was all but permanently narrowed, and additionally that Empedocles could now only be seen as someone who tried – and failed – to resolve the problem generated by the Platonic reading of Parmenides." (pp. 31-32)

4. Della Rocca, Michael. 2020. *The Parmenidean Ascent*. New York: Oxford University Press.

"Throughout this book, you will see me engage with Parmenides and other historical figures in significant detail. You will also see me engage in deep explorations of contemporary and recent philosophy. This combination of pursuits may lead you to ask whether this is a book on the history of philosophy or in contemporary philosophy. And my playful but serious answer is: "Yes." In other words, I reject the question, and this is precisely because I see the book as supporting a Parmenidean denial of the distinction between philosophy and the study of its history. In chapter 7, I will argue for this denial explicitly, but the book as a whole is meant to exhibit its truth.

I begin my Parmenidean journey in chapter 1 with what I take to be a strong case for a reading of Parmenides as what I

(following others) will call a strict monism. Parmenides is, I contend, a strict monist in the sense that he rejects any kind of distinction or multiplicity whatsoever. On my reading, Parmenides affirms simply the reality of being; he does not affirm the reality of any individual being or beings and does not affirm any distinctions within being. (*Proem*, pp. XIII-XiV)

5. ———. 2022. "Parmenides' insight and the possibility of logic." *European Journal of Philosophy* no. 30:565–577.

Abstract: "The purpose of this paper is twofold: to explain and render more accessible the arguments in a recent, important, and already famously difficult book and, on the basis of this appreciation and illumination, to level a criticism of the book that cuts deep and thereby opens up a new and powerful path to a paradoxical Parmenideanism. The book in question is Irad Kimhi's *Thinking and Being*. Kimhi is to be applauded for taking seriously Parmenidean challenges to negation and to nonbeing and for offering devastating criticisms of a Fregean (and Cartesian) distinction between the force and content of judgments, a distinction that Kimhi rightly shows to trade on unintelligible primitives. Nonetheless, in his response to the Parmenidean challenges, Kimhi is guilty of reliance on a number of similarly unintelligible primitives of his own. This failure on Kimhi's part leads the way to a radical Parmenidean view according to which distinctions, in general, are rejected."

6. DeLong, Jeremy C. 2015. "Rearranging Parmenides: B1: 31-32 and a Case for an Entirely Negative Doxa (Opinion)." *Southwest Philosophy Review* no. 31:177-186.

Abstract: "This essay explicates the primary interpretative import of B1: 31-32 in Parmenides poem (*On Nature*)—lines which have radical implications for the overall argument, and which the traditional arrangement forces into an irreconcilable dilemma. I argue that the “negative” reading of lines 31-32 is preferable, even on the traditional arrangement.

This negative reading denies that a third thing is to be taught to the reader by the goddess—a positive account of how the apparent world is to be “acceptably” understood. I then suggest that a rearrangement of the fragments would make more sense

overall, while further supporting the “negative” reading as more natural and coherent. In particular, the rearrangement dispels the objection that, “if mortal opinions were not true, why would Parmenides include such a lengthy false account of the apparent world--an account which explicitly denies the conclusions of the earlier section, Truth?”

7. ———. 2018. "Parmenides, Plato, and Μίμησις." In *The Many Faces of Mimesis. Selected Essays from the 2017 Symposium on the Hellenic Heritage of Western Greece*, edited by Reid, Heather L. and deLong, Jeremy C., 61-74. Sioux City, Iowa: Parnassos Press - Fonte Aretusa.

"Evidence for a Parmenidean influence on Plato's *Republic* typically focuses on content from Bks. V-VI, and the development of Plato's Theory of Forms. This essay aims to suggest that Plato's censorship of poetic content in Bks. II-III—particularly the rules for portraying divine nature (376e-383c)—also draw heavily upon the Eleatic tradition, particularly Parmenides.(3) Identifying this further Eleatic influence will be enhanced by my own reading of Parmenides.(4) This reading advocates understanding Parmenides in a more Xenophanean-vein—i.e. by taking What-Is to be an explication of the essential qualities of divine nature, and the overall poem as rejecting traditional, mythopoetic accounts of divinity." (p. 61)

8. Di Iulio, Erminia. 2020. "Identity's Sustainability. Parmenides on *Einaí* and *Noein*." In *The Sustainability of Thought: An Itinerary through th History ofg Philosophy*, edited by Giovannetti, Lorenzo, 19-43. Napoli: Bibliopolis.

"This paper deals with the problematic relationship between "being" and "thinking" – εἶναι and νοεῖν – in Parmenides' Poem.

Roughly, two main interpretative approaches are to be distinguished: one that argues for the "identity of thinking and being", the other, on the contrary, for their "non-identity".

Broadly speaking, one of the main reasons for the "identity thesis" is Eleatic monism: some of the most important identity scholars, such as Gregory Vlastos, Charles Kahn, Anthony Long and David Sedley, actually maintain that the identity between "being" and "thinking" is a necessary consequence of the Eleatic system: if it were not the case that thinking coincides with being, they argue, it would follow that thinking is nothing at all. Conversely, many others, including Francesco Fronterotta and Michael Wedin, prefer to attribute to Parmenides a mere correspondence relation between the ontological and the logical-linguistic levels in order to avoid what they consider unpleasant yet necessary consequences of the identity thesis: it seems, they argue, that it is not really possible to ascribe to Parmenides the "identity between being and thinking" without committing Parmenides himself either to some kind of idealism or to a neo-platonic conception of being. Accordingly, it seems more reasonable to conclude that the fundamental concern arising from the Poem is to establish that it is not possible to conceive of a "thinking" that is not a "thought of something that exists".

In the light of this, my proposal aims to answer those who reject the "identity thesis" in order to escape the idealistic and neo-platonic conclusions, by suggesting an alternative conception of "identity" and, thus, an alternative "identity thesis".

Therefore, my paper will be structured as follows: in Section 1 those passages of the Poem where Parmenides seems to take a stand on this question will be examined; in Section 2 a specific account of the "identity thesis", namely that proposed by Anthony Long, will be briefly discussed, since it is one of the most sophisticated opinions on this matter; in Section 3 a brief

description of the contemporary “identity theories of truth” will be provided, because they are a useful instrument to highlight the difference between “identity between being and thinking” and “idealism”; finally, in Section 4 I will go back to the Eleatic perspective in order to provide a new account of the “identity thesis”. (pp. 19-20)

9. ———. 2021. "Parmenides on ‘naming’ and ‘meaning’: a disjunctivist reading of the Poem." *Philosophy* no. 96:205-227.

Abstract: "A well-established tradition has argued that it is not legitimate to attribute to Parmenides a Fregean semantics, i.e. the distinction between ‘naming’ and ‘meaning’. Nonetheless, Parmenides claims more than once (B 8.53, B 9.1) that mortals do name reality, although incorrectly. As many scholars have emphasised, because it is fair neither to conclude that mortals’ names are ‘empty names’ nor dismiss Opinion’s account (i.e., broadly speaking, the mortals’ account of reality) itself as meaningless, it seems that Parmenides is suggesting that some kind of distinction between what names refer to and what names mean must be drawn. In view of this, what is Parmenides’ account of names?"

My suggestion is that in order to explain the Eleatic philosophy of language (and the Eleatic account of names) a step back is required. More specifically, Parmenides’ epistemology has to be taken into account. Indeed, if we assume that Parmenides is arguing for an ‘epistemological disjunctivism’ – such that the veridical and truthful state and the erroneous and deceptive state are essentially different – it will be clear that he is further arguing for what could be defined as a ‘semantic disjunctivism’, so that true speech and false speech are essentially different as well."

10. Diaz, María Elena. 2011. "Thought as perception: Aristotle's criticism of Parmenides in *Metaphysics* IV, 5." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 319-330. Las Vegas: Parmenides Publishing.

Summary: "This article analyzes the reasons for the inclusion of Parmenides in the list of physicists who strayed away from the

conception of phenomena contemplated in Aristotle's support of the principle of non-contradiction in *Metaphysics* IV, 5, and the partial appropriation of the perceptual model of thinking present in Parmenidean developments. In this passage of *Metaphysics*, Aristotle mentions the verses that form part of fragment B16, where thought is explained in terms of a perception understood as a physical alteration. Aristotelian opposition to such conception of perception and thought is radical. In B3, however, there also appears a thinking scheme which involves capturing processes similar to perception, only that in this case, Aristotle appears to act both as critic and as heir of the Eleatic philosopher in his explanation of the capturing process of the simple objects of thought."

11. Dilcher, Roman. 2006. "Parmenides on the Place of Mind." In *Common to Body and Soul: Philosophical Approaches to Explaining Living Behaviour in Greco-Roman Antiquity*, edited by King, R. A. H., 31-48. Berlin: Walter de Gruyter.

"Parmenides seems to have no place in the history of the philosophical problems that are indicated by the phrase "common to body and soul".

While in Heraclitus we do find for the very first time a concept of soul as something distinct from the body that is responsible for thought, action and feeling, there is a basic dichotomy in Parmenides' thought that also has a bearing on the question of a possible relation of "body" and "soul": on the one hand the account of Being which involves the exercise of mind; on the other hand a theory of the physical world on the basis of the two elements Light and Night. The coherence of these two parts of Parmenides' poem has been much debated in terms of the possible relation of Being to *Doxa*. Fr.16, however, provides an account of mind in relation to the two elements of the doxastic world, and so it might contribute in a different way to a better understanding of how the two parts cohere." (p. 31)

12. Dolin Jr., Edwin F. 1962. "Parmenides and Hesiod." *Harvard Studies in Classical Philology*:93-98.

"It should be said at once, of course, that the power and brilliance are Parmenides' own and not borrowed from anyone.

To assume, as this paper does, that the tradition from which Parmenides drew was the main poetic tradition of Homer and Hesiod is not to imply that hexameter poetry by itself somehow accounts for Parmenides. Rather, the assumption is that the tradition was there, pervasively and ineluctably, in the cultural atmosphere, that Parmenides used its motifs and imagery as freely and naturally as he breathed, counting them as allies in his poetic communication with Hellas, and that he criticized this cultural *donnée* whenever he saw fit, which was not seldom, by the very manner in which he made use of what he liked of it." (p. 93)

(...)

"This article seeks to extend the comparison with the *Theogony* by suggesting a specific parallel between Parmenides' daughters of the sun and the *Theogony's* Muses and by commenting on the parallel between Parmenides' gates of night and day and those of the *Theogony*.(3)

Its hypothesis is that Parmenides was deliberately attacking the archaic thought processes represented by Hesiod and wished to present himself as the exponent of a new intellectual approach which would be associated in its spirit with the Homeric ideal of the heroic individual." (p. 94)

(3) *Theogony* 736-57; Parmenides B. 1.11.

13. Domanski, Andrew. 2006. "The Journey of the Soul in Parmenides and the Katha Upanishad." *Phronimon* no. 7:47-59.

Abstract: "In the terse and compressed language of poetry, the Presocratic philosopher Parmenides of Elea expressed, for the first time in the West, the deepest ideas of nondualistic metaphysics. These ideas bear a close resemblance to, but are not necessarily derived from, the Vedantic philosophy which informs the Upanishads and other metaphysical texts of ancient India. The proemium to the poem of Parmenides contains a graphic metaphor in which the soul's progress towards ultimate truth is represented by the journey of a chariot. In developing his metaphor, Parmenides shows how it

is Justice which determines the progress of the soul. His vision of Justice is both individual and universal.

This article examines Parmenides's parable of the chariot in comparison with a remarkably similar image which occurs in the Katha Upanishad."

14. Drozdek, Adam. 2001. "Eleatic being: finite or infinite?" *Hermes. Zeitschrift für Klassische Philologie* no. 129:306-313.

Abstract: "The extant fragments indicate that there is a fundamental agreement between the two Eleatic philosophers, Melissus and Parmenides concerning characteristics of Being. Like Parmenides Melissus asserts that Being is eternal (30B1, B2, B4), immovable (B7.7-10, B10). complete (82), and unique (B5, B6). The physical world is unreal because it is characterized by "change, multiplicity, temporal succession and imperfection" (B8). Being cannot be known through sensory perception because senses indicate that things are constantly changing, which directly contradicts the immutability of Being (B7). However, as commonly assumed, there is at least one fundamental difference between them. Melissus considers Being infinite, whereas for Parmenides Being is finite because it is held in limits (28B8.26,31,42) and is compared to a sphere (B8.42-43). Does the limited/unlimited difference signify the modification introduced by Melissus to the Eleatic philosophy?"

15. ———. 2001. "Parmenides' Theology." *Eranos. Acta Philologica Suecana* no. 99:4-15.

Reprinted as Chapter 4 in: A. Drozdek, *Greek Philosophers as Theologians. The Divine Arche*, Aldershot: Ashgate, 2007. pp. 43-52.

Abstract: "Parmenides' system has always been an inexhaustible source of fascination because of the grandeur and, at the same time, paradoxical character of the ontological vision.

Even after centuries of interpretations, there is little agreement on the meaning of the system and its particular components. However, there seems to be a common slant in these

interpretations, at least in the last hundred years, starting with the groundbreaking publication of Hermann Diels on Parmenides' poem,(1) which deemphasizes the religious and theological components of Parmenidean ontology and epistemology. These theological components are very often glossed over – sometimes they are barely mentioned, sometimes discounted as a mere metaphor (beginning with Diels), sometimes treated as mere embellishments.(2) One reason is that Parmenides nowhere calls Being, which he discusses in particular in fr. B8, God, and the Olympian personae he mentions are discounted as a bow toward traditional mythology with very little religious significance. It seems, however, that such an approach is unjustified, that the main concern of Parmenides in his poem is with theological issues, and that the poem is an attempt to show the way of truth, which is the way of acquiring true religious knowledge about God."

(1) Hermann Diels, *Parmenides Lehrgedicht* (Berlin: Reimer, 1897).

(2) It is said, for instance, that "the fact that the goddess remains anonymous shows that she represents no religious figure at all ... Parmenides could not have attributed any reality to the goddess because for him there exists only one thing, the unique and homogenous Being," Leonardo Tarán, *Parmenides* (Princeton: Princeton University Press, 1965), p. 31.

16. Duman, Musa. 2012. "Reflections on Parmenides' Monism." *Kaygı: Uludağ Üniversitesi Fen Edebiyat Fakültesi Felsefe Dergisi* no. 19:105-121.

Abstract: "In this article, I attempt at exploring Parmenides' understanding of Being, that is, the notion of *esti*, and the basic function of *esti* in his overall monistic vision. I also discuss, in this context, the identity of *einai* and *noein*, the internal connections between *esti* and *aletheia* as well as what he means by the concept of *logos*. I argue in detail that Parmenides' monism has a very peculiar character in that he does not speak about one big single entity, but about the uniqueness of Being itself as the ground of all things in the cosmos. In that sense,

one can qualify it as non-material monism and, at the same time, as non-ontical monism. But it also contains an identity philosophy, that is, the view that Being can only be spoken of in terms of identity statements. I try to develop the thesis that it is possible to interpret Parmenides' reflections on *esti* with respect to the difference between Being itself and a being, (the ontological difference) which, arguably, corresponds to the way Parmenides contrasts *esti* vis-à-vis plurality and change, while identifying the former with pure being (*to eon*) and the latter with non-being (*to me eon*)."

17. Dunham, Jeremy, Gran, Iain Hamilton, and Watson, Sean. 2011. *Idealism: The History of a Philosophy*. New York: Routledge.

Chapter 1. *Parmenides and the birth of ancient idealism*, pp. 10-18.

"Thus Parmenides' axioms outline a problem for any systematic, monistic philosophy. If all is one, as the Way of Truth claims, then all that is must be accounted for in its terms. Parmenides does this by negation: the one is uncreated, indestructible, does not come into being, has no parts, and so on.

The problem is, if being and thinking are the same, and yet what- is- not cannot be thought, how is negation thinkable? If the goddess's test is solely logical, then there must be a divide between the logical (what can be thought) and the ontological (what is), marring the consistency of the system. If, as Kahn has it, the logical laws of thought constitute the very structure of reality, then "what is not" must be. One solution to this is to argue that the difference lies in the content of thought: the thought of what is, that is, has an object, whereas the thought of what is not has none whatsoever. Would it then remain true, however, that "thinking and being are the same", or would a better translation run "for it is the same thing that can be thought and can be" (Cornford [*Plato and Parmenides*. London: Routledge & Kegan Paul] 1939: 31; Burnet [*Early Greek Philosophy*, 4th edn. London: Adam & Charles Black]

1930: 173), since this would allow that “what is not” cannot be thought, without sacrificing consistency?

The problem of negation continues to play a major role in the development of idealism, most especially in Hegel’s dialectic (see ch. 8). Plato’s attempted accommodation of not-being, against Parmenidean strictures, is crucial in the subsequent development of idealism, and we turn to it in Chapter 2. Yet Parmenides’ renown is equally due to his advocacy of this direct contact between thought and reality. There are accordingly many realist accounts of the same identity in subsequent idealists. Bosanquet, for example, argues that “It is all but impossible to distinguish nature from mind; to separate them is impossible” (1912 [*The Principle of Individuality and Value: The Gifford Lectures for 1911*. London: Macmillan] 367); Whitehead, that “No entity can be conceived in complete abstraction from the system of the universe” (PR [*Process and Reality*. London: Macmillan. 1929] 3). As a simultaneous testament to the range of Parmenides’ identity thesis, and warning against an oversimplified account of idealism as inherently anti-naturalistic, both retain their idealism within a naturalistic framework.” (pp. 17-18)

18. English, Robert B. 1912. "Parmenides' indebtedness to the Pythagoreans." *Transactions and Proceedings of the American Philological Association* no. 43:81-94.

"A close examination of all the "opinions" shows that they, even more than his statements of "truth," relate to the doctrines ascribed to the Pythagoreans. There is scarcely a tenet set forth in the "opinions" which may not be referred directly or indirectly to them as they are represented in Aristotle. Not more than ten different propositions exist in this part of his work. Of these, two deal with first principles, three deal with astronomical truths, three have an astrophysical significance, one deals with procreation, and one with the nature of thought. The six dealing with astronomical or astrophysical theories undoubtedly have reference to the Pythagoreans. Of the two referring to first principles one seems to have resemblance to Anaximander, and the other to the dual principle of the Pythagoreans. To the theory of right and left in pro-creation

corresponds indirectly the Pythagorean idea of right and left as two first principles. To the postulate that "that which thinks is the nature of mingled parts in man and the excess is thought" there is no parallel in the Pythagorean doctrine. But Parmenides' own postulate on this point that "thinking will not be found without being, in which it is expressed" corresponds in substance to the belief of the Pythagoreans that soul and mind are properties of number (being), though Parmenides makes no mention of this Pythagorean symbol." (pp. 92-93)

(...)

"It seems evident, then, from this study (1) that the "opinions" of Parmenides refer in large part to the doctrines of the early Pythagoreans; (2) that his treatise on "truth" is largely concerned with a refutation of their arguments; (3) that not only his astronomical views but also his cosmological and ontological views generally were affected by the Pythagorean system; (4) that no violence to fact is done in setting the elementary metaphysical number theory of the Pythagoreans as early in time as the ascendancy of Parmenides." (p. 94)

19. Evans, Matthew. 2021. "The Work of Justice in Parmenides B 8" *Oxford Studies in Ancient Philosophy* no. 60:1-44.

Abstract: "Near the end of an early argument in Parmenides B8, the figure of 'Justice' is said to hold 'what-is' within shackles, so as to prevent it from being either generated or destroyed. Interpreters standardly assume that this claim is to be understood, not as a premise of that argument, but as a picturesque expression of the logical or rational necessity that binds the truth (or the acceptance) of its premises to the truth (or the acceptance) of its conclusion. The aim of this paper will be to cast doubt on this interpretation, and to develop an alternative to it. If this is right, then the work of Justice, both in B8 and in the poem as a whole, is far more robust than we have often been led to believe. The implications of this discovery for our understanding of Parmenides in particular, and of European thought in general, are both momentous and unsettling."

20. Ferella, Chiara. 2018. "A Path for Understanding': Journey Metaphors in (Three) Early Greek Philosophers." In *Paths of Knowledge. Interconnection(s) between Knowledge and Journey in the Greco-Roman World*, edited by Ferella, Chiara and Breytenbach, Cilliers, 47-73. Berlin: Topoi.

Summary: "This paper analyzes the use of journey metaphors by three early Greek philosophers, Heraclitus, Parmenides, and Empedocles. My investigation emphasizes the powerful, malleable and polyvalent nature of this metaphor cluster both with reference to diverse authors and in the same text. It highlights, moreover, the relationship between metaphor, imagination and philosophical argumentation, above all when a fresh metaphorical stratum is introduced within an already established metaphor. Finally, it investigates to what extent the introduction of a fresh metaphorical stratum contributes to creative thinking and, by structuring and organizing new insights, to theoretical argumentation."

21. ———. 2019. "Ζευ`ς μοῦνος and Parmenides' What-is." In *The Derveni Papyrus: Unearthing Ancient Mysteries*, edited by Santamaría Álvarez, Marco Antonio, 65-75. Leiden: Brill.

"In this paper I attempt to analyse one particular echo, in Parmenides' poem, of the ancient Orphic poem quoted in the Derveni Papyrus: one of the attributes of Parmenides' *what-is*, i.e. μονογενής (fr. 8-4 DK), might hint at a line of this poem quoted in column XVI of the Derveni Papyrus: αὐτο`ς δ' ἄρα μοῦνος ἔγεντο (OF [Albertus Bernabé (ed.), Orphicorum Et Orphicis Similium Testimonia Et Fragmenta]12.4).(3) This line concludes a passage that recounts the result of an extraordinary swallowing by Zeus, at the climax of his power over the cosmos and his predecessors. My aim here is to enquire into this particular echo with reference to its implications for Parmenides' philosophy. I will argue that this parallel is not a mere rhetorical device connected to the epic form, like, say, a literary topos, but has a function on a philosophical level. Consequently, I will first analyse whether an intentional echo of this Orphic myth may make sense in Parmenides' philosophical system and, if this is the case, I shall deduce from this evidence

both Parmenides' intention behind his reference to this myth, which is philosophically meaningful in the Orphic theogonic plot, and the implications it has for Parmenides' account of *what-is*." (p. 65)

(3) This echo has been already highlighted by scholars of Orphism, such as Burkert 1999: 79-80, 2005, 2008, Bernabé 2002b, and 2004b: 130-1. It seems, however, completely overlooked by scholars of Parmenides'

philosophy of whom, as far as I know, only S. Ranzato 2015: 160-1 noticed and registered it.

22. Ferreira, Fernando. 1999. "On the Parmenidean Misconception." *History of Philosophy & Logical Analysis* no. 2:37-49.

"Plato wrestled with the problem of falsehood on several occasions. His mature position on this issue appears in the *Sophist*. In this paper, I do not propose to analyse Plato's work on the problem of falsity. However, I do find that Plato's *Sophist* is an important tool, even a reasonably accurate guide, for understanding Parmenides and the sources of his misconception. I make two main claims in this paper. Firstly, I

claim that Parmenides had an erroneous conception of the meaning of sentences, a conception that in Parmenides' hands took the strong form not only of being unable to make sense of falsehoods but also of being unable to make sense of true negative predications. I call such a conception a referential theory of the meaning of sentences (henceforth, an RTMS). Secondly, I claim that Plato's double-theory of "limited mixing" plus "negation as otherness" – as expounded in the *Sophist* (251a–259d) – is still a form of an RTMS, even though of a weaker kind than that of Parmenides.

This paper is organized as follows. In the next section, I focus on the weaker gradation of an RTMS and I argue that this gradation, while still unable to make sense of falsehoods, nevertheless enlarges greatly the scope of significant sentences (albeit at an ontological price) and is able to make sense of true negative predications. The relation between a weak RTMS and Plato's above mentioned double-theory is suggested in the text via what I call Plato's maneuver. However, this relation is not fully discussed in this article since I believe that a proper treatment of such an issue requires a discussion that is beyond the scope of the present paper. In my view, this discussion must include an account of the finale of the *Sophist* (after 259e), in which Plato tries to make sense of falsehoods.

I plan such an undertaking at a latter date. In the third section, I discuss the first part of Parmenides' poem in light of a strong RTMS. In the course of this discussion, I propose a rather strong correlation between verses 3–4 and verses 40–41 of fragment 8 of the poem. This correlation is, to my knowledge, new in the literature. Finally, in the last section, I briefly consider an objection to the interpretation of the poem of Parmenides proposed in this article." (p. 38)

23. Finkelberg, Aryeh. 1986. "The Cosmology of Parmenides." *American Journal of Philology* no. 107:303-317.

"Our main source of information about the cosmological component of Parmenides' doctrine of Opinion - apart from the first three and a half abstruse lines of fr. 12 - is Aëtius' account.

This, however, is generally regarded as confused, garbled and incompatible with fr. 12.

The reconstruction of Parmenides' cosmology is thus considered a hopeless task, for "it must inevitably be based on many conjectures."

I, however, cannot accept this conclusion, for, as I argue below, it is possible to provide a reasonably intelligible account of Aëtius' report (except for the corrupt sentence about the goddess) which is also compatible with fr. 12, provided, of course, that we are not bent upon proving our sources incompatible, but rather seek to reconcile them." (p. 303)

"Aëtius' report reads as follows:(2)

"Parmenides says that there are rings wound one around the other, one made of the rare, the other of the dense, and between them there are others mixed of light and darkness. What surrounds them all like a wall is solid, beneath which there is a fiery ring, and what is in the middle of all rings is <solid>: around which there is again a fiery [sc. ring]. The middlemost of the mixed rings is for them all the <origin> and <cause> of motion and coming into being which he calls steering goddess, and key-holder, and Justice, and Necessity. Air has been separated off from the earth vaporized because of the latter's stronger compression; the sun is an exhalation of fire and such is the Milky Way. The moon is a mixture of both air and fire. Aether is topmost, surrounding all; beneath it there is that fire-like part which we call sky; beneath it is what surrounds the earth." (p. 304, notes omitted)

24. ———. 1986. "'Like by Like' and Two Reflections of Reality in Parmenides." *Hermes. Zeitschrift für Klassische Philologie* no. 114:405-412.

"The main problem confronting the student of Parmenides' doctrine is the nature of the relation between the two pictures of reality posited in his poem: reality as Being and reality as a mixture of the two 'forms', light and night.

To characterize the Parmenidean doctrine as ontological dualism explains nothing - the question is, what is the motivation for this dualism? Moreover, the Parmenidean teaching is epistemological rather than ontological dualism, for what is described in the Way of Seeming is not a different reality from that described in the Way of Truth, but a different knowledge of the same reality - the universe(1) - a knowledge declared inferior. On the assumption that the Parmenidean dualism is epistemological, we must therefore examine how man cognizes reality, with a view to isolating the conditions which determine the cognition of reality as Being or as a mixture of the 'forms'." (p. 405)

(1) That Parmenides conceived of Being as the unity of all things is the view of Plato (e.g. *Parm.* 128 A, 152 E), Aristotle (e.g. *Met.* 986b 27), and Theophrastus (e.g. ap. *Hippol. Ref.* I 11).

25. ———. 1988. "Parmenides: Between Material and Logical Monism." *Archiv für Geschichte der Philosophie* no. 70:1-14.

"To recapitulate. The problem of the monistic conception of reality, insoluble when approached on physical terms, was solved by Parmenides by inventing the notion of Being. When translated into terms of the doctrine of Being, monism became the logical necessity to conceive Being as the only thing that exists, while pluralism, that is, the assumption of the existence of something beside Being, revealed itself as the fallacy of admitting the existence of such a thing as not-Being. However, it was not the problem of Ionian monism to which Parmenides' thought was committed: the idea of cosmic Fire underlying the notion of Being shows that it was the failure of his own vision of reality as a material unity, a vision which he shared with the Ionians, to be truly monistic, that prompted Parmenides to a thorough examination of the pattern of current monism, resulting in a new idea of unity and a revision of the standing of cosmology in the monistic doctrine. In its genesis, the Parmenidean teaching is then a material monistic doctrine in which the material principle, Fire, is replaced by Being, while the cosmology is reinterpreted as a pluralistic misconception

and demonstrated to be untenable on the application of true names as they are established in the ἀλήθεια.

However the underlying material monistic pattern still remains operative: Fire persists as a visualisation of Being, thus providing the rationale for the cosmology and determining its specific profile, while the cosmology remains - not a true but nevertheless to some degree a valid account. The Parmenidean system is thus not self-contained, for the formative conception of Fire, the vision which mediates the transition from Being to the cosmology, thus making the teaching into a coherent whole, remains outside the formally posited doctrine." (pp. 12-13)

26. ——. 1988. "Parmenides' Foundation of the Way of Truth." *Oxford Studies in Ancient Philosophy* no. 6:39-67.

"The problem of the subject of *estin* and *ouk estin* in B 2.3 and 5 is one of the most controversial issues in Parmenides scholarship. The usual approach is that *estin* and *ouk estin* have a subject, which, however, remains unexpressed. Now by unexpressed subject one may mean that (a) a given utterance has a logical subject which is not expressed grammatically but is supplied by the immediate context, or (b) a given utterance has a logical subject which is neither expressed by means of a grammatical subject nor supplied by the immediate context. The case (a) is an instance of an ordinary linguistic phenomenon called ellipsis; the case (b) is either grammatically nonsensical or an example of unintelligible speech." (p. 39)

(...)

"Below I argue that *einai* is the only subject that meets this requirement. Proceeding from this assumption, I argue that *einai* should be distinguished from *eon* and that the 'ways' of B 2 are not so much ontological statements as logical-linguistic patterns whose truth and falsehood are self-evident.

These patterns serve in Parmenides as the basis of the subsequent deduction of true existential assertions about Being and not-Being, and I try to show that, if taken in this perspective, all the extant fragments preceding B 8, from B 2 to B 7, constitute a single argument whose detailed reconstruction

I propose in the second section of the article. Finally, in the third section, I examine, proceeding from the conclusions arrived at, the question of truth and falsehood in Parmenides in a more general context, which helps to shed light on the respective logical standing of the two parts of Parmenides' poem, the *Aletheia* and the *Doxa*." (p. 42)

27. ———. 1997. "Xenophanes' Physics, Parmenides Doxa and Empedocles Theory of Cosmogonical Mixture." *Hermes. Zeitschrift für Klassische Philologie* no. 125:1-16.

Abstract: "Although the resemblances between Empedocles' and Parmenides' physical theories are commonly recognized, in speaking of the former's philosophical debt to the latter commentators usually focus on the *ἀλήθεια*, paying much less attention, if any, to the *δόξα* (1). To me, this approach suggests that the role of the *δόξα* in fashioning Empedocles' physical doctrine is not sufficiently appreciated and calls for further discussion; consequently I propose a brief survey of Parmenides' *δόξα* with a view to elucidating systematic correlations between his and Empedocles' physical theories. Further, I intend to argue that Empedocles' physical doctrine is the final stage of a development which can be traced through Parmenides' *δόξα* back to Xenophanes' 'physics'. I believe that the novelty of

Xenophanes' 'physics' has not been duly appraised and its role as a forerunner of Parmenides' *δόξα* largely overlooked."

(1) Thus, for example, in speaking of Parmenides' influence in the 'Conclusion' to his investigation of Empedocles' thought, D. O'Brien, *Empedocles' Cosmic Cycle*, Cambridge 1969, 237-249, does not even mention the *δόξα*; similarly, B. Inwood, *The Poem of Empedocles*, Toronto 1992, 22-28, addresses only the *ἀλήθεια*.

28. ———. 1999. "Being, Truth and Opinion in Parmenides." *Archiv für Geschichte der Philosophie* no. 81:233-248.

"The traditional premise of Parmenidean scholarship is that the theory of Being renders the phenomenal world merely apparent and the account of this world in the *Doxa* fallacious.

Accordingly, commentators find themselves reckoning with the tantalizing question of the rationale of Parmenides' supplementing a true theory with a false one. In what follows, I propose to consider the thesis that Parmenides' Being is consistent with material heterogeneity and that, accordingly, the two parts of the poem combine to yield an exhaustive account of reality." (p. 233)

(...)

"This construal of Parmenides' thought enables an understanding of his poem as a unified philosophical project in which the *Doxa* has its rightful place, and extricates us from the hopeless dilemma that either Parmenides' acceptance of his own conclusions was qualified for the upheld their truth unqualifiedly and was mad.(37)" (p. 248)

(37) As stated by M. Furth, "Elements of Eleatic Ontology," in A. P. D. Mourelatos (ed.), *The Pre-Socratics*, Princeton, 1993, 268; cf. C. H. Kahn, "The Thesis of Parmenides," *Review of Metaphysics* 22, 1969, 715.

29. Floyd, Edwin. 1992. "Why Parmenides Wrote in Verse." *Ancient Philosophy* no. 12:251-265.

"Parmenides chose verse (instead of prose) for its many resonances highlighting deception. *Prophron* at 1.22, for example, has an apparently straightforward meaning "kindly", but in Homer it is used in contexts of divine disguise. Later on in Parmenides' poem, the focus on the immobility of Being (8.37-38) recalls Athena's fateful deception of Hektor in *Iliad*, book 22. Even more clearly, *Doxa* shows the pattern too, since the transition from *Aletheia* at 8.52 parallels a context (Solon, fr 1.2, ed. West) in which feigned madness brings about the Athenians's regaining Salamis."

30. Folit-Weinberg, Benjamin. 2022. *Homer, Parmenides, and the Road to Demonstration*. Cambridge: Cambridge University Press.

Parmenides the Late Archaic Poet, pp. 65-116.

"Parmenides' many other astonishing achievements do not, however, eclipse the fact that his confection of these three features – (i) proceeding from a starting point that has to be accepted (ii) by strict deductive arguments (iii) to establish an inescapable conclusion – marks a fundamental inflection point in the history of Western thought. The clarity with which we may state this is matched only by the intractable obscurity surrounding the development and fusion of these three features in Parmenides' poem.

This remains so despite agreement about Parmenides' importance, and despite the quantity (and quality) of recent scholarship devoted to understanding Parmenides in relation to his Presocratic predecessors and successors. Exploring the origins of this complex of features (i–iii) and providing an account of their emergence, both as individual items and as a complex formed from them (viz. a 'demonstration'), forms the central task of this book." (pp. 2-3, a note omitted)

(...)

"First: archaic Greek roads were not at all like our own. The physical nature and social function of archaic Greek roads (to be discussed in Chapter 1.1) have been neglected by analysts of Parmenides, but have a crucial bearing on our understanding of Fragment 8." (p. 12)

(...)

"Second: the semantics of the word *hodos* and its neighbours in the Homeric semantic field impose a distinctive shape upon the overarching contours of Parmenides' *hodos dizēsios*. The semantic analysis conducted in Chapter 1.2 will suggest a conceptual footprint whose outlines are defined by the fact that in the Homeric semantic field, a *hodos* is always a *hodos* to somewhere, a journey oriented towards, and undertaken with reference to, a fixed, stable final destination, to an end.⁽⁵⁴⁾ The thematic use of the word *hodos* thus inscribes the endeavour denoted by the phrase *hodos dizēsios* within a distinctively teleological framework." (p. 12, a note omitted)

(54) This is part of a larger study of the semantics of road words in Homer; see Folit-Weinberg (forthcoming, 2022). ["The Language of Roads and Travel in Homer: *hodos* and *keleuthos*." *Classical Quarterly*, 72(1):1-24]

31. ———. 2023. "Parmenides' *hodos dizēsios*, Models, and the Emergence of *to eon*." *Gaia. Revue interdisciplinaire sur la Grèce archaïque* no. 26:1-15.

Abstract: "Parmenides is widely credited with inventing the concept of *to eon*, "being" or "what-is"; in this article, I argue that Parmenides' use of the image and model of the *hodos*—of the "road", "route", or "journey"—played an important role in this invention. I begin by exploring the genealogical model that forms the intellectual backdrop to Parmenides' poem. Next, I introduce the discussion of models developed by the historians and philosophers of science Mary Hesse and Mary Morgan; this section identifies three roles that models can play in the development of new concepts.

Finally, I explore which of these options best describes the relationship between Parmenides' use of the model of the *hodos* and the emergence of the concept of *to eon* in his poem."

32. Frank, Luanne T. 2012. "Nietzsche is Said in Many Ways: Nietzsche's Presences in Heidegger's *Parmenides*." In *Heidegger & Nietzsche*, edited by Babich, Babette, Denker, Alfred and Zaborowski, Holger, 247-262. Amsterdam: Rodopi.

"My intent in what follows is to show that Heidegger's *Parmenides* is suffused with Nietzsche, making it essential, if this work is to be apprehended as a whole, that Nietzsche be accorded a recognition there that he typically fails to receive. I also wish to show how and to what ends he appears there. But first: since much of what is to be said here will depend for its point on an awareness of given aspects of the work, it will be necessary to review certain of them preliminarily.

The *Parmenides* is a lecture course of Winter Semester 1942-43 that saw print only in 1982. Page for page, it is thematically one of Heidegger's richest,(2) and one of his most intricately constructed. It also marks crucial philosophical and political

developments in his thought. Nietzsche figures prominently in these developments and among Heidegger's primary themes, as we shall see." (p. 247, a note omitted)

(2) Agnes Heller, "Parmenides and the Battle of Stalingrad", *Graduate Faculty Philosophy Journal* 19, no. 2 (1996), and 20, no. 1 (1997), 247, lists for the work thirty-one themes, acknowledging the list to be incomplete. One would want to add to her list at least an additional twenty.

33. Fränkel, Hermann Ferdinand. 1962. *Early Greek Poetry and Philosophy. A history of Greek epic, lyric, and prose to the middle of the fifth century*. New York: Harcourt Brace Jovanovic.

Translated from the German *Dichtung und Philosophie des frühen Griechentums* (second revised edition 1962) by Moses Hadas and James Willis.

Chapter VII *Philosophy and Empirical Science at the end of the Archaic Period: (c) Parmenides*, pp. 349-370.

"The core of Parmenides' philosophy is metaphysical in its nature.

To come face to face with that reality beyond the senses which had disclosed to him, the poet had to mount in spirit beyond this world in which we live. Whenever he reflected upon his lofty ideas, he felt himself' carried away into a realm of light beyond all earthly things. In the introduction to his poem he describes this experience, and since ordinary words are incapable of conveying anything so far beyond the ordinary, he conveys it in images and symbols.(2) (pp. 350-351)

(...)

"We have now in all essential points come to the end of our information about the philosophy of Parmenides. It unites grandeur of intuition with strictness of logic. He had gazed upon Being in all its plenitude and glory, but also in all its austerity and exclusiveness.

Just as Xenophanes had chosen to believe in god as god and as nothing else, so Parmenides worked out his notion of Being as

pure Being and nothing else; and he used his razor-edged dialectic to defend it against all common-sense doubts as the unique and perfect actuality, The metaphysical spirit here rules supreme.

This metaphysical spirit (cf. 1, 1 θυμὸς) is most completely expressed in the opening, in which the philosopher describes his own ascent into pure and inerrant reason in dramatic and vigorous images. There is a sequence of three scenes: the furious journey from night into day; the passing of a gate that opens to one man only; the gracious reception on the other side. The autobiographical 'I' at first appears quite openly; then it is latent and implied in the horses, chariot, maidens, etc.; then directly again in the address (1, 22ff.), where it is ennobled by the goddess' hand-clasp, to be replaced by 'you' on the lips of the divine speaker. This 'you' has a personal character as long as it is denoting (as in 24-32) the recipient of an exclusive favour, one who has raised himself above the fluctuations of humanity. But when the 'you' recurs later, as it sometimes does, it denotes only the audience of the lecture—in one instance Parmenides particularly (8, 61), elsewhere anyone who through his intermediacy will hear or read the poem." (p. 365)

(2) Probably this was why Parmenides chose verse: fr. 1 could not have been expressed in the Greek prose of his time.

34. ——. 1975. "Studies in Parmenides." In *Studies in Presocratic Philosophy. Vol. II: The Eleatics and Pluralists*, edited by Furley, David J. and Allen, R. E., 1-47. London: Routledge and Kegan Paul.

Partial English translation of *Parmenidesstudien (Nachrichten der Göttinger Gesellschaft der Wissenschaften 1930, 153-192)*.

"My intention in the following studies is to correct and extend certain essential aspects of our present knowledge of the system of Parmenides by criticism and interpretation of original fragments and *testimonia*. In so doing, I shall take particular care to keep close to the wording of the original text, as is done as a matter of course in the interpretation of 'pure' literature, but is easily neglected in the case of a strictly philosophical text, where the content appears to speak for itself, quite

independently of the words which happen to be used. And yet much will be radically misunderstood, and many of the best, liveliest and most characteristic features of the doctrine will be missed, if one fails to read the work as an epic poem which belongs to its own period, and to approach it as a historical document, through its language.

These studies are presented in such a way that only Diels-Kranz is required as a companion." (p. 1)

"As Parmenides himself says (B 3), his thought runs in a circle; it proves itself by itself, just as Being rests in itself: For equal to itself symmetrically on all sides, symmetrically it meets its πείρατα (104) to translate more exactly the vividly empirical ἐγκύρρειε: 'it happens everywhere upon its final forms.' Being has reached its formation symmetrically in every direction.

So has the theory of Reality; and with these words it is concluded." (p. 36)

35. Fratticci, Walter. 2020. "« Apeonta », « pareonta » : on fragment B4 DK " *Anais de Filosofia Clássica de Rio de Janeiro* no. 14:246-270.

Abstract: "The hermeneutical horizon of my work is provided by the extent of the discussion of the relationship between the doctrine of the truth and the doctrine of opinion as are dealt with in Parmenidean thought and work. Rejecting the vision of any separation or opposition between the two parts in which the Parmenidean poem has traditionally been divided, I argue in favour of its theoretical unity. In this way, the ontology lays the foundations for an innovative explanation of natural phenomena. After having highlighted how this unity is required by the general structure of Parmenides' thought, I show how the B4 DK fragment represents the place where Parmenides constructs the passage from ontology to the explanation of natural phenomena."

36. Frère, Jean. 2011. "Mortals (βροτοί) According to Parmenides." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 135-146. Las Vegas: Parmenides Publishing.

Summary: "It is a common opinion that when Parmenides refers to "mortals," he is referring to all human beings. But in fact, when he talks of "mortals," he implies only a limited fraction of humanity: those thinkers who have elaborated clever but nevertheless insufficient or misleading theories about the origin of things and the cosmos. This can be observed in fragment 6, where the formula "mortals who know nothing," far from implying all humanity, refers only to Heraclitus and his disciples. In the same way, in fragment 8.53–61, "mortals" who acknowledge two separate types of light and night to apprehend the structure of the cosmos are only the Pythagoreans, not all humans."

37. Frings, Manfred. 1988. "Parmenides: Heidegger's 1942-1943 Lecture Held at Freiburg University." *Journal of the British Society for Phenomenology* no. 19:15-33.

"In what follows, I wish to present a number of essentials of Heidegger's lecture, originally entitled, "Heraclitus and Parmenides," which he delivered at Freiburg University in the Winter Semester of 1942/1943. This was at a time when the odds of World War II had turned sharply against the Nazi regime in Germany. Stalingrad held out and the Germans failed to cross the Volga that winter. Talk of an impending "invasion" kept people in suspense. Cities were open to rapidly increasing and intensifying air raids. There wasn't much food left.

It is amazing that any thinker could have been able to concentrate on pre-Socratic thought at that time. In the lecture, there are no remarks made against the allies; nor are there any to be found that would even remotely support the then German cause. But Communism is hit hard once by Heidegger, who says that it represents an awesome organization-mind in our time.

There are two factors that somewhat impeded my endeavor of presenting the contents of this lecture:

1. Heidegger had originally entitled the lecture "Heraclitus and Parmenides." The 1942/43 lecture was followed in 1943 and 1944 by two more lectures on Heraclitus.
- 2 When I read the manuscripts of the 1942/43 lecture for the first time, I was stunned that Heraclitus was mentioned just five times, and,

even then, in more or less loose contexts. I decided that the title of the lecture should be reduced to just "Parmenides" in order to accommodate the initial expectations of the reader and his own thought pursuant to having read and studied it.

2. While reading the lecture-manuscripts for the first time, another troubling technicality came to my attention: long stretches of the lecture hardly even deal with Parmenides himself, and Heidegger seems to get lost in a number of areas that do, *prima facie*, appear to be irrelevant to Parmenides. And Heidegger was rather strongly criticized for this in the prestigious literary section of the *Frankfurter Allgemeine Zeitung* to the effect that it was suggested that I could have done even better had I given the lecture an altogether different title and omitted the name Parmenides." (p. 15, notes omitted).

38. ———. 1991. "Heidegger's Lectures on Parmenides and Heraclitus (1942-1944)." *Journal of the British Society for Phenomenology* no. 22:197-199.

"This is a discussion of the coverage of three Lectures Heidegger held on Parmenides and Heraclitus from 1942 to 1944. It is designed on the background of his personal experience during the trip he made to Greece in 1962 as recorded in his diary. The question is raised whether his 1943 arrangement of 10 Heraclitus fragments could be extended by "refitting transformations" of other fragments. The three Lectures are seen as tethered to Heidegger's 1966/67 Heraclitus Seminar. Central to his trip was the island of Delos where he seemingly experienced the free region of Aletheia. A "fragment" in his diary is suggested as a motto for all three Lectures."

39. Fritz, Kurt von. 1945. "Noŭς, νοεῖν, and Their Derivatives in the Pre-Socratic Philosophy (Excluding Anaxagoras). Part I. From the Beginnings to Parmenides." *Classical Philology* no. 40:223-242.

Reprinted (with the second part) in: Alexander P. D. Mourelatos, *The Pre-Socratics: A Collection of Critical Essays*, New York: Anchor Press, 1974; second revised edition, Princeton: Princeton University Press, 1993, pp. 23-52 (on Parmenides see pp. 43-52).

"In an earlier article (1) I tried to analyze the meaning or meanings of the words *noos* and *noein* in the Homeric poems, in preparation for an analysis of the importance of these terms in early Greek philosophy. The present article will attempt to cope with this second and somewhat more difficult problem, but to the exclusion of the *nous* of Anaxagoras, since this very complicated concept requires a separate investigation." p. 23 of the reprint.

So far it might seem as if Parmenides' concept of *noos* is still essentially the same as that of his predecessors, including his contemporary Heraclitus. In fact, however, Parmenides brings in an entirely new and heterogeneous element. It is a rather remarkable fact that Heraclitus uses the particle *gar* only where he explains the ignorance of the common crowd. There is absolutely no *gar* or any other particle of the same sense in any of the passages in which he explains his own view of the truth. He or his *noos* sees or grasps the truth and sets it forth. There is neither need nor room for arguments. Homer and Hesiod, likewise, when using the term *noos*, never imply that someone comes to a conclusion concerning a situation so that the statement could be followed up with a sentence beginning with "for" or "because." A person realizes the situation. That is all. In contrast to this, Parmenides in the central part of his poem has a *gar*, an *épei*, *oun*, *eineka*, *ouneka* in almost every sentence. He argues, deduces, tries to prove the truth of his statements by logical reasoning. What is the relation of this reasoning to the *noos*?

The answer is given by those passages in which the goddess tells Parmenides which "road of inquiry" he should follow with his *noos* and from which roads he must keep away his *noema*.

These roads, as the majority of the fragments clearly show, are roads or lines of discursive thinking, expressing itself in judgments, arguments, and conclusions. Since the *noos* is to follow one of the three possible roads of inquiry and to stay away from the others, there can be no doubt that discursive thinking is part of the function of the *noos*. Yet -- and this is just as important -- *noein* is not identical with a process of

logical deduction pure and simple in the sense of formal logic, a process which through a syllogistic mechanism leads from any set of related premises to conclusions which follow with necessity from those premises, but also a process which in itself is completely unconcerned with, and indifferent to, the truth or untruth of the original premises. It is still the primary function of the *noos* to be in direct touch with ultimate reality. It reaches this ultimate reality not only at the end and as a result of the logical process, but in a way is in touch with it from the very beginning, since, as Parmenides again and again points out, there is no *noos* without the *eon*, in which it unfolds itself. In so far as Parmenides' difficult thought can be explained, the logical process seems to have merely the function of clarifying and confirming what, in a way, has been in the *noos* from the very beginning and of cleansing it of all foreign elements.

So for Parmenides himself, what, for lack of a better word, may be called the intuitional element in the *noos* is still most important. Yet it was not through his "vision" but through the truly or seemingly compelling force of his logical reasoning that he acquired the dominating position in the philosophy of the following century. At the same time, his work marks the most decisive turning-point in the history of the terms *noos*, *noein*, etc.; for he was the first consciously to include logical reasoning in the functions of the *noos*. The notion of *noos* underwent many other changes in the further history of Greek philosophy, but none as decisive as this. The intuitional element is still present in Plato's and Aristotle's concepts of *noos* and later again in that of the Neoplatonists. But the term never returned completely to its pre-Parmenidean meaning." (pp. 51-52 notes omitted)

41. Fronterotta, Francesco. 2007. "Some Remarks on *Noein* in Parmenides." In *Reading Ancient Texts. Volume I: Presocratics and Plato. Essays in Honour of Denis O'Brien*, edited by Stern-Gillet, Suzanne and Corrigan, Kevin, 3-19. Leiden: Brill.

"In this paper I will confine myself to O'Brien's works on Parmenides. I refer in particular to the two volumes of *Études sur Parménide*, to which he contributed so substantially. In the first volume we find his magisterial version of Parmenides's fragments, with French and English translations and commentary, and a critical examination of the main interpretative and philosophical questions that they pose. The second volume includes two essays by him. One of these looks at a number of textual problems, and it aims to elucidate the "ideological" background which often conditions the study of texts because of a pre-existing historico-philosophical understanding of their contents.⁽¹⁾ O'Brien shows that many variants of the texts of fr. 1 and 8 DK reveal a Neoplatonic origin — very likely because Neoplatonic commentators felt the need to establish a convergence between the meaning and the spirit of the Parmenidean text and their own doctrinal positions. O'Brien's essay is a model of its kind, both as a reading of and commentary on the Parmenidean fragments (and on pre-Platonic thinkers in general) and for my more modest objective here, that of reflecting upon the significance of νοεῖν.

I shall look at translations of the verb νοεῖν, and, more especially, the species of activity to which this verb, according to Parmenides, refers us." (p. 3)

Reprinted in *Encyclopedia of Philosophy. Second Edition*, edited by Donald M. Borchert, New York: Thomson-Gale, 2006, pp. 122-127, with an *Addendum* by Patricia Curd, pp. 127-129.

"David Furley's original entry remains an exemplary introduction to Parmenides' thought. Since its publication, philosophers have focused on the character of the routes of inquiry that the goddess lays out in the poem, suggesting different interpretations of the subjectless is (or esti), and of the nature of to eon, the subject of inquiry. In addition, scholars have continued to study the Proem (the opening lines of the poem) and the Doxa (the goddesses' statement of mortal opinion), but there is no consensus about either." (p. 127)

Reprinted in: D. J. Furley, *Cosmic Problems: Essays on Greek and Roman Philosophy of Nature*, Cambridge: Cambridge University Press, 1989 pp. 27-37.

"There is a set of problems, much discussed in the literature, concerning the nature of the journey described in B1 of Parmenides, its destination, the revelation made to him by the goddess, and the connection between the symbolism of B1 and the two forms, Light and Night, which are the principles of the cosmology of the Way of Doxa. Some of these problems, I believe, have now been solved. The solution, which is mainly the work of scholars writing in German, (1) has been either overlooked or rejected by the English-speaking community, (2) and it seems worthwhile drawing attention to it and developing it." (p. 27 of the reprint)

Chapter 4: *Two philosophical critics: Heraclitus and Parmenides*, pp. 31-48; Chapter 5: *Pythagoras, Parmenides, and later cosmology*, pp. 49-60.

"If we are to inquire into something, or seek for it (the nature of the cosmos, for example, or its *archê* - but initially at least Parmenides leaves the object quite open), then we can envisage at once two possibilities concerning the object of our inquiry: that there *is* and *must* be such an object, and that there is *not* and *cannot be* such an object. But the second of these ways can be dismissed almost as soon as it is articulated. *Nothing* (a thing that is *not*) cannot be; hence it cannot be recognized or spoken of; hence it

cannot be an object of inquiry.(11) Parmenides then sets out an argument to show by elimination that only the first way remains: he calls it the Way of Persuasion, but it is usually referred to as the Way of Truth.

What then can be said about the object of inquiry, if we take the Way of Truth? Parmenides discusses the properties that it must have in the long fragment 8. First, what *is* is ungenerated and indestructible. The only thing that it could be generated from or destroyed into is what is *not*, and so we could not describe its generation or destruction without using this now forbidden notion. Secondly, it is one and indivisible, because the only thing that could divide it is something other than itself, and that could

only be what is not⁽¹²⁾ Thirdly, it is motionless and unchanging, since there is nothing other than itself into which it could move or change. Fourthly, it is complete, or perfect, without defect: or as he expresses it, 'like the mass of a well rounded ball, equally balanced from the center everywhere,' since it contains no element of what is *not*, which alone might constitute a variation in its texture.⁽¹³⁾" (p. 38)

(11) The argument is complicated by the modal verbs, 'cannot' and 'must.' Jonathan Barnes has set out a clever and plausible analysis of the structure of this argument in his recent book *The Presocratic Philosophers*, pp. 163–5.

(12) Barnes, *ibid.*, and in his article, *Archiv für Geschichte der Philosophie* 61 (1979), has raised doubts about whether Parmenides produced any argument to show that what is is all one. I believe it is to be found in fr. 8.22-5, where he aims to show that what is is undivided and continuous. Barnes thinks that this shows only that if a thing exists then it is undivided and continuous. It seems to me to work just as well if we take the expression 'what is' to mean 'all that is'; in that case the conclusion means that there is just one thing in existence.

(13) I have more to say about the fourth of these properties of what is: see below, pp. 54-7.

46. ——. 1989. "Truth as What survives the elenchos. An idea in Parmenides." In *The Criterion of Truth. Essays Written in Honour of George Kerferd, together with a Text and Translation (With Annotations) of Ptolemy's on the Kriterion and Hegemonikon*, edited by Huby, Pamela and Neal, Stephen, 1-12. Liverpool: Liverpool University Press.

Reprinted in D. J. Furley, *Cosmic Problems: Essays on Greek and Roman Philosophy of Nature*, Cambridge: Cambridge University Press 1989, pp. 38-46.

"My starting point in this paper is a couple of lines from Parmenides' poem. There is some reason to claim that they are the most remarkable lines in that astonishing document:

κρίνοι δε λόγφ πολύδηριν ελεγχον έξ έμεθεν ρηθεντα, μόνος δ'
ετι μύθος οδοιο λειπεται ώς εατιν.

Judge by logos the hard-hitting refutation (*elenchos*) that I have uttered. Only one single account of a way is left: that it is. (DK 2SB7.5-8.2)

The paradox of Parmenides is presented in the strongest outline here.

It is a goddess who speaks these lines, revealing the way of Truth to the initiate. Instead of standing on authority or using the persuasive power of religious ritual, she tells him to take away her message and subject it to criticism: judge by logos. Moreover, the revelation itself takes the form of a criticism: what she first offers Parmenides on his arrival , when he has passed through the gates of which Justice holds the key, is described as an έλεγχος (*elenchos*). This is the aspect of Parmenides' vision that I want to elaborate on this occasion. I am aiming to do two things: to improve the case for thinking that ελεγχος does indeed mean 'refutation ' here, rather than 'proof'; (1) and to see what this tells us about the underlying conception of truth." (p. 1)

(1) I argued briefly for this thesis in 'Notes on Parmenides' in *Exegesis and Argument: Studies in Greek Philosophy presented to Gregory Vlastos*, ed. E. N. Lee, A. P. D. Mourelatos, and R. M. Rorty, Phronesis suppl. vol . I (Assen 1973), 1 -15. I was stimulated to more about it by some contrary arguments in a paper by Mr. James Lesher , which he was kind enough to send me in typescript.

A year or so later I was invited to present a paper at a conference on "Truth" at Brown University, and without again

looking at Mr. Lesher's paper I wrote the present article. Shortly afterwards I sent it to the Editors of this volume, being very happy to have the opportunity to join in honouring my old and admired friend, George Kerferd.

Some time later, Mr. Lesher published his article ("Parmenides' Critique of Thinking: the *poluderis elenchos* of Fragment 7", *Oxford Studies in Ancient Philosophy* 2 (1984), 1-30.

On re-reading it, I see that although we come to different conclusions, we cover much of the same ground. To take proper notice of Mr. Lesher's arguments now would mean rewriting my paper and expanding it quite a lot. But since we worked independently of each other, I think it best to leave the reader to make the comparisons.

47. Furth, Montgomery. 1968. "Elements of Eleatic Ontology." *Journal of the History of Philosophy*:111-132.

Reprinted in: Alexander Mourelatos (ed.), *The Pre-Socratics. A Collection of Critical Essays*, Garden City: Anchor Press, 1974; second revised edition: Princeton: Princeton University Press, 1993, pp. 241-270.

"The task of an interpreter of Parmenides is to find the simplest, historically most plausible, and philosophically most comprehensible set of assumptions that imply (in a suitably loose sense) the doctrine of 'being' set out in Parmenides' poem.' In what follows I offer an interpretation that certainly is simple and that I think should be found comprehensible. Historically, only more cautious claims are possible, for several portions of the general view from which I 'deduce the poem' are not clearly stated in the poem itself; my explanation of this is that they are operating as *tacit* assumptions, and indeed that the poem is best thought of as an attempt to force these very assumptions to the surface for formulation and criticism-that the poem is a challenge. To be sure, there are dangers in pretending, as for dramatic purposes I shall, that ideas are definite and explicit which for Parmenides himself must have been tacit or vague-that Parmenides knew what he was doing as clearly as I represent him; I try to avoid them, but the risk must be taken. I even believe that not to take it, in the name of

preserving his thought pure from anachronous contamination, actually prevents us from seeing the extent to which he, pioneer, was ahead of his time-the argument works both ways. So let me hedge my historical claim in this way: the view I shall discuss could have been an active- indeed a controlling-element of Eleaticism; to suppose that Parmenides held it not only explains the poem, but also helps explain the subsequent reactions to Eleaticism of Anaxagoras, Democritus, and Plato (though there is not space to elaborate this here). In addition, it brings his thought astonishingly close to some contemporary philosophical preoccupations.

In the first of the following sections, I lay down some sketchy but necessary groundwork concerning the early Greek concept of 'being.' Then in Section 2 an interpretation is given of what I take to be the central Parmenidean doctrine, that 'it cannot be said that anything is not.' This section is the lengthiest and most involved, but it also contains all the moves that appear to be important. Of the remaining sections, Section 3 explains the principle: 'of what is, all that can be said is: *it is*,' Section 4 deals briefly with the remaining cosmology of "The Way of Truth," and Section 5 considers the question whether Parmenides himself believed the fantastic conclusions of his argument. There is a short postscript on a point of methodology." (pp. 111-112)

48. Gadamer, Hans-Georg. 1998. *The Beginning of Philosophy*. New York: Continuum.

See chapter 9: *Parmenides and the Opinions of Mortals* pp. 94-106 and chapter 10: *Parmenides on Being*, pp. 107-125.

"The last line of the second fragment says that it is not possible to formulate that which is not (7) (*me eon*), for this can neither be investigated nor communicated.

It is possible that the third fragment forms the continuation of this text: *to gar auto noein estin to kai einai*. (8) In the meantime, Agostino Marsoner has convinced me that fragment 3 is not a Parmenides quotation at all but a formulation stemming from Plato himself, which I believe I have correctly interpreted and which Clement of Alexandria has ascribed to

Parmenides. In order to interpret this fragment, we must confirm that *estin* does not serve here as a copula but instead means existence (9) and, in fact, not just in the sense that something is there but also in the characteristic classical Greek sense that it is possible, that it has the power to be. Here, of course, "that it is possible" includes that it is. Secondly, we must be clear about what is meant by "the same" (*to auto*). Since this expression stands at the beginning of the text, it is generally understood as the main point and therefore as the subject. On the contrary, in Parmenides "the same" is always a predicate, hence that which is stated of something. Admittedly, it can also stand as the main point of a sentence, but not in the function of the subject, about which something is stated, but in the function of the predicate that is stated of something. This something in the sentence analyzed here is the relationship between "*estin noein*" and "*estin einai*," between "[is] perceiving/thinking" and "[is] being." These two are the same, or, better yet: the two are bound together by an indissoluble unity. (Furthermore, it should be added that the article "*to*" does not refer to "*einai*" but to "*auto*." In the sixth century, an article was not yet placed in front of a verb. In Parmenides' didactic poem, where the necessity arises of expressing what we render with the infinitive of a verb together with a preceding article, a different construction is used.

This interpretation, the one I am proposing for the third fragment, was, as I recall, the object of a dispute with Heidegger. He disagreed altogether with my view of the evident meaning of the poem. I can well understand why Heidegger wanted to hold onto the idea that Parmenides' main theme was identity (*to auto*). In Heidegger's eyes, this would have meant that Parmenides himself would have gone beyond every metaphysical way of seeing and would thereby have anticipated a thesis that is later interpreted metaphysically in Western philosophy and has only come into its own in Heidegger's philosophy. Nevertheless, in his last essays Heidegger himself realized that this was an error and that his thesis that Parmenides had to some extent anticipated his own philosophy could not be maintained." (pp. 110-111)

(7) *das Nichtseiende*.

(8) 'For the same thing exists [or, is there) for thinking and for being' (Gadamer will argue against this reading; see below); alternatively, "For thinking and being are the same."

(9) *Existenz*.

49. Galgano, Nicola. 2020. "Non-being in Parmenides, DK B2." *Anais de Filosofia Clássica* no. 28:1-34.

Abstract: "In fragment DK 28 B 2 of his poem, Parmenides presents his method for distinguishing true persuasion from the lack of true persuasion. The famous two ways for thought that he suggests are the enunciation of a complex system which aims to assure the assertions' truthfulness and finally a credible discourse, the only one capable of real persuasion. The present article tries to show the central role attributed to non-being in the Parmenidean argumentation. The entire fragment is interpreted from this central notion, surely attained by a reflection on the impossibility of negating being, shedding light on Parmenides' discovery of that impossibility, which we currently call "contradiction". He enunciates that the way to avoid contradiction in thought and discourse is through a rule that we call a principle of non-contradiction. The study featured here makes a detailed inquiry into the notion of non-being in fr. 2, finally offering a new translation. "

50. Galgano, Nicola Stefano. 2016. "Amēkhanīē in Parmenides DK 28 B 6.5." *Journal of Ancient Philosophy* no. 10:1-12.

Abstract: "The paper examines closer the notion expressed by the word *amēkhanīē* in DK 6.5. In his analysis of problematic of knowledge Parmenides alerts about *amekhanīē* of mortals, a word generally translated with 'lack of resources' or 'perplexity', a kind of problem that drives the thinking astray. Scholars point out in many passages of the poem the opposition between imperfect mortals and the *eidóta phōta* of DK 1.3, the wise man. However, as much as I know, nobody noticed that, if mortals have a lack of resources, the goddess is teaching exactly how to fix it with a kind of method given through her precepts, which are an authentic *mēchané*. The paper shows that this is

the genuine didactic aim of Parmenides, as he says in 1.28-30, i.e., to point out where is the error of mortals and how the wise man fixes it. Starting from a reinterpretation of 1.29 and following with the analysis of fr. 6, the paper shows that the method of fr. 2 is indeed the *mēchané* that can do that. Although the word is not present in the poem, it is one of its main topics. It seems (by the extant fragments) Parmenides had no clear word to call his *mēchané*, a psychological cognitive tool we call today principle of non-contradiction."

51. ———. 2017. "Parmenides as Psychologist - Part One: Fragment DK 1 and 2." *Archai. Revista de Estudos sobre as Origens do Pensamento Ocidental* no. 19:167-205.

"The aim of this essay is to examine an aspect of Parmenides' poem which is often overlooked: the psychological grounds Parmenides uses to construct his view. While it is widely recognized by scholars that following Parmenides' view requires addressing mental activity, i.e. both the possibility of thinking the truth, as well as thinking along the wrong path that mortals follow, a closer examination of the psychological assumptions involved have, to my knowledge, not yet been attempted.

I argue that by identifying and analyzing the psychological vocabulary in his poem, it is revealed that Parmenides was a keen observer of human mental behavior. Through these psychological (perhaps "cognitivist," following some recent categories) observations of thought processes, Parmenides gains insight into the structure of thought itself. The outcome of this inquiry reveals three notable conclusions: First, the poem contains a remarkably extensive use of strictly psychological vocabulary.

Second, the presence of this psychological material and the lack of scholarly attention to it means there is a significant aspect of Parmenides intellectual legacy that remains unexplored — Parmenides as psychologist, keen observer of human mental behavior. Furthermore, the recognition of this material helps shed important light on Parmenides' philosophical message.

Ultimately, I intend to provide an exhaustive treatment of Parmenides' psychological language, which requires close examination of DK B 1, 2, 6, and 7. Due to spatial constraints, I have divided the inquiry into two parts, and will only address DK 1-2 below." (pp. 167-168)

52. ———. 2017. "Parmenides as Psychologist - Part Two: Fragment DK 6 and 7." *Archai. Revista de Estudos sobre as Origens do Pensamento Ocidental* no. 20:39-76.

53. Gallop, David. 1979. "'Is or 'Is Not'?" *The Monist* no. 62:61-80.

"In this article I reopen some basic problems in the interpretation of Parmenides' 'Way of Truth' familiar to anyone who has wrestled with his poem. The hub of my discussion is fr. B2, in which the goddess formulates two 'routes of inquiry', an affirmative one — 'is', and a negative one — 'is not'. The former she commends, while the latter she rejects as 'wholly unlearnable', on the ground that 'thou couldst not know what is not, nor couldst thou point it out' (B2.7-8). What is the meaning of 'is' and 'is not' in these two routes? Is it existential, predicative, or veridical? Or should we suppose a fused notion of 'being', in which various uses of the verb εἶναι are somehow combined? These questions are clearly fundamental for determining the nature of the two routes, upon which everything else in the Way of Truth depends. The answer that I wish to defend is the classical interpretation of 'is' as existential. This reading of it, adopted by Professor G. E. L. Owen in his influential study, 'Eleatic Questions', (2) remains preferable, in my view, to various alternatives that have been canvassed before and since his article appeared. I shall therefore first review and criticize those alternatives. I shall then reconstruct the argument of B2-3 and B6.1-2, putting forward a modified version of Owen's account. Finally, I shall defend this version against its rivals by considering Parmenides' disproof of coming-to-be and perishing in B8.6-21." (p. 61)

(2) *Classical Quarterly* N.S. 10 (1960), 84-102.

54. Gemelli Marciano, Maria Laura. 2008. "Images and Experience: at the Roots of Parmenides' *Aletheia*." *Ancient Philosophy* no. 28:21-48.

"Another argument against the thesis that the proem is to be interpreted as an ecstatic journey lies in its connection with the rest of the poem. Kingsley 2003 has recently solved this problem, too, by linking the ecstatic experience of the proem with the goddess' teaching in the central *Aletheia* section of the poem so as to produce a single, coherent picture (see Gemelli Marciano 2006b [Review of Kingsley 2003 in *Gnomon* 78: 657-671]). Parmenides' poem is, for Kingsley, neither a purely literary 'didactic' text nor a purely philosophical one. It is an esoteric poem that describes a mystical experience and above all aims through the power of language to induce this same experience in its listeners.

In what follows I develop this approach further and show that if Parmenides' poem is interpreted in this way his enigmatic language, his curious images, and also his so-called logical arguments take on a new meaning.(14) Parmenides' language is performative (it accomplishes what it says). 'Alienation' and 'binding, are the most powerful means to remove listeners from the ordinary, everyday dimension and way of thinking and put them into a different state of consciousness.

Images, repetitions, sequences of words and sounds, supposedly 'logical' arguments all contribute to this end and have a particular meaning and function that surpass conventional human language and ordinary syntactical and semantic relationships.

Here I will draw attention especially to the proem and to fragments 2 and 8. I refer to Kingsley 2002 and 2003 for treatment of the other fragments and the problems relating to them." (pp. 26-27; note 15 omitted)

(14) I formulated some of the observations contained in this article, concerning the divine epiphanies in the proem and the images in fr. DK 28B8, some years ago independently of Kingsley 1999 and 2003, while preparing my forthcoming

edition of the Presocratics (Gemelli Marciano 2008 [*Die Vorsokratiker*. Band II: *Parmenides, Zenon, Empedokles*. Düsseldorf: Artemis & Winkler.]). However, in Kingsley's books I have found the answers to questions and textual problems that have enabled me to organize my earlier unsystematic intuitions into a coherent picture.

55. Gershenson, Daniel E., and Greeberg, Daniel A. 1962. "Aristotle confronts the Eleatics: two arguments on 'the One'." *Phronesis* no. 7:137-151.

"In our review of Aristotle's two arguments against the Eleatics we have pointed out several features which mark off one from the other. The two sections are different primarily in the point of view from which each proceeds, and in the terminology each employs. Further evidence for the independence of the two passages is the following: [*Physics*] lines 186A34- 186B1 repeat in Eleatic jargon what lines 185A27-32 say in common Aristotelian parlance, namely, that if being is an attribute, then the subject will not be; lines 186B1 2-13 repeat the argument in lines 185A32-185B5, that if being is a magnitude, it will no longer be one, because all magnitudes are continua, and all continua by definition are divisible; lines 185B25-1 86A3 present a historical survey of Eleatic thought similar to that in lines 187A1-10, although the two passages accentuate different aspects of its later development. The evidence taken together makes it clear that we are dealing here with two independent written accounts of two separate Aristotelian attacks against Parmenides and the Eleatics. One need only compare the second argument, where the competence of the Eleatics as philosophers is not denied, and where, indeed, the fact that Aristotle carries on a dialogue with them lends them a certain respectability, with the first argument, where he spares the Eleatics no abuse and evinces contempt for their reputation as physicists and logicians, to see that this is so. Each account displays within itself a coherent organization and a consistent point of view. The two together make up Aristotle's main case against Eleatic philosophy." (pp. 150-151; notes omitted)

56. Giancola, Donna. 2001. "Towards a Radical Reinterpretation of Parmenides' B3." *Journal of Philosophical Research* no.

26:635-653.

Abstract: "It is generally agreed that Parmenides' fragment B3 posits some type of relation between "thinking" and "Being." I critically examine the modern interpretations of this relation. Beginning with the ancient sources and proceeding into modern times, I try to show that the modern rationalist reading of fragment B3 conflicts with its grammatical syntax and the context of the poem as a whole. In my critique, I suggest that rather than a statement about epistemological relations, it is, as it was originally understood, a religious assertion of metaphysical identity."

57. Girle, Roderic A. 2007. "Parmenides Demythologised." *Logique et Analyse* no. 199:253-268.

"The impression is often given that the metaphysics of Parmenides is absurd.

This impression is often reinforced with a warning that if philosophers resort to an "extreme" view then they are bound to finish with an absurd view, "like Parmenides". But all this is far too swift. I will argue that there is a way of looking at Parmenides which brings his views very much into line with the views of a substantial number of modern philosophers who are not taken to be putting forward absurd views. They might be somewhat discomfited to be grouped with Parmenides, but if they are, then that in itself should give cause to pause and consider both the issue of Parmenides' alleged absurdity and to what extent they have inherited Parmenides' problems.

So let us first reprise the views of Parmenides. Then we consider some modern doctrines which have consequences of a quite Parmenidean kind.

This will lead us to considering a contrast in the Philosophy of Time of considerable interest to Prior." (p. 253)

58. Glowienka, Emerine. 1988. "Exorcising the Ghost of Parmenides." *Southwest Philosophical Studies* no. 10:37-47.

"Yet this paper is not an attempt to offer a scholarly analysis of Parmenides' own metaphysics; rather, it is a chronology and

analysis of the subsequent history of some metaphysicians in dealing with this legacy bequeathed to them by Parmenides. This legacy, which I am calling the "ghost of Parmenides," is the confusion of our concept of "absolute being" ("abstract being") with, and/or the disengagement of this concept from, the objects of our experience. You doubtless recognize this confusion as a move from the mental to the extra-mental, which has been also named the "fallacy of misplaced concreteness" according to Whitehead.(3) For to equate being with unity is really only to describe what a concept of being must be in order for it to be intelligible to human understanding; it does not describe being as found outside that concept." (p. 37)

59. Göbel, Christian. 2002. "Mysticism and Knowledge in Parmenides." *The Downside Review* no. 120:157-174.

"Nowadays, mysticism and knowledge are often considered opposites. It does not seem possible that the concepts of experiencing God and rational insight can exist together. But on the other hand, there are many testimonies of ancient authors who

consider reason and divine experience to be related.

(...)

This is the case in the speculative system of Plato, but it is also valid for the man who stands at the beginning of metaphysical thinking: Parmenides of Elea (fl. c.5 00 BC).

Modern consciousness, however, has lost an immediate understanding of traditional symbols. It is therefore important to decipher the meaning of the ancient texts and make the - often very clear - ideas behind the mythic and symbolic speech visible again.

Such an attempt will be made in the following, focusing on Parmenides' poem 'On Nature'. Our interpretation will be restricted to some explanations of the symbolic speech of the

Eleatic philosopher in so far as it is relevant to the context of knowledge and

mysticism. It will become clear how and why the ancient thinker could express knowledge as mysticism, and it will be shown that ancient wisdom contains assertions about human knowledge that may still be valid today, especially in a Christian context, once mystical and mythical elements of Greek philosophy are understood - and 'translated' - as symbolic language." (pp. 157-158, a note omitted)

60. Goldin, Owen. 1993. "Parmenides on Possibility and Thought." *Apeiron. A Journal for Ancient Philosophy and Science* no. 26:19-35.

"Given the evidence and the nature of Parmenides' writing, it seems that Mourelatos (1979,5) is right in his suggestion that it is time for a 'tolerant pluralism' in Parmenidean scholarship. But if a definitive interpretation is beyond our reach, we may yet make progress in understanding what is to be gained or lost in the depth, cogency, and clarity of our interpretation of the whole poem when we interpret a line or an argument in one manner rather than another.

For this reason, I do not here defend a complete interpretation of what remains of Parmenides' poem. In most important respects I pursue the interpretive path taken by G.E.L. Owen ([*Eleatic Questions*, reprinted in] 1987a) in his highly influential interpretation of the poem. But I take issue with Owen's claim that Parmenides' argument for the existence of any object of reference or thought rests on fallacious modal logic. I also take issue with the view of Tugwell (1964) that Parmenides' argument rests on a naive and philosophically unsatisfactory blurring of the distinction between the potential and existential uses of εἶναι. I suggest that Parmenides' argument for the being of the object of thought and speech takes a different course. On my view, Parmenides explicitly denies that there are unreal but possible things or states of affairs, on the grounds that possible beings can be understood only as beings and hence as real. Since any object of thought or speech is a possible thing or state of affairs, any object of

- thought or speech is. On my view, Parmenides thus draws attention to what has come to be a perennial metaphysical problem: what status is to be given to possible beings?" (p. 19)
61. Gomes, Henrique. 2020. "Back to Parmenides." In *Beyond Spacetime: The Foundations of Quantum Gravity*, edited by Huggett, Nick, Matsubara, Keizo and Wüthrich, Christian, 176-205. Cambridge: Cambridge University Press.

Abstract: "After a brief introduction to issues that plague the realization of a theory of quantum gravity, I suggest that the main one concerns a quantization of the principle of relative simultaneity. This leads me to a distinction between time and space, to a further degree than that present in the canonical approach to general relativity. With this distinction, one can make sense of superpositions as interference between alternative paths in the relational configuration space of the entire Universe.

But the full use of relationalism brings us to a timeless picture of Nature, as it does in the canonical approach (which culminates in the Wheeler-DeWitt equation). After a discussion of Parmenides and the Eleatics' rejection of time, I show that there is middle ground between their view of absolute timelessness and a view of physics taking place in timeless configuration space. In this middle ground, even though change does not fundamentally exist, the illusion of change can be recovered in a way not permitted by Parmenides. It is recovered through a particular density distribution over configuration space which gives rise to 'records'. Incidentally, this distribution seems to have the potential to dissolve further aspects of the measurement problem that can still be argued to haunt the application of decoherence to Many-Worlds quantum mechanics. I end with a discussion indicating that the conflict between the conclusions of this paper and our view of the continuity of the self may still intuitively bother us. Nonetheless, those conclusions should be no more challenging to our intuition than Derek Parfit's thought experiments on the subject."

62. Graeser, Andreas. 2000. "Parmenides in Plato's *Parmenides*." *Bochumer Philosophisches Jahrbuch für Antike und Mittelalter* no. 5:1-14.

Abstract: "This essay examines the role of Parmenides in Plato's dialogue of the same name.

Over against the widely held view that this literary figure exemplifies the philosopher par excellence of an all-encompassing systematic of Eleatic provenience, it is maintained that Parmenides represents a particular frame of mind about certain philosophical matters, namely one which regards forms in a reified manner. It is suggested that by means of the literary figure of Parmenides, Plato is addressing in his dialogue inner-Academic debates about the theory of forms, especially Speusippus' conception of Unity, which betrays a kind of naive metaphysics of things, as can be seen especially in the first three deductions of the second half of the dialogue."

Parmenides of Elea. Annotated Bibliography of the studies in English: Grah - Ion

Bibliography

1. Graham, Daniel W. 1999. "Empedocles and Anaxagoras: Responses to Parmenides." In *The Cambridge Companion to Early Greek Philosophy*, edited by Long, Anthony Arthur, 159-180. Cambridge: Cambridge University Press.

"There is no question that Parmenides' poem was a watershed in the history of early Greek philosophy. No serious thinker could ignore his work. And yet it seems to pose insuperable problems for cosmology and scientific inquiry. The first generation to follow Parmenides

includes thinkers who wished to continue the tradition of Ionian speculation. But how would they confront Parmenides? What would they make of him and what effect would his arguments have on their work? The first neo-Ionians⁽¹⁾, as they have been called, were Empedocles and Anaxagoras.⁽²⁾ Despite some salient differences, the two philosophers have much in common in their approach. They are near contemporaries,³ and as we shall see, they make similar moves in their approach to scientific speculation. Let us first examine

the systems of Empedocles and Anaxagoras, and then discuss their responses to Parmenides." (p. 159)

(1) 1 The term is from Barnes [*The Presocratic Philosophers*, 2nd ed. [1st ed. 1979 in 2 vols.] (London, 1982)] ch. 15, who stresses the continuity of their project with that of early Ionian

philosophers. The term aptly allows us to class philosophers of Italy and Sicily, such as Philolaus and Empedocles, with later philosophers from Ionia such as Anaxagoras.

(2) These two philosophers seem to have been active about a generation earlier than Philolaus, Archelaus, Diogenes of Apollonia, and Leucippus, and perhaps a couple of generations earlier than Democritus.

2. ———. 2002. "Heraclitus and Parmenides." In *Presocratic Philosophy: Essays in Honour of Alexander Mourelatos*, edited by Caston, Victor and Graham, Daniel W., 27-44. Aldershot: Ashgate.

"The two most philosophical Presocratics propound the two most radically different philosophies: Heraclitus the philosopher of flux and Parmenides the philosopher of changelessness. Clearly they occupy opposite extremes of the philosophical spectrum. But what is their historical relation? For systematic reasons, Hegel held that Parmenides preceded Heraclitus. But in a footnote of an article published in 1850, Jacob Bernays noticed that in the passage we now know as DK 28 B 6 Parmenides could be seen as criticizing Heraclitus.(*). Bernays' insight had already been widely recognized as the key to the historical relationship between the two philosophers when Alois Patin strongly advocated the Bernays view in a monograph published in 1899. But in 1916 Karl Reinhardt reasserted the view that Heraclitus was reacting to Parmenides. Others argued that no connection was provable. The Reinhardt view was never popular, while the Bernays-Patin view gradually came to be widely accepted. Twenty-five years ago Michael C. Stokes (*One and many in Presocratic philosophy*, 1971) launched a devastating attack on the view that Parmenides was replying to Heraclitus. That attack has never been answered and the Bernays-Patin thesis at present remains undefended.

In this chapter I wish to argue that the Bernays-Patin thesis is true after all. And in the process of defending it, I hope to show that accepting the thesis has some value for understanding Parmenides beyond the external question of his relation to Heraclitus. Minimally, appreciating Heraclitus' influence on

Parmenides will help us understand Parmenides' argument better; but beyond that, it may help us put the whole course of early Greek philosophy in perspective. I shall first review the evidence for a connection between the philosophers (section I), then analyze the evidence for a connection (II), consider the role of historical influences in philosophical exegesis (III), and finally try to reconstruct Parmenides' dialectical opponent from his argument (IV)." (p. 27 notes omitted)

(*) In his *Kleine Schriften* (1885), vol. 1, pp. 62-3, n. 1.

3. ———. 2006. *Explaining the Cosmos: The Ionian Tradition of Scientific Philosophy*. Princeton: Princeton University Press.

Chapter 6: *Parmenides' Criticism of Ionian Philosophy*, pp. 148-185.

"What connection, if any, there is between Heraclitus and Parmenides has long been disputed(1). Of the four a priori possibilities: (a) that Parmenides influenced Heraclitus, (b) that Heraclitus influenced Parmenides, (c) that the two did not know or acknowledge each other, and (d) that they are influenced by a common source, only (b) and (c) seem likely. For, contra (a), Heraclitus likes to abuse his predecessors(2), and, contra (d), he tends to radically rework the material he inherits(3). There have been, and continue to be, proponents of both (b) and (c).(4) While it seems attractive in some ways to dodge the question and thus deal only with textual certainties rather than historical contingencies, I believe that textual evidence is adequate to decide the question in favor of (b), and, moreover, to help determine the philosophical relationship between the two most philosophical Presocratics—and the two most ideologically opposed." (p. 148)

(1) The argument in this section is drawn from a longer study (Graham 2002a). The results are disputed by Nehamas 2002.

(2) Heraclitus B40, B42, B57, B81a, B106, B129. "Dieses bleiben die Ecksteine der Geschichte der Vorsokratiker: Heraklit zitiert und bekämpft Pythagoras, Xenophanes und Hekataios, nicht Parmenides; dieser zitiert und bekämpft Heraklit" (Kranz 1916, 1174).

(3) E.g., he is at pains to deny the possibility of cosmogony at B30, the one doctrine common to all his philosophical forebears.

(4) Arguments for (a) start with Hegel 1971, 319ff., followed by Zeller, and revived by Reinhardt 1916; this view has mostly been abandoned, but see Hölscher 1968, 161–65. The argument for (b) was first made by Bernays 1885, 1: 2.62, n. 1, and defended vigorously by Patin 1899; this view was accepted by Baeumker 1890, 54; Windelband 1894, 39, n. 2; Diels 1897, 68ff.; Ueberweg 1920, 1st Part: 95, 97, 99; Kranz 1916, 1934; Burnet 1930, 179-80, 183-84; Calogero 1977, 44-45; Cherniss 1935, 382–83; Vlastos 1955a, 341, n.

11, KR (tentatively) 183, 264, 272, Guthrie 1962-1981, 2.23–24; Tarán 1965; Coxon 1986; Giannantoni 1988, 218-20, and others. Diels 1897, 68, says of Bernays: “[S]eine Ansicht is fast allgemein durchgedrungen,” noting that only Zeller has resisted the interpretation; but in his revised edition of Zeller, 1919–1920, 684, n. 1, and 687, n. 1, Nestle abandons Zeller’s view as obsolete. For (c) are Gigon 1935, 31-34; Verdenius 1942; Wilamowitz-Moellendorff 1959, 2.208-9; Mansfeld 1964, ch. 11; Marcovich 1965, col. 249;

Stokes 1971, 111-27.

4. ———. 2013. *Science before Socrates: Parmenides, Anaxagoras, and the New Astronomy.* New York: Oxford University Press.

Chapter 3: *Borrowed Light: The Insights of Parmenides*, pp. 85-108.

"We began by asking a series of questions about early Greek astronomy:

1. Who discovered the theories in question first?
2. What led him to this discovery?

3. Did the two philosophers (Anaxagoras and Empedocles) have good evidence for the theories?
4. Did the community of philosophers accept the theories?
5. Did they develop the theory on their own, or did they borrow it from another source (Thales, Pythagoras, the Babylonians)?

We have at present provided at least a partial answer to two of these questions. The remarkable chain of events that began theoretical astronomy as we know probably started with the recognition of heliophotism.

This theory, or insight, derives, as far as we can tell, from Parmenides of Elea, who, writing in the early fifth century, saw that the moon's phases could be explained on the basis of the moon's position relative to the sun, supposing that the sun was the moon's source of light—just as, perhaps, it is for clouds. It is plausible to suppose that Parmenides came to this insight by himself, unaided by earlier speculations on the moon, which were unhelpful, or Babylonian data and theories, which were most likely unknown to him, and which did not, in any case, derive the moon's light from the sun. The supposition that he had a Pythagorean informant seems gratuitous.

Thus in answer to question (2): Parmenides paved the way. In partial answer to question (5): Parmenides seems to be original in his contribution to the beginnings of astronomy. As to the further development of the theory of eclipses, there is no record that Parmenides had anything to say about eclipses, even if both his predecessors and his successors did. The students of astronomy and doxographers who canvassed early studies for new theories seem to have found nothing on this topic from Parmenides. We can say in answer to (1) that Parmenides (and not either Anaxagoras or Empedocles) discovered the source of the moon's light; as to the explanation of eclipses, question (1) must remain open, as well as questions (3) and (4). Moreover, we will have to see what role Parmenides' insights played in the further development of early Greek astronomy. What difference does it make to know that the moon gets its light from the sun?" (pp. 107-108)

5. ———. 2013. "Two Stages of Early Greek Cosmology." *Proceedings of the Boston Area Colloquium of Ancient Philosophy* no. 28:41-63.

Abstract: "It is generally held that Presocratic cosmologies are sui generis and unique to their authors. If, however, a division is made between sixth-century and fifth-century BC cosmologies, some salient differences emerge. For instance, heavenly bodies in sixth-century cosmologies tend to be light, ephemeral, fed by vapors, and located above the earth; those in fifth-century cosmologies tend to be heavy, permanent, heated by friction, and to travel below the earth. The earlier cosmologies seem to embody a meteorological model of astronomy, the latter a lithic model. The change in models can be accounted for on the basis of Parmenides' discovery that the moon is illuminated by the sun and hence is a spherical, permanent, opaque or earthy body. This insight generated empirical evidence to confirm itself and rendered obsolete earlier cosmologies."

6. ———. 2020. "The Metaphysics of Parmenides' *Doxa* and its Influence." *Anais de Filosofia Clássica* no. 14:35-58.

Abstract: "Parmenides' *Aletheia* receives the lion's share of philosophical scrutiny. His *Doxa*, focusing on the explanation of natural phenomena, by contrast, is often neglected, especially in studies focusing on metaphysics.

But it is the latter that occupied most of Parmenides' poem and which had, arguably, a more profound influence on later philosophy.

The *Doxa* seems to embody the Eleatic properties Parmenides attributes to the proper object of understanding, at least as far as possible in a theory designed to account for change. Apparently for the first time, it attempts to explain changeable phenomena in terms of changeless principles. The principles of the *Doxa* offered a model for subsequent philosophies of nature, and provided the basis for theories of elements from the fifth century BC until today."

7. Granger, Herbert. 2002. "The Cosmology of Mortals." In *Presocratic Philosophy: Essays in Honour of Alexander Mourelatos*, edited by Caston, Victor and Graham, Daniel W., 101-116. Aldershot: Ashgate.

"But why could not Parmenides take up a position of the sort his successors among the pluralists adopt(49) and introduce Light and Night as primal, eternal entities, each fully real, different and underived from one another, without their being just a denser or more rarefied version of something more fundamental? This is impossible for Parmenides and the goddess as long as they take the word 'being' to be a univocal predicate and to be what expresses the very nature of its subject. Parmenides' successors can conceive of Being as coming in a variety of forms, but not because they take 'being' to be equivocal or believe it to be something other than a qualitative term. On these points they would be in fundamental agreement with Parmenides and the goddess. Plausibly it may be argued that the pluralists who follow Parmenides are in a position to recognize the possibility of a qualitative heterogeneity within an existential homogeneity, because they take 'being' to be more like a generic than a specific term in its descriptive role, and thus they may take Being to be more like a determinable than a determinate in its nature. This would then put them in a position to maintain that Being may come in a variety of different sorts within a single conception of what it is to be.

The pathway to a cosmology of the post-Parmenidean sort is closed to the goddess and her disciple Parmenides. The goddess holds out no hope for any sort of cosmology, and she is in no position to appreciate or to anticipate the pluralism of the successors of Parmenides. The goddess should be taken, then, at her word when she warns that the order of her words on mortal opinions is deceptive. The cosmology of mortals is nothing more than a deception, which deceives by giving the appearance of reality without yielding its substance, and there is no reason to search for something more than mere deception in the deceptive words of the goddess upon the cosmos." (pp. 114-115)

(49) For example, Anaxagoras (B 5, B 17); Empedocles (B 17.27-35, B 6, B 8, B 9). On both of them, see Aristotle, *Ph.* 1.4, 187a22-b7. It is commonly held that Parmenides' successors presume a plurality without any argument. For example, Malcolm observes this of Empedocles and Anaxagoras, ["On avoiding the void", *Oxford Studies in Ancient Philosophy*, 9, 75-94] 1991, pp. 92-3, and Curd of the atomists as well, [*Parmenidean monism*] 1991, p. 261, and Curd [*The Legacy of Parmenides*], 1998, pp. 64-5, 129-31. Curd takes their lack of an argument to indicate that none was needed because Parmenides did not deny a plurality, since he was not a 'numerical monist' who held that a single entity constitutes reality. Curd charges that Parmenides' successors would have been remiss in their philosophical duty if they had presumed a plurality in the face of any argument by Parmenides against it. Yet even if the successors of Parmenides offered no argument for plurality, this need not indicate that Parmenides did not argue against plurality and that his successors in their presumption of plurality were not philosophically responsible. Parmenides' successors may have understood their charge to be the development of a compromise between the demands of his argument and those of common sense, in which the demands of these two extremes must be satisfied as much as possible without any hope that all of them would receive satisfaction.

8. ——. 2008. "The Proem of Parmenides' Poem." *Ancient Philosophy* no. 28:1-20.

"The paper defends the view that the Proem of Parmenides' poem is a secular allegory. At the allegory's center is the unnamed goddess who in the body of the poem instructs the unnamed youth, through her use of a priori argumentation, about the nature of reality. The goddess provides the very symbol for a priori reason, and a central feature of Parmenides' expression of this symbolic value for the goddess is his confused presentation of her in the Proem. His presentation is intentionally vague, and it defies any definitive interpretation that clearly identifies the classification of the goddess and her circumstances within traditional or unconventional Greek religious belief. Instead, she recalls in a confusing fashion

traditional revelatory goddesses, of whom the Muses and cult goddesses provide paradigm instances. Hence the youth's journey in the Proem to the unnamed goddess leads to no clearly identifiable circumstances, yet what it arrives at is still bound up within the medium of the standard epic style. Parmenides uses the old idea of the revelatory goddess in this unexpected way to try to show how it harbors something like the exercise of a priori reason. The reflection of the a priori does not reside merely in the similarity that the Muses bestow knowledge, which lies beyond the limited powers of human observation, about past, present, and future. The similarity is stronger and more significant when the Muses grant knowledge that lies beyond their own powers of observation in the form of insights into events they could not have possibly witnessed, such as the birth of the gods. Parmenides picks his unnamed goddess for his symbol for a priori reason because he takes himself to be demythologizing the philosophical truth reflected in a distorted fashion within the tradition of divine revelation. By placing a priori reason in the garb of the revelatory goddess who appears in a puzzling form, Parmenides indicates to his audience that this use of the power of reason has its antecedents in traditional practices that did not recognize this power for its true nature. There is a value in the tradition of divine revelation, which transcends the fictions of the poets in their story-telling, but revelatory deities must now step aside for the clear expression of the power of a priori reason. Hence the goddess abdicates her authority when she demands that the youth judge her words by his logos. Parmenides' verse conforms with his symbolic use of the goddess. It helps him mark his difference from his competitors among the new intellectuals, the so-called 'natural philosophers', who generally favor prose over verse. These intellectuals abandoned the Muses and their gift of verse, and they aspire to cosmologies that depend for their justification upon observation and inductive arguments that appeal to analogies and inferences to the best explanation. Verse as the medium of the Muses allows Parmenides to stress in a literary fashion how he adheres to a mode of thinking that does not rely upon the power of observation for the truth." (p. 1)

9. ———. 2010. "Parmenides of Elea: rationalist or dogmatist?" *Ancient Philosophy* no. 30:15-38.

"Parmenides of Elea is often lauded as a major figure of Western philosophy because he is the first to give an extensive role in his speculation to a priori argumentation.

In his poem we find for the first time in history sustained rational argumentation for the establishment of a complex metaphysical doctrine. Parmenides does not merely dictate to his audience a set of doctrines about reality, but, instead, undertakes to support his doctrines by means of logical inferences based on premises that have some claim to plausibility or self-evidence or a priori justification. This evaluation of Parmenides' accomplishment is not without its detractors, however. Kingsley has mounted a vigorous challenge to the presumption that Parmenides relies on argument for his opinions about reality, and recently Gemelli Marciano has significantly buttressed Kingsley's case by furthering his ideas in her detailed comments on Parmenides' poem. Kingsley and Gemelli Marciano maintain that Parmenides is a dogmatic mystic who depends for his dogmas entirely upon what he learns from divine revelation and that he makes no serious effort to defend his mystical beliefs by genuine argumentation.

In fact, reasoned argument not only cannot discover the truth, it provides an impediment that must be transcended or suppressed." (p. 15; notes omitted)

10. Greenstine, Abraham Jacob. 2017. "Diverging Ways: On the Trajectories of Ontology in Parmenides, Aristotle, and Deleuze." In *Contemporary Encounters with Ancient Metaphysics*, edited by Greenstine, Abraham Jacob and Johnson, Ryan J., 202-223. Edinburgh: Edinburgh University Press.

"Presently there is a flood of ontologies, an uproar over being. Not only is metaphysics permitted, it has become, perhaps, expected. Not that continental philosophy has returned to some sort of Wolffian systematic science of ontology.

Rather, we now find ourselves inundated by a variety of ontological styles:

it seems that every philosopher and scholar has their own theory of being. To make our way through this torrent, we might ask: what is ontology? How can we speak of being? Can it be narrated, accounted for, expressed?

In this essay I explore three philosophically and historically decisive answers to these questions: those of Parmenides, Aristotle, and Gilles Deleuze.

I examine not only what each thinker says about being, but also how they say it, that is, what the project of ontology is for each. Rather than proposing so many different hypotheses in a single pre-established discourse on being, each of them endeavors to create a new ontology. Parmenides inaugurates ontology, leading us on a journey to the truth through the path of what is. Aristotle, rejecting Parmenides' way of truth, instead proposes a knowledge of being, a science of ontology, which leads in turn to knowledge of the divine as the first causes of things. Deleuze, denying both the truth of Parmenides and the first causes of Aristotle, instead contends that there is only one proposition about being, just a single voice of ontology. Path, knowledge, and proposition: each philosopher institutes his own ontological style. Each defends an ontology apparently unassimilable to the others." (p. 202)

11. Gregory, Andrew. 2014. "Parmenides, Cosmology and Sufficient Reason." *Apeiron. A Journal for Ancient Philosophy and Science* no. 47:16-47.

Abstract: "Why Parmenides had a cosmology is a perennial puzzle, if, as the 'truth' part of his poem appears to claim, what exists is one, undifferentiated, timeless and unchanging.¹ Indeed, not only does the cosmological part of the poem tell us how the cosmos is arranged, it also tells us how the cosmos, humans and animals all came into being. Although more of the truth has survived, the cosmology originally made up some 2/3 to 3/4 of the poem. The poem claims it will give the 'complete ordering' and Parmenides is perceived to have 'completed all the phenomena'.³ Parmenides also seems to have made some

important original contributions to cosmology. These I take to be important facts which any explanation of the nature of this cosmology must account for. The aim of this paper is to explore a new suggestion for the status of the cosmology, that it may be equalled but not surpassed by other cosmologies which are capable of accounting for all of the phenomena. Its function, I argue, is to raise sufficient reason issues about some fundamental questions in cosmogony and cosmology. I will also argue that we can find sufficient reason considerations relating to cosmogony and cosmology in the truth part of the poem. This opens the possibility that it is at least in part issues of sufficient reason that link the two parts of the poem. Finally I will argue that by paying close attention to what Parmenides has to say about signs, σήματα, we can see how he leaves open the possibility of making positive contributions to cosmology.

I believe this gives us a richer account of Parmenides, places him more firmly in the debates of presocratic cosmology and cosmogony and gives him interesting relations to his predecessors and successors. These sufficient reason considerations may work both as a critique of contemporary cosmogony and cosmology and a challenge to any future cosmogony and cosmology." (pp. 16-17; notes omitted)

12. Groarke, Leo. 1985. "Parmenides' Timeless Universe." *Dialogue* no. 24:535-541.

"In his recent collection of Parmenides' fragments,(1) David Gallop joins a number of commentators (among them, Tarán(2) and Stokes(3)) who argue against the view that fragment 8 contains a commitment to a reality which is "timeless" or "atemporal". His arguments seem to me convincing if one adopts Owen's view(4) that timelessness is a result of indistinguishable phases of existence. Gallop's arguments could decide the issue if this was, as Tarán suggests, "the only reason to maintain that Being is a non-temporal entity".(5) There is, however, an alternative way to defend the atemporal interpretation, though it has not been elaborated in any detail.(6) If I am not mistaken, it can elude Gallop's criticisms and provide a more plausible account of Parmenides' philosophy.(7)"

(1) Parmenides of Elea, *Fragments, a Text and Translation with an Introduction* by David Gallop (Toronto: University of Toronto Press, 1984), 13-16. For good reason, the book is sure to become the standard reference for years to come.

(2) Leonardo Tarán, *Parmenides: A Text with Translation, Commentary, and Critical Essays* (Princeton, NJ: Princeton University Press, 1965), 175-181.

(3) Michael C. Stokes, *One and Many in Presocratic Philosophy* (Washington, DC: Center for Hellenic Studies, 1971), 127-137.

(4) See G. E. L. Owen, "Plato and Parmenides on the Timeless Present", in A. P. D. Mourelatos. ed. *The Pre-Socratics: A Collection of Critical Essays* (Garden City, NY: Anchor/Doubleday, 1974). I cannot discuss Owen's views in detail here.

(5) Tarán, *Parmenides*. 181.

(6) For interpretations of Parmenides' similar to the one that I suggest, see the following: W. K. C. Guthrie, *A History of Greek Philosophy*, vol. 2 (Cambridge: Cambridge University Press, 1965), 29; Felix M. Cleve, *The Giants of Pre-Sophistic Greek Philosophy: An Attempt to Reconstruct their Thought* (The Hague: Martinus Nijhoff. 1965), 531; and Peter Geach, *Providence and Evil* (Cambridge: Cambridge University Press, 1977). 53-54. None of these authors develops a detailed interpretation.

(7) The question of Parmenides' view of time (exemplified by disputes over fragment 8.5) is a thorny one. In G. S. Kirk, J. E. Raven, and M. Schofield, *The Presocratic Philosophers* (2nd ed.; New York: Cambridge University Press, 1983), Schofield writes, for

example, that "Probably what Parmenides means to ascribe to what is is existence in an eternal present not subject to temporal distinctions of any sort. It is very unclear how he hoped to ground this conclusion in the arguments of [fragment 8]... ." If the account

I suggest is correct, this conclusion is neither surprising nor difficult to understand.

13. ———. 1987. "Parmenides' Timeless Universe, Again." *Dialogue* no. 26:549-552.

"In a recent discussion note,(1) Mohan Matthen criticizes my claim that Parmenides is committed to an atemporal reality. I shall argue that his critique misrepresents by views , misunderstands Parmenides , and is founded on a capricious view of historical interpretation."

(...)

"The key to my account is the suggestion that Parmenides rejection of what does not exist entails the rejection of the past and future, for they do not exist (because the past no longer exists and the future does not yet exist). This is, I think, the most plausible interpretation of Parmenides claim that what is "neither was ... once nor will be, since it is now" (8.5, cf. my previous discussion of 8.19-20). It follows that sentences cannot meaningfully refer to the past and future, for we cannot refer to what is not (8.8)."

Translated from *Introduction a la métaphysique*, Québec: Les Presses de l'Université de Montreal 2004 by Lukas Soderstrom. Chapter 1. *Parmenides: The Evidence of Being*, pp. 1-20.

"Can we really identify Parmenides with the Presocratic physiological tradition?"

Some modern interpreters,(9) influenced by Aristotle (but then, who is not?), and by the modern scientific explanation of nature as well, have read Parmenides as a philosopher attempting to understand the structure of the universe. But one must recognize that he probably also opposed the Milesian physiological tradition by arguing against their attempts at a

genetic explanation of nature. According to Parmenides' Poem, there is no becoming because this would imply a passage from Nonbeing to Being and therefore the existence of Nonbeing. And since Nonbeing is unthinkable, there can only be Being and therefore no becoming. Thus, briefly summarized, is the doxographical content of Parmenides' disconcerting Poem." (p. 6)

(...)

"Although using the term " metaphysics" here may be premature, we may perhaps allow the use of the term " ontology" to characterize the inextricable relation the Poem urges us to think, despite the fact that it would be extremely anachronistic since the term *ontologia* did not appear before the seventeenth century. Here, the word ontology simply means that the true, or rational, discourse— that is, the logos, is dedicated to Being in its most basic sense— that is, imperishable and incorruptible. And it would be accordingly an overestimation of the mortals' linguistic capacities to believe there actually are such things as birth and death, change and becoming. Since then, philosophy or Western science has been enraptured by a stable and permanent Being, and enthralled to the rigors of " thought," which did not really exist prior to Parmenides." (p. 15)

(9) The most influential reading of this type, which is also a classic introduction to Presocratic thought, is John Burnett's *Early Greek Philosophy* (Cleveland, NY: Meridian, 1957 [1930]) 169-196.-

15. Groth, Miles. 2017. *Translating Heidegger*. Toronto: University of Toronto Press.

Chapter Four: *Paratactic Method: Translating Parmenides, Fragment VI*, pp. 165-193.

"Heidegger's efforts to translate the Greek thinkers are the source of his philosophy of translation, which I have summarized from a review of his published writings. In his 1951–52 translation of Parmenides's Fragment VI, Heidegger brings to bear a half-century-long conversation with ancient

Greek and demonstrates his practice of translating in full stride. Until now, Heidegger's philosophy of translation is part of what has been left unspoken of Heidegger's thought. It will have become clear that in my review of the early critical literature and the first English translations of Heidegger, I have had the principles of Heidegger's philosophy of translation in mind, and in my critique, I have countered the interpretations of his early readers with *Auslegungen* of his fundamental words. In this chapter, I will present an account of Heidegger at work in an *Auslegung* of a fragment of pre-Socratic thought." (p. 165)

"In this chapter, I will focus on the Parmenides translation which he presented during the second semester of the lecture course "Was heißt Denken?," Heidegger's last series of lectures as a regular professor

at the University of Freiburg. Fragment VI is introduced in the transition (*Stundenübergang*) between Session Five and Session Six of the Spring 1952 semester when Heidegger begins the translation itself. He devotes the last six hours of the course to the task. The background of the translation is the presiding question: What is it that we call thinking?" (p. 166, notes omitted)

16. Guetter, David Lloyd. 2011. "« Opposition » in Parmenides B12.5." *Euphrosyne* no. 39:227-246.

Abstract: "This paper argues that Parmenides distinguished between the kinds of opposition signaled by *anti-* and *enanti-*, then chose the latter deliberately to make a point about the ambivalence, perhaps even perversity, deeply characteristic of human existence. This ambivalence is reflected intra-personally (reason and passion), inter-personally (male and female), and even theologically (the goddess of Truth and the god of Love), suggesting that human Love untethered from Truth constitutes human cruelty. If so, it is little wonder that as far as our records go he refused to propagate it any further himself."

17. Guthrie, William Keith Chambers. 1965. *A History of Greek Philosophy. Vol. II: The Presocratic Tradition from Parmenides to Democritus*. Cambridge: Cambridge University Press.

See the First Chapter: *The Eleatics. Parmenides* - pp. 1-79.

"Presocratic philosophy is divided into two halves by the name of Parmenides. His exceptional powers of reasoning brought speculation about the origin and constitution of the universe to a halt, and caused it to make a fresh start on different lines. Consequently his chronological position relative to other early philosophers is comparatively easy to determine. Whether or not he directly attacked Heraclitus, (1) had Heraclitus known of Parmenides it is incredible that he would not have denounced him along with Xenophanes and others. Even if ignorance of an Elean on the part of an Ephesian is no sure evidence of date, philosophically Heraclitus must be regarded as pre-Parmenidean, whereas Empedocles, Anaxagoras, Leucippus and Democritus are equally certainly post-Parmenidean." (p. 1)

(1) See vol. 1, 408 n. 2 and pp. 23 ff., 32 below.

"The poem of Parmenides raises peculiar problems, and it will be as well to approach the text with the chief of these already in mind. In the prologue he receives from a goddess the promise that she will reveal to him two sorts of information: first the truth about reality, then the opinions of mortals, which are unambiguously said to be false. 'Nevertheless these too shall thou learn' (fr. 1.31). In conformity with this, the first part of the poem deduces the nature of reality from premises asserted to be wholly true, and leads among other things to the conclusion that the world as perceived by the senses is unreal. At this point (fr. 8.50) the goddess solemnly declares that she ceases to speak the truth, and the remainder of the instruction will be 'deceitful'; yet she will impart it all 'that no judgment of men may outstrip thee'. Then follows the second part of the poem consisting of a cosmology on traditional lines. Starting from the assumption of a pair of opposites, 'fire' and 'night' or light and darkness, it proceeds as a narrative of an evolutionary process in time. The 'true way', on the other hand, had asserted that reality was, and must be, a unity in the strictest sense and that any change in it was impossible: there is no before or after, and the exposition unfolds as a timeless series of logical deductions.

Here is the crux. Why should Parmenides take the trouble to narrate a detailed cosmogony when he has already proved that opposites cannot exist and there can be no cosmogony because plurality and change are inadmissible conceptions? Has it in his eyes no merit or validity whatsoever, so that his purpose in composing it is only to show it up, together with all such attempts at cosmogony, for the hollow shams that they are? If so, the further question arises: what is it? Some have thought it to be based on a particular cosmic system of which he disapproved, for instance that of Heraclitus or the Pythagoreans. Others have suggested, following up the goddess's own words about the 'opinions of mortals' in general, that it is partly or wholly intended as a synthesis of what the ordinary man believed about the world; others again that it is an original production, indeed the best that Parmenides could devise, but still intended to show that even the most plausible account of the origin and nature of the sensible world is utterly false. These critics point to the motive expressed by the goddess, 'that no judgment of mortals may outstrip (or get the better of) thee'.

An alternative is to suppose that Parmenides is doing his best for the sensible world, perhaps on practical grounds, by giving as coherent an account of it as he can, saying in effect: I have told you the truth, so that if I go on to speak about the world in which we apparently live you will know it is unreal and not be taken in. But after all, this is how it does appear to us; however misleading our senses may be, we must eat and drink and talk, avoid putting our hand in the fire or falling over a precipice, live in short as if their information were genuine. Being ourselves mortals we must come to terms with this deceitful show, and I can at least help you to understand it better than other people.

These are the most baffling problems which Parmenides presents: the nature of the 'Way of Seeming' and the relation between it and the 'Way of Truth'. Yet the essence of his remarkable achievement lies, as might be expected, within the Way of Truth itself. " (pp. 4-6)

18. Hankinson, R. Jim. 2002. "Parmenides and the Metaphysics of Changelessness." In *Presocratic Philosophy: Essays in Honour*

of Alexander Mourelatos, edited by Caston, Victor and Graham, Daniel W., 65-80. Aldershot: Ashgate.

"Conclusions.

Parmenides seeks to demonstrate the impossibility of generation (and hence change) dilemmatically: on the one hand the notion of caused generation turns out to be incoherent, while the supposition of uncaused generation, on the other, makes it inexplicable. Neither arm of the dilemma is successful. One cannot simply invoke PSR [Principle of Sufficient Reason] in order to rule out uncaused change, since PSR is at best an empirical hypothesis and not some Leibnizian *a priori* law of thought; (53) and a suitably sophisticated analysis of the logical form of change, one which recognizes the ambiguity of 'from' in propositions such as 'x comes to be from y,' will dispose of Parmenides' bomb. But it needed an Aristotle to disarm it.

The basic principle involved, namely:

P1 Nothing comes to be from nothing,

is not original to Parmenides (it first occurs in a fragment of the sixth-century lyric poet Alcaeus, although we do not know in what context; (54) its early history has been ably traced by Alex Mourelatos (55) but its use in destructive argument certainly is. P1 is ambiguous between the causal principle

P1a Nothing comes to be causelessly,

and the conservation principle

P1b Nothing comes to be except from pre-existing matter;

and that ambiguity is not always patent. Indeed, distinguishing (P1a) from (P1b) is the first step towards solving the Eleatic puzzle, as Aristotle (certainly: *Ph. I.7*, 190a14-31; cf. *Metaph. V.24*; *GA 1.18*, 724a20-34) and Plato (possibly: *Phd.* 103b) realized. Moreover, as Hume was to show, neither version can be accepted as an *a priori* truth: both the causal principle and the conservation principle (at any rate crudely interpreted as asserting the conservation of matter) are rejected by the standard interpretation of quantum physics; and whatever else

may be true of quantum physics, it is not logically incoherent." (p. 80)

(55) Mourelatos, 1981.

19. Havelock, Eric A. 1958. "Parmenides and Odysseus." *Harvard Studies in Classical Philology* no. 63:133-143.

"It is commonly supposed that Parmenides' statement of his philosophical principles is preceded by a "proem" of an allegorical nature (the precise symbolism of the allegory being in dispute) which describes the philosopher's inspired journey from darkness to light.

(...)

The first question to ask is whether it is proper to identify such a "proem" at all, as a separate entity in the poem. Would the author himself have recognized it as such?

(...)

If, however, the motive in Sextus for first identifying and then explaining this allegory in Parmenides was itself unhistorical, modern criticism has two resources with which to correct him. It can supply a better interpretation of the "proem"; or it can conclude that the original identification of the "proem" as such was a mistake. It is in part to this more radical view that the present article addresses itself." (p. 133)

(...)

"The foreground of Parmenides' imagination is occupied by Circe on Aea and the nymphs on Thrinacia all of them daughters of the sun. The latter he has converted from herdsmen into outriders, perhaps assisted therein by the common image of the sun's chariot. Both Teiresias and Circe

forewarned him concerning Thrinacia, the sun's island. But Circe's warning held also a hint of promise: "You will come to the isle Thrinacia where feed many herds of the sun; and there is no birth of them nor do they pass away. Their herdsmen are nymphs . . . daughters of the sun."(56) In short, the island is involved with some implication of immortality; it holds a mystery which can be approached but not violated. The centrality of this episode in the memory of the philosopher and his audience was guaranteed by the fact that Homer had selected it from among all others for dramatization in the preface(57) to his epic as central to Odysseus' experience in the *nostos*. So Parmenides remembered how on that island coming to be and perishing had been banished. This provided his climatic poetic excuse for linking the daughters of the sun with the marvels of a mental journey which had taken the traveller into an absolute, where there is no coming to be and no passing away.(58) For the philosopher, this was where the *nostos* ended. The journey of his mind and thought had reached the mansions of home.(59)" (p. 140)

(56) *Od.* 12. 130.

(57) *Od.* 1. 7-9.

(58) *Frag.* 8. 21.

(59) The Odysseus theme may persist even into the "second part" of Parmenides' poem. The Homeric hero, so Circe had told him, while his ship "bypassed" the Sirens, was to be allowed the pleasure of hearing their song (*Od.* 12. 47 and 52; cf. also 10. 109). When they sing, they admonish him that to "bypass" without listening is impossible and that to listen is to learn of all things that happened at Troy and of "all that is born on the earth" (12. 186-190). So Odysseus listens, while the ship "bypasses" them (12. 197).

Correspondingly, Parmenides comes to the end of his "reliable discourse and thought" (*Frag.* 8, line 50, equivalent to the "true" directives of Teiresias and Circe) and then allows his listener to hear a "deceitful composition of my epic tale" (*Frag.*

8, line 52), a story of how all things "are born and end" (*Frag.* 19).

This story is told so that his audience may not be "bypassed" by any mortal type of intelligence (*Frag.* 8, sub fin.). Is the verb *παρέλασση* which he here uses a reminiscence of the corresponding verb which Homer had used four times? If so, the philosopher's poetic memory has transposed it in application.

20. Heidegger, Martin. 1975. "'Moira' (Parmenides, fr. 8,34-41)." In *Early Greek Thinking*, edited by Krell, David Farrell and Capuzzi, Frank A., 79-101. New York: Harper & Row.

"The topic under discussion is the relation between thinking and Being. In the first place we ought to observe that the text (VIII, 34-41) which ponders this relation more thoroughly speaks of *eon* and not -- as in Fragment III -- about *einai*. Immediately, and with some justification, one concludes from this that Fragment VIII concerns beings rather than Being. But in saying *eon* Parmenides is in no way thinking "beings in themselves," understood as the whole to which thinking, insofar as it is some kind of entity, also belongs. Just as little does *eon* mean *einai* in the sense of "Being for itself," as though it were incumbent upon the thinker to set the non sensible essential nature of Being apart from, and in opposition to, beings which are sensible. Rather *eon*, being, is thought here in its duality as Being and beings, and is participially expressed -- although the grammatical concept has not yet come explicitly into the grasp of linguistic science. This duality is at least intimated by such nuances of phrasing as "the Being of beings" and "beings in Being." In its essence, however, what unfolds is obscured more than clarified through the "in" and the "of " These expressions are far from thinking the duality as such, or from seriously questioning its unfolding.

"Being itself," so frequently invoked, is held to be true so long as it is experienced as Being, consistently understood as the Being of beings. Meanwhile the beginning of Western thinking was fated to catch an appropriate glimpse of what the word *einai*, to be, says -- in *Physis, Logos, En*. Since the gathering

that reigns within Being unites all beings, an inevitable and continually more stubborn semblance arises from the contemplation of this gathering, namely, the illusion that Being (of beings) is not only identical with the totality of beings, but that, as identical, it is at the same time that which unifies and is even most in being [*das Seiendste*]. For representational thinking everything comes to be a being.

The duality of Being and beings, as something twofold, seems to melt away into nonexistence, albeit thinking, from its Greek beginnings onward, has moved within the unfolding of this duality, though without considering its situation or at all taking note of the unfolding of the twofold. What takes place at the beginning of Western thought is the unobserved decline of the duality. But this decline is not nothing. Indeed it imparts to Greek thinking the character of a beginning, in that the lighting of the Being of beings, as a lighting, is concealed. The hiddenness of this decline of the duality reigns in essentially the same way as that into which the duality itself falls. Into what does it fall? Into oblivion, whose lasting dominance conceals itself as *Lethe* to which *Aletheia* belongs so immediately that the former can withdraw in its favor and can relinquish to it pure disclosure in the modes of *Physis*, *Logos*, and *En* as though this had no need of concealment.

But the apparently futile lighting is riddled with darkness. In it the unfolding of the twofold remains as concealed as its decline for beginning thought. However, we must be alert to the duality of Being and beings in the *eon* in order to follow the discussion Parmenides devotes to the relation between thinking and Being." (pp. 86-87)

21. ———. 1992. *Parmenides (Lecture course 1942-43)*. Bloomington: Indiana University Press.

Gesamtausgabe Vol. 54. Lecture course from the winter semester 1942-43, first published in 1982; translated by André Schuwer and Richard Rojcewicz.

"We are attempting to follow the path of thought of two thinkers, Parmenides and Heraclitus. Both belong, historiographically calculated, to the early period of Western

thought. With regard to this early thinking in the Occident, among the Greeks, we are distinguishing between *outset* and *beginning*. Outset refers to the coming forth of this thinking at a definite "time." Thinking does not mean here the course of psychologically represented acts of thought but the historical process in which a thinker arises, says his word, and so provides to truth a place within a historical humanity. As for time, it signifies here less the point of time calculated according to year and day than it means "age," the situation of human things and man's dwelling place therein. "Outset" has to do with the debut and the emergence of thinking. But we are using "beginning" in a quite different sense. The "beginning" is what, in his early thinking, is to be thought and what is thought. Here we are still leaving unclarified the essence of this thought. But supposing that the thinking of a thinker is distinct from the knowledge of the "sciences" and from every kind of practical cognition in all respects, shall we have to say that the relation of thinking to its thought is essentially other than the relation of ordinary "technical-practical" and "moral-practical" thinking to what it thinks.

Ordinary thinking, whether scientific or prescientific or unscientific, thinks beings, and does so in every case according to their individual regions, separate strata, and circumscribed aspects. This thinking is an acquaintance with beings, a knowledge that masters and dominates beings in various ways. In distinction from the mastering of beings, the thinking of thinkers is the *thinking of Being*. Their thinking is a *retreating in face of Being*. We name what is thought in the thinking of the thinkers the beginning. Which hence now means: Being is the beginning. Nevertheless, not every thinker, who has to think Being, thinks the beginning. Not every thinker, not even every one at the outset of Western thought, is a primordial thinker, i.e., a thinker who expressly thinks the beginning.

Anaximander, Parmenides, and Heraclitus are the only primordial thinkers. They are this, however, not because they open up Western thought and initiate it. Already before them there were thinkers. They are primordial thinkers because they think the beginning. The beginning is what is thought in their

thinking. This sounds as if "the beginning" were something like an "object" the thinkers take up for themselves in order to think it through. But we have already said in general about the thinking of thinkers that it is a retreating in face of Being. If, within truly thoughtful thinking, the primordial thinking is the highest one, then there must occur here a retreating of a special kind. For these thinkers do not "take up" the beginning in the way a scientist "attacks" something. Neither do these thinkers come up with the beginning as a self-produced construction of thought. The beginning is not something dependent on the favor of these thinkers, where they are active in such and such a way, but, rather, the reverse: the beginning is that which begins something with these thinkers -- by laying a claim on them in such a way that from them is demanded an extreme retreating in the face of Being. The thinkers are begun by the beginning, "in-cepted" [*An-gefangenen*] by the in-ception [*An-fang*]; they are taken up by it and are gathered into it.

It is already a wrong-headed idea that leads us to speak of the "work" of these thinkers. But if for the moment, and for the lack of a better expression, we do talk that way, then we must note that their "work," even if it had been preserved for us intact, would be quite small in "bulk" compared with the "work" of Plato or Aristotle and especially in comparison with the "work" of a modern thinker. Plato and Aristotle and subsequent thinkers have thought far "more," have traversed more regions and strata of thinking, and have questioned out of a richer knowledge of things and man. And yet all these thinkers think "less" than the primordial thinkers." (pp. 7-8)

22. ———. 1999. "The Last, Undelivered Lecture (XII) from Summer Semester 1952." In *The Presocratics after Heidegger*, edited by Jacobs, David C., 171-184. Albany: State University of New York Press.

"Translator's Introduction

The following text presents for the first time a translation of the final lecture prepared by Heidegger for the second part of his 1951-1952 course *Was heisst Denken? (What is Called Thinking?)*. Although included in the original handwritten

manuscript, this lecture was not delivered as part of the course, apparently because there was insufficient time at the end of the summer semester. The published version of the course likewise omits the final lecture. Heidegger did, however, read the text of lecture XII as part of a subsequent "Colloquium on Dialectic," which took place in Muggenbrunn on 15 September 1952. Both the protocol of the "Colloquium" and the lecture are published in *Hegel-Studien*, Band 25 (Bonn: Bouvier Verlag, 1990). The text of the lecture is significant not only because it belongs to the original manuscript of *Was heisst Denken?*, but also because it represents an early version of the essay that appeared in revised form under the title "Moira" in *Vorträge und Aufsätze*.

In preparing this translation I have had reference to the translation of "Moira," by Frank A. Capuzzi, which appears in *Early Greek Thinking* (New York: Harper Collins, 1984). The English reader should note that the German text—in particular the introduction—has a somewhat stilted style, and that this is reflected in the translation. The numbers in square brackets indicate the original manuscript pagination, and facilitate cross-reference to the German text.

Will McNeill"

23. ——. 2003. "Seminar in Zähringen 1973." In *Four Seminars*, 64-84. Bloomington: Indiana University Press.

"In the silence that follows, Jean Beaufret notes: The text we just heard completes, as it were, the long meditation in which you have turned first towards Parmenides and then Heraclitus. One could even say that your thinking has engaged differently with Heraclitus and Parmenides. Indeed, in *Vorträge und Aufsätze*, the primacy seemed to be given to Heraclitus. Today what place would Heraclitus take with respect to Parmenides?

Heidegger: From a mere historical perspective, Heraclitus signified the first step towards dialectic. From this perspective, then, Parmenides is more profound and essential (if it is the case that dialectic, as is said in *Being and Time*, is "a genuine philosophic embarrassment") In this regard, we must

thoroughly recognize that tautology is the only possibility for thinking what dialectic can only veil.

However, if one is able to read Heraclitus on the basis of the Parmenidean tautology, he himself then appears in the closest vicinity to that same tautology, he himself then appears in the course of an exclusive approach presenting access to being." (p. 81)

24. ———. 2015. *The Beginning of Western Philosophy: Interpretation of Anaximander and Parmenides*. Bloomington: Indiana University Press.

Translated by Richard Rojcewicz; this is a translation of a lecture course Martin Heidegger offered in the summer semester of 1932 at the University of Freiburg. The German original appeared posthumously in 2012 as volume 35 of the philosopher's *Gesamtausgabe* ("Complete Works").

Contents: Part One: The dictum of Anaximander of Miletus, 6th–5th century 1-26; Part Two: Interposed considerations 27-77; Part Three: The "didactic poem" of Parmenides of Elea, 6th–5th century 79; §18. Introduction 79; §19. Interpretation of fragment 1. Preparation for the question of Being 81; §20. Interpretation of fragments 4 and 5 86; §21. Interpretation of fragments 6 and 7 92; §22. Interpretation of fragment 8 103; §23. The δόξα-fragments 9, 12, 13, 10, 11, 14, 16, 19 (in the order of their interpretation) 144< Conclusion. §24. The inceptual question of Being; the law of philosophy 152.

"We will start at once with the interpretation of Parmenides's didactic poem. What the previous endeavors at interpreting Parmenides have accomplished will be mentioned when discussing the respective issues. For the rest, however, those works will not be presented in more detail. Not because they are insignificant but because they are so unavoidable that one cannot speak about them at first. Our concern is primarily with securing a philosophical understanding of the beginning of Western philosophy and only secondarily with initiating ourselves into the procedure of appropriating an earlier philosophy, i.e., into the method of interpretation.

With respect to all previous interpretive attempts, even Hegel's, it should be said that they made their work philosophically too easy, in part by invoking as a highest explanatory principle the view that the beginning is precisely the primitive and therefore is crude and raw—the illusion of progress! (In this regard, nothing further to say about the previous attempts.)

The interpretation of Parmenides is closely coupled to the question of his relation to Heraclitus, who presupposed Parmenides and contests against him. The notion that in essentials they are in the sharpest opposition is thereby presupposed as valid. In the end, however, this presupposition is precisely an error. In the end, Parmenides and Heraclitus are in the utmost agreement—as are all actual philosophers—not because they renounce battling, but precisely on account of their own respective ultimate originality.

For nonphilosophers, who adhere only to works, opinions, schools, names, and claims, the history of philosophy and of philosophers does of course present the appearance of a madhouse. But that can quietly remain as it is." (p. 77)

25. Heller, Agnes. 1997. "Parmenides and the Battle of Stalingrad." *Graduate Faculty Philosophy Journal* no. 19:247-262.

Abstract: "For the winter semester of 1942-1943, Heidegger announced a lecture course at the University of Freiburg on Parmenides and Heraclitus. In Heidegger's collected works, volume 54, the lecture course was published under the title *Parmenides*, since Heidegger never actually discussed Heraclitus in the course. I may add that he barely discussed Parmenides either. The lecture course proceeds in circles. The lecturer seems to introduce new themes again and again, quickly digressing from each, only to return to some, but not all, of them. Allow me to list the main themes in order of their appearance in the lecture notes: ordinary thinking, *aletheia*, goddess, translation, conflict, the Greek word *pseudos* and its translations, how the Romans mistranslated the Greeks, the Greek word *methodos* and its misunderstanding, *lethe*, the translation of *zoon logon ekhon*, the word, *pragma*, *techne*, *physis* and how it is not *natura*, unconcealing and concealing,

the history of being, the *polis*, the *daimon*, the essence of the Greek gods, *politeia*, *adike*, what philosophy is, to think on something or about something, metaphysics, the subject/object relation, I-ness, egoism, metaphysics as the essence of technology, to think being, the essence of truth, the fate of the Occident, to rethink ordinary thinking, the foundation/less and so on. As one can see from this brief, and by no means full enumeration, Heidegger's lecture course on Parmenides contains a small encyclopedia of the so called "basic words" of his philosophical turn. There is nothing in his famous *Letter on Humanism* that was not already present during the *Parmenides* course in the winter semester of 1942-1943."

26. Helmig, Christoph. 2022. "Interpreting Parmenides of Elea in Antiquity: From Plato's *Parmenides* to Simplicius' *Commentary on Aristotle's Physics*." In *Received Opinions: Doxography in Antiquity and the Islamic World*, edited by Lammer, Andreas and Jas, Mareike, 175-206. Leiden: Brill.

"In Antiquity, the reception of Parmenides starts with Plato's Eleatic dialogues, especially with the *Parmenides* and the *Sophist*, and concludes almost 900 years later with Simplicius' *Commentary on the Physics* and, to a lesser extent, his *Commentary on the De Caelo*. It is well known that the Neoplatonist played an eminent role in the transmission of Presocratic philosophy. Leonardo Tarán estimated that "in the case of the Presocratics Simplicius alone has preserved at least two thirds of all the verbatim quotations." (p. 176)

(...)

"Because of its eminent role in the transmission and interpretation of Parmenides, it is worthwhile looking a bit closer at how Simplicius dealt with the material he quotes from the poem. Since our volume has a special focus on doxography, I shall, in what follows, try to situate Simplicius in the broader doxographical context of Parmenides' philosophy and raise the question as to how the Parmenidean doxographical tradition can best be characterised and delineated. What is the role of Simplicius within the doxographical tradition of Parmenides

and how can he be characterised compared to his predecessors (esp. Plato and the Platonic tradition after him)?" (p. 178)

"What is the Poem about? As I have indicated—and contrary to out-of-date interpretations and the cursory definitions which typify the average works of reference—the Poem is not about the universe, existence, or the oneness-of-it-all. All of these rather lofty objectives are later inventions, even if they have been repeated ad nauseam for the last 2,500 years. Yet the verses themselves bear no evidence that such matters belong to Parmenides' actual concerns. They show, rather, that Parmenides' inquiries were

less esoteric, without being less exciting, considering their fundamental ramifications for the integrity of human knowledge and communication, which indeed may also *include* our *knowledge* of the universe, existence, and so forth, and the mode we choose to explain them. Thus Parmenides focused on reasoning and speaking, and how to make both dependable, regardless of what in the end their object may be (as long as it is an expressible object). I like A. A. Long's comment on this

issue: “What Parmenides says is a continuous provocation to our own thinking about thinking.”(450)

There is a fine but very crucial difference to be made between the advancement of a cosmological theory and the demonstration of techniques of how to make an account reliable. Naturally, such an account may also be used to express a variety of things, including the universe and everything in it, but it is only reliable when such matters are addressed in their capacity as objects of thought (see frs. 4 and 7.3–6), and in a form that does not lead to self-contradiction (see fr. 8). In a nutshell, Parmenides' central problem was *how to ensure the reliability of discourse*. Statements had to be defended against self-contradiction as well as against the misleading plausibility of vagueness—regardless, ultimately, of what said statements were about. For both of these vulnerabilities, Parmenides introduces examples and methods to extricate the truth." (pp. 151-152)

(450) Long ['Parmenides on Thinking Being'] expands on Heidegger's remark about Parmenides' Poem that it “continually deserves more thought.” p. 127.

28. ———. 2008. "Negative Proof and Circular Reasoning." In *Eleatica 2006: Parmenide scienziato?*, edited by Rossetti, Livio and Marcacci, Flavia, 103-112. Sankt Augustin: Academia Verlag.

"In Cordero's work *By Being It Is*, chapter VI, p. 123, parallels are drawn between Parmenides' Poem and Plato's *Parmenides*. Cordero focuses on the use of 'I begin' [*arxomai*] by the Eleatic thinker - found in B5 and also B8, when the Goddess announces a new beginning before commencing with the Doxa (8.50) - comparing it to how the argumentative exercises are introduced in the second part of the *Parmenides* (137a-b). Plato, in this latter work, is having his own Parmenides - the dialogues' protagonist - also state that he will 'begin' the demonstration that will follow, the one that addresses his hypothesis 'that one is'. Cordero speculates that this allusion is not coincidental in Plato, suggesting that Plato was not only aware of the Parmenidean principle of circularity in

argumentative proving, but that he used it deliberately in the *Parmenides*.

While working on the *Parmenides*, particularly on its translation, I had come to similar conclusions. The idea of returning to one's initial premise by way of a challenge or test is at the heart of the Parmenidean method, an approach also used exhaustively by Plato in his Parmenidean dialogue. However, in Cordero's presentation of this approach, one particular point has remained somewhat unclear or unaddressed, namely whether the circulatory proving has to be taken as germane to the whole account, or only to specific parts. That is, must the whole account of the Goddess return to its beginning, or is this only required of the individual arguments that compose it? Personally, I hold the latter view, as this can be fairly easily demonstrated both by the Poem and the Platonic dialogue." (p. 103)

29. ———. 2009. "Parmenides versus Heraclitus?" In *Nuevos Ensayos sobre Heráclito. Actas del Segundo Symposium Heracliteum*, edited by Hülz Piccone, Enrique, 261-284. México: U.N.A.M.

"Five years ago, at the annual Arizona Colloquium in Ancient Philosophy, Daniel Graham gave a first draft of a paper titled 'Heraclitus and Parmenides.' He was investigating the possibility of a Parmenidean response to the Ephesian, and he defended the idea quite vigorously.

Graham's paper was a response to Michael Stokes, who, years ago, in his work *One and Many in Presocratic Philosophy*, had debunked this theory rather convincingly. I, of course, was very much in Stokes' camp, and as an avid and sometimes excessive student of Parmenides, had strong reservations. But Graham, very graciously, entrusted me with a copy of this early draft. Years passed and although I investigated other things, Graham's paper, and in a way his challenge, was always at the back of my mind. So it is only fitting that now, after all these years, I've thought to complete the circle, in a truly Parmenidean fashion, and devote this paper to Graham's observations.

A few brief remarks about Daniel Graham's study: the paper has remained the last word on the subject of a Parmenidean response. The work is well-researched and detailed, each argument meticulously worked out; particularly the final or published version which has some substantial improvements on the original draft.(1) Graham has dug up parallels between Parmenides and Heraclitus that, to my knowledge, have remained largely unnoticed, and I have benefited greatly from this thoughtful study. All in all, Daniel has offered us an excellent defense of the "Parmenides answers to Heraclitus" theory (subsequently acronymed to "PATH theory"). Nevertheless, I have remained unconvinced.

To establish a link between the two thinkers, certain criteria have to be met:

1. The question of chronology.
2. The textual correspondence, parallels or similarities of both works.
3. The question of an equivalent subject-matter: is there a shared object of inquiry or discourse in the teachings of both thinkers?
4. The testimonia of subsequent commentators, their criticisms, interpretations of teachings, and general opinions on Heraclitus and Parmenides.
5. And finally, if the chronological question cannot be resolved, and if no thinker mentions the other by name, and if the testimonia let us down, but if nonetheless textual agreement or parallels can be found, we must find some other means of determining who influenced whom. Perhaps, in this case, we should also consider the possibility that neither thinker influenced the other, but that they both were responding to a third party. My modest survey indicates that this may indeed be the case, a possibility that took me quite by surprise, considering that in the beginning I was aiming to show that Parmenides was an entirely original thinker, and if in fact he answered to anyone, then only to

Xenophanes' epistemological challenge (B 34), (but certainly not to his theology).(2)" (pp. 261-262)

(1) Graham, "Heraclitus and Parmenides", *Presocratic Philosophy*. Ed. Caston and Graham, Ashgate, 27–44.

(2) I am aware of the Homeric, Hesiodic and Orphic echoes in the Proem, but I don't consider this a response in the same vein as Parmenides is said to have answered to Heraclitus. It is rather a utilization of familiar or popular themes, which allowed him to evoke a mythical atmosphere.

30. ———. 2011. "Parricide or Heir? Plato's Uncertain Relationship to Parmenides." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 147-165. Las Vegas: Parmenides Publishing.

Summary: "Most scholars view Plato's critique of Parmenides in the *Sophist*, particularly the observations surrounding the "parricide" remark, as quite apt and justified. The theory is that Parmenides deserves to be rebuked for failing to recognize that "What Is Not" can be understood in more ways than one, namely, not only in an existential sense, but also predicatively or, in the language of the *Sophist*, as indicating "difference." I aim to show, nevertheless, that Plato's indictment of Parmenides misses the mark in significant ways, allowing Parmenides to escape the so-called threat of parricide not once but twice.

For example, Parmenides' abundant use of alpha-privatives (e.g., ἀγένητον)—as well as the negative οὐ (or οὐκ) when there is no a-privative form available—indicates that he was well aware of the difference between indicating "is not" predicatively versus existentially. Moreover, the Poem nowhere suggests that his strictures regarding the use of What Is Not are to be taken in the broadest possible sense, disallowing, in effect, the discrimination between the existential and the predicative case. Only when sought after as a "way of inquiry" does What Is Not—in contrast to the Way of What Is—fail to provide us with a graspable, expressible object. After all, the "Way of What Is Not," lacks any sort of *sēmata*, or signs, that can be used to navigate it. As a "way of inquiry for thinking" (B2), it leads

nowhere, lacking any sort of expressible or knowable object or goal. The complete absence of an object or result, however, does not hinder us from making statements to this effect, nor from uttering the words "What Is Not" or "Not Being." Yet this fine distinction is lost to many who have criticized Parmenides for being inconsistent, careless, or simply ignorant. The move from the intellectual unavailability of an object that marks a defunct way of inquiry, to the claim that to even speak of such a "way" is both illegitimate and impossible—all the while insisting that Parmenides himself is to be blamed for such a monstrous fallacy—seems an egregious gloss-over, even if the perpetrator is someone of Plato's stature. If my arguments prove sound, then Parmenides should be absolved of the charges leveled against him."

31. Hershbell, Jackson P. 1970. "Parmenides' Way of Truth and B16." *Apeiron. A Journal for Ancient Philosophy and Science* no. 4:1-23.

Reprinted in: J. P. Anton, A. Preus (eds.), *Essays in Ancient Greek Philosophy*. Vol. Two, Albany: State University of New York Press, 1983, pp. 41-58.

"At least three interpretations have been given to B16 of Parmenides' poem. It has been taken for a fragment of his theory of knowledge, of his doctrine of sense perception, and of his views on sensing and knowing.(1) Evidence for these interpretations is taken from Aristotle's *Metaphysics* and Theophrastus' *De Sensibus*. The fragment is usually assigned to the second part of the poem, the Way of Seeming or Opinion.

In this study it will be argued that B16 comes from the first part of the poem, the Way of Truth, and that it is a statement neither of a theory of knowledge nor of sense perception, but an affirmation of the close relationship between thought and Being:(2) there can be no thought without that which is, or in Parmenides' words, ". . . neither can you recognize that which is not (that is impossible) nor can you speak about it" (B2, 78). (3)" (p. 1)

(1) According to Burnet, "this fragment of the theory of knowledge which was expounded in the second part of the

poem of Parmenides must be taken in connection with what we are told by Theophrastus in the *'Fragment on Sensation.'* " J. Burnet, *Early Greek Philosophy* (reprint, New York, 1957) p. 178, note 1. Many interpreters of Parmenides' poem follow Burnet in assigning B16 to the second part. See also W. K. C. Guthrie, *A History of Greek Philosophy*, vol. 2 (Cambridge, 1965), p. 67; L. Tarán, *Parmenides* (Princeton, 1965), pp. 253-63; J. Mansfeld, *Die Offenbarung des Parmenides und die menschliche Welt* (Assen, 1964), p. 175 ff.; and U. Hölscher, *Anfängliches Fragen* (Göttingen, 1968), p. 112 f.; G. Vlastos, "Parmenides" Theory of Knowledge," *Transactions of the American Philological Association* 77 (1949): 66-77, argued that B 16 is part of Parmenides' doctrine of sense perception, not of his theory of knowledge.

Finally, an interpretation of this fragment as Parmenides' views on sensing and knowing has been offered by H. Fränkel, "Parmenidesstudien," *Göttinger Nachrichten* (1930): 153-92, especially 170 and 174. See also H. Fränkel, *Wege und Formen frühgriechischen Denkens* (Munich, 1955): 173-79.

In *Anfängliches Fragen*, Hölscher also maintains (p. 113) that Parmenides' teaching in B16 concerns ". . . Erkenntnis im allgemeinsten Sinne . . . , ohne zwischen Wahrnehmung und Denken, zwischen Trug und Wahrheit zu unterscheiden."

(2) This thesis is not wholly new. It is proposed, for example, by J. H. M. Loenen in *Parmenides, Melissus, Gorgias* (Assen, 1959). He writes (p. 58): "As to the place of fr. 16 we can by no means be sure that this really formed part of the doxa. On the contrary, there are good reasons for holding that fr. 16 belonged to the first part." My reasons for assigning B16 to the first part are, however, different. Moreover, we do not agree concerning particular details or the interpretation of Parmenides' poem as a whole.

(3) The expressions "that which is," "Being," and "existence" are used interchangeably in this study without any attempt to give them a more precise meaning. "That which is" is a translation of the substantive participle used occasionally in the fragments, e.g., B4, 2 and B8, 35. The most convincing

interpretation of Parmenides' thought is that of G. E. L. Owen, "Eleatic Questions," *CQ* 54 (1960): 84-102.

According to him, the subject of Parmenides' poem is "what can be talked or thought about" (pp. 94-95).

I have accepted Owen's general interpretation for the purpose of this study.

32. ———. 1972. "Plutarch and Parmenides." *Greek, Roman and Byzantine Studies* no. 13:193-208.

"Although Plutarch is not a major source for interpretation of Parmenides' poem, he preserves several fragments: B1.29-30; B8.4; B13, B14 and B15, the last two of which would otherwise be lost.(1) He also makes observations on Parmenides' style and thought, and relates one biographical incident.(2) Scholars of Plutarch and Parmenides are divided, however, on at least two problems: (I) What was the extent of Plutarch's knowledge of Parmenides, e.g. did he possess a copy of the complete poem, or was he working with second-hand sources such as compendia?(3) (II) How reliable and worthwhile is his interpretation of Parmenides?" (p. 193)

(...)

"A summation of Plutarch's treatment of Parmenides is now in order. First, Plutarch shows interest in Parmenides' biography, relating one incident possibly derived from Speusippus' Περὶ φιλοσόφων.

Secondly, he shows interest in Parmenides' poem, and his observations are probably based on first-hand acquaintance with it. This seems especially so since Parmenides is mentioned with other ancient authors whom Plutarch knew well, and in his travels and study at some major cities of the ancient world, e.g. Athens, Plutarch could easily have had access to a copy of the poem. Further support for attributing to Plutarch direct knowledge of Parmenides' text is found in his discussion of B13 at *Amat.* 756E-F and his quotation of B14 and B15, not found in other sources. Thirdly, Plutarch seems familiar with both parts of Parmenides' poem. Although his discussion is Platonic in

emphasis, his interpretation is not wholly unwarranted by the evidence.

Parmenides does seem to have been the first thinker to make some kind of distinction between the 'sensible' and 'intelligible' worlds, even though the terminology is not his. At least the things perceived by mortals do not have the characteristics Parmenides ascribed to τὸ εὖν. Fourthly, there are no clear indications that Plutarch's quotations are inaccurate. Some difficulties, especially in connection with B8.4, can be explained by a copyist's carelessness or Plutarch's tendency to paraphrase Parmenides, possibly from memory. In any case, rather than positing a use of compendia by Plutarch (for which there is no evidence), it seems more plausible to maintain Plutarch's reliance on notebooks based on his direct acquaintance with the poem.

Last, and perhaps most important, it would be erroneous to presume that Plutarch's quotations from and references to Parmenides are wholly disinterested. Several are found in anti-Epicurean and anti-Stoic contexts, a phenomenon which suggests, if nothing more, that Plutarch considered Parmenides an ally of the Academy." (pp. 207-208)

(1) The list of quotations in W. C. Helmbold and E. N. O'Neil, *Plutarch's Quotations* (Baltimore 1959) 53-54, is incomplete: B1.29-30 at 1114D-E and B8.4 at 1114c are not included.

(2) The *Adv. Colot.* has extended discussion of Parmenides' philosophy, and the biographical note is at 1126B. Remarks on Parmenides' style are at *Quomodo adul.* 16c-D, *De rect. rat. aud.* 45A-B, and *De Pyth. or.* 402F.

(3) Discussing the doxography on the moon in *De fac. orb. lun.* 929A-F which includes Parmenides, A. Fairbanks wrote: "it is quite possible that Plutarch was using some Stoic compendium which quoted freely from the earlier philosophers." See "On Plutarch's Quotations from the Early Greek Philosophers," *TAPA* 28 (1897) 82.

33. ———. 1972-1973. "Parmenides and *outis* in *Odyssey* 9." *The Classical Journal* no. 68:178-180.

"At the end of his "Odyssey 9: symmetry and paradox in *outis*" (CJ [*Classical Journal*] 6 [1972] 22-25), M. Simpson draws attention (n. 10, 25) to the possible relevance of Parmenides' thought to the *outis* passage (*Od.* 9.366-460), remarking that "the paradox appears to contradict Parmenides' premise, 'That which is, is, that which is not, is not.' "

He also states that his note would be an "unnecessary digression if Eric A. Havelock, in 'Parmenides and Odysseus,' HSCP [*Harvard Studies in Classical Philology*] 63 (1958) 133-143, had not argued the importance of the *Odyssey* to Parmenides." Thus Simpson queries Havelock: "... what would Parmenides have made of the central episode in Odysseus' narration of his adventures, the one which at once reveals the hero at his most Odyssean, and contradicts the major premise of Parmenides' philosophy?"

My purpose is, not to reply on behalf of Havelock, but to argue: (a) that Simpson has probably misinterpreted Parmenides, and (b) that the Polyphemus episode does not appear to contradict Parmenides' philosophy; on the contrary, it may illustrate it.

In any case, nothing in the fragments of Parmenides' poem evokes or recalls this adventure of Odysseus, though Parmenides' familiarity with it need not be doubted!¹)" (p. 178)

(1) 1 Parmenides' poem clearly belongs in the epic tradition; there are also motifs common to it and the *Odyssey*, as well as many formulaic parallels noted by H. Diels in his *Die Fragmente der Vorsokratiker*⁸ I (Berlin 1956). See Havelock, "Parmenides and Odysseus," and A. Mourelatos, *The route of Parmenides* (New Haven 1970), p. 1-46, esp. 17-25.

34. Hintikka, Jaakko. 1980. "Parmenides' *Cogito* Argument." *Ancient Philosophy* no. 1:5-16.

"Parmenides held that the only thing we can truly say in philosophy is "is" or, in a more idiomatic but also more misleading English, "it is," *éstin*. Even though this main thesis of Parmenides turns out to have more consequences and more interesting consequences than it might at first seem to promise, our first reaction to it is likely to be one of puzzlement. How can

a major philosopher hold such an incredible, paradoxical view? The purpose of this paper is to make Parmenides' thesis understandable. I shall argue that, notwithstanding the paradoxical appearance of Parmenides' thesis, it is in reality an eminently natural consequence of certain assumptions which are all understandable and which can all be shown to have been actually subscribed to by Parmenides. Furthermore, Parmenides' assumptions are arguably not incorrect, either, with one exception. They are all of considerable historical and systematic interest."

(...)

"Parmenides' first and foremost assumption is easier to formulate in terms of conceptual models or paradigms than in the form of an explicit premise. This model amounts to conceiving of thinking as a goal-directed process that "comes off" or "realizes itself" in its objects.

I shall first show how this conceptual model explains Parmenides' conclusion, and only afterwards return to my grounds for ascribing it to Parmenides and also return to its background and its corollaries in his work." (p. 5)

36. Hoy, Ronald C. 1994. "Parmenides' Complete Rejection of Time." *Journal of Philosophy* no. 9:573-598.

"Parmenides is often credited with discovering the category of timeless truths, and he is sometimes praised or blamed (along with Plato) for asserting that what is real can transcend time.(1)

But besides positing a timeless reality for eternal truths to be about, Parmenides finds fault with beliefs about time and argues that time is not real: if temporal thoughts are inherently contradictory then reality cannot be temporal. In claiming time to be contradictory,

Parmenides stands first in a line of philosophers (including Plato, Kant, and J.M. McTaggart) who find something unreal

about time.

(...)

In this paper, I shall suggest it is wrong to interpret Parmenides' position as hinging mainly on semantic issues centered on reference.

I shall show how commentators who do so fail to do justice to his complaints about time. Instead, I shall reconstruct Parmenides' worries in terms of the recent conflict between "tensed" and "tenseless" views of time. From this perspective, Parmenides offers an early proscription on the contradictory beliefs that dog any metaphysics based on temporal becoming. It will also become clear how complete Parmenides' rejection of time was: why, for other reasons, he could not accept even the tenseless view, and why he should be suspicious of attempts to read him as discovering a new kind of "eternity." (pp. 573-574)

37. ———. 2013. "Heraclitus and Parmenides." In *A Companion to the Philosophy of Time*, edited by Dyke, Heather and Bardon, Adrian, 9-29. Malden: Wiley-Blackwell.

"Once upon a time, two giants of the ancient Greek world expressed contrary views of time – views so fundamental and provocative that they continue to resonate in contemporary debates about the nature of time. Neither Heraclitus nor Parmenides wrote explicit theories of time. Instead, they wrestled with a basic philosophical problem: do our ordinary, "common sense" beliefs accurately represent reality, or do they distort it for the convenience or flattery of mere mortals? Both rejected in harsh terms many common beliefs. Both put forward alternative radical metaphysical views. What makes their claims important for later students of time is that Heraclitus and Parmenides each fastened upon some problematic aspect of the temporality of the world, and they each made what bothered them central to their dramatic rejection of common beliefs. Importantly, they focused on

different features of the human experience of time as the source of metaphysical error. In their different ways, they articulated views of time so different and provocative that philosophers and scientists can find themselves still wrestling with the same issues, and, in effect, taking sides. Or so the story has been going for about 2500 years." (p. 9)

(...)

"Parmenides' rejection of time is complete. Using the admonitions of the goddess he can reject Heraclitus' flux – what is given in perception harbors contradictions. And the common mortal belief that there is a metaphysical distinction between past, present, and future – plus passage between them – is also exposed as two-headed and backward turning." (p. 21)

38. Hrachovec, Herbert. 2011. "... goaded perhaps by Parmenides" – Preliminaries to a Platonic Problem." *Coceptus* no. 40:53-69.

Summary: "Donald Davidson, in his *Truth and Predication*, suggests that Plato's concern with "gluing together" subject and predicate in assertive sentences might be traced back to Parmenides. Taking his lead this paper discusses the connection, proceeding in three steps.

A short overview of the literature on Parmenides' fragment B2 will be given and a Davidsonian move to reduce the complexity of the hermeneutical situation will be proposed. Secondly, given this reduction, a Parmenideian tableaux will be put forward and compared to our present understanding of elementary propositional and predicate logic. This will provide the basis for the concluding discussion of Plato's characteristic transformation of Parmenides' dictum into the bundle of arguments that give rise to the problem of the unity of propositions."

42. Hummel, Ralph P. . 2004. "A Once and Future Politics: Heidegger's Recovery of the Political in "Parmenides"." *Administrative Theory & Praxis* no. 26:279-303.

Abstract: "Can it be that the modern perspective on politics, policy-making, and administration is so inbred that we are disabled from envisioning alternatives? Martin Heidegger thought so. The present author attempts to give an initial insight into what may be the controversial German philosopher's hidden opus on "Politics" as it revives the relationship between the polis and truth."

The science of politics studies necessities; the philosophy of politics studies freedom." (p. 279)

(...)

"By looking at Greek politics, we are offered a way of looking at politics that transcends the bare ruined practices of our day. Because the Greeks were in the modern sense "unpolitical," Heidegger warns that "No modern concept of 'the political' reaches far enough for us to grasp the essence of the polis" (1982, p. 135; 1992, p. 91).(15) We can focus in two statements for a summary of his findings on the polis. These, however, are no more than an obligation to the permanent theme: The Greek polis is the place where what is, things and beings as they are (*Seiendes*), can be seen as emerging from the relation with

Being (*Sein*), as that which grounds existence, and human existence (*Dasein*). The two statements: "Polis is the polos, the pole, the place around which turns, in a peculiar way, all that appears as what exists for the Greeks" (1982, p. 132; 1992, p. 89). And:

The polis is the place of the essence of the historical human being, the where wherein the human being as *zoon logon echon* [the being that has the word(16)] belongs, the where from where only he is fitted with the fittingness into which he is fitted.(17) (1982, p. 141; 1992, p. 95" (p. 288)

(15) *Ibid.*, "Kein moderner Begriff 'des Politischen' reicht zu, um das Wesen der *polis* zu fassen." (Heidegger uses the Greek alphabet for *polis* and other terms to remind us that they must be thought not in modern but in Greek.)

(16) Heidegger, in this characterization of the living being that blossoms into itself through possession of the word, rejects later translations of *zoon* = animal. He argues this neglects the nature of living being as the blossoming and self-revealing associated with *physis*. He rejects as well *logos*= ratio; *zoon logon echon* = animal rationale. Similarly, *logon* = word only if seen from a peculiar Roman point of view (1982, p. 100 and pp. 103, 113, 115; 1992, p. 68 and pp. 69, 77, 78). For Heidegger's discussion of the unfolding of *physis*: his "Vom Wesen und Begriff der *physis* -- Aristoteles, Physik B, 1" in *Wegmarken*, 2nd edition (Frankfurt am Main: Vittorio Klostermann, 1978), pp. 237-299.

(17) " . . . *das Wo, von woher allein ihm zugefuegt wird der Fug, in den er gefuegt ist.*" Heidegger develops the concept here translated as fittingness, that which becomes or befits Man, in a German neologism "Fug" and out of the Greek *dike*, usually rendered as justice (1982 and 1992, C § 6 b).

43. Husain, Martha. 1983. "The Hybris of Parmenides." *Dialogue* no. 22:451-460.

"To speak of *hybris* in the case of Parmenides seems hardly justified. He is addressed by the unnamed goddess to whose abode he journeys as Koupe, "youth" or "initiate", hardly a term of great respect in Greek usage. He is guided on his path, i.e., he has not found it by himself, and he receives a truth he never claims as his own. Could a mortal show greater awareness of his limitations? Yet, in an oddly disturbing way the distinction between the divine and the human is obliterated—the worst kind of *hybris* for Greek thought and feeling.

To charge Parmenides with *hybris* is paradoxical, to say the least, and yet perhaps illuminating. The philosopher's *hybris* has none of the traditional connotations of doing violence or injury to somebody out of wanton insolence and overreaching. On the contrary. His quest for enlightenment is sanctioned by divine power, by righteousness (θέμις) and justice δική(), and marked by almost complete self-effacement. And yet it contains features that would be clearly recognizable as *hybris* to traditional Greek thinking, and some of its results may well be seen as destructive. The Greek notion of *hybris*, overweening pride, connotes above all a failure of man to maintain its opposite, proper pride, i.e., to understand and occupy his proper and rightful place in the cosmos. That place is defined for man most significantly in terms of his relationship with the divine, and therefore the Greek awareness of *hybris* points to the ever-present danger of a disturbance in this relationship. To charge Parmenides with *hybris* is then to charge philosophy with being double edged, a new source of enlightenment but also a new source of danger.

Transposing this notion from traditional Greek culture to philosophy may illumine how all ways of being human are perilous." (p. 451)

On Parmenides see pp. 78-99 and 128-130.

"Parmenides is the first Presocratic of whose thought we still have a nearly complete and continuous exposition in his own words. That this is so is due entirely to one man, the Neoplatonist scholar Simplicius. In his commentary on the Physics of Aristotle, written early in the sixth century A.D., Simplicius quotes large extracts from the poem of Parmenides, in illustration of Aristotle's remarks on it, expressly because, as he says, the book had become scarce. It is therefore almost possible to approach Parmenides in the way intended by Parmenides himself; this chapter will follow that way as far as it can be established.

It is worth noticing that Parmenides expressed his thought in hexameter verses. This was not an odd or ridiculous thing to do, as it would be if a modern philosopher wrote in verse. Verse was still appropriate, and felt to be appropriate, for any pronouncement intended to be particularly memorable. Written books existed, and many states displayed their laws and decrees publicly in writing; yet the habit of relying on the written word was not widespread or of long standing. An educated man was one who had things by heart, and verse is more easily memorised than prose." (p. 78)

"Parmenides fr. 16 Diels-Kranz, notoriously, presents a tangle of textual and syntactic problems. This paper starts by bypassing these problems (though it eventually returns to them). The aim is to explore the possibility of a certain kind of reading

of Parmenides' account of "mind" and "thinking" (νοός, νόημα, φρονέειν) here.

In the rest of section 1, I consider the archaic (principally Homeric) usage of the words for "thinking" and "mind". Section 2 outlines the proposed reading of Parmenides' theory in the light of these linguistic considerations.

