"In two important senses, Englebretsen is not the inventor of the logic of which he writes, though he no doubt deserves the title of the most dedicated and meticulous expositor of it today. In the first place the logic in question is none other than the so-called 'term logic' usually said to have been invented by Aristotle, taught throughout the middle ages, toyed with by Leibniz, forgotten in the enlightenment and surpassed at last by the great developments in mathematical logic associated with names like Boole, Frege, Russell, Quine. So at least runs the textbook history that the average student of logic would learn today. Term logic figures in the contemporary mind as one of the discarded fashions of science, much like the Ptolemaic system in astronomy. Englebretsen does not claim to invent but only to rehabilitate this logic. And such an effort obviously requires a reassessment of its history, of which the present work provides an outline.

But the logic is not Englebretsen's own in a second way. The book is a sustained and systematic exposition of the life work of Prof. Sommers of Brandeis University, whose efforts have revealed the continuity of term logic from Aristotle to Leibniz and also its character as an uncompleted project, with unlimited promise in its application to logic of natural language. Sommers' work comes at a crucial moment, just as the problems in applying formal mathematical structures to ordinary language are coming to be recognized. Sommers' unconventional approach, however, has seemed to many to be moving quickly in the wrong direction, toward

the 'errors' of the past and he has thus acquired a reputation as the Ishmael of modern logic.

Professor Englebretsen's work is a systematic exposition and defense of Sommers' far-reaching contributions to logic, placing them in the context of a rectified history of the subject. Term logic is a project abandoned prematurely by logicians deceived by the appearance of security which the prestige of mathematics conferred upon mathematical logic. Recent logicians concluded too quickly that term logic was unformalizable, inadequate to reflect many of the actual inference structures of ordinary language, etc. The work of Sommers has demonstrated these claims to be false in the most appropriate way possible, by constructing a term logic of which they do not hold. Moreover Englebretsen has shown that Sommers' reply on behalf of term logic is not a mere riposte; it is a 'programme' of logic in the fullest sense. It contains a rigorously presented theory not just of the syntax, semantics and rules of inference for a term logic, but also a modal logic, a theory of predication, identity, singular terms, categories and ontology. In the reading of this book it is impossible not to get the idea that here is a vital programme for logic which is deserving of careful consideration and which is bound to lead to a re-evaluation of the traditional dogmas of mathematical logic." (pp. I-II)

For the bibliography of [Fred Sommers](#) see the page dedicated to him.

1. Englebretsen, George. 1969. "Knowledge, Negation and Incompatibility." *Journal of Philosophy* no. 66:581-585.

"When epistemologists attempt to establish a distinction between knowledge and belief, very often what they want is a distinction between knowledge and mere belief.

They are interested in the sense of belief that is incompatible with knowing: a sense in which if something is believed it is not

known, and if known not believed. This sense of belief (mere belief) is obviously different from the usual notion of belief.

In what follows I want to make a start at analyzing the concept of knowing by outlining the relations between knowledge statements (e.g., x knows that y) and other closely related statements." (p. 581)

2. ———. 1971. "Sommers' Theory and the Paradox of Confirmation." *Philosophy of Science* no. 38:438-441.

"In order to confirm any statement of the form (a) A are B we consider a sufficiently large number of A in order to check them for having or failing to have property B.

But logic leads us to believe that A are B is equivalent to (b) non-B are non-A. If this is so then it seems reasonable to suppose that we confirm (a) and (b) in the same way. Whatever set of things we consider for confirming one must be the same set that we consider for the other. Yet in confirming (a) the set considered seems to be the set of A, while in confirming (b) the set considered seems to be the set of non-B. How can two logically equivalent statements be confirmable in different ways?

I think this paradox is only apparent. It results from a simple confusion concerning the set of things considered for the confirmation of a statement." (p. 438)

3. ———. 1971. "On the Nature of Sommers' Rule." *Mind* no. 80:608-611.

"The number of recent journal articles (1) concerning Fred Sommers' "rule for enforcing ambiguity "(2) gives witness to an increasing interest in Sommers' way of doing ontology. Some of these articles can be said to display, at best, an undisguised misunderstanding of

just what the rule says. Others show, at worst, an - unwillingness to say what the intent and nature of the rule is. In this paper I want to say clearly just what the nature of the rule for enforcing ambiguity is and show what Sommers intends by its formulation and use.

In "Types and Ontology" (3) Sommers has established an isomorphism between the structure of ordinary language and the ontological structure. The structure of a language can be represented on a "language tree". A language tree is a mapping of the "sense" relations which hold between the terms of the language. Two terms, P and Q, have the sense relation U (written "U(PQ)") just in case they can "make sense" together in a subject predicate sentence. If they do not make sense together, then any subject-predicate sentence formed with them will be a category mistake. A language tree can be formed by writing all the terms of the language so that a solid line is drawn only between U-related terms.(4)" (p. 608)

4. ———. 1971. "Elgood on Sommers' Rules of Sense." *Philosophical Quarterly* no. 21:71-73.

"Several discussions of Fred Sommers's rules of sense have appeared recently. I will examine here the one by A. G. Elgood (this journal, April 1970) because I believe it clearly exemplifies how Sommers's theory is being too often misinterpreted by his critics.' My two points of criticism against Elgood will be brief. First, his formulations for the criterion of type difference are ill-formed. Second, his counter examples fail because they ignore a subtle, but crucial, distinction which can, be extracted from Sommers's theory." (p. 71)

7. ———. 1972. "Persons and Predicates." *Philosophical Studies* no. 23:393-399.

"My main thesis in this short paper is that the attribute theory of persons is correct but often misunderstood by its critics. We might best begin by comparing our theory with other possible theories of persons. Let us consider three other general sorts of theories: materialism, idealism, and dualism.

According to any materialist theory of persons, a person is nothing more than a material object. Talk about mental (i.e. nonmaterial activities) can be translated into talk about bodily (material) activities. Thus, for the behaviourist, the difference between a person and any other material object lies in the differences between the bodily activities of the two. To say that persons differ from stones in that they (persons) are intelligent is simply to say, on this view, that material objects which are persons often, in certain circumstances, act in ways in which material objects which are stones do not act. This is the view of behaviourists who are materialists. A behaviourist need not be a materialist.

Nor need a materialist be a behaviourist. A materialist might be an 'identity-theorist'. He would hold, then, that a person is nothing more than a material object. But, he distinguishes between persons and other material objects in a way other than that used by the behaviourist materialist.

The identity-theorist argues that a person differs from other material objects in that a person has a mind while other material objects do not. He then goes on to guarantee his materialism by identifying a person's mind with his brain or central nervous system.

For the idealist, a person is simply a mind (or soul or spirit), and minds are immaterial. Here persons differ from material objects simply by not being material. How idealists distinguish persons from other immaterial objects is not always clear. One thing is clear: the idealist who fails to distinguish between immaterial objects which are persons from immaterial objects which are not persons runs the risk of conceiving of persons in terms of those other immaterial objects (e.g. ideas of impressions or sense data) and thus, like Hume, ending up without a concept of persons." 10. ———. 1972. "On van Straaten's Modification of Sommers' Rule." *Philosophical Studies* no. 23:216-219.

"I argue here that R. van Straaten's four modifications of F. Sommers' 'rule for enforcing ambiguity' are based upon a misunderstanding of the basis of the rule and a failure to see the spanning/predicability distinction. The effect is that none

of van Straaten's several counterexamples are telling against the rule. In place of van Straaten's modifications I offer the following simple but important changes in the rule: the restriction of things to individuals and the reading of 'makes sense to predicate' and similar phrases in terms of the spanning relation."

14. ———. 1973. "Meinong on Existence." *Man and World* no. 6:80-82.

"For several years I was told, and believed, that while Russell's theory of descriptions might be flawed (viz. in the way Strawson showed), his rejection of Meinong's theory of objects, which led to the theory of descriptions, was undoubtedly correct. Now I doubt very much if this is so.

The "official" view is that Meinong had made the mistake of multiplying the senses of "exists" unnecessarily. According to this view, Meinong, since he held that the descriptive components of any meaningful sentence must refer to something, was forced to provide a special kind of existence, subsistence, for entities which are nonexistent but referred to meaningfully. Russell avoided this position by claiming that statements referring to nonexistent entities are meaningful but false (since they logically entail the existence of the entity referred to). I think the official view underestimates Meinong's philosophical abilities. Indeed, I think, rather than engaging in the philosophically dangerous task of multiplying kinds of existence, Meinong was expressing a keen insight into the nature of existential commitment." (p. 80)

15. ———. 1973. "Presupposition, Truth and Existence." *Philosophical Papers* no. 2:39-40.

"Ever since Strawson first introduced the notion of presupposition into logical matters, debate has continued over the nature of this operation.

Is presupposition a logical relation between statements? Formal logic or "informal" logic? Does it mean that there are truth-value gaps? Isn't it just material implication?

According to Strawson, a statement which presupposes a true statement is either true or false but a statement which presupposes a false statement is neither true nor false. These latter kinds of statements are vacuous. Compare this notion of presupposition with that of material implication. A statement which materially implies a true statement is either true or false while a statement which materially implies a false statement is false. What is the relation between 'The present King of France is bald' and 'The present King of France exists'? Strawson says it is one of presupposition. Russell said it was material implication. The Russellian rejects the notions of presupposition and vacuousity in order to preserve crucial elements of formal logic (viz. truth-functionality and bivalence). The Strawsonian accepts the concepts of presupposition and vacuousity as reflective of important elements in ordinary discourse, and thus denies those parts of formal logic which his opponent treasures." 17. ———. 1973. "Locke's Language of Proper Names." *Locke Newsletter* no. 4:25-30.

"It is argued here that recent discussions concerning the compatibility of Locke's theory of nominal essences with Geach's thesis (that each use of a proper name must presuppose the ability to use some corresponding general term) fail to appreciate the important difference between the generation of Lockean general ideas (from ideas of individuals) and the generation of Lockean general terms (not from proper names)."

18. ———. 1973. "Epistemic Logic and Mere Belief." *Logique et Analyse* no. 63-64:374-378.

"In a previous article (1) I argued that the distinction which epistemologists look for between knowing and believing is actually the distinction between knowing and merely believing, where, unlike belief, mere belief is incompatible with knowledge.

Using Fred Sommers' notion of predicate negation, (2) where the negation of a predicate is equivalent to the disjunction of all those predicates incompatible with it, I formulated several epistemic statements and drew out ten conditionals which should at least be theorems of any epistemic calculus.

In what follows I want to set up the axioms for an epistemic calculus. A few of these will come from my previous list of conditionals. I then want to show that in such a system the necessary conditions for mere belief can be adequately formulated." (p. 375)

19. ———. 1973. "Suggested Truth-Tables for a Three-Valued Sentential Logic." *International Logic Review* no. 8:255-259.

"Truth-tables for the normal sentential connectives are constructed on the basis of the concept of 'partial values'. On this view, every statement has a truth-value which is a function of an ordered pair of partial values. The first member is either T or non-T and the second is either F or non-F. The four combinations of partial values result in three possible truth-values: true, false, and empty."

20. ———. 1974. "Sommers on the Predicate 'Exists'." *Philosophical Studies* no. 26:419-423.

"In a series of recent journal articles F. Sommers has developed a logic of terms which differs greatly from the usual logic now taught in the schools. However, Sommers has committed himself to a thesis proper to that logic but not to his: everything exists. It is shown here that such a thesis cannot follow from Sommers' previous work. Using his logic proofs that something exists and that something does not exist are given."

21. ———. 1974. "A Note on Contrariety." *Notre Dame Journal of Formal Logic* no. 15:613-614.

"It is shown here that S. McCall's proposal, that in addition to the normal sentential operation of negation there is another, more traditional, sentential operation of contrariety ("Contrariety," *Notre Dame Journal of Formal Logic*, 8, 1967) is misguided. There is indeed a contrariety operator. But, it is a predicate operator rather than a sentential operator. The ability to explicate contrariety is just one of the advantages which an Aristotelian logic of terms has over modern sentential logic."

24. ———. 1974. "Behaviorism and Perception." *Man and World* no. 7:149-157.

"After distinguishing the ontological question concerning persons (what is the concept of a person?) from the epistemological question (on what grounds does my knowledge of persons rest?) three kinds of behaviorism are cited as responses to the Cartesian answer to the epistemological question. Unlike physicalism and dispositionism, restricted behaviorism denies that knowledge applies at all to myself and goes on to distinguish behavior from bodily activity. On this theory behavior is taken to be interpreted bodily activity -- bodily activity seen as personal behavior."

27. ———. 1975. *Speaking of Persons*. Halifax: Dalhousie University Press.

"This monograph is an attempt to defend an attributist theory of the concept of a person. It is held that our ordinary concept of a person is the concept of a noncomposite (contra dualism), material (contra idealism) object, to which both Strawsonian p- and m-predicates apply. Personal identity is accounted for in terms of bodily continuity "and" sortal continuity. Finally, with the aid of F. Sommers' theory of linguistic-ontological isomorphism, it is argued that an ontological theory compatible with our theory, must reject any sort of spirit, including God."

28. ———. 1975. "Sommers' Proof That Something Exists." *Notre Dame Journal of Formal Logic* no. 16:298-300.

"In the concluding remarks of [4] I mentioned that in [8] Sommers had given a proof to the effect that necessarily something exists and that later in [5] this proof was shown to be wrong in principle. Sommers' proof went like this:

1. Something is possible.
2. Whatever is not a categorially possible thing is not a possible thing.
3. Suppose there were nothing (i.e., nothing exists).
4. By definition D-things are categorially impossible if and only if nothing is D and nothing is D.
5. For any D, nothing is D and nothing is D. (by 3)
6. For any D, D-things are categorially impossible, (by 4 and 5)
7. For any D, D-things are not possible things, (by 2 and 6)

Since 7 is inconsistent with 1, we must reject 1 or 2 or 3 or 4. 1, 2, and 4 seem certain. Thus we must reject 3. This gives us the negation of 3 (Something exists).

Q.E.D.

Guerry attacked Sommers' proof by showing that 4 allows counterexamples and must be rejected rather than 3. What bothered Guerry about 4 was that it allowed Sommers to "derive a necessity (the impossibility of D-things) from a contingency (the nonexistence of D- and D-things)."

Nevertheless, a simple reformulation of this definition (4) can be used to render the proof immune to Guerry's attack. The reformulation is simply what I think Sommers had actually intended by 4. However, this reformulated argument can be shown to be simply invalid requiring Sommers to find a completely new argument for his purposes." (p. 298)

"Aristotle's thesis that universals must always inhere in a primary substance, a particular, has been used recently as evidence that he, like many contemporary logicians, rejected the predication of terms to universal, i.e., nonsingular, subjects. Yet this would force Aristotle to treat quantifiers as ranging over bare, unsorted, particulars. But Aristotle took the notion of an unsorted particular as nonsense. His thesis about the status of universals can no more serve as evidence that he took all subjects as particulars than can his thesis that every particular satisfies some universal serve as evidence that he took no subjects as particular."

36. ———. 1980. "Singular Terms and the Syllogistic." *The New Scholasticism* no. 54:68-74.

"It is generally held that singular terms have no place in Aristotle's syllogistic. A variety of reasons have been given for holding this view. Nevertheless, Aristotle did offer examples of syllogisms containing singular terms. It is suggested here that the reasons for denying singulars a place in syllogistic are unacceptable. Thus, singular terms are on a logical par with general terms.

They can be subject terms (thus be quantified) and they can be predicate terms as well (thus be affirmed or denied of subjects). A proper understanding of how this is so comes only from a clear understanding of Aristotle's theory of logical syntax. Recently F. Sommers has provided a syllogistic logic ("the calculus of terms") which shows, among other things, how singulars can be treated syllogistically."

37. ———. 1980. "Noncategorical Syllogisms in the *Analytics*." *Notre Dame Journal of Formal Logic* no. 21:602-608.

"It is a commonplace now among logicians that the logic of categorical syllogisms, first developed by Aristotle, presupposes the now-familiar logic of unanalyzed propositions. Aristotle, however, clearly took the syllogistic to be "basic logic", presupposing no other logic. Since he was not unaware of many important principles now constitutive of the calculus of propositions, it can only be argued that either: (i) Aristotle was blind to the import of such principles for formal logic in general, or (ii) he believed such principles could be accounted for by the syllogistic. In spite of the numerous and illustrious supporters of (i), we shall attempt here a brief defense of (ii).

The question, of course, is not whether Aristotle himself substantiated (ii), but rather: can any syllogistic substantiate (ii)? In answering this question affirmatively we will first cite several arguments which are found in the *Analytics*, and which make use of well-known principles of the propositional calculus. We shall then make some historical remarks concerning the attempt to reduce the logic of unanalyzed propositions to the logic of analyzed propositions (the syllogistic). Finally, we hope to show how a recently developed syllogistic system offers a technique which can be used to successfully render the arguments cited from the *Analytics* as categorical syllogisms." 41. ———. 1980. "Chandler on Change." *Critica* no. 7:81-85.
"Common sense, as Aristotle saw, demands an account of the world which admits both accidental and substantial change. In the first an object ceases to be how-it-is; in the second it ceases to be what-it-is. H. S. Chandler's recent critique of M. Loux's "Substance and attribute" suffers from a misunderstanding of this distinction. Chandler mistakenly concludes from the Aristotle-Loux theory that because an object is necessarily what-it-is, then it is eternally what-it-is."

43. ———. 1981. "A Journey to Eden: Geach on Aristotle." *Grazer Philosophische Studien* no. 14:133-141.
"Peter Geach has charged Aristotle with the sin of corrupting logic by initiating a process which led to the view that a sentence consists logically of just two names. This charge can only result from a clearly mistaken view of Aristotle's theory of logical syntax. Aristotle, unlike Geach, was careful to distinguish subjects from subject-terms and predicates from predicate-terms.
He took both subjects and predicates as syntactical complexes. Geach, following Frege, holds a very different theory of logical syntax which takes predicates, but not subjects, as syntactically complex."
44. ———. 1981. *Logical Negation*. Assen: Van Gorcum.
Introduction 1; Some historical remarks 3; Negation in mathematical logic 19; Sommers' term logic 28; The symbolism for a term logic 38; Negation and falsity 47; Concluding remarks on the nature of formal logic 56; Index 61-62.

"This monograph examines the notions of negation found in classical, Stoic, and contemporary mathematical logics and argues that for philosophical purposes, and consonant with ordinary discourse, the notions of predicate denial and term negation (Aristotle's) are to be preferred over the sentential negation now favored. Arguments supporting this atavism are drawn from or based upon the work of F. Sommers. A final result of this investigation is new light on falsity."

45. ———. 1981. *Three Logicians: Aristotle, Leibniz, and Sommers, and the Syllogistic*. Assen: Van Gorcum.

Preface VII; Introduction 1; *Three logicians*; Aristotle 9; Leibniz 28; Sommers 42; *The syllogistic*; Contemporary mathematical logic 67; Syllogistic logic 77; Concluding remarks 109; Bibliography 113; Index 116-118.

"In his *Introduction to Logical Theory* (London, 1952) P.F. Strawson attempted to show that traditional syllogistic logic was more reflective of various features of ordinary language than was modern mathematical logic. P. Geach, the best modern critic of traditional logic, responded to Strawson in "Mr. Strawson on Symbolic and Traditional Logic", *Mind*, 72 (1963). His brief remarks there show that Strawson's defense of the old logic is, at best, naive. Geach clearly believes that there just can be no sound defense of traditional logic. He even suggests that those who would persist in their allegiance to the old logic are either irrational or lazy. He says:

Many readers will vaguely think Strawson has *proved* that the traditional system with all its faults is philosophically less misleading than the new-fangled one. Those Colleges of Unreason where the pseudo-Aristotelian logic is presented as the only genuine logic, and those lecturers who would like to teach the philosophy of logic without having to learn any modern logic, may well thus have been supplied with a pretext for supine ignorance.

We believe that syllogistic logic is philosophically defensible. What Geach sees as its faults are either not faults at all or can be remedied. The result of applying such remedies is a new syllogistic - a logic which is broader and stronger than

Aristotle's original. It is a logic competitive with the "new fangled" logic of today. This new syllogistic was envisaged, but not built, by Leibniz. The hope for such a logic lay dormant during the period when mathematical logic was being born and nurtured through its rapid maturity. But recently that hope has been revitalized, and virtually fulfilled, in the work of F. Sommers. The best general answer to Geach's overall charge is simply a presentation of this new syllogistic.

While the primary motive in presenting this essay is the defense of syllogistic against its modern detractors, we also believe that it is time for a concise introduction to Sommers' logical work. This work is scattered throughout a wide variety of journals and anthologies; and there is now no available account of it. Given the great originality of Sommers' ideas, and the importance of the issues he has chosen to deal with in logic, this void must be filled. Part of this essay is intended as a modest start at that task." (From the Preface).

47. ———. 1981. "On the Terms of Truth." *Philosophical Papers* no. 10:89-92.

"Correspondence theories of truth require a special relation between sentences and the world.

Relying on suggestions first made by Leibniz, and later expanded by Sommers, it can be shown that the relation called for is simply that of denotation. Since denotation is primarily a relation between a term and things, sentences must be construed as terms. The things denoted by sentences are (pace Sommers) states of affairs."

48. ———. 1981. "Predicates, Predicables and Names." *Critica* no. 8:105-108.

"It is a canon of modern predicate logic that general terms are predicates and subjects are singular. Traditional logic, by contrast, took all terms to be fit for either the subject or predicate roles. The thesis, recently defended by T. Burge, that names are predicates amounts (once the prejudices of modern

logic are abandoned) to the much weaker claim that names can be used as general terms."

51. ———. 1982. "Aristotle and Quine on the Basic Combination." *The New Scholasticism* no. 56:244-249.

"Quine's 'basic combination' is a sentence joining a singular to a general term. The position as the singular is referential -- that of the general is predicational. Singulars and generals are unfit for each other's position. This contrasts with Aristotle's view, which takes such sentences to join a subject and a predicate. A subject is a quantified term -- a predicate is a qualified term. Yet the terms themselves are syntactically homogeneous -- fit for each other's position. One motive behind the Quinean view is the belief that: (i) subjects refer, (ii) singular refer to individuals, (iii) universals cannot be referred to. So, since generals cannot refer without referring to universals, generals are unfit for subjects. the Aristotelian account of logical syntax also avoids Platonic consequences, but not at the cost of an unsupported singular/general distinction."

76. ———. 1985. "Semantic Considerations for Sommers' Logic." *Philosophy Research Archives* no. 11:281-318.

"During the last twenty-five years Fred Sommers has developed a series of inter-related theories of language structure, ontological structure, logical syntax, and truth. Each theory has naturally contained valuable suggestions concerning semantic issues. But Sommers has not yet offered a specifically semantic

theory. I attempt here to fill that gap by sketching a theory of semantics based upon his logical theses. The theory holds that terms, as used in statement making sentences, have both denotation and signification. Terms denote objects and signify properties. Terms, when quantified, refer to some or all of their denotations, and, when quantified, characterize the subjects to which they are predicated as having or lacking the properties they signify. The semantic, syntactic, and ontological theses presented in this theory are contrasted with those found in classical, Scholastic, Leibnizian, Fregean, and Quinean theories."

77. ———. 1986. "On Some Alleged Semantic Correlations." *The New Scholasticism* no. 60:490-500.

"The Fregean replacement of the subject/predicate distinction with the argument/function distinction led to an emphasis on the singular/general distinction for logic. Only singulars could be subjects; only general terms could be predicates. Singulars refer; predicates are true of Ultimately the Fregean syntactic distinction is semantic. The old subject/predicate is not. A semantic theory based on the old logic of subjects and predicates can allow the semantic, syntactic and ontological distinctions their proper places."

78. ———. 1986. "Singular / General." *Notre Dame Journal of Formal Logic* no. 27:104-107.

"Modern logic takes the difference between singular and general terms very seriously. It insists that sentences with general subjects have a much more complex logical syntax than sentences with singular subjects.

This is partly because modern logic always treats general terms as predicates and never treats singular terms as anything but subjects. The insistence that the logic of singulars is different from the logic of general propositions is also partly due to modern logic's demand that the logical form of any sentence be a reflection of its truth conditions. 'Socrates is wise' is true just in case Socrates is wise. But 'Some philosopher is wise' is true just in case there is at least one thing which is such that it is a philosopher and it is wise. So the modern logician requires a

great deal of semantic information to be reflected in syntax. But how does a logician decide how much semantic information should be so reflected? Surely not all. There's just too much. Just that which determines truth? 'John is a bachelor' has as one of its (necessary) truth conditions that John is a male. Yet the modern logician does not require this bit of semantic information to be revealed syntactically."