Section 3 grapples with the greatest problem for that reading: the apparently contradictory testimony of Aristotle. Here it is necessary to use the rather different testimony of Theophrastus, and a general hypothesis about Aristotle's reading of the "materialistic" psychology of his predecessors.

Section 4 considers the earlier theories of "perception of like by like", of which Parmenides' is one. I aim to show that these can be understood as involving an "inner model". Finally, section 5 returns to Parmenides fr. 16, and shows how it may be read as an example of an "inner model" theory of mental activity." (p. 13)

46. Hutchinson, Gregory O. 2020. *Motion in classical literature: Homer, Parmenides, Sophocles, Ovid, Seneca, Tacitus, Art.* New York Oxford University Press.

Chapter 6: Parmenides, *On nature*, pp. 191-214.

"Parmenides' creation is an extraordinary adventure in philosophy, but it is also a poem. The poetry is not regrettable ornamentation: it is a potent means to the compelling expression of the thought.

(...)

The poem consisted of: a an account of the narrator's chariot ride and meeting with a goddess; b and c her speech, an account of the whole cosmos, as it is in reality (b), and as it is in mortal opinion (c). It is a striking aspect of the poem that a presents a metaphorical journey by chariot with remarkable vigour; b presents the process of arriving at truth through roads that are eliminated and followed (similarly the introduction of (b + c)); b presents reality as unmoving; c offers a world full of motion.

The idea that motion is unreal, that reality is immobile, is not a passing detail in the exposition of b. Parmenides is drawing on important ideas of Xenophanes about god, as the language shows: so Xenoph. B 26.1 = D19.1 αἰεὶ ἄδ' ἐν ταύτῳ μίμνει κινούμενος οὐδέν, 'he always remains in the same place, entirely unmoved', cf. A 28.977b8–20 = R6.9–11, A 31.6–7 = R4 last para. Parmenides seems to be pointedly contradicting Anaximander and Anaximenes, who are said to have spoken of eternal motion. His followers Zeno and Melissus took his thought up with energy." (p. 1919, two notes omitted)

47. Hyland, Drew A. 1998. "Reiner Schürmann's Parmenides: Of Unbroken Non-Hegemonies " *Research in Phenomenology* no. 28:243-258.

"Shortly before his death, Reiner Schurmann [1941-1993] brought to completion his remarkable magnum opus, *Des Hégémonies brisées*,⁽¹⁾ "Broken Hegemonies."

(...)

"Because the book is only recently published, as yet only in French, and because it is almost 800 pages long, I shall take rather more time than usual in setting out as accurately as I can the fundamentals of Schurmann's interpretation of Parmenides before turning to some remarks on the philosophic issues raised by that interpretation. Accordingly, the structure of this article will be as follows: after some introductory remarks, I shall, in part I, set out as best I can Schurmann's interpretation of Parmenides. I shall from time to time make comments on very specific textual issues as they arise, but I shall limit my comments to the specifics of those texts. Then, in part II, I shall raise and discuss some of the broader philosophic issues raised by Schurmann's thought-provoking interpretation.

I might best prepare the reader for the striking originality of Schurmann's interpretation of Parmenides by beginning with a word of clarification about my title. If we were to take as our standard some version of the orthodox interpretation of Parmenides (Parmenides as advocating a changeless, eternal, perfect, one Being and that alone, thereby denying all change, becoming, motion, or time; thus the father of the notion of a

changeless, eternal Being of some sort), then indeed, Parmenides may have established a hegemony which has been, or perhaps still needs to be, broken. Or perhaps, Schurmann himself breaks that hegemony through his radical deconstruction of that orthodox interpretation. For in any case, the Parmenides that Schurmann reads is certainly no broken hegemony, because it is not a hegemony at all, at least not in the sense of establishing a single, exclusive, dominant and domineering law. As a final prefatory remark, let me indicate in advance how much I appreciate the originality of Schurmann's interpretation. Unorthodox interpretations of a thinker that leave that thinker far behind by straying again and again from the text or by focusing only on a few lines of the text, those that suit one's interpretation, are easy; unorthodox interpretations such as Schurmann's that are accomplished by the most faithful adherence to the text as a whole and its spirit are always the most thought-provoking and challenging." (pp. 243-244)

Appendix: The *Philebus's* Response to the *Aporiai* of Participation from the *Parmenides*, pp. 145-156.

"As indicated already in chapter I, there is some overlap between the concerns raised in the three puzzles of the *Philebus* 15b–c and the *aporiai* of participation spelled out in the first part of the *Parmenides*. Just as I suggested in the closing of that chapter that the *Philebus* implicitly addresses the three puzzles regarding the intelligible monads, I want now to suggest that the *Philebus* addresses also implicitly the *aporiai* regarding participation that are mentioned in *Parmenides* 128e–130a. A comprehensive

treatment of either the *aporiai* of participation themselves or of the ways in which the *Philebus* implicitly addresses them is beyond the boundaries of this Appendix. I only aim to sketch here some hints for the direction that a study dedicated to these

issues could take. In what follows, I discuss briefly each one of the six *aporiai* and then suggest what I envision to be the direction of a response based on the *Philebus*." (p. 145)

1. Jackson Rova, Peter. 2021. "The Secret of the Untrembling Heart: A Cryptological Reading of Parmenides' Proem (EGP D4.29/DK B1.29)." *Mnemosyne* no. 74:737-756.

Abstract: "The poem by Parmenides is widely recognized as having a decisive influence on Greek philosophy. The text is also notorious for its interpretative problems owing to its obscure poetic style. Among the discordant quotes from the proem, Simplicius uniquely preserves a verse with the unparalleled genitive εὐκυκλέος (literally 'of [the] well-wheeled'). Contrary to a recent editorial trend in opting for the *lectio facilior* εὐπειθέος ('of [the] well-persuasive'), I argue in this paper that the *lectio difficilior* is genuine testimony to a poetic device designed by Parmenides to perform a pivotal role in the proemial structure as a whole, and to redeploy a key concept in archaic verbal art by means of paronomasia: the 'glory' (κλέος) conveyed through the costly medium of song. The proem thus gives characteristic voice to the experimental spirit of inquiry in which Parmenides variously challenged and took his cue from the conceptual framework of encomiastic performance."

2. Jacobs, David C. 1999. "The ontological education of Parmenides " In *The Presocratics after Heidegger*, edited by Jacobs, David C., 185-202. Albany: State University of New York Press.

"In the history of philosophical reflection, Parmenides' pronouncement about the relationship between being and thinking stands as his pinnacle achievement. In his thinking, τὸ αὐτό links being and thinking in their relationship as a belonging together and not as an identity.⁽¹⁾ Even with this novel reading of τὸ αὐτό opened up by Heidegger and others, much still remains enigmatic about the relationship between being and thinking—and, since this relationship is the center of Parmenides' thinking, much still deserves careful attention in his thought. His Poem can be characterized as a depiction of a goddess instructing a youth on how to think τὸ ἕν and mortal opinions. Focusing on this education on how to think τὸ ἕν, we can see how the instruction moves or turns the youth's thought to think τὸ ἕν in its presence with thought. However, if being and thinking belong together and are together in some sort of presence, which we will hold here, then a simple question arises: How are we to make sense of the fact that the Poem is an instruction that attempts to bring thought to being if being and thought always already belong together? We can think through this aporetic character of Parmenides' thought if we consider three things: first, we will examine what is said by Parmenides about the relationship between being and thinking; second, we will lay out the ontological education that Parmenides portrays as occurring between the goddess and the youth; and, third, we will re-think the relationship between being and thinking with the portrayal of the dispensation of τὸ ἕν."

(1) Reading τὸ αὐτό as a belonging together has also been pointed out by Heidegger in EGT, 87, and by T. M. Robinson, "Parmenides on Ascertainment of the Real," *Canadian Journal of Philosophy*, vol. 4, no. 4 (June 1975), 627.

3. Jameson, G. 1958. "'Well-Rounded Truth' and Circular Thought in Parmenides." *Phronesis* no. 3:15-30.

"Sufficient remains of Parmenides' poem for its general pattern to be evident. It falls into four sections:

1. The Proem (DK6 28 B 1).
2. A discussion of principles, which lays down certain axioms and traces their implications (B 2, 3, 6, 7).
3. A delineation of the properties of reality, from the starting-point dictated by Section 2 and according to the principles there stated (B 8. 1 -49).
4. A cosmogony (B 8.50-61, 9 ff.).

There are two fragments whose position is uncertain: B 4 and 5. I shall be discussing frg. 5 at length in a moment. Frg. 4 has no implications disruptive of any conclusions that can be drawn from the other fragments, nor is its presence inconsistent with the general scheme of the poem. Its location is a problem, but one which, for the present, can be left on one side." (p. 15)

(...)

"It is my purpose to discuss two passages in the fragments from which conclusions are usually drawn which conflict with the general pattern of Parmenides' thought and argument. They appear in DK as:

B 1. 29: Ἀληθείης εὐκυκλέος ἀτρεμεῖς ἦτορ

and B 5: Ἐυνοῦν δὲ μοί ἐστιν, ὀπλόθεν ἄρξωμαι· τόθι γὰρ πάλιν ἴξομαι αὖθις.

These passages have received various interpretations, sometimes separately, sometimes in combination. I shall suggest that frg. 5 should be treated as a doubtful fragment and that at 1.29 the correct reading is *ευπειθεος* not *ευκυκλεως*." (p. 16)

4. Janko, Richard. 2016. "Parmenides in the Derveni Papyrus: New Images for a New Edition." *Zeitschrift für Papyrologie*

und Epigraphik no. 200:3-23.

5. Johansen, Thomas Kjeller 2016. "Parmenides' Likely Story." *Oxford Studies in Ancient Philosophy* no. 50:1-29.

Abstract: "This paper reassesses the relationship between the way of Truth and the way of Opinion (*doxa*) in Parmenides' poem. Parmenides' criteria or 'signs' of intelligible inquiry are paradigmatically met by

being; however, by fulfilling those criteria, albeit partially and in a different manner from being, the cosmos comes to resemble being and achieve a degree of intelligibility and reality. Being and the cosmos appear in this way to be related as model to likeness. The paper argues on this basis that Parmenides' cosmology anticipates the likely story of Plato's *Timaeus*. Already Proclus in his commentary on the *Timaeus* had made a similar suggestion, but this paper is the first to attempt to spell out and assess it."

6. Jones, Barrington. 1973. "Parmenides 'The Way of Truth'." *Journal of the History of Philosophy* no. 11:287-298.

"Recent years have produced a number of distinct interpretations of Parmenides' philosophical poem. Of these, one of the most interesting is that of Montgomery Furth's "Elements of Eleatic Ontology,"(1) and I shall use his treatment of the poem as the basis for the development of a different interpretation, an interpretation which, hopefully, can preserve the explanatory power of Furth's exposition while avoiding certain of its difficulties.

Furth suggests that, at the start of his argument, Parmenides is concerned to show the meaninglessness of negative "is" statements, whether "is" be taken in an existential or a predicative sense. One cannot say "Unicorns do not exist" meaningfully; for, in order for the word "unicorns" to be meaningful, there must be unicorns for the word to refer to. Therefore, negative existential statements are self-defeating, because they purport to deny a necessary condition of their own meaningfulness. Parallel considerations apply to the predicative sense of "is".

If "John is tall" is meaningful only if John is tall, or the fact of John's being tall exists, or the like, then the statement "John is not tall" would be meaningful only if, for instance, the fact of John's being tall did not exist, but if it did not exist, then, again, there is nothing for the sentence to refer to, and therefore the sentence must be meaningless." (p. 287)

(1) *Journal of the History of Philosophy*, VI (1968), 111-132.

"To summarize the course of the discussion, then. We have seen that, if we do not take Parmenides as postulating monism, the argument proceeds with considerable force to the conclusions that Parmenides claims, and does so without involving him in any direct fallacy, such as a failure to distinguish between an 'existential' and a 'predicative' sense of "is." For just as I can think of something, so I can think of something's being the case, and the same considerations will apply. Nor does he impose impossibly stringent restrictions on meaningfulness; if anything, he is over-liberal in his admissions of existence and being. Given acceptance of the claim that what can be thought of must be, his argument has force.(26)" (p. 298)

(26) Throughout I have assumed that $\nu\omicron\epsilon\iota\nu$ is to be taken in its customary sense of "to think." C. H. Kahn ["The Thesis of Parmenides," *The Review of Metaphysics*, XXII (1969)], (pp. 703-711), however, has maintained that it is to be taken in the stronger sense of "to know." This can hardly be so in view of the fact that Parmenides does ascribe $\nu\omicron\omicron\varsigma$ to deluded mankind, who, he claims, are *totally* enmeshed in $\delta\acute{o}\xi\alpha$, opinion (B 6.6; 16.2). Furthermore, he uses the expression "wandering $\nu\omicron\omicron\nu$," and, had he meant "knowledge," this would be a striking 'contradictio in adiecto' (B 6.6)."

Reprinted in C. H. Kahn, *Essays on Being*, New York: Oxford University Press, 2009, pp. 16-40.

"I am concerned in this paper with the philological basis for Greek ontology; that is to say, with the raw material which was provided for philosophical analysis by the ordinary use and

meaning of the verb *einai*, 'to be'. Roughly stated, my question is: How were the Greek philosophers guided, or influenced, in their formulation of doctrines of Being, by the prephilosophical use of this verb which (together with its nominal derivatives *on* and *ousia*) serves to express the concept of Being in Greek?" (p. 16)

8. ———. 1969. "The Thesis of Parmenides." *The Review of Metaphysics* no. 22:700-724.

Reprinted in C. H. Kahn, *Essays on Being*, New York: Oxford University Press, 2009, pp. 143-166.

"If we except Plato, Aristotle, and Plotinus, Parmenides is perhaps the most important and influential of all the Greek philosophers. And considered as a metaphysician, he is perhaps the most original figure in the western tradition. At any rate, if ontology is the study of Being, or what there is, and metaphysics the study of ultimate Reality, or what there is in the most fundamental way, then Parmenides may reasonably be regarded as the founder of ontology and metaphysics at once. For he is the first to have articulated the concept of Being or Reality as a distinct topic for philosophic discussion.

The poem of Parmenides is the earliest philosophic text which is preserved with sufficient completeness and continuity to permit us to follow a sustained line of argument. It is surely one of the most interesting arguments in the history of philosophy, and we are lucky to have this early text, perhaps a whole century older than the first dialogues of Plato. But the price we must pay for our good fortune is to face up to a vipers' nest of problems, concerning details of the text and the archaic language but also concerning major questions of philosophic interpretation. These problems are so fundamental that, unless we solve them correctly, we cannot even be clear as to what Parmenides is arguing for, or why. And they are so knotted that we can scarcely unravel a single problem without finding the whole nest on our hands.

I am primarily concerned here to elucidate Parmenides' thesis: to see what he meant by the philosophic claim which is compressed into the one-word sentence "it is." I take this to be

the premiss (or one of them), from which he derives his famous denial of all change and plurality. I shall thus consider the nature of this premiss, and why he thought it plausible or self-evident. I shall also look briefly at the structure of his argument which concludes that change is impossible, in order to see a bit more clearly how such a paradoxical conclusion might also seem plausible to Parmenides, and how it could be taken seriously by his successors. Finally, I shall say a word about the Parmenidean identification of Thinking and Being." (pp. 700-701)

9. ———. 1969. "More on Parmenides. A Response to Stein and Mourelatos." *The Review of Metaphysics* no. 23:333-340.

A Reply to Stein (1969) and Mourelatos (1969).

"For Burnet and for many scholars of his generation, Parmenides was essentially a critic of earlier physical theories and the author of a challenge which provoked the atomist theory of matter as a response. Commentators today are more inclined to see him either as a philosopher of language in the style of Frege or Wittgenstein or, in the Continental tradition, as a metaphysician of Being in the manner of Hegel or Heidegger. It seems to me that Burnet was closer to the truth (even if his interpretation in detail is absurdly narrow), and that he and Meyerson were faithful to the deeper spirit of Eleatic philosophy in insisting upon a close connection between Parmenides' argument and the physical science of his day and ours. At all events, any interpretation must take account of the fact that his doctrine seems permanently relevant not only to speculative metaphysics and abstract ontology but also to critical reflection on the structure of natural science.

Hence I am happy that Howard Stein was willing to publish his comments on the poem, since his unusual command of modern physical theory makes it possible for him to formulate a plausible reinterpretation of Eleatic doctrine within the framework of post-Newtonian or Einsteinian physics. I fully agree with him as to the historical and philosophical value of such a reconstruction, even if it cannot square with every facet of the archaic text under discussion. Simply as a commentary

on the text, however, a one-sided interpretation fully worked out will often be more illuminating than a carefully balanced synthesis of different points of view.

Once such an interpretation has been presented, it is the ungrateful task of the interlocutor to insist upon the appropriate qualifications. Stein's reconstruction gains in coherence by taking Parmenides' Being as "truth" rather than "thing," as "discernible structure in the world" or *alles, was der Fall ist*: the unique *Sachverhalt* but not the unique *Gegenstand*. But Parmenides himself is not so coherent, and part of the creative influence of his theory was due precisely to the fact that it can also be understood—and was presumably also intended—as an account of the only thing or entity or object that can be rationally understood. Hence it was that, the atomists could define the concept of indestructible solid body as their new version of Being (*on*), and empty space as the new form of Non-being (*ouk on* or *oudén*). In general, the Greek philosophers never succeeded in formulating a systematic distinction between thing and fact, between individual object and structure (although Plato's self-criticism and later development of the theory of Forms may involve a conscious shift, from one category to the, other)." (pp. 333-334)

"I am grateful to Alexander Mourelatos for having tried to formulate my interpretation more precisely, and if he has not entirely succeeded that no doubt shows that my own exposition was not clear enough. I confess that I do not recognize my view in the complicated reduction sentences which he offers as a semi-formalization of my version of thesis and antithesis in fragment 2. I agree with him that any reading of the first and second Ways must construe them as contradictory, so that "the reason which compels rejection of the second route is the reason which enjoins strict and faithful adherence to the first route" (p. 736). I think my view can be shown to satisfy this condition, and to this end I shall indulge in a bit of rudimentary formalization." (p. 335)

10. ———. 1970. "Die Offenbarung des Parmenides und die menschliche Welt by Jaap Mansfeld (Review)." *Gnomon*:113-119.

Review of Jaap Mansfeld, *Die Offenbarung des Parmenides und die menschliche Welt*, Assen: Van Gorcum 1964.

"Mansfeld has given us one of the most penetrating and original discussions of Parmenides' poem since Frankel's *Parmenidesstudien* in 1930. The book consists of four chapters, each one of which might stand alone as an independent essay, but which together aim at a unified view of Parmenides' thought. Mansfeld develops his interpretation with a wealth of detail, a careful, nearly complete, and on the whole judicious discussion of other views, which makes his book at once a commentary on the poem and a valuable survey of earlier scholarship." (p. 113)

"Thus Maansfeld does justice to the positive side of the *Doxa*, in the analogies with Being, and also to the negative side, in the original sin of positing two forms instead of rejecting the other as the non-existent. He goes farther than other interpreters in suggesting an epistemic or pedagogic function of the *Doxa* as a theory which permits the initiate (i. e. the philosopher) to find his way back to the origins of the manifold of experience in the positing of two basic forms." (p. 118)

11. ———. 1973. *The Verb 'Be' in ancient Greek*. Dordrecht: Reidel.

Volume 6 of: John W. M. Verhaar (ed.), *The Verb 'Be' and its Synonyms: Philosophical and Grammatical Studies*, Dordrecht: Reidel.

Reprinted by Hackett Publishing, 2003 with new introduction and discussion of relation between predicative and existential uses of the verb *einai*.

"First of all, a word of clarification on the nature of the enterprise. My original aim was to provide a kind of grammatical prolegomenon to Greek ontology. First of all, a word of clarification on the nature of the enterprise. My original aim was to provide a kind of grammatical prolegomenon to Greek ontology.

The notion of Being, as formulated by Parmenides, seems to come from nowhere, like a philosophical meteor with no historical antecedents but profound historical consequences. It

would be difficult to overstate the influence of this new conception. On the one hand, Plato's doctrine of the eternal being of the Forms as well as his struggle with Not-Being both clearly derive from Parmenides' account of to on. On the other hand, not only Aristotle's doctrine of categories as "the many ways that things are said to be" but also his definition of metaphysics as the study of "being qua being" provide deliberate alternatives to Parmenides' monolithic conception of what is." (*Introduction* (2003), p. VII)

12. ———. 1988. "Being in Parmenides and Plato." *La Parola del passato* no. 43:237-261.

Reprinted in C. H. Kahn, *Essays on Being*, New York: Oxford University Press, 2009, pp. 167-191.

"Despite the silence of Aristotle, there can be little doubt of the importance of Parmenides as an influence on Plato's thought. If it was the encounter with Socrates that made Plato a philosopher, it was the poem of Parmenides that made him a metaphysician. In the first place it was Parmenides' distinction between Being and Becoming that provided Plato with the ontological basis for his theory of Forms. When he decided to submit this theory to searching criticism, he chose as critic no other than Parmenides himself. And when the time came for Socrates to be replaced as principal speaker in the dialogues, Plato introduced as his new spokesman a visitor from Elea. Even in the *Timaeus*, where the chief speaker is neither Socrates nor the Eleatic Stranger, the exposition takes as its starting-point the Parmenidean dichotomy. (1) From the *Symposium* and *Phaedo* to the *Sophist* and *Timaeus*, the language of Platonic metaphysics is largely the language of Parmenides.

One imagines that Plato had studied the poem of Parmenides with considerable care. He had the advantage of a complete text, an immediate knowledge of the language, and perhaps even an Eleatic tradition of oral commentary. So he was in a better position than we are to understand what Parmenides had in mind. Since Plato has given us a much fuller and more explicit statement of his own conception of Being, this

conception, if used with care, may help us interpret the more lapidary and puzzling utterances of Parmenides himself."

(1) *Timaeus* 27D 5: "The first distinction to be made is this: what is the Being that is forever and has no becoming, and what is that which is always becoming but never being?". (p. 237)

13. ———. 2002. "Parmenides and Plato." In *Presocratic Philosophy: Essays in Honour of Alexander Mourelatos*, edited by Caston, Victor and Graham, Daniel W., 81-94. Aldershot: Ashgate.

Reprinted in C. H. Kahn, *Essays on Being*, New York: Oxford University Press, 2009, pp. 192-206.

"This seems a happy occasion to return to Parmenides, in order both to clarify my own interpretation of Parmenidean Being and also to emphasize the affinity between what I have called the veridical reading and the account in terms of predication that Alex Mourelatos gave in his monumental *The Route of Parmenides*.) It is good to have this opportunity to acknowledge how much our views have in common, even if they do not coincide. And perhaps I may indulge here in a moment of nostalgia, since Alex and I are both old Parmenideans. My article '*The Thesis of Parmenides*' was published in 1969, just a year before Alex's book appeared. That was nearly thirty years ago, and it was not the beginning of the story for either of us. My own Eleatic obsession had taken hold even earlier, with an unpublished Master's dissertation on Parmenides, just as Alex had begun with a doctoral dissertation on the same subject. So, for both of us, returning to Parmenides may have some of the charm of returning to the days of our youth." (p. 81)

"I want to defend Parmenides' positive account of Being as a coherent, unified vision.

And I think his refutation of coming-to-be if formally impeccable, once one accepts the premise (which Plato will deny) that *esti* and *ouk esti* are mutually exclusive, like p and not-p. And it is precisely this assimilation of the '*is* or *is-not*' dichotomy to the law of non-contradiction -- to p or not-p' - that accounts for the extraordinary effectiveness of Parmenides'

argument, its acceptance by the fifth-century cosmologists, and the difficulty that Plato encountered in answering it.

However, if the rich, positive account of Being that results from Parmenides' amalgamation of the entire range of uses and meanings of *einai* turns out to be a long-term success (as the fruitful ancestor of ancient atomism, Platonic Forms, and the metaphysics of eternal Being in western theology), the corresponding negation in Not-Being is a conceptual nightmare. Depending on which function of *einai* is being denied, *to mê on* can represent either negative predication, falsehood, non-identity, non-existence, or non-entity, that is to say, nothing at all. The fallacy in Parmenides' argument lies not in the cumulation of positive attributes for Being but in the confused union of these various modes of negation in the single conception of 'what-is-not.' That is why Plato saw fit to criticize his great predecessor in respect to the notion of Not-Being, while making positive use of the Parmenidean notion of Being." (pp. 89-90)

15. ———. 2007. "Some disputed questions in the interpretation of Parmenides." *Anais de Filosofia Clássica* no. 1:33-45.

"It is always a pleasure to have an opportunity to return to Parmenides, a philosopher I fell in love with when I was a graduate student. Over the years I have published more than once on Parmenides' conception of Being and its impact on Plato. So my views on this subject are well known, and I shall not repeat them here. But I will at least refer to Parmenides' concept of Being, and I would be happy to discuss this in the question period.

But I want to start by situating Parmenides in relation to the tradition of natural philosophy that begins in Miletus, and I will then proceed to discuss a few disputed points, first concerning the interpretation of crucial passages and finally concerning the direction of the chariot ride in the proem." (p. 33)

16. ———. 2009. "Postscript on Parmenides." In *Essays on Being*, 207-217. New York: Oxford University Press.

Postscript on Parmenides (2008): 1. *Parmenides and physics*; 2. *The direction of the chariot ride in the proem*; 3. *The epistemic preference for Fire*.

"Parmenides was my first love in philosophy. I had once thought to write a book on Parmenides, but there always seemed to be too many unsolved problems. I conclude these essays by returning to three problems that do seem soluble, and that do not involve the concept of Being: Parmenides' relation to natural philosophy, the direction of the chariot ride in his proem, and the epistemic preference for Fire." (p. 207)

17. Kember, Owen. 1971. "Right and Left in the Sexual Theories of Parmenides." *The Journal of Hellenic Studies* no. 91:92-106.

Abstract: "G. E. R. Lloyd (1) has argued that Parmenides 'probably held that the sex of the child is determined by its place on the right or left of the mother's womb (right for males, left for females)'. It is the purpose of this paper to challenge this assertion by re-examining the primary evidence of fragments 17 and r8 of Parmenides as well as the tangled mass of testimony of the doxographers, Censorinus, Aetius and Lactantius. In so doing I shall consciously observe a sharp distinction between theories of sex differentiation and theories

of heredity since I shall argue that the confusion of the two subjects has led to distortion of Parmenides' doctrines."

(1) G. E. R. Lloyd, *Polarity and Analogy* (Cambridge, 1966) 17 and 50. It is interesting to note the change in wording from Lloyd's article in *JHS* lxxxii (1962) 60 where he uses the word 'apparently' instead of 'probably'. Other discussions on the problem of Parmenides' sexual theories within the last ten years include that of W. K. C. Guthrie, *History of Greek Philosophy*, vol. ii (Cambridge, 1965) 78 ff. and L. Tarán, *Parmenides* (Princeton, 1965) 263-6.

Tarán indeed asserts (264, note 98) 'sex, according to Parmenides, was determined by the female and not by the

male'. Earlier work of importance in this field has been done by E. Lesky, "Die Zeugungs- und Vererbungslehren der Antike und ihr Nachwirken", *Akademie*

der Wissenschaften und der Literatur, Mainz, Abhandlungen der Geistes- und Sozialwissenschaftlichen Klasse, Jahrgang 1950, Nr. 19, 1272 ff.

18. Kerferd, George. 1991. "Aristotle's Treatment of the Doctrine of Parmenides." In *Aristotle and the Later Tradition*, edited by Blumenthal, Henry and Robinson, Howard, 1-7. New York: Oxford University Press.

"In his *De caelo* (3. 1, 298b14~24 = 28 A 25 DK) Aristotle makes a strange and puzzling statement about Parmenides and the Eleatics." [follow the translation of the passage] (p. 1)

(...)

"What I want rather to do is to suggest a way in which we can make sense both of Aristotle's remark in the *De caelo* and of Simplicius' comments.

This can be done, I would argue, in the following way. Let us begin by assuming that all we have is the world of seeming. This, however, is seen to be defective in that it combines 'is' and 'is not', and we can know on the basis of the logical insight developed with devastating effect by Parmenides that only that which is can exist. We must accordingly proceed to a fresh analysis of the world of seeming. If we take this world at its own level, which is that of seeming, we can see that it contains, and so can be analysed into, combinations that change between two shapes or principles, light and darkness (Parmenides 28 B 8. 41, 53-9 DK). Thus, any physical object can be found both in the daytime and at night, and further it can be seen at any one time as combining what we might call reflectivity and light-absorption. We have thus the first step in a reductionist analysis. These two principles, however, can next be reduced to one—darkness is what is not light, and on the principles of Parmenidean logic what is not cannot exist. We need not ask whether the negative in 'is not light' is negating a copula or negating an existential sense of the verb 'to be'—in either case it

is plausible enough to treat darkness as a negative principle. We are left then with the one principle only, that which is. This principle can be regarded as something which is itself inside or within the world of seeming. But it will be better understood, I would suggest, as being not within the world of seeming but rather in a sense the world of seeming as such when this world is correctly understood and is stripped by the application of Parmenidean logic and cleansed of the plurality of names which mortals assign to it. For Simplicius this whole approach is to be seen as a mistake because it involves a denial of the dualism essential to Platonism, the dualism between the intelligible world and the (derived) world of appearances. But it may well have seemed to him to be a mistake which Parmenides was actually making." (pp. 6-7)

19. Ketchum, Richard. 1990. "Parmenides on What There Is." *Canadian Journal of Philosophy* no. 20:167-190.

Abstract: "There is an interpretation of Parmenides' poem which has not yet had, but deserves, a hearing. It reconciles two of the most prominent views of the meaning of the verb 'to be' ('εἶναι') as it occurs in the poem. It agrees with the spirit of those who interpret 'εἶναι' as 'existence.' It agrees with the letter of those who interpret 'εἶναι' as the copula. The basic idea is to treat relevant syntactically incomplete occurrences of the verb 'to be' as meaning 'to be something or other.'(1) In section I, I will explain and clarify the interpretation. In section II, I will dialectically support the interpretation by comparing it with other major interpretations.

Weaknesses will also appear." (p. 167)

(1) To my knowledge the idea that such uses of the verb εἶναι' in Greek philosophy might be profitably interpreted in this way was introduced by G.E.L. Owen ('A Metaphysical Paradox' in Rendord Bambrough, ed., *New Essays On Plato and Aristotle* New York: Humanities Press 1965 71, n. 1). He originally suggested that for Plato to be is to be something or other but later ('Plato on Not-Being') in Gregory Vlastos, ed., *Plato, I* Garden City, NY: Doubleday 1971 266) he recants.

As for the equation "to be is to be something," the negation of "to be something" is "not to be anything" or "to be nothing," which Plato holds to be unintelligible; and then it would follow from the equation that "not to be" makes no sense. But Plato recognizes no use of the verb in which it cannot be directly negated.

The fact that Parmenides not only recognizes but demands a use of the verb 'to be' which cannot be meaningfully negated is a reason to attempt to understand his use of 'to be' as 'to be something other.'

As is well known, Owen himself interprets Parmenides' syntactically incomplete uses of 'eivai' as 'to exist?' ('Eleatic Questions',) *Classical Quarterly* 10 1960, 94).

20. ———. 1993. "A Note on Barnes' Parmenides." *Phronesis. A Journal for Ancient Philosophy* no. 38:95-97.

"In *The Presocratic Philosophers* Vol. I: *Thales to Zeno* (London, 1979, pp. 155-175) Jonathan Barnes presents a formalization of an argument he finds in Fragments B2, B3 and B6 (148, 149 and 150 in Barnes' numbering). I am sympathetic to the enterprise but I think the execution is confused. After explaining the confusion, I present an alternative which I think preserves most of Barnes' interpretation." (p. 95)

21. Kimhi, Irad. 2018. *Thinking and Being*. Cambridge, MA: Harvard University Press.

"This book proceeds from the conviction that philosophical logic can make progress only by working through certain puzzles—such as those that come into view only once one is struck by that which is most puzzling in the pronouncements of the goddess who stands at the outset, the gate, of Parmenides's poem.

It has become difficult, in our time, to be struck by that which is most puzzling in these pronouncements. For we are apt to think that we have already put the difficulty behind us. Our misplaced confidence stems from our present conceptions of logic and language. We fail to see that, for all of their technical and mathematical sophistication, these conceptions are

inadequate to the task of philosophical logic indicated above."
(p. 2)

22. Kingaley, K. Scarlett. 2024. *Herodotus and the Presocratics: Inquiry and Intellectual Culture in the Fifth Century*. Cambridge: Cambridge University Press.

Chapter 6: *Historical Inquiry and Presocratic Epistemology*, pp. 167-189.

"Nearly all subsequent Presocratic philosophers commented on truth and the difficulty of attaining it. Alcmaeon's philosophical treatise began with the admonition that the gods alone had "certainty," σαφήνεια, while mortals "inferred from signs," τεκμαίρεσθαι (DK 24 B 1). Heraclitus yields some evidence for a pessimistic view of man's ability to identify truth with the forensic metaphor that "men are poor defendants of the true" (ἄνθρωποι κακοὶ ἀληθινῶν ἀντίδικοι).(18) But it is Parmenides' *On Nature*, contemporaneous with Heraclitus' work, that is the most comprehensive meditation on second-order concerns about truth, falsehood, and seeming. In the nearly 150 lines of the hexameter poem that survive, a philosophical treatise unfolds in the form of a meeting of two individuals, an unnamed Youth, who begins the narration, and a female divinity, whose two-part discourse constitutes nearly all of the fragments we possess." (pp. 171-172, a note omitted)

(...)

"A key innovation in the discussion of truth is Parmenides' elevation of the participle of the verb "to be," *eon*, "what-is," as an avenue for epistemological discussion. The first part of the goddess' revelation in the treatise is fixed squarely on *eon*. Its meaning as either an absolute "what-is" or a complement in the sense of "what is x" continues to inspire fierce debate in modern scholarship.(52) The goddess explicitly rejects the consideration of τὸ γε μὴ ἔόν (B2.7); she avers that τὸ ἔόν cannot be cut from holding onto τὸ ἔόν (B 4); what-is (ἔόν) is ungenerated, indestructible, complete, singleborn, stable, without end (B 8). This discussion as a whole constitutes

“thought about truth” (B8.50-1: νόημα | ἀμφὶ ἄληθείης), as opposed to opinion.” (p. 181, a note omitted)

(18) DK 22 B 133. For a discussion of the epistemological vocabulary used by Heraclitus, see Lesher (1983), *passim*.

23. Kingsley, Peter. 1999. *In the Dark Places of Wisdom*. Inverness: Golden Sufi Center.

"What is to be done when the scholarly author of a book is also a believer and writes in a style that seeks to convert the reader in two different senses of that word?

Firstly, to convert the academic reader to the argument expressed, and secondly to convert the reader more generally to the belief system expressed in the book – in this case a wider mystical approach to life. Whilst doing this, Kingsley also suggests that the current point-of-view of the scholar may be nothing more than a dogmatic and faith-tinged position anyway – so how should we read all this? These questions should be at the forefront of any reader’s response to *In the Dark Places of Wisdom*.

Kingsley is a lauded academic and also a self-admitted mystic and this book is framed as a journey into a new take on reality." p. 118 (Christopher Hartney, *Book Review of Peter Kingsley: In the Dark Places of Wisdom*, "Alternative Spirituality and Religion", 9, 2018, pp. 118-121)

"And that’s the purpose of this book: to awaken something we’ve forgotten, something we’ve been made to forget by the

passing of time and by those who've misunderstood or—for reasons of their own—have wanted us to forget.

It could be said that this process of awakening is profoundly healing. It is. The only trouble with saying this is that we've come to have such a superficial idea of healing. For most of us, healing is what makes us comfortable and eases the pain. It's what softens, protects us. And yet what we want to be healed of is often what will heal us if we can stand the discomfort and the pain." (p. 4)

"You might be tempted to describe the way that Parmeneides and the people close to him have been treated in the last two thousand years as a conspiracy, a conspiracy of silence. And in a very basic sense you'd be right.

But at the same time all these dramas of misrepresentation, of misuse and abuse, are nothing compared with what's been done to the central part of his teachings- or the writings of his successors. And the dramas fade away almost into insignificance compared with the extraordinary power of those teachings as they still survive: a power that's waiting to be understood again and used, not just talked about or pushed aside. This is what we'll need to explore next, and start rediscovering step by step.

So everything that's been mentioned so far Parmeneides' opening account of his journey to another world, the traditions about him, the finds at Velia—may seem a story in itself or even a story within a story. But the story is far from finished, and this book that you've come to the end of is only the beginning: the first chapter." (p. 231)

24. ———. 2003. *Reality*. Inverness: Golden Sufi Center.

"The writings of Parmenides, and other people like him, survive in fragments. Scholars have played all sorts of games with them. For centuries they have experimented with distorting them and torturing them until they seem to yield a sense exactly the opposite of their original meaning. Then they argue about their significance and put them on show like exhibits in a museum.

And no one understands quite how important they are. Even though they only survive in bits and pieces, they are far less fragmentary than we are. And they are much more than dead words. They are like the mythological treasure—the invaluable object that has been lost and misused and has to be rediscovered at all costs.

But this is not mythology, or fiction. It's reality. Fiction is like sitting on a goldmine and dreaming about gold; it's everything that happens when you forget this.

There is absolutely nothing mystical in what I am saying. It's very simple, completely down-to-earth and practical. We tend to imagine we have our feet on the ground when we are dealing with facts. And yet facts are of absolutely no significance in themselves: it's just as easy to get lost in facts as it is to get lost in fictions.

They have their value, and we have to use them—but use them to go beyond them. Facts on their own are like sitting on top of a goldmine and scratching at the dust around our feet with a little stick." (p. 21)

25. Kirk, Geoffrey S., Raven, John E., and Schofield, Malcolm. 1983. *The Presocratic Philosophers: A Critical History with a Selection of Texts*. Cambridge: Cambridge University Press.

Second revised edition; first edition (by Kirk and Raven) 1957.

Chapter VIII - *Parmenides of Elea*, pp. 239-262.

"Parmenides is credited with a single 'treatise' (Diog. L. 1, 16, DK 28a 13). Substantial fragments of this work, a hexameter poem, survive, thanks largely to Sextus Empiricus (who preserved the poem) and Simplicius (who transcribed further extracts into his commentaries on Aristotle's *de caelo* and *Physics* 'because of the scarceness of the treatise'). Ancients and moderns alike are agreed upon a low estimation of Parmenides' gifts as a writer. He has little facility in diction, and the struggle to force novel, difficult and highly abstract philosophical ideas into metrical form frequently results in ineradicable obscurity, especially syntactic obscurity. On the

other hand, in the less argumentative passages of the poem he achieves a kind of clumsy grandeur.

After the proem, the poem falls into two parts. The first expounds 'the tremorless heart of well-rounded Truth' (288, 29). Its argument is radical and powerful. Parmenides claims that in any enquiry there are two and only two logically coherent possibilities, which are exclusive — that the subject of the enquiry exists or that it does not exist. On epistemological grounds he rules out the second alternative as unintelligible. He then turns to abuse of ordinary mortals for showing by their beliefs that they never make the choice between the two ways 'is' and 'is not', but follow both without discrimination. In the final section of this first part he explores the one secure path, 'is', and proves in an astonishing deductive tour de force that if something exists, it cannot come to be or perish, change or move, nor be subject to any imperfection. Parmenides' arguments and his paradoxical conclusions had an enormous influence on later Greek philosophy; his method and his impact alike have rightly been compared to those of Descartes' *cogito*." (p. 241)

26. Kirk, Geoffrey S. , and Stokes, Michael C. 1960. "Parmenides' refutation of motion." *Phronesis* no. 5:1-4.

"Since Burnet at least (*Early Greek Philosophy* [third edition], 1920) pp. 179 and 181) it has been common to attribute to Parmenides the argument against motion described by Melissus in his fragment 7.

(...)

It had occurred independently to the authors of this short paper that the matter deserved further clarification, and, having discovered in conversation that their views were closely similar, they submit them jointly." (p. 1)

"Thus the fragments of Parmenides contain not the slightest hint of the physical argument that motion is impossible because it entails the existence of a void to move in. But this physical argument is stated in Melissus fr. 7 § 7, after the assertion that void, as not-being, does not exist: 'Nor does it [sc. Being] move;

for it has nowhere to withdraw to, but is full. For if there had been void, it would have withdrawn into the void; but since there is no void it does not have anywhere to withdraw to'. If it had not been for Plato *Theaetetus* 180 E 3-4, the attribution of this kind of argument to Parmenides, not merely to Melissus, would presumably never have been made." (p. 2)

"This whole field of possibilities deserves further exploration, but is shut off by the unjustified interpretation of those who attribute to Parmenides an argument invented probably by Melissus." (p. 4)

28. Knight, Thomas S. 1959. "Parmenides and the Void." *Philosophy and Phenomenological Research*:524-528.

"Unless Parmenides' One Being is considered a corporeal unit, he cannot be said to have denied the existence of a void. And whether or not his monism can be regarded as materialistic is a matter of dispute." (p. 524)

"Descartes rejected the proposition that there can be a space in which there is no body only *after* he had demonstrated "The grounds on which the existence of material things may be known with certainty."(10) The Pythagoreans, *after* viewing their numbers as discontinuous, postulated a void to separate them."(11) Void appears then to be posterior to: some kind of phenomenalism, some kind of materialism, and some kind of pluralism.

The point here is that Parmenides' One Being excludes all of these.

It seems, therefore, purely arbitrary to say that Parmenides denied the existence of void. The only way to answer Parmenides is to find some reasonable relation between Being and non-Being. Taking body as "what is" and void as "what is not" merely rejects the more original and more fundamental problem, How can non-Being be?" (pp. 527-528)

29. Kočandrle, Radim. 2018. "Explaining Earth's Stability by Uniformity: Origins of the Argument." *Apeiron. A Journal for Ancient Philosophy and Science* no. 51:459-482.

Abstract: "Aristotle ascribes to Anaximander a conception according to which the Earth remains in its place due to uniformity. Plato shows that this argument's validity is based on both the Earth and the universe being spherical. Anaximander, however, believed the Earth to be flat. Since Aetius ascribes the abovementioned reasoning also to Parmenides, in whose work we find hints to spherical shapes, the argument might be based on Parmenides' thoughts."

30. Kohlschitter, Silke. 1991. "Parmenides and Empedocles in Porphyry's *History of Philosophy*." *Hermatena* no. 150:43-53.

"In a kind of history of philosophy Shahrastani(1) draws up a list of seven philosophers(2) - Empedocles among them - whom he calls the "pillars of wisdom".(3) He approaches them with an unambiguous concern regarding the creator, namely to show his unity, and clearly formulated questions with regard to the creation of the world, namely "what and how many the primary principles are, and what the ἔσκατα are and when they come to happen".(4) As Franz Altheim and Ruth Stiehl convincingly show, Shahrastani took over the canon of the seven philosophers, as well as the problems he brings to them, from Porphyry.(5) The work that is to be considered in this context is his "φιλοσοφος ιστορία, of which fragments are preserved.(6)"

(...)

"Parmenides is the thinker who exclusively argues on the basis of the conditions of thinking itself." (p. 43)

"The central term in the Parmenidean philosophy of history is *Dike*.

All, by being unchangeable and motionless only as a whole, is actually unified and held together by her. One must therefore conceive of *Dike* as the supreme deity in Parmenides. Here the question arises, in what relationship to each other she and

history, or rather eternal being and the world of seeming have to be seen." (p. 44)

31. Korab-Karpowicz, W. Julian. 2017. *The Presocratics in the Thought of Martin Heidegger*. Bern: Peter Lang.

Contents: Preface 11; Abbreviations 13; Introduction 15; Chapter One: Philosophy, History and the Presocratics 23; Chapter Two: The Anaximander Fragment 63; Chapter Three: Heraclitus: Physis and the Logos 109; Chapter Four: Being and Thinking in Parmenides 119; Chapter Five: The Presocratics and the History of Being 219; Bibliography 247.

"Chapter Four is a consideration of Parmenides' fragments 1, 2, 3, 6 and 8 in Heidegger's interpretation, which comes from different works of the middle and later period of his thought. Since for Heidegger all primordial thinkers speak essentially the same, in his reading of Parmenides, I encounter the same issues with which we are already familiar from earlier chapters.

He does not set up any opposition between Heraclitus and Parmenides.

Nevertheless, if in the study of Heraclitus his focus was on λόγος, and φύσις, now the foremost attention is given to Ἀλήθεια. In Heidegger's view, ἀλήθεια is a basic character of beings, as well as the horizon within which the manifestation of what is present occurs. He claims that in the tradition of Western philosophy, the original Greek experience of ἀλήθεια has been misinterpreted and forced into oblivion.

Consequently, for Heidegger, ἀλήθεια is what is most worthy of thought. Its question is, for him, inseparably bound up with the question of being. Heidegger's inquiry into ἀλήθεια in the Parmenidean poem takes us beyond the Greek experience of being, namely, to ἀλήθεια in the no longer Greek but Heideggerian sense as the openness of being. Further, since the openness of being refers to a situation with in history, the context of his interpretation of Parmenides becomes the history of being. Only in this context, I conclude, can we fully understand and appreciate the interpretation of Presocratic thinkers in his later works." (p. 21)

32. Kraus, Manfred. 2019. "William of Moerbeke' translation of Simplicius *On de caelo* and the constitution of the text of Parmenides." In *ὁδοὶ νοῆσαι. Ways to Think. Essays in Honour of Néstor-Luis Cordero*, edited by Pulpito, Massimo and Spangenberg, Pilar, 213-230. Bologna: Diogene Multimedia.

Abstract: "Although Simplicius' commentary on Aristotle's treatise *De caelo* is one of the most valuable sources, in a number of cases even our only source, for the transmission of particular fragments of Parmenides, compared to the commentary on the *Physics* it has for specific reasons been sorely neglected in the past. When in 1894 J. L. Heiberg edited the text of this commentary, he found its Latin translation by William of Moerbeke (1271) to be a highly valuable secondary textual witness despite its coarse and inelegant style. However, while Heiberg only knew this translation from a faulty 16th-century printing, we are now in possession of reliable critical

editions of the books most relevant for the Parmenides text. Recent studies have further yielded that the Greek manuscript of *In De Caelo* Moerbeke translated from was definitely superior to all manuscripts extant today. All the more, this not only makes possible, but also advises an employment of Moerbeke's translation for the purposes of textual criticism. This essay gives a brief survey of the complex editorial history of both Simplicius' commentary and Moerbeke's translation as well of the current status of their texts. It undertakes a close comparative reading of Moerbeke's renderings of the seven direct quotations of passages from Parmenides exhibited in *In De Caelo*. It will be shown that by taking recourse to this valuable tool fundamental textual decisions can be confirmed, supported or challenged in a number of crucial passages."

Unpublished Ph. D. thesis available at <https://d-scholarship.pitt.edu/16704/>

Abstract: "The history of philosophy proper, claimed Hegel, began with the poem of the Presocratic Greek philosopher Parmenides. Today, that poem is extant only in fragmentary form, the various fragments surviving as quotations, translations, or paraphrases in the works of better-preserved authors of antiquity. These range from Plato, writing within a century after Parmenides' death, to the sixth-century C.E. commentator Simplicius of Cilicia, the latest figure known to have had access to the complete poem. Since the Renaissance, students of Parmenides have relied on collections of fragments compiled by classical scholars, and since the turn of the twentieth century, Hermann Diels' *Die Fragmente der Vorsokratiker*, through a number of editions, has remained the standard collection for Presocratic material generally and for the arrangement of Parmenides' fragments in particular.

This dissertation is an extended critique of that arrangement. I argue that the reconstructions of Parmenides' poem in the last two centuries suffer from a number of mistakes. Those errors stem from a general failure to appreciate the peculiar literary character of his work as well as the mishandling, in particular instances, of the various sources that preserve what remains of his verse. By reconsidering a number of rarely questioned assumptions underlying the standard presentations and by revisiting the source material with greater care, a number of scholarly impasses that have beset the discussion of this difficult text are resolved, and the foundations for a more faithful and fuller reconstruction of Parmenides' work are established."

35. ———. 2014. "Verity's Intrepid Heart: The Variants in Parmenides, DK B 1.29 (and 8.4)." *Apeiron. A Journal for Ancient Philosophy and Science* no. 47:81-93.

Abstract: "Abstract: This paper argues that the widespread impression of Parmenides as a poor poet has led to consequential errors in the reconstruction of his poem. A reconsideration of the sources behind two of the more disputed lines in the standard arrangement of the fragments leads to the suggestion that modern editors have mistakenly treated what were similar but separate lines in the original poem as variants of a single verse. Seeing through that confusion allows us to see Parmenides in a better poetic light, and gives potential insight into how his manner of exposition relates to his philosophic message."

36. ———. 2016. "The truth about Parmenides' « Doxa »." *Ancient Philosophy*:13-45.

"In a recent article in this journal, Néstor-Luis Cordero has offered an interesting account of how scholars may have been misreading Parmenides' poem for centuries, as well as some provocative suggestions on how to correct that misreading.(1)

(...)

Cordero's essay is a valuable reminder that the arrangements of the fragments that we encounter today are reconstructions by

modern editors, a fact too easily and too frequently overlooked. However, his account of the history of scholarship on the Doxa calls for correction on some points, and his own proposed rearrangement of the fragments strikes me as at least as chimerical a production as the more familiar presentation that Cordero likens to the fantastic creatures of Greek myth. Thus, while I share with him a conviction that the orthodoxy about the Doxa is incorrect, my own view of where it goes wrong is rather different. In what follows, I begin by discussing several matters raised by Cordero that, though often neglected, are necessary preliminaries for a responsible reconstruction

of Parmenides' poem. As we proceed, attending more closely to the ancient sources for the fragments and venturing into what might seem like alien terrain, a different way of viewing the Doxa, including a 'new' fragment, will emerge."

Items such as 'DK 10' or 'DK 7.5' are shorthand for referring to the 'B' fragments (and line numbers, if given) in the chapter in DK on Parmenides.

37. ———. 2018. "An Overlooked Fragment of Parmenides in Proclus?" *Apeiron. A Journal for Ancient Philosophy and Science* no. 51:245-257.

Abstract: "I propose that a quotation appearing in Proclus' commentary on Plato's *Timaeus*, and attributed by Proclus to Parmenides, preserves an independent fragment of Parmenides' poem. Because the verses quoted share language familiar from other Parmenidean and Empedoclean lines, scholars have regarded Proclus' quotation as a conflation of lines by Parmenides and Empedocles, but when due allowance is made for the repetitiousness of Parmenides' poetry and for

- Empedocles' borrowings from Parmenides, there is no reason to assume any confusion on Proclus' part."

39. Laks, André. 1990. "'The More' and 'The Full': on the reconstruction of Parmenides' theory of sensation in Theophrastus' *De sensibus*, 3-4." *Oxford Studies in Ancient Philosophy*:1-18.

Already published in French as: "Parménide dans Théophraste", in "La Parola del passato. Rivista di studi antichi", 43, 1988, pp. 262-280.

"Under the aegis of this physicist, and pre-Empedoclean, Parmenides of the second part of the poem, I propose to analyse here the context of the quotation of fr. 16 DK in Theophrastus' *Treatise on Sensations*.(9) My aim is to show how Theophrastus, by the use which he makes of the term *συμμετρία* in his critical summary of Parmenides' theory of sensations, would have authorized the doxographical tradition (of which he is one of the primary sources) to rank Parmenides, no less than Empedocles and Epicurus, under the banner of a physics which respected the integrity of being, that is, in the terms of Aetius' report, of a physics of quantity and of aggregates. This demonstration analyses the way in which Theophrastus interprets fr. 16 and rereads closely the first part of Theophrastus' report, which presents itself in part as its exegesis." (p. 3-4)

(9) J. P. Hershbell, 'Parmenides' Way of Truth and B 16', *Apeiron*, 4 (1970), 1-23, has suggested that the fragment ought rather to belong to the first part of the poem; but it is hard to see how, if it is true that the duality of the elements, which the fragment certainly presupposes (cf. the beginning of Theophrastus' report: *δυοῖν ὄντων στοιχείων*) has no place there.

40. ———. 2013. "Phenomenon and Reference: Revisiting Parmenides, Empedocles, and the Problem of Rationalization." In *Modernity's Classics*, edited by Humphreys, Sarah C. and

Wagner, Rudolf G., 165-186. Berlin-Heidelberg: Springer-Verlag.

Summary: "This paper deals with the state of affairs arising when philosophy, which already had many of the characteristics of a modern discipline, became subject in the modern period to historicism (raising questions about its 'origins') and to new conceptions of rationality and the irrational. The term 'rationalization', used for describing some kind of process leading from an 'irrational' to a 'rational' state of affairs, takes two opposed values, depending on whether this process is considered as objective or subjective, legitimate or not. The development of a new form of rationality in Archaic Greece (philosophy) and its later historiography often display interesting tensions between the two options. Have we to deal with the 'original' phenomenon, which should not be explained away, or with transpositions, which 'refer' to traditional claims or patterns of thought? The article confronts in this respect Parmenides' fantastic description of his journey to the Goddess, in the proem of his poem, and Empedocles' self-portrait as a sorcerer and magician, in some of his fragments, and suggests that both of them are liable to the second approach.(1)"

(1) Revised version (responding to observations and requests for clarification from S. Humphreys) of Laks 2003; bibliography updated.

Many thanks to her for the translation and for the further suggestions she made while doing it. R. Wagner, whom I also thank for his reading, tells me that there are Sinological parallels to the role of shamanism in the interpretations of Greek philosophy analysed here,

for example in comments on the voyage of Qu Yuan in the *Chu ci* (see Hawkes 1985), or in the "mystical" conception of Chinese thought current in the *Tel Quel* group (cf. Saussy 2002, Chap. 8).

41. Latona, Max J. 2008. "Reining in the Passions: the Allegorical Interpretation of Parmenides B Fragment 1." *American Journal of Philology* no. 129:199-230.

"Abstract. This article attempts to determine whether Parmenides intended the chariot imagery of his poem to be construed allegorically, as argued by Sextus Empiricus. Modern interpreters have rejected the allegorical reading, arguing that Sextus was biased by Plato, the allegory's true author. There are, however, reasons to believe that a tradition (either native or imported) of employing the chariot image allegorically preexisted Plato and Parmenides. This article argues that Parmenides was drawing upon such a tradition and did portray mind as a charioteer upon a path of knowledge, and impulse as the horses, requiring guidance in order to reach the destination." (p. 199)

42. Lebedev, Andrei V. 2017. "Parmenides, ANHP ΠΥΘΑΓΟΡΕΙΟΣ. Monistic Idealism (Mentalism) in Archaic Greek Metaphysics." *Indo-European Linguistics and Classical Philology* no. 21:495-536.

Proceedings of the 21st Conference in Memory of Professor Joseph M. Tronsky.

"In our view there is only one possibility to make philosophical sense of Parmenides' poem: to take seriously the ancient tradition on his Pythagorean background and to interpret his metaphysics as monistic idealism or immaterialism. The sphere of Being described in the Aletheia is not a lump of dead matter, but the divine *Sphairos* of the Western Greek philosophical theology known from Xenophanes and Empedocles, conceived as pure *Nous* (Mind) which is the only true reality. The identity of Being and Mind is explicitly stated by Parmenides in fr. B 3,

Zeller's and Burnet's interpretation is grammatically impossible and never occurred to any ancient reader. «What-is», conceived as a sphere of divine light endowed with consciousness, is also the invisible «Sun of Justice» (the Sun that «never sets»), an archaic idea known to Heraclitus and imitated by Plato in the allegory of the Sun in the Republic. Night (the symbol of body and corporeal matter) does not exist, it is an empty name resulting from a linguistic mistake of mortals who misnamed the absence of light as a separate substance. The Kouros of the Proem is not Parmenides himself, but an Apollonian image of his venerated teacher Pythagoras whose soul ascended to the celestial temple (oracle) of gods in a winged chariot and received there an oracular revelation from Aletheia herself, a great gift to humanity that liberated men from the veil of ignorance and fear of death. The first part of Parmenides' poem was not just an exercise in speculative metaphysics concerned with problems of motion and plurality, but a handbook of philosophical theology and practical psychology with ethical and political implications: the attributes of the divine absolute are paradigmatic for the personality of an ideal citizen abiding to law (Dike) and a warrior who has no fear of death and pain, since he knows that his soul is immortal and his body is just a «shadow of smoke» (σκια ` καπνοῦ). The immobility of the divine Sphere is not a physical theory, but an image for meditation, a psychological paradigm of the ataraxia and tranquility (*hesychia*) of the wise who has eradicated all passions and has assimilated his psyche to god following Pythagoras' command ἔπου θεῶν." (pp. 497-498)

43. ——. 2019. "Idealism (mentalism) in Early Greek metaphysics and philosophical theology: Pythagoras, Parmenides, Heraclitus, Xenophanes and others (with some remarks on the «Gigantomachia about being» in Plato's Sophist)." In *Indo-European Linguistics and Classical Philology - XXIII - Proceedings of the 23rd Conference in Memory of Professor Joseph M. Tronsky*, 651-704. Sankt-Peterburgurg: Hayka.

"Abstract and table of contents:

(1) Preliminary criticism of the presuppositions of the denial of existence of idealism in early Greek thought: pseudohistorical

evolutionism, Platonocentrism that ignores the archaic features of Plato's metaphysics and psychology, and the modern stereotype of «Presocratics» as physicalists, a product of the late 19th century (excessive) positivist reaction against Hegelianism and German idealism in the English-speaking historiography of Greek philosophy.

(..)

(7) The identity of Being and Mind in Parmenides. A refutation of the grammatically impossible anti-idealist interpretation of fr. B 3 by Zeller, Burnet and their followers. Parmenides' Kouros is a poetic image of Pythagoras as the originator of the Western Greek monotheistic theology of the noetic One, conceived as a Sphere of immutable thinking divine light (the conceptual metaphor of the Invisible Sun of Justice that «never sets»).

(8) The psychological and ethical dimensions of the Eleatic doctrine of Being, almost totally neglected in the mainstream of the post-Burnetean literature. The Pythagorean doctrine of the indestructible soul serves as a practical tool of military psychological engineering: the education of fearless warriors. Strabo's commonly neglected report on invincible Eleatic warriors, educated by Parmenides' nomoi, is to be taken seriously.

(9) The «battle of gods and giants over being» (Gigantomachia peri tes ousias) in Plato's *Sophist* 246a as a testimony on the Preplatonic metaphysical idealism (mentalism). It is argued that the two warring camps should not be confined to contemporary atomists and academics only: the whole Ionian (naturalism) and Italian (idealism) traditions, mentioned in Plato's context, are meant, i.e. the whole history of Greek philosophy.

(10) Some clarifications on the use of the terms idealism, naturalism, dualism etc."

44. Lecznar, Adam. 2020. "Parmenides at his Typewriter: Nietzsche, Heidegger, and the Media of Philosophy." In

Classics and Media Theory, edited by Michelakis, Pantelis.
New York: Oxford University Press.

Abstract: "This chapter seeks to explore two writers who are crucial to the history of media theory, Friedrich Nietzsche and Martin Heidegger, and to show how their appeals to the Presocratic philosophers regularly touched on issues of deep importance to understanding the connections between philosophy and materiality. Drawing on the seminal work of Friedrich Kittler, the chapter traces the constellation of the central mediating symbols of the body, the hand, and the typewriter in Nietzsche and Heidegger,

and argues that both writers stage their returns to the Presocratics in order to reflect on the correct media of philosophy."

45. Lee, Harold N. 1953. "Father Parmenides; or, Further Concerning Negative Facts." *The Journal of Philosophy* no. 50:70-74.

"The doctrine that there are negative facts is well supported in a recent article in this JOURNAL,(1) even though the author does not unqualifiedly espouse the position. He argues that the same reasons which show that there are any facts at all operate to show that there are negative facts. Nevertheless, he does not seem to be wholly convinced by his own argument. Neither am I convinced.

The thing to do with an argument that appears sound but does not produce conviction is to examine its premises with some care.

Mr. Taylor states on page 435 (and again on page 436):

"Something surely seems wrong here, and one feels that a bit of analysis should clear it all up." I think that a bit of analysis does clear it up. What is called for is the analysis of the meaning of the

term "fact" in both his premises and argument. I shall endeavor to show that such analysis sheds a good deal of light on the problem." (p. 70)

- (1) Richard Taylor, "Negative Things," this JOURNAL, Vol. XLIX (June 19, 1952), pp. 433-449.
46. Leshner, James H. 1984. "Parmenides' Critique of Thinking: the *poludêris elenchos* of Fragment 7." *Oxford Studies in Ancient Philosophy* no. 2:1-30.

"It is reasonable to suppose that Parmenides' primary objective in writing his famous poem was to provide a correct account of what exists. Much of the long argument of Fragment 8 is aimed at establishing the attributes of 'the real' (*to eon*), and it is the teaching of Fragment 6 that all thinking and speaking must be about the real. Yet we should remember that the goddess who delivers Parmenides' message announces in Fragment 1 that we will learn also about 'mortal beliefs' (*brotôn doxas*) and 'the things believed' (*ta dokounta*). The argument of Fragment 2 begins by listing the ways of enquiry that are 'available for thinking' (*noesai*). Parmenides' poem is therefore both an enquiry into being and an enquiry into thinking, and his positive theory is both about being and about thinking. In what follows, I offer an account of Parmenides' critique of human thinking, focusing on the crucial, but largely misunderstood, idea of the *poludêris elenchos* mentioned briefly at the end of Fragment 7. I shall argue that in the motif of the *deris* Parmenides expressed a view of the human capacities for independent thinking that departed from an older and derogatory view, and that by adapting the older idea of the *elenchos* to a new, philosophical, use, he introduced an influential decision procedure into philosophical enquiry." (p. 1)

47. ———. 1994. "The Significance of κατὰ πᾶντ' ἄ<σ>τη in Parmenides Fr. 1.3." *Ancient Philosophy* no. 14:1-20.

"Few of the problematic aspects of Parmenides' poem have proven more resistant to solution than the famous crux contained in the first sentence of his Fr. 1 (following our best MS, N= Laur. 85.19, of Sextus' *adversus Mathematicos* vii 111)" (...)

"For more than fifty years, from the publication in 1912 of the third edition of DK [Diels-Kranz, *Fragmente der Vorsokratiker*] until 1968, it was widely supposed that N actually contained the phrase κατά πάντ' ἄστη -- 'down to, along, on, or among all cities', but A.H. Coxon disposed of that idea when he reported that DK's ἄστη was actually a misreading of the MS, caused perhaps by a passing glance at the ασι in the πολύφραστοι in the adjacent line. Coxon's claim that N contained ἄτη and not ἄστη was subsequently corroborated by Tarán

1977; a photocopy of Laur. 85.19. f. 124v. clearly showing the ἄτη has since been published in Coxon's 1986. (pp. 1-2)

"Nevertheless, I believe, and will proceed to argue, that a good case can be made for restoring ἄστη by emendation as the original text of Parmenides' Fr. 1.3. The case will consist of showing how, when viewed in the larger context of early Greek poetry, κατά πάντ' ἄστη can be seen to possess an entirely natural meaning and, in concert with virtually every other feature in the opening lines of Fr. 1, contribute to a single, appropriate objective for the proem as a whole. The immediate question, then, is essentially a philological matter, but to answer it we must consider how Parmenides' views, aims, and methods might have been shaped by the artistic and intellectual traditions of his time and place." (p. 2)

48. ———. 1994. "The Emergence of Philosophical Interest in Cognition." *Oxford Studies in Ancient Philosophy* no. 12:1-34.

See § 4: *Parmenides' way of knowing*, pp. 24-34.

"To the list of Parmenides' contributions to Greek philosophy we should, therefore, add what might best be described as an adaptation of a familiar 'peirastic' paradigm of knowledge for use in the context of philosophical enquiry and reflection. But, having recognized this, we might also want to view Socrates' denial of any involvement with Presocratic ideas about knowledge with some scepticism. At least when the Socrates of Plato's early dialogues sets out to discover the nature of the virtues by putting a series of rival definitions to the test-hoping to find a λόγος that will remain steadfast throughout the entire

- process of examination his approach represents not a repudiation of earlier views of knowledge, but rather a continuation and extension of them." (p. 34, notes omitted)
49. ———. 2002. "Parmenidean *Elenchos*." In *Does Socrates Have a Method? Rethinking the Elenchus in Plato's Dialogues and Beyond*, edited by Scott, Gary Alan, 19-35. University Park: Pennsylvania State University Press.

This paper is a revised version of Lesher 1984.

"The present account differs from the 1984 paper in (1) omitting any discussion of the novelty of Parmenides' view of thought as subject to the control of the individual and (2) offering a different analysis of the structure of Parmenides' main argument. My view of the development of the meaning of *elenchos* from Homer to the fourth century and its meaning in Parmenides' poem remains unchanged. In the sixteen years since to *Oxford Studies* paper appeared, there has been relatively little discussion of the meaning of *elenchos* in Parmenides' poem (and a great deal about the Socratic *elenchus*), but the view of *elenchos* as a "test" or "examination" has been endorsed in several accounts: A. H. Coxon, *The Fragments of Parmenides* (Assen: Van Gorcum, 1986); David J. Furley, *Cosmic Problems: Essays in Greek and Roman Philosophy* (Cambridge: Cambridge University Press, 1989); and Patricia Curd, *The Legacy of Parmenides* (Princeton: Princeton University Press, 1998)." (p. 19)

"The upshot of the present analysis is that Parmenides' *polude ris elenchos* was a "controversial but forceful testing" of the possible ways of thinking and speaking about what is. By adapting the older idea of an *elenchos* or *dokimasia* of a person's qualifications or a thing's true nature to consider the merits of alternative conceptions of the nature of what is, Parmenides succeeded in mounting an effective presentation of his view in the face of competing accounts and a well-entrenched common sense." (p. 34)

50. ———. 2020. "Parmenides on Knowing What-is and What-is-not." *Anais de Filosofia Clássica* no. 28:59-80.

Abstract: "Parmenides presented himself to his audiences as one who had achieved a profound insight into the nature of to *eon* or "what-is." In support of this claim he conducted an *elenchos* or "testing" of the ways of inquiry available for thinking, in the process revealing a set of informative *sêmata* or "signs." In this respect Parmenides was speaking the language of discovery heard elsewhere in early Greek poetry. Similarly, his claim that we can neither learn nor know about what-is-not (hence must not say or think "it is not") was justified by the ordinary meaning of the ancient Greek verbs for learning and knowing. Strikingly, Parmenides' revisionary metaphysics rested in large measure on a widely shared view of what can be learned, known, and made known to others."

51. Lewis, Frank A. 2009. "Parmenides' Modal Fallacy." *Phronesis. A Journal for Ancient Philosophy* no. 54:1-8.

Abstract: "In his great poem, Parmenides uses an argument by elimination to select the correct "way of inquiry" from a pool of two, the ways of is and of is not, joined later by a third, "mixed" way of is and is not. Parmenides' first two ways are soon given modal upgrades - is becomes cannot not be, and is not becomes necessarily is not (B2, 3-6) - and these are no longer contradictories of one another. And is the common view right, that Parmenides rejects the "mixed" way because it is a contradiction? I argue that the modal upgrades are the product of an illicit modal shift. This same shift, built into two Exclusion Arguments, gives Parmenides a novel argument to show that the "mixed" way fails. Given the independent failure of the way of is not, Parmenides' argument by elimination is complete." (p. 1)

52. Liu, Qinqing. 2023. "Preliminary Study on Parmenides and the Origin of Greek Dialectic." In *Proceedings of the 2022 5th International Conference on Humanities Education and Social Sciences (ICHESS 2022)*, edited by Holl, Augustin, Chen, Jun and Guan, Guiyun, 2174-2178. Paris: Atlantis Press.

Abstract: "The thesis is a discussion on Parmenides and the origin of Greek dialectic."

By reviewing the main opinions on the discoverer of dialectic, we confirm that Parmenides is the discoverer of dialectic, both Plato and Aristotle provide us with potent evidences, and from their reports we can also find a line of development of Greek dialectic from Parmenides to Aristotle. In addition, we also observe the background of Parmenides' dialectical philosophy, it has a wide range of sources from previous philosophies. Through dialectic, Parmenides thoroughly changed the whole trend of Greek philosophy, and instilled new subjects and method into it."

53. Livingston, Paul M. 2024. "Unity and Predication in Plato's *Parmenides* and Nāgārjuna's *Root Verses* " In *Crossing the Stream, Leaving the Cave: Buddhist-Platonist Philosophical Inquiries*, edited by Carpenter, Amber D. and Harter, Pierre-Julien, 96-116. New York: Oxford University Press.

Abstract: " I consider in parallel some main argumentative strategies of Nāgārjuna's *Mūlamadhyamakakārikā* [MMK] and the "dialectical exercise" of the second part of Plato's *Parmenides*. I argue that both can usefully be seen as critically targeting the kind of unity that is attributed to entities in treating them as coherent and individual subjects of predication. Both tend to show, moreover, that it is ultimately incoherent to suppose, with respect to any such subject of predication, either that it i) has the relevant kind of intrinsic unity or ii) lacking such a unity, does not exist at all. This suggests that (as I argue with reference to Plato's *Sophist* and Plotinus's *Enneads*) the philosopher's attempt to identify and define an unconditional and ultimately consistent logical structure underlying predication in general cannot succeed. Nevertheless, I suggest that by understanding language and ordinary usage as themselves conditioned phenomena, we may see the results of such attempts as delimiting the more restricted domain of what Nāgārjuna calls "conventional" or "ordinary" (*saṃvṛiti*) truth in such a way as simultaneously to evince the "ultimate" (*paramārtha*) truth of the emptiness of all phenomena. Specifically, we may see the contradictory conclusions of both Plato's analysis in the *Parmenides* and Nāgārjuna's analysis in the MMK as pointing, not toward a

superior and more consistent regulative structure of categories or of logical forms, but rather to a possible overcoming of the “habit” of reifying conceptualization that is deep-seated in ordinary language and practice, and thereby to the soteriological benefits often associated, in Buddhist contexts, with such an overcoming.”

54. Llewelyn, John. 2015. *Gerard Manley Hopkins and the Spell of John Duns Scotus*. Edinburgh: Edinburgh University Press.

Chapter 3: *Parsing the Poem of Parmenides*, pp. 19-29.

"If we use the word ‘Being’ to translate Parmenides’ τὸ ἔόν as that English word was used at the time when while an undergraduate at Oxford Hopkins wrote his piece on that thinker’s poem, we should heed John Burnet’s observation that ‘Parmenides does not say a word about “Being” anywhere . . . We must not render τὸ ἔόν by “Being”, *das Sein* or *l’être*. It is “What is”, *das Seiende*, *ce qui est*. As (τὸ) εἶναι it does not occur, and hardly could occur at this date.’(1)" (p. 19)

(...)

"To foredraw is to think or perceive, *noein*.(7) This is to grasp not only universals or essences (*essentia*) in their anticipative, predelineative or ‘foredrawing’ capacity. It is also to posit entities (*entia*) in the undistributable singularity of their momentary or continuant real existence. As Hopkins is encouraged to say by Parmenides and, we shall see, by Scotus, without the entitivity of *entia*, and with a nounhood isolated from a verbhood centred on the verb ‘to be’, thinking would fall short of metaphysical and natural *scientia*, because thinking would fall short of sameness in difference – thinking would fall short of itself.(8)" (p. 20)

(7) *Ibid.* p. 100.

(8) Incidentally, a typographical dash is called in Danish a *tankestreg*, a think-stroke.

55. Lloyd, Geoffrey Ernest Richard. 1962. "Right and Left in Greek Philosophy." *The Journal of Hellenic Studies* no. 82:56-66.

"The purpose of this article is to consider how the symbolic associations which right and left had for the ancient Greeks influenced various theories and explanations in Greek philosophy of the fifth and fourth centuries B.C. The fact that certain manifest natural oppositions (e.g. right and left, male and female, light and darkness, up and down) often acquire powerful symbolic associations, standing for religious categories such as pure and impure, blessed and accursed, is well attested by anthropologists for many present-day societies. Robert Hertz, in particular, has considered the significance of the widespread belief in the superiority of the right hand, in his essay 'La prééminence de la main droite: étude sur la polarité religieuse' [*Revue Philosophique* lxxviii (1909), 553 ff., recently translated into English by R. and C. Needham in *Death and the Right Hand* (London, 1960) 89 ff.).

It is, of course, well known that the ancient Greeks shared some similar beliefs, associating right and left with lucky and unlucky, respectively, and light and darkness with safety, for example, and death. Yet the survival of certain such associations in Greek philosophy has

not, I think, received the attention it deserves. I wish to document this aspect of the use of opposites in Greek philosophy in this paper, concentrating in the main upon the most interesting pair of opposites, right and left. Before I turn to the evidence in the philosophers

themselves, two introductory notes are necessary. In the first, I shall consider briefly some of the evidence in anthropology which indicates how certain pairs of opposites are associated with, and symbolise, religious categories in many present-day societies. The second

contains a general summary of the evidence for similar associations and beliefs in prephilosophical Greek thought." (p. 56)

56. ———. 1964. "The Hot and the Cold, the Dry and the Wet in Greek Philosophy." *The Journal of Hellenic Studies* no. 84:92-106.

"In a previous article ([*Right and Left in Greek Philosophy*] JHS lxxxii (I 962) 56 ff.) I examined some of the theories and explanations which appear in Greek philosophy and medicine in the period down to Aristotle, in which reference is made to right and left or certain other pairs of opposites (light and darkness, male and female, up and down, front and back), and I argued that several of these theories are influenced by the symbolic associations which these opposites possessed for the ancient Greeks. In the present paper I wish to consider the use of the two pairs of opposites which are most prominent of all in early Greek speculative thought, the hot and the cold, and the dry and the wet. My discussion is divided into two parts.

In the first I shall examine the question of the origin of the use of these opposites in Greek philosophy. How far back can we trace their use in various fields of speculative thought, and what was the significance of their introduction into cosmology in particular? And then in the second part of my paper I shall consider to what extent theories based on these opposites may have been influenced by assumptions concerning the values of the opposed terms. Are these opposites, too, like right and left, or male and female, sometimes conceived as consisting of on the one hand a positive, or superior pole, and on the other a negative, or inferior one? How far do we find that arbitrary correlations were made between these and other pairs of terms, that is to say correlations that correspond to preconceived notions of value, rather than to any empirically verifiable data?" (p. 92)

57. ———. 1966. *Polarity and Analogy, Two Types of Argumentation in Early Greek Thought*. Cambridge: Cambridge University Press.

"The aims of this study are to describe and analyse two main types of argument and methods of explanation as they are used in early Greek thought from the earliest times down to and including Aristotle, and to consider them, in particular, in

relation to the larger problem of the development of logic and scientific method in this period." (p. 1)

"In Fr. 2 Parmenides puts a choice between two alternatives as if these were the only alternatives conceivable.

But even if we disregard the vagueness or ambiguity of ἔστι, the 'propositions' which Parmenides expresses are not contradictories (of which one must be true and the other false), but contraries, both of which it is possible to deny simultaneously, and it is clear that from the point of view of strict logic they are not exhaustive alternatives.

Fr. 8 throws more light on Parmenides' conception of the choice between 'it is' and 'it is not'. The addition of the word πάντα in Fr. 8 11 should be noted. What he means by the word 'wholly' in the sentence 'thus it needs must be *either* that it is wholly or that it is not' becomes clear when we consider the remainder of Fr. 8 where he argues that 'what is' is ungenerated and indestructible (vv. 6-21), immovable and unchangeable.(1) 'What is not', conversely, is said to be inconceivable (8 f., 17, 34 ff.), and we are told that nothing can ever come to be from what is not (7 ff., 12 f.). The two alternatives between which Parmenides wishes a choice to be made might, then, be expressed, in this context, as *unalterable existence* on the one hand, and *unalterable non-existence* on the other. But if this is so, Parmenides' alternatives, stated in the form of propositions, are again a pair of contrary, not contradictory, assertions, for the contradictory of 'it exists unalterably' is 'it does not exist unalterably' *and not* 'it is unalterably non-existent'. By taking 'it is' and 'it is not' in *this* sense(2) as exhaustive alternatives in Fr. 8 11 and again in 16 ('it is or it is not'), Parmenides *forces an issue*. Physical objects, subject to change, cannot be said to 'be' in the sense of 'exist unalterably' which Parmenides evidently demands: but since he allows no other alternative besides unalterable existence and unalterable non-existence, then, according to this argument, physical objects must be said not to exist at all, indeed to be quite inconceivable." (pp. 104-105)

(1) See ἀκίνητον at Fr. 8 26, and the denial of all sorts of change at 38 ff.

(2) Even if we take ἔστι in a predicative, rather than an existential, sense, Parmenides' choice again seems to lie between a pair of contrary assertions, i.e. between 'it is wholly so-and-so' (e.g. black) and 'it is wholly not-so-and-so' (not black), rather than between contradictories ('it is wholly so-and-so' and 'it is not wholly so-and-so').

58. ———. 1972. "Parmenides' Sexual Theories. A Reply to Mr Kember." *The Journal of Hellenic Studies* no. 92:178-179.

Abstract: "In an article entitled 'Right and left in the sexual theories of Parmenides' (*Journal of Hellenic Studies* XCI [1971] 70–79) Mr. Owen Kember challenges my statement (*Polarity and Analogy* [1966] 17) that 'Parmenides probably held that the sex of the child is determined by its place on the right or left of the mother's womb (right for males, left for females)'. In his article Kember draws attention, usefully, to the confusions and contradictions of the doxographic tradition. He has, however, in my view, misinterpreted one crucial piece of evidence. This is the testimony of Galen, who quotes Parmenides Fragment 17 (δεξιτεροῖσιν με`ν κούρους, λαιοῖσι δε` κούρας) in the course of his commentary on [Hippocrates] *Epidemics* vi ch. 48. Kember notes, correctly, that the meaning of the fragment by itself is quite unclear: 'the only deduction which can be safely made from the actual fragment is that Parmenides thought right and left were somehow connected with sex, and even here we must rely on Galen's judgement that the passage did in fact refer to sex in the first place' (op. cit. 76)."

59. Loenen, Johannes Hubertus. 1959. *Parmenides, Melissus, Gorgias: A Reinterpretation of Eleatic Philosophy*. Assen: Van Gorcum.

Part I: *Parmenides Περί Φύσεως*, pp. 6-124.

"The philosophy of the Eleatics has at all times aroused interest, not only in historians of philosophy, but also in wide circles of philosophers who realize that the theories of important thinkers of the past belong to philosophical speculation itself. Since the present study, though based primarily on a philological method, proposes an interpretation of Eleaticism which puts the development of pre-Socratic

philosophy as a whole in a new light, it seemed desirable to the author to try to make it accessible to non-specialists as well. This might at the same time help to bridge the gulf actually existing in the field of ancient philosophy between philologists and philosophers. But if one wants to interest the philosophers without failing to satisfy the just demands on the part of the philologists, the only possible method would appear to be to discuss philological points as far as possible in notes. In spite of the drawbacks involved in this method I have followed it wherever possible. Consequently I would draw the attention of philologists particularly to the notes. Meanwhile the fact must not be disguised that the present study is essentially an interpretation of texts, so that the reader will constantly be referred to the "Fragmente der Vorsokratiker." Philosophers will thus have to go through a much larger amount of philological detail than they are used to, but they too will sometimes find indispensable explanations in the notes."
(*Preface*, p. 1)

"Having come to the end of the first part of my inquiry, I feel bound to express my great admiration of this philosopher, who possessed intellectual powers that are almost incredible at so early a stage of the history of philosophy. In conclusion I would say that he must not be looked upon as the father either of materialism or of idealism, but that he may indeed be considered the first representative of dualistic metaphysics and of a realistic form of epistemological rationalism. He discovered the unity and invariability of the concept, though only as regards the idea of being (he was struck by its transcendental character, in the pre-Kantian sense of the word) and at the same time he was the first to surmise the existence of an extra-spatial and extra-temporal metaphysical reality, which to him still formed an inseparable unity with its idea. Even though the appreciation of philosophical opponents of the school of thought of which Parmenides is the first representative may be a little more moderate than mine, I think no one will venture to deny the truth of Plato's statement that he possessed a βάθος (...) παντάλασι γενναῖον (Theaet. 183 e)." (p. 124)

60. Long, Anthony Arthur. 1963. "The Principles of Parmenides' Cosmogony." *Phronesis. A Journal for Ancient Philosophy* no. 8:90-107.

Reprinted in: D. J. Furley and R. E. Allen (eds.), *Studies in Presocratic Philosophy*. Vol. II: *The Eleatic and the Pluralists*, London,: Routledge & Kegan Paul, 1975, pp. 82-101.

"The significance claimed by Parmenides for the cosmogony which forms the second half of his poem continues to be highly controversial. The interpretations offered by Owen and Chalmers, to name two recent criticisms, are so widely divergent that one might despair of arriving at any measure of agreement. (2) But since the significance of The Way of Truth must itself remain in some doubt until the status of the cosmogony is determined, further examinations of the evidence are justified. The purpose of this article is to discuss the passages throughout the poem which are concerned with mortal beliefs, and to suggest an interpretation of the fundamental lines 50-61 of B 8. (3) In this way the function of the cosmogony may, I believe, become clearer.

Of the solutions to the problem suggested by ancient and modern critics, four main trends can be discerned:

- I. The cosmogony is not Parmenides' own but a systematized account of contemporary beliefs.
2. The cosmogony is an extension of The Way of Truth.
3. The cosmogony has relative validity as a second-best explanation of the world.
4. Parmenides claims no truth for the cosmogony.

The first view, canvassed by Zeller and modified by Burnet to a 'sketch of contemporary Pythagorean cosmology', finds few adherents among modern scholars. (4) It has never been explained, on this interpretation, why the goddess should be made to expound in detail a critique of fallacious theories. Bowra (5) has taught us to see the poem as demonstrably apocalyptic, and Parmenides needed no goddess's patronage to set forth his contemporaries' cosmological systems. Moreover,

there is nothing in the later part of the poem which can be explicitly attributed to any attested philosopher. The doxographers in general, from Aristotle, assign the cosmogony to Parmenides himself.

The second and third views above have received much support. It is argued, following Aristotle, (6) that Parmenides cannot have countenanced absolute denial of phenomena. Such an explanation, however, fails entirely to account for the later activity of the Eleatics, and is quite at variance with the evidence of the poem. It belittles the achievement of Parmenides, and fails to take into account the evidence in favour of 4., even when this is equivocal. I shall argue that the cosmogony gives a totally false picture of reality; that it is the detailed exposition of the false way mentioned in The Way of Truth (B 6.4-9) and promised by the goddess in the proem (B 1. 30-32); that it takes its starting point from the premise of that false way, the admission of Not-being alongside Being, not from the introduction of two opposites, Fire and Night; and finally, that its function is entirely ancillary to the Way of Truth, in the sense of offering the exemplar, par excellence, of all erroneous systems, as a criterion for future measurement."

61. ———. 1996. "Parmenides on Thinking Being." *Proceedings of the Boston Area Colloquium in Ancient Philosophy* no. 12:125-151.

With a commentary by Stanley Rosen, pp. 152-162.

Reprinted in: G. Reschnauer (ed.), *Früggriechisches Denken*, Göttingen: Vandenhoeck & Ruprecht, 2005, pp. 227-251.

"At the end of one of his studies of Parmenides Heidegger wrote: "The dialogue with Parmenides never comes to an end, not only because so much in the preserved fragments of his 'Didactic Poem' still remains obscure, but also because what is said there continually deserves more thought."(1) Heidegger's diagnosis of the reasons for "this unending dialogue" is instructive—Parmenides' obscurity, on the one hand, and secondly, the merit of his words as a provocation of thought." (p. 125)

(...)

"In this paper I want to elucidate Parmenides' project on the assumption that we should approach him as a philosopher whose primary concern was to explore the activity of veridical thinking, and to identify its subject and object." (p. 126)

(...)

"Drawing upon his own philosophy, Heidegger offered a number of suggestions—some of them challenging, others perverse— about the way Parmenides took thinking to relate to Being. If I understand Heidegger, he tried to get inside the mind at work in Parmenides' poem, with a view to showing what it is like to think Being with Parmenides. My paper, though it is totally different from Heidegger's in method and findings, has that much in common with his.(5) I propose that Parmenides' first call on us is not to think about Being but to think about thinking Being (6). In modern jargon, Parmenides' project is a second-order inquiry. He is not purely or primarily a metaphysician. He is investigating mind, from the starting point that something is there—Being or truth—for mind to think." (p. 127)

62. ———. 2019. "Poets as philosophers and philosophers as poets : Parmenides, Plato, Lucretius, and Wordsworth." In *Logoi and Muthoi: Further Essays in Greek Philosophy and Literature*, edited by Wiens, William, 319-334. Albany: State University of New York Press.

"I cannot prove that Parmenides, my earliest philosopher poet, was already familiar with the Greek use of poiesis for poetry specifically. But we can confidently assume that his poem was designed to strike his hearers as a supremely creative production, inspired by the unnamed goddess who instructs "the man who knows" in the respective "ways" of Truth and Opinion. It is often assumed that Parmenides wrote in verse because prose at this date (about 500 BCE) was not yet an established form of composition, but I find this proposal unconvincing. Heraclitus and other early "scientific" writers composed in prose. Parmenides's choice of verse was clearly deliberate and not continued by his Eleatic successor Zeno. Diogenes Laertius (9.22) couples Parmenides as a philosophical poet with Hesiod, Xenophanes, and Empedocles, but the association obscures big differences between these four authors. Hesiod, whether or not we call him a philosopher, was an epic poet at a time when epic poetry was the only literary genre. Xenophanes was a professional rhapsode, who recited his poems at symposia. Empedocles's hexameter poetry alludes to Parmenides, but, unlike Parmenides, Empedocles also wrote poems on non-philosophical themes; and his choice of verse for his great poem on nature may well have been influenced by his strong sympathies with Orphism and Orphism's use of hexameter poetry. We need to explain Parmenides's choice of verse through his particular intention and message.

I propose to examine his work as a philosopher poet by reference to four criteria—speculative creativity, cultural authority, emotional intensity, and memorable phraseology. Once I have done that, I shall proceed to apply these criteria to my other three philosopher poets." (p. 324)

63. Loux, Michael J. 1992. "Aristotle and Parmenides: An Interpretation of *Physics* A.8." *Proceedings of the Boston Area Colloquium in Ancient Philosophy* no. 8:281-319.

With a commentary by Arthur Madigan, pp. 320-326.

"Parmenides' argument for the impossibility of change so dominated Greek thinking that we can expect it to loom large in Aristotle's discussion of coming to be in *Physics* A, and we are

not disappointed. After presenting his own analysis of coming to be in *Physics* A.7, Aristotle devotes all of A.8 to the argument.(1)" (p. 281)

(1) In attempting to understand Aristotle's response to the Parmenidean argument, one is struck by the fact that recent literature on A.8 seldom attempts to work through the difficult text of A.8. Those writing on the chapter typically provide inferential reconstructions of Aristotle's reply to Parmenides. As philosophically interesting as those reconstructions are, they tend to leave large chunks of the text unexplained. This paper is an attempt to identify the line of argument Aristotle actually employs in A.8. Its method is unabashedly that of extended philosophical commentary. I do not claim to have explanations of every line of the chapter, but I hope the paper goes some distance towards delineating the main contours of the argument of A.8. I make no apologies for my somewhat tedious attention to the details of Aristotle's response to Parmenides since I believe that clarity on the text of A.8 is a prerequisite to more general philosophical reflection of the sort that has typified recent literature on this chapter.

Parmenides of Elea. Annotated Bibliography of the studies in English: Mac - Mou

Bibliography

1. Macé, Arnaud. 2019. "Ordering the Universe in Speech. *Kosmos and Diakosmos in Parmenides' Poem.*" In *Cosmos in the Ancient World*, edited by Horky, Phillip Sidney, 42-61. Cambridge: Cambridge University Press.

"My hypothesis is that Parmenides, who chose to express himself in the verse, vocabulary, and images of Homer, can be chiefly credited with making the categories of Archaic poetry available for cosmology,

so that the universe could start to openly be described as another κόσμος that resulted from the process described by the verbs κοσμέω and διακοσμέω.

Only such a daring move could have opened the way to call the universe simply a 'kosmos', or even the kosmos.

My further claim is that Parmenides is able to bring the universe into the list of items that a poet would call well-ordered precisely because he exposes and criticises the traditional epic relation of word to reality: a well-ordered song is one that tells the truth about what actually happened, its order fitting the order of reality itself. I would like to suggest that the way Parmenides weaves κόσμος and διακόσμος together at the end of B 8 both exposes and denounces the claim that a combination of verses, a κόσμος ἐπέων, should be expected to turn into the disclosure of a διάκοσμος. Only this

time the great ordering is not the catalogue of ships ready for battle, but the division of the great principles according to which the universe is organised by mortals. Parmenides exposes the delusion of a song claiming to disclose the organisation of the whole of reality, ordered like the armies of the Achaeans. Such an approach changes the way we look at the status of cosmology and cosmogony in Parmenides: we usually think it should either be true and consistent or false and inconsistent. Parmenides shows us how human words, projecting human practices and institutions on the universe, make it a very consistent order – and all the more deceitful because of its consistency." (pp. 42-43, notes omitted)

2. Mackenzie, Mary Margaret. 1982. "Parmenides' Dilemma." *Phronesis. A Journal for Ancient Philosophy* no. 27:1-12.

Reprinted in M. M. McCabe, *Platonic Conversations*, New York Oxford University Press 2015, pp. 73-82.

Abstract: "Parmenides the Eleatic wrote a treatise which intrigued, puzzled and confounded the later philosophical tradition.(2) In it, he argued for a strong monism: what there is, is eternal, complete, immoveable and unvarying, one and homogeneous (DK 28B 8.3-6).(3) All the rest, the world of perceptible things, is contradictory - or an illusion.

Strong monism is frighteningly radical. So Parmenides left a series of problems in his wake, some of which have proved so recalcitrant as to be dismissed with that counsel of despair 'it's a dialectical device'.(4) This paper addresses two of those problems, and recasts the dialectical device in a mood of optimism."

(2) The secondary literature on Parmenides is extensive: cf. bibliographies in J. Barnes, *The Presocratic Philosophers*, Vol.1 (London: 1979) (*PP*) and A.P.D. Mourelatos, *The Route of Parmenides* (New Haven: 1970). Like many students of ancient philosophy, I have benefited most of all from the work of G.E.L. Owen; see, for example, his classic 'Eleatic Questions' (*EQ*) in R.E. Allen and D.J. Furley eds. *Studies in Presocratic Philosophy*, Vol.II (London: 1975), 48-81: or 'Plato and

Parmenides on the Timeless Present' in A.P.D. Mourelatos, ed, *The Presocratics* (New York: 1974). 271-292.

(3) All references to H. Diels and W. Kranz, eds. *Die Fragmente der Vorsokratiker* (Zurich: 1968) (*DK*).

(4) Cf. Owen, *EQ*, 54.

3. Mackenzie, Tom. 2017. "Parmenides and early Greek Allegory." *Materiali e discussioni per l'analisi dei testi classici* no. 79:31-59.

Abstract: "This article offers a new approach to the question of the allegorical status of Parmenides' poem, and suggests a new interpretation of the problematic line B8.53. It is argued that disagreements over whether Parmenides uses allegory arise from scholars using the term in different senses. An overview of the early Greek understanding of allegory suggests that Parmenides' poem can tentatively be seen as the most extended instance of allegorical composition in early Greek literature."

4. ———. 2021. *Poetry and Poetics in the Presocratic philosophers: Reading Xenophanes, Parmenides and Empedocles as Literature* Cambridge: Cambridge University Press.

Chapter 2 *Parmenides*, pp. 65-101.

"Since Xenophanes, Parmenides and Empedocles are retrospectively categorised as philosophers, there has often been an implicit assumption that they cannot be poets in any more essential sense than that they

happen to use verse. Consequently, they are relatively neglected by scholars of Greek poetry.

In light of this neglect, the present study applies methods from modern literary criticism of ancient poetry to the texts of these three authors, whilst also remaining sensitive to their philosophical significance, in an attempt to explain what sorts of experiences they could provide to the attentive listener and by what methods. In the following chapters, I enlist a range of historical and archaeological evidence that might seem

superfluous for the history of philosophy to help reconstruct the wider cultural norms that could affect an audience's response." (p.4, notes omitted)

(...)

"Chapter 2 offers a reading of Parmenides' proem within the context of other ancient accounts of supernatural journeys to places beyond the usual mortal realm, including some Near Eastern examples from outside the Greek tradition. Although these examples were almost certainly unfamiliar to Parmenides and his audiences, they originated from an ancient literary culture which was broadly similar to, and had at least some points of contact with, that of the Greeks. They are therefore taken as evidence for the sorts of narratives which could have been familiar and so can elucidate the connotations and particularities of Parmenides' text." (p. 5, a note omitted)

5. Maddox, Graham. 2011. "The spell of Parmenides and the paradox of the commonwealth." *History of Political Thought* no. 32:253-279.

Abstract: "Given the dominance of the United States' constitutional tradition, the modern world has inherited a widespread conservatism that holds constitutional 'reform' to be risky and change to mean decline. This attitude has ancient roots. Atavism in politics may be traced to movements that draw (however remotely) upon the legacy of the presocratic philosopher, Parmenides, who promoted a monist view of the world and graphically represented a radical rejection of all change as mere illusion. As one of the forerunners of the immeasurably influential Plato and Aristotle, he helped to shape a philosophical worldview in which the ultimate reality was locked in a realm of disembodied and unchanging Forms. Despite his 'new modes and orders', archaism is apparent in Machiavelli's constitutional inheritance from Polybius, who sought to arrest change through a blending of the 'given' forms of government. This mixed constitution is inherently not conducive to democratic development."

6. Makin, Stephen. 2014. "Parmenides, Zeno, and Melissus." In *The Routledge Companion to Ancient Philosophy*, edited by

Warren, James and Sheffield, Frisbee, 126-158. New York: Routledge.

Abstract: "Parmenides, Zeno and Melissus, philosophers of the fifth century BC, are often grouped together by scholars. They are sometimes referred to collectively as the Eleatics, after Elea in southern Italy, the home city of both Parmenides and Zeno (Melissus came from

the Greek island of Samos). The connection between them is generally taken to turn on an opaque set of views enunciated by the earliest of the three, Parmenides. Each of the three can be taken as representative of a distinct philosophical strategy. Parmenides was an innovator, in that he offered positive arguments for a novel and provocative set of views about the nature of reality. Zeno was a defender, in that he attacked those who thought Parmenides' ideas sufficiently absurd that they could be rejected out of hand. Melissus developed Parmenides' thought by arguing, often in fresh ways, for views which, while fundamentally Parmenidean, differed in some details from those originally set out by Parmenides. I will accept this framework in what follows, although this account of the relation between Parmenides, Zeno and Melissus is not universally accepted. (See Plato's *Parmenides* 126b–129a for the source of the view of Zeno as a defender of Parmenides; for critical discussion see Solmsen 1971, Vlastos 1975, Barnes 1982: 234–237; on Parmenides and Melissus see Palmer 2004; for a treatment of all three see Palmer 2009: Chapter 5.)" (p. 34)

7. Malcolm, John. 1991. "On Avoiding the Void." *Oxford Studies in Ancient Philosophy* no. 19:75-94.

"Several prominent scholars have maintained that a denial of empty space, or the void, is crucial to Parmenides' rejection of plurality and locomotion.' Plurality, for example, implies divisibility but there is no *what is not* (or void) to separate one supposed portion of *what is* from another. Hence *what is* is one. Locomotion, also, might well appear to need some (empty) room for manoeuvre, but such is precluded by the proclaimed 'fullness' of *what is*.

Recently, however, interpreters of Parmenides have not been convinced that an appeal to the non-existence of a void plays a role in his denial of locomotion and plurality. The void is in fact never explicitly mentioned in his poem. More importantly, to introduce the void weakens Parmenides' position, for a *plenum* may be regarded as permitting both locomotion and plurality -- a situation adopted by his successors Empedocles and Anaxagoras. Moreover, at B 8. 22 Parmenides asserts that there cannot be any distinctions within *what is* and this principle is strong enough to preclude *any* locomotion or plurality. This renders an appeal to the absence of the void unnecessary as well as insufficient.

Let me expand on this latter point with regard to both locomotion and plurality. In so doing I shall accept certain assumptions which shall require (and receive) subsequent identification and defence." (pp. 75-76, notes omitted)

8. ———. 2006. "Some Cautionary Remarks on the 'Is'/'Teaches' Analogy." *Oxford Studies in Ancient Philosophy* no. 31:281-296.

"Parmenides says that 'what is not' cannot be thought of or expressed (fragments 2, 3, 6). Though there is no explicit filling after the forms of *einai*, let us not read them as 'exists', but let us see how far we can get without committing Parmenides to the view that we cannot think of, or refer in speech to, what

does not exist.(10) If we understand an ellipsis and take the traditional alternative, the copula, Parmenides' dictum seems obviously true. If we cannot ascribe attributes to something, we cannot conceive of it (but see n. 7 above).

By excluding not being Parmenides (fragment 8) derives an impressive(11) series of characteristics of Being. Most of these, i.e. one, unchanging, continuous, indivisible, and homogeneous, follow directly from the denial of differentiation. I shall urge that this key move is best read as taking being as incomplete, not as *existence*." (p. 284)

(7) Kahn, 'Return', 386, quotes Plotinus as denying being to the One. He reads this as removing all predicative being, but not existence, from that sublime entity. It is unclear to me how this interpretation harmonizes with the view, which he champions, that the ancients did not (implicitly) distinguish existence from predication.

(10) As against e.g. D. Gallop, *Parmenides of Elea: Fragments* (Toronto, 1984), 8.

Brown (217–18) clearly presents the paradoxical results of limiting *esti* to 'exists'.

(11) For Brown, 'startling' (216).

9. Maly, Kenneth. 1985. "Parmenides: Circle of Disclosure, Circle of Possibility." *Heidegger Studies / Heidegger Studien* no. 1:5-23.

"In order to follow up on these questions that move *from* Heidegger's thinking *to* the word of Parmenides, this essay will first take up the questions raised here - metaphysics, Greek thinking, our return to original Greek thinking, and the task of dismantling - by tending to the word of Parmenides in more recent texts of Heidegger's - specifically by tending to a certain reverberation of Heidegger's lecture "The End of Philosophy and the Task for Thinking" in the text *Vier Seminare* (Part I). Then this essay will take up the issue of

ἀλήθεια/*Unverborgenheit*/disclosure as a Parmenidean image of possibility by tending to the word of Parmenides in Heidegger's lecture course of 1942-43 - specifically by a careful reading of the published text of that course, Volume 54 of the Gesamtausgabe, entitled *Parmenides* (Part II)." (p. 6)

10. Manchester, Peter. 1979. "Parmenides and the Need for Eternity." *The Monist* no. 62:81-106.

"Greek ontology eventually developed a notion variously described as 'timeless', 'atemporal', or 'non-durational' eternity. In Proclus and Simplicius it is already a school-commonplace, with a stable vocabulary in which *aion* (eternity) is sharply distinguished from what is merely *aidios* (everlasting, occupying all times). Plotinus had perfected this notion beforehand, believing not only that he found it in Plato, but that Plato had developed it on Parmenidean grounds.

Until the last twenty years or so historians generally shared that view, on the ground of verbal agreement among familiar texts from Parmenides, Plato and the Neoplatonists.

(...)

But the criticism which distrusts the retrojection, via verbal agreement, of later conceptions into earlier argumentation has had this whole 'tradition' under intense scrutiny lately, and it has not held up uniformly well. It is no longer always conceded that the *aion* of Timaeus or the *aei on* of more common Platonic usage are nondurational, and there is increasingly frequent unwillingness to read an argument against duration in the Parmenides of our fragments.(1)" (P. 81)

"Parmenides contrived a discourse that had a different means of surviving verbatim than that of Heraclitan epigram, but survive it has. The proposal of this paper is that its treatment of time stabilizes it, provides the 'negative feedback' that holds the text homeostatic against millennia of emenders.

But what about eternity? Not the theological eternity, connected with divine omniscience and with theodicy, but the Greek ontological notion. Eternity, the Now of the All One, is not 'non-time' but the paradigm for the timeliness of numbered time." (pp. 99-100)

(1) W. Kneale, "Time and Eternity in Theology," *Aristotelian Society, Proceedings* (NS) 61 (1960-61), pp. 87-108.

11. ———. 2005. *The Syntax of Time: The Phenomenology of Time in Greek Physics and Speculative Logic from Iamblichus to Anaximander*. Leiden: Brill.

Chapter Four: *Parmenides: time as the now*, pp. 106-135; Appendix 2; *The Poem of Parmenides, Fragment 8*, pp. 170-173.

"The best place to look for how Parmenides thinks about time is the passage in which he actually refers to it:

34 The same: to think, and wherefore is the thought-upon

35 For not apart from being, in which it is what has been uttered,

36 will you find thinking, as little as if time is or is going to be

37 other outside of being, since fate has shackled it

38a whole and quiescent to be.(1)

This text is not regularly taken into consideration as concerns the theme of 'time in Parmenides' because the inclusion of the Greek word for time, χρόνος, in line 36 is judged to be impossible. Still, it is exactly what we expect and need.

These lines are the first half of what I refer to as Signpost 3, the third of four blocks of text that answer to a four line programmatic summary."

(1) 1 The construction of the passage is part of my translation of the whole of Fragment 8, presented along with the Greek from Simplicius in Appendix 2. It is defended in what follows. Line numbers are those of Fr. 8 (DK). The Greek for groups of lines will not be cited in this chapter, since it can be consulted in the appendix. The structure of the fragment for which I argue is also made apparent there.

12. Mansfeld, Jaap. 1981. "Hesiod and Parmenides in Nag Hammadi." *Vigiliae Christianae* no. 35:174-182.

"We have noticed that, in Plutarch, Parmenides' cosmogonic Eros plays an important part and that he also says that Parmenides spoke of a cosmogonic Aphrodite. This is Plutarch's name for the anonymous goddess who in Parmenides *creates Eros* (*Vorsokr.* Fr. 28B13, quoted *Amat.* 756 F29). The activities of this goddess are described in some detail in a fragment of Parmenides preserved by Simplicius only (*Vorsokr.* Fr. 28B12), and in a non-verbal quotation by the same Simplicius (*In Phys.*, p. 39, 20-1, cf. *Vorsokr.* ad Fr. 28B13).

Surprisingly, a substantial portion of the hymnic description of Eros in NHC 11, 5, is strikingly parallel to these Parmenidean passages:

NHC II [Nag Hammadi Codex II], 5, 109, 16ff. - Parmenides B12, 1-3; 4-5." (p. 179, notes omitted)

"Yet I am not going to argue that the author of NHC 11, 5 had read Parmenides, any more than he had read Hesiod. Above, I have suggested that the person responsible for the Gnostic treatise in the form in which it has come down to us was influenced by Greek literature

comparable as to its contents to passages in Plutarch." (p. 180)

13. ———. 1981. "Bad world and demiurge. A «gnostic» motif from Parmenides and Empedocles to Lucretius and Philo." In *Studies in Gnosticism and Hellenistic Religions Presented to Gilles Quispel on the occasion of His 65th Birthday*, edited by Van den Broek, Roelof and Vermaseren, Maarten J., 261-314. Leiden: Brill.

"Consequently, what I propose to do in the present paper is to open up the following question: is it possible, in Greek philosophy before the Christian era, to indicate elements or features which even a slight

familiarity with the main tenets of Gnosticism *may help us to understand somewhat better?*" (pp. 262-263)

(...)

"Helped by 'Gnostic' hindsight, one may reconsider the thought of the great Parmenides.

(...)

"This raises a very difficult problem - one which, without overstatement, may be called the conundrum of the interpretation of Parmenides. If the inviolability of Being is vouchsafed by divine powers and if, indeed, according to Parmenides, it is absolutely unthinkable that this should not be the case, in what way, then, is a confusion - both ontic and epistemic - between Being and not-Being possible? If Parmenides had remained silent about the universe, our exegetic problem would be minimal, but he gives us, in the second part of his poem, a cosmogony and cosmology which constitute a serious, original, and even influential theory of 'nature' in the Presocratic sense of the world (cf. also the goddess' announcement, Fr. 28B1, 28-32)." (pp. 263-264)

14. ——. 1994. "The Rhetoric in the Poem of Parmenides." In *Filosofia, politica, retorica. Intersezioni possibili*, edited by Bertelli, Lucio and Donini, Pierluigi, 1-11. Milano: Franco Angeli.

"In the present paper, I wish to argue that Parmenides not only uses means we may call logical, but also avails himself of means we may call rhetorical. His logic is not a formal logic or *logica docens*, but a *logica utens*. In the same way, his rhetoric is not a *retorica docens* (not yet a τέχνη, as Aristotle would say) but a *retorica utens*. Aristotle, at the beginning of his *Rhetoric*, actually uses the concept of a *retorica utens*, for he points out that rhetoric and dialectic are very closely related and that all men, more or less, make use of both, either at random or from

practice or acquired habit. It is this natural endowment which forms the basis of the art (1)." (p. 1)

(...)

"We may safely conclude that Parmenides wanted to convince his audience in every way possible not only by means of argument, but also by using every possible rhetorical effect. This explains why the concept of 'conviction' (and a number of words relating to this concept) occupies a key position in the poem (epanodos again); actually, the word for conviction and its relatives are even used as a means of conviction (41).

The maidens «knowingly persuade» the watcher at the Gate by using «blandishing arguments» (B1. 15-6): they know how to argue and to get their way (42). Truth is most persuasive (ευπειθεος), whereas there is no true πιστις (43) in the views of men (B1.29-30). The way of 'what there is' is the way of conviction (πετθους B2.4). It is the power of niorig which prevents something to come to be from what is not there (B8.12 ff.). True πιστις has driven away coming to be and passing away (B8.28-9). What mortals believe (πεποιθοτες) to be true is not so (B8.39b ff., cf. B1.30). The account of truth provided by the goddess and its comprehension is πιστος (B8.50-1).

This πιστις, one should point out, is brought about by rigorous argument; it is caused by proof. True. It does make a difference whether one is convinced by rhetorical means, or is so by logical means. But, as Aristotle says, a rhetorical proof (nioTu;) is a kind of proof, and we are most fully persuaded when we assume that something has been proved (44). Often enough, the proofs in the poem involving πιστις are addressed ad hominem, that is to say are expressed in contexts containing the personal pronouns you and me (45), or verbs in the second or first person. The goddess is addressing her one-man public; the greater part of the poem is a formal logos (in verse) pronounced by her. What we would call logical proof is her most important instrument of conviction in the Way of Truth, but it is again and again presented as precisely such an instrument. In Parmenides' day, *logica* and *rhetorica* were still in their pre-technical stage of development and, in Aristotle's

words, existed only as interrelated natural endowments. Parmenides of course knows what he is doing. Yet I would argue that for him the difference between rhetoric and logic was not as important as it would become in later times. Today, rhetorical and informal means of argument and of bringing about conviction have again become the object of serious study. But this is not my subject.*

17. ———. 2015. "Parmenides from Right to Left." *Études platoniciennes* no. 12:1-14.

Reprinted in J. Mansfeld, *Studies in Early Greek Philosophy: A Collection of Papers and One Review*, Leiden: Brill 2018, pp. 185-202.

Abstract: "Parmenides devotes considerable attention to human physiology in an entirely original way, by appealing to the behaviour and effects of his two physical elements when explaining subjects such as sex differentiation in the womb, aspects of heredity, and sleep and old age. Unlike his general cosmology and account of the origin of mankind, this topos, or part of philosophy, is not anticipated in his Presocratic predecessors. What follows is that the second part of the Poem, whatever its relation to the first part may be believed to be, is meant as a serious account of the world and man from a physicist point of view."

"The first to place the relation between the two parts of the Poem explicitly on the agenda was Aristotle, who says that Parmenides on the one hand placed himself beyond physics by postulating that there is only one immobile Being — but that, on the other hand,

constrained to follow the phenomena, he introduced two physical elements, the hot and the cold or fire and earth in order to construct the world, and in this way designed a theory

of nature. A remarkable divergence, but not, it appears, a fatal one. Aristotle even provides a link between the two parts of the Poem by adding that Parmenides classified the hot as Being and the cold as non-Being.(4) That this particular link is most unlikely matters much less than that he endeavoured to find one.

(...)

In the present paper I shall be concerned with a substantial part of the history of this reception, and use it to try and draw some conclusions. Though for the sake of simplicity the evidence will not always actually be discussed from right to left, a fair amount of

backshadowing underlies most of the following inquiry." (pp. 1-2)

18. ———. 2019. "Parmenides on sense perception in Theophrastus and elsewhere." In *ὄδοι νοήσαι. Ways to Think. Essays in Honour of Néstor-Luis Cordero*, edited by Pulpito, Massimo and Spangenberg, Pilar, 177-191. Bologna: Diogene Multimedia.

Reprinted in J. Mansfeld, *Studies in Early Greek Philosophy: A Collection of Papers and One Review*, Leiden: Brill 2018, pp. 203-217.

Abstract: "Theophrastus' account at *De sensibus* 3–4 shows (1) that he did not find evidence for a detailed theory of sense perception in Parmenides and (2) that he did not include our fr. 28B7 in his overview. The tradition followed by Sextus Empiricus and Diogenes Laertius concluded from 28B7 that Parmenides rejected the evidence of the senses in favour of that of reason (*logos*). But *logos* in Parmenides means 'argument', and *glôssa* is not the organ of taste but of speech. If Theophrastus had interpreted the evidence of 28B7 in the manner of Sextus and Diogenes he would have been obliged to discuss Parmenides' triad of purported senses between Plato's two and Empedocles' five."

19. ———. 2021. "An Early Greek Epic: Narrative Structures in Parmenides' Poem and the Relation between Its Main Parts." *Mnemosyne* no. 74:200-237.

Abstract: "The question (once again) is in what cognitively acceptable way the Alētheia and Doxa sections of the epic should be connected, that is to say in what way Parmenides himself may have envisaged the relation between ontological Truth and mistaken

human Opinions. An important distinction is found to obtain between the common run of humankind, ignorant and helpless, and an enlightened human elite. The views of this elite serve as an intermediate between the cognitive condition of humanity in general and the arcane knowledge and ontology of the Alētheia section and help to attenuate the dualism by bridging the gap between ignorance and absolute Truth.

There is a significant and crucial interplay between the two sections which works both ways, forward from the Alētheia to the Doxa section and backwards from the Doxa to the Alētheia section. Defining characteristics of the elements per se and of their

compounds in the Doxa section are reflections of defining properties of Being in the Alētheia section. Conversely, recognition of these elemental characteristics may point the way back to properties of Being. The argument of the epic from fr. B1 to fr. B19

DK is strictly organized by means of reiterated theses and type-scenes, which lend an overarching unity to the poem. This technique itself is not new, but the contents of these reiterated motifs (such as the mention of humans, of the distinction between Being and not-Being, of name-giving, or of defining properties and characteristics) are original. The reiterated motifs which secure the proofs of the main thesis function as hidden persuaders. The story of the extraordinary journey of the anonymous author to the dwelling of his nameless goddess and the revelation he receives from her have been carefully authenticated and stage-managed to provide divine backing for

the stunning doctrines put forward and are also aimed at convincing the audience."

20. Marcacci, Flavia. 2020. "Argumentation and counterfactual reasoning in Parmenides and Melissus." *Archai. Revista de Estudos sobre as Origens do Pensamento Ocidental* no. 30:1-30.

Abstract: "Parmenides and Melissus employ different deductive styles for their different kinds of argumentation. The former's poem flows in an interesting sequence of passages: contents foreword, methodological premises, krisis, conclusions and corollaries. The latter, however, organizes an extensive process of deduction to show the characteristics of *what is*. In both cases, the strength of their argument rests on their deductive form, on the syntactical level of their texts: the formal structure of their reasonings help to identify the features and logical intersections of their thoughts. On the one hand, Parmenides uses modal reasoning, enforcing the employment of the principle of the excluded middle. On the other hand, Melissus radicalizes the use of modal reasoning and employs counterfactual statements in order to develop his doctrine of what is. Despite their differences, both deserve a place in the Stone Age of logic and theory of argumentation due to their common ambition to demonstrate *what is*."

21. Marsico, Claudia. 2022. "From Filiar Love to the Parricide. Parmenides among the Socratics." In *Supplementa Eleatica Vol. 3: Le vie dell'essere. Studi sulla ricezione antica di Parmenide*, edited by Volpe, Enrico, 131-150. Baden-Baden: Academia Verlag.

"As in a cascade effect, if the views about Parmenides change, it also changes what is to be considered Eleatic. Hence, the understanding of the horizon of ideas that impact the classical period becomes more complex. It is necessary to establish which were Parmenides' ideas and what were their links with Eleatism, which were the changes introduced in the Athenian environment, and what kind of impact they produced on the Socratic realm, considering that Italy occupies a vital position in the history and the thought of the group members with

Parmenides as the central figure. In this framework, we will highlight relevant aspects of a program oriented to connect Eleatic and Socratic studies by outlining three cases strongly related to re-readings of Parmenides' philosophy, focusing on his authorship of a metaphysical exercise oriented to offer an experience of certainty and truth." (p. 132)

22. Martin, Stuart B. 2016. *Parmenides' Vision: A Study of Parmenides' Poem*. Lanham: University Press of America.

"Sifting through the various interpretations of Parmenides' poem from ancient times to the present-day, one might easily get the impression that there were two philosophers who went by the name "Parmenides." The first and much the older "Parmenides" was a religious seer warning about the danger of settling for a superficial reading of human experience. His visionary poem proclaims that Reality, although it may appear multiple, is as the mystics disclose, an all-comprehending One.¹ This Parmenides is credited with insights into the nature and meaning of the universe beyond that which reason alone can discover. This view of Parmenides might well be called, the "religious-mystical" view. However, for many if not most 20th century Western scholars, Parmenides was a protomodern philosopher weighing in against the naive religiosity of his time with a series of brilliant but flawed arguments which perhaps led him to conclude that being is one, but whose method in later, more skillful hands, has come to underpin the scientific (and naturalistic) outlook of the modern world. In short, many modern philosophers relying primarily on analytical procedures would claim Parmenides for themselves. Their interpretation of Parmenides, for want of a better name, could be called the "rationalist" view. The "religious-mystical" interpretation is firmly grounded in the belief that Parmenides' poem is precisely what it presents itself to be in its opening verses: a vision in which God appears to Parmenides and proclaims to him the way to that one-whole Truth which lies hidden behind the veil of appearances. However, the modern student of philosophy may never encounter any serious consideration of this view, for the pervasive opinion of modern specialists, usually followed uncritically by the textbook

expositors, is that Parmenides is first and foremost a rationalist, and the opening scenario is merely a literary device." (p. 1)

23. Mason, Richard. 1988. "Parmenides and Language." *Ancient Philosophy* no. 8:149-166.

Abstract: "Parmenides says very little about language. Yet what he says is important, both in the interpretation of his philosophy and more widely. This paper will aim to fit together a coherent understanding and to explain why his views have a wider interest. Four themes will be considered: the nature and extent of his critique of the use of language by mortals; his alleged position as a primordial philosopher of reference; the status of the utterances he puts into the mouth of his Goddess; and his apparent identification of speaking with existing or being."

24. Matson, Wallace I. 1980. "Parmenides unbound." *Philosophical Inquiry* no. 2:345-360.

Abstract: "One may doubt whether any two scholars interpret Parmenides in exactly the same way. Nevertheless on one fundamental point they divide naturally and sharply into two camps, which I shall call the Majority and the Minority.

The Majority hold that Parmenides intended the Aletheia part of his poem to be taken as expounding the absolute truth about τὸ εἶναι, in complete contrast to the Doxa part which presents an altogether untrue account of things that have no real existence. According to the Minority view, on the other hand, the Doxa was put forward as possessing some kind or degree of cognitive validity.

In this paper I shall argue in advocacy of the Minority position."

25. Matthen, Mohan. 1983. "Greek Ontology and the 'Is' of Truth." *Phronesis. A Journal for Ancient Philosophy* no. 28:113-135.

Abstract: "This is an essay about the ontological presuppositions of a certain use of 'is' in Greek philosophy - I shall describe it in the first part and present a hypothesis about

its semantics in the second. I believe that my study has more than esoteric interest. First, it provides an alternative semantic account of what Charles Kahn has called the 'is' of truth, thereby shedding light on a number of issues in Greek ontology, including an Eleatic paradox of change and Aristotle's response to it. Second, it finds in the semantics of Greek a basis for admitting what have been called 'non-substantial individuals' or 'immanent characters' into accounts of Greek ontology. Third, it yields an interpretation of Aristotle's talk of 'unities' which is crucial to his treatment of substance in the central books of the *Metaphysics*."

26. ———. 1986. "A Note on Parmenides' Denial of Past and Future." *Dialogue* no. 25:553-557.

"In a recent issue of *Dialogue*, Leo Groarke attempts to defend the claim that Parmenides was committed to an atemporal reality. (*)

He argues like this:

(1) In the Parmenidean dictum "[It] is and cannot not be" (B2.4), "is" means "exists", and is in the present tense (536).

(2) (According to Parmenides) there is nothing that fails to exist (536).

(3) It follows from (1) and (2) that "the past is not" and "the future is not" (537).

(4) If the past and future are not, then the present is not. "All three tenses go down the drain together" (538), and so reality is atemporal." (p. 553)

"The point that I have tried to make in this short discussion note is that one cannot be careless about the ontology that one attributes to Parmenides in order to make his ban on non-existence yield other results such as the ban on change, or the abolition of time. Groarke is not the only person to have done this: there are others who have thought that an ontology of facts is adequate to explaining Parmenides' denial of change.(6) Groarke, however, is in special trouble because his account demands, and does not just permit, facts." (p. 557)

27. McKim, Richard. 2019. "Parmenides: The Road to Reality: A New Verse Translation." *Arion: A Journal of the Humanities and the Classics* no. 27:105-118.

"Parmenides has not, however, been well served by his English translators. He wrote poetry and yet is almost always translated into prose. His poem describes a divinely inspired revelation and yet is persistently translated as if it were an exercise in deductive logic. His Greek can be strange and difficult but is never unintelligible, which is more than can be said for the Anglo-gibberish his translators too often force him to speak. Too many subscribe to the misguided notion that a "literal" translation, as close as possible to word-for-word, best represents the original. In fact, the painful English that results, so far from being faithful to the Greek, actually betrays it, creating the obscurities it purports to reflect. Parmenides' reputation for being hard to understand is largely

his translators' fault, not his.

I've undertaken to make amends by translating his poem as a poem, in a loose English approximation of the same meter. My goal is to capture some of what gets lost in prose—to mirror, however dimly, the vital role of poetic form in shaping Parmenides' vision. The demands of meter make literal translation impossible—not at all a bad thing— while paradoxically freeing the translator to be more faithful. I've tried to use this freedom to demonstrate that Parmenides is not the obscurantist would-be logician of so many other translations but a philosopher who thinks in poetry, and whose thought is as clear and accessible as it is astonishing." (pp. 105-106)

(...)

"My translation consists of all the major fragments of part one, which I've retitled "The Road to Reality" and which, with a bit of arranging, can be read as a continuous text that's pretty much complete." (p. 108)

29. ———. 2008. "Signs and Arguments in Parmenides B8." In *The Oxford Handbook of Presocratic Philosophy*, edited by Curd, Patricia and Graham, Daniel W., 189-229. New York: Oxford University Press.

"David Sedley recently complained (1) that despite the enormous amount of work on Parmenides in the past generation, the details of Parmenides' arguments have received insufficient attention. (2) It is universally recognized that Parmenides' introduction of argument into philosophy was a move of paramount importance. It is also recognized that the arguments of fragment B8 are closely related. At the beginning of B8, Parmenides asserts that what-is (3) has several attributes; he offers a series of proofs that what-is indeed has those attributes. Some (4) hold that the proofs form a deductive chain in which the conclusion of one argument or series of arguments forms a premise of the next. Others (5) hold that the series of inferences is so tightly connected that their conclusions are logically equivalent, a feature supposedly announced in B5: "For me it is the same where I am to begin from: for that is where I will arrive back again." In act, close study of the fragments reveals that neither claim is correct. Here I offer a new translation of B8, lines 2-51, with an analysis of the arguments, their structure, their success, and their importance.(6)

I begin with a caution. Many of Parmenides' arguments are hard to make out: even on the best arrangement of the available

sentences and clauses they are incomplete. Since Parmenides lived before canons of deductive inference had been formalized, he may not have thought that there is need to supply what we regard as missing premises. The interpreter's job is not to aim for formal validity, but to attempt a reconstruction of Parmenides' train of thought, showing how he might have supposed that the conclusion follows from premises he gives. This is a matter of sensitivity and sympathy as much as of logic, depending on how we understand other arguments of his as well, and requires willingness to give him the benefit of the doubt -- up to a certain point." (p. 189)

(1) Sedley, "Parmenides and Melissus," 113. Sedley's complaint applies to antiquity as well.

(2) Jonathan Barnes is a notable exception to this tendency. I am indebted to his analysis in *Presocratic Philosophers*, chaps. 9-11.

(3) So far as possible, I translate to *eon* by "what-is"; I avoid "being." The expression denotes anything that is (see note 18 here).

(4) Notably Kirk & Raven 268

(5) Owen, "Eleatic Questions."

(6) In some places my discussion depends on interpretations of B2, B6, and B7 that are not presented here for want of space. I sketch my justification for controversial views in the notes.

(18) Parmenides argues here that the second road of investigation, "is not," cannot be pursued, on the grounds that you cannot succeed in knowing or declaring what-is-not. The minimal complete thought characteristic of the first road is *eon* (or *to eon*) *estin* ("what-is is"), with "what-is" being a blank subject with no definite reference: anything that is, whatever it may turn out to be and however it may be appropriate to describe it or refer to it. Likewise for the second road: the blank subject of *ouk estin* ("is not") is *to me eon* (or *mé eon*) ("what-is-not"), and the minimal complete thought characteristic of the second road is *to me eon ouk estin* ("what-is-not is not"). The

argument is not a refutation of "is not" as such. Nor is it a refutation of "what-is-not is not" in the sense of proving that that claim or thought is false. Instead Parmenides undermines "what-is-not is not" as a possible claim or thought. Since what-is-not cannot be known or declared, then a fortiori no claim *about* what-is-not can be known or declared (for instance, that it is not). Therefore, not even the theoretically minimum thought or assertion about the second road is coherent; no one can manage to think (much less know) it or declare it. On Owen's view ("Eleatic Questions"), the second road is eliminated not at 2.7-8 but at 6.1-2, which establishes the subject of "is" to be not the blank subject I am proposing but whatever can be spoken and thought of. In my view, the second part of 6.1 (*esti gar einai*: "for it is the case that it is," which Owen translates "for it is possible for it to be") repeats the content of the first road (2.3), while the first part of 6.2 (*meden d' ouk estin*: "but nothing is not," which Owen translates "but it is not possible for nothing to be") repeats the content of the second road (2.5). with the appropriate "minimal" subjects supplied. Given these premises, it follows that it is false (and therefore not right) to think that what-is-not is or that what-is is not, but true (right) to do what the first part of line 6.1 says: "it is right both to say and to think that it [namely, the subject of "is"] is what-is." The importance of 6.1-2 thus consists in the introduction of minimal subjects for "is" and "is not" together with the associated truisms that what-is is and what-is-not (namely, nothing) is not. This prepares the way for the discussion of the first road in B8, exploring the nature of what-is. (p. 222)

30. ———. 2010. "Parmenides B8.38 and Cornford's Fragment." *Ancient Philosophy* no. 30:1-14.

"Having established the attributes of τὸ ἔον in a series of arguments that end at B8.33, in the following eight lines Parmenides goes on to explore implications of his earlier claim that 'you cannot know what is not ... nor can you declare it' (B2.7-8) in the light of the results obtained so far in B8.

(...)

One of the principal issues in dispute is the relation between a line quoted in two ancient sources (Plato's *Theaetetus* and a commentary on that work by an unknown author) and B8.38. Do those sources contain the true version of B8.38, an incorrect version of that line -- a misquotation of the true version, or an altogether different line? B8.38 is a pivotal line in the passage B8.34-41; as indicated above, I believe that it contains the end of the first part of the passage and the beginning of the second, although it is commonly understood differently." (p. 1)

31. Meijer, Pieter Ane. 1997. *Parmenides Beyond the Gates: the Divine Revelation on Being, Thinking and the Doxa*. Amsterdam: Gieben.

Contents: Part I: Being and Thinking; Chapter I. The relation of Being and Thinking 3; Chapter II. Being and temporality 15; Chapter III. Being and spatiality 29; Chapter IV. Being and Matter 44; Chapter V. Tensions of a spatial and material Being and of Thinking within the identity of Being and Thinking 47; Chapter IV. Fragment 4 of the identity of Being and Thinking 54; Appendix: Parmenides and the previous history of the concept of Being 85; Part II. Being and Logic; Chapter I. The logical circle:98; Chapter II. The subject of *estin* 114; Chapter III. The logical procedure again 123; Part III. Doxa and Mortals; Chapter I. Ways and 'Doxa?' 144; Chapter II. Scholarly views of the 'Doxa' 166; Chapter III. The basic error of fr. 8, 53,54 190; Chapter IV. Negative qualifications of the Doxa 208; Chapter V. A plea for the existence of the Doxa 217; Part IV. A panoramic survey of results 234; Bibliography 252-257; Indices 258-274.

"Crucial will also be the discussion of the ways of inquiry Parmenides offers. Their detailed examination and delineation will appear to be of vital importance for the understanding of both Being and the Doxa. Anticipating my results, I would like to present as my view that die Doxa is not at all a way of inquiry, but that it must be seen as an optimized description of Parmenides' view on this world. It embeds many theorems of predecessors to give an accomplished, overall and insuperable picture of this world, which is radically separated from "the world" of Being.

In Part I of this book the problems which arise from the identification of Being and thinking are examined. In Part II it is the issue of the relation of logic and Being that comes to the fore. In Part III I attempt to catalogue and assess the scholarly explanations given of the Doxa so far in order to clarify the problems and arrive at a view of my own. Many publications in this field are lacking in confrontation with other already existing opinions. In presenting my own views I confront the views of other scholars. Therefore, a panoramic survey of my results may facilitate the reading of this book. This is the reason why I added Part IV to provide a summary of my views and conclusions." (*Preface*, P. XV)

32. Miller, Ed. 1968. "Parmenides the prophet?" *Journal of the History of Philosophy* no. 6:67-69.

"The latest word on Parmenides comes from a recent and exhaustive study by Leonardo Tarán. (1) Among other illuminating and novel interpretations, Tarán argues that Parmenides was not, after all, guilty of the confusion between the existential and copulative senses of "to be," that he did not identify thinking with Being, and that he had no conception of atemporal reality.(2) In these and other respects Tarán's volume makes a valuable contribution to our understanding of Parmenides. One might judge, however, that Tarán work is unusually insensitive to the religious element in Parmenides' poem, and in this respect his analysis seems to echo Reinhardt's unfortunate judgment which calls Parmenides "einen Denker, der keinen Wunsch kennt als Erkenntnis, keine Fessel fühlt als Logik, den Gott und Gefühl gleichgültig lassen." (3) This inadequacy of Tarán's approach to Parmenides is evident in his treatment of the poem in general, and especially the prologue." (p. 67)

33. Miller, Fred Dycus. 1977. "Parmenides on Mortal Belief." *Journal of the History of Philosophy* no. 15:253-265.

"I shall argue here that we, also, ought to accept Plato's judgment as to the philosophical merit of Parmenides' work. At the core of Parmenides' logic, I believe, we find neither a crude equivocation on the Greek word "to be" nor a crude confusion between meaning and reference or between meaning and truth, nor a bundle of modal fallacies. What we do discover is an important insight concerning the nature of thought and discourse, expressed in such a subtly (but disastrously) confused way that the valuable was not completely disentangled from the nonsensical until Plato wrote the *Sophist*.

The repudiation of the beliefs of mortals at the outset of "The Way of Seeming" is founded upon the "strife-encompassed proof" which is developed in "The Way of Truth." I will endeavor to clarify his reasoning, considering Parmenides' attack on naming and the repudiation of mortals' beliefs (Section I) and later his principle or dictum that "you cannot think or say what is not" (Section III). In trying to assess the strengths and weaknesses of Parmenides' reasoning, I will also make use of two arguments that were intentionally directed against Eleatic teachings: Leucippus's defense of the void (Section II) and Plato's defense of falsity (Section IV)." (p. 253)

34. Miller, Mitchell H. 1979. "Parmenides and the Disclosure of Being." *Apeiron. A Journal for Ancient Philosophy and Science* no. 13:12-35.

"The aim of this discussion is to offer an interpretation of the sense and intent of Parmenides' ἔστι. As the plethora and variety of excellent analysis attests, the problem is a perplexing one. The interpreter is faced with an intentionally fragmentary utterance - the ἔστι appears to stand alone, with its subject (and, possibly, predicate) ellipted - embedded in a collection of fragments from a lost whole poem which, in turn, is itself one of the few pieces of philosophical writing to survive from the sixth century B.C. I will argue in this essay, nonetheless, that the

original context of the *ton* can be recovered and that, once this context is established, its sense can be fixed.

The key to my interpretation is a close reading of the proem. As it is, this passage is generally ignored in analyses of the argumentative substance of the poem." (p. 12)

"If this interpretation is correct, then Parmenides did not regard the contraries as mere illusion. 53 It is true that he does not provide any explicit ontological characterization of their secondary status or domain. That will be the work of Plato and Aristotle.

Nonetheless, in their accounts they are not overcoming a one-sided monism but, rather, completing a task for which Parmenides has established the starting-point and direction." (p. 28, note omitted)

35. ———. 2006. "Ambiguity and Transport: Reflections on the Proem to Parmenides' Poem." *Oxford Studies in Ancient Philosophy* no. 30:1-47.

"Let me begin by distinguishing an ultimate and a proximate task for these reflections. The ultimate task, a perennial one for students of Greek philosophy, is to understand just what Parmenides lays open for thinking and speaking when, in the so-called Truth section of his poem, fragments 2 through 8. 49, he isolates the 'is' (ἔστι) that is 'the steadfast heart of . . . truth' (1. 29). The proximate task is to explore the context Parmenides gives us for this ultimate task, the proem's account of the transformative journey to and through 'the gates of the paths of Night and Day' that brings the traveller into the presence of the truth-speaking goddess.' We modern-day philosophers have generally been reluctant to pursue this exploration too closely, not only because we are accustomed to draw a sharp distinction between poetry and philosophy, a distinction that, arguably, did not take hold in the Greek world until Aristotle, but also, more to the point at present, because Parmenides' proem seems riddled with ambiguity. This is not wrong; indeed, as I shall try to show, its ambiguity is both more extensive and more central than has been recognized heretofore. But I shall also try to show that it is a resource, not a liability; by the close of these

reflections I hope to have made compelling that and why bringing the ambiguity of the proem into good focus is key to a well-oriented turn to our ultimate task, understanding the 'is'." (p. 1)

36. Minar Jr, Edwin L. 1949. "Parmenides and the World of Seeming." *American Journal of Philology* no. 70:41-55.

"In summary, the legislative activity of Parmenides and his association with the politically-minded Pythagoreans show him to be capable of taking interest in practical affairs. The very fact of his writing a didactic poem, the rhetorical warmth of its style, the elaboration of the second part as a socially valuable doctrine, all show that his philosophy is not alien to this interest.

And the appropriateness of his intellectual position to his position in life and the correlation of his views with those of other thinkers, opposing and agreeing, which are sometimes expressed in social terms, make it seem not unlikely that he was influenced in their formation by his reaction to the problems of the " world of seeming."

In so far as he had an immediate aim of conviction and conversion, it is questionable how successful he can have been in it.

Certainly he attracted a number of brilliant and devoted disciples, but it was naive to expect many to follow the severe, logical development of his thoughts, and a type of theory which almost everyone must regard as absurd-or to expect many to be influenced strongly by a system frankly presented as truly false and only second-best. Yet his greatness, as was said at the outset, is as a thinker, not as a statesman, and his important influence was not upon his contemporaries but upon later philosophers." (p. 55)

38. Mogyoródi, Emese. 2006. "Xenophanes' Epistemology and Parmenides' Quest for Knowledge." In *La costruzione del discorso filosofico nell'età dei Presocratici = The construction*

of philosophical discourse in the age of the Presocratics, edited by Sassi, Maria Michela, 123-160. Pisa: Edizioni della Normale.

Abstract: "The purpose of this essay is to explore the role Xenophanes' theory of knowledge might have played in the formation of Parmenides' central metaphysical concerns. It provides a detailed study of Xenophanes' epistemic tenets clarified within the context of his theology and cosmology. It argues that although Xenophanes' epistemic ideas were formulated within the intellectual historical context of traditional 'poetic pessimism', an examination of his theology and cosmology indicates that inasmuch as he radically departed from the traditional notion of the divine and the divine-human relationship, his epistemology created an ambiguous epistemic setting that proved provoking for the new paradigm of knowledge philosophical speculation introduced in early Greece. Parmenides responded to this crisis by a metaphysical inquiry into the rationale of 'the quest' and the nature of reality in a way by which he brought about a fundamental breakthrough toward a new methodology to attain scientific certainty.

Since Xenophanes' epistemology was essentially related to his theology, Parmenides' response necessarily entailed a new conception of the divine-human relationship."

39. ——. 2020. "Materialism and Immaterialism, Compatibility and Incompatibility in Parmenides." *Anais de Filosofia Clássica* no. 28:81-106.

Abstract: "The article provides a critical assessment of the viability of a materialist interpretation of Parmenides' ontology, discussing it in the context of the notorious issue of the compatibility of what-is in Alētheia and the cosmic constituents (light and night) in Doxa. It makes a case for a strictly incompatibilist view and, on this basis, concludes that a materialist interpretation of what-is is wanting. Clarifying Parmenides' own notion of the material, it makes the proposal that, whereas the mind vs. body/matter

contradistinction was not available for Parmenides, he did distinguish between the natural and the supernatural. Finally,

it suggests that a special kind of duality reminiscent of the contradistinction could have featured in his philosophy, which might have influenced Plato."

40. ———. 2024. "Light, Knowledge, Incorporeality, and the Feminine in Parmenides." In *Soul, Body, and Gender in Late Antiquity: Essays on Embodiment and Disembodiment*, edited by Panayotov, Stanimir, Jugănaru, Andra, Theologou, Anastasia and Perczel, István, 33-56. New York: Routledge.

"The bulk of the volume consists of five thematic and disciplinary sections. The first one, "Gender and the Self in Greek Philosophy," begins with five studies dealing mostly with late antique philosophy and problems of gender and femininity. Here, the opening text by Emese Mogyoródi (University of Szeged) sets the stage, with some important consequences, for some of the next chapters and for scholarship dealing with the long legacy of both Parmenides and Plato's eponymous dialogue. Parmenides' usual modern interpretations acclaim him as a paragon of reason and hence as a pioneer in the foundations of Western science, as we conceive of it today. While this account is not fundamentally flawed, some crucial features of Parmenides' poem suggest that it might be misleading to present it as a paragon of "logic" of a masculinist type. The poetic ego of the poem is a young man (*kouros*) who, after a mythical journey on a chariot to the heavens, encounters an anonymous goddess who initiates him into some profound knowledge about both "Truth" and "Appearance." Further striking details of the poem suggest that Parmenides might have put a great premium on the fact that the knowledge conveyed by his poem is presented as revealed by a female figure, and the poem is thronged with traditional goddesses or female powers, persistently featuring in all three sections (Proem, *Alētheia*, *Doxa*), which suggest that they play some explanatory role both in the arguments (*Peithō*) and the metaphysical (*Alētheia*) and natural philosophical (*Doxa*) conclusions. Hence, the question is raised from substantially revised premises: what is the role of the feminine in Parmenides' poem and philosophy? This chapter also analyzes the role and the symbolism of light and night, connects

them with the poem's metaphysical and natural philosophical theses and argues that, in contrast to traditional Greek notions, as well as to mainstream modern accounts on the poem, Parmenides not only associated positive qualities with the feminine, but also accorded to it an ontological and cosmological status that is higher than that of the male gender" (pp. 5-6)

41. Møller, Vigdis Songe. 2002. *Philosophy Without Women: The Birth of Sexism in Western Thought*. London: Continuum.

Chapter 2: Thought and Sexuality: A Troubled Relationship. An analysis of Hesiod and Parmenides, pp. 21-48; Chapter 3: The Logic of Exclusion and the Free Men's Democracy. An analysis of the notions of equality and balance in Anaximander and Parmenides, pp. 49-75.

"The central philosophers in this book are Parmenides and Plato. It is in the works of these two thinkers that the ideals of unity, identity and unchangeability are developed with the greatest clarity. These ideals can however be traced back to the poet Hesiod, who serves as the starting point of my study.

In Hesiod's texts, these ideals and their opposites are related to sexual difference; whereas unity, identity and unchangeability tend to be symbols of the man and the masculine, plurality and death are seen as representing the woman and femininity. Parmenides and Plato significantly augment this picture: since the unity of existence can only be grasped by means of thought, this too becomes associated with the man and the masculine. This view is unambiguously developed in Plato's *Symposium*, to which one of my chapters is devoted. In that dialogue, Plato depicts the philosopher as a man whose love of ideas allows him to aspire to a higher form of reality than that attained by the woman in giving birth. By means of his thought the philosopher immortalizes himself, thereby gaining independence of women and indeed heterosexuality in any form. Masculine spiritual love and creativity is contrasted here with female sexuality and the process of giving birth." (*Introduction*, p. XIV)

"To prepare the ground for what will be a fairly detailed analysis of Parmenides' work, I shall begin by taking a close look at the Theogony. It will become clear that Hesiod's genealogical account of reality runs into serious theoretical difficulties, something which Parmenides takes into account in his own work. Parmenides' concern is to find an alternative to the genealogical perspective. He attempts to grasp the peculiarity of existence without reference to the question of origins. But his intense refutation of everything connected with birth and becoming also results in a rejection of the female and the postulation of an ideal of existence correspondingly remote from sexuality, a type of existence which is in many ways purely masculine; only once we get beyond sexuality can we glimpse immortality. I am aware that it is unusual to attribute such thoughts to Parmenides, who has often been called 'the father of logic'. But in emphasizing the Hesiodic tradition to which he so obviously belongs, I hope to throw this aspect of his thought into clear relief and thereby expose his philosophy in an unfamiliar shape.(4)" (pp. 22-23)

(4) The account of Parmenides' philosophy offered here differs significantly from prevailing interpretations on a number of points. Firstly, the research tradition has not been commonly concerned with the issue of gender and sexuality in relation to Parmenides. It is only in the course of the last ten years that such themes have received any attention whatsoever, and evidently they still belong on the fringe of Parmenidean research, to put it mildly.(...)

42. Morgan, Kathryn. 2000. *Myth and Philosophy from Presocratics to Plato*. Cambridge: Cambridge University Press.

On Parmenides see pp. 67-86.

"A study of the fragments of Parmenides' philosophical poem concerning the possible types of human enquiry provides an opportunity for an in-depth analysis of one suggestive use of myth in Presocratic philosophy. We have argued that Xenophanes defined his philosophical aspirations by excluding poetic/mythological practice. Herakleitos appropriated and transformed mythological elements in order to draw attention

to the failings of traditional myth as an adequate system of signification. Both philosophers are concerned with the problematic relationship of language and reality. Yet in both cases poetry and mythology, although important, even crucial targets, are not *structuring* principles in their philosophy. When one moves to the fragments of Parmenides, one is in a different world. Although Parmenides' mythology is non-traditional, his search for knowledge is communicated to the reader through familiar motifs of quest and revelation and is attended by divine mythological beings. His wisdom is expressed in epic hexameters, which, although commonly stigmatised as clumsy and pedestrian, transport us back to the poetic and mythological realm of Homer and Hesiod. (1) What on earth was Parmenides about?

In this section, I shall characterise the ways in which Parmenides chooses to talk about his insight into the problems of being. Treatments of Parmenides sometimes imply that the mythological framework of the poem is a veneer that can be stripped away to reveal pure philosophical argument. On the contrary, mythological elements are integrated into the argument, and interpreting their status is one of the crucial philosophical problems in the poem. Separating Parmenides' *mythos* from *logos* he speaks the same tendency we saw in the interpretation of Xenophanes' literary ethics and theology: the desire to tidy up philosophy (separate *mythos* from *logos*) so that it conforms to modern perceptions of its subject matter and method. The idea that literary presentation might have philosophical import is ignored. There is, however, no dichotomy between logic on the one hand, and metaphor and myth on the other. This is to argue in terms which would have been foreign to Parmenides. Problems of mythological style and philosophical content are not only parallel, they are expressions of the same difficulty, the relationship between thought and its expression. Here Parmenides follows in the footsteps of his predecessors as he focuses on the problems of myth as a way of symbolising the difficulties inherent in all language.

Parmenides wishes to make his audience aware of the non-referentiality of what-is-not. He does this through logical

argument and by developing mythological figures of presentation that transgress the conclusions of his argument. Both argument and literary presentation problematise the status of the audience; there is a paradoxical incoherence between the world in which we live and the uniqueness and homogeneity of what-is. These difficulties are mirrored in the uncertain relationship of the narrator of the poem (the *kouros*), Parmenides the author, and the goddess who reveals the truth. The goddess replaces the Muse, but the source of inspiration is uncertain. Let us first survey the main features of the revelation, emphasising the close connection between thought and being, along with the key themes of narrative persuasion and conviction. We will then engage in a close reading of the mythological framework of the proem to show how it structures and elaborates the key themes of the rest of the poem. Finally we shall consider the poem as a series of nested fictions that draw attention to problems in the relationship of language and reality, problems of which the mythological framework is paradigmatic." (pp. 67-68)

(1) Parmenides may also have included Orphic elements, which would again contribute to a sense of comfortable orientation in a tradition (Mourelatos 1970: 42). For a recent, but unconvincing, attempt to find Orphism in Parmenides, see Böhme 1986.

43. ———. 2022. "Parmenides and the Language of Constraint." In *Hesiod and the Beginnings of Greek Philosophy*, edited by Iribarren, Leopoldo and Koning, Hugo, 221-238. Leiden: Brill.

"I shall suggest that Parmenides' language of constraint is appropriated from the *Theogony*, and that the triumphalism of Parmenides' establishment of the logical primacy of Being has its roots in the victory of the Olympian gods over the Titans and their

imprisonment in Tartarus. I shall start by outlining the topographical similarities between Hesiod's underworld and the locale of the revelation narrated in Parmenides' proem, and then pause to reflect on the interpretative constraints placed (or not placed) on our analysis by these similarities. The

analysis will then focus specifically on the language of imprisonment shared by Hesiod and Parmenides, as well as the motif of returning to the light, arguing that it is necessary to move beyond interpretative strategies based on imposing Hesiodic topography on Parmenides. We shall see that Parmenides gives the language of binding a paradoxically positive significance, creatively transforming this Hesiodic motif." (pp. 221-222)

44. Morrison, J.S. 1955. "Parmenides and Er." *Journal of Hellenic Studies* no. 75:59-68.

Abstract: "The aim of this paper is to explore the suggestion that Parmenides's poem, or at any rate some of it, has light to throw on the difficulties of the myth of Er in the *Republic*. Parmenides descends to the underworld as a shaman-poet in search of knowledge, Er goes there by the fortuitous circumstance of his death-like trance; but both *katabaseis* share a common setting, and in both the hero is shown a glimpse of the real shape and mechanism of the universe. In the case of Parmenides the exhibit is two-fold, both 'the unshakeable heart of rounded truth' and 'the opinions of men in which there is no true belief'. Interest has been mainly concentrated on the former, metaphysical, section, from which the greater part of our fragments derive; but the latter contained, in the system of *stephanai* (*), an account of the appearance of the universe, which is interesting, both on its own account and in view of the light it throws on the difficulties of Er's myth. I shall consider first (I) the setting of Parmenides's poem as it appears in the opening lines, then (II) propose an interpretation of the system of *stephanai*, and (III) seek support for some of its main features in the general tradition of cosmological speculation from Homer downwards. Finally (IV), I shall proceed to examine the myth of Er and offer an interpretation of some of its difficulties which will take account of this body of earlier thought."

[(*) "Parmenides, on the other hand, in fact [proposes] a fabrication. He makes up something like a wreath—he calls it a *stephanē*—a continuous blazing circle of light which encircles the heaven, and he calls it god." Cicero *On the Nature of the*

Gods i, 11, 28 (*Dox.* 534, 14–535, 8) cited by A. H. Coxon, *The Fragments of Parmenides*, Revised and Expanded Edition, Las Vegas: Parmenides Publishing 2009, *Testimonia* 54, p. 144.]

45. Mosimann, Robert. 2001. "Parmenides. An Ontological Interpretation." *Philosophical Inquiry* no. 23:87-101.

"Presocratic scholarship is a rare phenomenon and even when it occurs, often commences from misguided tenets. Anglo-American philosophy has been much preoccupied by linguistic analysis and logical concerns. Regrettably these concerns of the day have been foisted upon Parmenides as if he too were a shadow of today's illusions in philosophy.

This paper has several objectives, however, the principal one will be to provide an Ontological interpretation of Parmenides in replacement of the Logical Ones which have come to dominate Anglo American scholarship.

The second concern of this paper will be to correctly interpret "estai" and "that which is" in Parmenides as well as to determine the existential status of the objects of everyday experience.

Finally, we will discuss Parmenides conception of time and whether "that which is" is atemporal, eternal or neither." (p. 87)

46. Mosquera Rodas, Jhon Jairo. 2024. "A Different Perspective on the Polemic Between Heraclitus and Parmenides Concerning the Inner World and the Outer World in the Unity." *SSRN*:1-15.

Abstract: "The research presents the relationship between movement and staticity as an essential polemic presented by the ideas of Heraclitus and Parmenides, naturalist philosophers, in correspondence with the solution presented from the perspective of the macrouniverse and the contributions of Einstein and Rajinder, Singh, for the solution of this.

The paper presents the analysis of motion and staticity as the centre of the essential polemic between the two philosophers, and then makes an in-depth comparison between the most

important fragments of Heraclitus and some key aspects of Parmenides' poem of nature, to finally present a complex solution to the polemic using aspects of cosmology and philosophy in permanent relation to unity."

47. Mourelatos, Alexander P. D. 1965. "Φράζω and Its Derivatives in Parmenides." *Classical Philology* no. 60:261-262.

"Ever since Villoison's 1788 (*) publication of the Venetus scholia to Homer, classical philologists have been alert to the fact that φράζω may not (and usually does not) carry the meaning *dico* in early Greek poetry. It has rather a concrete sense, the core or root of which is "to point out," "to show," "to indicate with a gesture," "to appoint," "to instruct."

(...)

I would like to suggest here that the early, concrete sense of φράζω will improve the translation of 2. 6-8 and will also give us the key to the translation of that puzzling adjective πολύφραστοι applied to the horses in 1. 4." (p. 261)

48. ——. 1969. "Comments on 'The thesis of Parmenides'." *The Review of Metaphysics* no. 22:735-744.

About the paper by Charles Kahn (1969).

"The first of the two routes outlined by the Parmenidean goddess in fr. 2 is given this interpretive formulation in Kahn's paper: "It (whatever we can know, or whatever there is to be known) is a definite fact, an actual state of affairs." (1) Kahn explains that Parmenides intends to assert "not only the reality but the determinate being-so of the knowable object," in other words, that he posits existence both "for the subject entity" and "for the fact or situation which characterizes this entity in a determinate way" (pp. 712-713) .

As indicated by Kahn's use of the pronoun "whatever," the thesis has the force of universality. (2) Let me condense the formulation into a single proposition:

(1) For all p, if p is known, then p is true iff (3) there actually exists a certain F and a certain x such that Fx.

What should count as the denial of (1) P Presumably either:

(2) It is not the case that for all p, etc. [as in (1)];

or, more explicitly,

(3) There is a p such that: p is known, and p is true even though a certain x does not exist, or a certain F does not obtain.

If (1) is an adequate formulation of Parmenides' first route (which according to Kahn it is), then (3) ought to be the correct formulation of the second route. But Kahn's own formulation is significantly different. The first of the two "partial aspects" he distinguishes, the aspect of nonexistence of the subject, he formulates as the claim "that an object for cognition does not exist, that there is no real entity for us to know, describe, or refer to." The second aspect, nonexistence of a certain state of affairs, he expresses as the claim "that there is . . . no fact given as object for knowledge and true statement: whatever we might wish to cognize or describe is simply not the case" (p. 713). Either aspect could be condensed in either of the following formulations:

(4) There is no p such that: p is known, and p is true iff there actually exists a certain F and a certain x such that Fx.

(5) For all p, if p is known, then p is true if a certain x does not exist or a certain F does not obtain.

It should be noticed immediately that (4) and (5) are alternative formulations not of the contradictory of (1) but of its contrary. If anything is clear about the argument in Parmenides' poem, it is that he intends the two routes as exclusive alternatives, the one a contradiction of the other.' Kahn's analysis thus appears to involve an imprecise formulation of the opposition between the two Parmenidean routes."

(1) Charles H. Kahn, "The Thesis of Parmenides," pp. 711-712. References to the paper will hereafter be given mostly in the

text and by page number only.

(2) The formulation of p. 714 has similar scope: "*esti*" claims only that something must be the case in the world for there to be any knowledge or any truth." The deflating expressions "only" and "something" should not mislead; the governing universal quantifier is in the pronoun "any."

(3) The usual abbreviation for "if and only if."

(4) But Kahn says (p. 713) that Parmenides' second route "would deny both assertions" (i.e., both the ascription of existence to *x* and the ascription of actuality to *F*). The "both" seems to be an over-statement not required by Kahn's interpretation.

(5) Kahn recognizes this (p. 706). The point I am making has nothing to do with the fact that the modal clauses in the two routes of fr. 2 are related as contraries. Propositions (1)-(5) are formulations of the nonmodal clauses of the routes.

49. ———. 1970. *The Route of Parmenides: a Study of Word, Image, and Argument in the Fragments*. New Haven: Yale University Press.

New, revised edition including a new introduction, three additional essays and a previously unpublished paper by Gregory Vlastos, *Names of Being in Parmenides*, Las Vegas: Parmenides Publishing, 2008.

Reprint of the pages 222-263 (abridged and slightly revised) with the title: "The Deceptive Words of Parmenides' 'Doxa' " in: Alexander Mourelatos (ed.), *The Pre-Socratics. A Collection of Critical Essays*, Garden City: Anchor Press, 1974; second revised edition: Princeton: Princeton University Press, 1993, pp. 312-349.

Contents: Returning to Elea: Preface and Afterword to the revised and expanded edition (2008) XI-L; Part I. The route of Parmenides: a study of word, image, and argument in the Fragments: Use of Greek and treatment of philological and specialized topics LIII; Abbreviations used in Part I LVII-LIX; 1. Epic form 1; 2. Cognitive quest and the Route 47; 3. The

vagueness of What-is-not 74; 4. Signposts 94; 5. The bound of reality 115; 6. Persuasion and fidelity 136; 7. Mind's commitment to reality 164; 8. Doxa as acceptance 194; 9. Deceptive words 222; Appendix I. Parmenides' hexameter 264; Appendix II. Interpretations of the Subjectless *esti* 269; Appendix III. The meaning of *kré* and cognates 277; Appendix IV. Text of the Fragments 279; Supplementary list of works cited in Part I. 285; Part II. Three supplemental essays; Abbreviations used in Part II 297; 10. Heraclitus, Parmenides, and the naive metaphysics of things 299; 11. Determinacy and indeterminacy, Being and Non-Being in the Fragments of Parmenides 333; 12. Some alternatives in interpreting Parmenides 350; Part III. The scope of naming: Gregory Vlastos (1907-1991) on B.38 and related issues (Essay not previously published: "Names" of being in Parmenides, by Gregory Vlastos 367; Indexes to Parts I-III 391-408.

"My own aim has been to steer a middle course, keeping three points in sight: (a) Parmenides' relation to the epic tradition; (b) the deep and central involvement of his thought in the sequence of Greek philosophy from Thales to Plato; (c) the supra-historical dimension of the concepts, problems, and arguments in the poem.

The book is not intended as a commentary on the fragments. For this one must still turn to Hermann Diels' *Parmenides' L.ehrgedicht* (Berlin, 1897) and to the two more recent commentaries: Mario Untersteiner's *Parmenide: testimonianze e frammenti* (Florence, 1958) and Leonardo Taran's *Parmenides: A Text with Translation, Commentary and Critical Essays* (Princeton, 1965). The most up-to-date, comprehensive account of the various interpretations of individual lines and passages will be found in the Italian revision of Zeller's history of Greek philosophy: E. Zeller-R. Mondolfo, *La filosofia dei Greci nel suo sviluppo storico*, Part I, 3, "Eleati," ed. G. Reale (Florence, 1967), pp. 165-335.

As the subtitle of the present study indicates, I have concentrated on the actual language of the fragments: on analyzing the meaning of key words, on articulating arguments,

and on exploring the context and morphology of images in the poem. These three aspects I see as congruent. The study of Parmenides' vocabulary reveals that the key terms are embedded in certain paradigms involving analyzable logical structures. They provide trace lines for the argumentation—the logical grammar of the words channels the course of the argument. A similar point can be made with reference to the second aspect mentioned in the subtitle. The imagery introduced in the narrative prelude (B1) is preserved, to an important extent, through verbal echoes in the rest of the poem. But the images do not function evocatively, to suggest a mood, or to point to a symbolic value. Rather, they come in certain configurations of motifs or themes, familiar from Homer (especially the *Odyssey*) and from Hesiod. The imagery can thus provide a sort of logical calculus for the argument, as well as paradigms or-models for the radically new concepts of knowledge and reality which Parmenides strives to formulate.

I might best summarize all this in saying that I have tried to do justice to the fact that Parmenides composed a philosophical argument in the form of an epic poem. In accordance with this approach, I have also tried to show in the concluding chapter that the poem's dramatic setting, rudimentary as it is (an all-knowing goddess in a double relation to "ignorant mortals" and to a privileged youth, who is entrusted with a revelation to be subsequently communicated to his fellow men), interacts in important ways with the rhetoric and the argument of the poem as a whole. (The comparison with Plato is, once again, apposite.)" (from the *Preface* to the first edition, 1970, pp. XIV-XV)

"In the nearly four decades that have passed since the Yale University Press edition, the volume of literature on Parmenides, both books and essays, has exploded. Accordingly, a thorough and fully updated revision is out of the question. It could only be a total re-writing of the book.

Let me, then, clarify at the outset the scope of "revised and expanded." On its subject, *The Route of Parmenides* inevitably reflects the *status quaestionis* of the mid- and late- 1960s. The

revisions in the present reissue of the Yale Press book (Part I of this volume) are modest: mostly corrections of misprints; altering or adjusting some misleading formulations; editing some egregiously dated phrases, such as "X has recently argued," or "in this [twentieth] century"; and the like. All this was done with care not to change the arabic-number pagination (except for the Indexes) of the Yale Press edition; for it was my concern not only to keep costs of production low but also to ward off the emergence of inconsistencies in citations of the book in the literature.

(...)

If the revisions are delicate and unobtrusive, the expansion is substantial and obvious. Part II reprints three essays of mine, composed in the mid- and late- 1970s, in which I sought to supplement, to strengthen, and in some respects also to modify theses that were advanced in the original edition of the book (theses that are still represented here in Part I). As in the case of the text in Part I, slight adjustments and corrections have been made for the reprinting of the three essays. But the typesetting and pagination in Part II are, of course, new. Part III consists of a previously unpublished essay by Gregory Vlastos. The rationale of publishing posthumously this essay by Vlastos, as well as that of reprinting my own three previously published essays, is perhaps best given in the course of a narrative, which immediately follows here, of my engagement with the thought of Parmenides over the years. Additional comments and afterthoughts, ones that reflect my present views on crucial points of interpretation, will be presented in the course of the narrative and in the closing sections of this Preface." (from the Preface to the Revised and Expanded Edition, 2008, pp. XI-XIII)

50. ——. 1971. "Mind's Commitment to the Real: Parmenides B8 34-41." In *Essays in Ancient Greek Philosophy*, edited by Anton, John P. and Kustas, George L., 59-80. Albany: State University of New York Press.

"An expanded version of this paper appears as chapter 7 of my book, *The Route of Parmenides*" (p. 59)

"In proposing to undertake here yet another argument on the analysis of the passage, I do not aim for anything like certainty or finality of exegesis. This would be too much to hope for, when we are working at such small scale, and all the more so in the case of pre-Socratic

studies, where the evidence itself is limited and fragmentary and our controls over language and background only too imperfect. Rather it is through an analysis of this passage that I can explain most clearly and directly a certain conception of the relation of mind to reality for which I also find evidence in other texts, in some of the characteristic aspects and themes of Parmenides' poem, and which I consider philosophically and historically important. So let me proceed directly to the analysis, not pausing to review or to formulate the status quaestionis, but taking up points of controversy as they arise." (pp. 59-60)

Supplementary vol. I: E. N. Lee, A. P. D. Mourelatos, R. M. Rorty (eds.), *Exegesis and Argument. Studies in Greek Philosophy Presented to Gregory Vlastos*, Assen: Van Gorcum.

Already published as chapter 10 of *The Route of Parmenides: a Study of Word, Image, and Argument in the Fragments*.

"The world we know is not a mere thing or an aggregate of things but a whole that is conceptually articulated. It is pervaded by abstract entities, such as qualities, kinds, and relations—entities we can only explain to ourselves indirectly, by saying they are what in the world corresponds to expressions of such-and-such form. Let me refer to this conception by the phrase "the world as logos-textured." The great revolutionary is, of course, Plato; and the great moment of the revolution is in the doctrine of the communion of forms in the *Sophist*, with perhaps an initial, programmatic thrust in this direction already made by the Socrates of *Phaedo*, who "takes refuge in λόγος." Aristotle feels so much at home in the new logos-textured world that he takes it for granted that his early

predecessors, too, must have thought in terms of substance-attribute, quality, privation, and like abstractions.

My purpose in this paper is to look into the pre-history of this revolution. Two thinkers, Heraclitus and Parmenides, played decisive, though contrasting roles. I will also try to show what was the genuine and compelling attractiveness of what I shall here call "the naive metaphysics of things." For I do not wish to suggest that Heraclitus and Parmenides sought to correct a parochial, or merely primitive error.

The allure of this naive metaphysics would thus also help explain why for Plato the movement toward the logos-textured world involved so much soul-searching and self-criticism." (*The Route of Parmenides*, pp. 299-300 of the 2008 edition; two notes omitted)

52. ———. 1975. "Determinacy and indeterminacy as the key contrasts in Parmenides." *Lampas* no. 8:334-343.
53. ———. 1976. "Determinacy and Indeterminacy, Being and non-Being in the Fragments of Parmenides." In *New Essays on Plato and the Pre-Socratics*, edited by Shiner, Roger and King-Farlow, John, 45-60. Guelph: Canadian Association for Publishing in Philosophy.

"The main argument in Parmenides' didactic poem begins with these remarks by the unnamed goddess who delivers the revelation (B2 in Diels-Kranz *Die Fragmente der Vorsokratiker*): [follow a translation of B2-B8, here omitted]

Modern students of Parmenides have agonized over the question as to how precisely we are to construe the first *esti* and the *einai* of the positive "route," and the *ouk esti* and *me einai* of the negative "route". The older solution was to attempt to guess the identity of the suppressed subject from the context, and then to supply it in the translation (e.g., "Being exists . . . or "Something exists," or "Truth exists...," or "The route (*hodos*) exists...," and the like). In more recent years a certain consensus has developed, at least in

English-language literature, that Parmenides' argument depends on suppressing the subject initially; that it is his

intention to allow the subject to become gradually specified as one ponders the logic and implications of the two routes. Within that wider consensus, my own argument has been (2) that Parmenides' subjectless *esti* in B2 is best understood as (syntactically) a bare copula, with both its subject and its predicate complement deliberately suppressed. The route *esti* would thus represent not a proposition or premise but the mere form or frame of propositions that characterize their subject in positive terms, "____ is ____" or "x is F" for variable x and F; the route *ouk esti*, correspondingly, would represent the form of propositions that characterize their subject in negative terms, "____ is not ____" or "(x is not-F)," for variable x and F.

Of the arguments which, I believe, justify this construction, I shall restate here only those that can be presented most briefly; I shall also present some fresh considerations and additional evidence; and, on certain points, I shall qualify or attempt to elucidate my earlier account." (pp. 46-47 some notes omitted)

54. ——. 1979. "Some Alternatives in Interpreting Parmenides." *The Monist* no. 62:3-14.

"In the work of interpreting Parmenides we have witnessed in the 'sixties and 'seventies, in English language scholarship, that rarest of phenomena in the study of ancient philosophy, the emergence of a consensus. Four interpretive theses now seem quite widely shared: (a) Parmenides deliberately suppresses the subject of *esti*, "is," or *einai*, "to be," in his statement of the two "routes" in B2, his intention being to allow the subject to become gradually specified as the argument unfolds. (b) The negative route, *ouk esti*, "is not," or *me einai*, "not to be," is banned because sentences that adhere to it fail to refer (semantically speaking) to actual entities - the latter to be understood broadly, as will shortly be stated in thesis (d). (c) The argument does not depend on a confusion between the "is"

of predication and the "is" of existence. (d) In the relevant contexts, *esti* and *einai* involve a "fused" or "veridical" use of the verb "to be"; in other words, *esti* or *einai* have the force of "is actual" or "obtains," or "is the case," envisaging a variable subject x that ranges over states-of-affairs. (1)

I formulate the four theses as abstractly and schematically as I can to do justice to the considerable variation of scholarly opinion that obtains within the consensus. It is clear, nevertheless, that the four theses concern fundamental points, and so one may even speak of the emergence of a standard Anglo-American interpretation of Parmenides-let me refer to it as "SI," for short." (p. 3)

"In several respects, which correspond to the criteria of adequacy just cited, SI falls short. I detail these shortfalls in the next five paragraphs. The considerations I offer do not amount-I hasten to emphasize - to a refutation of SI. But they do provide pointers of the directions in which Feyerabendian alternatives might be sought." (p. 5)

(1) See G.E.L. Owen, "Eleatic Questions," (1960), W.K.C. Guthrie, *A History of Greek Philosophy: Vol. II, The Presocratic Tradition from Parmenides to Democritus*, pp. 6-57; Montgomery Furth, "Elements of Eleatic Ontology," (1968) Charles H. Kahn, "The Thesis of Parmenides" (1969); Michael C. Stokes, *One and Many in Presocratic Philosophy* (1971), pp. 127-148; David J. Furley, "Notes on Parmenides" (1973); Edward Hussey, *The Presocratics* (1972), pp. 78-99; T. M. Robinson, "Parmenides on Ascertainment of the Real" (1975) [references abbreviated].

My formulation both of the consensus and of alternatives fails, unfortunately, to take into account a major new interpretation of Parmenides: Jonathan Barnes, *The Presocratic Philosophers*, 2 vols. (London: Routledge & Kegan Paul, 1979), vol. 1, pp. 155-230, which appeared after the present paper had already gone to print.

"It has often been noticed that Plato, and before him Parmenides, assimilates "what is not" (μηδέν or ουδέν). (1) Given that the central use of "nothing" has important ties with the existential quantifier ("Nothing is here" = "It is not the case that there is anything here"), it has widely been assumed that contexts that document this assimilation also count as evidence that both within them and in cognate ontological contexts the relevant sense of "being" or "to be" is that of existence. That this assumption is not to be granted easily, has been compellingly argued by G. E. L. Owen. (2) His main concern was to show that the assumption is particularly mischievous in the interpretation of the *Sophist*, where he found it totally unwarranted. My own concern is to attack the assumption on a broader plane. "Nothing" in English has uses that do not depend on a tie with the existential quantifier. So too in Greek: *meden* or *ouden* can be glossed as "what does not exist," but it can also be glossed as "not a something," or in Owen's formulation, "'what is not anything, what not in anyway is': a subject with all the being knocked out of it and so unidentifiable, no subject." (3) In effect, the assimilation of "what is not" to "nothing" may—in certain contexts—work in the opposite direction: not from "nothing" to "non-being" in the sense of non-existence; rather from "non-being" as negative specification or negative determination to "nothing" as the extreme of negativity or indeterminacy. To convey the sense involved in this reverse assimilation I borrow Owen's

suggestive translation "not-being" for μὲν οὐ, a rendering which makes use of an incomplete participle, rather than the complete gerund, of the verb "to be." (p. 319)

(2) Owen, "Plato on NotBeing," pp. 241-248 and passim. For use of this assumption in interpreting Parmenides, see D. J. Furley, "Notes on Parmenides," in *Exegesis and Argument: Studies in Greek Philosophy Presented to Gregory Vlastos*, Phronesis, suppl. vol. 1 (Assen and New York, 1973) 12.

56. ———. 1981. "Pre-Socratic Origins of the Principle that There are No Origins from Nothing." *Journal of Philosophy* no. 78:649-665.

"Even those who might question the truth of the *ex nihilo nihil* principle would readily concede that this principle itself could not have sprung from nothing. The origins are in pre-Socratic philosophy.

(...)

But the earliest text with a recognizable version of the *ex nihilo nihil* (henceforth ENN) is Parmenides B8.7-10.

Now since a concern with relations between Being and Not-Being (or Nothing)³ is saliently characteristic of Elea, the question arises whether Aristotle's attribution of ENN to philosophers before Parmenides may not be anachronistic. The suspicion of anachronism is reinforced when we consider the rationale for ENN Aristotle projects to his predecessors, all the way back to Thales. They held, Aristotle says, that "from what-is-not nothing could have come to be, because something must be present as a substratum" (*Phys.* I.8.191a30-31). The "because" clause here blatantly invokes Aristotle's own triadic ontology of matter-privation-form. If that is why Aristotle declares ENN to be pre-Eleatic in its origins and archaion,

"ancient" (*Metaph.* I.984a27-984bl), why should we believe him?" (p. 649)

(...)

"This will not be a complete story of the origins of ENN, but I hope enough will be said to clear the way for renewed appreciation of the tenor of Aristotle's thesis.(*). My concern is not to vindicate Aristotle but to bring out conceptual connections and implications in pre-Socratic fragments." (p. 651)

(*) "from what-is-not nothing could have come to be, because something must be present as a substratum" (*Phys.* I.8.191a30-31).

58. ———. 1993. "The Deceptive Words of Parmenides' "Doxa"." In *The Pre-Socratics: A Collection of Critical Essays*, edited by Mourelatos, Alexander P. D., 312-349. Princeton: Princeton University Press.

From *The Route of Parmenides: A Study of Word, Image, and Argument in the Fragments* (New Haven, Conn.: Yale University Press, 1970), pp. 222-63; abridged and slightly revised in the present version.

"My aim in this study will be to show that two related concepts, drawn from the field of literary criticism, can serve to interpret faithfully both the facts of contrast and the facts of similarity. It will then appear that what is reflected in scholarly literature as controversy is actually a tension built into the argument and language of "Doxa," and that this tension is intrinsic to the philosophical message of this part of Parmenides' poem.

I have in mind the twin concepts of ambiguity and irony. It is actually surprising, considering that the goddess is impersonating a spokesman for mortal doxai, "opinions," and warns that her words are "deceptive," that these important analytical tools of the literary critic have been neglected in discussions of the second part of the poem.(6) Under "ambiguity" we should be prepared to allow any of the several types distinguished by modern literary critics,(7) although, as one would expect, only a smaller number can be illustrated in the rhetorical and poetic effects of the "Doxa." I will not pause over questions of classification

here; the type will become clear in the analysis of individual passages." (p. 313)

(6) I note, however, that Charles H. Kahn has remarked: "The ambiguity of Parmenides' style is intentional" (*Anaximander and the Origins of Greek Cosmology* [New York, 1960], p. 227).

(7) See William Empson, *Seven Types of Ambiguity*, 3d ed. (New York, 1955), pp. v-vi; also William Bedell Stanford, *Ambiguity in Greek Literature: Studies in Theory and Practice* (Oxford, 1939), chs. 3, 4, and pp. 91-96.

59. ——. 1999. "Parmenides and the Pluralists." *Apeiron. A Journal for Ancient Philosophy and Science* no. 32:117-129.

The article discusses Patricia Curd's *The Legacy of Parmenides* (1998).

"Curd does not read Parmenides as a philosopher of the One. Her view is that Parmenides sought to establish formal criteria for what should properly count as 'what-is' or 'the real' (the physis or 'nature' of things) in a rationally constructed cosmology. Such an entity - or such entities - should indeed be unborn, imperishable, unchanging, and inherently complete." (pp. 117-118)

(,,)

"In offering my own critical comments on the book, let me start by posing this question: Given that the basis for Curd's larger narrative is her interpretation of Parmenides, what exactly is

that basis and how secure is it? Since half of the book is devoted to Parmenides, let me take up separately and at some length four salient theses in Curd's interpretation of Parmenides." (p. 120)

60. ———. 2011. "Parmenides, Early Greek Astronomy, and Modern Scientific Realism." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 167-189. Las Vegas: Parmenides Publishing.

Reprinted in Joe McCoy (ed.), *Early Greek Philosophy. The Presocratics and the Emergence of Reason*, Washington: The Catholic University Press 2013, pp. 91-112.

Summary: " "Doxa," the second part of Parmenides' poem, is expressly disparaged by Parmenides himself as "off-track," "deceptive," and "lacking genuincredence." Nonetheless, there is good evidence that "Doxa" included some astronomical breakthroughs. The study presented here dwells on fragments B10, B14, and B15 from the "Doxa," and especially on the term *aidēla*, interpreted as "causing disappearance," in B10.3. The aim is to bring out the full astronomical import of Parmenides' realization of four related and conceptually fundamental facts: (i) that it is the sun's reflected light on the moon that explains lunar phases; (ii) that it is the sun's glare which, as the sun moves in its annual circuit, causes the gradual seasonal disappearance of stars and constellations, and that the absence of such glare explains their seasonal reappearance; (iii) that it is likewise the sun's glare which causes the periodic disappearance, alternately, of the Morning Star and the Evening Star, and it is the absence of such glare that allows, alternately and respectively, for the reappearance of each of these stars; and (iv), a ready inference from (iii), the realization that the latter supposedly two stars are an identical planet.

In seeking to make sense of the paradoxical antithesis of "Truth" vs. a disparaged yet scientifically informed "Doxa," the present study explores two modern analogues: Kant's doctrine of the antithesis of "things-in-themselves" (or "noumena") vs. "appearances" (*Erscheinungen* or "phaenomena"); and the twentieth-century doctrine of scientific realism, notably

propounded by Wilfrid Sellars. The latter model is judged as more apt and conceptually more fruitful in providing an analogue for the relation between "Truth" and "Doxa." "

Parmenides of Elea. Annotated Bibliography of the studies in English: Mou - Rav

Bibliography

1. Mourelatos, Alexander P. D. 2012. "“The Light of Day by Night”: *nukti phaos*, Said of the Moon in Parmenides B14." In *Presocratics and Plato. Festschrift at Delphi in Honor of Charles Kahn*, edited by Patterson, Richard, Karasmanis, Vassilis and Hermann, Arnold, 25-58. Las Vegas: Parmenides Publishing.

"The earliest securely attested record of the discovery that the moon gets its light from the sun is in the second part of Parmenides' poem, the "Doxa": in the one-line fragments B14 and B15.(1) In an earlier study, I have used the term "heliophotism" as a succinct reference to the correct explanation of lunar light;(2) and for convenience I shall use the neologism again here. Daniel W. Graham has made a strong case in favor of the claim that the two fragments present heliophotism as a discovery made by Parmenides himself.(3)

(...)

My concern in this study is not with the issue of attribution of the discovery but quite narrowly with the correct reading of the text in B14. Nonetheless, as I hope to establish, once the correct reading is determined, the deflationary position will be decisively undercut. Moreover, the correct reading will give us a statement that is semantically more nuanced, superior in astronomical accuracy, and rhetorically and poetically more expressive.

B15 will come up for supporting quotation later in the present essay. But the important amplification it provides for B14 needs to be kept in mind throughout." (pp. 25-27)

2. ———. 2013. "Commentary on Graham." *Proceedings of the Boston Area Colloquium of Ancient Philosophy* no. 28:64-73.

Commentary on Daniel W. Graham, *Two Stages of Early Greek Cosmology*.

Abstract: "The comment endorses and reinforces Daniel W. Graham's highly original and attractive proposal that early Greek cosmology develops in two stages. In what Graham calls the "meteorological stage" of the sixth century BCE, celestial objects are explained as formations either from fire or from watery exhalations in a roughly planar model of the cosmos. In the "lithic stage" of the mid- and late fifth century introduced by Anaxagoras, the model is that of a central earth around which solid stone-like celestial objects revolve held aloft in a vortex.

The change to the lithic stage comes about, according to Graham, as the implications of Parmenides' epoch-making discovery that the moon is illuminated by the sun (heliophotism) come to be understood and are then

theoretically exploited. The present comment also proposes that the false explanations of lunar phases and lunar and solar eclipses in the meteorological-stage cosmologies, respectively, of Xenophanes and of Heraclitus may have played a helpful heuristic role in the theoretical breakthrough to heliophotism."

3. ———. 2013. "Sounds, Images, Mysticism, and Logic in Parmenides." In *Eleatica Vol. 3: Parmenide. Suoni, immagini, esperienza*, edited by Rossetti, Livio and Pulpito, Massimo, 159-177. Sankt Augustin: Academia Verlag.

"These notes are only a first and short reaction to the rich and dense text by Laura Gemelli Marciano (hereafter abbreviated 'LGM'), which collects her lectures in Velia towards the end of 2007." (p. 149)

(...)

"In the following comments, I take for granted that our primary object is the fragmented text that tradition has kept for us under the name of Parmenides. LGM's approach is full of interesting observations, the critical worth of which undoubtedly reaches beyond her own preferred framework. It's outstanding the care and detail with which she deals with fragment B1, which she seems to identify with the Proem. Since there is no reference to the internal distinction of three parts(3), one can wonder where exactly the so-called 'Way of truth' actually begins. If the Proem is B1 as such and the Way of Truth is the same as B8 1-50, the series B2-B7 (plagued with vexed problems of its own) doesn't seem to belong to one on the other. On the other hand, paying attention to the three voices that the poet uses, one might want to limit the Proem *stricto sensu* to the first twenty-three verses, and locate the beginning of the Way of truth already in B1, 24. Verses 24-27 seem designed to look backwards, whereas verses 28-32 are programmatic and look forward. The nine verses together seem to constitute a balanced and tight exordium of the whole discourse of the goddess - so there would be, in a sense, two proems at play in B1.

About LGM's rich approach to the Proem, I keep only a few of the themes and motifs that seem the most important to me." (p.

150)

(3) This is, of course, a construct that comes from commentators and interpreters that has become a widespread current convention, but it's well grounded in the text itself.

4. ———. 2014. "The conception of *eoikōs/eikōs* as epistemic standard in Xenophanes, Parmenides, and in Plato's « Timaeus »." *Ancient Philosophy* no. 34:169-191.

"There are books on the pre-Socratics, and there are books on Plato.[*] Except in general histories of ancient Greek philosophy, the border that marks off Plato's philosophy of the cosmos and of nature from the thematic domain of corresponding accounts offered by the pre-Socratics is not crossed very often. Among exceptions to this pattern, one that is both well known and distinguished is Gregory Vlastos' 1975 book, *Plato's Universe*. And now Jenny Bryan's *Likeness and likelihood in the Presocratics and in Plato* is a welcome addition to the genre, and indeed a specially worthy complement to *Plato's Universe* inasmuch as Bryan deals with topics that had not been central in Vlastos' account.

The book's project is announced by Bryan ('JB' henceforth) as one of developing 'an intertextual reading of [Xenophanes, Parmenides, and Plato's] use of *eoikōs/eikōs*. Her narrative of intertextuality is engaging, and it is elegantly told in well-organized sections and sub-sections. It comprises careful and sensitive analyses of the target Greek texts; and ii reflects wide and searching reading of the relevant studies in the secondary literature. She shows herself well-trained and adroit in the deployment of the twin methods her topic calls for: the conscientious philologist's scrupulous examination of words in their context and in their history; the analytic philosopher's probing of concepts and the dialectical canvassing of issues and of candidates for solutions. The entire narrative involves four stages. which I summarize in what immediately follows." (p. 169 notes omitted)

[* Discussion of Jenny Bryan, *Likeness and Likelihood in the Presocratics and Plato*]

5. ———. 2016. "Two Neo-Analytic Approaches to Parmenides' Metaphysical-Cosmological Poem." *Rhizomata* no. 6:257-268.

Critical Discussion of John Palmer, *Parmenides and Presocratic Philosophy* (Oxford and New York: Oxford University Press, 2009); and Michael V. Wedin, *Parmenides' Grand Deduction: A Logical Reconstruction of the Way of Truth* (Oxford and New York: Oxford University Press, 2014).

"The obvious limitation of Wedin's book comes from its unswerving concentration on the "Truth" part. There are occasional glances to the other major part, the Doxa, "Way of Opinion", but only on secondary issues. Wedin adheres to Owen's position, which is that Parmenides appends the Doxa only *exempli gratia*, so as to identify and memorialize the sort of Ionian project of natural philosophy Parmenides' austere ontology aims to abandon or to discredit.

Over the preceding two decades, however, a consensus has been emerging among students of Parmenides that the Doxa contains important scientific discoveries, especially in astronomy. Since at least some of these discoveries are likely to have been made by Parmenides himself, it is hard to imagine that Parmenides would have cited them merely as instances of misguided belief. Accordingly, the issue of the relation between "Truth" and Doxa is one that is currently undergoing thorough re-examination. Unfortunately, Wedin does not engage at all with these more recent developments in Parmenidean scholarship." (p. 260)

(...)

"I have raised some fundamental difficulties and objections to the accounts offered in the two books. And yet there is no denying that these are works of high quality and of singular interest – arguably among the best that have been produced on any of the Eleatics in recent decades. The rigor and logical precision in Wedin's formal reconstruction of "Truth" is totally admirable. But equally admirable is Palmer's close-grain analysis of scores of philosophical and philological issues, and also his masterly command of the daunting volume of

- Parmenidean and pre-Socratic scholarship, with all the twists and turns in disputes and ephemeral resolutions over more than a century. My semantic objections notwithstanding, Palmer's "modal reading" offers an interpretative option that is imaginative and even enthralling." (p. 268, a note omitted)
6. ———. 2020. "Elements of Natural Science in the Second Part of Parmenides' Poem: Comment on Livio Rossetti's Lezione I at Eleatica 2017." In *Eleatica Vol. 8: Verso la filosofia: Nuove prospettive su Parmenide, Zenone e Melisso*, edited by Galgano, Nicola S., Giombini, Stefania and Marcacci, Flavia, 244-250. Baden-Baden: Academia Verlag.

"In sum, I find that – except for the elements of astronomy – there is some hyperbole in Rossetti's estimate of Parmenides as a "tenace e creativo investigatore della natura" (p. 56). Nonetheless, I judge Rossetti has done a major service to Parmenidean scholarship by strongly urging us to consider that in Parmenides we have "un intellettuale molto versatile, cui si devono insegnamenti diversissimi" (p. 63). The *communis opinio* – that in the second part of the poem we have nothing more than an *exempli gratia* display of wrong views of "mortals" – cannot be right.

How, then, should we think of the relation between the ontological doctrine of the first part of the poem and the natural philosophy of the second? Here too I agree with the critique Rossetti offers in sections 2.4 and 2.5 of Lezione I of recent attempts to "bridge" the difference between the two parts. And yet his own solution, viz., of "[m]era giustapposizione", leaves us frustratingly hoping and looking for something more. Dare we hope that (as in the case of Epicurus) archaeology might some day bring to light more texts from Parmenides' poem? I, for one, derive more comfort from Rossetti's suggestion, at the end of Lezione I, that "le virtualità sistemiche di questo superbo insegnamento sull'essere non si sono manifestate e non sono arrivate a prendere forma" (p. 90). Yes, a lot of science, and notably of good empirical science (witness the case of observational astronomy), can be pursued and indeed achieved within the ambit of empirical observation. But the ontology of the first part points prophetically to a future

predominantly theoretical account of reality, one that will be free of the comforting anthropocentric familiarities provided by the (mainly) visual approach to things (“Light” and “Night”).” (pp. 249-250)

7. ———. 2022. "Parmenides of Elea and Xenophanes of Colophon: the conceptually deeper connections." *Proceedings of the Aristotelian Society* no. 34:1-23.

Abstract: "According to the influential Plato-Aristotle account, Parmenides advocates holistic monism ('all things are one'), and Xenophanes anticipated him by advocating some version of monotheism. Over the last half-century or so, Parmenides studies have disputed this vulgate by arguing that Parmenides' focus is on the nature of 'what is' (*to eon*), rather than on 'the One'. Correspondingly, there has developed a tendency to minimize the philosophical importance of Xenophanes, by viewing him primarily as a reformer of Greek religious beliefs and as social critic. I argue that a close study of Xenophanes shows that he had developed a coherent naturalist or physicalist world-view. And this also allows us to gain deeper insights into Parmenides, by viewing the latter as generalizing Xenophanes' critique of peculiarly 'anthropist' (or anthropomorphist) bias in our approach to the universe."

8. Mourelatos, Alexander P. D., and Pulpito, Massimo. 2019. "Parmenides and the Principle of Sufficient Reason." In *ὁδοὶ νοήσῃαι. Ways to Think. Essays in Honour of Néstor-Luis Cordero*, edited by Pulpito, Massimo and Spangenberg, Pilar, 121-141. Bologna: Diogene Multimedia.

Abstract: "The subtle and well-structured argument from B8.6 to B8.10 of Parmenides' "Trut" culminates at B8.9-10 in what has long been recognized as at least Implied recourse to the Principle of Sufficient Reason (PSR): "Why *genesis* at a later rather than an earlier time?". But the widely used translation for B8.9 of *chreos* as "need" and of *ôrsen an* as "might have driven" entail oddities that have been overlooked. The authors argue that *chreos* in Parmenides is essentially a nominalization of the expressions *chrē* and *chreōn esti*, which, running through Parmenides' poem, convey the sense of "right and

reasonable necessity" (not necessity simpliciter). It emerges that Parmenides' awareness of PSR is not just intuitive but rather thematized and reflective. And that is why, after PSR is first invoked with reference to alternative points in time at B8.9-10, it is redeployed at B8.44-45 (in the "sphere" passage) with reference to alternatives of extension in space."

9. Nehamas, Alexander. 1981. "On Parmenides Three Ways of Inquiry." *Deucalion* no. 33/34:97-111.

Reprinted in: A. Nehamas, *Virtues of Authenticity. Essays on Plato and Socrates*, Princeton: Princeton University Press, 1999, pp. 125-137.

"We often take Parmenides to distinguish three "ways of inquiry" in his poem: the way of being, that of not being, and the way which combines being and not being; and to hold that of these only the first is to be followed.

This approach, originating in Reinhardt, (1) is now canonical (2). G.E.L. Owen, for example, writes that Parmenides aims to rule out two wrong roads which, together with the remaining right road, make up an exhaustive set of possible answers to the question *estin e ouk estin*;... The right path is an unqualified yes. The first wrong path is an equally unqualified no... There is no suggestion that anyone ever takes the first wrong road... It is the second, the blind alley described in... B6, that is followed by 'mortals'. . To take this well-trodden path... is to say, very naturally, that the question *estin e ouk estin*; can be answered either yes or no (3).

The text of B6. 1-5 (...) can be translated as:

What is for saying and for thinking must be; (4) for it can be, while nothing cannot; I ask you to consider this.

For, first, I hold you back from this way of inquiry,

and then again from that, on which mortals, knowing nothing, wander aimlessly, two headed...

Simplicius' manuscript, where this fragment is found, contains a lacuna after *dizesis* in line 3. Diels supplied *eirgo* and took

lines 4ff. to follow directly afterwards. (5) Thus, the goddess scents to proscribe two ways of inquiring into being. This text, however, exhibits certain peculiarities which suggest that this view awes serious difficulties. The purpose of this paper is to present these peculiarities, discuss the difficulties, and to suggest, if cautiously, an alternative to the text and to the view it engenders." (pp. 97-98)

10. ———. 2002. "Parmenidean Being / Heraclitean Fire." In *Presocratic Philosophy: Essays in Honour of Alexander Mourelatos*, edited by Caston, Victor and Graham, Daniel W., 45-64. Aldershot: Ashgate.

"The facts are these.

Parmenides and Heraclitus lived at about the same time, at opposite ends of the Greek-speaking world. Parmenides constructed a rigorously abstract logical argument in vivid verse. Heraclitus composed a series of striking paradoxes in obscure prose. They are both difficult to understand. They are

both arrogantly contemptuous of their predecessors as well as their contemporaries, to whom they usually refer as 'the many' or 'mortals'.(1) They have been taken to stand at opposite philosophical extremes: Parmenides is the philosopher of unchanging stability; Heraclitus, the philosopher of unceasing change.

The rest is speculation.

That is not a criticism. Most of the speculation is not idle: it is interpretation, based partly on the texts and partly on a general sense of the development of early Greek philosophy. But interpretation it is and, as such, each of its aspects affects and is, in turn, affected by every other. One of these is the idea that, though close contemporaries, Heraclitus and Parmenides wrote successively and that whoever wrote later criticizes the other: either Heraclitus denounces Parmenides (2) or Parmenides attacks Heraclitus.(3) Testimony to the continuing influence of the ancient diadoche-writers, that assumption bears directly on the interpretation of both philosophers. In particular, if, as most people today believe, Parmenides is answering Heraclitus, we need to find in Heraclitus views that Parmenides, in turn, explicitly rejects in his poem.(4)

I want to question this assumption - not necessarily to reject it, but to show exactly how it affects our interpretation of both Parmenides and Heraclitus.(5) I would also like to outline, in barest form, an alternative understanding of their thought which takes them to write in parallel and not in reaction to one another. (6)" (pp. 45-46)

(1) Heraclitus also names some of the targets of his criticisms (for example, B 40, B 42, B 56, B 57, B 81, B 106, B 129).

(2) That is the view of Reinhardt, [*Parmenides und die Geschichte der griechischen Philosophie*] 1916.

(3) A notable exception is Stokes [*One and Many in the Presocratic Philosophy*], 1971, pp. 109-23, who believes that each can be understood quite independently of the other. For full references to the debate, see Daniel W. Graham, '*Heraclitus and Parmenides*' (in this volume, pp. 27-44). Graham offers a

strong defense of Patin's thesis to the effect that Parmenides is directly concerned with criticizing Heraclitus in his poem.

(4) More cautiously, we need to assume that Heraclitus must at least have appeared to have held views which Parmenides rejects in his poem.

(5) It is an assumption that is important to two of the best recent studies of Parmenides and Heraclitus: Curd [*The Legacy of Parmenides*], 1998 and Graham [*Heraclitus' Criticism of Ionian Philosophy*], 1997, as well as to the latter's '*Heraclitus and Parmenides*.' Both, not incidentally, are as deeply indebted to A. P. D. Mourelatos as I am in my own inadequate celebration of his work, which this essay constitutes.

6 My view of the relationship between Parmenides and Heraclitus is similar to that of Stokes 1971, though the implication I draw from it for my interpretation of their views differ from his in many ways.

11. Newell, John F. 2022. "Finding Ithaca, and sense in Parmenides B1.3 : the Homeric meaning of εἰδῶς " *Classical Quarterly* no. 72:53-68.

Abstract: "A close reading of the contexts of several Homeric passages reveals that Homer often uses εἰδῶς with ironic force. This realization sheds light on several passages discussed herein, including: 1) Homer's description of the location of Ithaca, which is shown to be Odysseus' strategic lie that directs the Phaeacians to the local stronghold (nearby Dulichium), and 2) the manuscript reading of Parmenides B1.3, which is shown to harbour no internal conflict even if its εἰδῶτα φῶτα ('one who knows') is in a state of confusion (ἄτη), because εἰδῶτα can signal incomplete or confused knowledge, or even a lack of it. Other literary clues in Parmenides B1 are shown to support this reading."

12. Northrup, Mark D. 1980. "Hesiodic personifications in Parmenides A 37." *Transactions of the American Philological Association* no. 110:223-232.

"At *De Natura Deorum* 1.11.28 (= DK 28 A 37), Cicero's speaker Velleius first describes that deity who presides over, then identifies several other divine inhabitants of, Parmenides' World of Seeming"

(...)

"Developing an idea of Karl Reinhardt, Karl Deichgraber took these words as evidence that Parmenides populated his world of doxa with personified abstracts arranged in antithetical pairs. (2)"

(...)

"In his book on Parmenides, Leonardo Tarán rejected this theory of contrary potencies, asserting that ultimately there was "no evidence" to support it.(7) That such evidence does, however, exist (although considered by neither Reinhardt nor Deichgraber) I hope to show in what follows. I hope to do so, moreover, in a way which will shed a measure of new light not only on Parmenides' poem but also on an important aspect of the Theogony, viz., Hesiod's use of personification. (pp. 223-225)

13. O'Brien, Denis. 1993. "Non-Being in Parmenides, Plato and Plotinus: a Prospectus for the Study of Ancient Greek Philosophy." In *Modern Thinkers and Ancient Thinkers*, edited by Sharples, Robert W., 1-26. London: University College London Press.

English version of "Le non-être dans la philosophie grecque: Parménide, Platon, Plotin", in Pierre Aubenque (ed.), *Études sur le Sophiste de Platon*, Napoli: Bibliopolis 1991, pp. 317-364.

"Here I must omit detailed argument (which I have published elsewhere) (11) and limit myself to a simple outline of the structure of the whole.

Esti does not mean "being is" (Cornford's emendation) at the beginning of the poem. But the *esti* of the first path does acquire a subject in the course of the argument. For the goddess does later claim as a development of the first way the proposition *eon emmenai* (fr. 6.1): "it is necessary to say this, and to think this, namely that being is", or ". . . that there is being".(12)

That is not the case however for the path which is opposed to the path of persuasion, a path "from which we can learn nothing" (fr. 2.5-8). This path is expressed by the negation of *esti* (fr. 2.5): " 'is not' and it is necessary not to be". This path has no subject and never acquires one, for the substantivized participle, "what is not" (*to me eon*, fr. 2.7-8), proves to be as unknowable as the simple indicative statement: "is not".

Hence a crucial difference between the first and second way.

"Being" or "what is" (*eon*) can be added as a development of the first way (*esti*) whereas "is not" (*auk esti*) and "what is not" (*to me eon*) are never joined to form a proposition; both expressions are equally impossible and equally unknowable statements of the second way.

It is true that, in the course of the poem, the goddess does produce a composite statement where the negative participle is added to the positive verb (*einai me eonta*, fr. 7.1): "things that are not, are". That composite statement does not represent either of the two paths introduced at the beginning of the argument. It is, instead, an impossible combination of the two ways, a combination which is not only false, but contradictory (cf. fr. 6).

The false and contradictory combination of "is" and "is not" (fr. 7.1: "things that are not, are") represents the "opinions of mortals in which there is no true conviction" (fr. 1.30; cf. fr. 8.38-41).

Thus the whole poem turns upon the opposition between "is" and "is not" (fr. 2), on the development of "is" into "being is" (fr. 6.1-2) and the recognition which this will bring of a being that is "unborn" and "imperishable" (fr. 8.1-21), and finally on

the impossible conjunction of "is" and "is not" which underlies the whole of our belief in a world where things are not unborn and are not imperishable, the world where "things that are not, are" (fr. 7.1).

An impossibly rapid survey of an unconventional interpretation of Parmenides, but one which will allow me to turn to the criticism made of Parmenides by Plato in the *Sophist*."

14. ——. 2000. "Parmenides and Plato on What is Not." In *The Winged Chariot: Collected Essays on Plato and Platonism in Honour of L.M. de Rijk*, edited by Kardaun, Maria and Spruyt, Joke, 19-104. Leiden: Brill.

"Plato, in writing the *Sophist*, "did not consider it beneath his dignity to return to the great Parmenides" . Any reader of Plato's dialogue must therefore do likewise. But whose Parmenides should we return to? If modern interpretations of the *Sophist* are legion, so too are the reconstructions that are currently on offer, from modern scholars, of the fragments of Parmenides.

Which one should we take on board?

Two names in particular stand out. Miss G. E. M. Anscombe was a close associate of Wittgenstein, and is generally acknowledged as one of the leading philosophers of her day. Professor W. K. C. Guthrie was a pupil of F. M. Cornford, and is the only historian of ancient philosophy who has had both the knowledge and the ambition to undertake a history of Greek philosophy that would rival the great work of Eduard Zeller.(2) Both scholars therefore have impeccable credentials. Both have written on Parmenides.(3)

One or other or both, one might surely think, will have been able to recover from the extant fragments ideas that will make sense of the criticisms of Parmenides that loom so large in Plato's *Sophist*." (p. 19)

(2) See Guthrie (1962-1981). Sadly, Guthrie did not live to complete his majestic enterprise; the last volume takes us only as far as Aristotle. Cf. Zeller (1844) and (1919-1920). Gomperz (1896-1909) is too chatty to be a serious rival.

(3) Guthrie (1965) 1-80. Anscombe (1969), reprinted in Anscombe (1981) 3-8. Cf O'Brien (1987) 206 n. 25. Miss Anscombe goes so far as to entitle the first volume of her *Collected papers* (1981) *From Parmenides to Wittgenstein*. Obviously therefore she does not consider her contribution on Parmenides to be a mere *πάρπεργον*."

"I have a couple of times ventured to suggest that in the *Sophist* Plato does not refute Parmenides.(2) The reaction has been, to say the least, hostile.(3) Hostile, with more than a touch of disapproval. You might have thought I had suggested that the Queen of England was a man.

The suggestion was not only false, but foolish. A mere eye-catcher. Absurd, and unseemly." (p. 117)

(...)

"Both Empedocles and Parmenides are understandably chary, though for different reasons, of the 'names' commonly applied to the phenomena of the visible world by those who know no better. Names commonly in use do not at all match what Empedocles believes to be the true explanation of such phenomena, the explanation inspired by his 'white-armed Muse' (cf. fr. 3.3). Still less do they match the message of Parmenides' goddess, dwelling beyond the Gates of Night and Day (fr. 1.11) and claiming to disprove the very possibility of anything whatever coming-into-being or passing-away (fr. 8.26 –28). All the many things that we mortals think to see, 'coming into being and passing away, being and not being, changing place and altering their bright colour', so Parmenides would have us believe, are 'no more than a name' (cf. fr. 8.38 –41)." Response to M. R. Wright, *Philosopher poets: Parmenides and Empedocles*.

"In this short rejoinder to Professor Wright's paper I shall attempt to do two things: first, to raise two fundamental questions not directly discussed by Wright, but which nevertheless seem to me to bear on our present topic, that is the 'didactic poetry', so called, of Parmenides and Empedocles; and second, briefly to explore a theme of my own relating to the structure and content of the poems. In the course of developing these themes of my own, I shall also respond to some of the claims in Wright's paper where they bear on the same issue.

1. Poetry or prose: a real choice?

My two fundamental questions are these:

1.1. Is the notion of 'didactic poetry' appropriate or helpful in relation to this period and these thinkers?

1.2. Was poetry the default form for the Presocratics and if so, why does not every philosopher write in verse?" (p. 23)

(...)

"In conclusion, then, I would suggest that in both Parmenides and Empedocles we find that the structure of the poem itself expresses the message conveyed in it. Parmenides' journey in verse matches the journey he describes, which in turn expresses the logical structure of the argument it represents, and reveals that the contrast between the mortal confusion and the true logic is not that one is straight and the other crooked, but that one is internally consistent and circular and the other inconsistent and wayward. Empedocles' formulaic and cyclical poetry, in which words and lines are recycled for new uses and

new tellings of old tales, accurately recaptures his formulaic world in which events recur in cycles as time recycles forces and elements to create new worlds and retell old stories. Though we may not ask why they wrote in verse we may ask what form the verse takes in each case. What I hope to have shown is that in both cases form and content are so closely matched that the medium is itself indispensable to the message, and indeed, once we take that relation seriously, we can start to discover just what the message is." (pp. 34-35)

17. ———. 2006. "Was there an Eleatic revolution in philosophy?" In *Rethinking Revolutions Through Ancient Greece*, edited by Goldhill, Simon and Osborne, Robin, 218-245. Cambridge: Cambridge University Press.

"My concern in this chapter is with Parmenides' effect on the immediately subsequent generation of philosophers, the fifth-century Presocratics. Of course, there is no question that Parmenides was important for Plato. He figures prominently in the late dialogues, and arguably instigated, through Plato, a metaphysical trend that was indeed revolutionary, at least from the perspective of modern philosophy. But such delayed responses are not my focus here.(5) I am simply asking whether we should detect a radical change in the way cosmology was pursued and defended immediately after Parmenides' poem hit the public domain." (p. 219)

"On the orthodox story, Parmenides was targeting the group of sixth-century predecessors whom we classify as the first philosophers, particularly the Ionian cosmologists, Thales, Anaximander and Anaximenes. Each of these, so we are told, tried to derive a plural world - the world as we know it now - from a single stuff (water for Thales, air for Anaximenes and so on). They thought that the many could be explained in terms of the one from which it was ultimately derived. By contrast, so the story goes, Parmenides was succeeded by a generation of pluralists, in particular Empedocles, Anaxagoras and the atomists (Leucippus and Democritus). Their choice of plural principles was motivated, so we are told, by their recognition of the force of Parmenides' criticisms.

Scholars differ as to whether these so-called pluralists were attacking Parmenides' conclusions or endorsing and incorporating them. Some read them as rejecting the Eleatic doctrines, both monism and the prohibition on change: hence the pluralists aimed to refute Parmenides or at least to reduce the significance of his claims, Others read the pluralists as warm towards Parmenides' outlook. On this view the 'Eleatic pluralists'⁶ adjusted their cosmology to meet Parmenidean criteria; they appealed to fundamental principles, atoms for instance, that were indeed indivisible and unchanging, as Parmenides' arguments had demanded.

Nothing hangs on which variant we prefer, The pattern is the same: anti-cosmological motives for Parmenides' intervention, and a subsequent attempt to rehabilitate cosmology in dialogue with Parmenidean principles.

\Xlwhether the later thinkers were pro- or anti- Parmenides is insignificant to the structure of this reconstruction." (p. 220)

(5) For a full treatment of Plato's reading of Parmenides see Palmer (1999).

(6) This title (originally applied to the atomists by Wardy (1988)) is adopted by Graham (1999) 176, to apply to Empedocles and Anaxagoras. Wardy challenges the reader, at page 129, to choose between ditching the traditional account of a post-Parmenidean response by the atomists, or improving on the traditional version of how atomism is a response. My chapter (unlike his) favours the former solution, though my target is not actually atomism (for which there is good evidence of a post-Parmenidean motivation).

18. Owen, Gwilym Ellis Lane. 1960. "Eleatic Questions." *Classical Quarterly*:84-102.

Reprinted with additions in: D. J. Furley and R. E. Allen, *Studies in Presocratic Philosophy*. Vol. II: *The Eleatics and Pluralists*, London: Routledge and Kegan Paul, 1975 pp. 48-81 and in: G. E. L. Owen, *Logic, Science, and Dialectic. Collected Papers in Greek Philosophy*, Ithaca: Cornell University Press, 1986 pp. 3-26.

"The following suggestions for the interpretation of Parmenides and Melissus can be grouped for convenience about one problem. This is the problem whether, as Aristotle thought and as most commentators still assume, Parmenides wrote his poem in the broad tradition of Ionian and Italian cosmology. The details of Aristotle's interpretation have been challenged over and over again, but those who agree with his general assumptions take comfort from some or all of the following major arguments. First, the cosmogony which formed the last part of Parmenides' poem is expressly claimed by the goddess who expounds it to have some measure of truth or reliability in its own right, and indeed the very greatest measure possible for such an attempt. Second, the earlier arguments of the goddess prepare the ground for such a cosmogony in two ways. For in the first place these arguments themselves start from assumptions derived from earlier cosmologists, and are concerned merely to work out the implications of this traditional material. And, in the second place, they end by establishing the existence of a spherical universe: the framework of the physical world can be secured by logic even if the subsequent introduction of sensible qualities or 'powers' into this world marks some decline in logical rigour.

These views seem to me demonstrably false. As long as they are allowed to stand they obscure the structure and the originality of Parmenides' argument." (p. 84)

19. ——. 1966. "Plato and Parmenides on the Timeless Present." *The Monist*:317-340.

Reprinted in: Alexander Mourelatos (ed.), *The Pre-Socratics: A Collection of Critical Essays*, Garden City: Anchor Press, 1974 and in: G. E. L. Owen, *Logic, Science, and Dialectic. Collected Papers in Greek Philosophy*, Ithaca: Cornell University Press, 1986 pp. 27-44.

Some statements couched in the present tense have no reference to time. They are, if you like, grammatically tensed but logically tenseless. Mathematical statements such as "twice two is four" or "there is a prime number between 125 and 128" are of this sort. So is the statement I have just made. To ask in

good faith whether there is still the prime number there used to be between 125 and 128 would be to show that one did not understand the use of such statements, and so would any attempt to answer the question. It is tempting to take another step and talk of such timeless statements as statements about timeless entities. If the number 4 neither continues nor ceases to be twice two, this is, surely, because the number 4 has no history of any kind, not even the being a day older today than yesterday. Other timeless statements might shake our confidence in this inference: "Clocks are devices for measuring time" is a timeless statement, but it is not about a class of timeless clocks. But, given a preoccupation with a favored set of examples and a stage of thought at which men did not distinguish the properties of statements from the properties of the things they are about, we can expect timeless entities to appear as the natural proxies of timeless statements.

Now the fact that a grammatical tense can be detached from its tense-affiliations and put to a tenseless use is something that must be discovered at some time by somebody or some set of people. So far as I know it was discovered by the Greeks. It is commonly credited to one Greek in particular, a pioneer from whose arguments most subsequent Greek troubles over time were to flow: Parmenides the Eleatic. Sometimes it is suggested that Parmenides took a hint from his alleged mentors, the Pythagoreans. "We may assume" says one writer "that he knew of the timeless present in mathematical statements." ² But what Aristotle tells us of Pythagorean mathematics is enough to undermine this assumption. According to him (esp. *Metaph.* 1091a12-22) they confused the construction of the series of natural numbers with the generation of the world. So Parmenides is our earliest candidate. His claim too has been disputed, and I shall try to clear up this dispute as I go, but not before I have done what I can to sharpen it and widen the issues at stake." (pp. 317-318)

20. Owens, Joseph. 1974. "The Physical World of Parmenides." In *Essays in Honour of Anton Charles Pegis*, edited by O'Donnell, Reginald J., 378-395. Toronto: Pontifical Institute of Mediaeval Studies.

21. ———. 1975. "Naming in Parmenides." In *Kephalaion. Studies in Greek Philosophy and Its Continuation Offered to Professor C. J. de Vogel*, edited by Mansfeld, Jaap and Rijk, Lambertus Marie de, 16-25. Assen: Van Gorcum.

"Naming for Parmenides, the texts show, is basically the conventional process by which a word or expression is established to designate a thing. Metaphorically it is extended, in one reading of Fr. B 8,38, to cover the conventional establishing of perceptible things as expressions or names for the unique immobile being. It may be either right or wrong. It is right when, either by words or by perceptible constructs it designates being, the only thing positively there to be named. Accordingly the thinking out and writing and reciting of Parmenides' poem is perfectly legitimate.

Naming, however, has always to be based on a positive characteristic or distinguishing mark. It is therefore illegitimate when conventionally applied to not-being. Not-being, having no characteristics at all, cannot be known and cannot be expressed in speech. But mortals do in fact mistakenly name not-being, on the basis of the characteristics of night, darkness, ignorance, earth, thickness, heaviness. They obtain these distinguishing marks by dividing bodily appearance -- for the corporeal is the only kind of being recognized by Parmenides -- into these characteristics and their opposites. This whole process is wrong, for there is no not-being to be named, and the characteristics assigned to it, though appearing positive, are in reality negations. But with the second basic form so named and its characteristics so established, and with equal force given to both, the differentiations and changes in the perceptible universe may be explained. To understand them and treat of them as in this way human conventions, is truth. To believe that the differentiations and changes are the true situation, is the *doxa*.

Naming is accordingly for Parmenides a conventional process throughout which being remains sole and sovereign both in the perceptible world and in human thought and speech. Every sensible thing and every human thought and word is being. To

understand that, is to be on the road of the goddess while thinking and speaking. Recognized clearly as naming the one immobile being, human thought and language and living are thoroughly legitimate. Parmenides may legitimately continue in them, even though according to *doxa* they and all perceptible things are differentiated and are engendered and perish, and "for they inert have established a name distinctive of each" (Fr. B 19,3). The important philosophical consequence is that for Parmenides perceptible things can retain all the reality and beauty they have in ordinary estimation, and still function as names for the one whole and unchangeable being." (pp. 23-24)

22. ———. 1979. "Knowledge and 'Katabasis' in Parmenides." *The Monist* no. 62:15-29.

"The relation between imagery and philosophy in the poem of Parmenides has occasioned much discussion in recent years. One item of particular import has been the direction taken by the journey that was so inspiringly pictured in the opening section. Is the travel upwards? Or is it downwards? Or is it rather cross-country, either aloft, or on the earth's surface, or in the depths of the nether world? Further, if there is cross travel on any of these three levels, is the direction from east to west, or from west to east?

Readily acceptable is the stand that the text itself does not explicitly specify either upward or downward direction.(1)" (p. 15)

"Yet one guiding principle seems obligatory from the start. If correct historical and literary exegesis of the poem should run counter to any particular interpretation of the philosophy, the interpretation can hardly be considered acceptable. Parmenides' introduction, if even ordinary literary skill is accredited to him, has to be in harmony with what it is meant to introduce.

The effects of a *katabasis* norm in assessing Parmenides' conception of human knowledge could be especially devastating. A study of the problem in the global context of the various directions found in the poem by commentators is accordingly indicated. The reasons for the ascent, the descent,

and the surface journey need to be probed from the viewpoints of their weight and their reciprocal exclusiveness. In a panoramic survey of this kind the salient thrusts that bear upon the philosophic interpretation of the poem should become manifest." (p. 17)

(1) For critiques of alleged indications of an ascent, see *infra*, nn. 11-12. Towards the end of the nineteenth century Hermann Diels, *Parmenides: Lehrgedicht* (Berlin: Georg Reimer, 1897), p. 8, had observed: [Nor does the way to God become us vividly described. We do not even hear if it goes down or up.] This warning was approved by Walter Burkert, "Das Proomium des Parmenides und die Katabasis des Pythagoras," *Phronesis*, 14 (1969), p. 2, n. 3, maintaining "[It is more correct, however, to omit the vertical, the top and the bottom at all]" (p.15). Burkert, however, defends a *katabasis* rather than an *Auffahrt*. A bibliography on the topic may be found in Maja E. Pellikaan-Engel, *Hesiod and Parmenides: A New View on Their Cosmologies and on Parmenides' Proem* (Amsterdam: Adolph M. Hakkert, 1974), pp. 104-109.

Note: I give the English translation of the texts by Diels and Burkert, cited in the original German by Owens.

23. Palmer, John. 1999. *Plato's Reception of Parmenides*. Oxford: Clarendon Press.

"Before proceeding, then, I want to say something about how I believe we must approach the question of Parmenides' influence on Plato.

I have already noted the principal error vitiating most appraisals of this influence, namely the assumption that one can base an appraisal upon an interpretation of Parmenides developed independently of the actual Platonic reception. Such attempts at assessing this specific case of intellectual influence are particularly unfortunate, since many modern treatments of Parmenides have, either implicitly or explicitly, endeavoured to avoid any interpretation of his philosophy that might appear too 'Platonic', afraid that attributing to him anything like Plato's own distinction between the sensible world of becoming and the intelligible realm of being would be anachronistic. The

paradox involved in then addressing Parmenides' influence on Plato, based on a view of Parmenides that deliberately avoids seeing him as Plato might have done, should be apparent. Now, those who avoid a 'Platonic' reading of Parmenides tacitly recognize that it is indeed possible to understand Parmenides as articulating the type of epistemological and ontological categories fundamental to Platonism—as well they should, since such an understanding was fairly common among later Platonists in antiquity. Therefore, even if one were unwilling to accept an interpretation along these lines as representing a proper understanding of Parmenides himself, one would nevertheless have to admit that the 'Platonic' understanding had its historical effect and, as such, deserves attention. One might even believe that Plato himself would have subscribed to the 'Platonic' understanding of Parmenides." (p. 8)

24. ———. 2004. "Melissus and Parmenides." *Oxford Studies in Ancient Philosophy* no. 26:19-54.

"Detailed consideration of Plato's representations and uses of Parmenides shows that he would not have subscribed to the contemporary view of Parmenides that makes it possible to see Melissus as faithfully replicating the essential features of his thought. In fact, the view

of Parmenides as a strict monist seems to have been something of a minority interpretation in antiquity."

(...)

"... I shall try to avoid presuming at the outset any particular interpretation of Parmenides. Although I do want to argue that Melissus is more original than he has previously been taken to be, it would be improper to do so by simply adopting an understanding of Parmenides that differs from those presumed by previous assessments. Instead, I shall begin by focusing on the unquestionable adaptations of Parmenides and the equally unquestionable departures from him in Melissus' conception of what is and in his argumentation for the various attributes of what is. While the majority of these departures have been recognized by others, I believe that the full impact of their collective weight has yet to be realized.

The differences between Parmenides' and Melissus' conceptions of what is and the structures of their argument are extensive enough to prompt reconsideration of the view that the 'overall structure' and the 'general intellectual nucleus' of Parmenides' and Melissus' philosophy 'are one and the same'." (pp. 21-22)

25. ———. 2009. *Parmenides and Presocratic Philosophy*. New York: Oxford University Press.

Contents: 1. Parmenides' place in Histories of Presocratic Philosophy 1; 2. Parmenides' Three Ways 51; 3. The way of the Goddess and the Way of Mortals 106; 4. What Must Be and What Is and Is Not 137; 5. Zeno, Melissus and Parmenides 189; 6. Anaxagoras and Parmenides 225; 7. Empedocles' Element Theory and Parmenides 260; 8. Parmenides' Place in Presocratic Philosophy 318; Appendix: The Fragments of Parmenides' Poem 350; Bibliography 388; Index locorum 405; General index 422-428.

"Parmenides of Elea is the most brilliant and controversial of the Presocratic philosophers.

This book aims to achieve a better understanding of his thought and of his place in the history of early Greek philosophy. To this end, I here develop and defend a modal interpretation of the ways of inquiry that define Parmenides' philosophical outlook. He was, on this view, the first to have distinguished in a rigorous manner the modalities of necessary being, necessary nonbeing or impossibility, and contingent being. He himself specifies these modalities as what is and cannot not be, what is not and must not be, and what is and is not. Accompanying this fundamental ontological distinction is a set of epistemological distinctions that associates a distinct form of cognition with each mode of being. With this framework in place, Parmenides proceeds to consider what what must be will have to be like just in virtue of its mode of being and then to present an account of the origins and operation of the world's mutable population." (*Preface*, VI)

26. ———. 2016. "The early tradition on Melissus and Parmenides." In *Eleatica Vol. 5: Melissus between Miletus and Elea*, edited

by Pulpito, Massimo, 150-156. Sank Augustin: Academia Verlag.

"Prof. Mansfeld provides a masterfully concise overview of Melissus's argument and its ancient reception before identifying a number of outstanding problems.[*] My comments here will be concerned in the first place with gleaning more about what Prof. Mansfeld thinks we can learn about Melissus and his relation to Parmenides from some of the significant features of the earlier reception. Prof. Mansfeld adopts a sound strategy in the first of his lectures by treating Melissus himself as belonging to the early reception of Parmenides and by thus attempting to view Parmenides through the eyes of Melissus. Caution is in order, however, when it comes to assessing Melissus's relation to Parmenides because Melissus's neo-Eleatic argumentation unfortunately distorted understanding of Parmenides already in antiquity and has done so even more in the modern era. Thus grouping Melissus with Parmenides and Zeno as members of an 'Eleatic school' is problematic on a number of counts, both historiographically and philosophically. It tends to obscure the question of Melissus's relation to Parmenides by encouraging us to see Melissus as a broadly faithful, if sometimes innovative, student developing the doctrines of his master. Both Plato and Aristotle give us good grounds for questioning this view." (p. 150)

27. Panchenko, Dmitri. 2008. "Parmenides, the Nile and the Circumnavigation of Africa by the Phoenicians." In *Libyae Lustrare Estrema. Realidad y literatura en la visión grecorromana de África. Homenaje al Prof. Jehan Desanges*, edited by Candau Morón, José María, González Ponce, Francisco José and Chávez Reino, Antonio Luis. Sevilla: Universida de Sevilla.

"We are told that the division of the earth into zones originated with Parmenides(1), whose *floruit* is dated by Apollodorus to the 69th Olympiad (504/3-501/0 BC)(2). Moreover, according

to a testimony that ultimately goes back to Theophrastus, “Parmenides was the first to locate inhabitable parts of the earth on each side of the two tropical zones”(3).

Must we suppose that Parmenides simply assumed, quite arbitrarily, a southern inhabited zone? My answer is: no. In general, we may think that Parmenides would have done his best to avoid being accused of inventing “facts”. More specifically, we have no evidence that his doctrine of zones had any explanatory function in his system, and therefore we have no reason to assume that it was advanced as ad hoc support for some thesis of his own. We should further take into consideration that Parmenides was also the first to maintain that the earth is spherical(4)."

(...)

"I conclude that Parmenides' doctrine of an inhabited southern zone was based on some kind of actual information. Now, Herodotus specifically addresses the issue of the circumnavigation of Libya. He cites the successful circumnavigation performed by the Phoenicians, the failed attempt of Sataspes, and the problematic claim of the Carthaginians (the expedition of Hanno is apparently meant) that they too circumnavigated the continent (*IV* 42-43). One has the definite impression that Herodotus has mentioned all the remarkable expeditions in Libyan waters of which he was aware. There is no good reason to assume that Sataspes went as far as the southern temperate zone(5), and in all probability he is later than Parmenides(6). The preserved account of Hanno's voyage makes it clear that Hanno, who is likely to be an older contemporary of Parmenides, did not go that far. What could be then the source of Parmenides' awareness of the southern inhabited zone if not the reports of the Phoenician mariners who had circumnavigated Africa?" (pp. 189-190)

(1) Posidonius, fr. 49 Edelstein–Kidd = STR. II 2, 2: “Posidonius says that Parmenides was the originator of the division into five zones, but that Parmenides represents the torrid zone as almost double its real breadth” (H. L. Jones' transl.); cf. fr. 209 Edelstein–Kidd = *ACH. TAT., Intr. Arat.* 31

(Parm., 28 A 44a Diels–Kranz). We need not discuss here the difficult issue of the relative size of particular zones according to Parmenides.

(2) D. L., IX 23. The chronology of Parmenides (as is the case with nearly all the Presocratics) is in fact a difficult matter. For the present purpose it is enough to assume that Apollodorus' dating does not deviate much from the truth.

(3) Parm., 28 A 44a Diels–Kranz = Placit. (*AĒT. [PS.-PLU.]*, III 11, 4), p. 377 Diels: Παρμενίδη ᾧ πρώτο ἄφώρισε τῆ γῆ του οἰκουμένου τόπου ὑπο ταῖ δυσι ζώναι ταῖ τροπικαῖ. The phrasing is characteristic for Theophrastus.(...)

(4) So Theophrastus *apud* D. L., VIII 48; IX 21.

(5) His account of the voyage did not apparently remove the ground for disbelief in the claim of the Phoenicians that in sailing round Libya they had the sun on the right hand (*HDT.*, IV 42). This claim is equivalent to an assertion that the midday sun was seen north of an observer, which is invariably the case in the “southern inhabited zone”, that is, south of the winter tropic.

(6) Sataspes was sent by Xerxes, whose reign began in 486 BC and began with troubles, while the circumnavigation of Libya was clearly not of primary concern for the king.

28. Papadis, Dimitris. 2005. "The Concept of Truth in Parmenides." *Revue de Philosophie Ancienne* no. 23:77-96.

"In this paper I shall endeavor to define the concept of truth, which is very closely related to the βροτων δοξαι, and to the so-called δοκούντα. Truth in Parmenides manifests itself as divine revelation bestowed upon a chosen individual, namely Parmenides himself. No doubt, this revelation is no more than a poetic-mythical-religious model of teaching, which does not substantially affect the content thereof." (p. 77)

"The word ἀλήθεια occurs in three fragments, namely B 1.29, B 2.3, and B 8 .51. Its meaning is not defined in any of them. This is to say that Parmenides has not attempted a systematic theoretical approach to the problem(6)." (p. 78)

"In conclusion, we have in Parmenides a tripartite scheme, as far as the cognitive approach to things is concerned: a) *doxa*, true or false, b) *ta dokounta* = true *doxai*, mainly of universal reference, and c) *aletheia*. *Doxa* and *dokounta* refer to the perceptible aspect of the

world, whereas *aletheia* refers to the inner Being of the world. Access to the truth is, according to the poem, a preserve of Parmenides. Still, it is understood that this is also possible for everyone possessed of his exceptional spirituality." (p. 95)

29. Pelletier, Francis. 1990. *Parmenides, Plato and the Semantics of Not-Being*. Chicago: University of Chicago Press.

Contents: Acknowledgments IX; Introduction XI-XXI; 1. Methodological preliminaries 1; 2. Parmenides' problem 8; 3. Plato's problems 22; 4. Some interpretations of the *symploke eidon* 45; 5. The Philosopher's language 94; Works cited 149; Index locorum 155; Name index 159; Subject index 163-166.

"As the title indicates, this is a book about Plato's response to Parmenides, as put forward in Plato's dialogue, the *Sophist*. But it would be a mistake to think that the difficulties raised by Parmenides and Plato's response are merely of antiquarian interest, for many of the same problems emerge in modern discussions of predication and (especially) of mental representation of natural-language statements. The intricacies and difficulties involved in giving a coherent account of Plato's position will be familiar to scholars in the field of ancient Greek philosophy, as will be the general philosophic difficulty to which Plato is responding- the Parmenidean problem of not-being.

This introduction is written to show to philosophers interested more in natural-language understanding and knowledge-representation than in ancient philosophy that the issues being grappled with by Plato remain crucial to these modern enterprises, and to show classical philosophers that many of the interpretive choices they face have modern analogues in the choices that researchers in cognitive science make in giving an adequate account of the relations that must hold among language, the mind, and reality." (from the Introduction).

"With the removal (1) of all manuscript authority from ἄσθη, [from the Fragment B 1.3] editors may resort to defense of the transmitted text or to conjectural restoration based upon "palaeographical likelihood." I believe they should do neither." (p. 507)

(...)

"By way of conclusion, some general remarks on το ἓον will be in order. Parmenides' use throughout the poem of the singular (το ἓον) is an innovation the purpose of which is not far to seek. In earlier writers there is found only the plural (τα ἓοντα), used, usually τα τ' εσσομενα προ τ' εοντα, to describe reality in terms of its constituent elements.(24) This tendency to use the plural to designate reality is evident in Heraclitus (whom some have thought to be a special target of Parmenides' argument (25)), both in the famous παντα ῥει and especially B7 D-K εἰ πάντα τα ἔοντα καπνοῦ γένοιτο, ῥῖνες ἄν διαγνοῖεν: as clear an assertion of the enduring multiplicity of real entities as can be found anywhere. Parmenides, in denying multiplicity, would have been required, for the sake of logical consistency, to shun the established use of the plural παντα τα ἔοντα and to adopt the singular παν το ἓον. (26)" (p. 512)

(1) The results of Coxon's re-examination of N have been corroborated by L. Tarán, *Gnomon* 49 (1977) 656, n. 15, [review article of Mourelatos, *The Route of Parmenides*] who has himself inspected the Ms.

(24) In most of these passages (for example, in all the instances of the formula listed by West on Hes. *Th.* 32) the plural participles designate the objects of knowledge; this point should be of interest to those who maintain that the subject of ἔστι throughout Parmenides is "the objects of discourse or inquiry" (e.g., J. Barnes, *The Presocratic Philosophers* [London 1982] 163; G. E. L. Owen, "Eleatic Questions," *CQ* n.s. 10 [1960] 84-102 = D. J. Furley and R. E. Allen, *Studies in*

Presocratic Philosophy II [London 1975] 48-8 I). If my restoration of παν το ἔον is accepted at B 1.3, it can be resupplied as object of εἰδότεα: 'the road which bears the man who knows [all that exists] over all that exists'.

(26) I wish to thank Professors A. T. Cole, R. L. Fowler, D. R. Shackleton Bailey, and R. J. Tarrant for their criticisms and suggestions.

31. Pellikaan-Engel, Maja. 1974. *Hesiod and Parmenides: A New View of Their Cosmologies and on Parmenides Proem*. Amsterdam: Adolf Hakkert.

Contents: Chapter I: Why an approach to Parmenides from Hesiod 1; Chapter II: Hesiod's cosmology, *Theogony* 116-33 11; Chapter III: Hesiod, *Theogony* 736-66 19; Chapter IV: Hesiod's Truth 39; Chapter V: Some substitutions of certain Hesiodic concepts in the proem of Parmenides. The route of Parmenides 51; Chapter VI: Excursus of the other interpretations of the route of Parmenides 63; Chapter VII: Parmenides's Truth 79; Chapter VIII: Parmenides' cosmology 87; Summary 101; Bibliography 104; Curriculum vitae 110.

"Summary. Research is made into the texts of Parmenides and Hesiod. Points of comparison between the proem of Parmenides and Hesiod *Theogony* 736-66 lead to attach similar meanings to the similar terms "chaos" and "house of Night" (Chapt. I). An analysis of the contents of the texts leads to the conclusion that the image in Parmenides' proem with regard to the Heliades, who have left the house of Night, taking with them the poet as a chosen person, is parallel to the alternate cyclic journey of the goddesses Day and Night c.s. from the subterranean house of Night, via the East to the region above the earth and via the West down and back again to the point of departure, as is written in Hesiod *Theogony* 746-66; in this the taking with them of the chosen person from the earth is parallel to *Theogony* 765, 6, where Death, son and companion of Night, takes with him his victims of men (Chapt. III and V).

An analysis of Hesiod's cosmological views leads to the conclusion, that Hesiod imagined the sky to be a metallic and revolving sphere, the earth at its centre (Chapt. II) and that he imagined *chaos* in its first phase to be of unbounded extension, presumably consisting of air at rest, and later on to be the region above as well as beneath the earth, limited by the spherical sky, consisting of air in motion (Chapt. IV).

The result of Chapt. V and an analysis of Parmenides' cosmological views leads to the conclusion that Parmenides imagined the earth to be a hollow sphere (Chapt. VII) and that the problem concerning what was in the midst in his cosmological system, either the goddess or the earth, can be solved by supposing the goddess to be in the midst in the absolute sense, i.e. at the centre of his cosmos and the earth to be in the midst in the relative sense, i.e. as a hollow sphere in the midst between the centre of his cosmos, viz. the goddess, and the outer limitation of his cosmos, viz. the spherical sky (Chapt. VIII)." (p. 101)

32. Perl, Eric D. 2014. *Thinking Being: Introduction to Metaphysics in the Classical Tradition* Leiden: Brill.

Chapter 1: *Parmenides*, pp. 11-17.

"In the fall semester of 2008 I taught a course in the graduate program at Loyola Marymount University called "Metaphysics in the Classical Tradition."

Originally conceived primarily as an advanced survey of the most significant figures in classical metaphysics,(1) the course as it proceeded developed into something far richer and deeper: an articulation of the thematic continuity in the thinking of being from Parmenides to Thomas Aquinas, centered on the two fundamental questions, 'What is being?' and 'Why are there beings, rather than nothing?' The first of these questions is formulated by Aristotle but stated by him to have been asked "from of old" (*Met. Z.1, 1028b3-5*); the second, although not expressly formulated in antiquity,(2) is touched on by Plato in his account of the good as "beyond reality" and as the source of being itself (*Rep. 509b6-10*), and is central to the thought of both Plotinus and Aquinas. The result of remaining attentive to

these two questions was a thematic understanding of the tradition that is liable to be lost in more specialized examinations of individual thinkers and remains altogether unthought in 'histories of philosophy' that are merely historical rather than truly philosophical.

The present study, aiming to set forth that understanding, is thus intended neither as a survey nor as a history but as a properly philosophical exposition of the fundamental insights of classical metaphysics." (p. 1)

(...)

"To dismiss the world as illusion does not account for the occurrence of the illusion itself. It is not being, and yet it somehow is.

As we shall see, Plato and Aristotle will grapple with this problem. But they will do so, not in simple repudiation of Parmenides but rather in continuity with him, for they will remain within the Parmenidean framework in which being is that which is intelligible, and, just insofar as it is intelligible, is timeless, changeless, "ungenerated and incorruptible, whole, of one kind and unshaken and complete" (B 8.3–4)." (p. 17)

(1) The term 'classical' is used here, for want of a better, to refer to ancient and medieval philosophy as a continuous tradition.

(2) This question, in the form "Why is being at all and not rather nothing?" is identified by Heidegger as the fundamental question of metaphysics: Martin Heidegger, *Einführung in die Metaphysik*, 4th ed. (Tübingen: Max Niemeyer, 1976), 3.

33. Perry, Bruce Millard. 1983. *Simplicius as a Source for and an Interpreter of Parmenides*, Washington University.

Ph.D thesis available at ProQuest Dissertation Express, order number: 8319442.

Contents: Acknowledgments IV; Special Abbreviations V; Introduction 1; Chapter I. Plato and Parmenides 11; Chapter II. Aristotle and Parmenides 33; Chapter III. Parmenides in the Later Tradition 52; Chapter IV. Simplicius on Parmenides 87; Conclusion 257; Bibliography 271; Appendix A. Translations

278; Appendix B. Quotations from Parmenides 409; Appendix C. Verses, Variant Readings 416; Appendix D. Index Locorum 440-442.

"A systematic study of Simplicius's interpretations of all the Presocratics is not feasible here.

(...)

I have chosen to study his interpretation of Parmenides because he is perhaps the most important, if also the most problematic, of the Presocratics. Simplicius quotes 101 out of the 154 extant Greek verses of Parmenides, and devotes considerable space in his commentary on *Physics I*, augmented by several passages from his De Caelo commentary, to interpreting Parmenides.

There is thus considerable material for study.

Because Simplicius's interpretation does not arise *ex nihilo*, some consideration must be taken of the formative influences on and the possible sources for his interpretation. More specifically, Simplicius rejects the criticisms of Parmenides by Plato in the *Sophist* and by Aristotle in the *Physics* and argues that his own interpretation silences both criticisms. Chapter I comprises a sketch of Parmenides's influence on Plato (Republic V 476e6-480a13), and an examination of Plato's criticism in the *Sophist* (244b6-245e2). Similarly, Chapter II considers Aristotle's treatment of Parmenides in *Metaphysics A* (986b27-987a2) and *Physics I* (184b15-187all). The other possible influences or sources are considered in Chapter III: the doxographical tradition, Sextus Empiricus, Plutarch, and the Neoplatonists.

The large amount of material on Parmenides in Simplicius necessitates a division into manageable topics or sections. While such a division is by nature arbitrary, the nine sections I have decided upon in Chapter IV represent reasonably discrete subjects: I. Biographical Information; II. Obscurity of Doctrine, Poetry; III. Overall Discussions of Parmenides; IV. The *Aletheia*; V. The *Doxa*; VI. Parmenides's Argument for the

Unity of Being; VII. Plato on Parmenides; VIII. Aristotle on Parmenides; IX. Others on Parmenides.

Each section contains at least two parts: a detailed list of the relevant passages (A), and a summary of their contents (B). For the first five sections commentary is provided (C); particularly detailed commentary is devoted to the *Aletheia* (IV) and the Doxa (V). A summary of Simplicius' s interpretation is found at the beginning of Chapter IV, and a set of conclusions follows Chapter IV.

Appendix A contains English translations of all the passages which bear on Parmenides in Simplicius. A detailed list of Simplicius's quotations from Parmenides forms Appendix B. The verses with variant readings from CAG [*Commentaria in Aristotelem Graeca*] VII and IX are collected in Appendix C. Appendix D is a skeletal *Index Locorum*." (pp. 6-8)

34. ———. 1989. "On the Cornford-fragment (28 B 8,38)." *Archiv für Geschichte der Philosophie* no. 71:1-9.

"In "A New Fragment of Parmenides" CR 49 (1935) 122—123, F. M. Cornford argued for the authenticity of the verse found at *Theaetetus* 180e1 and in Simplicius *in Ph.* 29.18, 143.10:

οἶον ἀκίνητον τελέθει τῷ παντι δνομ* εἶναι.

Though editors from Diels onward have rejected the verse as a misquotation of B 8.38, Cornford has persuaded some scholars to accept it as a genuine fragment. The cogency of some of these arguments will be challenged in this article. While the fragment does not stand or fall solely with Cornford's arguments, fresh doubts as to its authenticity will be raised incidentally." (p. 1, notes omitted)

"Cornford's argument for the accuracy of Simplicius's quotation of the verse rests on the claims that he quotes the verse directly from his MS of Parmenides and that he does not explicitly mention the *Theaetetus* when he quotes it. Both claims are open to objection. Simplicius does not invariably quote Parmenides from his MS; in fact, he often quotes him from Plato. There is also good reason to believe that Simplicius has

the *Theaetetus* in mind when he quotes the verse at *in Phys.* 143.10." (p. 5)

"It is reasonable to conclude that Simplicius did quote the verse from Plato, and not from his MS of Parmenides." (p. 9)

35. Perzanowski, Jerzy. 1996. "The Way of Truth." In *Formal Ontology*, edited by Poli, Roberto and Simons, Peter, 61-130. Dordrecht: Kluwer.

Contents: Index 61; 1. Introduction 62; 2. Beings, the Being and Being 64; 3. Ontological connection 65; 4. Towards a theory of ontological connection 67; 5. Some classical ontological questions 73 ; 6. A linguistic intemezzo 76; 7. An outline of a Primitive Theory of Being - PTB 86; 8. Towards a Extended Theory of Being - ETB 102; 9. Parmenidean statements reconsidered and classical questions answered 122; 10. Summary 127; Acknowledgements 128; References 128-130.

"1.8 In what follows a very general theory of ontological connection is provided.

In spite of its generality this theory enables us, as we shall see, to reconsider the classical ontological claims of Parmenides and to refute an anti-ontological claim that the notion of being is syncategorematic.

Also certain ontological theorems will be proved, including: *Being is and Nonbeing is* (sic!). *A being is, whereas a nonbeing is not.* Also: *Whatever is, is* - which is shown to be equivalent to *Whatever is not, is not.*

1.9 The paper is organized as follows: I start with general remarks concerning ontology and different approaches to the notion of being. Next, several classical questions of traditional ontology are discussed. After making our problems clear, I will introduce a formalism enabling us to study them in their full generality. Finally, the results of the paper are discussed in a manner introducing perspectives for a subsequent theory of qualities." (p. 63)

36. Philip, J. A. 1958. "Parmenides' Theory of Knowledge." *Phoenix. Journal of the Classical Association of Canada* no.

12:63-66.

"But Parmenides is only incidentally concerned with any theory of knowledge. He is telling the tale of his journey, in search of both knowledge and true opinion. It takes him away from the paths of men, beyond the gates of day and night, into the light. There the goddess reveals to him the secrets of true being which alone is the object of knowledge; but she also reveals true opinion concerning our physical world. In his poem Parmenides is passing on that revelation, but he nowhere suggests that that revelation is accessible to intellectual

effort without revelation. For that reason it seems to me that no interpretation which makes Nous a product of physical constitution can be acceptable, and that in spite of its difficulties it is preferable to understand Nous as a harmony, in the Universe and in the mind of

man." (pp. 65-66 a note omitted)

37. Phillips, E.D. 1955. "Parmenides on Thought and Being." *Philosophical Review* no. 64:546-560.

"Professor Erwin Schrödinger, in the second chapter of his recent book, *Nature and the Greeks* (Cambridge, Cambridge University Press, 1954) discusses for a few pages (ibid. 24-28) the Parmenidean doctrine of Being. The whole book is of peculiar interest because it is the work, not of a professional Hellenist or even philosopher, but of a famous physicist, who has his own reasons for studying Greek thought; and this chapter has the added piquancy of presenting a view of Parmenides which was once respectable but is now widely reprobated. I propose first to examine this view, as Schrödinger puts it, and then, having necessarily reached some conclusions of my own about Parmenides, to examine the Parmenidean doctrine itself, so determined, from the point of view of modern philosophy, at any rate in the matter of logic. The precise nature of this amalgam of logical, illogical, and nonlogical thinking may then become clearer for those who are interested in the history of philosophy and the temperaments of philosophers." (p. 546)

38. Picht, Georg. 2022. "The Epiphany of the Eternal Present – Truth, Being and Appearance in Parmenides (1960)." In *Georg Picht. A Pioneer in Philosophy, Politics and the Arts*, edited by Enno Rudolph and Picht, Johannes, 7-42. Cham (Switzerland): Springer.

Originally published as: 'Die Epiphanie der ewigen Gegenwart: Wahrheit, Sein und Erscheinung bei Parmenides'. In: H. Höfling (ed.), *Beiträge zu Philosophie und Wissenschaft: Wilhelm Szilasi zum 70. Geburtstag*. München: Franke 1960. Also in: G. Picht, *Wahrheit – Vernunft – Verantwortung: Philosophische Studien*. Stuttgart: Ernst Klett Verlag 1969, pp. 36–86.

"In the study 'The Experience of History'[*], the assertion that truth appeared to the Greeks as the epiphany of eternal presence was reached via an interpretation of Aristotle's definition of the human being as a $\zeta\ \bar{\omega}\nu\ \lambda\omicron\gamma\omicron\varsigma$ – a creature that possesses the logos. The form of knowledge in which truth discloses itself as truth, namely nous, was 'consciously omitted' there because it did not belong in an investigation that sought to gain access to the experience of history by following the history of the concept of experience. The result of this omission was that the origin of the Aristotelian logos remained obscure, and that in the analysis of Kant, the shared ontological foundation of the concept of time and the concept of pure reason could be hinted at, but not revealed. The ontological foundations of Kant's thought are the ontological foundations of objective science. We cannot expect to attain the status of freedom in relation to this science and its effects on the shaping of the technological world if the foundation on which it rests remains hidden from us. That is why the question of the original sense of the 'epiphany of eternal presence' is one we must no longer avoid.

The following investigation does not actually seek to pose this question, only to prepare it. It will show that the epiphany of truth that determined the fate of European thought took place, in a sense that can be precisely defined, in the poem by Parmenides. In order to reach an understanding of

Parmenides, the first part of the text will trace the path that leads from Homer via Hesiod to Xenophanes, whose concept of *nous* will be interpreted. The second part will attempt to build on this by examining some fragments from the poem. The method of our approach can only develop through a philological interpretation of difficult texts that have survived as fragments; there is no 'royal road' to the insights we seek. If we seriously mean to speak of the 'history of truth', we can no longer view the 'historical' as the 'relative' or the 'contingent', which indifferently circles a timeless truth. The well-worn distinction between 'historical' and 'systematic' work is then revealed as a naïve prejudice. We will only be able to explore and experience the history of truth if the great patience of philology is combined with the great patience of fundamental questioning." (p. 8)

40. Popper, Karl Raimund. 1992. "How the Moon Might Throw Some of Her Light Upon the Two Ways of Parmenides." *Classical Quarterly* no. 86:12-19.

An improved and expanded version in: K. R. Popper, *The World of Parmenides. Essays on the Presocratic Enlightenment*, Essay 3, pp. 68-78.

"Parmenides was an important philosopher of nature (in the sense of Newton's *philosophia naturalis*). A whole series of important astronomical discoveries is credited to him: that the morning star and the evening star are one and the same; that the earth has the shape of a sphere (rather than of a column, as Anaximander thought). About equally important is his discovery that the phases of the moon are due to the changing way in which the illuminated half-sphere of the moon is seen from the earth." (p. 14)

"But a great discoverer is bound to try to generalize his discovery. Selene does not truly possess those movements that

she exhibits to us. Perhaps we can generalize this?

And then came the great intellectual illumination, the revelation: in one flash Parmenides saw not only that reality was a dark sphere of dense matter (like the moon), but that he could prove it! And that movement was, indeed, impossible.

The proof was (more or less simplified):

(1) Only Being is (Only what is, is).

(2) The Nothing, the Non-Being, cannot be.

(3) The Non-Being would be Absence of Being, or Void.

(4) There can be no Void.

(5) The World is Full: a Block.

(6) Movement is impossible." (pp. 14-15)

"When as a 16-year-old student I first read Parmenides'
wonderful poem.

I learnt to look at Selene (the Moon) and Helios (the Sun) with new eyes - with eyes enlightened by his poetry, Parmenides opened my eyes to the poetic beauty of the Earth and the starry heavens, and he taught me to look at them with a new searching look: searching to determine, as does Selene herself, the position of Helios below the Earth's horizon, by following the direction of her 'eager look'. None of my friends whom I told about my rediscovery of Parmenides' discovery had looked for this before, and I hoped that some of them liked it as much as I did. It was, however, only some seventy years later that I realized the full significance of Parmenides' discovery, and this made me realize what it must have meant for him, the original discoverer. I have tried since to understand and explain the importance of this discovery for the world of Parmenides, for his Two Ways, and its great role in the history of science, and especially of epistemology and of theoretical physics." (Preface, VIII-IX)

"The following study represents an attempt not only to explicate in some small way a mode of thought significantly different from much of our own, but also to suggest a new criterion of judgment for Classical Philology. These two purposes merge into one insofar as both come about from my own sharp disagreement with certain prevailing critical attitudes towards the so-called pre-Socratics. These essentially ungrounded attitudes are characterized, as I see them, by

strong relativistic and materialistic premises which, although hidden for the most part, result in awkward misunderstandings of the pre-Platonic corpus in general and an uneven, if not castrating, criticism of specific authors in particular. These modern critical stances did not exist in the pre-Aristotelian Greek world in any predominant form, but Classical Philology in the later half of the twentieth century maintains otherwise and has, consequently, severely limited itself and very probably its future by adopting a narrow and unnecessarily rigid criterion of judgment that largely misrepresents the literary evidence at hand. Beyond the by no means unanimous acknowledgment that Aristotle revealed little of the real worth of the pre-Socratics, modern Classical Philology has not even suggested the need of a method — let alone the method itself — that might grasp the period between

Homer and the Platonic revolution. I offer this study as an attempt to supply this critical tool." (*Preface*, VII)

"Three men, Carl Jung, Claude Levi-Strauss, and Ernst Cassirer have contributed greatly to the elucidation of the mode of thought whose influences we shall trace in the ensuing pages. Each, working from a different professional point of view and actually for very different

purposes, has opened the serious investigation of the archaic configuration of mind." (p. 2)

"I substantially agree with the basic comparative approach of Reinhardt, Frankel, Mansfeld, and Mourelatos, although I should not place as much emphasis on the innovative quality of Parmenides' insight as does the last. My own particular method, however, is symbolic and structural, and in these respects little has been done with the text of Parmenides with the partial exception of the vocabulary and motif study of Mourelatos. Tarán, for instance, denies a recourse to symbolism in Parmenides.(32) Havelock points to definite symbols in the proem of the work but does not develop their meaning *qua* symbols.(33) It was left to Jung to detect the psychological and cultural symbolism inherent in the work of Parmenides. He indicated that the *στεφάνη* Cicero discusses in

his *De Natura Deorum* is in fact an archetypal representation of the divine.(34) Cicero's "unbroken ring of glowing lights encircling the sky which he [Parmenides] entitles god" is surely the phenomenon described in fragment 12. Jung also connects it with the "circular motion of the mind which everywhere returns into itself" (5).(35) The symbolic nature of Parmenidian thought represents an observable phenomenon that in my opinion should be examined thoroughly. It is in the proem to his work that this nature is most easily detected." (p. 95)

Abstract: "In this paper, the author argues that the revelatory form Parmenides gives his poem poses considerable problems for the account of being contained therein. The poem moves through a series of problems, each building on the last: the problem of particularity, the cause of human wandering that the goddess would have us ascend beyond (B1); the problem of speech, whose heterogeneity evinces its tie to experience's particularity (B2–B7); the problem of justice, which motivates man's ascent from his "insecure" place in being, only ultimately to undermine it (B8.1–49); and finally the question of the good, the necessary consequence of man's place in being as being out of place in being (B8.50–B19). What emerges is a Socratic reading of Parmenides's poem, a view that Plato appears to have shared by using Parmenides and his Eleatic stranger to frame the bulk of Socrates's philosophic activity."

Summary: "Historians of Greek thought have often described the Parmenidean doctrine as a sort of philosophical exception, hostile to the prevalent naturalist interests of earlier philosophers. The structure of the Parmenidean poem itself, juxtaposing a section on Truth, concerned with an entity displaying characteristics incompatible with those of Nature, to a section on Opinion, concerned with physical theories, seems to support that interpretation. A re-examination of the relationship between these two sections, however, and their authentic internal articulation, can help to understand the Parmenidean position on physics, thus restoring him to his historical-philosophical context. The alleged tension between the two sections is contained mainly in verse B8.53. The verse is traditionally

understood as referring to the decision of mortals to name two forms (μορφάς) corresponding to Fire and Night. However, a more careful reading of the verse (as proposed by some scholars) leads us to the conclusion that the "two" are not the forms but the mortal points of view (γνώμας). So what are the forms then? A reading of verse B9.1 allows us to stipulate that, for Parmenides, the forms are all the visible things and thus the physical objects. If we identify these exterior forms with τὰ δοκοῦντα from verse B1.31 (translated as "the objects of opinion") it becomes possible to recompose the poem's structure. We can recognize three sections: the first, on Truth, dedicated to existence in oneness and homogeneity; the third, on physical forms, providing a description of the world from a morphological standpoint. Between these two lies the second section, dedicated to mortal Opinions which, like the cosmogonies, confuse the ontological status of Everything with the morphological and mereological status of particular objects. Nonetheless, in the section on correct physical theories (the third one) Parmenides attempts to recuperate the two principles recognized by mortals, accepting their δυνάμεις

(most likely identified with Hot and Cold) as elements of which the cosmos consists. This reading allows us to place Parmenides inside the development of Pre-Socratic thought, connecting him to earlier thinkers and, more importantly, to the later ones. The idea that the physical world consists of forms both visible and mutable, as manifestations of a reality fundamentally invisible and immutable, perceivable only through reason, will become a cliché of natural philosophy after Parmenides; at least until Plato, who will go on to recognize in the invisible and immutable forms the paradigm of the world."

"Likewise, I agree with quite a few non-trivial points among those presented by RM [Richard McKirahan], sharing with him, for example, the idea that Parmenides was not at all (as a long tradition of interpretation holds) a numerical (or strict) monist, and therefore not a proponent of a single unchanging entity or that the manifold changing things we believe in do not exist. I also agree with RM that there are not 'two worlds' in the thought of Parmenides, that the two parts that follow the proem (there are three, in my estimation, but that is another matter) deal with different objects, and that the distinction between the parts can be placed on a level approximately analogous to that which distinguishes metaphysics from physics. It is precisely this reference – the distinction between metaphysics and physics – that induces RM to present his interpretation as having as its object an 'Aristotelianizing Parmenides.' What separates me from him are the details of his interpretation – although they are important details." (p. 190)

Abstract: "In *Physics A*, Aristotle introduces his science of nature and devotes a substantial part of the investigation to refuting the Eleatics' theses, and to resolving their arguments, against plurality and change. In so doing, Aristotle also dusts off Parmenides' metaphor of the routes of inquiry and uses it as one of the main schemes of his book. Aristotle's goal, I argue, is to present his own physical investigation as the only correct route, and to show that Parmenides' "way of truth" is instead both wrong and a sidetrack. By revisiting Parmenides' metaphor of the route, Aristotle twists it against him, distorts it and uses this distortion as a source of fun and of some mockery of Parmenides himself. Thereby, *Physics A* gives us a taste of

Aristotle's biting humour and of his practice of the “virtue” of wit (*eutrapelia*).”

"1. The Role of Chapter 3 in Physics I:

An Introduction

In the second and third chapters of *Physics* I Aristotle provides a criticism of Eleatic monism. Chapter 2 contains a refutation (ἔλεγχος) of the Eleatics' view that 'all things are one', whereas chapter 3 gives a resolution (λύσις)(1) of some of their arguments, most of which concern the unity of the things that are.(2)

In the first two sections of chapter 3 (186a4–22, 22–32) Aristotle resolves some arguments by Melissus and one argument by Parmenides, which he describes as eristic: they assume some falsity and their conclusions do not follow (185a8–10, 186a6–8). In the third section (186a32–b14) Aristotle puts forward a strengthened version of Parmenides' argument and criticizes it. Then (186b14–35), building on this criticism, he formulates an argument for the internal division of what is (conceived of as what is just being). Lastly, he tackles the view of some post-Eleatic philosophers who gave in to two Eleatic arguments. The whole criticism of Eleatic monism is concluded in chapter 3 with the following words: '[i]t is therefore clear that it is impossible that what is is one in this way' (187a10–11)." (pp. 89-90)

(1) Cf. *Top.* VIII 10, 160b33–4, SE 16. On Aristotle's distinction between the refutation of a thesis (ἔλεγχος) and the resolution of an argument (λύσις), cf. Rossi 2014.

(2) The focus of chapter 3 is clearly on Eleatic monism. Eleatic immobilism is dealt with in chapter 8.

However, in chapter 3 Aristotle also tackles some arguments by Melissus for the immobility of what is, arguments that he describes as lacking ἀπορία (185a10–12).

50. R., Lacey A. 1965. "The Eleatics and Aristotle on Some Problems of Change." *Journal of the History of Ideas* no. 26:451-468.

"Where Parmenides demands that anything real must be eternal, Aristotle substitutes the demand that anything which changes must have an unchanging factor, which, however, turns out to be purely notional in one type of change (genesis) and rather hard to identify in another (growth). To this extent I think the hand of Parmenides can still be felt on Aristotle's shoulder. I have already agreed with King [*] that prime matter is not as prominent and explicit in Aristotle as has usually been thought, and it is probable that here as elsewhere Aristotle was making heroic efforts to free himself from his Platonic and Parmenidean heritage while only partly succeeding. Further evidence of these efforts can be seen in another feature of Aristotle's doctrine of change, his insistence that change must be between contraries, which are in the same genus (324a2, 188a35). This is not entirely adequate.

An object can become black from being white or gray, but also from being red or transparent. Aristotle allows for change from intermediate points on the scale, but sometimes only "intermediate" points are available (his attempt to say that the contraries in the case of growth are the original size and the "proper" size to which the object is growing [201a7] seems rather factitious); and sometimes, as with red and transparent, the scale itself is not very obvious. The important point is that the terms of a change must be inconsistent (hence a sweet object can only become black incidentally, not qua sweet).

But this, though necessary, is not sufficient. Nothing can be at the same time both black and prime (in the sense in which numbers can be prime), but an object cannot change from being black to being prime." (pp. 467-468)

"As Dr C. M. Bowra has pointed out in a paper in *Classical Philology* (XXXII [1937], p. 106), 'it is clear that this Proem is intended to have the importance and seriousness of a religious revelation'. Not only the passage from darkness into light but many minor details throughout the poem suggest that Parmenides desired, particularly in the Proem, to arm himself in advance, by stressing the religious and ethical nature of his revelation, with an answer to his potential critics. There seems no reason to doubt Dr Bowra's assumption (loc. cit. p. 108) that these potential critics were 'his fellow-Pythagoreans'.

Parmenides is indeed, in Cornford's phrase, 'a curious blend of prophet and logician'. The Proem, though its details are of no importance to our present inquiry, at least serves the useful purpose of stressing the prophetic strain. The Way of Truth, on the other hand, is an entirely unprecedented exercise of the logical faculty, and as such it is usually and naturally taken to be devoid of any emotion. In its outward form it certainly is so; but it must be remembered that the concept on which Parmenides' logic is at work is that of unity, and there is no

reason to suppose that the concept of unity is incapable of arousing emotion. If two of the conclusions that I have already reached are justified, that Parmenides was a dissident Pythagorean, and that in the Pythagoreanism from which he was seceding there was a fundamental dualism between the principle of unity and goodness and another and eternally opposed principle, then is it not permissible to imagine that Parmenides, swayed perhaps by a deeper respect for the good principle than his 'fellow-Pythagoreans' revealed, may have been driven along the road from darkness into light by a basically religious desire to vindicate the good principle against the bad? Such a supposition would help to explain the fervour that almost succeeds in illuminating the uninspired poetry of the Proem; and the ultimate triumph of his logical faculty over his emotion should not blind us to the possibility that an emotional impulse underlay his unemotional reasoning.

But the only convincing test of such a hypothesis must obviously be sought in the poem itself. I propose to examine the Way of Truth in considerable detail, adopting for the purpose the method employed by Cornford in his chapter on the same subject. Indeed, on occasions I shall be merely paraphrasing that chapter; but a measure of such repetition is inevitable for the sake of continuity." (pp. 23-24).

"We are now at last, therefore, in a position to counter the only apparently grave objection that might be brought against the contention that Parmenides wrote his poem with an eye especially upon the Pythagoreanism from which he had seceded. If that contention is indeed true, then why is it, it might reasonably be asked, that neither of the two ways from which the goddess sees fit to debar Parmenides represents Pythagoreanism? Our examination of the purpose of the poem should by now have suggested a complete answer to such an apparently damaging objection. The first forbidden way, that it is NOT or NOTHING IS, is to this extent, as Parmenides claimed, ἀνόητον ἀνώνημον, that at any rate nobody had attempted to tread it. It is introduced into the poem partly for the sake of logical completeness but especially because it was combined with the true way to form the way which foolish two-

headed mortals tread, the way of custom. So far as we are entitled to judge, therefore, from our reading of the Way of Truth alone, the third way, namely that it is and it is not, will include any combination whatever of the true way and the way of falsehood, or in other words any known cosmology whatever. But Pythagoreanism, with its ultimate dualism and its consequent employment, not of the characteristics of Being only nor of those of Not-being only, but of the two simultaneously, is undeniably a particularly glaring example of such a combination— more glaring, indeed, than any other early system simply because, as Aristotle suggests in his own way, it admits more of those νοητά which Parmenides accepted as the only truth. It might, therefore, be not unreasonably expected, until we actually pass to it, that the Way of Seeming will at least bear a closer resemblance to the Pythagorean than to any other way. But fortunately, almost as soon as we come to the Way of Seeming, Parmenides himself gives us the explanation of why that need not necessarily be so. The Way of Seeming presents the best cosmology that Parmenides was capable of inventing, ὡς οὐ μὴ ποτέ τίξ σε βροτῶν γνώμη παρελάσση ; and in consequence, so far from imitating the Pythagorean cosmology, it is, at some points at least, in direct conflict with it. This part of the poem too, and for much the same reason as the earlier part, is in fact especially damaging to the Pythagorean system; for that system was undeniably more guilty than any other of confusing the illusory objects of perception with the eternally existent objects of thought. To look, in short, for an explicit representation of any known system whatever in either of the two forbidden ways is to demand that the poem should be rewritten in quite another form and with quite another object. But that is no valid argument against my contention that throughout the poem we can repeatedly detect a special (even if, as I have all along admitted, a secondary) anti-Pythagorean validity." (pp. 41-42)

Partial translation of *Parmenides und die Geschichte der griechischen Philosophie*, Frankfurt: Klostermann, 1916 (the following pages are translated: 18-23, 29-32, 64-71, 74-82, 88 with omissions as indicated. (Translation by Matthew E. Cosgrove with A. P. D. Mourelatos).

"Whoever takes the trouble to understand Parmenides in all his boldness as well as in his restraint, and at the same time in terms of his historical situation, must first of all realize that the

one great defect from which the "Doxa" suffers in our eyes- namely, that it is unable to take hold of the knowing subject and must turn for help to the things themselves- was not very perceptible to Parmenides, and was perhaps not perceived by him at all. He understood the proposition that like can only be known by like so literally, so close to the level of visual imagery, that he could not but think that the organ of perception and its object were made up of the same constituents, and were even subject to the same forms and laws. Thought processes in the soul appeared to him not as corresponding with, but as exactly repeating the external world. What was a law for thought had to have unqualified validity for things also. If nature were shown contradicting the principle of non-contradiction itself, then nature was ipso facto false and precisely not existent: "For you could not come to know that which is not (for it is not feasible), nor could you declare it; for it is the same to think and to be" (B2.7-8, B3). Conversely, every character of the external world led directly to a conclusion concerning human knowledge.

No matter how hard one looks, one will not find the slightest hint of a separation between thinking and being (or representation and appearance) in the fragments. Parmenides begins the "Doxa" by relating (B8.53) that men have agreed to designate a twofold form with names, but he does not elaborate, as one would expect, on how they fashioned their world-picture from both forms. Instead, the object of their thought straightaway achieves an independent life: Dark and light unite and produce the world; and to our surprise a cosmogony springs from the epistemology. What had been no more than a name, a convention, an onoma, enters into physical combinations, and finally generates even man himself and his cognitive states. To our way of thinking, that is certainly hard to take. Our only recourse, if we are to grasp it, is to recite to ourselves once again the rule that was the lifeblood of Parmenidean conviction: "For it is the same to think and to be" (B3). Because this world is composed throughout of light and darkness, and is pervasively the same and then again not the same (B8.58, B6.8), because contradiction is the essence of all doxa, this entire world must be false, that is to say, subjective,

or as the Greeks would have said, it can only exist *nomoi*, "by convention," and not *physei*, "in reality."

To be sure, this conclusion is not repeated in every sentence. Now and then it even seems as though the critic and nay-sayer had let himself be carried along for a while on the broad stream of human opinions; indeed, as though his critique were itself the repository of discoveries in which he took pride. For since appearance by no means lacks all reason and consistency, it can actually be explored. Yet its character as appearance does not mitigate its contradicting the highest law of thought, the sole guarantee of truth. This is said twice, briefly but sharply, at decisive points: the beginning and the end of the second part. Whether between these passages there were originally additional reminders of the same fundamental idea, we do not know. The two that we do know are sufficiently complete. As though separated from the rest by a thick tallying stroke, at the conclusion of the whole stand the words that give the sum of all that has been said (B19):

And so, according to appearances (*kata doxan*) these things came to be, and now are, and later than now will come to an end, having matured; and to these things did men attach a name, a mark to each." (pp. 295-297)

3. Rickert, Thomas. 2014. "Parmenides, Ontological Enaction, and the Prehistory of Rhetoric." *Philosophy & Rhetoric* no. 47:472-493.

Abstract: "The Presocratic thinker Parmenides is portrayed in philosophy and rhetoric as a philosopher of static monism anticipating reason's triumph over myth. Such a portrayal is narrow and ill fits the evidence. Parmenides was associated with a cult of priest-healers (*iatromantis*) of Apollo who practiced incubation, usually in caves, in order to receive wisdom and truth. Parmenides's famous poem "On Being" ("Peri Phuseōs") reflects these practices. The poem directly invokes altered states of consciousness, revelations from the gods, and an underworld descent (*katabasis*).

Further, the poem is of strong rhetorical interest because it directly discusses rhetorical themes of persuasion, truth, and

knowledge. Additionally, the poem suggests that rationality alone cannot suffice to liberate human beings from worldly illusions; rather, reason must be accompanied by a combination of divine inspiration and *mêtis* (cunning wisdom)."

4. ———. 2017. "Parmenides: Philosopher, Rhetorician, Skywalker." In *Logos without Rhetoric. The Arts of Language before Plato*, edited by Reames, Robin, 47-62. Columbia: University of South Carolina Press.

"Currently, Parmenides is peripheral at best in rhetorical studies, but I claim that he merits a significant place in rhetorical history—or, better, prehistory, since he predates the group we call the sophists, and, further, it is likely that *rhētorikē* is a coinage of Plato's, and hence, not quite applicable to Parmenides.(3)" (p. 49)

"It is only recently that a different picture of Parmenides has begun to emerge that allows us to see that he does not fit the narrow frame philosophy has created for him. To see this, it is necessary to take the introductory proem seriously. While the proem has frequently been dismissed as a literary device introducing the poem's philosophical core, a variety of evidence indicates that the proem frames all that follows, performing acts of initiation and revelation in line with other ritualistic practices in the ancient Greek world. Further,

taking the proem seriously resonates with the above evidence concerning Zeno's death and Parmenides' bust. In short, Parmenides should now be understood as someone with wide-ranging interests, including teachings that involve not just cosmology but theurgy, healing, life-training, and rhetoric. Our understanding of Parmenides' use of reason should be thought within this broader scope. Instead of being a precursor to Plato's escape from the cave of ignorance to the light of reason, on the traditional philosophical read, Parmenides is engaged in *katabasis*, a descent into the cave, to receive knowledge." (p. 52)

(3) Edward Schiappa ("Did Plato Coin *Rhētorikē*?" *American Journal of Philology* 111 (4): 457–470, 1990, 457; *Protagoras*

and Logos: A Study in Greek Philosophy and Rhetoric. 2nd ed. Columbia: University of South Carolina Press, 2003, 40–41) argues compellingly that the term *rhētorikē* is Plato's, or at the least a fourth-century and not fifth-century b.c.e. usage (although the root term, in various formulations, is older). The term "sophist" is also contested, but I cannot delve into that issue here.

5. ———. 2017. "Technique–Technology–Transcendence: Machination and *Amēchania* in Burke, Nietzsche, and Parmenides." In *Kenneth Burke + The Posthuman*, edited by Mays, Chris, Rivers, Nathaniel A. and Sharp-Hopkins, Kellie, 98-123. University Park, PA: The Pennsylvania State University Press.

"In what follows, I put a trio of thinkers—Parmenides, Nietzsche, and Burke—into conversation about the posthuman issue of human and nonhuman relations, specifically their relations to technology. ." (p. 100)

(...)

"I begin with Parmenides, who may seem an unusual figure to explore in this context. Technology, in the common understanding as externalized artifact, is not an issue for Parmenides. However, if we engage with his use of spiritual and intellectual techniques, we will see that Parmenides has much to offer us about technology. Parmenides is one of the first to ask why things are the way they are in a way that sets us on the road to theoretical knowledge. Parmenides marks where technique steps into rational account and thereby gets its -logy (although this is simply a disclosure of a primordial technological attitude). However, there have been recent challenges, most notably by Peter Kingsley, to the philosophical picture of Parmenides as a protophilosopher who offered one of the first rational accounts of the cosmos. These challenges open up other aspects of his surviving poem, *Peri Phuseos* (On Being), demonstrating that Parmenides was interested in truth as persuasion; that metaphysical, revelatory elements are integral to his thinking; and that he was interested in teaching *mētis*, which is understood as a form of cunning, worldly

wisdom, a polymorphous intelligence open to fluid, evolving situations (Detienne and Vernant 2–5)." (p. 103, a note omitted)

Text and translation of the Poem, pp. 212-223.

"The aim of this study is the investigation of Parmenides' method in guiding a human being towards understanding. Parmenides' words operate as a travel guide that leads the audience on a journey that will educate them, transform them, and make them philosophically mature. I will analyse various literary, rhetorical, polemical, and argumentative features of Parmenides' Poem which, I submit, bring the audience a step further towards the kind(s) of knowledge that Parmenides has in store for them.

Many scholars have concentrated on the arguments of fragment B8,3 and on their conclusions -- that Being is without birth, undifferentiated, changeless and complete.

In general, one may be inclined to think that, once a goal has been reached, the journey that brought one there is not relevant anymore. Accordingly, the student of Parmenides' Poem may be tempted to concentrate his or her interpretative energy on Being: the goal of the journey made under the guidance of the goddess of whom the Poem tells us. The scholar who is looking for the philosophical message of the Poem may try to reduce all the questions, pieces of advice and encouragements of the speech of the goddess (B1,24 onwards) to a *description* of Being: the true and knowable reality.

But it may be asked whether this approach, which looks only for a description of Being in the fragments, does not neglect the complex journey that the mind has to make through myths,

images, encouragements and warnings, before it will be able to grasp Being: the philosophical itinerary through which Parmenides guides his audience throughout the Poem. The question *how*, according to Parmenides, we can achieve insight into Being seems no less important for a better understanding of the Poem than the content of this insight. The doubt about traditional certainties, the rejection of certain mental behaviours and the process of building new perspectives significantly *precede* the search for the characteristics of Being.

Once we resist the temptation of detaching a description of Being from the conditions for the achievement of understanding that the goddess sets out, and from the human being who attempts to understand Being, we will become sensitive to the fact that the Poem works upon its audience and helps them to achieve understanding. I will try to analyse the progress towards understanding from the very beginning. The study of this progress, which, I believe, constitutes the main subject matter of Parmenides' Poem, will turn out to be fundamental to the study of Parmenides' philosophy.

A study of a philosopher's method will have to concentrate not only on the words and phrases that the philosopher uses to *describe* the right method, but also on the words and phrases that the philosopher *uses* in order to transform his or her audience: i.e. to persuade them to adopt a new way of looking that will change them.

This will be a systematic study of the rhetorical and linguistic features of Parmenides' Poem that hopes to shed light on his philosophy. Such a study will have to pay attention to the *effect* of such features on the audience who is gradually guided towards insight. Only by looking at the transformative effect of such features of our Poem on the audience will we be able to give a *coherent* interpretation of the fragments.

We will find their coherence by studying the goal they have in common: to help the audience to acquire insight into Being.

What happens when one's journey towards Being is accomplished? Is there room for a differentiation between

oneself and one's goal in a monistic reality? In order to answer these questions, we will look at the hints the goddess gives about the effects of the journey on the way of Truth, i.e. the hints about the transformation of the knowing subject when the journey has reached its goal. We will also be able to find out more about Parmenides' monism by investigating the place of the knowing subject in a monistic reality. I will argue that there are hints throughout the Poem that it is possible for the knowing subject to leave one's status of mortal who can have only opinions, and become one with Being." (pp. 9-10, notes omitted)

7. ———. 2011. "What is Parmenides' Being?" In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 231-231. Las Vegas: Parmenides Publishing.

Summary: "Nobody could know what $\acute{\epsilon}\acute{\omicron}\nu$ meant before listening to the Poem: even native speakers of Ancient Greek needed to acquire new mental categories and form this new concept, $\acute{\epsilon}\acute{\omicron}\nu$, which is usually translated as "Being." Throughout his Poem, Parmenides teaches his audience to form this concept. One of the means he uses are the signs ($\sigma\eta\mu\alpha\tau\alpha$) given by the goddess to the traveler in fr. B8. I focus here on the fourth $\sigma\eta\mu\alpha$, where Parmenides gives hints about the special relation between Being

and those who understand Being. I will show that Being is the fundamental unity of what-is (what is stable, without differences, development, needs) and what-understands. This perfect unity is what the audience is encouraged to understand. This unity is also the condition of the possibility of human understanding. Human beings can, in fact, understand this unity, directly, with an act of $\nu\omicron\epsilon\acute{\iota}\nu$, since $\nu\omicron\epsilon\acute{\iota}\nu$ and Being are not separate but are one."

8. ———. 2016. "Parmenides' and Śankara's Nondual Being without Not-being." *Philosophy East and West* no. 66:290-327.

"In the first section I will sketch what I call 'the fashionable Parmenides interpretations,' which regard being as the result of

laws of logic or of predication. I will mention the common practice of scholars of trying to understand Parmenides' meaning of 'is' and 'being' by looking for the subject of the verb 'is,' that is, the alleged entity or object that 'is.' An alternative to this practice is to try and understand both the omission of a subject of the verb 'is' and the journey metaphors in fragment DK B2 as suggestions that being is not a thing but rather the activity, state, or fact of being. By means of a comparison with Śaṅkara, I will use the category of nondual experience to understand being, which is not a thing. In section 2, I will present a short overview of the existing comparisons between Parmenides and Śaṅkara. I will then (section 3) look at pointers in Śaṅkara's work that might help us grasp what is meant by nondual experience, which is knowing that is not different from being (and Self/Ātman, which is reality/Brahman), which might well be regarded as the goal that both philosophers want to help their audience reach. In section 4, I will show how both philosophers express the need on the part of human beings not only to become aware of the nondual essence of reality but also to make sense of reality by means of concepts and words that help them see order in reality. However, Parmenides and Śaṅkara regard "opinions" and "lower level of knowledge," respectively, as only acceptable if they are not used as instruments to understand reality as it is. Both philosophers offer a method for testing what mortals (i.e., we) believe to be real.

In section 5, we will look at the first step of this method, taken by Parmenides in DK B2 and by Śaṅkara in *Brahmasūtra-bhāṣya* I, 1, 1.

(...)

In section 6, I will mention the second step their methods have in common: the application of a test of what, according to common sense, are the fundamental characteristics of reality: birth, movement, differentiation, development, and relations of cause and effect. I will concentrate on the passage in DK B8 where Parmenides tests the reality of birth (which does not pass the test and is proved to be unreal). We will then look

(section 7) at Śaṅkara's use of negative dialectic in *Brahmasūtra-bhāṣya* II, 1, 18, where he refutes the reality of two distinct entities called cause and effect." (pp. 290-291)

9. ———. 2016. "Being is not an object: an interpretation of Parmenides' fragment DK B2 and a reflection on assumptions." *Ancient Philosophy* no. 36:263-301.

"Is Parmenides' *being* a thing, discovered by reason and expressible in well-formed sentences? Or is it rather the same as knowing, which is the trustworthy aspect of our experience, pointed at by Parmenides by means of coherent reasoning?

In this introduction, I make explicit the main assumptions that the majority of scholars apply to the interpretation of DK B2 and of the rest of Parmenides' poem. In sections 1 and 2, I show what role these assumptions play in the interpretation of Parmenides' poem. Then, I show what other assumptions could be used to interpret Parmenides. In section 3, I argue that Parmenides' *being* (το ἔόν, εἶναι) could be something other than a special 'object'. By 'object' I mean some entity distinct from a subject observing it. I suggest what question *being* could be an answer to and review some answers given by philosophers of various backgrounds to that question. In section 4, I look at what being could be, by focussing on the role played by the notion of trust throughout the poem. In section 5, I analyse fragment B2 and delve into the category of experience. In the conclusion, I compare the repercussions, for the interpretation of B2 and Parmenides' philosophy at large, of applying the two different sets of assumptions" (p. 263)

10. ———. 2016. "Self or *being* without boundaries: on Śaṅkara and Parmenides." In *Universe and Inner Self in Early Indian and Early Greek Thought*, edited by Seaford, Richard, 134-148. Edinburgh: Edinburgh University Press.

"This chapter focuses on a similar argument made by Parmenides(2) and Śaṅkara(3) involving the claim that boundaries between everyday entities are superimposed and not real. I hereby continue my exploration of the similarity of the arguments of the two philosophers, who, so far, have been

compared only either as adherents of monism, or in order to show historical dependence, mostly of Greek thought on the Veda.(4) I will show how Parmenides and Śaṅkara argue that any boundary that we believe to be real and capable of separating the many individuals and things can be proven to be superimposed by humans on being rather than being real." (p. 134)

(2) Parmenides was a Greek philosopher of the early fifth century bce, i.e. before Socrates and Plato. He wrote a poem in which he describes a journey that takes him first beyond the Gates of Night and Day and then beyond what can be seen as all opposites and dualities, the duality of knowing and being or subject and object included. Of this poem only quotations by other authors survive.

(3) Śaṅkara was an Indian philosopher of the eighth century ce; his school was called Vedānta, meaning the last part of the Veda. He wrote commentaries on the Vedānta or Upaniṣads and on other important texts like the Brahmā Sūtra. He is an exponent of Advaita Vedānta, i.e. non-dual Vedānta, which signals that he interprets literally the Upaniṣadic claim that *ātman*, or our Self, is the same as *brahman*, i.e. the essence of reality.

(4) For a comparison between Śaṅkara's and Parmenides' arguments based on separation or discrimination, see Robbiano (2016). In this paper I also offer an extensive review of the existing comparisons between these two philosophers.

11. ———. 2016. "Parmenide's and Melissus' *being* without not-being." In *Eleatica Vol. 5: Melissus between Miletus and Elea*, edited by Pulpito, Massimo, 165-174. Sank Augustin: Academia Verlag.

"My paper is an elaboration of Mansfeld's claim: 'This core ingredient of Parmenides' distinction between Being and non-Being still determines the argument in the later paragraphs of Melissus' exposition' (76). What Jaap refers to as a 'distinction' I interpret as a complete absence of not-being from Parmenides' ontology. I will argue that Parmenides and

Melissus point to the same being, which does not allow for anything else, i.e. for any 'not-being', next to it. I will show that Melissus' signs should be seen as different pointers to the same being. In order to justify my claim, I will show that Melissus' *semata* (just like Parmenides') are securely founded on the absence of not-being. The absence of not-being is not argued by Melissus who can rely on Parmenides' argument (especially B2.5-8). I will suggest that being without not-being is not a product of logic: in fact, the certainty of the absence of not-being next to being comes from experience, i.e. it comes from the assumption that it is impossible to know not-being, defended in B2.5-8 by an appeal to experience." (p. 165)

12. ———. 2019. "Just being: un-individualized. An interpretation of Parmenides DKB16 and a glance at empirical research." In *ὁδοὶ νοῆσαι. Ways to Think. Essays in Honour of Néstor-Luis Cordero*, edited by Pulpito, Massimo and Spangenberg, Pilar, 167-176. Bologna: Diogene Multimedia.

Abstract: "In this paper I build on my interpretation of Parmenides: being or awareness -which is continuous, undifferentiated, and unchanging - is what is really there, and thus, what we, humans, really are. It is only conventionally (according to the human *doxai*, B19) that there are many things that are born and die, and that we are separate individuals. I present here the following interpretation of DKB16: what keeps all limbs of one individual together is awareness; awareness - the unifying factor, which is what perceives and knows in all of us - is the same for all individuals: there is no way to differentiate one unifying factor from the next: at the fundamental level, there is no differentiation, no separation and no individuals. I suggest that the unifying awareness of B16 resembles what contemporary cognitive scientists and phenomenologists refer to as the unitary, continuous, and ubiquitous structure, which accompanies and unifies all our experiences. They refer to it as *pre-reflective* self-awareness, 'sense of I', and 'minimal self', and distinguish it from reflective awareness, or sense of 'Me', that enables one to construct one's narrative identity. I also refer to empirical research that has been interpreted as pointing to the experience of the

dissociation between pre-reflective self-awareness and sense of Me'. The subjects who experienced this un-individualized self-awareness report it to be an experience of integration a loss of time and space, and profound relaxation (in other words, unshakeness) - which closely resemble Parmenides' signs of being (B8)."

13. Robinson, Thomas M. 1975. "Parmenides on the Ascertainment of the Real." *Canadian Journal of Philosophy* no. 4:623-633.

"In this paper I want to suggest that, while the argued philosophical distinction between logic, epistemology and ontology is one of the many achievements of Aristotle, his predecessor Parmenides was in fact already operating with a theory of knowledge and an elementary propositional logic that are of abiding philosophical interest. As part of the thesis I shall be obliged to reject a number of interpretations of particular passages in his poem, including one or two currently fashionable ones. Since so much turns on points of translation, I note for purposes of comparison what seem to be significant alternatives to my own in any particular instance." (p. 623)

14. ———. 1979. "Parmenides on the Real in Its Totality." *The Monist* no. 62:54-60.

Reprinted in Thomas M. Robinson, *Logos and Cosmos: Studies in Greek Philosophy*, Sankt Augustin: Academia Verlag 2010, pp. 53-60.

"In the long term Parmenides' doctrine has two further major implications for logical and linguistic theory: (a) by extrapolation it can be argued that the logic of wholes and the logic of parts are different from one another whatever the philosophical topic under discussion, and knowledge of this fact will prove to be one of the greatest safeguards against two of the commonest fallacies in philosophy, namely those of Composition and Division; and (b) "what is the case" can no more be said to have a temporal mode of existence than can "what is real". In suggesting that genuine ascertainment is of what will later be called the eternally existent Parmenides has come to the very verge of the understanding that a true existential proposition is atemporally such. A hint of this, it

seems to me, can be found at 8.34–36: the present tense of the participial phrase “the real (= apparently “the true”: see above, note 1), like the present tense used of the phrase “the real” in the sense of “the unique entity”, is the best that grammar can do to convey the notion of that which is, in Owen’s phrase ([2] 271), logically tenseless. It is, as need hardly be pointed out, at best a hint and very possibly not something sensed by Parmenides himself; but with such inspired gropings does serious philosophical progress begin.” (p. 59 of the reprint)

Reprinted in Thomas M. Robinson, *Logos and Cosmos: Studies in Greek Philosophy*, Sankt Augustin: Academia Verlag 2010, pp. 32-40.

"In this paper I wish to argue that Parmenides and Heraclitus, despite significant differences in other respects, agreed on the following fundamentals:

1) Knowledge in the strictest sense is possible, but it is always of the general or universal. As a consequence the only true object of knowledge can be the real as a whole.

2) This real-as-a-whole is co-extensive with what is normally referred to as the world, in the sense of all that exists and/or all that is the case.

3) The real as a whole is eternal (Parmenides) or everlasting (Heraclitus), and unchanging; in respect of its parts it is subject to temporal process and change.

4) What the senses can tell us about the real in respect of its parts is not always reliable; but their role can still be a valuable one.

5) Reality, knowledge and a rational account (logos) go hand in hand; this is true both for our own account of the real and for the real's account of itself.

6) The relationship between knowledge and the real, and between a number of supposedly opposing features of the real, is one of necessary interconnectedness, boldly described by both philosophers in terms of identity." (p. 32 of the reprint)

16. ———. 2010. "Parmenides on Coming-to-Know the Real." In *Logos and Cosmos*, edited by Robinson, Thomas M., 61-72. Sankt Augustin: Academia Verlag.

Originally published in Japanese in *Academic Proceedings of the St. Andrew's University Press*, Osaka, 1996, pp. 27–36.

"By common consent, Parmenides is the key philosophical figure in Greece antecedent to Socrates. Yet the exact nature of his claims continues to be a matter of great dispute and puzzlement. To survey the vast literature on the matter would be the subject of a book in itself.

For the moment I shall simply offer the thoughts that I myself have had on his poem over the past two decades. Appended to the paper are set of my translations of various sections of Parmenides' poem. These I shall examine in turn. During the examination it will become clear where I stand on what I think Parmenides is trying to say. After that I shall attempt to draw some conclusions on the effect, as I see it, of Parmenides' thought on the development of western philosophical thinking in the realms of logic, epistemology, metaphysics, and the philosophy of science. (p. 61)

17. Rockmore, Tom. 2021. *After Parmenides: Idealism, Realism, Epistemic Constructivism* Chicago: The University of Chicago Press.

Chapter 1 *On Reading Parmenides in the Twenty-First Century* 9; Chapter 2 *Some Ancient Greek Reactions to Parmenides* 19-34.

"This book is intended neither as a study of Parmenides, nor as a recapitulation of his reception, nor even as a history of a

particular concept, such as A. O. Lovejoy's account of being. Rather, it is intended to examine the ancient Parmenidean thesis that knowing and being are the same in the context of the Western philosophical tradition." (p. 19)

(...)

"Parmenides's ontological distinction enables him to understand "truth" in relation to "being." Truth is not, as is sometimes said, the truth of being; but being is truth or true. What is, is true; and what is not is not true. In a widely known, influential passage, Parmenides writes: *to gar auto noein estin te kai einai*.(33)

This passage is translated and interpreted in different ways—for instance, by Diels and Kranz as "The same thing is for thinking and being,"(34) by John Burnet as "For it is the same thing that can be thought and that can be"(35) and by Coxon as "for the same thing is for conceiving as is for being."(36) In F. M. Cornford's translation, the passage reads: "For it is the same thing that can be thought and that can be."(37)

(...)

According to Phillips, Cornford and Burnet both go astray, since "Parmenides can be called an idealist, who believes that what can be thought must be real."(41) This can be decided only when we have agreed on the meaning of "idealism."

But Phillips is helpful in noting that the simplest translation of this passage is: "For thinking and being are the same."(42)

We can expand this thesis as follows: (1) there is being; (2) being can be known; (3) when being is known, thought and being—that is, the thought of being and the being of the thought—are known as the same, or identical; (4) if nonbeing cannot exist, it cannot be known; and (5) since thought and being are the same, nonbeing, which cannot be known, also cannot be or exist." (p. 18)

(...)

"The preceding chapter sketched a description of Parmenides's claim that thought and being are the same as a claim to know the real, reality, or the world.

This chapter will describe selected ancient Greek reactions to Parmenides—more precisely, to the thesis about the sameness of thought and being, with special attention to Plato and Aristotle." (Chapter 2, p. 19)

"The estimation of Parmenides' argument has risen to such high levels in our scholarship, that Plato's very reputation as a thinker has begun to fade into somewhat of a derivative status. Plato, it is held by more than a few influential scholars, could not even have arrived at his theory of forms if he had not had the good fortune to be influenced by Parmenides' doctrine

about motionless, eternal "Being." In the view of recent commentators, it is not an exaggeration to suggest that Parmenides is now often portrayed as *the* seminal thinker of classical Greek philosophy.(10) It is increasingly a standard view among commentators, that Plato's Socrates himself is overcome by the power of the Eleatic legacy, which, they say, he willingly embraces.

The most spectacular evidence of this movement in the status of Plato in our scholarship can be seen in the commentary on the dialogue *Parmenides* itself. A large number of scholars are now convinced that in this dialogue, Plato has commissioned the character of Parmenides to deliver a telling, if not a fatal blow against Plato's own theory of forms.(11) We will investigate this matter in some depth in chapter 5; for the moment, it must suffice to indicate the following points. In fact, it is Parmenides' argument which is put to the test in the dialogue that Plato named after the great Eleatic; so far from treating Parmenides with reverence or deference, Plato actually assigns a very humbling role to Parmenides in the dialogue named for him. The role assigned to Parmenides there is nothing other than to utter the effectual refutation of his own entire argument. In the fifth chapter, a case will be made that Plato refutes Parmenides' indictment of the reality of coming-into being, and so concludes, rather than sustains, the legacy of Parmenides' argument.

We will also be challenged, in this study, to rebut a claim that has by now been very powerfully established in the scholarly literature: this claim is that Parmenides created a philosophical interpretation of the notion of Being which even Plato's Socrates has in some measure been shaped by, or come to adopt. Plato's theory of forms, as those forms are hypothesized to be eternal and ungenerated, is linked by a number of scholars to the theory of being that Parmenides developed.

This view is confused. In the first place, the forms are originally known to human beings in those very perishable objects which the Eleatics wish to wholly exclude from all evidentiary matters concerning truth of fact. Plato's Socrates, it can be noted,

arrived at his famous profession of ignorance precisely as a rhetorical method for summoning forth from interlocutors a base of knowledge which all hold in common: namely recognition of the various forms in perishable bodies.

This common intelligence on display in the ordinary individual's effortless assignment of name to object is certainly not science, in Plato's view; however, the theory of scientific definition which Plato advances does indeed depend on this recognition-knowledge as the ultimate *evidence* for its own investigations. The ordinary and spontaneous ability of unphilosophic human beings to assign name to object is, in Plato's view, itself evidence of a distinct *intelligence* operative in the ordinary opinions. One could hardly formulate a proposition more at loggerheads with the Eleatic philosophy.

That which the memory recognizes in the patterns that recur (and all of the patterns, as Plato argues throughout his work, appear innumerable times in the perishable objects), is not a knowledge that has the power of full consciousness and comprehension such as the power possessed by logos or more deliberate investigation. Yet Plato insists that these opinions are nevertheless the port from which philosophy must embark. When argument finally reaches for an intellectual comprehension in speech—as opposed to *an* inarticulate recognition of the individual forms—Plato's philosophy will attach a scientific hypothesis to the ordinary views. Yet this hypothesis itself, that the forms exist separately in nature for the sake of intellectual investigation, remains dependent on the common familiarity with the forms as they recur in the common objects. "And in respect of the just and the unjust, the good and the bad, and all the ideas or forms, the same statement holds, that in itself each is one, but that by virtue of their communion with actions and bodies and with one another they present themselves everywhere, each as a multiplicity of aspects" (*Republic* 476a). Yet it is the building block upon which Plato's entire science of definition rests, and he never fails to fight for the integrity of this recognition-knowledge in his major debates with rival philosophers such as Protagoras and Parmenides." (pp. 10-11)

(10) Charles Kahn, "Being in Parmenides and Plato," *La Parola del Passato* 43 (1988): "If it was the encounter with Socrates that made Plato a philosopher, it was the poem of Parmenides that made him a metaphysician. In the first place it was Parmenides' distinction between being and becoming that provided Plato with an ontological basis for his theory of forms. When he decides to submit this theory to searching criticism, he chose as critic no other than Parmenides himself" (237). Cf. "Hershbell (1) presents compelling evidence combined with sound reasoning for his contention that Fr. 16 does not belong in 'The Way of Opinion (or Seeming)' but rather in 'The Way of Truth' portion of Parmenides' poem. With as much justice I think it is possible to reassign Fr. 19 to the first part of the poem as well. For it is here that Parmenides introduces the concept of name (*onoma*, B19 1.3), and utilizes it to explain mortal belief (*doxa*, B19 1.1) in coming-to-be and in passing-away. (2) It seems natural to place this after the concluding words of Fr. 8, 11. 60-61, in which Parmenides advises or promises a full account (3) so that no "mortal wisdom may ever outstrip" that of the reader or initiate. It is only proper to regard Parmenides' theory of names, if it is as full-blown as all that, as belonging to his metaphysical apparatus and thus as having nothing to do, in and of itself, with the erroneous

picture of the world which it is expressly designed to account for." (p. 20)

20. Romero, Gustavo E. 2012. "Parmenides Reloaded." *Foundations of Science* no. 17:291-299.

Abstract: "I argue for a four dimensional, non-dynamical view of space-time, where becoming is not an intrinsic property of reality. This view has many features in common with the Parmenidean conception of the universe. I discuss some recent objections to this position and I offer a comparison of the Parmenidean space-time with an interpretation of Heraclitus' thought that presents no major antagonism."

21. Rosen, Stanley. 1996. "Commentary on Long [*Parmenides on Thinking Being*]." *Proceedings of the Boston Area Colloquium in Ancient Philosophy* no. 12:152-160.

"As a result of reading Long's excellent paper and reviewing some of the scholarship, it occurs to me that Parmenides is something of a Hegelian. I do not need to emphasize that Hegel would not have approved of this assertion without elaborate qualification. But that is

not decisive. To begin with, Hegel did believe that the end is somehow contained, even prefigured within, the beginning. In this connection, the spherical character of Parmenides' being is a striking prototype of the circularity of the Hegelian concept and even of Nietzsche's eternal return of the same. And Long's excellent emphasis on the fact that Parmenides is inquiring into the thinking of being, not into being as independent of thought, is also quite Hegelian. The lynch-pin of this somewhat but not entirely playful Hegelian reading is the translation and interpretation of fragment 3 offered in various contexts by

Heidegger, Couloubaritsis, Long, and myself. What is "the same" that serves as the subject of the two infinitives "to think" and "to be?" It must be the same as each yet other than either. If it is not the same as each, then obviously neither will be the same as the other. But if it is not other than each, then the two will not only be "the same" but will be one and the same or a homogeneous unit. The only remaining possibility is that the two are both same and other, or as Hegel would say, that "the same" stands here for "the identity" in the expression "the identity of identity and difference."

(...)

"I do not need to emphasize too strongly that it was not my intention to present a new and comprehensive interpretation of Parmenides in a short commentary on someone else's paper. My main purpose was to signal my partial adherence to Long's central thesis and to make one or two suggestions for strengthening it." (pp. 157-159)

22. Rossetti, Livio. 2020. "Parmenides Misinterpreted." *Φιλοσοφία* no. 49:43-59.

"Parmenides is universally known as «the philosopher of Being» but, as it is becoming more and more clear, he specialized in ontology as well as in a number of other «sciences». Therefore, if he was the father of what in much more recent times begun to be called «ontology», he was at the same time an equally creative and penetrating student of our earth, living creatures, the stars, as well as the formal organization of arguments(1). Moreover, no unified body of doctrines and no «guiding idea» surfaces from what we know about his teachings. Indeed, not even a philosophy surfaces from his surviving fragments." (p. 43)

23. Ruzsa, Ferenc. 2002. "Parmenides' road to India." *Acta Antiqua. Academiae Scientiarum Hungaricae* no. 49:29-49.

Summary: "Parmenides' philosophy is unique in the history of ideas in Europe, but it has a striking parallel in India, from

about the same age. The unchanging Absolute, called 'Being' or 'Existent'; the depreciation of everyday objects as mere 'names';

and the construction of the empirical world out of elements called 'forms' are all found in the first text of the Sadvidyā (Chāndogya Upaniṣad VI. 1-7). Comparing details and taking into consideration other old Indian material this paper tries to prove that convergence of thought or parallel development is out of the question – there must have been actual contact. Also it suggests that the most probable scenario is that Parmenides travelled to India, learned the language and some important philosophical texts, and brought them back to Greece."

24. Sanders, Kirk R. 2002. "Much Ado About 'Nothing': μηδέν and τὸ μη ἔόν in Parmenides." *Apeiron. A Journal for Ancient Philosophy and Science* no. 35:87-104.

"It is, to my knowledge, a universally accepted assumption among contemporary commentators that μδεν το εν αιων, 'nothing', and τομ~ Μν, 'what-is-not', function as synonyms in Parmenides' poem.(1) In this paper, I focus primarily on the central role this supposed semantic equivalence plays in arguments supporting an emendation in line 12 of fragment B8.

Despite this scholarly unanimity regarding the synonymy of these two Greek terms and the popularity of the emendation, I contend that we can make the best sense of Parmenides' argument in this and the surrounding lines precisely by retaining the manuscript reading and recognizing the difference in meaning between 'nothing' and 'what-is-not'. This claim, of course, also has broader implications for the interpretation of Parmenides' poem generally." (p. 87)

25. Santillana, Giorgio de. 1970. "Prologue to Parmenides." In *Reflections of Men and Ideas*, 82-119. Cambridge: M.I.T. University Press.

Originally published in *Lectures in Memory of Louise Taft Semple, First Series 1961-1965*, Princeton University Press, 1967.

"These, in sketchy outline, are the reasons that I suggest for restoring Parmenides to the world of science without removing him from metaphysics. There would be much more to say before the ground can be considered clear. I have concentrated on the specifically geometrical fragments. I have not attempted to establish the link of Parmenides with Melissus, nor, further, the filiation of thought which makes of the Eleatics the fountainhead of Sophistic logic. That a new concern with the possibilities of pure reasoning runs through this line is undeniable. The word play of Zeno is the fateful point when words begin to veer away from the central concern with the kosmos, and to live a life of their own. Inside the Eleatic school itself, there is evidence that some very reckless experimenting went on with the possibilities of the newly discovered verbal instrument, and here we might find the legitimate source of Plato's *Parmenides*. But if the enterprise wandered off into eristics, it also led to Bryson. It was the most adventurous

moment of Greek thought, the freest adventure, and it would seem the greatest hope. What the men of those generations saw in the promise of the Goddess is surely incommunicable. All true metaphysical experiences are. By linking the realm of geometry with that of the “logos that is spoken,” Parmenides provided a complex of meanings as rich as that of Herakleitos, but lending itself to rigorous deduction at all levels. Nothing in modern thought can provide more than a pale image of that wealth of living meaning: only Plato can show us what a contemporary could hope of it, and in that sense, if in that sense only, his exegesis is valid. For us, dealing with the autopsy of what is no longer an overwhelming truth, the anatomy of logic shows a clear distinction. The logic of the Eleatics is so guided by their object of contemplation as to remain scientifically impeccable; that of their successors is not, and we must assume that the object has changed. On this we rest our case." (pp. 103-104)

26. Santoro, Fernando. 2011. "*Ta Sēmata: On a Genealogy of the Idea of Ontological Categories.*" In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 233-250. Las Vegas: Parmenides Publishing.

Summary: "My hypothesis is that some figures of speech, like catalogs, present in the sapient epics of Hesiod and Homer, as well as figures emerging from a discursive field of veracity belonging to the newborn fifth century forensic rhetoric, helped build the originality of Parmenides' categorical ontological language. Especially for the characteristics of Being, presented in fragment B8 as signals: σήματα. I would also like to add to these elements of language, the early physicists' (φυσικῶν) interest in limits (περάτων). With these genealogic views, we can speculate about some important parameters of ontological categories such as subordination, attribution, and opposition."

27. ——. 2020. "Venus and the Erotics of Parmenides." *Anais de Filosofia Clássica* no. 28:165-189.

Abstract: "The twenty-first century begins with many interpretive turns towards the pre-Socratic thinkers, among them Parmenides of Elea. I investigate how the cosmological

contents contained in the fragments of the Poem can be integrated into the Parmenidean program of knowledge of the truth, achieved by thought.

In this way, scientific discoveries concerning the Moon, Venus and others are glimpsed. I also propose that an old way of integrating the knowledge of astronomical contents to the knowledge of contents related to generation and sex, which compose the physical subjects of the Poem, takes the form of an Erotic interpretation of the world, ruled by Eros and Aphrodite."

28. Santos, José Gabriel Trindade. 2011. "The Role of "Thought" in the Argument of Parmenides' Poem." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 251-270. Las Vegas: Parmenides Publishing.

Summary: "It is my aim in this paper to analyze the role played by "thought" in the argument of Parmenides' Poem. The relevance of the "thought" theme in Greek philosophical tradition has long been recognized. In Parmenides it implies approaching the study of reality through the experience of thought in language. As knowledge is to the known, thought is to being. Their identity dominates Parmenides' argument in the Way of Truth, persisting in later relevant conceptions as Platonic ἐπιστήμη and Aristotelian "active intellect." "

29. ———. 2013. "For a non-predicative reading of « esti » in Parmenides, the Sophists and Plato." *Méthexis. International Journal for Ancient Philosophy* no. 26:39-50.

Abstract: "The absence of grammatical subject and object in Parmenides' "it is/it is not" allows the reading of the verbal forms not as copulas but as names, with no implicit subject nor elided predicate. Once there are two only alternatives, contrary and excluding each other, sustaining that a 'no-name' does not grant knowledge implies identifying its opposite – "it is" – as the only name conducive to knowledge in itself, denouncing the 'inconceivability of a knowledge that does not know. If "it is" is the only [name] "which can be thought/known", and "what is" is the way in which 'thought/knowledge' can be accomplished,

there is no need to postulate the existence of 'anything' that is, nor of anything that can be said of "what is". Being the only name which "can be thought of/known", the unifying synthesis of "knowledge, knowing and known" in one infallible cognitive state, it is unthinkable that "what is" does not exist."

30. Sassi, Maria Michela. 2016. "Parmenides and Empedocles on Krasis and Knowledge." *Apeiron. A Journal for Ancient Philosophy and Science* no. 49:451-469.

Abstract: "Making mental phenomena to depend on certain elements or organs of the body is famously recognized as a distinctive feature of physiologia both in the so-called "autobiography" of Socrates in the *Phaedo* and in a further "doxographic" passage in the dialogue, where Simmias develops the argument that the soul is like "a blending and an attunement" of the bodily elements.

While no earlier thinker is mentioned here, one can easily identify Parmenides and Empedocles as two of the main supporters of the notion that thought and perception depend on the various blendings of the physical constituents of the body. That they had such a view is indeed well known thanks to a few fragments, for whose discussion Aristotle's and Theophrastus' comments prove to be particularly helpful. What neither Plato nor Aristotle acknowledge, though, is that no such specific bearer of mental functions as psyche is needed in this kind of account. As a matter of fact, both Parmenides and Empedocles share with the epic and lyric tradition the idea of the precariousness of human knowledge, due to the constant exposure of human beings to change. Yet they "translate" the topos of human existence and thought subjected to the divine into a vision where the physical krasis of the body (not by chance, a medical notion) is all that matters."

31. Sattler, Barbara M. 2012. "Parmenides' System: The Logical Origins of his Monism." *Proceedings of the Boston Area Colloquium in Ancient Philosophy* no. 26:25-90.

Abstract: "This paper aims to demonstrate that it is Parmenides' criteria for philosophy in conjunction with his understanding of the available logical operators and their

holistic connection that lead to what we can call a logical monism—only the one Being can be conceived and hence known. Being the first to explicate criteria for philosophy, Parmenides will be shown to establish not only consistency as a criterion for philosophy, but also what I call rational admissibility, i.e., giving an account of some x that is based on rational analysis and can thus withstand rational scrutiny. As for logical operators, Parmenides employs a basic operator for connection, identity, and one for separation, negation. His negation operator, expressing an extreme negation that negates the argument completely, corresponds to his identity operator, expressing identification with no exception. But not only are these two basic operators tailored to each other, also Parmenides' basic notion of Being is such that it fits these operators as well as his criteria for philosophy. Accordingly, a kind of holism, a systematic character, underlies Parmenides' philosophy such that that any changes in one concept would necessitate changes in the others. Given the restrictions of Parmenides' criteria for philosophy and the logical operators available to him, what can be a possible object of philosophical investigation is nothing but something absolutely simple, the one Being as the logical content of a thought."

32. ———. 2020. *The Concept of Motion in Ancient Greek Thought*. Cambridge: Cambridge University Press.

Chapter 2: *Parmenides' Account of the Object of Philosophy*, pp. 80-123.

"This chapter spells out the challenge that Parmenides' philosophy poses for natural philosophy. This challenge arises not so much from explicit reflections on natural philosophy and on earlier cosmologies as from what we can call Parmenides' logical, metaphysical, and methodological reflections: it derives from the criteria Parmenides establishes, in part implicitly, for any rational or scientific investigation in conjunction with the logical operators available to him. The field of investigation that is thus methodologically prepared excludes natural philosophy, since what is subject to change and motion – the object of natural philosophy – cannot be rationally grasped with the help of Parmenides' criteria and operators." (p. 80)

(...)

"In order to reconstruct Parmenides' challenge, in this chapter I first show that he establishes clear criteria for rigorous philosophical inquiry and then analyse the logical operators with which Parmenides works. These criteria and the logical operators are systematically tied to each other in such a way that, as becomes clear in the next step, Parmenides' monism and his exclusion of natural philosophy follow naturally. The final section spells out in detail the challenges natural philosophy thus faces." (p. 83)

33. Scapin, Nuria. 2020. *The Flower of Suffering: Theology, Justice, and the Cosmos in Aeschylus' Oresteia and Presocratic Thought*. Berlin: de Gruyter.

Chapter 5: *Cosmic Justice and the Metaphysics of Opposites: Anaximander, Heraclitus, and Parmenides*. 117-145; Chapter 8: *Persuasive Dikê: from violence to kindness*, 204-213.

"Next I shall examine the development of the notion of cosmic justice and its specific application in the thought of three Presocratic philosophers: Anaximander, Heraclitus, and Parmenides." (p. 123)

(...)

"In Parmenides' poem about truth, Being, and mortal opinions, Dikê plays indeed a cosmic role, but her familiar universal function is exploited within the space of innovative thought. An important role is assigned to her in each of the three parts into which the poem is traditionally divided: not only does she feature in the Proem, where the most dense stock of allusions to the traditional corpus of poetic phraseology and religious imagery is concentrated, but she also plays an important role in the two remaining sections. Dikê's traditional role is bent to aid Parmenides' abstract logic and metaphysical arguments in the central philosophical part of the poem, and she is bestowed an important role in the final section dedicated to cosmological speculations." (p. 137)

(...)

"My study of justice in the *Oresteia* follows the slow unfolding of the workings of *dikê* in the three plays. In the present chapter I show how the notion of an inherent limitations in the nature of the universe is profoundly rooted in this text: I predominantly focus on *dikê* in its associations to notions of time and necessity.

In the following chapter, I focus on the notion of retributive justice (*δίκη* as *ποινή*) and discuss how, in moments of dramatic climax, justice is brought into the awareness of characters as a due process rather than a single act. In the penultimate chapter, I focus on the association between justice and persuasion in the *Oresteia* and Parmenides' Poem."(p. 150)

34. Schick, Thomas. 1965. "Check and Spur: Parmenides' Concept of (What) Is." *Classical Journal*:170-173.

"So far Parmenides has told us that (what) is not does not exist, and we cannot know it: (what) is exists; and now we seek to know its characteristics, its nature.

How is (what) is described? What can we know of it? It is generally agreed that all the predicates attributed by Parmenides to (what) is are contained in Fr. 8; but how are they contained there? Are they proved there? One opinion says "yes": "It [Fr. 8) opens (like a theorem in geometry) with an enunciation of the attributes, positive and negative, that will be proved to belong to the Real. ... These attributes are then established by a series of astonishingly brief and penetrating arguments."(16) But a heavy and well-founded "no" is sounded by Loenen. [*] He argues that *de facto* many of the predicates are not proved; and he thus supports one of his main theses, that a lacuna in the text contained analytic proofs of most of the predicates.

"Fr. 8 thus contains the deduction of a small number of additional attributes, viz. those which could not be arrived at by an analytical description of the idea of being."(17) This seems most plausible; and, though I am slow to accept many of Loenen's conclusions and interpretations, I use his divisions for the following description.

I identify and explain the attributes merely mentioned; I then discuss the deduced attributes and give their arguments and proofs; and finally I discuss briefly a characteristic which is not explicitly mentioned in the fragment, but which must be predicated of (what) is." (pp. 171-172)

(17) 17 Loenen, p. 99.

35. Schofield, Malcolm. 1970. "Did Parmenides Discover Eternity?" *Archiv für Geschichte der Philosophie*:113-135.

"Mr. J. E. Raven ascribes to Parmenides the-doctrine that 'past and future are alike meaningless, the only time is a perpetual present time'(1). And this is the orthodox view(2).

(...)

But in recent years a dissenting point of view has been expressed.

First Professor Hermann Fränkel (6), then Professor Taran (7) has maintained (I quote Taran's expression of the point):

There is nothing in the text to substantiate the claim of those who assert that Parmenides maintains that past and future cannot be predicated of Being to which only the present 'is' truly belongs. Parmenides is only denying that Being ever perished or ever will come to be(8).

The arguments adduced by Fränkel and Taran in support of this opinion have met with vigorous opposition, deservedly so for the most part(9). But I believe that their case is a stronger one than they have been able to establish, and that the majority opinion rests on

rather flimsier supports than has yet been generally appreciated.

These claims I attempt to substantiate in this paper.

The lines of Parmenides' poem which are chiefly responsible the controversy are B 8.5-6a." (pp. 113-114, a note omitted)

(1) G. S. Kirk and J. E. Raven, *The Presocratic Philosophers* (Cambridge, 1960: corrected Impression of the first edition), p. 274.

(2) L. Taran, *Parmenides*. (Princeton, 1965), p. 175, n. 1, gives a list of some who have held this view of Parmenides. They include Diels, Calogero, Mondolfo, Cornford, Gigon, Deichgräber, Owen. One may now add the names of W. K. C. Guthrie, *A History of Greek Philosophy* Vol. II (Cambridge, 1965), pp. 27-31, and C. H. Kahn, in a review of Taran's book in *Gnomon* 40 (1968), pp. 127-129.

(6) H. Fränkel, *Wege und Formen frühgriechischen Denkens*, second edition (Munich, 1960), p. 191, n. 1.

(7) Taran, *Parmenides*, pp. 175-188.

(8) Op. cit., p. 177. Zeller, in *Die Philosophie der Griechen*, Vol. I, Pt. I, ed. by W. Nestle (Leipzig, 1923), pp. 689-692, seems to give the same Interpretation as Fränkel and Taran in his text, but in a note (p. 690, n. 1) he mentions what appears to him to be a possible ground for adopting the view which has become traditional.

(9) Fränkel's arguments have been effectively rebutted by G. E. L. Owen, *The Monist* 60 (1966), pp. 320-322, and Taran's by C. H. Kahn, *Gnomon* 40 (1968), pp. 127-129.

36. ———. 1987. "Coxon's Parmenides." *Phronesis. A Journal for Ancient Philosophy* no. 32:349-359.

"A.H. Coxon has a remarkable record of publications on ancient philosophy.

In CQ [= *Classical Quarterly*] 1934 there appeared the early and much respected article "The Philosophy of Parmenides". Then in CQ 1968 came a brief note reporting Coxon's shaming discovery that the puzzling ὄστη usually printed in Fr. 1, 3 has no manuscript authority, coupled with a report on his re-examination of those portions of the manuscripts of Simplicius which bear on the establishment of Parmenides' text. Now in

1986 we have a full critical edition of the fragments, with introduction, translation, a much fuller selection of the ancient testimonia than in Diels-Kranz, and a commentary(1). So far as I know these are Coxon's only published writings on our subject." (p. 349)

"Perhaps the most interesting and important general conclusion Coxon draws from his study of the manuscript tradition of Parmenides is the proposition (*contra* Diels) that Parmenides' diction is uniformly epic and Ionic." (P. 350)

37. ———. 2019. "Diakosmêsis." In *Cosmos in the Ancient World*, edited by Horky, Phillip Sidney, 62-73. Cambridge: Cambridge University Press.

Summary: "Deployment of the notion of kosmos has been much discussed in the scholarship on Presocratic philosophy. But *diakosmos* and *diakosmêsis* have been almost entirely neglected. This chapter argues that in describing the business of articulating 'mortal belief' as *diakosmos*, Parmenides bequeathed to his successors among the Presocratics a question – intended as deflationary – about the main agenda for physics and physical explanation: how the universe is arranged. He coined a concept designed to articulate it. *Diakosmos* was a concept his successors were determined to reinflate, but only at the price of contestation between believers in a single world produced by design and proponents of infinite undesigned worlds. And in Aristotle, *diakosmêsis* is re-invested with a hint of the deflationary."

38. Schürmann, Reiner. 1988. "Tragic Differing: The Law of the One and the Law of Contraries in Parmenides." *Graduate Faculty Philosophy Journal* no. 13:3-20.

"There is probably no greater beginner in the history of philosophy than Parmenides. If it is true that in their compactness beginnings already contain the essential insights

that the subsequent tradition only spins out in ever new threads, then coming to terms with

Parmenides is a task that has to be undertaken ever again. Most of his sayings are hapax legomena which yield clear answers only to clearly put questions. But the questions we bring to him remain ours, dictated by the preponderances of the day.

The question I put to him concerns ultimate foundations. In a sense, it is the very issue for which he has been granted the status of fatherhood ever since antiquity. Common opinion holds that he drafted once and for all, as it were, the job description of the philosopher: namely, to secure principles—reference points on which every thinking agent can rely both in his thinking and in his acting. Husserl still echoes and accepts that assignment when he counts himself among "the functionaries of mankind". From the time Parmenides wrote that being is one, and perhaps until Wittgenstein taught that grammars are many, this public function invested in philosophers has on the whole gone unchallenged.

Their foundational expertise has made them the civil servants par excellence in as much as they felt called upon, and in many quarters still feel called upon today, to secure a ground guaranteeing knowledge its truth and life, its meaning. As professionals, philosophers must point out—not set—reliable standards. They provide evidential moorage for the sake of consoling the soul and consolidating the city: some single first law governing all regional laws, be they cognitive, practical, or even positive.

Parmenides calls that law the One (capitalized for mere conventional purposes). For an age that has grown more aware than any other of fragmentations and dispersals in the order of things, can the One as Parmenides argues it assure a non-fractured foundation? If it turned out that his originative, compact insight also contains a conceptual strategy that counters his foundational gesture from within, it might follow that in and after Parmenides philosophy has had a more humble mission to fulfill than satisfying man's quest for ultimacy. Accustomed to the Many, our century may then not

amount to the mere barbarism bent on destroying the entire noble tradition devoted to the One. Philosophy may have consisted all along in the attempt to think explicitly and with some rigor about matters that everyone knows, ad though rather implicitly and poorly. And what is it that we all know firsthand, yet poorly? Of our own coming-into-being, our birth, we know only indirectly; just as we know only indirectly of our own ceasing-to-be, our death. We know, but dimly, that we stand in the double-bind of life and its contrary. The clear knowledge of that double-bind in which the law of contraries places us is tragic knowledge." (pp. 3-4)

39. ———. 2003. *Broken Hegemonies*. Bloomington: Indiana University Press.

Translated by Reginald Lilly from the French: *Des Hégémonies brisées*, Mauvenzin, Trans Europe Repress, 1996.

See Part One: *In the Name of the One. The Greek Hegemonic Fantasm. I: Its Institution: The One That Holds Together (Parmenides)* pp. 51-135.

"The pages that follow are meant to be read as a contribution to the age old "doctrine of principles." Philosophers have never stopped speculating about this principal Greek legacy. Today the business of principal principles seems to have been robbed of its heritage. What can be learned from its loss? May it actually represent a gain for us? These are good enough reasons to examine the operations that have been carried out on this legacy." (p. 3)

"In what way is being one? As cumulative and "re-cumulative," as constantly recurring. The one that being is, is thinkable only as the crystallization of beings (which has nothing to do with atomism), a crystallization thought not in terms of beings, but as an occurrence, hence in terms of time. The one is what occurs through an aggregation. Beings and being are articulated in the *henological difference*.

How does this difference make law? Our analysis of contraries has shown that they essentially conjoin and disjoin with one another. There fore we cannot think of being as arrival without also thinking of it as leaving. There is no centripetal aggregation without a centrifugal disaggregation. To use Heidegger's words once again: no appropriation without expropriation.(119) In the idiom of an analytic of ultimates—no universalization without singularization. In terms of the law—no legislation with out transgression immanent within it. In one fell swoop, and necessarily, the henological difference makes the law by binding us both to the dissolution of the phenomena of the world and to their consolidation that is underway. As soon as he understands the one as a process, Parmenides has to establish both at traction and withdrawal as equally normative. This double bind is embedded in our condition as mortals. We can call it the *henological differend*." (P. 134)

40. Seaford, Richard. 2004. *Money and the Early Greek Mind: Homer, Philosophy, Tragedy*. Cambridge: Cambridge University Press.

"This book argues that the monetisation of the Greek polis in the sixth and fifth centuries bc contributed to a radical transformation in thought that is, in a sense, still with us. Academics – perhaps because they are more interested in texts than in money – have emphasised rather the role of alphabetic literacy in the radical intellectual changes of this period. They are often also emotionally invested in the autonomy of their various specialisms, an investment encouraged by the institutional division of academic labour.

For most presocratic scholars, to allow that any kind of social process might illuminate their texts would threaten their control of their subject and the autonomy of 'doing philosophy'. The consequent subconscious policing of the boundaries can be simultaneously sincere and brutal. For embarking on such a

fundamental question I make no apology, and hope that others will be inspired to remedy the inadequacies of my answers."
(*Preface*, P. XI)

(...)

"We have identified, as factors in the genesis of the Parmenidean One, mystery cult (11b), the historical development of monetary abstraction, reaction to Heraclitus, and the unconscious imperative to separate self-sufficient true value from the uncertain and vulgar monetary circulation of precious metal. Although this imperative was not confined to aristocrats, it may not be coincidental that the two thinkers who reflect the progress of this separation were apparently both, as was Plato, of aristocratic origin.

Heraclitus, for whom permanent unity and abstract logos are both embodied in permanent physical circulation, was said to have resigned the 'kingship' in favour of his brother and to have been isolated from politics by his intellectual contempt for humankind.(138) Parmenides, for whom permanent abstract unity is finally explicitly separated from the transformation believed in by 'ignorant mortals . . . indiscriminating hordes' (b6), was said to have been 'of illustrious family and of wealth', (139) but also, in contrast to Heraclitus, a lawgiver (9b)." 41. ———. 2020. *The Origins of Philosophy in Ancient Greece and Ancient India: A Historical Comparison*. Cambridge: Cambridge University Press.

"Summary: This book is devoted to a unitary argument, but over such a wide range of material that I offer the reader preliminary guidance in this chapter, beginning with an overview.

The next chapter (concluding Part A) presents explanations of the similarity between the earliest philosophy in India and Greece.