79. ———. 1986. "Czezowski on Wild Quantity." *Notre Dame Journal of Formal Logic* no. 27:62-65.

"It is well known that if singular sentences are to be fully incorporated into a syllogistic logic, singular subjects must be quantified. Leibniz argued that such subjects are both universal and particular. Similar (but not identical) views have been advanced in this century by Copi, Sommers and Czezowski. but the latter has argued that singular quantity is unique, distinct from the two classical quantities. it is shown here that this is an illusion."

80. ———. 1986. "A Note on Truth and Existence in Leibniz." *Manuscrito.Revista Internacional de Filosofia* no. 9:7-9.

"Leibniz was able to connect the notion of truth for a sentence with the idea of existence for individuals. Words and sentences are taken to both denote individuals and signify concepts. if a true sentence two conditions must hold. The concept signified by the subject and the word denoted by the sentence must be the actual word."

83. ———. 1987. "Natural Syntax and Sommers' Theory of Logical Form." In *The New Syllogistic*, edited by Englebretsen, George, 245-272. New York: Peter Lang.

"F. Sommers has challenged the Fregean theory of logical syntax. In particular, he has denied the idea that natural language has no logic. It is possible to articulate a theory of logical syntax for natural language. it construes sentences as concatenations of subjects and predicates. A subject is a quantifier plus a term; a predicate is a qualifier plus a term. Surprisingly, such an analysis accounts not only for categoricals but singulars, identities, rationals and truth-functions."

84. ———. 1987. "Logical Polarity." In *The New Syllogistic*, edited by Englebretsen, George, 305-311. New York: Peter Lang.

"Both statements and terms can be negated. They come in positively/negatively charged pairs. This polarity is reversible for terms (for any negative term a semantically equivalent

positive can be defined) but not for statements. An account of why this is so is offered here."

87. ———. 1988. "Preliminary Notes on a New Modal Syllogistic." *Notre Dame Journal of Formal Logic* no. 29:381-395.

Abstract: "This article consists of five parts. In Section 1 we introduce the topic of modal syllogistic by examining the case of the two Barbaras found in *Prior Analytics*.

In the second section we briefly review certain aspects of the "new syllogistic" developed in recent years by Fred Sommers. The next two sections examine some of the syntactic and semantic features of modal sentences *de dicto* and *de re* respectively. Our final section presents a preliminary sketch of what a syllogistic admitting both *de dicto* and *de re* modality would look like."

90. ———. 1989. "Formatives." *Notre Dame Journal of Formal Logic* no. 30:382-389.

Abstract: "An answer to the question of 'sentential unity' (What makes a sentence a single linguistic unit rather than just a string of words?) is one of the goals of any theory of logical syntax. A 'Fregean' theory claims that a sentence is a function (unsaturated expression, containing gaps) whose gaps are filled with either arguments (saturated, gap-less) or other functions which have already been saturated. A 'Leibnizian' theory construes a sentence as a syntactically complex subject (quantified term) plus a syntactically complex predicate (qualified term). Subjects and predicates just naturally fit one another to form sentences. An 'Aristotelian' theory takes a

sentence to consist of a pair of terms connected by a binary formative expression (functor), whose only role is to connect terms to form more complex expressions (e.g., sentences). After an examination of the formal nature of such functors, it is argued that this third sort of theory not only answers better the question of sentential unity, but it also provides a better account of the nature of logical constants in general."

93. ———. 1990. "Cartesian Syntax." *Philosophical Inquiry* no. 12:59-64.

"The "Cartesian" theory of logical syntax was most fully formulated by the Port-Royal logicians. A brief survey of their work, especially the *Logique*, shows that they took a statement to have a deep structure analyzable as a predication. It is a joining or separating of two terms by a positive or negative copula. Complex terms were also viewed as (implicit) predication. The logical syntax of predication requires no recourse to semantic distinctions among terms, nor does it distinguish atomic from molecular statements."

"In the late nineteenth century there were two very active lines of research in the field of formal logic. First, logicians (mostly in English-speaking countries) were engaged in formulating a generally traditional logic as an algebra, a part of mathematics; second, logicians (mostly on the Continent) were busy building a non-traditional logic that could serve, not as a part of, but as the foundation of, mathematics. By the end of the First World War the former line had been pretty well abandoned while the second continued to expand. However, that old abandoned line, stretching from Aristotle, through the Scholastics and then Leibniz to the nineteenth century algebraists, had not been completely forgotten. One of those logicians who has recently worked on the restoration (and, importantly, the extension) of that line is Fred Sommers. His Term Logic preserves a number of traditional insights (especially involving the theory of logical syntax), while also enjoying a power to account for formal

inference at least comparable to that of the standard logic now in place."

107. ———. 2004. "Predicate Logic, Predicates, and Terms." In *First-Order Logic Revisited*, edited by Hendricks, Vincent, Neuhaus, Fabian, Pedersen, Stig Andur, Scheffler, Uwe and Wansing, Heinrich, 75-88. Berlin: Logos Verlag.

Abstract: "My primary aim here is to introduce in a very preliminary way a system of formal logic that has been built by Fred Sommers and myself over the past few years. This term logic matches the inferential power of the standard first-order predicate logic, but enjoys certain advantages in terms of simplicity and naturalness. What I hope this can offer is some insight into ideas concerning formal logic that are extremely old but not often encountered today. I may rightly be accused of atavism for touting such antiques, but perhaps the contrast between these ideas and more contemporary ones will be of interest. So, some of my remarks will concern some central logical concepts (especially the concept of predication), while others will be a bit historical."

108. ———. 2005. "Trees, Terms, and Truth: The Philosophy of Fred Sommers." In *The Old New Logic. Essays on the Philosophy of Fred Sommers*, edited by Oderberg, David S., 25-48. Cambridge: The MIT Press.

"During the past fifty years Fred Sommers has developed bold and original ideas concerning the sense structure of natural language and how it reveals ontological structure, a powerful and fully expressive version of term logic, and a revitalized theory of truth by correspondence. This essay shows how all these ideas are mutually related to one another. Together they amount to a unified, coherent theory of mind, language and the world. Sommers's work in these areas has influenced research in philosophy of language, logic, and cognitive psychology."

109. ———. 2006. *Bare Facts and Naked Truths: A New Correspondence Theory of Truth*. Aldershot: Ashgate.

Contents: Preface IX. Part One: Introduction; 1. À la recherche du temps perdu 9; 2. The big MAC attack 37; Part Two: 3.

Terminism 79; 4. Facing the facts 1070; 5. Giving the world Its due 141; 6. A nice derangement 153; Conclusion 167; Bibliography 171; Index 189.

"The aim of the present essay is to outline a theory about truth. Since a number of concepts are involved in the concept of truth this means that I shall have to offer clarification, of one sort or another, of a large number of concepts and conceptual clusters. Some of these involve what there is, existence, reality, and the like (so my project is partly metaphysical); some involve knowledge, belief, perception, and so forth (so my project is partly epistemological); others involve sentences, terms, propositions, statements, saying, and so on (so part of my project is in the philosophy of language -- semantics). To illustrate briefly what I've been saying, consider some of the semantic concepts with which we shall be dealing. The terms of art needed to talk about such things as sentences, statements, facts, stating, saying, and what is stated are all plagued by ambiguity (and much else besides). To disambiguate them, trace out their different senses, is to analyze the multiple concepts they can express. Thus a sentence might be either a sentence-type or a sentence-token; a statement might be either a sentence or what is expressed by a sentence; a fact might be either a true sentence, a true statement, a truth expressed by a sentence (or by a statement), or what makes something (a sentence, statement, and so on) true; to state might be to utter, to express, to signify, or to do something else; to say might be to utter or to state; what is stated might be a sentence, a fact, or something else. So here we have just a portion of a large cluster of concepts that is implicated in any account of truth and is in serious need of clarification, analysis, disentanglement -- and I have yet to focus on the concept of a concept. An appropriate way to make progress here is to try to formulate a detailed, specific theory of truth. Along the way, the clarification of various concepts will help push along the development of the theory. Reciprocally, the theory, as it gets formulated, will help shed light on various key concepts and at least show the way to the clarification of others."

113. ———. 2012. *Robust Reality: An Essay in Formal Ontology*. Frankfurt: Ontos Verlag.

"Because I owe so much to Fred Sommers, I offer the present book as a feeble attempt to fulfill his wish to provide a full account of the tree theory, of the structure of language, its relation to ontology, and the many fruits that can be harvested from it - especially when watered by logic and ripened in the sunlight of truth." (p. XIII).

"In this essay, we have examined systems of formal ontology hinted at by Aristotle, attempted by Ryle, and one fully articulated by Sommers. Each took some formal aspect of language to provide a guide to the formal structure of the ontology. More particularly, each concentrated on semantic relations as key to that structure. This contrasts with more recent theories that take the syntactic forms dictated by modern mathematical logic as the proper guide to ontology. Sommers' semantic-ontological tree theory proved fruitful. For example, it highlighted the fact that term ambiguity, which requires different senses of a term to have different locations on the language tree, is most commonly the result of following rules - rules that "enforce ambiguity" on some terms. Moreover, the theory permitted a rational way to look at the order in which various rules governing language apply - "levels of rectitude".

Given the isomorphism of sense structures for the terms of ordinary language and the inclusion relations among categories

of things, the notion of levels of rectitude could be extended to rules governing ontology as well. The key notion of spanning, which holds or fails to hold between a (sense of a) term and thing, helps enrich our understanding of how things can constitute not only sets but categories and types.

In examining the tree theory, with its focus on terms, one can't help noting that much depends on the idea that predication is essentially a relation between a predicable term and another term, which is also predicable. It was this idea, that statements could be parsed as pairs of terms standing in the relation of predication, that led Aristotle away from the view that statements consist of names and verbs. Giving up that grammar-based view freed Aristotle to view statements as consisting of pairs of terms joined together by a logical copula doing the work of predication. Only then was he able to develop formal logic, a term logic, the syllogistic." (pp. 143-144).

115. ———. 2016. "Fred Sommers' Contributions to Formal Logic." *History and Philosophy of Logic* no. 37:269-291.

Abstract: "Fred Sommers passed away in October of 2014 in his 92nd year. Having begun his teaching at Columbia University, he eventually became the Harry A. Wolfson Chair in Philosophy at Brandeis University, where he taught from 1963 to 1993. During his long and productive career, Sommers authored or co-authored over 50 books, articles, reviews, etc., presenting his ideas on numerous occasions throughout North America and Europe. His work was characterized by a commitment (often implicit) to the preservation and application of historical insights and to the value of a well-articulated, coherent logical system. He was recognized for his independence and refusal to accept any view on the basis of authority alone. This made him a formidable critic but accounted in part for his many innovative and original ideas. In spite of his general contrariness in logic, Sommers earned the respect of the majority of his contemporaries, including Russell, Quine, van Benthem, Hacking, Suppes, and Strawson. In 2005, he was the

- subject of a *Festschrift* with contributions by a number of younger philosophers and logicians, just one indication of the continuing importance and influence of his work."

"Post-Fregean mathematical logic began with a concern for foundational issues in mathematics. However, by the 1930s philosophers had not only contributed to the building and refinement of various formal systems, but they had also begun an exploitation of them for primarily philosophical ends. While many schools of philosophy today eschew any kind of technical, logical work, an ability to use (or at least a familiarity with) the tools provided by formal logic systems is still taken as essential by most of those who consider themselves analytic philosophers. Moreover, recent years have witnessed a growing interest in formal logic among philosophers who stand on friendly terms with computer theory, cognitive psychology, game theory, linguistics, economics, law, and so on. At the same time, techniques developed in formal logic continue to

shed light on both traditional and contemporary issues in epistemology, metaphysics, philosophy of mind, philosophy of science, philosophy of language, and so forth.

In what follows, students who have already learned something of classical mathematical logic are introduced to some other ways of doing formal logic: classical logic rests on the concepts of truth and falsity, whereas constructivists logic accounts for inference in terms of defense and refutation; classical logic usually makes use of a semantic theory based on models, whereas the alternative introduced here is based on the idea of truth sets; classical logic tends to interpret quantification objectually, whereas this alternative allows for a substitutional interpretation of quantifiers. As well, a radically different approach, fundamentally different from any version of mathematical logic, is also introduced. It is one that harkens back to the earliest stages in the history of formal logic but is equipped with the resources demanded of any formal logic today." (pp. 1-2)

Preface X; 1. Reasoning 1; 2. Picturing propositions 25; 3. The language of logic (I) 49; 4. The language of logic (II) 77; 5. Syllogistic 109; 6. Relational syllogistic 139; 7. Statement logic 163; 8. Modern predicate logic 213; Rules, laws and principles 253; A note on further reading 259-260.

The book "introduces the discipline of formal logic by means of a powerful new system formulated by Fred Sommers.

This system, term logic, is different in a number of ways from the standard system employed in modern logic; most striking is, its greater simplicity and naturalness. Based on a radically different theory of logical syntax than the one Frege used when initiating modern mathematical logic in the 19th Century, term logic borrows insights from Aristotle's syllogistic, Scholastic logicians, Leibniz, and the 19th century British algebraists.

Term logic takes its syntax directly from natural language, construing statements as combinations of pairs of terms, where

complex terms are taken to have the same syntax as statements. Whereas standard logic requires extensive 'translation' from natural language to symbolic language, term logic requires only 'transcription' into the symbolic language. Its naturalness is the result of its ability to stay close to the forms of sentences usually found in every day discourse. Written by the founders of the term logic approach, *An Invitation to Formal Reasoning* is a unique introduction and exploration of this new system, offering numerous exercises and examples throughout the text. Summarising the standard system of mathematical logic to set term logic in context, and showing how the two systems compare, this book presents an alternative approach to standard modern logic for those studying formal logic, philosophy of language or computer theory."

Jerzy Perzanowski: Modal Logics, Ontology and Ontologies

Introduction

This page use the font *Lucida Sans Unicode* for logical symbols.

An overview of Perzanowski's thought can be found in the *Preface* by Janusz Sytnik-Czetwertynsk to the volume *Art of Philosophy. A Selection of Jerzy Perzanowski's Works*, Frankfurt: Ontos Verlag 2011, pp. 15-21.

"Jerzy Perzanowski's publications concerns mainly the problems of metaphysics and logic. His numerous unpublished works forms an important part of his total output, and actions are taken to arrange, edit and publish these works." (*ibid.*, p. 11.)

"1. Philosophy, taken from the point of view of its problems and methods is the collection of distinct philosophical disciplines. In fact meta-philosophical analysis leads to rather troublesome questions: Are philosophical disciplines methodologically and/or essentially related and connected? Are particular philosophical disciplines scientific? And, if the answer is not definite, to what extent is this so? Do philosophic disciplines form a uniform and organized (at least in its depth) system?

The most important factor in the characterization of any scientific discipline is its problematics. Hence, there are as many philosophical disciplines as there are different and autonomous families of philosophic problems.

Certainly, two philosophical disciplines are particularly distinguished: logic - for methodological reasons and ontology - for essential ones.

Instead of considering the initial question in its full complexity, let us go to its kernel - ontology itself.

1. Philosophy, taken from the point of view of its problems and methods, is the collection of distinct philosophical disciplines. In fact, metaphilosophical analysis leads to rather troublesome questions: Are philosophical disciplines methodologically and/or essentially related and connected? Are particular philosophical disciplines scientific? And, if the answer is not definite, to what extent is this so? Do philosophical disciplines form a uniform and organized (at least in its depth) system? The most important factor in the characterization of any scientific discipline is its problematics. Hence, there are as many philosophical disciplines as there are different and autonomous families of philosophical problems. Certainly, two philosophical disciplines are particularly distinguished: logic - for methodological reasons and ontology - for essential ones. Instead of considering the initial question in its full complexity, let's go to its kernel - ontology itself.

Ontology and its parts.

2. Ontology is the theory of what there is, the theory of being. She considers the full ontological universe, all items that are possible, describing and classifying them and searching for the principles of the universe, principles of taking together the plurality of ontic objects, particular beings, into one - the Being.

Thus, two questions govern ontological investigations: what is possible and why? The second question, concerning the being's principles, may be strengthened to the deepest - last in the logical order - question: how that which is given, or rather what there is, is possible? The question above principles of being, i.e., general laws of nature, plus the question: what makes possible what there is and renders impossible what there isn't?

Because of its matter and problematics ontology is the most general discursive discipline. It is the general theory of possibility. By the nature of its questions it is also very modal.

3. Ontology has two sides: descriptive - phenomenological, and theoretical - formal. Hence, it is divided into three parts: onto-ontics (in brief: ontics), ontomethodology and ontologic.

4. Ontics is devoted to the selection of ontological problems and notions, their differentiation, classification and analysis. Doing ontics we construe the conceptual net of a given ontological theory, i.e. its categories. It is also one of the tasks of ontics to state ontological hypotheses, based on the previous analysis of concepts.

Ontics, being a part of ontology, is itself complex. Its further description depends on the general idea of ontology, on accepted classification of ontological concepts. For example, Ingarden has distinguished three parts of ontology: the material ontics, the formal ontics and the existential one. Notice that his ontology is, in our terms, ontics!

5. Ontomethodology concerns ways of doing ontology, methods and types of ontological constructions as well as principles of choice between ontological statements and theories. Examples of such ontomethodic principles are: the principle of non-contradiction, the principle of sufficient reason, and Ockham's razor.

Indication and discussion of the appropriate principles is necessary for sure for any critique of ontological theories, particularly the critique of the logical means used in ontology.

6. Ontologic is a logic of the ontic realm. It is an investigation of ontological connections, concerning particularly logical relations between pieces of ontic information. Also, it is a theory of the fundament of ontic relations.

Ontologic considers the organization of the ontological universe, trying to describe its mechanism. It describes the complexity of the Being, looking for its laws and base - the Logos.

7. Ontics is a purely descriptive and analytical discipline, ontologic is speculative and formal. They are, however, closely connected and interrelated disciplines, affecting one another. The product of ontics is a description, usually complex, of the ontological universe, whereas ontologic supplies different theories of this universe.

Certainly, at present ontic considerations are more common. In ontology we have many descriptions and claims, but not as many theories.

Among Polish ontologists, for instance, Ingarden may be regarded as typical ontics reasoner, while Leśniewski should be treated as a typical ontologist." (pp. 23-25)

(...)

"Comparison and conclusion.

42. We listed and commented on 18 variants of ontology, what certain doesn't exhaust the full spectrum of ontologies. On the other hand, the number of reasonably differentiated types of ontologies is undoubtedly smaller.

The classification of ontologies into types has certainly not to be arbitrary. It should both follow ontologies' goals and consider their contents.

We considered previously two such classifications:

First, following opposite descriptions of synthesis mechanism, into STATIC vs. DYNAMIC ontologies;

and the second, according to three main planes of being, into BEING vs. THOUGHT vs. LANGUAGE ontologies.

In addition, at least three more natural, self-explaining classifications should also be mentioned:

The third, according to the nature of ontologies' objects, into MODAL vs. NON-MODAL ontologies.

It is easy to see that the proper ontologies of being are modal.

The fourth, taking into account the way of doing ontology, into DESCRIPTIVIST vs. CONSTRUCTIVIST ontologies.

They either try to describe or try to construct the ontological universe.

Surely, the golden mean is the best. Particularly, ontologies of being should be - in proper proportion - both of this and that kind.

And, the fifth, regarding the role of the language in ontology: message vs medium, into

LINGUISTIC vs. EXTRALINGUISTIC ontologies.

Bringing a given ontology into one type we decide, in fact, to what extent the language, including the language of ontology itself, should be taken into account. Moderation is welcome. Certainly, the language is an important but not alone component of the world.

43. Plurality of ontologies is not without a reason.

Namely, we are interested in different aspects of being. Its full picture shows itself, however, only through comparison." (pp. 39-40)

From: Jerzy Perzanowski, "Ontologies and Ontologies", in: *Logic Counts*, edited by Ewa Zarnecka-Bialy, Dordrecht: Kluwer 1990, pp. 23-42.

"Another string of investigations – which will be analyzed in closer details in 2.3 – involves quantification theory. Logical and linguistic theories of quantifiers try to solve the problem of intentional objects by quantifying over non-existing individuals (allowing, therefore, for empty singular terms), or by skipping the classical presupposition of a non-empty domain (allowing for empty general terms). In that sense, free logics and other quantification theories can and have to be conceived as contributions to formal ontology (...).

The other dominating area of formal ontology, besides the one about intentional objects, is that of complex or compound beings of all kinds. We have already mentioned set theory and mereology, but at least starting with Russell's facts and Davidson's events there is a growing awareness of the fact that several different philosophical entities can be formed from (or built out of, or defined based on) sentences. The discrimination of these entities provides us not only with a rich, but controlled ontology. It further yields a better understanding of what the objects of intensional logic are: What is it that we believe, what is necessary or possible, what can be promised or forbidden (...)

Again, it was a Polish logician, Jerzy Perzanowski, who first suggested the name "ontologic" for this area of research (see his foreword to Scheffler and Urchs (eds.) - *Ontologic. Essays in Formal Ontology* - Volume 2 of *Logic and Logical philosophy*, Torun: Copernicus University Press 1994). Perzanowski's "The Way of

Truth" in Poli and Simons (eds.), *Formal Ontology* 1996 is an example of that kind of investigation. In the framework of what he calls qualitative ontology he starts from the standard Parmenidean principle of identity: Being is and nonbeing is not. He defines five conjugate notions of a being (understood as a subject of qualities). Perzanowski's aim is to prove theorems concerning these notions. For that purpose he needs some appropriate formalism. The axiomatics of "Primitive Theory of Being" is a first, but useful, approximation. He considerably improves the expressive power of this theory by assuming two additional abstract concepts of being: as a collection of all beings and as the unity or idea of all beings. By means of classical logic he thus achieves a substantial contribution to the ancient controversy between Plato and Parmenides concerning being and nonbeing: Beings are; Non beings are not; The being is; The nonbeing is; Being is; and Nonbeing is." (pp. 13-14)

From: Jan Faye, Uwe Scheffler and Max Urchs (eds.), *Things, Facts and Events*, Amsterdam: Rodopi 2000.

Some definitions

"Ontologic, a part of ontology devoted to the systematic development of formal ontological theories.

o. The general question of Ontology, Leibnizian in spirit, is: *How what is possible is possible?*, whereas the general question of Metaphysics is: *How what is real, or exists, is possible?* Clearly, Metaphysics, by definition, is a particular Ontology.

1. *Ontology*, in its most general and traditional version, is the theory of what there is, the theory of being. It considers the full ontological universe, including all items that are possible.

Two basic questions govern ontological investigation: what is possible and why? Or in a more general and deep way: how that which is possible, is possible?

Because of its questions ontology is the most general discursive discipline. As a matter of fact, it is the general theory of possibility. From other points of view, it is the general theory of relations, the general theory of things and properties or the theory of situations, events and processes.

2. Ontology is divided into three parts: ontics, ontomethodology and ontologic.

Ontics is devoted to the selection of ontological problems and notions, their differentiation, classification and analysis; to construction of the conceptual net of a given ontological theory and to statement of reasonable ontological hypotheses.

Ontomethodology concerns ways of doing ontology, their principles as well as methods and types of ontological constructions.

3. Ontologic is a logic of the ontic realm. It considers the organization of the ontological universe, trying to describe its mechanism.

Ontologic is a discipline of investigation of ontological connections, in particular logical relations between ontic statements.

4. Ontologic is therefore a discipline of logical philosophy. It is made after its receipt: Take an interesting (and real) ontological problem and try to answer it theoretically, i.e., by means of a theory.

To this end, we start with a conceptual analysis (which belongs to ontics), determining relevant primitive concepts and clarifying them enough to find reasonable axioms, which next are subject to logical deduction and appropriate semantical investigation. The method is sound if some theorems answer, or at least illuminate, the starting problem.

Ontologic is ontology done in this way, i.e., ontology produced by answering *ontological* question by means *logical* methods and procedures. In short, ontologic is ontology *modulo* logic: ontologic = ontology / logic."