Part B describes the polytheist reciprocity that, among an elite, was replaced in both cultures by monism. Part C centres on the main factors behind this replacement in India: the individual interiorisation of what I call the cosmic rite of passage, and monetisation. Part D describes the similar factors behind the similar development of ideas in Greece. The conclusion (Part E) summarises and explores the variety of factors behind the new imagining of universe and inner self.

Although Part C focuses mainly on India and Part D mainly on Greece, I have made frequent attempts throughout the book to explain the similarities and differences between the intellectual transformations in the two cultures. Some references to the Greek material in Part C will be fully appreciated only after the analogy between the Greek and the Indian intellectual transformations has become clear in Part D. Possible early misgivings about my position on monetisation as an important factor behind the intellectual transformations are addressed in Part E." (p. 3)

(..)

"In Part D the main focus moves from India to Greece. Chapter 11 compares the interiorisation of the cosmic rite of passage in India (sacrifice) and Greece (mystic initiation) (11§A), identifies the importance of the soul (psuchē) in mystic initiation (11§B), which is interiorised in Herakleitos (12§B), in Parmenides (11§C) and in Plato (11§D). This Greek interiorisation promoted ideas akin to the coalescence of mental with abstract monism promoted by the interiorisation of the cosmic rite of passage in India." (p. 5)

42. ———. 2020. "Aristocracy and Monetization: Plato, Parmenides, Herakleitos, and Pindar." *Greece & Rome* no. 67:54-70.

"Numerous further examples could be given of the Greek reaction to monetization.(25) But our focus here is specifically

on the effect of monetization on 'aristocracy'. I will, in what remains of this article, introduce into the historical discussion of aristocratic ideology something that is generally kept entirely separate from it: the development – simultaneously with monetization and in the very same cities – of philosophy, specifically of three philosophers with impeccable aristocratic credentials,(26) whom we will discuss in reverse chronological order (Plato, Parmenides, Herakleitos), before ending with the most obviously aristocratic writer of the classical period, Pindar." (p. 60)

(...)

"The ontological privileging of unchanging abstract Being (the 'One', all that exists) by Parmenides is – somewhat like the Platonic form of the good – a metaphysical projection of the unchanging, all-pervasive abstract Being of money. I realize that such a proposal may seem counterintuitive, and certainly outside what is generally considered legitimate in the study of the Presocratics. But unfortunately I have here nothing like the considerable space needed for the detailed, cumulative argumentation on which it is based, and which is laid out in my *Money and the Early Greek Mind*.(38)" (p. 63)

43. Sedley, David. 1999. "Parmenides and Melissus." In *The Cambridge Companion to Early Greek Philosophy*, edited by Long, Anthony Arthur, 113-133. Cambridge: Cambridge University Press.

Abstract: "Parmenides and Melissus were bracketed in antiquity as the two great exponents of the Eleatic world-view which denies change and plurality. (1) In modern times their treatment has been curiously unequal.

Too much has been written on Parmenides - albeit the greater thinker of the two - too little on Melissus. Too much has been

said about Parmenides' use of the verb "be," while too little has been said about his detailed arguments for the individual characteristics of what-is. However, neither these nor other anomalies should disguise the immense wealth of scholarship that has furthered the reconstruction of their Eleaticism." (p. 113)

"How, then, does the cosmology complement the Way of Truth?

Above all by showing how to bridge the gap between truth and cosmic appearance. The entire range of cosmic phenomena can be generated by allowing the intrusion of just one additional item - by starting out with two instead of one. This makes immediate sense of the frequently noticed fact that the detailed descriptions of the cosmos mimic the language of the Way of Truth. For example, in B10 the "encircling heaven" is "bound down by Necessity to hold the limits of the stars," immediately recalling the description of what-is as held motionless by Necessity in the bonds of a limit (B8.30-31). This tends to confirm that the very same sphere is being first correctly described, then, in the cosmology, incorrectly redescribed." (p. 124)

(1) Most of the interpretations proposed in this chapter can also be found in my two articles, "Melissus" and "Parmenides," in Craig, E. General editor *Routledge Encyclopaedia of Philosophy* (London, 1998).

44. Sentesy, Mark. 2022. "Being, Identity, and Difference in Heraclitus and Parmenides." *Dialogoi: Ancient Philosophy Today* no. 8:1-31.

Abstract: "Are all forms of difference contained in what is, or is there some form of difference that escapes, negates, or constitutes what is? Parmenides and Heraclitus may have had the greatest effect on how philosophy has answered this question. This paper shows that Heraclitus is not a partisan of difference: identity and difference are mutually generative and equally fundamental. For his part, Parmenides both makes an argument against opposing being and non-being in the False Road Story, and then uses precisely this opposition to put up signs on the Way of Truth. The paper responds to this impasse

by making the case that the poem's philosophical character is didactic, rhetorical, and mythological, which is why both these signs, and the opposition between non-being and being, are presented as names created by mortals."

Philological remarks on the following fragments: 1,10, 1,24, 1,30, 2,3f; 6,4f; 6,5-6; 8,1, 8,28, 8,38, 12,2, 12,3.

47. Siegel, Rudolph E. 1962. "Parmenides and the Void. Some Comments on the Paper of Thomas S. Knight " *Philosophy and Phenomenological Research* no. 22:264-266.

"In his paper, T. S. Knight came to the conclusion that Parmenides did not simply deny the existence of a void, a physical vacuum, but also questioned the existence, the reality of the sensible world.

It might be open for discussion if the poem of Parmenides can be considered as a treatise on such highly abstract thinking as discussed by T. S. Knight. (1) One may rather assume, as others have done, that Parmenides and other pre-Socratic philosophers expressed with the Greek word 'To Hen,' the 'one,' a more concrete astronomical idea, the cosmos. In a paper on 'The Paradoxes of Zeno' (2) I tried to explain that the word 'one' might express: the mathematical point, the atom, and even the cosmos.

Its respective meaning should be taken from the entire context."

48. Sisko, John E. 2003. "Anaxagoras' Parmenidean Cosmology: Worlds within Worlds within the One." *Apeiron. A Journal for Ancient Philosophy and Science* no. 36:87-114.

"The aim of this paper is to suggest a limited solution to a long-standing puzzle regarding the history of Pre-Socratic philosophical cosmology.

The puzzle concerns the development of post-Parmenidean pluralism.

Specifically, it concerns the relationship between Parmenides' account of existence and the physical theories advanced by Democritus, Empedocles and Anaxagoras." (p. 88)

(...)

"I wish to propose a limited solution to this puzzle. My solution concerns only the relationship between Anaxagoras' physical theory and Parmenides' arguments. I suggest that Anaxagoras has little need to argue against Parmenides, because Anaxagoras' own cosmology begins right where Parmenides' cosmology leaves off. Anaxagoras accepts the basic tenets that Parmenides draws from the critique of negation, but he then proceeds to show how a specific sort of plurality might be brought to light within Parmenides' One.(3) That is, Anaxagoras develops a pluralistic cosmology which is consistent with Parmenides' foundational claims about the One." (p. 90)

(3) In this paper, I follow the practice of calling the numerical unity, which constitutes all that exists on Parmenides' account, 'the One'. However, it should be noted that, while Parmenides attributes unity to that which exists (see DK 28 B 8.6), he does not

- explicitly call this unitary being 'the One',
49. ———. 2010. "Anaxagoras Betwixt Parmenides and Plato." *Philosophy Compass* no. 5/6:432-442.
 50. ———. 2014. "Anaxagoras and Empedocles in the shadow of Elea." In *The Routledge Companion to Ancient Philosophy*, edited by Warren, James and Sheffield, Frisbee, 49-64. New York: Routledge.

"If Anaxagoras and Empedocles advance their theories in response to Parmenides, then it is quite unlikely that they consider Parmenides to be a predicational monist.

(...)

Whether Parmenides is a numerical monist or a generous monist, his alleged monad is motionless and phenomenally homogeneous. Also, on either interpretation, it is reasonable to consider Parmenides' monad both to be either a finite sphere or an infinitely extended expanse and to be either predicationally simple or predicationally saturated.

(...)

In light of their shared supposition that the cosmos develops from Parmenides' monad, it is unlikely that Anaxagoras and Empedocles consider Parmenides to be a generous monist.

(...)

It is not implausible to suppose that Anaxagoras and Empedocles consider Parmenides to be a numerical monist.

(...)

Thus, it is possible that Anaxagoras and Empedocles consider Parmenides to be a numerical monist, concerning the initial state of the universe, and a numerical pluralist, concerning subsequent states. This interpretation constitutes a fourth alternative for assessing Parmenides' philosophy. Nevertheless, the interpretation does not appear to be consistent with specific claims offered in the Way of Truth (as those claims are commonly understood). So, it remains credible to affirm that Parmenides is a numerical monist and both Anaxagoras and

Empedocles understand him to be a numerical monist." (pp. 62-63)

51. Sisko, John E., and Weiss, Yale. 2015. "A Fourth Alternative in Interpreting Parmenides." *Phronesis* no. 60:40-59.

Abstract: "According to current interpretations of Parmenides, he either embraces a token-monism of things, or a type-monism of the nature of each kind of thing, or a generous monism, accepting a token-monism of things of a specific type, necessary being. These interpretations share a common flaw: they fail to secure commensurability between Parmenides' *alētheia* and *doxa*. We effect this by arguing that Parmenides champions a metaphysically refined form of material monism, a type-monism of things; that light and night are allomorphs of what-is (*to eon*); and that the key features of what-is are entailed by the theory of material monism."

52. Skirry, Justin. 2001. "The Numerical Monist Interpretation of Parmenides." *Southern Journal of Philosophy* no. 39:403-417.

Abstract: "The doctrine of numerical monism, as it is traditionally attributed to Parmenides, is the claim that there is only one thing that is genuinely or truly real - that is, is not generated, not perishable, immutable, indivisible, whole, complete, and continuous.(1) In this paper I argue that this interpretation is mistaken because it entails a claim that Parmenides does not accept, namely that Being and not-Being are both the same and not the same. This paper begins with a discussion of the central thesis of the Numerical Monist Interpretation of Parmenides (NMIP). (2) Next, I argue that any consistent version of this interpretation must also hold that Parmenides is committed to the identification of thinking with Being. In the following section, I argue that if Parmenides is committed to this identification, then he must also think that Being and not-Being are both the same and not the same. However, fragment B6 provides evidence for the claim that Parmenides would not accept this conclusion. Finally, these considerations provide the three main premises of an argument, which concludes that Parmenides does not accept numerical monism as traditionally attributed to him by

commentators. We now turn to a discussion of NMIP's central thesis."

(1) Other commentators use different terms to refer to what I call "numerical monism." For example, Jonathan Barnes uses "real monism" (Jonathan Barnes, "Parmenides and the Eleatic One" *Archiv fur Geschichte der Philosophie* 61 [1979]: 1-21), and Mary Margaret MacKenzie uses the term "strong monism" (Mary Margaret MacKenzie, "Parmenides' Dilemma," *Phronesis* 27 [1982]: 1-12).

(2) Numerical monism is one of at least three varieties of monism found in early Greek philosophy. The other two types are material and predicational monism. The former asserts that all reality is made of the same stuff: For example, on the traditional interpretation, Anaximenes believed that all things are really air in different stages of condensation and rarefaction. Notice that material monism does not designate a number of existents. "Predicational Monism" is the term used by Patricia Curd to describe her position. According to Curd a real thing for Parmenides is a predicational unity holding only one predicate, which indicates what it is. Notice that this does not preclude the existence of a plurality of predicates (see Patricia Curd *The Legacy of Parmenides* (Princeton: Princeton University Press:

1998, 65-66). This paper is concerned with the attribution of numerical monism to Parmenides. Whether or not Parmenides is committed to one of these other sorts of monism is not at issue here.

53. Slaveva-Griffin, Svetla. 2003. "Of Gods, Philosophers, and Charioteers: Content and Form in Parmenides' Proem and Plato's *Phaedrus*." *Transactions of the American Philological Association* no. 133:227-253.

Summary: "This article examines the ways in which Parmenides and Plato avail themselves of the literary motif of the charioteer's journey for philosophical discourse. I argue that the *Phaedrus*' myth of the soul as a charioteer exemplifies Plato's literary and philosophic appropriation of the charioteer allegory in Parmenides' proem and of Parmenides' concept of

being, showing how the literary study of intertexts can be applied to questions of both content and form in philosophy."

"The allegory of the charioteer's journey in Parmenides' proem and Plato's *Phaedrus* deserves the attention of both philosophers and literary critics.

Regarding content, Plato bases his concept of the immortality of the soul upon Parmenides' concept of true being: the soul is a self-moving first principle that cannot be destroyed or come into being (*Phdr.* 245c5–e1) and is therefore kindred to Parmenides' ungenerated, imperishable, whole, steadfast, and complete being (B8.3–4).¹ Regarding form, Plato employs the allegory of the charioteer's journey to illustrate the immortal nature of the soul (*Phdr.* 246a6–b4), alluding thereby to Parmenides' account of the chariot journey of a young philosopher beyond sense-perceptible reality to the realm of eternal existence (B1.1–5). I shall examine the close relationship between Plato's myth of the soul as a charioteer in the *Phaedrus* and the charioteer's journey in Parmenides. I shall also draw attention to the literary tradition of the theme prior to Parmenides, and particularly to its presence in Homer, in order to situate the interconnection of the two philosophical texts in the context of their generic differences and similarities. The current examination entails the study of (a) Parmenides' adoption and adaptation of the Homeric theme of a charioteer's journey in the allegory of a philosopher's search for true knowledge; and (b) Plato's literary and philosophical use of Parmenides' allegory in the account of the immortality of the soul (*Phdr.* 245c5–47a2)." (p. 227)

54. Soares, Lucas. 2011. "Parmenides and his precursors: a Borgesian reading of Cordero's Parmenides." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 373–382. Las Vegas: Parmenides Publishing.

Summary: "In this paper I focus primarily on Cordero's Parmenides and the basic nucleus of the reading in his most recent book—*By Being, It is* (2004)—on Parmenides' "venerable," "profound," and "enigmatic" philosophical thesis.

Secondly, I undertake a Borgesian reading of the Parmenides that arises from this book. In other words, a reading of a reading."

55. Solana, José Dueso. 2011. "Parmenides: Logic and Ontology." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 271-288. Las Vegas: Parmenides Publishing.

Summary: "Many scholars (especially Calogero) affirm that in the age of Parmenides, a theoretical treatment of logic and ontology was not clearly differentiated. Accepting this thesis, valid as well for Plato and Aristotle to some extent, this paper provides arguments for a primarily logical and only secondarily ontological interpretation of the ἀλήθεια of Parmenides (fr. 2–fr. 8.50). An interpretation of this type allows us to solve the arduous problem of the relationship between both parts of the poem, the ἀλήθεια and the δόξα, in a satisfactory way. Besides the internal arguments from Parmenides' own text, there are two external references that support the proposed interpretation: firstly, some data of the philosophical-poetic context, and secondly, an insistent thesis of Aristotle according to which some Presocratic philosophers (Parmenides among them) supposed that reality is confined to sensible things."

56. Solmsen, Friedrich. 1971. "Parmenides and the description of perfect beauty in Plato's *Symposium*." *The American Journal of Philology* no. 92:62-70.

"Normally when the question of Plato's relation to Parmenides or to the Eleatics in general arises, scholars tend to the Theaetetus, the Sophistes, and the Parmenides, dialogues all probability close to one another in point of chronology all three of them embodying extensive discussions tenets. Doubtless Plato is in them intent on clarifying he agrees with central doctrines of this school; while mental sympathy with their outlook, he yet finds it necessary move beyond them and in particular to rehabilitate some of the μη ὄν, which Parmenides and after him Melissus banished from philosophical discourse." (p. 61, a note omitted)

(...)

"It seemed desirable to emphasize the significance as well as the paradoxical quality of this much neglected development; yet my intention is not to indulge in speculations regarding its causes, but to draw attention to a section of the *Symposium* as testifying to Eleatic influence in an early stage of this development. The section in question is a part of Diotima's final revelation, the τέλεα and εποπτικά." (p. 64)

(...)

"Finally after we have recorded so many points of detail in which the two descriptions agree fully, agree in part, or do not agree, a basic similarity of their conception should not go unnoticed. Both sections form a part-perhaps even both the climax-of a revelation.(24) This has its reason; for with Parmenides listen to the goddess or with Diotima, what the goddess says at the beginning the one message as much as to the other: ἡ γὰρ ἀπ' ἀνθρώπων ἔκτο' ἅπαντος ἐστίν (B1, 27)," (pp. 69-70)

(24) 24 The revelations differ not so much in style (although at first we may think so) as in method. Both are encomiastic but the Parmenidean has at the same time logical rigor; its ἀπόδειξις is so strict that, as far as we can tell, it sets a new standard in Greek thought. In the *Symposium* the hymnic tone excludes demonstration.(...)

57. ——. 1977. "Light from Aristotle's Physics on the Text of Parmenides B 8 D-K." *Phronesis. A Journal for Ancient Philosophy* no. 22:10-12.

"Students of Parmenides are familiar with a problem regarding his text and thought in the beginning of the passage where Being is elevated to an unheard-of grandeur and sublimity. Does Parmenides in B 8.6-15 disprove only genesis from not-Being or does his refutation dispose of genesis from Being as well as from not-Being?

(...)

Exegetes who consider a dilemmatic structure of the argument necessary have not failed to avail themselves of the strong support afforded them by Simplicius' comments on vv. 3-14

(...)

What seems to have gone unnoticed is that Aristotle too bears witness to the truth of their position. For although he does not name him, he must have Parmenides in mind at *Physics* I 8, 191 a 23-33." (pp. 10-11)

"Throughout a large part of *Physics I*, Parmenides' (and Melissus') position presents the great obstacle to Aristotle's efforts at treating genesis as a reality.(6) The monolithic, unchanging *on* deprives physics of the principles (*archai*) without which it cannot build. Aristotle launches attack after attack against the fortress that had so long been considered impregnable.

Having conquered it he constructs his own theory of *genesis*." (p. 12)

(6) See esp. I 1-3 (184 b 15 ff., 25 ff. etc.). Cf. my *Aristotle's System of the Physical World* (Ithaca, 1961) 74 ff.

58. Solomon, J. H. M. 1978. "Parmenides and the Gurus." *Platon* no. 30:157-173.
59. Songe-Møller, Vigdis. 2020. "The Goddess and Diotima: Their Role in Parmenides' Poem and Plato's *Symposium*." In *Methodological Reflections on Women's Contribution and Influence in the History of Philosophy*, edited by Thorgeirsdottir, Sigridur and Hagenruber, Ruth Edith, 67-81. Cham (Switzerland): Springer.

Abstract: "While female characters play a central part in Greek comedies and tragedies, this is not the case in Greek philosophical texts. There are, however, two important exceptions: in Parmenides' poem and Plato's *Symposium* female characters—an unnamed goddess and the priestess Diotima—have unique access to philosophical truth, which they convey to their male pupils. This chapter poses the following question: Why did Plato and Parmenides choose female

characters as a precondition for the philosophical quest for knowledge? It is argued that both the goddess and Diotima tell a truth that is beyond the reach of ordinary human knowledge, from a perspective of the Other. While Parmenides uses a female nonhuman character to expel everything female from true thinking, Plato uses Diotima to destabilize the notions of male and female and thus to point towards a non-gendered subject of philosophy."

60. Sorabji, Richard. 1983. *Time, Creation and the Continuum: theories in antiquity and the early middle ages*. London: Duckworth.

Chapter 8: Is Eternity Timelessness?; *Parmenides*, pp. 99-107.

"The concept of eternity appears very early in Western thought in one of the first Presocratic philosophers, Parmenides of Elea (born c. 515 B.C). It is taken up by Plato and the Platonists and this is the route by which it comes to influence Christian thought. Eternity is standardly contrasted with time and is said by the Christians I shall be discussing to be a characteristic of God. To the question raised in the chapter heading, whether eternity is timelessness, I shall answer with a qualified 'yes', after explaining what I mean. But the case will need arguing, for there are plenty of rival interpretations which have been ably supported." (pp. 98-99)

"In his poem *The Way of Truth*, Parmenides discusses an unspecified subject 'it'. I favour the suggestion that the subject is whatever can be spoken and thought of, or alternatively whatever we inquire into. (3) The crucial sentence for our purposes comes in fr. 8 DK, 1. 5 and the first half of 6:

Nor was it ever (*pot'*), nor will it be, since it now is, all together, one, continuous.

It is the denial of 'was' and 'will be' which expresses some concept of eternity - but what concept?

I shall distinguish eight main interpretations." (p. 99)

"I conclude provisionally that the 'timeless' interpretation fits Parmenides best, and I should now like to see what happened

to the concept of eternity after Parmenides. To put it briefly, my suggestion will be that Plato clouded the issue by placing alongside the implications of timelessness more phrases implying everlasting duration than can conveniently be explained away. This made it necessary for Plotinus to make a decision and his decision was in favour of timelessness." (p. 108)

(3) The first is the suggestion of G.E.L. Owen, the second that of Jonathan Barnes. G.E.L. Owen, 'Eleatic questions', CQn.s.10, 1960, 84-102 (repr. in D.J. Furley and R.E. Allen, *Studies in Presocratic Philosophy* vol.2, London, 1975), and 'Plato and Parmenides on the timeless present', *Monist* 50, 1966, 317-40 (repr. in A.P.D. Mourelatos (ed.) *The Pre-Socratics*, Garden City N.Y., 1974). Jonathan Barnes, *The Presocratic Philosophers*, London 1979, vol. 1, 163.

61. Sorensen, Roy. 2003. *A Brief History of the Paradox: Philosophy and the Labyrinths of the Mind*. New York: Oxford University Press.

"The natural objection to Parmenides is that his reasoning is refuted by experience. Our senses tell us that there are many things. These things come in various sizes. They are sometimes in motion. They undergo qualitative changes such as when milk sours.

(...)

Only with Parmenides do we see an attempt to completely veto the senses. Parmenides heartily agreed that his arguments conflicted with experience. But he insisted on the supremacy of the intellect over the senses.

Parmenides stresses the principle that one should follow the argument wherever it leads. Previous philosophers had assumed the senses place an important check on one's reasoning.

But they had trouble resisting Parmenides' suggestion that reason is king. After all, the testimony of the senses must be judged by reason. What is the alternative? Any method that purports to be better than reason would have to be adopted and

applied by reason. This gives reason an almost despotic dominion over all methods of inquiry.

Although Parmenides thinks the senses convey a grand illusion, he recognizes a practical necessity for dealing with this realm of appearances. To that end, he proposes a physical theory more or less in the tradition of Anaximander. He tidies up his predecessors by expunging references to voids and privations (such as the view that darkness is merely the absence of light). But even after purging nothingness from traditional physics, Parmenides only offers a theory that aims to be like the truth. His real truth is an uncompromising monism." (pp. 33-34)

62. ———. 2022. *Nothing: A Philosophical History*. New York: Oxford University Press.

Chapter 6: *Parmenides: Absence of Absence*, pp. 77-89.

"After applying his revolutionary principle to the things in space and time, Parmenides extends it to the framework of space and time itself.

Time has three parts: past, present, and future. They cannot overlap. But any difference from one time to another would involve some earlier state of affairs going out of existence, and some later state coming into existence. But Parmenides has already shown that such transitions cannot take place, so time is unreal.

Change requires time because there must be a before and after. So change is also an illusion.

This includes motion as a special case involving change over space.

Parmenides derives some special difficulties from his corollaries about space and time. Motion requires that the mover penetrate empty space.

But emptiness is a kind of nonbeing. Motion also requires temporal differences. And those have already been obliterated.

Parmenides's objections to motion derive from his discoveries about negation. His disciples bred a second flock of arguments

based on infinity, now known as Zeno's paradoxes." (pp. 87-88)

Parmenides of Elea. Annotated bibliography of the studies in English: Spa - Vol

Bibliography

1. Spangenberg, Pilar. 2011. "Aristotle on the Semantic Unity of Parmenidean Being." In *Parmenides, Venerable and Awesome (Plato, Theaetetus 183e): Proceedings of the International Symposium (Buenos Aires, October 29-November 2, 2007)*, edited by Cordero, Néstor-Luis, 383-392. Las Vegas: Parmenides Publishing.

Summary: "This article presents a reading of Aristotle's criticism of the Parmenidean thesis about the unity of being at *Physics* I, 2–3. I intend to show that Aristotle reduces the Parmenidean denial of the multiplicity of beings to the denial of the categories, and that this reading of Parmenidean monism determines the logical character of the strategy Aristotle utilizes against it. I argue that *Metaphysics G* represents a clue for understanding this strategy against Parmenides: in both cases the refutation must be radical in order to preserve the very possibility of science and language."

2. Spangler, G.A. 1979. "Aristotle's Criticism of Parmenides in *Physics* I." *Apeiron. A Journal for Ancient Philosophy and Science* no. 13:92-103.

"Aristotle's aim in the *Physics* is to discover those principles which make it possible to have systematic knowledge of nature. He does not say that this is his aim, however, but only implies that it is. The text of the *Physics* opens with the following remarks:

In all disciplines in which there is systematic knowledge of things with principles, causes, or elements, it arises from a grasp of those: we think we have knowledge of a thing when we have found its primary causes and principles, and followed it back to its elements. Clearly, then, systematic knowledge of nature must start with an attempt to settle questions about principles (184a 10-15).

These remarks put Aristotle's *Physics* squarely into the tradition of "natural philosophy," which is usually said to have originated with Thales. But just as one is rightly wary of saying that natural philosophy was originated by any one man, so it is incautious to suppose that one could easily label what Aristotle is doing in a work so complex as his *Physics*. His own words suggest that he is writing with a scientific interest at stake, but even so one must remember that the lover of truth was then little concerned with marking out territories on the intellectual landscape. In any event, Aristotle quickly moves on to a discussion of Parmenides and Melissus, a discussion which, as he says, offers scope for philosophy." (P. 92)

3. Spanos, William V. 2001. "Heidegger's Parmenides: Greek Modernity and the Classical Legacy." *Journal of Modern Greek Studies* no. 19:89-115.

Abstract: "One of Heidegger's most insistent assertions about the identity of modern Europe is that its origins are not Greek, as has been assumed in discourses of Western modernity since the Enlightenment, but Roman, the epochal consequence of the Roman reduction of the classical Greek understanding of truth, as *a-letheia* (un-concealment), to *veritas* (the correspondence of mind and thing). In the *Parmenides* lectures of 1942–43, Heidegger amplifies this genealogy of European identity by showing that this Roman concept of truth—and thus the very idea of Europe—is also indissolubly imperial. Heidegger's genealogy has been virtually neglected by Western historical scholarship, including classical. Even though restricted to the generalized site of language,

this genealogy is persuasive and bears significantly on the conflicted national identity of modern, post-Ottoman Greece. It

suggests that the obsessive pursuit of the unitary cultural ideals of the European Enlightenment, in the name of this movement's assumed origins in classical Greece, constitutes a misguided effort to accommodate Greek identity to the polyvalent, imperial, Roman model of the polity that informs European colonial practice. Put positively, Heidegger's genealogy suggests a radically different way of dealing with the question of Greek national identity, one more consonant with the actual philosophical, cultural, ethnic, and political heterogeneity of ancient Greece (what Martin Bernal has called the "Ancient Model") and, thus, one less susceptible to colonization by "Europe".

4. Spitzer, D. M. 2020. "Figures of Motion, Figures of Being. On the Textualization of the Parmenidean Poem." *Ancient Philosophy* no. 40:1-18.

"For the most part, editors of the Parmenidean poem are silent about the conditions of orality and performance in which it took shape. How can contemporary readers of the Parmenidean poem listen for and hear-if only as an echo-resonances of the oral-performance culture of archaic Greek culture? What implications for philosophic interpretation are generated by the conditions of orality?

Two root assumptions underlie and animate the editorial presentation and philosophic interpretation of the Parmenidean poem. The first is that the song was principally a text to be read,⁽²⁾ while the second is the implicit view of a single, authoritative original text of the poem. Each of these suppositions bears on and informs critical engagement with the poem. Specifically, these two assumptions reinforce the conventional interpretation that the poem presents a twofold ontological doctrine of stasis and unity. The conventional, doctrinal interpretation as expressed, for example, by Taran 1965, 181, holds that the poem's first part establishes 'the eternity of identity and the impossibility of difference' and takes this to be the 'most important doctrine' advanced by Parmenides. Making visible the poem's connection to a tradition and culture of orality, in terms of both performance contexts of poetry and the ancient practices of reading,

discloses important tensions within the poem's articulation of that twofold." (p. 1)

(2) This follows Havelock 1982, 225 in his assessment of the assumption among twentieth century philologists that 'Greek literature by definition had to be a written literature composed for readers.'

5. Sprague, Rosamond Kent. 1955. "Parmenides: A Suggested Rearrangement of Fragments in the "Way of Truth"." *Classical Philology* no. 50:124-126.

"The proposed alteration of Diels's ordering of the fragments of Parmenides will, I believe, eliminate from the poem two difficulties in thought which result from the present sequence.

(1) The fragments with which I am concerned are the following: 6. 1-9; 7. 1-5; 8.1-2 [Greek text omitted]" (p. 123)

"My rearrangement of the fragments would be as follows: (1) I should detach the first two lines of Fragment 6, thus leaving a gap between lines 2 and 3 in the present sequence. (2) I should then place 7. 1-2 in the gap created between 6. 2 and 6. 3." (p. 124)

"The entire rearrangement may be summarized as follows: (1) 7. 1 follows 6. 2; (2) 7. 2 is dropped on the assumption that it is really another version of 6. 3; (3) 6. 3-9 are as before, but, with the removal of 7. 1-2, 7. 3 follows 6. 9. The rest of the ordering remains the same." (p. 125)

6. ———. 1967. "Parmenides, Plato, and I Corinthians 12." *Journal of Biblical Literature* no. 86:211-213.

"To the student of ancient philosophy, St. Paul's discourse on the body of Christ in I Corinthians 12 has an extremely familiar ring. In vss. 12-21 in particular, he is quite clearly dealing with a philosophical problem familiar to students of Greek thought as the problem of the One and the Many.' Furthermore he is dealing with it in a manner which shows him to be quite conscious of the traditional difficulties. In this brief paper I shall try to place his remarks in this setting." (p. 211)

7. ——. 1971. "Symposium 211A and Parmenides Frag. 8." *Classical Philology* no. 66:261.

"The terms in which Plato describes the Form of Beauty in the Symposium (21 1A ff.) are strikingly similar to those in which Parmenides describes s Being in the Way of Truth (Frag. 8 D.-K. passim)." (p. 261)

8. Stannard, Jerry. 1960. "Parmenidean Logic." *The Philosophical Review* no. 69:526-533.

"That Parmenides introduced a significant change in the method of Greek philosophic thinking is admitted on all hands, though there is, naturally, considerable disagreement about the nature of that change as well as its significance." (p. 526)

"I am not at all convinced that the famous dictum "It is impossible that Being and Not-Being are and are not the same" (B6 D-K) is evidence that Parmenides recognized that the formal structure of his argument was a special case of the more general principle of contradiction. Exactly what method Parmenides used in cataloguing the characteristics of Being doubtless remains a problem.

My own feeling is that he was simply and intuitively following the syntactical structure of the only language known to him. Thus I would suggest that the principal criterion followed by Parmenides in this process was essentially a negative one: avoidance of any open violation of the rules of Greek syntax. (18)" (pp. 530-531)

(18) For this reason, I am inclined to agree with von Fritz (loc. cit., ["NOYZ, NOEIN, and their Derivates in Pre-Socratic Philosophy," *Classical Philology*, XL, 1945] p. 241) that

Parmenides' method was largely an "intuitive" one. Whether or not, in addition to this, Parmenides' exposition of the Way of Truth was akin to a religious or mystical revelation, as Bowra (op. cit. [*Problems in Greek Poetry*, Oxford, 1953]) convincingly argues, is a matter that does not affect the present paper.

9. Steele, Laura D. 2002. "Mesopotamian Elements in the Proem of Parmenides? Correspondences between the Sun-Gods Helios and Shamash." *Classical Quarterly* no. 52:583-588.

"This paper will examine the striking similarities between the journey of Parmenides' narrator and that of the Babylonian sun-god Shamash (Sumerian UTU),(3) similarities that confirm previous scholarly attempts to discern attributes of Helios and/or Apollo in the proem.(4) While the metaphors of a horse-drawn chariot and 'daughters of the sun' are attested Greek associations with the sun-god Helios, three elements of Parmenides' proem are explained more readily with reference to Shamash: the downward passage(5) through gates that are described in great structural detail; the association between these gates and the figure of Justice; and the identification of Parmenides' narrator as Greek κούροϛ, a word that covers the semantic range of a common epithet of Shamash (and of his disciple Gilgamesh), Akkadian *etlu*.

Whether or not Parmenides invoked Babylonian antecedents intentionally, his choice of images indicates a certain degree of Babylonian influence on Greek deities and literary culture more generally." (p. 584)

About the paper by Charles Kahn (1969).

"I want to suggest that the conclusions of your beautiful paper on the Greek verb "to be," which you apply in what seems to me a very convincing way to the analysis of Parmenides, can be exploited further than you have done, with a gain of coherence for the doctrine. I offer my suggestions diffidently: they are rather speculative, and I have no scholarship in the language and little in the period.

The principal question I want to raise is that of the interpretation of what you call Parmenides' "wildly paradoxical conclusions about the impossibility of plurality and change." An argument that leads to a truly paradoxical conclusion is always open (if it escapes conviction for fallacy) to construction as a *reductio ad absurdum*. And the (meager) biographical tradition represents Parmenides - quite unlike Heraclitus, Heraclitus, for instance - as a reasonable and even practically effective man, not at all a fanatic. It therefore seems natural to ask, if he maintained a paradoxical doctrine, whether it did not possess for him (and perhaps for his successors who took him seriously) an interpretation that made some sense. Further, setting aside this not very weighty *prima facie* argument, I think the search for plausible interpretations is worthwhile in any case: for (1) to make a rational assessment of the historical evidence one needs the widest possible survey of hypotheses to choose among; (2) since conclusions in such matters are always uncertain, a list of possibilities may retain a kind of permanent (not just heuristic) value, as the best we can do; and (3)

readings which are even dismissed as unsound on adequate critical grounds may still be of interest, both for the understanding of historical influence - I have in mind in the present case especially Parmenides' influence on Plato-and for our own philosophical edification." (p. 725)

These remarks are a revised version of comments made in correspondence concerning an earlier redaction of Kahn's paper. It has seemed, on the whole, least stilted to retain the informality of second person address. I wish to record my gratitude to Kahn for suggesting that these comments be published with his paper.

12. Stekeler-Weithofer, Pirmin. 2001. "The Way of Truth. Parmenides' Seminal Reflections on Logic, Semantics and Methodology of Science." In *Audiator vox sapientiae. A Festschrift for Arnim von Stechow*, edited by Féry, Caroline and Sternefeld, Wolfgang, 450-472. Berlin: Akademie Verlag.

"In the following, I try to present a new perspective on Parmenides, the father of Plato's logical semantics, or rather, on his famous and difficult poem. I do so without presenting sufficient philological arguments for the proposed reading. I just claim that the poem is a most influential text in the history of logic, semantics and methodology of science. Usually, some kind of metaphysical ontology stands in the focus of attention. I believe, instead, that later shifts of interest and understanding lost the original context and project out of sight.

Parmenides asks what truth and reliable knowledge is. He seems to be the first philosopher who did not just tell allegedly true stories about the structure of the world as, for example, the Ionians did. Parmenides begins with a metalevel reflection on method, on the right road (*hodos*) to knowledge and truth. He presents an ideal explanation of what absolute truth and knowledge is. Only after this does he give a presentation of best possible knowledge. This main part of the poem is almost totally lost. It consisted of a collection of claims about the real causes of some phenomena. Therefore, the book had the title *On Nature* in antiquity." (p. 450)

13. ———. 2003. "Plato and Parmenides on Ideal Truth, Invariant Meaning, and Participation." In *Ideal and Culture of Knowledge in Plato. Akten der IV. Tagung der Karl-und-Gertrud-Abel-Stiftung vom 1-3 September 2000 in Frankfurt*, edited by Wolfgang, Detel, Becker, Alexander and Scholz, Peter, 115-132. Stuttgart: F. Steiner.

"For Parmenides, representation 'by the mind', by memory, or 'to the mind', by words, is the basic method of overcoming the cognitive limits of sheer presence.(3) Parmenides defends the peculiar role of presence and claims that it is conceptually the same to say that something is real and that it can be known: Existing (einai) and being the object of possible knowledge (noein) are the same. But he seems to work with a double meaning of "noein": The core meaning is to notice or to realise something in a present situation.

Hence, there is an obvious need to 'enlarge' the concept of knowing from the narrow sense of immediate 'realisation' to general knowledge and, by the same token, of the parochial concept of actual being here to universal reality. By this move, the concept of immediate knowledge, i. e. perception, widens to possible knowledge. Truth and reality is what can be known. It is not defined by what actually is known or, even worse, what only seems to be known. But how do we conceptually proceed from what can be realised here and now to what can or could be known?" (p. 116)

(3) It is not clear how Parmenides, fragment 4,1 must be translated, perhaps both readings are right.

14. Stewart, Donald. 1980. "Contradiction and the Ways of Truth and Seeming." *Apeiron. A Journal for Ancient Philosophy and Science* no. 14:1-14.

"The central problem concerning Parmenides' poem is to provide the rationale for the relationship between the two major parts of the poem, The Way of Truth and The Way of Seeming." (p. 1)

"Very briefly my argument is this; though the Greeks individuated objects on the basis of sensation just as we do,

they had, at the time of Heraclitus, no satisfactory way of grounding this sensory individuation in ontology.

(...)

This, in turn, led Heraclitus to a belief in, if not a formulation of, what we may call the principle of contradiction, for it was evident that all things were One and yet still different things at the same time, and thus that paradox was the only true method of thought.

Parmenides, in a reference seemingly clearly to Heraclitus,(4) formulates this principle for the first time when he refers to those by whom "To be and Not To be are regarded as the same and not the same, and (for whom) in everything there is a way of opposing stress." (fr.6) It is this principle which is the key, I believe, to the relation of the Way of Seeming to the Way of Truth. If we take "To be" as a description of the One and "Not to be" as its negation then it is relatively easy to discern the relation between the two Ways. The Way of Truth gives us a description of the One from the point of view of the One while allowing, at the same time, for a description of the many, but only from the point of view of the many. Each is totally different from the other, and yet if we take Heraclitus seriously, as I think Parmenides did, they are the same as well as not the same. It is this sameness of the two opposites, the One and all the things that are the One, which provides the link between the two Ways. The Way of Seeming, though it is the Way of Truth, is that Way only from the point of view of Seeming. Similarly, the Way of Truth, though it is the Way of Seeming, is so only from the point of view of the truth, the One." (p. 2)

(4) Stokes disagrees and claims that there is no compelling reason to believe that Parmenides was aware of Heraclitus' writings at all.

15. Stokes, Michael C. 1960. "Parmenides Fr. 6." *Classical Review* no. 10:193-194.

I give the text and punctuation of Diels-Kranz for lines 3 ff.:

Πρώτης γὰρ σ' ἀφ' ὁδοῦ ταύτης διζήσιος <εἶργω>,

αὐτὰ ῥ' ἔπειτ' ἀπο` τῆς, ἦν δη` βροτοὶ εἰδότες οὐδε`ν
 πλάττονται, δίκρανοι· ἀμηχανίη γὰρ ἐν αὐτῶν
 στήθεσιν ἰθύνει πλακτο`ν νόον· οἱ δε` φοροῦνται
 κωφοὶ ὁμῶς τυφλοὶ τε, τεθηπότες, ἄκριτα φύλα,
 οἷς το` πέλειν τε καὶ οὐκ εἶναι ταύτο`ν νενόμισται
 κού ταυτόν, πάντων δε` παλίντροπός ἐστι κέλευθος.

"There has been much controversy over the question whether or not this fragment refers to the philosophy of Heraclitus; much less discussion of the construction and meaning of these singularly difficult lines. The crucial point concerns the gender of πάντων in I. 9. Kirk-Raven, p. 271, translate as if it were neuter, while admitting, p. 272 n. 1, that it is possible that it is masculine. This is fair enough; but the word 'possible' is perhaps an understatement." (p. 193)

"I suggest that the most satisfactory way out of the problem is to punctuate with a colon after κού ταυτόν, taking πάντων δε` ... as syntactically parallel to οἱ δε` ... in I. 6 of this fragment. The last clause of the fragment would then be a separate statement of the goddess, introduced by an explanatory δε`. (1) It would follow, of course, that πάντων should be taken as masculine, since the goddess could hardly say that the way of all things was backward-turning. The conclusion is that in all probability the phrase πάντων ... κέλευθος and the path of all (mortals) is backward-turning'. The abruptness resulting from this punctuation need arouse no suspicion; for abruptness is not uncharacteristic of Parmenides." (p. 194)

16. ——. 1971. *One and Many in Presocratic Philosophy*. Washington: Center for Hellenic Studies.

Reprint: Lanham: Rowman & Littlefield, 1986.

Preface V-VI; Contents: I. Aristotle and the Analysis of Unity and Plurality 1; II. The Milesians 24; III. Xenophanes 66; IV.

Heraclitus 86; V. Parmenides and Melissus 109; VI. Empedocles 153; VII: Zeno of Elea 175; VIII. One-Many Problem in Atomism 218; IX. Miscellaneous Presocratic Contexts 237; X. Conclusion 249; Appendix: Parmenides B8.7-12 253; Abbreviations 258; Bibliography 259; Notes 267; Index of Passages 341; General Index 347-355.

"Having decided to treat of Parmenides separately from Heraclitus, we must turn to consider the role of unity, and of the one-many antithesis, in Parmenides' thought, and the kind(s) of unity and plurality that he had in mind. We must also consider whether a question of "what is one" being or becoming many arises in Parmenides' argument. It seems clear that the function of the one-many antithesis in this, the first extant European piece of consecutive metaphysical reasoning, has been greatly exaggerated in some quarters; though the exaggeration has been somewhat diminished in successive works of recent years,(65) it still remains an obstacle to the understanding and appreciation of a great philosopher and needs therefore still to be pointed out and criticized.

If any single antithesis occupied a high place in Parmenides' thought, it was that between Being and not-Being. The word "one" appears in only two extant places in Parmenides' poem, and the phrase "the one" appears in Melissus apparently for the first time, in conscious reference back to that Being which has been proved to be one; the phrase "the One Being," beloved alike of Cornford and of the Neoplatonist Simplicius, is not to be found in the extant remains of Presocratic Eleaticism. Once more the questions at issue can be decided only on the basis of close textual analysis; and again we have to deal with a thinker recognized even by the ancients as obscure. (66)" (p. 127)

(65) Untersteiner's thesis (*Parmenide*, [Firenze, La Nuova Italia, 1958] passim) eliminating the One altogether from Parmenides is adequately dealt with by Schwabl, *Anzeiger für Altertumswissenschaft* 9 (1956) 150f. F. Solmsen's important analysis, reducing the significance of unity in Eleatic thought perhaps too drastically, came into my hands as this book was going to press, too late for detailed criticism: see "The 'Eleatic

One' in Melissus," *Mededelingen der koninklijke Nederlandse Akademie van Wetenschappen*, Afd. Letterkunde, Nieuwe Reeks, Deel 32, No. 8 (1969) 221-233.

17. Stough, Charlotte. 1968. "Parmenides' "Way of Truth", B 8. 12-13." *Phronesis. A Journal for Ancient Philosophy* no. 13:91-107.

"The consistency with which fragment 8 of the Way of Truth has occupied the attention of commentators is evidence of its importance for an understanding of Parmenides' thought. Yet the many efforts to elucidate this passage have issued in diverse and mutually incompatible conclusions, with the result that the meaning of significant portions of the text remains in doubt. Lines 12-13, in particular, have been the subject of protracted but inconclusive debate and are still interpreted variously in the context of the fragment.(2)

οὐδε` ποτ' ἐκ μη` ἔόντος (3) ἐφήσει πίστιος ἰσχύς
γίγνεσθαι τι παρ' αὐτό.

The chief difficulty in interpreting these lines, and the source of the divergency of opinion as to their meaning, concerns the reference of αὐτό in line 13. The pronoun seems to point most naturally to μη` ἔόντος in the preceding line as its grammatical antecedent. If the Greek is construed in this way, the lines can be rendered, "Nor will the force of conviction allow anything to arise out of what is not besides itself" (viz., what is not). Reading the passage accordingly, a number of scholars have translated it in some such fashion as the above.(4)" (p. 91)

"The main concern of this paper is to defend the meaningfulness of lines 12-13 as translated above and to clarify the function of that assertion in the context of Parmenides' argument. The first section deals with the claim that the lines so rendered are meaningless or

inappropriate in their content; the second section concerns the structure of the argument in which the statement occurs; and

the third section discusses very briefly variant interpretations of the text." (p. 92)

18. Swindler, James Kenneth. 1980. "Parmenides' Paradox: Negative Reference and Negative Existentials." *The Review of Metaphysics* no. 33:727-744.

"In the beginning Parmenides sought to deny the void. But he found himself trapped by his language and his thought into admitting what he sought to deny. Wisely, he counseled others to avoid the whole region in which the problem arises, lest they too be unwarily ensnared. Plato, being less easily intimidated and grasping for the first time the urgency of the paradox, unearthed each snare in turn until he felt he had found a safe path through the forbidden terrain in a new conception of being and the derivation of its linguistic consequences in the Sophist. Aristotle evidently took Parmenides' advice; and save for a few groping scholastics, perhaps Leibniz, Brentano, and Meinong, and Frege only in passing, no one else attempted the crossing before Russell made his spectacular dash through the posted ground from the completely new direction of linguistic reference. Again the problem lay dormant for half a century until Strawson constructed a new low road through ordinary language and Quine improved Russell's high algebraic pass. Refinements of these routes have been forthcoming, especially from Searle and Kripke, until today it might appear that there are two super highways through Parmenides' forbidden country of nonbeing. In this essay I will first argue that these new linguistic highways are no more than flimsy camouflage hiding but not resolving the old paradoxes. I will then show how

Plato's ontological way out, though more difficult, is the straight and narrow path." (p. 727)

19. Tallis, Raymond. 2007. *The Enduring Significance of Parmenides: Unthinkable Thought*. New York: Continuum.

Contents: Autobiographical Prelude IX; Preface: The once and future philosopher XII-XVI; Chapter 1. The strange dawn of Western thought 1; Chapter 2. The existence of What-Is-Not 27; Chapter 3. Propositional awareness encounters itself 50; Chapter 4. Why Parmenides happened 88; Chapter 5. Parmenides' footnotes: Plato and Aristotle 130; Chapter 6. Parmenides today 158; Works cited 189; Notes 195; Index 230-240.

"In Chapter 2, I shall examine Parmenides' central claim - that what-is-not is not - and discuss how what-is-not comes to have such a pervasive presence in the human world. The key to this, I shall argue, is possibility - which may or may not be actualized, as a result of which what-is exists explicitly and corresponds to 'truth', and what-is-not can be individuated and be an explicit falsehood. Chapter 3 looks further into the origin of negation and possibility, finding it in the Propositional Awareness (knowledge, thought and discourse) that characterizes distinctively human consciousness. Parmenides' poem, I shall argue, is the first fully fledged encounter of Propositional Awareness with itself. Chapter 4 examines in what sense Parmenides was unique among the Presocratic thinkers and then why he and, indeed, Presocratic thought arose when they did. It is obvious that philosophy must have had non-philosophical origins. I try to dig deeper than the usual explanations and in doing so examine many factors - politics, trade, exile, the alphabet, different linguistic codes - that made seventh-century Greeks conscious of their consciousness in a way that had no precedent in the hundreds of thousands of years of human consciousness prior to this. Parmenides may be seen as the resultant of the factors that led to Presocratic thought plus his reaction to his predecessors. Chapter 5 examines the most important response to Parmenides - Plato's Parmenides - which did more than any other post-Parmenidean event to amplify Parmenides'

influence kind, at the same time, to conceal him behind the Platonic ideas he is supposed to have provoked. I examine not only Plato's response to Parmenides but also Aristotle's response to Plato.

In the final chapter, I look at the possible meaning that Parmenides might have today. His present relevance resides in the fact that we may have reached the end of the cognitive road upon which he, pre-eminent amongst the early Greek philosophers, set mankind. Parmenides dismissed ordinary wakefulness as if it were a kind of sleep, in the hope of goading us to another kind of wakefulness. While the present book cannot match that ambition, I would very much hope that, by returning to the philosophical and historical hinterland of Parmenides' cataclysmic idea, I might start the process by which we return to the place from which Parmenides set out and journey in another direction in a world unimaginably different from his." (pp. 25-26)

20. ———. 2012. *In Defence of Wonder and Other Philosophical Reflections*. Durham: Acumen.

Coda: Parmenides: The Great Awakening, pp. 225-238.

"In a much-quoted, and perhaps somewhat dispiriting, passage, Alfred North Whitehead described the European philosophical tradition as "a series of footnotes to Plato".[*] Whether or not this is fair to the thinkers who followed Plato, it is a gross injustice to the philosophers who preceded him. Pre-eminent among these giants was Parmenides. Elizabeth Anscombe's slightly tongue-in-cheek suggestion that Plato might be characterized as "Parmenides' footnote"[**] is not as perverse as it seems. While Plato's dialogues are among the supreme philosophical works of the Western tradition, it was Parmenides who established the implicit framework of their debates and laid down the rules of engagement. And he did so with remarkably little fuss." (p. 225)

[*] *Process and Reality: An Essay in Cosmology*, New York: Free Press 1979, p. 39: "The safest general characterization of the European philosophical tradition is that it consists of a series of footnotes to Plato."

21. Tarán, Leonardo. 1967. "Proclus *In Parm.* 1152.33 (Cousin) and Parmenides 28 B 3 (Diels-Kranz)." *Classical Philology* no. 62:194-195.

Reprinted in L. Tarán, *Collected Papers (1962-1999)*, Leiden: Brill, 2001, pp. 623-624.

In a recent study on Parmenides, Dr. Mansfeld takes Proclus *in Parm.* 1152. 33, ταὐτόν δ' ἐστὶν ἐκεῖ νοεῖν τε καὶ εἶναι to be a quotation of Parmenides 28 B 3; and he maintains that, however imperfect that quotation may be, there is no justification for the failure on the part of Diels and Kranz to mention that this fragment was known to Proclus.(1)" (p. 623)

"In short, although absolute certainty is impossible, Proclus *in Parm.* 1152. 33 is more likely to be a paraphrase of 28 B 8.34 than of 28 B 3 and, whether this was the reason that decided Diels and Kranz to exclude Proclus as a source of 28 B 3 or not, Dr. Mansfeld should have considered this possibility before blaming Diels and Kranz for what he takes to be their failure to mention an important source." (p. 624)

Reprinted in L. Tarán, *Collected Papers (1962-1999)*, Leiden: Brill, 2001, pp. 168-170.

"Parmenides' basic mistake is his misapplication of the law of the excluded middle to the disjunction being::notbeing.

Otherwise his reasoning is flawless, and none of the philosophers who came immediately after him was able to refute him. The refutation was reserved for Plato, especially in his *Sophist*; but Plato recognized the importance of

- Parmenides' attempt to apply the exigencies of logical proofs to thought and its object." (p 169 of the reprint)

Review-Article of A.P.D. Mourelatos, *The Route of Parmenides. A Study of Word, Image, and Argument in the Fragments* (New Haven-London 1970).

"In this work, where a new and revolutionary interpretation of Parmenides is put forward, M. does not discuss all the verbatim quotations from that philosopher, nor analyze the indirect evidence about him; he decided instead to concentrate his efforts on those Parmenidean texts that seem to him to provide the clue to Parmenides' thought.

The book consists of nine chapters and four appendices: Ch. I (Epic Form) deals with the relation of Parmenides' poem to the epic tradition, and is supplemented by app. I, which is devoted to Parmenides' use of the hexameter; ch. 2 (Cognitive Quest and the Route) is on the two routes of B 2,(1) and is itself complemented by app. II, on the different interpretations given to ἐστὶ ἄν in B 2, 3; in chs. 3 (The Vagueness of What-Is-Not), 4 (Signposts), 5 (The Bounds of Reality), and 7 (Mind's Commitment to Reality) M. discusses B 8 and B 9; ch. 6 (Persuasion and Fidelity) is devoted to the meaning of πείθειν and cognate words, ch. 8 (Doxa as Acceptance) mostly to an analysis of B I, 31-32, while ch. 9 (Deceptive Words) is an attempt to demonstrate Parmenides' purposeful use of ambiguity. App. III is on the meaning of χρή and cognate words, and app. IV contains the text of the fragments, but without a critical apparatus, for which the author refers to this reviewer's edition. (2)" (p. 171 of the reprint)

(1) I shall hereafter refer to Parmenides' fragments merely by the use of B followed by the number of the fragment in Diels-Kranz, *Fragm. d. Vorsokr.*⁶ (Berlin 1951-2).

24. ———. 1979. "Perpetual Duration and Atemporal Eternity in Parmenides and Plato." *The Monist* no. 62:43-53.

Reprinted in L. Tarán, *Collected Papers (1962-1999)*, Leiden: Brill, 2001, pp. 204-217.

"The purpose of this paper is less ambitious than its title might suggest, since it does not deal with everything that Plato has said on time and on eternity. Rather, it attempts to clarify some issues which have arisen in the controversy as to whether Parmenides or Plato was the first Western philosopher to grasp the notion of atemporal eternity. It is particularly concerned with some publications on the subject that have appeared within the last twelve years or so. G.E.L. Owen, in a paper published in this journal, has defended his earlier interpretation that Parmenides discovered the notion of atemporal eternity. (1) J. Whittaker for his part has contended that both Parmenides and Plato failed to grasp it, and would ascribe its discovery to some later thinker. (2) Yet another scholar, G. Reale, (3) believes that there is no essential difference between the position of Parmenides as reconstructed by Owen and others and that of Melissus. For Reale maintains that Melissus' formula "it is and always was and always will be" does not exclude atemporality, that it means the same thing as the alleged tenseless "is" predicated of Parmenides' Being.

Most scholars, however, do agree -- and rightly so, I believe -- that in the *Timaeus* Plato has clearly grasped the notion of atemporal eternity. It is therefore best to begin the discussion with him, since it will then become apparent what an ancient philosopher meant by atemporal eternity and by the tenseless "is" that expresses it." 25. ———. 1993. " Review: *Etudes sur Parménide* I and II." *Ancient Philosophy* no. 13:152-156.

Reprinted in L. Tarán, *Collected Papers (1962-1999)*, Leiden: Brill, 2001, pp. 193-198.

Review of *Etudes sur Parménide*. Published under the direction of P. Aubenque. Tome I: *Le poème de Parménide*, Tome II: *Problèmes d'interprétation* (Paris 1987).

"This voluminous work originated in the travaux of the Centre Leon-Robin, *Centre de Recherches sur la Pensée antique* de l'université de Paris-Sorbonne (Paris-IV) et laboratoire associé au C.N.R.S. No. 107, held in 1980 and 1981. These "travaux" resulted in the papers contained in vol. 2. (An additional paper by J. Wiesner, originating in a Berlin seminar with P. Moraux, is also included.) The publisher having asked for an edition and translation of Parmenides' poem, the assignment was given to D. O'Brien.

The first volume, then, consists (apart from the preliminary material) of a text of the poem with an apparatus of sources and notes where the variant readings are given. The Greek text (and the Latin text of Fr. 18 preserved by Caelius Aurelianus) is accompanied by an English translation by O'Brien and a French one by J. Frere. This is followed by these sections by O'Brien: a list of ancient authors, with editions and, sometimes, manuscripts; a supplementary note on Coxon's edition, which is severely criticized; an index of Greek words; a critical essay "Introduction à la lecture de Parménide: Les deux voies de l'être et du non-être" (137-252), supplemented by "Notes complémentaires" (253-302). The volume ends with two

indices, followed by an English summary of the contents of Parmenides' poem.

The second volume is divided into two parts, the first on Parmenides, the second on the tradition (or influence) of Parmenides on later Greek philosophy." (p. 193 of the reprint)

26. Tarrant, Harold. 1976. "Parmenides B1.3: Text, Context and Interpretation." *Antichthon* no. 10:1-7.

Abstract: "It is an almost universal principle that texts should not receive emendation until the reading of the MSS. has received careful consideration. An initial awkwardness may, after reflection, prove to be a poet's sacrifice of style to achieve some higher end – an allusion to traditional literature, a word-order reflecting the structure of his ideas, or the accurate expression of ideas which are not easily put into verse. The last reason is usually held responsible for the short-comings of Parmenides' poetry, while in his prologue, with which I am here concerned, sacrifices of the first kind may also be expected, as literary allusions have been proved plentiful and significant. In a previous publication I have also argued for a carefully contrived word-order at B8.53, hinting that this may also be the case at B1.3. If my hunch were correct, then it would involve restoring the manuscript reading in that line."

27. ———. 1983. "The Conclusion of Parmenides' Poem." *Apeiron. A Journal for Ancient Philosophy and Science* no. 17:73-84.

"In *Apeiron* 13 (1979) p. 115 P. J. Bicknell assigns Parmenides B4 to the closing lines of the work, following the illusory account of the physical world; he relates its references to processes of separation and combination (lines 3-4) to some kind of 'cosmic cycle' which allegedly featured in the Doxa. Since I have long supposed that the Doxa did make use of opposite, if not cyclical, cosmic processes,(1) I am attracted by Bicknell's attempt to relocate this fragment." (p. 73)

"But placing B4 at the conclusion of the poem must be dependent upon one's overall view of the conclusion. If one regards B19 as the conclusion (and Simplicius' words make it quite clear that B19 closed the account of the physical world)

(9) then B4 must be squeezed into the *Way of Truth* in spite of the difficulty in finding a context for it and in spite of the fact that it refers to a cosmos (B4.3). To me it seems fairly clear that B19 did not conclude the poem, and that there was a short final section which commented further on the relation of Being to the world of phenomena. The considerations which bring me to this conclusion are independent of the attempt to place B4 there." (p. 74)

28. Tegtmeier, Erwin. 1999. "Parmenides' Problem of Becoming and Its Solution." *Logical Analysis and History of Philosophy* no. 2:51-65.

Abstract: "Parmenides advances four arguments against becoming. Two of these are sound. Plato's and Aristotle's attempt to refute them fail. They react to Parmenides' challenge by differentiating and grading being and existence. Thus they deviate from Parmenides' strict concept of existence which is the only reasonable one. What's wrong with Parmenides' train of thought is a decisive premise: that becoming is a transition from non-existence to existence. The reality of becoming can be maintained if (and only if) this premise is given up. One has to see that becoming is a purely temporal affair not involving existence and that existence is timeless. Time and existence are independent of each other."

29. Tejera, Victorino. 1997. *Rewriting the History of Ancient Greek Philosophy*. Westport: Greenwood Press.

Contents: Preface VII; 1. Aristotle versus the Peripatos: Consequences of the Conditions under Which the Aristotelian Corpus Came into Being 1; 2. A New Look at the Sources 19; 3. Parmenides 37; 4. What We Don't Know about Plato and Socrates 105; Selected Bibliography 121; Index 139-145.

"The interpretations of Parmenides' "Being" which have perpetuated the distinction between the objects of reason and the objects of sense as an epistemological one are just those that keep "Being" from being the appropriate subject of the cluster of predications that the Goddess makes about it in the poem. These interpretations turn the reader's problem into one of reconciling his own (or his times') notions about Being with the attributes Parmenides assigned to it. But the real problem is to find a subject to which the attributes can all be seen to attach without difficulty. The project, then, is to make coherent sense out of Parmenides' text in accordance with the kinds of sense it would have made to Parmenides' time and peers. The solution which we will come to here will also make literary sense out of the relationship between the different parts of the poem." (p. 37)

"One paradox about Parmenides' insight is that, while it is implied that discourse about "Being" must be strictly consistent when understood to be making truth-claims, the language in which he has enacted this lesson is not itself assertive or propositional, but exhibitiv or poetic. But the logically two-valued strict discourse that the Goddess recommends is compelling, because it is the only guide we have to rightly conceptualizing the "All." Whether the characterization of Being that she has offered is itself strictly consistent is another matter. Is the "All," for instance, in fact one, or only because, to be spoken of at all, it must have the unity of a grammatical subject? The "All," we can agree, is certainly distributively exhaustive and innumerable. But we may ask, with Buchler, is it a unity in the sense of having a collective existential integrity? There certainly cannot be two Alls; but, in the Goddess's own terms, it could not be completely observed even if it did have such a unity. Conceptually, the "All" can be all there is, was, and will be without having any other than a nominal or grammatical unity; like Buchler's "the world," it has no collective integrity. And this is why nature philosophy must ever be an incomplete (*endeês*) and merely probable (*hês eikós*) account, as Plato's Timaios will be willing to admit when he rehearses for Socrates his *eikóta mûthon* in the *Timaeus*. This,

in turn, reassures us that Plato -- unlike the neoplatonist forgers of the Lokrian Timaios -- has quite understood and taken to heart Parmenides' admonitions about nature-inquiry." (pp. 59-60)

30. Thanassas, Panagiotis. 2006. "How Many *Doxai* Are There in Parmenides?" *Rhizai. A Journal for Ancient Philosophy and Science* no. 3:199-218.

"The paucity of surviving fragments of the *Doxa* section certainly reinforces the tendency to overlook its importance. But how did it happen that, at least according to Diels (1897 [Parmenides, *Lehrgedicht*, Reimer, Berlin (2nd ed.: Academia Verlag, Sankt Augustin 2003)], 25-26), about 9/10ths of the material on *Aletheia* has survived, but only about 1/10th of the material on *Doxa*? I would recommend viewing the scant attention paid to *Doxa* as a case of helplessness without any parallel in the history of philosophy. From Plato to Heidegger (or if one prefers, to Guthrie), the history of philosophy has consistently been confronted with the above-mentioned duality of *Doxa* and has not known how to deal with it. The loss of so much material on *Doxa* has less to do with its lack of philosophical content than with the tradition's intuitive strategy of resolving the aporia by eliminating that duality. After the detailed passages of Parmenides' cosmogony and cosmology had been lost, *Doxa* could be restricted to a region of 'lies and deception' (5) and then completely dismissed as philosophically uninteresting." (p. 200)

"We are not in a position to revoke retroactively the traditional oversight and to remedy the substantial loss of essential passages from Parmenides' cosmogony and cosmology. But we can and must set the record straight: the fact, the *factum brutum* that there really were such passages, should not remain ignored. A 'correction' of this oversight does not take its bearings by the criterion of historical fidelity; we do not 'correct' the oversight because it discredits just a part of Parmenides' philosophy, but because it distorts what is the heart of that philosophy: Parmenidean *Aletheia*." (p. 201)

(5) 'Lug und Trug': Reinhardt (1916) [*Parmenides und die Geschichte der griechischen Philosophie*, Klostermann, Frankfurt (5th ed.1985)], 6.

31. ———. 2008. *Parmenides, Cosmos, and Being: A Philosophical Interpretation*. Milwaukee: Marquette University Press.

Contents: Acknowledgments 6; 1. The Poem and its legacy 9; 2. The Heart of Truth 23; 3. *Esti*, Being and Thinking 31; 4. The signs of Being 43; 5. *Doxa*: mixture vs. partition 61; 6. *Aletheia* and *Doxa*: the human and the divine 77; Appendix: translation of the Fragments 89; Selected bibliography 99; Index of names 107; Index of topics 109.

"Indeed, given the plurality of themes and intentions effective in the second part of the poem, the simple, unqualified use of the *Doxa* seems altogether misleading. In view of this, the presentation undertaken above discerned four distinctive perspectives on *Doxa*:

(1) Understanding the deceptive human conjectures and demonstrating their error (8.53-9).

(2) Presenting an appropriate positive *Doxa* that rests on a mixture of both forms instead of their separation, thus counteracting the deception (8.60 ff.).

(3) Portraying the genesis of the deceptive opinions, the divergences of which are traced back to differences in the perceptual apparatus (16).

(4) Giving (in the *Aletheia*) an ontological evaluation and rejecting the deceptive opinions by demonstrating their path to be the "third (non-) way" (6, 7). (pp.79-80)

32. ———. 2011. "Parmenidean Dualisms." In *Parmenides, 'Venerable and Awesome' (Plato, Theaetetus 183e)*, edited by Cordero, Néstor-Luis, 289-308. Las Vegas: Parmenides Publishing.

Summary: "The poem of Parmenides is systematically composed of dual structures. The part of *Aletheia* establishes an opposition between Being and Non-Being, but also an "identity" between Being and Thinking; the part of *Doxa*

attempts to give an account of the relation between the two forms of Light and Night; finally, it is the duality of the two parts of the poem themselves that poses the question of their own relation. I attempt to explore the character and role of these dualisms, and especially their impact on the traditional perception of Parmenides as a rigorous “monist.” "

33. ———. 2020. "Ontology and Doxa: On Parmenides' Dual Strategies." *Anais de Filosofia Clássica* no. 28:216-249.

Abstract: "Starting from Reinhardt's interpretive instruction to take into account both parts of the poem of Parmenides in order to achieve a sufficient understanding of his philosophy, this paper aims to re-evaluate the state of recent scholarship, and to propose an approach that reveals the “dualistic methodology” at the heart of Parmenides' philosophy. The ontological monism of Truth emerges as grounded in the dualistic projection of the concepts of Being and Nothing. The dualism of Doxa, structured upon the forms of Light and Night, evolves by producing a further duality: the erroneous opinions that separate the two forms have to be replaced by the appropriate cosmological world-order of their mixture. Finally, the poem as a whole, in its two parts, reflects a deeper duality, which signifies the profound distance that separates the human from the divine. The importance of all these binary structures compels us to re-examine the consideration of Parmenides as champion of a blind monism."

34. Thom, Paul. 1986. "A Lesniewskian Reading of Ancient Ontology: Parmenides to Democritus." *History and Philosophy of Logic* no. 7:155-166.

Abstract: "Parmenides formulated a formal ontology, to which various additions and alternatives were proposed by Melissus, Gorgias, Leucippus and Democritus. These systems are here interpreted as modifications of a minimal Lesniewskian Ontology."

"There is a tradition of ontological theorising which commences with Parmenides and whose central arguments can be given a purely formal interpretation. This, of course, is not their only possible interpretation. It is, nonetheless, worthy of

consideration, as a means of articulating the continuities and discontinuities within that tradition, and of investigating the prehistory of logic.

The main thesis of this paper is that such a purely formal interpretation of Parmenides, his followers and critics, is best expressed in the language (or, if you wish, in some of the languages) of Leśniewski's Ontology." (p. 155)

35. ———. 1999. "The Principle of Non-Contradiction in Early Greek Philosophy." *Apeiron. A Journal for Ancient Philosophy and Science* no. 32:153-170.

Abstract: "The principle of non-contradiction received ontological formulations (in terms of 'being' and 'non-being') as well as logical formulations (in terms of affirmation and denial) in early Greek philosophy. The history of these formulations is traced in the writings of Parmenides, Gorgias, Plato and Aristotle. Gorgias noticed that the principle — in Parmenides' formulation NC: 'Not (what-is-not is)' — is inconsistent with the thesis G that what-is-not is what-is-not, given a principle P whereby we can infer from 'a is b' to 'a is'. Parmenides, Gorgias, Plato and Aristotle all address the inconsistent triad {NC, G, P} in different ways."

36. ———. 2002. "On the Pervasiveness of Being." In *Presocratic Philosophy: Essays in Honour of Alexander Mourelatos*, edited by Caston, Victor and Graham, Daniel W., 293-301. Aldershot: Ashgate.

Abstract: "The pervasiveness of Being is the doctrine that everything is. This doctrine would be false if something was not. That being is pervasive is not a trivial claim. An ontology might be motivated by the desire to quantify over non-beings in such a way that we can say that something is a flying man without implying that some being is a flying man. If such a distinction is allowed, then it might be thought that something is not, even though no being is not. Pervasiveness then would be true for beings but not for 'something's.'

This chapter explores the different positions that philosophers from Parmenides to Aristotle take on the question of the

pervasiveness of Being, and traces some of the relations linking those positions to one another."

"Note the thesis's modal import. Parmenides is asserting that everything is, not just as a matter of fact, but necessarily. And this is fitting, given that the premiss of his reasoning is the modal claim that 'a is not' cannot be said.

Is Parmenides' position internally consistent? It depends. If we suppose that his philosophy is intended as a description of language in general, then it will appear to be self-refuting. He tells us that various things can not be spoken, or thought, or singled out, or consummated, at the same time forbidding us to make negative statements. Consistency can, however, be rescued by distinguishing an object-language about which Parmenides is speaking, and a meta-language in which he is speaking. We can then represent him as saying, in the meta-language, that there are no negative statements in the object-language. In this case, Parmenides' project will be a prescriptive one - to delineate the conditions that govern a certain 'higher' language that is not subject to the contradictions inherent in the language of mortals.

This is a noble conception, but not one that will be universally shared. Faced with these Parmenidean prescriptions, there will always be anarchic spirits who will dare to speak of what is alleged to be unspeakable." (p. 294)

37. Tilgham, B. R. 1969. "Parmenides, Plato and logical atomism." *Southern Journal of Philosophy* no. 7:151-160.

"It has been remarked more than once that many of the questions raised by philosophers in the twentieth century are more nearly akin to those raised by the Greeks than to the ones that concerned their more recent predecessors.

I am interested here in kinship that, if not altogether unnoticed, does not seem to have been commented upon. I want to show that there is a problem that both Parmenides and Plato dealt with that seems very much like one that intrigued Frege, Russell, and Wittgenstein and also that the way Plato saw to

what he thought was its solution is very similar to that taken by Russell and Wittgenstein." (p. 151)

38. Tor, Shaul. 2015. "Parmenides' Epistemology and the Two Parts of His Poem." *Phronesis* no. 60:3-39.

Abstract: "This paper pursues a new approach to the problem of the relation between *Aletheia* and *Doxa*. It investigates as interrelated matters Parmenides' impetus for developing and including *Doxa*, his conception of the mortal epistemic agent in relation both to *Doxa*'s investigations and to those in *Aletheia*, and the relation between mortal and divine in his poem. Parmenides, it is argued, maintained that Doxastic cognition is an ineluctable and even appropriate aspect of mortal life. The mortal agent, however, is nonetheless capable of sustaining the cognition of *Alêtheia* by momentarily coming to think with — or as — his divine (fiery, aethereal) soul."

39. ———. 2017. *Mortal and Divine in Early Greek Epistemology: Study of Hesiod, Xenophanes and Parmenides*. Cambridge: Cambridge University Press.

Contents: Preface and Acknowledgements page IX; List of Abbreviations XII; Introduction 1; 1 Rationality and Irrationality, Philosophy and Religion 10; 2 Hesiodic Epistemology 61; 3 Xenophanes on Divine Disclosure and Mortal Inquiry 104; Introduction to the Chapters on Parmenides 155; 4 Why Did Parmenides Write *Doxa*? 163; 5 How Could Parmenides Have Written *Alêtheia*? 222; 6 Retrospect and Prospect 309; Appendix 347; Bibliography 360; Index Locorum 387; General Index 399-406.

"On the assumption, which I share, that the goddess represents *Doxa* as the best possible account of Doxastic things, she indeed implies that even the best cosmology could never constitute an account of the unshaken heart of ultimate reality. Nonetheless, the scope and nature of Parmenides' cosmological investigations undermine these dialectical responses to the aetiological question.

The goddess had concluded in *Alêtheia* her critical demonstrations that processes like coming-to-be and change do

not typify what-is. Both direct and indirect evidence indicates that what followed in Doxa was an extended and detailed exposition, thoroughly positive in tone, of diverse scientific theories, spanning, among other things, universal cosmology (DK28 B9, B12; A37), cosmogony (B10–11), astronomy (B10–11; B14–15; A40a), geography (A44a; B15a), theogony (B13), anthropogony (Diogenes Laertius, 9.22, A53), embryology (B18; A53–4) and human physiology and cognition (A46 = B16, A46a-b, A52)." (pp. 163-164)

40. ———. 2020. "Parmenides on the Soul." In *Heat, Pneuma, and Soul in Ancient Philosophy and Science*, edited by Bartoš, Hynek and King, Colin Guthrie, 61-79. Cambridge: Cambridge University Press.

"Direct doxographic reports concerning Parmenides' view of the soul are scanty, schematic and variable. Aëtius indiscriminately ascribes to Parmenides and Hippasus the view that the soul is fiery (Παρμενίδης δε ` και ` Ίππασος πυρώδη, A 45, followed by Theodoret, *Graec. affect. cur.* 5,16,5–6, 18,5–6). According to Macrobius, who most likely reflects here nothing more than the awareness that Parmenides' cosmology was dualistic, Parmenides maintained that the soul was constituted from earth and fire (*Parmenides ex terra et igne*, A 45). Theophrastus, according to Diogenes Laërtius, said that Parmenides identified soul and mind: 'and [sc. Parmenides says that] the soul and the mind are one and the same, as Theophrastus too mentions in his *Physics*' (και ` τη ` ν ψυχη ` ν και ` το ` ν νοũν ταũτο ` ν εĩναι, καθα ` μέμνηται και ` Θεόφραστος ἐν τοĩς Φυσικοĩς, A 1,11–12).

In view of this scarcity and variance, it is not surprising that the question of Parmenides' conception of the soul has been largely ignored in modern scholarship, despite an upsurge of interest in recent years in Parmenides' cosmology more generally. In his account of Parmenides' natural philosophy, for example, Giovanni Casertano (2011) recounts our evidence for his conception of soul and, without further comment, concludes that 'we do not have any clue to judge on this point'.(1) In this chapter, I wish to

challenge this verdict and to offer a sustained examination of Parmenides' conception of soul and of the relation of this conception to his broader cosmological, physiological and eschatological attitudes in *Doxa*.(2)" (p. 61)

(1) Casertano 2011, 49 n. 111.

(2 This chapter, then, explores in detail Parmenides' psychology and its place in his cosmology more broadly. For a discussion of the role which Parmenides' notion of a divine element within the mortal (his soul) plays in his epistemology, and of the light which this notion can shed on the relation between the two parts of his poem, see Tor 2017, 155–308.

Abstract: "As early as Plato and as recently as current scholarship, readers of Parmenides have diagnosed tensions of one sort or another between his ontological views and the language through which he expresses those views. In the first instance, this article examines earlier claims for such tensions and argues that they are predicated on problematic assumptions concerning Parmenides' ontological commitments or his strictures regarding the use of language. In the second instance, however, it argues that Parmenides' Way of Reality does indeed confront us with tensions between language and doctrine, that these tensions are more pointed and sustained than scholars generally recognize and that they can be identified independently of specific or determinate elaboration of Parmenides' precise ontological views. This analysis discloses a reflective preoccupation with, and a consistent attitude towards, the scope and limitations of human language.

Parmenides persistently evinces his awareness that his description of what-is proceeds through expressive measures that are imported with difficulty from a different domain and, consequently, are limited, indirect and often figurative. The article closes by pointing to a meaningful (but partial) affinity between Parmenides and those Platonists who placed their own ultimate philosophical and ontological principle beyond the expressive reach of words."

42. Torgerson, Tobias Peter. 2006. "The εἶδωσ φῶς and the traditional dichotomy of divine and mortal epistemology." *Revue de Philosophie Ancienne* no. 24:25-43.

Abstract: "That Parmenides drew upon previous poets' dichotomy between divine knowledge and mortals' opinions is obvious. In his poem, the word βροτός, "mortal," always carries a connotation of ignorance or opinion. Nevertheless, Parmenides credits one type of human being - the εἰδῶτα φῶτα of line 1.3 - with true knowledge. This man receives a divine revelation of the truth about being, yet it seems that he possesses some knowledge even before the goddess' revelation. What sets him apart from other mortals and grants him access to divine knowledge? Homer, Hesiod, and other poets had previously spoken of the false notions of mortals, the inscrutable truth accessible only to the gods, and the conditions of revelation. By comparing and contrasting Parmenides with his predecessors, we can perceive an original element in his adaptation of the dichotomy of mortal and divine epistemology: there is a type of human being, the εἶδωσ φῶς whose mental perception νοός not only liberates him from the deceptive opinions of mortals but also renders him able to verify the words of the gods themselves."

47. Travers, Martin. 2019. *The Writing of Aletheia: Martin Heidegger in Language*. Bern: Peter Lang

Chapter 3: Re-calling the Originary: *Parmenides*, pp. 105-139.

"Parmenides' poem has been read as an allegory of an "ontological education": "the youth is to learn how to think properly according to the divine; his thinking will be removed from mortal thinking and brought to think 'to eon' ['Being'] properly" (Jacobs 188). He will achieve this by learning from the goddess what truth, "aletheia", means. Consequently, Heidegger explores during the course of his lectures the nature of that concept, explicating its past uses, literary and philosophical, in an attempt to establish its foundational centrality to "inceptual thinking". The first lecture, a discussion of the goddess "Aletheia", is followed by an enquiry into the conditions required to regain contact with the originary meaning of truth as "aletheia", and a disquisition on how the methods of conventional translation are insufficient to achieve this. In his second and third lectures, he discusses the various forms of "aletheia" as "unconcealedness" (*Unverborgenheit*), and how these manifest themselves in "forgetting". This is followed by an analysis of the conflicting notions of "truth" in Greek and Latin, and a critique of the historical dominance of the latter in Western culture. The fourth and fifth lectures focus on "the multiplicity of the opposites of unconcealedness", notably those connected with "lethe". In the lecture that follows, Heidegger exhorts us to return to the "rich essence of concealedness" and, in furtherance of this, to be prepared to make contact with "aletheia" through hand and eye, as we open ourselves, as the Greeks did through their art and literature, to the experience of the "uncanny" (*Ungeheuer*). *Parmenides* concludes with two lectures that chart the movement of "aletheia" into the "open and free space of Being", before concluding with a return to the journey that the hero of the poem has undertaken." (p. 107)

49. Tugwell, Simon. 1964. "The Way of Truth." *Classical Quarterly* no. 14:36-41.

"Professor G.E.L. Owen has demonstrated (C. Q. [*Classical Quarterly*]. N.s. X (1960), 84 ff.) that Parmenides' Way of Truth is to be taken as a self-contained logical argument.

The basis for this argument is a proof that whatever we may choose to think about εἶναι. The first stage of this proof is contained in B 2.

According to Owen's reconstruction of the argument, Parmenides' method is to take the three possible answers to the question εἶναι ἢ οὐκ εἶναι; (i.e. an unqualified yes; an unqualified no; and a noncommittal answer that sometimes we must say yes, sometimes no) and rule out two of them. This view involves giving equal status to each of the two wrong answers; but Parmenides appears not to do this." (p. 36)

50. Tulli, Mauro. 2022. "Parmenides' inquiry and the literary representation of the ways." *Phoenix* no. 28:48-63.

Abstract: "Critics often consider the division in Parmenides' poem among fields of knowledge or not knowledge, depicted in a polar perspective. In the tale of the journey the division emerges, for example, with the allusion to the day and the night or with the image of the door and in a polar perspective unravels the speech given by the goddess in the vibrant exhortation to achieve both the truth and the opinion, which does not convince. In the complex panorama of the preserved fragments, the desire to describe the result of inquiry, being, as redemption from the darkness, which conditions the life of mortals, is woven with the desire to stress the choice among the ways of inquiry, not all positive, not all oriented towards the truth. Certainly, the ways of inquiry. But how many? The division involves the opinion, the ghost of not being, the doctrines of Heraclitus or the common people, with the metaphors of deafness and blindness. It is useful to check the literary tradition and this paper will try to understand the choice among the ways of inquiry by means of the peculiar pattern of the Priamel, the frame of parallel structures which underlines in Sappho's song or in the corpus of Pindar the new conception that the author offers."

51. Vandoulakis, Ioannis M. 2024. "On a Possible Relation Between Greek Mathematics and Eleatic Philosophy." In *Universal Logic, Ethics, and Truth: Essays in Honor of John Corcoran (1937-2021)*, edited by Madigan, Timothy J. and Béziau, Jean-Yves, 217-230. Cham (Switzerland): Birkhäuser.

Abstract: "In this paper, we approach the problem of the relationship between Greek mathematics and Eleatic philosophy from a new perspective, which leads us to a reappraisal of Szabó's hypothesis about the origin of mathematics out of Eleatic philosophy. We claim that Parmenidean philosophy, particularly its semantic core, has possibly been shaped by reflexion on the Pythagoreans' mathematical practice, particularly in arithmetic. Furthermore, Pythagorean arithmetic originates not from another domain

outside mathematics but from counting, i.e., it has its roots in man's practical activity. This interpretation restores the historically inverse relationship between mathematics and philosophy, refuting the attribution of mathematics' origin to a field outside mathematics, for which Szabó's hypothesis has been criticized. Moreover, Parmenidean theory of truth is viewed not as a defective predecessor of Aristotle's classical theory of truth that needs to be remedied but as a semantic conception coordinated with the mathematics of Parmenides' times."

52. Vassallo, Christian. 2016. "Parmenides and the «First God». *Doxographical Strategies in Philodemus' On Piety. Praesocratica Herculaniensia VII.*" *Hyperborea* no. 22:29-57.

Abstract: "Among the several Herculanean testimonia to Parmenides, fr. 13 of PHerc. 1428 no doubt represents the most important piece of evidence for this pre-Socratic philosopher. A new autopsy of the papyrus made a reconstruction of the name 'Eros' at line 12 possible. Within the Doxa section of Parmenides' poem, Eros is notoriously described as the first of the gods to be created by Aphrodite (DK 28 B 13). In fr. 12 DK, Aphrodite is defined in turn as the goddess governing the universe, who represents the balancing point of the astronomical theory of celestial spheres. In the second part of the Herculanean fragment, Philodemus says that, according to Parmenides, the "first god" would be inanimate and that gods who were generated by him would have, in the view of mortal people, the same passions of human beings. The paper argues that Philodemus could have (a) either intentionally mixed his sources in order to create a pendant between PHerc. 1428's frs. 12 (on Xenophanes) and 13 (on Parmenides); (b) gone back to an older tradition, later developed by early Stoicism, which exactly describes the "first god" as the ruler of the universe and absolutely devoid of human passions; (c) or mixed some attributes of Parmenides' god with those ascribed to One by his follower Melissus."

53. Verdenius, Willem Jacob. 1942. *Parmenides. Some Comments on his Poem*. Groningen: J. B. Wolters.

Reprinted with a new Preface: Amsterdam: A. M. Hakkert, 1964.

Contents: Preface (to the reprint) III-IV; Introduction 1; Chapter I. The doctrine of knowing 5; Chapter II. The doctrine of being 31; Chapter I. The doctrine of opinion 45; Appendices 64; Bibliography 79; English index 81; Greek index 82; Index of quotations 83-88.

"The present study was submitted as a doctoral dissertation to the Faculty of Arts of Utrecht University in 1942. Since its publication, so many books and articles have been written on the same problems that it might seem presumptuous to reprint a comparatively old work. I do not want to suggest that everything published after my thesis has little or no value. On the other hand, a critical evaluation of these works would not affect the substance of my original comments. As the book continued to be in demand and I could not find time to carry out my intention of writing a full commentary, an unrevised reprint seemed to be the only solution.

There are three points on which I have altered my opinion. I no longer believe, as I did in my dissertation (p. 73 f.) and in *Mnemosyne* III 13 (1947), pp. 272 ff., that Περὶ φύσεως may have been the original title of Parmenides' work and of the works of a number of other Pre-Socratics. I now take the subject of εἶναι in frags 2,3 and 8,2 to be Ἀληθείη in the sense of 'the true nature of things' (cf. *Mnemos.* IV 15, 1962, p. 237), and not Reality in the sense of the total of things (as suggested in my dissertation, p. 32). The μέλα in frag. 16 I no longer take to be 'something between the two universal Forms and the parts of the human frame' (p. 7), but the human frame itself (cf. *Mnemosyne* IV 2, 1949, p. 126 n. 5fn)." (*Preface* III)

"Expounding an ancient philosophy is only possible with the aid of modern notions, which have a more limited sense than the material to which they are to be applied. Hence the difficulty of ascertaining the differences between ancient and modern abstractions and the danger of misconceiving an idea through attaching a too specific meaning to one or other particular expression. It will now be understood how in the

course of time Parmenides has come to be classed with the most divergent philosophical systems. An attempt might be made to classify and analyse all these various interpretations. This would, however, not be the most expedient way to arrive at the real meaning of the poem. It stands to reason that our conclusions should be constantly reviewed and tested in the light of current opinion, but the more our considerations are bound up with the criticism of other interpreters, the greater will be the difficulty in evolving a coherent system of interpretation.

So I will attempt to follow a more positive method by considering in detail three fundamental problems of Parmenides' philosophy, viz. 'Knowing', 'Being', and 'Opinion'. If it proves to be possible to arrive at definite conclusions in this respect, the road will probably be clear for a better understanding of the thoughts associated with these principles.

With regard to the method adopted in my interpretation I may conclude with the following remark. I have pointed out already that Parmenides stands out from his predecessors by the application of a deductive method and the building up of a coherent argument. The methodical way of reasoning characterizes his work so much that even in ancient times he was classed by some critics among the dialecticians. In fact, his syllogisms, the distinction made between the three 'ways of inquiring', and also his way of putting questions foreshadow dialectical methods. This is not surprising since the whole trend of his thought aims at valid arguments, cogent conclusions, and complete evidence'. It seems advisable, then, to give more attention to the logical form in which Parmenides exposes his views than has been done hitherto. When the goddess of Truth counsels him not to trust to the senses but to judge by reasoning, we might accept her words as a suggestion to base our interpretation on the logical context of the argument in accordance with Parmenides' own intention.

It may be objected that a criterium for such a logical context is hard to find since in a pre-Aristotelian philosopher we cannot expect a method of reasoning which may be formulated in

sylogisms. From the logical point of view Parmenides' argument undeniably does not always comply with scientific standards, but this does not imply that the form of the syllogism is not applicable to his thought. This form is not an invention of Aristotle kept alive by convention, but it is at the root of all reasoning. Parmenides may not have been aware of the syllogistic form as a general mode of arguing, but he uses it, it may be unconsciously and not always accurately, yet, generally speaking, 'guided by truth itself'.

I have undertaken the following inquiries in the belief that such a 'truth' exists, and that the principles of logic are no mere arbitrary grammatical phenomena as moderns would have us believe, but the universal foundation which underlies all science, including the science of interpretation." (pp. 3-4, notes omitted).

54. ———. 1947. "Notes on the Presocratics." *Mnemosyne* no. 13:271-289.

"The term πίστης is used in the sense of 'religious faith' in the New Testament (e.g. I Cor. 13, 13), but it has not got this meaning in early Greek literature. In the works of the Pre-Socratics πίστης means 'evidence, both in the subjective sense of confidence that one's belief is true and in the objective sense of reliable signs which justify such confidence' (15). Parmenides used it to denote the logical stringency of his argument (frag. 8, 12 and 28); his Way of Truth is at the same time Πειθοῦς κέλευθος (frag. 2, 4)." (p. 1)

(15) G. Vlastos, *Philos. Rev.* 55 (1946), 590 n. 60. ["Ethics and Physics in Democritus", *The Philosophical Review*, Vol. 54, No. 6 (Nov., 1945), pp. 578-592]

The text by Gregory Vlastos:

"Unlike Platonic being which, immaterial by definition, is never given in sensation, Democritean being is the material stuff of nature as we see, touch, and taste it.) The "assurance" (πίστης) (60) of its existence must, therefore, be given in the phenomenon " (p. 590, two notes omitted)

(60) πίστης in [Diels-Kranz] B. 125: φρήν gets its πίστεεις from the senses. This is confirmed by Sextus (*Adv. Math.* 7.136; B. 9 in Diels-Kranz), who tells us that in his essay entitled κρατυντήρια Democritus "promised to assign to the senses the power of evidence (το κράτος της πίστεως)." This last should be compared with πίστιος ἰσχύς in Parmenides, B. 8, 12. Πίστης in the pre-socratics is not an inferior form of knowledge as in Plato, *Rep.* VI 511e, but evidence, both in the subjective sense of confidence that one's belief is true and in the objective sense of reliable signs which justify such confidence.

55. ———. 1949. "Parmenides Conception of Light." *Mnemosyne* no. 2:116-131.

"In this paper I shall deal with a problem in the philosophy of Parmenides which has been rather neglected, because it did not seem to be a problem at all. Parmenides based his cosmology on the dualism of two primary substances, Fire or Light and Night." (p. 116)

"Perhaps another aspect of his mind may bring us nearer to the solution of our problem. In the proem of his work Parmenides describes his discovery of the truth as a journey from the realm of Darkness to the realm of Light Driving a car and guided by Sun-maidens he passes through the gates of Night and Day and is kindly welcomed by a goddess who discloses to him the principles of reality. There is much in this description that may be regarded as mere poetical imagery, but there are also many details which have a serious meaning. I shall only mention those points which have some bearing upon the present question." (p. 119)

"It may be suggested that Parmenides in a similar manner distinguished between a supreme kind of light as the cognitive aspect of Being and Truth, and an inferior kind of light restricted to the world of change and opinion. This interpretation would fit in very well with the general trend of his philosophy, which tries to attribute the various aspects of the world to a higher and a lower plane of reality.

It might only be asked how Parmenides managed to get from the lower plane of empirical reality up to the higher plane of

Being, or in other words: how the ordinary light which formed one of the elements of his mental constitution could pass into the divine light which enabled him to grasp the ultimate principle of reality. This criticism is justified; it could only be met by putting another question: is there anyone who has succeeded in finding a satisfactory transition from psychology to metaphysics?" (pp. 130-131, a note omitted)

56. ———. 1962. "Parmenides B2, 3." *Mnemosyne* no. 15:237.

"Much ingenuity has been spent on the question as to what is the subject of ἔστιν in Parmenides B 2,3 (and 8,2), but even the most recent attempts, such as that made by G. E. L. Owen in C.Q. 10 (1960), 95, are far from convincing.

My own suggestion (*Parmenides*, 32), that the subject is reality in the sense of the total of things, has not met with much approval. I now believe that the clue to the solution of this problem is to be found in B 8, 51 ἀμφὶ ἴσ ἀληθείης. If Truth is the subject of the goddess' discourse, it is by implication the subject of ἔστιν." (p.237)

57. ———. 1977. "Opening Doors (Parm. B 1, 17-18)" *Mnemosyne* no. 30:287-288.

"After Dike has removed the bar (5), the doors open spontaneously at the approach of the divine maidens." (pp. 287-288)

(5) Wiersma, [*Notes on Gree Philosophy*] *Mnemosyne* IV 20 (1967), 405 rightly points out that this idea has to be supplied from the context.

58. ———. 1980. "Opening Doors Again." *Mnemosyne* no. 33:175.

In my note on Parmenides B 1, 17-8 in this journal, IV 30 (1977), 287-8, I forgot to refer to K. J. McKay, *Door Magic Epiphany Hymn*, CQ [*Classical Quarterly*] 17 (1967), 184-94, who discusses Callim. *H.* 2, 6 in connection with Hom. *Epigr.* XV 3-5 and other texts." (p. 175)

59. Vick, George R. 1971. "Heidegger's Linguistic Rehabilitation of Parmenides' 'Being'." *American Philosophical Quarterly* no.

8:139-150.

Reprinted in: Michael Murray (ed.), *Heidegger and Modern Philosophy*, New Haven: Yale University Press, 1978 pp. 204-221.

"It is a fairly well-known fact that Martin Heidegger has defended Parmenides' account of Being, (1) but the strategy of his complex semantic and etymological arguments for the meaningfulness of Parmenides' type of discourse on Being is unknown to the great majority of philosophers in Britain and America(2) - indeed is virtually unnoted even within the phenomenological-existential school (in part, perhaps, because of the abstruse character of both his thought and language).

Furthermore, the fact that Heidegger has corrected what is ordinarily taken as an essential part of Parmenides' theory has not, so far as I know, been pointed out, even by Heidegger.(4) Nor has anyone taken note of the way in which Heidegger's correction makes what remains of Parmenides' theory more defensible. In the following pages I shall attempt to set forth and explain Heidegger's strategy (including a reason why it has been useful for him to couch his argument in language that is so abstruse). I will then go on to show the way in which his correction of Parmenides' theory strengthens its claim to being true." (p. 139)

1 This defense is to be found primarily in the most extensive work of Heidegger's later period, his *Einführung in die Metaphysik* (1953) in which his summer lectures at Freiburg in 1935 were revised and published. All page references will be to the English translation by Ralph Mannheim, *An Introduction to Metaphysics* (New Haven, 1959).

(2) For this strategy, see especially *ibid*, ch. II and III, pp. 52-92. (p 139, a note omitted)

(4) See fn. 44.

(44) Heidegger has, indeed, distinguished his own view of the meaning of "Being" from that which he maintains has been current since antiquity (cf. Heidegger, *op. cit.*, [*Introduction to*

Metaphysics] pp. 203-204). And the view which Heidegger regards as having been current since antiquity is that in which Being is regarded as excluding our saying that becoming, appearing, thinking, and the ought are, and this is a view which is, except with respect to the third of these four factors, usually attributed to Parmenides. But, on the other hand, he has continually distinguished between the authentic pre-Socratic, or Parmenidean, view of Being, and the defective view which has come down to us since (*Ibid.*, pp. 179-196). And he has, furthermore, given an exegesis of Parmenides in which he interprets him as allowing to thinking a certain distinction from Being (in that he interprets Parmenides as saying that thinking is one with Being only in a "contending sense," i.e., in a unity through opposition).

Hence, it is not clear whether Heidegger identifies the teaching of Parmenides with the view of Being from which he distinguishes his own (a position with which exegesis of Parmenides' treatment of the relation between Being and thinking would make difficult), or whether he interprets Parmenides in such a way as to allow "is" to be predicated of becoming, etc., without being thereby identified with them (a position directly challenging the usual monistic interpretation of Parmenides, and challenging it in such an essential way that we should expect Heidegger to have made some explicit mention of the fact that he was correcting the usual interpretation of Parmenides on the very point which since Plato has probably been given most attention, i.e., his supposed monism.)

60. Vlastos, Gregory. 1946. "Parmenides' Theory of Knowledge." *Transactions and Proceedings of the American Philological Association* no. 77:66-77.

Reprinted in: G. Vlastos, *Studies in Greek Philosophy, Volume I: The Presocratics*, edited by Daniel W. Graham, Princeton: Princeton University Press, 1995, pp. 153-163.

Abstract: "Parmenides' frag. 16 has been taken for a general statement of his theory of knowledge. I argue that it is no more than his doctrine of sense-perception, since it views thought as

a passive record of the "much-wandering" ratio of light to darkness in the frame. Theophrastus' report that Parmenides explains "better and purer" thinking by the preponderance of light must refer to the active phases of thought, memory and judgment. When these are perfect the ratio of light to darkness must be one to zero, and the knowledge of Being must represent a state of unmixed light." (p. 66)

61. ———. 2008. "'Names" of Being in Parmenides." In *The Route of Parmenides*, edited by Mourelatos, Alexander, 367-390. Las Vegas: Parmenides Publishing.

Previously unpublished essay (1961).

Editing note by A.P.D. Mourelatos.: The importance and continuing value of this essay is, in my judgment, fourfold. (1) Beyond what was already accomplished by Woodbwy's essay of 1958 [*Parmenides on Names*] Vlastos here provides the best and most sustained argument in favor of the reading *onomastai* at B8. 38. (2) There is an assumption many have made (doubtless, as Vlastos points out at n. 20, because of the influence of Diels, who first voiced it in 1887) [*] that Parmenides employs "naming" terms (*onoma*, *onomastin*) only with reference to the false

beliefs posited by "mortals." Vlastos' essay provides a decisive refutation of this quite unwarranted and misleading assumption. (3) Vlastos also shows that we gain a more coherent account of Parmenides' critique of the language of "mortals" if we read that critique as charging that mortals make statements that are false rather than meaningless.

(4) Finally, Vlastos offers in this essay a philosophically incisive and engaging argument in support of the thesis that Parmenides' rationale for the rejection of "not-being" as a subject of thinking and speaking is quite different from that advanced by the Eleatic Stranger in Plato, *Sophist* (237B-C)." (p. 367)

Parmenides of Elea. Annotated bibliography of the studies in English: Wac - Z

Bibliography

1. Wacziarg, Aude. 2008. "For a Rehabilitation of the Parmenidean doxa." In *Eleatica Vol. 1: Parmenide scienziato?*, edited by Rossetti, Livio and Marcacci, Flavia, 143-151. Sankt Augustin: Academia Verlag.

"To conclude: as far as we can project the concept of 'science' on preclassic Greece, Parmenides did seem to have a 'scientific' project. His Doxa certainly presents a global vision of the world, from the macrocosm to our human realities (and down to medicine). A system comparable in its scope to that of the Milesians' ones. But with a superior worth because it asks the question of its own validity. After establishing the very little that we can consider 'true', Parmenides progresses with rigorous logic to give a picture that is the 'best lie' we can reach. From the separation between 'is' and 'is not' and their transposition into the sensible principles of Light and Night, our world is perfectly structured. Vice-versa, from an understanding of the dual structure of the world, one can reach the understanding of 'Truth'. This is why Parmenides introduces the exposition of the world within his development on 'is', in fr. 8.53-61. And this is why the philosopher claims: 'it is indifferent for me where I begin, for there I shall return again' (fr. 5)." (p. 149)

2. Warren, James. 2007. *Presocratics*. Stocksfield: Acumen.

Chapter 5: *Parmenides*, 77-102; Chapter 6: *Reactions to Parmenides*, 103-118.

"Parmenides of Elea, a town on the west coast of southern Italy, is perhaps the most celebrated of all the early Greek philosophers. His fame and importance derive from his one known work: a poem in the hexameter metre used also by the Homeric epics, which was perhaps entitled *On Nature* or *On What Is*. There is no doubt that he was also very influential in his own time, and caused quite a stir in the Greek intellectual world. He is the first of our philosophers whose followers are themselves well-known – the paradox-monger Zeno of Elea and Melissus of Samos – and who can be said to constitute some sort of philosophical movement. Parmenides cast a tremendous shadow over all succeeding Greek philosophy, not only of the period before Socrates, but long after too. Plato names one of his dialogues in Parmenides' honour, and the philosophical problems first emphasized by Parmenides exercised Plato, Aristotle, and their successors." (p. 77)

(...)

"However influential or powerful we imagine the arguments of Parmenides to have been, they were certainly not successful in discouraging entirely the practice of cosmological speculation. Indeed, if Parmenides had intended to put an end to all such accounts of the origin and composition of the cosmos, then he would surely have been very disappointed by the response to his arguments. The period after Parmenides saw no diminution in attempts to explain the universe and the processes of change and generation within it, although perhaps Parmenides would have been pleased to see that those attempts tended to be more self-conscious and precise in their claims about which things "are", which things are fundamental to the universe and how these fundamental things compose everything else. It is also worth noticing that Parmenides had himself, arguably, already led the way by producing the first post-Parmenidean cosmology in his own "Way of Opinion"." (p. 103)

3. Wedin, Michael. 2011. "Parmenides' Three Ways and the Failure of the Ionian Interpretation." *Oxford Studies in Ancient*

Philosophy no. 41:1-65.

"The middle part of Parmenides' great philosophical poem, the section known as the *Way of Truth (WT)*, opens with the divine declaration that only two paths of enquiry present themselves to the mind—the path of what is and the path of what is not. I regard these as Parmenides' 'canonical' paths and shall refer to them as Path I and Path II, respectively. Fragment 2 emphatically warns against pursuing Path II, and fragment 6 is no less direct in advancing Path I as a necessary path of enquiry. According to some, Parmenides is merely expressing his preferences in these early fragments of *WT*. Of course he is doing so, but not just this. Rather, fragments 2 and 3 contain a deduction whose aim is to exclude what is not as a fit target for investigation because such a thing is flatly impossible, and fragment 6 certifies Path I, again deductively, on the grounds that what it investigates is nothing less than what is necessary. Her opening declaration notwithstanding, in fragment 6 the goddess goes on to warn against a third path, the path of what is and is not. This too is excluded on the basis of a crisp, but tricky, Eleatic deduction.

This paper offers reconstructions of these three opening deductions." (p. 1)

4. ———. 2014. *Parmenides' Grand Deduction: A Logical Reconstruction of the Way of Truth*. New York: Oxford University Press.

"When I examined the arguments of the leading *nouveaux* interpreters, none of the contenders lived up to expectations. Each was flawed in logically telling ways.

The results of this examination surface in the monograph in two ways. On the one hand, a contending view is sometimes discussed in the course of advancing or clarifying my own argument. On the other hand, I address them in their own right in Part III of the monograph, where the views are subjected to more systematic scrutiny. The view argued in this monograph, *outré* or not, favors an austere reading of Fr. 8's 'signs' or deductive consequences of what is." (p. 2)

"A general study of Parmenides' poem would address many issues, from the influence of the epic tradition, and the significance of the Proem with its divine invocation, to the relation between the two substantive parts of the poem—the Way of Truth (WT) and the Way of Opinion. This monograph is less ambitious.

First, I am interested almost exclusively in WT; in particular, I am interested in the logical form of Parmenides' arguments in WT. Second, I pursue this interest by offering reconstructions of WT's deductions, in their entirety, and only rarely do I introduce material that does not serve this project.

Nonetheless, the reconstructions have global reach because the deductions of WT are the core of Parmenides' philosophical position." (pp. 4-5, a note omitted)

5. Weiss, Yale. 2018. "Commentary on Cherubin." *Proceedings of the Boston Area Colloquium in Ancient Philosophy* no. 33:22-26.

Abstract: "This commentary examines the interpretation of Parmenides developed by Rose Cherubin in her paper, "Parmenides, Liars, and Mortal Incompleteness." First, I discuss the tensions Cherubin identifies between the definitions and presuppositions of justice, necessity, fate, and the other requisites of inquiry. Second, I critically assess Cherubin's attribution of a sort of liar paradox to Parmenides. Finally, I argue that Cherubin's handling of the *Doxa*, the section of Parmenides' poem that deals with mortal opinion and cosmology, is unsatisfactory. I suggest that her reading may contradict the text in denying that the *Doxa* contains truths."

6. White, Harvey. 2005. *What is What-is? A Study of Parmenides' Poem*. New York: Peter Lang.

"The interpretation of the poem which follows takes issue with what has long been the standard view, and which, only recently, has begun to be challenged. Because my interpretation ascribes many of the fragments which have been taken as the mortal view to the goddess' position, my arrangement of the fragments differs somewhat from the standard one provided by Diels and

Kranz. Thus the numbers assigned to the fragments differs from theirs." (p. 2)

"It has long been fashionable to take the ontology (and attendant epistemology) that Parmenides set forth in his poem to be characterized by "the one", or "Being", as the all encompassing single reality, which is to be distinguished from mere sensible and pluralistic being." (p. 5, notes two notes omitted)

"Against this understanding of the Poem I will argue that:

1. "is" is used predicationally rather than purely existentially, and as a result the text is best understood as being consistent with a pluralistic ontology rather than a monistic one; i.e., Parmenides did not claim that all reality is a single ideal universal and non-sensible "Being";
2. Parmenides affirms the positive role of sense perception in apprehending reality, accepting as real what appears sensibly; most of what is traditionally termed the Doxa section of the poem is an elucidation of his own position;
3. the poem's major point is that each individual object is a unity rather than a plurality constituted of opposites, even though it may come to be out of a mixture of opposites. The erroneous position held by the mortals is that an individual object is a plurality, a view that results from a confusion of what something is with the conditions out of which it is generated;
4. the poem is critically concerned with judgement rather than perception: the error of the mortals consists of misjudgements concerning perceived reality.

The overall perspective is that historically Parmenides does not present as radical and revolutionary an ontology and epistemology as he is commonly portrayed to advocate. His importance lies within the intellectual transition occurring in the Greek world, in that his poem is an attempt to move from the past mythos (as in Homer and Hesiod) into the emerging scientific view of the world." (p. 6)

7. White, Stephen. 2021. "Truth Attending Persuasion: Forms of Argumentation in Parmenides." In *Essays on Argumentation in Antiquity*, edited by Bjelde, Joseph Andrew, Merry, David and Roser, Christopher, 1-19. Cham, Switzerland: Springer.

Abstract: "Parmenides marks a watershed in the history of argumentation, presenting the earliest surviving sequence of recognizably deductive reasoning in the Greek tradition. This chapter focuses on the central section of his poem (fr. 8 DK) and examines the form of its argumentation: its use of indirect proof, the articulation of its reasoning, and the role necessity plays in it."

8. Whittaker, John. 1971. "God, Time, Being. Two Studies in the Transcendental Tradition in Greek Philosophy." *Symbolae Osloenses* no. 23:16-32.

First study: '*Parmenides, Fr. 8, 5*'.

Parmenides, fr. 8, 5 as quoted by Simplicius seems to proclaim the doctrine of the Eternal Now clearly and succinctly:

οὐδέ ποτ' ἦν οὐδ' ἔσται, ἐπεὶ νῦν ἔστιν ὁμοῦ παν.

Simplicius is our main authority for the surviving fragments of Parmenides and his general reliability is beyond question. Yet if we accept Parmenides as the author of the above verse and as the originator of the conception there contained, many difficulties arise, as the following considerations will indicate.

(1) The conception of non-durational eternity is not of the sort that presents itself spontaneously to the mind. Bearing in mind the abstrusity of the notion, it would seem hardly conceivable that, stated in this bald manner, it would have been at all comprehensible to Parmenides' contemporaries. No doubt there was much in Parmenides' poem that his contemporaries found obscure. Yet it cannot have been Parmenides' aim merely to mystify. If Parmenides had really formulated the notion of non-durational eternity and was teaching it in his poem, a certain degree of elaboration would have been essential. But the relevant section of the poem contains no such elaboration.

(2) The notion in question is not accepted by Melissus; cf., e.g., fr. 1 ἀεὶ ἦν δ τι ἦν καὶ ἀεὶ ἔσται. Yet there is nothing in the doxographi-cal evidence to suggest that Parmenides and Melissus were at variance on this point.

(3) The only reason Parmenides might have had for introducing the notion into the Way of Truth is that he felt that passage from past to present to future involves coming-to-be and passing-away, i.e., that duration as such entails change. But if Parmenides had stressed this aspect of duration, then he would have raised a problem which all subsequent philosophers would have had to face. Parmenides' Presocratic successors accepted the validity of the Eleatic denial of change and were painfully aware of the predicament in which it placed them. If Parmenides had argued that duration is a process and therefore a form of change, then they would have had to tackle this problem too. Yet no post-Parmenidean Presocratic seems to have been aware that bare duration could be held to involve change. Empedocles' philosophy, for example, is a conscientious attempt to solve the difficulties raised by Parmenides. Yet there is nothing to suggest that Empedocles was acquainted with this particular problem. The same is true of other post-Parmenidean philosophers - including, as I shall argue, Plato and Aristotle.

Such considerations as these render it obvious that, in spite of fr. 8, 5 as cited by Simplicius, Parmenides cannot possibly have propounded the doctrine of non-durational eternity. Once this point has been established there are two courses open to the student of Parmenides: (a) he may search for another and more plausible interpretation of the text quoted by Simplicius, or (b) he may call into question the reliability of the text which Simplicius has preserved." (pp. 16-17)

(...)

"Because of their faith in the text presented by Simplicius, students of Parmenides have not usually considered it necessary to devote attention to a rival version of fr. 8,533 preserved by Ammonius (*In Interpr.* 136, 24 f. Busse),

Asclepius' (*In Metaph.* 42, 30 f. Hayduck), Philoponus (*In Phys.* 65, 9 Vitelli), and Olympiodorus (*In Phd.* 75, 9 Norvin).

I do not believe that this alternative version is necessarily correct as it stands, but must draw attention to one fact which speaks strongly in its favour. In Simplicius' version fr. 8, 6 opens with the words ἐν, συνεχές syntactically linked to v. 5 but nevertheless left somewhat in the air, whilst Asclepius (loc. cit.) quotes the opening of v. 6 in conjunction with v. 5 as follows:

οὐ γὰρ ἔην οὐκ ἔσται ὁμοῦ παν ἔστι δέ μοῦνον οὐλοφυές.

It can, in my opinion, hardly be doubted that Simplicius' ἐν, συνεχές was originally a gloss on οὐλοφυές and has supplanted that reading in Simplicius' exemplar. Since the latter term was used by Empedocles there is no reason why it should not also have been employed by Parmenides. However, it was not current in Neoplatonic terminology and might well have provoked a textual gloss." (p. 21)

(...)

"However, my own conviction is that one cannot feel assured that either version is close enough to the original text of Parmenides to permit of more than highly conjectural interpretation. We have already seen that fr. 8, 4 was universally corrupt by the time of Plutarch" (p. 24).

(...)

"I would conclude that no knowledge of the teaching of the historical Parmenides can be safely derived from the versions of fr. 8, 5 which have survived. One can, however, assert with complete conviction, as was shown at the outset, that the doctrine of non-durational eternity, which Neoplatonists associated with both versions of the line, was not taught by the historical Parmenides." (p. 24, notes omitted)

9. Wilkinson, Lisa Atwood. 2009. *Parmenides and to eon. Reconsidering Muthos and Logos*. London: Continuum.

Contents: Acknowledgments IX; Introduction 1; 1 A Route to Homer 10; 2 Homeric or "Sung Speech" 27; 3 Reconsidering Xenophanes 40; 4 Reconsidering Speech 56; 5 Parmenides'

Poem 69; 6 The Way It Seems . . . 104; Notes 118; Bibliography 147; Index 153-156.

"I suggest that we might be able to begin to "hear" anew the wisdom of our first philosophical texts. Hence, I take a historical-philosophical route to Parmenides. This route begins with an analysis of the significance of "Homer" in ancient Greek culture that challenges some of our common knowledge about "Homer" and how oral poetry works (Chapter 1). These challenges are supplemented by an overview of Homeric or "sung speech" (Chapter 2) that is brought to bear on assumptions about Xenophanes' fragments (Chapter 3) and contemporary accounts of speech (Chapter 4). Having reconsidered Homer, Xenophanes, and basic assumptions about speech, the final chapters offer an interpretation of Parmenides' poem (Chapter 5) that differs from some of our general accounts (Chapter 6)." (p. 7)

10. Wilson, John R. 1970. "Parmenides, B 8. 4." *The Classical Quarterly* no. 20:32-34.

"The text of Parmenides 8. 4 is unusually corrupt. Most recent critics, however, agree that Plutarch's ἔστι γὰρ οὐλομελές printed in the later editions of Diels-Kranz, *Die Fragmente der Vorsokratiker*, should be excluded in favour of οὐλον μουννογενες." (p. 32)

(...)

"The corruptions in the first half of the line are fairly easily explained.

Plutarch's οὐλομελές could be the result of a conflation of the preceding οὐλον with μουννο-. This parallels the corruption of οὐλον itself into μουννον in Eusebius, Theodoretus, and Ps.-Plut. *Strom.* The corruption μουννογενες in Simplicius and other *testimonia*, the earliest of which is Clement, can best be explained as the substitution of the familiar Christian epithet 'only begotten' for that strange and perhaps puzzling 'single-limbed.(2)" (p. 34)

11. Wolfe, C. J. 2012. "Plato's and Aristotle's answers to the Parmenides problem." *The Review of Metaphysics* no. 65:747-764.

"The questions raised by the great pre-Socratic philosopher Parmenides were perhaps the main challenge for Plato and Aristotle, two of the greatest post-Socratic philosophers." (p. 747)

"No philosopher was able to accurately interpret and refute the Parmenides problem until Plato and Aristotle. Plato answered it in an important way in his dialogue the *Sophist*, and Aristotle followed this up with the complete answer in *Physics* book 1, chapter 8. My thesis is that Plato's answer would have been good enough to defeat Protagoras in extended argument, thereby remedying the political aspects of the Parmenides problem. However, Aristotle's answer is required to answer some additional philosophical and scientific aspects.

The first section of this paper will summarize the history of pre-Socratic philosophy and explain why Parmenides was a turning-point.

The second section will explain the sophist Protagoras' relation to the Parmenides problem. The third part will present Aristotle's complete answer to the Parmenides problem, and in the fourth part I will compare that approach with Plato's solution in the *Sophist*. Lastly, I will sum up by characterizing how I think Plato and Aristotle would have responded to Protagoras' Parmenidean sophistry in political life." (p. 748)

12. Wood, James L. . 2020. "Necessity and contingency in the philosophy of Parmenides." *The The Review of Metaphysics* no. 73:421-454.

To bring out the determinative, self-revealing nature of being in Parmenides' poem, I will examine his account of necessary versus impossible being in the Way of Truth, followed by his treatment of contingent being in relation to necessary being in the Proem and Way of Opinion. On the basis of that examination, I will argue that we can make the best sense of Parmenides' poem as a whole by seeing the cosmos of

contingent beings as the self-manifestation of necessary being, and that the misunderstanding of “mortals” lies not in their acceptance of the reality of contingent beings, but in their failure to grasp the distinction and the connection between the modes of being. Moreover, because many interpreters of Parmenides see him as rejecting contingent beings, and a plurality of beings of any sort, in favor of a strict ontological monism, they too fail to grasp the distinction and the connection between the modes of being in his thought. Consequently, salvaging a place for contingent being in Parmenides’ philosophy will also require that we confront the problematic interpretation of Parmenides as a strict monist.” (pp. 423-424, notes omitted)

Reprinted in: J. P. Anton and George L. Kustas (eds.), *Essays in Ancient Greek philosophy*, Albany: State University of New York Press, 1972, pp. 145-162 and in: C. Brown, R. Fowler, E. I. Robbins, P. M. Matheson Wallace (eds.), *Collected Writings of Leonard E. Woodbury*, Atlanta: Scholars Press, pp. 80-95.

[The essay is a discussion of the fr. B8 34-41]

"voẽĩv has been until now translated, for convenience' sake, as "mean" or "think", but these renderings will no longer suffice, since it now appears what is implied when voẽĩv is used, as by Parmenides, not of a word or a thought, but of the name of the world. The object of voẽĩv is that-in-being, and in consequence voẽĩv can here stand only for that knowledge which perceives the world as it is. Knowledge of being can be found only in the meaning of the name, "being". Parmenides' philosophy of names leads directly into his ontology. But we have no text that asserts the identity of knowledge with its object, of voẽĩv with τὸ ἔov. The text that has so often been thought to make this assertion says in fact something quite different. It says that voẽĩv is the same as εἶvαι, and this must mean that knowledge, like the right thought and meaning, can be found only in the use of the name. The only way is a μυθος ὁδοιο, ὡς ἔστιv.

Werner Jaeger has taught us to take seriously the theological significance of Parmenides' proem and to see at the heart of his philosophy a "Mystery of Being". (39) What I should venture to propose to him is that the meaning of the goddess's revelation is that the world is expressed in "being", and that Parmenides' holy mystery is the reality of a name." (p. 157)

(39) Cf. W. Jaeger, *The Theology of the Early Greek Philosophers* (Oxford, 1947), 107.

14. ———. 1986. "Parmenides on Naming by Mortal Men: fr. B8.53-56." *Ancient Philosophy* no. 6:1-13.

Reprinted in: C. Brown, R. Fowler, E. I. Robbins, P. M. Matheson Wallace (eds.), *Collected Writings of Leonard E. Woodbury*, Atlanta: Scholars Press, pp. 439-453.

"Concerning the text and syntax of the passage there appears to be a wide, though not a universal, agreement. But in regard to interpretation it is agreed only that severe problems proliferate and defy clear solutions." (p. 1)

"The proper choice is the one figured in the proem, the entrance upon a road that passes beyond the paths of Night and Day into light, under the guidance of the Daughters of the Sun, who quit the House of Night for this purpose, throwing back there at the veils that cover their faces. (24) The journey is one that is directed by Justice and has the effect of persuading the Necessity that controls the goings of mortal men under the direction of a bad dispensation. The choice of the road, it is plain, entails the choice of the guidance of light." (p. 12)

(24) On the allegory of Parmenides' journey and the vicissitudes of the sun in this world, see my "Equinox at Acragas: Pindar *ol.* 2 . 61 - 62" TAPA [*Transactions and Proceedings of the American Philological Association*] 97 (1966) 597 - 616, especially 609 ff. and E. Robbins in *Greek Poetry and Philosophy* (Ed. D.E. Gerber (Chico, California 1984), note 20) 224. "

15. Wright, Maureen Rosemary. 1998. "Philosopher poets: Parmenides and Empedocles." In *Form and Content in*

Didactic Poetry, edited by Atherton, Catherine, 1-22. Bari: Levante.

"Parmenides and Empedocles are crucial figures in the history of philosophy, and it is important to understand why they chose hexameters instead of prose, and what they did with them. As might be expected, the style and language of the didactic epics of Hesiod are relevant, but so too are the battle epic of the Iliad and the travel and homecoming epic of the Odyssey. In the present exploration of the adaptation of traditional poetic forms to new philosophic uses it is the Homeric borrowings that become more significant and arresting." (pp. 2-3)

(...)

"Coxon's edition of Parmenides restored the epic and Ionic forms in place of the tragic and Attic ones. He showed that there are only 55 words in the surviving fragments for which a Homeric form is not found, and that most of these are related to or compounded from words in Homer.

Vocabulary, phrasing and imagery throughout Proem, *Doxa* and *Aletheia* were found to be Homeric, and there are grounds for a similar case to be made for a Homeric-based Empedocles, although he has in addition his own idiosyncrasies. Aristotle, however, in the above quotations, hesitates between finding nothing in common for Homer and Empedocles except the metre (one being a poet and the other a scientist'), and attributing positive poetic value to Empedocles' work on the grounds that he 'Homerises' with metaphors and similar devices. The inconsistency here may be due to the Aristotelian context, for in the opening of the Poetics, in which the first quotation is found, Aristotle views the poetic art as primarily imitative, comparable to ballet or playing a musical instrument. He expects a plot, a *muthos*, which is worked through metrically in narrative or direct involvement or a combination of the two, and on this criterion a work of philosophy in metre would not qualify as poetry. Yet where the detailed adaptation of stylistic devices is under consideration the two philosophers are indeed poets, using old forms but for new purposes." (p. 5)

16. Wyatt, William F.Jr. 1992. "The Root of Parmenides." *Harvard Studies in Classical Philology* no. 94:113-120.

"Parmenides, in looking for the roots of things and for essence, examined and pondered as well on the roots of words and their essential meaning. In so doing he found linguistic support for his notions, or for some of them. He wrote at a time and in a style which allowed root meanings to appear clearly and which saw in nouns the verbal notion underlying them, and in verbs the nominal cognates. In this he is rather in the style of the choral poets such as Pindar and Aeschylus who, it would seem, at times cared little for parts of speech but very much for the meanings conveyed in roots. I close with a Parmenidean example.

In 7.3 he characterizes ἕθος as πολύπειρον.(19) There can be much discussion about the precise meaning of the word, but it appears to me that it contains (for Parmenides) the meaning or meanings inherent in the verb πειρασθαι "attempt," and in the noun πειρασ "limit" with its adjective ἄπειρον.(20) It will therefore have to do with mankind's tentative and uncertain steps toward truth, steps which lead to no conclusion or end. In this man is like the ἀνθρωποι of Heraclitus' Fr. 1." (p. 120)

(19) For so I take it. Coxon (58 & 191) construes the adjective with τουτο. Little hinges on this, I suspect, but the Greek works better my way, which is the usual translation.

20 Parmenides seems to have played as well with prefixes, particularly the negative prefix (ἀ- and the prefix "many" (πολυ-). They correspond to the way of non-being on the one hand, and of mortal uncertainty and searching on the other. Of the three words τροπος, ἄτροπος, πολύτροπος only the first has any real existence.

17. Yamakawa, Hideya. 2008. *Visible and Invisible in Greek Philosophy*. Lanham: University Press of America.

Chapter 5: Dual Truth, Parmenides and Nāgārjuna, pp. 67-79.

"The "ἀλήθεια" (alétheia) was, for Parmenides, nothing other than the very thing that he discovered and gave it a name "το

ἐὸν” (to eon) for the first time. *To eon is*, according to Parmenides, the *alétheia*.

The denomination of a novel concept like that of ‘to eon’ inevitably forces one to grapple with a traditional system of language, to which s/he is necessitated to conform and under which everything that is already known is comprised.

The language presupposes necessarily a whole of conventional things that has been traditionally established by social consensus or surroundings.(1) It is an original field where the so-called *Urdoxa* casts its anchor.(2) The words of a language *qua* language are fully charged with various preconceptions imposed by collective usage that may conceal and pervert the real state of things; the unconcealed state of the things, namely the a-/étheia as ‘un-concealed-ness’ (*Unverborgenheit*).(3)

In order to reveal the real state of things (*alétheia*), one must un-cover the veil of concealed facts." (p. 67)

(...)

"About 2500 years ago, Parmenides the Eleatic, a Western philosopher, went along this way to *alétheia*, and came back again to the native land of mortals (*brotoi*) in order to tell them the truth of *to eon* in human language; namely in the so-called Doxa-language.

By the way, contrasting with Parmenides’ case, it is very interesting that, in the second and third centuries A. D., Nagarjuna, another philosopher in the East, followed a very similar way of negation. He too preached to people on the doctrine of dual truth, namely truth relating to worldly convention (*samvrtisatya*) on the one hand and truth in terms of ultimate fruit (*paramarthatya*) on the other hand.

Both philosophers’ motives and ways of thinking are so strikingly similar one another that their theories of dual truth, which are originally based on a kind of divine revelation or religious experience,(5) will be worthy of comparison." (pp- 67-68)

18. ———. 2021. "The Bottom of Parmenides's ΠΕΡΙ ΦΥΣΕΩΣ." In *The Poetry in Philosophy: Essays in Honor of Christos C. Evangeliou*, edited by Mitsis, Philip and Reid, Heather L., 57-98. Fonte Aretusa: Parnassos Press.

"I. KATA ΠΑΝΤ ΑΤΗ

[I1] I reject the text "κατα` παντ' ἄστη" at Parmenides B1.3 in Diels, *Die Fragmente der Vorsokratiker* (the 3rd-6th Editions) as well as all other revisions so far proposed and adopt the original letters in the manuscript N as they are.

Walter Burkert left us his English version³ of the well-known article "Proömium des Parmenides und die Katabasis des Pythagoras."⁴ He says in its preface that: "In the well-cultivated fields of classical philology, real progress is rare; [...] one misspelled word in Parmenides's proem (line 3) has not found its definitive correction, in spite of specialists' exertions for more than a hundred years". (p. 57)

"[I4] In order to recover the lost honor of the proposition (b) [*], let me read the lines of N afresh. Below is the original text in N:(35)

I translate the above three lines as follows:

The mares that carry me, as far as ever my yearning spirit might reach, were sending me, once they stepped and set me on the much resounding way of the goddess (ἐς ὄδο`ν... πολύφημον... δαίμονος), that carries (φέρει) the man of knowledge (εἰδότης φῶτα)³⁶ over (κατα`) all the heads (πάντ' <ἀνδρῶν> <κράατα> [neuter plural accusative]) blinded <ἀαθέντα> by Ate (ἄτη = Ἄτη [causal dative]).'

The corpus of extant Greek poetry from Homer to Euripides contains 'ATH' 169 times besides Parmenides's case: Homer 26, Hesiod 6, Solon 4, Alcaeus 1, Ibycus 1, Theognis 7, Pindar 5, Aeschylus 48, Sophocles 40, Euripides 31.³⁷ While twenty cases among them employ the dative case of 'ἄτη,' I have detected four cases using the causal dative,³⁸ which testify to the appropriateness of "ἄτη" (= Ἄτη) in the context of fr. 1.3." (pp. 65-66)

19. Yildiz, Arif. 2020. "Hegel's Critique of Parmenides in the *Science of Logic*." *Arkhe-Logos. Journal of Philosophy* no. 10.

Abstract: "Parmenides plays an important role in the first section of Hegel's *Science of Logic* due to his definition of being as a pure thought-determination.

This article investigates, first, how Hegel conceives the Parmenidean being.

Secondly, by discussing Hegel's logical analysis of pure being and pure nothing, it aims to show why and how such conception of being, according to Hegel, provides a crucial insight into the function of the understanding."

20. Younesie, Mostafa. 2021. "Parmenides on the True and Right Names of Being." *Open Journal for Studies in Philosophy* no. 5:1-18.

Abstract: "Parmenides as a knowing mortal (F I. 3) writes a philosophical-poetic account of a travelogue in which distinctive voices (F. 2) that are a mixture of myth and logos come out of an unnamed goddess (F I. 23) who didactically speaks with an unnamed young man as her direct listener and addressee (F II. 1) in order to reveal for him different spheres and routes (F II. 2) of inquiry about a specific referent. In the hybrid and tailored account of the immortal about a specific subject-matter, such as being, we can read different approaches of the thoughtful mortals through the narration of the goddess, and the idea of the immortal herself. And exactly when thoughtful mortals want to introduce their thinking and understanding of the "referent" in human lingual terms they appeal to the act of naming and making names, though there is no explicit account by the immortal about her approach for lingual expressing of the referent. Such an account gives us some useful and distinctive hints about Parmenides' conception as a mortal about naming/names which makes his conception in a specific position in regard to the other pertinent and close words, such as ἔπος/ἔπεα, ῥῆμα, ἔργον, καλεῖν, λόγος and Presocratic thinkers like Heraclitus, Democritus, and Empedocles. According to the immortal's account, in relation to naming and names thoughtful mortals can be classified mainly into two groups: (1) Those who are in Aletheia are informed of the distinctive features of the referent that is a "totality" and should be able to make "true" names for it but fail (F8. 38-39). If they succeeded, then their naming and names are true/ἀληθῆ; and (2) those who are in Doxa think to know the features of the referent that is a "dual" and accordingly thoughtful mortals make names. Though all of names that are made are not unacceptable, one set is acceptable/χρεῶν (F 8.

54). As a result, we can infer that if Parmenides as a thoughtful mortal wants to express his thought about eon in lingual terms, he should appeal to naming and making names for they have specific dynamis (F IX. 2—a term that appears in Plato's Cratylus 394b) in communicating the nature of any specific referent. The first best situation or Aletheia is where on the basis of his "knowledge", he can communicate the distinctive features of eon in names and thereby make "true" names. Besides, there is the second best or Doxa, where he can communicate his "beliefs" about the essence and essential features of eon in names and make "acceptable" names."

21. Young, Tyler. 2006. "Perceiving Parmenides: A Reading of Parmenides of Elea's Philosophy by Way of the Proem." *Dionysius* no. 24:21-44.

Abstract: "Parmenides' poem must be read as a whole, beginning with the proem and seeing it as a basis for approaching the entirety of the work. Analysis of Homer's *Odyssey* and Hesiod's *Theogony* shows that Parmenides' poem is a masterpiece of allusion, and that the proem establishes a method and imagery by which the following two sections can be read both independently and in relation to each other. Examination of the Way of Doxa in the second part of the poem provides the opportunity for an explication of Parmenides' cosmology and theology and demonstrates that the Doxa is necessary to his philosophy. The heart of his thesis lies in the juxtaposition of the two ways. The Way of Truth in the third part stands as a succinct statement of the nature of Reality and its relation to human experience."

22. Zeller, Eduard. 1881. *A History of Greek Philosophy from the earliest Period to the time of Socrates*. London: Longman, Green and Co.

With a General Introduction (pp. 1-183),

Translated by S. F. Alleyne in two volumes from the German fourth edition of: *Die Philosophie der Griechen in ihrer geschichtlichen Entwicklung*, Leipzig: R. Reisland, 1876-1882.

On Parmenides: vol. I, pp. 580-608.

"The great advance made by the Eleatic philosophy in Parmenides ultimately consists in this, that the unity of all Being, the fundamental idea of the Eleatics, was apprehended by him in a much more definite manner than by Xenophanes, and that it was based upon the concept of Being. Xenophanes, together with the unity of the world-forming force or deity, had also maintained the unity of the world; but he had not therefore denied either the plurality or the variability of particular existences. Parmenides shows that the All in itself can only be conceived as One, because all that exists is in its essence the same. But for this reason he will admit nothing besides this One to be a reality. Only Being is: non-Being can as little exist as it can be expressed or conceived; and it is the greatest mistake, the most incomprehensible error, to treat Being and non-Being, in spite of their undeniable difference, as the same. This once recognised, everything else follows by simple inference." (pp. 580-585, notes omitted)

Bibliographie des études en Français sur Parménide A - E

Bibliographie

1. Année, Magali. 2010. "Le verbe « être » de Parménide: élaboration stratégique d'une entité linguistique infaillible." *Antiquorum Philosophia* :75-97.

;"Au il d'une analyse structurelle, sémantique et morphologique des fragments, centrée sur l'énonciation du verbe être, j'essaierai de mettre en évidence que la fonction primordiale de la construction de ce verbe est, avant toutes choses, d'instituer la parole kosmologique du poète-savant en une parole d'autorité infaillible. Comme l'a dit J. Bollack de l'oeuvre d'Empédocle, il faut considérer le poème parménidien comme «une ample épopée, savante et visionnaire», mais discursive et parénétiq ue, et non pas «narrative et didactique».(1) Car le verbe être que Parménide invente semble être au coeur d'une véritable stratégie d'énonciation visant plus à instaurer qu'à transmettre un savoir." (p. 79)

(...)

"Il ressort donc de ces remarques sur les emplois du pronom-adjectif *to`* et de la négation, que le discours de Parménide n'est pas tout entier tourné vers la construction d'un substantif contenant en germes le «concept» de l'être. Il donne plutôt l'impression d'élaborer un verbe être aux variations paradigmatiques sans limites, un verbe être métamorphique capable de se manifester n'importe où, un verbe être original, spécialement conçu pour et par le poème, dont la valeur n'a de

sens que le temps de la profération du poème, afin d'assurer une assise infaillible à la parole même du poète-savant.(2)" (p. 82)

(1) 1 Cf. Bollack 1965-1969, p. 7. J'ai volontairement substitué «discursive» à son «narrative».

(2) Indépendamment de la question de la fixation écrite du poème dans sa forme définitive, il est très probable que celui-ci a été destiné à une communication orale, visant un auditoire particulier. On sait, à en croire Aristote, que Parménide aurait eu pour maître Xénophane (*Métaphysique* A 5, 986 b 22, ὁ γὰρ Παρμενίδης τούτου λέγεται γενέσθαι μαθητής). Au sujet de l'influence profonde de ce dernier sur la formation philosophique de Parménide, voir Mogyoródi 2006. Or, Xénophane est aussi connu pour les élégies qu'il a composées. Si les poèmes savants avaient pour cadre une «école», leur prononciation devant un «cercle d'étude» n'était peut-être pas si éloignée des performances élégiaques devant les convives de banquets. Quoi qu'il en soit, sortis du contexte pragmatique de son énonciation, le poème de Parménide et ses échafaudages linguistiques perdent sinon tout leur sens, du moins toute leur efficacité. Même si la vérité des fragments n'était certainement pas destinée à l'oubli, comme ce pouvait être le cas pour un texte de tragédie, puisque leur vérité repose justement, comme on va le voir, sur la continuité fondamentale du λόγος, j'oserai parler ici, pour emprunter un terme cher à Fl. Dupont (2001, notamment p. 25), d'une certaine «insignifiance» du verbe être.

2. ——. 2012. *Fragments. Poème*. Paris: Vrin.

;Texte et traduction de Magali Année; précédé de *Énoncer le verbe être* (pp. 9-146).

"L'élaboration singulière du verbe être, dans le poème de Parménide, qui a dû frapper jusqu'à ses contemporains mêmes, participe vraisemblablement d'un tel fonctionnement. Son déploiement tant syntaxique que sémantique et morphologique lui confère indéniablement une place fondamentale, partant un rôle clé, dans l'économie du discours d'ensemble. Ce qu'on désigne habituellement comme l'« ontologie » de Parménide, et que je me contenterai d'appeler « développement sur l'être », constitue, en effet, la première partie d'une longue composition poétique dont la seconde partie, beaucoup plus importante, dépend. S'il est vrai comme le prétend P. Aubenque, que « personne n'a jamais contesté que l'interprétation de la première partie commandait celle de la seconde » (1), il n'est, à ma connaissance, que J. Bollack (2), qui ait proposé d'y voir le moyen stratégique de fonder un discours cosmologique à partir d'un langage concentré sur lui-même. De fait, les emplois du verbe être dans chacune de ses réalisations morphologiques différentes, incitent d'eux-mêmes à une approche purement linguistique du poème, loin de la « surdétermination philosophique » qui empêche d'aborder le texte qui nous est parvenu avec innocence (3). Car la pensée qu'on y découvre, ne s'élabore fondamentalement que par le discours en train de se faire. Aussi laisserai-je volontairement de côté et le sens et la pensée « ontologiques » du verbe être, qui accompagnent certainement (4) son emploi dans le poème parméniénien, pour me concentrer sur la fonction énonciative que ses valeurs sémantiques et son amplitude morphologique semblent signaler au destinataire comme autant d'indices linguistiques." (pp. 15-17, certaines notes ont été omises)

(1) Cf. Aubenque, 1987, p. 103.

(2) Dans son article de 1957, il montre déjà que le fragment 4 et le fragment 16, appartenant tous deux au discours cosmologique, se complètent parfaitement pour mettre en évidence la cohérence du tout. La cosmologie parméniénienne refléterait au sein de l'apparence l'unité de l'être définie dans la

première partie, et rendrait ainsi possible une expérience commune de l'être « au-delà des noms qui cachent ce qui est ». Voir Bollack 1957, en particulier, p. 64-65 et 70.

3. ———. 2013. "Parménide. Recommencer le verbe être." *Les Études philosophiques* :463-491.

;"« Recommencer », c'est peut-être justement le propre du verbe être parménidien.

« Toujours recommencé », un peu comme la mer de Valéry, mais linguistiquement seulement, c'est-à-dire « énoncé » une nouvelle fois, pour reprendre le titre de l'ouvrage qu'il s'agit ici de présenter et, en quelque sorte, de continuer : *Parménide. Fragments, Poème*, précédé de *Énoncer le verbe être* (Paris, Vrin, « Bibliothèque des textes philosophiques », 2012). Les lignes qui suivent, en effet, ont ceci de particulier qu'elles ne doivent pas s'entendre autrement que comme la restitution de la présentation qui a été prononcée dans le cadre du Séminaire « présocratique » du Centre Léon Robin, le 29 juin 2013. Elles n'ont de sens, autrement dit, qu'en tant que simple explicitation, ou justification, des intentions et de l'approche qui furent les miennes au moment de la rédaction du commentaire et de la traduction qui constituent ce livre." (p. 463)

4. ———. 2019. "Discours en creux et négation de la négation. Quelques objections à la 'sémantique de la disjonction' et au

principe d' 'incompatibilité sémique' " In *Eleatica Vol. 7: Parmenide: tra linguistica, letteratura e filosofia = Parménides: entre lingüística, literatura y filosofía* , edited by Berruecos Frank, Bernardo and Giombini, Stefania, 121-134. Baden-Baden: Academia Verlag.

;"S'agissant d'un artisan-professionnel de la langue comme le fut Parménide – et comme le furent avant et après lui la plupart des poètes et savants de l'époque archaïque, «autant poètes que penseurs de la nature et de l'esprit humain»(1) – l'«expérience» linguistique que propose Alberto Bernabé au commencement de sa 2e leçon et qu'il poursuit dans la 3e, ne peut qu'être en tout point profitable. Comme les sessions d'Eleatica en sont l'une des plus belles illustrations, le poème de Parménide, sans doute plus que tout autre, ouvre la voie à une infinité d'interprétations, parfois radicalement contraires, mais toujours nécessairement complémentaires. Suivant l'esprit d'ouverture et d'échange qui caractérise ces sessions, je n'hésiterai donc pas à y participer à contre sens – en adoptant un point de vue linguistique *παλίντροπος* qui, outre qu'il me semble mieux adapté aux dictionnaires savantes et poétiques de l'époque archaïque, se trouve être en accord avec certains aspects de la composition du poème, à commencer par celle de B 6, 8-9. " (p. 121)

;"On voudrait s'efforcer ici de répondre à une question simple, mais probablement décisive: de quoi s'agit-il dans le Poème de Parménide? (...)" (p. 102)

(...)

"Donc l'être, et non d'abord l'unité. Mais pourquoi l'être?"

Pour répondre à la question du pourquoi, on en est réduit à des conjectures, car aucun texte conservé ne justifie explicitement le choix de Parménide. Mais ne pas se poser la question serait considérer comme allant de soi un choix qui ne s'imposait pas absolument, puisque Parménide aura été pendant longtemps le seul à le faire. Il faut, si difficile que ce soit après vingt-trois

siècles de métaphysique, réactiver l'étonnement devant le fait que, avec Parménide, la philosophie se soit constituée pour la première fois comme ontologie, et non physiologie, cosmologie, théologie ou même hénologie.

De surcroît, un certain nombre d'indices convergents permettent peut-être d'apporter à la question du pourquoi un début plausible de réponse. Nous rangerons ces indices sous cinq rubriques, en mentionnant à chaque fois le très petit nombre d'interprètes qui ont pu nous précéder sur cette voie." (pp. 108-109)

7. Badiou, Alain. 2014. *Parménide : l'être 1, figure ontologique*, 1985 . Paris: Fayard.

;Texte établi par Véronique Pineau.

"On peut présenter aussi simplement que possible les trois propositions principales de la façon suivante :

- Proposition 1 : Parménide fonde la philosophie en proposant un noeud entièrement nouveau entre trois concepts, celui d'être, celui de pensée et celui de non-être.

- Proposition 2 : ce noeud est borroméen. Ce qui veut dire que chacun des trois termes n'est lié à un autre que par le troisième. Centralement, que le noeud soit borroméen signifie que, pour Parménide, l'être n'est lié à la pensée par une relation identitaire (l'être est « le même » que la pensée) qu'autant qu'intervient le troisième terme, le non-être, sous la forme d'un acte : l'acte d'en interdire la pensée.

- Proposition 3 : si tout cela relève de la philosophie et non du récit mythique (où il est souvent question, en Égypte comme en Inde, d'être et de non-être), c'est parce que, bien que proposé sous la forme d'un poème et comportant des éléments de récit sacré, le texte de Parménide, pour la première fois, se soutient, quant à ses propositions principales, d'un mathème: le raisonnement par l'absurde.

Ainsi, la méthode de ce séminaire consiste bel et bien à tenter de démontrer qu'il y a de sérieuses raisons de tenir Parménide pour le fondateur d'une discipline nouvelle, non parce qu'il a

vaticiné sur l'être et le non-être, comme le firent de nombreuses mythologies, mais parce qu'il a convoqué dans cette vaticination poétique son contraire, à savoir la rigueur universelle absolue des procédures mathématico-logiques qui, au même moment, trouvaient en Grèce leur forme définitive. Et ce, d'une double façon : topologie d'un noeud d'une part, structure logique du raisonnement apagogique de l'autre." (p. 6)

8. Battistini, Yves. 1955. *Trois présocratiques: Héraclite, Parménide, Empédocle* . Paris: Gallimard.

;Deuxième édition augmentée avec le titre *Trois Présocratiques* , Paris: Gallimard, 1968.

9. Beaufret, Jean. 1971. "Héraclite et Parménide." *L'Herne* no. 15:152-161.

;Repris dans J. Beaufret, *Dialogue avec Heidegger. Philosophie grecque*, Paris: Éditions de Minuit, 1973 pp. 38-51 (sur Parménide, pp. 45-51).

Traduction en Anglais : *Dialogue with Heidegger. Greek Philosophy*, Bloomington: Indiana University Press, 2006, pp. 20-31.

"Si le monde dit *présocratique* est riche en figures originales, Héraclite et Parménide sont les figures les plus radieusement centrales de ce monde. Car, avec Héraclite et Parménide, c'est la fondation même de la pensée occidentale qui s'accomplit. C'est à eux que remonte comme au secret de la source ce qu'il y a d'encore vivant et de toujours vivace au fond de nos pensées.

On peut dire que c'est par eux que nous pensons, même si nous ne pensons pas à eux, car ils sont la lumière où se révèle initialement la profondeur de notre monde, profondeur que nous ne cessons d'être et qui, cependant, nous demeure d'autant plus énigmatique et ainsi d'autant mieux réservée que nous lui appartenons davantage au plus intime de notre histoire jusqu'ici advenue et encore à advenir." (p. 38)

"Si Parménide est le penseur de l'être, comprenons maintenant que cette pensée de l'être ne porte pas plus ombrage au

changement que la pensée du changement, tel que le conçoit Héraclite, n'ébranle une permanence fondamentale. Le mouvement n'apparaît à Héraclite que sur fond de permanence, et, lorsque Parménide pense face au non-être la permanence de l'être, c'est comme horizon immuable de la présence-absence qui est l'essence de tout changement. Loin donc qu'Héraclite et Parménide surgissent l'un contre l'autre dès l'aurore comme les champions d'une polémique inaugurale, peut-être sont-ils l'un et l'autre, malgré la différence de leurs paroles, à l'écoute d'un même λόγος auquel ils prêtent l'un comme l'autre une même oreille à l'origine de la pensée occidentale. Au fond, il n'y a peut-être pas plus d'immobilisme dans le Poème de Parménide qu'il n'y a de mobilisme dans les fragments d'Héraclite, ou plutôt permanence et changement sont aussi bien des deux côtés. Ainsi les deux langages divergent sans cependant se contrarier, exposant tous les deux le savoir grec de l'être, ce savoir être qui se déploie dans l'élément de la présence sans rien forcer ni tourmenter, sans esquiver ni se crispier, sans compromis ni démesure." (p. 50).

10. Bollack, Jean. 1957. "Sur deux fragments de Parménide (4 et 16)." *Revue des Études Grecques* no. 70:56-71.

;Résumé : "Par l'étude grammaticale du fragment 4, l'auteur cherche à montrer que les vers appartiennent à la deuxième partie du poème, réservée aux Opinions, et que l'exhortation qu'on y trouve formulée concerne l'expérience de notre univers, et non la contemplation de l'Être vrai. Ces vers doivent donc être rapprochés du fragment 16, où il convient de donner à πλέον le sens de « plein » (et non de « prédominant »). Les deux textes réunis font valoir les prédicats de continuité, de cohérence et de plénitude, qui reviendraient à une forme d'être saisissable dans l'univers des choses devenues. L'étude des deux fragments forme ainsi une contribution au problème, essentiel pour la compréhension du poème de Parménide, des liens qui unissent les deux parties de l'oeuvre, l'Être et les apparences."

13. ———. 2006. "Parménide, un auteur." *Revue de Philosophie Ancienne* no. 24:45-49.

;"La forme littéraire qu'a choisie Parménide pour s'exprimer, l'hexa mètre, a autant occupé les esprits que la contradiction construite entre les deux parties du poème, que l'on a cru énoncée comme une aporie par l'auteur lui-même. Le recours à la langue de l'épopée paraissait inadapté, imposé, mais mal assumé.

(...)

La doxographie sur ce sujet est riche et instructive ' - à côté d'une interprétation proprement dépréciative (le rejet a souvent été violent et radical)- on trouve le plus souvent une référence faite à l'environnement culturel, mais parfois aussi le reflet du contenu². Le point de vue défendu ici privilégie dans la forme littéraire la création du sens. Le choix des conventions techniques, largement héritées, doit être considéré comme une décision initiale, qui en tant que telle revêt à son tour une importance historique et culturelle." (p. 45)

(1) Voir, à titre d'exemple, l'article de Georg Wöhrl, « War Parmenides ein schlechter Dichter ? Oder : Zur Form des Wissensvermittlung in der früh griechischen Philosophie », dans W. Kullmann et J. Althoff (éds), *Vermittlung und Tradierung von Wissen in der griechischen Philosophie*, Tübingen, 1993, pp.167-180. 2. Voir Lambros Couloubaritsis, *Mythe et Philosophie chez Parménide*, Bruxelles, 1986, rattachant la forme et la démarche à « une transmutation profonde du mythe archaïque » (p. 252). Voir aussi sa présentation du problème tel qu'il a été traité dans la critique (la section « Le mythe du philosophe », pp. 129-133, et ailleurs.

14. ———. 2006. *Parménide: de l'étant au monde*. Lagrasse: Verdier.

;"La familiarité avec le texte et avec l'histoire de la critique ma fortement soutenu, mais la relecture que je propose et le système qui s'y ébauche reposent autant, sinon davantage, sur une mise en question; c'est le propre d'un nouveau départ sur de nouvelles bases. Les certitudes anciennes y trouvent la place qui leur revenait. Les interprétations d'autres poètes anciens, Homère, Hésiode ou les tragiques, et autant de poètes modernes, m'ont beaucoup aidé et appris à mieux lire. La table n'est pas rase, mais on apprend à faire comme si c'était le cas. Il y a de quoi lire, mais il importe autant de recomposer librement, à la place de l'auteur, ce qu'on n'a pas Verbatim, en se servant de la logique qu'on est parvenu par ailleurs à reconstituer. Si l'on s'entend sur cette obligation, on pourra faire d'autres progrès. J'ai essayé d'aller le plus loin possible sur la base de ce travail, sans me laisser effrayer par les lacunes et les pertes. On tente l'impossible et on a les moyens de s'aventurer avec ce qui se trouve déjà quasi archéologiquement repéré." (pp. 8-9)

15. Bollack, Jean, and Wissman, Heinz. 1974. "Le moment théorique: Parménide fr. 8,42 - 49." *Revue de Sciences Humaines* no. 39:203-212.
16. Boussoulas, Nicolas-Isidore. 1964. "La structure du mélange dans la pensée de Parménide." *Revue de Métaphysique et de Morale* :1-13.

;"II semble de primea bord très difficile de parler de mélange chez Parménide.

En effet, chez un penseur pour qui, en dehors de l'Être, il n'existe rien d'autre, comment déceler la moindre trace d'une intuition des mixtes ?

Et pourtant, à y voir de plus près, il existe dans le poème parménidien l'entité de la mixtion, dans sa seconde aussi bien que dans sa première partie, qui nous décrit l'Être absolu.

Mais pour détecter cette structure, il serait plus efficace de commencer par la deuxième partie du poème, celle qui traite des Opinions, pour s'acheminer par la suite vers la première partie, purement ontologique.

Et tout d'abord, nous ne pensons pas que la partie traitant de la Physique n'ait absolument rien à faire avec la Vérité.(1)'''

(...)

"Il y aurait chez Parménide la même différence entre le domaine de l'Ontologique et celui du Physique que celle existant chez Platon relativement à ces deux ordres : dans le *Tintée*, l'Être est taxé de vérité, tandis que tout ce qui concerne le devenir relève de l'opinion ; en d'autres termes, du probable et du vraisemblable."

(...)

"Et maintenant, après ces quelques remarques préliminaires, lisons attentivement cette deuxième partie du poème. Nous constatons aussitôt qu'elle est presque entièrement dominée par l'idée du Mélange." (pp. 1-2)

(1) Cf., par exemple, J. Burnet : *L'Aurore de la Philosophie grecque*, p. 213.

17. Brague, Rémi. 1987. "La vraisemblance du faux (Parménide, Fr. I, 31-32)." In *Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 44-68. Paris: Vrin.

;Repris dans Rémi Brague, *Introduction au monde grec. Études d'histoire de la philosophie*, Chatou: Les Éditions de la Transparence 2005 (Édition revue 2008), pp. 101-142.

"Les deux derniers vers du premier fragment de Parménide, qui contient le prologue de son poème ontologique et cosmologique, comptent parmi les plus ardues et les plus âprement discutés de son oeuvre, ou de ce qui nous en est parvenu. Le fait est d'autant plus regrettable qu'ils constituent à l'évidence l'annonce par la déesse qui instruit le poète-philosophe du programme qu'il lui faudra étudier, et qu'ils sont donc comme la clef de tout le poème. Malgré les efforts de beaucoup de très bons esprits, armés d'une incontestable érudition, aucune interprétation ne semble capable de recueillir l'adhésion générale. Nous aimerions intervenir dans ce débat, non pour rivaliser avec de plus savants que nous, mais pour

attirer l'attention sur un fait nouveau, résultat des travaux de ceux-ci, mais qui ne nous semble pas avoir été remarqué comme il le mériterait.

Il nous semble en effet que les efforts des philologues et des philosophes ont abouti, il y a un peu plus de dix ans, à une situation herméneutique nouvelle et simplifiée. Avant cette date, les interprétations les plus variées de ces deux vers semblaient pouvoir être admises, au moins en principe. Ce n'est, à notre avis, plus le cas. Les arguments en sont venus, nous semble-t-il, à s'annuler les uns les autres, de façon à exclure toutes les possibilités d'interprétation. Une telle situation d'aporie, si elle doit s'avérer définitive, impose un réexamen d'ensemble de la question. Nous nous proposons donc de mettre en évidence les obstacles infranchissables que rencontre toute tentative d'interprétation, avant de proposer une solution." (p. 44)

18. Bredlow, Luis André. 2011. "La théologie des passions dans le poème de Parménide (frs. 12-13 D-K)." In *Figures de la passion et de l'amour*, edited by Chateau, Dominique and Salabert, Pierre, 91-107. Paris: L'Harmattan.

;"La tradition classique de la philosophie grecque — dont nous sommes héritiers, de bon ou mauvais gré, et même sans le savoir — a marqué les passions du double stigmate de la réduction à l'intériorité de l'individu et de la relégation à un niveau inférieur de la vie consciente." (p. 91)

(...)

"Mais il fut un temps, pas très éloigné de l'époque de Platon et d'Aristote, où ce que nous appelons les passions de l'âme était conçu comme des divinités vivantes, objet du culte des communautés humaines, et dont le pouvoir, vivifiant ou destructeur, loin de demeurer renfermé dans l'intimité de l'âme individuelle, se répandait sur l'ensemble du monde naturel. C'est la situation que nous trouvons chez Hésiode, parfois encore chez les poètes tragiques, et un peu partout dans le folklore et les coutumes religieuses des Grecs. Pourtant, je préfère me concentrer ici sur un bref commentaire des fragments « théologiques » de Parménide d'Élée (frs. 12-13

Diels-Kranz) : c'est, certes, un document — hélas ! — très fragmentaire, mais qui a l'avantage de nous laisser entrevoir le surprenant degré de systématisation que ce complexe diffus de croyances et de pratiques avait acquis dans ses formulations les plus mûres." (p. 92)

19. Briand, Michel. 2020. "Pindare et Parménide, poètes et penseurs jeux de métaphores et effets pragmatiques." *Dialogues d'histoire ancienne* no. 46:75-104.

;Résumé : "Pindare et Parménide, poètes et penseurs : jeux de métaphores et effets pragmatiques. Aidée des notions de cognition incarnée et métaphore conceptuelle, l'analyse porte sur l'interaction entre jeux de langage et pensée ou imagination et connaissance, dans la poésie de Pindare et dans la philosophie de Parménide, par exemple : le char des Muses et la voie du poète et de son chant (Parménide, fr. 1, 2, 3, 8, et Pindare, dans une trentaine de cas, dont l'*Olympique* 6) ; les figures synesthésiques du regard et de la lumière, où Parménide, fr. 1, 4, 7 à 12, 14, rappelle la poétique pindarique de l'éclat ; des maximes sur la meilleure manière de sentir, penser, agir (Parménide, fr. 1, 2, 4, 6, 7, 8 ; Pindare, par exemple *Pythique* 2, 72 ou 3, 61-62). On trouve ici en germe une distinction poésie/philosophie, mais riche d'analogies primordiales."

;"L'ouvrage dédié à la mémoire de Pierre-Maxime Schuhl. est le plus important. sur Parménide depuis très longtemps : deux tomes totalisant. plus de 700 pages et comprenant le texte grec., une traduction française et une traduction anglaise des fragments du Poème. traduction annotée et complétée par un Essai critique et par quinze études résultant des travaux du Centre Léon Robin.

(...)

"L'index des mots grecs est un modèle à suivre. On y trouve les 1147 mot.s qui subsistent du Poème de Parménide. Les différentes formes d'un même vocable sont indiquées;

quelquefois même, ces formes sont accompagnées de remarques grammaticales qui indiquent le choix du traducteur." (pp. 684-685)

(...)

"Que dire sur l'ensemble de cet important travail? Une fois de plus, il ne saurait être question d'entrer dans les détails. Je ne ferai donc que quelques remarques, et je formulerai une idée que je développerai et dont j'essaierai de tirer toutes les conséquences.

Alors que le premier tome constitue dans son ensemble et pour ce qui est de son orientation générale une critique des positions, des présupposés et des orientations analytiques de G.E.L. Owen en particulier et de l'École philosophique d'Oxford en général, une critique qui ne peut s'empêcher d'adopter la méthode argumentative de ceux qu'elle vise, le second se trouve surtout sous l'influence d'une herméneutique d'inspiration heideggerienne, un Heidegger représenté par J. Beaufret. En fait, cette dualité reflète plus généralement la ligne de partage qui s'est institué ces dernières années, en France, entre les chercheurs en philosophie grecque." (p. 691)

;"Aux origines du problème de la vérité il y a Parménide. On parle de problème car, pour claires que soient les coordonnées théorétiques dans lesquelles se situe la perspective

parménidienne, il n'est pas facile, ensuite, d'en dégager la signification et les implications. Le fragment 3 (« en effet penser et être sont la même chose »), lu en dehors de tout horizon néoplatonicien ou idéaliste, nous parle seulement d'une coïncidence, ou bien d'une identité, ou bien d'une inséparabilité : mais, tandis que « penser » est facile à entendre, il est plus difficile d'entendre le champ sémantique de « être ». On sait que Parménide n'utilise pas le terme « être » pour indiquer l'objet de sa recherche mais plutôt το ἔόν, l'étant, « ce qui est ». Voilà le premier problème : l'être de B 3 est-il le même que το ἔόν, ou bien indique t-il autre chose? La question se complique parce que, à côté de « ce qui est » apparaît aussi un το μὴ ἔόν, un non-étant, « ce qui n'est pas », qui n'est, comme il est dit explicitement, possible ni à connaître ni à exprimer (B 2.7-8: οὔτε γνοίης ... οὔτε φράσαις), donc qui, évidemment, n'est pas pensable. Il y a donc une relation étroite entre la séquence : être / penser connaître / exprimer-dire, et, de façon spéculaire par rapport à celle-ci, l'autre séquence : ne pas être / ne pas penser-ne pas connaître / ne pas exprimer - ne pas dire." (p. 67)

23. Cassin, Barbara. 1980. *Si Parménide. Le traité anonyme De Melisso Xenophane Gorgia. Édition critique et commentaire*. Lille: Presses Universitaires de Lille.

; *Le Parménide de Gorgias* pp. 43-75.

"«Si Parménide»: il s'agit d'ontologie, de sophistique, de doxographie. «Edition commentée du traité anonyme Sur Mélissus, Xénophane et Gorgias»: il s'agit de l'établissement d'un texte grec, de sa traduction, de leurs justifications. Du titre au sous-titre, il s'agit de philosophie et de philologie, d'un certain rapport entre elles." (p. 17)

"[Dans le Poème de Parménide] la déesse nomme pour qui les portes se sont ouvertes, les deux seuls chemins qui s'offrent à la recherche:

«L'un: que est et que n'est pas possible de n'être pas,

l'autre: que n'est pas et qu'est besoin de n'être pas».

L'énoncé de la première thèse de Gorgias [dans le traité *De Melisso Xenophane Gorgia* = G.], dans la reprise introduisant à

sa démonstration, est littéralement identique au nom du second chemin: «n'est pas». Il ne faut pas croire pour autant que Gorgias, désobéissant délibérément à la déesse et au père Parménide, s'engage d'emblée déjà sur le chemin interdit, impraticable et qui n'aboutit pas ; rien d'une contestation aussi immédiate, primaire, et somme toute négligeable puisqu'elle donne du sophiste l'image bien connue d'un insolent blanc-bec prêt à tout pour faire le malin. Au contraire, «n'est pas» se présente explicitement comme une conséquence et le résultat d'une double démonstration. Or ces deux démonstrations constituent en elles-mêmes une interprétation du chemin du «est» tel qu'il est tracé dans le Poème et en marquent les étapes.

C'est, tout d'abord, la différence entre les deux démonstrations proposées qui est significative. La première, celle qui est propre à Gorgias, porte sur le verbe comme tel: elle prouve que «n'est pas» parce que ni «être» ni «n'être pas» ne se soutiennent en position de verbe, parce qu'il n'y a pas de verbe pour être. La seconde, démonstration référentielle qui opère en combinant les thèses des autres Eléates, porte sur le sujet : elle prouve que «n'est pas» parce que, aucun prédicat ne convenant au sujet, il n'y a pas non plus de sujet pour être. C'est donc par deux fois qu'il faut conclure «n'est pas»: parce qu'il n'est pas vrai qu'il y ait être, et parce qu'il n'est pas vrai qu'il y ait un étant pour être. La duplication produit une structure de recul, d'ailleurs caractéristique tout au long du traité de la manière de Gorgias: il n'y a pas de verbe, et quand bien même il y aurait un verbe, ce verbe n'aurait pas de sujet. Ainsi s'interprète, avec ses deux négations en renfort portant l'une sur le verbe et l'autre sur le sujet, l'énoncé inaugural de cette première thèse, impossible en vertu des règles françaises de la double négation à rendre par la formule littérale «n'est pas rien», et qu'on peut transcrire d'un : «(il) n'est (absolument) rien».

Si l'hypothèse texte contre texte est exacte, ce renchérissement démonstratif suppose à lui seul une certaine compréhension du Poème: à lire en deux temps ou trois mouvements, tels que de la position inaugurale du verbe «est» advienne, au moyen d'une prédication effective, la position seconde du sujet «l'étant».

Puis l'annonce faite par l'Anonyme de la démonstration propre à Gorgias pour la première thèse est elle aussi révélatrice d'une lecture de même type. Elle tient en une phrase: «(il) n'est pas (possible) ni (d')être ni (de) ne pas être» (2). Les parenthèses sont là pour servir d'alibi, c'est-à-dire conférer à la phrase un ailleurs, une ubiquité, l'équivoque caractéristique de la tournure grecque. Car le grec veut dire à la fois: «ni être ni pas être ne sont», «il n'est pas possible ni d'être ni de n'être pas», «ce n'est ni être ni ne pas être». Et la démonstration elle-même prouve qu'aucun de ces sens n'est à exclure, mais qu'au contraire ils découlent l'un de l'autre de façon réglée: si les deux verbes «être» et «ne pas être» ne sont pas, ils ne peuvent pas plus l'un que l'autre servir effectivement de verbe et donc «il n'est pas possible ni d'être ni de n'être pas», auquel cas, quel que soit le sujet qu'on veuille supposer, ni être ni ne pas être n'en seront les prédicats, si bien que «ce n'est ni être ni pas être».

Cet énoncé unique engage à explorer la prétendue tautologie parménidienne, «l'être est», pour y lire non pas la fixité de l'identité stérile d'un «est» à jamais imposé, antihéraclitéisme caricatural, mais l'auto-mouvement en quelque sorte plus hégélien d'une identité vivante qui se développe dans la langue et en produit la logique comme syntaxe prédicative.

Reste à éprouver directement cette lecture-miroir, sa possibilité et son intérêt, au contact du texte du Poème." (pp. 45-47)

Études sur Parménide. Tome II. Problèmes d'interprétation,
edited by Aubenque, Pierre, 163-169. Paris: Vrin.

;"Le Poème de Parménide est une épopée philosophique:
"Odyssée spirituelle", cette quête cognitive, menacée par
l'errance, d'un être d'exception divinement guidé. La pertinence
du lieu commun fondé sur l'analogie de certains motifs et
thèmes comme sur l'identité formelle de l'hexamètre, devient
plus pressante lorsque les parallèles terminologiques ne
relèvent manifestement pas du seul phrasé épique. L'un de ces
parallèles me paraît devoir retenir singulièrement l'attention; il
superpose en effet l'immobilité d'Ulysse lié au mât par ses
compagnons dans l'épisode des Sirènes [*Odyssée*, XII, 158 ss],
et l'immobilité de ce qui sera la sphère, retenue par une
nécessité puissante dans les liens de la limite, l'un ou l'autre
'reste ici même solidement planté dans le sol'." (p. 163)

"Odyssée et Poème servant tour à tour de propre et de
métaphore ou d'allégorie l'un pour l'autre, le chant des Sirènes
nous est ainsi apparu comme un miroir et donc une caricature
de l'épopée dans l'épopée elle-même: Ulysse passe ligoté,
préférant au bruit de sa gloire une identité minimale -- il sera
reconnu de son chien en arrivant au pays. De façon parallèle, la
doxa serait miroir ou caricature de l'*alétheia* au sein de
l'*alétheia* elle-même, et l'étant qui lui échappe est lui aussi
ligoté dans une identité minimale." (p. 169)

26. ——. 1998. *Parménide. Sur la nature ou sur l'Étant: la
langue de l'Être ?* Paris: Éditions du Seuil.

;"Le point nodal quant à l'interprétation littérale du Poème est
alors le sens et le statut de la *doxa*. Si, comme on le fait
toujours, on retient pour derniers vers du proème, non pas ceux
que donne Sextus, mais ceux que transmet Simplicius, le poids
du « doxique » s'accroît considérablement. On ne peut plus
croire que les « opinions des mortels » (*brotôn doxas*, 30), qui
vont faire partie de l'enseignement de la déesse accueillante au
voyageur, soient un simple repoussoir. Il faut comprendre de
quelle nécessité elles relèvent, et interpréter deux autres termes
de même famille, au sens plus ou moins ambigu, le participe
neutre pluriel *ta dokounta* (31, « les choses qui paraissent /

apparaissent ») et l'adverbe *dokimôs* (32, « comme il convient », « honnêtement », dit le Bailly, « really », « genuinely », dit le LSJ [Liddell, Scott, Jones, *Ancient Greek Lexicon*]). Valeur d'abord négative (tout cela n'est que semblant), et Parménide est toujours platonicien. Valeur d'abord positive ou, au moins, ambiguë (tout cela a l'éclat de la présence), et, loin de toute « pétition de platonisme », Parménide devient « authentiquement », c'est-à-dire à la fois nietzschéennement et heideggériennement, grec. Les *dokounta* baignent dans l'amour de la lumière de ce monde-ci : Beaufret va jusqu'à gloser avec insolence *dokounta* de la plus antiplatonicienne manière par « les choses mêmes » (p. 33). La clef du rapport *alêtheia* / *dokounta* tient tout entière, conclut-il, dans « la *Différence ontologique* qui est le lieu originel du Poème de Parménide » (p. 53), *alêtheia* pour dire l'être et son dévoilement, donation-retrait, *dokounta* pour dire les étants et leur (ap)paraître.

Où l'on voit comment l'appréciation du sens et de la valeur de ces quelques mots implique une vision d'ensemble du poème, de son architecture et de ses articulations. On assiste même *in vitro* à la fabrication simultanée du texte et du sens : Parménide platonicien rationaliste, Parménide heideggérien." (pp. 18-19, une note omise)

27. Cassin, Barbara, and Narcy, Michel. 1987. "Parménide sophiste: la citation aristotélicienne du fr. XVI." In *Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 277-293. Paris: Vrin.

;"Certes, il peut paraître difficile de parler d'une exégèse d'Aristote à propos du fragment XVI, étant donné que les quatre vers sont cités sans commentaire, encadrés seulement d'autres citations. Mais c'est justement dans la façon dont sont présentées, agencées, ces citations, qu'il faut essayer de saisir l'interprétation." (p. 281)

28. Castelnérac, Benoît. 2014. "Le Parménide de Platon et le Parménide de l'histoire." *Dialogue. Canadian Philosophical Review* no. 53:435-464.

;Résumé : "Cette étude se consacre à l'exergue méthodologique du *Parménide* où Parménide explique comment fonctionne

l'enquête dialectique. Cette méthode reprend les indications que le Parménide historique prêtait à la déesse, une méthode d'enquête qui se déploie en «pensant la voie de l'être et la voie du non-être». Dans le *Parménide*, ces voies de la recherche sont présentées comme la manière d'examiner une hypothèse.

Cette démarche prend des aspects d'exhaustivité : il faut se demander, en alternance et un grand nombre de fois, ce qu'il en découle si la chose en question existe ou si elle n'existe pas. Elle peut enfin se distinguer des autres pratiques de la dialectique chez Platon."

29. ——. 2015. "Note exégétique sur le fragment 2 de Parménide (DK 28 B 2)." *Revue des Études Grecques* no. 128:291-308.

;Résumé : "Cette analyse textuelle du fr. 2 de Parménide (DK 28 B2) a pour principal objectif de démontrer que le verbe νοῦσαι (l. 2) doit être lu comme un infinitif actif ayant pour complément les propositions subordonnées introduites respectivement par ὅπως à la li. 3 et ὡς à la li. 5. Il est en outre suggéré que le *De arte* (II, 1-2), du corpus hippocratique, ainsi qu'un passage du *Parménide* de Platon (136a-c) ont des points communs avec le fr. 2."

30. Charles, Sébastien. 2001. "Du *Parménide* à Parménide." *Les Études philosophiques* no. 59:535-552.

;"Nous voilà parvenus à la fin de notre analyse. Nous croyons avoir bien montré en quoi le Poème de Parménide n'est pas d'ordre métaphysique mais ontologique(4) et cosmologique. Un tel travail de lecture attentive des textes peut bien entraîner une certaine déception car faire de Parménide un Présocratique avant tout, c'est lui faire perdre une dimension métaphysique dont l'histoire de la philosophie l'avait affublé et qui pouvait être, pour certains, à la source d'une véritable jouissance spéculative. Mais le travail philosophique se veut aussi effort critique pour nous débarrasser de nos illusions en général, et, parfois, de nos illusions philosophiques. Comme l'écrit André Comte-Sponville : « La vérité, pour le philosophe, prime sur le bonheur. Mieux vaut une vraie tristesse qu'une fausse joie5). » Mieux vaut un Parménide philosophe

de la nature qu'un métaphysicien anachronique. Mais cela ne nous empêche pas de faire encore de Parménide l'objet de nos recherches car tout n'est pas dit. Comme l'écrit judicieusement Heidegger : « Le dialogue avec Parménide ne prend pas fin ; non seulement parce que, dans les fragments conservés de son Poème didactique, maintes choses demeurent obscures, mais aussi parce que ce qu'il dit mérite toujours d'être pensé. Mais que le dialogue soit sans fin n'est pas un défaut. C'est le signe de l'illimité qui, en soi et pour la pensée qui se souvient, préserve la possibilité d'un revirement du destin. »(6) La métaphysique

a bel et bien une histoire, et cette histoire, pour nous, est toujours à *faire* ." (p. 552)

(4) Une nouvelle fois nous rappelons ici notre distinction entre métaphysique et ontologie.

Alors que l'ontologie se passe de principes transcendants (Idées, formes, etc.), la métaphysique recourt essentiellement à ce genre de concepts pour expliquer le réel. Parménide pense l'Être et non le Bien ou l'Acte pur...

"Ce travail est né de la volonté de comprendre comment, dès son origine, la pensée de l'Être s'est constituée comme refus du temps, comment "être" a cessé de signifier "devenir".

Avec Parménide, le discours philosophique, le logos, s'instaure comme parole métaphysique de l'être. L'être a pour corollaire essentiel et fondamental la négation du temps ; ce qui est dans le temps, n'est pas absolument. Vivant et mourant, nous sommes dans le non-être parménidien.

La question initiale de ce travail est la suivante:

comment Parménide, en posant que tout logos est logos de l'être, c'est-à-dire aussi que tout discours vrai est discours de l'être, a-t-il fermé les portes du logos au temps?

Pour répondre à cette question, nous avons eu recours à une analyse structurelle du poème. Nous avons donc écouté la parole parménidienne par delà les vicissitudes historiques de ses différentes interprétations.

Nous avons pensé que seule l'analyse de la construction du discours parménidien nous permettait d'entrer dans ce même discours pour en saisir toutes les difficultés et toutes ses richesses et pour tenter dans la mesure du possible de lever ces difficultés.

Nous avons, par conséquent, voulu écouter Parménide et lui seul, parce que la réponse à notre question est dans sa seule pensée. Nous avons en effet, voulu comprendre de quelle manière il a réalisé le rejet du temps de la sphère de l'Être.

La question du pourquoi aurait sans doute nécessité une autre méthode. Nous n'avons pas recherché les causes historiques de cette éviction du temps et de l'instauration du discours métaphysique.

Nous avons voulu comprendre comment s'est établie la dissociation de l'être et du temps dans le discours original,

c'est-à- dire dans la pensée parménidienne ; comment finalement Parménide a-t-il rendu possible la métaphysique ?

Il fallait donc s'interroger sur la force et les ressorts de ce discours, qui a commandé, à certains égards, l'avenir de la philosophie. L'analyse de la logique gouvernant ce discours nous permettait d'accéder, selon nous, à la compréhension de la dissociation de l'être et du temps.

C'est pourquoi, nous nous sommes abstenus d'expliquer Parménide à la lumière de Platon ou d'Aristote, ces derniers ne nous étant d'aucun secours pour répondre à notre question initiale. Il ne s'agissait pas, en effet, de lire Parménide au travers de sa postérité ou des problèmes qu'il a posés à cette même postérité - même si nous avons pu éclairer Parménide de certaines lumières platoniciennes ou aristotéliennes, notamment concernant la question du temps. Mais il faut être extrêmement prudent sur les rapprochements historiques. Et cette prudence même aurait nécessité un tout autre travail." (pp. 3-4)

"La traduction qui suit n'est pas le fruit d'un travail personnel en dehors de certains vers qui nous sont apparus déterminants pour notre interprétation, et pour lesquels nous avons cru bon de proposer notre propre traduction lorsque celle de D. O'Brien et de J. Frère ne nous satisfaisait pas. Nous nous sommes largement inspirés de leur commune traduction ainsi que de celles de L. Couloubaritsis et de N.L. Cordero. Cette traduction n'a par conséquent qu'une valeur d'outil de travail et se présente à cet égard comme le reflet de notre interprétation." (p. 9)

32. Constantineau, Philippe. 1987. "La question de la vérité chez Parménide." *Phoenix. Journal of the Classical Association of Canada* no. 41:217-240.

;"Nous proposons, dans ce qui suit, une interprétation du fragment 2 dont la principale nouveauté réside dans le fait que nous partons de l'hypothèse que les propositions des vv. 3 et 5 constituent non pas des déclaratives, comme l'écrasante majorité des commentateurs l'ont cru jusqu'à présent, mais des interrogatives indirectes. En effet, rares ont été les

commentateurs qui ont admis comme possible cette lecture et aucun ne l'a encore sérieusement défendue, comme si cela ne changeait pas grand-chose au sens de ces vers que l'on adopte l'une ou l'autre lecture.

Nous croyons au contraire pouvoir démontrer que la lecture que nous proposons résout les principales difficultés auxquelles se butait l'interprétation traditionnelle et fait apparaître sous un jour nouveau le point de départ de l'ontologie parménidienne." (pp. 218-219)

(...)

"La raison de la disqualification par Parménide des propositions existentielles usuelles tient à la compréhension restrictive, qui se veut d'ailleurs conséquente, voire littérale, qu'il fait de ce qu'implique la question qui demande ὄντως ἔστιν. En effet, pour Parménide, "ce qui est" ou l'étant, cela vaut dire d'emblée la totalité de ce qui existe (cf. fr. 8,3-5) et non pas tel ou tel objet particulier. Il suit de cette compréhension restrictive de la question de la Vérité que tout discours sur les "formes" autres que l'étant comme tel, y inclus les propositions usuelles d'existence, se trouve ravalé par Parménide au rang d'opinions," (p. 240)

33. Cordero, Néstor-Luis. 1977. "Analyse de l'édition Aldine du commentaire de Simplicius à la *Physique* d'Aristote." *Hermes. Zeitschrift für Klassische Philologie* no. 105:42-54.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 37-48.

"Tout porte à croire, par conséquent, que l'édition de Simplicius de 1526 a été effectuée sous la responsabilité de Francesco d'Asola, dont les conjectures, en général, n'ont pas été tellement heureuses. Cependant, nous devons reconnaître une fois de plus que nous nous trouvons sur le plan des conjectures et que la possibilité - lointaine, certes - n'est pas exclue que Francesco d'Asola ait disposé de l'archetype de l'oeuvre de Simplicius. Toutefois, nous pouvons constater que les manuscrits conservés actuellement présentent le même

texte que E et F et, par conséquent, ne justifient pas quelques conjectures « trop hardies »." (p 54)

34. ——. 1979. "Les deux chemins de Parménide dans les fragments 6 et 7." *Phronesis. A Journal for Ancient Philosophy* no. 24:1-32.

;"Nous avons dit qu'à 6.1-2 il était question du premier chemin de la recherche, et qu'à 6.4 sq. nous trouvons un exposé concernant le second chemin. Selon l'invitation de la Déesse, l'élève doit apprendre les deux chemins; or, il doit *commencer par ce premier chemin* (exposé a 6.1-2), et *après* il doit continuer par le second chemin, cette impasse par laquelle déambulent les hommes qui ne savent rien. Toutefois, selon les thèses présentées au fr. 2, il suffit d'énoncer un chemin pour se rendre compte que le chemin contradictoire n'est pas possible, car s'il n'y a *que* de l'être, il est évident que le non-être n'existe pas. C'est ainsi que le point du départ est double, et telle est la signification de l'énigmatique fr. 5: $\Xi\nu\nu\omicron\ \nu\ \delta\epsilon\ \mu\omicron\iota\ \acute{\epsilon}\sigma\tau\iota\nu,\ \omicron\pi\lambda\omicron\theta\epsilon\nu\ \acute{\alpha}\rho\chi\omega\mu\alpha\iota\ \tau\omicron\theta\iota\ \gamma\alpha\ \rho\ \pi\acute{\alpha}\lambda\iota\nu\ \acute{\iota}\xi\omicron\mu\alpha\iota\ \alpha\acute{\upsilon}\theta\iota\varsigma.$ Ici c'est la Déesse qui expose *son* ($\mu\omicron\iota$) point de vue, et, pour elle, le point du départ est commun ($\xi\nu\nu\omicron\varsigma$). *A partir* ($\omicron\pi\lambda\omicron\theta\epsilon\nu$)(151) de ce point $\xi\nu\nu\omicron\varsigma$, elle commence ($\acute{\alpha}\rho\chi\omicron\mu\alpha\iota$) son raisonnement. Mais tandis que pour la Déesse le point du départ est commun, l'élève doit commencer par un chemin et ensuite(152) il doit commencer par un autre. Pour cette raison, lorsque la Déesse termine son exposé du premier chemin, elle signale: "ici je termine pour toi ($\sigma\omicron\iota$) le raisonnement et la pensée à propos de la Vérité" (8.50-51); et elle commence ensuite ($\delta'\ \acute{\alpha}\pi\omicron\ \tau\omicron\upsilon\delta\epsilon$) l'enseignement des opinions des mortels, exposé par l'intermédiaire d'une "trompeuse distribution de mots" (8.52)." (p. 23)

(151) *Etym. Mag* . p. 611; *Etym. Gr. Ling* ., p. 416; Hesychius, *Lex.*, III, p. 173.

(152) Il faut signaler que la corrélation $\rho\acute{\omega}\tau\eta\varsigma\ \gamma\acute{\alpha}\rho\ \dots\ \alpha\acute{\upsilon}\tau\alpha\ \rho\ \acute{\epsilon}\pi\epsilon\iota\tau\alpha$ (6.3-4) n'a pas sens adversatif, comme le font ressortir la plupart des traductions, mais simplement corrélatif.

35. ——. 1982. "La version de Joseph Scaliger du Poème de Parménide." *Hermes. Zeitschrift für Klassische Philologie* :391-398.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 69-76.

"La plupart des livres des grands philosophes et de leurs commentateurs voient la lumière aux XVe et XVIe siècles, et à l'intérieur de ce précieux corpus les philologues commencent à décèler des noms presque inconnus,

des citations d'ouvrages déjà perdus, dont la reconstitution, à partir de fragments isolés, devient pour certains erudits une véritable et souhaitable obsession.

Un des résultats les plus heureux de cette passion est la reconstitution presque complète, vers la fin du XVIe siècle, du Poème de Parménide. L'auteur de cette authentique prouesse - car il a réussi à recueillir cent quarante huit des cent soixante vers attribués aujourd'hui à Parménide(3) - fut le philologue français Joseph J. Scaliger.

L'excellente reconstitution de Scaliger du Poème de Parménide n'eut qu'un seul défaut: elle n'a jamais été publiée." (p. 392)

(...)

"Dans son testament, Scaliger leguait à l'Université de Leiden tous ces livres et ses écrits, et dans un catalogue de l'année 1612 figure déjà une liste du "fonds Scaliger" (pp. 79-88). Le manuscrit que nous présentons ne constitua pas une exception: dans cet ancien catalogue on lui attribua le code '14'." (p. 395)

(...)

"Nous rappelons que dans la version de Scaliger manquent les Fr. 3, 5, 11, 19, et les vers 31 -32 du Fr. 1 (c'est-à-dire, douze vers). Son texte des Fr. 4, 9, 13, 14 et 15 ne diffère pas de celui présenté par Diels-Kranz. L'ordre des fragments chez Scaliger,

enfin, était le suivant: Fr. 1 (1 -30), 7 (2- 6), 8,9, 12,2,6, 13, 15, 14,7(1-2), 17,4, 10, 16et 18." (p. 398)

36. ——. 1982. "Le vers 1, 3 de Parménide ("la Déesse conduit à l'égard du tout")." *Revue Philosophique de la France et de l'Étranger* :159-179.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate i i suoi "eredi"* , Baden-Baden; Academia Verlag 2019, pp. 77-96.

"La seule source du vers 1.3 est l'*Adv. Math* . de Sextus Empiricus et, dans la plupart des éditions de ce texte publiées après 1912, nous lisons quel' « homme qui sait» a été conduit jusqu'à la demeure de la Déesse « à travers toutes les villes » (κατα` πάντ' ἄσθη). Bien que dans le contexte de la philosophie de Parménide, cette formule ait toujours semblé douteuse, il est probable que beaucoup d'érudits importants l'ont conservée parce qu'elle se trouvait - croyaient-ils - au moins dans un manuscrit de l'oeuvre de Sextus, et que son rythme respectait fidèlement celui de l'hexamètre parménidien.

Mais, dans ces dernières années, le texte de Sextus a subi de nouveaux examens, et dans le cas précis de la citation parménidienne, A. H. Coxon a fait une découverte éclairante : la version κατα` πάντ' ἄσθη que nous citions ci-dessus n'est qu'une fausse lecture du cod. N (Laur. Gr. 85.19) par H. Mutschmann.

Cependant, il reste encore beaucoup à dire en ce qui concerne le vers 1.3 de Parménide car, quoique la critique de Coxon ouvre la voie à des nouvelles enquêtes, elle n'apporte pas une solution définitive pour ce passage. C'est pour cette raison que notre tâche consistera à proposer une nouvelle conjecture pour le vers 1.3, même si nous risquons d'ajouter encore une interprétation aux « innombrables conjectures» dont se plaignait déjà H. Diels en 1897 et qui, comme nous le voyons aujourd'hui, étaient loin d'épuiser toutes les possibilités offertes par le texte de Sextus." (pp. 159-160, notes omises)

37. ——. 1984. *Les deux chemins de Parménide* . Paris: Vrin.

;Édition critique, traduction, études et bibliographie.

Deuxième édition corrigée et augmentée 1997.

La racine indoéuropéenne. Le Lexicon d'Ebeling. La thèse de Ch. H. Kahn. Les trois nuances d' *einai* exemplifiées par trois utilisations différentes 215; Appendice II: La tradition manuscrite du vers 6,3. List de manuscrits qui contiennent le vers 6,3. Les variations du texte 234; Parte III: Bibliographie parménidienne 237; Table analytique des matières 301-302.

"Nous ne prétendons pas avoir trouvé *la* solution, c'est-à dire le point de vue à partir duquel la philosophie de Parménide révélera la clé de sa fertilité. L'état fragmentaire dans lequel nous est parvenu son Poème nous place en état d'infériorité par rapport aux penseurs classiques pour émettre un jugement sur la totalité de son oeuvre. C'est pour cela que nous avons préféré limiter notre étude à un seul problème. Toutefois, nous avons choisi un problème qui, à notre avis, occupe une place de choix dans les fragments du Poème que nous possédons actuellement: le problème des chemins de la connaissance, des voies de la recherche. (...)

Pour atteindre cet objectif, nous proposons d'analyser certains éléments généralement admis dans la pensée de Parménide, mais qui, dans la plupart des cas, ne sont pas poursuivis jusqu'à leurs conséquences extrêmes. (...)

La quasi totalité des chercheurs qui se sont intéressés à la philosophie de Parménide s'accordent sur le fait que sa pensée est structurée autour du principe de la non - contradiction (8). Nous n'affirmons pas ni ne nions pour autant que Parménide ait "inventé" ce principe, ni qu'il ait eu conscience de son

utilisation, mais il ne faut pas oublier que le principe du tiers exclu apparaît également chez Parménide - principe qui renforce celui de la non-contradiction et rend contradictoires toutes les oppositions que nous rencontrons tout au long de son Poème. Sur la base de cette constatation, dont nous fournirons des exemples tout au long de notre travail, nous trouvons chez Parménide un dualisme méthodologique rigoureux qui sépare, "comme d'un coup de hache", l'espace conceptuel, ainsi que l'a remarqué P.M. Schuhl à juste titre (10), en deux régions opposées. Cette dichotomie, véritable transposition sur le plan philosophique de la *bifurcation* mystique que nous trouvons dans les récits orphiques et pythagoriciens (11), constitue, à notre avis, la structure primordiale du raisonnement parménidien. C'est à cette dichotomie qu'obéit la présentation de son enseignement sous la forme de deux *thèses* contradictoires: les deux chemins de la recherche.

Notre analyse cherchera à établir le contenu de ces thèses contradictoires ainsi que leur portée, c'est-à-dire le domaine auquel elles s'appliquent et les conséquences qui dérivent de leur acceptation rigoureuse (12). Nous partirons pour cela du fr. 2, où apparaît la première énonciation des "deux seuls chemins de la recherche", et, une fois établie la valeur des deux thèses, nous étudierons leur réapparition (reliée à des problèmes différents) dans les fr. 6, 7 et 8. Ensuite, nous tenterons de découvrir quelques correspondances possibles entre ces chemins de la recherche et le récit mythique du voyage entrepris par le poète-philosophe, tel qu'il figure dans le fr. 1. Enfin, nous analyserons la nouveauté que présente le système de Parménide par rapport à la pensée de ses prédécesseurs.

En ce qui concerne notre méthode, enfin, il y a deux constatations que le lecteur ne pourra pas s'empêcher de faire. La première, qui sera reçue avec un certain soulagement, concerne le fait que notre travail semble se terminer à la page 214. Cela obéit, d'une part, à notre intention de grouper dans deux *Appendices* l'analyse de certains éléments qui renforcent notre recherche, mais dont l'insertion dans les chapitres correspondants aurait, à notre avis, nui à la continuité du

discours, et, d'autre part, à la présentation, dans cet ouvrage, de la Bibliographie Parménidienne.

La deuxième constatation concerne l'abondance - l'excès parfois - de questions dites "philologiques" dans un travail qui, comme le nôtre, se voudrait proche du domaine de la "philosophie". La raison en est simple: nous croyons que dans le domaine des études classiques, une collaboration étroite, voire une symbiose, entre philologie et philosophie s'impose. Nous n'hésitons pas à affirmer que, en ce qui concerne la pensée antique, *la philosophie sans philologie est aveugle*, de même que *la philologie sans philosophie est vide*. Sans son support *réel*, c'est-à-dire les mots et la science qui s'en occupe, les spéculations philosophiques ne sont que tâtonnements; mais les mots, isolés du système conceptuel dont ils sont issus, ne sont que "paroles trompeuses", comme dit Parménide lui-même." (Introduction pp. X-XIII)

8. Cf. K. Reinhardt (1916), p. 56, et J. Mansfeld (1964), p. 57, n. 3.

9. Cf. notamment 8,16 et 8,36-7.

10. P.M. Schuhl *essai sur la formation de la pensée grecque* (1949), p. 284.

11. Cf. *Idem*, p. 285.

12. Parmi ces conséquences, la principale est le rejet, en tant que "chemin de recherche", du prétendu "troisième chemin" du fr. 6.

38. ——. 1985. "Les sources vénitiennes de l'édition Aldine du Livre I du *Commentaire* de Simplicius sur la *Physique* d'Aristote." *Revue internationale des études relatives aux manuscrits médiévaux* no. 39:70-88.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 49-68.

"Même si, ces dernières années, les progrès ont été presque nuls dans l'étude des techniques et de la méthode des éditions d'Alde Manuce, ainsi que dans l'identification des manuscrits

dont il s'est servi pour l'édition du Commentaire de Simplicius sur la Physique d'Aristote, la récente parution de certains documents concernant les bibliothèques vénitiennes vers la fin du XVe et le début du XVIe siècle nous permet d'envisager notre tâche avec de nouvelles précisions. Nous ne croyons pas pour autant avoir trouvé une solution définitive à notre problème, mais nous pouvons avouer que les inconnues dans notre recherche ont maintenant presque entièrement disparu." (p. 70)

39. ——. 1987. "L'histoire du texte de Parménide." In *Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 3-24. Paris: Vrin.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 16-36.

"Nous sommes condamnés aujourd'hui à ne posséder qu'un schéma très partiel et mutilé de sa philosophie, si puissante et polémique(7). Il nous est parvenu toute une série de fragments d'un poème à caractère philosophique⁸ attribuée depuis l'antiquité à Parménide (voir l'appendice B à la fin de cet article). Tous ces fragments appartiennent-ils à un seul ouvrage⁹, Trouvons-nous à l'intérieur de ces fragments le noyau central de la pensée de Parménide?(10). Nous n'en aurons jamais la certitude totale. En outre, et comme complication supplémentaire, Platon fait allusion à l'enseignement "en prose" (πεζή)(11) de Parménide. Cet enseignement était-il oral ou écrit? Nous ne pouvons pas le savoir. Il n'y a qu'une réalité: une certaine quantité de vers - groupés ou isolés - écrits vers le début du Ve siècle par Parménide, à partir desquels, à un moment donné, des érudits ont essayé de reconstituer le Poème originel. Les péripéties de la découverte de ces fragments et des essais de reconstitution du texte de Parménide constituent le domaine auquel nous faisons allusion lorsque nous parlons de "l'histoire du texte de Parménide". (pp. 3-4)

(...)

"A partir de la 5e édition de *Die Fragmente der Vorsokratiker* (1934/7), la responsabilité du travail appartient à W. Kranz, (qui était responsable depuis 1910 d'un volume contenant le *Wortindex*). Kranz modifia encore une fois quelques leçons, la traduction, et l'ordre des fragments(76). La 6e édition (1951), enfin, reproduit le texte de la 5e et ajoute un "Nachtrag" détaillé. Toutes les éditions qui paraîtront après 1951 ne sont que reproductions photomécaniques de la 6e édition.

Cette version du Poème de Parménide est devenue orthodoxe. Elle est souvent reproduite, et la plupart des érudits, même les plus compétentes, lui font confiance. Il n'y a que quelques auteurs qui aient proposé de légères modifications, toutes basées sur l'apparat présenté par Diels-Kranz. Cet apparat, pourtant, n'est pas exempt d'erreurs (nous en signalons quelques exemples dans l'"Appendice A"). Nous estimons, en conclusion, que cette version "orthodoxe" doit être modifiée en profondeur, à partir des éléments fournis par une nouvelle analyse des sources manuscrites du texte de Parménide(77)." (p. 24)

Appendice A: Sur la version de Diels-Kranz du Poème de Parménide: a) L'évolution (pp. 18-19); b) Quelques erreurs (pp. 19-24);

Appendice B: Les sources du texte de Parménide (pp. 22-24)

(7) Sur l'aspect "contestataire" du Poème de Parménide par rapport aux philosophes précédents, cf. notre travail *Les deux chemins de Parménide* , Paris-Bruxelles, 2e éd. 1997, pp. 197-8.

(76) Dans ["Appendice A" nous signalons les différents changements effectués par Diels-Kranz dans leur version entre 1897 et 1937.

(77) Nous avons présenté un texte critique correspondant à l'état actuel des éditions des auteurs-sources, aussi qu'à nos recherches personnelles, dans notre ouvrage *Les deux chemins de Parménide* (Vrin-Ousia, Paris-Bruxelles, 1984; 2e éd. 1997). - 1-32) et “Le vers 1.3 de Parménide (‘La déesse conduit à l’égard de tout’)”, *Revue Philosophique*, 1982, 2, pp. 159-179.
40. ——. 1987. "Simplicius et l'«école» éléate." In *Simplicius. Sa vie, son oeuvre, sa survie*, edited by Hadot, Ilsetraut, 166-182. Berlin: de Gruyter.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate i i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 214-227.

"En effet, il est très probable que l'école éléate n'ait jamais existé. Il est très probable que les éléates, en tant que mouvement philosophique, n'aient jamais existé. Mais, dans ce cas là, il aurait fallu les inventer, car ce concept, comme celui de Dieu, permet de résoudre toute une série de problèmes.

Il a permis, surtout, de mener à bien une classification par rapport à laquelle les systèmes de Platon et d'Aristote se sont placés et ont dessiné ses limites, ce qui n'est pas une petite affaire. En effet, c'est grâce à des schémas clairs et distincts, qui ont coulé dans des moules acceptables, c'est-à-dire compréhensibles, des systèmes parfois très éloignés des intérêts de ces penseurs plutôt «primitifs», que seraient les résocratiques, que la métaphysique et l'ontologie occidentales ont pu avancer. Et l'«école éléate» est l'un de ces moules, l'un de ces casiers. Voilà pourquoi, si l'école éléate n'a peut-être pas existé, il aurait fallu l'inventer.

Le titre de notre travail fait allusion à Simplicius et l'«école» éléate, mais nous ne pouvons pas oublier que Simplicius utilise un schéma qu'il reproduit, plus ou moins fidèlement — comme nous le verrons; aussi ne sera-t-il pas inutile de porter notre réflexion sur la réalité historique de ce qu'on appelle «école éléate», sur sa genèse, ses intégrants et ses caractéristiques." (p. 166)

41. ——. 1990. "La Déesse de Parménide, maîtresse de philosophie." In *La naissance de la raison en Grèce. Actes du Congrès de Nice, mai 1987*, edited by Mattéi, Jean-François, 207-214. Paris: Presses Universitaires de France.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 110-117.

"Un siècle et demi après Hésiode, mais presque au même temps qu'Eschyle et que Pindare, Parménide partage encore cet univers. Dans l'histoire qu'il nous raconte, il y a quelqu'un qui s'adresse à une déesse. Il ne l'invoque pas, mais il fait un voyage pour la rencontrer, et ce voyage est très certainement initiatique. Et lorsque le voyageur arrive au domaine de la déesse, celle-ci qui, comme la *théa* du début de l'*Iliade*, est anonyme parle. Comme toutes les déesses que nous venons de mentionner, elle dit la Vérité, et exhorte son élève à écouter son *mythos* : «Eh bien : je dirai, et toi, qui écoutes, accueille mon *mythos* » (fr. 2. 1).

Jusqu'ici, rien de nouveau. La Déesse parméniennne n'a rien de particulier. Mais une fois exposés (au fr. 2) les principes de sa Vérité -- c'est-à-dire les axiomes desquels découlent les affirmations qui constitueront un véritable "système" la Déesse s'engage dans une révolution copernicienne. Elle, qui est une Déesse, se sécularise, et, d'une manière inattendue, demande à son élève : "Juge avec le logos la preuve très polémique que je viens d'énoncer" (fr. 7.5-6). Etonnante formule dans la bouche d'une déesse, que cet appel à son élève afin qu'il examine son message avec le logos! Il est probable que la philosophie, comme recherche du principe de toutes les choses, est née le 28 mai 585 (8), lorsque l'éclipse que Thalès avait prédite a eu la gentillesse de ne pas manquer au rendez-vous; mais nous n'hésitons pas à affirmer que la philosophie, en tant que critique argumentée des idées reçues, c'est-à-dire comme dialogue didactique entre la Vérité et la pensée qui l'interroge, est née en ce jour du début du Ve siècle, quand Parménide écrivit -- ou récita -- les mots que nous venons de citer. Notre affirmation peut paraître surprenante. Il est indéniable, néanmoins, que dans cette formule nous trouvons pour la première fois une invitation -- même une incitation -- adressée par un maître à son élève, afin que celui-ci joue un rôle actif dans la recherche de la vérité. Mais nous devons justifier notre

enthousiasme, et le meilleur moyen est l'analyse détaillée des vers 5 et 6 du fragment 7 de Parménide." (pp. 208-209)

(8) W. K. C. Guthrie, *A History of Greek Philosophy*, I, Cambridge, 1962, p. 6.

42. ———. 1991. "L'invention de l'école Éléatique: Platon, *Soph.* 242d." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre and Michel, Nancy, 91-124. Napoli: Bibliopolis.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 194-213.

"La "philosophie éléatique" est devenue ensuite l'un des clichés dont les commentateurs dans un premier temps, et les historiens de la philosophie après, n'ont pas pu se passer. Nous voudrions analyser dans ce travail le rapport qui pourrait s'établir entre les deux philosophes nés à Elée ("éléates", donc) et le "système éléatique"(5) tel qu'il a été canonisé par Platon dans le *Sophiste*.

«Pour ce qui est de notre gent (*ethnos*) éléatique, qui part de Xénophane et de plus haut encore» (tr. L. Robin), elle «ne voit qu'unité dans ce qu'on nomme le Tout» (tr. A. Diès) (*Soph.* 242 D). Lorsque Platon écrivait ce passage du *Sophiste* qui constitue la première "histoire de la philosophie" que nous connaissons(6) - pouvait-il imaginer qu'il venait de signer l'acte de naissance de l'école éléatique? Probablement pas, mais comme sa systématisation permettait à la fois de "clarifier" la complexité de la pensée parménéidienne et de placer le «vénérable et redoutable» Parménide (*Theaet.* 183 E) parmi des collègues plus facilement critiquables, la formule eut un succès retentissant.

Mais il faut justifier ces appréciations, et le point de départ le plus approprié est l'analyse du passage platonicien." (p. 94)

(...)

"Dans le *Sophiste*, Platon doit se libérer d'une certaine conception de l'être: celle qu'il avait affirmée jusqu'aux

dialogues de la période des "critiques". Le *Parménide* règle les comptes avec la théorie des Formes, mais surtout en ce qui concerne le rapport entre celles-ci et les individus. Dans le *Sophiste*, c'est la structure même de l'univers des Formes, ainsi que la constitution de chaque Forme, qui est en question. Jusqu'au *Sophiste*, l'héritage du père Parménide était la source de l'univers des Formes. La nouvelle conception du παντελῶς ον, en revanche, exige le parricide.

Mais Platon, qui se considérait jusqu'alors comme un parménidien lui-même, est certain que les conceptions de Parménide ont dépassé la personne du Maître et sont à la base d'un mouvement qui montre - enfin! - ses faiblesses chez l'"élève" Méliossos. En fin de compte, Parménide n'était qu'un moniste, dit Platon. Il devient ainsi la figure centrale d'un groupe qui «ne voyait que l'unité dans ce qu'on nomme le Tout», dont le représentant le plus récent, Méliossos, propose une version *ad usum Delphini* du système. L'école d'Elée, devenue un cliché, est une généralisation didactique utile, profitable. Mais elle possède autant de réalité historique que la très belle "Ecole d'Athènes" de Raphaël.

(5) 5 Nous appelons conventionnellement "éléates" les habitants d'Elée et "éléatique" tout ce qui concerne l'école ou le système philosophique qui serait né à Elée.

45. ———. 2004. "La pensée s'exprime 'grâce' à l'être: Parménide, fr. 8, 35." *Revue Philosophique de la France et de l'Étranger* no. 129:5-13.

;"En effet : Parménide est très cohérent : étant donné la priorité qu'il a accordée au fait d'être, le penser s'exprime *ép'eónti*, c'est-à-dire, « grâce » (ou « à cause de » : *epí* n'abandonne jamais son pouvoir causal) à ce qui est. La formule *eph'hôî*, que nous proposons d'adopter, consacre ce principe au beau milieu de l'exposé des sémata de ce qui est, dans le long fragment 8. Et, à la ligne suivante, Parménide exprime la même idée, mais d'une manière négative : sans ce qui est (áneu(1) tou eóntos), le penser n'existe pas. Voici donc le sens du passage 8.34-6 : « Penser et ce pour quoi la pensée est, sont la même chose ; car sans ce qui est, grâce auquel il est énoncé, tu ne trouveras pas le penser. » Le penser n'existe que lorsqu'il exprime quelque chose sur ce qui est en train d'être. Et comme « il n'y a pas, et il n'y aura pas, autre chose que ce qui est » (8 .36 b-7), la pensée n'a qu'un seul objet : ce qui est. Lorsque ce qui est est absent de la pensée ou du dire, il n'y a que des « mots » trompeurs (8 . 52), des opinions vides." (p. 13)

(1) *Áneu*, en tant que privation, est l'expression contraire à *epí*.

47. ———. 2006. "Pour en finir avec la "troisième voie" chez Parménide." *Elenchos* no. 27:5-33.

;"Parler de "voies de la recherche" chez Parménide est non seulement naturel, mais aussi légitime. En effet, il est tout à fait *naturel* de parler de ces voies car Parménide lui-même en parle, et il est *légitime* de le faire parce que Parménide affirme, dans le texte connu aujourd'hui comme "fragment 1", que celui qui entreprend le chemin du savoir a le "droit" à l'ouverture des portes de la connaissance. Ce n'est pas le fruit du hasard que soit Diké, la déesse du droit, qui détienne les clés qui ouvrent la voie du chemin de la vérité, et que soit elle qui permet ainsi d'entreprendre la recherche qui conduira vers la découverte de l'être. En revanche, parler d'un problème concernant ces voies de recherche est à la fois artificiel (c'est-à-dire, non naturel) et illégitime, car ce *problème* n'existe pas dans la philosophie de Parménide. Il s'agit d'une invention des commentateurs, et même des commentateurs qui s'étalent dans le temps dans une période très restreinte, car Parménide a écrit son texte il y a au moins vingt-cinq siècles, et ledit *problème* est né il y a à peine un siècle et demi, et même moins. On pourrait soutenir que la tradition philosophique s'est trompée, et même que les commentateurs anciens sont restés aveugles et sourds face à ce qui était évident. Ce n'est pas impossible. Mais on peut affirmer aussi que notre post-modernité a une tendance naturelle à compliquer ce qui, en soi, était presque banal, et qu'elle exige des gens du passé qui s'expriment au présent. Les intellectuels ont l'habitude de parler d'une "récupération" du passé. Nous préférons la catégorie de "tergiversation". Regardons à ce propos le cas de Parménide." (p. 5)

48. ——. 2010. *Gianfrancesco d'Asola, le "créateur" de la troisième voie de Parménide* .

;Celtic Conference in Classics - The Second Conference of the International Association for Presocratic

Studies, University of Edinburgh 28-31 July 2010. (inédit, disponible sur academia.edu).

"Notre travail a un seul but: inviter (et même inciter) les chercheurs intéressés à la philosophie de Parménide à revenir au passé, car la seule justification de l'existence d'une éventuelle troisième voie de recherche est la conséquence d'un

verbe introduit en 1526 par l'éditeur Gianfrancesco d'Asola pour combler une lacune existante dans les manuscrits qu'il avait utilisé lorsqu'il s'est occupé d'imprimer le Commentaire de Simplicius à la "Physique" d'Aristote, seule source du fr. 6 de Parménide. La meilleure manière de revenir au passé consiste à interpréter la philosophie de Parménide sans tenir compte de la conjecture proposée par d'Asola, et respecter, en ce qui concerne le vers 6.3, son état lacunaire." (p. 5)

49. ——. 2011. "La "Doxa des mortels" n'est pas la "physique" de Parménide." In *Ontologia scienza mito. Per una nuova lettura di Parmenide*, edited by Ruggiu, Luigi and Natali, Carlo, 81-90. Milano-Udine.

;Repris dans N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 181-189.

50. ——. 2012. "'Être" (et non "L'Être") chez Parménide." In *Λόγος διδόναι. La filosofia come esercizio del render ragione. Studi in onore di Giovanni Casertano*, edited by Palumbo, Lidia, 107-114. Loffredo: Napoli.

;"Nous voyons aujourd'hui que le rapport qu'il y a entre les textes conservés (les "fragments") des Présocratiques les plus éminents, Héraclite et Parménide, et l'interprétation platonicienne et aristotélicienne, n'est – comme on dit dans certains films – qu'une pure coïncidence.

Il semble évident qu'aussi bien Platon comme Aristote possédaient le texte intégral des deux philosophes, mais quand ils commentent les passages que, heureusement, nous conservons encore aujourd'hui (par exemple, les vers 8.43-4 de Parménide sur l'image de la sphère, en ce qui concerne Platon(5), ainsi que l'interprétation aristotélicienne des vers 8.55-9, où le Stagirite se permet de parler de "principes", ἀρχαί, chez Parménide, le froid et le chaud(6), nous voyons qu'il s'agit d'une véritable entreprise de désinformation, car ils adaptent ces textes à leurs propres recherches." (pp. 108-109)

(...)

"L'origine des trois prétendues propriétés de l'Être (unité, immobilité, sphéricité) est facile à trouver: depuis l'Antiquité on a parlé de "L'Être" de Parménide, c'est à dire, d'un verbe substantivé, comme traduction, dans toutes les langues, de la formule parménidienne τὸ ἔοῦν. Le verbe "être", "substantialisé", c'est à dire, devenu un substantif, "L'Être", peut être envisagé comme une substance, susceptible d'être une ou multiple, immobile ou en mouvement, et sphérique ou cubique.

Mais la nouveauté introduite par Parménide dans le domaine de la philosophie (nouveauté que Platon semble découvrir tardivement, lors de l'écriture du *Sophiste* ; je reviendrai sur ce point), a consisté à découvrir que, s'il a des entités "substantielles", ou, si l'on préfère, des "étants", c'est parce qu'il y a de l'être. Et son Poème est une (dé)monstration passionnée du caractère nécessaire (car il est impossible de ne pas être: fr. 2.3) et absolu (car il n'y a pas des étants qui ne soient pas: fr. 7.1) du fait d'être. Le participe, parfois substantivé, (τὸ ἔοῦν), est une nuance grammaticale de la thèse centrale du Poème, qui est une analyse de l'infinitif εἶναι, nuance qui permettra de faire allusion à tous les "étants" (τὰ ἔόντα) moyennant un singulier général ou générique, (τὸ ἔοῦν), et ceci pour la première fois dans un texte philosophique." (p. 109)

(...)

"Les mortels ne mélangent pas deux "entités", l'Être et le Non-Être, comme on dit presque toujours, mais deux "états": le fait d'exister et le fait de ne pas exister." (p. 110)

(...)

"N'oublions pas que Platon, presque son contemporain, n'a pas hésité à écrire que «je crains ne pas comprendre ce que lui [Parménide] a dit, et, plus encore, que le sens de sa pensée nous échappe»(15). Il y a à cet égard un fait très curieux: le texte que nous appelons aujourd'hui "fragment 2", qui présente les seules voies de recherche que l'on peut imaginer (dont l'une sera supprimée), et qui expose les véritables axiomes sur lesquels s'appuie toute la philosophie de Parménide (*grosso modo* : il y

a de l'être; ne pas être n'est pas possible) n'a été cité par des "collègues" philosophes, Proclus et Simplicius, que plus d'un millénaire après son écriture. Ce texte fondamental semble ne pas avoir été l'objet d'un intérêt particulier de la part de Platon, d'Aristote, de Plutarque, ni de personne, peut être parce que Parménide n'avait pas accompagné sa découverte du fait d'être d'une assimilation de celui-ci à des étants privilégiés (eau, feu, atomes, Formes, etc.), comme c'était le cas des autres philosophes." (pp.112-113)

51. ——. 2015. "L'insoutenable poids des 'absences' dans l'interprétation parménidienne de Casertano." In *Eleatica Vol. 4: Da Parmenide di Elea al Parmenide di Platone*, edited by Gambetti, Francesca and Giombini, Stefania, 129-135. Sank Augustin: Academia Verlag.

;"Or, la nouveauté de Parménide, laissée de côté par Casertano, c'est l'utilisation, pour la première fois, du singulier, το ἐόν. Or, si Parménide a introduit cette nouveauté c'est pour se séparer de ses collègues (tout en restant un 'physicien') et pour souligner que, comme πάντα τα ὄντα ont en commun 'le fait d'être' - on reviendra sur cette formule - c'est du fait d'être que doit s'occuper le philosophe, et ce fait d'être est représenté par un singulier générique. Casertano a donc raison lorsqu'il dit que Parménide utilise la formule το ἐόν, 'l'ente, «ciò che è»', et qu'il ne parie pas de 'l'être'. Mais on peut lui répondre: parler de το ἐόν, est parler de ce que 'tous' les philosophes grecs ont appelé 'l'être'. La très connue phrase d'Aristote en est une confirmation: «Il y a une certaine science qui étudie τὸ ὄν ἢ ὅν» (Mét. 1003a21). La traduction littérale de la formule est, bien sur, «ce qui est, en tant qu'il est», mais personne ne peut nier qu'Aristote envisage ce que les philosophes appellent 'l'être'. Personne n'a utilisé la formule qui devrait être traduite littéralement par 'l'être', τὸ εἶναι. Elle apparaît une fois chez Platon (Soph. 243 e2 mais elle concerne le 'verbe' être.

Mais après avoir dit que, pour parler de l'être, Parménide utilise la formule 'ce qui est', il s'interroge: «l'essere di B3 è la stessa cosa di τὸ εἶναι o indica qualcosa d'altro?». Or, DK 28B3 parle 'd'être', non pas de 'l'essere' ('l'être'). Nous rentrons ici au centre du parménidisme, car, en effet, la découverte de Parménide concerne 'le fait d'être', une activité dénotée par un 'verbe', qui se concrétise 'après' dans un participe, τὸ εἶναι(2). Parménide commence par la découverte d'ἐστὶ (DK 28B2,3) et arrive, après, à concrétiser cet ἐστὶ dans ce qui 'indéniablement' 'est', 'ce qui est' (τὸ εἶναι). Dans tous les passages décisifs de son Poème, Parménide présente sa découverte par l'intermédiaire des formes du 'verbe' être (et, parfois, directement par l'infinitif, comme en DK 28B3), représenté soit pas εἶναι suit par πελέναι(3). Et, contrairement à ce que dit Casertano ('Tutti i σήματα di DK T H' riguardano «ciò che è»'), les σήματα du fr. 8 concernent exclusivement Γέσσι: 'il reste un seul mot comme chemin: ὡς εστιν. Sur 'celui-ci' (ταύτη δ' ἐπὶ) (donc, a propos de ce 'mot') il y a plusieurs σήματα (DK 28B8,1-2). Comme le 'seul' sujet qui peut appartenir au dénudé ἐστὶ d'une manière claire, immédiate et distincte c'est τὸ εἶναι (car, qui pourrait nier que, s'il y a quelque chose qui εστιν, est 'ce qui est?'), Parménide concrétise le dénudée εστιν dans 'ce qui est' (en réalité, dans la plupart des cas, sans l'article), et ce qui est un, inaltérable, complet, etc., est 'ce qui est en train d'être', [τό] εἶναι, qui garantit l'existence des étants." (p. 130)

(2) Des détails sur notre position se trouvent dans notre contribution au volume consacré à Casertano: N.-L. Cordero, *Etre (et non pas L'Être) chez Parménide*, in L. Palumbo (a cura di), *λόγον διδόναι. La filosofia come esercizio del render ragione. Studi in onore di Giovanni Casertano*, Napoli 2011, pp 107-114.

52. ——. 2016. "Aristote, créateur du Parménide *díkranos* que nous héritons aujourd'hui." *Anais de Filosofia Clássica* no. 10:1-25.

;Abstract: "All studies consecrated to Parmenides reads his "Poem" as it had been written in this way: Introduction (fr. 1), Way of Truth (fr. 2-fr. 8.50), "Way of Seeming" (Doxa) (fr. 8.51-fr 19).

However, this order was proposed in 1795 by G. G. Fülleborn, based on the interpretation of Simplicius, inspired by Aristotle. But Aristotle had already "platonized" Parmenides, by applying to him a dualistic scheme inexistent before Plato. If we don't take care of Aristotle's mistake, the interpretation of Simplicius, as well as Fülleborn's arrangement, must be abandoned, especially because doxa, in Parmenides' time, means "opinion" and have not an ontological value, synonym of "appearances". There is not in Parmenides a study of two subjects (being and appearances) but a single subject, considered from two points of view opposites."

53. ———. 2017. "La place de la "physique" de Parménide dans une nouvelle reconstitution du *Poème* ." *Revue de Philosophie Ancienne* no. 35:3-13.

;Résumé : "En 1795, G. G. Fülleborn publia un travail sur Parménide dans lequel, pour la première fois, on proposa un arrangement des fragments du Poème en deux parties, l'*Alétheia* (fr. 1 à 8.50 DK) et la *Dóxa* (fr. 8.51 à 18 DK). L'auteur avoue s'être inspiré de Simplicius, et cette division devint canonique. Or, le critère utilisé par Simplicius est une conséquence de la « platonisation » de Parménide, esquissée déjà par Aristote, qui trouve chez l'Éléate la dichotomie « sensible / intelligible ».

Conséquence : il y aurait dans le Poème une théorie sur l'être et aussi sur les apparences. Il suffit de regarder ce que Parménide lui-même établit comme « vérité » et ce qu'il considère comme « dóxa » pour réfuter ce schéma et trouver dans le Poème une place pour les textes « physiques », qui ne correspondent pas à la « doxa », étant donné qu'ils ne sont ni trompeurs ni décevants."

54. ———. 2018. "Quelques exemples de la « physique » contestataire de Parménide." *Anais de Filosofia Clássica de Rio de Janeiro* no. 12:88-109.

;Résumé : "Chez Parménide, une analyse détaillée des citations authentiques de son Poème, sans tenir compte des commentaires, qui, depuis Platon, ont essayé de les interpréter, montre clairement qu'il y a une distinction entre ce qu'il appelle "doxa" et sa propre "physique". Cette distinction est malheureusement effacée dans la version du Poème, proposé en 1795 par G.G. Fülleborn et accepté aujourd'hui comme "orthodoxe". Dans cette version, les citations que Parménide consacre aux "doxai" des mortels, qui ne sont ni vraies ni convaincantes, cohabitent avec des fragments qui contiennent la véritable "physique" de Parménide. Cet article se propose de déchiffrer ce qui reste, dans cet ensemble, de la "physique Parménidienne" de Parménide."

55. ——. 2018. " L'être parménidien selon Cerri: une réalité... irréelle." In *Eleatica Vol. 6: Dall'universo-blocco all'atomo nella scuola di Elea: Parmenide, Zenone, Leucippo* , edited by Pulpito, Massimo and Ranzato, Sofia, 154-157. Sank Augustin: Academia Verlag.

;"En réalité, il est impossible de ne pas partager la thèse centrale de Cerri concernant Parménide: il s'est occupé, dit-il, de 'il reale', de 'ciò che esiste oggettivamente'. Mais plusieurs questions se posent à propos de ces formules, la première: qu'est-ce qu'est 'il reale'? D'autres philosophes, après Parménide, notamment Platon, ont forgé la formule '*ontôs on*', et, pour faire allusion à la totalité du réel il a utilisé '*pantelôs on*'. Mais chez Parménide il n'y a qu'*eon* (et, très rarement, *n*). Or, pour montrer que 'la realtà è costituita dall'*eon*' (p. 53), Cerri emprunte un chemin très curieux qui fait de l'*eon* l'opposé de ce qu'il se propose soutenir, car *il devient une abstraction totalement irréelle* , une sorte de fantôme qui annonce la philosophie-fiction de Mélissos, créateur d'un *eon* qui n'a rien à voir avec ce qui est réel.

Le fait d'attribuer un caractère 'scientifique' à 'la metodologia-epistemologia della conoscenza' (p. 49) parce qu'elle s'appuie sur l'*esti*, et la critique 'dei falsi sapienti' parce qu'ils font appel à des énoncés 'imperiati sul 'non è', n'a pas de sens. Les 'falsi sapienti' utilisent, eux aussi l'*esti* : ils disent que 'tout est en même temps un ensemble de lumière et de nuit obscure' (fr.

B9, 3), et le discours vrai n'hésite pas à faire appel à l'*ouk esti* quand il affirme que l'un des chemins 'n'est pas le vrai chemin' (fr. B8, 17).

Mais le point le plus contestable de l'interprétation de Cerri est l'antithèse radicale qu'il trouve entre le pluriel *eonta* et le singulier *eon*. Pour lui, *eonta* 'sono doxai' (p. 54), tandis que l'*eon* 'è il reale'. C'est évident que Cerri est victime d'un préjugé qui découle de l'interprétation d'Aristote, qui avait envisagé Parménide à la lumière de son propre système (Platon, en revanche, avait été plus prudent), selon lequel l'Éléate, d'une part, s'exprimait monachôs, mais 'obligé par les *phainomena* " (*Metaph* . 986 b), avait proposé deux 'principes', lumière et nuit. L'inexactitude d'Aristote est plus qu'évidente, car, dans les passages authentiques du Poème que nous conservons aujourd'hui - et qu'Aristote sans doute connaissait - Parménide attribue la postulation (*katethento*, fr. B8, 53) de deux principes aux 'mortels qui ne savent rien.'" (p. 154)

56. ——. 2019. "Il y a, évidemment, un « Parménide *phusikós* », mais... (à propos de Livio Rossetti, « Un altro Parmenide », 2017) " *Archai. The Journal of Archetypal Cosmology* no. 25:1-29.

;Résumé : "Comme tous les Présocratiques, Parménide s'est intéressé à la *phúsis* ; donc, considérer qu'il était un *phusikós* , c'est tout à fait naturel. L. Rossetti, dans son capolavoro en deux volumes *Un altro Parmenide* (Diogenes Multimedia, Bologne, 2017), a étudié d'une manière très détaillée la question. Cependant, la perspective à partir de laquelle Rossetti a envisagé la question n'a pas pu se dégager de deux obstacles principaux : la place dans laquelle se trouvent les textes « physiques » (à l'intérieur de la « doxa ») et le caractère négatif que la « doxa » a aux yeux de Parménide. En effet, en fonction d'une division arbitraire du Poème en deux parties, proposée par G.G. Fülleborn, en 1795, les textes « physiques » de Parménide seraient à l'intérieur d'« un ordre trompeur de mots », qui commence au vers 8.51 et se termine au fr. 19, ce qui anéantit la valeur d'une physique parménidienne. La seule façon de revendiquer une physique chez Parménide consisterait

à séparer ses textes physiques de la « doxa des mortels », critique par la Déesse.

Évidemment, cette possibilité suppose une critique d'une partie de la tradition doxographique, initiée par Aristote."

57. ———. 2019. "Pourquoi Sextus cite le fr. 7.2 (DK) de Parménide après le vers 30 du fragment 1 (DK) ?" In *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, 97-103. Baden-Baden: Academia Verlag.

;Conférence prononcée à l'*International Association for Presocratic Studies* 6, Delphi, juin 2018.

Traduction anglaise: "Why Simplicius quoted the fr. 7.2 (DK) of Parmenides after the fr. 1.30 (DK)?" disponible sur academia.edu.

58. ———. 2020. "Parménide phusikós, oui, mais." In *Verso la filosofia: Nuove prospettive su Parmenide, Zenone e Melisso*, edited by Galgano, Nicola, Giombini, Stefania and Marcacci, Flavia, 195-198. Sankt Augustin: Academia Verlag.

;"Le Parménide de Rossetti est en réalité un Parménide 'platonisé', mais non par Platon, mais par Aristote et Simplicius. Aristote, qui a du mal à ranger Parménide parmi les *phusiologōi*, interprète que, malgré tout, il aurait dû s'occuper du sensible, et affirme que, "obligé par les phénomènes, il a proposé aussi deux *arkhai*" (Met. 985b31).

C'est absurde. Ce n'est pas Parménide, mais les 'mortels' qui ont, comme les philosophes précédents, trouvé une explication de 'la réalité' (non 'du sensible') moyennant des éléments. La dichotomie sensible/intelligible ne se trouve pas chez Parménide. La doxa parménidienne n'est pas l'"apparence" d'un Être occulte.

Simplicius systématise la platonisation de Parménide quand il dit que, "dans son discours sur l'opinion, il pose comme principes le froid et le chaud. Il les appelle feu et terre, lumière et nuit ou obscurité" (*In Phys.* 170). Grâce à Simplicius, Parménide devient *díkranos* ...

Un Parménide *phusikós* ? Pourquoi pas, mais en fonction de sa découverte, le fait d'être, qui empêche que ce qui est (lune, soleil, sexes, voie lactée) ne soit pas." (p. 198)

59. ———. 2021. "Le très curieux silence des Doxographes à propos de l'incompétence des auteurs des opinions chez Parménide." *Journal of Ancient Philosophy* no. 15:1-17.

;Abstract: "Since the Goddess of Parmenides presents the two ways to explain the reality that must be faced by this who want to become a "man who knows", the truth and the opinions of mortals, she makes clear that the opinions (*dóxai*) are not "reliable". Later, when he describes in detail how the makers of opinions really are, the description is devastating: they are the people who are incapable of judging, who are astonished, who do not know how to use sensations, and who have a misguided intellect. Consequently, when they express their opinions, they present only a "misleading set of words". However, already from Aristotle onwards, this way of conceiving reality is attributed to Parmenides himself, and not to "the mortals". Theophrastus echoes this interpretation of Aristotle and, with him, the totality of the Doxographers. Obviously, in order to attribute the "opinions" to Parmenides himself, any reference to the incapacity of his authors is absent from the comments: no Doxographer mentions it."

60. ———. 2022. "Les deux manières d'expliquer la réalité proposées par Parménide." *Peitho. Examina Antiqua* no. 13:13-23.

;Abstract: "Towards the end of fragment 1 of his Poem, Parmenides puts forward two methods or paths that a priori explain the same object of study: the existence of the fact or state of being. One of the options leads to the core of the truth and is, therefore, pursued. The other is merely a set of contradictory opinions and is, accordingly, abandoned. These two paths are expounded in the rest of the Poem, while fragment 4 shows that even the erroneous conception, which had to be set aside, can still be fruitful. Once the firm foundation of truth has been established, fragments 10 and 11 propose to widen the inquiry to the whole of reality. This

interpretation suggests a rejection of the arrangement of the Poem that has become canonical, and a criticism of the doxographic tradition that since Aristotle has “Platonised” the philosophy of Parmenides by assimilating the “opinions” (which are only points of view) to the “appearances” (in the Platonic sense of the term).”

61. ———. 2023. "L'aristotélisation de Parménide, est-elle un parménidicide ?" In *Eleatica Vol. 9: Aristotle and the Eleatics = Aristotele e gli Eleati*, edited by Pulpito, Massimo and Berruecos Frank, Bernardo, 135-146. Baden-Baden: Academia Verlags.

;"Le titre de cette communication, “L'aristotélisation de Parménide, est-elle un parménidicide?” pourrait sembler exagéré, mais je ferai de mon mieux pour le justifier, de la manière la plus succincte possible.

Le défaut principal de l'aristotélisation de Parménide, est son héritage. Les notions, comme les gens, ont des ancêtres, et l'ADN originaire reste dans les descendants.

C'est le cas d'une erreur de lecture de la part d'Aristote (nous justifierons ce mot, car il ne s'agit pas d'une interprétation erronée, mais d'une faute; Platon n'a pas commis cet erreur, même si son interprétation peut être considérée partielle) qui a déterminé, à partir de lui (via Simplicius et G. G. Fülleborn) la destinée des études parménidiennes." (p. 136)

(...)

"La véritable tragédie grecque à laquelle nous avons fait allusion dans nos travaux récents cités ci-dessus commence en 1795 quand le philosophe kantien Georg G. Fülleborn écrit le premier livre consacré exclusivement à la pensée de Parménide(11). Le travail est excellent, et, tel qu'on attend d'un chercheur sérieux, il envisage la pensée de Parménide selon un critère herméneutique, dans l'occasion, d'origine kantienne, qui distingue, d'un point de vue gnoséologique, l'intelligible et le sensible. Et, en fonction de ce critère, Fülleborn divise les dix-huit(12) fragments en deux “sections”. Un ensemble de textes font partie du “Vernunfterkenntniss vom Wesen der Dinge” (p.

55), et un autre ensemble s'occupe du "Sinnliche Erkenntniss vom Wesen der Dinge" (p. 81). Mais l'ADN aristotélicien apparaît à la page 54, quand Fülleborn reconnaît que "ita dividit carmen Parmenidis Simplicius". Et il a raison; après avoir transcrit quelques vers concernant l'être-Un, Simplicius, s'inspirant d'Aristote, écrit: "Ensuite Parménide quitta l'intelligible pour le sensible, ou, selon ses propres termes, la vérité pour l'opinion (δόξα) [...] Et établit, lui aussi, comme principes élémentaires des choses engendrés, l'opposition première, qu'il appelle 'lumière et obscurité' ou 'feu et terre' ou 'dense et rare' ou 'le même et l'autre'" (*In Phys . 30*)" (pp. 136-137, certaines notes ont été omises)

(11) Fülleborn 1795 [1795, *Fragmente des Parmenides*, Züllichau], *passim* .

(12) Le fragment 19 fut ajouté en 1810 grâce a la découverte d'A. Peyron 1810 [*Empedoclis et Parmenidis fragmenta ex codice Taurinensis Bibliotheca restituta et illustrata*, Leipzig], 55-61.

62. ——. 2024. "Les conséquences tragiques pour Parménide d'une erreur d'Aristote." *Journal of Ancient Philosophy* no. 18:1-24.

;Abstract: "The difficulty of grasping the thought of Parmenides led interpreters already in antiquity to approach his philosophy according to later schemes of thought. This was the case of Aristotle, whose interpretation was inherited by his disciple Theophrastus and by his commentators, especially Simplicius. Simplicius, a Neoplatonist and Aristotelian at the same time, proposed an interpretation, strongly dualistic (dominated by the sensible/intelligible dichotomy), which is not found in the recovered quotations. The origin of this interpretation is an "error" of Aristotle, inherited by Simplicius, who attributed to Parmenides himself the paternity of the "opinions of mortals". In 1795 G. G. Fülleborn, inspired by Simplicius, proposed a division of the Poem into two "parts", unanimously accepted today, and which must be urgently revised and rejected."

Bibliographie des études en Français sur Parménide F - Z

Bibliographie

1. Couloubaritsis, Lambros. 1986. *Mythe et philosophie chez Parménide*. Bruxelles: Ousia.

;Index: Préface de la deuxième édition (1990) 7; Introduction: Le mythe des multiples chemins 9; Chapitre I: Transmutation du mythe 76; Chapitre II: L'émergence de l'ontologie 165; Chapitre III: L'émergence d'une nouvelle physique 261; Conclusion: L'émergence de la philosophie 352; Appendice: Traduction du poème 368; Table de matières 381-382.

Troisième édition modifiée et augmentée avec le titre: *La Pensée de Parménide* - Bruxelles, Ousia, 2008.

"Dans les pages qui suivent, nous allons tenter d'élucider l'instauration de la philosophie au travers de cette transmutation du mythe, grâce à laquelle se manifestent successivement une problématique de l'être et de la pensée (première partie du poème) et une nouvelle physique (seconde partie). Pour ce faire, nous commencerons par élucider le sens du poème, où le mythe parménidien pose ses fondations en vue d'édifier un nouveau type d'activité, axé exclusivement sur le savoir. Cette première étape de notre recherche nous permettra d'établir plus clairement la pratique parménidienne du mythe et d'en déceler la portée. Ensuite, nous montrerons en quoi l'émergence de l'ontologie est tributaire de la transmutation accomplie par le mythe des multiples chemins. Le traitement du texte nous aidera à discerner comment, par une sorte de retournement, cette émergence de l'ontologie

déstabilise fatalement le mythe lui-même, rendant possible l'instauration de nouveaux discours, comme le discours métaphorique et le *logos* proprement dit. Mais plus fondamentalement encore, que cette démarche parménidienne institue le penser et la pensée, ouvrant la voie à une appréhension nouvelle des choses en devenir. C'est en effet en nous appuyant sur cette problématique de la pensée que nous achèverons notre travail, en indiquant comment, à la fois la prise en considération des diverses critiques que Parménide adresse à ses prédécesseurs (117) et une certaine réorganisation des fragments (118) autorisent à établir l'émergence d'une nouvelle physique, fort différente de celle des Ioniens, non seulement parce qu'elle met en oeuvre une cosmogonie quasi-mythique, fondée sur deux entités, mais aussi et surtout parce qu'elle s'institue grâce à l'usage même de la pensée, qui seule peut accorder le devenir aux lois de l'être, lui assurant, de ce fait même, une crédibilité. Par là, le poème parménidien nous apparaîtra dans toute sa cohérence: en vue d'instaurer la philosophie le mythe des multiples chemins nous conduit vers la compréhension du cosmos en devenir à partir, d'une part, de l'institution de l'ontologie comme la condition même d'une pensée susceptible de le prendre comme objet possible d'un savoir et, d'autre part, de l'édification d'une physique qui suppose l'impossible ontologisation du réel en devenir." (pp. 74-75)

(117) En distinguant la critique concernant les *akrita phyla* de celle des "mortels" qui, au contraire, séparent le corps du réel sans chercher l'unité des deux entités qu'il établissent.

(118) En situant le fr. 4 dans la seconde partie du poème. Voir l'Appendice de cet ouvrage, où nous introduisons d'autres réaménagements de moindre importance.

;"Des nombreuses difficultés qui subsistent encore dans le Poème de Parménide, les plus importantes nous paraissent celles qui touchent aux trois éléments mêmes du texte: le sens à

accorder au mythe qui l'introduit, la représentation que l'on devrait se donner de l'*eon*, y compris son rapport énigmatique à la question de la pensée, et enfin la signification de la *doxa* et son lien éventuel avec le discours sur *alétheia*. Bref, ce qui est toujours en jeu, c'est encore aujourd'hui, comme autrefois, la cohérence mémé du texte parménidien et donc son unité." (p. 25)

3. ——. 2009. *La pensée de Parménide*. Bruxelles: Ousia.

;Troisième édition modifiée et augmentée de *Mythe et Philosophie chez Parménide*, Bruxelles: Ousia, 1986.

Index: Préface de la troisième édition 9; Introduction: L'avènement de la pensée 27; Chapitre I: Le mythe des multiples chemins 57; Chapitre II: Le "Proème" comme producteur de chemins 121; Chapitre III: Transmutation du mythe 197; Chapitre IV: L'émergence de l'*eon* 243; Chapitre V: Le statut de l'*eon* 297; Chapitre VI: La question de la pensée 343; Chapitre VII: Au seuil d'une nouvelle distorsion 405; Chapitre VIII: Les traces d'un univers perdu 445; Conclusion: L'émergence de la philosophie 515; Appendice: Texte et traduction 537; Auteurs cités 559; Table des matières 569-570.

"Ce livre constitue une nouvelle version, modifiée et augmentée de *Mythe et Philosophie chez Parménide* (1986, 1990 deuxième édition). Parallèlement à une réévaluation de la question du mythe qui différencie le *mythos* comme façon de parler autorisée, et le *logos* comme discours catalogique, cette nouvelle livraison refuse, pour l'*eon* parménidien, le sens anachronique d' "être" ou d' "étant", et distingue *eon / eonta* (ce qui est dans le présent / choses qui sont dans le présent) et *on / onta* (ce qui est ou étant / choses qui sont ou étants), accordant ainsi une prééminence au temps, en l'occurrence au "maintenant". Par là, l'auteur prend davantage encore ses distances par rapport aux interprétations dominantes, et propose comme centre d'analyse le *penser* et la *pensée*. Légitimée par "Ce qui est dans le présent" (*eon*) d'une façon absolue et permanente qui en est la condition "inviolable" (*asylon*), la pensée est appliquée au devenir des "choses qui ne sont pas dans le présent" (*mè eonta*), "choses ab-sentes"

(*apeonta*), et les convertit en "choses pré-sentes" (*pareonta*), sans jamais les identifier à une forme d'être. Grâce à cette promotion du présent dans le devenir, l'impossible ontologisation du réel en devenir s'accompagne néanmoins de la possible édification d'une nouvelle physique, différente de celle des premiers Ioniens, à savoir une physique du *mélange*, fondée sur l'unité de deux "formes", la lumière et l'obscurité, se référant au Feu et à la Terre, et dont le statut doxatique transforme le "nominalisme" propre au devenir des choses éphémères en une pensée de la *doxa*. Ce cheminement complexe donne une solution nouvelle au problème toujours en débat de l'*unité* du Poème, et laisse percevoir, par la transmutation du mythe archaïque, l'émergence de la philosophie comme aspiration au savoir, grâce à l'irruption de la pensée qui, en l'homme, puise sa continuité dans l'inflexibilité de "Ce qui est dans le présent", dont l'enracinement dans la flexibilité de la *physis* réussit à équilibrer et à fonder la force différenciante de la parole."

4. ——. 2019. "Réinterprétation de l'*eon* de Parménide dans l'éclairage du Papyrus de Derveni." In *ὁδοὶ νοῆσαι. Ways to Think. Essays in Honour of Néstor-Luis Cordero*, edited by Palumbo, Lidia, 193-206. Diogene Multimedia: Bologna.

;Résumé : "Ce texte se propose de démontrer la nécessité d'une reconsidération de notre approche de Parménide dans l'éclairage du Papyrus de Derveni, qui montre qu'il faut avoir en considération la temporalité au moment de traduire l'*eon*, de sorte que la traduction qui convient, pour le pluriel *ta eonta*, est il "les choses qui sont dans le présent". Tout d'abord, il montre que le B 2 de l'édition Diels-Kranz de Diogène d'Apollonie distingue clairement *ta eonta* et *ta onta*, co-présence qu'implique que cette différence exprimait deux sens différents dans la problématique de l'être. Ensuite, il indique comment cette différence est clairement posée dans le Papyrus de Derveni, et enfin il établit le sens dans lequel le Papyrus bouleverse notre vision de la pensée de Parménide."

6. Cursaru, Gabriela. 2015-2016. "Imagerie mythico-poétique, philosophie et religion dans le *Proème* de Parménide." *Archæus. Studies in the History of Religions* no. 19-20:19-48.

;"L'analyse du *Poème* de Parménide, des emprunts à l'imagerie mythico-poétique-religieuse et des stratégies que le poète-philosophe a utilisées pour renverser cette tradition au moyen de la substitution, de la transposition du μῦθος par l'instauration du λόγος,, permet de constater que l'Éléate s'inscrit de ce point de vue dans une tradition plus large, celle des Présocratiques, qui, nouveaux bâtisseurs, récupèrent les pierres des édifices antérieurs, les réemploient et leur confèrent de nouvelles fonctions pour construire leurs propres édifices. Parménide, comme Anaximandre et Anaximène, Héraclite et Empédocle, chacun à son tour et à sa façon, s'approprient des thèmes et des moyens poétiques, des figures et des motifs empruntés à la tradition pré-présocratique pour les détourner, substituant leur propre vision philosophique soumise à l'ordonnance de la pensée logique à celle des ποιηταί, instances culturelles traditionnelles qui faisaient autorité. À cet égard, il est intéressant de noter que, par la suite, la pensée philosophique fera constamment appel aux figures du voyage pour traiter de questions épistémologiques, il suffit de mentionner l'image de l'attelage qui, de Parménide à Platon et de Boèce à Ficin, a cristallisé tout un discours sur l'être, l'âme, la connaissance et le lien entre l'homme et Dieu." (p. 44)

7. ——. 2016. "Le *Proème* de Parménide : anabase et / ou catabase ?" *Cahiers des études anciennes* no. 53:39-63.

;"Il n'existe peut-être pas de question plus débattue concernant le *Proème* de Parménide que celle de la direction du parcours suivi par l'attelage du jeune voyageur guidé par les Héliades, et celle du trajet de ces dernières lorsqu'elles sont parties à sa rencontre.

Alors qu'on s'accorde pour reconnaître que le voyage hors du temps et hors de l'espace effectué par le κοῦρος parméniénien n'est qu'une forme d'expression spatialisée de sa quête du savoir, des mouvements noétiques de son âme et du processus de recherche de la connaissance et de la Vérité absolue

d'origine et d'essence divines, on ne cesse de s'interroger sur la nature de son expérience : s'agit-il d'une anabase ou d'une catabase ? Dans cette analyse, il ne s'agira pas de prendre position à ce sujet, mais plutôt de remettre en question la pertinence d'une telle interrogation et de porter un regard neuf sur le sujet. Il me semble que réduire le voyage parménidien soit à une anabase, soit, inversement, à une catabase, le traiter donc à l'aune des interprétations en quelque sorte « dualistes », c'est s'arrêter en chemin. Alors qu'au premier abord, anabase et catabase semblent s'opposer radicalement, à mieux y réfléchir, elles entretiennent des rapports autrement plus féconds que celui de l'exclusion." (pp. 39-41, deux notes omises)

8. Dehon, Pierre-Jacques. 1988. "Les recommandations de la déesse. Parménide fr. 1,28-32." *Revue de Philosophie Ancienne* no. 6:271-289.

;"Les propos par lesquels la Déesse met fin à son discours introductif dans les derniers vers du proème de Parménide ont été diversement traduits et interprétés. Le plus souvent, les solutions avancées découlent de la conception globale défendue par les critiques de la pensée parménidienne. Aussi m'a-t-il semblé opportun d'aborder d'un oeil neuf le texte même du passage, tout en dressant un bilan de ces différentes tentatives." (p. 271)

9. Destrée, Pierre. 2000. "L'être et la figure du soleil: note sur Parménide, DK B 8 v. 34." *Revue des Études Grecques* no. 111:304-307.

;"Même si la problématique des sēmata de l'être est bien connue, il demeure, à notre avis, une question que les interprètes n'ont pas vraiment abordée pour elle-même : celle de savoir quelle pourrait bien être l'origine ou la provenance des termes retenus par Parménide pour tenter de décrire ou de caractériser l'être. Ou, plus précisément, quel pourrait bien être comme le fil conducteur, c'est-à-dire l'image ou le référent implicite de tous ces « signes » ou « symboles » servant à faire comprendre ce qu'est l'être ?

Très curieusement, il y a un petit mot qui, dans le fragment central du Poème de Parménide, le D.K. B 8, n'a jamais

vraiment attiré l'attention des interprètes : ὄγκω au vers 43. C'est sans doute l'importance de l'image de la sphère, symbole de la ' perfection ' de l'être, comme on l'interprète généralement, qui a oblitéré la lettre même du texte : il faut faire en effet remarquer que l'être n'est pas directement comparé à une sphère, mais bien à la « masse d'une sphère bien arrondie » (εὐκύκλου σφαιρῆς ἐναλίγκιον ὄγκω). Quel est le sens de cette précision?

La réponse pourrait sembler obvie : Parménide répète ce qui a été dit au vers 24 du même fragment : « tout entier, il est plein d'être » ; tel est le sens du mot ὄγκος qu'Aristote reprend dans sa *Physique*, lorsqu'il l'oppose au « vide » (κενός) . Cette réponse, cependant, ne nous livre pas le sens de ce choix ici, au vers 43. En effet, si Parménide tient à préciser que la sphère à laquelle l'être est comparé a une certaine « masse », ou un certain « poids » (cf. le lien étymologique entre ὄγκος et ἐνεγκεῖν) au sens réel comme au sens figuré², c'est qu'il a voulu donner une indication quant au type de sphère qu'il fallait se représenter. Or, ce type de sphère ne peut être que le soleil que les tragiques associent fréquemment à l'idée de cercle, et que, de manière générale, les Grecs associent au divin, à commencer par Apollon Phébus³. Il nous semble que ce n'est qu'à la faveur de cette représentation précise que l'on peut comprendre le choix des « signes » de l'être." (p. 304)

(1) Cf. *Physique*, III, 4, 203 b 28.

(2) Cf. Sophocle, *Trachiniennes*, 817, où il est question de la « majesté » d'un nom.

³ Sur ce thème, cf. P. Boyancé, « L'Apollon solaire », dans : *Mélanges Jérôme Carcopino*, Paris, 1966, p. 149-170.

10. ———. 2000. "La communauté de l'être: Parménide fr. B5." *Revue de Philosophie Ancienne* no. 18:3-13.

;"Aujourd'hui, à la suite de l'article pionnier de Cornford(1), la majorité des interprètes s'accorde à donner une portée méthodologique, et purement méthodologique, au fragment D.K. B 5 du Poème de Parménide (ξυνόν δέ μοι ἔστιν, ὀπλόθεν ἀρξομαι τόθι γὰρ πάλιν ἴξομαι αὐθις), que l'on traduit de la

manière suivante: "Il m'est indifférent d'où je commence, car je retournerai en ce point à nouveau" (Trad. M. Conche)(2). Les deux seules questions restent alors de savoir sur quoi porte l'énoncé, quelle est la problématique visée par ce lieu d'où, "indifféremment", la déesse part et auquel elle revient, ainsi que la place qu'il faut donner à ce texte dans l'ordre des fragments." (p. 3)

(...)

"Telles sont donc les raisons, rapidement exposées, pour lesquelles il nous semble que l'on doit reprendre à nouveaux frais l'interprétation de cet "énigmatique" fragment 5, comme l'a dit un interprète (14) .

;Abstract: "Parmenides, Moses, Jesus: the revelation of the Absolute in the Greek, Hebrew and Christian traditions is marked by the persistence of three surprising invariants: Being, Heart, and Word. In the Mediterranean area, the divine revelation takes always place in the heart, has invariably being as subject, and is performed by a word, which is the verb « be » itself. As a striking result, the Name is always a Verb as well in Parmenides' poem as in *Ex 3,14* and in the Gospels' text. However, while Being is a neuter participle in the pagan poem giving birth to ontology as well as to Western philosophy, Being is a Person, *I AM* , in the world of the Bible. The study of the use of « be » in these three different contexts brings to the stunning conclusion that absolute Reality is seen as a substance in classical Greek philosophy, while it is seen as relation in the

world of the Bible. The opposition between these two categories recalls the crucial difference between natural and supernatural mystic proposed by Maritain, worked out by Gardet and Lacombe and further investigated by J.-H. Tisin. While pagan, or natural mystic aims at the identification of knower, known and knowledge in an indifferent unity, implying the annihilation of consciousness and personality (*enstasis*), the supernatural mystic, typical of monotheism, conceives the revelation of a transcendent Creator as a Love relation, in which the creature's person is, at the same time, transfigured and preserved (*exstasis, visio beatifica*)."

14. Dixsaut, Monique. 1987. "Platon et le logos de Parménide." In *Études sur Parménide. Tome II. Problèmes d'interprétation* , edited by Aubenque, Pierre, 215-253. Paris: Vrin.

;Repris comme Chapitre VI dans *Platon et la question de la pensée. Études platoniciennes I*, Paris Vrin 2000, pp. 175-223.

"Avant d'aborder l'examen critique des doctrines de l'être, l'Étranger adresse trois prières à Théétète. Dans la première, il lui demande de se contenter «du peu qu'on pourra gagner, par quelque biais que ce soit, sur un *logos* aussi fort que celui de Parménide»; dans la deuxième, de ne point le regarder comme un parricide «s'il est contraint de mettre à l'épreuve le *logos* de son père Parménide»; dans la troisième, de ne pas l'accuser de manquer de mesure, de délirer, s'il «entreprend de réfuter ce *logos* », à supposer qu'il en soit capable (*Sophiste* 241c-242a).

Du sens que l'on accorde à cette manière d'annoncer l'entreprise comme mise à l'épreuve d'un logos fort, paternel et sacré -- et de l'importance que l'on attache (ou non) à cette manière de l'introduire, dépend toute la lecture du texte qui suit. La relecture de ce célèbre passage du *Sophiste* aura donc pour objet de déterminer sur quoi porte exactement la réfutation, comment et dans quel but elle se conduit."(p. 215)

15. Drvota, Tomáš, and Vitek, Tomáš. 2020. "Parménide DK 28 B 16 : un fragment méconnue [sic] d'Empédocle ?" *Eirene* no. 56:179-240.

;"Dans la première partie de cette étude, nous chercherons à montrer que ces quatre vers font surgir d'insurmontables difficultés exégétiques et que leur contenu est incompatible, d'un point de vue sémantique comme philosophique, avec celui des autres fragments de Parménide. La thèse principale du fragment considéré, qui semble présenter le *vóos* comme le résultat d'un mélange variable d'énigmatiques *μέλεα* corporels, se révèle à l'examen en contradiction très nette avec le coeur de la doctrine de Parménide, laquelle, selon l'interprétation commune, établit l'identité ou l'inséparabilité de *voẽiv* avec *το*

ἐόν. Or, il est fort peu concevable que Parménide ait pu, dans ce fragment B 16, conférer aux termes *voëiv* et *vóoc* une signification totalement différente de celle qu'ils ont dans les autres fragments. Le fragment B 16 semblerait plutôt partager la notion traditionnelle du *vóoc* telle que nous la connaissons de la poésie archaïque, épique ou lyrique.

Dans la deuxième partie de cet article, nous essaierons de montrer qu'en envisageant ce fragment dans un contexte empédocléen, il devient soudain possible d'en comprendre la singulière sémantique et d'en proposer une interprétation cohérente. Nous ne prétendons certes pas parvenir de la sorte à réfuter définitivement la paternité de Parménide ni à établir ainsi avec certitude celle d'Empédocle, mais peut-être cette tentative aura-t-elle eu le mérite d'attirer l'attention sur cette éventualité : celle d'une attribution erronée d'un fragment d'Empédocle à Parménide, que celle-ci ait été initialement le fait des premiers doxographes ou bien d'Aristote et de Théophraste. Plus tard, les exégètes modernes, héritiers d'une tradition qui remontait à l'école péripatéticienne, n'auraient eu d'autre possibilité que d'interpréter ces vers dans le cadre de la doctrine de Parménide." ;"Si Parménide n'attribue pas à l'instar de Xénophane une connotation fortement négative au discours mensonger de la tradition poétique, il n'en demeure pas moins qu'on assiste chez lui à une véritable transmutation du discours homérique et hésiodique notamment en ce qui concerne le problème complexe de la vérité, de la tromperie et de la vraisemblance. Son originalité philosophique résiderait non seulement dans l'élaboration d'un logos qui incarnera pour la première fois l'idée d'une «raison critique personnelle» capable de «juger» une réfutation énoncée par l'autorité d'une «maîtresse de vérité» et dans l'établissement d'une gnômê susceptible de faire le choix entre le plus vraisemblable et le moins vraisemblable; mais également dans le fait d'entamer, bien avant Platon et à la différence du Sophiste, une réflexion sur la vérité et l'erreur qui est commandée par la question des bons et des mauvais mélanges, des bonnes et des mauvaises séparations."

;Résumé : "Le but de cet article est de montrer le rôle fondamental joué par la "raison" (*logos*) aux origines de la Grèce antique. Parménide d'Elée est le premier philosophe qui recommande, à travers l'injonction de la "Déesse" du Poème, rencontrant d'une manière allégorique son "disciple" (le

philosophe), d'utiliser sa "raison critique personnelle" en vue d'instaurer une "crise" (krisis)(4) parmi les opinions et les fausses valeurs du commun des mortels, et dans le but de critiquer la validité de la vérité affirmée par la Déesse elle-même qui représente l'autorité par excellence(5). Cette importance assignée par Parménide à la "raison critique" et au concept de "crise" détermine, en quelque sorte, le destin de notre culture/science occidentale fondée sur le questionnement et la remise en cause - et définit l'activité et la "méthode" originale du philosophe."

(4) Au fragment B 8, 15, la *krisis* désigne la "décision" séparant et distinguant l'être du non-'être, le vrai du faux.

(5) Au fragment B /, 5, la déesse lui dit clairement: "Décide (juge) par la raison (*krinai logô*) la réfutation polémique que j'ai énoncée."

25. Francotte, Auguste. 1958. "Les disertes juments de Parménide." *Phronesis* :83-94.

;"1. Le premier fragment du poème philosophique de Parménide(1) relate un mythe apparemment sans mystère. Le penseur feint d'être emporté dans les cieux sur un char attelé de juments. De jeunes Vierges, les Filles du Soleil, le conduisent auprès d'une Déesse qui lui révèle la voie de la Vérité et les embûches de l'Opinion.

La signification de cet enlèvement est transparente: l'assomption est synonyme à la fois de rupture avec le commun et d'initiation aux réalités transcendantes.(2) De nombreuses difficultés surgissent toutefois si l'on veut rendre raison de tous les détails du récit. Entre ces différents traits, nous nous proposons d'examiner, sinon le plus riche de sens, du moins, pensons-nous, le plus négligé." (p. 83)

(..)

"Si l'intelligence grecque élargit, approfondit et littéralement informe le mythe, elle ne se substitue pas à lui. D'Hésiode à Platon, la pensée grecque ne cesse d'être mythe ni le mythe grec d'être pensée. Bien plus, comme nous avons tenté de le montrer, la pensée la plus logique est aussi la plus imprégnée

de mythe. Car les perspectives de la fable et de la critique, loin de diverger, se complètent.

Composant l'une et l'autre avec l'aisance géniale qu'elle met à surmonter toutes les antinomies vulgaires, la pensée grecque doit à son ambiguïté même son irremplaçable particularité et sa valeur universelle." (p. 94)

26. Frère, Jean. 1981. "Parménide, penseur du cosmos." *Deukalion* no. 33-34:77-86.

;"Dans ce qui subsiste des vers du poème de Parménide(1), les vers 50 - 61 sur lesquels s'achève le fragment 8 marquent un tournant. La première partie du poème avait dit l'Être (το ἔόν») (fgt 8, v. 19, v. 32, v. 35; déjà fgt 4, v. 2) et l'impossibilité du Non-Être radical (fgt 8, v. 7). L'Être se révèle en son surgissement comme parole (φάσις) (fgt 8, v. 35),. comme pensée (νόημα) (v. 33 - 35), comme vérité (αλητεία) (v. 51). Mais Parménide en reste-t-il à une pure réflexion sur l'Être et sur les caractères de l'Être ? Bien des commentateurs, philosophes ou historiens de la pensée, l'ont à tort prétendu. En réalité, ce que nous allons montrer, c'est que le discours sur l'Être n'a de sens que comme fondement d'un discours sur le Cosmos. Après le discours (λόγος) plein de foi (πίστις) (fgt 8, v. 50; cf. fgt 1, v. 30) concernant la Vérité ou l'Être, Parménide, loin de se contenter comme on l'a cru trop souvent de dénoncer des opinions illusoires de mortels, énonce avec netteté des jugements (γνώμη) (fgt 8, v. 61) permettant de connaître, dans la mesure du possible, le Cosmos.

Parménide, dans la seconde partie du poème, depuis le fragment 8, v 61, jusqu'au fragment 19, s'il critique assurément certaines conceptions erronées du Cosmos ou du 'Tout' (πᾶν) (fgt 9, v. 3) n'en esquisse pas moins sa propre conception du Cosmos." (pp. 77.78)

27. ——. 1985. "Aurore, Éros et Ananké. Autour des dieux parménidiens." *Les Études Philosophiques* :460-470.

;"Deux divinités dominant le cosmos selon Parménide : Ananké et Eros.

Ananké intervient en deux passages essentiels du poème; dans l'un il s'agit de l'Être, dans le second il est question des astres. Au fragment 8, vers 30-31, parlant de l'immobilité de l'Être, Parménide dit :

la contraignante Nécessité le maintient dans les liens d'une limite qui l'enserme de toutes parts.

Au fragment m, vers 5-6-7, Parménide dit parlant du ciel :

tu connaîtras le ciel et comment la Nécessité qui le dirige l'a contraint à maintenir les limites des astres.

Ainsi les deux passages insistent-ils sur la « contraignante » Nécessité qui « maintient » dans des « liens » et des « limites ».

Pour ce qui est de la conception parménidienne d'Eros, nous possédons le fragment 1 3. Le fragment 1 3 dit :

le tout premier de tous les dieux, c'est Eros qu'[Elle] conçut.

(...)

Dans le commentaire de la *Physique* d'Aristote, Simplicius apporte à son tour des textes et des indications concernant Ananké et Eros.

C'est grâce à ces passages de Simplicius que les éditeurs de Parménide ont ordonné plusieurs fragments de la seconde partie du poème (f. 9 et suiv.).

Cependant l'ordonnance des fragments ici retenue par la plupart des éditeurs, si l'on y apporte quelque attention, semble loin de s'imposer.

Relisant de près le texte de Simplicius, nous voudrions ici dégager conjointement plusieurs thèmes. D'abord en ce qui concerne Simplicius, nous voudrions apporter des précisions sur sa technique de citation des fragments. A partir de là, nous

pourrions envisager une nouvelle structuration des fragments portant sur Ananké et Eros. Enfin, nous pourrions ainsi essayer de mieux dégager certains aspects de la place du divin dans l'oeuvre parméniennne." (pp. 459. 460, notes omises)

28. ———. 1987. "Parménide et l'ordre du monde: fr. VIII, 50-61." In *Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 192-212. Paris: Vrin.

;"La lecture des derniers vers du fragment VIII de Parménide (v. 50-61) pose un problème difficile. La clôture du discours cernant la Vérité est-elle ouverture sur les débordements d'opinions erronées? Ce morceau terminal ne concerne-t-il pas plutôt les étants en leur relation avec l'Être? La nouveauté de Parménide, depuis le fragment I jusqu'au fragment VIII, v.49, c'est assurément de s'arracher aux conceptions des penseurs de la *physis* ; Parménide s'y montre le premier véritable philosophe de l'Être: mais délaisse-t-il pour autant certains aspects de la *physis* ? La dernière partie de l'oeuvre (fr. VIII, v. 50-61; fr. IX à fr. XIX) n'est-elle qu'une critique des opinions erronées des philosophes sur le monde? Ou ne serait-elle pas, bien plutôt, l'articulation de ce qu'il est possible et légitime d'énoncer sur le monde, en tant que les étants sont fondés dans l'Être? Ainsi une lecture approfondie des derniers vers du fragment VIII s'avère-t-elle fondamentale. Déjà les derniers vers du fragment I suggèrent que les *dokounta* sont fondés dans l'Être. Dans leur prolongement, les derniers vers du fragment VIII n'amorcent-ils pas la mise en place d'une connaissance possible du monde et d'une connaissance possible des étants par rapport à leur fondement dans l'Être?" (p. 192)

29. ———. 1991. "Platon, lecteur de Parménide dans le *Sophiste* ." In *Études sur le Sophiste de Platon*, edited by Aubenque, Pierre, 125-143. Napoli: Bibliopolis.

;"Bien que souvent négligé, le témoignage de Platon sur Parménide est sans aucun doute capital. Comment Platon lit-il Parménide avant de le discuter?" (p. 127)

(...)

"Le témoignage de Platon semble donc fondamental.

Pourtant, les exégètes de Platon - dans l'Antiquité, de nos jours - ont-ils réellement tenu compte de ce que dit le texte de Platon concernant Parménide?

On a vu dans Parménide, à travers le témoignage de Platon, le premier penseur de l'Être, en sa pureté et son intemporalité d'être. Certes. Mais en quel sens précis Parménide pensait-il "est" (*esti*) ou l'"Êtant" (*to on*)? C'est ici que les penseurs et commentateurs ont projeté et continuent de projeter leurs propres conceptions philosophiques - théologiques, ontologiques, matérialistes sur le texte de Platon aussi bien que sur celui de Parménide. Ne faudrait-il pas revenir au témoignage de Platon, même si sa lucidité nous montre chez Parménide des thèmes auxquels nous ne prêtons souvent aujourd'hui que peu attention?" (pp. 128-129)

(...)

"Ainsi selon Platon dans le *Sophiste* y avait-il chez Parménide énoncés vrais, énoncés erronés, quant à l'Êtant et quant aux étants. C'est le problème du bien-fondé de tels énoncés qui allait amener Platon à contourner Parménide énonçant de l'Êtant son caractère d'inengendré et indestructible Englobant. «Il nous faudra nécessairement, pour nous défendre, mettre à la question la thèse de notre père Parménide» (*Soph.* 241 D). Au dialecticien rationaliste usant de mythes rationnels Platon, Parménide apparaissait, tels les autres Présocratiques, comme un abusif "conteur de mythes". «Ils m'ont tout l'air de nous conter des mythes, comme on ferait à des enfants» (*Soph.* 242 C). Mais, même si Parménide a intégré à son oeuvre des figures mythiques, Parménide selon Platon n'a point vraiment "conté de mythes". Des pensées désormais incontournables ont été énoncées par Parménide.

Platon le sait et l'a écrit. Or Platon ne nous montre pas seulement en Parménide un penseur de l'Être un, mais aussi un penseur de l'Être-sphère et de l'Êtant dont se peuvent énoncer avec certitude bien des qualifications et bien des négations essentielles." (p. 143, une note omise)

30. ——. 2005. "Les dieux d'Élée et d'Agriente." In *Agonistes: essays in honour of Denis O'Brien*, edited by Dillon, John M.

and Dixsaut, Monique, 3-12. Aldershot: Ashgate.

;"C'est semblablement à ces conceptions très complexes et élaborées de ce qu'est le Dieu un que Parménide fut amené à envisager sa propre conception de l'Être un.

Du monisme théologico-géométrique de Xénophane, Parménide passe à l'ontologie. Mais en fonction et à partir de Platon, surtout attentif à la conception parménidienne de l'Être un en tant qu'inengendré (agég_ton) et impérissable (*agênethron*) (30), les commentateurs ont négligé le versant de corporéité pure (*démas*) qu'impliquait« !'Être» (*tò eón*) (31).

Certes Platon n'a pas ignoré, bien qu'il ne l'ait envisagé que fort épisodiquement, cet aspect de l'Être parménidien, à la fois corporéité géométrique parfaite et pensée pure (32). Mais ce ne furent pas ces aspects de la conception parménidienne de l'Être qui attirèrent ses réflexions et commentaires.

Toutefois, le déroulement même de la démonstration de Parménide dans le fragment 8 est tout à fait net et explicite. Et ne voir dans l'image de la « Sphère» qu'une métaphore pour signifier la perfection constitue un total déni de compréhension de la seconde partie du fragment. Parménide était sur ce point très proche de ce qu'avait admis le monothéisme xénophanien. Après les analyses de l'intemporalité de !'Être un, Parménide a aussi traité de ce *démas* parfait qui caractérise tout autant et réellement l'Être éternel que le penser parfait. Pourquoi, sinon, les vers 22-49 du Poème? On trouve ici une longue et très précise analyse de ce qu'est le *démas* parfait constitutif de !'Être en sa perfection quasi divine." (p. 11)

(30) 28 B, 8, 3 D.K.

(31) 28 B 4, 3, D.K.; 8, 19, O.K. Le *démas* ne concerne pas seulement Feu éthéré et Nuit obscure (8, 55, 59).

Conclusion 131; Le Poème, texte grec 133; Traduction 143; Notes 153; Bibliographie 163-164.

"Parménide distingue très nettement deux plans du divin. D'une part, le plan des dieux éternels dans l'entour de l'Un éternel, dieux puissants, silencieux, purificateurs. D'autre part, celui des dieux présidant soit au devenir du cosmos soit au surgissement du savoir humain : dieux immortels. Les dieux éternels sont au nombre de quatre : Diké, Moira, Thémis, Ananké ; s'y ajoutent les grands principes cosmiques divins éternels : Ananké II, la Nuit, la Lumière. Parmi les dieux non éternels mais immortels figurent d'abord les dieux dominant l'ensemble du Cosmos; se situent ici les dieux favorables que sont l'Amour, les dieux astraux (le Soleil et la Lune). Mais il y a aussi des dieux malveillants tels les dieux de la guerre. Viennent ensuite les dieux du dialogue avec les humains, dieux tout de bienveillance : la Déesse sans nom révélatrice de la Vérité, les Héliades, filles du Soleil conduisant le jeune homme avide de savoir, la déesse Portière qu'il faut tâcher de séduire, la bonne Moira, les déesses immortelles Équité (Thémis) et Justice (Diké).

Ainsi, pour parachever sa doctrine de l'Un éternel et du dualisme cosmique de Nuit et Lumière, Parménide se trouve amené à donner une place d'importance à tout un ensemble de déesses et de dieux bien déterminés. Dans ce panthéon parménidien, l'on constate l'absence des dieux olympiens. Point

de Zeus, en effet, ni d'Athéna. D'autre part, il n'y a aucune hiérarchie généalogique à la façon d'Hésiode. De la tradition, Parménide ne conserve que très peu de noms. On retrouve Moira, Thémis, Eros ; mais leurs places et fonctions précises sont très différentes de celles des conceptions antérieurement admises par les Grecs." (pp. 10-11)

32. Fronterotta, Francesco. 2013. "Une école éléatique ? : Parménide, Zénon et Mélissos." In *La sagesse présocratique. communication des savoirs en Grèce archaïque : des lieux et des hommes* edited by Desclos, Marie-Laurence Desclos and Fronterotta, Francesco, 131-147. Paris: Armand Colin.

;Résumé : "Le critère «géographique» de classement des penseurs présocratiques adopté dans ce volume montre bien son efficace dans le cas de Parménide et Zénon, natifs de la ville d'Élée, dans le sud de l'Italie, car ce n'est qu'entre eux que l'on peut admettre un rapport, sinon d'école à proprement parler, au moins de connaissance directe et de doctrine, alors que, pour ce qui est de Xénophane et de Mélissos, habituellement rangés dans le cadre de l'«école» éléatique, la situation apparaît beaucoup plus douteuse, Xénophane n'ayant aucune relation certaine avec Parménide (ni personnelle ni doctrinaire) et avec la ville d'Élée, et Mélissos, qui reprend évidemment une version «moniste» des thèses de Parménide, se situant à une distance considérable de ce dernier, dans l'île de Samos, en mer Égée.

C'est la raison pour laquelle on ne traitera pas, dans ce chapitre, de Xénophane (voir, dans ce volume, le chapitre Égée); et que l'on examinera, de Mélissos, les arguments qui se rattachent de manière directe aux thèses de Parménide (voir aussi, pour compléter sa présentation, le chapitre Abdère)."

Deuxième partie. Les digressions : lieux de réflexion personnelle et moyens d'innovation philosophique;

Chapitre 4. — Les digressions : esquisse d'une typologie 83;

Chapitre 5. — Analyse des digressions 89;

5.1 Les digressions « concordistes » de Simplicius 89;

5.1.3 Deux digressions à propos de la doctrine de Parménide (In *Phys.*, 86.19 – 90.22 et 142.28 – 148.24) 100-108.

Appendice

Les digressions traduites et annotées 207;

3) Simplicius, *Sur les significations de l'un chez Parménide* (In *Phys.*, 86.19 – 90.22) 220;

4) Simplicius, *Sur l'Un-qui-est parménidien* (In *Phys.*, 142.28 – 148.24) 225-231.

"Le présent livre se propose d'étudier l'originalité de l'exégèse philosophique de Simplicius et de Jean Philopon, telle qu'elle se laisse appréhender par une analyse systématique de leurs Commentaires sur la *Physique* d'Aristote.

Commentant le même texte fondateur de la pensée antique, les deux exégètes, contemporains l'un de l'autre et nourris dans le même modèle philosophique, celui du néoplatonisme tardif, sont loin de nous proposer une interprétation de la *Physique* identique ou semblable, et cela dans une époque où la nouveauté, la « kainoprépeia », fut généralement dévaluée. C'est dire que la tradition – ce dont l'originalité tient à la fois sa différenciation et son identité – pesait lourd sur les épaules des derniers philosophes de l'antiquité." (p. 1)

"La présente étude est accompagnée d'un appendice, dans lequel sont traduites et annotées les principales digressions des deux Commentaires sur la *Physique*, mis à part les excursus *contra Philoponum* de Simplicius et les quatre *Corollaria* (sur le lieu et le temps, de Simplicius, et sur le lieu et le vide, de Philopon)." (p.4)

"Les digressions que Simplicius consacre à la doctrine de Parménide visent à éclairer non seulement la critique que lui adresse Aristote, mais aussi, à l'arrière-plan du commentaire, celle de Platon. La première digression (*In Phys.*, 86.19 – 90.22) suit l'explication de *Phys.*, I 2, 185b 5 – 25, où Aristote réfute le monisme de l'« école » éléate en faisant apparaître les différents sens qu'admet le nom d'« un ». Quand on dit que quelque chose est un, explique le Stagirite, on entend qu'elle est : 1) soit continue ; 2) soit indivisible ; 3) soit une et identique avec une autre chose en vertu de leur définition commune." (p. 100)

"La deuxième digression (*In Phys.*, 142.28 – 148.24) est une sorte de récapitulation des remarques déjà formulées dans les digressions précédentes et aussi au cours du commentaire. Somme toute, elle couronne l'exégèse de *Phys.*, I 2–3, dont le contenu est pour l'essentiel une réfutation des thèses éléatiques. En voici le proème :

Mais puisque nous avons déjà atteint la fin des discours qui s'opposent à Parménide, il serait bon de dépister à quel degré la doctrine de l'Un-qui-est de Parménide répond à ce dont il est question ici, et d'examiner également sur quoi portent précisément les objections." (p. 104)

35. Graham, Daniel W. 2002. "La Lumière de la lune dans la pensée grecque archaïque." In *Qu'est-ce que la philosophie présocratique ? = What is presocratic philosophy ?*, edited by Laks, André and Louguet, Claire, 351-380. Villeneuve d'Ascq: Presses Universitaires du Septentrion.

;Traduction : Létitia Mouze.

« Thalès a dit le premier que [la lune] est éclairée par le soleil ; Pythagore et Parménide de même. » (Aétius II, 28, 5)

« [Anaximandre dit que] la lune brille d'une lumière empruntée, éclairée par le soleil. » (Diogène Laërce II, 1)

« Eudème rapporte dans son *Astronomie* qu'Oénope a le premier découvert le cercle du zodiaque et le cycle de la Grande Année ; Thalès, l'éclipse du soleil et l'époque des solstices, et qu'ils ne paraissent pas toujours au même moment ;

Anaximandre, que la terre est suspendue et se meut autour du centre du monde ; Anaximène, que la lune reçoit sa lumière du soleil, et de quelle manière elle a une éclipse. » (Théon de Smyrne, CXCVIII, 14-CXCIX, 2)

"Qui a découvert le premier la source de la lumière de la lune ? Les notices doxographiques citées ci-dessus reflètent les mauvaises informations accumulées dans l'Antiquité sur le prétendu Premier Découvreur" (p. 351)

"Le dernier personnage, auquel il est fait allusion dans notre liste des prétendus découvreurs de la source de la lumière de la lune, est Parménide. Et cette fois, il existe une preuve positive en faveur de cette allégation. La compréhension de Parménide est attestée dans deux brefs fragments :

Νυκτιφαε`ς περι` γαῖαν ἀλώμενον ἀλλότριον φῶς (28 B14)

αἶει` παπταίνουσα προ`ς αὐγα`ς ἡελίοιο. (B15)

[la lune est un corps] qui brille la nuit³⁵, errant autour de la terre avec une lumière empruntée, jetant sans cesse un regard vers les rayons du soleil.

Les deux idées principales dans ces fragments sont le fait que la lune reçoit sa lumière d'autre chose, et qu'elle fait toujours face aux rayons du soleil. Au lecteur non averti, les observations de Parménide sembleront complètement triviales. Mais si nous avons en tête le fait qu'aucune de ces observations n'a, à notre connaissance, jamais été faite avant - en tout cas pas dans la littérature grecque que nous avons conservée - nous commençons à voir dans ces lignes la reconnaissance de quelque chose d'important.

Puisque nous avons disqualifié les prétendants anciens, il nous reste comme premier découvreur Parménide, ce qui est confirmé par ses propres paroles." (p. 289, deux notes omises)

(35) 35. Ou bien : « brillant comme la nuit », d'après Coxon 1986, 245s.

36. Guérard, Christian. 1987. "Parménide d'Élée chez les Néoplatoniciens." In *Études sur Parménide. Tome II*.

Problèmes d'interprétation , edited by Aubenque, Pierre, 294-313. Paris: Vrin.

;"Dans toute son oeuvre conservée, Proclus cite abondamment les fragments orphiques, les Oracles chaldaïques et Homère surtout, mais, somme toute, peu fréquemment Parménide.

On ne trouve des citations ou des allusions certaines que dans trois seuls ouvrages:

-- l'un de jeunesse, mais probablement remanié plus tard: l'*In Timaeum* ;

-- l'autre de la majorité, et pour nous le plus important: l'*In Parmenidem* ;

-- le dernier de la fin: la *Théologie platonicienne* (30).

À l'évidence, l'Éléate n'est pas pour Proclus une autorité primordiale. Cela se comprend aisément dans la mesure où il ne connaissait pas l'Un avant l'être, et, dans son Poème, ne distingue pas explicitement les différents degrés de la «largeur intelligible». Toutefois, il n'est aucunement regardé comme un adversaire; nous allons le constater en étudiant toutes les citations et allusions évidentes au Poème parménidien." (pp. 300-301)

(...)

"À l'issue de cette étude, il nous semble possible de définir le néoplatonisme par rapport à sa propre perspective historique.

Nous avons vu que les rares allusions à Parménide, chez Plotin, font place à des citations textuelles et nombreuses chez Proclus. Le Lycien a peut-être même commenté systématiquement l'Éléate, tant on a l'impression qu'il affine son exégèse à mesure qu'il lit la Voie de la Vérité. Mais ce ne sont là que différences de méthode et de personnalité.

La pensée néoplatonicienne est rigoureusement identique de Plotin à Proclus: Parménide justifie la lecture théologique du *Parménide* . C'est parce qu'il a connu l'intellect que, par son hypothèse, Platon a pu s'élever jusqu'à l'Un premier. L'Éléate

s'inscrit donc parfaitement dans le mouvement de dévoilement de la Lumière." (p. 312)

(30) Signalons que nous ne rencontrons plus aucune citation de Parménide après le livre III de cet ouvrage. À part une allusion dans le livre IV, il n'est question que du personnage du dialogue pfatonicien.

37. Guidara, Giulia. 2019. "Les idées des intellectuels alexandrins sur la vérité, la philosophie grecque et les Présocratiques : Plotin et Clément en comparaison." *Freiburger Zeitschrift für Philosophie und Theologie* no. 66:431-454.

;Résumé : "La comparaison entre Clément d'Alexandrie et Plotin donne une idée de la circulation et de l'interprétation de la pensée présocratique dans l'Alexandrie des Ier-IIIe siècles : les significatives analogies concernant Héraclite, et les importantes différences à propos de Parménide mettent en lumière l'existence d'une tradition exégétique alexandrine qui est unitaire, mais aussi fluide. En outre, les points de contact et les divergences entre Clément et Plotin permettent de comprendre la manière dont la philosophie chrétienne et la philosophie « païenne » pensent les débuts (et donc aussi, la nature même) de la sagesse humaine, à savoir le contexte où la pensée présocratique se développe."

38. Hoffman, Ernst. 2005. "Logos et epos chez Héraclite et Parménide." *Poésie* no. 114:111-125.

;Traduit de la version italienne, *Il linguaggio e la logica arcaica*, traduit et introduit par Luca Guidetti, Spazio libri, Firenze, 1981 et présenté par Martin Rueff.

Édition originale: "Die Sprache und die archaische Logik" (*Heidelberger Abhandlungen zur Philosophie und ihrer Geschichte*, 3, 1925).

"Le langage et la logique archaïque est l'oeuvre la plus connue d'Ernst Hoffman. Ce texte qui fut d'emblée considéré comme un « classique » fut publié la première fois en 1925 dans les « Heidelberger Abhandlungen zur Philosophie und ihrer Geschichte » qu'Ernst Hoffman dirigeait avec Heinrich Rickert." (p. 111, une note omise)

"Si l'on voulait rendre la doctrine de Parménide en une formule, on pourrait dire : les mots sont « faux » parce qu'ils feignent d'être identiques aux choses qu'ils prétendent nommer alors que seuls l'être et la pensée sont identiques. Seul ce qui peut être objet de la véritable pensée, seul ce qui est véritablement pensable, peut être le contenu d'un « discours véridique ». Ce qui est, ce qui est pensable et ce qui peut être dit ne doit pas être séparé : par cette affirmation, Parménide a créé la présupposition de la logique archaïque des Grecs. La pensée prélogique pose comme identiques, en vertu de la connaissance du nom, l'être de la chose, son nom et ce qui lui appartient. Parménide retire l'identité au monde des choses et des mots pour leur attribuer une demeure dans le mundus intelligibilis. C'est alors et alors seulement que l'identité est chez elle, c'est là et là seulement que se réalise l'unité sans partage de l'èon, du noëma et du logos. Telle est la thèse proposée par Parménide et c'est exactement cette thèse que les sophistes ont convertie en son contraire. Gorgias ne dit-il pas « premièrement et pour commencer que rien n'existe, deuxièmement que, même s'il existe quelque chose, l'homme ne peut l'appréhender, [et] que même si on peut l'appréhender, on ne peut ni le formuler ni l'expliquer aux autres »? (3)" (p. 125)

39. Iribarren, Leopoldo. 2006. "Rationalisations de la croyance : la construction de la « pistis » comme philosophème chez Parménide et Empédocle." *Revue de Philosophie Ancienne* no. 24:63-82.

;"Chez Parménide, les appels à la *pistis* résonnent avec insistance du côté de l'ontologie; l'étant y apparaît comme son dépositaire légitime, car il assure, dans les limites de sa détermination parfaite, la coïncidence

de l'être, du penser et du dire. Dans ce contexte, la persuasion et la croyance se posent en barrières logiques du chemin de la

vérité, empêchant toute contamination par l'évidence sensible et les concepts qui

sous-tendent la physique." (p. 64)

(...)

"De l'une à l'autre *pistis*, de la conviction parménidienne, force logique qui résume les attributs de l'étant, à la fiabilité empédocléenne, phénomène physiologique lié à la sensation, nous avons essayé de montrer les opérations qui, à l'intérieur de ces deux poèmes philosophiques, déterminent rationnellement la croyance. Au-delà des différences concernant la nature des évidences et ses critères de vérification, Parménide

et Empédocle thématisent le rapport de la vérité à la croyance.

On l'a vu, il revient à chaque poète d'imposer un critère de vérité, de forger une *pistis* qui lui soit propre et de la rendre indissociable de l'articulation interne de son discours. Que son fondement relève de

l'ontologie ou qu'il tienne d'un processus sensoriel, la croyance s'érige en seul rapport légitime du sujet à l'objet de connaissance. Faire émerger la *pistis*, expliciter ses conditions de possibilité dans le discours,

fait partie intégrante des projets des poètes-philosophes. Cette suprême ambition performative, créatrice de mondes persuasifs, atteint son sommet dans l'*Éloge d'Hélène* (DK 82 B11), oeuvre de Gorgias, disciple

d'Empédocle, où se réalise la tentative de production de la *pistis* à partir d'un écart de la vérité établie." (p. 82)

40. ———. 2013. "Sophistique contre cosmologie. À propos d'une allusion à Parménide dans les *Nuées* ." In *Socrate et les « Présocratiques » dans les Nuées d'Aristophane* edited by Laks, André and Saetta Cottone, Rosella, 133-149. Paris: Éditions Rue d'Ulm.

;"On peut affirmer, certes de façon très schématique, que l'action des *Nuées* d'Aristophane repose sur le rapprochement

entre, d'un côté, ce que l'on pourrait appeler le « monde de la vie », incarné par Strepsiade, paysan sommaire pressé par ses dettes, et, de l'autre, la « théorie », personnifiée par un certain Socrate, intellectuel improbable préférant un composite de doctrines « présocratiques » plus ou moins identifiables." (p. 133)

(...)

"D'autres indices textuels montrent qu'à travers le personnage de Strepsiade, Aristophane ne se contente pas de détourner quelques éléments significatifs du proème de Parménide, qui devait constituer à l'époque le récit initiatique par excellence, mais vise la doctrine même du philosophe. Dans la première partie du poème, connue comme le récit de la « vérité », la Déesse présente au jeune élu les seules voies de recherche qui peuvent être pensées, « est » et « n'est pas », deux formes verbales conjuguées et dépourvues de sujet." (p. 138)

(...)

"La diversité des termes que Parménide mobilise autour de la métaphore de la « voie » comme quête du savoir ne semble pas avoir échappé à Aristophane(14). On remarquera ainsi que chez le poète comique, le chemin « divinement merveilleux » qui fait l'objet de la scène de persuasion de Strepsiade (v. 76) est désigné par le terme ἀτραπός, le même qui, dans le poème de Parménide, sert à nommer le chemin impraticable du « n'est pas ». La voie initiatique censée sauver Strepsiade de ses créanciers reçoit donc la connotation négative que Parménide imprime à ce mot." (p. 139)

(14) Parménide déploie tout un vocabulaire lié à la « voie » : ὁδός (B1 2, 5, 27 ; B2 2 ; B6 3 ; B7 2, 3 ; B8 1, 18), κέλευθος (B1 11 ; B2 4 ; B6 9), ἀμαξιτός (B1 21), πάτος (B1 27), ἀτραπός (B2 6). Voir à ce propos l'étude classique d'A. P. D. Mourelatos, *The Route of Parmenides*, p. 16-25.

42. Journée, Gérard. 2010. "Parménide B6, 1 et 8-9 DK: grammaire, poésie, métaphysique." *Revue des Études Grecques* no. 123:397-424.

;"Alors qu'il est habituel de traduire B6, 8-9 de la manière suivante, «Ils sont emportés, sourds en même temps qu'aveugles, race indécise, pour qui l'être et le non être sont tenus pour le même et non le même». Burnet proposait au contraire pour la fin «Undiscerning crowds, who hold that it is and is not the same and not the same(1)», en donnant à τὸ une valeur démonstrative. C'est semble-t-il plutôt la question de savoir si ce passage constituait ou non une attaque d'Héraclite, comme le pensait Burnet contre Zeller(2), qui a ensuite intéressé les interprètes. L'interprétation proposée, quant à elle, n'a guère été reprise(3), sinon de manière très remarquable par A. H. Coxon, à une nuance près «people without judgment, by whom this has been accepted as both being and not being the same and not the same(4).» (p. 398)

"La considération de la leçon des mss., en B6, 1, ne renforce pas la solution articulatoire qui, dans tous les cas, peut subir les mêmes critiques. Elle affaiblit en revanche très fortement l'hypothèse déjà difficile de Burnet. Mais elle ne saurait abattre, en tout cas, la possibilité de la lecture démonstrative qui, soutenue par Bollack et Wismann sur l'ancienne version du texte, vaut toujours pour la nouvelle.

La suite est une question de lecture : si B6, 8 ouvre le texte à son contexte, la syntaxe présumée ambiguë de B6, 1 s'éclairerait finalement toujours à partir de ce même contexte. Faute de ce liant, les possibilités se multiplient : considérer en revanche que les τὸ de B6, 1 ont une fonction similaire à celui de B6, 8 ferme la syntaxe et, quoi qu'il faille penser de sa poésie, rend justice à Parménide." (p. 421)

(1) Burnet 1920, p. 174. La construction pourrait être comparée à celle que l'on trouve en *Iliade* I, 228, «τὸ δὲ τοι κη ῥ εἶδεται εἶναι», «cela te paraît être la mort». Le rôle du τὸ est en l'occurrence plus clair, mais il est parfaitement possible que,

aux yeux de Parménide, le oûk posé à la suite ait suffi à réduire l'ambiguïté.

(2) Burnet 1920, p. 179.

(3) A. Rey 1933, p. 143, qui a suivi Burnet, rend la phrase de manière légèrement différente, mais dans un esprit comparable «Foules sans jugement, aux yeux de qui cela est et cela n'est pas, le même et non le même».

(4) Coxon 1986, p. 54 et son commentaire p. 185. On signalera encore J. Bollack 2006, p. 122 qui traduit, conformément à son interprétation générale du τὸ, qu'il ne traite jamais comme un article chez Parménide «ils se sont entendus pour faire de ceci de l'être et du non-être, le même et pas le même». Mais il relève néanmoins une autre construction possible (p. 133), suggérée par A. Laks, qui consiste à prendre le τὸ comme le sujet des deux infinitifs, et revient donc en puissance à la solution de Burnet.

;Abstract: "The great german Scholar, Eduard Zeller, suggested that the reference to male and female in Parmenides B12.5-6 was probably an allusion to the physical principles of 'mortal opinion': Night and Light. This suggestion has been rejected by some scholars because such an association would lead us to admit that, in B12, male was associated with Night and female

with Light, a theory which would be at odds with the supposed misogyny of Greek culture.

However, Parmenides' account of 'mortal opinion' certainly associates male with coldness and density, the attributes of Night, and female with hotness and greater rarity, the attributes of Light. The aims of this paper are, then, first, to show that the association of female with Light and of male with Night is in fact right; and secondly to investigate the main dualistic features of Parmenides' 'mortal opinion' (embryology, sleep, death, knowledge) in relation to this theme. This will lead us, finally, to focus our attention on the Proem, which introduces us to a world full of female divinities, among whom – beyond the gates of the

ways of day and night – is the unnamed goddess who will initiate her young male auditor into the two 'ways'."

44. ——. 2014. "Les avatars d'une démonsse : à propos de Parménide fr. 28B13." *Elenchos* no. 35:5-38.

;Abstract: "It is a striking fact that the role played by Parmenides' female divinity (the daimon) in the Doxa is not adequately reflected in ancient doxography. While Parmenides' description, known from Simplicius' quotation of fr. B12, makes of her the main origin of generation (she steers all things and initiates the "odious birth and mixing of everything"), she does not seem to have featured as a cause in the ancient doxographical reports about Parmenides' causal principles, starting with Aristotle.

Even more puzzling: while Simplicius reports that this female divinity was the one who "devised to make Eros, the first of all gods" (according to fr. B13, which Simplicius quotes in the wake of fr. B12), Plato and Aristotle, who also quote the fragment, leave the verb of this sentence without any clear subject, so that we can't elicit from them that the divinity in question was responsible for the origin of Eros. This paper tries to show how and why the status of Parmenides' female divinity in Plato and Aristotle and then in later doxography was reduced to that of a sheer metaphor."

46. Lafrance, Yves. 1993. "Les multiples lectures du Poème de Parménide." *Dialogue* no. 32:117-127.

;"Les *Études sur Parménide* viennent s'ajouter à cette liste déjà impressionnante d'ouvrages qui, dans la dernière décennie, ont été consacrés au texte et à l'interprétation du Poème de Parménide. Celui-ci contient les études issues du Centre de Recherches sur la Pensée Antique ou Centre L. Robin de l'Université de Paris-Sorbonne (Paris IV) que dirigeait le professeur P. Aubenque. Les spécialistes de Parménide de la nouvelle génération ne manqueront pas d'instruments de travail pour leur lecture du Poème. Mais ils risquent du même coup de pénétrer dans un véritable labyrinthe d'interprétations d'où ils auront vraisemblablement plus de difficultés à sortir que leurs devanciers. La somme de connaissances accumulées autour des quelques cent soixante vers de ce Poème au niveau des manuscrits, de la langue grecque et de la littérature de l'époque est considérable, la diversité des lectures codicologîques, philologiques et philosophiques qui touche chaque vers du Poème, pour ne pas dire chaque mot, est déroutante puisque les arguments qui fondent chacune de ces lectures ne manquent pas de vraisemblance." (p. 117, une note omise)

49. ———. 2003. "Phénomènes et références : éléments pour une réflexion sur la rationalisation de l'irrationnel." *Methodos. Savoirs et textes* no. 3:1-22.

;Résumé : "Le terme de « rationalisation », qui renvoie à un processus menant de l'« irrationnel » au « rationnel », prend deux valeurs opposées, selon que le processus en question est considéré comme objectif ou subjectif, légitime ou non. Le développement d'une nouvelle forme de rationalité en Grèce ancienne (la philosophie) et son historiographie postérieure présentent souvent des tensions intéressantes entre les deux options. Avons-nous affaire au « phénomène » originel, dont la raison, malgré qu'elle en ait, doit s'accommoder, ou déjà à des utilisations et transpositions, qui font « référence » à des prétentions ou des types de pensée traditionnels ? L'article étudie sous ce rapport deux cas célèbres : la description fantastique que donne Parménide de son voyage chez la Déesse dans le proème de son poème et l'autoportrait d'Empédocle en « magicien » dans un de ses fragments, pour suggérer, contre certaines tendances récentes de l'interprétation, qu'ils répondent tous deux à la seconde hypothèse."

50. Lambin, Gérard. 2021. *Parménide et l'école d'Élée*. Pais: L'Harmattan.

;"Et faut-il bien parler d'une école philosophique(11) ? Pour autant que nous sachions, Élée ne connut rien de comparable aux sociétés pythagoriciennes, alors florissantes, ou bien à l'Académie, au Lycée, au Jardin, au Portique. Notre embarras est d'autant plus grand que le nom du fondateur de l'école (ou prétendue école) put être discuté. Platon nous intrigue en faisant remonter la « gent éléatique » (Ἐλεατικοὺν ἔθνος) à Xénophane de Colophon (vers 570 - vers 475 avant J.-C.) et même plus haut, sans préciser(12). De plus, un ἔθνος / ethnos - la traduction « gent » est empruntée à Auguste Diès et Léon Robin - n'est pas une école : le mot, comme on sait, désigne essentiellement un peuple(12). Les habitants d'Élée avaient-ils la réputation d'être des esprits curieux voulant tout comprendre, en allant jusqu'à l'unité dans laquelle se seraient rejointes des réalités apparemment distinctes ? Car, ajoute Platon, cette « gent » « expose en détail, en devisant », plus littéralement « par ses propos » (τοῖς μύθοις), que « chose une sont celles, multiples, que l'on nomme » : pour « les Mélissos et

les Parménide », « un est l'ensemble des choses, et, n'ayant pas d'espace où se mouvoir, il reste en lui-même »(14).

51. Létoublon, Françoise. 1990. "La notion de non-être dans l'histoire de la langue grecque archaïque." *Revue de Théologie et de Philosophie* no. 122:313-322.

;Résumé : "L'étude de la langue grecque aux origines - Homère et Hésiode - confirme celle de la mythologie et montre que la notion même de non-être n' existe pas en Grèce à l'époque archaïque. La poétique homérique est une poétique de l'être, même quand il s'agit des Sirènes, montrées en pleine activité de mensonge. La poétique du mensonge (ou de la fiction?) apparaît, timidement d'ailleurs, avec Hésiode; mais il n'est jamais question du non-être à cette époque, même avec le terme χάος «vide». Personne ne s'étonnera de ce que la spéculation grecque sur le non-être commence, dans le vocabulaire aussi bien qu'en tant qu'objet philosophique, avec

les Présocratiques, Xénophane et surtout Parménide. C'est l'apparition du neutre singulier affecté de la négation (τοῦ μὴ ὄν) au lieu du pluriel homérique jamais nié τὰ ὄντα) qui nous semble le signe linguistique capital de cette évolution dans la pensée, à mettre en parallèle avec la désignation, à partir d'Anaximandre, de «l'infini» par un autre neutre singulier (τοῦ ἀπείρων). Retour vers l'*Odyssée* enfin: la spéculation sur l'ambiguïté d'οὔτις «personne», pronom susceptible de devenir un nom propre, pourrait constituer un témoignage sur la germination de cette réflexion sur le non-être à l'époque archaïque."

52. Lorite Mena, José. 1978. "Parménide : la parole entre la vérité et le soupçon." *Revue de Métaphysique et de Morale* no. 83:289-307.

;"La parole de Parménide trame par delà les siècles l'appel du mystère.

Son Poème répartit les possibilités du discours suivant les épreuves de la pensée dans et par l'amorce du silence. L'architecture de son expérience donne la possibilité du silence comme garantie de la réalité de la parole. Parménide nous propose - par le dire de la déesse - les marques, les signes du mystère; à cette partie inexprimable s'accroche un discours en cascade qui, pour respecter la saisie plurielle des choses, se revêt d'un langage discontinu, sans briser pour autant l'unité de l'éthos de « l'homme qui sait ». Son message ne se limite pas à l'instauration de l'ontologie; il appelle à un mode d'être. Aurait-il pu positionner l'ontologie sans exiger une modification de l'habituel humain ? Le Poème nous parle d'une manière de se placer face au monde où la dimension religieuse - « initiatique » - côtoie sans pudeur les perspectives du rationalisme naissant en Grèce, où l'infailibilité d'une révélation réclame une adhésion totale (pistis) qui contraste avec l'effort logique mis en oeuvre dans la démonstration ... Pluralité de discours pour que l'homme apprenne à regarder le monde dans l'ordonnement d'une perspective divine. Le regard de Parménide réside dans une parole qui n'est possible qu'inscrite dans une manière d'être; l'épistémè est enchaînée à l'éthos - elle en marque les

paramètres - : une manière de connaître prend forme dans une manière d'être.(1)" (p. 289)

1. Voir E. Fink, *Zur ontologischen Frühgeschichte vom Raum, Zeit, Bewegung*, La Haye, 1957, pp. 53 sq."

53. Lowit, Alexandre. 1986. "Les 'principe' de la lecture heideggerienne de Parménide (*Parmenides*, GA, 54)." *Revue de Philosophie Ancienne* no. 4:163-210.

;"A partir d'où Heidegger lit-il Parménide dans le *Parmenides* (1) ? Posée ainsi, la question est évidemment indéterminée. Mais c'est bien ce qu'elle doit être si elle veut prétendre interroger la démarche du *Parmenides* dans toute son amplitude. Pour ne formuler que les deux extrêmes de son champ: "A partir d'où ... ?", cela doit certes demander: dans quel fragment, vers ou mot de Parménide Heidegger voit-il le motif, le 'commencement' déterminant du Poème? Mais cela doit - ou du moins devrait - demander aussi bien: dans l'horizon de quelle tâche, en répondant à quel $\chi\rho\eta$, à quel "Il faut", Heidegger lit-il Parménide? Pour m'aventurer à faire quelques pas sur le chemin — déroutant à souhait - où cette question m'engage, je procéderai selon trois étapes, en recourant successivement à trois types de démarche. Dans la première, sans aller jusqu'à 'ramper dans les phrases', je chercherai à me tenir au ras des énoncés et de leurs enchaînements, avec le but de dégager à ce niveau l'essentiel de l'itinéraire du *Parmenides* et de relever les principales objections auxquelles cet itinéraire est exposé quand on le suit à ce niveau-là; dans la seconde, reprenant quelques-uns des pas décisifs de cet itinéraire, je tenterai, pour échapper aux objections soulevées, de les suivre, non plus sur le plan des propositions mais dans l'espace des phénomènes; quand les phénomènes mettront fin à la possibilité d'avancer ainsi grâce à eux, je me donnerai, dans la troisième et dernière étape, la liberté de recourir, pour avancer quand même encore, à une 'supposition'." (pp. 163-164)

(1) *Parmenides*, publié seulement en 1982 dans la *Gesamtausgabe*, est un cours prononcé par Heidegger en hiver 1942-1943 — au moment donc où se déroulait la bataille de

Stalingrad. - Pour éviter des confusions, je me référerai à ce volume en recourant à la forme allemande de son titre.

54. Lucarini, Carlo Martino. 2020. "La circulation du poème de Parménide à l'époque impériale." *Maia* no. 72:13-30.

;Abstract: "This paper aims to determine which authors of the imperial period read the poem of Parmenides. Through a philological analysis I conclude that only Plutarch, Proclus, Simplicius (and perhaps Ammonius) had a direct knowledge of Parmenides, whereas the majority of philosophers had no access to the poem. Greek poets do not seem to have been influenced by Parmenides."

Bibliographie Mal - Z

1. Mallan, Claude. 2007. "De Parménide à Platon, quelques remarques sur le σύμβολον." *Connaissance Hellénique* no. 111:14-17.
2. Mansfeld, Jaap. 1999. "Parménide et Héraclite avaient-ils une théorie de la perception ?" *Phronesis. A Journal for Ancient Philosophy* no. 44:326-346.

;"Dans un article paru en 1996, auquel le présent essai fait suite, nous avons analysé la thèse aristotélicienne selon laquelle les philosophes pré-platoniciens ne faisaient pas de distinction entre perception et pensée.(1)" (p. 326)

(...)

"À la fin de cette discussion nous nous trouvons donc face à face avec un paradoxe qui vaut la peine d'être ébauché. Les deux grands philosophes présocratiques qui ont établi, ou du moins cherché à établir, une doctrine du logos (le «raisonnement» de Parménide, l'«explication» d'Héraclite), n'ont pas développé une doctrine de la perception sensorielle. Les philosophes présocratiques qui se sont efforcés de fournir des descriptions des différents sens, et des mécanismes et conditions de la perception sensorielle,(69) c'est-à-dire Empédocle, Anaxagore, Diogène d'Apollonie, et surtout Démocrite, chez qui la distinction entre sensation et pensée est de surcroît explicite dans des fragments cités littéralement non seulement par Sextus mais aussi par Galien,(70) n'ont pas

cherché à développer une doctrine du raisonnement, ou de l'explication.(71)

Aristote, qui prétendait que la doctrine du percevoir-et-savoir des anciens physiciens était une voie sans issue, et trouvait que la doctrine du «raisonnement» a priori de Parménide s'était éloignée de la physique

et pour cette raison ne lui était pas applicable, s'était donc bien rendu compte de quelques-uns des problèmes fructueux que ces doctrines comportent." (pp. 345-346)

(1) «Aristote et la structure du *De sensibus* de Théophraste», *Phronesis* 41, 1996, p. 158 sqq. (basé sur la première partie d'une conférence tenue à Paris le 7 avril 1995). Il s'agit surtout d'Aristote, *Métaphysique* 4.5.1009b12 sqq., *De l'âme* 1.2.404a25 sqq., 3.427a16 sqq.; cf. aussi infra, notre note 4. Remarquons que le commentateur tardif du , Jean Philopon, n'était pas d'accord avec ce qu'il appelle les inférences d'Aristote (*In De an* . p. 71.22 sqq. Hayduck).

(69) Voir, une fois de plus, l'article cité plus haut, à la note 1.

(70) Ce qui constitue une différence majeure avec la majorité des autres Présocratiques discutés ici; Sextus, dans le septième livre de son grand ouvrage cité plusieurs fois plus haut, n'a pas besoin d'une interprétation pour établir que Démocrite faisait cette distinction capitale. Les fragments en cause sont 68B9-10 (Sextus, deux fragments), B125 (Galien; deux fragments, dont le premier coïncide avec le premier texte cité par Sextus). Cet aspect de la doctrine de Démocrite manque dans le *De sensibus* de Théophraste; faute bizarre, ou défaut d'information?

(71) Il est vrai que nous sommes mal renseignés sur la production énorme de Démocrite.

3. Mansion, Suzanne. 1953. "Aristote, critique des Eléates." *Revue Philosophique de Louvain* no. 51:165-186.

;"L'étude qu'on se propose de faire ici se limitera pour l'essentiel à la critique aristotélicienne de la thèse centrale des Eléates: le monisme. On négligera notamment les aspects « physiques » de la doctrine (inexistence du vide, limitation ou

illimitation du Tout, etc.), et ses aspects mathématiques (arguments de Zenon pour prouver l'impossibilité du mouvement, p. ex.), ainsi que les objections qu'Aristote adresse à ces conceptions. Ce sont donc les positions métaphysiques et épistémologiques de l'école d'Elée qui retiendront surtout notre attention. C'est en elles, du reste, tout insuffisantes qu'elles soient, que réside le principal intérêt philosophique de la pensée éléatique. D'un autre côté, les attaques qu'elles subissent de la part du Stagirite s'appuient sur un certain nombre de principes qui paraissent assez fondamentaux dans son système et originaux dans une large mesure. C'est pourquoi la réflexion théorique a intérêt à voir s'affronter ces deux philosophies à propos d'un problème qu'elle rencontre inévitablement." (p. 165)

4. Martineau, Emmanuel. 1986. "Le 'coeur' de l' *alétheia* ." *Revue de Philosophie Ancienne* no. 4:33-86.

;". . . ἀληθείης εὐκυκλέος ἀτρεμῆς ἦτορ

Ainsi se présente, dans le poème de Parménide, la première nomination de Yalètheia. Que cette nomination précède, au fr. 1, celle de l'être lui-même, qui ne surgira qu'au fr. 2, nous considérons ce fait immédiatement constatable comme un signe univoque de l'absolue primauté, dans la problématique parméniennne, de la question de la "vérité" sur toute autre, y compris la question même de la distinction de l'"être" et du "non-être". Non moins absolue, dès lors, est la nécessité de comprendre correctement le vers cité (1,29). Aussi, c'est seulement après en avoir fait progresser l'exégèse (A) que nous esquisserons les quelques principes de la nouvelle interprétation d'ensemble qui constitue la perspective de cette étude (B)" (p. 33)

5. Monnoyer, Jean-Maurice. 2014. "Le dogme de la vérité selon Parménide." In *Mind, Values, and Metaphysics. Philosophical Essays in Honor of Kevin Mulligan – Volume 1* edited by Reboul, Anne, 459-470. Dordrecht: Springer.

;Résumé: "Peut-on continuer d'opposer l'approche phénoménologique et métaphysique? Parménide, fondateur de la métaphysique, s'adresse dans son texte à l'évidence de la

thisness (à la caractéristique du ceci): le *to gar auto* . Son emploi double de la copule *est* , emploi existentiel et prédicationnel, a provoqué une discussion légendaire sur son actualisme et son nécessitarisme supposés, qui ont été forgés en dépit de la compréhension de ses énoncés. L'article se propose de comparer les lectures de C.Kahn, D. O'Brien, J. Barnes et J. Bollack, pour fournir une lecture non archéologique de cette conception trahie depuis *Le Sophiste* de Platon au moins, mais qui reste le modèle de ce que devrait être une métaphysique expérimentale."

6. Morel, Jean-Paul. 2005. "« Oulis » à Velia: l'hypothèse phocéenne." In *Da Elea a Samo: filosofi e politici di fronte all'impero ateniese: atti del Convegno di Studi: Santa Maria Capua Vetere, 4-5 giugno 2003* , edited by Bregia, Luisa and Luoi, Marcello, 31-47. Napoli: Arte Tipografica.
7. Mouraviev, Serge. 2012. "Parménide chez Perséphone." In *Λόγος διδόναι. La filosofia come esercizio del render ragione. Studi in onore di Giovanni Casertano* , edited by Palumbo, Lidia, 139-158. Loffredo: Napoli.

;"Le texte de Laura Gemelli Marciano (LGM) est un travail remarquable et immensément ambitieux(2). C'est une tentative de «refocaliser» toute la tradition parménidienne (de Platon à Patricia Curd), avec pour objectif de «lever le voile de mystère qui obscurcit toujours l'essence de l'oeuvre» du grand Éléate. Ensuite, c'est une tentative de rétablir dans ses droits l'élément religieux incontestablement présent dans cette oeuvre et d'en déterminer la place et le rôle. Troisièmement, c'est toute une série de suggestions prégantes, méritant examen, d'une part sur l'importance de certaines sources historiques relatives à Parménide (P) et, d'autre part, sur la meilleure façon de dire, lire et interpréter maint passage concret de son poème. Enfin, aussi difficile qu'il soit d'émettre pareille supposition, ce pourrait être une bombe à retardement qui, si elle explose jamais, révolutionnera l'histoire de la philosophie occidentale et relancera les vieux débats sur les rapports entre religion, philosophie et science.

Plan suivi

Les remarques ci-dessous iront du coq à l'âne et paraîtront décousues.

Elles concernent chacune un sujet particulier restreint, mais crucial pour juger de la démarche de LGM. Je les ai regroupées en trois petits chapitres.

J'examinerai d'abord la situation exceptionnelle que semble créer la conception générale de LGM relativement à celle qui s'est instaurée – avec nombre de divergences, certes, dans notre discipline et l'impact beaucoup plus large qu'elle pourrait avoir (I). Je continuerai par un examen de l'argumentaire de LGM et en particulier de la stratégie macrorhétorique qu'elle met en place en faveur de l'interprétation mystique (II).

Et je terminerai par un examen détaillé de la façon dont elle analyse le langage et la poétique de P et dont elle interprète les structures supralinguistiques qu'elle y découvre (III)." (pp. 139-140)

(2) Cet article, dédié conférences présentées par Laura Gemelli Marciano à Ascea (Velia) en novembre-décembre 2007 sous le titre générique *Parmenide: Suoni, immagini, esperienza*, auxquelles j'avais pu assister et dont le préprint m'avait été communiqué, était destiné à l'origine au recueil *Eleatica 2* (Academia, Sankt Augustin, 2012).

Des circonstances imprévues m'ont empêché de l'y inclure. Mais sachant l'intérêt que Giovanni Casertano porte à Parménide, Lidia Palumbo a proposé que je le lui offre ici à l'occasion de son anniversaire. Je le fais avec d'autant plus de plaisir que Gianni est un ami et que j'admire beaucoup sa vision du grand Éléate. Quant au texte intégral des conférences de LGM, le lecteur le trouvera dans le recueil sus-indiqué. Les chiffres entre crochets renvoient aux pages du préprint.

Essays in Honour of Néstor-Luis Cordero*, edited by Pulpito, Massimo and Spangenberg, Pilar, 61-86. Bologna: Diogene Multimedia.

;(1) Je remercie sincèrement A.P.D. Mourelatos, N.-L. Cordero, R. Brague, R. Di Giuseppe, S. M. Kraus et un collègue ayant préféré garder l'anonymat, pour leurs remarques et critiques d'une première version de cet article. Elles m'ont permis d'en améliorer considérablement le texte et la documentation. Il va de soi qu'ils ne sont en rien responsables des opinions différentes des leurs que je défends, ni a fortiori de mes erreurs (2009). En 2010 il a fait l'objet d'un échange d'opinions par courriels avec Scott Austin qui a eu pour résultat l'addition d'une troisième partie intitulée *Philosophie*. En 2015 et 2016 ces deux versions furent affichées sur le site academia.edu (2015 et 2016) M e ont donné lieu à une discussion suivie par de nombreux collègues, dont Massimo Pulpito qui suggéré j'ajoute ma correspondance féconde avec Scott Austin, lequel, hélas, nous a quittés en 2014. Je le fais d'autant plus volontiers que je lui dois l'écriture de la Ille partie. Le lecteur trouvera donc ci dessous, en tant qu'un des derniers reflets de ses opinions sur ce sujet qu'il avait tellement à coeur, un Appendice contenant l'essentiel de ses réactions. J'assume entièrement le contenu de la partie philologique (I), j'ai quelques doutes sur l'intérêt de la partie historique (II) et je prie le lecteur de ne voir dans la partie philosophique (III) qu'un simple ballon d'essai (2010), ballon d'essai que je replace maintenant dans le contexte originel de mon échange de vues avec S. Austin.

Résumé : "Nouvelle interprétation de Parménide fr. B 1,28-32 sans amendements modernes. Traduction: "Il faut que tout tu connaittes, et le cœur, qui point ne bat, de Vérité persuasive, et les opinions des mortels en lesquelles il n'y a pas de confiance vraie. Mais tu apprendras quand même ceci : qu'il fallait qu'on admette que les choses apparentes sont toujours tout à fait semblables à des choses existantes." Le commentaire comporte une partie philologique, une partie historico-méthodologique et une partie philosophique sur la dissymétrie du logique et du réel."

11. O'Brien, Denis. 1980. "Temps et intemporalité chez Parménide." *Les Études Philosophiques* no. 35:257-272.

;"Conclusion : temps et intemporalité

Cette analyse du raisonnement de la déesse ouvre une nouvelle perspective sur les notions de temps et d'intemporalité chez Parménide.

L'objet du discours s'avère éternel, si nous entendons par là qu'il est sans commencement ni fin temporels. En revanche, deux conceptions de l'intemporalité sont ici à exclure: celle d'énoncés logiques et mathématiques, dont Aristote reprendra l'analyse dans son traité de la *Physique*; et celle de l'éternité non durative propre à l'existence divine, conception qu'on trouvera plus tard dans la philosophie de l'Antiquité, notamment chez Plutarque(31).

Certes, ces deux conceptions de l'intemporalité ont été attribuées à Parménide, celle-ci par les commentateurs néoplatoniciens de la fin de l'Antiquité classique, celle-là par M. Owen. *Strange bed-fellows*, dira-t-on(32); mais soulignons que dans les deux cas on a été amené à fausser le sens littéral de ces deux vers (vv. 5-6), soit en supprimant les adverbes temporels « jadis » et « maintenant » (c'est le procédé d'Ammonius et d'Asclépius), soit en prenant ces deux adverbes pour des inexactitudes linguistiques dont l'auteur lui-même aurait été parfaitement conscient et que le lecteur aurait tort de prendre au pied de la lettre (c'est la solution que semble supposer l'approche de M. Owen).

La seule issue possible, me semble-t-il, est de rattacher la formuel « intemporelle » à son contexte d'origine : cela permet

de voir en elle une affirmation de la thèse qui la précède (v. 3) et une première ébauche de l'argumentation qui la suit (vv. 6 sqq.).

Une fois replongée dans les tours et les détours de ce contexte, cette formule manifeste sa fonction, qui est d'annoncer, sous une forme liminaire et incomplète, non pas une existence non durative et intemporelle, mais bien plutôt la nécessité d'une existence qui serait « éternelle », en ce sens seulement qu'elle est inengendrée et impérissable." (p. 270)

(31) Sur Plutarque, et sur la conception d'une éternité non durative, voir J. Whittaker, *Ammonius on the Delphic E*, *Classical Quarterly*, n.s., 1969, 185-192. Je reprendrai l'étude de l'« intemporalité » chez Aristote dans une publication ultérieure, où j'examinerai aussi la référence que M. Owen fait à Leibniz et à son principe de l'identité des indiscernables, pour fonder sa critique de Parménide.

;"Sommaire: I. Le problème de l'intemporalité; II. «Il n'est pas» III. «Il ne sera pas»; IV. «Il n'était pas»; V. L'inengendré; VI. L'impérissable; VII. La preuve de l'immortalité; VIII Les deux emplois du «maintenant»; IX. L'éternel (1)

LE PROBLÈME DE L'INTEMPORALITÉ

Le sens d'« éternité»

Au fr. VIII, 1-2, la déesse déclare: «Il ne reste plus qu'une seule parole, celle de la voie énonçant: 'est'». Elle désigne ainsi la Voie de l'existence, annoncée au fr. II, 3. Cette Voie est «chemin de persuasion, car la persuasion accompagne la vérité» (fr. II, 4). C'est donc au fr. VIII que la déesse accomplira la promesse faite dans le prologue (fr. I, 29): le disciple s'instruira du «coeur de la vérité persuasive ...» (2).

Quelle est cette «vérité», exposée dans la Voie de l'existence?

En ouvrant cette Voie, la déesse affirme que l'objet de son discours est «inengendré» et «impérissable» (fr. VIII, 3). Elle précise, deux vers plus loin (v. 5): «Il n'était pas à un moment, ni ne sera à un moment, puisqu'il est maintenant». Pour la majorité des exégètes, Parménide aurait évoqué dans ce dernier vers, pour la première fois dans l'histoire de l'Occident, le concept d'éternité. Mais de quelle «éternité» s'agit-il? En quel sens prend-on ici ce terme? Le plus souvent, les formules adoptées par les commentateurs laissent perplexe." (pp. 135-136)

(1) Le chapitre que l'on va lire repose sur les conclusions dégagées dans le premier tome de cet ouvrage (*Éludes I, Essai critique: Introduction à la lecture de Parménide*) ainsi que sur mes recherches antérieures, que je reprends ici, en les approfondissant et en les corrigeant. Quelques précisions de terminologie s'imposent, ici comme dans mon *Essai critique* (cf. p. 140 n. 3): je parlerai indifféremment de «genèse» et de «naissance», de «disparition» et de «mort»; en employant ces termes «naissance» et «mort», je n'ai point voulu imposer au lecteur une représentation de l'«être» de Parménide comme d'un être animé/vivant. Dans ce que j'appelle la «preuve de l'immortalité» (voir surtout pp. 157-158 infra), la déesse vise à montrer non seulement que l'être est immortel (absence de «mort» ou de «destruction»; sur la possibilité d'une distinction implicite entre ces deux termes, voir p.155 infra), mais encore qu'il est inengendré (absence de «genèse» ou de «naissance»).

(2) Sur l'articulation du poème, voir mon *Essai critique*, chap. XI (*Études 1*, pp. 239 sqq.)

13. ——. 1987. "Problèmes d'établissement du texte: la transmission du Poème dans l'Antiquité." In *Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 314-350. Paris: Vrin.

;"Sommaire: I. L'édition des textes et l'histoire de la philosophie; II. Fr.I, 29: «vérité» et «persuasion»; III. Fr. VIII, 4: «entier en sa membrure»; IV. Immortalité et indivisibilité: la thèse de G. E. L. Owen; V. Immortalité et immobilité: la citation de Plutarque; VI. Fr. VIII, 4: «unique» et

«inengendré»; VII. Fr. VIII, 4: l'histoire de la transmission du texte; VIII Fr. VIII, 5: «il est maintenant»; IX. Fr. VIII, 6: la «continuité» du temps; X. La tradition manuscrite du poème; XI. Fr. VIII, 12: une naissance à partir de l'être; XII. Les éditeurs de la fin de l'Antiquité."

"Le texte de Parménide commenté dans un chapitre précédent de cet ouvrage (fr. VIII, 1-21: la première partie du discours sur la vérité) est émaillé de variantes; je reprendrai, dans ce chapitre, celles qui touchent de près à mon analyse.

Le texte du poème, on le sait, n'est pas attesté en tradition directe; il n'est conservé que dans les manuscrits d'une trentaine d'auteurs anciens qui en ont cité des extraits. Dans ces manuscrits, comme pour tous les textes qui nous sont venus de l'Antiquité, des erreurs de copistes se sont accumulées; à l'éditeur de rectifier ces erreurs, en tirant parti de ses connaissances codicologiques ou philologiques.

La science du codicologue ou du philologue risque cependant de s'avérer insuffisante, lorsqu'il s'agit d'une difficulté relevant d'un domaine qui n'est pas le sien: celui de l'histoire de la philosophie. Les fragments de Parménide, tels qu'ils ont été conservés dans les manuscrits, ne présentent pas seulement en effet des variantes imputables à l'inadvertance ou à l'ignorance des copistes; on peut aussi subodorer ici et là, sous certaines variantes, les traces de manipulations tendancieuses du poème.

À y regarder de plus près, il devient en effet évident que des copistes savants, imbus de platonisme et de néoplatonisme, ont pris à coeur de «normaliser» la pensée de Parménide, en l'intégrant, de gré ou de force, dans leur vision idéaliste de la philosophie des anciens. Pour ce faire, ils ont gommé, dans le texte du poème qui leur était transmis, les discordances, réelles ou supposées, avec les dialogues de Platon ou les Ennéades de Plotin.

Les «corrections» ainsi infligées au texte primitif du poème, si elles ont été faites avec suffisamment d'habileté, ne violentent ni la grammaire ni la métrique. Elles risqueront par conséquent de passer inaperçues tant que l'éditeur moderne n'aura pas pris

conscience des considérations proprement philosophiques qui peuvent avoir influé sur la transmission des fragments." (pp. 314-315)

15. ———. 2012. "Le Parménide historique et le *Parménide* de Platon." In *Lectures de Platon*, edited by Castel-Bouchouchi, Anissa, Dixsaut, Monique and Kévorkian, Gilles, 89-106. Paris: Ellipses.

;" « L'un » qui fait l'objet de l'examen dans la seconde partie du dialogue n'est plus en effet « l'être » qui est « un » dans le poème de Parménide. Dès les premières lignes du premier raisonnement, Parménide nous apprend que « l'un » dont il est ici question est « illimité » (137d8) et « sans forme » (d9). Ce n'est donc plus « l'être » de Parménide, qui est, au contraire, « fini » (fr. 8.42) et « semblable à la masse d'une sphère à la belle circularité » (v. 43). Dans « l'un » soumis à l'examen dans le dialogue de Platon on ne peut donc plus reconnaître « l'être » qui est « un » dans le poème de Parménide.