From: *Ontologika* (a the text published in: www.filozofia.org.pl, but no more available)

Excerpts from his publications: ontological modalities

"Alethic modalities are modifiers of semantical and logical components of judgements. Their classification obviously depends on the ontology and semantics that is presupposed. Some modalities

are theoretical – useful for reasoning; some are practical or pragmatic – useful for action. Taking the first, at least four kinds of alethic theoretical modalities should be distinguished:

1. *A priori*, concerning what can be thought, used to delineate the realm of reason. Examples are *thinkable, understandable, reasonable, controvertible*, etc.
2. Logical, used for collection and comparison: *possible, necessary, contingent*, etc.
3. Metaphysical, concerning facts, what is real or actual: *actual, factual, to be a fact, to be true, making true, making actual*, etc.
4. Ontological, useful for describing the general and basic conditions for some families of objects or complexes. They concern the possibility of what there is, or what is possible; hence they are used for delineation of the most general field we can deal with – the realm of all possibilities – the ontological space. Examples are: *possibility, necessity, contingency, and exclusion taken in the sense of a condition; compossibility, coexistence, and eminent existence* in the sense of Leibniz, *(formal) possibility* in the sense of Ludwig Wittgenstein's *Tractatus*; *combinable, synthetizable and analysable; making possible, making impossible, being ontologically neutral*; and several common philosophical modalities *de re: by necessity, essentially, by its very nature*, etc.

The above classification has a clear counterpart in grammar: some modalities, mostly logical but also *a priori* and metaphysical ones, are adjective-like, some – chiefly ontological modalities – are noun-like. On the other hand, the logical modalities are quantifier-like modifiers (what is nowadays clarified by relational semantics).

There is a widely shared temptation to reduce some modalities to other ones, particularly ontological to logical modalities (and *a fortiori* noun- to adjective-modalities). Moreover, where such reduction is difficult or counterintuitive, it is usual to ignore the unmanageable cases.

According to the kind of modalities one prefers, we have several types of modal reductionism: modal apriorism, factualism, etc. The most popular is modal logicism which claims that any alethic

modality can and ought to be treated as a logical modality. The extreme version of this position – modal extensionalism (cf. Quine 1953) is the conjunction of two theses: first, that any alethic modality is reducible to logical modality(ies); and second, that any essential use of logical modalities is eliminable, formally expressed as a claim in favour of the eliminability of *de re* modalities by modalities *de dicto*. Extensionalism not only reduces modalities; it also substitutes set-theoretical ontology for any intensional ontology.

Ontological modalities are the key to any non-reductionistic ontology. The most august family thereof is that of Leibniz: *compossibility, compatibility, coexistence, and eminent existence*. Leibniz himself was fully aware of the role they play in ontology, warning against the "confusion of possibles for compossibles" (*Philosophical Papers and Letters*, ed. L. E. Loemker, 1969, p. 661).

A very manageable family of ontological modalities consists of: *making possible* (MP), *making impossible* (MI), *being ontologically neutral* (ON), which are introduced to formalize the fundamental ontological connections: attraction, repulsion, and indifference.

They are useful especially for the development of the combination ontology dealing, *inter alia*, with relations *simpler than* or *being in and combinable from* (cf. Perzanowski 1989). In addition, they enable us to express the Leibnizian modalities mentioned above.

There are two complementary approaches to the theoretical treatment of these modalities: the axiomatic and the semantic. From the semantic point of view, based on the description of the ontological space, MP is used to express formal conditions of synthesis.

Let $\sigma(x)$ denote the collection of all objects synthetizable from the object x , i.e. objects which can be obtained from the objects connected with x (in the most natural case – from the substance of x), the relation *simpler than* or *being in*. The basic idea concerning making possible can now be expressed by:

$MP(x,Y) \leftrightarrow y \in \sigma(x)$;

x makes possible y iff y is synthetizable from x .

The outlined family of ontological modalities enables us to define most of the notions used in ontology. In particular, using MP we can define:

$\text{Cons}(x) := \text{MP}(x,x)$;

x is ontologically *coherent (consistent)* iff x makes itself possible.

$\text{C}(x,y) := \text{MP}(x,y) \ \& \ \text{MP}(y,x)$;

x and y are *compossible* iff each of them makes possible the other.

$\text{E}(x,y) := \exists z \ y \ \text{MP}(z,x)$;

x *exists eminently* in y iff there is something in y which makes x possible.

$\text{R}(x,y) := \forall z \ x \ \text{MP}(z,y)$;

y is (ontologically) *alternative* to x iff everything in x makes y possible.

The first three notions were used by Leibniz, the last encodes the alternativity relation of the canonical models of relational semantics (cf. Chellas 1980). Using the chosen modalities we can therefore define relational semantics for modal logic, providing it with a solid ontological foundation. Note that the relation R closely connects with Leibniz's notion of eminent existence:

$\text{R}(x,y) \rightarrow \text{E}(y,x)$

y is alternative to x implies that y eminently exists in x .

The axiomatic approach opens a rich field of research. Most of the axioms answer the basic questions of ontology. For example: Does making possible preserve ontological coherence?

A priori we have three positive answers, each of which yields a suitable axiom of preservation:

(CR) $\text{MP}(x,y) \ \& \ \text{Cons}(x) \rightarrow \text{Cons}(y)$

(CL) $\text{MP}(x,y) \ \& \ \text{Cons}(y) \rightarrow \text{Cons}(x)$

(C) $\text{MP}(x,y) \rightarrow (\text{Cons}(x) \leftrightarrow \text{Cons}(y))$

Is making possible -monotonic? This yields, several axioms of (left/right) mono-tonicity, among others:

$MP(\uparrow) : MP(x,y) \& x z \rightarrow MP(z,y)$

$MP(\downarrow) : MP(x,y) \& z y \rightarrow MP(x,z),$

and so on.

Is the ontological universe uniform? I.e., does it include only coherent objects? Only compossible objects?

Again, positive answers to such questions yield the following axioms:

(Ucons) $\forall x \text{ Cons}(x)$

(UC) $\forall x,y \text{ C}(x,y)$

What interconnections hold between basic modalities?

Again, this yields a range of different axioms, for example:

The axiom of ontological trichotomy:

(OT) $\forall x,y (\text{MP}(x,y) \vee \text{MI}(x,y) \vee \text{ON}(x,y))$

The axiom of full modalization:

(FM) $\forall x,y \text{ ON}(x,y)$

The contrary axiom of ontological extensionality:

(OE) $\forall x,y \text{ ON}(x,y)$

The axiom of ontological excluded middle, i.e., the ontological consistency axiom:

(OC) $\forall x,y (\text{MP}(x,y) \leftrightarrow \text{MI}(x,y)).$

By taking appropriate families of axioms a wide range of different ontological theories may be defined.

Finally, notice that the above picture, following Leibniz, is chiefly based on the positive ontological modality making possible (MP). If instead we prefer the negative modality making impossible (MI) this would yield a Hegelian path in ontology." (pp. 560-562)

Parmenides: The Way of Truth

"1. Introduction

1.1 The Parmenidean 'way of truth' concerns what there is and what there is not: *estin te kai os ouk esti me einai*. (1) It concerns the basic ontological items: beings and nonbeings, as well as (the) being and (the) nonbeing. As we have learned from Parmenides, Zeno and Plato, (2) the way of Parmenides is the way of difficult truth, the way of metaphysical paradox.

1.2 Quite often the principal truth of Parmenides is formulated as the *ontological principle of identity: being is and nonbeing is not*. Usually this principle is considered tautologous (3) or even trivial.

I disagree. Triviality presupposes clarity. The principle, however, is neither clear nor evident. Also it is not obvious.

Is it true?

1.3 Both 'being' and 'is' are immediate derivatives of the verb 'be'. The verb itself has several variants. Can all these derivatives and variants be presented in a uniform way? Is, for example, 'Being is' a more adequate expression of the thought of Parmenides than 'Whatever is, is'? Next, to which items does the Parmenidean statement refer: to particular beings - like me, you, a ship, this pencil; or to their totality - the being; or to their unity - Being? Should Parmenides' statement be understood as 'the being is and the nonbeing is not', or rather as 'a being is and a nonbeing is not', i.e.,

'any being is and no nonbeing is' or 'beings are and nonbeings are not'?

1.4 The problem was pointed out and discussed by Plato in *Sophist* as the crux of his refutation of the sophistic claim that nothing is false. Parmenides' spokesman, the Eleatic Stranger, is arguing there for Plato's conclusion that 'nonbeing has an assured existence and a nature of its own', recalling at the same time the warning of Parmenides: 'For never shall this thought prevail, that non-beings are, but keep your mind from this path of inquiry'. (4)

1.5 The answer to Plato's problem clearly depends on an explication of the four notions involved: *being*, *nonbeing*, *is* and *is not*. From a metalogical point of view it is also determined by the related logics: the logic of our reasoning and an appropriate logic of being.

1.6 Hereafter, the ontological notions are explained according to the qualitative approach to the notion of being: *a being is a subject of some qualities the being is the totality of all beings; Being is the unity of all beings*.

These quite ancient but yet obscure formulas are crucial for traditional ontology and they therefore deserve clarification.

Such a clarification requires an appropriate theory of qualities, as well as suitable theory of ontological connection connecting qualities with subjects. It is the latter, above all, which will be outlined in the present study.

1.7 Clarification comes, inter alia, through formalization. Formalization requires logic. In what follows I rely exclusively on classical logic. To be more exact, standard classical logic is used as the logic of reasoning, whereas a suitable applied version of classical logic will serve as our logic of being.

1.8 In what follows a very general theory of ontological connection is provided.

In spite of its generality this theory enables us, as we shall see, to reconsider the classical ontological claims of Parmenides and to refute an anti-ontological claim that the notion of being is syncategorematic.

Also certain ontological theorems will be proved, including: Being is an Nonbeing is (sic!). *A being is, whereas a nonbeing is not.* Also: *Whatever is, is* - which is shown to be equivalent to *Whatever is not, is not.*

1.9 The paper is organized as follows: I start with general remarks concerning ontology and different approaches to the notion of being. Next, several classical questions of traditional ontology are discussed. After making our problems clear, I will introduce a formalism enabling us to study them in the full generality. Finally, the results of the paper are discussed in a manner introducing perspectives for a subsequent theory of qualities." pp. 62-63.

Notes

(1) Cf. Diels 1906, Parmenides B2.3. Notice a rather subtle problem connected with the translation of this claim (see Bodnar 1988b). Inter alia, the following translations have been offered: Diels 1906: "dass [das Seiende] ist und dass es unmöglich nicht sein kann", Bormann 1971: "dass [das Seiende] ist und das Nicht-Seiende ist nicht", Kirk and Raven 1957: "that it is and that it cannot not-be", Burnet 1957: "It is, and... it is impossible for it not to be", Taran 1965: "it is and to not be is not", Mannheim [translator] in Heidegger 1961: "it is, and... nonbeing is impossible".

(2) For Parmenides and Zeno cf. Kirk and Raven 1957, for Plato cf. *Parmenides* and particularly the *Sophist* in Plato 1961.

(3) Cf. Tatarkiewicz 1958.

(4) Cf. *Sophist*, 258 b-d.

9. ———. 1984. "Some Ontological and Semantical Puzzles of Wittgenstein's *Tractatus*." In *Aesthetics. Proceedings of the 8th International Wittgenstein Symposium, 15th - 21st August 1983, Kirchberg Am Wessel (Österreich)*, edited by Haller, Rudolf, 224-230. Wien: Holder-Pichler-Tempsky.

"The importance of the ontological component of Wittgenstein's *Tractatus* is generally recognized. And most of the contemporary philosophers (analytical at least) believe that the *Tractatus* is primarily a product of the first-rate metaphysical (*) thinker. Does it mean that Wittgenstein's ontology and the role it plays in the *Tractatus* is commonly and completely understood?

Of course, we all know how rich in philosophical theories and insights *Tractatus* is. Let me mention a few of them: the picture theory of language (i.e. the theory of propositions, meaning and logical syntax), a semantical theory of logical truth (with a concept of "tautology", logical atomism, the principle of extensionality), new theory of identity, remarkable philosophy of logic, theory of philosophy as a "critique of language" as well as the *Tractatus* insights into ontology (which I am going to discuss below), epistemology (with the *Tractatus* solipsism and mysticism), religion and ethics. However, many people consider the *Tractatus* to be rather a bundle of theories and/or claims. The reason for that opinion is drawn from the *Tractatus* characteristic, aphoristical style and its lack of (fully developed) arguments. For example, Professor Max Black underlines in *A Companion to Wittgenstein's Tractatus* on the one hand the importance of the ontological component of the *Tractatus* but on the other hand he writes that Wittgenstein's great contributions to philosophical insights mentioned above are logically independent of his views about the nature of the world (p. 27)

The main aim of my paper is to supply evidence that ontology and semantics of the *Tractatus* (as well as further philosophical theories which are to be found therein) are much more coherent and interconnected than it is usually believed."

(*) or rather ontological, if we differentiate ontology -- a theory of what and why is possible from metaphysics -- a theory of what and why exists.

10. ———. 1985. "Some Observations on Modal Logics and the *Tractatus*." In *Philosophy of Mind, Philosophy of Psychology. Proceedings of the 9th International Wittgenstein Symposium, 19th-26th August 1984, Kirchberg Am Wechsel (Österreich)*, edited by Chisholm, Roderick M., 544-550. Wien: Holder-Pichler-Tempsky.

"[1] The modal character of the Tractarian ontology is now commonly recognized [2]. And it is clear that there must be some modal calculus (or, more carefully, calculi) implicit in the *Tractatus*. In the subjects' literature we may find several papers dealing with the question. Most of them point to Lewis' calculus S5 as the Tractarian modal logic. Is this answer right? Are arguments in its support convincing?

I do believe that:

(1°) the most popular answer mentioned above, even if true, should be argued for more thoroughly than it has been;

(2°) the modality structure implicit in the *Tractatus*, even when restricted to purely ontological modalities, is more complex than it looks in its usual descriptions, including the best available at the moment. In particular, both the basic role played by the notion of form-fundamental modality of the *Tractatus*, as I tried to argue in my *Some ontological and semantical puzzles of Wittgenstein's Tractatus* (1984) - and the question of its logic is simply omitted by the writers known to me.

However, truth is only one, and if not fully recognized, irrespective of how deeply it is hidden, it sends us words about itself, mainly indirectly, through some inaccuracies and/or inconsistencies in current opinion. This applies to the question under discussion, among others, in the following way: both necessity and possibility operators implicit in S5 or in any similar logic are symmetrical, whereas these two notions in its most frequent Tractarian occurrences are not. Characteristic

are also incoherencies which are to be found in claims made by the authors arguing, in fact, along the same line (compare A. Maury 1977 and G. H. von Wright 1972).

In what follows, starting with brief comments concerning D. Kaplan's, G. H. von Wright's and A. Maury's works, I will try to reexamine the problem and to provide some new arguments for a corrected version of von Wright's solution and to extend that solution by basing it on more fundamental theory of the notion of form. This theory, as you will see, provides solid philosophical foundations for relational semantics of intensional logics, foundations which are grounded on the Tractarian ontology." p. 544

[1] The paper's title clearly paraphrases the title of G. H. von Wright's master essay *Modal logic and the Tractatus* [in G. H. von Wright - *Wittgenstein* 1982, pp. 185-200]. Its ambiguity is intended, two main claims of the paper are thus hinted at. The first one concerns complexity of the modality structure of the Tractatus and points out several modal logics inhering in it. The second one shows the way of basing modal logics on the Tractarian ontology. To do that one reduces the fundamental notions of modal philosophy and relational semantics of modal logics (compatibility, possible worlds and relation of alternativeness) to the notion of form-the basic ontological modality of the Tractatus (comp. J. Perzanowski - *Some ontological and semantical puzzles of Wittgenstein's Tractatus*, 1984).

[2] The paper forms a third part of my bigger work in progress (comp. previous parts *Some ontological...*, cit. and *What is non-Fregean in the Tractarian semantics and why?* 1993) in which, after having articulated the proper place of ontology in the Tractatus, I am trying to formalize it. Due to the limitation of the paper's length it is still a sort of abstract. Its full text, with all arguments developed, is intended to be published elsewhere as *Modal logics and the Tractatus* - in preparation [the essay was never published].

Spirali.

Originally published in Italian.

"Fin dall'inizio la filosofia europea si è confrontata con la controversia tra monismo e pluralismo concernente la questione: quante cose esistono realmente? la questione dell'uno e dei molti.

Ovviamente la nostra esperienza ci dice -- Molti; ma tante false affermazioni sono basate sull'esperienza!

Nella tradizione europea ci sono due grandi linee di pensatori. La prima è quella dei filosofi monisti che incomincia con Parmenide di Elea e comprende i filosofi che sostengono che esiste *un* solo ente, che è costante e a priori. Più tardi il monismo fu generalmente connesso con la pretesa che questo ente unico sia Dio, o la Natura di essenza puramente logica. La seconda linea comprende i filosofi pluralisti e incomincia con Eraclito. Il pluralismo sostiene che ci sono molti enti mutevoli nonché -- nella maggior parte dei casi -- fenomenici.

L'opposizione Monismo-Pluralismo non è una questione isolata e puramente teoretica. Ha una sua propria tensione interna, espressa in un senso del mistero per cui Uno è Molti e Molti è Uno; questa sensazione è la principale fonte del misticismo filosofico. In quanto segue cercherò di portare la luce della logica sulla controversia basilare su esposta."

12. ———, ed. 1987. *Essays on Philosophy and Logic. Proceedings of the Xxxth Conference on the History of Logic, Dedicated to Roman Suszko. Cracow, October 19-21, 1984.* Cracow: Jagiellonian University Press.

Preface: "This volume contains nearly all the papers presented at the XXXth Conference on the History of Logic which was held in Cracow, October 19th-21st, 1984.

The Conference was organized by the Department of Logic, Jagiellonian University and the Cracow Branch of the Polish academy of Sciences.

The papers published in the present Proceedings are published as preprints, whose copyright belongs to the authors. Their

extended versions may be submitted elsewhere.

The potential reader should be warned that the traditional name of the Conference should be understood as 'Conference on Logic and Its History'. In fact, majority of papers published here deal with history of logic in a rather indirect way -- contributing directly to logic and/or philosophy.

This motivates the division of papers into three parts.

Papers from the third part are devoted to logical and philosophical achievements of the late Professor Roman Suszko.

It is a good tradition of Cracow Conferences that -- since 1972 -- most of them have been devoted to achievements of the most eminent representatives of the Polish logical and philosophical school.

Dedication of the XXXth Conference on the History of Logic to scientific achievements of the late Professor Suszko as well as obvious to any participant success of the Conference prove that Roman Suszko, pupil and former assistant of Kazimierz Ajdukiewicz, is widely recognized as the member of the Polish logical school in the *very* sense of the word.

The Proceedings of the XXXth Conference on the History of Logic are dedicated to the memory of Professor Roman Suszko, outstanding philosopher and logician, who was greatly respected and admired by all of us. The Editor"

"This exploratory paper offers, to those familiar with studying logics as consequence relations, an intriguing system of problems along with suggestions for confronting them. The author raises two questions: What is the size and number of matrices needed to characterize a logic given by a consequence relation? He motivates the questions by reminding us that for logics given

axiomatically the questions are simply answered by citing the Lindenbaum algebra for the language. The answers are not so simple when we consider consequence relations. He explores answering the question of how many matrices are needed to characterize a logic by determining the number of maximally consistent extensions of the logic." (Charles F. Kielkopf)

Abstract: "When, for a given propositional logic, we take semantics (say - matrix, algebraic or relational semantics) the most natural question is to estimate it. This means to answer the question: How many and how big matrices (algebras, frames, or - in general - structures) are necessary to characterise the logic?

In the case of matrix semantics, for logics understood traditionally - as sets of formulas closed under chosen rules and substitution - the general answer is easy and well-known: as

was shown by A. Lindenbaum, it suffices to take exactly one matrix with the number of elements not exceeding the number of language's expressions.

However, when we consider consequence operators, or equivalently - sets of rules, the question is much more difficult and in many cases still open.

In what follows I will discuss the first part of it: How many structures are needed to characterise a given consequence operator? My general idea is to compare this number with the number of maximally consistent, i.e. Post-complete, logics of this consequence operator."

Towards a Re-Evaluation: Proceedings of the 14th International Wittgenstein-Symposium, Centenary Celebration, 13th to 20th August 1989 Kirchberg Am Wechsel (Austria)*, edited by Haller, Rudolf, Haller, Rudolf and Brandl, Johannes, 185-199. Dordrecht: Kluwer.

"1. Surely the above title is rather dark. Therefore, let me start with a few words of clarification. "Post-Tractatus" means either after "Tractatus" or a natural prolongation of the books' sequence: "Proto-Tractatus", "Tractatus",... . Hence the title of this paper means either the task of developing ontology built up after "Tractatus" clues, by taking its claims and lesson seriously, or clarification of the "Tractatus" text, by explaining notions and providing its claims with well-grounded arguments, trying thus to develop, step by step, a more advanced and better argued version of Wittgenstein's treatise.

(...)

The paper is organized as follows: I start with a general review of the ontology of the Tractatus, putting emphasis on its modalities, particularly on its notion of the form. Semi-

formalization of the thesis 2.033, in which the form is defined as the possibility of the structure, leads to isolation of the basic ontological modality - making possible. The formal theory of it, which is the crux of combination ontology, is outlined in the fourth chapter of the paper. Finally, several applications of this general ontology to the starting Tractarian ontology are given." p. 185.

21. ———. 1993. "What Is Non-Fregean in the Semantics of Wittgenstein's Tractatus and Why?" *Axiomathes* no. 4 (3):357-372.

"1. Certainly, of the two title questions the second - why? - is more challenging and important. But also much more difficult.

To answer it we must not only collect and evaluate non-Fregean components of the semantics of the *Tractatus*, thus comparing them with Frege's semantics - which is rather easy; but we must also go into depth on both semantics, looking at their fundamentals and trying to find their basic conceptual and methodological framework. Such research, however, is much more difficult, partly because it leads us out of semantics into the broader and more general field of ontology, and to very fundamental metaphilosophical questions: to metaphilosophical considerations - because we try to compare two general philosophical theories; to ontological investigations - because of the nature of semantics.

2. Semantics provides language with the objective interpretation establishing connections between linguistic expressions and pieces of the world. To this end, however, it must be, if not arbitrary, developed inside a framework common for a language and the world. Such a framework can be provided only by a discipline more general than a theory of language, including semantics, as well as a theory of the world, i.e. by ontology - the most general theory of being, the theory of all possibilities.

Any proper semantics is indeed based on ontology - Frege's and Wittgenstein's semantics as well.

3. Full and well-motivated discussion of the title questions requires a book rather than a short article. Therefore, I shall limit the discussion to differences in the key-schemes of both semantics, plus very brief and rather cryptic remarks concerning the general framework of this comparison.

I start with a few general remarks concerning the type of philosophy which, to my mind, is common to Frege and the young Wittgenstein. Next, I will proceed to a reconstruction of the semantic diagrams which are basic for the two semantics under investigation, emphasizing differences and trying to explain reasons for them." p. 357

22. ———. 1993. "Locative Ontology Part I-Iii." *Logic and Logical Philosophy* no. 1:7-94.

The First Part is reprinted in: *Art of philosophy. A Selection of Jerzy Perzanowski's Works*, pp. 87-120.

"To characterize his monograph-length essay, which is to be continued, the author writes: "The work has two aims: a philosophical one-to clarify one of the most important variants of verb-type ontologies, and a mathematical one-to enlarge the body of commonly known theories of order." A verb-type ontology is an axiomatization of the ordering relation of a use of a verb phrase based on the verb 'to be' if this axiomatization is developed for the philosophical purpose of understanding the structure of reality in so far as it is correctly represented with the use of 'to be' in question. Thus, set theory can be an ontology for 'to be a member of', while mereology is an ontology for 'to be a part of'. The author focuses on the locative use of 'to be' which means 'to be in'. Examples of such uses are 'She is in Schaan' and 'I am in her thoughts'.

The author distinguishes the locative use from other uses, especially the mereological use. In general, the locative 'is' is not transitive. Most of the work is the mathematical work of characterizing and axiomatizing the (hitherto undeveloped) ordering relation for 'to be in'. The author explicitly requests readers to judge the mathematical work on its mathematical merits." (Charles F. Kielkopf - Karlsruhe)

"The paper is organized as follows: I start with a general and brief overview of verb-type-ontologies, stressing the importance of the locative one. Next, three main relevant formal theories-of preorders, of mereologies as well as Leśniewski's Ontology - are presented. They are shown to be inadequate to formalise location.

In this survey a special emphasis is put on premereologies intermediate between classical mereologies and preorders. Premereology seems to be very useful in the field of ontology and metaphysics as the first, purely logical, approximation of

the idea of condensation, i.e. the internal strength of unifying connections.

Next, I will pass to a discussion of locative ontologies, introducing them as a generalization of preorders, which fill in certain gaps occurring in both mathematical and philosophical approaches to orders. The bulk of locative ontology is presented in the Parts II and III, where locative orders are introduced and related to more familiar structures outlined previously. At the end, the philosophical content of locative ontology is presented and, finally, several cases of location in some important domains are pointed out." p. 11

23. ———. 1994. "Towards Psychoontology." In *Philosophy and the Cognitive Sciences. Proceedings of the 16th International Wittgenstein Symposium, 15-22 August 1993, Kirchberg Am Wechsel (Austria)*, edited by Casati, Roberto, Smith, Barry and White, Graham, 287-296. Wien: Hölder-Pichler-Tempsky.

Reprinted in: *Art of philosophy. A Selection of Jerzy Perzanowski's Works*, pp. 135-146.

"Psychoontology is *the ontology* of the psyche and of related matters. Hence, by definition, it is a case of *particular* and *applied* ontology.

Here, following Leibniz's idea, ontology is defined (1) by its characteristic question: *How is possible?* More exactly: *How is x possible?*

Now, the level of generality of a given ontology depends on the generality of its characteristic question, i.e. on the scope of the variable x . If it is the most general of all, we obtain the general ontology, which is the study of the following, most general, version of the ontological question: *How is what is possible, possible?*

To answer it we must provide *a reason* for being possible as well as *a framework* for the study of *the ontological space* of all possibilities (2)." p. 287

(1) For a discussion of general ontology in comparison with particular ones cf. Perzanowski *Ontology and ontologies*.

(2) This is what Wittgenstein in the *Tractatus* named the *logical space*.

26. ———. 1999. "Fifty Years of Parainconsistent Logics." *Logic and Logical Philosophy* no. 7:21-24.

"One of the first logicians who questioned the status of the metaphysical and logical versions of the Principle of Consistency was Jan Łukasiewicz, the father of Polish logic and master of Stanislaw Jakowski. In his classic book *O zasadzie sprzeczności u Arystotelesa* (On the Principle of Consistency in Aristotle) published in 1910 Łukasiewicz endorsed only the ethical version of the principle of non-contradiction, as the rule

which defends us against permanent error and lie, and against madness.

The view of Łukasiewicz, later reintroduced and made popular by Ludwig Wittgenstein, gave rise the question of finding an interesting and sufficiently rich logic which accommodates inconsistencies, allowing for their consistent investigation.

The problem was first solved in the previously mentioned work of Łukasiewicz's student Stanislaw Jaskowski.

Jaskowski's problem was fundamental, its solution profound and inspiring. His work could therefore be described as decisive, crucial for further investigation.

And that is precisely what happened.

Jaskowski's point of departure was a discourse, the situation of a discussion. When one asks: *Is it the case that A?*, and does not know the answer, one often considers both possibilities at once. Likewise, when defending A, one respects, at least during a honest discussion, an opponent who claims not-A. Which logic applies here?

Usually classical logic, though not in its full power and entirety. In this situation we are not ready to accept, for example, the rule of Duns Scotus, which from the contradiction: *A and not-A* allows us to infer any statement B, i.e., to conclude just everything. This is a little too much, however.

For, in real discussions between serious and honest opponents inconsistencies neither explode nor overfill the discourse.

Inconsistencies must be examined. Not prejudged. Nor worshipped as idols, as in the case of most Hegelians (excluding Graham Priest and other logical philosophers, I hope).

Quite the contrary. We examine them in order to find a remedy. In search of the understanding about their sources, reasons and real consequences.

From this perspective, the mastery of Jaskowski's solution is simply striking.

Firstly, he created a discursive calculus D2, which fulfilled all the formal criteria we tend to impose on interesting paraconsistent logics.

Secondly, his construction in its deep structure enables us to consider inconsistencies occurring in a theory T as contingent statements in a related modal theory $M(T)$ playing the role of its metatheory.

Thirdly, it often allows for the consistent examination of a given inconsistency. Sometimes even for the understanding of its mechanism and sources." pp. 23-24

27. ———. 1999. "Combination Semantics for Intensional Logics I. Makings and Their Use in Making Combination Semantics." *Logique et Analyse* no. 42:181-203.

Reprinted in: *Art of philosophy. A Selection of Jerzy Perzanowski's Works*, pp. 165-174.

Abstract: A very general framework for intensional semantics is outlined. In ontological spaces endowed with suitable ontological modalities (making possible, making impossible, etc.) a formal semantics for logical modalities (possibly, necessary, etc.) is defined. Its very idea is that x realizes possibly A if x makes possible (the combination) A .

Notice that sentences and their sets, as everything but simples, are combinations.

This idea is developed in three different ways generalizing the most common logical semantics and providing them with a natural metaphysical interpretation and foundation.

A special attention is put on the soft combination semantics which is shown to be complete for all intensional logics.

A list of conditions characteristic for basic modal logics is also provided.

"Each proper semantics must be based on ontology.

1. The above statement is a truism. But an important one. It is often forgotten, for in our time it is rather a common (and quite

doubtful) conviction, that the only valuable ontology for contemporary semantics is the set-theoretical ontology.

In the past century set-theory indeed played the most important role in mathematics and logic and, in turn, in their philosophical applications. It is also true that the very paradigmatic case of a semantical analysis for formal languages, done by Alfred Tarski, is in fact a combination of set-theoretical and algebraic ideas.

Tarski - type semantics was extended in the sixties to the case of intensional languages providing us, as many believe, with a satisfactory method to deal with real philosophical problems.

2. In part, for sure, it is true. But only in part! If we distinguish, *inter alia*, between ontology of the being, including metaphysics (i.e., ontology of the world) on the one hand, and - on the other hand - the ontology of language and the ontology of mind (cf. *Ontologies and ontologies*, 1990), then by their close connection with formal investigations of concepts, set-theoretical and algebraic ontologies are closely connected with two later types of ontology, but not with the first!

Real philosophy, however, is about the being. Therefore, we are still in need of a more suitable and subtle semantics for it.

3. In what follows I will try to outline such a semantics, based on combination ontology, which is a part of a deeply modal version of a general theory of analysis and synthesis.

To this end, I will start with rather general remarks concerning modalities, with particular emphasis put on ontological ones, passing next to a rather general description of a theory of analysis and synthesis." p. 181

28. ———. 2001. "Parainconsistency, or Inconsistency Tamed, Investigated and Exploited." *Logic and Logical Philosophy* no. 9:5-24.

"In the paper, the notion of inconsistency is studied. The author proposes to use the term 'parainconsistency' rather than 'paraconsistency' with respect to inconsistent logics which contrive their inconsistency. Several illuminating examples of

inconsistency are given. A brief history of the research related to the notion of (para)inconsistency is presented. Special attention is paid to the seminal contribution of Jaskowski. Jaśkowski's modal approach to parainconsistency is discussed. Gödel's and Jaśkowski's interpretations of modalities and contingencies are compared." Anna Gomolinska (Białystok)

"Any educated person knows, or at least should know (1), that most cases of incoherencies, impossibilities and -- in a theoretical framework -- inconsistencies are rather suspicious members of a domain.

In particular, being inconsistent is a rather bad property of a theory. But why?

Our aim in the paper is, firstly, to discuss several answers to the question, and secondly, and more importantly to provide a proper frames to explain and to exploit inconsistencies. The framework which will force inconsistencies to work in a positive way, i.e., to enlarge and to deep our understanding of problems involved." p. 5

(1) With exceptions of Hegel, Hegelians, etc.

29. ——. 2003. "A Profile of Masonic Synthesis." *Logic and Logical Philosophy* no. 11/12:167-189.

Reprinted in: *Art of philosophy. A Selection of Jerzy Perzanowski's Works*, pp. 199-222.

"Everything is a both a product of the decomposition (analysis) of a given object into simpler objects and of the synthesis (composition) of that which is composed of simpler components. In order to come to know a given object, it is necessary to reconstruct the process of analysis and synthesis, in the one and the other direction." p. 167

"Classical metaphysics has come back to life. Yet it has most definitely become a logical, hence scientific discipline not aligned with the Kantians, but one set against them. Those who regenerated first philosophy as a discipline were above all the fathers of contemporary logic. Conceived in the latter half of the nineteenth century, classical logic has enjoyed a era rich in

developments. In chronological order, we begin with Bolzano, Boole, Frege, Peirce, and Peano, followed by Russell, Whitehead and Wittgenstein, after whom the names worthy of mention are legion.

A second figure in the revitalisation of classical metaphysics as a live scientific philosophy was Franz Brentano, and beyond him his students and developers, amongst whom we find Kazimierz Twardowski, the father of Polish scientific philosophy.

Brentano united scientific philosophy with descriptive psychology and a resurrected descriptive metaphysics in the style of Aristotle. His pupils divided into schools following paths which, whilst differing from each other, always remained faithful to their source. In the case of phenomenology, special techniques of eidetic analysis were introduced into the Brentanian picture. A different case is that of Meinong and his co-workers, who worked Brentanian ideas into a general theory of objects and properties." pp. 170-171.

"Ontology is the general theory of the possibility, i.e., the theory of the realm of all possibilities -- the ontological space. Metaphysics, on the other hand, is the ontology of the world.

The world is the realm of existing items. After Wittgenstein's *Tractatus*: The world is all what is the case. In other words, all events taken as existing complexes (facts).

2. If we distinguish, *inter alia*, between the ontology of the being, including metaphysics (i.e., ontology of the world) on the one hand, and -- on the other hand -- the ontology of language and the ontology of mind, then we see, by close connection the later two with formal investigations of concepts, that set-theoretical and algebraic ontologies are closely connected with them, but not with the ontology of being.

True philosophy, however, is about the being. Therefore, we are still in need of a metaphysics based on its background combination ontology with appropriate combination semantics. In need, by definition, of combination metaphysics.

3. In what follows, I will first try to outline such a semantics, based on combination ontology, which is a part of a deeply modal version of a general theory of analysis and synthesis. Next, I will try to apply it to the analysis of the most fundamental metaphysical notions.

To this end, I will start with general remarks concerning modalities, with particular emphasis put on ontological and metaphysical ones, passing next to a rather general description of a theory of analysis and synthesis." p. 93

31. ———. 2007. "In Praise of Philosophy." In *The Courage of Doing Philosophy. Essays Presented to Leszek Nowak*, edited by Brzezinski, Jerzy, Klawiter, Andrzej, Kuipers, Theo A.F., Lastowski, Krzysztof, Paprzycka, Katarzyna and Przybysz, Piotr, 375-394. Amsterdam: Rodopi.

Reprinted in: *Art of philosophy. A Selection of Jerzy Perzanowski's Works*, pp. 25-40.

The paper is an English translation by Matthew Carmody of an essay published in Polish in 2000.

"Philosophy, in particular logic and ontology, occupy a key place in the structure of human knowledge.

We conceive the world, one might say we grasp it, via concepts, that is mental pictures of the aspects of objects under consideration. Concepts in turn are connected according to the principles of an appropriate grammar, into propositions (logical judgments), that is, logical pictures of mentally-grasped fragments of the world.

Concepts are junctions of information: propositions -- its pieces.

From here comes the role of logic, being the basic theory of those pictures of the world, fragments of grasped information. The logic of names examines the relations between concepts

expressed in a given language. The logic of sentences examines the relations between propositions. This leads to an examination of the recombinations of the initial group of pictures, that is, to an examination of possibilities.

Their totality in turn constitutes the ontological space, the space of all possibilities.

Ontology, the true first philosophy, in this way creates the most general conceptual framework for the varied and diverse fields of human knowledge and strives towards the complete working-out of that framework. As a matter of fact, we owe to Leibniz the idea of the above modal definition of ontology and the opportunity of carrying out ontological research by pointing out the proper form of ontological questions: what is possible? And why? And, how is it possible?

In turn, particular ontological questions, for a given x , sound as follows: how is x possible? We have amongst other: metaphysical questions - How is the world possible? How is existence possible? And what, why and how is it that exists?: epistemo-ontological questions - How is knowledge itself possible? In particular, How is mathematical a priori knowledge of that which is real possible? Also questions of *axio-ontology* and *antropo-ontology*: What are values? How are they possible? How is evil possible? Who are people so evil? And many other questions of this form.

The problems of real philosophy are real and great. Therefore they will be with us for as long as will survive human curiosity. *For all people by nature strive for knowledge* (Aristotle. *Metaphysics*, I, 1). including the deepest one.

This is why it is so important that reflection on these questions be carried out by true philosophers. For if philosophy, at the insistence of skeptics or under the pressure of positivists, were to give up concerning itself with its real problems, then they would fall into hands of charlatans, causing great mental and social damage.

- Therefore people should not forget about philosophical questions and the right way to deal with them." pp. 378-379.

Just as 'beautiful' points the way for aesthetics and 'good' for ethics, so do words like 'true' for logic.

...it falls to logic to discern the laws of truth. (Gottlob Frege, *Der Gedanke (The Thought)* p. 58

Logic stand guard at the border between Truth and False (Jan Łukasiewicz)

INTRODUCTION. "1. The old but still bright and fresh wisdom, expressed in both mottos, says that the chief task of logic is to search for the laws of truth and for rules governing transformations preserving truth, and sometimes falsity. The theory of Truth and Falsity is therefore the true kernel of logic, and logicians duty is, as Łukasiewicz said, to guard the border between Truth and Falsity.

2. In our poor, postmodern time quite a lot of people, including, unfortunately, a few logicians and many philosophers, are following rather Nietzsche than Frege trying to dissolve, at least in human beings' minds, this border together with other natural borders. They like to be happy on wanton vacation without any border, including the border between Truth and Falsity and the border between real and unreal.

Are guardians still doing their job? Do logicians fulfill their duty?

3. The masters certainly do. Recall, for example, seminal work of Tarski clarifying in set theoretical terms the classical definition of truth in the case of an extensional language, or the

work of Kripke and others which extend Tarski's analysis to the case of intensional operators.

One gap however is surprising. Despite efforts of G. H. von Wright (1) and his followers we still have no reasonable, easy to catch and use, logics of Truth and Falsity, or rather logics of fundamental logical modalities: T -- *is true* and F -- *is false*.(2) Why?

The reasons are mental, not essential. As you will see, they are mainly misunderstanding and propaganda due to a false understanding of Tarski's work and Ramsey's redundancy thesis.

4. In a series of papers, with the present one as the starting item, I will outline natural T&F-logics showing, to my surprise, that between them are most of the basic modal logics. In particular, in the present paper I will pick out T&F-logics connected with the matrix method for classical logic. T&F-logics obtained in such way are counterparts of logics implicit in the matrix (algebraic) way of Boole and the tableau method of Beth, Smullyan and Fitting (cf. Melvin Fitting, *Intuitionistic Logic, Model Theory and Forcing*, North Holland, 1969).

In subsequent papers I will outline in turn T&F-logics of algebraic automorphisms, connections from the logical square of T and F, next iterations of T and F, cancellation, and deflation. Finally, I will compare logics from my list with T&F-logics pointed out in the literature of the subject.

5. A natural consequence of my list of T&F-logics is to use them to discuss several notorious problems concerning Truth and Falsity, including the most famous one -- the Liar Paradox. In "Modal Logics and the Liar" I will show that a modal approach to the Paradox by means of suitable T&F-logics is powerful and subtle enough to catch both its kernel and mechanism.

As a matter of fact, my interest in the Liar Paradox was the starting point for my investigation of T&F-logics. Since 1986 I have lectured several times in several places trying to explain the power and usefulness of modal logic for a true discussion of the Liar Paradox and of similar obstacles to formal semantics

based on the classical idea of *being true* and *being false*.(3)" (p. 95-96. N.B: *The mottos by Frege and Lukasiewicz in the original are in German and Polish*)

(1) Cfr. G. H. von Wright, *An Essay in Modal Logic*, Amsterdam, 1951.

(2) Called T&F-logics, in short.

(3) Special thanks should go to Jozef Misiek, who awoke me by his provocative claim that there are no proper T&F-logics and no reasons as well to consider the Liar Paradox to be a reasonable and genuine paradox. Read and see!

The volume contains 12 Essays, (the 2, 4, 6, and 9 are previously unpublished).

"Jerzy Perzanowski, born en 23rd April 1943 in Aix-Les-Bains. An outstanding Polish philosopher of international renown, he passed away on 17th May 2009 in Bydgoszcz. His original philosophical ideas include informatic monadology", "protophysics", and a rather un-usual blend of logic and ontology in what he called onto/logic where the slash is meant to suggest a quotient of ontology by logic. Perzanowski began as a logician, his early works being on modal logic, then gradually shifted his interest to "logical philosophy" (another of Perzanowski's coinages, meaning not so much philosophy of logic as philosophy informed by logic). Later, his interests turned to cognitive science and finally even to mysticism, again of a particular, logically informed, kind." p. 9.

Modal Logics and Philosophy. Ph.D thesis, Jagellonian University.

Slightly modified version reprinted in *Jak filozofowac? Studia z metodologii filozofii*, pp. 262 - 346.

"The first part of the essay contains basic information concerning the author's analysis of modalities. It presents a construction of perzanowski-cones (a three-dimensional topography of modal calculi) as well as an outline of his combination ontology. Within this framework he elaborates a new type of relational semantics, called "combination semantics of modal logics", which generalizes standard semantics of modal systems. In a second part the author illustrates his thesis, that modal logic is the main tool of exact philosophy, particularly with respect to ontological rationalism.

He presents general rules concerning formalization of the philosophical modal expressions. He uses a fragment of Wittgenstein's *Tractatus* to demonstrate various methods which allow to obtain the categorial logic of a philosophical text. The following chapters on "modal fallacy" and contingency contain an extended discussion of his attempt to a modal analysis of "(onto)logical" rationalism. The chapter "Ontic primitivity and secondarity" presents four formalizations of Ingarden's conception of moments of existence. On the one hand, this serves as an exemplification of the previously developed formalities, on the other one it shows that logic has an active influence on philosophy, conducting systematic theoretical research in it. The author's very original and interesting essay ends with an English summary. However, it would be highly desirable to obtain a full version in English or German." Kit Fine: annotated bibliography. Books and Papers 1970-1981

Books

1. Prior, Arthur Norman, and Fine, Kit. 1977. *World, Times and Selves*. London: Duckworth.

Contents: Preface by Kit Fine 7; 1. The Parallel between Modal Logic and Quantification Theory 9; 2. Egocentric Logic 28; 3. Supplement to 'Egocentric Logic' 46; 4. Worlds, Times and Selves 51; 5. Tensed Propositions as Predicates 67; 6. Modal Logic and the Logic of Applicability 84; 7. Supplement to 'Modal Logic and the Logic of Applicability' 102; 8. Postscript by Kit Fine: Prior on the Construction of Possible Worlds and Instants 116; Technical Appendix 162; Index of Symbols 169; Index of Names 171; General Index 173-175.

"Before he died, Prior was working on a book to be entitled 'Worlds, Times and Selves'. This book was to deal, in one way or another, with the interplay between modal or tense logic, on the one hand, and quantification theory on the other. One of its main concerns was to show that modal and tense logic could stand on their own, that talk of possible worlds or instants was to be reduced to them rather than the other way round.

Unfortunately, only the first chapter was completed. There were jottings for other chapters, but they were far from complete. However, it is clear that some of Prior's recently published papers would have been incorporated into the book, though probably in considerably modified form. So what I have tried to do is to collate the published and unpublished material

in such a way that the result is as close as possible to the book he had in mind.

This should explain the distribution of the unpublished material. The completed chapter appears, as it should, as the first paper of the collection. However, the other passages of unpublished material appear as supplements, in 3 and 7, to already published papers. This is because they are quite obviously expansions or elaborations of those papers. In order to avoid repetition, I have omitted some initial sections from the supplementary papers; and this accounts for their abrupt beginnings. I have also not used some other unpublished material, either because it was expository or because it was too fragmentary to be of interest.

The first paper explains in very simple terms the parallel between modal logic and quantification theory. It is a good introduction to the technical and philosophical problems that arise in the later papers.

The next three papers deal with the egocentric counterpart to ordinary tense or modal logic. They introduce the operator Q that picks out those propositions that correspond to instants, worlds or selves, as the case may be. The last sections of 2 and 4 and most of the supplement 3 are concerned with the formal development of Q or cognate notions.

The last three of Prior's papers, 5-7, deal with the problem of embedding the theory of instants or possible worlds within orthodox tense and modal logic respectively. Chapter 5 attempts to see how far the opposite view can be maintained. Chapter 6 is a particularly rich paper. It deals, among other things, with a world-calculus for the system Q , the logic of significance, and the extension of embedding results to possibilist quantifiers. The supplement elaborates further on some of these topics.

In his book, Prior would certainly have said more on this question of embedding. In the postscript, I have tried to fill this gap by discussing in detail his proposal for explaining instants and possible worlds within tense or modal logic. I had intended

to write on his whole philosophy of time and modality; but, for reasons of space, I decided to stick to this more limited topic.

I should like to thank the editors of *Nous*, *L'Age de la Science*, *American Philosophical Quarterly*, and *Theoria* for permission to publish papers originally published by them. I should also like to thank Mary Prior, Anthony Kenny and Hans Kamp. They all, in their own ways, helped me to produce this collection. Tom Dimas and Mike Ferejohn prepared the indexes." (*Preface* , pp. 7-8)

2. Fine, Kit. 1985. *Reasoning with Arbitrary Objects* . Oxford: Basil Blackwell.

Contents: Preface VII; Introduction 1; 1. The General Framework 5; 2. Some Standard Systems 61; 3. Systems in General 147; 4. Non-Standard Systems 177; Bibliography 210; General Index 215; Index of Symbols 219-220.

"This book deals with certain problems in understanding natural deduction and ordinary reasoning. As is well known, there exist certain informal procedures for arguing to a universal conclusion and from an existential premiss. We may establish that all objects of a certain kind have a given property by showing that an arbitrary object of that kind has that property; and having shown that there exists an object with a given property, we feel entitled to give it a name and declare that it has the property. So we may establish that all triangles have interior angles summing to 180° by showing of an arbitrary triangle that its interior angles sum to 180° ; and having established that there exists a bisector to an angle, we feel entitled to give it a name and declare that it is a bisector to the angle.

These informal procedures correspond to certain of the quantificational rules in systems of natural deduction. Corresponding to the first is the rule of universal generalization, which allows us to infer $\forall x \phi(x)$ from $\phi(a)$ under suitable restrictions. Corresponding to the second is the rule of existential instantiation, which allows us to infer $\exists(a)$ from $\exists x \phi(x)$, again under suitable restrictions.

In these inferences, certain terms play a crucial role; and it is natural to ask how they are to be understood. What role is to be attributed to the term a in the inferences from natural deduction? What is to be made of our talk of arbitrary triangles or indefinite bisectors in ordinary reasoning?

The present work is based upon the hypothesis that these critical terms refer to arbitrary or representative objects. The term a in the inferences from natural deduction functions as a name of a suitable arbitrary object. And our talk of arbitrary triangles or of indefinite bisectors is to be taken at its face value as also evincing reference to arbitrary objects.

The core of the work will be taken up with applying this hypothesis to two main systems of natural deduction: the one of Quine's *Methods of Logic* [52]; and the other of Copi [54], as amended by Kalish [67] and Prawitz [67]. In the case of each of these systems, we shall propose a generic semantics and then, by reference to that semantics, both establish soundness and motivate the restrictions on the rules.

We shall also be concerned to cover certain other topics. We develop the pure theory of arbitrary objects somewhat beyond the needs of the present application, partly because of its intrinsic interest and partly with a view to other applications. We embark on a general study of systems containing a rule of existential instantiation and prove some general results on what form satisfactory systems of this sort can take. Finally, on the basis of an alternative generic semantics, we develop certain presuppositional systems and relate them to existing systems in the literature. The book is divided into parts according to the topic treated, with the first part dealing with the pure theory, the second with the application to the systems of Copi and Quine, the third with systems in general that contain a rule of existential instantiation, and the last with the presuppositional systems.

The work here is part of a much larger project, one in which the theory of arbitrary objects is to be applied to the use of pronouns in natural language and to the use of variables in informal mathematics and programming languages. These

other topics have been altogether ignored, although the perceptive reader may pick up on certain intended points of contact. The closely related topic of developing a generic semantics for the ε - and η -calculi of Hilbert and Bernays [34] and Hailperin [57] has also not been considered; and my hope is that I shall be able to deal with it thoroughly elsewhere.