Mais une différence plus radicale encore sépare « l'un » qui fait l'objet des arguments successifs élaborés dans la seconde partie du dialogue de Platon, d'une part, et « l'être » qui est « un », dans le poème de Parménide, d'autre part, « L'être » qui est « un » dans le poème de Parménide constitue l'ensemble de ce qui est. Admettons donc qu'il est, en ce sens, l'univers. Admettons donc que le jeune Socrate, quand il prête à Parménide la thèse suivant laquelle « le est un » (128a 8-b1), n'a pas faussé sa pensée.

Or, « l'un » qui fait l'objet des raisonnements dans la seconde partie du dialogue de Platon n'est plus l'univers. Il n'est donc plus *to pan*. Parménide.-Le Parménide de Platon --.- propose en effet d'examiner les conséquences que doit entraîner chacune des deux hypothèses (que l'un soit « un » ou que l'un

soit (« non un »), non seulement pour l'un, mais aussi pour « les autres », (136a4-c5).

Si « l'un », était l'univers, il n'y aurait pas d'« autres ».

Mais l'on ne doit pas s'étonner que la thèse du Parménide ne soit plus la thèse de Parménide. Ici, comme dans les critiques adressées à Parménide dans le *Sophiste*, Platon ne s'occupe plus de l'« univers » qui est « un » ; il s'attache à savoir ce que c'est que d'être un. Cet « un » n'est plus par conséquent ni monde ni l'univers. Ce n'est certainement pas « le monde » : le monde, soit pour Parménide que pour Empédocle, s'oppose à l'un. Mais ce n'est pas plus {« l'univers » : s'il s'agissait de l'univers, donc de la totalité de ce qui est, n'aurait même pas le droit de s'interroger sur « les autres », car ces « autres », fait même qu'ils ne faisaient pas partie de l'univers, n'existeraient pas. « L'un » de la seconde partie du *Parménide*, - c'est l'un, en tant que tel." (pp. 105-106)

16. ———. 2012. "[Chapitre] V. Parménide." In *Lire les présocratiques*, edited by Brisson, Luc, Macé, Arnaud and Therme, Anne-Laure, 129-148. Paris: Press universitaires de France.

;"Parménide avait autour de soixante-cinq ans quand il rencontra Socrate, alors tout jeune ; tels sont les propos de Platon, au début de son dialogue le Parménide. Cette rencontre est sans doute fictive, mais Platon, metteur en scène scrupuleux, a certainement cherché à l'intégrer dans un contexte historique plausible. Socrate, mort en 399 à l'âge de soixante-dix ans, est un jeune adolescent avant le tournant du Ve siècle av. J.-C. (455-450) ; la naissance de Parménide remonterait donc, si l'on en croit Platon, aux premières décennies du siècle précédent (520-515).

Le poème dont il est l'auteur n'a pas été conservé. Il n'en reste pas moins de longs extraits, dont un prologue (32 vers), cité dans son entier par Sextus (IIe siècle ap. J.-C.), et « un discours sur la vérité » (49 vers), recopié en partie par Sextus et en partie par Simplicius (VIe siècle ap. J.-C.). Dans le prologue, Parménide parle de lui-même comme d'un κοῦρος, un « jeune homme » (fr. 1, 24) ; le poème est donc présenté comme une

oeuvre de jeunesse. La doctrine du poème, et notamment le préambule au « discours sur la vérité », fera l'objet d'une critique détaillée dans le dialogue de Platon, le *Sophiste*. Ce sont les données essentielles dont nous disposons pour reconstituer la philosophie de Parménide." (p. 129)

17. Parenteau, Danic. 2004. "Du recours heideggerien à la thèse ontologique de Parménide : sur la différence ontologique comme le fait originaire." *Horizons philosophiques* no. 14:27-36.

;"Le présent article se veut une analyse de la place et du rôle de la différence ontologique au sein de l'ensemble de la pensée de Heidegger, tant sa première pensée que sa pensée qui procède du Tournant. Notre travail vise une compréhension de la manière dont Heidegger conçoit la différence ontologique et de l'importance qu'il lui accorde. Il s'agira pour nous de montrer pourquoi Heidegger considère que la différence ontologique peut se passer d'une quelconque interrogation quant à son existence, pouvant ainsi être présentée comme relevant de l'évidence. Notre analyse portera premièrement sur la place de la différence ontologique au sein des deux pensées de Heidegger. Deuxièmement, nous analyserons la manière dont Heidegger cherche à faire valoir la différence ontologique comme le fait originaire, c'est-à-dire ce à quoi rien ne saurait échapper et ce sur quoi tout repose. Pour Heidegger, au «fondement» de tout ce qui «est» se trouve la différence ontologique. Troisièmement, nous formulerons une critique de cette idée de la différence ontologique comme le fait originaire." (p. 28)

(...)

"En raison de l'importance qui revient à Parménide eu égard à la question de l'être, ce penseur occupe une place prépondérante et incomparable dans la pensée de Heidegger. Celui-ci estime que Parménide serait le premier penseur de l'être, le premier à poser la question de l'être et à prendre conscience de ce que Heidegger nomme «le mystère originel pour toute pensée(13)». On le sait, pour Heidegger, la suite de l'histoire de la pensée occidentale — pensée qui est devenue

avec Platon et Aristote «métaphysique» — ne sera qu'un long déclin, celui de l'oubli de plus en plus grandissant de l'être(14)." (p. 32)

(13) *Lettre sur l'humanisme*, p. 87. Heidegger écrit bien «das anfängliches Geheimnis».

18. Pasqua, Hervé. 1992. "L'unité de l'Être parménidien." *Revue Philosophique de Louvain* no. 90:143-155.

;"Being exists in an absolute sense, and because it exists it cannot cease to be. In other words non-being is impossible. This is the central thesis of Parmenides' poem. The Author aims to show that this thesis can only be justified in Parmenides' view if Being is considered to be identical with the One. If this is the case, it has an important effect on the interpretation of the Poem, namely that the affirmation of Being does not depend on the denial of Non-being, as many exegetes hold. In this article two recent interpretations are discussed, namely those of N. L. Cordero and L. Couloubaritsis. The Author aims to inquire to what extent the true thought of Parmenides does not consist in making the affirmation of Being depend on that of Non-Being, but rather the contrary, by basing his argumentation on the reciprocity of Being and the One."

19. Pòrtulas, Jaume. 2019. "Parménide et les traditions de la palinodie poétique." In *La poésie archaïque comme discours de savoir*, edited by Desclos, Marie-Laurence, 219-244. Paris: Garnier.

;Résumé : "Le poème de Parménide est l'héritier d'une longue tradition poétique, dont il reprend de nombreux procédés. Son invocation à une autorité transcendante est lourde de conséquences : l'adoption du rôle de messenger ; l'accent mis sur la thématique de Peithô ; la dénonciation de la foule ; l'appel aussi à une certaine « pierre de touche », etc. On verra que les conventions de la palinodie pourraient nous aider à mieux comprendre l'articulation délicate entre l'Alétheia et les doxai des mortels."

20. Primavesi, Oliver. 2013. "Le chemin vers la révélation : lumière et nuit dans le proème de Parménide." *Philosophia Antiqua* no. 13:37-81.

;Traduction par Mathilde Brémond de *Der Weg zur Offenbarung: Über Licht und Nacht im Proömium des Parmenides* (2011).

Résumé : "Cet article propose une interprétation de la relation entre l'aletheia et la doxa dans le poème de Parménide sur la base d'une analyse du voyage relaté dans le proème. À partir d'un examen précis du texte parménié, il établit que l'hypothèse selon laquelle la citadelle de la nuit est la destination finale du voyage rend bien mieux compte de celui-ci que l'hypothèse longtemps admise selon laquelle il s'agirait de la lumière. Cette lecture du proème permet non seulement d'établir un certain nombre de parallèles avec d'autres œuvres poétiques qui décrivent le trajet du Soleil, mais surtout de mettre au jour une analogie entre le récit de voyage et la partition en deux du poème parménié : notre monde, où alternent le jour et la nuit, représente le monde de la doxa, où être et non-être sont mêlés et qui est gouverné par deux principes correspondants, le feu et la nuit, tandis que l'unicité de la déesse de la Nuit dans l'au-delà renvoie à celle de l'être. De plus, en distinguant deux étapes dans le voyage du narrateur, celle où il atteint de lui-même le chemin de la nuit et du jour et celle où les filles d'Hélios le guident sur ce chemin, on peut expliquer l'existence même d'un discours sur les opinions des mortels : de même que le narrateur a besoin d'abord d'aller de notre monde quotidien jusqu'au chemin de la nuit et du jour pour avoir ensuite accès à la connaissance divine, de même il faut expliquer le monde de l'opinion en le faisant remonter à deux principes fondamentaux pour montrer aux mortels le chemin vers l'aletheia. L'article conclut en expliquant, à partir des fragments B14 et B15, pourquoi Parménide a recours à la déesse de la Nuit pour faire cette révélation : ce choix repose sur une critique de la lumière du soleil comme condition de la vision trompeuse."

22. Ranzato, Sofia. 2019. "Choisir sa propre route chez Parménide, dans la poésie didactique et dans les traditions religieuses à l'époque archaïque." In *La poésie archaïque comme discours de savoir*, edited by Desclos, Marie-Laurence, 201-217. Paris: Garnier.

;Résumé: "Point de départ de cette étude, l'image du carrefour dans l'œuvre d'Homère, d'Hésiode et de Théognis, ainsi que sa re-fonctionnalisation dans les lamelles d'or orphiques. Choisir un chemin déviant par rapport à celui que parcourent les masses apparaît comme une modalité nécessaire en vue d'obtenir une condition post mortem privilégiée. Ainsi s'éclaire l'insistance de Parménide sur le choix de la seule voie qui conduise à la vérité, semblant se charger d'une valeur également existentielle."

23. Regvald, Richard. 1986. "Parménide : le trajet de la non-coïncidence." *Revue Philosophique de la France et de l'Étranger* no. 176:13-29.

;"En déclarant notre attachement à la conception heideggerienne de la parole, nous nous efforcerons, après quelques préliminaires, de mettre en évidence le croisement de l'atemporalité et de la temporalité dans le poème de Parménide et l'importance de ce croisement pour la constitution de la science. La transparence parménidienne, opposée traditionnellement à l'obscurité héraclitienne, conserve une épaisseur bien propre : elle peut être envisagée comme ce qui fait transparaitre et implique, pour cela même, un résidu foncièrement irréductible. Cette perspective prend également en compte les rapports aporétiques et fragiles (à proprement parler, le saut) reliant les deux parties du poème. Pour que l'unité puisse devancer la diversité, sans en faire purement et simplement abstraction - car la seconde partie du poème a bel et bien été écrite-, il y a lieu de supposer qu'un frémissement parcourt cette unité-là, si initial ou si évanescent soit-il." (p. 14)

24. Riu, Xavier. 2019. "Vérités et performance publique. Quelques réflexions sur ἀλήθεια " In *La poésie archaïque comme discours de savoir* , edited by Desclos, Marie-Laurence, 245-258. Paris: Garnier.

;Résumé : "Qu'en est-il du concept de vérité en Grèce archaïque et partiellement classique ? Plusieurs conceptions de la vérité coexistaient, plusieurs mots pour la dire également, que nous ne différencions mal et que souvent nous tendons à confondre. Il faut par ailleurs resituer le concept d'ἀλήθεια dans le contexte de l'énonciation publique. Enfin, ces types de vérité multiples nous permettent de penser autrement la manière dont Parménide présente les différentes façons d'être et d'être vrai."

25. Rocca-Serra, Guillaume. 1985. "Parménide et les médecins d'Elée." *Histoire des sciences médicales* no. 19:169-174.

;Résumé : "Nous désirons examiner à nouveau quatre inscriptions grecques découvertes à Velia, qui portent le nom de trois médecins et celui de Parménide. Nous nous interrogeons sur la possibilité d'un rapport entre ces médecins et le philosophe et nous attirons l'attention sur quelques fragments et témoignages qui nous permettent de voir dans Parménide un auteur lu par les médecins et utilisé comme autorité par une association médicale."

26. ———. 1987. "Parménide chez Diogène Laërce." In *Études sur Parménide. Tome II. Problèmes d'interprétation* , edited by Aubenque, Pierre, 254-273. Paris: Vrin.

;"Nous avons choisi d'organiser notre recherche autour de la notice consacrée à Parménide par Diogène Laërce. Une autre méthode eût consisté dans une présentation qui aurait suivi un ordre chronologique, mais une telle procédure supposait résolu un problème qui tourmente, au moins depuis Nietzsche, philologues et philosophes, celui des sources de Diogène Laërce. Au contraire, partir de cet auteur et revenir en arrière nous évitait de prendre des positions trop tranchées à la fois sur ses informateurs immédiats et sur les sources de ces informateurs eux-mêmes.

L'oeuvre de Diogène constitue, on le sait, une sorte de synthèse, maladroite et parfois mal intentionnée, de ce que l'érudition hellénistique avait rassemblé sur le thème des «Vies et doctrines des philosophes célèbres». Sa méthode de travail, son esprit superficiel lui ont attiré des critiques méritées, mais il nous a conservé une masse d'informations qui font de son livre un ouvrage indispensable. Ajoutons qu'une partie des absurdités qu'on lui attribue pourrait parfaitement provenir de la maladresse des scribes médiévaux." (p. 254)

"Cet examen, bien que partiel, de la tradition biographique et doxographique nous aura persuadés, semble-t-il, d'abord, que les restes de cette tradition ne représentent qu'une infime partie d'une littérature jadis très importante. C'est ainsi que la modeste notice de Diogène nous fait entrevoir les travaux de l'école d'Aristote, de l'érudition alexandrine, de la doxographie sceptique.

Ensuite et surtout, on peut mettre en évidence la valeur de certaines des indications qu'elle nous transmet. Elle nous fournit le canevas vraisemblable de la biographie de Parménide, d'abord héritier d'une grande famille et voué probablement à une activité politique et législative, puis se tournant vers la philosophie, sans toutefois que la fine pointe de sa pensée soit mise en évidence, et c'est là une des lacunes de la tradition. Pourtant, bien avant K. Reinhardt 1^o2, Sotion puis Diogène ont dissocié Xénophane et Parménide, pressentant ainsi l'originalité de ce dernier. La tradition, enfin, a retenu plus volontiers le monde de l'apparence que le poème. C'est surtout grâce à elle que nous reconstruisons la doxa parménidienne, sur laquelle les parties conservées du Poème nous renseignent guère. Elle a donc sa place dans l'approche d'un Parménide dans sa totalité." (p. 273 notes omises)

27. Rossetti, Livio. 2010. "La structure du poème de Parménide." *Philosophie Antique* no. 10:187-226.

;Résumé : !La structure qui sous-tend la composition du poème de Parménide est très élaborée, il est aisé de s'en rendre compte. La déesse y parle des enseignements qu'elle s'appête à délivrer et, dans les fragments 10 et 11, elle offre un panorama

détaillé de tout un ensemble de questions qu'elle va traiter aussitôt après. Un certain nombre d'éléments métatextuels se trouvent de cette façon insérés dans le texte écrit au premier degré et en interrompent le cours. D'autres passages de texte à métatexte (et vice versa) se rencontrent d'ailleurs dans les fragments, mettant ainsi en évidence de frappantes discontinuités et des changements significatifs dans le type de saturation provoqué dans l'auditoire. Tout cela fait comprendre que les enseignements délivrés dans le poème sont immergés dans une infrastructure beaucoup plus « construite » et « étudiée », beaucoup plus consciente que celle qui apparaît dans tant d'autres textes de la même époque ou antérieurs. D'où l'importance d'une recherche spécifiquement consacrée à la composition du poème dans son ensemble.

La formule rassurante de B10.1, « tu apprendras » (*eisē*), prend dans cette recherche une importance particulière, parce qu'elle démontre que Parménide lui-même a donné une valeur explicitement positive à ce qui, jusque peu auparavant, faisait l'objet de jugements fortement négatifs. Cette incohérence n'est donc pas une conjecture de notre part, mais quelque chose dont Parménide ne peut pas ne pas s'être rendu compte, ce qui signifie vraisemblablement que la seconde partie du poème expose des connaissances auxquelles il était parvenu dans une « phase précritique » de sa recherche. Sinon, à quelle autre explication pourrait-on penser ?"

28. ——. 2021. "Les déesses de Parménide." In *Penser les dieux avec les présocratiques*, edited by Saetta Cottone, Rossella, 129-142. Paris: Éditions Rue d'Ulm.

;"Dans son poème, Parménide ne parle que de déesses, et non pas de dieux au masculin.

Plus encore, au début du poème, Parménide choisit de commencer le premier vers par les mots *hippoi tai*, des juments, détail confirmé au vers 25 avec la reprise du même mot, cette fois sous la forme *hippois th' hai*. Pourquoi une telle insistance sur le féminin ? Le poète qui relate son voyage évoque des juments tout en suggérant que celles-ci ont rempli une mission importante, confiée par une déesse, en vue d'une

rencontre que cette déesse semble avoir voulue (et soigneusement préparée)." (p. 129)

(...)

"Un tel ensemble a un sens et remplit une fonction. Ce que nous découvrons de la suite du poème ne fera que renforcer l'impression que le poète veut mettre en lumière l'univers féminin ; il saisit plusieurs opportunités pour le faire, même lorsqu'il n'est pas question de voyage. Mais dans quel but ?

Chose curieuse, à aucun moment le poème n'indique ouvertement que le féminin mérite une considération particulière. On doit donc en déduire que ce message est pensé comme implicite ou indirect, tout en étant un message que Parménide souhaite faire passer. Avant d'essayer de le déchiffrer, faisons déjà état des données fournies par le texte." (p. 130)

29. Ruben, Tanja. 2007. "L'être, la pensée et les liens du discours : structures et argumentation du fr. 8, 1-49 D-K de Parménide." *Métis* :163-184.

;Résumé : "Une analyse attentive aux liens formels et aux marques de l'énonciation du fragment 8 (1-41) D-K de Parménide montre qu'il présente une structure annulaire. Les parties corrélatives de chacun des trois anneaux se complètent et font progresser l'argumentation. Le discours de la déesse, par lequel elle cherche à convaincre le jeune homme d'emprunter le chemin de l'être, doit son efficacité et sa force persuasive à cette composition en anneaux et au récit paradigmatique qui en forme le centre. Celui-ci donne en exemple au jeune homme la divine Justice qui s'est prononcé jadis en faveur du chemin de l'être."

;"La discussion à propos du sens des catégories philosophiques est, depuis Aristote, un lieu récurrent de la problématisation de la connaissance, voire aussi de la constitution du langage et de la nature humaine elle-même.

(...)

Ce qui nous intéresse à présent est la façon dont les catégories philosophiques ou scientifiques, les catégories de connaissance, les catégories qui ont rapport à un discours à prétention de vérité, sont produites dans le langage et dans les langues occidentales. Une hypothèse de départ, à utiliser comme axiome de recherche, est que le discours philosophique et scientifique que nous utilisons puise ses formes sémantiques, syntactiques et herméneutiques dans des usages langagiers, dans certaines pragmatiques qui ont des rapports expressifs avec la vérité – et qui se rencontrent parmi plusieurs genres littéraires dans les conditions les plus diverses : festives, religieuses, politiques, judiciaires etc. Ils y puisent certaines formes tout en les transformant en modèles du discours scientifique et philosophique. Une recherche parmi ces moments métaboliques du sens pourrait trouver des ponts dans cette zone de frontière entre les discours poétiques en général et le discours philosophique traditionnel.

Dans ce programme, une étape décisive est sans doute la formulation aristotélicienne de la doctrine des catégories et ses interprétations par les commentateurs néoplatoniciens. Pourtant, il ne seront pas visés en cet article dans une herméneutique directe, mais comme le point de départ inverse d'une généalogie et même d'une archéologie des manières de dire la vérité. Cherchons à dégager dans la formulation aristotélicienne les emprunts langagiers qui peuvent constituer des traces pour une généalogie de ces catégories. On y peut repérer deux lignées principales : l'une qui remonte aux catalogues épiques, l'autre aux disputes judiciaires rhétoriques sur la vérité des accusations. Ces deux lignées ont pourtant un moment de rencontre exceptionnel dans la préhistoire des catégories aristotéliciennes, dans le Poème de Parménide. C'est

précisément le sujet de cet article :Parménide et les catalogues d'Homère." (pp. 25-26)

32. Sassi, Maria Michela. 2013. "La logique de l'*eoikos* et ses transformations : Xénophane, Parménide, Platon." *Philosophie antique* :13-35.

;Résumé : "L'adjectif *eoikos* apparaît dans trois passages cruciaux de la pensée grecque (Xénophane, fr. B35; Parménide, fr. B8, 60; Platon, *Timée*, 29b3-c3), caractérisant une certaine « ressemblance » à la vérité qui se veut constitutive du discours du savant. En fait, le long de cet examen on découvre que les trois usages du terme ne peuvent pas être disposés le long d'une ligne continue, vu la difficulté de comprendre à quelle notion de vérité, sous quel point de vue, et avec quel degré d'évidence, ce discours se veut « ressemblant » selon l'occasion. Dans le cas de Parménide, cet aspect passe même au second plan, puisqu'on assiste à la prédominance d'une autre connotation qui accompagne le terme *eoikos* à partir de l'usage homérique, à savoir celle de la «convenance» à un contexte communicatif. L'article cherche dans l'ensemble à éclairer les déplacements que subie la logique de la similitude (et des procédés analogiques qui s'y greffent) en passant par des cadres ontologiques et épistémologiques aussi différents que le sont ceux de Xénophane, Parménide et Platon."

35. Schüssler, Ingeborg. 1996. "La question de la nature au début de la pensée occidentale. Destruction ou conservation? À propos du Poème de Parménide." *Cahiers de la Revue de théologie et de philosophie* no. 18:392-396.

36. Semenzato, Camille. 2017. *A l'écoute des Muses en Grèce archaïque. La question de l'inspiration dans la poésie grecque à l'aube de notre civilisation* . Berlin: de Gruyter.

;7e mouvement : Parménide et Empédocle, deux poètes-penseurs; poètes-penseurs; 7.1 Parménide : proème musical 291-308.

"Depuis la fin du 19e siècle au moins, Parménide et Empédocle sont classés parmi les présocratiques – appellation qui en fait des précurseurs de Socrate-Platon, des philosophes, distincts des chanteurs et poètes. Aujourd'hui, la tendance est de repenser ces catégories, impropres à la réalité archaïque. On considère désormais les deux auteurs comme des poètes de genre particulier.(1) Des poètes-musiciens, parce qu'ils écrivent en vers, font mention respectivement de déesses aux traits musicaux ainsi que de Muses et déploient un champ lexical sémantiquement proche des autres auteurs de notre corpus. Des poètes-penseurs, parce que leurs oeuvres sont inscrites dans une ambiance pré-philosophique : voie vers la pensée métaphysique et la connaissance abstraite des phénomènes. Même sans entrer dans les détails d'interprétation philosophique, l'observation des apparitions parménidienne et empédocléenne des divinités féminines et du vocabulaire musical s'avère des plus instructives ; elle montre l'importance et influence de la musique sur toute composition." (P. 291, une note omise)

(...)

"Si le voyage initiatique raconté par le narrateur du poème de Parménide ouvre la pensée humaine aux lumières de la philosophie, il n'en demeure pas moins une expérience menant aux sombres profondeurs de la vérité. Même si les filles, la divinité et la déesse ne sont pas des Muses, l'ensemble de l'initiation se déroule dans un contexte et une ambiance de part en part musicaux : musique qui accorde à l'homme une connaissance inédite de la vérité. Voyage initiatique, connaissance et vérité que Platon et l'ensemble de notre tradition a interprété en termes de pure lumière métaphysique, mais qui ouvre toutefois en même temps sur quantité d'expériences et de compréhensions sensibles, claires-obscurées, mystérieuses du monde." (p. 308)

37. Somville, Pierre. 1970. "Hypotyposes parménidiennes." *Tijdschrift voor Filosofie* no. 32:488-493.

;"L'articulation des Doxai et de l'Alethéia au sein d'un même système de pensée semble bien être la croix de toute interprétation parménidienne.

Que ces deux „chemins de pensée" soient présentés dans le rapport d'une radicale exclusion de termes, ou, qu'au contraire, les exégètes tentent de les réunir dans une vision ontologiquement unifiante, le problème reste pendant.

Or, il nous semble que les tentatives d'explications d'ordre tant logique qu'historique ne soient pas satisfaisantes en l'occurrence.

Nous croyons plutôt voir dans ces deux axes parménidiens de l'Apparence et de l'Etre la première émergence lucide d'une problématique inhérente à toute situation philosophique, au-delà même des écoles et des différences de localisation dans l'espace et dans le temps. Doxai et Alethéia sont les deux éléments pour la première fois posés d'une dialectique de l'Etre et du Paraître, dont on ne peut même pas dire qu'elle aura une grande postérité, ou qu'elle „fera école", puisqu'elle nous semble être constituante de toute démarche philosophique en tant que telle.

(...)

Notre propos sera donc de voir brièvement le genre d'aménagement réciproque que Parménide réserve à ses deux grandes notions, et de tenter ensuite d'en rapprocher la pensée de trois philosophes modernes, - Descartes, Kant et Emile Meyerson -, nous risquant à établir une sorte de dialogue figuré entre Parménide et ces trois penseurs. D'où la couleur d'ébauche et de prosopopée évoquée par l'intitulé de cette contribution, qui se veut stricte, autant qu'il est possible, mais qui ne prétend nullement atteindre à la rigueur d'une démonstration." (pp. 488-489)

39. Steinrück, Martin. 2006. "La forme figurative et le vers de Parménide." *Revue de Philosophie Ancienne* no. 24:17-24.

;"Où faut-il localiser le poète Parménide ? Dans la tradition homérique ou dans la tradition orphique ? Dans la poétique coloniale ou dans la poétique grecque? Du côté panhellénique ou du côté épichoréen? Est-il archaïsant ou moderne? Nous tenterons de donner ses coordonnées en croisant trois critères, celui de la forme figurative, de l'arrangement des répétitions thématiques, celui du type d'hexamètre (du véhicule) qu'il utilise pour créer ces figures et finalement le critère de l'enchaînement accentuel." (p. 17, une note omise)

40. Stella, Fabio. 2020. "Parménide, fragment 2 DK : du lexique de l'agir au lexique de la connaissance." *Dialogues d'histoire ancienne* no. 46:51-73.

;Résumé : "Cet article se propose de montrer que le lexique utilisé par Parménide dans le fragment 2 DK est pour la plupart tiré d'un vocabulaire déjà homérique, tout à fait « pratique », dont il conserve la cohérence logico-syntactique originelle. La transformation de ce « lexique de l'agir » en « lexique de la connaissance », que Parménide met en œuvre, n'est pas réalisée par une resémantisation de chacun des mots, mais en changeant, grâce à une réflexion métalinguistique sur le texte homérique, le niveau d'abstraction de l'objet du discours, l'ἔοικον."

41. Stevens, Annick. 1990. *Posterité de l'être. Simplicius interprète de Parménide*. Bruxelles: Ousia.

;Table des matières: Introduction 5; Chapitre I: L'Alétheia 11; Chapitre II: La Doxa 53; Conclusion 80; Appendice: Traduction 83; Bibliographie 143; Index des Fragments de Parménide cités par Simplicius 147.

"La plupart des fragments que nous connaissons de Parménide nous sont parvenus par l'intermédiaire de Simplicius, philosophe néoplatonicien du VI^{ème} siècle de notre ère, grâce aux multiples citations et références étayant son commentaire à la *Physique* et au *De Caelo* d'Aristote. Or, ce commentateur ne s'est pas contenté de citer, mais a apporté bien des explications aux apories suscitées depuis vingt-cinq siècles par l'obscurité

du poème parménidien. En effet, le contexte dans lequel apparaissent les citations permet souvent de situer plus exactement leur objet, et par là leur signification précise.

(...)

Par conséquent, mon travail suppose une connaissance préalable des doctrines platonicienne et néoplatonicienne, particulièrement en ce qui concerne la notion de l'Un dans son rapport avec l'être. Bien que j'aborde le problème au chapitre 1, B, cependant, j'évite de concentrer mon étude sur ces théories, au risque de perdre l'essentiel. Je ne fournirai pas davantage un travail exhaustif sur la pensée parménidienne, quoique, pour des raisons de clarté, j'étudierai et comparerai, sur les points les plus controversés, les explications de plusieurs interprètes modernes, en vue de proposer, quand cela est possible, mon propre point de vue. A ce propos, je voudrais signaler qu'il existe deux études récentes traitant spécifiquement de l'exégèse de Simplicius; il s'agit de "Simplicius as a source for and an interpreter of Parmenides" de Bruce M. Perry, et de "The Interpretation of Parmenides by the Neoplatonist Simplicius" de Karl Bormann. On peut leur faire le reproche commun d'être davantage des paraphrases que des tentatives d'explication, et de ne pas exploiter ce nouveau champ herméneutique, cette richesse nouvelle d'interprétations possibles, que nous ouvre la lecture de Simplicius pour celle de Parménide. Néanmoins, la dissertation doctorale de Perry a le mérite d'exposer le commentaire de façon très systématique, paragraphe par paragraphe, en l'accompagnant d'index, de remarques philologiques, d'une bonne critique des sources et des manuscrits, et de nombreuses références aux commentateurs antérieurs qui ont pu influencer Simplicius. Quant à l'article de Bormann, s'il relève certains passages où le néoplatonicien sort de l'aporie les interprétations traditionnelles sur quelques conceptions obscures de Parménide, il n'en donne aucun commentaire ni ne cherche à voir ce qui motive l'interprète, d'où s'inspire sa conception de l'Étant, et dans quelle mesure elle déforme celle de l'Éléate lui-même.

(...)

J'espère avoir montré, par ces quelques observations, qu'une étude attentive de Simplicius n'est ni superflue ni aisée.

Mon intention étant de suivre les questions posées comme essentielles par Simplicius lui-même, je n'envisagerai que les fragments transmis grâce à lui, laissant de côté une partie importante du poème. Le fait de suivre le commentaire m'oblige également à voyager constamment d'une page à l'autre en faisant bon nombre de comparaisons, d'anticipations et de rappels, ce dont le lecteur voudra bien m'excuser, puisque Simplicius, suivant lui-même l'ordre de oeuvre d'Aristote, et passant, selon le besoin, d'un Présocratique à l'autre, présente une explication tout à fait disparate et en rien systématique. Néanmoins, j'essaierai de structurer mon étude de la manière la plus claire possible, envisageant, selon la méthode classique, chacune des deux parties du poème, divisées elles-mêmes en questions principales.

Une traduction des passages de Simplicius concernant la pensée éléatique figure en appendice; j'invite le lecteur à la consulter fréquemment, car elle sert de support à tous mes développements.

Enfin, ce travail étant achevé en 1988, je n'ai pas tenu compte des études qui ont paru à partir de cette date." (pp. 5-9)

42. ——. 2011. "Parménide." In *Le Néant*, edited by Laurent, Jérôme [et al.], 29-40. Paris: Presses universitaires de France.

;"Le non-étant de Parménide est bien, comme l'a compris Platon dans le *Sophiste*, le contraire de l'étant, ce qui n'est d'aucune manière et donc ce qui ne peut être ni dit (au sens de « décrit ») ni pensé ni même imaginé. C'est pourquoi Platon se défend à juste titre de commettre le moindre parricide envers le père de la philosophie, lorsqu'il affirme l'existence d'un certain non-étant, déterminé par altérité vis-à-vis d'un certain étant(1). Sa véritable révolution par rapport à Parménide est l'introduction de la multiplicité et de la différence au sein même de ce qui est, c'est-à-dire parmi les Formes éternelles. Pour cette raison même,

il est manifeste que le ce-qui-est de Parménide n'est pas la Forme, l'universel intelligible, car il devrait être multiple. Il ne doit pas davantage être identifié à un principe ultime de la nature, que ce soit l'un-tout ou le principe d'être des étants en devenir. Nulle part un tel souci de fonder la physique n'apparaît dans le poème ; au contraire, les deux types de discours, celui sur la nature, celui sur l'être, sont absolument séparés. Ce qui est n'est rien d'autre que ce qui satisfait le sens véritable d'être, et exposer toutes les conséquences de cette signification constitue toute l'ambition de l'enquête parménidienne.

C'est pourquoi aussi, lorsque Gorgias entreprend de réfuter le rapport exclusif entre l'être et la pensée, au sens où il serait absurde que tout ce qu'on peut penser soit, il manque la cible en prenant l'être au sens ordinaire. Il la manque aussi, du même coup, en ne faisant pas de distinction, au sein des actes mentaux, entre une représentation quelconque et la signification restreinte du « penser » et du « dire » qui correspond à la signification stricte de l'être.

Or c'est précisément cette confusion que Parménide entendait éviter grâce au premier acte de la pensée, qui est l'affirmation du fait de l'être : tant les célèbres vers 8, 34-38 que déjà le fragment 6, 1 donnent pour tâche à la pensée d'affirmer que ce qui est est. La pensée est avant tout jugement d'existence. C'est seulement après cette exclusion du « n'est pas » et le refus corollaire de ne pas choisir entre « est » et « n'est pas », que d'autres actes de pensée seront possibles, car alors seulement tout ce qui suivra sera une pensée connaissante et non une trompeuse opinion. En effet, quel que soit ce qu'elle prendra pour objet, si cela admet le fait d'être, alors elle pourra le connaître. Le poème de Parménide est une détermination des conditions a priori de l'accès à la vérité, et le partage de l'être et du non-être en est la toute première étape, bien antérieure à la connaissance de ce qui est et de ce qui n'est pas." (pp. 34-35)

(1) Au vers 8, 46, l'hypothèse d'un non-étant tel qu'il viendrait interrompre la continuité de l'étant, n'est probablement pas une préfiguration du non-être relatif mais plutôt une allusion à la controverse contemporaine entre une physique du continu et

une physique du discontinu composé de plein et de vide. Sur cette controverse qui opposa probablement Zénon d'Élée et les Pythagoriciens, voir M. Caveing, *Zénon d'Élée : prolégomènes aux doctrines du continu : étude historique et critique des fragments et témoignages*, Paris, Vrin, 1982. Cependant, si l'argument est issu de la physique, la cohérence de la conception exige qu'il soit appliqué métaphoriquement à l'étant, qui n'est d'aucune façon un objet physique.

43. Todoua, Maïa. 2007. "Sur l'improbable *douceur* du feu dans la cosmologie de Parménide (v. 57 du Fr. 8 DK)." *Revue des Études Grecques* no. 120:395-413.

;Résumé : "D'après la théorie physique de Parménide, deux éléments fondamentaux régissent le monde, le feu éthéré de la flamme et la nuit obscure. Dans l'énumération des adjectifs (v. 57-59 du Fr. 8 DK), qui n'est pas sans rappeler un système de paires d'opposés, chacun de deux éléments reçoit les caractéristiques opposées les unes des autres. Il se trouve que, suite à des interventions ultérieures, le vers 57 nous est parvenu sous forme d'un heptamètre au lieu d'un hexamètre attendu, donnant ainsi lieu à une irrégularité métrique qui soulève un problème davantage dogmatique que textuel. Tous les manuscrits du Commentaire à la Physique de Simplicius, notre source unique pour ce passage, établissent, pour l'élément du feu, trois épithètes : ἥπιον, « doux », ἀραιόν, « clairsemé », et ἐλαφρόν, « léger ». Dès les premières éditions de Parménide, la lecture consensuelle a consisté à conserver ἥπιον, « doux », en éliminant soit ἀραιόν, « clairsemé », soit ἐλαφρόν, « léger », considérés, à tour de rôle, comme une glose l'un de l'autre. Quant à ἥπιον, traduit tantôt comme « calme, non intense », tantôt comme « doux, favorable », sa véritable portée dans ce contexte n'a jamais été dûment expliquée. Le présent article essaie de démontrer que la conservation de ἥπιον au vers 57 va à rencontre du principe même d'un système cosmologique fondé sur une opposition fondamentale.

Selon la théorie physique de Parménide, les éléments premiers, ainsi que leurs caractéristiques, sont établis à part les uns des autres (χωρίς απ' ἀλλήλων). Chaque qualificatif du feu devrait donc trouver son pendant dans la description de la nuit. Or

ἦπιον est le seul terme qui échappe à cette règle. Dans ma tentative de réfuter l'opinion consensuelle concernant l'authenticité de ἦπιον au vers 57 du Fr. 8 DK, j'ai trouvé que le cardinal Bessarion, dans sa traduction latine de ce passage, offrait une lecture proche de cette idée non orthodoxe. Par ailleurs, Simon Karsten, auteur de la reconstitution définitive du poème de Parménide, se sentait, lui aussi, tenté par cette hypothèse."

44. Tournaire, Roland. 2004. *L'intuition existentielle : Parménide, Isaïe et le midras protochrétien*. Paris: L'Harmattan.
45. Villani, Arnaud. 1988. "La tenue ontologique dans le Poème de Parménide." *Revue de Métaphysique et de Morale* no. 93:291-315.

;Résumé : "Si le prologue du Poème de Parménide n'est pas seulement formules consacrées de l'imagerie magico-religieuse, mais exhibition de deux modèles homothétiques où il est question d'axes, d'alvéoles, et de leur tenue réciproque; si des passages cruciaux (I, v. 31 et 32 ; VIII, v. 50 à 61) et plusieurs termes majeurs du Poème sont susceptibles d'une double lecture où le sens généralement accepté va jusqu'à s'inverser ; si le retour des mots de la famille sémantique d'« échein » est systématique, et relègue bien loin la préoccupation de V« hen » au profit du « synéchès » ; alors une meilleure "tenue" du Poème dans son ensemble est possible, le Prologue, les Fragments II à VII, IX à XIX n'ayant pas moins de sens philosophique que le « Fragment ontologique » (VIII L'enjeu de cette réflexion aurorale nous semblera alors la préservation d'une Règle dont le juste usage décèlerait dans le réel des « configurations convenables », bien ajointées, et pour cela préservées autant que possible de « naissance et destruction.»"

46. Viola, Coloman. 1984. "Á propos d'un fragment du Poème de Parménide cité par Clément d'Alexandrie (V *Stromate* c. IX, 59, 6)." *Bulletin de la Société Internationale pour l'Étude de la Philosophie Médiévale* no. 26:90-92.

;"Les *Fragmente der Vorsokratiker Griechisch und Deutsch* édités par H. Diels (réédités en 1934 par W. Franz) omettent une référence incluse dans le V *Stromate* de Clément

d'Alexandrie (écrivain entre 193 et 211) concernant un fragment du *Poème* de Parménide. Cette référence, que rapportera Simplicius quatre siècles plus tard, comporte des variantes importantes par rapport au texte transmis par Simplicius."

47. ——. 1987. "Aux origines de la gnoséologie: réflexion sur le sens dur fr. IV du Poème de Parménide." In *Études sur Parménide. Tome II. Problèmes d'interprétation*, edited by Aubenque, Pierre, 69-101. Paris: Vrin.

;"Le fr. IV du Poème de Parménide est sans aucun doute un des fragments les plus difficiles à interpréter: certains commentateurs sont allés jusqu'à mettre en doute son intelligibilité. (...)

La solution ne consistera pas nécessairement en une option pure et simple pour l'une des hypothèses en excluant d'une manière absolue l'autre. Les difficultés du fragment ont amené certains à proposer des corrections du texte en supposant soit que Clément d'Alexandrie s'était trompé en le transcrivant soit que le texte de Clément lui-même nous est parvenu sous une forme corrompue. Ces problèmes grammaticaux et textuels difficiles à résoudre doivent inspirer une grande prudence en ce qui concerne l'interprétation du fragment. Ces difficultés combinées aux difficultés d'une méthodologie en général - dont un Hölscher (2) a déjà fait état -- mettent à une sérieuse épreuve quiconque se promettrait de trouver la solution idéale du fragment.

Les cadres de cet essai ne rendent pas possible l'examen même superficiel de tous les problèmes qui ont été déjà soulevés au sujet de ce fragment. Je propose avant tout d'examiner le contexte originel dans les Stromates de Clément d'Alexandrie qui nous ont conservé le fragment pour y chercher et trouver éventuellement la solution de certains problèmes inhérents au fragment. D'autre part, pour éclaircir davantage le sens des termes, nous allons faire appel à la philologie comparée ce qui nous permettra d'esquisser quelques principes d'interprétation qui, à notre avis, devraient guider toute recherche concernant le sens du fragment." (pp. 69-70 notes omises)

48. Wersinger-Taylor, Gabrièle. 2012. "Parménide croyait-il dans les signes de l'Être ? Remarques sur l'énonciation et la délocution au fragment 8, vers 1-11." *Savoirs en prisme* no. 1:1-22.

;"En se situant d'un point de vue analytique, Gorgias a conduit Parménide à une impasse insoluble. Mais Parménide avait peut-être lui-même mesuré l'ampleur d'une autre contradiction, celle qui, d'ordre pragmatique, couve comme une bombe à retardement et menace tout discours sur l'être. Ainsi cette contradiction de type pragmatique sera entièrement perdue de vue, lorsqu'on croira pouvoir dire les affections (pathè) de l'Être. Car pour admettre qu'il peut y avoir un discours des affections de l'Être, il faut croire comme Socrate dans le Cratyle, qu'il est possible de partir des choses elles-mêmes pour juger de la pertinence des signes que sont les mots. Il faut donc avoir définitivement forclos la perspective de l'énonciation sans évidemment en annuler les effets, plus que jamais sensibles aujourd'hui." (p. 20)

2. ———. 2013. "Ferrea razionalità e logica ineludibile nel monismo ontologico assoluto di Parmenide." *Anuario Filosófico* no. 46:79-119.

Abstract: "The proposed monistic interpretation of Parmenides' ontology appears confirmed by the inescapable logic that permeates his whole thought. In spite of the fragmentary nature of his poem, it is possible to reconstruct the ironclad rationality of the Parmenidean ontology. This intrinsically coherent logic shows the absolute necessity of the monistic nature of being. From this perspective the absolute incompatibility between the perfect rationality and coherence of truth and the deceptiveness and inconsistency of doxa is made evident."

"... il punto d'arrivo del presente percorso [è] dedicato ad alcuni passaggi filosofici che hanno al centro la nozione di *pistis* intesa nel senso per cui essa definisce una relazione — la relazione di fiducia, e altresì l'affidamento (ovvero la credenza in altri), la fedeltà, l'affidabilità e la garanzia che essa comporta. Ad occuparci saranno pochi luoghi e pochi autori che individuano in tale relazione una sorta di punto-limite e di nucleo elementare capace insieme di definire e regolare i rapporti umani. Si tratta di Gorgia soprattutto, e in particolare dell'*Apologia di Palamede*, che andrà però letta in riferimento agli altri aspetti del suo pensiero. Ma si tratta ancor prima di Parmenide, il cui percorso d'indagine teoretica è all'insegna del *logos* perché questo è *pistos*, affidabile. E si tratta infine di Platone, in alcuni passi (di *Repubblica* e *Leggi*) che impongono riflessioni sulla *pistis* intesa in modo specifico nell'accezione relazionale, e lo fanno non senza connessioni con l'approccio gorgiano." (p. 9)

(...)

"Sfondo logico e contrappunto ontologico alla posizione gorgiana, padre da superare per quella platonica, è, notoriamente, il poema di Parmenide: qui *pistis* ricopre una posizione letteralmente nodale e, nonostante si presenti su un fronte dell'essere e del conoscere opposto a quello in cui la collocheranno sia Gorgia sia Platone, i significati che lì le si attribuiscono rimarranno vigenti e determinanti anche per costoro. Perciò, pur nella parzialità dell'operazione dal punto di vista strettamente storiografico, assumeremo l'Eleate come premessa per arrivare in età sofistica." (p. 23)

(...)

"Solo il *logos* che svolge la prima via è *logos pistos*: o, meglio, poiché di *logos* si parla in effetti solo in ambito di *eon* e *noein*, l'affidabilità che è propria del *logos* e del pensiero intorno alla verità (*noema*; 8, 50-51) vien meno passando alle opinioni dei mortali, al loro cosmo di parole suscettibile d'inganno (51-52). Solo il *logos* è *pistos*: abbandonare la strada da esso tracciata è abbandonare la strada segnata da *pistis*. Così come solo la *pistis* che bandisce le *doxai* è *alêthês*: non perché sia possibile una *pistis* non *alêthês*, in quanto di *pistis* si parla solo in contrapposizione al cosmo dei mortali. E però la verità che a *pistis* si salda vien meno se si cede alle abitudini espressive e cognitive del mondo. Sicché, come il *logos* è sempre *pistos* e la *pistis* ne è una caratteristica certa, così la verità è un carattere proprio e certo di *pistis*, laddove *alêtheia* non sempre in grado altrettanto sicuro sostiene ciò di cui siamo persuasi. La verità, come correlato del dire, può essere velata dal dire stesso, che rende una parvenza: ma se il dire è *logos*, ovvero è *pistos*, l'*alêtheia* ne è correlato certo in senso pieno e non, invece, nel modo frammentato e apparente (quindi non-*alêthês*, ovvero ingannevole) del *kosmos* e della *glossa*." (p. 46)

12. ———. 2020. "Rilevanza epistemologica dell'ontologia parmenidea." *Anais de Filosofia Clássica* no. 27:121-145.

Riassunto: "È possibile intendere l'essere di Parmenide come la 'totalità dell'esistente'.

L'intuizione di Parmenide è che l'*essere* è un continuum compatto (fr. 4), e egli fornisce una dimostrazione logica di questa intuizione riconoscendo che il *non-essere*, che solo potrebbe dividere l'esistente in una molteplicità di *esseri*, non esiste. Di conseguenza, la conoscenza dell'essere può soltanto essere l'apprendimento della totalità dell'essere nel suo insieme – una forma di conoscenza che è inconcepibile per l'uomo.

La conoscenza umana si articola sempre in concetti, immagini, relazioni..., espresse da i loro nomi. Gli uomini dunque non colgono l'essere stesso ma, al più, alcuni limitati aspetti di una minima parte di esso, come appaiono da prospettive umane e personali. Parmenide attribuisce l'epiteto 'dalla doppia testa' a quei mortali che pretendono che le loro verità rappresentino la realtà dell'essere, perché questa pretesa implicherebbe l'esistenza insieme dell'*essere* e del *non-essere*. Questa concezione epistemologica è l'unico risultato che conti dell'ontologia di Parmenide. L'epistemologia di Parmenide scioglie molti degli enigmi filosofici del suo tempo, mostra che i cosiddetti paradossi di Zenone sono argomenti validi e prefigura le dottrine di Protagora e Gorgia."

"Per i Greci di età prearmenide le varie forme di εἶναι « essere », cioè i molti tipi verbali che le seriori schematizzazioni dei grammatici avrebbero poi raggruppati e ordinati sotto l'esponente di quel « modo infinito », costituivano un complesso di strumenti significativi che essi adoperavano con la stessa spontanea libertà con cui se n'è valso e se ne varrà sempre, in ogni ambiente linguistico non privo di quel motivo semantico, il parlante idealmente prearmenideo, cioè non preoccupato delle formali difficoltà del suo uso. Chi voglia intendere la posizione di Parmenide nella sua genuina freschezza storica deve perciò riportarsi a quell'ambiente e a quell'uso: deve rifarsi Parmenide, tornare al suo primitivo ed ingenuo orizzonte mentale, presupporre i suoi soli presupposti e lasciar da parte tutti quelli di cui la sua coscienza di storico è arricchita dai ventiquattro secoli dell'evoluzione di quel

problema dell'essere, che appunto in quanto nacque da Parmenide non fu la premessa di Parmenide." (p. 109)

(...)

"Ormai legittimata anche nelle sue coerenti difficoltà, la teoria della *doxa* completa dunque ed accentua, coi suoi chiaroscuri, quella fisionomia del pensiero di Parmenide, i cui lineamenti primari risultano schietti già dalla sua concezione della realtà verace. Così nell'una come nell'altra egli resta il massimo eroe ellenico della verità parlata: il più potente traduttore di contingenze linguistiche in presunte situazioni e problemi di realtà. Nasce in un ambiente abituato a sentire su un solo piano l'infinito divergere e contrastare dei nomi e delle cose; ed ha per contemporaneo Eraclito che, persuaso di scoprire la legge del mondo in quello stesso guerreggiare delle cose nominate, era perciò condotto ad enunciarla in un linguaggio in cui il « no » disdiceva il « sì » e l'« è » era oppugnato dal « non è ». Egli invece sente l'« è » come la parola stessa della verità, e non può tollerare che sia contaminata dal « no »: deve quindi accogliere come verace solo ciò il cui « è » sia affatto immune da « no », e rifiutare come apparente anche tutto l'universo visibile, quando la multiforme sua realtà enunciabile appaia soggetta a quel contagio. Giunge così, da un lato, a proclamar reale « ciò che è », l'« ente », che solo risponde a quella suprema Necessità e Giustizia del Vero. Apre dall'altro il vasto abisso del « no », in cui precipita tutto quanto non regge al paragone del sí » dell'« è ».

Suoi epigoni sono quindi, d'allora in poi e per millenni, tutti coloro che credono che l'« ente » o l'« essere » sia una realtà o un problema, e non una maschera verbale di molte possibili realtà e problemi; coloro che vedono nell'antitesi del sì e del no, dell'affermazione e della negazione non una contingente struttura del linguaggio ma una fatale guisa della realtà, una discriminazione assoluta spezzante il cosmo in due parti, il positivo e il negativo, la luce e la tenebra dell'essere; coloro che sulla base di tale antitesi costruiscono le loro logiche e con esse l'intero quadro del mondo, e coloro che capovolgendo quelle logiche costruiscono sulla stessa base le loro dialettiche, e con

esse l'intero quadro del mondo. Suoi successori sono invece coloro che, pur appartenendo ad età ancora fortemente dominate dal senso arcaico del linguaggio e quindi subendo in varia misura l'influsso di quello spontaneo atteggiamento mentale, accentuano sempre più la reazione critica nei suoi riguardi, e riescono a volta a volta a liberarsi da talune delle sue difficoltà: coloro che non accettano quelle parole-realtà come tali, ma per intenderle le analizzano, e s'accorgono come in tale analisi si scinda e moltiplichi anche la loro presunta realtà; coloro che scoprono quante esperienze concrete possano celarsi sotto il puro « no » di Parmenide, quanti significati assumere, non solo nelle sfere dottrinali in cui vivono l'esistenza la predicazione la realtà l'identità la necessità ma anche nell'universale uso semantico, il suo astratto e solitario « è ». La storia della logica occidentale è in questo senso la storia degli sforzi, con cui il pensiero lentamente si affranca dalla servitù parmenidea." (pp. 151-153)

47. Fazzo, Silvia. 2020. "Una versione progredita della teoria delle idee nel papiro di Ai Khanoum: una scoperta nella scoperta." *Elenchos* no. 41:157-163.

Abstract: "The paper firstly focuses on a rare vox, that is, the verb $\mu\epsilon\tau\iota\sigma\chi\omega$, as a new finding in two different sources: the Π text of *Methaphysics Lambda* 1075b19 and the "Ai Khanoum philosophical papyrus" (not only at column II.9, but arguably at II.11 and IV.8–9 as well). Using the verb $\mu\epsilon\tau\iota\sigma\chi\omega$ testifies for a "2.0 version" of the theory of ideas, in a subsequent phase to Plato's *Parmenides*. Xenocrates is likely to have played a role. This suggests a deeper connection than previously thought between Aristotelian theories and Plato's Academy."

Riassunto: "L'orizzonte interpretativo entro cui questo lavoro si inserisce è quello della discussione del rapporto tra la dottrina dell'essere e quella dell'opinione nel poema di Parmenide. Rifiutando la prospettiva di una qualche separazione o opposizione tra le due parti in cui esso tradizionalmente viene diviso, sostengo la tesi dell'unità teorica del Poema.

Dopo aver mostrato come una tale unità sia richiesta dall'impianto generale del pensiero di Parmenide, individuo nel frammento 4 il luogo in cui Parmenide articola il passaggio tra le due dottrine. Il Poema offre pertanto una positiva visione della realtà, dove l'ontologia pone le premesse di un'originale spiegazione dei fenomeni naturali."

English abstract: "In this paper I examine the traditional reading of Parmenides' fr. B3 (το ἄγαρ αὐτοῖ νοεῖν ἐστὶν τε

καὶ εἶναι), which implies a strong “identity” between thinking and being, suggesting the hypothesis of a “correspondence” of what is thinkable and what is. These considerations lead me to defend a translation of fr. B3, which seems to me the less anachronistic: “For there is the same thing for being thought and for being”. I discuss in what follows the meaning of the verb νοεῖν and of the connected terms in Parmenides’ Poem (especially in fr. B4). I indicate three interpretative options of νοεῖν: 1. As a form of purely intellectual knowledge of true being (that is, the intelligible); 2. As a form of propositional or “veritative” knowledge concerning the truth or the falsity of a proposition; 3. As a capacity of “catching a situation”, of “recognising” something or someone, suggesting a meaning of being that implies the simple observation of the being of things and of the sensible world.”

Riassunto: "Uno dei chiché più comuni contro la logica usata nel poema parmenideo è l'accusa della presenza di contraddizione fra le affermazioni della dea sull'impossibilità di conoscere e esprimere il non essere (DK B 2.5-8) e l'uso in particolare del non essere, ma più in generale della negazione lungo tutti i frammenti. Come esempio di questa contraddizione, uno dei passaggi più citati è B 2.3, dove Parmenide usa la doppia negazione. Si presume che Parmenide si contraddica quando dice che 'è' (qualunque cosa sia questo 'è') non è non essere. La contraddizione appare se si prendono entrambe le negazioni in senso predicativo e sparisce se si tiene la seconda in senso esistenziale. Tuttavia, considerare il non essere come esistenziale costituisce esattamente la proibizione della dea, restituendo l'argomento alla contraddizione. L'articolo vuole mostrare che non c'è contraddizione nell'argomento di Parmenide ed esamina in tre parti l'uso che egli fa del non essere e della negazione. La prima parte presenta il fr. 2 e il significato problematico del suo uso delle negazioni. La seconda parte studia il non essere "esistenziale" come una possibile esperienza di 'ciò che non è', evidenziando che tale esperienza accade nelle nostre comuni funzioni psicologiche di percezione, e lo fa usando soltanto nozioni elementari del senso comune, come devono essere state quelle di Parmenide. Infine, la terza parte distingue la negazione predicativa da quella esistenziale in B 2.3 concludendo che non ci può essere nessun inganno: la prima negazione è predicativa e la seconda è esistenziale, dunque non c'è contraddizione nell'uso delle negazioni nel fr. 2."

"Nel presentare questo volume ci sembra utile avvertire il lettore che siamo stati indotti ad unire i nostri due studi (I. *Gli Eleati*; II. *Rapporti tra grammatica e filosofia nell'interpretazione del greco einai, on, ousia*) sotto l'unico titolo: *Attualità dell'ontologia eleatica* per la evidente connessione che é possibile rilevare tra lo studio dei frammenti dei filosofi che appartengono alla scuola di Elea e lo studio dell'essere, nonché tra lo stesso concetto dell'essere che fu da quei pensatori elaborato per la prima volta nella storia della filosofia greca e la problematica attuale su di esso, viva oggi

come ieri. Che l'attualità del problema dell'essere sia sentita dagli studiosi contemporanei è prova l'abbondante messe di studi a sfondo idealistico, esistenzialistico, cristiano che sono stati recentemente pubblicati. È anzi particolare merito dello Heidegger l'aver posto e cercato di svolgere il problema dell'essere «come costitutivo essenziale della verità riportandolo al suo significato originario»: (1) è solo mediante lo studio dei Presocratici che, secondo lo Heidegger (2) si può giungere alla conoscenza dell'essere, della verità, del divino. Affermazione questa di grande importanza perché, come risulterà dal nostro studio -- che si discosta, per altro, dalle conclusioni heideggeriane -- è partendo dalla concezione eleatica (e particolarmente parmenidea) che si può giungere alla determinazione dell'essere concepito nel senso cristiano. Con quest'affermazione, com'è ovvio, intendiamo definire sin d'ora, l'atteggiamento del nostro pensiero che è diverso dalla tesi di coloro che considerano l'essere «come elemento logico e verbale dell'affermazione» e da quella esistenzialistica. Mentre la prima poggia sul significato copulativo dell'ἔστι parmenideo e sostiene la dimostrazione della genesi dell'ontologismo parmenideo dal suo logicismo, la seconda tesi, dopo aver escluso l'interpretazione idealistica del significato dell'ἔ del giudizio da ascrivere all'ἔστι parmenideo, procede all'identificazione dell'essere con l'apparire.

Un esame attento dei frammenti di Parmenide ci porterà a sostenere un valore esistenziale ontologico dell'ἔστι che si legge in essi. A sostegno della nostra interpretazione varranno alcuni rilievi filosofici, glottologici, grammaticali. Basandoci sull'accordo di tutti i filologi nell'ammettere la lezione ἔστι (e non già ἐστι) nel testo parmenideo, nonché sul rilievo grammaticale che l'uso di ἔστιστι parossitono nella lingua greca racchiude in sé un valore esistenziale, sosterremo la presenza di questo valore in Parmenide: quindi il punto di partenza della disquisizione parmenidea è per noi ontologico e non logico e siamo di fronte ad un'ontologicità dell'essere e non ad un'ontologizzazione dell'essere. Dal rilievo glottologico, poi, che è insostenibile l'accostamento semantico della radice *bhu* di φῶ alla radice *bha* di (παίω, che invece vorrebbe lo

Heidegger, giungeremo a negare l'identificazione dell'essere con il fenomeno per eccellenza.

Com'è ovvio, il valore esistenziale dell'ἔστι parmenideo non può avere ancora in sé né il senso creazionistico né quello idealistico né quello fenomenistico, ma tuttavia lascia aperta la via al primo. Così dicendo si salva la creazione e salvare la creazione vuol dire salvare il fondamento della metafisica cristiana « imperniata non più e non soltanto attorno all'οὐσία, ma attorno all'atto di essere ».(3) Trovare il fondamento della creazione vuol dire trovare la giustificazione di quanto di più vitale è nel Cristianesimo. Questa interpretazione, poi, conserva la consistenza all'essere di fronte alle altre due tesi che tendono a svuotarlo del suo essenziale significato." (pp. V-VI)

A cura di Peter Trawny. Edizione italiana a cura di Giovanni Gurisatti.

"Tenuto nel 1932 e dedicato all'interpretazione di Anassimandro e Parmenide – insieme a Eraclito i «pensatori iniziali» della filosofia occidentale –, questo corso universitario rappresenta una vera e propria cesura nel percorso di Heidegger dopo Essere e tempo, e si inserisce nella celebre «svolta» inaugurata dal saggio del 1930 sull'Essenza della verità. Compito della filosofia è ormai per Heidegger, impegnato nella ricerca di tale essenza, quello di rievocare la forza delle parole più elementari del pensiero delle origini –

phýsis, alétheia, noûs, lógos – mediante una comprensione prefilosofica, cioè preplatonica e prearistotelica, del fenomeno della verità. Si tratta cioè di compiere quel passo indietro che permette di ripensare in modo ancora più iniziale l'inizio del pensiero occidentale, prima della soglia che dà accesso alla storia della metafisica: non già per operare una ricostruzione filologica e storiografica, ma nella prospettiva che tale «inizio più iniziale» possa essere «ripetuto» e, soprattutto, trasformato in un nuovo inizio, promosso da un'umanità futura in modo ancora più originario. Sicché, conclude Heidegger, «l'inizio non sta più dietro di noi, alle nostre spalle, bensì sta davanti a noi in quanto compito essenziale della nostra più propria essenza».

"Il fr. 1 di Parmenide, trascurato da Zeller, ma rimesso successivamente in luce da ulteriori studi, appare meritevole di attenzione particolare in quanto sembra racchiudere in forma metaforica l'enunciazione dei principi dottrinari del sistema parmenideo. La corretta esegesi del frammento deve tuttavia scaturire da un esame preliminare riguardante la struttura secondo la quale viene allegoricamente espressa la concezione metafisica esposta nel prosieguo del poema. Una prima analisi rivela una composizione 'ad anello' che abbraccia quasi l'intero proemio." (p. 127)

(...)

"A base della struttura del proemio è dunque posta una concezione triadica, che scaturisce dalla dialettica della antitesi fondamentale tra essere e non essere. Da un'indistinta molteplicità iniziale, simboleggiata nel primo anello dal numero imprecisato delle cavalle, si passa, nel secondo anello,

ad un primo riconoscimento della natura dell'essere in quanto eterna extratemporalità. Il terzo anello rappresenta la sistematica classificazione delle antitesi, metodo che conduce ad una precisa definizione del non essere, tema del quarto anello. Nel quinto anello si riconosce la suprema antitesi metafisica essere-non essere, mediante la quale si giunge, nel centro, all'affermazione definitiva della realtà assoluta dell'Essere, del quale sono predicabili soltanto talune determinazioni." Abstract: "The dóxa is a major aspect of Parmenides' "scientific" commitment, as evidenced by studies of its discoveries in various fields of knowledge. Among them in astronomy.

However, these studies have ended up identifying a scientific plan separate from the mythical religious and philosophical one of the first part. This survey explores the possibility of reconsidering the presence in the Parmenides' dóxa of ontology and theology. It does so by proposing the hypothesis that the proem contains among the multiple semantic-linguistic layers the mythopoeic presentation of the astronomical theorem of the identity of Eos and Hesperus, with the intent of showing, from the very beginning and in the most authoritative language for his audience, the alétheia of «being» on the divine stage of the celestial sphere. In our reading, therefore, the deities that enter the scene give life to a firmament that interconnects every

- cosmic dimension with each other and leads the one who knows (the εἰδότα φῶτα; B1, 3) – he knows that πᾶν πλέον ἐστὶ ἔν ὁμοῦ φάεος καὶ νυκτοῦς because ἐπεὶ οὐδετέρω μετὰ μηδέν (B9, 3-4) – on the other side of the sky, in the presence of the theá that will reveal to him the meaning of everything."

"Ho iniziato le mie ricerche sulla lingua di Parmenide percorrendo la via fino a oggi più battuta negli studi, quella - fondamentale - del rapporto tra la dizione parmenidea e i suoi modelli epici. Quindi mi sono rivolto a studiare il delicato problema dei rapporti tra i dialetti e le tradizioni letterarie in un poeta attivo in un'area di intensi contatti culturali e linguistici come il mondo coloniale d'Occidente. A un certo

punto, tuttavia, si è delineata ai miei occhi con contorni sempre più nitidi una questione che non ho tardato a riconoscere della massima importanza: mentre studiavo i problemi linguistici posti dai frammenti di Parmenide, mi sono infatti accorto che essi non possono essere affrontati con profitto senza che la loro trattazione venga preceduta da un'attenta disamina delle fonti che ci hanno trasmesso i vari testi. In altre parole, ho iniziato a riscontrare convergenze e divergenze significative tra fonti diverse o tra diversi gruppi di fonti; e mi sono convinto che ordinare quelle fonti in base a criteri linguistici avrebbe potuto condurre a un progresso rilevante per la nostra conoscenza della storia del testo di Parmenide.

Il mio libro riflette questo percorso di studio. La prima parte è infatti dedicata alla storia del testo di Parmenide nell'antichità, alla discussione sull'attendibilità delle fonti e ad alcuni tra i più tormentati problemi di costituzione del testo. La seconda parte si occupa del rapporto tra il dialetto ionico, la dizione parmenidea e quella dell'epica tradizionale. La terza parte, infine, studia l'influsso sul testo di Parmenide di tradizioni poetiche altre rispetto alla tradizione ionico-epica, mettendo in luce da un lato il carattere secondario di un alto numero di elementi linguistici riconducibili all'attico, dall'altro le probabili influenze esercitate su Parmenide dalla lingua della lirica." Abstract: "Today, the field of Parmenidean studies is still divided over the fundamental question of the correct exegesis of the verb 'to be' in the poem *On Nature*. The two principal interpretative lines supported by

scholars are, on the one hand, the traditional view that understands the verb 'to be' in its existential sense and, on the other, the one that arose in the 20th century that focuses on its predicative sense. This paper examines the latest and most ambitious attempt to interpret the thought of Parmenides and the profound influence that he had on pluralist philosophers, starting from a purely predicative approach. It is an epistemological interpretation of the Eleaticism proposed by Patricia Curd, centred on the notion of 'predicational monism', which has the unquestionable merit to place Parmenides within the pre-Socratic naturalistic debate but that, after a careful analysis, fails to convince. In fact, this interpretation, which certainly appears to be one of the most articulate and intelligent proposals of recent years, raises a series of exegetical and argumentative problems that do not seem possible to resolve without exiting the predicative horizon."

"Su queste basi, il poema viene qui interpretato secondo l'ordine in cui le immagini sembrano ricorrere in un percorso che parte dal proemio, affronta il discorso su verità (*l'alêtheia*), e termina con l'analisi delle opinioni dei mortali (*la doxa*).

Il proemio, come è noto, è un racconto mitico che ha per protagonista l'autore del poema. Non sorprende, pertanto, che qui più che altrove l'Eleate faccia uso delle immagini, sfruttando al massimo la loro potenzialità evocativa. Per tale motivo a questa parte dell'opera sono dedicati ben due capitoli di questo studio. Il primo si concentra sul percorso che il giovane compie fino a giungere all'incontro con la dea che gli impartisce l'insegnamento riferito nel poema.

(...)

Il secondo capitolo si concentra, invece, sulla scena dell'incontro tra il giovane e la dea e tenta di approfondire le modalità del loro relazionarsi, a partire dalla definizione dell'identità del primo sulla base del racconto in prima persona e della presentazione che ne fa la divinità nel momento in cui lo accoglie nella sua dimora. In tal senso sarà importante considerare anche il luogo dell'incontro e il suo richiamo al paesaggio mitico dell'oltretomba.

(...)

Nella seconda parte del discorso veritiero viene poi presentata l'unica realtà ammissibile per chi sceglie di seguire la via "come è": *to eon*. Esso è subito presentato attraverso una serie di tratti distintivi (*semata*) che permettono di assimilarlo alla nuova

immagine del divino che si andava diffondendo all'epoca, ravvisabile soprattutto nell'opera di Senofane.

(...)

La parte conclusiva del poema dell'Eleate è dedicata, invece, al miglior quadro del cosmo realizzabile da chi resta nella prospettiva comunemente condivisa dagli uomini. In tale sezione, l'uso di un discorso in esametri che racconta l'origine del cosmo attiva un automatico confronto con le teogonie tradizionali, da cui, peraltro, la cosmogonia qui presentata si distanzia, sia per l'adozione di alcuni termini e concetti elaborati in seno alle ricerche fisiche e cosmologiche più recenti, sia per alcuni suoi tratti specifici. Nella prima parte dell'ultimo capitolo si tenterà dunque di capire il senso della scelta di Luce e Notte come principi fondanti questo quadro cosmico, sulla base del confronto con la funzione che le stesse entità ricoprono nelle teogonie tradizionali e nei testi dei naturalisti, in particolare nella riflessione di Eraclito sull'unità degli opposti. Affrontando il problema in questa prospettiva potremo concludere che la cosmologia proposta nella sezione liliace dell'opera dell'Eleate, per quanto verisimile, non corrisponderà mai, in verità, proprio perché fondata su due principi che non possono in alcun modo essere ricondotti all'èon parmenideo, fondando invece le basi di una visione del reale attraversata da un continuo divenire.

In questo quadro, particolare attenzione sarà rivolta all'analisi del frammento 16, in cui è descritto il processo con cui l'uomo conosce in base alla corrispondenza tra Luce e Notte all'interno e al di fuori del soggetto.

(...)

Una lettura dell'opera di Parmenide concentrata sull'efficacia comunicativa delle immagini che vi ricorrono permetterà dunque di proporre un'interpretazione globale del poema dell'Eleate e della relazione tra le tre parti di cui si compone (proemio, *alètheia* e *doxa*); e, al tempo stesso, contribuirà a stabilire in che modo il discorso poetico dell'autore si inserisce

all'interno del contesto culturale in cui è stato composto." (pp. 18-21)

116. Ricci, Vittorio. 2020. "Annotazioni su B1,1-3 (B1,4a) di Parmenide." *Journal of Ancient Philosophy* no. 14:1-52.

Abstract: "The extraordinary overall textual situation of Parmenides' B1,1-3, due to complex, variegated and polymorphous causes, entailed and still entails diverse sorts of problematic issues so to constitute a true labyrinth of philological, hermeneutical and theoretical instances interwoven each other in almost inextricable way. In this analysis, a first substantial knot of philological type resulted necessary to a preliminary discrimination for making sure the textual reconstruction in order to argue then its most literarily clear and specifiable meaning. In this way it was also possible to make sure its semantic and theoretical relevancies. This research led to outline and, hopefully, to demonstrate no textual corruption and following misunderstanding happened before sec. XIII, namely corresponding to the lecture present in the first available manuscript, the so-called cod. N, universally excluded and entirely misevaluated, even discarded; instead it is not only the principle, but the unique reliable codex. The detailed analyse including the autoptic exam is the result of enlightening the absolute goodness of this version and the reasons both philological and hermeneutical comparisons, which allow to achieve its complete textual rehabilitation and so to grasp its real conceptual content."

"Si può approntare quindi la seguente traduzione di B1,1-4a:

Cavalle, e esse, portando me [Quando cavalle, e esse, portarono me], fin dove l'animo raggiungerebbe, come quinto (con le

quattro [presenti]), dopo che vennero a trasportami a (una) via magniloquente

di demone (femminile), la quale (sc. via) in tutto 'alienata' (disattesa; occlusa) [dai mortali] porta uomo che sa, vi ero portato (destinato [ad arrivare])..." (.p. 47)

Abstract: "Queste note hanno lo scopo di dare un'idea delle Lezioni Eleatiche dedicate alla filosofia virtuale dei cosiddetti Eleati. Tali lezioni sono in programma per i giorni 28-30 settembre 2017 durante ELEATICA, nei locali della Fondazione Alario ad Ascea Marina, SA. Queste pagine, e così pure i dettagli dell'evento, sono (o saranno) disponibili in italiano e in inglese in www.eleatica.it e forse anche altrove.

Perché ‘filosofia virtuale’? Perché con ogni verosimiglianza né Parmenide né Zenone o Melisso ebbero la più vaga idea di ciò che in epoche successive cominciò ad essere chiamato ‘filosofia’, e perciò non ebbero nemmeno la possibilità di delineare una

loro filosofia. Così essi possono essere stati, al massimo, dei filosofi inconsapevoli e involontari, dunque meramente virtuali.

Inoltre c’è abbondanza di indizi per pensare che, una volta stabilite le fondamenta della sua dottrina dell’essere, Parmenide omise di sviluppare una compiuta teoria basata su di esse, mentre fu capace di offrire una serie di dottrine su cielo, terra e organismi viventi. Ora, se così stanno le cose, in cosa dovrebbe consistere la sua filosofia virtuale? Nemmeno Zenone pervenne a delineare una sua filosofia virtuale, mentre Melisso sì."

"Tra il Decano del Collegio dei Cittadini Onorari di Elea (cioè Néstor) e me è in corso una disputa a distanza che ormai ha diversi anni alle spalle. È iniziata, infatti, con le sue Lezioni Eleatiche del 2006, che convenimmo di intitolare «Parmenide scienziato?». All’epoca Néstor era già pronto a dire esattamente ciò che ha appena ripetuto nel titolo del suo recente intervento su *Archai*: “sì, scienziato, ma...” (mentre io avrei fatto a meno di quel “ma” già allora). All’epoca la sua preoccupazione era di trovare un posto, per il sapere naturalistico di Parmenide, nella cornice della trattazione sull’essere, dunque di collocarla all’interno di questa ‘scatola’ molto sui generis. Così egli otteneva di non toccare quella, che fin dai tempi di Melisso, Gorgia e Platone, è sempre stata considerata l’idea centrale e l’insegnamento cardine del parmenidismo: la riflessione sull’essere.(1)"

(1) Ricordo che, durante tutto il Novecento la dottrina dell’essere ha fatto di Parmenide un pensatore sempre più importante, ma anche sempre più inarrivabile. Con una conseguenza sicuramente inattesa: una dilatazione dell’offerta

di libri e articoli sul suo poema così estrema da passare da una media di una monografia ogni dieci anni (agli inizi del Novecento) fino a una media di due monografie all'anno (nel nostro XXI secolo).

124. ——. 2019. "Mondo vero e mondo falso in Parmenide." In *ὁδοὶ νοῆσαι. Ways to Think. Essays in Honour of Néstor-Luis Cordero*, edited by Pulpito, Massimo and Spangenberg, Pilar, 143-153. Bologna: Diogene Multimedia.

Riassunto: "Una consolidata *communis opinio* vuole che, confidando nei versi finali del Proemio e nei versi finali di B8, a Parmenide si debba attribuire un'immagine del mondo cost semplificata da non far posto alla distinzione tra le chiacchiere degli ignoranti e il raffinato e, in molti casi, ampiamente comprovato sapere impartito dalla dea. Ma, se la verità viene associata alla sola trattazione sull'essere, e se ciò che ricade nella sfera della non-verità viene assimilato alle opinioni irriflesse della gente, queste opinioni e gli insegnamenti su cielo, terra e organismi viventi verrebbero poste sullo stesso piano delle opinioni dei mortali. Possibile che questo abbia insegnato Parmenide? Non sarebbe troppo strano? E stato Nestor Corderò, in anni a noi vicini, ad aver finalmente messo a fuoco il problema, e anche ad aver avanzato una sua ipotesi di soluzione. La sua idea è che non siamo affatto tenuti ad assimilare il sapere naturalistico impartito dalla dea alle opinioni irriflesse. A suo avviso, è logico che questo sapere faccia parte dell'area di ciò che è vero. A mio parere bisogna distinguere il problema dalla soluzione. Molte ragioni invitano a non mettere sullo stesso piano il sapere naturalistico e le opinioni irriflesse della gente. In questo, Corderò ha ragione. Tuttavia la soluzione da lui proposta è incompatibile con un passo di Simplicio, Cael. 558.3-11, che è presente in Coxon ma non in Diels-Kranz o Laks-Most. Su questa base viene avanzata una proposta alternativa."

Abstract: "In Parmenides' B 8 37–41, we find a question that raises a difficult problem: how can Parmenides handle the opposition between “being and not” (i.e. being and not being) in the same way as the oppositions which characterize the mortals' opinions? This question is especially relevant for answering the following theoretical question: how do we to treat the fundamental philosophical question of oppositions at large? To answer these question we need to reinterpret some major points of Parmenides' thought: the second part of his poem, but also the identification of πέλειν and εἶναι in B 6 8, as well as other passages of the poem. But, above all, the question makes us introduce some distinctions within the oncept of negation and, consequently, between difference and negation. This allows us to distinguish the affirmation of the truth of being from the negation of the negation of being (i.e. the negation of nonbeing). This distinction has a major philosophical relevance, as can be seen by referring it to such thinkers as Plato, Hegel and Heidegger."

"Il pensiero di Parmenide è stato identificato con le sole teorie svolte nella prima parte del monologo della dea fin dai tempi di Platone, anzi fin da prima: già nel caso di Melisso e Gorgia, e probabilmente anche nel caso di Zenone e Protagora, ciò che fece impressione, ciò che ci si affannò a difendere - o attaccare -

non furono questa o quella tessera del sapere doxastico sui più diversi fenomeni naturali, ma unicamente la dottrina dell'essere svolta nel primo logos. Si può ben dire dunque che, una volta reso pubblico il poema, pochi decenni furono sufficienti per il formarsi di una *communis opinio*, poi recepita senza la minima esitazione anche da Platone, secondo la quale la dottrina dell'essere costituisce l'insegnamento di Parmenide, il suo pensiero, e in un certo senso lo esaurisce." (pp. 1-2)

(...)

"In effetti, una volta individuata l'esistenza di una doxa 'buona', e assumendo come accertata l'esistenza di un'ampia seconda parte del poema nel corso della quale veniva presentato un vasto e articolato sapere *peri physeos*, diventa quasi automatico spingersi a pensare che Parmenide (A) abbia fermamente creduto anche nella validità del sapere *peri physeos* da lui stesso elaborato, (B) abbia investito energie cospicue anche nella costruzione di quel particolare sapere al quale dedicò, come sembra, i 3/4 o addirittura i 4/5 dell'intero poema; (C) in quel contesto, abbia elaborato una più che creativa congettura sulla forma del cosmo(20), un più che rispettabile *iatrikos logos* e una serie di altre teorie su questioni particolari, mediamente degne di attenzione; (D) nondimeno abbia insistito nel far presente che questo suo sapere *peri physeos*, per quanto rispettabile, non poteva reggere il confronto con il supremo sapere *peri tou ontos* professato nella prima parte del poema (pp. 20-21)

(20) Trovo pertinente ricordare che, come ha efficacemente segnalato il Cerri (o.c., p. 266 ss.), la teoria parmenidea delle *στηφάναι* costituisce un preciso e inequivocabile antecedente del modello di cosmo a sfere concentriche successivamente sviluppato da Eudosso e Aristotele. Il fatto che Aristotele non menzioni Parmenide allorché, nel *De caelo*, discute delle sfere concentriche non potrebbe certo valere come indizio del contrario.

"Il ciclo di conferenze che si tiene annualmente ad Ascea presso la Fondazione Alario per Elea-Velia (a nemmeno tre km dagli scavi) e che raccoglie una comunità di studiosi interessati ai temi riguardanti la filosofia presocratica e, in particolare, quella eleatica, ha avuto come docente invitato, per l'edizione 2008-2009, il Professor Jonathan Barnes. Le sue lezioni magistrali costituiscono il nucleo centrale di questo libro. Esse vertevano sui paradossi di Zenone e hanno aperto un intenso dibattito di carattere sia filosofico sia storico, che ha coinvolto diversi partecipanti.£ (p. 19)

(...)

"Il problema, secondo Barnes, è proprio che [Zenone] non vi riesce, perché l'argomento da lui proposto, come si è visto, riposa su una premessa falsa: l'idea che la somma di un numero infinito di quantità sia necessariamente infinita. Che sia un argomento fallace lo si dimostra molto semplicemente: posto che il volume del corpo iniziale sia finito, di qualunque grandezza siano le parti che scegliamo, la loro somma sarà

sempre pari al volume totale, che per ipotesi è finito. Ammesso che il volume di un corpo sia pari alla somma delle parti di qualsiasi partizione, allora le varie partizioni dovranno essere tutte uguali fra loro (perché tutte uguali al volume iniziale del corpo finito): di conseguenza, la somma degli elementi di nessuna di esse darà per risultato una grandezza infinita. Barnes osserva, in chiusura, che la migliore confutazione di Zenone resta quella di Antistene, mettersi a camminare (sebbene si tratti, probabilmente, di una leggenda). Ciò che Antistene ha fatto per rivendicare la realtà e la comprensibilità del movimento, avrebbe potuto farlo anche per la grandezza delle cose, richiamandosi all'evidenza empirica della finitezza dei corpi, così come, secondo leggenda, egli si era richiamato all'evidenza del movimento. Certo, egli avrebbe dimostrato che Zenone è in errore, ma non dove e come. Mostrare dove esattamente si nasconde Tenore di Zenone è, secondo Barnes, un proficuo esercizio filosofico, complesso ma gratificante. Per dirla con Platone, una utilissima *gymnasia*." (p. 24)

Bibliografia 289; Gli autori 301.

" Per LGM [Laura Gemelli Marciano] la peculiare cultura della Magna Grecia dell'epoca ha segnato in profondità gli scritti di Parmenide - e di Zenone - per cui è possibile comprendere appieno la loro opera e il loro pensiero solo a condizione di riscoprire i connotati inequivocabilmente esoterici che entrano in gioco e restituire loro il giusto peso.

Come abbiamo ricordato, la sua presa di posizione trova i suoi più intuitivi punti di riferimento in note opere di Walter Burkert e di Peter Kingsley, mentre si delinea una sorta di vero e proprio scontro frontale con i molti interpreti che hanno invece ravvisato in Parmenide un campione del rigore logico-deduttivo e il promotore di un sapere sull'essere, eventualmente anche di un sapere sul mondo fisico e i fenomeni biologici (per converso, l'impostazione difesa da LGM raccoglie vasti consensi tra gli studiosi del pitagorismo). A questo riguardo la contrapposizione è molto netta e, non a caso, è emersa anche nel dibattito seguito a queste Lezioni Eleatiche.

Sarebbe tuttavia fuor di luogo generalizzare, in quanto il panorama dei consensi e dei dissensi si fa subito più articolato se si considerano alcuni punti qualificanti." (p. 10)

(...)

"Un ultimo presupposto di cui liberarsi, quello forse più radicato nella tradizione ermeneutica occidentale, consiste nel vedere in Parmenide un metafisico, un logico o uno scienziato, in ogni caso un filosofo mosso da mere esigenze speculative, cioè volto a ottenere la conoscenza fine a se stessa, senza ulteriori scopi pratici. Ma questa immagine del filosofo speculativo non si applica al Parmenide storicamente vissuto ad Elea, essendosi formata ad Atene negli ultimi decenni del V secolo. Tale è la figura del *meteòrologos* elaborata, ad esempio,

per Anassagora e quelli come lui, e, in seguito, proiettata retrospettivamente su personaggi più antichi. Questa interpretazione comporta non solo la marginalizzazione del proemio, inteso come una sezione del poema oscura e del tutto accessoria, puro ornamento letterario, ma anche la perdita di un elemento, che invece LGM giudica essenziale per la comprensione dell'opera, e cioè la struttura fonica del poema. Come per molti altri testi mistici, anche nel poema l'ordine dei suoni non è casuale o funzionale solamente alla trasmissione di un contenuto. La ripetizione di suoni o di versi con l'attenzione focalizzata esclusivamente sui suoni notoriamente costituisce, infatti, nelle varie tradizioni religiose una pratica corrente nel raggiungimento di altri stati di coscienza. È su questo piano (del tutto inedito nella storia delle interpretazioni parmenidee) che bisogna riconsiderare il poema, e cioè riscoprirne la tessitura fonica, al fine di comprenderne l'impatto fisico, reale, diretto sugli uditori anche indipendentemente da ciò che le parole significano." (p. 15)

Gli autori 231-235.

"Il *cursus studiorum* di Giovanni Casertano (d'ora in poi GC) rappresenta una delle espressioni più originali e significative di questo importante ripensamento ermeneutico avvenuto nel secolo scorso, di cui anche il presente volume è esempio. GC esordì, come è noto, con ricerche sulla sofistica e su Parmenide (con la 'rivoluzionaria' monografia del 1978, Parmenide, il metodo la scienza l'esperienza), per poi approdare ad ampie e profonde letture dei dialoghi platonici, non senza aprire ulteriori finestre su autori come Empedocle e Protagora. Accenniamo appena a questo lungo percorso di GC perché di recente esso è stato oggetto di molteplici interventi in occasione di λόγον δίδόναι. La filosofia come esercizio del render ragione, la Festschrift in suo onore curata da Lidia Palumbo che gli venne presentata proprio in occasione delle sue Lezioni Eleatiche del 2011.

Per le ragioni indicate, la scelta di dedicare queste Lezioni Eleatiche al complesso tragitto che da Parmenide conduce a Platone ha significato toccare le principali tappe del suo ricco itinerario di ricerca, dunque spostare l'attenzione da singole questioni storiografiche al filo conduttore che ha ispirato un complessivo ripensamento di questa cruciale fase del pensiero antico.

(...)

"Gli assi portanti delle Lezioni Eleatiche di GC che, dunque, risultano euristica-mente fecondi sono due: il primo riguarda la rielaborazione protagorea e gorgiana del parmenidismo, come

training filosofico formativo di Platone, nella quale l'ontologia è ridotta a logologia e il λόγος assume il ruolo fondativo della realtà.

Il secondo asse invece descrive il tentativo di Platone di ristabilire il primato del piano ontologico su quello logico: a causa dell'impossibilità di fondare ontologicamente il non essere attraverso la risoluzione del falso nell'alterità, intesa come diversità della relazione predicativa rispetto a ciò che pretenderebbe di descrivere, Platone è di fatto costretto a riaffermare la centralità del linguaggio e quindi la prospettiva sofistica, specialmente quella gorgiana." (pp. 16-17)

"Negli ultimi due secoli - con una certa approssimazione - si possono riconoscere due grandi periodi nella ermeneutica parmenidea. Nel primo si è sostenuta un'interpretazione che ha costituito, fino alla prima metà del Novecento, la lettura standard di Parmenide: essa ha di fatto misconosciuto la sezione fisica, la cosiddetta Doxa, relegandola a pura appendice senza alcun valore conoscitivo o epistemologico, perché incompatibile con la prima parte del poema, quella sulla Verità. Si è trattata, come oggi appare evidente, di una lettura inconsapevolmente 'melissiana' di Parmenide (come già nell'antichità fecero personaggi come l'epicureo Colete di Lampsaco), fondata sulla eliminazione del mondo fisico e la sua riduzione a mero piano illusorio. Ciò però ha danneggiato Melisso, poiché la sua dottrina potè essere intesa non come un parto originale del suo pensiero, ma come un clone di quella del suo illustre predecessore. E così, l'aver reso Parmenide una sorta di Melisso di Elea ha sottratto al Samio l'originalità, ossia la condizione minima per essere ritenuto filosofo degno d'attenzione.

(...)

Ma come s'è detto, c'è poi stato un secondo periodo. Più o meno a partire dalla metà del Novecento si è fatta strada con sempre più forza una nuova famiglia di interpretazioni di Parmenide, molto diverse tra loro (e prevedibilmente conflittuali), ma tutte accomunate dalla radicale messa in discussione della lettura classica e quindi da una più o meno robusta rivalutazione della sezione fisica del poema, al punto che oggi si può dire che il paradigma si sia del tutto rovesciato ed è raro incontrare sostenitori del vecchio approccio anti-naturalistico. Questa riscoperta della Doxa (o comunque del sapere naturalistico parmenideo) ha evidentemente impedito la precedente identificazione tra la dottrina di Melisso e quella di Parmenide, poiché (nonostante alcuni audaci tentativi esegetici in controtendenza) l'ammissione dell'esistenza di un piano doxastico o fisico accanto a quello dell'Essere, è del tutto assente nel filosofo di Samo.

(...)

Da questo mutamento di schema interpretativo, dunque, Melisso non ne è uscito avvantaggiato: egli diviene una sorta di Straniero di Elea - in questo caso di Samo - che, come il protagonista del *Sofista* platonico, si macchia di un parricidio nei confronti del maestro. Ma nel un caso non si tratta di un delitto filosoficamente fecondo, come quello platonico; al contrario, la sua diviene piuttosto una sterilizzazione forzata del parmenidismo.

(...)

< Cionondimeno, le linee di ricerca su Melisso emerse negli ultimi decenni (ma in fondo già all'opera nel primo dei due periodi ora menzionati, seppure ancora in modo germinale) hanno giudicato il pensatore di Samo meritevole di maggiore considerazione, in alcuni casi del tutto simpatetica, e anche laddove non sono giunte fino ad una sua piena riabilitazione critica, hanno offerto un contributo alla ricostruzione del suo pensiero che segue nuove strade.

(...)

Ma per comprendere appieno il quadro interpretativo nel quale s'inseriscono le Lezioni Eleatiche di Mansfeld, è utile gettare un rapido sguardo agli studi dedicati a Melisso negli ultimi cinquant'anni (e qualcosa di più)." (pp. 20-22)

La replica del Prof. Cerri 214;

Gli autori 251-254.

"Secondo Giovanni Cerri (GC) il punto di partenza della riflessione parmenidea è una ricerca scientifica lunga e laboriosa fondata sulle due componenti della rilevazione sperimentale e del ragionamento matematico-geometrico. In entrambe, GC individua una comune tendenza a identificare tra loro diversi elementi in un processo che porta a semplificare la complessità del reale e, così, a comprenderla meglio.

(...)

Sulla base del fatto che, in greco, il concetto di uguaglianza da noi formulato con il segno = si esprimeva con l'espressione «è» (*est*), GC ipotizza che questo sia il senso del verbo 'essere' su cui insiste l'Eleate nella sua opera. Su questa 'epistemologia equazionale' si basa il nuovo metodo conoscitivo che Parmenide contrappone al sapere tradizionale dei poeti e alle nuove ricerche storico-geografiche di tradizione ionica (*historie*), entrambi basati su un accumulo di nozioni tra loro diverse (*polymathie*) senza che via sia una vera comprensione scientifica (fr. B2-8, 2a). Il risultato del graduale processo di identificazione dei diversi enti (*eonta*) tra loro, prospettato nel

poema parmenideo, sarebbe dunque quello di ridurre la complessità del reale ad un solo ente (*eon*). Le caratteristiche distintive dell'*eon* sono elencate e descritte in B8, laddove si verifica il passaggio dall'essere copulativo-equazionale a quello sostanzialistico-esistenziale. Il fatto che esso sia subito presentato come ingenerato e imperituro riconnette la natura dell'ente parmenideo al principio - valido ancor oggi - *nihil ex nihilo, nihil in nihilum*, che, come ha riconosciuto Aristotele in *Metaph.* 1,3, 983 b 6 ss., appare il postulato fondamentale della maggior parte dei sistemi fisici dei presocratici. Tuttavia, Parmenide porta all'estremo tale assunto e individua un intervento *ex nihilo* in ogni forma di trasformazione, arrivando quindi a postulare, per primo, l'esistenza di una realtà che sia anche unica, immobile, immutabile e perfettamente omogenea. Questo *eon*, peraltro, come suggeriscono alcuni versi di B8, è un ente reale, con una massa corporea che occupa la totalità dello spazio, non un corpo tra gli altri, ma il solo corpo in assoluto. In questo contesto, οὐκ ἔόν, 'non ente' viene a significare, per la prima volta, "spazio vuoto" secondo una terminologia che verrà poi ripresa da Leucippo e Democrito. Appare così chiaro che la ricerca di Parmenide si iscrive interamente nell'ambito della fisica, piuttosto che in quello della metafisica, come sembra avere riconosciuto lo stesso Aristotele in *De caelo* 3, 1, 298 b 21-24. E in quest'ambito, formulando l'immagine di un ente che occupa uno spazio finito illimitato in una dimensione atemporale, Parmenide anticipa le teorie di alcuni fisici moderni come Hawking e Capra. All'interno di questa linea interpretativa trova senso anche la seconda parte del poema, dove è descritto il migliore quadro del reale alla luce del sapere scientifico più aggiornato, presentato nella versione propria di Parmenide stesso e della sua scuola. Si tratta di un mondo di parvenze ingannevoli, fondato sulla fallace contrapposizione tra luce e tenebra, stabilita in base ad un'impressione sensoriale degli uomini agli albori della loro storia, ma, dietro di esso traluce la Verità dell'Essere/Uno." (pp. 20-21)

"Un certo e costante interesse per Parmenide lo ha accompagnato [Alberto Bernabé] per molti anni di studio e questo rapporto con il filosofo di Elea è giunto al suo culmine con le tre lezioni magistrali che ha offerto in occasione di Eleatica 2015 nella sede della Fondazione Alario per Elea-Velia, ente promotore della sessione scientifica, nei giorni 10-12 settembre.

La prima parte di questo nostro lavoro introduttivo ha l'obiettivo di esporre e analizzare la presenza di Parmenide negli studi scientifici di Alberto Bernabé (da ora AB), con il proposito ulteriore di seguire e ricostruire le linee interpretative e le proposte che AB è andato suggerendo negli ultimi 38 anni.

Questo percorso di analisi si costituirà di undici sezioni in cui analizzeremo altrettanti studi di AB nel quale egli ha toccato punti importanti del poema di Parmenide che in una forma o nell'altra sono stati ripresi e ampliati in questo volume.

Di seguito si potranno trovare le sintesi delle lezioni, dei commenti alle lezioni e delle rispettive risposte di AB.

La sezione introduttiva si chiude con un profilo biografico di AB.") (p. 11)

(...)

"Infine, l'ultimo studio parmenideo pubblicato nel 2015 da AB, "Parménides se encuentra con la diosa"(19), è un lavoro nel quale vengono sviluppati alcuni dei punti che saranno esposti e portati alle estreme conseguenze nella prima Lezione Eleatica, quali l'atipicità del proemio in relazione alla tradizione letteraria precedente, in particolare in riferimento alla mancanza di una invocazione a una musa; l'assunto secondo cui si tratterebbe di un viaggio celeste nel carro del sole, da cui deriverebbe l'apparizione delle Eliadi; e, infine, la convinzione che non si tratta della descrizione o del riflesso di una

esperienza reale, né di un'allegoria con significato occulto, ma dell' «elaboración literaria del acceso a una gran verdad que el autor interpreta como una revelación religiosa» (p. 29).

Parmenide «situa lo que tiene que decir en el ámbito en el que en su época se situaban las verdades profundas, la iniciación» (p. 29). Questa sarà l'idea centrale della proposta che AB farà nella prima delle tre Lezioni Eleatiche.

Questo percorso nell'opera di AB ha inteso essere propedeutico alla lettura delle tre Lezioni Eleatiche: quella di AB si è dimostrata una interpretazione forte, costruita nel tempo, nata dal tessere le fila delle dottrine del pensiero presocratico e di quelle orfiche nel contesto della letteratura e del pensiero antichi. Il quadro delineato dovrebbe agevolare e avvicinare il lettore alle tre Lezioni, di cui di seguito si offre una sintesi ragionata." (pp. 18-19)

"Nel 2017, in occasione della decima edizione di Eleatica, di cui è stato ideatore e fondatore, Livio Rossetti è stato invitato dal Collegio dei Cittadini Onorari dell'Antica Città di Elea a offrire le tre lezioni magistrali che, fin dalla prima edizione, caratterizzano la struttura di questo evento.

Ricorrendo alla 'filosofia virtuale' come chiave interpretativa, Rossetti ha analizzato il pensiero dei tre grandi esponenti della cosiddetta scuola Eleatica: Parmenide, Zenone e Melisso. Un progetto ambizioso quanto fruttuoso quello di guardare da una prospettiva inedita a questi tre pensatori: senza cedere a preconcetti e interpretazioni consolidate nella (vastissima) letteratura critica esistente sui temi, Rossetti ingaggia un personale e intenso corpo a corpo con gli Eleati col chiaro scopo di riscoprire e ridare valore ai loro aspetti maggiormente inediti e tralasciati, se non addirittura mai rilevati. In tal senso, l'approccio peculiare delle sue Lezioni Eleatiche risulta coraggioso, come d'altronde, la sua bibliografia ci ha abituati a pensare.

Così a queste Lezioni sono seguiti due anni di lavoro e di scambi con colleghi e studiosi. Le analisi si sono intensificate, i risultati accresciuti, le prospettive rettificate, le divergenze appianate o acuitizzate, le questioni aperte rinnovate.

Prima di entrare nel vivo delle lezioni, intendiamo ripercorrere in maniera sintetica le indagini di Rossetti e il dibattito che esse hanno sollevato con altri studiosi. Si intende così offrire al lettore uno strumento agile per avere una visione generale dei risultati raggiunti in queste pagine." (p. 11)

"La discussione aristotelica del pensiero eleatico, e parmenideo principalmente, si sviluppa attorno ad almeno tre linee tematiche, che costituiscono il maggiore contributo testimoniale aristotelico sul tema. Se la seconda di esse affronta il cuore della tesi eleatica più nota, quell'ontologia monista e immobilista che Aristotele si propone di decostruire, le altre due si rivelano non meno significative e riguardano, l'una, lo statuto epistemologico della teoria di Parmenide e dei suoi seguaci, l'altra, il piano di compatibilità tra questa teoria e la trattazione fisica (tematica circoscritta all'interpretazione del solo Parmenide)." (p. 13)

(...)

"1. An Aristotelianizing Parmenides. – La prima lezione di RM [Richard McKirahan], come recita il titolo, intende introdurre il lettore a un nuovo modo di interpretare la filosofia di Parmenide, che cerca di conciliarla e armonizzarla con le idee essenziali che definiscono il progetto filosofico di Aristotele, in particolare con la sua concezione della metafisica come scienza dell'essere in quanto essere e con la distinzione, centrale nel suo sistema di pensiero, tra metafisica e fisica. RM presenta la sua proposta come una nuova interpretazione, sebbene riconosca talune affinità con quella proposta da Thanassas (2007) e sia solidale con l'influente lettura di P. Curd (2004), la quale sostiene che Parmenide non fosse un monista numerico, ma un monista predicativo: quando Parmenide afferma che ciò che è è uno, ciò non significa che esista un'unica cosa, ma che ogni cosa che è è una cosa unitaria, d'un solo genere. Lo studio di RM esordisce stabilendo tre punti preliminari, prima di presentare la sua lettura aristotelizzante del fr. DKB8" (p. 24)

"L'apporto principale che Corderò ha dato agli studi sul poema di Parmenide è consistito nell'insistenza sul netto dualismo che lo caratterizzerebbe: la visione pienamente negativa delle doxai

dei mortali (non redibimili attraverso arbitrarie attenuazioni della dura condanna della dea, come invece è stato proposto da altri interpreti) si accompagnerebbe all'esclusione di una possibilità di conciliazione tra la verità e l'opinione, la cosiddetta 'terza via'. È proprio questo 'corto circuito' ermeneutico che ha condotto Corderò negli ultimi tempi a separare la 'doxa' dalla fisica, e quindi, non trovando alcuno spazio terzo tra la sezione della verità e quella dell'opinione, a muovere i frammenti fisici dalla seconda alla prima parte. Oltre a ciò, Corderò aveva già mostrato come il riconoscimento dell'affermazione di una 'terza via' nel poema (terza, secondo i suoi sostenitori, rispetto alle due vie, cosiddette, dell' 'essere' e del 'non essere') si fondasse in realtà non sul testo pervenuto, ma su una congettura del grande filologo Hermann Diels sul fr. 6, peraltro inaccettabile se considerata nel contesto del frammento." (pp. 9-10)

(...)

"Il tratto originario di questo percorso di ricerca si ritrova nei venti scritti (in francese e in piccola parte in spagnolo) qui raccolti. Il volume si divide in tre sezioni, introdotte da una breve presentazione dello stesso autore. La prima sezione è incentrata sui problemi di ricostruzione del testo del Poema, e si occupa della complessa trasmissione dei frammenti a noi noti. La seconda tratta dei nodi interpretativi posti dal pensiero dell'Eleate, a cui offre soluzioni originali. L'ultima sezione, dedicata ai cosiddetti 'eredi' di Parmenide (oltre che ad un suo 'predecessore'), affronta invece le questioni legate all'esistenza della presunta 'scuola' di Elea." (p. 11)

"Il campo di studi principale di Alexander P. D. Mourelatos è stato il pensiero presocratico, assieme ad alcuni aspetti della filosofia di Platone e di Aristotele. Il suo primo libro, *The Route of Parmenides*, è stato pubblicato nel 1970, e poi riedito in una versione riveduta e ampliata nel 2008. Quel volume, apparso quando l'autore aveva solo trentatré anni, è ritenuto oggi uno dei testi più importanti della letteratura critica su Parmenide.

Un posto particolare tra i Presocratici lo ricopre dai primi anni 2000 un pensatore pre-parmenideo, Senofane di Colofone, la cui fisica, talvolta marginalizzata, è stata invece l'oggetto di una originale reinterpretazione da parte di Mourelatos.

Proprio a Senofane (e alla sua affascinante “astrofisica delle nuvole”) furono dedicate le *lectiones magistrales* che lo studioso tenne in italiano per Eleatica 2010, e che gli valsero l'anno dopo la Cittadinanza Onoraria dell'Antica Città di Elea. Le lezioni si intitolavano La “natura delle cose” prima di Parmenide: il mondo visto da Senofane, e offrivano uno sguardo lucido su una delle fasi più interessanti della riflessione naturalistica pre-parmenidea.

Ma Mourelatos, già nei tre decenni precedenti, aveva riservato una serie di studi altrettanto significativi a quel che era avvenuto dopo Parmenide. E come avrebbe poi fatto nel caso di Senofane, in quegli studi egli problematizzò la lettura, fino troppo schematica, secondo cui tutto era legato (anche retrospettivamente) a Parmenide. Se nel caso del Colofonio Mourelatos avrebbe rivelato gli errori interpretativi generati dal “mito eleatico”, che aveva condotto a sovrainterpretare (e in ultima analisi a fraintendere) i versi di Senofane, degradandolo a mero precursore, nel caso dei filosofi post-parmenidei si era proposto di valutare il reale condizionamento che Parmenide (e l’eleatismo in genere) avevano determinato sulla filosofia successiva. Seppure, infatti, tale condizionamento appare innegabile, è alto il rischio di una sua sopravvalutazione, allorché tutta la riflessione successiva viene forzatamente ricondotta ad una mera replica all’eleatismo. Mourelatos si è sforzato di mostrare come il quadro fosse sensibilmente più complesso, cercando di far emergere anche i contributi più originali di questi pensatori (e cioè i cosiddetti Pluralisti, i Pitagorici – più nello specifico Filolao – ma anche figure più prossime all’eleatismo, come Melisso o, seppure polemicamente, Gorgia).

È a questa fase della sua ricerca, incentrata sul pensiero post-parmenideo, che è dedicata principalmente questa raccolta. Il volume contiene otto saggi, di cui sette già pubblicati in inglese, e uno (il terzo di questo libro) che originariamente, in una versione ridotta precedente – qui sviluppata e ampliata – era stato pubblicato in greco moderno.” (pp. 11-12)

Gli autori 205-208.

"Il presente volume raccoglie un insieme di nove saggi che hanno l'obiettivo di fare luce sul ruolo che il pensiero eleatico, in particolare quello di Parmenide, hanno avuto nell'ambito della riflessione filosofica antica e tardo-antica, una *Wirkungsgeschichte* che giunge fino alla riflessione procliana nel tardo Neoplatonismo.

Lo scopo è quello di mostrare come il pensiero parmenideo, seppur secondo differenti accezioni e con finalità diverse, abbia avuto un ruolo fondamentale in diversi autori e tradizioni filosofiche, tanto da risultare determinante nella formazione di veri e propri sistemi filosofici oppure fungendo da punto di riferimento critico." (p. 9)

(...)

!L'insieme dei saggi che compongono il presente volume mostrano come la presenza di Parmenide si riveli un elemento di confronto costante per gli autori antichi successivi. La ricezione della dottrina di Parmenide viene assorbita e richiamata in diversi aspetti del pensiero filosofico, quali l'etica, il linguaggio, la teologia, la fisica, la metafisica e l'ontologia. Parmenide è dunque, in alcuni casi, una sorta di fondamentale punto di riferimento, la cui dottrina risulta imprescindibile e necessaria per la comprensione dello sviluppo del pensiero successivo. Allo stesso tempo, tuttavia, non mancano i casi in cui la dottrina di Parmenide venga posto sul banco degli imputati da autori che si rivolgono all' Eleate con un atteggiamento critico, cercando di mostrare come il ferreo razionalismo delle sue posizioni conduca, in alcuni casi, a un

cortocircuito logico-ontologico difficile da accettare nella sua radicalità.

In conclusione, ciò che emerge con chiarezza da tutti gli studi di questo volume è il fatto che non sia possibile affrontare alcuni grandi temi filosofici del pensiero antico senza prendere nella dovuta considerazione il condizionamento o almeno la suggestione che il pensiero eleatico ha fortemente esercitato sulla riflessione a lui successiva." (p. 18).

"Schluss. Das Seiende, das Kennen des Seienden, menschliches νοεῖν und scheinbare Realität, im Zusammenhang hiermit der einzig richtige und die beiden falschen Wege der Forschung sind die großen Themen des parmenideischen Denkens. Der Weg der Wahrheit endet nicht mit der Lehre vom Seienden und

den Ausführungen über das mit dem Seienden verbundene νοεῖν, sondern führt auch zur Erhellung der rein menschlichen Erkenntnis und der von ihr hervorgebrachten scheinbaren Realität. Das Seiende ist gleichmäßig ausgedehnt und kugelförmig. Wollte man aristotelische Terminologie auf es anwenden, dann ist es eine Substanz, die nur Quantität, aber keine bestimmte Quantität hat. Weder innerhalb noch außerhalb des Seienden existiert das Nichts; die räumlichen Grenzen bilden weder den Abschluß gegen anderes Seiendes noch gegen das Nichts, sondern, in der Ganzheit des Seienden gegründet, schließen sie das Seiende ein und gewährleisten seine Ganzheit. Somit erwies die Interpretation die Richtigkeit der auf Aristoteles und Theophrast zurückgehenden Konzeption. In der Erkenntnislehre ist der Unterschied zwischen göttlichem und menschlichem Erkennen von größter Wichtigkeit. Das göttliche Erkennen sieht das Seiende so, wie es ist; das menschliche Erkennen erreicht das Seiende nicht, sondern entwirft die scheinbare Realität.

Durch diese Lehren sind alle denkerischen Bemühungen vor Parmenides als falsch zurückgewiesen worden. In wenigen Fällen sind einige Denker kenntlich, deren Theorien durch die parmenideische Argumentation widerlegt werden. Die Ablehnung aller früheren Deutungsversuche der Wirklichkeit besagt nicht, daß Parmenides von ihnen gänzlich unbeeinflusst geblieben ist, wenngleich solcher Einfluß selten zu entdecken ist²). Auffallend ist, daß gerade hierbei eine altpythagoreische Doktrin (Seelenwanderung) mit Wahrscheinlichkeit anzutreffen ist; das läßt erwarten, daß noch mehr Bezüge zwischen Parmenides und dem frühen Pythagoreismus sichtbar werden, wenn sich das Dunkel um diesen gelichtet hat. Die Methode des Parmenides ist dadurch ausgezeichnet, daß er der erste unter den Vorsokratikern zu sein scheint, der argumentiert. Direkte und indirekte Beweisführung werden verwendet; die Kreisförmigkeit der Argumentation³) ahmt das »wohlgerundete« Seiende nach.

Thema des zweiten Teils der Untersuchung wird die antike Parmenides-Interpretation sein. Angestrebt wird die Beantwortung von drei Fragen: 1) Was galt als Philosophie des

Parmenides? 2) Stimmt die jeweilige Auffassung mit den Fragmenten überein, und welche Autoren haben Parmenides verstanden und deuten seine Lehre richtig? 3) Ist es möglich, die Lehren der Fragmente durch doxographische Berichte zu erweitern? Falls es nämlich Autoren gibt, welche den Inhalt der Fragmente richtig darstellen, darf angenommen werden, daß ihr Bericht auch dann zuverlässig ist, wenn er durch die Fragmente nicht zu verifizieren ist, ihnen aber auch nicht widerspricht. Da die Fragmente ein zwar lückenhaftes, aber doch, was den Seinsteil und die Charakteristik der Doxa betrifft, ein klares Bild ergeben, ist von ihnen her die Doxographie zu beurteilen. Notwendige Voraussetzung hierfür aber ist eine Interpretation der Fragmente; sie wurde im ersten Teil versucht." (183-184)

From the English Summary: "The question why the poem of Parmenides includes a detailed account of the origin and the order of the world that according to his ontology is deprived of truth, cannot be answered with certainty. There are affinities between the Parmenides' cosmos and his absolute *hen*, and so the ancient idea of the unity of god and the cosmos seems to be at the background of his philosophical system.

(...)

On the basis of this reconstruction it is possible to outline the main features of the Parmenidean cosmological system. It is a very archaic conception of the universe divided into three spheres, paralleled in the Babylonian and Indian cosmography. In contrast to the systems recognizing the seven planets, in this case the fixed stars are located under the sun. In Greece, this system is recognizable in the thought of Anaximander, Metrodorus or Leucippus as a parallel to the more developed Pythagorean model.

Another important feature of this system is a contraposition of two balancing cosmic principles, Fire and Earth. A dark and solid principle is represented in the very centre, while the edges are dominated by a principle that is light and thin. Between these extremes, there is a gradual transition from one principle to the other. In the process of creation of a cosmos, these two elementarily pure principles mingle and mix. Yet whenever this process is referred to as 'hateful' or 'abominable' (*stygeros*), we can assume that everything that stems from it has a negative character. In the proem, Parmenides describes a passage leading out of this world and towards knowledge of eternal and immutable truth." (pp. 48-50).

Abstract: "Many scholars explain the epistemological value of Heraclitus' λόγος by interpreting it as a rational or mathematical pattern, whose translations refer to the related semantic fields: e.g. 'law of thinking', 'proportion', 'formula of things'. Such meanings are not safely documented earlier than the philosophical language of the fourth century BC. From Homer until the end of the sixth century BC, λέγειν means basically 'to collect' and 'to tell', λόγος means 'collection' and much more often 'speech', whereas 'speech' itself represents a 'collection of utterances (ἔπεα, μῦθοι)'.

Maybe our common sense suggests that no speaking activity can affect the human understanding as Heraclitus' λόγος does. However, another archaic thinker, Parmenides, argues that 'names' and 'naming' mislead the opinions of human beings concerning natural phenomena. Furthermore, Heraclitus' epistemology conforms to the Grundbedeutung of λόγος as 'collection of utterances' and consists in 'listening' (ἀκούειν) and 'putting together' (ξυνιέναι), even grasping the secret 'joint' (ἄρμονιή) of things. That is why I suggest to interpret λόγος according to the archaic, not philosophical meaning of the word, i.e. as 'speech'."

Presents an analysis of the relationship between language and reality in the philosophy of Parmenides, focusing on the way in which the two parts of his poem stand related to each other. Maintains that *both* parts have the same object, namely, Being or reality, although, it insists, Being as the object of opinion becomes inevitably falsified and deformed by the human language of predication. Regards Parmenides more as a philosopher of language (comparable to Frege, Russell, and the early Wittgenstein) than as a metaphysician in the platonic tradition." [N.]

70. Mansfeld, Jaap. 1964. *Die Offenbarung des Parmenides und die menschliche Welt*. Assen: Van Gorcum.

"Mansfeld has given us one of the most penetrating and original discussions of Parmenides' poem since Fränkel's *Parmenidesstudien* in 1930. The book consists of four chapters, each one of which might stand alone as an independent essay, but which together aim at a unified view of Parmenides' thought. Mansfeld develops his interpretation with a wealth of detail, a careful, nearly complete, and on the whole judicious discussion of other views, which makes his book at once a commentary on the poem and a valuable survey of earlier scholarship.

Chapter I ('*Die Vorgeschichte des dritten Wegs*') is a brilliant study of the literary and historical background of fragment 6, designed to clarify the question whether or not Parmenides is referring to Heraclitus in his polemic against ignorant mortals (...). Mansfeld's answer to this question is, I think, the correct one: the evidence of fragment 6 and of the poem generally is *compatible* with a reference to Heraclitus but does not *require* it (pp. 41 and 204-208). The parallels are perfectly intelligible without the assumption that Parmenides has Heraclitus in mind. Since there is no relevant external evidence, we are faced with a question of historical fact which we have no historical means of deciding. What we can say is that *if* Parmenides was familiar with Heraclitus' work, he may have seen in it simply "die modernste Formulierung der archaischen Bestimmungen des Menschen" (41), and thus made use of Heraclitean terms in fr. 6 to characterize human folly *as such*. Certainly fr. 6 does not refer uniquely or primarily to the folly of Heraclitus.

(...)

Chapter II ('*Die Logik des Parmenides: Disjunktion und Implikation*') is a stimulating but on the whole unsatisfactory analysis of the argument in the section on Truth. Mansfeld here attempts to identify Parmenides as the originator of the Megaric-Stoic tradition of ancient propositional logic, in contrast with the Aristotelian logic of terms. Mansfeld is

certainly correct in insisting upon the careful structure of Parmenides' argument and upon the logical character of the fundamental *krisis* as an exclusive disjunction. This disjunction, *éstin mé ouk éstin*, is in fact a compressed statement of the law of contradiction and the law of excluded middle at once. But Mansfeld is much less successful in his reconstruction of various syllogisms of the Stoic type in fr. 2 (pp. 56-62). And in presenting Parmenides and Zeno as 'logicians' he fails to distinguish between skill in constructing particular arguments, which the two Eleatics exhibit to a remarkable degree, and the analysis *of forms* of valid argument, which is the proper achievement of the logician and of which there is really no evidence before Aristotle, except for a few remarks in the Platonic dialogues. Mansfeld also fails to distinguish between implication understood as a conditional proposition ('If *p*, then *q*') and implication as entailment between propositions ('*p*. Therefore *q*'). (For Mansfeld's use of implication in the former sense, see e. g. pp. 100. 102 ; for the latter, confusedly, pp. 59. 68. Thus the arrow, which symbolizes inference to a conclusion on p. 59 is used to represent the propositional connective 'if ... then. . on p. 108.)"

- "Meixner argues that Parmenides' refutation of becoming is logically defective, that the term "being" occurs in two senses in his inference, synonymously with "actual" and in a wider sense. This interpretation is rejected. In addition, it is pointed out that Meixner's concepts of actuality and potentiality are not relevant referring to facts rather than to things. Finally, Meixner's disproof of what he calls "actualism" is refuted. "

"An den Anfang seines Lehrgedichts stellt Parmenides die Darstellung einer persönlichen Erfahrung, einer Reise zum Wissen, zur Göttin hin, einer Reise, die ohne Zweifel über die gewöhnlichen Erfahrungen des Menschen hinausgeht. Die Erzählung stellt den Gegensatz zwischen dem Menschen dar, der in die Welt der Göttin kommt, und dem Menschen, der in der Finsternis umherirrt. Parmenides erreicht die Welt der Göttin.

Es liegt auf der Hand, den Menschen, der in der Finsternis umherirrt, mit dem Leser zu identifizieren. Aber Parmenides organisiert den Text mit Blick auf den Leser. Die Analyse, die dieser Beitrag bieten soll, will in dieser Hinsicht mehr als nur einen Aspekt herausarbeiten. Themen sind hier die Definition des Weges, die Form der Erzählung, der Enthusiasmus des Menschen, die Richtung der Reise, das Paradigma Homer, der Gruß der Göttin, das Paradigma Hesiod, der Imperativ, das Verhältnis zwischen Reise und Suche sowie das aufmerksame Zuhören. Es wäre nicht schwer, die Liste noch zu erweitern." (p. 31)

130. ———. 1996. *Parmenides. Der Beginn der Aletheia. Untersuchungen zu B2 - B3 - B6*. Berlin: Walter de Gruyter.

Inhaltsverzeichnis: Vorwort V-VI; Einleitung 1; 1. Kapitel: Antithesen 4; 2. Kapitel: Argumentation 84; Text und Übersetzung B2 - 8,2 251; Bibliographie 255; Indizes 262-280.

"Einleitung. Die bisherige Parmenidesforschung geht im Hinblick auf den Beginn des Aletheiateils von einer prinzipiell falschen Voraussetzung aus. Die Abfolge des Textes entspricht m. E. nicht der Abfolge des Gedankenganges. B 2, mit dem die Darlegung der Seinslehre einsetzt, ist auch als inhaltlicher Ausgangspunkt interpretiert worden; doch den eigentlichen gedanklichen Beginn bildet B 6,1—2. Die Argumentation verläuft von B 6,1—2 über B3 zu B2 und nicht, wie bisher allgemein angenommen, in umgekehrter Richtung. Das Statement von Karl Deichgräber (1), Parmenides formuliere, mit der Aletheia einsetzend, sogleich ein Resultat, hat seine tiefe Berechtigung. Freilich in anderem Sinne, als der Verfasser es eigentlich meinte: der Philosoph begeht keinen logischen Kurzschluß, sondern entwickelt seinen Gedankengang, der auf die Formulierung der beiden Wege hinführt, von B 6 her in kontinuierlicher Argumentation.

Um dies aufzuzeigen, ist der Nachweis notwendig, daß die bisher als Einzelfragmente gezählten Textpartien B 2, B 3, B 6 ein fortlaufendes, lückenloses Ganzes darstellen. Hierfür gibt es einmal Indizien grammatisch-sprachlicher und gedanklicher Art: Parmenides hat seinen Text höchst sorgfältig gestaltet und verwendet durchgehend Parallelführungen und Antithesen (auf manches ist bereits hingewiesen worden). Darüber hinaus führt der Gedankenablauf, wenn man die drei Fragmente zu einer Einheit zusammenschließt, zu einer Abfolge, deren Historizität beweisbar ist. Die drei Hauptpunkte, welche sich in diesem Falle für den Gedankengang ergeben, bilden nämlich gerade das positive Pendant zu den negativen Feststellungen, die am Beginn von Gorgias' Schrift Über das Nichtseiende erscheinen: (1) Es gibt nichts. (2) Wenn es etwas gibt, ist es nicht erkennbar. (3) Wenn es erkennbar ist, kann es einem anderen nicht mitgeteilt werden. Die Reaktion des Gorgias auf Parmenides, auf die allgemein schon öfters hingewiesen worden ist, erweist sich als exakter Bezug auf den Beginn der Aletheia. Äußerungen wie diejenige von Barbara Cassin², der Widerlegung des Gorgias läge das Produkt einer schulmäßigen Ausformulierung parmenideischer Gedanken („Parménide scolaire“) zugrunde, verlieren damit ihre Berechtigung.

Unsere Thesen sollen nun im einzelnen erläutert und begründet werden. Das Unternehmen, über den Beginn der Aletheia zu handeln, stellt freilich jeden Parmenidesinterpreten vor immense Schwierigkeiten. Wovon soll er ausgehen? Denn in den Fragmenten 2, 3 und 6 ist nahezu alles umstritten: B 2,3 und 2,5, B 3 und B 6, 1a—2a werden in ihrer Syntax und ihrer Argumentationsform höchst unterschiedlich erklärt." (ss. 1-2)

(1) K. Deichgräber, Parmenides' Auffahrt zur Göttin des Rechts (Abh. Akad. Mainz 1958, Nr. 11), Wiesbaden 1959, 676.

(2) B. Cassin, Si Parménide, 44. Cassin kann der Vergleich Parmenides — Gorgias nicht gelingen, weil sie, der traditionellen Sichtweise verhaftet, für den Beginn von Gorgias von B 2 ausgeht statt von B 6.

(3) Die umfangreiche „Bibliographie parménidienne“, die Cordero seinem Buch Les deux chemins de Parménide (1984)

beigegeben hat, verzeichnet für den Zeitraum 1573 bis 1983 591 Titel (S. 240–272). Darüber hinaus ist noch eine Liste von „Ouvrages cités ne concernant pas exclusivement la pensée de Parménide“ erstellt (S. 277–281). Obwohl der Autor keinesfalls Vollständigkeit in Anspruch nimmt (siehe seine Vorbemerkung S. 239 - 240), dürften in der Bibliographie die Forschungsberichte von H. Schwabl nicht fehlen. In der zweiten Liste sollten z. B. Barnes' *Presocratic Philosophers* und Stokes' Buch *The One and the many* aufgeführt sein, die ausführliche Parmenideskapitel enthalten.

Parménides. Bibliografía de estudios en Español

Bibliografía

1. Aguirre De la Luz, Nazyheli. 2020. "El verbo εἶμι en Parménides. entre epistemología y ontología." *Hypnos* no. 44:54-74.

Resumen: "Resumen: A partir de la propuesta de Charles H. Kahn sobre identificar como primario el valor veritativo del verbo εἶμι en el poema de Parménides, este artículo se propone dar cuenta del desarrollo del argumento central de su poema en términos de una transición de un nivel epistemológico a uno ontológico. Se argumentará que dicho recorrido sigue el despliegue semántico del verbo εἶμι, que avanza desde dicho sentido inicial veritativo hasta poner en primer plano el valor existencial, en ese entonces todavía incipiente. A su vez, se mostrará cómo cada uno de estos dos niveles interpretativos se traduce, respectivamente, en estructura lógica de la realidad y estructura fáctica y concreta, las cuales confluyen en el concepto totalizador ἐόν."

2. ——. 2021. "La denominación como operación lingüística humana en Parménides." *Emerita. Revista de Lingüística y Filología Clásica* no. 89.

Resumen: "Como han puesto en evidencia los trabajos de varios estudiosos en las últimas décadas, en Parménides hay una reflexión más consciente que en sus predecesores sobre la relación tripartita entre realidad, pensamiento y lenguaje. El presente estudio, que parte de las investigaciones de Woodbury (1958 y 1986) sobre el uso de ὀνόματα y de ὀνομάζω en el

poema de Parménides, ofrece un nuevo y más amplio análisis de las cuatro referencias explícitas al establecimiento de nombres (*Parm.* 28 B 8.38-41; B 8.53-56; B 9.1 ss.; B 19.3 DK), sobre las que desarrolla una interpretación de tipo semiótico que busca hacer patente el papel que desempeña el lenguaje en la propuesta epistemológica del pensador eleático. En especial, se pone de relieve cómo la crítica de Parménides a la vía de las δόξαι βροτῶν no estaría necesariamente conectada con su postura convencionalista sobre el lenguaje, sino con la identificación de una falla en el proceso cognitivo de clasificación de la realidad por parte de los mortales."

3. Arduini, Stefano. 2001. "Parménides y la metáfora de las dos vías." *Logo: Revista de retórica y teoría de la comunicación* no. 1:43-52.

"Este artículo se ocupará de traducción, retórica y filosofía. Voy a considerar un texto imprescindible de la filosofía griega para ver cómo las traducciones occidentales modernas son hijas de una tradición que tiene su origen en la lectura platónica de Parménides que sucesivamente no ha sido discutida realmente, una tradición que ha descorporizado el saber y el conocimiento.

Sin duda esta crítica lleva consigo una idea de la traducción no sólo como simple transferencia de un significado ya incluido en el texto fuente sino como construcción de un significado que está en relación con los parámetros de la cultura de la que forma parte el texto traducido(2). Esto significa colocar en el centro de la investigación la realidad del texto traducido, esto es, el texto real en la cultura de destino. En este caso el punto central llega a ser el de considerar la traducción como un ejemplo de manipulación del significado y de construcción de una identidad(3).

Traducir es entonces utilizar estas estrategias cada vez distintas y la traducción de un texto es una reconstrucción que siempre está orientada por la cultura en la que se realiza. En consecuencia es posible considerar la traducción también como rewriting(4), como

reescritura. Traducir es una actividad de reescritura porque la historia de la traducción coincide con la de la identidad de un grupo social y reescribir es pensar un texto en su ámbito cultural.

Creo que las referencias anteriores son importantes para encararnos con un texto complejo como el de Parménides, porque nuestro objetivo es precisamente entender a qué tipo de manipulación fue sometido para proponer una traducción distinta que, sin embargo, no considero menos manipulada." (p. 43)

"IX. La reflexión lingüística de Parménides, pp. 320-325.

"Más importante que la aportación de Heráclito (y a mi modo de ver aún no valorada como se merece en las historias de la lingüística) es la de Parménides.

En efecto, si leemos los fragmentos del eléata observamos que su teoría filosófica está basada primordialmente en principios lingüísticos o, al menos, lingüísticamente formalizables. Su punto de partida es una reflexión lingüística, aunque llegue más allá. No voy aquí a trazar el sistema filosófico de Parménides, sino sólo hacer referencia a los principios lingüísticos en que se basa, tal y como se traslucen en sus propios fragmentos. En otros términos, lo que propongo es una lectura «lingüística» de los fragmentos del eléata. Desglosemos, pues, los principios lingüísticos sobre los que se basa." (p.320)

5. ———. 2015. "Parménides se encuentra con la diosa." In *AEIΔE ΘEA. La inspiración en la poesía religiosa*, edited by Fernández Sánchez, Alberto and Herrero de Jáuregui, Miguel, 13-31. Madrid: Ediciones Universidad San Dàmaso.

"Parménides nació en Elea, hoy Velia, en la Magna Grecia, a finales del primer cuarto del siglo VI a. C. Escribió un poema, que no ha llegado a nosotros en su totalidad, sino que solo nos quedan de él algunos fragmentos, escrito en el mismo tipo de verso en que estaban escritas la *Ilíada* y la *Odisea* o las obras de Hesíodo, esto es, los poemas épicos más antiguos. El poema, en todo caso, no debió de haber sido muy extenso. El fragmento del que voy a ocuparme, el primero de la edición canónica del autor, lo componen una treintena de versos que eran los primeros de la obra, lo que llamamos el proemio del poema, la

parte en que el autor presentaba el frontispicio de lo que venía a continuación, tratando de atraer al oyente hacia su contenido." (p. 13)

(...)

"Es hora de esbozar unas conclusiones.

El proemio ni es reflejo de una experiencia real, como creen algunos(31), ni una alegoría en que todo tenga un sentido oculto(32). Intentaría definirlo como la elaboración literaria del acceso a una gran verdad que el autor interpreta como una revelación religiosa: da la impresión de que Parménides considera que el discurso sobre el ser no es una verdad más; es la Verdad.

En consecuencia, sitúa lo que tiene que decir en el ámbito en el que en su época se situaban las verdades profundas, la iniciación.

Desde las coordenadas ideológicas de la religión de su época y de su entorno, debió interpretar que se le había ocurrido porque alguien (una divinidad cuya identidad él no sabía) se la había inspirado, bien entendido que tampoco consideró que hubiera sido posible sin intervención de la razón en absoluto, de modo que debía de ser algo que estaba mas allá, que se situaba en el ámbito de las verdades eternas. En los Misterios, el espacio en que la verdad divina se transmite a los seres humanos es el espacio iniciático, entre nuestro mundo y el Más Allá, entre lo humano y lo divino, entre la vida y la muerte. Consecuentemente ése es el escenario en que Parménides sitúa la revelación, que pretende, además, presentar como legítima y no como una intromisión indebida de un mortal en las verdades de los dioses." (pp. 29-30)

6. ———. 2019. "Parménides: entre lingüística, literatura y filosofía." In *Eleatica Vol. 7: Parmenide: tra linguistica, letteratura e filosofia = Parménides: entre lingüística, literatura y filosofía*, edited by Berruecos Frank, Bernardo and Giombini, Stefania, 49-118. Baden-Baden: Academia Verlag.

"A diferencia de los milesios, que expresaban sus ideas sobre el origen y sobre la evolución de las cosas en un relato en prosa, sin especificar el modo en que habían llegado a sus conclusiones, Parménides, que expone como piedra angular de toda su obra la premisa sobre lo que es, y que luego argumenta detenidamente sobre las consecuencias de esta afirmación inicial, presenta tanto una como la otra como reveladas por una diosa y describe pormenorizadamente en un poema hexamétrico, un viaje que lo conduce a presencia de esta divinidad. Mourelatos (1970,46) tiene razón en señalar que la pregunta «why poetry» no debe siquiera hacerse, dado que el λόγος en prosa no sería una opción viva para alguien que se sitúa en las coordenadas ideológicas del autor. Además, escribir un poema hexamétrico en una tradición literaria tan formalizada como la griega representaba situarse en un contexto tradicional, cuyos modelos más evidentes son Homero y Hesíodo.

La parte del poema en que la presencia de la tradición se advierte de manera más intensa es el proemio, el punto en el que el contraste entre forma literaria y contenido se hace más evidente. Pese a todo, el proemio de Parménides es también atípico para la poesía hexamétrica tradicional. Dado que estoy convencido de que el proemio no es algo ajeno a su filosofía, sino todo lo contrario, la fundamenta, creo que el análisis en detalle de cuánto de lo que en él se lee procede de la tradición y cuánto es innovación del autor puede ser revelador de su importancia y su función dentro del poema en su conjunto." (pp. 49-60)

7. Bernal, Sonsoles Alonso. 2011. "Parménides: el poema y su datación." *Ontology Studies* no. 11:297-331.

Resumen: "De Parménides no existen datos biográficos; solamente la atribución de la autoría del Poema y una escasa leyenda transmitida por los platónico-aristotélicos. El género poético del Poema, escrito en hexámetros, remite su composición a una época en que la poesía era oral, gestada en el seno de tradiciones gremiales de vates, ligadas a lugares de culto o a sagas familiares. Nuestro trabajo intenta demostrar que el Poema sufrió la misma peripecia diacrónica que los demás poemas de su género y que no tuvo un único autor. Hemos encontrado huellas de una diacronía compositiva anterior al momento de su redacción escrita: por un lado, nexos con el folclore minorasiático sitúan el origen matricial del Poema en una época anterior a la fundación de Elea, pero, por otro, ciertos conocimientos científicos que se exhiben en la Teogonía -el origen de las mareas o el origen solar de la luz lunar- sólo pueden datarse a principios del s. IV a. C. y los interpretamos como la huella del escriba: sitúan en esa época la redacción escrita de la obra."

8. Berruecos Frank, Bernardo. 2015. "Las hijas del Sol en el proemio de Parménides." *Diánoia* no. 60:55-84.

Resumen: "El presente trabajo esbozará ciertos elementos para una interpretación global del proemio de Parménides, a partir del análisis de uno de sus elementos centrales: las doncellas hijas del Sol. Tras examinar las acciones que éstas realizan dentro de la narración, y con el objetivo de defender una interpretación alegórica, se definirá la actividad alegórica arcaica mediante algunos ejemplos. Finalmente, se trazarán los cimientos para una revalorización crítica de la interpretación de Sexto Empírico y se argumentará que la alegoría platónica del carro alado como símbolo de la ψυχή en el *Fedro* bien podría estar recreando y evocando de cerca el mito parmenideo del proemio.

La disyuntiva hermenéutica (ἀνάβασις-κατάβασις) se halla motivada por la ambigüedad intrínseca del relato, ambigüedad

que tiene por objeto mostrar la unidad real de los contrarios aparentes a través del símbolo de las doncellas hijas del Sol."

9. ———. 2019. "*Bene rotunda et globosa ueritas* : Epítetos de la verdad en Parménides DK28 B1.29." *Archai. As origens do pensamento ocidental* no. 26:1-25.

Resumen: "En el presente artículo se discuten brevemente las tres variantes, ofrecidas por la tradición, del adjetivo que califica ἀληθείη en el fr. DK28 B1.29 de Parménides, es decir, εὐφειγέος, εὐπειθέος y εὐκυκλέος, buscando sobre todo aclarar la última de éstas. Dicha lectura ha sido acogida por algunos editores del Poema no sólo por ser considerada la *lectio difficilior* (así ya desde Diels), sino también debido a la autoridad de quien la ha transmitido, Simplicio, y a la conexión que emerge con la imagen de la esfera del fragmento B8. Se presenta a continuación un breve estudio sobre el adjetivo εὐκυκλος y su significación en la poesía arcaica griega y finalmente se intenta dar una posible respuesta a la pregunta de por qué la diosa habría calificado de "bien redonda" la verdad."

10. ———. 2019. "El Poema de Parménides y la lírica arcaica. Notas a la primera Lección Eleática de A. Bernabé." In *Eleatica Vol. 7: Parmenide: tra linguistica, letteratura e filosofia = Parménides: entre lingüística, literatura y filosofía*, edited by Berruecos Frank, Bernardo and Giombini, Stefania, 135-145. Baden-Baden: Academia Verlag.

"En la primera Lección Eleática (pp. 53-54), AB [Alberto Bernabé] cita y refiere a este pasaje de la Olímpica sexta de Píndaro y a este paralelismo que constituye uno de los τόποι literarios empleados por Parménides en el proemio y compartidos por la poesía lírica. AB simpatiza con la hipótesis del modelo común, pues considera que el origen de la tradición de un viaje en carro a otro espacio, común a Píndaro, a Parménides y conocida por Platón en el *Fedro*(5), estaría en un poema épico religioso de la Magna Grecia (pp. 6-7.)" (pp. 135-136)

(5) Tal y como Alberto Bemabé (p. 54) lo refiere, el comentarista Hermias se percató de la continuidad temática entre Parménides y Platón {*In Phdr.* 122, 19 Couvr. {*OF* 172) y, además, de que la imagen del auriga y los caballos también fue empleada por Orfeo, referencia de la cual deben estar las *Rapsodias* órficas. AB aventura la hipótesis de que el mismo motivo debió figurar en una *Teogonia* órfica más antigua, reelaborada por el poeta de las *Rapsodias* (p. 54).

11. ———. 2021. "El nuevo Parménides de André Laks y Glenn W. Most. Nota crítica de *Early Greek Philosophy*, vol. 5, parte 2, cap. 19." *Diánoia, Revista de Filosofía* no. 66:153-170.

Resumen: "En esta nota crítica presento un análisis de los materiales textuales que constituyen el capítulo 19 de la serie *Early Greek Philosophy* de A. Laks y G. Most dedicado a Parménides. Después de comparar cuantitativamente los textos de este capítulo con las ediciones de H. Diels y A.H. Coxon, así como de precisar cuáles son los textos "nuevos" que figuran en esta edición y las formas en que los editores decidieron presentarlos, ofrezco algunas consideraciones sobre el concepto mismo de recepción y su operatividad en este capítulo, sobre la superación definitiva de la distinción entre testimonios y fragmentos y sobre las ventajas y desventajas que supone cortar los textos para la presentación esquemática y temática de los contenidos. Por último, examino el modo en que la doctrina de Parménides se presenta en este capítulo y muestro algunas de las decisiones que los autores tomaron sobre los innumerables problemas de transmisión textual del *Poema*."

12. Boeri, Marcelo D. 2006. "Aristóteles contra Parménides. El problema del cambio y la posibilidad de una ciencia física." *Tópicos* no. 30 bis:45-68.

Resumen: "Este ensayo se propone presentar una lectura de las críticas de Aristóteles a Parménides en la *Física*. El autor sugiere que algunas importantes cuestiones que Aristóteles tiene en cuenta cuando determina los principios básicos de la ciencia de la naturaleza surgen de esas críticas, Boeri argumenta que, a pesar del fuerte desacuerdo declarado por Aristóteles en *Física* 1 2-3 respecto de las posiciones eleáticas

en general y la posición de Parménides en particular, Aristóteles aprovecha su discusión con Parménides de un modo constructivo a favor de su propia teoría del cambio y, en general, de las condiciones indispensables para la constitución de la ciencia de la naturaleza..Según el autor, uno de los puntos centrales del desacuerdo de Aristóteles con Parménides (la teoría del ser) es al mismo tiempo una de las más fértiles cuestiones desde el punto de vista del uso de Aristóteles de tal desacuerdo para establecer los fundamentos de su física."

13. Bossi, Beatriz. 2010. "Parménides, DK 58 B 16: ¿ el eslabón perdido ? ." In *Il quinto secolo: studi di filosofia antica in onore di Livio Rossetti*, edited by Giombini, Stefania and Marcacci, Flavia, 45-61. Passignano sul Trasimeno: Aguaplano editore.
14. Bredlow, Luis Andrés. 2000. *El Poema de Parménides: un ensayo de interpretación.*

Tesis doctoral, Universitat de Barcelona.

Resumo: "La presente tesis realiza un estudio conjunto de los fragmentos de Parménides de Elea y los testimonios acerca de su poema, con especial atención a las cuestiones del sentido de éstin/estin ("es") (cap.1), la ordenación de las señales de la vía de la Verdad (B8, 1-49) (cap.2), las teorías físicas de Parménides y las "creencias de los mortales" (cap. 3), la cosmología (cap. 4), la teoría de la conciencia (cap. 5) y el significado de los elementos "Luz" y "Noche" (cap. 6). Se ofrecen diversas propuestas más o menos novedosas respecto al establecimiento del texto, aspectos gramaticales y de traducción, ordenación de los fragmentos e interpretación de las enseñanzas de Parménides. El estudio concluye con dos apéndices sobre el proemio (B1) y los personajes divinos que aparecen en los fragmentos."

15. ——. 2010. "Cosmología, cosmogonía y teogonía en el poema de Parménides." *Emerita* no. 78:275-297.

Resumen: "El propósito de este artículo es ofrecer una nueva reconstrucción del sistema del mundo físico de Parménides, distinguiendo debidamente los momentos cosmológicos,

cosmogónicos y teogónicos de la teoría, cuya confusión ha sido fuente principal de malentendidos en las interpretaciones anteriores.

En particular, el sistema de coronas o anillos de B 12 y A 37 no representa el orden actual del universo, sino la estructura general de la materia, así como el estado inicial de la cosmogonía (sección 1), según puede inferirse también de la lectura de los fragmentos por Simplicio (sección 2). Esa distinción permitirá una reconstrucción tentativa de la cosmogonía (sección 3) y la cosmología de Parménides, cuyo rasgo más llamativo es la ubicación de las estrellas fijas por debajo del Sol y de la Luna, sostenida asimismo por Anaximandro y

—como trataré de mostrar— en la cosmología del papiro órfico de Derveni (sección 4)."

16. ——. 2011. "Verdad, creencia y convención en el poema de Parménides." *Ontology Studies* no. 11:263-279.

Resumen: "Esta intervención trata de resumir las líneas generales de una nueva interpretación del conjunto de los fragmentos de Parménides, tomando pie de la relación entre forma poética y razonamiento lógico (I). Se sostiene, en particular, que el 'ES' de la diosa ha de entenderse en el sentido de una predicación de verdad necesaria, cuya negación ('NO ES') resulta contradictoria consigo misma (II), por lo cual 'lo-que-ES' ha de ser lo que es de modo eterno, perfecto e inmutable, mientras que las cosas de la realidad ordinaria no pueden ser lo que se supone que son más que "de nombre" (III); que el problema de la mal llamada dóxa sólo se resuelve con tal de distinguir la teoría física del poema – cuyo principio es la mezcla y unidad de los opuestos– de las engañosas creencias de los mortales en la rígida separación (lógica y física) de los términos opuestos (IV), empezando por la oposición raigal 'luz/noche', esto es, 'vida/muerte' o, para la visión cosmológica y religiosa, los dominios de Zeus y de Hades (V), si bien la teoría física misma debe partir dialécticamente de los mismos supuestos (la oposición y discontinuidad de los entes) cuya condición !ctica está denunciando (VI); lo cual, en !n,

arroja alguna nueva luz también sobre el proemio como parodia irreverente de la Tartaroscopia hesiódica y sobre la unidad de razón poética y lógica en el poema (VII).

17. ———. 2011. "Platon y la invencion de la Escuela de Elea (*Sof.* 242d)." *Convivium* no. 24:25-42.

Resumen: "Los estudiosos suelen concordar actualmente en que la "escuela eleática", tal como se nos presenta por primera vez en los diálogos de Platón, tiene más de ficción que de realidad histórica. En este artículo trato de dilucidar el origen de esa ficción, empezando por examinar las hipótesis de que el comentario de Platón acerca de la "tribu eleática" iniciada por Jenófanes es una broma o bien refleja una interpretación previa debida a Hippias o a Antístenes. Argüiré que la "eleatización" de Jenófanes fue introducida –junto a la lectura

de Parménides y Zenón como filósofos monistas, a la manera de Meliso– por la escuela megárica de Euclides (lo cual me obliga a defender, contra Von Fritz y Döring, el carácter neo-eleático de la filosofía megárica), y sugeriré que una huella precisa de tal interpretación

megárica puede encontrarse en la sección dedicada a Jenófanes del tratado pseudo-aristotélico *De Melisso Xenophane Gorgia*."

18. ———. 2013. "Parménides científico y las opiniones de los mortales (apuntes para una nueva interpretación)." *Méthexis. International Journal for Ancient Philosophy* no. 26:5-22.

Abstract: "The aim of this paper is to suggest a possible way of understanding Parmenides' so-called doxa, starting from the clear and lucid formulation of the problem which is offered to us in some recent writings of N.-L. Cordero. We agree with Cordero (and some others) on the need to distinguish between the "opinions of mortals" and Parmenides' own physical theories, usually confused under the label of the doxa or "way of opinion" (I-II); not so with his proposal to insert the 'scientific' fragments into the discourse on Truth, which seems rather incompatible with the sources (III) and ultimately grounded on the confusion –shared by most interpreters– of the ordering of

the parts of the Poem, enounced at the end of fr. 1 (IV), with the "ways of inquiry" of frs. 2 and 6-7 (V). This is followed by an outline of a tentative reconstruction of Parmenides' polemics against the beliefs of mortals (VI-VIII). The guiding principle of Parmenides' physics is the mixture and interpenetration of the apparent opposites separated by mortals (VI), beginning with the antithesis 'light' / 'darkness', i. e. 'life' / 'death', the dominions of Zeus and of Hades in the traditional world vision which is refuted by the new cosmology of Parmenides (VII). But even so, the new cosmos is in its own way a "deceptive order" as well: since what-is is continuous and homogeneous, the entities postulated by the physical theory have to be necessarily fictitious or conventional; only the explicit acknowledgement of this status prevents the theory from the error of mortals, which consists in taking linguistic convention for the true being of things (VIII)."

19. ——. 2019. "Espacio iniciático o espacio cosmológico? Una nota sobre el proemio de Parménides." In *Eleatica Vol. 7: Parmenide: tra linguistica, letteratura e filosofia = Parménides: entre lingüística, literatura y filosofía*, edited by Berruecos Frank, Bernardo and Giombini, Stefania, 146-152. Baden-Baden: Academia Verlag.

"Si alguna dificultad ofrece la magnífica exposición de Alberto Bemabé al comentario crítico, es la de ballar algún punto en que se pueda no estar de acuerdo, fuera de algunas minucias textuales, siempre discutibles, en las que no vale la pena insistir aquí. Su esmerado y erudito estudio de los fragmentos, reacio a toda especulación, concienzudamente cenido a los datos que el texto mismo nos ofrece, su copiosa aportación de paralelos literarios, merecen nuestra gratitud y no brindan apenas resquicio al disentimiento.

Entre los contados puntos que no me dejan muy convencido, es acaso el de mayor interés la interpretación del proemio, de la ruta del viaje que se describe y del escenario en que se desarrolla. Una larga controversia ha venido enfrentando a los partidarios de un viaje a los cielos o, por el contrario, al inframundo; Bemabé juzga, con bastante razón, estéril este debate (pp. 70 ss.), ya que el texto del poema combina, sin duda

deliberadamente, variados elementos de lo uno y de lo otro, de un modo por lo demás difícil o imposible de conciliar con el cuadro de la cosmología tradicional. Ahora bien, de ahí concluye Bemabé que las características que definen la ruta del viaje no son coherentes entre sí; que Parménides desea «crear un espacio iniciático fuera de este mundo [...] pero tampoco quiere identificarlo ni con el cielo ni con el mundo subterráneo» (p. 70)." (p. 146)

20. Calvo, Martínez Tomás. 2000. "El lenguaje de la ontología: de Parménides a Meliso." *Convivium* no. 13:1-12.

Resumen: "En este trabajo se pretende analizar la relación existente entre Parménides y Meliso desde la perspectiva del lenguaje utilizado por ambos. En la primera parte el autor analiza las principales oposiciones léxicas mediante las cuales suele articularse la filosofía de Parménides: Verdad-Opinión, Ser-No ser, Verdadero-Falso, Razón-Sentidos, Discurso Racional-Discurso narrativo. El autor descarta la pertinencia de las oposiciones Razón-Sentidos y Verdadero-Falso, insistiendo en la relevancia de la oposición entre dos formas de discurso, el racional argumentativo (propio de la Verdad) y el narrativo (característico de las opiniones relativas a la cosmogénesis). En la segunda parte del artículo el autor se vuelve a Meliso mostrando el empobrecimiento y simplificación que se produce en éste, tanto desde el punto de vista del léxico como desde el punto de vista de la doctrina, en comparación con la compleja estructura de la filosofía de Parménides."

21. Candel, Miguel. 2016. "Ser, verdad y misterio: El poema de Parménides." *Disputatio. Philosophical Research Bulletin* no. 5:93-121.

"Sea como fuere, lo cierto es que tanto quienes privilegian la «luz» racional como quienes reivindican la mirada místico-esotérica para interpretar el poema de Parménides esgrimen buenos argumentos en apoyo de sus tesis. Lo razonable, pues (y, en consecuencia, nada esotérico), es suponer que en el poema de Parménides se entrecruzan en mayor o menor proporción ambas perspectivas.

En cualquier caso, me ocuparé aquí fundamentalmente de los elementos lógico–racionales del poema, aunque trate de hacer ver cómo éstos, que constituyen la obra estructural, los pilares o paredes maestras de todo el edificio, le permiten a éste alojar una vasta (aunque, lamentablemente, fragmentaria) concepción de la naturaleza en la que no faltan los elementos esotéricos, vinculados acaso a algún ritual místico comparable a los misterios eleusinos.(10)" (p. 95)

(10) De ser cierta la hipótesis de Kingsley de que la diosa que guía al poeta–filósofo (o, según Kingsley, *iatromante* o *chamán*) de Elea sea Perséfone, la hija de Deméter raptada por Hades para convertirla en reina del Averno, la conexión del poema con rituales como los de Eleusis (articulados en torno al culto a Deméter, diosa del ciclo vida–muerte–resurrección) resultaría harto verosímil.

24. Casanova, Carlos. 2002. "La vía de la verdad en El *Poema* de Parménides." *Revista Venezolana de Filosofía* no. 43-44:125-129.

Resumen: "El artículo es una lectio de la vía de la verdad en el *Poema* de Parménides. Expone su contenido intentando evitar anacronismos, frecuentes en los comentadores modernos. Muestra, además, las hazañas metafísicas de valor perenne que se encierran en esta obra clásica, tales como la determinación del ente como objeto de la primera captación intelectual, la primitiva formulación del principio de no contradicción, la identidad del cognoscente y lo conocido, la oposición entre lo simple y lo compuesto, el vínculo entre el tiempo y el movimiento y entre éste y la pluralidad, y las consecuencias que se pueden extraer de lo que "ente" significa. En esta tarea dilucida el problema del sujeto de "ies!" y usa como

herramienta el señalar la recepción de muchas de las intuiciones parmenídeas en la obra de Aristóteles."

Reimpreso en N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate i i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 234-242.

Abstract: "Parmenide's philosophy is the presentation of a general notion expressed by the verb "to be" at the present tense: third singular person: "is" (*estin*). The absence of a grammatical subject denotes and reenforces the general meaning of the notion, because_ "everything" is.

Parmenides' Poem is an analysis of the fact of being: it is always present, homogeneous, and its *absence* (that is, its refusal) is impossible to conceive, because whenever we think and speak, we think or say "some-thing". "No-thing" is not. Some years later, Melissus of Samos, concerned, as all Ionian philosophers, by concrete realities (placed in time and in space), applied Parmenides' theory to reality. Thus, Parmenides' "is" become the "Eleatic One", criticized by Plato in the *Sophist*. The condemnation of the father (Parmenides) because of a fault of the son (Melissus) is a genuine philosophical tragedy."

27. ———. 2002. "Acerca de la inexistencia de una tercera vía de investigación en Parménides." *Argos* no. 26:19-39.

Reimpreso en N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate i i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 154-170.

"Volvamos al núcleo del pretendido tercer camino. El mismo mezclaría ser y no ser al decir que hay no ser y que el ser no es. ¿Para qué hipostasiar un tercer camino si, como vimos, el segundo camino dice exactamente lo mismo? Entramos así al centro del problema. Quienes afirman que hay un tercer camino

de investigación en Parménides creen que el segundo camino es "el camino del no ser". Si así fuera, ¿qué sostiene este camino? Que hay no-ser, o que el ser no es. *En ambos casos se supone que hay ser*, o sea, el contenido del primer camino, ya sea porque se otorga la calidad de "ser" al no-ser (y para afirmar que el no-ser, es, hay que poseer la noción de "ser"), ya sea porque del "ser" se dice que no es. El ser está abusivamente presente y no podría ser de otra manera, ya que el ser es una evidencia primaria, necesaria y absoluta, al menos, para Parménides.

La pretendida fórmula del "tercer camino" no es otra que la del segundo.

Quienes la encuentran en el fr. 6, a partir del verso 4, no tienen en cuenta que, en el conjunto que va de 6, 4 a 7, 5, Parménides presenta el segundo camino en función de sus eventuales "usuarios". No es la diosa quien lo formula; sino los "mortales que nada saben", por quienes "el ser y el no-ser son considerados (*nenómistai*, de "nómos", "costumbre") como lo mismo y no lo mismo" (fr. 6, 8-9). Parménides subraya el carácter "habitual" de esta opinión humana que se apoya sobre un "intelecto errante" (*plaktòs nóos*, 6, 6). Es la "costumbre inveterada" (*éthos polupeiron*, 7, 3) la que conduce a los hombres a "fabricar" (*pláttontai*, 6,5) un método que mezcla ser y no-ser y, por consiguiente, a afirmar que estos son idénticos y diferentes a la vez. La expresión que encontramos en 6, 8-9 significa simplemente que los mortales atribuyen el ser al no-ser y el no-ser al ser. Dicho de otro modo: ellos confunden (mezclan, combinan) lo que está siendo y lo que no es." (p. 24)

28. ———. 2005. *Siendo, se es. La tesis de Parménides*. Buenos Aires: Ciudad Biblio.

"Toda nueva interpretación de la filosofía de Parménides, o toda crítica de interpretaciones anteriores, debe apoyarse sobre un texto que se acerque lo más posible al original perdido. La titánica tarea llevada a cabo durante siglos por filólogos y codicólogos nos ofrecía un

punto de partida firme, pero mucho quedaba aún por hacer. Pasajes del Poema permanecían inexplicablemente oscuros

(por ejemplo, ¿por qué la diosa ordena apartarse de un camino verdadero en el v. 6.3? ¿Cómo puede afirmarse que el pensamiento está expresado en el ser, como parece decir el v. 8.35?). Por esta razón, desde que nuestra presencia en Europa lo hizo posible, decidimos efectuar una revisión de la tradición manuscrita de las citas (mal llamadas "fragmentos") del Poema de Parménides con el objeto de proponer una nueva versión, purificada de ciertos errores que se habían acumulado a lo largo de los siglos. Un primer resultado de nuestra búsqueda fue presentado en 1971 como tesis de doctorado, (4) y varios años después nuestro libro *Les deux chemins de Parménide* (1997) (5) completó nuestro trabajo. Nuevas investigaciones acerca de las fuentes manuscritas de las primeras ediciones del Poema, así como un cambio de perspectiva en nuestra valoración de "los dos caminos", nos permiten presentar hoy esta nueva versión de "la tesis" de Parménides. En este trabajo, además, tenemos en cuenta comentarios y críticas suscitados por nuestros estudios sobre Parménides y, cuando ello es posible, nos defendemos o hacemos, resignados, ciertas rectificaciones.

Es imposible adentrarse en la filosofía de Parménides sin contagiarse.

Esperamos que el eventual lector de este libro comparta esta idea." (p. 15)

29. ———. 2007. "En Parménides, 'tertium non datur'." *Anais de Filosofia Clássica* no. 1:1-13.

Reimpreso en Fernando Santoro, Henrique Cairus e Tatiana Ribeiro (eds.), *Acerca do Poema de Parmênides*, Rio de Janeiro: Azogue 2009, pp. 11-21 y en N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 142-153.

"El título de nuestra conferencia hace alusión a un principio que pertenece al ámbito de la lógica, el principio del "tercero excluido". Esta referencia a la lógica sugiere que nuestra

exposición se ocupará fundamentalmente de una cuestión que hoy podríamos llamar "metodológica". Pero para ubicar este punto en su contexto, me permitiré exponer en muy pocas palabras, apenas unos minutos, el punto central de mi interpretación de Parménides.

La filosofía nació como un intento de explicación total de la realidad. Para referirse a ese "objeto" de estudio, quizá los primeros filósofos utilizaron el término *physis*. No nos consta, al menos hasta Heráclito. El texto más antiguo que poseemos, esas inagotables tres líneas de Anaximandro, hablan de *ta onta*, en plural (en el fragmento, en dativo), o sea, directamente, las cosas, y, literalmente, "los entes". Nada sabemos de los otros filósofos de Mileto. Podemos suponer que Heráclito también habla de "las cosas" cuando dice que él explica "*hekaston*", cada cosa, según la *physis*, y en otro texto (fr. 123) independiza la *physis*, entendida sin duda como la constitución última del conjunto de todas las cosas, *ta onta*.

Parménides, en cambio, es el primer filósofo que, para referirse a "los entes", utiliza el singular, pero ello no significa que va a ocuparse de una sola cosa. Su singular es genérico, porque se refiere a aquello que tienen en común todas las "cosas", los entes, *ta onta*. Así como el biólogo estudia *to zoon*, lo viviente, o sea, eso que caracteriza a todos los seres vivos, panta *ta zoa*, el filósofo debe ocuparse de "*to eon*", lo que es, que está presente en todas las cosas que son, que existen, en *panta ta onta*. Ya las ciencias se ocuparán de estudiar en particular lo que corresponde a cada grupo de cosas, pero esto es posterior, ya que las cosas no existirían, si no se diese el hecho de ser. Parménides se limita a este "objeto", el hecho de ser, y su Poema es una analítica de cuanto puede decirse sobre el mismo. En resumen, la unidad parmenídea es la unidad del singular, y esto es lo que dice Platón en el *Sofista*, si se traduce bien el texto, cuando afirma que, para lo que él llama "la raza eleática", "todas las cosas (*ta panta*) son llamadas, nombradas (*kalouménon*) un ser único (*hen on*)" (242d). Platón no dice que para ellos "todo es uno" (frase, por lo demás, escrita por Heráclito). Dentro de esta problemática, me propongo hoy ocuparme del método puesto en práctica por Parménides para

llegar a "demostrar", a su manera, las verdades que él creyó alcanzar a propósito de "to eon". (pp. 142-143)

30. ———. 2013. "El Extranjero de Elea, "compañero" de los parmenídeos... desde 1561." *Méthexis. International Journal for Ancient Philosophy* no. 26:51-58.

Abstract: "In 1561 J. Comarius proposed his own version of some passages of Plato's *Sophist*. In this version Theodorus presents the Eleatic Stranger as "a companion (*hetairas*) of Parmenideans and Zenonians" (216a). Since then, this cliché is accepted by all translations. However, when the possibility of justifying the existence of images and appearances is considered, the Stranger himself proposes 'testing' Parmenides' thesis.