The book does not need to be read from beginning to end and the first part, in particular, may be consulted according to the demands from the other parts. The reader who is having difficulties may find my 'Natural Deduction and Arbitrary Objects' [85] helpful as a somewhat gentler introduction to the subject." (*Introduction* , pp. 1-2)

"The present monograph has been written more from a sense of curiosity than commitment. I was fortunate enough to attend the Munich Conference on the Philosophy of Mathematics in the summer of 94 and to overhear a discussion of recent work on Frege's approach to the foundations of mathematics. This led me to investigate certain technical problems connected with the approach; and these led me, in their turn, to reflect on certain philosophical aspects of the subject. I was concerned to see to what extent a Fregean theory of abstraction could be developed and used as a foundation for mathematics and to place the development of such a theory within a general framework for dealing with questions of abstraction. To my surprise, I discovered that there was a very natural way to develop a Fregean theory of abstraction and that such a theory could be used: to provide a basis for both arithmetic and analysis. Given the context principle, the logicist might then arguing that the theory was capable of yielding a philosophical foundation for mathematics, one that could account both for our reference to various mathematical objects and for our knowledge of various mathematical truths. I myself am doubtful whether the theory can legitimately be put to this use. But, all the same, there is surely considerable intrinsic interest in seeing how the theory of abstraction might be developed and whether it might be capable of embedding a significant portion of mathematics, even if the theory itself is in need of further foundation.

The monograph is in four parts. The first is devoted to philosophical matters and serves to explain the motivation for the technical work and its significance. It is centred on the main questions: What are the correct principles of abstraction? In what sense do they serve to define the abstract with which they deal? To what extent can they provide a foundation for mathematics? The second part (omitted from the original paper) discusses the context principle, both as a general basis for setting up contextual definitions and in its particular application to numbers. The third part proposes and investigates a set of necessary and sufficient conditions for an abstraction principle to be acceptable. The acceptable

principles, according to this criterion, are precisely determined and it is shown, in particular, that there is a strongest such principle. The fourth and final part attempts to develop a general theory of abstraction within the technical limitations set out by the third part; the theory is equipped with a natural class of models; and it is shown to provide a foundation for both arithmetic and analysis." (*Introduction* , pp. IX-X)

4. ———. 2005. *Modality and Tense: Philosophical Papers* . New York: Oxford University Press.

Contents: Preface; Introduction 1;

III. Issues in Metaphysics.

7. The Varieties of Necessity (2002) 235; 8. Tense and Reality (2005) 261; 9. Necessity and Non-Existence (previously unpublished) 321;

IV. Reviews.

10. Review of *Conterfactuals* by David Lewis (1975) 357; 11. Review of *The Nature of Necessity* by Alvin Plantinga (1976) 366; References 371; Index 379-387.

"This volume collects together my published papers on tense and modality up to the present time. It contains two reviews, since the issues they discuss are still of interest; and it also contains a much expanded version of my paper, 'The Reality of Tense', now under the title 'Tense and Reality', and two previously unpublished papers. I have not included my technical papers on modal logic, even when they have contained philosophical material or have had an obvious

bearing on philosophical questions; and nor have I included any of my philosophical or technical papers on essence, even when they have dealt with the connection between essence and modality. I have added an introduction to the volume, outlining the central content of each paper and bringing out certain issues and themes that may not be evident from the papers themselves." (From the *Preface*)

5. ———. 2007. *Semantic Relationism* . Oxford: Blackwell.

Contents: Preface VII; Introduction 1; 1. Coordination among variables 6; 2. Coordination within language 33; 3. Coordination within thought 66; 4. Coordination between speakers 86; Postscript: further work 122; Notes 133; References 141; Index 143.

"The ideas behind these lectures had their origin in the early 1980s.

There was then a great deal of excitement over the "new" theory of direct reference, but many of those who were attracted to the theory were also worried about the challenge posed by Frege's puzzle. How could they claim, as the theory seemed to require, that the meaning of "Cicero = Tully" was the same as "Cicero = Cicero," when the one was plainly informative and the other not?

I myself faced a similar problem over the role of variables. I had previously attempted to develop a theory of variable or arbitrary objects. According to this theory, a variable should be taken to signify a variable object, something which we might loosely identify with the variable's meaning or abstract role. However, even though the variables x and y , when considered on their own, should be taken to signify the same variable object, they should not be taken to signify the same variable object when considered together, since otherwise we would lose the relevant distinction between $x = y$ and $x = x$. It seemed clear to me that the two problems were essentially the same and that there should be a common solution to them both, even though it was not then clear to me what the solution should be.

I worried about this issue on and off for the next 15 years until it dawned on me that it could only adequately be solved by making a fundamental break with semantics as it is usually conceived. One must take account of the meaning that expressions have, not only when considered on their own but also when they are considered together; the meaning relation between them is not simply to be regarded as a product of their individual meanings. Once we embrace this liberating thought, we can then see how the usual referential view of the meaning of variables and names can be retained and yet the difficulties over Frege-type puzzles avoided.

It was, therefore, opportune when Ernie Sosa asked me to give the first Blackwell/Brown lecture for the Fall of 2002, since this provided me with an opportunity to develop these ideas, which were still in a very inchoate form, and to discuss them with a wonderful group of philosophers.

(...)

The present book is loosely based upon the lectures I gave at Brown and I have tried to keep to something like the original lecture format. This has meant that a number of topics have not been pursued, though I have given a brief account of some of the more important of these topics in the final chapter. It has also meant that scholarly allusions have been kept to a minimum. I have, in particular, made no attempt to compare my own work with the loosely related work of Almog (2006), Fiengo and May (2005), Lawlor (2005), and Lieb (1983). This is a “bare-bones” account, simply intended to convey the essential ideas; and I hope later to provide a fuller account that is both broader in its scope and much more thorough in its treatment of particular topics.” (*Preface* pp. VII-VIII)

6. ———. 2020. *Vagueness. A Global Approach*. New York: Oxford University Press.

"The material for the lectures has been extracted from a much longer booklength manuscript, which I hope to publish separately. I therefore hope that the reader will bear in mind that many topics that are discussed perfunctorily or not at all in this monograph will be discussed at much greater length in the book. This is a bare bones account, without the usual qualifications or consideration of objections or discussion of alternative points of view.

The first lecture (Chapter 1) was intended as an introduction to a general audience with no special expertise in the topic. It is, for this reason, very sketchy and, except for the last part, not at all original. The subsequent two lectures are more substantive. The first of these (Chapter 2) presents my general account of vagueness and the second (Chapter 3) discusses its application to three topics: the sorites argument (or paradox of the "heap"); the question of luminosity (or whether we can know our own minds); and the problem of personal identity, especially in its connection to the possibility of fission." (from the Preface)

Papers 1970-1981

1. Fine, Kit. 1970. "Propositional Quantifiers in Modal Logic." *Theoria* no. 36:336-346.

"In this paper I shall present some of the results I have obtained on modal theories which contain quantifiers for propositions. The paper is in two parts: in the first part I consider theories whose non-quantificational part is S5; in the second part I consider theories whose non-quantificational part is weaker than or not contained in S5. Unless otherwise stated,

each theory has the same language L . This consists of a countable set V of propositional variables p_1, p_2, \dots , the operators \vee (or), \sim (not) and \Box (necessarily), the universal quantifier (\forall), p a propositional variable, and brackets (and), The formulas of L are then defined in the usual way." (p. 336)

2. ———. 1971. "The Logics Containing $S_4.3$." *Zeitschrift für Mathematische Logik und Grundlagen der Mathematik* no. 17:371-376.

"In this paper I prove some general results on logics containing $S_4.3$. In section 2 I prove that they all have the finite model property. Bull [1] has already proved this result; but his proof is algebraic, whereas mine is semantic. In sections 3 and 4, I prove that they are all finitely axiomatizable. It follows from these results that they are all decidable. Finally, in section 5, I show that the lattice of $S_4.3$ logics is isomorphic to one on finite set of finite sequences of natural numbers. Needless to say, these results carry over to the extensions of the intermediate logic LC .

In a paper on logics containing K_4 , I shall present another semantic proof that $S_4.3$ logics have the finite model property and thereby also establish some results on compactness." (p. 371)

3. ———. 1971. "Counting, Choice and Undecidability." *Manifold* no. 11:17-22.

Abbreviations: Continuum Hypothesis = CH; Axiom of Choice = AC.

"In 1900 Hilbert stated 23 problems which he considered to be of crucial importance. The first of these was 'prove Cantor's Continuum Hypothesis'. Gödel (1939) and Cohen (1963) have shown that the hypothesis can neither be proved nor disproved. Their proofs are expounded in:

P. J. Cohen, *Set Theory and the Continuum Hypothesis*, Benjamin 1966.

P. J. Cohen, "Independence results in set theory", in *Studies in Logic and the Foundations of Mathematics*, North-Holland 1965, pp. 39-54.

K. Gödel, "The Consistency of the Axiom of Choice and of the Generalized Continuum Hypothesis with the axiom of set theory", 1939, 4th printing, Princeton 1966." (p. 71)

(...)

"The question now remains: what attitude should the working mathematician take towards CH? It is important to leave AC on one side at this point because it possesses a degree of self-evidence that CH certainly lacks.

There are, I think, two main attitudes. On the one hand, one could say there is no sense in which CH is true or false and give up looking for ways of settling the question. Instead, one would develop different set theories, with or without CH, somewhat in analogy to the alternative geometries of the 19th century. On the other hand, one could say that CH is either true or false and look for new ways of determining which.

Two main ways suggest themselves. The first is to dispense with proof and to accept that hypothesis concerning transfinite cardinals which is most fruitful in consequences. The second is to search for new self-evident axioms that might settle CH.

These new axioms might be formulated in terms of set-theoretic notions or in terms of a new notion or new notions altogether.

The adoption of non-deductive procedures or the discovery of non-set-theoretic notions would conflict with two common views about mathematics, viz. that all mathematical knowledge is based upon proof and that all mathematical notions can be given a set-theoretic definition. Although it is too early to talk of feasibility, it is worth noting that these common views are based upon an analysis of extant mathematics. There seems to be no reason, in principle, why they should be true." (p. 82)

4. ———. 1972. "In So Many Possible Worlds." *Notre Dame Journal of Formal Logic* no. 13:516-520.

"Ordinary modal logic deals with the notion of a proposition being true at least one possible world. This makes it natural to consider the notion of a proposition being true in k possible worlds for any non-negative integer k . Such a notion would stand to Tarski's numerical quantifiers as ordinary possibility stands to the existential quantifier.

In this paper (1) I present several logics for numerical possibility. First I give the syntax and semantics for a minimal such logic (sections 1 and 2); then I prove its completeness (sections 3 and 4); and finally I show how to extend this result to other logics (section 5)." (p. 516)

(1) The results of this paper are contained in my doctorate thesis, submitted to the University of Warwick in 1969. I am greatly indebted to my supervisor, the late Arthur Prior. Without his help and encouragement this paper would never have been written.

5. ———. 1972. "For So Many Individuals." *Notre Dame Journal of Formal Logic* no. 13:569-572.

"In [2], Tarski introduces the numerical quantifiers.

(...)

Because of their definability, the numerical quantifiers have rarely been considered on their own account. However, in this paper I consider a predicate logic without identity which is enriched with numerical quantifiers as primitive. In section 1, I present the syntax and semantics for this logic; and in sections 2 and 3, I establish its completeness." (p. 569)

6. ———. 1972. "Logics Containing S_4 Without the Finite Model Property." In *Conference in Mathematical Logic, London '70*, edited by Hodges, Wilfrid, 98-102. Berlin: Springer Verlag.

"In [1], Harrop asked whether there were logics containing the intuitionistic logic IL which lack the finite model property [=fmp]. Jankov gave examples of such logics, but they were not finitely axiomatizable. By the Tarski-McKinsey translation, Harrop's problem relates to the question of whether there exist extensions of the modal logic S4 without fmp. Makinson [2] showed that there are extensions of the modal logic M without fmp, but he could not extend his results to S4. In this paper, I shall exhibit logics containing both IL and S4 which lack fmp, but are finitely axiomatized and decidable." (p. 98)

(...)

"Finally, it should be noted that we can add axioms to the logics described above so as to obtain logics which are decidable, finitely axiomatized, complete for their intended interpretation, and yet without fmp." (p. 101)

7. ———. 1972. "Some Necessary and Sufficient Conditions for Representative Decision on Two Alternatives." *Econometrica* no. 40:1083-1090.

"A social decision rule is one that produces a social decision for each configuration of individuals' decisions. Such a rule is representative if it produces a social decision that is the result of repeatedly applying the rule of simple majority decision to decisions obtained

by that rule. We give necessary and sufficient conditions for a social decision rule for two alternatives to be representative." (p. 1083)

(...)

"The central problem of this paper is to find an alternative characterization of the representative functions. May in [1] gave

an alternative characterization of the simple majority decision functions, and Murakami in [2 and 3] established that monotonicity and self-duality are necessary conditions for being a representative or indirect majority decision function. (In fact, Murakami deals with what he calls democratic functions, i.e., representative functions which are non-dictatorial; but this latter condition may be added or left out at will.) However, he was not able to establish any sufficient conditions. In this paper, I establish his conjecture that strong monotonicity with self-duality is a sufficient condition.

I use this result and a new property of not being "zigzag" to prove that monotonicity, self-duality, and not being zigzag are necessary and sufficient conditions. (2)

Finally, I show that the monotonic, self-dual, and positive functions are exactly those definable in terms of the voting and jury operators." (p. 1084)

(2) P. C. Fishburn independently solved this problem in his paper "The Theory of Representative Majority Decision," *Econometrica* , 39 (1971), pp. 273-284. However, he uses a completely different method of proof and a slightly different condition in place of "not zigzag".

8. ———. 1973. "Conditions for the Existence of Cycles under Majority and Non-Minority Rules." *Econometrica* no. 41:889-899.

"This paper provides type I necessary and sufficient conditions for transitivity and quasi-transitivity under simple majority rule. (2) For type II conditions, a master list of orderings is

acceptable if the social rule generates a "rational" (e.g., transitive) social ordering whenever the individuals select their preference orderings from the list. A list ordering may be selected any number of times, and, in particular, it may not be selected at all. For type I conditions, on the other hand, each list ordering must be selected at least once, so that the list and the configuration of individual orderings must exactly match in the kind of orderings they contain. Thus for type II conditions it is the absence of certain kinds of orderings that blocks irrational social choice, whereas for type I conditions the presence of certain kinds of orderings may also contribute toward blockage.

Type II conditions have been determined for a wide variety of rules and under several definitions of rationality. Our main interest in this paper is in type I conditions for simple majority rule with rationality defined in terms of transitivity or quasi-transitivity. However, our method of argument will yield simple alternative proofs of some standard results on type I conditions and it will also yield the type I and type II conditions for transitivity under non-minority rule.

Section 1 lays down some relevant definitions. Section 2 proves the "min-midmax" theorem, which is the basis for all that follows. Sections 3 and 4, respectively, establish the conditions for transitivity and quasi-transitivity under majority rule.

Finally, Section 5 proves the min-mid-max theorem for the non-minority rule and establishes the condition for transitivity under that rule." (p. 889)

(2) The terminology of type I and II conditions is Pattanaik's [6]. Type II conditions were first proposed by Inada [3] and type I conditions by Pattanaik [5].

Reprinted in: Alan Ross Anderson, Nuel D. Belnap, Jr., with contributions by J. Michael Dunn ... [et al.], *Entailment: The Logic of Relevance and Necessity*, Princeton: Princeton University Press, 1992 vol. II, pp. 208-231.

"This paper gives a modelling for Ackermann's systems Π' and Π'' , Anderson's and Belnap's system E and R , and several of their subsystems. The distinctive feature of this modelling is a point-shift in the evaluation of negation and entailment: the negation of a formula holds at a point if the formula itself fails to hold at a complementary point; and an entailment holds at a point if whenever its antecedent holds at a point its consequent

holds at an appropriately associated point. These rules enable negations of valid formulas to hold at a point and valid formulas themselves to fail to hold at a point. They also provide a grip on certain axioms involving negation or nested entailment." (p. 347, notes omitted)

(...)

The first two sections present the deductive-semantic framework; §51.1 specifies the models, and §51.2 the logics. The following two sections establish completeness; §51.3 for a minimal logic B , and §51.4 for Π' , Π'' , E and the several subsystems. §51.5 outlines various alternative versions of the modeling. The last two sections contain applications of the modeling: §51.6 to the admissibility of modus ponens; and §51.7 to the finite model property and decidability. Many of the systems considered are shown to have these properties; see §63 for a further survey on decidability, and §65 for fundamental undecidability results." (pp. 208-209 of the revised reprint)

12. ———. 1974. "An Incomplete Logic Containing S4." *Theoria* no. 40:23-29.

"This paper uses the standard terminology of modal logic. It should suffice to say that: all logics contain the minimal logic K and are closed under necessitation, substitution and modus ponens; frames consist of a relation defined on a non-empty set of points; models consist of a frame with a valuation; and truth-at-a-point is defined and notated in an obvious way; with the formula $\Box A$ true at a point iff A is true at all accessible points. The formula A is true in (satisfied by) a model if it is true in all (some) points of the model; A is strongly verified in a model if all substitution-instances of A are true in the model; and A is valid in a frame if A is true in all models based upon the frame, A set of formulas is true, strongly verified, or valid if all of its members are. Unless otherwise stated, all logics contain S4 and all models and frames possess reflexive and transitive relations.

A logic is complete if any formula valid in all frames that validate the logic is in the logic. This paper exhibits a logic L containing S4 that is not complete." (p. 23)

13. ———. 1974. "Logics Containing K4. Part I." *Journal of Symbolic Logic* no. 39:31-42.

"There are two main lacunae in recent work on modal logic: a lack of general results and a lack of negative results. This or that logic is shown to have such and such a desirable property, but very little is known about the scope or bounds of the property. Thus there are numerous particular results on completeness, decidability, finite model property, compactness, etc., but very few general or negative results.

In these papers I hope to help fill these lacunae. This first part contains a very general completeness result. Let $I_n >$ be the axiom that says there are at most n incomparable points related to a given point. Then the result is that any logic containing K4 and $I_n >$ is complete.

The first three sections provide background material for the rest of the papers. The fourth section shows that certain models contain no infinite ascending chains, and the fifth section shows how certain elements can be dropped from the canonical model. The sixth section brings the previous results together to establish completeness, and the seventh and last section establishes compactness, though of a weak kind. All of the results apply to the corresponding intermediate logics." (p. 31)

14. Fine, Kit, and Fine, Ben J. 1974a. "Social Choice and Individual Ranking I." *Review of Economic Studies* no. 41:303-322.

"This paper investigates social positional rules. The rules are social in that they produce a social output for any configuration of individual preference orderings. They are positional in that the output produced depends only upon the positions occupied by each alternative in the individual preference orderings. (3)

Social rules may be distinguished by the form of their output, be it a quasi-ordering, choice structure or complete ordering. For each form of output, we shall determine the class of social rules that satisfy certain desirable conditions. Part one deals with quasi ordering rules; part two will deal with the other types of rules.

Indeed, this part shows that certain desirable conditions are uniquely satisfied by the so-called positional rule. One alternative is as good as another by this rule if any individual's ranking of these cond alternative can be matched by as high a ranking of the first alternative by some possibly different individual. The individuals'rankings should be as good for the one alternative as for the other." (p. 303)

(*) Some of the results of this paper are contained in B. Fine's B.Phil. thesis, Oxford1971. We should like to thank the editor and a referee for many helpful suggestions.

(3) There have been several recent papers on positional rules. See [2], [3], [5] and [8]. However, most of the results of these papers overlap with the material of Part II (which is forthcoming in this journal) rather than Part I. Further details will be given there, but let us note that Smith [8] also has a variable number of individuals and a composition condition (his separability).

15. ———. 1974b. "Social Choice and Individual Ranking II." *Review of Economic Studies* no. 41:459-475.

"In Part I of this paper it was shown that certain appealing conditions forced any social quasi-ordering rule to include the positional rule, which is itself the intersection of all finite ranking (f.r.) rules. These conditions are slightly strengthened in the first three sections of this part, but this allows us to characterize in Section 3 the rules that also satisfy the additional properties as the intersection of some set of f.r. rules. In case a continuity property, which can be interpreted as a non-veto condition applied to groups, does not hold, the set of f.r. rules must be extended to include transfinite weightings. Section 1 finds sufficient conditions for a quasi-ordering rule to be positional. This is used in Section 2 to prove the results contained in Section 3 for the special case of a social ordering rule, when a single f.r. rule emerges. This special case is then generalized in Section 3.

In Section 4, for the first time in the paper, we analyse conditions that recognize social decision depending upon the number of alternatives. Previously, only the number of individuals has been effectively allowed to vary. Again, simple and natural properties have powerful consequences, and it is thereby shown that the Borda rule is a compelling choice for making social decision, given a veil of ignorance, that is no knowledge of the special features of the individuals and alternatives concerned. In case only a quasi-ordering rule is required, social decision is based on the intersection of a set of f.r. rules symmetrical about the Borda rule.

In Section 5 we turn to choice structureules. First a positional choice structure is defined. It is the strongest such rule containing all the f.r. rules, since an alternative in a set belongs to the choice from that set iff for some f.r. it is best in the set. This last condition is shown to be equivalent to demanding that the HC of that element does not belong to the convex hull of the

HC of the other alternatives in the set. Then an outline is made for a conditions analysis of the rule: it is found to be the weakest rule satisfying certain conditions, in the sense that any other rule satisfying those conditions must be more decisive. In this, the method, results and analysis correspond to Part I's consideration of the positional quasi-ordering rule.

Section 6 is devoted to an examination of some questions concerned with the independence of conditions and Section 7 contains concluding remarks. The above only sketches the major results of this paper. In addition, the analysis of normal social quasi ordering rules in Section 2 and Section 3 has obvious relevance to the theory of production and utility under risk in the presence of indivisibility.

Finally, it should be noted that throughout this part, individual preferences are assumed to be antisymmetrical. Whilst the complications posed by individual indifference were overcome in Part I (Section 6), a more general analysis becomes analytically cumbersome and presents more problems here. Nevertheless many of the results, especially analysis by conditions, do apply more generally, though possibly with slight modifications." (pp. 459-460)

(*) The first part of the paper [1974a] was written up by K. Fine and the second by B. Fine. Both authors have contributed to all sections of the paper, though the first has contributed more to the material on the positional rule and the second to the material on normal social rules. Some of the results for ordering rules in this paper have been independently established by Smith [Smith, J. H. "Aggregation of Preferences with Variable Electorate", *Econometrica* . Vol. 41, No. 6 (Nov., 1973), pp. 1027-1041].

16. Fine, Kit. 1975. "Vagueness, Truth and Logic." *Synthese* no. 30:265-300.

Reprinted in: Rosanna Keefe & Peter Smith, *Vagueness: A Reader*, Cambridge: MIT Press, 1996, pp. 119-150.

"My investigation of this topic began with the question "What is the correct logic of vagueness?" This led to the further question

"What are the correct truth-conditions for a vague language?" And this led, in its turn, to a more general consideration of meaning and existence.

The contents of the paper are as follows. The first half contains the basic material. Section 1 expounds and criticizes one approach to the problem of specifying truth-conditions for a vague language. The approach is based upon an extension of the standard truth-tables and falls foul of something I call penumbral connection. Section 2 introduces an alternative framework, within which penumbral connection can be accommodated. The key idea is to consider not only the truth-values that sentences actually receive but also the truth-values that they might receive under different ways of making them more precise. Section 3 describes and defends the favoured account within this framework.

According to this account, as roughly stated, a vague sentence is true if and only if it is true for all ways of making it completely precise. The second half of the paper then deals with consequences, complications and comparisons of the preceding half. Section 4 considers the consequences that the rival approaches have for logic. The favoured account leads to a classical logic for vague sentences; and objections to this unpopular position are met. Section 5 studies the phenomenon of higher-order vagueness: first, in its bearing upon the truth-conditions for a language that contains a definitely-operator or a hierarchy of truth-predicates; and second, in its relation to some puzzles concerning priority and eliminability.

Some of the topics tie in with technical material. I have tried to keep this at a minimum.

But the reader must excuse me if the technical undercurrent produces an occasional unintelligible ripple upon the surface. Many of the more technical passages can be omitted without serious loss in continuity." (p. 265)

17. ———. 1975. "Normal Forms in Modal Logic." *Notre Dame Journal of Formal Logic* no. 16:229-237.

"There are two main methods of completeness proof in modal logic.

One may use maximally consistent theories or their algebraic counterparts, on the one hand, or semantic tableaux and their variants, on the other hand. The former method is elegant but not constructive, the latter method is constructive but not elegant.

Normal forms have been comparatively neglected in the study of modal sentential logic. Their champions include Carnap [3], von Wright [10], Anderson [1] and Cresswell [4]. However, normal forms can provide elegant and constructive proofs of many standard results. They can also provide proofs of results that are not readily proved by standard means.

Section 1 presents preliminaries. Sections 2 and 3 establish a reduction to normal form and a consequent construction of models. Section 4 contains a general completeness result. Finally, section 5 provides normal formings for the logics T and K4." (p. 229)

"This is an excellent book. It combines shrewd philosophical sense with fine technical expertise; the statement of views is concise and forthright; and the level of argument is high." (p. 451)

(...)

"Lewis suggests that merely possible worlds are like the actual world, 'differing not in kind but only in what goes on at them'. Indeed, for him there is no absolute difference between the actual world and the others: the difference is relative to a particular possible world as point of reference. A similar view has been held about the present time, but it is hard to accept for possible worlds. On the logical construction view, the actual world is distinguished by the property that all of its propositions are true. Here 'true' is an absolute term. It is not defined as truth in the actual world but, on the contrary, truth-in-a-world is defined as set-theoretic membership." (p. 455).

19. ———. 1975. "Some Connections between Elementary and Modal Logic." In *Proceedings of the Third Scandinavian Logic Symposium*, edited by Kanger, Stig, 15-31. Amsterdam: North-Holland.

"A common way of proving completeness in modal logic is to look at the canonical frame. This paper shows that the method is applicable to any complete logic whose axioms express a XA-elementary condition or to any logic complete for a A-elementary class of frames. We also prove two mild converses to this result. (1) The first is that any finitely axiomatized logic has axioms expressing an elementary condition if it is complete for a certain class of natural subframes of the canonical frame. The second result is obtained from the first by dropping 'finitely axiomatized', and weakening 'elementary' to 'A-elementary'.

Classical logic is used in the formulation and proof of these results.

The proofs are not hard, but they do show that there may be a fruitful and non-superficial contact between modal and elementary logic. Hopefully, more work along these lines can be carried out.

§ 1 outlines some basic notions and results of modal logic. For simplicity, this is taken to be mono-modal. However, the results can be readily extended to multi-modal logics and, in particular, to tense logic.

§ 2 proves the first of the above results and a related result as well; § 3 proves the second of the above results; and finally, § 4 constructs counterexamples to some plausible looking converse results." (pp. 15-16)

(1) After writing this paper, I discovered that A.H. Lachlan had already proved the first of these 'mild converses' in [5]. His proof uses Craig's interpolation theorem, whereas mine uses the algebraic characterization of elementary classes. R.I. Goldblatt [4] independently hit upon this latter proof at about the same time as I did.

He also has a counter-example to the converse of this result. It is similar to the one in § 4.

I should like to thank Steve Thomason for the references above and for some helpful comments on the paper.

"This paper presents a theory of extensional and intensional entities. The entities in question belong to a hierarchy that begins with individuals, sets, properties and propositions. The hierarchy extends to higher orders, both extensional and intensional. Thus it contains sets of propositions, properties of sets, properties of such properties, and, in general, it contains relations-in-intension and relations-in-extension over types of entities already in the hierarchy.

The theory does not say what a proposition or property is. Rather, a possible worlds account of these entities is taken for granted. Thus a proposition is regarded as a set of possible worlds, a property as a set of world-individual pairs, and similarly for the other intensional entities.

What the theory does is to characterize and investigate various properties of the entities in terms of possible worlds. These properties include existence, being purely general or qualitative, being logical, having an individual constituent, and being essentially modal. Thus the theory is ontological rather than linguistic. Its main concern is with the ontological status of the various entities and not with their relation to language." (p. 135)

25. ———. 1978. "Model Theory for Modal Logic Part I: The ' *de re / de dicto* ' Distinction." *Journal of Philosophical Logic* no. 7:125-156.

"It is an oddity of recent work on modality that the philosopher's main concern has been with quantificational logic whereas the logician's has been with sentential logic. There have, perhaps, been several reasons for this divergence of interest. One is that the area of sentential modal logic is already rich in logical problems; and another is that the semantics for quantified modal logic has been in an unsettled state. But

whatever the reasons have been in the past, the time would now seem ripe for a more fruitful interaction between these two approaches to the study of modality.

My aim in these papers has been to bring the methods of model theory closer to certain common philosophical concerns in modal logic. Indeed, most of the results answer questions that arise from some definite philosophical position. In this respect, my approach differs from that of Bowen [1] and others, who attempt to extend the results of classical model theory to modal logic. Although this approach has its attractions, it also suffers from two drawbacks. The first is that most of its results are devoid of philosophical interest; and the second is that many standard results of classical model theory, such as the Interpolation Lemma, do not apply to some standard modal logics, such as quantified S5 (see my paper [5]).

The philosophical position that underlies the results of the first two parts of this paper may be called *de re* scepticism. It is the doctrine that quantification into modal contexts does not, as it stands, make sense. Call a sentence *de dicto* if, in it, the necessity operator never governs a formula that contains a free variable. Then for the *de re* sceptic, only *de dicto* sentences, or their equivalents, are legitimate." (p. 125)

26. ———. 1978. "Model Theory for Modal Logic Part II: The Elimination of ' *de re* ' Modality." *Journal of Philosophical Logic* no. 7:277-306.

"In the first part of this paper, two philosophical positions were introduced: *de re* scepticism; and anti-Haecceitism. According to the first, quantification into modal contexts does not, as it stands, make sense; and according to the second, the identity or non-identity of individuals in distinct possible worlds is a matter of convention. It was shown that the two positions are

equivalent in the sense that whatever first-order modal sentence is legitimate for the one is also legitimate for the other.

A soft and hard version of each of these positions may be distinguished. According to the soft *de re* sceptic, it is possible to make sense of *de re* modal discourse; and according to the soft anti-Haecceitist, it is possible to define coherent identity conditions for individuals across possible worlds. Both of the soft positions, then, are compromising ones in that they allow that ordinary modal discourse may be reconstructed. The hard versions of the positions, on the other hand, deny that any such reconstruction is possible.

The soft *de re* sceptic may reconstruct ordinary modal discourse in various ways. One way is to reinterpret either quantification or modality (or both) so that each *de re* sentence is equivalent to one that is *de dicto*. Although this method has been prominent in the literature, I shall deal with it only incidentally here. I hope to deal with it more fully elsewhere. Another way is to add axioms to the standard modal logic so that two conditions are satisfied. The first (eliminability) is that every *de re* sentence should have a *de dicto* equivalent relative to the resulting system. The second (conservativeness) is that no *dicto* sentence should be provable in the resulting system that is not already a theorem of standard modal logic." (p. 277)

27. ———. 1979. "Failures of the Interpolation Lemma in Quantified Modal Logic." *Journal of Symbolic Logic* no. 44:201-206.

"Beth's Definability Theorem, and consequently the Interpolation Lemma, fail for the version of quantified S5 that is presented in Kripke's [7]. These failures persist when the constant domain axiom-scheme $\forall x \Box \phi \equiv \Box \forall x \phi$ is added to S5 or, indeed, to any weaker extension of quantificational *K*.

§1 reviews some standard material on quantificational modal logic. This is in contrast to quantified intermediate logics for, as Gabbay [5] has shown, the Interpolation Lemma holds for the logic CD with constant domains and for several of its extensions. §§2–4 establish the negative results for the systems

based upon S5. §5 establishes a more general negative result and, finally, §6 considers some positive results and open problems. A basic knowledge of classical and modal quantificational logic is presupposed." (p. 201)

"Parry presented a system of analytic implication in [7] and [8], Dunn [2] gave an algebraic completeness proof for an extension of this system and Urquhart [10] later gave a semantic completeness proof for Dunn's system with necessity. This paper establishes completeness for Parry's original system, (*) thereby answering a question of Gödel [6], and then, on the basis of the completeness result, derives decidability; it also deals with quantificational versions and other modifications of his system.

Section 1 contains some informal remarks on the notion of analytic implication.

They are not strictly relevant to the later analysis, although they may help to place it in perspective. Section 2 presents the semantics and Section 3 exhibits a system of analytic implication. Section 4 helps to demonstrate that the system is equivalent to Parry's, and Section 5 establishes completeness. Finally, Section 6 outlines the theory for some related systems." (p. 64)

Abstract. "This paper is part of a general programme of developing and investigating particular first-order modal theories. In the paper, a modal theory of propositions is constructed under the assumption that there are genuinely singular propositions, ie. ones that contain individuals as constituents. Various results on decidability, axiomatizability and definability are established."

"In some recent work ([7], [8], [9], [10]), I have attempted to carry out a dual programme of developing a general model-theoretic account of first-order modal theories, on the one hand, and of studying particular theories of this sort, on the other. The two parts of the programme are meant to interact, with the second providing both motivation and application for the first. The present paper belongs to the second part of the programme and deals with the question of giving a correct essentialist account of propositions.

My approach is distinctive in two main ways, one linguistic and the other metaphysical. On the linguistic side, I have let the variables for propositions be both nominal and objectual. That is to say, the variables occupy the same position as names and are interpreted in terms of a range of objects, which, in the present case, turn out to be propositions. This approach stands in contrast to the earlier work of Prior [17], Bull [1], Fine [4], Kaplan [14] and Gabbay [12], [13], in which the variables are sentential (they occupy the same position as sentences) and are interpreted either substitutionally or in terms of a range of intensional values." "The aim of this paper is to formalize various metaphysical theories within a first-order modal language. The first part deals with modal set theory. The later parts will deal with propositions, possible worlds, and facts.

Such an undertaking is relevant both to logic and to metaphysics.

Its relevance to logic lies mainly in its bearing on the model theory for first-order modal languages. I have begun to develop such a theory in [8]. The consideration of particular theories can then provide both an application of and motivation for general results in this field. There is already a fruitful interaction between the proof of general results and the consideration of particular first-order theories within classical model theory; and the hope is that there should be as beneficial an interaction within modal logic.

The relevance of the undertaking to metaphysics consists mainly in the general advantages that accrue from formalizing an intuitive theory. First of all, one thereby obtains a clearer view of its primitive notions and truths. This is no small thing in a subject, such as metaphysics, that is so conspicuously lacking in proper foundations.

But once a formalization is given, one can establish results about the theory as a whole and thereby obtain that overall

view of a subject that philosophers often strive for but rarely obtain." (p. 177)

(...)

"The plan of this part of the paper is as follows. §1 contains an informal discussion and justification of our axioms for modal set theory. §2 then presents the formal theories. §3 develops a proof- and a model-theory for class abstracts in modal set theory and establishes a useful result on transferring abstracts from classical set theory into a modal context. In §4, it is shown that the formal theories are equivalent in that any two of them share the same theorems in their common language. The proof of equivalence contains general result on when the possible worlds semantics for a given modal theory can be represented within that theory itself. The next section discusses the adequacy of our formalizations and shows that, in a certain sense, they capture all of the essential truths about sets as such. The last section is concerned with the identity of sets and places the problem within a general account of the identity of objects." (p. 178)

[8] Fine, K., 'Model Theory for Modal Logic I, II, III', *The Journal of Philosophical Logic*, (1978) 125-56, (1978) 277-306, and to appear. [1981, 293-307]

31. ———. 1981. "Model Theory for Modal Logic. Part III: Existence and Predication." *Journal of Philosophical Logic* no. 10:293-307.

"This paper is concerned with the technical implications of a certain view connecting existence to predication. This is the view that in no possible world is there a genuine relation among the nonexistents of that world or between the nonexistents and the existents. (1) The meaning of the term 'genuine' here may be variously explained. On an extreme interpretation, all relations are 'genuine', so that none of them are to relate non-existents.

On a milder interpretation, the genuine relations are those that are simple or primitive in some absolute sense. But even without appeal to an absolute concept of simplicity, we can

require that all relations should be analyzable in terms of some suitable set of relations, relating only existents to existents.

In order to make our results applicable to the thesis, we shall suppose that the primitive non-logical predicates of our language correspond to the genuine relations, whatever they might be taken to be. Thus, the linguistic formulation of the thesis becomes that the primitive predicates of the language should only be true, in each world, of the existents of that world.

Of course, the thesis might have been given a linguistic formulation, without any reference to relations, in the first place.

The thesis is an instance of what has been called Actualism. This is the ontological doctrine that ascribes a special status to actual or existent objects. Another form of the doctrine, so-called World Actualism, says that the behaviour of nonexistents is supervenient upon the behaviour of the existents, that two possible worlds which agree in the latter respect cannot differ in the former respect. The present thesis, by contrast, might be called *Predicate Actualism*. It should be clear that Predicate Actualism implies World Actualism, at least if the predicates used to describe the world are to express 'genuine' relations; for then there are no relationships involving nonexistents by which two worlds might be distinguished. On the other hand, World Actualism does not, as it stands, imply Predicate Actualism." (p. 293)

(*) This paper is the third and final part of a series (see the references below). It was completed and submitted to the *Journal of Philosophical Logic* in 1977, at about the same time as the other parts. But because of some mishap in the mail, its publication was delayed. The present part is independent from the other parts in its results, but draws upon the terminology of Section 2 of Part I.

I should like to thank the editor, R. Thomason, for many valuable remarks on the earlier version of the paper.

(1) I have briefly discussed this thesis elsewhere. The reader may like to consult Section 7 of [11], pp. 151 and 156-160 of [2], p. 564 of [3], and Section 8 of [7b].

There has been a fair amount of recent literature on the topic. I cannot give a complete survey, but the reader may like to consult Chapters IV-V of [9], p. 86 of [8], Chapters VII-VIII of [10], and pp. 333-336 of [11].

Kit Fine: annotated bibliography. Papers 1982-1998

Papers 1982-1998

1. Fine, Kit. 1982. "The Problem of Non-Existents. I: Internalism." *Topoi* no. 1:97-140.

Contents: A. Introduction. 1. Outline 97; 2. Methodology 99; B. Preliminaries, 1. Contexts and Objects 101; 2. Identity and Being 102; 3. The Identity of Non-existents 104; c. An Internalist Theory. 1. The Rudiments 106; 2. The Extended Theory 108; D. Refinements. 1. Implicit /Explicit Copula 110; 2. Diagonal Difficulties 115; 3. Dual Diagonal Difficulties 120; 4. Correlates 123; 5. Modal Matters 129; E. Criticisms. 1. Against Platonism 130; 2. Against Internalism 132; 3. Other Theories 136; Notes 137; References 139.

"The main philosophical question about non-existents is whether there really are any. My own view is that there are none. But even if this is granted, we may still ask what they are like, just as the materialist may consider the nature of sensations or the nominalist the nature of numbers.

On this further topic, there seem to be three main divisions of thought, which may be respectively labelled as:

- (i) platonism /empiricism;
- (ii) literalism /contextualism;
- (iii) internalism / externalism.

Let me attempt a rough characterization of these divisions. More refined formulations will come later. On a platonic

conception, the non-existent objects of fiction, perception, belief and the like do not depend for their being upon human activity or upon any empirical conditions at all; they exist, or have being, necessarily.

Under an empirical conception, on the other hand, these objects are firmly rooted in empirical reality; they exist, or have being, contingently. On an extreme conception of this sort, these objects are literally created and are brought into being by the appropriate activity either of or within the agent.

(...)

All in all, the three divisions provide for 8 ($= 2^3$) combinations of positions. Each, I think, is coherent, but some are more natural than others. For example it is natural, though not necessary, for the 'platonist' to accept internalism and for the 'empiricist' to accept externalism; for the means by which the objects are individuated will naturally be taken to provide conditions for their existence or being.

My own view on these questions is given by empiricism, contextualism and externalism, not that this is a common combination in the literature. This view will be defended in the second part of this paper. In the present part, I am concerned to discuss a view that combines internalism with contextualism and platonism; and in the third part, I shall discuss the literalist position, mainly in association with platonism and internalism. I have not attempted systematically to consider all of the possible combinations of position. I have only looked at the more prominent or plausible of the views, though what I say on them should throw light on what is to be said of the others.

The plan of the present part is as follows. In section A2, I discuss general methodological issues facing any philosophical study of nonexistents and, in particular, defend the claim that one can say what they are like without presupposing that there really are any. In section B, I try first to delineate more precisely the subjectmatter of our theories and then to describe the problems of providing identity and existence conditions with which any such theory should deal. In section C, I give an

initial formulation of an internalist theory, which is successively refined in section D. Finally, in section E, I give two major criticisms of the theory as thus developed. A more detailed account of each section is given in the list of contents.

It is of the greatest importance to note that the present part does not contain my own views on the subject. It is only in the last section of this part that the internalist position is criticized, and it is only in the second part of this paper that my own, more positive, views are developed." (pp. 97-99)

2. ———. 1982. "First-Order Modal Theories. III: Facts." *Synthese* no. 53:43-122.

"This paper forms the third part of a series on the development and study of first-order modal theories. It was not originally intended for this issue, but is relevant to Prior's work in two main ways. First, it does not treat modal logic as a mere technical exercise, but attempts to relate it to common philosophical concerns. This was an approach that Prior himself adopted and perhaps did more than anyone else to foster. Secondly, the paper deals with the more specific topic of facts.

This was a matter upon which Prior had definite views and upon which he had written extensively - in relation to the definition of necessity ([25]), the semantics for the modal system *Q* ([26]), and the correspondence theory of truth ([27] and [29]). I have found all of these writings useful and, although I have disagreed with him on several points, the influence of his views on my own should be evident.

It is therefore with respect and affection that I dedicate this paper to his memory.

The paper falls into two main parts, one philosophical and the other technical. Either may be read independently of the other, but both are required for an all-round view. The first part is in two sections. One attempts to show that a modal first-order theory of facts is viable, and the other discusses its principles and their bearing on various philosophical issues. The second part is in six sections, which fall into three groups. Those of the

first group (§§3--4) deal with the modal theory of possible worlds, both in itself and in its application to other subject-matter. Since I regard worlds as very big facts, it is only natural that they should be considered in this paper. The next section (§5) deals with the theory of facts under the anti-objectualist assumption that they contain no individual constituents. The sections of the last group (§§6-8) deal with facts under objectualist assumptions and include a statement of the appropriate objectualist conditions, a proof of their equivalence to the corresponding conditions for propositions, and an account of the resulting theories. It will be helpful, and sometimes essential, to have the earlier parts of the series ([15] and [16]) at hand.

In the technical part of this paper, I have concentrated on the question of finding a correct essentialist theory of facts. As far as I know, very little work has been done in this direction, although there is a start in [46]. On the other hand, there is now a fair amount of material on facts as a subject, not of object-theory, but of semantical metatheory (see [45], [21] and [43], for example). I do not wish to dispute the interest of this material, either for logic or the philosophy of language; but it will not fall within the purview of the paper." (pp. 43-44)

3. ———. 1982. "Act, Events and Things." In *Sprache und Ontologie. Akten des sechsten Internationalen Wittgenstein-Symposiums, 23. bis 30. August 1981, Kirchberg am Wechsel (Osterreich)*, edited by Leinfellner, Werner, Kraemer, Eric and Schank, Jeffrey, 97-105. Wien: Holder-Pichler-Tempsky.

"The purpose of my theory is not to provide a reference for ordinary uses of a *qua*-phrase but to account for the identity of certain other objects — chairs, tables and the like— to which we clearly do refer.

Qua objects are governed by certain principles; and it is in terms of them that they are best understood.

Existence. The *qua* object X *qua* ϕ exists at a given time (world-time) if and only if x exists and has ϕ at the given time (world-time);

Identity. (i) Two *qua* objects are the same only if their bases and glosses are the same, (ii) A *qua* object is distinct from its basis (or from the basis of its basis, should that be a *qua* object, and so on).

Inheritance. At any time (world-time) at which a *qua* object exists, it has those normal properties possessed by its basis." (p. 100)

(...)

"The theory of *qua*- objects has some other applications worth mentioning. First, the *qua* objects are very like Aristotle's

compounds of matter and form, with the matter corresponding to the basis and the form to the gloss. Aristotle's views, it seems to me, have not been taken seriously enough; many of his more distinctive doctrines have either been forgotten or fallen into disrepute. A modern version of the Aristotelian theory should give us the courage to embrace some of those doctrines and the means to articulate them more clearly.

Secondly, the theory of qua objects is able to throw light on the question of the ground ' for necessary truths." (p. 104)

4. ——. 1983. "The Permutation Principle in Quantificational Logic." *Journal of Philosophical Logic* no. 12:33-37.

"The story goes back to 1940, with the publication of Quine's *Mathematical Logic* [5]. He there presents a system of quantificational logic in which only sentences or closed formulas are theorems."

(...)

"The story now goes to 1963, with the publication of papers by Kripke [2] and Lambert [3]. Kripke was concerned to block the derivation of the Barcan formula or its converse within a quantified version of the modal logic S5. He was able to do this by requiring, as in Quine [6], that only closed formulas be theorems. However, because he wished to dispense with the rule of necessitation and because he also wished to allow for the empty domain, he did not quite take Quine's revised system as the quantificational basis for his modal logic."

(...)

Quite independently, Lambert developed a similar system. Like Kripke, he was concerned to allow for the empty domain; but he also wished to allow for theorems with free variables."

(...)

"As later became clear, Lambert's full system (with identity) is complete for its intended interpretation. But it was then generally assumed that this system without its identity axioms and the corresponding quantificational part of Kripke's system (which had not been formulated with identity in the first place)

were also complete. Indeed, in their paper [4] of 1970, Leblanc and Meyer gave a metalogical investigation of the Lambert fragment in which it was presupposed that Permutation and related principles were derivable; and, in [2], Kripke claimed completeness for his full modal system, which would have entailed completeness for its quantificational fragment. But then, Lambert pointed out, in a letter to Meyer of around 1968-9, the difficulty of deriving Permutation within the identity-free part of his system; and independently, in his paper of 1970 ([7], p. 286, fn. 6), Trew pointed to the related difficulty of deriving Permutation within Kripke's system. The problem of deriving the principle became open and, at least within the world of free logicians, achieved some notoriety.

It now appears that Permutation is not derivable within these systems." (pp. 33-35)

"There is the following view. In addition to individual objects, there are arbitrary objects: in addition to individual numbers, arbitrary numbers; in addition to individual men, arbitrary men. With each arbitrary object is associated an appropriate range of individual objects, its values: with each arbitrary number, the range of individual numbers; with each arbitrary man, the range of individual men. An arbitrary object has those properties common to the individual objects in its range. So an arbitrary number is odd or even, an arbitrary man is mortal, since each individual number is odd or even, each individual man is mortal. On the other hand, an arbitrary number fails to be prime, an arbitrary man fails to be a philosopher, since some individual number is not prime, some individual man is not a philosopher.

Such a view used to be quite common, but has now fallen into complete disrepute. As with so many things, Frege led the way." (p. 55)

(...)

"In the face of such united opposition, it might appear rash to defend any form of the theory of arbitrary objects. But that is precisely what I intend to do. Indeed, I would want to claim, not only that a form of the theory is defensible, but also that it is extremely valuable. In application to a wide variety of topics — the logic of generality, the use of variables in mathematics, the role of pronouns in natural language— the theory provides explanations that are as good as those of standard quantification theory, and sometimes better.

Rather than present the finished theory at the outset, we may see it as the outgrowth of the criticisms that have been directed against its cruder formulations. Each criticism, if not deflected, will lead to an appropriate change of formulation. The finished form of the theory will then emerge as the cumulative result of

these various criticisms; it will be, if you like, the prize that the proponent of the naive view can carry off with him in the contest with his critics. This is not how I myself came to the theory; but it is perhaps the most congenial approach for those who are already sceptical. (pp. 55-56)

6. ———. 1984. "Critical Review of Parsons' ' *Nonexistent Objects* ' ." *Philosophical Studies* no. 45:95-142.

Review of: Terence Parsons, *Nonexistent Objects*, New Haven: Yale University Press, 1980.

"There has recently been a rebellion within the ranks of analytic philosophy. It has come to be appreciated that, in the debate between Russell and Meinong, Russell was perhaps mistaken in his criticisms and Meinong was perhaps correct in his views. As a consequence, an attempt was made to rehabilitate the Meinongian position, to defend it against the most obvious attacks and to develop it in the most plausible ways. T. Parsons was among the first of the contemporary philosophers to make this attempt, (1) and so it is especially appropriate that his views should now be set out in a book.