His remarks are rather those of an adversary than of a friend or companion of Parmenides. In fact, in spite of Theodorus' presentation, the Stranger, albeit citizen of Elea, does not seem to share the theses of the 'Eleatics'. These anomalies invited us to question the character of 'companion' of the 'Parmenideans' credited to the Stranger. The questioning is possible if we exploit some valuable greek manuscripts of Plato's *Sophist*, neglected by J. Bumet, like *Vindobonensis* 21 (Y). This manuscript, among others, has the lecture *heteras*, 'different', instead of *hetairon*, 'companion'. This manuscript permits to maintain the formula *tón hetairón*, transmitted by all the manuscripts after the first *hetairon*, and removed in modern editions. The translation we propose is: the Eleatic Stranger is "different (*heteras*) of the companions (*tón hetairón*) of Parmenides and Zenon".

31. ———. 2013. "Las "partes" del Poema de Parménides: un prejuicio interpretativo trágico." In *Μαθήματα. Ecos de Filosofía Antigua*, edited by Gutiérrez, Raúl, 15-26. Lima: Fondo Editorial Pontificia Universidad Católica del Perú.

Reimpreso en N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate e i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 171-180.

English translation available on Academia.edu: *The "parts" of Parmenides' Poem: a tragic interpretative prejudice.*

Resumen: "Los textos conservados de los Presocráticos son reconstrucciones y en ningún caso se pretendió restaurar el texto en su orden originario. No obstante, desde hace más de dos siglos, se estudia el Poema de Parménides como si el filósofo lo hubiese escrito tal como lo leemos: con una Introducción, una Primera Parte (Alétheia) y una Segunda Parte (Doxa). Esta estructura es peligrosa en lo que concierne la "Segunda Parte", la "Doxa". Sólo los últimos nueve versos del fragmento 8 corresponden, según la Diosa, a las "opiniones de los mortales". No obstante, desde que el Poema tiene la forma actual, once citas textuales (=fragmentos) se agregaron a continuación, con lo cual se constituyó un dossier conocido como "la Doxa de Parménides".

La ubicación errónea de esos textos en la llamada "Doxa" obedece al prejuicio platonizante que consiste en atribuir a la noción de Doxa el valor anacrónico en tiempos de Parménides de "apariencia". Parménides pretende explicar LA realidad, y para ello expone dos métodos" posibles: uno persuasivo y verdadero (la Vía de la Verdad) y otro engañoso y no convincente: las opiniones de los mortales. La dicotomía ser-aparecer es platónica, no parmenídea."

32. ——. 2014. "Jenófanes invitado a Elea... por H. Diels (Diógenes Laercio 9.18)." In *Dos Homens e suas Ideias Estudos sobre as Vidas de Diógenes Laércio*, edited by Leão, Delfim, Cornelli, Gabriele and Peixoto, Miriam C., 101-107. Coimbra: Imprensa da Universidade de Coimbra.

Reimpreso en N.-L. Cordero, *Parmenidea. Venti scritti sull'Eleate i i suoi "eredi"*, Baden-Baden; Academia Verlag 2019, pp. 228-233.

Resumen: "En un pasaje del *Sofista* en el cual Platón se ocupa de algunas escuelas filosóficas anteriores (242c), se dice que Jenófanes fue el iniciador del grupo eleático.

Parménides no es mencionado, pero como se sabe que era originario de Elea, se impuso desde entonces la fórmula

“Parménides, discípulo de Jenófanes”. No obstante, ninguna fuente antigua atestigua la presencia en Elea de Jenófanes. Pero cuando H. Diels narra la vida de este filósofo en *Die Fragmente der Vorsokratiker* tal como la presenta Diógenes Laercio, se apoya en un manuscrito de este autor en el cual podría haber una laguna y, en el lugar de la posible laguna, agregó esta conjetura: “<y [Jenófanes] también se relacionó con la colonia de Elea, donde enseñó>”. Nada justifica esta conjetura (ningún editor del texto de Diógenes Laercio la adoptó), pero en transcripciones sucesivas del texto de Diels, y especialmente en traducciones, suelen omitirse los corchetes angulares, con lo cual se consagra la presencia de Jenófanes en Elea... gracias a Diels.”

33. ———. 2015. "La aristotelización y platonización de Parménides por Simplicio." *Argos* no. 38:32-51.

Resumen: "La dificultad de captar el pensamiento de Parménides llevó a los intérpretes ya en la Antigüedad a encarar su filosofía según esquemas de pensamiento posteriores. Fue el caso de Aristóteles, cuya interpretación fue heredada por su discípulo Teofrasto y por sus comentadores, especialmente Simplicio. Simplicio, neoplatónico y aristotélico a la vez, propuso una interpretación, fuertemente dualista (dominada por la dicotomía sensible/inteligible), que no se encuentra en las citas recuperadas. En 1789 G. G. Fülleborn, inspirándose en Simplicio, propuso una división del Poema en dos "partes", aceptada hoy en forma unánime, y que debe ser revisada y rechazada con urgencia."

34. ———. 2019. "El insoportable peso de la negación. A propósito de la tercera Lección de A. Bemabé." In *Eleatica Vol. 7: Parmenide: tra linguistica, letteratura e filosofia = Parménides: entre lingüística, literatura y filosofía*, edited by Berruecos Frank, Bernardo and Giombini, Stefania, 157-160. Baden-Baden: Academia Verlag.

"Como dijimos al comienzo, las Lecciones de AB [Alberto Bernabé] son una invitación a la investigación y a seguir el camino trazado por él. En nuestro caso personal, siempre hemos privilegiado en nuestros trabajos el rol preponderante

de la negación en Parménides, pero por razones diferentes de las expuestas por AB. No obstante como sus lecciones son una ocasión ideal para el diálogo, nos permitimos exponer muy someramente nuestro punto de vista que seguramente puede tomarse como complementario del de AB. Eventualmente, él lo dirá.

La eficacia argumentativa de la negación consiste en lo siguiente: quien niega, debe conocer lo que niega. Toda negación es puntual. Y cuando se niega la negación, se confirma aquello que se conoce, porque se lo ha puesto a prueba, y se lo ha reforzado. Los ejemplos de compuestos negativos propuestos por AB confieren carácter de necesidad y de obligatoriedad a lo contrario de lo que se niega. Basten dos ejemplos: anóetos, cuya significación es “no imaginado”, pero que deviene en la argumentación “inconcebible”; anónimos, “que no tienen nombre”, deviene “innombrable”. (p. 158)

35. Cordero, Nestor-Luis. 2020. "Parménides y la concepción ante-predicativa de la verdad." *Archai. As origens do pensamento ocidental* no. 30:1-21.

Resumen: "Platón sostiene que, para confirmar que el sofista es un fabricante de ilusiones (Sph.262d8), hay que refutar la tesis de Parménides que afirma que sólo existe – según Platón lo interpreta – el ser absoluto. Muy probablemente un eco de esta tesis se encuentre en Antístenes, a quien Platón parece aludir en el Sofista, para quien “lo que es, es verdadero”. Esta concepción de la verdad se conoce como “ante-predicativa” u ontológica, y, según Heidegger, sería originaria. No es así. Desde Homero y hasta Parménides, la verdad (o falsedad) fue siempre atribuida a un discurso o a un pensamiento, jamás a un ente. La concepción “ante-predicativa” de la verdad fue una creación de la filosofía, que probablemente comenzó con Parménides y continuó con Antístenes. Cuando Platón la refuta, en la segunda parte del Sofista, no hace sino regresar al pasado, pues hace del discurso el “lugar” de la verdad."

36. Cordero, Néstor-Luis. 2020. "Gianfrancesco d'Asola, el “creador” de la tercera vía parmenídea." *Hypnos* no. 45:185-195.

English translation available on Academia.edu: *Gianfrancesco d'Asola, the creator of the third way of Parmenides*.

Resumen: "Identificamos, na edição renascentista do Comentário de Simplicio à Física de Aristóteles, a invenção de uma conjectura que determinaria os rumos da interpretação do Poema de Parmênides desde o século XIX. Com a escolha de preencher a lacuna do verso B6,3 com um verbo que exprime a ideia de recusa ou afastamento, o editor Gianfrancesco d'Asola está efetivamente na origem da interpretação que supõe a existência de três caminhos de investigação no Poema. Ora, como vai se argumentar, todos os indícios textuais, bem como as notícias transmitidas desde a Antiguidade, apontam para um dualismo entre Alêtheia e Doxa, de maneira que qualquer esquema tricotômico depende forçosamente de uma criação datada do século XVI."

37. ———. 2021-2022. "El extraño criterio utilizado para crear "la Doxa" de Parménides." *Diánoia* no. 66:141-151.

Resumen: "En 1795, un filólogo de origen kantiano, G.G. Fülleborn, agrupó en dos "partes" los fragmentos recuperados del Poema de Parménides: "la Verdad" (frgs. 1–8.50) y "la Doxa" (frgs. 8.51–18; el frg. 19 fue descubierto después). Con pequeñas modificaciones, esta estructura se convirtió en clásica y se acepta hoy en forma unánime. Sin embargo, una lectura de cada fragmento en forma aislada no justifica dicha división, la cual se basa en una interpretación de Simplicio influida por Aristóteles, quien encuentra ya en Parménides un esbozo del dualismo platónico entre lo "sensible" y lo "inteligible", inexistente en éste. Análisis aquí en forma crítica el criterio que emplea Fülleborn, anacrónico para el caso de un pensador preplatónico."

38. ———. 2022. "Las "opiniones" en Parménides y su desconocimiento del insoportable peso del ser." *Hypnos* no. 48:1-22.

Resumen: "La lengua griega para referirse a las cosas utiliza la expresión τα ὄντα, "las cosas que son". Ya la lengua cotidiana establece una relación entre "algo que es" y el hecho de ser. La filosofía de Parménides puede explicarse como una reflexión

filosófica sobre este hecho lingüístico. Una perspectiva no filosófica desconoce este hecho, y explica la realidad en función de las cosas que “parecen ser”, las “opiniones”. Parménides demuestra en su Poema, sólo una relativización del hecho de ser puede justificar la una explicación de la realidad basada en opiniones."

English translation available on Academia.edu: "*The "opinions" in Parmenides and his ignorance of the unbearable weight of being*".

40. Fernandez Moujan, Raimundo. 2019. "Parménides como precursor de la dialéctica platónica." *Archai. As origens do pensamento ocidental* no. 26:1-26.

Resumen: "Partiendo de una interpretación de la dialéctica platónica y de la lectura del artículo de Monique Dixsaut "Platon et le lógos de Parménide"[^o], investigamos en este trabajo si acaso no podemos encontrar en el Poema de Parménides algunos elementos que luego resultarán fundamentales en la constitución de la dialéctica en los diálogos de Platón. El rechazo del nombre como medio y depositario del conocimiento, la necesidad de la mediación del lógos y la insistencia en lo importante que resulta conocer también la naturaleza del engaño, son algunos de esos elementos que ya encontramos expuestos en Parménides y que resultarán fundamentales para el paulatino desarrollo del método propuesto por Platón."

41. Fernández Mouján, Raimundo. 2020. "No existe la separación: algunas continuidades entre el Poema de Parménide y el *Sofista* de Platón." *Signos Filosóficos* no. 22:8-33.

Resumen: "En varios pasajes de su poema, Parménides identifica al no ser con la separación: "No podrás obligar a lo

que es a separarse de lo que es". *No es posible no ser* significa así que no existe corte o franja al interior de lo que es por la que pase el no ser. No existe separación ontológica. Platón apoya esta idea: en el *Sofista* dice que la separación es *a-filosófica*, y consecuentemente define al ser como *capacidad de relación*. ¿No hay acaso una suerte de "deducción" a seguir, una que va del *es* parmenídeo a la *dúnamis koinonías* platónica, pasando justamente por la imposibilidad de la separación ontológica como dato central? ¿Y no podemos identificar gracias a esta continuidad una prevención fundamental contra todo sustancialismo, contra toda concepción según la cual el mundo estaría hecho de sustancias separadas entre sí? Me propongo pensar esa continuidad para analizar cómo la lectura conjunta del poema de Parménides y el *Sofista* de Platón permite hablar de un rechazo fundamental de toda filosofía sustancialista."

42. Gallego Franco, Santiago. 2006. "Los caminos de (y hacia) Parménides." *Revista de Filosofía* no. 24:27-36.

Resumen: "El poema de Parménides a la *physis* ha invitado a muchas polémicas desde la Antigüedad. Desde las paradojas de Zenón hasta los trabajos de Heidegger y Jaeger, el poema ha sido objeto de interpretaciones que han ubicado al filósofo de Elea unas veces entre los negadores de las apariencias y otras entre quienes sólo conciben al ser en relación con ellas. En el artículo se recorren los caminos expuestos por el poema, los cuales ayudarán a comprender al mismo Parménides, intentando redimir el camino olvidado de las opiniones al que tantos hexámetros le dedicó el filósofo."

43. Gálvez Garduni, Rafael. 2008. "La poesía de Parménides: el arte del estilo ambiguo y desafiante, insinuador y sutil." *Nova Tellus* no. 26:55-90.

Resumen: "En este trabajo se realiza un análisis del proemio del poema de Parménides con la intención de mostrar cómo su construcción está sabiamente acabada tanto en el plano literario de la factura artística, como en el del proyecto comunicativo, que plantea un reto a la inteligencia del auditorio. Éste, en efecto, se ve sometido a un haz de estímulos a menudo contradictorios, que van de la ambigüedad expresiva

a la insinuación sutil, cuyos efectos están destinados por cierto a tocar cuerdas muy sensibles en el receptor. Sentadas estas premisas, se sugiere que el contraste entre el fascinante relato alegórico del proemio y la parte propiamente filosófica del poema de Parménides puede depender de su gestación en dos diferentes etapas de la vida del filósofo, en la primera de las cuales la influencia de la epopeya homérica resulta insoslayable."

44. ——. 2011. "“Y una diosa me recibió” al volver en mi camino por el relato de Parménides." *Nova Tellus* no. 29:19-46.

Resumen: "Con base en algunos pasajes de Platón, se plantea la hipótesis de que los escritos de la mayoría de los filósofos presocráticos contienen un discurso insinuante e indirecto, derivado de otro fundamental y privado que contendría explícitamente su doctrina íntima. El reto que de esto resulta para el estudioso es realizar un análisis objetivo y penetrante, exento de todo prejuicio desorientador, del modo de expresión presocrático que le permita dar el “salto” del discurso público al privado e íntimo. El caso de Parménides se presenta como especialmente ejemplar, pues muestra cómo su Musa ofrece ciertas pistas e insinuaciones que, si son captadas por un lector muy atento y reflexivo, le posibilitarán acceder con claridad a ciertas intimidades del pensar parmenídeo."

46. Gigon, Olof. 1985. *Los orígenes de la filosofía griega. De Hesíodo a Parménides*. Madrid: Editorial Gredos.
- Parménides*, pp. 274-324.

"Resulta seductor y peligroso ver —como ha hecho Platón en Parménides de Elea la pura oposición de Heráclito. Hay sin duda una oposición tanto en el estilo de su obra como en los propósitos de su tarea filosófica. La obra de Heraclito, por su forma, va íntimamente ligada a los arcaicos libros-ὀρθήκαι, compilaciones de trabazón poco rigurosa de dichos conceptuosos e independientes en sí mismos. Parménides

vuelve a la forma más antigua de la literatura griega, el gran poema épico como era, por ejemplo, la *Teogonia* de Hesíodo. La filosofía de Heráclito está determinada por el propósito de iluminar al hombre el sentido de su obrar. La filosofía de Parménides es al menos en cierto sentido— la más pura expresión de cuanto había sido el ideal de la filosofía jonia del cosmos objetivo. Su pensamiento tiene tal monumentalidad y tal voluntad de transparencia perfecta que se convierte por ellas en un punto central de la filosofía griega. Es el primer filósofo que ha quedado como valedero y clásico. El problema del ser, que hemos visto en Hesíodo perfilándose en el horizonte, se hace en él perfectamente visible. Es quien ha dado al lenguaje filosófico el concepto y la palabra de ser." (p. 274)

47. Gómez, Luis F. 2019. "El Enigma de Parménides: Un enfoque ecofeminista." *Gestión y Ambiente* no. 22:267-276.

Resumen: "La obra de Augusto Ángel Maya [*] se ha constituido como una de las bases del pensamiento ambiental colombiano. Dentro de esta, la metafísica es una de las causas de la actual crisis ambiental. Por su parte, el ecofeminismo ha postulado que la visión de mundo moderna hegemónica se estructura alrededor de marcos conceptuales, es decir, pares antagónicos y excluyentes, donde uno de sus términos tiene un mayor valor que el otro. La articulación de estas dos propuestas puede ampliar el análisis de las implicaciones de la metafísica en la actual crisis ambiental. El objetivo de la presente investigación fue determinar los marcos conceptuales de la metafísica griega.

Para esto, se analizaron algunos textos de Parménides, Platón y Aristóteles desde la teoría de los marcos conceptuales propuesta por el ecofeminismo anglosajón y se compararon los resultados obtenidos con los de Ángel. Se encontró que las teorías de Parménides, Platón y Aristóteles se organizan alrededor de las categorías verdad/opinión, razón/sensación y alma/cuerpo, respectivamente. Éstos corroboran la conclusión de Ángel que Parménides inaugura el camino de la metafísica como un intento de deshacerse del devenir, introduciendo el concepto de ser, pero muestran que esto condujo a dos principios epistemológicos que han marcado la visión de

mundo occidental: la búsqueda de un conocimiento universal, deslocalizado e incorpóreo y la lógica de la identidad."

48. Gomez-Lobo, Alfonso. 1986. "Parmenides y la Diosa. Breve historia de la interpretación de un texto." *Ideas y Valores* no. 36:49-66.

"Como se recordará. Sexto Empírico nos decía que Parménides iniciaba su poema con los versos que el, Sexto, transcribiría a continuación. Ahora comprendemos por qué. La experiencia de Parménides equivale muy de cerca a la conciencia de Homero de saberse inspirado por una musa y al encantamiento e invocación de las musas todas en Hesíodo. (38) En un sentido más distante y salvadas las diferencias culturales, hay también una equivalencia con la vocación del profeta en Israel. (39)

En cada uno de estos casos no se discierne una anticipación alegórica de lo que el poeta o profeta dirá en cumplimiento de su vocación. Se describe más bien una escena autosuficiente en que se apunta a una fuente superior de sabiduría que garantiza al auditor que lo cantado o narrado efectivamente es lo que pretende ser: una revelación profunda y arcana pero, por sobre todo, verdadera."

(...)

"Si Parménides estaba familiarizado con esas ideas cosmogónicas que la tradición posterior asoció con Orfeo, Museo y Epiménides, figuras cuya cercanía a Parménides hemos hecho notar, entonces es altamente probable que haya que interpretar el viaje de éste como conducente al origen último del cosmos, a la fuente última de todo lo que hay. Que mayor autoridad podría invocarse para la revelación de la admirable y paradójica filosofía de Elea?

Este es, por último el punto al cual nos han encaminado las investigaciones modernas del misterioso proemio de Parménides, éste es el estado actual de nuestro conocimiento histórico en este campo."

(38) *Teog.* 1-115.

(39) *Isaías* 6. 1-12; *Jeremías* 1. 4-19; *Amos* 7. 14-15. El paralelismo entre este último pasaje y la vocación de Hesíodo es analizado por F.M. Cornford, *Principium Sapientiae*, Cambridge, 1952, pp. 99-100.

49. Gonzalez Escudero, Santiago. 1983. "Una precisión sobre el *Es* en Parménides." *El Basilisco* no. 15:62-70.

Resumen: "Entre los muchos problemas que plantea la comprensión del poema de Parménides es sin duda el fundamental poner en claro lo que en el fragmento 2 recogido por Diels (1) se manifiesta como contenido del camino de investigación propuesto por la diosa y que ha dado lugar a las más variadas controversias dado que en él radica lo que podríamos llamar «el discurso del ser en Parménides».

Parece pues procedente tratar de contrastar los estudios realizados desde diferentes ángulos acerca de los sentidos que pudo haber tenido en Parménides este fragmento.

Estudios realizados desde la posibilidad de comprender las palabras de Parménides, de difícil sentido, dentro no sólo de los análisis filológicos más precisos sino desde las perspectivas que nos brinda la ideología conocida como propia de Parménides y su repercusión en la filosofía griega.

Pues indudablemente el problema sobre el ser que desde los versos de este fragmento comienza su andadura en el pensamiento ha constituido y constituye el núcleo del que arrancan o al que conducen todos los sistemas filosóficos, como los de Platón o Aristóteles, por ejemplo.

Las dificultades de comprensión y de traducción de la terminología en que se expresa este núcleo ideológico ha sido magistralmente analizado por García Calvo en *Lecturas Presocráticas* (2), si bien creemos que es preciso ahondar más en el problema para dejar en claro sobre todo las relaciones que se abren con los grandes sistemas filosóficos griegos.

Es P. Aubenque (3) el que indirectamente más ha contribuido a denunciar las consecuencias de las afirmaciones de

Parménides, por cuanto ha sabido ver en Platón y sobre todo en Aristóteles la necesidad de un planteamiento de la base lingüística fundamental en lo que va a ser considerado el problema principal de la Metafísica.

Desde este ángulo vamos a tratar de anaüzar en el fragmento a que nos referimos el sentido y el alcance conceptual de la definición de lo que tradicionalmente se considera el «Ser» en Parménides, sin entrar en una pormenorización exhaustiva de sus manifestaciones lo que nos llevaría a una edición nueva de todo el poema, lo que excede los límites de un artículo."

(1) Hermán Diels-W. Kranz. *Die Fragmente der Vorsokratiker*, 10 ed. Berlín, 1960.

(2) A. García Calvo. *Lecturas Presocráticas*, Lucina, Madrid 1981. En donde, además de una edición crítica del poema junto con una versión rítmica, hay dos estudios acerca de las dificultades de traducción del verbo «éstin» griego, págs. 58 y ss. y Apéndice 225-234.

(3) Fierre Aubenque. *El problema del ser en Aristóteles*, Taurus, Madrid 1981, sobre todo págs. 93-131 y 158-199. Sin embargo no estamos de acuerdo con su teoría de que los eléatas se encierran en una ontología demasiado exigente (pág. 140), ya que así deja de lado los fundamentos de la valoración lingüística de «éstin», si bien estamos de acuerdo en que en los megáricos no aparecerían de la misma manera que en Parménides.

Sumario: Introducción 7; Capítulo 1 El nacimiento de la filosofía 19; Capítulo 2 La cuestión del ser 55; Capítulo 3 La cuestión del saber 87; Capítulo 4 El mensaje de Heráclito y Parménides 117; Glosario 147;

Lecturas recomendadas 151; Índice 153-155.

"Para entender el pensamiento de Heráclito y Parménides habrá que empezar explicando brevemente las peculiares fuentes de información gracias a las cuales se conoce a los presocráticos, porque, a diferencia de lo que ocurre con el resto de autores de la tradición filosófica, de ninguno de ellos se conserva ni una sola obra completa. De todos ellos se dispone solamente de un puñado de breves fragmentos, conservados gracias a las citas de autores posteriores, y también, como fuente complementaria, de los llamados testimonios, que son noticias indirectas de muy variable valor. No hay nada más. Así que, del mismo modo en que un historiador de la arquitectura arcaica, a partir de cuatro pedazos de columnas, estatuas y capiteles, debe hacerse una idea del aspecto que el templo tenía cuando estaba entero, leer a Heráclito y Parménides requiere hacerse una idea de cómo era su obra antes de que el azar la hiciera trizas." (p. 8)

51. Grammatico, Giuseppina. 2000. "Cuando el hacer se condensa en el ser." *Kléos: Revista de Filosofía Antiga* no. 4:57-70.

Resumen: "La imagen del filósofo en Grecia es relativamente reciente. Preceden a éste en el tiempo otras figuras de depositarios de la actividad cogitativa y del saber en los que, aunque no está presente la filosofía como hoy la entendemos, se pueden entrever algunos rasgos de la misma en su modo de ser y de hacer. Se dibujan estas diversas imágenes : la del adivino-profeta, a través del análisis de la figura de Tiresias en las « Bacantes » de Eurípides ; la del poeta-músico, a través de Hesíodo en su encuentro con las Musas en la « Teogonía » ; y la del sabio propiamente tal, científico, legislador y político, a través en particular del testimonio de Anaximandro y de la reflexión de Parménides sobre el ser."

52. Guerrero-Troncoso, Hernán. 2019. "Identidad o confluencia. Apuntes para una interpretación de la relación entre pensar y ser en Parménides." *Byzantion nea Hellàs* no. 38:105-127.

Resumen: "Este artículo analiza en clave histórico-especulativa la relación entre ser y pensar en Parménides, a partir de lo que se ha llamado el "segundo inicio" de la metafísica. Dicha propuesta sostiene que ésta habría dejado de ser una ciencia del

ser supremo para ocuparse del primer objeto del intelecto. A partir de estas posibilidades de la metafísica, se exponen dos interpretaciones de aquella relación, una que afirma la identidad entre ser y pensar y otra que sostiene su confluencia.

Esta última posición sería más afín a una metafísica del primer objeto del intelecto y permitiría, a su vez, plantear una comprensión del ser más amplia que la de una metafísica del ser supremo."

53. Guiu, Ignacio. 2007. "La lectura de Parménides en la *Física* de Aristóteles." *Ágora. Papeles de Filosofía* no. 26:27-53.

Resumen: "La intención de este artículo es esclarecer la crítica aristotélica a quien pasa por ser el padre de la metafísica. Toda la crítica de Aristóteles a Parménides en la *Física* se centra en la afirmación "todo es uno". Aunque enfrentarse a la tesis central del monismo no sea encarar directamente el argumento parmenídeo que afecta a la realidad del cambio, sin embargo, Aristóteles considera de especial importancia examinarlo. Y a nosotros nos puede ayudar a hacernos una idea de cómo entendió Aristóteles

el eleatismo."

54. Hülsz, Enrique, and Berruecos, Bernardo. 2019. "Parménides B1.3: una nueva enmienda." In *ὁδοὶ νοῆσαι Ways to Think. Essays in Honour of Néstor-Luis Cordero*, edited by Pulpito, Massimo and Spangenberg, Pilar, 31-59. Bologna: Diogene Multimedia.

Resumen: "Este trabajo se ocupa de algunos problemas de lectura e interpretación de DK28 B1.3, un verso que nos ha llegado corrupto. A partir de una ojeada a la estructura del Proemio (que evidencia una compleja composición anular pentádica), y del examen y la discusión de las diversas conjeturas que se han propuesto hasta ahora – en particular el rechazo de la enmienda $\kappa\alpha\tau\grave{\alpha}\ \pi\acute{\alpha}\nu\tau\prime\ \acute{\alpha}\sigma\tau\eta$ – asumimos como lectura original la siguiente, admitiendo como suplemento una $\acute{\iota}\pi\sigma\iota\lambda\omicron$ y siguiendo el camino trazado por una conjetura antigua de G. Hermann, $\pi\acute{\alpha}\nu\tau\prime\ \acute{\alpha}\upsilon\tau\eta$, y dos propuestas recientes, de N. L. Cordero, $\pi\acute{\alpha}\nu\ \tau\alpha\langle\acute{\upsilon}\rangle\tau\eta$, y A. Mourelatos, $\kappa\alpha\tau\grave{\alpha}\ \dots$

α<ύ>τη` <ν>:

ΔΑΙΜΟΝΟΣΗΚΑΤΑΠΑΝΤΑΥΤΗΦΕΡΕΙΕΙΔΟΤΑΦΩΤΑ.

Nuestra conjetura, ἢ κατα` πάντ' αὖ τῆ φέρει εἰδότα φῶτα, “el cual [camino] lleva de vuelta nuevamente ahí al hombre que sabe todas las cosas”, resulta de un análisis diferente de la secuencia ΑΥΤΗ, interpretada como dos palabras: los adverbios αὖ y τῆ. El verso anticipa así la formulación metodológica en B5 y es una micro-imagen del Proemio entero que pone en el primer plano su carácter eminentemente poetológico. Nuestra interpretación recurre a la hipótesis de que se trata de un caso de sintaxis discontinua: desarticulando la frase preposicional κατα` πάντα, construimos πάντα en hipérbaton como objeto directo del participio εἰδότα: el “hombre que lo sabe todo”, caracterización antitética perfecta de los βροτοι` εἰδότες οὐδε`ν, “los mortales que nada saben”, del fragmento B6, y la preposición κατα` en tmesis con el verbo φέρει, con el sentido de “llevar de vuelta”, “regresar”.

Resumen: "Como dijimos en la Parte I, las obras de Heráclito y Parménides nos resultan desconocidas en su integridad. Sin embargo, pocos filósofos han sido tan comentados como ellos. Pero esta crítica –diversa y contradictoria– de los fragmentos heraclitanos y del Poema de Parménides, respectivamente, en vez de aclarar, ha servido para ocultar aún más sus genuinas reflexiones filosóficas, pues muchos de estos escritos se han utilizado ya sea para alabar a Heráclito o Parménides, ya sea para criticarlos y contraponerlos, o bien para justificar intereses espurios. Esta Parte II de nuestro trabajo versa sobre las interpretaciones de la doctrina de la ἀλήθεια y de la δόξα en el filósofo de Elea, advirtiendo de nuevo que siempre se planteará el problema de la duda respecto a la autenticidad o falsedad, orden y estructura de sus fragmentos como fuente."

59. Meza, Carlos Carrasco. 2017. "La justificación dialéctica de la refutación al eleatismo en Física I, 2-3." *Revista de Filosofía* no. 73:9-27.

Resumen: "Este trabajo tiene por objetivo mostrar el carácter dialéctico de la refutación al eleatismo en *Física I*, 2-3. En primer lugar, se argumenta que la dialéctica aristotélica puede llegar a constituir un método de investigación científica, ya que permite esclarecer los principios de una ciencia particular. En segundo lugar, se muestra que la refutación al eleatismo en *Física I* 2-3 solo se justifica en el marco de una argumentación dialéctica, ya que esta refutación constituye un método de esclarecimiento de los principios de la física."

60. ———. 2020. "La filosofía de Parménides según el testimonio de Aristóteles." *Tópicos. Revista de Filosofía* no. 59:397-426.

Resumen: "Este trabajo pretende exponer y comentar la interpretación aristotélica de la filosofía de Parménides. En primer lugar, se analiza la refutación del monismo parmenídeo en *Phys. I* 2-3.

Luego se comenta una serie de pasajes relevantes del corpus en los que Aristóteles hace referencia tanto a la ontología y cosmología de Parménides como a su metodología de investigación filosófica. Se propone una interpretación compatibilista de la lectura aristotélica de Parménides, según la cual este último habría afirmado la unidad e inmovilidad de lo real según el concepto y su pluralidad cambiante según la sensación. Si bien es evidente la influencia platónica en ciertos aspectos de la interpretación aristotélica, esta última no es una mera recepción y repetición de la lectura de Platón. En efecto, Aristóteles parece haber comprendido el pensamiento de Parménides a partir de una distinción metodológica operativa en *Phys. I* 5."

61. Montero Moliner, Fernando. 1960. *Parménides*. Madrid: Editorial Gredos.

"En resumen, éste es el fin que nos proponemos: sugerir y fundamentar que cabe una interpretación de la obra de Parménides en la que la realidad del Cosmos empírico no quede anulada, sino tan sólo subordinada a un principio o dimensión metafísica del mismo; que el Ser y el Cosmos de las opiniones propias de los mortales constituyen dos aspectos epistemológicos de la misma realidad. Con el primero se

descubre el fundamento último del Cosmos. Pues, .las apariencias sensibles encubren más bien esa dimensión decisiva de cuanto constituye el Universo; ¿responden a una forma burda de pensamiento que es capaz solamente de captar los estratos más superficiales de las cosas. Sólo cuando el pensar adquiere toda su pureza es posible «pie se descubra, cual tmn revelación divina, la verdad decisiva, la del Ser «pie loitniiiiiy la última y lilis pura dimensión de lodo el Universo. Pues el Oíamos múltiple y cambiante, sometido a luchas, guerras y escisiones dolorosos, el Cosmos en que domina la enfermedad, el odio y la muerte, se ofrece como uno, eterno, continuo y homogéneo, inmóvil y equilibrado, cuando es considerado como lo Ente. Un hálito de mística paz acompaña así al descubrimiento de ese Ser transido de pureza. Pero, no obstante esta supremacía de la Verdad que se alcanza con el descubrimiento del Ser, es posible y estimable realizar una interpretación o juicio (p»(ú|JLYj) de esas mismas realidades según su presencia empírica, decidiendo su denominación y encuadre bajo dos “formas” supremas (Luz y Noche oscura) que someten a un cierto orden la multiplicidad y cambio de las “potencias” cósmicas.

Si a lo largo de este estudio vamos a seguir un orden que en general parece acomodarse al que siguen los fragmentos del Poema de Parmánides ello no se debe a un simple prurito de fidelidad al mismo. Se ha decidido así porque al mismo tiempo ello constituye el orden más adecuado para una clara dilucidación del problema que nos interesa y que se ha bosquejado. Por esto mismo no se ha dudado en traicionar esa fidelidad aparente para con el orden del Poema cuantas veces ha sido conveniente examinar ciertos fragmentos prescindiendo del lugar que ocupan, atendiendo su conexión con otros fragmentos distantes." (pp. 28-29)

62. Padilla Gálvez, Jesús. 2015. *Parménides, ΠΕΡΙ ΦΥΣΕΩΣ - Sobre la naturaleza. El desarrollo de una gramática metafísica*. Madrid: Ápeiron Ediciones.

"El fin de este trabajo es el de repasar ciertas cuestiones de envergadura que generan ciertos dilemas filosóficos. El primero es el de supervisar si el prejuicio arraigado de que la filosofía

analítica no posee instrumentos válidos para analizar textos clásicos de la filosofía se puede justificar adecuadamente. Se trata, pues, de saber si el método analítico es incapaz de estudiar textos y propuestas filosóficas atendiendo a un análisis del lenguaje y sus estructuras formales. Seguidamente, se trata de confirmar o rebatir si la investigación del lenguaje filosófico y las estructuras formales permiten disipar los prejuicios metafísicos o más bien confirman las posturas metafísicas. Este estudio se centrará en el análisis de las propuestas desarrolladas por Parménides.

Lo propio del método analítico es considerar y entender separadamente las partes de un todo. Con ello podemos conocer una serie de elementos, distinguirlos, y luego tratar de componerlos. Una composición que es un mosaico, una serie de notas escrita que ponen de manifiesto una gramática. Ciertamente, en dicho trabajo debemos respetar al máximo la estructura del texto de origen. Hay, pues, que tener bien claro en qué consiste el análisis: estudio gramatical de las unidades semánticas que portan un determinado contenido. De hecho, cualquier estructura gramatical bien construida persigue unos fines constructivos. La terminología usada da cuenta de la reducción de unos conceptos a otros. Por ello es particularmente importante demostrar determinadas formas lógicas y reglas de transformación entre enunciados que en definitiva dan cuenta de la reducción de unos conocimientos a otros. La fundamentación del análisis gramatical en filosofía depende de dos supuestos: primero, del hecho de que solo puede decirse algo con sentido a través de proposiciones sintácticas bien estructuradas y que están sometidas a controles formales; y, segundo, que uno de los instrumentos más rigurosos que poseemos es el análisis formal de dichas estructuras lingüísticas." (pp. 45-46)

63. Pòrtulas, Jaume. 2014. "Παναπευθέα ἀταρπὸν (a propósito de Parménides 28 B 2 DK)." In *Ágalma : ofrenda desde la Filología Clásica a Manuel García Teijeiro*, edited by Fernández, Ángel Martínez, Ortega Villaro, Begoña, Velasco López, María del Henar and Zamora Salamanca, María del Henar, 587-592. Valladolid: Universidad de Valladolid.

Abstract "The aim of this paper is to analyze two difficult expressions in lines 4 and 6 of Parmenides' fragment 2 DK (= 3 Coxon). In the course of this analysis, several probable Homeric hypotexts are examined. The idea underlying the paper is that the problems related to persuasion and communication have a fundamental role in Parmenides' attempt to define *aletheia*."

64. Posada, Gonzalo Soto. 2008. "El enigma de Parménides: el fascinante pero terrible Parménideds." *Escritos* no. 16:558-577.

Resumen: "El artículo intenta leer el poema parmenídeo en contra vía de la interpretación tradicional que ve en éléata al filósofo del ser, negador del devenir. Esta dicotomía tradicional opone la vía de la verdad y la vía de la opinión y descalifica el proemio como mero exordio poético, místico y religioso, sin ninguna importancia para el poema en sí. Se establece así la separación radical entre ser y devenir, ser y aparecer y el pensar sólo se ocupa del ser en tanto unidad, inmovilidad, lejos del movimiento. La reflexión intenta hermenéuticamente polemizar con esta perspectiva mostrando la unidad del poema desde el proemio mismo. Este, lejos de ser una formalidad lírica, es el pórtico de entrada al templo del poema. Como en un pórtico sacral, el proemio es la

escalinata que establece la unidad del poema, derribando la dicotomía destructiva. Desde el proemio copulan ser–devenir, ser–pensar, ser–aparecer en una unidad que hace del tó eón como physis una totalidad envolvente que concilia la contrariedad en una

compensación armoniosa como concordia de los contrarios."

65. Pulpito, Massimo. 2019. "El 'giro lingüístico' de Parménides." In *Eleatica Vol. 7: Parmenide: tra linguistica, letteratura e filosofia = Parménides: entre lingüística, literatura y filosofía*, edited by Berruecos Frank, Bernardo and Giombini, Stefania, 189-201. Baden-Baden: Academia Verlag.

"En la plètora de estudios actuales sobre el poema de Parménides no es comùn encontrarse con interpretaciones que puedan jactarse de ser originales y, al mismo tiempo, justificadas y fundamentadas. A veces, en pos de la búsqueda

de innovaciones interpretativas, se sacrifica la solidez argumentativa y las evidencias textuales; por el contrario, la cautela excesiva, en algunos casos, no sólo ha impedido dar pasos hacia adelante en la comprensión del eleata, sino que a menudo ha inducido a repetir lo ya dicho. El mèrito de las tres lecciones ofrecidas por Alberto Bemabé (AB) para Eleatica 2015 me parece precisamente éste: haber sabido anadir una nueva perspectiva para nuestra visión del texto y de las operaciones intelectuales de Parménides, pero haciéndolo a partir de una gran pericia filològica, reconocida por todos. Los puntos fuertes de està fértil perspectiva me parecen numerosos. Aquí me limitaré a intervenir en algunos pasajes argumentativos que, pienso, ameritan una discusión adicional." (p. 189)

66. Quirante Rives, José Vicente. 2021. "Catábasis e identidad de la diosa en el proemio de Parménides." In *Forum classicorum: perspectivas y avances sobre el Mundo Clásico*, edited by de la Villa Polo, Jesús, López Fonseca, Antonio and Falque Rey, Emma, 835-841. Madrid: Sociedad Española de Estudios Clásicos.

68. Rossi, Arnaldo. 2016. "Mismidad y alteridad en torno al poema de Parménides." *Limes. Revista de Estudios Clásicos* no. 27:33-48.

Resumen: "Ni Parménides en su poema ni otros filósofos griegos se quedan sólo con su experiencia de lo Mismo. Necesitan por eso retornar al mundo manifestado donde lo Mismo y lo Otro se vinculan imprevisiblemente y donde no reinan ni el puro azar ni la necesidad apodíctica del clásico racionalismo moderno sobre la Filosofía o sobre la Ciencia."

69. Schüssler, Ingeborg. 1978. "La relación entre el pensamiento y el ser en el poema de Parménide." *Anuario Filosófico* no. 11:197-205.

"La relación entre el pensamiento y el ser es un tema fundamental de la filosofía europea. Su primera expresión escrita se encuentra en el poema de PARMÉNIDES: «es una misma cosa el Pensar con el Ser» (1)

En esta frase los términos «pensar y ser» forman el sujeto y los términos «es una misma cosa» el predicado. Quiere decir, por lo tanto: pensar y ser son lo mismo; el pensar y el ser se relacionan en la mismidad. Sin embargo surge la pregunta, ¿qué es la misma cosa en relación con qué? ¿es el ser en relación con el pensar o el pensar en relación con el ser? En el primer caso, la frase sería una proposición acerca del ser y afirmarí­a su mismidad con el pensar; en el segundo sería primariamente una proposición sobre el pensar y afirmarí­a su mismidad con el ser. ¿Cómo hay que entender, pues, esta frase?

En el transcurso de la historia de la filosofía la frase de PARMÉNIDES se ha interpretado de numerosas maneras, hasta en la investigación moderna acerca de PARMÉNIDES. Estas interpretaciones coinciden esencialmente en que la entienden como frase acerca del ser —por tanto en el primer sentido: el ser es lo mismo que el pensar; el ser está determinado por el pensar; el pensar es el principio de determinación del ser. La frase de PARMÉNIDES se considera, pues, como testimonio de una concepción idealista del ser y se entiende o en el sentido de un idealismo platónico antiguo o de un idealismo moderno.

Según la interpretación idealista antigua, debe significar que el ser tiene la *naturaleza* del pensamiento, es decir es un *νοετον*, a saber, la idea suprasensible que sólo se capta con el pensamiento. Según la interpretación idealista moderna, significa que un ser sólo existe dentro de y para una consciencia." (pp. 197-198)

(1) Fragm. 3. (La traducción de este fragmento y de los demás corresponden a la versión de J. P. GARCÍA BACCA, *El poema de Parménides*, México 1962. N. d. T.).

70. Seggiaro, Claudia Marisa. 2021. "La *phýsis* como problema en el fragmento 9 de *Sobre la filosofía*." *Revista Latinoamericana de Filosofía* no. 47:357-381.

Resumen: "En el presente trabajo, nos centraremos en el análisis de las críticas a Parménides y Meliso realizadas en el fragmento 9 de *Sobre la filosofía*.

Creemos que este fragmento es un testimonio relativamente sólido de que en esta obra Aristóteles habría intentado indagar en torno a uno de los principios de lo real: la *phýsis*, presentando las problemáticas que su negación presupone. Para realizar nuestro análisis, dividiremos el trabajo en dos partes. En la primera, examinaremos el contexto en el cual aparece citado el fragmento 9 de *Sobre la filosofía* y la fuente por la cual nos ha llegado: Sexto Empírico. En la segunda parte, nos centraremos en las estrategias argumentativas que Aristóteles habría implementado para desarrollar las tesis presentadas en el fragmento en cuestión."

71. Segura Peraita, Carmen. 2001. "Una interpretación de la concepción de la *physis* entre los presocráticos. Antes y después de Parménides." *Contrastes. Revista Internacional de Filosofía* no. 6:143-160.

Resumen: "La pregunta por la *physis* es un rasgo característico del pensamiento griego, y en particular de los pensadores presocráticos. A pesar de sus puntos de coincidencia, no podemos olvidar las diferencias entre ellos. Con respecto a la *physis* Parménides establece una ruptura entre los filósofos anteriores y posteriores a él. Si, como su significado original sugiere, el concepto de *physis* está vinculado esencialmente a la generación, entonces su estatuto entre Parménides y sus seguidores resulta problemático. Por esta razón, es útil analizar algunas de las implicaciones de *physis* entre los filósofos jonios."

72. Sierra Martin, César. 2019. "Tucídides y la vía parmenídea de la verdad." *Éndoxa: Series Filosóficas* no. 43:19-40.

Resumen: "En el presente artículo exploramos el contexto filosófico de la obra de Tucídides. A través del análisis de la verdad en la obra de Tucídides definimos una conexión intelectual con filósofos presocráticos como Parménides de Elea y Gorgias de Leontinos."

73. Solana, Dueso José. 2006. *De Logos a Physis. Estudio sobre el Poema de Parménides*. Zaragoza: Miros Editores.

"Parménides es uno de los pensadores más influyentes de la filosofía occidental. El presente libro ofrece una hipótesis hermenéutica que se puede resumir en dos afirmaciones esenciales: primera, Parménides, como todos los pensadores de su tiempo, era ante todo un físico o fisiólogo (como los denominó Aristóteles), cuyas inquietudes y aportaciones se expresan en la segunda parte de su poema *Sobre la naturaleza*. Esa parte, escasamente representada en los fragmentos conservados, exponía una teoría original que se caracterizaba por defender una física dualista frente al monismo de los milesios. Segunda, Parménides, a diferencia de la mayoría de los físicos, tomó conciencia por primera vez de la necesidad de explicar, no solo el orden de la naturaleza (*physis*) y las leyes que la rigen (tarea de los físicos), sino también el orden y las leyes del mundo del discurso (*logos*), de la teoría que trata de explicar el mundo. A esta segunda tarea, que sin duda puede ser calificada como el descubrimiento de la lógica, dedicó la primera parte de su Poema a modo de un discurso del método y no de una anacrónica especulación metafísica."

74. Solana Dueso, José. 2001. "Lenguaje y filosofía en el poema de Parménides." *Convivium: revista de filosofía* no. 14:31-47.

Resumen: "Este artículo aborda tres cuestiones relativas al sentido y alcance que tiene en el Poema de Parménides la reflexión sobre el lenguaje. La primera pretende explicar el diferente tratamiento que merece el lenguaje en las dos partes del texto parmenídeo. La segunda trata de señalar cómo algunos aspectos gramaticales son aprovechados como recursos formales al servicio de lo que podríamos llamar la protológica parmenídea.

Finalmente, se analizan los versos B8.34-41 para sostener que del citado pasaje no debe deducirse, como hacen muchos intérpretes, una descalificación del mundo fenoménico.

Por el contrario, el citado pasaje contiene dos tesis muy decisivas para la interpretación del conjunto del Poema:

primera, que el lenguaje es un artefacto necesario e inevitable para la teona física, y segunda, que la imposición de los nombres es una actividad teórica que debe someterse a la crisis."

75. ——. 2003. "Generación y tiempo en el Poema de Parménides." *Méthexis. International Journal for Ancient Philosophy* no. 16:7-22.

"El fragmento 8 del poema de Parménides constituye un conjunto de argumentos a favor de un grupo de predicados del *éou* que se presentan en los versos a favor de un grupo de predicados del *éou* que se presentan en los versos B8.3-4:

ἀγένητον εόν καί ἀνώλθθρόν ἐστιν,

ούλον μουννογβνές re καί ἀτρεμές ἠδ' ἀτ€λ€στόν

El objeto de este artículo será analizar cuestiones relacionadas con el primero de estos versos, el que se refiere al carácter ingénito e indestructible del *éou*, cuya prueba se desarrolla a lo largo de B8.5-21. La estrecha asociación entre generación y tiempo queda patente al comprobar el énfasis de que son objeto los adverbios de tiempo en conjunción con el uso de los tiempos verbales." (p. 7)

76. ——. 2006. *De Logos a Physis. Estudio sobre el Poema de Parménides*. Saragoza: Mira editores.

"Parménides es uno de los pensadores más influyentes de la filosofía occidental. El presente libro ofrece una hipótesis hermenéutica que se puede resumir en dos afirmaciones esenciales: primera, Parménides, como todos los pensadores de su tiempo, era ante todo un *físico* o *fisiólogo* (como los denomina Aristóteles), cuyas inquietudes y aportaciones se expresan en la segunda parte de su poema *Sobre la naturaleza*. Esa parte, escasamente representada en los fragmentos conservados, exponía una teoría original que se caracterizaba por defender una física dualista frente al monismo de los milesios. Segunda, Parménides, a diferencia de la mayoría de los físicos, tomó conciencia por primera vez de la necesidad de explicar, no sólo el orden de la naturaleza (*physis*) y las leyes que la rigen (tarea de los físicos), sino también el orden y las

leyes del mundo del discurso (*logos*), de la teoría que trata de explicar el mundo. A esta segunda tarea, que sin duda puede ser calificada como el descubrimiento de la lógica, dedicó la primera parte de su Poema a modo de un discurso del método y no de una anacrónica especulación metafísica."

77. ———. 2015. *La voz de los Maestros: Parménides*.

78. ———. 2019. "Mito y logos en Parménides." In *ὁδοὶ νοῆσαι Ways to Think. Essays in Honour of Néstor-Luis Cordero*, edited by Pulpito, Massimo and Spangenberg, Pilar, 87-99. Bologna: Diogene Multimedia.

Resumen: "El artículo argumenta que la tesis de "paso del mito al logos" para explicar el nacimiento de la filosofía en Grecia no se ajusta a la realidad; antes bien, el mito siguió existiendo en el campo de la filosofía, incluida la de Parménides.

No solo eso, sino que del Poema parmenídeo se infiere que el mito es ineliminable, y además es necesario en dos dominios: el de la explicación del mundo y el de la justificación del orden social."

79. Suárez de la Torre, Emilio. 2010. "La diosa lleva al iniciado por la vida del Ser: conjetura a Parménides B 1.3 D.-K." In *Dic mihi, mvsa, virvm: homenaje al profesor Antonio López Eire*, edited by Cortés Gabaudan, Francisco and Méndez Dosuna, Julián Víctor 659-662. Salamanca: Ediciones Universidad de Salamanca.

"La diosa lleva a quien ha recibido su iniciación sapiencial por el camino del Ser. el único verdadero: lo conduce *por todo lo que es*. Dejo claro que, en mi opinión, la enseñanza que recibe el Κοῦρος; que se inicia en la sabiduría no es sólo distinguir entre la vía de la Verdad y la de lo *opinable*, sino que, además, aprende una explicación cosmológica que, aunque cotejable con otras alternativas y dotada de la virtualidad engañosa de todo relato poético bellamente ordenado y verosímil (fr. 8.52 κόσμον ἑμῶν ἑπέων ἀπατηλοῦν, 60 διάκοσμον εὐικότα), tiene la garantía y autoridad de la diosa que lo transmite. Por la propia teoría expresada por la diosa, ni ella ni el camino (para quienes prefieran esta concordancia del relativo) nos pueden llevar por

la vía del No-Ser (que no es), sólo por la de lo que es, aunque los poetas y filósofos hayan dado explicaciones que pueden estar equivocadas. En cualquier caso, si algo es, es pensable, opinable y puede ser dicho." (p. 661)

80. Untersteiner, Mario. 1956. "La "doxa" en la filosofía de Parménides." *Diánoia* no. 2:203-221.

Resumen: "La determinación precisa del significado de la δόξα parmenídea y de sus relaciones con la ἀλήθεια puede considerarse verdaderamente como una vexata questio hasta hoy sin solución. Mientras que en relación a otros problemas la historia de las cuestiones puede facilitarnos el hallar un hilo conducente a una solución de orden superior, en este caso, por el contrario, es más conveniente enfrentarse directamente a las palabras mismas de Parménides, sin dejar de tener presentes, en su oportunidad, para las exégesis de detalle, las precedentes soluciones parciales que puedan considerarse acertadas."

Parmenides. Bibliografia dos estudos em Português

Bibliografia

1. "Parmênides I." 2007. *Anais de Filosofia Clássica* no. 1.

Este volume é dedicado ao Emérito Professor Nestor Cordero, na comemoração de seus 70 anos, em grande parte ocupados com a vitalidade do Poema de Parmênides.

Este volume, em dois números, apresenta artigos apresentados no I Simpósio Internacional OUSIA de Estudos Clássicos: O Poema de Parmênides, realizado no Rio de Janeiro em 2006. O simpósio foi uma realização dos laboratórios OUSIA (filosofia) e PROAERA (letras clássicas) da UFRJ.

Índice: Nestor-Luis Cordero: Em Parmênides, 'tertium non datur' 1; José Trindade Santos: Parmênides contra Parmênides 14; Emmanuel Carneiro Leão: O homem no Poema de Parmênides 26; Fernando Muniz: A Odisséia de Parmênides 37; Luís Felipe Bellintani Ribeiro: Parmênides trágico 45; Gérard Émile Grimberg: Parmênides e a matemática 55; Carla Francalanci: O diálogo *Sofista* à sombra de Parmênides 69; Fernando Pessoa: Entre pensar e ser, Heidegger e Parmênides 78; Gisele Amara: A necessidade do dizer 87; Alexandre Costa: O sentido histórico-filosófico do Poema de Parmênides 92; José Trindade Santos: Índice da recepção dispensada a Parmênides, na Antiguidade 1-3.

2. "Parmênides II." 2007. *Anais de Filosofia Clássica*.

5. Amaral, Gisele. 2007. "A necessidade do dizer." *Anais de Filosofia Clássica* no. 1:87-91.

"Para Parmênides, é necessário explicar e superar o mundo dos erros e das ilusões, combatendo a presunção de todo conhecimento fundado na aparência, pois o mundo da aparência é um mundo enganador. Pensar apoiado no fundamento da verdade de ser desmente o caminho da aparência e dá lugar na fala ao que é íntegro, imutável, incorruptível, indivisível, imóvel, não-gerado, inabalável, sempre o mesmo, em suma, permanente. E isso é ser. Ao dirigir-se apenas para a constituição de ser, pensar coincide com ser. Mas a desconfiança da experiência dos mortais no mundo é a provocação de pensar que a Deusa lança sobre o jovem, por isso é tão necessário que ele seja capaz de reconhecer o que é aparente como meramente aparente e, para tanto, ele deve aprender o ordenamento inventivo (*kósmon apatelón*) de suas palavras. A verdade do discurso depende da relação entre pensar e dizer isto que só ser é. Neste sentido, deve ser eliminada qualquer consideração tanto acerca do que não é, quanto acerca do vir-a-ser, pois o vir-a-ser exprimiria uma condição de ainda não ser ser, uma hipótese também descartada no *Poema*." (p. 90)

6. Azevedo, Cristiane Almeida de. 2021. "O poema de Parmênides e suas temporalidades." *Anais de Filosofia Clássica* no. 29:34-49.

Resumo: "Os estudos mais recentes sobre o pensamento de Parmênides esforçam-se por entender os fragmentos que chegaram até nós de forma integral. Trata-se de relacionar o que ficou conhecido como três partes diferentes do poema em um todo coerente. O presente trabalho pretende pensar o poema dentro dessa perspectiva integral a partir de uma reflexão sobre a questão da temporalidade. Para tanto, identificamos em cada parte do poema uma temporalidade diferente relacionada com o pensamento de Parmênides sobre o conhecimento do que é e das coisas que são."

7. Barbosa, Rafael Mello. 2015. "Sobre o Princípio de não-contradição: Entre Parmênides e Aristóteles." *Anais de Filosofia Clássica* no. 9:13-25.

Resumo: "O artigo procura mostrar que Parmênides não deve ser considerado precursor do princípio de não contradição. Não são poucos aqueles que compreendem os versos B2 do poema de Parmênides como o princípio de não contradição *avant la lettre*. Contudo, quando se realiza tal aproximação, perdemos de vista aquilo que parece ser próprio de cada autor. Por um lado, Parmênides defende o *Monon On*, o Ser Único, como testemunham Platão, Zenão e Melisso. Por outro lado, é preciso não assumir uma parte mais fundamental da formulação do princípio de não contradição, do contrário teríamos que sustentar um princípio do princípio mais fundamental, o que implica ter que manter o movimento e a pluralidade como itens essenciais da formulação do primeiro princípio."

8. Bellintani Ribeiro, Luís Felipe. 2007. "Parmênides trágico." *Anais de Filosofia Clássica* no. 1:45-54.

"Eis aqui o ponto central da presente interpretação. O espírito fundamental da filosofia de Parmênides é trágico, ao contrário do que pensava Nietzsche (*A filosofia na época trágica dos gregos*), que corretamente assinalou o caráter trágico de toda filosofia pré-socrática e incorretamente excluiu, como o menos grego dos gregos contemporâneos à eclosão da revolução jônica, a pretexto de certo sacrifício da empiria em nome da exatidão lógica de truísmos vazios, exatamente o mais trágico

- de todos. Como na tragédia, em que o herói tem e não tem escolha, o caminho do não-ser é e não é um caminho." (p. 48)
9. Bernabé, Alberto. 2013. "Filosofia e mistérios: leitura do proêmio de Parmênides." *Archai. Revista de Estudos sobre as Origens do Pensamento Ocidental* no. 10:37-58.

Resumo: "Tem-se analisado, recorrentemente, a influência de Homero e de Hesíodo no proêmio do poema de Parmênides. As possíveis influências da poesia órfica tem sido apenas consideradas.

Todavia, diversas descobertas de textos órficos aconselham voltar a analisar os vestígios da tradição mistérica, em geral, e órfica, em particular, no poema do filósofo de Eléia, sem minimizar, com isso, as outras influências já postas em relevo.

O autor assinalou, em um trabalho anterior, algumas conexões entre Parmênides e os textos órficos; neste artigo, a análise se centra nos pontos de contato com ideias e imagens literárias dos Mistérios que se encontram no proêmio. Não se trata de determinar as crenças do filósofo, senão de situar, no âmbito da tradição, os conteúdos doutrinários e/ou poéticos expressados nesta parte fundamental do seu poema, para fazer ver o que têm de poderosamente originais e, em consequência, tratar de determinar o significado do proêmio no conjunto da obra."

10. Bocayuva, Izabela. 2007. "O Poema de Parmênides e a viagem iniciática." *Anais de Filosofia Clássica* no. 1:106-118.

"O acolhimento da Deusa em relação ao viajante só se deu dentro de determinadas condições. Foi preciso que Díke fosse persuadida pelo apelo das filhas do sol a favor do poeta, para então destrancar a passagem da qual detém as chaves. Com esse consentimento, entendemos que Díke diz, mesmo sem pronunciar palavra: "Ele encontrou a medida. É justo que ele ultrapasse o umbral das portas do Dia e da Noite, é justo que para ele aconteça o deslocamento radical dos eixos delas". Eis que o que era noite virou dia. A visão do invisível se torna possível. Agora o poeta, o homem que tomou o caminho apartado dos homens, pode ver com uma clareza que antes não existia. Agora ele é um iniciado." (p. 108)

11. Brinati Furtado, Daniela, and da Silva Fortes, Fábio. 2020. "Um possível diálogo entre o Poema de Parmênides, e o *Tratado do não-ser* de Górgias." In *Estudos em Tradução & Recepção dos Clássicos*, edited by Taveira Baptista, Natan Henrique, de Abreu Carvalho, Luiza Helena Rodrigues and Ribeiro Leite, Leni, 10-19. Vitória, ES: Letras-Ufes.

"O objetivo deste estudo é apresentar uma reflexão sobre a filosofia parmenídica acerca do ser e em que medida esta pode ter viabilizado o pensamento de Górgias desenvolvido no *Tratado do não-ser*. Em seu tratado, Górgias apresenta a hipótese de que as coisas externas ao discurso [lógos] não são traduzíveis em palavras, portanto não são comunicáveis. Ao fazê-lo, o sofista impede que qualquer discurso fale fielmente da realidade, atitude que inviabiliza tratar o Poema de Parmênides realmente do ser. Feito isso, Górgias dá, ao nosso conhecimento, apenas acesso ao discurso, o qual receberá o poder de atribuir sentido à realidade que será um constante fluxo de discursos pontuais. E, ao refletirmos sobre a questão do sofista, nos perguntaremos se o ser parmenídico – na medida em que este é confundido com o pensamento presente em seu Poema – possivelmente abriu espaço para os postulados gorgianos." (p. 10)

12. Casertano, Giovanni. 2007. "A cidade, o verdadeiro e o falso em Parmênides." *Kriterion. Revista de Filosofia* no. 116:307-327.

Resumo: "Parte da historiografia filosófica da segunda metade do século XIX se empenha em renovar a imagem de Parmênides de Eléia fixada pela tradição – filósofo do imobilismo, isolado, estranho e venerável – recuperando as relações estreitas que ele mantinha com as exigências da cultura de sua época. O propósito deste artigo é reconduzir Parmênides ao seu tempo, apontando o pensamento vivo de um homem que foi não apenas filósofo, mas também cientista e político de grande relevo."

13. ———. 2007. "Verdade e erro no Poema de Parmênides." *Anais de Filosofia Clássica* no. 1:1-16.

Tradução de Maria da Graça Gomes de Pina.

"Em conclusão, podemos dizer que não há uma oposição entre o campo da ciência e o da experiência comum, entre o processo do discurso racional e o das experiências sensíveis, mas uma continuidade. Uma continuidade que é dada pelo no/oj, pelo intelecto, pela mente do homem que conhece. A intervenção do no/oj na leitura da experiência comum, essa intervenção necessária para que este mundo possa constituir não uma sucessão caótica de factos e de aparências, mas um cosmo racionalmente ordenado, é precisamente a de dar um justo valor, uma justa colocação (veja-se o w(j eiÅnai de B1.31-32) à multiplicidade dos fenómenos dessa única realidade em que o homem vive e trabalha." (p. 14)

15. Cherubin, Rose, Galgano, Nicola Stefano, Pulpito, Massimo, and Santoro, Fernando. 2020. "Ontologia Eleática: origem e recepção. Introdução Geral; Introduções ao Volume 1. e ao Tomo 1.1." *Anais de Filosofia Clássica* no. 27:19-26.

Resumo: "O primeiro volume do projeto *Ontologia Eleática: Origem e Recepção* lança seu olhar para a filosofia antiga, onde as principais características de uma prospectiva ontologia eleática foram forjadas. No

pensamento grego antigo, encontramos a origem desta perspectiva teórica, na obra de Parmênides e dos outros eleatas, que a seu modo testemunharam uma primeira recepção do Parmenidianismo. Mais tarde, a filosofia antiga veio a mostrar repetidamente exemplos de recepção deste ponto de vista, e foi esta posteridade que, por sua vez, originou a noção de ontologia eleática nos séculos seguintes."

16. Conte, Bruno Loureiro. 2010. *Mythos e logos no poema de Parmênides*. São Paulo: Pontifícia Universidade Católica de São Paulo.

Resumo: "Como é bem sabido, o poema de Parmênides, considerado uma das obras fundamentais do pensamento filosófico grego, apresenta uma pluralidade de elementos míticos, seu esclarecimento constituindo um problema para os

intérpretes. Trata-se, neste trabalho, de investigar o significado histórico-filosófico do *mythos* e do *logos* no poema, a partir da inserção da obra em seus contextos culturais. Nossa análise inicia-se destacando a presença do *mythos*, entendido em seu sentido original de maneira autorizada de falar, mostrando-o de tal modo entrelaçado ao que o "argumento": sem ele, sequer seria compreensível.

De outro lado, procuramos determinar a especificidade do *logos* de Parmênides: trata-se de um *logos* reflexivo, "refutativo", mas não, como pretendem alguns intérpretes, de uma estrita "demonstração". Estabelecido esse ponto, surge a obra de Parmênides como produtora de agenciamentos míticos diversos, apropriando-se das imagens do poeta tradicional inspirado, da iniciação nos cultos de mistérios, de figuras de divindades e da concepção da existência humana presente na Lírica arcaica, efetuando-se o poema em múltiplas configurações discursivas (narrativa, argumento, fala oracular). Nesse sentido, introduzimos a hipótese interpretativa da associação da fala da deusa no poema a um tipo específico de oráculo, similar ao do médico-adevinho. Tais associações ou agenciamentos, todavia, não se revelam como simples reproduções de aspectos presentes na cultura grega: eles são mesmo subvertidos em direção à instauração filosófica de uma reflexão radical, que recolhe "sinais" do visível e do invisível, conduzindo ao "pensar".

17. ———. 2016. "A poética de Parmênides e sua nova imagem de mundo." *Hypnos*:225-251.

Resumo: "Este artigo procura uma elucidação a respeito da escolha por Parmênides de compor um poema em hexâmetros dactílicos, característica do épico, apesar da prosa já estar disponível em seu tempo. Através de uma análise do próemio, observa-se que, longe de inscrever-se de maneira simplesmente orgânica em seus contextos tradicionais, o Poema apresenta uma dinâmica de antecipações e ressignificações que aponta para uma relação dialética entre o novo e o tradicional."

18. ———. 2023. *A Doxa no poema de Parmênides: Uma investigação a partir dos testemunhos antigos*. São Paulo

Edições Loyola.

Resumo: "O objetivo desta investigação é determinar o lugar da assim chamada seção da *Doxa* no Poema de Parmênides, tanto do ponto de vista de sua reconstituição textual quanto de seu estatuto teórico. O trabalho se justifica, de um lado, a partir da constatação de que a representação moderna do Poema, dividindo-o em duas Partes principais, *Alétheia* {Verdade} e *Doxa* {Opinião}, não concorda com alguns aspectos noticiados pela doxografia.

Desse ponto de vista, coloca-se em questão o princípio dicotômico adotado pelos editores modernos no esrabelecimento do texto parmenídeo que nos chega fragmentariamente.

Trata-se assim, em um primeiro momento, de investigar com cuidado as fontes, procurando a partir delas detenninar o conteúdo temático preciso que a tradição identificou através da expressão *ta pros doxan*. Particular atenção é dedicada aos testemunhos de Simplício e de Aristóteles. De outro lado, a visão predominante na literatura interpretativa, que tende a simplesmente desvalorizar as "opiniões" para o pensamento de Parmênides, depara-se com o problema de explicar a razão da presença de uma Cosmogonia na assim entendida Segunda Parte do Poema. Apresentamos, a partir da investigação das fontes, a hipótese de uma versão deflacionista da *Doxa*, composta pelos versos B8,51-61 e B9,1-4 {numeração da edição Diels-Kranz}. A partir daí, mostramos a sua inserção, em conjunto com a Cosmogonia propriamente dita, no contexco mais amplo de uma *Diakosmésis*, e desenvolvemos unia hipótese interpretativa que procura mostrar o seu estatu to teórico positivo, o que a tradição viu como a postulação de princípios cosmológicos (*arkhai*}, e que identifica-se no poema a um "arranjo cósmico" (*diakosmos*}) dos contrários. De acordo a essa hipótese, no entanto, a *Doxa* pode ser interpretada não apenas como uma teoria física, mas também segundo aspectos de suas implicações crítico-epistemológicas e para os fundamentos de uma filosofia da linguagem parmenídea, o que revela o seu papel no conjunto do argumento do Poema."

19. ———. 2024. "A necessidade e outras divindades no poema de Parmênides." In *Filosofía y religión en la Grecia antigua*, edited by Gutiérrez, Jorge Luis and Castrillejo, David Torrijo, 29-45. Salamanca: Síndéresis.

"Das muitas perspectivas que permitem pensar os aspectos mítico-religiosos presentes no Poema, limitar-me-ei a tratar do papel de algumas das divindades naquilo que elas de algum modo contribuem para a formulação de certos problemas filosóficos e também enquanto auxiliam a estruturar, como veremos, o discurso parmenídeo. Principalmente, terei algo a dizer sobre a deusa anônima que enuncia uma doutrina sob forma de revelação e sobre a divindade ou as divindades que recebem o nome de Justiça (*Dike*) e Necessidade (*Ananke*), que podem ou não ser a mesma entidade a que se refere o fr. 12 (aquela "que tudo conduz"). Direi ainda acessoriamente algo sobre a Persuasão (*Pistis*) e a Verdade (*Aletheia*), divinizadas.

Este parece ser o conjunto completo de divindades do poema, além das já mencionadas Heliádes, todas elas figuras femininas, em contraste com o *Kouros*, protagonista masculino da viagem filosófica. Mas, em especial, interessa-me neste trabalho compreender como a Necessidade, divinizada, relaciona-se a fórmulas modais de clara importância filosófica no *Poema*." (pp. 29-30)

20. Cordero, Néstor-Luis. 2007. "Em Parmênides, 'tertium non datur'." *Anais de Filosofia Clássica* no. 1:1-13.

Traduzido por Josefina Neves Mello.

"Parmênides, no entanto, é o primeiro filósofo que, para se referir a "os entes", use o singular, mas isso não significa que vá tratar de uma só coisa. Seu singular é genérico porque se refere àquilo que têm em comum todas as "coisas", os entes, *tà ónta*. Assim como o biólogo estuda *tò zôon*, os seres vivos, ou seja, isto que caracteriza todos os seres vivos, *pánta tà zôa*, o filósofo deve ocupar-se com "tò eón", isto que é, o que está presente em todas as coisas que são, que existem, em *panta ta onta*. Já as ciências tratarão de estudar particularmente aquilo que corresponde a cada grupo das coisas, mas isto é posterior, pois

as coisas não existiriam, se não se desse o “fato” de elas serem. Parmênides se limita a este “objeto”, o ato de ser, e seu poema é uma análise do quanto se pode dizer sobre ele mesmo.

Em suma, a unidade parmenídea é a unidade do singular, e isso é o que diz Platão em “O Sofista” – se se traduz bem o texto – quando ele afirma que, para aquilo que ele chama de “a família eleática”, “todas as coisas (*tà pánta*) são chamadas, nomeadas (*kalouménon*) um ser único (*hèn ón*)” (242d). Platão não diz que para eles “tudo é um” (frase, aliás, escrita por Heráclito). Dentro desta problematização, proponho-me cuidar do método posto em prática por Parmênides para conseguir “demonstrar”, à maneira dele, as verdades às quais ele acreditou haver chegado a propósito de “*tò eón*.” (pp. 1-2)

21. ——. 2011. *Sendo, se é. A Tese de Parmênides*. São Paulo: Odysseus.

Tradução de Eduardo Wolf.

"A interpretação de Parmênides que proponho neste trabalho é resultado de mais de quarenta anos de investigações acerca do grande filósofo eleático.

Nada assegura, no entanto, que essa interpretação seja definitiva. Os cento e cinquenta versos que puderam ser recuperados de seu Poema (apenas três ou quatro páginas de um texto impresso atual) parecem ser inesgotáveis: cada palavra é uma espécie de bomba relógio, ou, para usar uma metáfora mais agradável, uma espécie de fogo de artifício que, uma vez aceso, espalha-se em variadas cores. Consciente dessa riqueza, minha tarefa principal consistiu em, durante muitos anos, "depurar" o texto do Poema, texto que ao longo dos séculos foi abrigando leituras equivocadas e, pior ainda, conjecturas excessivamente fantasiosas. Uma leitura direta das principais fontes do Poema (entre elas, os manuscritos de Proclo e de Simplício existentes atualmente, entre outros), permitiu-me apresentar um texto que considero mais próximo do original que a versão clássica de H. Diels.

Uma segunda etapa, que forma o núcleo central desse trabalho, consistiu em interpretar o texto, que já na Antiguidade foi

objeto de leituras muito diferentes (Platão e Aristóteles, por exemplo, não parecem estar se referindo ao mesmo filósofo quando comentam Parmênides). Minha interpretação ressalta a contribuição original da filosofia de Parmênides com relação a outros pensadores de seu tempo, mas não pretende separá-lo do contexto filosófico dos pré-socráticos para fazer dele uma espécie de "pai" da oncologia) (p. XII)

22. ———. 2011. "Una consecuencia inesperada de la reconstrucción actual del Poema de Parménides." *Hypnos*:222-229.

Resumo: "O estabelecimento moderno do texto do poema de Parmênides, ao apresentá-lo em uma certa ordem de fragmentos, induziu os intérpretes à divisão de sua doutrina em "Verdade" e "Opinião". Lançando dúvidas quanto a essa ordenação e questionando a leitura do poema em duas "partes", o autor procura desvincular os testemunhos que tratam dos astros de qualquer suposta doutrina parmenídica das *doxai*."

23. ———. 2013/2014. "O diálogo enganoso de Platão consigo mesmo na primeira parte do Parmênides." *Revista E. F. e H. da Antiguidade, Campinas* no. 27:103-122.

Tradução e notas: André Luiz Braga da Silva (USP).

Resumo: "Não são cabíveis dúvidas de que o Parmênides é um diálogo estranho. Ele foi escrito mais de vinte anos após a abertura da Academia, e Platão viu na obra a oportunidade para exibir certos pontos débeis de sua Teoria das Formas (sugeridos quiçá por alunos avançados, colegas, ou diretamente detectados por ele mesmo). Elegeu para isso uma mise-en-scène adequada: fez sua teoria ser exposta pelo seu porta-voz habitual, Sócrates, mas o rejuvenesceu: na ficção este não tem mais de vinte anos. Isso não significa que sua posição filosófica seja diferente: tudo que este diz corresponde literalmente às ideias expostas por Platão em diálogos anteriores... Mas a falta de experiência própria à juventude o impedem de responder às severas críticas que lhe apresenta seu interlocutor, o "grande Parmênides".

O diálogo trata-se, na realidade, de um diálogo de Platão consigo mesmo: sob o aspecto do jovem Sócrates, ele expõe a versão tradicional de sua teoria; e, identificando-se com o personagem Parmênides, critica os aspectos sensíveis que, no momento de escrever este diálogo, ele encontrou em sua filosofia. Todavia, este diálogo de Platão consigo mesmo é enganoso porque Platão já tem elaboradas as respostas às críticas que ele põe na boca de Parmênides. Estas respostas aparecerão no diálogo *Sofista*."

24. Cornelli, Gabriele. 2005. "O caminho de Parmênides: Sobre filosofia e Katábasis no prólogo do Poema." *Hypnos* no. 10:93-101.

Resumo: "À margem das apressadas generalizações aristotélicas, este artigo se propõe remastigar o prólogo do poema *Sobre a Natureza* de Parmênides, em busca de uma compreensão profunda da relação entre a filosofia que nasce e as práticas de

katábasis, de descida ao mundo dos mortos. Ocasão para redescobrir a beleza de um diálogo, antigo entre a reflexão filosófica e o vasto mundo da sabedoria em suas formas mais arcaicas. Possibilidade de repensar as categorias fundamentais de nossa

historiografia filosófica."

25. ——. 2007. "A descida de Parmênides: anotações geofilosóficas às margens do prólogo." *Anais de Filosofia Clássica* no. 1:46-58.

"Conclusão

Mais uma vez, a história da filosofia antiga nos regala uma ferramenta, um *martelo nietzschiano*, ou quem sabe um simples pincel, para redesenhar tanta historiografia racionalista e presentista das origens de nossa maneira de ver o mundo ocidental. Para conseguirmos ver origens mais amplas, de maior diálogo e menos estanques daquelas às quais estamos acostumados.

Pois nosso jogo da história da filosofia parece-me ser, ainda hoje, aquele que jogava Merleau-Ponty: o de “explorar o irracional para integrá-lo numa razão expandida”.

Explorar e expandir, portanto: imperativos para descer, para a katábasis até as origens de nossa filosofia, quaisquer elas sejam, aonde quer que nos levem, com coragem e sinceridade intelectual, aprendendo com a ousadia parmenidea: *dià pántos pánta perônta*, “atravessando tudo através de tudo.” (p. 57)

26. Costa, Alexandre. 2007. "O sentido histórico-filosófico do Poema de Parmênides." *Anais de Filosofia Clássica* no. 1:92-128.

"Constituído de três partes, o poema de Parmênides oferece de imediato uma dificuldade aos seus leitores e estudiosos: sendo essas três partes muito distintas entre si, seja no que se refere aos seus conteúdos, como também às suas formas ou gênero, como conciliá-las a contento? Esta pergunta, por sinal, já gera um outro obstáculo: será mesmo que devem ser conciliadas? De onde nasce a nossa tendência a conceber o poema como um todo necessariamente harmônico, um conjunto internamente coerente apesar das referidas diferenças de teor e de caráter que separam essas suas partes?

Perguntas como essas têm sido respondidas das mais variadas formas, perfazendo a grande amplitude e diversidade que marcam a literatura a respeito da compreensão do poema.

Há um pouco de tudo dentro desse acervo crítico. Desde as hipóteses que apontam no seu interior a mais franca contradição até as que vêem no poema a mais absoluta coerência, passando por hipóteses ou soluções intermediárias, claro, como aquelas que sugerem que Parmênides tê-las-ia escrito em épocas distintas, de modo a conterem o itinerário do seu pensamento e, portanto, as mudanças que esse pensamento teria sofrido ao longo do tempo." (p. 92)

27. Da Silva, José Lourenço Pereira. 2014. "Sobre alguns problemas de interpretação difícil no Poema de Parmênides." *Hypnos* no. 32:108-129.

Resumo: "Resumo: Parmênides de Eléia é o mais importante pensador pré-socrático.

Seu poema filosófico marca um momento decisivo na história da investigação racional no século V a.C. Os fragmentos restantes, objeto de amplo debate entre os estudiosos da filosofia antiga, apresenta problemas para a interpretação do pensamento de Parmênides. Focalizando sua *via da Verdade*, sugiro uma interpretação das lições de Parmênides sobre o ser. Examinou três problemas cruciais extensamente tratados na literatura crítica sobre Parmênides: (i) sua relação com outros filósofos do seu tempo, (ii) o sujeito do verbo ser em seu poema, e (iii) o significado desse verbo no fragmento 2."

28. de Azevedo, Cristiane A. 2017. "O discurso sobre o devir no poema de Parmênides: a presença fundamental de Éros na constituição do cosmos e do homem." *Revista Enunciação* no. 2:72-84.

Resumo: "Este artigo pretende, primeiramente, voltar-se para a última parte do poema de Parmênides que ficou ao longo de séculos relegada ao âmbito do não-ser, da aparência ou da falta de verdade. Este discurso trata da dóxa dos mortais e apresenta os elementos que formam a cosmologia. Nosso objetivo é pensar a dóxa de maneira positiva, constituindo-se como a maneira própria de falar daquilo que está sujeito ao devir, a saber, o sol, a lua, as estrelas, a Via Láctea, o homem. Em um segundo momento, vamos pensar não só a presença e a função de Éros no cosmos construído pelo pensamento de Parmênides mas também sua importância para o homem."

29. de Barros. 2023. "Para ler Parmênides. Uma breve introdução à questões estruturais do texto." *Kinesis* no. 15:300-319.

Resumo: "Como é possível extrair filosofia de um texto de quatro ou cinco páginas, arbitrariamente montado ao longo de mil anos de citações na Antiguidade, cujo tamanho original se desconhece, e suas partes, precariamente conectadas, juntam-se a partir de critérios e suposições tardias? Normalmente, nem se quer refletimos sobre questões desse tipo quando tratamos de estudar o pensamento de um autor, pois é comum que o estudo de um filósofo não passe pela história da obra em

questão, quando e de que forma ocorreu a transmissão do texto ao longo da história. No presente artigo, teceremos algumas considerações importantes que leitor não familiarizado com o Poema de Parmênides tem de ter para que evite cair em armadilhas e reproduza dogmaticamente interpretações convencionalmente estabelecidas."

30. Figueira, Markus. 2007. "O atomismo antigo e o legado de Parmênides." *Anais de Filosofia Clássica* no. 1:59-69.

"Gostaríamos de propor também uma incursão no pensamento atomista antigo, notadamente nas poucas referências que fizeram ao pensamento de Demócrito de Abdera, nos textos remanescentes da física de Epicuro e na exposição que Lucrécio fez em seu poema *De rerum natura*, sobre os princípios da natureza. Trata-se, por um lado, de apontar a influência do pensamento parmenídeo na exposição acerca da realidade (*phýsis*) presente nos escritos destes pensadores; por outro lado, mostrar a necessidade que a eles se apresentou de encontrar um caminho divergente do apontado no Poema de Parmênides para pensar o movimento de constituição e dissolução das coisas na natureza. Acreditamos que todo o pensamento pluralista surgido no final do século V a. C. teve que responder ao sério problema deixado por Parmênides sobre a impossibilidade de se pensar o vir-a-ser e tributamos ao atomismo de Leucipo e Demócrito, e seu desdobramento em Epicuro e Lucrécio, uma solução, ainda que problemática, para esta questão." (p. 60)

31. Francalanci, Carla. 2007. "O diálogo *Sofista* à sombra de Parmênides." *Anais de Filosofia Clássica* no. 1:49-76.

"O Sofista, diálogo que, através da busca por distinguir sofista e filósofo, necessita rever as relações entre ser e não ser, tomando para isso a disjunção entre ambos atestada pelo Poema de Parmênides, é conduzido pelo Estrangeiro de Eléia. Tão intrigante quanto o silêncio guardado por Sócrates é a ausência de nome próprio dessa personagem, o que nos obriga a ouvir, continuamente, a sua denominação; somos confrontados, ao longo de todo o diálogo, com o termo "Estrangeiro" (xénos). A

personagem é de fato, geograficamente, estrangeira, uma vez que provém do géno de Eléia(6)." (p. 70)

(...)

"Gostaria de concluir aqui essa exposição. Através da descoberta de uma nova possibilidade de resguardar a unidade do ser, a linguagem se mostra, mais uma vez, como horizonte para o acontecimento de um limite, através do qual o ser pode ser entrevisto em sua separação, distinção. Na retomada de um dizer que expressa o pertencimento do ser ao Um, refulge ainda uma vez o dizer inaugural de Parmênides." (pp. 76-77)

(6) *Sofista* 216a.

32. Galgano, Nicola Stefano. 2012. "DK 28 1.29. A verdade tem um coração intrépido?" In *Una mirada actual a la filosofía griega. Ponencias del II Congreso Internacional de Filosofía Griega de la Sociedad Ibérica de Filosofía Griega*, 189-202. Madrid-Mallorca: Ediciones de la Sociedad Ibérica de Filosofía Griega (SIFG).

"O artigo estuda uma das passagens mais famosas do Poema de Parmênides, o verso 29 do fragmento 1, Ἀληθείης εὐκυκλέος ἄτρεμές ἦτορ, que literalmente pode ser assim traduzido: «o coração intrépido da verdade bem redonda». Essas palavras são proferidas por uma deusa anônima a um discípulo e querem expor o programa de ensino da divina mestra: o discípulo tem que aprender a verdade, mas também as opiniões dos mortais. Todos os estudiosos interpretam esse verso como metáfora, onde as expressões ‘coração intrépido’ e ‘bem redonda’ formam a imagem de uma ‘verdade imortal’ oposta às ‘opiniões dos mortais’.

O artigo questiona esta interpretação metafórica, talvez platonizante, alegando três tipos de considerações: literárias, (imagem imprópria de um coração que não bate, intrépido), históricas (pela fisiologia da época o coração é também a sede do pensamento) e filológicas (o termo para significar ‘centro’ é καρδία e não ἦτορ). A nova tradução proposta mostra que Parmênides queria dizer algo mais simples, isto é, ‘a mente firme da verdade bem conexa’, apontando para um fenômeno

psicológico, a persuasão, sucessivamente retomado no fragmento 2." (p. 189)

33. ——. 2015. "Depois ou antes: Parmênides e o tempo em DK 8. 9-10." *Anais de Filosofia Clássica* no. 9:87-103.

Resumo: "É um *cliché* muito comum considerar que Parmênides introduz a atemporalidade na história da filosofia, negando o tempo em seu poema. Este cliché está baseado em passagens que supostamente expressam claramente esta negação. Das muitas passagens, a mais importante é a DK 8. 5: ὕδ' ἐποτ' ἦν οὐδ' ἔσται, ἐπειὶ νῦν ἔστιν ὁμοῦ πάν / ἔν, συνεχῆς [...]; nem nunca era nem será, pois é todo junto agora, / uno, contínuo. Todavia, estudos recentes contestam esta interpretação, que podemos chamar de clássica, mostrando problemas no estabelecimento do texto de 8. 5 e na sua tradução. Meu objetivo, em linha com estes estudos, é mostrar duas coisas. A primeira é que os versos 8. 9-10, que contêm as palavras 'depois' e 'antes' (ὕστερον e πρόσθεν), não apresentam uma noção de tempo, a qual seria afinal negada pelo argumento, e portanto não propõem uma atemporalidade. A segunda é que estas duas palavras, que parecem indicar marcação de tempo, não discutem especificamente o tempo, mas se referem a uma ideia mais simples, a de sequência."

34. ——. 2016. "Os limites da palavra: Parmênides e o indizível." *Revista Ética e Filosofia Política* no. 2:4-24.

Resumo: "A importância do papel de Parmênides na história da filosofia foi evidenciada por Hegel, quando chegou a considerá-lo o primeiro verdadeiro filósofo. No entanto, o hegelianismo e, com ele, a moderna história da filosofia acentuaram a descoberta parmenidiana do ser, deixando de lado a complexa noção de não-ser. Mas o próprio Parmênides, ao introduzir aquelas noções, se dedica mais à explicitação e à argumentação do não-ser, mostrando algumas características peculiares que acabam tendo consequências sobre a estruturação do discurso cognitivo. Uma destas características é a indizibilidade do não ser, demonstrada por Parmênides indiretamente. Com a afirmação da indizibilidade, Parmênides estabelece, pela primeira vez na história do pensamento ocidental, um limite

para o uso da linguagem e, portanto, um critério para o desenvolvimento do discurso epistêmico, uma autêntica regra metalinguística. A presente análise procura evidenciar os argumentos de Parmênides a partir do texto do poema, revelando a sutileza da reflexão do eleata, o primeiro a introduzir a problemática da linguagem epistêmica na cultura ocidental."

35. ———. 2018. "O não-ser em Parmênides de Eleia." *Trans/form/ação* no. 41:9-36.

Resumo: "No fragmento DK 28 B 2 de seu poema, Parmênides apresenta seu método para distinguir a persuasão verdadeira da falta de persuasão verdadeira. As famosas duas vias para o pensar que ele propõe são o enunciado complexo de um sistema que quer garantir a veracidade das afirmações para obter, afinal, um discurso confiável, o único capaz de persuasão verdadeira. O presente artigo mostra que o papel central da argumentação parmenidiana é atribuído ao não-ser, uma noção derivada certamente de uma reflexão sobre a impossibilidade da negação do ser. Assim, o inteiro fragmento é interpretado a partir dessa noção central, evidenciando que Parmênides descobre aquela impossibilidade de negação, que hoje nós chamamos de "contradição", e enuncia qual é a maneira de evitar a contradição no pensamento e no discurso, uma regra que atualmente nós chamamos princípio de não-contradição. O estudo aqui apresentado faz uma investigação detalhada da noção de não-ser, no fragmento DK 28 B 2, oferecendo finalmente uma nova tradução."

36. ———. 2019. *Parmênides: o não ser como contradição*. São Paulo: Paulus.

"O estudo apresentado nas páginas a seguir trata de um tema específico entre os muitos presentes no poema de Parmênides: o não ser. Os motivos para este recorte são dois: o primeiro é a necessidade atual, no debate contemporâneo, de uma revisão dos mais variados pressupostos que sustentam e compõem a nossa visão de mundo – que podemos chamar genericamente de newtoniana – onde, imergida em espaço e tempo homogêneos, se encontra uma realidade em constante devir;

esta visão parece não ser mais suficiente e, ademais, é questionada desde o século XIX pela filosofia e ao menos desde o século XX pela ciência mais avançada. Hoje, espaço e tempo não são mais tidos como um receptáculo neutro do mundo; alguns tradicionais instrumentos cognitivos humanos, como a relação causa-efeito e o princípio de não contradição, parecem não atuar de forma absoluta como se acreditava; e, finalmente, a projeção para o futuro das dinâmicas do mundo segundo nossos atuais conhecimentos – e, portanto, uma ideia de rumo para a humanidade – não tem cenários confortáveis, principalmente porque a equivocidade, a instabilidade e até mesmo a confusão das noções que utilizamos para ver o mundo não permitem um foco mais preciso." (p. 17)

37. ——. 2020. "Graduação e pós-graduação em Parmênides DK 7." In *Educación, arte y política en la filosofía antigua. Actas del IV Simposio Nacional de la AAFA*, edited by Suñol, Viviana and Berrón, Manuel, 266-276. Santa Fe: Asociación Argentina de Filosofía Antigua.

Resumen: "O poema de Parmênides é um texto didático à maneira arcaica, onde alguém que ensina, representado pela figura de uma Deusa, se propõe a mostrar ao discípulo uma representação do mundo extremamente sofisticada e complexa. No programa de aprendizagem, em DK B 1, a deusa avisa que o discípulo vai aprender tanto os conhecimentos verdadeiros quanto aqueles que são somente opiniões dos mortais. Essa distinção depende de um método, que ela ensina no fr. 2 e que permite ir além do conhecimento comum. Nos fr. 7, é especificado que há uma maneira de pensar aprendida culturalmente, dentro da qual os homens comuns desenvolvem suas atividades. Todavia, o discípulo deve ser capaz de se afastar dessa pensar comum e deve ser capaz de realizar suas pesquisas autonomamente a partir dos critérios por ela ensinados. O discípulo, que já aprendeu muito (graduação), agora deve ser capaz de pesquisar para aprender sozinho (pós-graduação)."

39. Grimberg, Gérard Émile. 2007. "Parmênides e a matemática." *Anais de Filosofia Clássica* no. 1:55-68.

"O poema de Parmênides é o primeiro texto a refletir sobre o discurso da verdade e como tal um discurso atento à lógica. Durante a Antiguidade grega, a matemática vai se tornar o modelo de discurso da verdade. É portanto legítima a tentativa de avaliar e delimitar alguns aspectos da influência que teve o pensamento de Parmênides sobre o desenvolvimento da matemática grega." (p. 55)

40. Huguenin, Rafael. 2009. "Sugestões para a interpretação do poema de Parmênides." *Síntese. Revista de Filosofia* no. 36:197-218.

Resumo:" O objetivo deste artigo é oferecer uma sugestão para uma nova interpretação do poema de Parmênides. Para isso, em um primeiro momento, (I) discutiremos algumas abordagens tradicionais das duas vias de conhecimento no fragmento 2 e suas relações com as funções do verbo grego 'ser'. Depois, (II) faremos uma exposição da tese de Charles Kahn acerca dos usos antigos do verbo 'ser', que coloca a questão em novos termos. Para concluir, (III) mostraremos como alguns aspectos da tradição oral, na qual o poema está certamente inserido, podem iluminar a interpretação dos problemas aos quais ele se dirige."

41. ———. 2013. "Parmênides e Frege: um breve estudo sobre as relações entre o poema sobre a natureza e as investigações lógicas." *Kriterion. Revista de Filosofia* no. 54:7-24.

Resumo: "O presente texto tem como objetivo estabelecer algumas relações entre o poema de Parmênides e as Investigações Lógicas, de Frege.

Mais especificamente, nosso objetivo é iluminar certos aspectos do poema de Parmênides por meio de uma comparação com certas noções utilizadas por Frege para caracterizar aspectos centrais de seu pensamento."

42. ———. 2015. "O fragmento B4 de Parmênides à luz da épica." *Prometeus - Filosofia* no. 8:218-227.

Resumo: "O propósito do presente texto é interpretar alguns termos empregados por Parmênides de Eléia em seu fragmento B4 à luz dos usos homéricos dos mesmos termos, em especial aqueles utilizados em contextos militares"

43. Kahn, Charles H. 1997. *Sobre o verbo grego ser o conceito de ser*. Rio de Janeiro: Núcleo de Estudos de Filosofia Antiga (Depto. de Filosofia da PUC-Rio).

Sumário: Editorial V; Apresentação IX; O Verbo Grego "Ser" e o Conceito de Ser 1; Sobre a Teoria do Verbo "Ser" 33; Sobre a Terminologia para Cópula e Existência 63; Por que a Existência não emerge como um Conceito distinto na Filosofia Grega ? 91; Alguns Usos Filosóficos do Verbo "Ser" em Platão 107; Retrospectiva do Verbo "Ser" e do Conceito de Ser 155; Ser em Parmênides e em Platão 197-227.

Apresentação: "No artigo "Retrospectiva sobre o Verbo 'Ser' e o Conceito de Ser", incluído nesta coletânea, Charles Kahn apresenta as razões que o levaram a investigar o verbo grego *einai*: seu objetivo era "fornecer uma espécie de prolegômenos gramaticais ao estudo da ontologia grega". Desconfiado de uma compreensão do verbo *einai* que se tinha tornado cristalizada, e que lhe atribuía esquematicamente ou bem um uso copulativo ou o sentido de existência, desconfiado além disso da própria noção de existência a ele associada sem nenhuma crítica, Kahn empreendeu um estudo sobre os usos ordinários do verbo, independentes de seu uso especial pelos filósofos, a fim de "esclarecer o ponto de partida pré-teórico para as doutrinas do Ser desenvolvidas por Parmênides, Platão, Aristóteles".

Kahn começou a publicar os resultados de suas pesquisas em 1966, com o artigo que abre este volume, "O Verbo Grego 'Ser' e o Conceito de Ser". A partir daí, nunca mais o verbo grego *ser* foi o mesmo.

As revelações de Charles Kahn sobre os usos e sentidos do verbo *einai* surpreenderam os meios acadêmicos, e obrigaram a uma revisão radical de interpretações tradicionais não só sobre

o sentido do verbo ser nos textos gregos, mas sobre o sentido dos próprios textos dos filósofos que forjaram o conceito de Ser, o fundamento por excelência do pensamento filosófico ocidental. O que realmente disseram Parmênides, Platão, Aristóteles, quando falaram sobre ser e o Ser? Tudo teve de ser revisto, e as polêmicas, evidentemente, não poderiam faltar. Nos debates em que se viu envolvido, Charles Kahn soube defender suas posições e soube ouvir seus opositores. Dessa escuta atenta são prova os ajustes e precisões introduzidos em suas teses ao longo do tempo. Seria redundante, na ocasião em que publicamos seus textos, apresentar, ainda que resumidamente, tanto as teses originais de Kahn quanto os ajustes e precisões a que nos referimos. Os artigos desta coletânea estão organizados cronologicamente, para que o leitor possa acompanhar essa evolução." (pp. IX-X)

44. ———. 2007. "Algumas questões controversas na interpretação de Parmênides." *Anais de Filosofia Clássica* no. 1:33-45.

Tradução de Marcus Reis Pinheiro.

"É sempre um prazer ter a oportunidade de retornar a Parmênides, um filósofo pelo qual me apaixonei quando eu ainda era um estudante de pós-graduação. Ao longo dos anos, publiquei mais de uma vez sobre as concepções de Parmênides acerca do Ser e seu impacto sobre Platão. Assim, minhas visões sobre este assunto são bem conhecidas, e eu não as repetirei aqui. No entanto, irei, pelo menos, me referir ao conceito de Ser de Parmênides, e ficarei feliz em discutir sobre isto no momento das perguntas. Por outro lado, quero começar por situar Parmênides em relação à tradição da filosofia da natureza que começa em Mileto e, então, procederei à discussão de alguns pontos controversos, primeiro concernentes à interpretação de passagens cruciais e, finalmente, concernentes à direção da marcha da carruagem no proêmio." (p. 33)

45. Leão, Emmanuel Carneiro. 2007. "O homem no Poema de Parmênides." *Anais de Filosofia Clássica* no. 1:26-36.

"Primeiro apresentaremos o texto do Poema, a seguir, damos uma versão em português e, por fim, propomos uma interpretação de pensamento. É importante ler o original grego,

para sentir o que há de estranho no familiar e de alheio no conhecido de nós mesmos, tanto na consciência, que temos, quanto na língua, que falamos."

46. Lopes, Daniel Rossi Nunes. 2006. "Parmênides vs. Górgias. Uma polêmica sobre a linguagem." *Phaos* no. 6:21-50.

Abstract: "This article intends to show the quarrel between Gorgias and Parmenides about the possibility of the ontologic speech. The gorgian treatise *On Non-being or On Nature* presents itself, in this perspective, as refutation of the "parmenidian triad"

being, thinking and saying, expressed in the Poem. Gorgias intends to prove that the speech concerning being, which Parmenides considers the only possible and true, is inconsislent, both sintaticly and semanticy. Denying lhe possibility of an ontologic speech, Gorgias attribules then a central function to rhetoric in the theory of specch."

47. Marques, Masrcelo Pimenta. 1992. "A dóxa de Parmênides." *Classica. Revista Brasileira de Estudos Clássicos*:33-39.

Resumo: "Neste trabalho desenvolve o que seria a cosmologia de Parmênides, tal como podemos inferir a partir dos escassos fragmentos que nos chegaram da chamada 'dóxa', ou a segunda parte de seu poema (DK 28 B 8,50- 19). Para ta/lanço máo também de fragmentos doxogrdficos (DK 28 A 37; 46; 46a; 46b; 52; 53; 54), utilizados criticamente, numa reconstrução das linhas gerais da visão pannenidiana do cosmo e do homem, pensados como mistura de Fogo e Noite."

48. ———. 1997. "A presença de Dike em Parmênides." *Kleos* no. 1:17-31.

"No poema de Parmênides, encontramos díke tanto no prólogo (l, 14 e 28) quanto no fragmento dito "ontológico" (8,14). Díke detém as chaves que abrem as portas aos caminhos de noite e dia. É díke e não uma má moira quem manda o jovem percorrer o caminho rumo ao âmago da verdade. E é ainda díke quem mantém o ser firmemente em seus laços.

Três momentos que nos revelam o papel ordenador de uma potência divina no centro de um poema filosófico. Dentro do esquema mítico dos caminhos que estrutura o poema filosófico de Parmênides, díke permanece uma figura divina que controla, guia e amarra, companheira de alétheia. Por outro lado, o percurso no qual ela se inscreve é um viagem humana: o percurso do jovem que caminha rumo à divindade. Para além deste percurso interno ao poema, podemos também falar do percurso que o próprio poema executa, caminho poético de Parmênides que inaugura a filosofia enquanto busca pelo ser na palavra que se quer justa e verdadeira." (p. 17)

49. ———. 2007. "O frag. 4 de Parmênides." *Anais de Filosofia Clássica* no. 1:91-105.

"Desenvolvo aqui algumas anotações sobre o fr. 4, traíndo minha incapacidade de resistir ao fascínio que este poema primeiro da filosofia ainda exerce sobre mim. Limito-me a explorar o termo apeóntha, experimentando, com Couloubaritsis, uma leitura heterodoxa: proponho compreender "coisas ausentes" como não-entes, seres afastados do ser, em meio aos quais erra o pensamento humano; o noûs é percepção inteligente que fundamentalmente erra, mas que, se apumada na direção do ser, pode adquirir alguma solidez." (p. 91)

50. Muniz, Fernando. 2007. "A Odisséia de Parmênides." *Anais de Filosofia Clássica* no. 1:37-44.

"O que eu pretendo insistir aqui é na relação genética entre poema de Parmênides e a *Odisséia*. Em primeiro lugar, quero explicar o que entendo por relação genética. Não quero dizer que a *Odisséia* explica o Poema da Deusa, nem que há uma continuidade simples, sem ruptura, entre os dois poemas, mas, sim, que Parmênides usou a *Odisséia* não como forma atraente para tratar de temas áridos. Mas, sim, como um arquivo onde selecionou aspectos narrativos relevantes para os quais ofereceu alcance filosófico. Desse modo, penso num tipospecífico de elaboração filosófica a partir de materiais poéticos significativos: imagens, palavras, temas, objetos, personagens etc." (p. 38)

51. Pereira da Silva, José Lourenço. 2010. "Sobre o conceito de *Noeîn* em Parmênides." *Dissertatio* no. 32:177-191.

Resumo: "O verbo *noeîn* e sua substantivação *nóos* pertencem ao vocabulário cognitivo grego na literatura épica e pré-socrática comunicando a ideia de uma apreensão imediata da realidade ou da verdade de um objeto, isto é, um tipo de cognição análogo à percepção sensível em seu caráter intuitivo e direto. Segundo Von Fritz, esses conceitos passaram por uma evolução na qual Parmênides representa um momento decisivo. Em Parmênides, sem perder o aspecto preponderante de uma intuição da natureza das coisas – portanto de captar o ser (*tò eón*) – o *nóos* também opera como raciocínio lógico. Quer dizer, *noeîn-nóos* exerce uma dupla função: é o contato direto com a realidade última e o pensamento discursivo, que argumenta, infere e deduz. Nosso propósito aqui é mostrar como, em Parmênides, essas funções do *nóos* se encontram articuladas."

52. ———. 2014. "Sobre alguns problemas de interpretação difícil no Poema de Parmênides." *Hypnos* no. 12:108-129.

Resumo: "Parmênides de Eléia é o mais importante pensador pré-socrático.

Seu poema filosófico marca um momento decisivo na história da investigação racional no século V a.C. Os fragmentos restantes, objeto de amplo debate entre os estudiosos da filosofia antiga, apresenta problemas para a interpretação do pensamento de Parmênides. Focalizando sua 'via da Verdade', sugiro uma interpretação das lições de Parmênides sobre o ser. Examinou três problemas cruciais extensamente tratados na literatura crítica sobre Parmênides: (i) sua relação com outros filósofos do seu tempo, (ii) o sujeito do verbo ser em seu poema, e (iii) o significado desse verbo no fragmento 2."

53. Pessoa, Fernando. 2007. "Entre pensar e ser, Heidegger e Parmênides." *Anais de Filosofia Clássica* no. 1:78-86.

"O propósito deste texto é mostrar como Heidegger, em seu projeto de superação da metafísica moderna, recoloca a questão do sentido do ser através de uma repetição da compreensão da

identidade entre pensar e ser indicada por Parmênides. Essa demonstração visa a esclarecer o projeto heideggeriano de desconstrução da noção vigente de verdade como adequação, através da interpretação da verdade como descobrimento." (pp. 79-80)

54. Pimenta Marques, Marcelo. 1997. "A presença de Dike em Parmênides." *Kléos* no. 1:17-31.

"No poema de Parmênides, encontramos díke tanto no prólogo (1,14 e 28) quanto no fragmento dito "ontológico" (8,14). Díke detém as chaves que abrem as portas aos caminhos de noite e dia. É díke e não uma má moíra quem manda o jovem percorrer o caminho rumo ao âmago da verdade. E é ainda díke quem mantém o ser firmemente em seus laços. Três momentos que nos revelam o papel ordenador de uma potência divina no centro de um poema filosófico. Dentro do esquema mítico dos caminhos que estrutura o poema filosófico de Parmênides, díke permanece uma figura divina que controla, guia e amarra, companheira de alétheia. Por outro lado, o percurso no qual ela se inscreve é um viagem humana: o percurso do jovem que caminha rumo à divindade. Para além deste percurso interno ao poema, podemos também falar do percurso que o próprio poema executa, caminho poético de Parmênides que inaugura a filosofia enquanto busca pelo ser na palavra que se quer justa e verdadeira." 56. Robbiano, Chiara. 2007. "Duas fases parmenídeas ao longo da via para a verdade: elenkhos e ananke." *Anais de Filosofia Clássica* no. 1:17-32.

"Minha proposta é ler o Poema de Parmênides como uma condução capaz de acompanhar os ouvintes ou leitores em direção à verdade(2). Muitos elementos do texto parmenídeo se prestam a serem lidos nesta chave interpretativa, ou seja, como ajudas oferecidas àqueles que queiram adquirir aquele tipo de conhecimento (verdade, consciência) que o Poema encoraja a alcançar." (p. 17)

(Agradeço especialmente ao professor Fernando Santoro pelo entusiasmo com que se ocupou desta tradução do italiano para o português.

2 Cf. Santoro, F. Os Nomes dos Deuses. In: *O Poema de Parmênides. Da Natureza*. "No Poema de Parmênides, a verdade ontológica do ser não é dissociada da prescrição de correção no agir e no escolher. A proximidade entre ser e dever ser, na expressão da indicação do caminho da verdade, é um traço decisivo do Poema...", p.81.

57. Santoro, Fernando. 2007. "Os nomes dos deuses." *Anais de Filosofia Clássica* no. 1:83-90.

"No Poema de Parmênides, estamos num desses lugares textuais, em que ganha clareza a transição da teogonia mítica para a ontologia filosófica; a transição da celebração dos deuses em suas gestas para os conceitos em sua determinação. No Poema, estão presentes os nomes tradicionais de vários deuses, ora em passagens narrativas, como um mito tradicional, ora já nas passagens mais densas de uma precursora analítica do ser, ora ainda numa efetiva cosmogonia natural.

Este lugar de transição nos põe, já na tradução, um dilema: terão esses nomes o estatuto de conceitos abstratos ou lhes daremos as maiúsculas iniciais, com que caracterizamos hoje a condição personificada de deuses? Optamos, na tradução, pelas maiúsculas, mesmo anacrônicas, para realçar estes nomes, e poder perceber como os deuses, tão presentes na vida do pensamento grego, exprimem também estas idéias

fundamentais com que os filósofos apreendem a realidade."
(pp. 85-86)

58. ———. 2008. "As provas contra o ente, no tribunal de Parmênides." *O que nos faz pensar* no. 17:35-45.

Resumo: "Confluem, para a originalidade da linguagem ontológica de Parmênides, determinadas figuras de linguagem (*skhemáta léxeon*) do campo discursivo da veracidade, entre as quais destacam-se figuras da nascente retórica forense. Isto, evidentemente, já na tradição originária dos filósofos que falam da natureza, que Aristóteles chamou de físicos, fisiólogos. No fragmento 8, a Deusa do Poema de Parmênides leva o ente ao tribunal, denuncia-lhe os sinais (*sémata*) e por fim amarra-o nos liames da Necessidade."

59. ———. 2012. "Da Experiência à Ciência, o Céu de Parmênides." In *Λόγος διδόναι. La filosofia come esercizio del render ragione. Studi in onore di Giovanni Casertano*, edited by Palumbo, Lidia, 115-125. Loffredo: Napoli.

"Mas efetivamente é a recepção do Poema no século XX que levanta a grossa poeira do problema e que acaba por redefinir e reavaliar o sentido e o estatuto em relação à verdade do discurso da "Doxa".

Para esta reavaliação, a meu ver, contribuíram duas ideias importantes, oriundas de formas diversas de aceder ao problema. A primeira, que entende τα ἄδικοῦντα como as coisas que se mostram, ou seja, fenômenos.

Esta tem como porta-voz a leitura fenomenológica de Jean Beaufret, sob inspiração do problema da diferença ontológica de Martin Heidegger. Há uma diferença de perspectiva entre o discurso sobre o ser como fundamento e sobre os entes ou fenômenos nos quais o ser se mostra e é. Assim, o caminho do "não ser" proibido, insondável e indizível não se identifica com a via das opiniões ou do que se mostra,

antes é o abismo face à constatação primordial de que há o ente e não antes o nada. O nada pertence ao discurso constitutivo do ser como fundamento. Do ser, abre-se o sentido do mundo que se mostra para

o homem.

A segunda ideia entende a dóxa como o caminho da experiência constitutiva do conhecimento e da ciência, para esta ideia contribuiu particularmente o livro de Giovanni Casertano, *Parmenide il metodo la scienza l'esperienza*. Tomo aqui a liberdade de entender a experiência a partir da qual se constitui a ciência como uma experiência não apenas de conhecimento, mas como uma completa experiência vital, carregada de emoção e sentido: como uma plena experiência humana.

Exemplifico a partir de um verso da dóxa, ou da física, ou da cosmologia de Parmênides." (p, 118)

60. ——. 2020. "Vênus e a Erótica de Parmênides." *Anais de Filosofia Clássica* no. 1:83-90.

Resumo: "O século XXI começa com muitas viradas interpretativas com relação aos pensadores pré-socráticos, entre os quais Parmênides de Eleia. Investigo como os conteúdos cosmológicos contidos nos fragmentos do Poema podem ser integrados ao programa parmenídeo de conhecimento da verdade pelo pensamento. Neste caminho vislumbram-se descobertas científicas relativas à Lua, a Vênus e outras. Proponho ainda que uma antiga forma de integrar o conhecimento de conteúdos astronômicos ao conhecimento de conteúdos relativos à geração e ao sexo, que compõem os assuntos físicos do Poema, dá-se na forma de uma interpretação erótica do mundo, regido por Eros e por Afrodite."

"Esta comunicação visa três objectivos:

1. mostrar que a influência de Parménides na tradição próxima e futura da Filosofia se deve ao argumento sobre o ser, desenvolvido na Via da Verdade;
2. propor uma leitura e interpretação sumárias do argumento em que é abordada a problemática do ser;
3. sugerir uma via para a compreensão do impacto que teve na tradição."

63. ——. 2012. "A questão da "Existência" no Poema de Parmênides." *Filosofi a Unisinos* no. 13:182-198.

Resumo: "O texto estuda o uso do verbo grego 'ser' por Parmênides com vista ao estabelecimento do conceito de 'ser' pelos pensadores por ele influenciados.

Foca a noção de 'existência' tentando avaliar a correção do nosso uso do verbo 'existir' para traduzir o verbo grego 'einai' no Peri physeôs. Baseado em considerações de ordem cognitiva, Parmênides avança a sua tese sobre a impossibilidade de conhecer "o que não é" (B2.5-8a) visando estabelecer "o que é" como "o que há para pensar" (B2.2; B8.15-

18), para permitir a identidade de “pensar” e “ser” (B3; B8.34). Se, ao longo do argumento da Via da Verdade, Parmênides lê a existência como um pressuposto de “o que é”, mas nunca como um predicado separado, devem ser rejeitadas as leituras existenciais do verbo ‘ser’ nas traduções das expressões que nomeiam os dois caminhos (B2.3; B2.5).”

64. ——. 2012. "A leitura de "É/Enao É" a partir de Parmênides, B2." *Dissertatio* no. 36:11-31.

Resumo: "Interpreto antepredicativamente o argumento de Parmênides na “verdade” do *Da natureza*. Chamo ‘antepredicativa’ a uma interpretação que, explorando a ausência de sujeito e predicado em “é/não é” (B2.3,5), lê os dois caminhos como expressões autoreferenciais, negando às formas verbais usadas o valor de cópulas. Da incognoscibilidade de “que não é” (B2.6-8a) resulta a “decisão de abandonar esse ‘não-nome’ (anônimo: B8.17) como via de investigação” (B8.17-18a), “deixando” ‘que é’ (B8.2) como o único [‘nome’]” (B8.1b-2a) que “pode ser pensado” (B8.18b). Nesta interpretação, ‘ser’ não é objeto de ‘pensar’, nem pensar’/‘pensamento’ a faculdade que capta o “ser” (B3, B8.34), mas o estado cognitivo infalível em que “pensamento, pensar e pensado são” (B6.1a). A leitura antepredicativa de Parmênides deixou sinais em textos de Platão, Górgias e Protágoras, alguns anunciando a captação da antepredicatividade pela predicação, nos diálogos platônicos.”

65. ——. 2015. "Parmênides e a antepredicatividade." *Filosofia. Revista da Faculdade de Letras da Universidade do Porto* no. 32:9-33.

Resumo: "O texto propõe uma interpretação antepredicativa dos argumentos de Parmênides na Alêtheia do seu Poema. Lida antepredicativamente, a oposição do par de esti sem sujeito em ambos os «caminhos para pensar» (B2.2) implica apenas que se um deles «é» (B2.3), então necessariamente o outro «não é» (B2.5). Esta oposição justifica a necessidade de escolher (B8.15) entre eles, abandonando «a via impensável e anônima » (B8.17-18; B2.7-8), conseqüentemente deixando «é» como a via autêntica (B8.18). Devido ao hábito de confiar nas

sensopercepções (b7.3-5a), as «opiniões dos mortais» ignoram esta oposição (B64-9), «considerando o ser e não-ser o mesmo e o não-mesmo» (B6.8-9a; B8.40). Contudo, os homens não deviam errar (B8.54), levados pela mistura dos seus membros (B16.1-2a), «pois, o pleno é pensamento » (B16.4b; B9.1-4)."

66. Soares, José de Ribamar Barreiro. 2014. "A questão metafísica em Parmênides. O ser. é, o não-ser não é." *Cadernos Aslegis* no. 53:25-27.

Resumo: "Este trabalho tem como objetivo analisar a abordagem metafísica feita por Parmênides a respeito do ser, considerando que o ser não pode ser gerado, transformado ou destruído. Isto significa que toda mudança bem como os opostos decorrem de uma falácia criada pelos sentidos, razão pela qual a busca pela essência do ser deve seguir o caminho da razão."

67. Soares, Marcio. 2008. "Sobre ser, pensamento e discurso no poema de Parmênides." *Intuitio* no. 1:232-248.

Resumo: "Visamos tratar das relações entre ser, pensar e dizer na filosofia de Parmênides de Eléia.

Nesse sentido, procuramos demonstrar a sistemática imbricação entre essas três dimensões, na medida em que, segundo o Filósofo eleata, apenas o que realmente é (o ser) pode ser dito e pensado, como uma senda segura de investigação filosófica. Visamos, ainda, demonstrar que o não-ser acaba por figurar apenas como uma expressão lingüística puramente negativa na filosofia parmenídica, sem qualquer correspondência real (ôntica). Com isso, queremos defender que a via do não-ser e a opinião dos homens mortais são distintas e não podem ser confundidas. A partir dessa proposta interpretativa do poema de Parmênides, especulamos sobre os limites e paradoxos de sua filosofia ao pensar o não-ser como expressão negativa na linguagem, ao mesmo tempo em que o Filósofo proíbe completamente sua investigação. Também procuramos, ao final do texto, discutir o próprio conceito de discurso que resulta como consequência da filosofia parmenídica, especialmente em relação à opinião.

Para tanto, começamos analisando o próêmio do poema parmenídico desde a perspectiva da tradição poética grega, tentando demonstrar que nosso Filósofo reside em uma região fronteira entre a poesia e a filosofia nascente."

68. Spinelli, Miguel. 1997. "O exame de Aristóteles da proposição ontológica de Parmênides." *Revista Portuguesa de Filosofia* no. 53:323-349.

Resumo: "Resumo: Embora Aristoteles considere a formula ontologica de Parmenides (i)<; como primitiva e incomplete faz dela, todavia, o fundamento de todo o discurso verdadeiro Interessado, sobretudo, em rever a teoria das Ideias de Platao, e bem provavel, inclusive, encontrado na formula de Parmenides, alem de motiva^ao para o seu proprio empenho, sintatico-semantico do discurso ontologico, mais precisamente, dos modos ou categorias podemos expressar-nos gramatical e filosoficamente."

69. Suárez de la Torre, Emilio. 2011. "El problema de Parmênides." *Humanitas*:27-59.

Resumo: "Este artigo foca dois elementos convergentes: 1. Uma tentativa de explicação do chamado estilo 'áspero' de Parmênides, que pode ser justificado como uma 'estratégia de estilo' em busca de uma perfeita adaptação da linguagem aos princípios defendidos. 2. Algumas reflexões sobre a auto-apresentação de Parmênides em relação ao contexto social e religioso, tendo em conta não só as circunstâncias contemporâneas, mas também a imagem do filósofo projectada na tradição local."

70. Vanin, Andrei Pedro. 2017. "As 'Raízes da verdade' no próêmio do poema 'Da natureza' de Parmênides." *Gavagai* no. 4:103-120.

Resumo: "O texto procura evidenciar como algumas noções de verdade presentes, sobretudo, na *Odisseia* e na *Iliada*, influenciaram a definição de verdade proposto no poema *Da Natureza* de Parmênides. A vasta literatura a respeito do tema, de modo geral, considera Parmênides o 'divisor de águas' entre a poesia e filosofia. Dada a importância filosófica do poema, ao

enunciar pela primeira vez a identidade entre o ser e o pensar, esquece-se de ressaltar, no mais das vezes, fato não menos importante, a teoria literária subjacente ao poema, bem como as influências e semelhanças com os mitos precedentes. Sendo assim, parte-se de uma rápida caracterização do modo pelo qual a noção de verdade é apresentada em passagens específicas da *Odisseia* e da *Iliada*. O segundomomento, apresenta rapidamente e de modo geral, a noção de verdade no poema de Parmênides, para após, buscar por contraste as semelhanças/dessemelhanças em relação aos poemas ditos homéricos, centrando-se a análise no próêmio do poema *Da Natureza*, onde pode-se ilustrar um contexto de teoria literária arcaica específico presente em ambos os textos a serem analisados, a saber: a adequação do assunto e estilo."

71. Veccho Alves, Daniel. 2020. "Parmênides no carro das sombras." *Nuntius Antiquus* no. 16:7-30.

Resumo: "Com a invasão persa do século VI a.C., diversos filósofos jônicos precisaram deslocar suas escolas para a Grécia continental e a Magna Grécia, fluxo emigratório intenso constituído por refugiados extremamente cultos. Entre alguns desses ilustres

emigrantes, encontramos Pitágoras de Samos, Xenófanes de Cólofon e Parmênides de Eléia. Exilados da Jônia cada um a seu tempo, esses cosmólogos e filósofos, conhecidos erroneamente pela etiqueta dos "pré-socráticos", promoveram a filosofia tanto quanto Sócrates. Acostumados aos contatos interculturais promovidos em sua região (com babilônicos, egípcios e gregos), os pensadores jônicos se tornaram sensíveis ao problema da verdade e à ideia de examinar criticamente um relato quanto a sua capacidade de extrapolar impressões sensoriais, ou seja, quanto a sua capacidade de apreensão intelectual do real. Por fim, investiga-se mais detidamente, em Parmênides, a plenitude de uma transformação filosófica dos elementos sensíveis do mundo em elementos racionais do pensamento humano, tendo como base a análise dos fragmentos de sua obra intitulada *Da Natureza*."

A Selection of Critical Studies on the Poem of Parmenides

Fr. B1: The Proem

Our only source for the verses 1-28 is Sextus Empiricus, *Against the logicians*, VII, 111; verses 29-30 are also contained in Simplicius *Commentary on De Caelo (On Aristotle's 'On the heavens')* book III, p. 557, 20 ff.; Simplicius is the only source for the verses 31-32).

Sextus gives the most ancient commentary on Parmenides' Proem (op. cit. VII, 112-114):

"(112) In these words Parmenides is saying that the "mares" that carry him are the non-rational impulses and desires of the soul, and that it is reflection in line with philosophical reason that is conveyed along "the famed road of the goddess". This reason, like a divine escort, leads the way to the knowledge of all things. His "girls" that lead him forward are the senses. And of these, he hints at the ears in saying "for it was being pressed forward by two rounded wheels," that is the round part of the ears, through which they receive sound. (113) And he calls the eyes "daughters of Night," leaving the "house of Night," "pushed into the light" because there is no use for them without light. And coming upon "much-punishing" Justice that "holds the corresponding keys" is coming upon thought, which holds safe the apprehensions of objects. (114) And she receives him and then promises to teach the following two things: "both the stable heart of persuasive Truth," which is the immovable stage of knowledge, and also "the opinions of mortals, in which there is no true trust" -- that is, everything that rests on opinion, because it is insecure. And at the end he explains further the necessity of not paying attention to the senses but to reason. For he says that you must not "let habit, product of much experience, force you along this

road to direct an unseeing eye and echoing ear and tongue, but judge by reason the argument, product of much experience, that is spoken by me".

So he too, as is evident from what has been said, proclaimed knowledgeable reason as the standard of truth in the things that there are, and withdrew from attention to the senses." (pp. 24-25)

From: Sextus Empiricus, *Against the Logicians*, Translated and edited by Richard Bett, Cambridge: Cambridge University Press 2005.

"The fragments of Parmenides are an important monument of Greek poetry at the end of the sixth or the beginning of the fifth century B.C. In time they cannot be far removed from Pindar's Pythian x, which was written in 498, or from his Pythians VI and XII, which were written in 490. With these flights of lyrical genius the poem has little in common, but it belongs to the same age, and it has suffered from being too often considered either in isolation as a contribution to truth or as an episode in purely philosophical poetry. But it presents questions to the literary critic which have little direct relation to its metaphysics; and particularly in the Proem Parmenides attempts a manner of writing so unusual that it is easy to dismiss it as an eccentricity of a philosopher attempting a task for which nature had not equipped him. But Parmenides was a careful and singularly exact writer, and the composition of his Proem no doubt cost him as much pains as the exposition of reality which it precedes. In it he had something to say of great importance, and he adopted a remarkable method to which Greek poetry presents hardly any parallel. The origins of his method have been studied, but a knowledge of them does not explain either what he meant to say or what his contemporaries would see in his words. If we can understand what the Proem meant in the thought of his time, we may perhaps understand better how Parmenides viewed his calling as a philosopher.(1)

Diels was surely right in assuming that behind Parmenides' Proem there lies a considerable literature which has almost entirely disappeared. There were certainly poems which described descents into hell,(2) and there may have been poems which described ascents

into heaven, although the evidence for them is scanty and the story of Empedotimus, told by Servius, *ad Georg.* I. 34, cannot be pressed, since its date is not known. But even if such ascents had a poetry of their own, it seems to be quite different from that of Parmenides. For these poets surely told of such adventures as facts which they expected to be taken as literally true. When Epimenides told of his converse with nymphs in a cave, he stated what he claimed to be a fact.' It could be believed or disbelieved, but there was no question of allegory or symbolism. But Parmenides is plainly allegorizing. The allegory may of course be based on something akin to a mystical experience, but it is none the less an allegory. The transition from Night to Day is the transition from ignorance to knowledge; the Sun-maidens who accompany the poet are the powers in him which strain toward the light; the horses who know the road are his own impulses towards truth; the way on which he travels is the way of inquiry. The allegory is revealed as soon as the goddess begins to speak. For then the way with its three different branches becomes the ways of truth, of not-being, and of opinion. The allegory breaks down when the poet gets to his real task, and we may be certain that till then Parmenides is not giving the literal record of a spiritual adventure but clothing his search for truth in an allegorical dress.

Parmenides' Proem may be called allegorical because it has two meanings--the superficial meaning which tells a story and the implied meaning which gives the essential message of the poet. He tells of a chariot journey through gates to a goddess, but what he really describes is the transition from ignorance to knowledge. The use of allegory on such a scale is extremely rare in early Greek poetry. The first signs of it may be detected in Homer's account of the *Aitiai*(2) and in Hesiod's steep path which leads to *Arethé*.(3) But in neither of these is much added to the essential facts by the allegorical dress, and in both the allegory is closely related to traditional mythology." (pp. 97-99)

Fr. B2: The Ways of Enquiry

"Then what roads of enquiry can be thought of? [Fragment B 2] mentions two roads: Road (A) is described in line 3, and proved by line 4 to be the Way of Truth; Road (B) is the 'track beyond all tidings', delineated in line 5. [B 6]. 3-4 also mentions two roads: Road (C), described in lines 4-9, is that 'along which mortals . . . wander', and it is therefore the Way of Opinion. The 'first road' of line 3 also has pitfalls (for the goddess 'restrains' Parmenides from it); and it cannot therefore be identical with Road (A), the Way of Truth. Now lines 1-2 contain the end of an argument concerned with this 'first road' ; and, as I shall show, it is plausible to find the beginning of the argument in [B 2] 7-8, which starts to recount the horrors of the 'track beyond all tidings'. If that is so, then the 'first road' of [B 6] is identical with Road (B); and in consequence Road (B), the 'track beyond all tidings', is not the Way of Opinion.

[B 2] and [B 6] show Parmenides at a crossroads, faced by three possible paths of inquiry: (A) the Way of Truth; (B) the 'track beyond all tidings' and (C) the Way of Opinion. (8) The first duty of the goddess is to characterize those three roads in a logically perspicuous fashion. Road (A) maintains 'both that it is (*esti*) and that it is not for not being' (B2. 3) ; (9) Road (B) maintains 'both that it is not and that it is necessary for it not to be' (B2. 5); Road (C) is not explicitly described in comparable terms, but must have maintained 'both that it is and that it is not' (cf. [B 6.8]).

The three roads are thus distinguished by means of the word '*esti*', 'it is'. Both the sense of the verb and the identity of its subject are matters of high controversy. Since they are also vital to any

interpretation of Parmenides' argument, we cannot burke the issue. I begin by asking what is the sense of the verb '*einai*' as Parmenides uses it here. The classification of the different 'senses', or 'uses', of the verb '*einai*' is a delicate task, abounding in linguistic and philosophical difficulties; (10) and my remarks will be crude and superficial. Nevertheless, something must be said.

We can distinguish between a complete and an incomplete use of '*einai*': sometimes a sentence of the form '*X esti*' expresses a complete proposition; sometimes *esti* occurs in sentences of the form '*X esti Y*' (or the form '*X esti*' is elliptical for '*X esti Y*'). In its complete use, '*einai*' sometimes has an existential sense: '*ho theos esti*' is the Greek for 'god exists'; '*ouk esti kentauros*' means 'Centaurus do not exist'. In its incomplete use, '*einai*' often serves as a copula, and the use is called predicative: '*Sokrates esti sophos*' is Greek for 'Socrates is wise'; '*hoi leontes ouk eisin hemeroi*' means 'Lions are not tame'. Many scholars think that Parmenides' original sin was a confusion, or fusion, of the existential with the predicative '*einai*'; and they believe that the characterization of the three roads in [B 2] catches Parmenides *in flagrante delicto*. If we ask what sense '*esti*' has in line 3, the answer is disappointing: '*esti*' attempts, hopelessly, to combine the two senses of 'exists' and 'is Y'. (11)

Now I do not wish to maintain that Parmenides was conscious of the distinction between an existential and a predicative use of '*einai*'; credit for bringing that distinction to philosophical consciousness is usually given to Plato. But I do reject the claim that [B 2] fuses or confuses the two uses of the verb. I see no reason to impute such a confusion to the characterization of the three roads; for I see no trace of a predicative 'is' in that characterization. The point can be simply supported: Road (B) rules out 'X is not'; if we read 'is' predicatively, we must suppose Parmenides to be abjuring all negative predications. to be spurning all sentences of the form 'X is not F'. Such a high-handed dismissal of negation is absurd; it is suggested by nothing in Parmenides' poem; and it is adequately outlawed by such lines as B 8.22, which show Parmenides happy to accept formulae of the form 'X is not F'. (12) '*esti*', in the passages we are concerned with, is not a copula.

Then is '*esti*' existential? Aristotle distinguishes what has been called a 'veridical' use of '*esti*'; '*X esti*', in this use, is complete, and '*esti*' means '. . . is the case' or '. . . is true'. If Socrates asserts that cobblers are good at making shoes, his interlocutor may reply '*esti tauta*', 'Those things are' or 'That's true'. It has been suggested that Parmenides' complete '*esti*' is veridical, not existential.

That suggestion can be accommodated, I think, to [B 2] and [B 6]; but the accommodation is not easy, nor (as far as I can see) does it have any philosophical merit. In any event, the suggestion breaks on the rocks of B 8: in that fragment, Parmenides sets himself to infer a number of properties of X from the premiss that *X esti*. None of those properties consists with the veridical reading of '*esti*': the very first inference is that X is ungenerated; and if it is not, strictly speaking, impossible to take 'X' in 'X is ungenerated' to stand for the sort of propositional entity of which veridical '*esti*' is predicable, it is grossly implausible to do so, and the implausibility mounts to giant proportions as the inferences of B 8 proceed. Since the inferences in B 8 are tied to the '*esti*' of [B 2] and [B 6], the veridical reading of *esti* in those fragments can only be maintained at the cost of ascribing to Parmenides a confusion between veridical and non-veridical *einai*. And I see no reason for making that derogatory ascription. (13)

Existential '*einai*' remains. The obvious and the orthodox interpretation of '*esti*' in [B 2] and [B 6] is existential; and that interpretation is felicitous: it does not perform the impossible task of presenting Parmenides with a set of doctrines which are true, but it does give Parmenides a metaphysical outlook which is intelligible, coherent and peculiarly plausible. I shall continue to translate Parmenides' '*einai*' by 'be'; but I shall paraphrase it by 'exist'.

Road (A) thus says that 'it exists', *esti*. Scholars have naturally raised the question of what exists: what is Parmenides talking about? what is the logical subject of '*esti*'? Some have denied the appropriateness of the question, urging that we need no more ask after the subject of '*esti*' than we do after '*hueti*', 'it is raining'. I find that suggestion perfectly incomprehensible. (14) Nevertheless, the spirit behind it is sound: '*esti*' need not have a logical subject. For in general, we can make sense of a sentence of the form 'it ϕ s' in either of two ways:

first, we may find a determinate reference for 'it', so that 'it φ s' is understood as '*a* φ s'. ('How is your motor car?' -- It's working again'.) Here we do look for a logical subject and we expect to find it, explicit or implicit, in the immediate context. Second, 'it φ s' may be the consequent of a conditional or a relative sentence: 'If you buy a machine, look after it'; 'Whatever machine you buy, something will go wrong with it'. In ordinary discourse, the antecedent is often not expressed: 'What will you do if you catch a fish? -- Eat it'. Here there is no question of finding a logical subject for the predicate ' φ s': 'it' does not name or refer to any particular individual.

One standard view gives '*esti*' in [B 2].3 a logical subject: that subject is 'Being'; and Road (A) asserts, bluntly, that Being exists. I am at a loss to understand that assertion; what in the world can be meant by 'Being exists'? Nevertheless, behind abstract Being there lurks a more concrete candidate for the post of logical subject: '*to eon*', 'what is': should we gloss '*esti*' as 'what is, is'? (15)

Phrases of the form 'what φ s' do not always serve as logical subjects: 'what φ s' may mean 'whatever φ s' ('What's done cannot be undone'); and then 'what φ s ψ s' means 'for any x: if x φ s, x ψ s'. Thus we might gloss Parmenides' '*esti*' by 'what is, is', and yet deny that 'what is' is a logical subject; for we might explain the phrase by '*whatever is, is*'. Road (A), on that view, maintains that whatever exists exists and cannot not exist. It has been objected to that interpretation that Parmenides attempts to prove that Road (A) is right, and Roads (B) and (C) mistaken; but that the interpretation makes (A) tautologous, and hence in no need of proof, and (B) and (C) contradictory, and hence in no need of disproof. But the objection is doubly mistaken: first, tautologies can, and sometimes should, be proved; and contradictions can, and sometimes should, be disproved. Second, Road (A) does not turn out tautologous; since it is far from a tautology that what exists *cannot not exist*.

'What φ s' may mean 'the thing that φ s', and serve as a logical subject. Thus '*to eon*' may mean 'the thing which exists'. Then Road (A) maintains that the thing that exists -- 'the One' or 'the Whole' or 'Nature' -- exists and cannot not exist. It has been objected to that interpretation that Parmenides proceeds in B 8 to prove that the subject of his poem is One; and that he can hardly have intended to

prove the tautology that 'the One is one'. Again, the objection is weak: first, Parmenides may have tried to prove a tautology; second, it is far from clear that Parmenides ever does try to prove that the subject of his poem is One; and thirdly, it is not clear that it is tautologous to say that 'the Whole' or 'Nature' or 'Reality' is one.

Nevertheless, I do not believe that '*to eon*', on either interpretation, is a likely supplement to Parmenides' *esti*. The reason is simple: nothing in the context of [B 2] could reasonably suggest to even the most careful reader that by 'it is' Parmenides meant 'what is, is'. The term 'what is' does not appear in B 1 or in [B 2]; and it is not the sort of term a reader would naturally supply for himself. (16)

A close investigation of the context of [B 2] has supplemented '*esti*' in a different way: instead of 'what is', supply 'what can be thought of or 'what can be known'. Road (A) then says that 'what can be thought of exists'; and 'Parmenides' real starting-point is . . . the possibility of rational discourse' or of thought. (17) My objection to that suggestion is a weaker version of my objection to '*to eon*': nothing in the introductory context of [B 2] suggests such a supplement for '*esti*' at line 3; reflexion on the subsequent argument may indeed lead us to 'what can be thought of', but it will also lead us to berate Parmenides for a gratuitously roundabout and allusive way of expressing himself; for the most careful reader, on this view, will only understand the crucial lines of [B 2] after he has read a quantity of later verses.

Nonetheless, the philosophical advantages of the interpretation are considerable; and we may well be loth to abandon the spectacle of a Parmenides who investigates, in Kantian fashion, the implications of rationality. We can retain the advantages and avoid the objection by modifying the interpretation slightly. I suggest the following paraphrase for lines 1-3: 'I will tell you . . . the different conceivable ways of inquiring into something -- the first assumes that it exists and cannot not exist . . .' In the paraphrase, 'it' has an explicit antecedent, and 'inquiring into' has an explicit object: viz. the word 'something'. In the Greek text there is no explicit subject for '*esti*' and no explicit object of '*dizêsios*' ('inquiry'). Subject and object must both be supplied, and nothing is easier than to make this double task one: the implicit object of '*dizêsios*' is the implicit subject of '*esti*'. 'Of the ways of inquiring [about any given object], the first assumes that

[the object, whatever it may be] exists." (Chapter IX: *Parmenides and the Objects of Inquiry*, pp. 125-128 of the 1982 edition)

Notes

(8) The reference of *tautês* in [B6].3 has caused some difficulty (see especially Stokes [1971], 112-15); but as far as I can see that word refers simply enough to the Road discussed in [B2] and [B6].1-2 (see Cornford [1933], 99-100).

(9) The second half of [B2].3 is syntactically ambiguous: the *esti in ouk esti me einai* may be either 'personal' or 'impersonal' ('It is not for not being' or 'It is not possible for it not to be'). Line 5 proves that the sense is: 'It cannot not be'; and I take it that either syntax will yield that sense.

(10) See especially Kahn [1973]; there is a useful table on p. 82 presenting a summary classification of the roles played by *einai*.

(11) Eudemus, fr. 43 Wehrli = A 28, says that the Eleatics ignore different uses of *einai*; but the Peripatetic and the modern accusations are quite distinct. Furth [1968] maintains that the notions of existence and of the copula are 'impacted or fused in the early Greek concept of being' (243). He cites no evidence; and he does not explain the difference between fusion and confusion. Kahn [1973], 320-3, argues that existential *einai* -- his Type VI -- was invented in the fifth century; but I cannot distinguish Type VI from the early Type I.

(12) '. . . negative judgments (*hoi apophatikoi logoi*), as Parmenides says, fit principles and limits' (Scholiast to Euclid, A 22a in Untersteiner [1958]'s edition); but the sense and reliability of the report are uncertain.

(13) The veridical use of *einai* is discussed in Kahn [1966], and applied to Parmenides in Kahn [1968]. Kahn's view is complicated by the fact that he maintains first that the veridical use of *einai* involves both the existential and the predicative uses ([Kahn 1968], 712), and second, that Parmenides' *esti* means both 'it is the case' and 'it exists' (ibid., 336). Mourelatos [1970], ch. 2 and Appendix 2, claims to follow Kahn; but he says that *esti* is the 'is' of 'speculative predication' (predication which gives insight into the identity of

something or says what it is). That is not a special sense of *esti*; nor can I give any account of the three Roads in terms of it. Holscher [1969], 79 and 98, holds that *esti* is neither existential nor predicative: it means 'seiend sein', 'Bestand haben', 'wahr sein'. Jones [1973], 290-1, thinks that Parmenides is proposing a new sense of *einai*, which he explains in [B3]. None of these modern suggestions has any linguistic or interpretative plausibility; and none is worth considering unless there are grave objections to the existential construe of *esti*.

(14) Some scholars talk vaguely of an 'indefinite' subject. Loenen [1959], 12-14, emends line 3 to read: . . . *hopôs esti ti kai hês* . . . ('that something (*ti*) is . . .'). Untersteiner [1958], LXXV-XC, takes the subject of *esti* to be he [*hodos*], 'the one [road]'; and 156.17-18 supports the suggestion. But that gives Parmenides grammar at the cost of sense.

(15) Reinhardt [1916], 60, supposes a lost line before [B2] in which Parmenides refers to *to eon*; Cornford [1939], 30, n. 2, emends line 3 to read: *Hê men hopôs eon esti* . . .

(16) Tugendhat [1970], 137, says that 'what Parmenides is dealing with is that (i.e. "the Whole") which previous philosophers had always dealt with'; so that the philosophically educated reader will grasp the subject of the poem at once (cf. Verdenius [1942], 32: Verdenius, 73-5, argues that the poem was explicitly entitled *Concerning Nature*). The Milesians had indeed described the universe as a whole; but they had not, in any very obvious sense, made statements about 'the Whole'.

(17) See especially Owen [1960]; I quote from Stokes [1971], 119-22.

F. Wehrli (ed.) *Die Schule des Aristoteles* (Basel, 1967–92)

From: Jonathan Barnes, *The Presocratic Philosophers*, London: Routledge Kegan Paul 1979; revised edition in one volume 1982.

"What is declared to exist in B 2 is simply what can be talked or thought about; for the proof of its existence is that, if it did not exist, it could not be talked or thought about. (On our version of B 6. 1-2 the subject comes into the open there: *to legein te noein t'eon.*) (50) And it needs no proving that the subject of the argument can be

talked and thought about, for we are talking and thinking about it. Hence indeed the temptation to say that the *éstin* has no subject; for Parmenides' argument need assume nothing save that we are thinking and talking of something, and this seems to be guaranteed by our framing or following the argument at all. The subject is quite formal, until it is filled in with the attributes (beginning with existence) that are deduced for it; and because this seems to reduce to the vacuous discovery that the subject is just the subject, it is as tempting as it is certainly illogical and misleading to say that there is no subject at all.

Is this too small a mouse from the mountain? Philosophically it seems more like the giant that Parmenides' successors thought it. The comparison with Descartes' *cogito* is inescapable: both arguments cut free of inherited premisses, both start from an assumption whose denial is peculiarly self-refuting. This seems sufficient to establish that Parmenides does not, in the sense described, rest his argument on assumptions derived from earlier cosmologists. To me it seems sufficient to establish him as the most radical and conscious pioneer known to us among the Presocratics." (*Logic, Science, and Dialectic. Collected Papers in Greek Philosophy*, pp. 15-16)

Notes

(50) [Lest this mislead, it must be emphasized that the problem has never been to supply a *grammatical* subject for the *éstin* and *οὐκ éstin* of B 2 (save for emendators such as Cornford and Loenen), for there is sufficient evidence that, at the start of the argument at least, Parmenides is prepared to dispense with one. The problem is to decide what must be supposed true, from the start, of whatever it is that Parmenides exhibits in the course of his argument as existing without beginning or end or change or plurality. I argue that this subject must simply be what can be spoken and thought of (told forth, picked out in speech -- (*φραζειν, λέγειν, φατιζειν*, cf. the contrasted *άνωνυμον*, B 8. 17; distinguished and grasped in thought -- *γιγνώσκειν, νοειν*). For one reviewer this still left the subject too 'definite' (Kerferd, *Classical Review* 1961, 26), and one can only ask what it would be to have a more indefinite subject than one which can merely be thought and spoken of: which of these attributes

would it lack, and what nonsense would result? Another scholar, by contrast, found such an account of the subject 'rarefied and abstract' (A.P.D. Mourelatos, *The Route o Parmenides* (New Haven 1970), xiv) but himself proposed to translate the tatty and ouk éstin as '--is -' and '-- is not --', 'with blanks in both the subject and the predicate place' (ibid. 55).] But those who wish to set his poem inside an orthodox cosmological tradition have one prop left to rest on: the spherical universe, whose appearance is the outcome of the whole argument."

(51) 'In the sense described': I am not of course denying that some of the ideas employed in the course of the argument may have been inherited from earlier theorists. This must be true of some of the cosmogony, and probably of at least the idea of πείρας in the Αλήθεια (see the third section of the paper).

Collected Papers in Greek Philosophy*, Ithaca: Cornell University Press 1986, pp. 3-26.

Fr. B3: Thinking and Being

...το` γα` ρ αὐτο` νοεῖν ἐστίν τε και` εῖναι.

"As examples of semiotic analysis I have selected classical and, as far as possible, non-problematic older texts from the tradition on which our philosophy is founded, that is, the Greek tradition. Their clarity is a function of the non-ambiguity of translations, which is, of course, always relative since it itself is already an interpretation; in fact, variations in translation appear in our own language, as philosophical or any other dictionaries reveal (by the enumeration of synonyms and homonyms). Polysemy can be substantially reduced by investigating the context and comprehending the meaning as defined, on the whole, by the tension between context and situation - to the extent, of course, that we are able to comprehend the situation.

For a first example I have chosen a sentence from Parmenides, fragment 3: *to gar auto noein estin to kai einai*, translated by Diels: *denn (das Seiende) denken und sein ist dasselbe*; by W. Capelle: *Denn (nur) ein und dasselbe kann gedacht werden und sein*; and by E. Cassirer: *Dasselbe ist Denken und Sein.*(3)

If we look at the syntactic side of semantic analysis, we see that everyone connects to-- *auto* and *noein* -- *einai* by means of *estin* and that the translations in general do not differ greatly, at least at first glance, with regard to the "sense," despite the fact that some translators insert words expanding the original text, and in so doing, already direct the interpretation. Let us suppose that we now choose the simplest translation, Cassirer's "it is the same to think and to be" and that we first examine without further interpretation those syntactic aspects of the texts which are important in determining the meaning. The most important is *estin*. Here logical syntax distinguishes three possibilities which could be illustrated by the following examples: (a) $1 + 1 = 2$, (b) the crow is black, (c) ice is water. The first means a complete "identity" and tautology; in fact, the sentence can be reversed. The second case is an "inclusion" of a subclass; the crow is included in the class of black things. The third case represents an "identity" with regard to the third thing (the physical substance). Now, we can ask which case is applicable to the sentence: "It is the same to think and to be." The word "is" is semantically determined by the modifier "same," which would point to the first case, to a complete identity (thought = existence). Let us suppose that we accept this result; the question now is whether in such a case the "sense" is given without any ambiguity. How did Parmenides understand it and what did he mean by it? What did he want to say through this fundamental thesis of his? Is it meant subjectively (I think = I am), or, perhaps, in an objectivist sense as with Hegel, or is it meant in another, different way? What meanings did the words "to think" and "to be" have for Parmenides in his situation? Do we understand something similar by our own words in our own situation?

Neither syntax nor simple lexical semantics helps us here. We must study the whole of the context and especially passages worded identically and probably having identical meaning or intention. Hence we reach for the nearest sentence that seems to express the

same thing or to clarify the first text. In Diels we read in fragment 8, verse 34: *t'auton d'estin noein to kai houneken estin noema*,⁽⁴⁾ which is translated by Diels: *Denken und das Gedankens Ziel ist ein und dasselbe*; by Capelle: *Dasselbe aber ist Denken und des Denkens Gegenstand*. If we now compare the first sentence (fragment 3) with the second sentence (fragment 8), we find that "being" as an object of thinking coincides with thinking about that being. The subjectivist interpretation, approximately as in Descartes, would seem to be put aside, but surely the meaning is not yet fully clear for that reason. Diels, however, does have grounds for his analysis, that is to say, for his interpretation in terms of "substance" (*einai* -- *to on*, *das Seiende*), which he supports by the whole text of Parmenides' poem, by Parmenides' intention to recognize what actually "is," and to assert the impossibility of knowing what "is not." But if we are to decide for a definite interpretation, then we must not only study the whole of Parmenides' poem, but also examine other texts to which, in this instance, Parmenides might directly or indirectly be tied, that is, look at the part of philosophy which could have been known to him. Moreover, we have to try to disclose Parmenides' own intuition by considering an analogous situation and, in this way, explain the proper intention of his thought. All of this will be relevant to the interpretation that we finally give to the words "thought and being are one" or "to think and to be is the same thing." Thus, the unambiguity of the meaning does not depend only on the syntax and semantics of individual words in the sentence or of the sentence as a whole, but primarily on the situation.

The question now is: what meaning did *einai* and *noein* have for Parmenides in his immediate situation? Furthermore, did he distinguish *einai* and *to on*, *noema* and *noein*, being and existence, content and object of thought? Let us assume that we know the following about his relation to predecessors or to contemporaries and followers in the Eleatic school: Parmenides responds in his poem partly to the teaching of Heraclitus on origin, partly to the teaching of Anaximander on apeiron, and simultaneously to the teaching of the Pythagoreans, who were endeavoring to demarcate, to define, the "boundless" quantitatively. He applied a more profound concept of existence or being not only as physical existence in space, but also as substance, the essence of the physical, which is

not quantitatively definable, like matter, and of which it cannot be said that it appears "more" here and "less" there (since "to be" means either that [something] "is" or "is not"). This substance is definable by thought as its own object and without it nothing exists.

Apparently, what is at stake is to overcome, to demonstrate if you like, the impracticality of "negation" for knowledge and to establish the basic "position" prior to any thought of particularities. Here we have a case of a confrontation with the "boundless," with the identification of existence with the world of numbers and thus with the views of Anaximander and the Pythagoreans. What is at stake is a higher reality than reality originating empirically (Heraclitus). There are many grounds for this conclusion in the context of the poem as well as in the historical reality known to us. These problems were taken up by the Eleatic school, which later, during the time of Zeno and Melissus, attempted to reconcile formally Parmenides' original intuition about thinking that attains being with the problem of the continuum of existence and the discursiveness of concepts, that is, with the logical problems of mastering the "integrity" of being as the substance of phenomena, the "immutable" being itself which "hard Necessity keeps in the shackles of bounds that hold it fast on every side." The whole intent of the antinomies and paradoxes of this school is to demonstrate the unreliability of other schools on the questions of becoming and ceasing-to-be, of being and nonbeing, of the changeability of the position, color, or shape of an object.

It is our intention here only to indicate possibilities for a definite interpretation and not to choose one it is simply a question of showing the need to approach as closely as possible the situation in which Parmenides wrote his poem, if we are to understand it. It would certainly be a great help if we were able somehow to ascertain different situational possibilities with the assurance that they had a ground in history, and at the same time to ascertain the forms of thought, or better of expression, which we have at our disposal. In this way the arbitrariness of interpretation could be limited to a certain extent, and directions could be given for the intuition of an analogous situation. For that purpose, however, a mere typology of "world views" would not be adequate, but only the elucidation or deciphering of the whole "constitution of philosophy." This is an important goal which today philosophy can no longer neglect; but it

goes beyond the framework and possibilities of this article. If we were to succeed in this goal, it would be possible to establish for the first time a true philosophical history of philosophy, that is, an interpretation which would neither fragment this history into independent, isolated accidents nor impose upon it a definitive rational scheme of development in which what follows fulfills what precedes it as if the latter existed only for the sake of the former. Formal developmental connections manifest themselves above all in language, in a syntactic-semantic structure of expressive possibilities that are at the disposal of a unique act of thought, which always wants to master being anew. And precisely that tension, in turn, has an effect on the development of the vehicle of expression, that is to say, on the development of language." (pp. 93-96)

Lexica

1. Brandwood, Leonard. 1976. *A Word Index to Plato*. Leeds: W.S. Maney & Son.
2. Des Places, Édouard. 1964. *Lexique de la langue philosophique et religieuse de Platon*. Paris: Belles Lettres.
3. Radice, Roberto, ed. 2003. *Plato*. Milano: Biblia.

Electronic edition by Roberto Bombacigno.

From the Preface: "This volume and the enclosed CD-ROM contain a fully lemmatised lexicon of the writings of Plato in John Burnet's critical edition (*Platonis Opera*, 5 vol., Oxford

University Press, 1900-1907).

This lexicon on the work of Plato is the first volume of Lexicon, a Lexicons Series dedicated to Ancient Philosophy, which is part of a multimedia project that includes printed volumes, CD-ROMs and an Internet site (www.biblia.it). A more complete description of the project can be found at this website.

The purpose of the Lexicon project is to create a powerful, scientifically reliable and easily usable resource for terminological and conceptual searches for scholars of ancient philosophy. The Lexicon archives contain original language texts by the major Greek thinkers in the most recent critical editions or the editions normally used in historical/philosophical research.

All the texts are coded and indexed to facilitate in-depth searches by forma and lemma and are presented in electronic form (on-line and on CD-ROM, with a search engine) and in a printed volume.

Obviously, the printed volume cannot offer all the characteristics available in the electronic edition. However, because the electronic publishing is still in a transitional phase, it was deemed appropriate to supply support facilities that are also accessible to people without access to computerised research tools, or who work in environments without a computerised workstation.

The electronic version of Lexicon is available in both on-line and off-line versions; the latter is distributed on CD-ROM with the printed volume. The two versions use the same search interface and the same technology. There are two differences: a) the on-line version allows for parallel searches within several lexicons while, with the CD-ROM version, only one lexicon can be consulted; b) the CD-ROM version allows users greater scope for personalising the text by means of notes, codes and markers."

Plato's *Parmenides* and the Dilemma of Participation

Ancient interpretations of Plato's Parmenides

"Plato's *Parmenides* was probably written within the last two decades preceding the death of its author in 347 B.C. (1) Despite almost two millennia of documented commentary, however, scholars today are still struggling to make sense of the dialogue. Almost every major discussion of the *Parmenides* in this century has begun with some remark about its extraordinary difficulty; (2) and no line of interpretation has yet been offered that a majority of commentators find persuasive.

The main problem of interpretation, most agree, is what to make of Plato's treatment of the several hypotheses that constitutes the second portion of the dialogue (Stephanus 137C-166C, referred to subsequently as "*Parmenides* II"). One source of perplexity is that this latter portion fails to exhibit any obvious continuity of subject matter with the first part of the dialogue ("*Parmenides* I"), making it difficult to determine what the dialogue as a whole is about. To make matters worse, the argumentation of the second part is so extremely condensed that it sometimes gives the appearance of being incoherent. As a result, not only are individual arguments often very hard to decipher, but moreover it is far from apparent what Plato was trying to accomplish with these arguments in the first place.

(...)

Two major lines of interpretation were already established by the time of Proclus' *Parmenides Commentary* in the fifth century A.D., (3) and both have prominent followers in the present century. As

Proclus notes in the first book of his commentary, (4) some readers view the dialogue as an exercise in logic. Within this group, some read *Parmenides* II as a polemical tour-de-force in which methods of argument derived from Zeno are turned against their originator, in an effort by Plato to show that Zeno's own monistic views lead to absurdities of the very sort he purports to demonstrate against the champions of pluralism. Others within this group read the second part more or less at face value, as a demonstration of a logical method that will enable Socrates to avoid the pitfalls in his theory of Forms that are exposed by Parmenides in the first part of the dialogue. In either case, readers of this persuasion view the dialogue primarily as a dialectical exercise, devoid of any positive metaphysical content.

The second major line of interpretation identified by Proclus (5) assigns *Parmenides* II a definite metaphysical purpose. An early version of this approach (perhaps associated with Origen in the third century A.D. (6) identifies the topic of the dialogue as the Being of the historical Parmenides, with the consequence that the exclusively negative results of the first hypothesis come to be viewed as adding to the pluralistic list of features denied of the singular Being in Parmenides' poem. The tradition of interpretation with which Proclus himself joins forces, on the other hand, is that beginning with Plotinus and moving through Porphyry to Iamblichus and Syrianus. As Proclus puts it, (7) commentators of this group take the subject of the dialogue to be "all things that get their reality from the One," which he later identifies with the Good of Plato's *Republic*. (8) Keying upon the conclusion at *Parmenides* 142A that the One can be neither expressed nor conceived, Proclus reads the results of the first hypothesis as a demonstration of the ineffable transcendence of this Supreme Principle. (9)" (pp. XI-XII)

Notes

(1) See W. K. C. Guthrie, *A History of Greek Philosophy*, vol. 5, p. 34. The most recent attempt to assign a date to the *Parmenides* is G. R. Ledger's *Re-Counting Plato*, which locates it between the *Republic* and the *Theaetetus* sometime before 369 B.C. My own view of the matter, defended in appendix B of *Plato's Late Ontology*, is that the

second part of the dialogue at least was composed somewhat later, perhaps around the time of the *Sophist* and the *Statesman*.

(2) Thus, for example, the opening comment of F. M. Cornford (*Plato and Parmenides*, p. V) that ancient and modern scholars alike have differed more widely about the second part of the *Parmenides* than about any of the other dialogues, that of M. Miller (*Plato's Parmenides*, p. 3) that the *Parmenides* is "the most enigmatic of all of Plato's dialogues," and R. S. Brumbaugh's opening remark in *Plato on the One* that no other work in the history of philosophy has retained the obscurity of this particular writing.

(3) A history of commentary on the *Parmenides* up to the time of Proclus is given in John Dillon's introduction to *Proclus' Commentary on Plato's Parmenides*, translated in part by Glenn Morrow and completed by Dillon.

(4) Proclus' *Parmenides Commentary* 630.37-635.27.

(5) Ibid. 635.31-640.16.

(6) See Dillon in Proclus' *Commentary on Plato's Parmenides*, p. 8.

(7) Proclus' *Parmenides Commentary* 638.18-19.

(8) Ibid. 1097.10, passim.

(9) Ibid. 46K ff., from the Latin translation. The manner in which this reading anticipates, and to some extent inspires, the "negative theology" of the Middle Ages is noted by Cornford (*Plato and Parmenides*, p. VI) and by R. Klibansky (*Plato's Parmenides in the Middle Ages and Renaissance*, pp. 286, 309).

From: Kenneth M. Sayre, *Parmenides' Lesson*, Notre Dame: University of Notre Dame Press 1996.

Brief outline of the Parmenides

"0. *Stage-setting* (126a-127d)

1. The *elicitation* of Socrates' theory of forms by Zeno's contradictions (127d-130a)

2. Parmenides' *refutations* of Socrates' theory (130a-134e)

1) Inquiry into the range of the forms (130b-130e)

2) The exposure of how participation appears to contradict the unity of the form (130e-133a)

(i) Against the unity (to be understood as the integrity) of the participated form, the dilemma of participation by whole or by part of the form (130e-131e)

(ii) Against the unity (to be understood as the singularity) of the participated form, the regress arguments (131e-133a)

3) The exposure of how, if the forms and their participants belong to separate domains, forms are unknowable (133a-134e)

3. Parmenides' reorienting help: the method of "gymnastic" (135a-137c)

4. Parmenides' return to Zenonian contradiction: the four pairs of apparently antithetical hypotheses (137d-166b)

(1) If the One is, it both has none of the possible characters, including being and unity, (hypothesis I, 137d-142a) and has all of the possible characters (hypothesis II, 142b-155e) and transits between them (hypothesis Ha, 155e-157b).

(2) If the One is, "the others" both participate in it and as a result have all the possible characters (hypothesis III, 157b-159b) and do not participate in it and as a result have no characters at all (hypothesis IV, 159b-160d).

(3) If the One is not, it both is, as referent of speech and knowledge, different from "the others" and participates in greatness, equality, and smallness and participates in being in some sense, transiting between being and not-being, (hypothesis V, 160b-163b) *and* -- since it does not participate in being in any sense -- cannot have any characters at all (hypothesis VI, 163b-164b).