I should say, at the outset, that I thoroughly approve of the Meinongian project. As Parsons makes clear (pp. 32— 38), we refer to non-existents in much the same way as we refer to other objects. It is therefore incumbent upon the philosopher to work out the principles by which our discourse concerning such objects is governed. Not that this is necessarily to endorse a realist position towards the objects of the resulting theory. Nominalists and Platonists alike may attempt to set out the principles that govern arithmetical discourse; and it is in the same spirit that the realist or anti-realist may attempt to set out the principles of our fictional discourse.

Despite my approval of the project, I must admit to some misgivings as to how Parsons has carried it out. These misgivings are of two kinds. There are first some internal criticisms, requiring only change within Parsons' basic approach. There are then some external criticisms, requiring change to the basic approach.

These criticisms, though, should not be thought to detract from the merits of Parsons' book. It is, in many ways, an admirable contribution to the field.

It gives weight both to the interest and the legitimacy of the Meinongian enterprise; it pinpoints the difficulties which any satisfactory theory must deal with; and in its solution to those difficulties, it sets up a theory with a degree of rigour and systematicity that should serve as a model for years to come. As a well worked-out and accessible contribution to object theory, there is no better book." (pp. 95-96)

7. Fine, Kit, and Mc Carthy, Timothy. 1984. "Truth without Satisfaction." *Journal of Philosophical Logic* no. 13:397-421.

"In his famous paper [7], Tarski gave a definition of truth for a formalized language. Unable to perform a direct recursion on the concept itself, he gave a definition in terms of satisfaction. This makes it natural to ask if such an indirect procedure is necessary or whether a definition of truth can be given without using or somehow invoking the concept of satisfaction.

The question, as it stands, is vague; and later we shall be concerned to make it more precise. But even as it stands, it has an obvious technical interest. The situation that Tarski found himself in is common in mathematics. We wish to define a certain concept, but unable to perform a direct recursion on the

concept itself we perform a recursion on a related concept of which the given concept is a special case. It would therefore be desirable to know when the related concept is necessary, both in the case of truth and in general.

The question may also have some philosophical interest. There is a fundamental difference between the concepts of truth and of satisfaction. The former merely applies to certain linguistic units; the latter connects language to an ontology of objects, typically extra-linguistic. A negative result on defining truth without satisfaction may perhaps constrain formal attempts to implement non-referential conceptions of truth. In the present paper, however, we will not be concerned in detail with the philosophical aspects of our question, although we will from time to time mention some points of contact between our discussion and the philosophical literature.

Interest in our question dates back to Wallace [9]; and the topic was subsequently taken up by Tharp [8] and Kripke [3] (especially Section 10).

We have made our presentation self-contained, though the reader may consult the earlier work for general background and for elucidation of particular points.

The plan of our paper is as follows. Section 1 sets out the general framework in which our question and its cognates are posed. Section 2 solves the questions in case the meta-theory is not required to be finitely axiomatized; and Section 3 gives partial solutions in case finite axiomatizability is required, thereby answering a question of Kripke's [3] and of Tharp's [8].

Finally, Section 4 considers the question under other provisos on the metatheory." (pp. 397-398)

"This paper is an abridged and simplified version of my monograph *Reasoning with Arbitrary Objects* [4]. It may be read by the diligent as a preparation for the longer work or by the indolent as a substitute for it. But the reader, in either case, may find it helpful to consult the paper, *A Defence of Arbitrary Objects* [3], for general philosophical orientation.

This paper deals with certain problems in understanding natural deduction and ordinary reasoning. As is well known, there exist in ordinary reasoning certain procedures for arguing to a universal conclusion and from an existential premiss. We may establish that all objects have a given property by showing that an arbitrary object has the property; and having shown that there exists an object with a given property, we feel entitled to give it a name and infer that it has the property." (p. 57).

9. ———. 1985. "Logics Containing K4. Part II." *Journal of Symbolic Logic* no. 50:619-651.

"The plan of this part is as follows. §1 presents some elementary results on pmorphisms. §2 introduces the logics to be proved complete and §3 the conditions for which they are complete. §4 contains the completeness proof. In §5 we show that there are a continuum of subframe logics, while in §6 we give various alternative characterizations of the subframe logics and extend our results on the finite model property from logics to theories. The final section, §7, gives a general characterization of those of the subframe logics that are compact and gives reasonably practicable methods for determining when a logic is compact and what condition its axioms express.

I make free use of the material in the first five sections of Part I, and the reader is advised to have that part at hand." (p. 620)

10. ———. 1985. "Plantinga on the Reduction of Possibilist Discourse." In *Alvin Plantinga*, edited by Tomberlin, James and Inwagen, Peter van, 145-186. Dordrecht: Reidel.

Reprinted in: *Modality and Tense. Philosophical Papers*, as chapter 5, pp. 176-213.

"Plantinga is what I call a modal actualist. He believes that the idioms of necessity and possibility are to be taken as primitive in preference to talk of possible worlds and that only actuals, as opposed to possibles, are to be granted ontological status. On these two issues, he and I agree.

The modal actualist faces a challenge. Talk of possible worlds and of possible individuals appears to make perfectly good sense. There seems to be a clear meaning, for example, in the claim that some possible object does not exist. So the modal actualist, once he grants that possibilist discourse makes sense, must somehow give it sense. It is on this question of how such a challenge is to be met that Plantinga and I disagree.

He favours a reduction of possibilist discourse in which possible worlds and possible individuals give way to propositions and properties, respectively; I favour a reduction in which reference to possibles becomes a modal manner of reference to actuals. In this paper, I shall attempt to adjudicate between these rival positions.

In the first section, I shall set out the problem of reduction and Plantinga's favoured solution. In the second, I shall present my central criticism of the reduction, viz. that it is question-begging. In the next three sections, I shall consider the related question of whether properties and propositions exist necessarily, first presenting an argument against and then disposing of an argument for their necessary existence. In the final section, I shall present my own reduction and the reasons for preferring it to Plantinga's.

The central theme of this paper is the question of reduction; but it should have a broader significance than such a theme might suggest. Partly this is because other issues, of independent interest, are raised: the connection between existence and predication; the necessary existence of propositions; the Priorian stand on modality. But perhaps more important than this question of particular issues is the question of how the issues are to be approached, of what is to count as a plausible consideration one way or another. Even when I have found myself in agreement with Plantinga on a certain view, I have often also found myself unhappy with the reasons he adduces in its favour. It is in this difference of approach, then, that the paper may also have a broader significance." (pp. 145-146)

Reprinted in: Alan Ross Anderson, Nuel D. Belnap, Jr., with contributions by J. Michael Dunn ... [et al.], *Entailment: The Logic of Relevance and Necessity*, Princeton: Princeton University Press, 1992 vol. II, pp. 235-262.

"This paper is a companion piece to my *Incompleteness for Quantified Relevance Logics*. In that earlier paper, I showed that RQ and other systems of quantified relevance logic were not complete for the standard semantics. In the present paper, I provide a semantics with respect to which they are complete." (p. 27)

(...)

"This section is divided into five subsections. The first two lay out the semantics, the third presents the logics, and the last two establish soundness and completeness. A basic knowledge of the semantics for propositional relevance logic is presupposed (see §51). It is conceivable that the methods of the present section might be used to simplify the proofs of incompleteness for the standard semantics; but this is not here investigated." (p. 239 of the reprint)

12. ———. 1989. "Incompleteness for Quantified Relevance Logics." In *Directions in Relevant Logic*, edited by Norman, Jean and Sylvan, Richard, 205-225. Dordrecht: Kluwer.

Reprinted in: Alan Ross Anderson, Nuel D. Belnap, Jr., with contributions by J. Michael Dunn ... [et al.], *Entailment: The Logic of Relevance and Necessity*, Princeton: Princeton University Press, 1992 vol. II, pp. 235-261.

"In the early seventies, several logicians developed a semantics for propositional systems of relevance logic.

(...)

In the light of this work, it seemed reasonable to extend the completeness results to quantificational systems of relevance logic. But what systems should be chosen? One would like, in the first place, to deal with the systems that already exist in the literature, such as quantified R (RQ) or quantified E (EQ). This, at least, is a debt that we owe to the history of the subject. But one would also like to prove completeness for the quantificational analogues of propositional systems that have already been proved to be complete. These analogues might be obtained from the propositional system by adding a standard quantificational component, consisting of such and such axioms and rules. Such a component might be chosen in terms of its intrinsic plausibility as a quantificational basis. Less arbitrarily, it might be chosen so as to yield a complete system when combined with the minimal propositional system (the one complete under no special conditions on \circ , R or $*$). Not surprisingly, the pre-existing systems turn out to be equivalent to the systems obtained by the other approach.

The construction of the quantificational analogue is not, in fact, as straightforward as this description might suggest; for the extension of the propositional semantics to the quantificational case is not unique. It must be decided whether the domain I of individuals is to be constant or not. If it is not constant, then there are various ways of dealing with nonexistent individuals, individuals that do not belong to the domain of the world or point under consideration. But once these decisions are made, the choice of the quantificational component can be fixed." (p. 205)

13. ———. 1989. "The Problem of *De Re* Modality." In *Themes from Kaplan*, edited by Almog, Joseph, Perry, John and Wettstein, Howard, 197-272. New York: Oxford University Press.

Reprinted in: *Modality and Tense. Philosophical Papers*, as chapter 2, pp. 40-104.

"I want now to evaluate Quine's objections to quantified modal logic, dealing first with the metaphysical and then with the logical argument.

I observed before that the metaphysical argument was operator-specific; for different operators it yields different problems. This observation applies as much to different notions of necessity as it does to notions other than necessity. There is not a single problem of essentialism, but a range of problems, that vary according to the notion of necessity in question.

There are perhaps four principal notions of necessity for which the problem arises; these are, respectively, the logical, the analytic, the metaphysical, and the natural. Of these, the most important is undoubtedly the problem for the metaphysical notion. Indeed, not only is this problem of great importance in itself, but it is central, in my opinion, to any attempt to understand the nature of metaphysics.

However, it is not my intention to discuss this problem here. I wish to follow Quine and concentrate my attention on the logical and semantic modalities." (p. 202)

14. ———. 1989. "The Justification of Negation as Failure." In *Logic, Methodology and Philosophy of Science VIII. Proceedings of the Eighth International Congress of Logic, Methodology and Philosophy of Science, Moscow, 1987*, edited by Fenstad, Jens Erik, Frolov, Ivan and Hilpinen, Risto, 263-301. Amsterdam: North-Holland.

"Prolog is a logic programming language; it is used to answer queries on the basis of information provided by the programmer. For the most part, the logic employed by Prolog is standard. But it uses a highly unorthodox rule for establishing negative facts. This rule, the so-called rule of negation as failure, allows us to deny a statement on the grounds that a certain attempt to prove it has failed.

The rule is not classically valid; and therefore the question arises as to how it is to be justified. There are basically three different kinds of justification that have been proposed in the literature. The first is to re-interpret negation to mean something like unprovability. The second is to assume that the program is complete with respect to truths; all truths are derivable. The third is to suppose that the program is complete with respect to conditions; all sufficient conditions for the application of the predicates have been specified.

My aim in this paper is to evaluate these various proposals and then to make a proposal of my own. I shall argue that the existing proposals all suffer from some defect or another: the first is unable to account for a classical reading of negation; the second delivers too much on programs which employ negation; and the third delivers too little on programs which make no use of negation.

I shall then argue that my own proposal is able to avoid these difficulties. From one point of view, the proposal is not new; it is merely a form of the second proposal stated above, according to which all truths are derivable. However, the concept of derivability which is appealed to is quite novel; for the assumption that all truths are derivable, may itself be used in establishing that a given statement is derivable. The assumption has, in other words, a self-referential character.

The proposal has various other features of interest. It provides a natural way of interpreting inductive definitions in which the positive instances of a predicate are allowed to depend upon its negative instances. It sanctions an extension of the rule of negation of failure, under which not only the finite, but also the transfinite, failure of a statement may constitute a ground for its denial. It is capable of variation in the choice of which other assumptions or rules are used in defining the concept of derivability.

(...)

One feature of my exposition is worthy of special note. I have for the most part confined my attention to the sentential case, under which only truth-functional complexity is ever exposed. Such a case is usually regarded as trivial, since most of the interesting features of Prolog depend upon the use of variables. However, in this regard, the rule of negation as failure is an exception. Most of the problems in justifying the rule already arise at the sentential level; and to solve these problems at this level is to have gone a long way towards solving them altogether. There are, however, certain difficulties which are peculiar to the introduction of variables and terms; and these are considered at the end of the paper. It is argued, in particular, that the usual assumptions concerning an ontology of terms are needlessly strong and that an ordinary ontology of individuals can be countenanced in its place." (pp. 263-264)

15. ———. 1990. "Quine on Quantifying In." In *Propositional Attitudes: The Role of Content in Logic, Language and Mind*, edited by Anderson, Anthony and Owens, Joseph, 1-26. Stanford: Center for the Study of Language and Information, Stanford University.

Reprinted in: *Modality and Tense. Philosophical Papers*, as chapter 3, pp. 105-130.

"It is my aim in this chapter to evaluate Quine's argument against quantifying into modal contexts, dealing first with the peculiarly modal considerations and then with the more general logical considerations." (p. 2)

16. ———. 1991. "The Study of Ontology." *Noûs* no. 25:263-294.

"A constructional ontology is one which serves to construct complexes from simples. The present paper is concerned with the nature and with the study of such ontologies. It attempts to say, in the first place, how they are constituted and by what principles they are governed. But it also attempts to say how their study may lead one to adopt certain positions and to make certain definitions.

The remarks on the study of ontology are meant to relate to the study of disciplines in general. I am interested in how the study of a discipline gets shaped by the positions which are adopted and the strategies which are pursued. These interact; for the pursuit of certain kinds of strategy will lead to the adoption of certain kinds of position, and the adoption of certain kinds of position will be required by the pursuit of certain kinds of strategy. One therefore needs to understand how they interact.

Certain subsidiary themes run through the paper, all interrelated in one way or another. One concerns a dialectical conception of modality, one that is determined by what is left open at a given stage of enquiry. Another involves a particular way of expressing modal claims, in terms of certain objects requiring others. Yet a third is an interest in a relativist conception of ontology, according to which no ontology stands out as being correct.

The paper concludes with a formal appendix, which attempts to make precise much of what can be made precise in the earlier informal part of the paper. Each part has been designed to be read independently of the other, although a proper understanding of either part depends upon reading them both." (p. 263)

17. ———. 1991. "The Identity of Material Objects." In *Topics in Philosophy and Artificial Intelligence*, edited by Albertazzi, Liliana and Poli, Roberto, 33-37. Bozen: Istituto Mitteleuropeo di Cultura.

Papers from the International Summer Schools in Bozen - 1989-1990.

"1. The Problem of Identity

What is a question of identity? Two responses to this meta-question of identity may be distinguished, which I call the *comparative* and the *intrinsic*. On the comparative conception, one answers a question of identity by saying when two objects of a given sort are the same. On the intrinsic conception, one answers a question of identity by saying what objects of a given sort are "in themselves".

The comparative conception goes back to Locke's famous chapter on identity. It was extended by Frege. Very roughly, we may say that Frege extended the application of the comparative conception from the identity of concrete objects to the identity of abstract objects. This conception is the dominant one of today; it informs the work of Strawson, Quine, Wiggins and of others.

The basic idea behind the comparative conception is to make the *what* of identity a *when*: to ask what an object of a given sort is is to ask when objects of that sort are the same. But to ask when two objects are the same invites the trivial answer: when they are the same. We need somehow to distinguish the intended answers to this question.

This can often be done by means of the concept of a *presentation*. I mean to use this term in a suitably abstract sense. Thus a sentence might be regarded as a presentation of a proposition; there is no need for a presentation to be something mental or even for it to be that by which we grasp the object.

An intended answer to an identity question then says when two presentations are presentations of the same object; and it says this in terms which do not presuppose the identity of the objects at issue.

Different questions of identity - e.g. at a time, across time, across worlds - turn on different accounts of how the objects are to be presented.

There is a fundamental criticism to be made of the comparative conception. For it says what kind of "career" the object has, not

what kind of object it is that has the career. For example, a transtemporal criterion of identity for material things is compatible with a material thing being (a) a primitive substance, (b) a mereological sum of time-slices, (c) the embodiment of a form, (d) an event, and so on. Similarly, the extensional criterion of identity for sets is compatible with a set being (a) constructive, (b) "exclusive", i.e. determined by its non-members rather than by its members, (c) logical, i.e. determined by a property with the required extension rather than by its members.

What is missing from the comparative conception? I would like to suggest that often what is missing is an account of how the objects of the given kind are generated or analysed. Thus primitive substances are not generated from anything else at all, mereological sums are generated by aggregation, embodiments are generated by a suitable embodiment operator, and so on. In each case, we need to say how (if at all) the object is to be analysed; we need to say what the object is in itself." pp. 33-34.

18. ———. 1992. "Aristotle on Matter." *Mind* no. 101:35-57.

"It is my belief that there is still a great deal to be learnt from Aristotle's views on the nature of substance; and it is my aim in a series of papers, of which this is the first, to make clear what these views are and what it is in them that is of value. (1)

A peculiarity of my approach, compared to current scholarly practice, is the attempt at rigour. I have tried to provide what is in effect a formalization of Aristotle's views. I have, that is to say, attempted to make clear which of his concepts are undefined and which of his claims underived; and I have attempted to show how the remaining concepts are to be defined and the remaining claims to be derived.

I can well understand a traditional scholar being suspicious of such an approach on the grounds that the various parts of Aristotle's thought are either too unclear to be capable of formalization or else are clear enough not to require it.

Since the matter is not one for a priori dispute, I can only ask the scholar to put his suspicions at bay until the details of the case are examined. I then think that it will be found that the attempt at rigour provides a most valuable guide for the study of the text.

I have not tried to deal with all aspects of Aristotle's thought on substance. I have concentrated on those which centre on the concepts of matter, form, part, and change; and I have neglected those which concern the related concepts of predication, function, priority and power. It is to be hoped that the investigation will be rounded out at some later time to include all of the central aspects of his work.

It should also be mentioned that my treatment of the text has not been altogether scholarly. Partly this has been a matter of competence, and partly of inclination. I have been more concerned with the broad sweep of Aristotle's views than with exegetical detail; and this has led me to conjecture that he held a certain opinion, not because of direct textual evidence but because it is what his view most naturally requires. Thus the Aristotle I have presented here is much more consistent, definite and complete than the Aristotle of the texts." (p. 35)

(1) This paper is based upon the first two sections of my unpublished paper "Aristotle on Substance". I should like to thank the members of a seminar I held at UCLA in the winter of 1991, and Frank Lewis in particular, for many helpful discussions on some of the topics of the paper. I am also grateful to Richard Sorabji for valuable remarks on an earlier version of the paper.

19. ———. 1992. "Transparent Grammars." In *Logic from Computer Science. Proceedings of a Workshop held November 13-17, 1989*, edited by Moschovachis, Yiannis N., 129-151. New York: Springer.

"1 . Introduction

'Cat' is a word which occurs in 'cattle', but it does not occur as a word; '1-1-2' is a term which occurs in '1+ 2.3', but it does not occur as a term. All such occurrences of expressions might be

said to be accidental, since they are accidents of how the syntax of the language happens to be realized.

The notion of accidental occurrence is significant in various areas of thought. In logic, it greatly aids the formulation and proof of meta-logical results if it can be assumed that the underlying language contains no accidental occurrences. For example, a subformula can then simply be defined as a formula which occurs within a given formula rather than as an expression which is thrown up by a parsing of that formula. In philosophy, the issue of whether one can quantify into modal contexts has been seen to turn on such questions as to whether the occurrence of '9' in 'necessarily, $9 > 7$ ' is accidental or not; and the absence of accidental occurrence has been regarded as a condition on any "ideal language". In computer science and in linguistics, the presence of accidental occurrences has an obvious relevance to parsing, since they lead to the danger that a parser might mistake an apparent constituent of the expression to be parsed for a genuine constituent.

Let us say that a language or grammar is transparent if it permits no accidental occurrences. It is the main purpose of the present paper to investigate the conditions under which a context-free grammar is transparent.

It is shown how any accidental occurrence reduces to a certain "primitive" case; and it is shown how such primitive occurrences might be detected.

On the basis of these results on reduction and detection, an effective test for transparency is then given.

The concept of transparency represents a strengthening of the more familiar concept of nonambiguity. Any transparent grammar, at least of a well-behaved sort, is unambiguous, though not every unambiguous grammar is transparent. Moreover, what is required for many purposes is not merely an unambiguous but a transparent grammar. It is therefore significant in this regard that there is an effective test for the stronger property even though there is no effective test for the weaker one.

The plan of the paper is as follows. The first two sections introduce the relevant notions from the theory of context-free grammars. The third section explains the connection between nonambiguity and transparency.

The fourth section establishes the reduction of accidental occurrence to the primitive case. The next three sections deal with the question of detecting the primitive accidental occurrences: a more fully articulated or canonical version of the given grammar is introduced; it is shown how accidental occurrences in the given grammar correspond to certain kinds of expression in the canonical grammar; and a precedence analysis is given of those expressions in the canonical grammar which correspond to the primitive

accidental occurrences in the given grammar. An effective test for transparency is then provided in the final section.

The treatment of transparency in this paper has been very brief. Many of the results can be extended; and I have given a much fuller account in Fine [1]." (pp. 129-130)

"The concept of essence has played an important role in the history and development of philosophy; and in no branch of the discipline is its importance more manifest than in metaphysics.

Its significance for metaphysics is perhaps attributable to two main sources. In the first place, the concept may be used to characterize what the subject, or at least part of it, is about.

For one of the central concerns of metaphysics is with the identity of things, with what they are.

But the metaphysician is not interested in every property of the objects under consideration. In asking 'What is a person?', for example, he does not want to be told that every person has a deep desire to be loved, even if this is in fact the case.

What then distinguishes the properties of interest to him? What is it about a property which makes it bear, in the metaphysically significant sense of the phrase, on what an object is?

It is in answer to this question that appeal is naturally made to the concept of essence. For what appears to distinguish the intended properties is that they are essential to their bearers." (p. 1)

(...)

"It is my aim in this paper to show that the contemporary assimilation of essence to modality is fundamentally misguided and that, as a consequence, the corresponding conception of metaphysics should be given up. It is not my view that the modal account fails to capture anything which might reasonably be called a concept of essence. My point, rather, is that the notion of essence which is of central importance to the metaphysics of identity is not to be understood in modal terms or even to be regarded as extensionally equivalent to a modal notion. The one notion is, if I am right, a highly refined version of the other; it is like a sieve which performs a similar function but with a much finer mesh.

I shall also argue that the traditional assimilation of essence to definition is better suited to the task of explaining what essence is. It may not provide us with an analysis of the concept, but it does provide us with a good model of how the concept works. Thus my overall position is the reverse of the usual one. It sees real definition rather than *de re* modality as central to our understanding of the concept." (p. 3)

21. ——. 1994. "Compounds and Aggregates." *Noûs* no. 28:137-158.

"Some objects appear to be composed of parts: a quantity of sand of its grains, a throbbing pain of its throbs, a set of its members, and a proposition of its constituents.

There seem to be two fundamentally different ways in which an object can be composed of parts. One is nonstructural in character; the parts just merge. The other is structural; the parts hang together within a structure. Thus of the examples above, the first two, the sand and the pain, are composed from their parts in a nonstructural fashion, while the last two, the set and the proposition, are composed in a structural manner.

The notion of a nonstructural method of composition may be taken to be one which conforms to certain structure-obliterating identity conditions. These are as follows: order and repetition among the composing objects is irrelevant to the result; the composition of a single object is the object itself; and the composition of compositions of objects is the composition of those very objects'. Thus the first of these conditions excludes concatenation as a nonstructural method of composition; while each of the remaining conditions excludes the set-builder (the operation which composes a set from its members).

Let us agree to call any nonstructural method of composition a method of fusion. There is a particular such method, I call it aggregation, which has been very prominent in the literature on part-whole. It may be characterized as a method of composition which conforms to the identity conditions above and which also conforms to the following existence conditions: the aggregate of objects which exist in time exists at exactly those times at which one of the objects exists; and an aggregate of objects which are located in space occupies, at any given time at which it exists, exactly those places which are occupied by one of the objects.