(4) If the One is not, "the others" *both* will not "truly" have, but will "seem" and "appear" to have, all the possible characters (hypothesis VII, 164b-165e) *and* -- since they cannot participate in anything that is not -- cannot even "seem" and "appear" to have any of the possible characters (hypothesis VIII, 165e-166b)." (pp. 185-186)

A survey of contemporary interpretations (under construction)

"The sheer magnitude of the scholarly literature on Plato makes its assessment difficult. Even if we leave aside editions and translations, the study of Plato is carried on in many languages other than the more familiar English, French, German, Italian, and Spanish and by scholars in an astonishing diversity of fields: anthropology, archeology, art history, classical philology, city planning, drama, education, geography, history, law, literature, mathematics, medicine, music, penology, philosophy, politics, psychology, religious studies, rhetoric, and sociology. At least partly for this reason, there has been no really comprehensive review of the literature recently and it is questionable whether such a thing is even possible. The problem can be reduced to more manageable proportions by distinguishing among the diverse purposes for which scholars study Plato's dialogues. For a substantial amount of the Plato literature is essentially concerned with discovering Plato's answers to the questions of concern to contemporary scholars and researchers, or, more plainly, 'the enterprise of mining Plato for the purposes of one's own philosophizing' [cited from Rudolph Weingartner]. Guthrie is correct that there is nothing intrinsically better about what he calls, on the other hand, 'the historical approach' or 'a scholar's approach,' but the difference is often overlooked. The historical and scholarly approach has its own aims and uses, and is the concern here. Of that still substantial Plato literature which is left, there is a further distinction to be made between the study of Platonism, which involves study of the dialogues along with many other factors, texts, and influences, and the study and interpretation of the dialogues in and for themselves. That is to say, the subject of these pages is the state of the question about how to understand and interpret the dialogues of Plato, to discover their meaning in their own context, in terms of their own aims, functions, structures, and principles." (p. 309)

3. Ambuel, David. 2005. "On What Is Not: Eleatic Paradox in the *Parmenides* and the *Sophist*." In *Plato's Parmenides. Proceedings of the Fourth Symposium Platonicum Pragense*, edited by Havlíček, Ales and Karfík, Filip, 200-215. Prague: Oikoimené.
4. Anscombe, Gertrude Elizabeth Margareth. 1966. "The New Theory of Forms." *Monist* no. 50:403-420.

"In the relatively naive early theory of forms, Plato uses unreflectively such words as "one," "being," "whole," "same," "other"; when he came to reflect on these words and to treat them as signifying forms, he encountered many difficulties -- especially in view of his principle of "self-predication," that the form (being) is itself. An attempt is here made to delineate the "new" theory involved in the "Sophist" and "Parmenides", in two main aspects: participation of one form in another, and negation and incompatibility. A constructable model for these relations of forms is described. "

"The antinomies of the *Parmenides* were composed for the purpose of showing that the Eleatic dialectic of Zeno when applied to the monistic Being of Parmenides produces the same paradoxes as when used against pluralism. It is demonstrated

that the second part of the dialogue is formally an elaborate parodia of the poem of Parmenides and metodically a parodia of the logic-chopping of Zeno. By this means the psychological purpose of the dialogue is elucidated, the unity of the dialogue is made evident, and its relationship to the Sophist is established."

"The paper challenges the view that in both the "Parmenides" and the "Sophist" Plato suffers from confusion about identity and predication. I claim that the arguments of part II of the "Parmenides" are not infected with this confusion. Further, I argue that part II of the "Parmenides" explores and investigates ideas (especially about being and not-being) that are crucial to the solution of the problem of not-being in the "Sophist" (a solution that does not depend on distinguishing identity and predicative senses of 'to be')."

"Plato's *Parmenides* contrasts with Plato's other works in several ways. For example, Socrates is depicted as "very young" (127c5), perhaps fifteen or perhaps nineteen. *Parmenides* questions Socrates, who contradicts himself; in other dialogues of question and answer, Socrates typically questions others, who contradict themselves. *Parmenides* refutes Socrates on the topic of forms, items such as justice itself and good itself, while the older Socrates of other dialogues presents forms as central to philosophy; the dialogue thus raises the question whether its criticism of forms signals Plato's revision of views expressed in previous writings. The *Parmenides* is the only dialogue in which forms are the main topic. The dialogue's second part,

- 137c-166c, is the longest passage of unrelenting argument in Plato's writings. Its arguments are his most puzzling." (p. 383)

"The aim of this paper is to give a synthetic and overview interpretation of what Plato intends by "participation" in several dialogues. "Phaedo", 100 sqq.: participation is the effect of the Forms' presence in things and of their having something in common. "Parmenides", 248-249: participation consists of things "being-caused-as-images-of Forms," where "cause" will in later dialogues be disclosed to be the Forms as models and goals and intellects as agents. "Sophist", 219 sqq. and 266a sqq.: by productive art intelligent agents -- human and divine -- cause products to participate through contemplation of Forms as models. "Timaeus", 26b-30d and 47e sqq.: working with the receptacle as the participant underlying all participation, the divine craftsman uses the Forms as models and telic causes in producing individual souls and bodies, together with the entire visible universe itself. "Symposium", 210e-211b, "Phaedo", 79d and "Republic", vi, 511d suggest that Plato's philosophy is not a phenomenology."

Semantics, Predication, Truth and Falsehood in Plato's *Sophist*

Being and Nonbeing, truth and falsehood in the Sophist

"The *Sophist* seems to be concerned with two things: being and nonbeing, on the one hand, and true and false speech, on the other. If speech is either true or false speech, it seems not even plausible for being to be either being or nonbeing, since we would then be compelled to say that nonbeing is as much being as false speech is speech. If nonbeing, however, is being, then nonbeing cannot be nonbeing, for otherwise the falseness of false speech would not consist in its saying 'nonbeing.' And, in turn, if nonbeing is nonbeing, the falseness of false speech again cannot consist in its saying 'nonbeing,' for it would then not be saying anything. If we then say that nonbeing is appearing, and appearing is not unqualified nonbeing, being is being and appearing, and we want to distinguish between the strict identity which belongs to being and the likeness of nonbeing to the strict identity of being. We say, then, 'Here is Socrates himself' and 'Here is a likeness of Socrates.' Everything in the likeness of Socrates that is a likeness of Socrates himself will generate a true speech of Socrates identical to another speech true of Socrates himself. Everything, however, in the likeness of Socrates that is not a likeness of Socrates himself yields a false speech of Socrates. Among the false speeches of Socrates would be, for example, the paint on Socrates' portrait but not the color of the paint that is true of Socrates himself. The paint, then, without the color (*per impossibile*), is not true of Socrates, but it certainly is not a likeness of Socrates either. The paint must be together with its color in order for it to be both a likeness of Socrates and nonbeing, but it seems to be utterly mysterious how by being together it can be that

and by being apart it ceases to be anything of the sort. If every thing then is just what it is and nothing else, it is impossible for there to be any speech, either true or false, for speech is impossible unless something can be put together with something else. The conditions for speech are the same as the conditions for nonbeing, and we can have speech if there is always falsehood or being if there is never truth. Parmenides must and cannot be right. If this is the gist of the sophist's argument, it is hard to see how the Eleatic stranger shows its incoherence and thereby distinguishes between sophistry and philosophy. He leads us to believe that inasmuch as logos comes to be through the weaving together of kinds, the problem of nonbeing has been solved; but he goes on to characterize logos, insofar as it can be said to be true or false, as the weaving together of verb and noun (action and actor) without ever showing how these two kinds of logos are related to one another. The stranger himself even says that he has always failed to solve the problem of nonbeing, and in the dialogue he proves that the problem of being is no less baffling. He proposes then that his own logos, even if it fails to solve either problem, will be as far as it goes adequate for both; but since he also asserts that being and nonbeing are as different as light and dark, he implies that no single logos can be adequate for both unless it is indifferent to that difference. The argument, then, that the sophist mounts against philosophy is reinforced by the stranger's own self-contradictory account. That Theaetetus believes by the end that the problem has been solved only goes to show the degree to which the stranger in tracking the sophist has become indistinguishable from the sophist." (pp. XII-XIII)

From: Seth Benardete, *Plato's Sophist. Part II of The Being of the Beautiful*, Chicago: Chicago University Press 1986.

"The King admired Alice for being able to see even the nothing while he himself could hardly see anything. The King's intellectual ancestry goes back more than two thousand years. The problem of seeing nothing posed philosophical questions to the Greeks, and thus it became the main topic of Plato's *Sophist*. Plato did not share the King's point of view. He wished to explain truth, falsehood, and meaning without supposing that people can see the nothing. Plato's effort goes beyond the repudiation of the King's position. Underlying

the problem of seeing nothing is the issue whether believing the truth is like seeing, seeing with "the eye of the mind." If believing the truth is seeing, then believing what is false must be blindness.

But how could it be? Believing falsehoods is still believing something. It is not blindness; it is not believing nothing. Plato's dissolution of this puzzle helps us to understand better the nature of truth and falsehood. In denying that wisdom is sight and folly blindness we come to understand that truths are not objects of mental sight. What is true or false is not an object or a name. Thus Plato's explanation of truth, falsehood, and meaning has important consequences for his conception of the nature and objects of knowledge, and therefore for his theory of Forms. The results of Plato's investigation are not of mere historical interest to us. The differences between statement and name, meaning and truth, sort- and formal concepts, -- differences which Plato was pointing out -- are as lively topics of philosophical debate today as they were twenty-four hundred years ago." (pp. 22-23)

From: Julius M. E. Moravcsik, "Being and Meaning in the Sophist", *Acta Philosophica Fennica* 14, 1962.

Summary of the section on Nonbeing

"To sum up then, the discussion in the *Sophist* seems to attempt the following things: to distinguish the sense of *einai* in which it means 'exist' from various other senses which the word bears; to deal, as we have seen, with the Paradox of False Belief; and to deal with the (related) problems raised by negation on the assumption that a sentence which does contain, or could be re-phrased so as to contain, the copula 'is' asserts the existence of its subject and that its negation might be thought to assert its non-existence, or at least to attribute to it a measure of non-existence. I hope that this will become clear in the following account of the argument in which, as before, I shall prefix a number to paragraphs which purport to give the gist of the text and a letter to those which contain comment. [Sections with comments are omitted in this summary] (*To on* is that which is, an *on* is something which is; *to mê on* is that which is-not, a *mê on* is something which is-not; *einai* means 'to be').

1. The relevant section begins in 236 d, when the Stranger, having said that sophists pursue apparent rather than real wisdom, goes on to say that there has been, and still is, a serious puzzle about "appearing and yet not being, and about saying something and yet something which is not true". Arguments implying the possibility of false statement or false belief "venture to say that not-being is; for there could not otherwise be such a thing as falsity" (237 a 4).
2. The Stranger then says that Parmenides always warned his pupils not to say that not-being is, and offers as the reason for this ban the argument that 'not-being' cannot be the name of anything which is, and therefore cannot be the name of anything. But a man who says something must say some one thing; therefore the man who does not say something must say nothing, and therefore perhaps we ought to say that the man who tries to utter what is-not not only says nothing, but does not even say at all. (237 a-e).
3. It has been shown so far that not-being is a balking notion. On the one hand we often have occasion to use it; on the other hand Parmenides has good reason to forbid us to do so. The Stranger goes on to find further difficulties in the notion of not-being. That which he calls the chief of them is as follows. Something which does not

exist cannot have any properties. But if one is going to speak of non-
entity at all one must either use the singular or the plural ('not-being'
or 'not-beings'). Not-being, therefore, cannot be spoken of nor
thought of at all. Furthermore, and worse, even to say that much
about it is to treat it as if it were some one existing thing. (238 a-239
c).

4. The Stranger goes on to conclude from the difficulties he has
raised about not-being that it will be embarrassing to say that
sophists create semblances (eikones). For the sophists will ask what
an eikôn is, will refuse to accept an ostensive definition, and will
force you to admit that a semblance is something which is not the
genuine thing. And since the genuine thing is really a being, and the
non-genuine its opposite, a semblance will have to be something
which 'is not really a being, but exists in a way, though not genuinely,
except that it really is a semblance', and therefore 'not really being, it
really is'. And thus we shall have to say that a not-being in a way is.
(239 c-240 b).

5. The Stranger then says that he is unable to see how to define
sophistry without contradicting the conclusions that they have come
to in their discussion so far. He wants to say that sophists make us
believe what is false, but he sees that the sophists will retort that this
is impossible because a false belief must be one that asserts what is
contrary to what is, either by holding that not-beings are, or by
holding that beings are not. Therefore if we say that there are false
propositions we shall, as Theaetetus puts it, 'be forced to tack being
on to not-being, which we have agreed to be impossible'. (240 d-241
b).

6. The Stranger then says that they must come to terms with
Parmenides, and show that not-being in a way is, and being in a way
is-not. This leads him to the criticisms of various philosophical and
cosmological schools which we have examined in an earlier chapter,
the professed aim of these criticisms being to show that being is just
as difficult a notion as not-being. He criticizes (a) those who say that
to on is two or three things, such as the warm and the cold; (b)
Parmenides who says that it is to hen (which could mean either
'unity' or 'the one substance'); (c) the materialists who say that to on
is what we can see and touch; and (d) the Partisans of the Forms who

say that to on is utterly changeless. Showing, from this last criticism, that activity and inactivity both are (i.e. exist), and yet are not being, he concludes that it is as difficult to say what 'being' is the name of as it is to say what 'not-being' is the name of. (241 d-251 a).

7. The Stranger continues his argument by way of drawing attention to the fact that in every predication something other than the subject is predicated of it, and that this shows that kinds can share. Then follows the passage about dialectic and the discussion of the very great kinds-being, activity, inactivity, sameness and difference-in which it is demonstrated that all of these are, but that none is identical with any of the others. From this it is concluded (256-7) that activity (for instance) is not being, and that therefore 'not-being must exist with respect to activity and in accordance with all the kinds'. Since none of them is identical with being they can all be called not-beings while at the same time they are beings. 'Every kind has much being and infinite not-being' (256 a 1). Even being itself is-not everything else. (251 a-257 a).

8. The Stranger now concludes that when we speak of not-being we do not speak of the opposite of being, but only of something different from it. Negation does not 'signify the opposite'. To prefix 'not' to a word is to indicate something different from the thing that the word stands for. There are many parts of difference, or in other words many contrasts, such as that between the beautiful and that which is different from it; and the contrasted term (such as the not-beautiful) is just as much a being as the other term, since the former does not signify the opposite of the latter, but only something different from it. This, he says, deals with the problem of the sophists' teaching. Not-being is difference. It is not the opposite of being. We are not 'venturing to say' that the opposite of being exists. The question whether there is such a thing as not-being conceived of as the opposite of being, and if so whether any account can be given of it, is not one which arises in this connection. It is sufficient for the present purpose to show that the kinds can share, and that though difference (or "not-being" in the ordinary sense of that phrase) is not being, it is a being, in which all other beings, including being itself, partake. (257 b-259 b).

9. The Stranger continues his argument by warning his hearers against the frivolous production of antinomies. The fact that logos or the making of statements involves the interweaving of different kinds means that it will always be possible to produce apparent antinomies out of innocent statements if one fails to attend to the sense of what is said. But to exploit such antinomies is to render discourse impossible. He then alarms his hearers by telling them that though the existence of not-being has been established, the sophists will still be able to contend that statements and beliefs cannot partake in it, and meets this with the analysis of a proposition into an *onoma* and a *rhema* with which we are familiar. (259 b-264 b)." (pp. 502-514)

From: Ian MacHattie Crombie, *An Examination of Plato's Doctrines*, Vol. II: *Plato on Knowledge and Reality*, London: Routledge & Kegan Paul 1963.

A survey of recent interpretations (in progress)

"Coming back to false statement, a fantasm exists qua fantasm, and so possesses being. But qua fantasm -- qua perceived look and not qua verbal or material embodiment of that look -- it exists as not that which it shows itself to be. Therefore it cannot refer directly to what it shows itself to be or derive its existence solely from that and hence indirectly from /the pure form) being. So it looks as if the fantasm refers to, and derives its existence from, (a pure form) non-being. If, however, non-being is a pure form, then it too derives its being from combination with the pure form being.

If non-being is indeed a pure form, then 'non-being is' in the sense just explicated. This statement contains a self-contradiction because it can be unpacked into the two statements: "non-being" means "complete absence of being" and "non-being" means "presence of being" or something of the sort. Actually, the problem is even worse than this, because to deny that non-being possesses being is by the Stranger's analysis meaningful if and only if the expression 'non-being' refers to something. We can make this point sharply, if not in the Stranger's own terms, by saying that, for him, 'non' or 'not' cannot be explained entirely as a syntactical particle or function.

This leads to another preliminary remark that I think worth making here. We should not assume that it is self-evident what the Stranger means by a 'contradiction'. I want to bring this out by making use of an unpublished paper by Richard Routley.

Routley distinguishes three kinds or senses of 'contradiction.' (1) One statement may cancel another. In this case, the result of 'A and not-A' is silence or nothing. (2) The collision of the statements 'A' and 'not-A' results in what Routley calls the 'explosion' of 'A' into every statement whatsoever. In other words, from a contradiction everything follows. (3) The statement 'not-A' constrains but does not totally control 'A.' Routley is thinking here of relevance logic, in which the choice between 'A' and 'not-A' can be sensibly raised if and only if 'A' and 'not-A' are each the opposite of the other. The semantical rule for evaluating relevant negation is then: 'not-A' holds in a world a if and only if 'A' holds in world a', the reverse of a. Following this third case, 'not-A' is the reverse of 'A,' and reversal is the relevance-restricted version of 'other thanness,' or what looks like the Stranger's eventual explanation of nonbeing. In sum: within relevance logic, there must be a substantive connection between 'A' and 'not-A' for any meaningful (and hence truth-functional/ connection to hold between them. To the extent that this applies to the Stranger's doctrines, we may take the connection to be semantic; since the Stranger has no doctrine of possible worlds, the connection between 'A' and 'not-A' must hold in this world. However, this world has two different aspects. Some statements refer directly to pure forms. Other statements, like 'Theaetetus flies,' do not. So 'Theaetetus flies' and 'Theaetetus sits' are contradictory, if and only if there is someone we know named Theaetetus who is either flying or sitting.

To this extent, then, the Stranger may be called a relevance logician. The Stranger is not reduced to silence by the assertions 'nonbeing is' and 'non-being is not.' At least, this is not his intention, as his subsequent analysis makes plain. Similarly, the Stranger cannot accept the 'explosion' interpretation of contradiction. For within this interpretation, the statement 'non-being is' would continue to hold, side-by-side with 'non-being is not.' Differently stated, the Stranger's fundamental interest is ontological, not 'formal,' in the sense used in contemporary logical calculi. If the Stranger's interests were merely

formal, he could easily avoid a contradiction by stipulation. This is of course an anachronistic way of looking at the actual situation, but that is precisely my point. One comes closer to the truth by saying that the Stranger is investigating the semantical basis of logical rules, and that for him 'semantics' is in the last analysis a doctrine of ontological or pure forms." (pp. 178-179)

From: Stanley Rosen, *Plato's Sophist. The Drama of Original and Image*, New Haven: Yale University Press 1983.

"In order to understand the Stranger's position with respect to otherness, we must remember that he is on the way to a resolution of the problem of non-being. It will be part of his resolution not to hypostatize 'not'; that is, he will deny that 'being' (or being) has a contrary (or 'opposite'). In one sense, then, 'not' must be explained as a syntactical particle to which no form corresponds. But in another sense, this is impossible, since the Stranger requires forms to provide meaning. The semantic force of 'not' will thus be derived by him from otherness. Despite the assurances of some scholars to the contrary, the Stranger does have a 'complete' use of 'is,' as I have now explained at length. This use cannot be negated; at least, the Stranger never deals with this problem. He never deals with nonexistent 'things' because (to put the point somewhat awkwardly) for him, there are no such things. I am not contending that he would not understand statements like 'Socrates does not exist.' The absence of such statements follows from his primary concern with 'exists' in the sense of 'possesses being' or 'combines with being.' But the analysis of statements like 'Socrates does not exist' would present grave problems for the Stranger. This is because he wants to explain 'not' by way of a form. The form he chooses is otherness. So 'not to be' means for him 'not to be F,' where ultimately F is a form or combination of forms (in the case of instances). But 'not to be F' must in turn mean 'to be G,' where G is ultimately a form, or formal combination, entirely distinct from F. If Socrates does not exist, then he does not participate in the form being. In this case, however, he participates in no forms at all. He is not 'other than' an instance of being. The doctrine of forms provides no basis for explaining the meaning of the statement 'Socrates does not exist.' Nor, for that

matter, does the meaning of 'Socrates is dead' spring readily to the eye, given the Stranger's doctrine.

In sum: since we wish to avoid speaking of nonexistent things, or to put it positively, since anything at all combines with or participates in being, 'not' must be explained by means of the available network of pure forms. The obvious choice is otherness. 'Not to be this' is instead 'to be that.' Hence otherness must be a double look, or what would today be called a two-place relation. This conclusion gives rise in turn to a second question: What about sameness? Contrary to the contemporary procedure, the Stranger takes 'sameness' as a complete look. This is misunderstood by those who replace 'sameness' by 'identity' and explain that, in turn, as one sense of 'is'. As I have shown in detail, this destroys the distinction between the two forms being and sameness. When the Stranger says that each form is the same as itself, he is in fact denying that form F is 'related' to any other form, qua same; hence his insistence that sameness and otherness are two distinct forms. If sameness were a two-place relation, it would contain otherness in its intrinsic nature; and this would violate the separateness of the two forms. The Stranger sees no need to consider 'sameness' as a reflexive relation (for example, as 'F = F'); we may infer that this would introduce duality from his standpoint. However we might analyze it, the expression 'each of them is other' (254d13) is for the Stranger a way of saying that the form sameness is a distinct form, which provides a distinct look, and which is complete in itself. That is, 'a is the same' is a complete expression, whereas 'a is other' is not." (pp. 271-272)

From: Stanley Rosen, *Plato's Sophist. The Drama of Original and Image*, New Haven: Yale University Press, 1983.

"Before Plato is ready to attempt an integration of his accounts of becoming and of being into a coherent theory of participation, however, another important problem from the *Theaetetus* must be resolved. Although *lógos* is made possible by the weaving together of Forms (*Sophist* 259b5-6), not every case of *lógos* is a case of knowledge. It is just the difference between true and false discourse, in fact, that ultimately marks the difference between philosophy and sophistry. To complete the 'official' mission of the Sophist, which is to make the nature of the latter clear, the distinction between truth

and falsity in judgment must be firmly established. To complete its account of being, in turn, which is the more substantial purpose of the dialogue, is to show how the objects of knowledge (the Forms) must be related to make the distinction between true and false judgment possible. To this end Plato develops an account of not-being (of what is not) that remains among his more impressive accomplishments of the intermediate period.

The sophist is a producer of semblance in discourse, which means that he influences our minds 'to think things that are not' (240D9). What we thus understand him as doing, however, is precisely what Parmenides had proclaimed not to be understandable at all. That it is not,' he said, 'is not to be said or thought' (Kirk and Raven, 1995, fr. 347.8-9) rather, 'all that can be thought is the thought that it is' (Ibid, fr. 352.1). Thus to complete his definition of the sophist's art, the Stranger must engage in a form of parricide (241D3), and show that 'what is not' can be thought after all." (pp. 228-229)

From: Kenneth Sayre, *Plato's Late Ontology. A Riddle Resolved*, Princeton: Princeton University Press 1983. (Second edition with a new introduction and the essay, *Excess and Deficiency at Statesman 283C-285C*, Las Vegas: Parmenides Publishing, 2005).

"Plato's Sophist has held special significance in recent decades. Of all of his works it has seemed to speak most directly to philosophical interests of modern American and British philosophers. Much of the most sophisticated Platonic scholarship has been aimed at interpreting it. (...) In 1905 Russell published his article 'On Denoting'. In it he claimed to show how the notion of nonexistence could be expressed without the paradox that had often appeared to afflict it. His answer to the problem seemed to provide a lesson in how explaining a bit of language could unravel a metaphysical tangle. The problem arose because, for example, when one says 'Pegasus does not exist,' one seems to indicate that one is talking about a certain thing, Pegasus, and yet at the same time to say that it is not there to be talked about. Russell tried to show how this appearance of paradoxical conflict could be eliminated.

The Sophist mainly deals with a problem that looks much the same as Russell's. At 236ff., Plato expounds a difficulty concerning 'that

which is not' (to me on). He attributes the discovery of it to the earlier philosopher Parmenides (who died probably not long after 450 B.C.). His contention was that we cannot speak or think of that which is not. Nonetheless, Plato emphasizes, certain things that we say and think do indeed seem to require us to use the phrase 'that which is not' -- including even our own effort to say that we cannot speak or think of that which is not (238d-239b). Parmenides' difficulty seems related to Russell's problem about nonexistence. For example the statement, 'That which is not cannot be spoken of,' seems paradoxical in a way that is reminiscent of 'Pegasus does not exist.' The resemblance appears especially strong if 'nonbeing' and 'nonexistence' amount to the same thing. In that case we have the two statements, 'Pegasus does not exist' and 'That which is not cannot be spoken of,' both of which look as though they single something out to talk about, but at the same time say that it is not there to be talked about. The two statements are not exactly parallel (the latter, unlike the former, tries to say explicitly that its alleged subject matter cannot be spoken of). Still, both appear to be caught up in much the same difficulty, which is roughly that of trying to speak about something that is, by hypothesis, not there at all.

It has been disputed whether the two problems are the same (cf. *infra*, pp. XX, XXVIII), and whether 'nonbeing' really is tantamount to 'nonexistence.' Nevertheless the resemblance between them makes clear why many nonexistence twentieth-century interpreters of Plato have found the Sophist especially congenial food for philosophical and historical thought. Its problem of nonbeing, taken along with its possibly antimetaphysical and obvious linguistically oriented thinking, fits well with modern preoccupations." (pp. VII-IX)

From: Plato, *Sophist*, Translated, with introduction and notes by Nicholas P. White, Indianapolis: Hackett 1993.

"The sophist as a kind can be grasped only if falsity is possible. But the False in things and in words, that which makes them pseudo-things and pseudo-accounts (pseudos being the Greek word for "falsehood"), is shot through with Non-being: Just as imitations are not what they seem to be, so false sentences say what is not the case. Now if Non-being is unthinkable and unutterable, as Father

Parmenides asserted, then we may conclude that all speech must be granted to be true for those who utter it. Perfect relativity reigns.

Parmenides' dangerous single-mindedness cannot be overthrown by the mere counter-assertion of the paradox that Non-being after all somehow is. Non-being has to be given a meaning; it has to be rendered specific and placed among the articulable kinds. The stranger helps Theaetetus to discover the great and comprehensive kind that does indeed make Non-being sayable: the Other. When Non-being is specified as otherness, it becomes a powerful principle for regulating the slippery relativity that is the sophist's refuge. The Other controls relativity in two ways. First it is itself the principle of relativity which turns the swampy relativity of "everything is true for someone" into a firm source of relationality. The Other does this work by being chopped up and distributed through all beings or, in the dialogue's other metaphor, by being thoroughly interwoven with Being. Every being, every thing, is not only the same with itself but also other than all the other beings. Each being is related to all the others by the reciprocating principle of otherness: It is the others' other without being the less itself, the less self-same.

So the Other acts as a sort of divisive bond that enables speech to mark off each kind or thing from all the others without consigning any of them to mere non-being or consigning itself to saying nothing. As the Other, Nonbeing does indeed become speakable. In fact the stranger's way of division relies continually on this power of the Other when it selects certain kinds and sets aside the other or non-selected kinds.

Non-being interpreted as the Other thus ceases to be mere nothingness and becomes instead the source of articulated diversity in things and in thought. Parmenides has been superseded.

But the sophist's relativity has not yet been completely controlled. The stranger has shown that Non-being, far from being unutterable, is in fact a necessary ingredient in thought and speech. To catch the sophist, however, another step is needed. The stranger does not just speak; he speaks falsehood, makes pseudo-arguments, offers imitation-wisdom. Though the Other is Nonbeing positively understood, it is still negative enough to help account not only for the diversity of kinds but also for differences in their dignity. An

image or an imitation, because it has a share in Non-being, is not merely other than its original but also less. It is less in genuineness and may even fall further into falsity. The sophist can no longer claim that there is no intelligible discrimination between true and false.

The Other as positive Non-being thus has a double function: First it establishes a world of diversity through which the multifarious sophist ranges, with the stranger in hot pursuit. And second, the Other plays a role in establishing the hierarchy of genuineness in which the sophist is caught and marked by the stranger as one who truly deals in falsity." (pp. 11-12)

2. Ackrill, John Lloyd. 1955. "ΣΥΜΠΛΑΟΚΗ ΕΙΔΩΝ." Bulletin of the Institute of Classical Studies no. 2:31-35.

Reprinted in J. L. Ackrill, *Essays on Plato and Aristotle*, New York, Oxford University Press, 1997, Chapter 4, pp. 72-79.

"It is the purpose of this short essay• to consider the meaning and implications of a sentence in Plato's Sophist. At the end of the section on μέγιστα γένη (the combination of kinds) the Eleatic visitor is made to speak as follows (259e4-6): τελεωτάτη πάντων λόγων ἔστι `ν ἀφάνισις το` διαλύειν ἕκαστον ἀπο`

πάντων: δια ` γα ` ρ τη ` ν ἀλλήλων τῶν εἰδῶν συμπλοκη ` ν ὁ λόγος γέγονεν ἡμῖν (the isolation of everything from everything else is the total annihilation of all statements; for it is because of the interweaving of Forms with one another that we come to have discourse). I shall be mainly concerned with the second half of this remark, and shall refer to it, for brevity, as sentence or statement S." (p. 72 of the reprint)

(...)

"I have gradually passed from talking about Forms to talking about concepts, and I have taken these to be, in effect, the meanings of general words. Correspondingly, I have implied that the task assigned in Plato's later dialogues to the dialectician or philosopher is the investigation and plotting of the relations among concepts, a task to be pursued through a patient study of language by noticing which combinations of words in sentences do, and which do not, make sense, by eliciting ambiguities and drawing distinctions, by stating explicitly facts about the interrelations of word meanings which we normally do not trouble to state, though we all have some latent knowledge of them in so far as we know how to talk correctly. To justify all this, and to add the many sober qualifications which it evidently demands, would take a volume." (p. 78 of the reprint)

3. ———. 1957. "Plato and the Copula: Sophist 251-9." *Journal of Hellenic Studies* no. 77:1-6.

Reprinted in: R. E. Allen (ed.), *Studies in Plato's Metaphysics*, London: Routledge & Kegan Paul 1965, pp. 207-218, G. Vlastos (ed.), *Plato. A Collection of Critical Essays. I: Metaphysics and Epistemology*, Notre Dame: Indiana University Press 1971; J. L. Ackrill, *Essays on Plato and Aristotle*, New York: Oxford University Press 1997, pp. 80-92.

"My purpose is not to give a full interpretation of this difficult and important passage, but to discuss one particular problem, taking up some remarks made by F. M. Cornford (in *Plato's Theory of Knowledge*) and by Mr. R. Robinson (in his paper on *Plato's Parmenides*, *Class. Phil.*, 1942)." (Allen 1965, p. 207)

(...)

"This examination of Plato's use of some terms, though far from exhaustive, is, I think, sufficient to discredit Cornford's claim that the 'blending' metaphor is the one safe clue to Plato's meaning, and to establish that μετεχειν and its variants, μετλαμβανειν and κοννειν (with genitive), are not used by Plato as mere alternatives for μειγνυσθαι. It may be admitted that in 2.5 5d, the passage Cornford exploits, μετεχειν is used in an exceptional way; but one passage cannot be allowed to outweigh a dozen others.(1)

To sum up: I have tried to argue firstly, that the verb μετεχειν, with its variants, has a role in Plato's philosophical language corresponding to the role of the copula in ordinary language; and secondly, that by his analysis of various statements Plato brings out - and means to bring out - the difference between the copula (μετεχει . . .), the identity-sign (μετεχειν ταυτου ...) and the existential ἔστιν (μετεχειν του ὄντος)." (Allen 1965, p. 218)

(1) This is rather a cavalier dismissal of the passage on which Cornford relies so heavily. But it is not possible in the space available to attempt a full study of the perplexing argument of 255c 12-e 1, and without such a study no statement as to the exact force of μετεχειν in 25 5c 4 is worth much. My own conviction is that even in this passage μετεχειν does not stand for the symmetrical relation 'blending'; but it is certainly not used in quite the same way as in the other places where it occurs in 2 5 1-9.

4. Adomēnas, Mantas. 2004. "'They are telling us a myth': a curious portrait of the presocratic philosophers in Plato's Sophist." *Literatura* no. 46:8-14.

"Philosophical implications of the dialogue-form have been, for quite some time, all the buzz in Platonic studies. One need not enumerate all the advantages and productive insights that this approach has generated. One facet of Plato's philosophical method, however, remains insufficiently explored so far: namely, Plato's reflections on the question of genre and form of philosophical discourse which could be gleaned from his judgments on his philosophical predecessors, the Presocratics.

What I propose to do here is to offer a close reading of a couple of Platonic passages where Plato's protagonists' engagement with the Presocratic doctrines is described or dramatised. In doing that, I shall seek to highlight Plato's position and judgments concerning the form, or genre,⁽¹⁾ of Presocratic discourse, and to trace the implications of those judgments with one question in view: what is the nature, in Plato's view, of Presocratic teaching qua intellectual enterprise or 'genre'?⁽²⁾" (P. 8)

(1) The notion of 'intellectual genre' here is considerably indebted to Alasdair MacIntyre. Though he was not the first to interpret various types of philosophical enquiry in terms of their genre of discourse, each of which presupposes a certain distinct type of validity for its statements, I found MacIntyre's observations in his *Three Rival Versions of Moral Enquiry* particularly rewarding.

(2) This is an aspect of larger project of reconstructing Plato's reception of the Presocratic thinkers, addressed in my doctoral thesis.

5. Aguirre, Javier. 2011. "Plato's Sophist and Aristotelian being." *Czech and Slovak Journal of Humanities* no. 1:74-81.

Abstract: "In the chapter M 4 of *Metaphysics*, Aristotle criticizes the dialectics practiced by Socrates. Aristotle attributes to Socrates the lack of "dialectical power". In the same way, in N 2, Aristotle criticizes the dialectics practiced by "the dialecticians" imputing the archaic way in which the problem about being is posed. There are many signs that make us think that Aristotle refers to Plato and the Platonics with the term "dialecticians", to whom he attributes the "dialectical power". Therefore, Aristotle is aware of the merits and shortcomings of Platonic dialectics, more specifically of the dialectics practiced by Plato in the *Sophist*. In the development of his own conception of the being (to on), in the middle books of *Metaphysics*, Aristotle bears in mind the contents of this dialogue and makes the attempt to overcome the difficulties stated in the *Eleatist*, such as the deficiencies of the Platonic way of understanding the being."

6. ———. 2011. "Plato's Sophist and the Aristotelian being." *Czech and Slovak Journal of Humanities Philosophica*:74-81.

Abstract: "In the chapter M 4 of *Metaphysics*, Aristotle criticizes the dialectics practiced by Socrates. Aristotle attributes to Socrates the lack of "dialectical power". In the same way, in N 2, Aristotle criticizes the dialectics practiced by "the dialecticians" imputing the archaic way in which the problem about being is posed. There are many signs that make us think that Aristotle refers to Plato and the Platonics with the term "dialecticians", to whom he attributes the "dialectical power". Therefore, Aristotle is aware of the merits and shortcomings of Platonic dialectics, more specifically of the dialectics practiced by Plato in the *Sophist*. In the development of his own conception of the being (to on), in the middle books of *Metaphysics*, Aristotle bears in mind the contents of this dialogue and makes the attempt to overcome the difficulties stated in the Eleatist, such as the deficiencies of the Platonic way of understanding the being."

7. Albury, W. H. 1971. "Hunting the Sophist." *Apeiron* no. 5:1-12.

"The Stranger from Elea is asked by Socrates, at the outset of Plato's dialogue, the *Sophist*, to distinguish between the Sophist, Statesman, and Philosopher — "not so short and easy a task," as the Stranger tells us (217 b).

To Theaetetus, his joint inquirer, the Stranger says, "We had better, I think, begin by studying the Sophist and try to bring his nature to light in a clear formula" (218 b-c).

But being brought to light is, of course, the very thing which the Sophist most resists, for he is a creature who "takes refuge in the darkness of not-being, where he is at home and has the knack of feeling his way" (254 a).

Thus, the Stranger warns Theaetetus, "it is not so easy to comprehend this group we intend to examine or to say what it means to be a Sophist" (213 c). Now since the Sophist is such a "troublesome sort of creature to hunt down" (212 d) : it seems reasonable to ask why the Stranger has decided to begin with him instead of with the Statesman or the Philosopher." (p. 1)

8. Alieva, Olga. 2010. "Elenchus and Diairesis in Plato's Sophist." *Hermatena* no. 189:71-91.

"The well-known sixth definition of the sophist in the homonymous dialogue contains a discussion of the elenchus (230b4-e3) which is often referred to as a manifestation of the late Plato's attitude towards this method of argumentation. It is generally assumed that the definition of the sophist 'of noble lineage' given here should be applied to Socrates as represented in earlier Platonic dialogues."

(...)

"The scope of this paper is to demonstrate that the mention of the elenchus at 230b4-e3 is not merely retrospective, and to draw attention to the elenctic dimension of the whole dialogue. This, in its turn, enables us to reconsider also the method of diairesis and its methodological potential." p. 71)

9. ———. 2016. "Ὄρθολογία περὶ τὸ μὴ ὄν: Heidegger on the Notion of Falsehood in Plato's Sophist." In *Sophistes: Plato's Dialogue and Heidegger's Lectures in Marburg (1924-25)*, edited by de Brasi, Diego and Fuchs, Marko J., 143-155. Newcastle upon Tyne: Cambridge Scholars Publishing.

"A crucial question Plato poses in the Sophist is how it is possible to say falsehoods: it involves the assumption that non-being exists (τὸ μὴ ὄν εἶναι), for otherwise falsehood could not come into existence (236e–237a). Plato's solution to this problem has been explored mainly in terms of the modern philosophy of language with an emphasis on the meanings of the verb 'to be' existential/copulative/veridical),(1) types of predication (ordinary/definitional),(2) the character of false statements (affirmative/negative)(3) etc. It has been generally acknowledged that to understand the solution Plato offers to the so called "falsehood paradox" we must focus mainly on the propositional dimension of λόγος, on its subject-predicate structure. In sharp contrast, Heidegger endeavours to "get rid of propositions" (GA 19, 594/411)(4) while interpreting the Sophist,(5) and this endeavour will be our topic in what follows." (p. 143)

(1) Ackrill (1957), 1–6; Kahn (1966), 245–265, and others; a useful overview can be found in Fronterotta (2011), 35f.

(2) Crivelli (2012), 9 and *passim*.

(3) Owen (1978), 223f; McDowell (1982), 115f; Brown (2008), 437f, etc.

(4) 4 Hereinafter the number after the slash refers to the English translation by Rojcewicz and Schuwer (1997)

(5) There are extremely few references to Heidegger in the vast literature on Plato's *Sophist*. See, e.g.: Cordero (1993), 224; 227; Notomi (1999), 7. It has been repeatedly noted that Heidegger fails to do justice to the dialogical form of the writing because he reads Plato "through Aristotle". See, e.g.: Gonzalez (2009), 60; Rosen (1983), 4f.

Abstract: "In this paper, I address the way in which Plato's Sophist rethinks his lifelong dialogue with Heraclitus. Plato uses a concept of logos in this dialogue that is much more Heraclitean than his earlier concept of the logos. I argue that he employs this concept in order to resolve those problems with his earlier theory of ideas that he had brought to light in the Parmenides. I argue that the concept of the dialectic that the Stranger develops rejects, rather than continues, the idea reached at the end of the Theaetetus that knowledge has to be grounded in a nous aneu logou (a non-logical, divine intellect) even while the Stranger appropriates the concerns that lead to his conclusion. Ultimately, I suggest that my differentiation of the later Plato's appropriation of the tradition from Aristotle's appropriation of that tradition is closely related to the rethinking of the full sense of logos in the later Heidegger on Heraclitus and on Parmenides. I end by suggesting that the question that Plato and Heraclitus pose to us is to ask what such a divine logos tells about human ways of knowing."

See Chapter 2: Plato's Trilogy: Sophist, Statesman, and Apology of Socrates 69-169.

"In the traditional retelling of the outworn story of Plato's Development, Parmenides marks its author's abandonment or modification of the views of his "middle period," especially as presented in Republic 5-7 and Phaedo. By configuring Timaeus, Philebus, Sophist-Statesman, and Laws as "late dialogues," that story suggests that Plato has, in some meaningful ways, outgrown Socrates; I am challenging that story on the basis of Reading Order, an alternative paradigm for ordering and reading his dialogues. Looking back to The Guardians in Action [*], the indisputable fact that Plato joined Republic to Timaeus-Critias in a dramatic sense has not been given its due, and the parallel fact guiding The Guardians on Trial is that Plato, once again indisputably, has joined Sophist-Statesman to the trial and death of Socrates, primarily by means of Euthyphro." (p. 9, a note omitted)

"The following argument undertakes to show one positive thesis implied by the thicket of interrelated contradictions that is the Parmenides. There may well be others. In particular, it is proposed here that, as a consequence of the multiply contradictory conclusions and the methods that lead to them, any analysis of the kind of unity that we find in the world - namely, that of composites, of wholes of parts - demands that being is not a form, but form the principle of being.

To accomplish this, the following thoughts look into parallels linking the Sophist with the Parmenides. Emphasis is directed especially to the concept of not-being as it appears in the second part of Parmenides and in the Sophist, 237a-244d. Both

dialogues reveal inadequacies of Parmenides' metaphysics by employing the logic of Eleatic metaphysics to examine form - being is and is intelligible (like the ideas), not-being is its opposite, their opposition is that of simple contradictories, i.e. between being and not-being lies nothing - with the result that the real is either empty, transcendent and inaccessible, or that being, all of reality, is reduced to the manner of existence of sensibles (i.e. having the being of wholes and parts), which, subsequently, upon analysis, leads to contradiction and unintelligibility." (p. 200)

13. ———. 2007. *Image and Paradigm in Plato's Sophist*. La Vegas: Parmenides Publishing.

Second edition; first edition Evanston: Northwestern University Press, 1991.

"The Sophist is a rather technical piece. The myth and drama are at their minimum, and Plato introduces a set of plodding definitions that evolves into a discussion of terms of highest abstraction: 'being,' 'rest,' 'motion,' 'sameness,' 'otherness.'

And yet it is not only a technical piece. This volume aims to give an interpretation of the Sophist as a whole, with sensitivity to its subtleties and implications. The philosophical commentary is followed by a translation. As R. E. Allen remarked on translating Plato, "Plato, as a writer, stands with Shakespeare, but his translators do not, so this task is all but impossible." There have been several translations of the Sophist, and I have learned from them all. The goal here is not to add one to their number, but to add clarity to the interpretation. Those familiar with other interpretations will quickly apprehend that the reading presented here sets out with an approach distinct from many. The intent is not to make a definitive statement of doctrine; where there is such philosophical richness, there is no finality. Instead, the intent is to overcome the barriers that keep us from the Sophist's philosophical depths. As the Philebus states, discussing analysis and definition by divisions, when improperly done, is the cause of impasse; properly done, it is the entry to an open path. The Sophist presented here is not an artifact of our intellectual past or a notable historical point

marking the ancestry of later developments; it is living philosophy." (Preface, pp. XI-XII)

(...)

"It has been observed that "all Platonic scholars hold that in the Sophist and subsequent works the protagonist expresses Plato's own views."(2) By now, it will not have escaped the attention of the reader familiar with the literature on the Sophist that I share neither this assumption that the Eleatic speaks straight Platonic doctrine nor other related presuppositions about the text. The reasons I find these absurd should become clear to the reader who persists. For the reader who does hold to what "all Platonic scholars" hold, and has both the kindly indulgence and diligence to persevere, let this be a dialectical exercise to discover what this dialogue might uncover, on the hypothesis that it is, after all, a work of metaphysics." (Introduction, P. XVII)

14. ———. 2011. "The Coy Eristic: Defining the Image the Defines the Sophist." In *Plato's Sophist: Proceedings of the Seventh Symposium Platonicum Pragense*, edited by Havlíček, Aleš and Karfík, Filip, 278-310. Praha: Oikoymenh.

"The argument of this paper is informed by two observations about the Sophist's dramatic structure: in contrast to the denial in all other Platonic depictions of the sophist, here the sophist is assumed to have an art. That assumption is never relinquished, even though the reason given elsewhere for declaring him artless is explicitly voiced when he is described as a kind of magician (233b–c). Secondly, the discussion is led, not by Socrates, but by an Eleatic philosopher, and is conducted following a process that adheres to an Eleatic ontology that admits no intermediate between being and absolute not-being.

Without an ontological intermediary, every image is as real as any reality, and every practice an art." (p. 278)

15. ———. 2013. "Difference in Kind: Observations on the Distinction of the Megista Gene." In *Plato's Sophist Revisited*,

edited by Bossi, Beatriz and Robinson, Thomas M., 247-268.
Berlin: Walter de Gruyter.

"In short, the nominalism of an Eleatic metaphysics (or of a Heraclitean metaphysics, as they are interpreted in the Sophist and the Theaetetus) cannot state what anything "is," which would require the means to conceive of a character that is universal, distinguishable from things that are characterized by it, and attributable in the same or in related senses to a plurality. Consequently, what a thing "is" becomes what it is not.

The analysis of combinations furnishes the abstract, if contradictory, logic underpinning the method of division used to pursue the sophist.

The irony is that, by setting aside the ontological inquiry into the opposite of "being" and identifying "not-being" (in one sense) with "other," the being and nature of anything as a result is constituted entirely by its difference from what it is not. Being, in effect, is nothing other than not-being." (p. 267)

16. Andic, Martin, and Brown, Malcolm. 1973. "False Statement in the "Sophist" and Theaetetus' Mathematics." Phoenix no. 27:26-34.

"The purpose of this paper is to call attention to a parallel between Plato's account of false statement in the Sophist and Theaetetus' study of incommensurables, substantially preserved for us in Euclid's Elements, Book 10." (p. 26)

(...)

The main parallel to which we are calling attention gives rise to the following question. We have emphasized that the proportions into which we analyze assertions that a given statement is true or false put the same objects on both sides of the division between statement and being: does this not collapse the true statement with the fact it states? Readers of Russell's Problems of Philosophy (London 1912), Chapter 12, are often vexed by a similar puzzle in his doctrine of false belief, which is in many ways like the doctrine of the Sophist. If and only if it is true what Othello believes, i.e., that Desdemona

loves Cassio, then there exists such a complex as Desdemona's love for Cassio (or, that Desdemona loves Cassio), and this, though its actual existence is independent of Othello's mind, is composed of the very objects which also go to compose his belief. But how, one wonders, can the objects of the world be the very objects in the believer's mind? In reply, one might ask, how can they fail to be the very objects concerning which he has belief? It seems a reasonable answer to this question simply to say that it is the same thing that can be believed and can be. More fully, the same relation which is believed to hold among objects, or holds among them in a picture, can also hold among them in reality, and does so just when the belief or picture is true to reality. Similarly, it is the same thing that one states to be the case with certain objects and which is the case when the statement is true, or not the case when it is false. Finally, a point about the Academy in the mid-fourth century. If we are right in finding a strict parallel between these philosophical and mathematical researches into "not-being in logos" at the Academy, we would have found some confirmation of the familiar Platonic thesis that mathematics prepares the way for philosophy. Nor would it be any surprise if Plato, admiring Theaetetus' work on incommensurability, should have developed his own treatment of false statement so as to run parallel to it, and accordingly had good reason for assigning to this mathematician a central role in the Sophist." (p. 34)

17. Anscombe, G.E.M. 1966. "The New Theory of the Forms." *The Monist* no. 50:403-420.

Reprinted in *The Collected Philosophical Papers of G. E. M. Anscombe, Volume One: From Parmenides to Wittgenstein*, Oxford: Basil Blackwell 1981, pp. 21-33.

"I want to suggest that Plato arrived at a revised theory of forms in the later dialogues. Or perhaps I might rather say that he constructed a new underpinning for the theory. This can be discerned, I believe, in the Sophist, taken together with certain parts of the dialectic of the Parmenides which use the same language as the Sophist." (p. 21)

(...)

"If I am right, then the idea of some forms as having parts is of extreme importance.

In the Sophist (1158d-e) it is especially stressed that the other is divided up into many bits and parcelled out among all things in relation to one another, and we hear of the part of the other that stands over against the being of each, or, if we follow Simplicius, of each part of the other that stands over against being. I prefer the MSS reading, but on my interpretation it makes no difference to the sense. For the language of being divided up and parcelled out occurs also in the Parmenides in relation to one and to being (144), and it seems immensely unlikely that this part of the argument there was not also part of Plato's final view. This gives us three points: (1) the being and unity of each form are parts of being and of the one respectively; (2) the one being is a whole of parts, among which are the existent unitary forms of the early theory; (3) each existent form is a whole composed of the form and its being. Thus there will be a part of the other (the bottom right hand layer in my diptych as it lies open) which is a part of being that stands over against being. This part of the other will itself be divided into parts each of which stands over against part of being, i.e. the being in one of the forms of the early theory. We may add that one will, like being, same and other, "run through" everything, and same, like being, one and other, will be "parcelled out" among all things." (p. 30)

18. Baltzly, Dirk C. 1996. "'To an Unhypothetical First Principle" in Plato's Republic." *History of Philosophy Quarterly* no. 13:149-165.

"This paper argues that we may find examples of two unhypothetical principles in Parmenides and Sophist. But, in the Republic, Plato speaks only of an unhypothetical principle. Moreover, commentators almost universally identify the unhypothetical principle of the Republic with the Form of the Good, or some account of the Form of the Good. My unhypothetical principles-One has a share of Being, some of the kinds blend-do not look like they have much to do at all with the Form of the Good. How, then, can these passages from Sophist and Parmenides be illustrations of the method

described in Book VII in the ascent to an unhypothetical starting point?" (p. 157)

19. Beere, Jonathan. 2019. "Faking Wisdom: The Expertise of Sophistic in Plato's Sophist." *Oxford Studies in Ancient Philosophy* no. 57:153-189.

"How should we understand the Sophist's definition of sophistic?"

We tend to assume that the problem with sophistic is that sophists use bad arguments in the logical sense that the arguments are either invalid or unsound. Sophistic is either some special facility in the use of fallacious forms of argument or it is a character defect, the willingness to use such arguments, or both. But the concept of a logical fallacy distorts Plato's view of sophistry, which is both stranger and more interesting, as I will argue. Indeed, perhaps the most interesting and, in its own way, puzzling aspect of the definition of sophistic has been neglected: the Eleatic Visitor defines sophistic as an expertise (τέχνη, *Soph.* 221 d 1–6).(1)" (p. 153)

(1) While I originally drafted this paper some time before the appearance of L. Brown, 'Definition and Division in Plato's Sophist' ['Definition'], in D. Charles (ed.), *Definition in Greek Philosophy [Definition]* (Oxford, 2010), 151–71, the two papers are antitheses to one another. Brown claims, 'Sophistry, the sophist: these are not appropriate terms to be given a serious definition . . . there is no such genuine kind as sophistry—especially not under the genus of technē, skill, art, or expertise' (Brown, 'Definition', 153). I attempt here to vindicate the seventh and final definition of sophistic by vindicating the claim that sophistic is an expertise.

20. Benardete, Seth. 1960. "Plato Sophist 223 b1-7." *Phronesis. A Journal for Ancient Philosophy* no. 5:129-139.

"We must now ask what bearing this distinction between the hunter and the hunted has on the dialogue as a whole. Suppose all hunters were different, while all the things hunted were of the same kind. Art would then be definable exclusively in terms of its procedure. There would be no separable classes of beings

in so far as they were beings, but only in so far as there were different ways of hunting them. There would be no εἶδη, Suppose, on the other hand, all the things hunted were different, while all the hunters were the same. Art would then be definable only in terms of its single subject. It would have no procedure, for an art presupposes a differentiable class of beings on all of which the same procedure can be applied; and a lack of procedure would entail no distinction between knowledge and ignorance. An art, then, must be defined both by its objects - the art of something - and by its way to that something." (p. 131)

21. ———. 1963. "The Right, the True, and the Beautiful." *Glotta* no. 41:54-62.

Whenever a Platonic character says ναί in answer to a question, we know that his "yes" is the same as ours; and if he answers πῶς γάρ; or πῶς γάρ οὔ; he is confirming a negative or positive statement; but when one of them says ὀρθός, ἀληθής, χαλώς is not self-evident that he means the same as we do in saying "right", "true", "fine". These answers hardly look except for their greater rarity more significant than ναί." (p. 54)

(...)

"Were there a gap in our manuscripts between two questions of Socrates, we should not now be able to say which stereotyped phrase was most suitable. Was Plato equally perplexed?

Are his "rights", "trues", and "fines" as arbitrary and interchangeable as Homeric formulae, or are they, as we shall try to show, dependent on and prompted by the form the previous question takes?" (p. 54)

(...)

"To bathe the reader in enough examples and yet not drown him, I have chosen to explain καλώς (κάλλιστα), ορθώς (ὀρθότατα) and ἀληθής (ἀληθέστατα) in two dialogues only, the *Sophist* and *Politicus*.

As the "dramatic" element in them is not so prominent as elsewhere, the propriety of each word for the course of the

argument appears more distinctly. The danger, however, of using them lies in the similarity of their themes, style, and speakers, which may be thought to exclude any inference about other dialogues; but these very similarities allow us to check them against one another: to see how a similar remark in each provokes the same answer. And yet to indicate that our definitions are not too parochial, further examples from other dialogues have been added, though without explanation the force of these words is easily missed." (p. 55)

(...)

"If our interpretation of these passages is correct, we should not conclude that it holds everywhere. There may be cases where it would be impossible for us to make any discrimination, and we could go no farther than the almost-empty "fine", "right", and "true"; and possibly Plato did not always keep to the same usage throughout his writings. But the consistency of our results in two dialogues and their agreement with the other passages cited (from a much larger store), put out of court the possibility of accident and randomness. They show Plato's ability even in small things to imitate and sharpen the distinctions of ordinary speech). They further suggest that every context would have to be as thoroughly analyzed before we could decide on the scope and accuracy of our tentative definitions. It is not, however, a project that can be published. Complete lists, without explanation, would be almost useless, and with them, too tedious to be valuable. They would be as long as the Platonic corpus itself. We only offer this paper as a specimen and challenge: the reader of Plato must work out the rest for himself." (p. 62)

22. ———. 1986. *Plato's Sophist: Part II of 'The Being of the Beautiful'*. Chicago: University of Chicago Press.

Contents: Introduction IX; Guide for the Reader XVII; Sophist II.1; Sophist Commentary II.69; Notes II.168; Selected Bibliography II.178-180.

"The Sophist's dialogic form presents us with another riddle: Either Socrates is just another sophist, or all philosophers prior to Socrates were sophists. The first half of the dialogue, in

which the stranger traps Socrates in progressively narrower definitions until the sophist can be only Socrates, is balanced by its second half, in which the stranger proceeds to condemn all earlier philosophers for not understanding the necessity of Socrates' so-called second sailing. Inasmuch as the second sailing is inseparable from Socrates' discovery of political philosophy, the Sophist's companion dialogue, the Statesman, in which the stranger brings about a complete identity of dialogic form and argument, needs to be put together with the Sophist before the Sophist can be understood by itself. It is because the Statesman is essentially prior to the Sophist that it follows it of necessity. The Sophist then requires a double reading. But even such a double reading does not suffice, for its problem is initiated by the Theaetetus, in which the joint failure of Socrates and Theaetetus to answer the question, What is knowledge?, prompts them to appeal to the Eleatic stranger. His answer is contained in the Sophist and the Statesman; it is not contained in either of them separately. It is therefore another question whether his twofold answer differs from the answer to be found in the Theaetetus." (p. 210)

23. ———. 1993. "On Plato's Sophist." *The Review of Metaphysics* no. 46:747-780.

Reprinted in: S. Benardete, *The Argument of the Action: Essays on Greek Poetry and Philosophy*, Chicago: University of Chicago Press, 2000, pp. 323-353.

"It seems at first as if the Stranger's analysis of λόγος into agent and action is designed solely for finding truth or falsity in the correct or incorrect attachment of an action to a known agent; by his restriction of imitation to impersonation, however, the agent becomes significant in himself and independent of what he does.(13) The sophist embodies virtue as it is understood in opinion, despite his suspicion that he does not know what his οχῆμα declares he knows.

Gorgias exemplifies this perfectly, but what he does is to contradict and refute the opinions about virtue the interlocutor himself maintains and believes he sees represented in the

sophist. The sophist impersonates the opinions he refutes. What, then, of Socrates?

He is not an impersonator. Theodorus at any rate found him pokerfaced, and could not figure out what Socrates believed from his totally convincing presentation of a Protagorean position (Theaetetus 161a6). Socrates, however, is ironical. Does his claim to ignorance come across as knowledge in light of his capacity to show up the ignorance of others? More particularly, does the incoherence in opinion about a virtue, once Socrates has exposed it, induce the impression that Socrates himself possesses that virtue? It would seem impossible that Socrates could display popular virtue without its inconsistencies while bringing to light its inconsistencies, but Socrates the logic-chopping moralist seems to be doing exactly that.

Λόγος as dialogue thus comes to light as the problem of Socrates the agent in his action. We can say that the Sophist ends at that point where the problem has been uncovered, and the Statesman is designed to treat Socratic agency. Socrates the agent, however, cannot show up in himself; instead, he shows up in the patient, young Socrates." (pp. 779-780)

(13) In the summary the Stranger gives of the sophist's genealogy (268c8-d4), all but one of his lines of descent can be rephrased as a verb: the difference between divine and human imitation resists such a rephrasing.

24. Benitez, Eugenio. 1996. "Characterisation and Interpretation: The Importance of Drama in Plato's Sophist." *Literature & Aesthetics* no. 6:27-39.

"I confess that I would not recommend the Sophist to anyone as a work of literature. But I deny that the dramatic form is ever unimportant in Plato. In my own work on Plato I have found that the drama and the philosophy are not separable.(10) to At the very least, the drama complements, supplements, and augments the philosophy. Let me cite what should be an uncontroversial example from the Sophist.

Theodorus innocently uses the word '(γένος ('kind')) in his first speech: the Stranger, he says, belongs to the γένος of Elea (i.e. he is Eleatic by birth). Socrates, who has a nose for ambiguity, picks up the term in his second speech, claiming that the kind called 'philosopher' is scarcely easier to discern than the kind 'god'. The discussion then turns to a consideration of three '(γένη ('kinds')) - sophist, statesman and philosopher [216c3, 217a7] - but ultimately even this topic yields to discussion of the five μέγιστα γένη ('greatest kinds'), namely being, sameness, difference, motion and rest. An innocent remark leads to the most extraordinary inquiry. This progression is the dramatic complement of the Stranger's own remark that: 'one must practise first on small and easy things before progressing to the very greatest' [218d1-2]." (p. 28)

25. Berger, Fred R. 1965. "Rest and Motion in the Sophist." *Phronesis. A Journal for Ancient Philosophy* no. 10:70-77.

"In a recent article,(1) Professor Julius M. E. Moravcsik has attempted an interpretation of a very difficult passage in Plato's *Sophist* (255 a4-b 6), in which Plato sought to prove that neither the Same nor the Other is identical with either Rest or Motion. The interpretation which Moravcsik puts forth aims at making Plato's argument sound and consistent with other points made in the dialogue. Unfortunately, Moravcsik's presentation is not always clear itself. It is one of the chief purposes of this paper to clarify Moravcsik's argument. In addition, it will be argued that his interpretation of the passage in the *Sophist* fails to save Plato's argument, and that it rests on a subtle logical distinction which there seems little reason to assume Plato intended to use. Indeed, it will be argued that an interpretation which Moravcsik rejects seems better suited to Plato's passage." (p. 70)

78. I am indebted to Professor Jürgen Mau who first called my attention to some of the problems in Moravcsik's interpretation.

26. Berman, Brad. 2015. "The Secret Doctrine and the Gigantomachia: Interpreting Plato's Theaetetus-Sophist." *Plato Journal* no. 14:53-62.

Abstract: "The Theaetetus' 'secret doctrine' and the Sophist's 'battle between gods and giants' have long fascinated Plato scholars. I show that the passages systematically parallel one another.

Each presents two substantive positions that are advanced on behalf of two separate parties, related to one another by their comparative sophistication or refinement. Further, those parties and their respective positions are characterized in substantially similar terms. On the basis of these sustained parallels, I argue that the two passages should be read together, with each informing and constraining an interpretation of the other."

27. Berman, Scott. 1996. "Plato's Explanation of False Belief in the Sophist." *Apeiron* no. 29:19-46.

"Introduction. In this paper, I will reconstruct Plato's explanation of false belief as it emerges from his Sophist and suggest why it is explanatorily better than the principal contemporary account. Since Frege, the received view in contemporary analytic philosophy of mind and philosophy of language is that human cognition of the world is always mediated through some sort of intensional object.⁽¹⁾ Moreover, the identity conditions of such intensional objects have been assumed to be ontologically independent of their relation to the world. This theory of human cognition is worse ontologically as compared with a theory which does not require any mediary objects because the former commits itself to a larger ontology than the latter. However, the larger ontology is allegedly justified by gains in explanatory power. If that is the case, then the postulation of such further entities is justified. On the other hand, if the alleged gain in explanatory power is, as I shall suggest, illusory, then Plato's theory of human cognition, which

makes no reference to intensional objects which are ontologically independent of their relation to the world, will be a better explanation insofar as it will commit itself to a smaller ontology in that explanation and further, will actually explain something we want explained." (p. 19)

(1) I owe a great debt, both here and elsewhere, to Penner, Terry. (1988). *Plato and the Philosophers of Language*. Unpublished manuscript.

28. Bernabé, Alberto. 2013. "The Sixth Definition (Sophist 226a-231c) : Transposition of religious language." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 42-56. Berlin: Walter de Gruyter.

"Plato defines the sophist, in the sixth definition of the dialogue of the same name (226a – 231c), as one who purifies the soul of wrong opinions through the technique of refutation. In so doing, however, he ends up in an awkward position: the result of applying the method of diairesis seems to result rather in a definition of the philosopher Socrates (1), or, what is worse, a definition valid for both the sophist and the philosopher, and likely to produce confusion between them. So the sixth definition looks a little bizarre, and is difficult to understand.

My aim is to make a contribution to the solution of the problem from the point of view of a philologist. I shall be looking at the use of certain words which in Plato's time were as pertinent to the religious sphere as they were to the philosophical. I shall pay particular attention to those that had been used by him in dialogues antecedent to the Sophist.

This analysis will allow me to introduce a number of facts into the discussion from a point of view which is different from the usual, and to open up new possibilities for the understanding of this section of the dialogue." (p. 41)

(...)

"The art of the sophist, like the practices of Orpheus and his followers, is deceptive, false, and lies in the realm of δόξα. The philosopher alone is a true educator, physician and purifier,

who effects a genuine liberation. And philosophy alone can be placed on the level of genuine religion." (p. 56)

29. Berrettoni, Pierangiolo. 2008. "A Metamathematical Model in Plato's Definition of Logos." *Histoire Épistémologie Langage* no. 30:7-19.

Abstract: "The definition of logos given by Plato in the *Sophist* is investigated together with its (meta) mathematical background.

Terminological resonances found in philosophical and mathematical authors are pointed out in order to show the generalization of an epistemic model based on the concept of generation."

"In a recent article (Berrettoni, forthcoming) I observed that Plato's definition of logos, noun and verb in the *Sophist* makes use of a set of terms and of a phraseology which had a wide range of use in mathematical sciences, in many cases acquiring the status of technical terms; this might lead us to the hypothesis that the definition had a (meta)mathematical background. By this I understand a conceptual frame and mental map ultimately derived from mathematical sciences, which gave Plato the model and the form for his definition of logos, according to the apt expression with which Starobinski (1966), in his study on the history of the concept of "nostalgia", characterizes the cultural hegemony of a discipline inside a particular historical epistème, as in the case of the generalization of an epistemic model derived from psychoanalysis in the culture of the 20th century.

I am fully aware that this hypothesis is very strong and difficult to demonstrate on a strictly textual and philological basis. I am not claiming that Plato was consciously and deliberately applying mathematical concepts to the definition of logos, but simply that he was conditioned by his view of knowledge as

based on a hierarchy of sciences, where the central role was attributed to mathematics." (p. 7)

"The Eleatic Stranger's extremely problematic refutation of materialism in Plato's "battle of gods and giants" (Soph. 246-48) is an instance of what Heidegger terms an 'ontology,' a 'theoretical inquiry explicitly devoted to the meaning of entities' - in this case, living things, souls, wisdom, justice, and the like. Every such explicit inquiry into beings, Heidegger claims, "has its foundation" in the implicitly presupposed "pre-ontological understanding of being" that characterizes the inquirers themselves - in this case, the Eleatic Stranger and Theaetetus (as a surrogate materialist). For all inquirers into being "fall prey to the tradition"

from which they have "more or less explicitly" received their "pre-ontology." The Stranger's and Theaetetus's pre-ontology, that is, dictates the direction and scope of their inquiry without their being aware of it. To understand the Sophist inquiry, then, "this hardened tradition must be loosened up and the concealments ... dissolved." My thesis is that, to a point, Heidegger is correct: The Eleatic Stranger's and Theaetetus's ontology, their explicit inquiry into being, is controlled ('mastered') by their traditional "pre-ontological" understanding of being. To understand them we must "destroy [i.e., unstructure or deconstruct their] ancient ontology' to reveal what it conceals." (p. 28)

31. ———. 1988. "Plato's Forms. A text that self-destructs to shed its light." *Southwest Philosophy Review* no. 4:111-119.

"Heidegger would call Plato's problematic revision of his theory of forms in "the Battle of Gods and Giants" (Soph. 246-48) an "ontology," a "theoretical inquiry explicitly devoted to the meaning of entities."

(...)

"On its surface, then, the text is incoherent. It can be coherent only if beneath its surface the Stranger's charge of inconsistency is somehow on target, and his move to conform the theory to his own ontology is somehow relevant.

I will show that the attack is on target and the revision relevant. For though the Stranger and the friend of forms cannot know it, their startling conclusion that being is nothing but power turns out to be the Heideggerian "preontology" that has controlled their inquiry from the outset, the subsurface upon which the theory of forms itself rests. Real being is "power either to affect anything else or to be affected," the Stranger concludes, "I am proposing as a mark to distinguish real things that they are nothing but power" (247de). This explicit ontology is the surfacing of the implicit "pre-ontology" which underlies and supports this text and the theory of forms wherever it is found. When on the surface the Stranger irrelevantly forces the theory of forms to conform to his apparently alien ontology, beneath the surface he is in fact forcing it to conform to its own presupposition. The text, that is, and the theory of forms which it attacks both make sense only if understood as presupposing the text's conclusion. The argument turns a perfect Heideggerian circle: its surface anomalies are the barely decipherable indications that within its depths its presupposition is twisting itself into position to surface disguised as the argument's conclusion." (p. 111)

32. Bestor, Thomas Wheaton. 1978. "Plato on Language and Falsehood " *The Southwestern Journal of Philosophy* no. 9:23-37.

"In a recent article in this journal entitled "Plato and the Foundations of Logic and Language,"(1) William B. Bondeson makes several acute points about Plato's philosophy of language, particularly as it relates to the so-called "paradox of false judgment." On one point he is almost certainly right, and importantly right. On another, however, he is almost certainly wrong, and importantly wrong. Both points deserve a certain amount of amplification, I believe, and that is what I want to give them here. The details provide us with a much clearer perspective on Plato's basic picture of how language works. They also provide a rather nice illustration of the relevance of analytic philosophy to Platonic scholarship today." (p. 23)

(1) Southwestern Journal of Philosophy 6 (1975): 29-41.

33. Blondell, Ruby. 2002. *The Play of Character in Plato's Dialogues*. Cambridge: Cambridge University Press.

Contents: Preface IX; 1. Drama and dialogue 1; 2. The imitation of character 53; 3. The elenctic Sokrates at work: Hippias Minor 113; 4. A changing cast of characters: Republic 165; 5. Reproducing Sokrates: Theaetetus 251; 6. Putting Sokrates in his place: Sophist and Statesman 314; Bibliography 397; General index 428; Index of passages cited 438-452.

"My first two chapters are devoted to clarifying certain preliminary matters that underlie this way of approaching Plato. I begin, in this chapter, with some general questions about "dramatic" form and literary" interpretation, which will help to clarify my methodology.

Chapter 2 explores issues surrounding literary and philosophical notions of character and its interpretation in ancient texts generally, and in Plato in particular, with special attention to the figure of Sokrates.

Subsequent chapters offer readings of a select number of individual dialogues: Hippias Minor, Republic, Theaetetus, Sophist, and Statesman. These works were chosen in part to exemplify a broad range of Platonic styles and methods, and in part because most of them have received relatively limited "literary" study, but also because their discursive content

connects with my particular concerns, especially in their focus on the representation and use of literary character." (p. 3)

(...)

"The last chapter was concerned with Theaetetus on its own terms. But it is also the first of a triad of dialogues, completed by Sophist and Statesman, which are linked by a variety of thematic and structural connections.(1)

These three works are also bound together by formal features, in a way that is unparalleled among Plato's works. These features include dramatic sequencing, explicit cross-references, and an overlapping cast of characters. At the end of Theaetetus Sokrates looks forward to continuing his conversation with Theaitetos and Theodoros the next day (210d); at the beginning of Sophist Theodoros alludes to "yesterday's agreement" to continue (216a); and in Statesman, Sokrates refers back explicitly to his first meeting with Theaitetos and the previous day's discussion (257a, 258a).

The explicitness and the dramatic character of these links distinguish them from other forms of Platonic intertextuality, and invite us to read these three works together, in a certain sequence, and in each other's light." (p. 314)

34. Bluck, Richard Stanley. 1957. "False Statement in the "Sophist"." *Journal of Hellenic Studies* no. 77:181-186.

"Various attempts have been made to find a satisfactory alternative to Cornford's explanation of what the Sophist has to say about false statement, and in particular to his interpretation of the passage in which the statements 'Theaetetus is sitting' and 'Theaetetus is flying' are discussed. The difficulty with Cornford's view is that he wants to find the explanation of truth and falsity entirely in the 'blending' or incompatibility of Forms, but that in the examples Sokrates chooses, while Sitting and Flying may be Forms, Theaetetus cannot be. Hence Cornford has to say, 'It is not meant that Forms are the only elements in all discourse. We can also make statements about individual things. But it is true that every such statement must contain at least one Form'. Unfortunately, when talking about

the εἶδων συμπλοκή at 259e, the Stranger seems clearly to envisage a blending of εἶδη with each other:. How can this be reconciled with an 'example' in which only one term stands for a Form?

I do not propose to discuss in detail the various solutions that have been offered, but to set forth my own interpretation of the whole passage. This may be regarded as to some extent a 'blending' of what has been said by Professor Hackforth and Mr. Hamlyn, but a number of points arise which deserve further discussion, and it may perhaps be hoped that such a σύνθεσις as this may prove to be ." (p. 181)

35. ———. 1975. *Plato's Sophist: A Commentary*. Manchester: Manchester University Press.

Edited by Gordon Neal.

"The problems raised by the *Parmenides* being extremely complicated, and the date of the *Timaeus* being a matter of dispute, studying the *Sophist* is perhaps the most promising way of trying to discover whether, and if so in what manner, Plato's philosophy—and in particular his theory of Forms—developed or changed after the writing of the *Republic*.

(...)

No doubt the dialogue is capable, and is meant to be capable, of being interpreted without reference to Platonic Forms. The arguments of the unconverted sophist against the possibility of saying or thinking what is false must be controverted with arguments that he will accept as valid. Yet at the same time it is most unlikely that Plato would repeatedly use the term εἶδη; without bearing in mind that readers acquainted with his earlier works would at once think of his Forms; and it is therefore highly probable that what is said is meant to be capable of being interpreted in terms of Forms. This is all the more likely, as a great deal is said about one Kind (λέγῳς) or Form (εἶδος) partaking of another, and the question was raised in the *Parmenides*, clearly with reference to the theory of Forms, whether one εἶδος could partake of another. It is therefore a reasonable working hypothesis that the arguments

are intended to be interpreted in terms of Platonic Forms by those acquainted with Platonic doctrine, while at the same time being capable of being interpreted without special reference to such doctrine by those who rejected it or had no knowledge of it. The aim in what follows is to try to determine the most natural significance of each argument from the Platonist's point of view, taking the γένη or εἶδος; as Forms, and to see whether these arguments and the dialogue as a whole will, after all, make good sense when so interpreted. A positive answer to this question will emerge as the book proceeds. The reader must judge whether the case is proved.

Those who have never doubted that the Kinds can be taken as Forms may consider such an enquiry unnecessary. But there are many passages, as has already been mentioned, where difficulties raised have never been satisfactorily met, and the precise nature of the Platonic doctrine implied is still far from clear. New interpretations are here offered, for example, of the arguments for the separateness of the Kinds (chapter VII), of what is meant by a vowel Form (chapter VI), and of the argument against the monists (chapter III)" (pp. 1-2).

36. Bolton, Robert. 1975. "Plato's Distinction between Being and Becoming." *The Review of Metaphysics* no. 29:66-95.

Reprinted in: N. D. Smith (ed.), *Plato. Critical Assessments, Vol. II: Plato's Middle Period: Metaphysics and Epistemology*, London: Routledge 1998, pp. 116-141.

"The guiding questions to which I refer are familiar ones. First: What is the fate of the theory of paradigm forms of the *Phaedo* and *Republic* in view of the apparent criticism of the theory found in the *Parmenides*? And second: What is the fate of the distinction of the *Phaedo* and *Republic* between being (οὐσία) and becoming (γένεσις) in view of the apparent criticism of the adequacy of that distinction found in the *Theaetetus* and *Sophist*? Lately, the first of these two questions has received the greater share of the attention of philosophers and scholars. I want here to redirect attention to the equally important and equally intriguing second question." (p. 66, note omitted)

(...)

"The conclusion of our investigation is that Plato's theory of reality was neither subject to as much or to as little flux as some have believed. There were important modifications in his view of becoming and also in his view of being. In each case the changes were based on important philosophical developments. But Plato retained a version of the being-becoming distinction strong enough to sustain his theory of degrees of reality and of sufficient conceptual power to make that theory intelligible.

In the light of the history of Platonic scholarship it would be foolish to claim that no other theory of the development of Plato's views on being and becoming could be defended. All that is here claimed is that the theory which is here offered is the one which best accommodates all the available evidence. It accounts for Aristotle's testimony, for the explicit statements of the *Phaedo* and *Republic* and the argument of *Republic V*, for the explicit changes in Plato's way of characterizing being and becoming after the *Theaetetus*, and for the changes in Plato's view of the epistemic status of becoming. On this account none of these matters need be explained away or given any interpretation other than the most straightforward one. That constitutes the strongest argument in favor of this account." (p. 95)

37. Bondeson, William. 1972. "Plato's "Sophist": Falsehoods and Images." *Apeiron* no. 6:1-6.

"The chief arguments of the *Sophist* occur in what is sometimes called its "inner core". The core is that large section which begins after the dichotomies employed to catch the sophist come to an impasse about "nonbeing" and falsehoods, and which ends with the return to dichotomous division after the account of "logos" in the sense of "statement" has been given. This inner core runs from 232B to 263E. The relations between shell and core depend upon how seriously Plato is thought to have regarded the method of "division" (διαίρεσις). Such problems are not relevant to the questions discussed here, nor does Plato's attempt to catch the sophist appear to be entirely serious.

Rather, I want to discuss the puzzles about falsehood and how these puzzles are connected with the hunt for the sophist." (p. 1)

38. ———. 1973. "Non-Being and the One: Some Connections between Plato's "Sophist" and "Parmenides"." *Apeiron* no. 7:13-21.

"The purpose of this paper is to point out some similarities between a part of Plato's treatment of non-being in the *Sophist* and two hypotheses of the *Parmenides*. I shall first discuss a small section of the *Sophist* and try to show what Plato means by the phrase το μηδαμῶς ὄν. I shall then, by an analysis of the first and sixth hypotheses of the *Parmenides*, try to show that Plato wants to make virtually the same points as he made in the *Sophist*.

The conclusions reached here should be helpful for a more comprehensive interpretation of these two dialogues." (p. 13)

See the reply by Paul D. Eisenberg, "More ou'ouon-being and the one". *Apeiron*, 10, 1976, pp. 6-14.

39. ———. 1974. "Plato's *Sophist* and the Significance and Truth-Value of Statements." *Apeiron*:41-48.

"The greater portion of Plato's *Sophist* deals with a number of issues in what might be called the philosophy of language. It also deals with a series of metaphysical and ontological views and attempts to show how language and reality are related. Thus one way of organizing the views of Plato in the *Sophist* is to view much of the material up to and including 260E as concerned with topics centring around the question: how is discourse possible? Thus Plato talks about Being, Non-being, Sameness and Otherness and makes the claim that it is the τῶν εἰδῶν συμπλοκή which makes discourse possible (259E). The interpretation of this important passage and what precedes it in the dialogue must be left aside for the purposes of this paper because it is concerned with what follows 260E rather than with what precedes it.

(...)

In this paper I want to do four things. First, it will be necessary to discuss and evaluate Plato's answer to the "nature" question about statements and their parts. Second, I want to determine the relation between statements and truth or falsehood, and to determine how statements can be true or false.

Third, I want to determine whether Plato has adequately discussed and answered the Sophist's difficulties and confusions about falsehoods (these will be also discussed as the topics in the first two parts are developed), and fourth, to point out the propositional character of belief which will indicate some important connections between the Sophist and the Theaetetus." (p. 41)

40. ———. 1975. "Plato and the Foundations of Logic and Language." *The Southwestern Journal of Philosophy* no. 6:29-41.

"Whatever Plato's philosophy of language and his logical theory might be, they are backed by a metaphysics and an ontology. Or, to put the claim more strongly, Plato's philosophy of logic and language implies a metaphysics and an ontology, and the elaboration of these is his primary goal, even in those dialogues, i.e., the later ones, where linguistic considerations might seem to be predominant. Or, as one recent interpreter of Plato, Julius Moravcsik, has put it, Plato constructs an elaborate metaphysics and ontology in order to make our ordinary ways of thinking, talking, and knowing intelligible.(14)

Thus, in this paper, the concern shall be with a variety of topics in Plato's philosophy of logic and language, but there is not the space here for developing many of the metaphysical implications of those views.

Probably the most fundamental question in interpreting Plato, and in terms of which most questions concerning Plato's views are settled, is the question of whether, and to what extent, the views in the dialogues are cut from the same cloth and form a single philosophic whole. Most analytic interpreters do not hold such a view; rather, they maintain that there are important differences in the doctrines of the various dialogues. Other interpreters have maintained that there are differences in the

angle of approach to a problem or that there are differences in topic without real change in the overall doctrine. It will be shown that this will not work for at least some of the logical and linguistic problems with which I am concerned." (p. 30)

(...)

"Many distinctions and clarifications need to be made before the "object" view and its resultant paradoxes can be laid to rest; senses of "is" and "is not" need to be distinguished, negation and negative predication need to be understood, and how the forms and their interrelations make discourse possible needs to be shown. But all of these problems can be solved only if there is a clear awareness of the nature and function of statements in accounts of stating, believing, and knowing.

It seems to me that Plato realized that the "object" view is confused and contradictory and that in the *Theaetetus*, and even more so in the *Sophist*, he attempts to dispel it. Thus, the concept of a λόγος is the fundamental notion which ties the *Theaetetus* and the *Sophist* together." (p. 39)

(14) Being and Meaning in the *Sophist*, *Acta Philosophica Fennica*, fasc. 14 (1962).

41. ———. 1976. "Some Problems about Being and Predication in Plato's *Sophist* 242-249." *Journal of The History of Philosophy* no. 14:1-10.

"One of the central tasks which Plato sets for himself in the *Sophist* is to say what being (τὸ ὄν) is. In doing this he makes a variety of philosophical moves. The first is to show that non-being in a very restricted sense of the term (τὸ μηδαμῶς ὄν) is an impossible and self-contradictory concept. (1) This occupies the first part (237A ff.) of the central section of the *Sophist*. After discussing some puzzles concerning deceptive appearances (240 B) and falsehoods (240 D), Plato turns to a discussion of being at 242B. In this section of the dialogue Plato claims to show that the attempts of previous philosophers to define being have failed and he makes his own first attempt in the dialogue to define being (cf. 242C and 247E). 2 In this paper I am concerned only with this section of the *Sophist*

(242-249), and I want to show first that Plato's notion of being here is ambiguous, the term τὸ ὄν shifting between "being" and "what has being," between the form and those things which participate in it. Second, I want to show that the definitions of being at 248C and 249D are not only compatible with one another but also that, when properly understood, they make sense of Plato's use of motion and rest in the Sophist. And finally, I want to show that Plato is caught in the snares of self-predication when he talks about being and other Forms of the same ontological level. This is due to the way in which he formulates the difference between statements of identity and predication in the argument against Parmenides in this section of the Sophist." (p. 1)

(1) Cf. my "Non-being and the One: Some Connections between Plato's Sophist and Parmenides," forthcoming in *Apeiron* [1973]. My view is somewhat different from that of G. E. L. Owen's "Plato on Not-Being" in *Plato, A Collection of Critical Essays*, ed. G. Vlastos (Garden City, New York: Doubleday and Co., 1971), vol. I.

(2) Cf. Owen, *ibid.* p. 229, n. 14. Owen presents a convincing case that Plato is giving a definition (as opposed to a mark or sign) of being. However, Owen also seems to take the view, for example against Moravcsik in *Being and Meaning in the Sophist* (*Acta Philosophica Fennica*, XIV [1962]), that little of philosophical significance happens in 242-249. I hope to show in this paper that this is not the case.

42. Booth, N. B. 1956. "Plato, Sophist 231 a, etc." *The Classical Quarterly* no. 6:89-90.

"Mr G. B. Kerferd, in *Classical Quarterly* XLVIII (1954), 84 ff. writes of 'Plato's Noble Art of Sophistry'. He suggests that Plato thought there was a 'Noble Art' of sophistry, other than philosophy itself; and he seeks to find this Art in the better and worse arguments of Protagoras. This suggestion is, unfortunately, based on a mistranslation of Plato, Sophist 231 a (...). Mr. Kerferd supposes that this can mean: 'For I do not think there will be dispute about distinctions which are of little

importance when men are sufficiently on guard in the case of resemblances.'

(...)

But further, what are these distinctions which, if we accept Mr. Kerferd's view, are 'of little importance'? They are distinctions on the one hand between tame and fierce, and on the other hand between the cathartic process of dialectic and sophistry. The 'tame' and 'fierce' distinction is not between tame and fierce merely; it is a distinction between the very tamest and the very fiercest of animals (Plato uses superlatives at the beginning of 231 a). How Plato could have in the same paragraph stressed the vastness of the difference by means of superlatives and then spoken of 'small distinctions', is more than I can see. I also fail to see how Plato could ever have thought the distinction between sophistry and healing dialectic to be a small one; that would be saying that there was little to choose between Socrates and Thrasymachus. No: Plato is saying here that there is a certain superficial resemblance between healing dialectic and sophistry, but we must beware of that resemblance; in fact the one is a tame watch-dog, the other a ravening wolf, and 'we shall find in the course of our discussion, once we take adequate precautions, that there is no small distinction between the two'." (p. 89)

43. Bossi, Beatriz. 2013. "Back to the Point: Plato and Parmenides – Genuine Parricide?" In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 157-173. Berlin: Walter de Gruyter.

"Famous scholars in the XXth century (1) understood that Plato really does refute Parmenides' absolute condemnation of not-being as unthinkable and inutterable by his demonstration that 'not-being' 'is' in the sense of 'is different from'. Though this goal is made explicit and is almost claimed to have been achieved by the Stranger in the *Sophist*, Plato offers certain clues that show there is enough evidence for a different reading that admits of some nuances. The Stranger begs Theaetetus not to suppose that he is turning into some kind of parricide (241d3). Yet Plato does toy with a potential parricide, which the

Stranger claims he will never commit. The attitude might be regarded as a literary trope inserted for dramatic purposes, but in the context it could be merely rhetorical.

In my view, the person the Stranger really fights and kills is, not Parmenides himself but the ghost of a ridiculous Parmenides character dreamed up by the sophist, who will shelter his own 'relativistic' view beneath his cloak by denying the possibility of falsehood." (p. 158)

"The papers included fall into three broad categories: a) those dealing directly with the ostensible aim of the dialogue, the definition of a sophist; b) a number which tackle a specific

question that is raised in the dialogue, namely how Plato relates to Heraclitus and to Parmenides in the matter of his understanding of being and non-being; and c) those discussing various other broad issues brought to the fore in the dialogue, such as the 'greatest kinds', true and false statement, difference and mimesis." (Preface, p. V)

45. Bostock, David. 1984. "Plato on 'Is Not' (Sophist, 254-9)." Oxford Studies in Ancient Philosophy no. 2:89-119.

"According to the received doctrine, which I do not question, the uses of the Greek verb 'to be' may first be distinguished into those that are complete and those that are incomplete. In its incomplete uses the verb requires a complement of some kind (which may be left unexpressed), while in its complete uses there is no complement, and it may be translated as 'to exist' or 'to be real' or 'to be true' or something of the kind. What role the complete uses of the verb have to play in the Sophist as a whole is a vexed question, and one that I shall not discuss. For I think it will be generally agreed, at least since Owen's important article of 1971, (1) that in our central section of the Sophist it is the incomplete uses that are the centre of Plato's attention. Anyway, I shall confine my own attention to these uses, and accordingly my project is to elucidate and evaluate Plato's account of 'is not' where the 'is' is incomplete. I might also add here that, for the purposes of the Sophist as a whole, I am in agreement with Owen's view that what Plato himself took to be crucial was the account of 'not', and what he has to say about 'is' is, in his own eyes, merely ancillary to this. But I do not argue that point, partly because Owen has already done so, and partly because it is not needed for my main contentions. As we shall see, one cannot in fact understand what Plato does say about 'not' without first considering his views on the incomplete 'is'.

Reverting to the received doctrine once more, the incomplete uses of 'is' may be divided into two. In one sense the verb functions as an identity sign, and means the same as 'is the same as', while in the other it functions merely as a sign of predication, coupling subject to predicate, and cannot be thus paraphrased. The vast majority of commentators on the Sophist

seem agreed that Plato means to distinguish, and succeeds in distinguishing, these two different senses of the verb.(2) This I shall deny. In fact I shall argue not only that Plato failed to see the distinction, but also that his failure, together with another ambiguity that he fails to see, wholly vitiates his account of the word 'not'. The central section of the Sophist is therefore one grand logical mistake." (pp. 89-90)

47. Brown, Lesley. 1986. "Being in the Sophist: A Syntactical Enquiry." *Oxford Studies in Ancient Philosophy* no. 4:49-70.

Reprinted with revisions in G. Fine (ed.), *Plato 1: Metaphysics and Epistemology* (Oxford: Oxford University Press 1999), pp. 455-478.

"Plato's Sophist presents a tantalizing challenge to the modern student of philosophy. In its central section we find a Plato whose interests and methods seem at once close to and yet remote from our own. John Ackrill's seminal papers on the Sophist, (1) published in the fifties, emphasized the closeness, and in optimistic vein credited Plato with several successes in conceptual analysis. These articles combine boldness of argument with exceptional clarity and economy of expression, and though subsequent writers have cast doubt on some of Ackrill's claims for the Sophist the articles remain essential reading for all students of the dialogue. I am happy to contribute an essay on the Sophist to this volume dedicated to John Ackrill.

Among the most disputed questions in the interpretation of the Sophist is that of whether Plato therein marks off different uses of the verb *einai*, 'to be'. This paper addresses one issue under that heading, that of the distinction between the 'complete' and 'incomplete' uses of 'to be', which has usually been associated with the distinction between the 'is' that means 'exists' and the 'is' of predication, that is, the copula." (p. 49)

(1) *Symploke Eidon* (1955) and *Plato and the Copula: Sophist 251-59* (1957), both reprinted in *Plato I*, ed G. Vlastos (New York, 1971), 201-9 and 210-22.

48. ——. 1994. "The Verb 'To Be' in Greek Philosophy: Some Remarks." In *Companions to Ancient Thought: Language*, edited by Everson, Stephen, 212-236. Cambridge: Cambridge University Press.

"The existence of at least these three distinct uses of 'is' was taken for granted by commentators and assumed to apply, by and large, to ancient Greek, though with some salient differences. These include the fact that Greek can and regularly

does omit *esti* in the present tense, though not in other tenses, and that the complete 'is' is still very much a going concern, though more or less defunct in modern English. The fact that the *esti* of the copula can be omitted means that a predicative use of *esti* can convey a nuance over and above that of the mere copula (for instance connoting what really is F rather than merely appearing F, or what is enduringly F).

And the fact that current English has more or less abandoned the use of the complete 'is' to mean 'exist' (as in Hamlet's 'To be or not to be), while in Greek it is very much a going concern, may lead us to question whether the complete *esti* really shares the features of the 'is' which means (or used to mean) 'exist'." (p. 215)

(...)

"I cannot offer here a full account of what I take to be the results of the Sophist, far less a defence of such an account, but confine myself to a few points. To the question whether the dialogue distinguishes an 'is' of identity from an 'is' of predication, I have indicated my answer: that it does not, but it does draw an important distinction between identity-sentences and predications (see section I and n. 2 above). Here I focus on the question whether and if so how it distinguishes complete from incomplete uses. I shall suggest that Plato developed a better theory about the negative 'is not' than his argumentation in the Republic suggests, while continuing to treat the relation between the complete use (X is) and the incomplete (X is F) in the way I have described in section IV, that is, by analogy with the relation between 'X teaches' and 'X teaches singing'." (p. 229)

49. ———. 2001. "Innovation and Continuity: The Battle of Gods and Giants, Sophist 245-249." In *Method in Ancient Philosophy*, edited by Gentzler, Jyl, 181-207. New York: Oxford University Press.

"In Greek mythology, Zeus and the other Olympian deities were challenged in a mighty battle by the race of giants, a battle which, with the help of Herakles, the gods won. Unlike the earlier battle of the Titans, in which Zeus' party defeated and

supplanted their own forebears, the Titans, the Gigantomachia ended with the preservation of the old order in the face of the newcomers' challenge.

(...)

Here I focus on the section of the Sophist whose high point is represented by Plato, through his chief speaker, the Stranger, as a Gigantomachia, a debate about being between materialists and immaterialists, or so-called Friends of the Forms. The materialists, cast in the role of 'giants', hold that only the material (what is or has a body) is or exists.

Their opponent the 'gods', labelled 'Friends of the Forms', take the opposite view; they accord the title 'being' only to the immaterial, to 'certain intelligible Forms', and relegate to the status of genesis (coming to be) those material, changing things the giants champion. In this section, in which the Stranger takes on each party in turn and aims at a rapprochement between them, Plato takes what may be thought of as first steps in ontology. In reflective discussion and argument about what there is and about how one should approach the question of what there is. There is considerable disagreement over the upshot of the whole debate, and especially over whether the discussion of the Friends of the Forms' views concludes with the Stranger advocating a radical departure from the treatment of Forms in the middle dialogues: both Owen and Moravcsik advocate a reading whereby the immutability of the Forms is abandoned.⁽¹⁾ Here I re-examine the Gigantomachia, asking what philosophical moves and results it contains. In doing so, I consider what use Plato makes of two innovations in approach which can be detected in the later dialogues, and in particular in the Sophist." (pp. 181-182)

50. ———. 2008. "The Sophist on Statements, Predication, and Falsehood." In *The Oxford Handbook of Plato*, edited by Fine, Gail, 383-410. New York: Oxford University Press.

"This essay focuses on two key problems discussed and solved in the Middle Part: the Late-learners problem (the denial of predication), and the problem of false statement. I look at how each is, in a way, a problem about correct speaking; how each

gave rise to serious philosophical difficulty, as well as being a source of eristic troublemaking; and how the Eleatic Stranger offers a definitive solution to both. As I said above, the Sophist displays an unusually didactic approach: Plato makes it clear that he has important matter to impart, and he does so with a firm hand, especially on the two issues I've selected." (p. 438)

51. ———. 2010. "Definition and Division in Plato's Sophist." In *Definition in Greek Philosophy*, edited by Charles, David, 151-171. New York: Oxford University Press.

"In Plato's late dialogues *Sophist* and *Politicus* (*Statesman*), we find the chief speaker, the Eleatic Stranger, pursuing the task of definition with the help of the so-called method of division.

(...)

However, there are major and well-known problems in evaluating the method as practised in the two dialogues, but especially so in the *Sophist*.

(...)

I investigate below some of the many scholarly responses to this bewildering display of the much-vaunted method of division. I divide scholars into a 'no-faction', those who hold that we should not try to discern, in any or all of the dialogue's definitions, a positive outcome to the investigation into what sophistry is (Ryle, Cherniss), and a 'yes-faction': those who think an outcome is to be found (Moravcsik, Cornford, and others).(2) I shall conclude that in spite of the appearance of many answers (Moravcsik) or one answer (Cornford, Notomi), the reader is not to think that any of the definitions give the (or a) correct account of what sophistry is. But while I side with the no-faction, my reasons differ from those of Kyle and Cherniss, who, in their different ways, located the failure in the nature of the method of division. In my view the failure lies not, or not primarily, in the method of division itself; but in the object chosen for discussion and definition. Sophistry, the sophist: these are not appropriate terms to be given, a serious definition, for the simple reason that a sophist is not a genuine kind that possesses an essence to be discerned.(3) If we try to

carve nature at the joints, we cannot hope to find that part of reality which is sophistry, for there is no such genuine kind as sophistry-especially not under the genus of techne, art, skill, or expertise." (pp. 151-153).

(2) The views of Moravcsik, Cornford, and Notomi are discussed in the text of section III; those of the 'no-faction' in note 17.

(3) I use 'genuine kind' to indicate something with a wider extension than that of 'natural kind' familiar from Locke, Putnam, etc. I use it to mean the kind of entity which Plato would allow to have an ousia (essence) or phusis (nature) of its own (cf. *Th.* 172b). Virtues, senses like hearing and sight, and crafts like angling would be recognized as genuine kinds in the intended sense."

52. ———. 2012. "Negation and Non-Being: Dark Matter in the Sophist." In *Presocratics and Plato: Festschrift at Delphi in Honor of Charles Kahn*, edited by Patterson, Richard, Karasmanis, Vassilis and Hermann, Arnold, 233-254. Las Vegas: Parmenides Publishing.

"My aim is to try to understand what I regard as the most difficult stretch of the Sophist, 257–259. In responding to a particularly impenetrable claim made by the Eleatic Stranger (ES), Theaetetus announces at 258b7 that they have found τὸ μὴ ὄν (not being), which they have been searching for on account of the sophist. He is thinking, of course, of what sparked the long excursus into not being and being: the sophist's imagined challenge to the inquirers' defining his expertise as involving images and falsehood. Here's that challenge: speaking of images and falsehood requires speaking of what is not, and combining it with being, but to do so risks contradiction and infringes a dictum of Parmenides. This heralds the puzzles of not being, and of being, which are followed by the positive investigations of the Sophist's Middle Part. So Theaetetus' eureka moment ought to signal some satisfying clarification and closure to the discussions. But in fact the stretch it is embedded in is singularly baffling, and the subject of continuing debate among commentators.(2) There is

little agreement about what issues Plato is discussing in this section, let alone about any supposed solutions.

My strategy is to try to read the passage without preconceived ideas about what it ought to contain." (pp. 233-234)

(2) I list here and in the next two notes some of the major discussions. I have learned from them all, and from many others not mentioned: M. Frede, *Prädikation und Existenzaussage*. *Hypomnemata* 18 (Göttingen: Vandenhoeck & Ruprecht, 1967). G. E. L. Owen, "Plato on Not-being," in *Plato: A Collection of Critical Essays* 1, ed. G. Vlastos (Garden City, NY: Anchor Books, 1971), 223–267. Owen's essay is reprinted in *Plato 1: Metaphysics and Epistemology*, ed. G. Fine (Oxford: Oxford University Press, 1999). E. N. Lee, "Plato on Negation and Not-being in the Sophist," *The Philosophical Review* 81.3 (1972): 267–304. D. Bostock, "Plato on 'Is Not'," *Oxford Studies in Ancient Philosophy* 2 (1984), 89–119. M. Ferejohn, "Plato and Aristotle on Negative Predication and Semantic Fragmentation," *Archiv für Geschichte der Philosophie* 71 (1989), 257–282. M. Frede, "Plato's Sophist on False Statements," in *The Cambridge Companion to Plato*, ed. R. Kraut (Cambridge: Cambridge University Press, 1992), 397–424.

53. ———. 2018. "Aporia in Plato's Theaetetus and Sophist." In *The Aporetic Tradition in Ancient Philosophy*, edited by Karamanolis, George and Politis, Vasilis, 91-111. Cambridge: Cambridge University Press.

Abstract: "The chief aim of this essay is to examine the development of Plato's use of philosophical puzzles to guide his enquiries. Labelled aporiai, they are prominent in Sophist, but already found in Theaetetus. Section 2 identifies common features in such puzzles, and explores how in Theaetetus they

are presented but left unsolved. In both dialogues the young Theaetetus is characterised as an ideal interlocutor, quick to appreciate a philosophical puzzle, and to respond appropriately. By these means Plato links the otherwise very disparate dialogues: Theaetetus, a formally aporetic attempt to define knowledge conducted by Socrates, and Sophist, whose new protagonist, the Stranger from Elea, confidently announces results both in the Outer Part's search for the sophist and in solving the problems of the Middle Part.⁽¹⁾ Section 3 traces how the Sophist's Middle Part is explicitly structured around a series of philosophical puzzles, and notes the plentiful terminology of *aporia* that signposts this. Plato shows his readers the philosophical payoffs of a serious attempt to diagnose the source of a given *aporia*: herein (I suggest) lies the real difference between the sophist and the philosopher.

But first Section I explores the famous image in Theaetetus of Socrates as a midwife, where Plato offers what I read as a new approach to the respondent's subjective *aporia*."

(1) I follow Szaif's classification of a formally aporetic dialogue, Chapter 2 [same volume], Section 2. Like other formally aporetic dialogues, This has been the subject of many doctrinal readings, cf. Sedley 2004.

Reprinted in R. S. Brumbaugh, *Platonic Studies of Greek Philosophy: Form, Arts, Gadgets, and Hemlock*, Albany: State University Press, 1989, pp. 103-111.

"An interesting effect of Eric Havelock's discussion has been the constant reminder of the location of Plato at the end of a dominant oral tradition, without which there might be the temptation to take Platonic dialogue as a discontinuous leap into literacy, thus leading a modern reader to misread the texts. For example, we easily assume, because we have not thought about it, that reading was done silently in Plato's time; that there were equivalents of our copyrights and publishers; even - in some cases- an axiom that "mature" thought must be expressed in clear, monochrome treatise. All of this helps misunderstand

the dialogue form.

(...)

The purpose of my present comments is to relate this framework to the interpretation of Plato's Sophist, with a passing glance at the Statesman. In particular, I want to follow up a suggestion I made earlier, that the principal speaker, the Eleatic Stranger, is an imported bounty-hunter, brought in to shoot the Sophist down (or, more exactly in the absence of the rifle, to catch him in a net). The "weapons" are, perhaps, new (or old) techniques of method and language. (For this simile, compare Socrates' remark in the Philebus that he will now require "weapons of a different kind" to resolve a shifted point under debate.)(2)" (p. 103)

55. Brunschwig, Jacques. 1994. "The Stoic Theory of the Supreme Genus and Platonic Ontology." In *Papers in Hellenistic Philosophy*, 92-157. Cambridge: Cambridge University Press.

English translation by Janet Lloyd of *La théorie stoïcienne du genre suprême et l'ontologie platonicienne* (1988).

"The discussion upon which I shall now embark is divided into six parts. In the introduction (i), I shall make a few observations on various structural problems which spring to mind once one examines the TSG doctrine [the doctrine of the $\tau\acute{\iota}$ as the supreme genus]. In part II, which is devoted to the chronology of the TSG doctrine, or more precisely to a kind of

chronological topology of this doctrine, I shall be analysing a number of texts which could have been and/or were used as arguments to support the adoption of the TSG doctrine at a relatively late date in the history of Stoic thought, and I shall try to show that these texts do not justify such a conclusion. In the next two parts, I shall try to establish the role that may have been played by the reading of Plato's *Sophist* (III) and that possibly played by critical reflection upon the Platonic theory of Forms (IV) in the elaboration of the TSG doctrine. In the last two parts, finally, I shall try to put together two kinds of arguments that confirm my general thesis: to refute the idea that the TSG doctrine is the fruit of an induction based upon an analysis of the canonical incorporeals, I shall try to bring to light the disparities that those incorporeals present and the discrepancies between the various arguments used by the Stoics to fix their ontological status (V). To confirm the role played by the mediation of Platonism in the construction of the TSG doctrine, I shall examine some of the objections put to the Stoics by their adversaries on the subject of this doctrine and the varying degrees of attention that the Stoics paid to those objections (VI)." (pp. 95-96)

56. Bruseker, George. 2018. "The Metaphor of Hunting and the Method of Division in the *Sophist*." In *Proceedings of the XXIII World Congress of Philosophy Volume 2, Section II: Classical Greek Philosophy*, edited by Boudouris, Kostantinos, 55-60. Athens: Greek Philosophical Society.

Abstract: "This paper examines the metaphor of hunting as used in Plato's dialogue, the *Sophist*. In it, we explore the idea that the example of the 'angler' given at the start of the dialogue is no throw-away example, but opens up the metaphor of hunting as an important element of understanding how to use the method of division introduced for coming to definitional knowledge. I argue that the use of the metaphor of hunting is a pedagogical tool that transforms the attentive student's understanding of the method of division from a dry science of definition, to a manner of approaching the search for truth. Applied reflexively to the search for the definition of the *sophist*, it helps reveal that the search for knowledge is a non-

linear, iterative process which requires passing-through, and abides no shortcuts. It leaves open the suggestion that the true image of knowledge and the philosopher may finally be found in a version of acquisitive rather than productive or separative arts (as they are classified within the dialogue)."

57. Buckels, Christopher. 2015. "Motion and Rest as Genuinely Greatest Kinds in the Sophist." *Ancient Philosophy* no. 35:317-327.

"The blending of the greatest kinds (γένη) or forms (εἶδη) is one of the central topics of Plato's *Sophist*. These greatest kinds, or megista gene, which seem to be either Platonic Forms or very similar to Platonic Forms, are Being, Motion, Rest, Sameness, and Otherness; I take them to be properties that are predicated of other things, for reasons we will examine. Why these five kinds are greatest is not made explicit, but immediately before taking up his investigation, the Eleatic Visitor, the main speaker of the dialogue, says that some kinds are 'all-pervading', such that nothing prohibits them from blending with every other kind, i.e., from being predicated of every other kind (254b10-c1). One might think, then, that these five are examples of all-pervading kinds. Almost immediately, however, the Visitor and his interlocutor, Theaetetus, agree that Motion and Rest do not blend with each other, which seems to cut off this explanation of their greatness (252d9-11). For this reason, many commentators suggest that Motion and Rest are simply convenient examples of kinds, garnered from discussions earlier in the text, and only Being, Sameness, and Otherness are special, all-pervading kinds. On this reading. Hot and Cold, which are also examples from earlier in the text (243d6-244b4), would seem to do the job just as well as Motion and Rest, since both pairs are opposites that do not blend with each other but which are (by blending with Being), are self-identical (by blending with Sameness), and are distinct (by blending with Otherness).

I think this reading is incorrect; Motion and Rest are carefully selected as megista gene, greatest kinds, and are not just convenient examples (Reeve [Motion, Rest, and Dialectic in the *Sophist*] 1985, 57 holds a similar position). In fact, I think the

kinds are greatest because they are all-pervading; the Visitor intends us to question the agreement that Motion and Rest do not blend, as is suggested when Theaetetus agrees, later, that if Motion shared in Rest, there would be nothing strange about saying that Motion is at rest (255b6-8). Thus, I argue, Motion and Rest can blend, i.e., they can be jointly predicated of one subject and can be predicated of each other, just as Sameness and Otherness can. While Sameness and Otherness are opposites, a single subject may be the same in one respect, namely, the same as itself, and other in another respect, namely, other than other things. Thus they can be predicated of a single subject, and they can be predicated of each other, as well, since Sameness is other than other things and Otherness is the same as itself." (p. 317)

Plato's *Sophist*. Bibliography of the studies in English: Can - Fos

Bibliography

1. Campbell, Ian J. 2021. "Plato, the Eristics, and the Principle of Non-Contradiction." *Apeiron* no. 54:571-614.

Abstract: "This paper considers the use that Plato makes of the Principle of Non-Contradiction (PNC) in his engagements with eristic refutations. By examining Plato's use of the principle in his most detailed engagements with eristic—in the *Sophist*, the discussion of "agonistic" argumentation in the *Theaetetus*, and especially the *Euthydemus*—I aim to show that the pressure exerted on Plato by eristic refutations played a crucial role in his development of the PNC, and that the principle provided him with a much more sophisticated means of demarcating philosophical argumentation from eristic than he is generally thought to have. In particular, I argue that Plato's qualified formulation of the PNC restricts the class of genuine contradictions in such a way that reveals the contradictions that eristics produce through their refutations to be merely apparent and that Plato consistently appeals to his qualified conception of genuine contradiction in his encounters with eristics in order to demonstrate that their refutations are merely apparent. The paper concludes by suggesting that the conception of genuine contradiction afforded by the PNC did not just provide Plato with a way of demarcating genuine from eristic refutations, but also with an answer to substantive philosophical challenges that eristics raised through their refutations."

2. Candiotto, Laura. 2011. "The Children's Prayer: saving the Phenomena in Plato's Sophist." *Anais de Filosofia Clássica* no. 5:77-85.

Abstract: "Plato builds an ontology capable of saving the Phenomena in the Sophist. By doing so, he distances himself from Parmenides. This article analyses the children's prayer (Soph. 249 d 5) in order to sustain this thesis and evaluate the platonic proposal, along with the role of the negation and the heteron in the communication of the Kinds."

3. ———. 2016. "Negation as Relation: Heidegger's interpretation of Plato's Sophist 257 b3-259 d1." In *Sophistes: Plato's Dialogue and Heidegger's Lectures in Marburg (1924-25)*, edited by De Brasi, Diego and Fuchs, Marko J., 75-94. Newcastle upon Tyne, UK: Cambridge Scholars Publishing.

"The aim of the present chapter is to discuss and evaluate chapters 78 and 79 of Heidegger's Lectures on Plato's Sophist, which deal with Sph. 257b3-259dl. To this purpose, I will compare these chapters with the

more established interpretations concerning the role played by the heteron in Plato's dialogue. Providing my own reading, my main claim is that negation is understood by Heidegger as the foremost shape of relationality.

Moreover, negation as relation is not a dialectical tool but the disclosive power able to show the "things themselves".

My argument will proceed by: 1) providing a short introduction of the major themes within the Sophist; 2) presenting Heidegger's thesis; 3) analyzing the main threads within the Platonic text by referring to the

more established interpretations; 4) evaluating Heidegger's interpretation with a special emphasis on where it has to be situated with regard to the text and to other interpretations, thus pointing out the innovative elements proposed by Heidegger." (p. 75)

4. ———. 2018. "Purification through emotions: The role of shame in Plato's Sophist 230b4-e5." *Educational Philosophy and*

Theory no. 50:576-585.

Abstract: "This article proposes an analysis of Plato's Sophist (230b4–e5) that underlines the bond between the logical and the emotional components of the Socratic elenchus, with the aim of depicting the social valence of this philosophical practice. The use of emotions characterizing the 'elenctic' method described by Plato is crucial in influencing the audience and is introduced at the very moment in which the interlocutor attempts to protect his social image by concealing his shame at being refuted. The audience, thanks to Plato's literary strategy, realizes the failures of the interlocutor even as he refuses to accept them. As a result, his social image becomes tarnished. Purification through shame reveals how the medium is strictly related to the endorsement of specific ethical and political goals, making the Platonic dialogs the tools for the constitution of a new paideia."

5. Caplan, Jerrold R. 1995. "The Coherence of Plato's Ontology." American Catholic Philosophical Quarterly no. 65:171-189.

"In light of the so-called theory of Forms presented in earlier dialogues and the communion of the greatest kinds in the later dialogues, it has been argued that Plato abandoned his earlier ontology in favor of the more sophisticated scheme of his later period. The criticism is then made that the so-called later ontology is inconsistent with the earlier one and that the two accounts do not cohere.

I argue, to the contrary, that Plato's presentation has been consistent throughout. One might say that the discussion in the Sophist (236-259) is a revision or a refinement or expansion of the theory as found, for example, in the Phaedo (78-9). Although this may suggest that there has been some sort of development in the treatment of the Forms from early to late, it by no means implies any wholesale abandonment of the first formulations nor any inherent inconsistency. The fact that Plato himself raises questions about the Forms indicates the need for a clearer articulation of the relationship between thought and being, which is precisely what is undertaken in the later dialogues." (p. 171)

6. Casadesús Bordoy, Francesc. 2013. "Why Is It so Difficult to Catch a Sophist? Pl. Sph. 218d3 and 261a5." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 15-27. Berlin: Walter de Gruyter.

"Suffice it, therefore, in conclusion to this presentation, to return to the passage from the Republic in which the lines of the Odyssey which begin the Sophist are commented on in negative terms, and to ask once again the question Socrates poses in justification of his criticism of the lines of Homer:

‘Shall I ask you whether God is a magician, and of a nature to appear insidiously now in one shape, and now in another...?’

In order to answer this question in the negative, Plato has to undertake the writing of the Sophist, in an attempt to expose one who, due to his protean and mimetic character, adopts all kinds of forms, even the most divine. Equipped with his philosophical hunting weapon, the dialectical method and diarsis, he attempts, like Menelaus, to catch the sophist.

Nonetheless, the possibility of success remains in doubt, given Socrates’ disturbing observation that the hard-working hunter, the Stranger from Elea himself, could be yet another of the multiple and polymorphous manifestations of the Sophist ..."
(p. 27)

7. Casper, Dennis J. 1977. "Is There A Third One and Many Problem in Plato?" *Apeiron* no. 11:20-26.

"In a recent article (1), M.J. Cresswell points out that the problem of the one and the many "gets a new twist in three of Plato's later dialogues (Parmenides, Sophist, and Philebus) where we discover not one problem but apparently two."(2) The first problem (I) concerns particulars, things subject to generation and perishing (Philebus, 14D-15A); it is " the problem of how the same thing can have many characteristics." (3) The second problem (II) concerns forms, things not subject to generation or perishing; it is the problem how a unitary form can be in many things which come into being (Philebus, 15B). The first problem is "childish and easy", the second serious and difficult.

Cresswell points out that the formal structure of (I) does not require that it concern particulars. In a sense, forms have "characteristics" — each is one, the same as itself, and so on. So a parallel one and many problem (III) might be raised: How can the same form have many characteristics? Here Cresswell remarks, "However, when Plato actually sets out the one and many problem about the forms it doesn't have the structure of (I) at all."

Rather, it is (II) above. So Cresswell believes apparently that Plato does not set out (III) in the passages he mentions or elsewhere in the *Philebus*, *Parmenides*, and *Sophist*. I shall argue, however, that Plato does raise (III) in these works and that he takes it as seriously as he does (II). " (p. 20, some notes omitted)

(1) M.J. Cresswell, "Is There One or Are There Many One and Many Problems in Plato?", *The Philosophical Quarterly*, vol. XXII (1972), pp. 149-154.

(2) *Ibid.*, p. 149.

(3) *Ibid.* In stating (1) in this way, Cresswell takes his cue from *Sophist*, 251A-B. In the *Philebus* and at the opening of the *Parmenides* (127E; 129A-E), the problem concerning particulars is how the same thing can have opposite characteristics.

8. Cassin, Barbara. 2017. "The Muses and Philosophy: Elements for a History of the Pseudos." In *Contemporary Encounters with Ancient Metaphysics*, edited by Greenstone, Abraham Jacob and Johnson, Ryan J., 13-29. Edinburgh: Edinburgh University Press.

"Barbara Cassin's "The Muses and Philosophy: Elements for a History of the 'Pseudos'" (1991; translated by Samuel Galson), investigates Plato's attempt in the *Sophist* to distinguish the philosopher from the sophist. Cassin pinpoints the slippery operation of the pseudos through the texts of *Parmenides* and *Hesiod*. Yet *Parmenides*' rejection of not-being allows the sophist to claim infallibility. Plato's *Eleatic Stranger* shows that *Parmenides*' rejection of notbeing is self-refuting (thus the

Stranger's famous parricide is just as much Parmenides' suicide). Further, although the Stranger ultimately fails to find a criterion for truth or falsity, he nevertheless establishes a place for the pseudos in the distinction between logos tinos (speech of something) and logos peri tinos (speech about something). Ultimately, Cassin argues that reality of pseudos is a condition for the possibility of language, and indeed involves the very materiality and breath of language." (p. 5)

9. Cataldo, Peter J. 1984. "Plato, Aristotle and προς εν equivocality." *The Modern Schoolman* no. 61:237-247.

"One of the brilliant features of Father Joseph Owens' commentary on Aristotle's *Metaphysics* [*] is the way that he traces the integration of the προς εν equivocality of being in Aristotle's work. But Aristotle's concept of προς εν equivocality is not linked with his predecessor Plato in this classic commentary.

The aim of this essay is to indicate such a link, and one in which Plato's contribution is more than just an anticipation; for, it will be argued that all of the elements which constitute προς εν equivocality per se are also present in Plato's doctrine of being found in the *Sophist*.

The nature of this project requires that several texts be presented from both thinkers, but this in no way presumes to be a comprehensive analysis of the texts. I only wish to show that Aristotle's concept of προς εν equivocality is traceable to Plato in some definite ways, all the while assuming, of course, that their doctrines of being are essentially opposed." (p. 237)

[*] *The Doctrine of Being in the Aristotelian Metaphysics: A Study in the Greek Background of Mediaeval Thought*, Toronto: Pontifical Institute of Mediaeval Studies, 1951, Third revised edition 1978.

10. Chan, Han-liang. 2012. "Plato and Peirce on Likeness and Semblance." *Biosemiotics* no. 5:301-312.

Abstract: "In his well-known essay, 'What Is a Sign?' (CP 2.281, 285) Peirce uses 'likeness' and 'resemblance' interchangeably in

his definition of icon. The synonymy of the two words has rarely, if ever, been

questioned. Curiously, a locus classicus of the pair, at least in F. M. Cornford's English translation, can be found in a late dialogue of Plato's, namely, the *Sophist*. In this dialogue on the myth and truth of the sophists' profession, the mysterious 'stranger', who is most likely Socrates persona, makes the famous distinction between *eikon* (likeness) and *phantasma* (semblance) (236a,b).

For all his broad knowledge in ancient philosophy, Peirce never mentioned this parallel; nor has any Peircian scholar identified it.⁽¹⁾ There seems to be little problem with *eikon* as likeness, but *phantasma* may give rise to a puzzle which this paper will attempt to solve. Plato uses two pairs of words: what *eikon* is to *phantasma* is *eikastikhn* (the making of likeness [235d]) to *phantastikhn* (semblance making [236c]). In other words, icons come into being because of the act of icon-making, which is none other than indexicality. Witness what Peirce says about the relationship between photographs and the objects they represent: 'But this resemblance is due to the photographs having been produced under such circumstances that they were physically forced to correspond point by point to nature.' (Ibid.) Thus the iconicity which links the representamen (sign) and its object is made possible not only by an interpretant, but also by indexisation.

Their possible etymological and epistemological links aside, the Peircian example of photographing and the Platonic discussion of painting and sculpturing in the *Sophist*, clearly show the physio-pragmatic aspect of iconicity. The paper will therefore reread the Peircian iconicity by closely analysing this relatively obscure Platonic text, and by so doing restore to the text its hidden semiotic dimension."

11. Chappell, T. D. J. 2011. "Making Sense of the *Sophist*. Ten Answers to Ten Questions." In *Plato's Sophist: Proceedings of the Seventh Symposium Platonicum Pragense*, edited by Havlíček, Aleš and Karfík, Filip, 344-375. Praha: Oikoymenh.

"One notable feature of the method of division is this: every determination in a well-performed division is a positive determination.

See Statesman, 262c9–d7, on an attempted definition by division of barbaros:

"[Our division went wrong because we did] the same sort of thing as those who are trying to make a twofold division of the human race, and do what most of those do who live here: they distinguish on one side the race of Greeks as separate from all others, and then give the single name 'barbarians' to all the other races, though these are countless in number and share no kinship of blood or language.

Then because they have a single term, they suppose they also have a single kind."

A good division will not divide Greeks from non-Greeks, but Greeks from Romans, Britons, Gauls, Teutons, Slavonic tribes, Hyperboreans, islanders of the utmost west, etc. etc. etc. To put it another way, every step of a well-performed division will use "other than" and not "is not". More about this in due course." (pp. 344-345)

(...)

"In all these ways making sense of the Sophist, and (come to that) making sense of the sophist, is very literally a matter of watching Plato making sense: creating a theory of how, alongside the changeless world of the Forms, there can and must be a changing world of interweavings of those Forms. Not only the gods' interweavings, which constitute the world, but also our interweavings, which constitute logoi about – representations of – that world: either misleading and false images of it, like the sophist's, or faithful and accurate images, like those created by the person whom above all the sophist aspires to imitate: the philosopher." (p. 375)

12. Charlton, William. 1995. "Plato's Later Platonism." Oxford Studies in Ancient Philosophy no. 13:113-133.

"And although on some interpretations the analyses of negation and false statement in the Sophist call precisely for quantification over abstract objects, those passages have also been interpreted as requiring quantification over concrete objects like Theaetetus.

(...)

"But the passages themselves are brief and the issues clear. In what follows I first explain (Section I) why I prefer a Platonizing interpretation, and (Section II) question whether Plato is willing to quantify over concrete objects at all. I then (Section III) consider how he would wish us to understand existential claims to the effect that 'there is' something or that something 'shares in being'. Next (Section IV) I show how, using quantification over abstract but not over concrete objects, and also using the five Greatest Kinds mentioned in the Sophist, Plato could analyse various kinds of statement. He did not, of course, have the concept of quantification logicians have today. But he had strong logical instincts, and the suggestions he throws out lend themselves to development with the aid of quantifiers in a perspicuous and intriguing way. Finally (Section V), I suggest that his analysis of negation in terms of otherness reveals a sort of Platonism that is itself other than that defined by Quine: he believes that the difference between being and not being is independent of our thought in a way it would not be on an analysis similar to that proposed for change in Section IV." (pp. 113-114)

13. Cherubin, Rose. 1993. "What is Eleatic about the Eleatic Stranger?" In *Plato's Dialogues: New studies and Interpretations*, edited by Press, Gerald A., 215-235. Lanham: Rowman & Littlefield.

"In this paper I would like to pose and to explore the following questions: Why is there an Eleatic Stranger in Plato's Sophist? What if anything does this character say or imply or do that only a "companion of those around Parmenides and Zeno" (216a) would?

I would also like to propose that central to these concerns is the question of how Plato read Parmenides' poem. Did Plato take

the daimon's speech as a direct and literal statement of Parmenides' views? What we can discover about this issue could be instructive in our considerations of how we might best read Parmenides.

The Stranger's speeches and behavior include much that seems sophistic, as well as a number of reasons to suspect that he is not, or not only, a sophist. We are led, then, to ask what if any the differences are between Eleatic and sophist, and especially what if any differences between them appear in Plato. (For the latter I will focus on the Sophist.) What would account for the differences, or the lack thereof? And if there are differences, into which group—Eleatic or sophist—does the Stranger fall?" (p. 215)

14. Chrysakopoulou, Sylvana. 2010. "Heraclitus and Xenophanes in Plato's Sophist: The Hidden Harmony." *Ariadne. The Journal of the School of Philosophy of the University of Crete* no. 16:75-98.

"The principal aim of the present article is to shed light on Heraclitus' intellectual kinship with Xenophanes. Although the overlap of fundamental patterns and themes in both thinkers' worldview could be partly due to the osmosis of ideas in the archaic

era, the intertextual affinity between them, as transmitted by the history of reception, cannot be regarded as a mere accident of cultural diffusion. Our primary intention is to focus on the common grounds of their criticism against the authority of the epic poets on the theological education of the Greeks and more particularly on its platonic appropriation." (p. 75)

(...)

"In conclusion, Plato in the Sophist uses Xenophanes' and Heraclitus' theological affinity as a trait d'union between the latter and Parmenides, inasmuch as Plato's ontology is presented as a response to Parmenides' account on being." (p. 85)

15. ———. 2018. "Xenophanes in Plato's Sophist and the first philosophical genealogy." *Trends in Classics* no. 10:324-337.

Abstract: "In this article I intend to show that Plato in the Sophist provides us with the earliest doxographic material on pre-Platonic thinkers. In his account on his predecessors, Xenophanes emerges as the founder of the Eleatic tribe as opposed to the pluralists, while Heraclitus and Empedocles are presented as the Ioanian and the Italian Muses respectively. This prima facie genealogical approach, where Plato's predecessors become the representatives of schools of different origins paves the way for Plato's project in the Sophist. In other words the monistic account Xenophanes introduces, prepares for the synthesis between the one and the many set forth by Heraclitus and Empedocles, which is thus presented as a further step towards the 'interweaving of forms' (σμπλοκὴν εἰδῶν) Plato proposes in the Sophist."

16. Clanton, J. Caleb. 2007. "From Indeterminacy to Rebirth: Making Sense of Socratic Silence in Plato's Sophist." *The Pluralist* no. 2:37-56.

"I argue here that, in the Sophist, Plato opens up possibilities for philosophy that lie beyond Socrates's style of discourse. Plato does so by introducing indeterminacy as a way of salvaging determinate discourse itself. In the first section of this article, I explore what the problem of the Sophist seems to be. It appears that in order to preserve discourse, the characters within the dialogue must try to make sense of non-being, which clearly is a problematic undertaking. In the second section, I follow the characters as they try to

resolve this issue of not-being. Third, I argue that in saving determinate discourse through resolving the issue of not-being, the characters in the dialogue incorporate indeterminacy into the very enterprise of philosophy. With this reading of the Sophist in mind, I try to make sense of a crucial element that Plato adds -- namely, Socrates's absence in the dialogue. In doing so, I mean to stay closely attuned to the dramatic features of the dialogue as they generate the questions I focus on. Finally, in light of this reading of the Sophist,

I suggest a way to rethink what it means to do philosophy, following Plato's lead in carrying out a philosophical project

that is often deemed foreign to Plato." (p. 37)

17. Clarke, Patricia. 1994. "The Interweaving of the Forms with One Another: Sophist 259e." *Oxford Studies in Ancient Philosophy* no. 12:35-62.

"At Sophist 259 E the Eleatic Stranger and Theaetetus agree that 'The loosening of each thing from everything [else] is the complete wiping out of all λόγοι for it is because of the interweaving of the forms with one another that we come to have λόγος. My chief aim in this paper is to air a possible solution to the problem of how this remark might apply to such statements as 'Theaetetus sits' and 'Theaetetus flies', (1) in each of which only one form is referred to. The solution turns on the claim that neither statement could be true unless forms could mix with one another in the sense of being instantiated together in Theaetetus. I do not positively endorse it. I wonder whether there is any definite solution to the problem; Plato does not seem to give sufficiently clear indication of how he is thinking. However, I wish to argue that a solution along the lines indicated cannot be dismissed as easily as has sometimes been supposed. In the first part of my paper I give some general consideration to the remark at 259 E, and examine briefly some alternative solutions to the problem of its application to 'Theaetetus sits' and other such statements." (p. 35)

(1) I use these translations, rather than the more idiomatic 'Theaetetus is sitting', 'Theaetetus is flying', to reflect the fact that in the original at 263 A each example is expressed by means of a two-word sentence composed of proper name and verb. However, even for a statement of the form 'Theaetetus is F', expressed with copula and predicate, a problem arises if for Theaetetus to be F is simply for Theaetetus to partake directly of F, for then again only one form might seem to be involved."

18. Cordero, Nestor-Luis. 2013. "The relativization of "separation" (khorismos) in the Sophist." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 187-201. Berlin: Walter de Gruyter.

"It is a commonplace among historians of ancient thought to refer to the "separation" (khorismos) which characterizes

Platonic philosophy, and which Aristotle criticized severely. It is true that, like any commonplace, this separation, which is at base a type of dualism, can be the subject of very different understandings, including that of being minimized." (p. 187)

(...)

"All aporiai stem from separation. So, one has to try to suppress it, or at any rate relativize it, and that is going to be the task the Sophist sets itself.

Why the Sophist? Because, as we saw, khorismos separated two modes of being, and the Sophist is a dialogue about being. Steering clear of interpretation, the dialogue's subtitle is *peri tou ontos*. And it is normal, if he is going to undertake an in-depth analysis of the figure of the sophist, that he should see himself as obliged, for the first time on his philosophical voyage, now that he is over seventy, to confront his father Parmenides, the venerable and fearsome monopolizer of being, and the confrontation concerns sophistry. This is not the time to expatiate on the "amitiés particulières" that Plato establishes between Parmenides and sophistry. In criticizing the great master all things are allowed, including taking literally images in the poem which are didactic, such as the sphere, and in particular characterizing him as a fellow traveller of sophistry, which is, all in all, a joke in poor taste. But it is undeniable that his changing of *porte-parole*, in which he replaces Socrates with the Stranger, allows Plato to take certain liberties, and to face problems that his Socrates had never faced, among them precisely the necessity of refuting Parmenides." (p. 191)

19. Corey, David D. 2015. *The Sophists in Plato's Dialogues*. Albany: State University of New York Press.

Chapter Eight: Plato's Critique of the Sophist?

"In this chapter, I consider four such accounts of the sophists: those of Anytus speaking to Socrates in the *Meno*, Socrates speaking to Adeimantus in the *Republic*, Socrates speaking to Polus in the *Gorgias*, and the Eleatic Stranger speaking to Theaetetus in the *Sophist*. Although all these appear to stand as general critiques of the sophists, none is successful as such, nor,

I argue, does Plato mean for us to accept them as such. These accounts are obviously defective both in their own terms and in light of what we know of the sophists from other dialogues. At the same time, however, I want to argue that these passages of general criticism have a broader scope than merely attempting to criticize the sophists. They also call into question the very lines of demarcation

between such categories as “sophistry,” “philosophy,” and “good citizenship,” thus leading inevitably to the possibility of self-reflection, whether one understands oneself to be a philosopher or merely a citizen.

In other words, what is usually taken rather facilely to be “Plato’s critique of the sophists” in fact cuts more deeply into common thinking and doing than readers may like to admit. Widely accepted and even cherished political, philosophical, and pedagogical practices are implicated in these accounts. ” (pp. 202-203)

20. Cornford, Francis Macdonald. 1935. *Plato's Theory of Knowledge. The Theaetetus and the Sophist of Plato translated with a running commentary.* New York: Harcourt, Brace and Co.

Contents: The Theaetetus, pp. 15-163; The Sophist pp. 165-332.

"My object was to make accessible to students of philosophy who cannot easily read the Greek text, two masterpieces of Plato's later period, concerned with questions that still hold a living interest. A study of existing translations and editions has encouraged also the hope that scholars already familiar with the dialogues may find a fresh interpretation not unwelcome. A commentary has been added because, in the more difficult places, a bare translation is almost certain, if understood at all, to be misunderstood.

This danger may be illustrated by a quotation from a living philosopher of the first rank: It was Plato in his later mood who put forward the suggestion "and I hold that the definition of being is simply power". This suggestion is the charter of the doctrine of Immanent Law.'(1)

Dr. Whitehead is quoting Jowett's translation. If the reader will refer to the passage (p. 234 below), he will see that the words are rendered: 'I am proposing as a mark to distinguish real things that they be nothing but power.'(2) A mark of real things may not be a 'definition of being'. This mark, moreover, is offered by the Eleatic Stranger to the materialist as an improvement on his own mark of real things, tangibility. The materialist accepts it, 'having for the moment no better suggestion of his own to offer'. The Stranger add that Theaetetus and he may perhaps change their minds on this matter later on. Plato has certainly not committed himself here to a 'definition of being'. So much could be discovered from an accurate translation; but the word 'power' still needs to be explained. It has been rendered by 'potency', 'force', 'Möglichkeit', 'puissance de relation'. Without some account of the history of the word dynamis in Plato's time and earlier, the student accustomed to the terms of modern philosophy may well carry away a false impression.

To meet difficulties such as this, I have interpolated, after each compact section of the text, a commentary which aims at discovering what Plato really means and how that part of the argument is related to the rest. There are objections to dissecting the living body of a Platonic dialogue. No other writer has approached Plato's skill in concealing a rigid and intricate structure of reasoning beneath the flowing lines of a conversation in which the suggestion of each thought as it arises seems to be followed to an unpremeditated conclusion. In these later dialogues the bones show more clearly through the skin; and it is likely that Plato would rather have us penetrate his meaning than stand back with folded hands to admire his art. An interpolated commentary, giving the reader the information he needs when and where he needs it, may be preferred to the usual plan of stowing away such information in an introduction at the beginning and notes at the end. It is not clear why we should be forced to read a book in three places at once. This book, at any rate, is designed to be read straight through." (Preface, pp. VII-VIII)

(1) A. N. Whitehead, *Adventures of Ideas*, (1933), p, 165. I am not suggesting that Dr. Whitehead fundamentally misunderstands the master who has deeply influenced his own philosophy, but only pointing out how a profound thinker may be misled by a translation.

(2) This rendering is itself doubtful, the construction of the words, as they stand in the MSS, being obscure and difficult.

21. Cresswell, M. J. 1972. "Is There One or Are There Many One and Many Problems in Plato?" *The Philosophical Quarterly* no. 22:149-154.

"How can one thing be many and many things one? This perennial in Greek philosophy gets a new twist in three of Plato's later dialogues (*Parmenides*, *Sophist*, and *Philebus*) where we discover not one problem but apparently two. More interestingly, although one of them is a serious and perplexing problem demanding the full insight of the rigorously disciplined philosopher, the other problem is described in the *Philebus* (14d, e) as commonplace and one such that "almost everyone agrees nowadays that there is no need to concern oneself with things like that, feeling that they are childish, obvious and a great nuisance to argument". And in the *Sophist* (251b) it is relegated to providing a banquet for the young and for "late learners of old men" who are "poorly endowed with intelligence and marvel at such things, thinking themselves to have come upon all wisdom".

What is the difference between this trivial form and the serious form of the problem of how one thing can be many? In the *Philebus* (15a) Socrates says that the trivial problem occurs when the one in question is the sort of thing which can come into being and pass away, i.e., is something which belongs to the physical world. The serious problem is when the one is an eternal existent." (p. 149)

22. Crivelli, Paolo. 1993. "Plato's *Sophist* and Semantic Fragmentation." *Archiv für Geschichte der Philosophie* no. 75:71-74.

"In this journal, Band 71, Heft 3, pp. 257-282, Michael T. Ferejohn [*] proposed to apply to the interpretation of certain parts of Plato's *Sophist* a methodological principle which I shall call 'principle of joint explanation': given the close relationship between Platonic and Aristotelian philosophy, in particular circumstances it's possible to use Aristotelian texts to interpret obscure or vague Platonic passages. In this paper I shall criticize Ferejohn's application of the 'principle of joint explanation' to the *Sophist* and his interpretation of Plato's analysis of negation and of its philosophical aims."

[*] Plato and Aristotle on Negative Predication and Semantic Fragmentation.

23. ———. 2012. *Plato's Account of Falsehood: A Study of the Sophist*. Cambridge: Cambridge University Press.

Contents: Acknowledgements IX; Abbreviations of titles of Plato's works X; Note on the text XI; Introduction 1; 1. The *sophist* defined 13; 2. Puzzles about non-being 28; 3. Puzzles about being 71; 4. The communion of kinds 102; 5. Negation and not-being 177; 6. Sentences, false sentences, and false belief 221; Appendix: The *Sophist* on true and false sentences: formal presentation 261; References 275; Index of names 290; Index of subjects 294; index of passages cited 296-309.

"In the *Sophist* Plato presents his mature views on sentences, falsehood, and not-being. These views have given an important contribution to the birth and growth of the subjects now identified as ontology and philosophy of language. I have two main objectives: to offer a precise reconstruction of the arguments and the theses concerning sentences, falsehood, and not-being presented in the *Sophist* and to gain a philosophical understanding of them. In this introduction I offer an overview of the main problems addressed in the *Sophist* and their solutions and then discuss the methodology whereby I pursue my primary goals." (Introduction, p. 1)

"Almost a commentary. The close interconnection of themes and concepts invited by the dialogue-form makes it difficult to address a Platonic dialogue by examining some of its themes and concepts in isolation from the others: if an operation of this

sort is attempted, the impression arises that some factor essential for the understanding of the issues under consideration is ignored. Mainly for this reason I decided to have my examination of the Sophist unfolding in parallel with the development of the dialogue. So the present study covers most of the dialogue and follows its progression, almost as a running commentary.

Nevertheless, my examination of the Sophist is selective: not all the themes and concepts emerging from the dialogue are discussed with the same care or depth. The approach I have privileged is that of philosophy of language (in the comprehensive sense in which it addresses also ontological matters). In particular, I ask Plato some of the questions that a modern philosopher of language would regard as important and I consider what answers Plato is committed to offering. Establishing what answers Plato is committed to offering requires an accurate historical reconstruction of what he actually does say: modern questions, Plato's answers. The present study therefore combines exegetical and philological considerations with a philosophically minded attitude." (p. 11)

24. Crombie, Ian M. 1962. *An Examination of Plato's Doctrines*. London: Routledge & Kegan Paul.

Vol. 2: *Plato on Knowledge and Reality*; Chapter 3: *Metaphysical Analysis*. § V: *The Sophist*, pp. 388-421; Chapter 4: *Logic and Language* § III: *The Paradox of False Belief* pp. 486-497; § IV: *Some Further Problems arising out of the Sophist: the Copula and Existence, etc.*, pp. 498-516.

"The doctrine of the Sophist is continuous with that which we have been examining. The fact that I have relegated the Sophist to a section of its own must not be allowed to give a contrary impression.

I have given the Sophist a section on its own partly because it is very difficult, and partly because it adds something to the doctrine sketched in the *Cratylus* and common to the *Phaedrus*, *Statesman* and *Philebus*. There are two parts to this additional material. One of these parts deals with matters which are perhaps more properly called logical than metaphysical, namely

the meaning of the verb *einai* or "to be", and the nature of negation. The discussion of these topics is entangled with that of the others and can only be separated by violence. I shall use violence, however, and postpone the detailed consideration of these topics to the next chapter. The other part of the additional material can perhaps be described as follows. So far the "kinds" whose "sharing" we have been considering have been, on the whole, material or limiting properties. I call, for example, animality a limiting property, because there are certain limits which cannot be transgressed by anything which is to have the property.

We recall however that the discussion in the *Parmenides* was concerned with the formal or non-limiting property unity—non-limiting in the sense that to be told that X is one is to be told nothing whatever about the nature of X. It is clear that the relation of non-limiting to limiting properties was an important question in Plato's latest phase, and it is in the *Sophist* that this is first discussed in connection with the sharing of kinds. This is the special material with which this section will be primarily concerned. I may add that it will be impossible in a discussion of this—perhaps of any—length to justify an interpretation of the *Sophist*." (p. 388)

25. Curd, Patricia Kenig. 1988. "Parmenidean Clues in the Search for the *Sophist*." *History of Philosophy Quarterly* no. 5:307-320.

"Does the *Parmenides* hold clues to a proper understanding of the *Sophist*? It seems to me that it does; in this paper I shall explore a number of issues that link the two dialogues, arguing that understanding Plato's treatment of these issues in the *Parmenides* can help us correctly interpret the arguments of the *Sophist*.

Influential interpretations of Plato's later work hold that there are serious confusions about identity and predication in that work. According to these interpretations some of the arguments in the antinomies of Part II of the *Parmenides* exhibit this confusion; further, according to these views, it is not until the *Sophist* that Plato sees his way to distinguish identity and

predication adequately, and that it is this that allows him finally to solve the problems of Being and Not Being in that dialogue.

(1)

In this paper I want to challenge this view: I shall claim that the arguments of Part II of the Parmenides are not infected with an identity/predication (I/P) confusion. Further, I shall argue that in the second part of the Parmenides Plato explores and investigates certain ideas that are crucial to his solution of the problem of Not-Being in the Sophist (a solution that does not depend on distinguishing identity and predicative "senses" or "uses" of the verb "to be"). (2) I shall begin with some preliminary remarks about the I/P confusion and the earlier dialogues before turning to the Parmenides and the Sophist." (p. 307)

(1) The interpretations I have in mind are primarily those of G. E. L. Owen (in "Notes on Ryle's Plato," in *Logic, Science and Dialectic*, ed. G. E. L. Owen and M. C. Nussbaum (Ithaca, 1986), pp. 85-103; hereafter NRP; and in "Plato on Not-Being," in *LSD* pp. 104-137; hereafter PNB); and Malcolm Schofield (in "The Antinomies of Plato's Parmenides," *Classical Quarterly*, vol. 21 [1977], pp. 139-158). See also M. Frede, *Prädikation und Existenzaussage* (Gottingen, 1967).

(2) Here I shall follow the interpretation of the arguments of the Sophist suggested by Jean Roberts in "The Problem about Being in the Sophist," *History of Philosophy Quarterly*, vol. 3 (1986), pp. 229-243 (hereafter PBS). What I shall say here about the Sophist is based on an acceptance of Roberts' arguments (which I shall not repeat here) and owes much to her work.

26. Dancy, Russell M. 1999. "The Categories of Being in Plato's Sophist 255c-e." *Ancient Philosophy* no. 19:45-72.

"Sophist 255c-e contains a division of beings into two categories rather than a distinction between the "is" of identity, existence, and/or predication; this emerges from an analysis of the argument that employs the division. The resulting division is the same as that ascribed to Plato in the indirect tradition among the so-called "unwritten doctrines"; there the two

categories are attached to the One and the Indefinite Dyad." (p. 45)

(...)

"Conclusion. Perhaps it is not so bad if the later Plato sounds more like Aristotle. But there remains an enormous difference of ontology between Plato and Aristotle, if any of the reports of Plato's 'unwritten doctrines' can be believed.

We have already noticed that Plato thinks the distinction between beings and others can be put by saying that while beings partake of both the Forms Standalone and Relative, others partake only of the Form Relative. The partition of beings into Standalone ones and Relative ones, as I have construed it, is a categorial scheme: the scheme of Old Academic Categories adverted to in the introductory section of this article. Hermodorus (or whoever) was there quoted as saying that Plato says 'of the beings, some are by virtue of themselves, and some are relative to something'; that much we have the Eleatic Stranger saying in 255c13-14. But Hermodorus gives us examples, where the Stranger does not: a man and a horse are by virtue of themselves; large and small [things] are relative to things. If we unpack these examples, we presumably find ourselves saying: Bucephalus is a horse by virtue of himself; it is because he is Bucephalus that he is a horse, or, perhaps better, it is not because of some other thing that Bucephalus counts as a horse, whereas the fact that Bucephalus is large is something whose explanation requires us to introduce other, relatively smaller, horses which are the norm for horses as far as size goes. This then leads to categorizations of the terms man and horse under the heading Standalone and large, small, good, and bad under the heading Relative. And it seems a sound conjecture that where I am speaking of 'terms', Plato would speak of 'forms': the division is a division of forms, if that is right.

But that is not the end of the story. The Hermodorus text, along with other texts, (1) would have us believe that Plato rooted the two categories Standalone and Relative in two super-Forms that stood above all the others: the mysterious entities known

as the One and the Indefinite Dyad, from which the more ordinary Forms derived as numbers. I think this, too, should be taken seriously. But that is a large undertaking, not to be entered on here." (pp. 69-70)

- (1) Including, besides the others quoted in I, many in Aristotle, and also the rather strange and somewhat garbled stretch of text in Sextus Empiricus, *Adversus Mathematicos* X 257-276 purporting to report on the views of 'Pythagoras and his circle'.

"This introductory essay hence focuses on four aspects. First of all, it will offer an overview on the current state of research. Second, it will argue for a relativization of Heidegger's alleged misunderstanding of Plato. This will be achieved by arguing against some of the criticism expressed by Werner Beierwaltes [*] towards Heidegger's reading of Plato. Third, it briefly examines the "Transition" in the 1924 Marburg Lectures between Heidegger's analysis of the Nicomachean Ethics and the interpretation of Plato's Sophist, the "Preliminary Remarks" and the "Introduction" to the actual interpretation of the dialogue, describing Heidegger as a somehow unconscious 'forerunner' of the modern dialogical approach. Finally, it will present an overview of the contributions in the volume and suggest further possible research developments." (p. 2)

29. De Garay, Jesús. 2013. "Difference and Negation: Plato's Sophist in Proclus." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 225-245. Berlin: Walter de Gruyter.

"We do not have a specific commentary on the Sophist, and it is doubtful whether he ever wrote one. What we do have is the Commentary on the Parmenides, from which some have hypothesized that he also wrote one on the Sophist. Whatever the case, the explicit references to this dialogue are many, and they affect crucial issues in Proclus' thought. In particular, *The Elements of Theology* aside (which, because of its axiomatic treatment does not include textual references of any kind), allusions to the Sophist are very frequent in his three most relevant systematic works: the Commentary on the Parmenides, the Platonic Theology, and the Commentary on the Timaeus (9)." (p. 227)

(...)

"However, as has been pointed out by Annick Charles-Saget, to understand Proclus' interpretation of the Sophist we cannot pay attention solely to explicit quotations from the dialogue; but we must also consider his silences and significance shifts. In other words, on the one hand there are important questions in the dialogue which Proclus hardly adverts to: for example, the sophist as deceiver, and purveyor of falsehood in general; on the other hand, there are matters which Proclus presents in a different way, such as the vindication of poetic production in light of the definition of the sophist. Also significant is the way in which a number of very short passages from the Sophist are adduced over and over and again in support of his thesis." (p. 228)

(9) An exhaustive documentation of references to the Sophist can be found in Guérard (1991). My own exposition will focus strictly on the Commentary on the Parmenides and Platonic Theology.

30. de Harven, Vanessa. 2021. "The Metaphysics of Stoic Corporealism." *Apeiron*:1-27.

Abstract: "The Stoics are famously committed to the thesis that only bodies are, and for this reason they are rightly called "corporealists." They are also famously compared to Plato's earthborn Giants in the *Sophist*, and rightly so given their steadfast commitment to body as being. But the Stoics also notoriously turn the tables on Plato and coopt his "dunamis proposal" that being is whatever can act or be acted upon, to underwrite their commitment to body rather than shrink from it as the Giants do. The substance of Stoic corporealism, however, has not been fully appreciated. This paper argues that Stoic corporealism goes beyond the *dunamis* proposal, which is simply an ontological criterion for being, to the metaphysics of body. This involves, first, an account of body as metaphysically simple and hence fundamental; second, an account of body as malleable and continuous, hence fit for blending (*krasis di' holou*) and composition. In addition, the metaphysics of body involves a distinction between this composition relation seen in the cosmology, and the constitution relation by which the four-fold schema called the Stoic Categories proceeds, e.g. the relation between a statue and its clay, or a fist and its underlying hand. It has not been appreciated that the cosmology and the Categories are distinct — and complementary — explanatory enterprises, the one accounting for generation and unity, the other taking those individuals once generated, and giving a mereological analysis of their identity and persistence conditions, kinds, and qualities. The result is an elegant division of Plato's labor from the *Battle of Gods and Giants*. On the one hand, the Stoics rehabilitate the

crude cosmology of the Presocratics to deliver generation and unity in completely corporeal terms, and that work is found in their Physics. On the other hand, they reform the Giants and “dare to corporealize,” delivering all manner of predication (from identity to the virtues), and that work is found in Stoic Logic. Recognizing the distinctness of these explanatory enterprises helps dissolve scholarly puzzles, and harmonizes the Stoics with themselves.”

31. de Vries, Willem. 1988. "On "Sophist" 255B-E." *History of Philosophy Quarterly* no. 5:385-394.

"At Sophist 255b7-e the Eleatic Stranger gives two arguments, one to show that being and identity are not the same, and one to show that being and otherness are not the same. Scholars have not paid them particularly close attention, but it seems generally agreed that the two arguments are quite different. In this paper I shall offer an interpretation which shows that the two arguments, though superficially quite different, are intrinsically and importantly related. Specifically, in the first argument the Stranger elicits an obvious falsehood from the hypothesis that being and identity are the same. I claim that in order to distinguish being and otherness an exactly parallel argument could have been given instead of the second argument we actually find. However, there are sound dramatic reasons why this was not done, for in this case the falsehood would not be obvious.

Instead, the argument we are given takes us deeper and analyzes the source of the falsehood by introducing a distinction between absolute and relative uses of "being." This distinction, which has been misinterpreted in the literature, is then applied to the problem at hand and is used to distinguish being from otherness. Thus the fuller and apparently different argument to distinguish being and otherness succeeds by giving the deeper reasons for the success of the argument to distinguish being and identity.

As a corollary to my interpretation, we can see that in these arguments other senses of "is," whether the "is" of existence or

the "is" of identity, do not come into play, as other commentators have held.

The first section will discuss the first argument of our text, along with a recent interpretation of it. In the second section I shall introduce the argument to distinguish being and otherness and argue against Owen's interpretation.

The third section contains my interpretation of this argument, and is followed by a summary fourth section." (p. 385)

32. Delcomminette, Sylvain. 2014. "Odysseus and the Home of the Stranger from Elea." *Classical Quarterly* no. 64:533-541.

"Not very long ago, Plato's *Sophist* was often presented as a dialogue devoted to the problem of being and not-being, entangled with limited success in an inquiry into the nature of the sophist. Thanks to the renewal of interest in the dramatic form of Plato's dialogues, recent works have shown that this entanglement is far from ill conceived or anecdotal.(1)

However, the inquiry into the sophist is itself introduced by another question, concerning the nature of the Stranger from Elea himself. I would like to show that this question and the way in which it is raised in the prologue may themselves shed light on the relations between the many threads which run across this very complex dialogue."

33. Denyer, Nicholas. 1991. *Language, Thought and Falsehood in Ancient Greek Philosophy*. London: Routledge.

"How can one say something false? How can one even think such a thing?

Since, for example, all men are mortal, how can one either say or think that some man is immortal? For since it is not the case that some man is immortal, how can there be any such thing for one to say or think? That, in a nutshell, is the problem of falsehood. It, and some of its many ramifications in ancient philosophy, will be the topic of this book." (p. 14)

(...)

"In the Sophist Plato sorts out, once and for all, the problems about falsehood that still lingered in the Theaetetus. His strategy is one of unite and conquer. What has made falsehood so problematic hitherto is, he suggests, the fact that it has been treated in isolation. We have thought that not being was uniquely difficult to understand, not realising how wrong we are to think that we understand being (243 b 7 - c 5, 245 e 8 - 246 a 2). Once however we realise that both being and not being should by rights be found equally difficult, we will be able to make progress (250 e 5 - 251 a 3). Plato thus examines all the many and diverse questions and answers about being that were bequeathed him by his philosophical predecessors. How many things are there? Just one? Just two? Or more? What sorts of things are there? Only changing and tangible things? Only changeless and intangible ones? Or are there things of both sorts? If we are to speak and think at all, argues Plato, we must acknowledge the existence of many things, both tangible and intangible.

Above all, we must acknowledge the existence of the five Greatest Kinds: Change, Rest, Being, Same and Other. By the end of Sophist 255 those kinds have been isolated and distinguished from one another. Plato thereupon puts them to work. He starts to explore some of the connections between them, and in so doing solves the problem of how we can speak of that which is not." (Chapter 8, p. 147)

(...)

"Plato has explained how we can negate both predications and identifications. He has explained how both those ways of speaking about what is not are perfectly legitimate and free from paradox. His explanations seemed plausible enough, so far as they went. But did they go far enough? In particular, did they go far enough to solve our problem about falsehood? Plato thought not. By Sophist 258 b 7 he has legitimated talk of what is not. It is not however until Sophist 263 d 4 that he takes himself to have legitimated talk of falsehood. In the meantime, much other work is done; and even though the problem of falsehood was that to charge someone with falsehood requires

talk of what is not, nevertheless the eventual solution to that problem is not a simple application of the earlier result that talk of what is not can make perfectly good sense. Why does Plato proceed in this way? Why does he not declare the problem of falsehood solved the moment he has given his account of negation?" (Chapter 9, p. 166)

34. Desmond, William. 1979. "Plato's Philosophical Art and the Identification of the Sophist." *Filosofia oggi* no. 2:393-403.

Summary: "The author starts from an interpretation of continuity in the dramatic character of Plato's dialogue (a trait to be found in the Sophist as well, also in account of those images helpful to outline the nature of the philosopher), thus bringing forward a reading of the dialogue based on the statement that Plato's philosophical purpose cannot be either dried up or fulfilled on the range of logical analysis."

" I argue that in adopting a kind of Socratic "virtuosity," the shortcomings of the Eleatic alternative to Socrates are put in dramatic relief. Not only does the Stranger's appropriation of Socratic elenchos ultimately fail to produce clarity with respect to the sophist, but the drama of the dialogue suggests that the Stranger is critically lacking in self-knowledge. We see this most clearly in the Stranger's philosophical parricide of "Father" Parmenides; certainly, it is through this parricide that the Stranger is able to produce an internally consistent account of being and logos, but the Stranger's consistency only serves to attenuate his abstraction from a satisfactory account of the human things. At the end of the dialogue the Stranger thus produces a conclusion no more satisfying than the Athenian jury of the Apology—that Socrates looks awfully similar to a sophist. The specific ways in which Plato problematizes the

Stranger's investigation and conclusions, however, provide us with some insights into why Plato made Socrates the philosophical hero of the dialogues, particularly insofar as the Stranger seems lacking in Socrates' characteristic self-knowledge. In the last analysis, while Plato opens the *Sophist* by dividing philosophy like from like, he closes it by dividing it better from worse, vindicating Socrates." (p. 117)

37. Dominick, Yancy Hughes. 2018. "The Image of the Noble Sophist." *Epoché: A Journal for the History of Philosophy* no. 22:203-220.

Abstract: "In this paper, I begin with an account of the initial distinction between likenesses and appearances, a distinction which may resemble the difference between sophists and philosophers. That distinction first arises immediately after the puzzling appearance of the noble sophist, who seems to occupy an odd space in between sophist and philosopher. In the second section, I look more closely at the noble sophist, and on what that figure might tell us about images and the use of images. I also attempt to use the insights provided by the noble sophist in an investigation of the kind of images that Plato the author produces. This raises the question of the general notion of image as it appears in the *Sophist*, and especially of the dual nature of all images, which in turn invites reflection on certain features of the examination of being and non-being late in the dialogue. Finally, I return to the deception inherent in images, and I argue that this dialogue does not present the possibility of completely honest images. Nevertheless, I hope to show that some uses of deceptions and images are better than others."

"It has not generally been observed that there are remarkable differences between the way that the Eleatic stranger defines the sophist in the dialogue of that name, and the way that Socrates had characterized him in the earlier dialogues. These differences entail some serious consequences, and by paying attention to these we will be able to notice important implications of the *Sophist's* treatment of its theme. More

generally, it will help us evaluate the claim that the dialogue represents a fundamental departure from Plato's earlier thinking." (p. 41)

39. ———. 1994. *Form and Good in Plato's Eleatic Dialogues: the Parmenides, Theaetetus, Sophist, and Statesman*. Berkeley: University of California Press.

"The four dialogues examined here form a natural group with sequential concerns. Since the aim of the present study is to try to understand the group as a whole, I have sacrificed the advantage of greater detail that book-length commentaries would provide, in order to present a more synoptic picture. But although the treatment of individual dialogues will not be as extensively detailed as in book-length studies, I have tried to pay careful attention both to the conceptual arguments and to the dramatic and literary events, and have tried to ensure that the lessening of detail would not mean a lessening of attentiveness." (from the Preface, p. IX)

(...)

"In the middle dialogues such as the *Phaedo* and *Republic*, Plato defines reality with reference to the criterion of rationality. Reason apprehends what is universal and unchanging, but not what is particular and in flux. The senses apprehend what is particular and in flux, but not what is universal and unchanging. Since reason is a more trustworthy guide to truth than are the changeable and deceptive senses, true reality is to be identified with "being" (the universal and unchanging) rather than "becoming" (the particular and fluid). This is the dichotomy represented later in the *Sophist* by the gods (friends of the forms) and giants (materialists), respectively. The former maintain against the materialists that "through the body we have intercourse with becoming by means of the senses, and by means of reason through the soul we have intercourse with real being, which always remains the same in the same respects, whereas becoming is different at different times" (248a). The leader of this dialogue is not Socrates but an unnamed stranger from Elea, who apparently is proposing to give up this dichotomy by neutralizing the

difference between the gods and giants—in which case he would destroy the theory of forms in one of its most fundamental features.

Consequently it is more important in the case of the Sophist than with most other dialogues to consider its standpoint in relation to that of its predecessors. There are in fact notable differences between the way sophistry—the defining focus of the present dialogue—is portrayed here and in the Socratic dialogues." (pp. 121-122)

40. ———. 2013. "The Method of Division in the Sophist: Plato's Second deuterostrophos." In *Plato's Sophist Revisited*, edited by Bossi, Beatriz and Robinson, Thomas M., 87-99. Berlin: Walter de Gruyter.

"I have suggested that the trilogy [Parmenides, Theaetetus, Sophist], like the Phaedo, approaches the good indirectly, by a deuterostrophos. The reason the good cannot be presented directly is indicated in the final definition. The visitor concedes that it is difficult to know in which of the two species of images – distorted "semblances" or accurate "likenesses" – the sophist's products belong (Sophist 236c – d). He goes on to locate that difficulty in the problem that to say what is false is to attribute existence to "what is not", and although at first he raises this point with regard to semblances rather than likenesses (236e– 239e), he proceeds to broaden the problem: since any image (ειδωλον) differs from the true thing (ἀληθινον) that it imitates, it must be not true (μὴ ἀληθινον), which means it really is not (οὐκ ὄντος). When Theaetetus points out that it "really is a likeness (εἰκόν),” the visitor replies, "Without really being, then, it really is what we call a likeness (εἰκόνα)?" (239d – 240b). Although the passage began as if only semblances were problematic, the problem was eventually extended to images in general, and by the end even likenesses were expressly included." (p. 97)