It has often been supposed that aggregation is a legitimate method of composition, that objects may be composed from others in conformity with the conditions set forth above. What has made aggregation so attractive, apart from any intuitive appeal it may have, are two main factors (which will be discussed in more detail later in the paper). The first, and most

important, is the identification of a thing with the content of its spatio-temporal extension. The second is the identification of a thing with the fusion of its time-slices. Both of these forms of identification require that the objects fuse in the manner of aggregation.

It has also often been supposed that aggregation is the only legitimate method of fusion. Part of the appeal of this further position may arise from a general hostility to different methods of composition, whether they be methods of fusion or not. Under the form of nominalism championed by Goodman, for example, there can be no difference in objects without a difference in their parts; and this implies that the same parts cannot, through different methods of composition, yield different wholes.

However, I suspect that many of those who would be open to structural methods of composition would still not be open to distinct nonstructural methods of composition. For it is hard to see, especially given the identification of a thing with its spatio-temporal content, what other methods of fusion there might be; and it is hard to see how there could be alternative conceptions of a fusion, of a whole at the same level as its elements and formed without regard to their order or repetition.

Let us call the extreme position, that there is only one method of composition, mereological monism; let us call the less extreme position, that there is only one method of fusion, fusion monism; and let us call that particular version of fusion monism according to which aggregation is the sole method of fusion aggregation monism.

The main purpose of this paper is to show that the last of these three positions is mistaken. I want to show that there is a method of fusion which is not aggregative, i.e. which does not conform to the characteristic existence conditions for aggregates. However, my attack on this position may be relevant to the two other positions as well. For granted that aggregation is itself a legitimate method of fusion, it follows that fusion monism should be dropped in favour of a pluralist position. And to the extent that the adoption of monism

depended upon a general hostility to structural considerations, the way is then open to the admission of structural methods of composition.

It is also my intention to attack two related forms of monistic doctrine. For just as we can single out the aggregative method of nonstructural composition, so we can single out the aggregative way of being a nonstructural part and the aggregative kind of nonstructural whole. One might then maintain that not only does aggregation constitute the only nonstructural method of composition, but that it also constitutes the only nonstructural way of being a part and the only nonstructural way of being a whole. We therefore have three forms of monism, one with respect to composition, another with respect to part, and a third with respect to whole. As will later become clear, the two further forms of monism are successively weaker than the original; and so their denials might be taken, in mimicry of Quine, to comprise three grades of mereological involvement.

From the discussion of monism will emerge objections to two other prominent doctrines: extensionalism and mereological atomism. According to the first of these, things are the same when their extensions (spatial, spatio-temporal, or modal-spatio-temporal) are the same; and according to the second, parts are prior to their wholes.

For the purposes of attacking the aggregation monist, I have assumed that aggregation is a legitimate method of fusion. Towards the end of the paper, I suggest that there is no such method and propose a form of fusion monism in which some other method of fusion takes the place of aggregation. However, my tentative endorsement of fusion monism is not meant in any way to lend support to a general monist position." (pp. 137-139)

22. ———. 1994. "A Puzzle Concerning Matter and Form." In *Unity, Identity, and Explanation in Aristotle's Metaphysics*, edited by Scaltsas, Theodore, Charles, David and Gill, Mary Louise, 13-40. Oxford: Clarendon Press.

"Montgomery Furth has written (1), "given a suitable pair of individuals ... there is no reason of Aristotelian metaphysics why the very fire and earth that this noon composes Callias and distinguishes him from Socrates could not, by a set of utterly curious chances, twenty years from now compose Socrates ...". He does not specify what these "curious chances" might be. But we may suppose that Socrates eats Callias for his lunch and that, owing to the superiority of Callias' flesh and bone, it is the matter of this which remains in Socrates after the period of twenty years.

That such an exchange of matter is possible is a point on which many Aristotelian scholars could agree. However, I wish to argue that such a case gives rise to a fundamental difficulty; for its possibility runs into conflict with certain basic metaphysical principles which are commonly attributed to him and which would also be commonly accepted.

The problem consequently arises as to how this difficulty is to be resolved. This problem itself may be regarded in two somewhat different lights. On the one hand, it may be regarded as a difficulty for Aristotle. The question then is whether one can find a solution which would be acceptable to him, either in the sense that he would or that he could accept it. On the other hand, it may be regarded as a difficulty for a neo-Aristotelian, i.e. to someone who is sympathetic to the analysis of things into matter and form. The question then is to find a solution, regardless of whether or not it would be acceptable to Aristotle.

For the most part, my concern has been with the exegetical question; and even here, my purposes have been somewhat limited. For I have not attempted to settle on one solution as opposed to another. My aim has been to map out the exegetical space rather than to locate the views of Aristotle within it.

However, it should be mentioned that I count myself a neo-Aristotelian (and, indeed, it was my own commitment to hylomorphism which led me investigate Aristotle' views in the first place). It has therefore been of some importance for me to take the purely metaphysical question into account."(p. 13)

(1) Furth, M. *Transtemporal Stability in Aristotelian Substances*, *Journal of Philosophy*, 75 (1978), 624-646; reprinted in *Substance, Form, and Psyche: An Aristotelean Metaphysics*, Cambridge University Press: Cambridge, 1988. (note abbreviated).

23. ———. 1995. "The Logic of Essence." *Journal of Philosophical Logic* no. 24:241-273.

"Central to this paper is a certain distinction. This is the distinction between objects simply having a property and their having that property essentially or by their very nature. Also central to the paper is a certain claim. This is the claim that the notion of essence, of objects essentially having a property, is not to be understood in terms of the notion of necessity.

The claim is defended in my paper *Essence and Modality*. But the basic idea behind the defence can be given here. Consider Socrates and the singleton set containing him. Now although it is plausible to suppose that the singleton essentially contains the man, it is not plausible to suppose that the man essentially belongs to the singleton. There is nothing in the nature of Socrates which demands that there be any sets, let alone one that contains him. However, the standard accounts of essence in terms of necessity are unable to account for this asymmetry. For under such an account, the singleton essentially containing Socrates will consist in something like its being necessarily the case that the set contains Socrates if the set exists. But if this is true, then it will also be necessarily the case that Socrates belongs to the set if the man exists." (p. 241)

24. ———. 1995. "Part-Whole." In *The Cambridge Companion to Husserl*, edited by Smith, Barry and Smith, David Woodruff, 463-485. Cambridge: Cambridge University Press.

"Husserl's third *Logical Investigation* is perhaps the most significant treatise on the concept of part to be found in the philosophical literature. (1) In it Husserl attempts to analyze the notion of dependent part, to lay down the principles governing its use, and to relate it to more general considerations concerning the nature of necessity and unity.

He begins his study with the consideration of objects in the psychological sphere. A typical example of the kind of object he has in mind is that of a visual datum, a red patch, let us say, and its various aspects or "moments"- its colour, say, or its extension. He takes each of these moments to be peculiar to the object in question; no other datum, no matter how great its resemblance to the original datum, will have the very same moments. He also takes the moments to be, in a suitably broad sense, part of the given object; they are thought to be actually present in it." (p. 463)

(...)

"My aim in the present essay is to clarify certain formal aspects of Husserl's thought. I have here and there, inserted some critical comments; but my main concern has been to say what the views are, and not to say whether or not they are right. Husserl himself took the formalization of his ideas to be not only possible, but highly desirable. He writes (§24, 484):

a proper working out of the pure theory we here have in mind would have to define all concepts with mathematical exactness and to deduce all theorems by argumenta in forma, i.e., mathematically. . . . That this end can be achieved has been shown by the small beginnings of a purely formal treatment in our present chapter. In any case, the progress from vaguely formed to mathematically exact concepts and theories is here, as everywhere, the precondition for full insight into a priori connections and an inescapable demand of science.

Thus the present paper can be regarded as an attempt to carry through the project that he began." (p. 464)

25. ———. 1995. "The Problem of Mixture." *Pacific Philosophical Quarterly* no. 76:266-369.

Reprinted in: Frank A. Lewis and Robert Bolton (eds.), *Form, Matter and Mixture in Aristotle*, Oxford: Blackwell, 1996, pp. 82-182.

"For Aristotle, the everyday world contains three main kinds of things: the elements, the homogeneous mixtures, and the heterogeneous substances. The topic of mixture was vigorously

debated in medieval times (see Maier (1982): 142). But contemporary interest has focused on the objects at the extremes of his ontology -- the elements and the substances -- while the topic of mixture has been relatively neglected. This is unfortunate. For not only is the topic of great interest in its own right, it is also important for a wider understanding of Aristotle's scientific and metaphysical views.

The intrinsic interest of the topic largely arises from the difficulty in seeing how a non-atomistic conception of matter is to be reconciled with a plausible view of mixture. The exegetical interest has perhaps two main sources. The first resides in the special position occupied by mixtures in Aristotle's ontology. For all substances are composed of mixtures; and all elements compose mixtures, in so far as they compose anything at all. Thus the mixtures provide the cushion, as it were, between the elements and the substances; and any account of the role of the elements or of the nature of the substances should deal with the relationship of each to the mixtures.

The other source of exegetical interest lies in the relevance of the topic of mixture to other, more general, topics -- principally, potentiality and change. Just as mixtures occupy a kind of midpoint between the elements and the substances, so mixing occupies a kind of midpoint between accidental and substantial change; and the potentiality of the ingredients in a mixture is one of the more important and problematic forms of potentiality for Aristotle. Thus no exegesis of his views on either change or potentiality can be considered complete unless it takes into account his views on mixture.

We now know that Aristotle's views on mixture are mistaken, and badly mistaken at that. In rejecting atomism he made a critical (though understandable) error; and when one combines the rejection of atomism with the antiquated belief in the four elements, it is easy to conclude that his views are purely of scholarly interest with no real relevance to contemporary concerns. But even though his views may be much further removed from reality than those of modern science, they are much closer in many ways to common sense. In the laboratory

we do not suppose that every part of some butter is butter. But in the kitchen we do; and it is convenient, though erroneous, assumptions of this sort that guide us in our everyday life. This therefore suggests that we treat these views of Aristotle as having their most direct bearing, not on the nature of reality, but on the structure of common sense.

There have been recent attempts in cognitive science to formalize the content of folk or naive physics; such a physics is meant to provide the principles that would enable one to construct a robot that could deal with the everyday world in much the same way as we do. If I am not mistaken, the contemporary interest of Aristotle's scientific views may lie as much in their connection with these developments within cognitive science as it does with the content of the established sciences. I might add that the recent attempt to rehabilitate the notion of capacity by Cartwright (1989) and others also gives a topical interest to Aristotle's general views on capacities and on the way they might compose or interact within a mixture.

The paper is in six sections. In the first, I state the problem with which Aristotle opens his discussion of mixture in *Generation and Corruption* : how is mixture possible? Aristotle thinks he has a solution; and our problem is to understand what that solution is. In the next section, I consider three interpretations of his views on mixture, those of Sharvy (1983), Gill (1989) and Bogen (1995), and find all of them wanting. The main defect with these proposals, from my own point of view, is that they do not take Aristotle's hylomorphic outlook sufficiently seriously. In the third section, I provide a sketch of that outlook and set out the two main accounts of mixture that are in conformity with it, Leveling and Ascent; one places mixture at the same level as the elements, the other at a higher level. The next two sections are the heart of the paper and constitute a sustained argument in favor of Leveling. It is shown how two doctrines -- the doctrines of intermediates and of derived parts -- enable Aristotle to avoid the apparently insuperable difficulties that lie in the way of its acceptance. The final section considers the problem of how mixing, as opposed to mixture, is possible and

argues that Aristotle is also in a position to solve this problem." (pp. 82-83).

26. ——. 1995. "Ontological Dependence." *Proceedings of the Aristotelian Society* no. 95:269-290.

"There appears to be a distinctively ontological sense in which one thing may be said to depend upon another. What the one thing is will depend upon the other thing, upon what it is. It is in this sense that one is tempted to say that a set depends upon its members or that a particularized feature, such as a smile, upon the particular in which it is found. For what the set is will depend upon its members; and what the feature is will depend upon the particular that instantiates it. (1)

Granted that there is an intelligible notion of ontological dependence, it would appear to be of great importance to the study of metaphysics. Metaphysics has two main areas of concern: one is with the nature of things, with *what* they are; and the other is with the existence of things, with *whether* they are. Considerations of dependence are relevant to both. For central to the question of the nature of any item is the determination of what it depends upon; and if something is taken to exist, then so must any thing upon which it depends. Indeed, it has often been maintained that it is only those things which do not depend upon anything else that can properly be said to exist at all." (p. 269)

(...)

"But how is the notion of dependence itself to be understood? The idea of what something is, its *identity* or *being*, is notoriously obscure; and the idea of the being of one thing *depending* upon that of another is doubly obscure. A natural suggestion at this point is to take the being of something simply to be its existence. Thus in saying that a set depends upon its members, or a feature upon its instantiator, we are taking the existence of the one to depend upon that of the other. Call this the *existential* construal of dependence. Another natural suggestion is to take the dependence between the beings of the two items, as opposed to the items themselves, to be modal in character. The being of the one will depend upon that of the other in the sense that it is necessary that if the one item has its 'being' then so does the other. Call this the *modal* construal of dependence." (p. 270)

(1) This paper derives from an earlier paper 'Dependent Objects', that was written in 1982 but remained unpublished. Some of the issues raised are discussed at greater length in Fine [1995b]; and no attempt is here made to settle the methodological, as opposed to the conceptual, issues. I should like to thank Ruth Chang and the members of the Wednesday Group at Oxford for helpful comments.

27. ——. 1995. "Senses of Essence." In *Modality, Morality and Belief. Essays in Honor of Ruth Barcan Marcus*, edited by Sinnott-Armstrong, Walter, 53-73. Cambridge: Cambridge University Press.

"One may distinguish between the essential and accidental properties of an object. A property of an object is essential if it must have the property to be what it is; otherwise the property is accidental.

But what exactly is meant by this account? It has been common to give a further explanation in modal terms. A property is taken to be essential when it is necessary that the object have

the property or, alternatively, when it is necessary that it have the property if it exist. For reasons that I have already given in my paper "Essence and Modality," I doubt whether this or any other modal explanation of the notion can succeed. Indeed, I doubt whether there exists any explanation of the notion in fundamentally different terms. But this is not to deny the possibility of further clarification; and it is the aim of the present paper to provide it.

What I shall do is to distinguish some of the closely related ways in which the notion may be understood. This will be important for getting clearer both on which claims can be made with its help and on which concepts can be defined with its help. In particular, we shall see that several different senses of ontological dependence correspond to the different senses of essence. The task is also important for the purpose of developing a logic of essentialist reasoning; for most of the different senses of essence that we distinguish will make a difference to the resulting logic. My main concern in this paper has been with making the distinctions, and not with drawing out their implications; but I hope it is clear from the examples what some of these implications are." (p. 53)

28. Fine, Kit, and Schurz, Gerhard. 1996. "Transfer Theorems for Multimodal Logics." In *Logic and Reality: Essays on the Legacy of Arthur Prior*, edited by Copeland, Jack, 169-214. Oxford: Oxford University Press.

"Many of the modal logics that have been developed contain two or more modal operators. A notable example is the tense logic of Prior, which contains operators for both the past and the future. A more recent example is the logic of programs, which contains infinitely many operators, one for each program.

A multimodal logic will have various monomodal fragments; and in the simplest case, it will be the join of these fragments -- there will be no interactive axioms. Our concern in the present chapter is to investigate the question of when certain properties of the monomodal logics transfer to their join. To answer this question, we develop a very general proof method, which allows

us to piece together models for different logics. The resulting theorems provide very general answers to our question, which are positive in most cases, but not in all.

Our investigation is a natural continuation of those begun by Prior.

For he was interested both in the development of multimodal logics and in their relationship to monomodal logics. It is therefore, with a keen sense of his own contribution to the subject that we have pursued the present line of research." (p. 169)

[Note:] Some of the initial ideas behind this chapter were contained in a letter from Fine to Schurz in 1990. The subsequent work has been joint, with Fine writing up sections 1 and 6 and Schurz writing up the rest. The result on strong completeness transfer has been obtained independently by Valentin Goranko and Solomon Passy; the results on transfer of strong and weak completeness, f.m.p., and of decidability (under the assumption of weak completeness) have been obtained independently by Marcus Kracht and Frank Wolter. Our own proof of decidability transfer is based upon ideas in their proof.

29. ———. 1998. "Cantorian Abstraction: A Reconstruction and Defense." *Journal of Philosophy* no. 95:599-634.

"In what follows I shall concentrate on the views of Cantor, though it should be clear how what I say will can be modified to apply to the views of Dedekind. I have not attempted to capture all of the nuances or tensions in Cantor's thought but merely to develop what I take to be its spirit, or central idea. And in developing this idea, I have been guided more by what the idea itself requires than by Cantor's own writings.

The plan of the paper is as follows. I begin by setting out what appear to be decisive objections to the Cantorian account. I then show how these objections can be overcome by making use of the theory of arbitrary objects developed in my book '*Reasoning with Arbitrary Objects*' [Chapter VII. The relevant parts of the theory are outlined in section 2; and the application

to Cantor's account of number is made in section 3. I show, in section 4, how the approach may be extended to order types and to structure types in general. In the final two sections, I first compare the Cantorian approach to abstraction with the standard approaches of von Neumann and Zermelo, on the one side, and of Russell and Frege, on the other; and I then consider to what extent the Cantorian approach is capable of yielding a structuralist conception of number and order type. In a formal appendix, I briefly indicate how the present theory might be formalized within an extension of ZF [Zermelo-Frankel]." (p. 603)

30. ———. 1998. "The Limits of Abstraction." In *The Philosophy of Mathematics Today*, edited by Schirn, Matthias, 503-630. Oxford: Oxford University Press.

Reprinted in expanded form as *The Limits of Abstraction*, New York: Oxford University Press 2002.

"This paper has been written more from a sense of curiosity than commitment. I was fortunate enough to attend the Munich Conference on the Philosophy of Mathematics in the Summer of 1993 and to overhear a discussion of recent work on Frege's approach to the foundations of mathematics. This led me to investigate certain technical problems connected with the approach; and these led me, in their turn, to reflect on certain philosophical aspects of the subject. I was concerned to see to what extent a Fregean theory of abstraction could be developed and used as a foundation for mathematics and to place the development of such a theory within a general framework for dealing with questions of abstraction. My conclusions were somewhat mixed: a theory of abstraction could be developed somewhat along the lines that Frege has envisaged; and it could indeed be used as a basis for both arithmetic and analysis. When wedded to a suitable version of the context principle, the theory was capable of accounting for our reference to numbers and other abstract objects. But without the support of the principle, it was not clear that the theory had any great advantage over its rivals. Thus my results would be congenial to someone already committed to the Fregean approach though unconvincing to someone who was not. I therefore present

them in somewhat the same spirit as someone who sends off a message in a bottle. I have no desire to announce my communication to the world; but if someone stumbles across it and finds it to be of interest, I shall be pleased.

The paper is in three parts. The first is devoted to philosophical matters, which help explain the motivation for the subsequent technical work and also its significance. It is centred on three abstracts with which they deal? And to what extent can they provide a foundation for mathematics? The second part proposes and investigates a set of necessary and sufficient conditions for an abstraction principle to be acceptable. The acceptable principles, according to this criterion, are precisely determined and it is shown, in particular, that there is a strongest such principle. The third part attempts to develop a general theory of abstraction within the technical limitations set out by the second part; the theory is equipped with a natural class of models; and it is shown to provide a foundation for both arithmetic and analysis.

The original version of the paper contained a lengthy section on the context principle. But this acquired a life of its own (just as reference does under the principle); and it has therefore been omitted. I hope to be able to present the material elsewhere." (pp. 503-504)

31. ———. 1998. "Mixing Matters." *Ratio* no. 11:278-288.

Reprinted in: David Oderberg, *Form and Matter. Themes in Contemporary Metaphysics*, Oxford: Blackwell. 1999 pp. 65-75.

Abstract: "Aristotle raised a puzzle about the possibility of mixing whose solution is by no means obvious. I here explicate his solution to the puzzle and attempt to make it plausible within the context of his thought. Although we now know that his specific views on mixing were mistaken, his discussion of the topic raises questions concerning the role of capacities and the relationship of part to whole that are still of interest."

"The topic of mixture plays a central role in Aristotle's metaphysics (1). For every concrete substance is composed of

mixtures and underlying every substantial change is a process of mixing.

Thus no understanding of substance or of substantial change is complete without an understanding of mixtures and mixing.

Aristotle's account of mixture may also be of some contemporary interest. For it depends upon a view, still worthy of attention, of how dispositions may conflict.

The main text in which mixture is discussed is chapter I.10 of *Generation and Corruption*. Aristotle there raises two puzzles that purport to show that mixing is impossible.

(1) The present paper is a much abridged version of Fine [95].

Many people have helped me develop the ideas in these two papers; and I am especially indebted to the work of Boguen [95] and Code [95].

Kit Fine: annotated bibliography. Papers 1999-2011

Papers 1999-2011

1. Fine, Kit. 1999. "Things and their Parts." *Midwest Studies in Philosophy* no. 23:61-74.

"I wish to sketch a theory of the general nature of material things. It is a theory on which I have been working for some time; and what I present here is the merest sketch. Details are slid over, significant questions not raised, and controversial assumptions left undefended. But I hope, all the same, that enough is said to indicate the relevance of the theory to questions concerning the nature of material things and the plausibility of its answers.

One way into the theory is through consideration of part-whole. Things have parts; and so we are led to consider how they are capable of having the parts that they do. What in their nature accounts for their division into parts? It has often been supposed that we may give an adequate answer to this question by conceiving of a material thing as the material content of a space-time region or as a successive stream of matter. But I believe that there are enormous difficulties with these positions and that, once they are taken into account, we are led to adopt a very different conception of a material thing and of its relationship to its parts.

Central to the paper is a distinction between two different ways in which one thing can be part of another. It can, in the first place, be apart in a way that is relative to a time. It is in this way, for example, that a newly installed carburetor is now apart

of my car, whereas earlier it was not, or that certain molecules are now parts of my body though later, through the exercise of natural bodily functions, they no longer will be.

In the second place, one object can be a part of another in a way that is not relative to a time. For something that is a part in this way, it is not appropriate to ask when, or for how long, it is a part; it just is a part. It is in such a way that the pants and the jacket, for example, are parts of a suit or various atoms are parts of a water molecule, or two particular pints of milk are parts of a quart of milk, or various time-slices, if there are such things, are parts of a persisting individual." (p. 61)

2. ———. 2000. "Semantics for the Logic of Essence." *Journal of Philosophical Logic* no. 29:543-584.

"In a previous paper ' *The Logic of Essence* ', I presented a system for the logic of essence. In this paper, I present a semantics for a variant of the system and prove it complete with respect to that semantics.

(...)

The basic idea behind the semantics is that a statement should be taken to be true in virtue of the nature of certain objects if it is true in any world compatible with the nature of those objects. We shall make the simplifying assumption that each world is compatible with the nature of all and only those objects that it contains. Thus the condition for a statement to be true in virtue of the nature of certain objects is that it should be true in all those worlds that contain those objects. However, the presence of an object in a world is not taken to guarantee its existence but merely its possibility.

Thus each world will be taken to embody its own 'view' of which objects are possible and which are not.

(...)

The first two sections are devoted to the language of the logic (Section 1) and the system of proof (Section 2). The next section gives the semantics (Section 3). The remaining six sections develop the completeness proof. The first three (Sections 4–6)

provide lemmas crucial to the construction of the canonical model. The next two sections (Sections 7, 8) show how to build up a 'diagram' of the model; and the last section (Section 9) shows how to obtain the model itself. The reader might find it helpful to have the previous paper 'The Logic of Essence' at hand (henceforth abbreviated to 'LE') and also to consult the papers 'Essence and Modality' and 'Senses of Essence' for further explanation of the notion of essence and for general philosophical motivation." (pp. 543-544)

3. ———. 2000. "Neutral Relations." *The Philosophical Review* no. 109:1-33.

"There is a standard view of relations, held by philosophers and logicians alike, according to which we may meaningfully talk of a relation holding of several objects in a given order. Thus it is supposed that we may meaningfully - indeed, correctly - talk of the relation loves holding of Anthony and Cleopatra or of the relation between holding of New York, Washington, and Boston. But innocuous as this view might appear to be, it cannot be accepted as applying to all relations whatever. For there is an important class of metaphysical and linguistic contexts which call for an alternative conception of relation, one for which the order of the relata plays no role and in which the application of the relation to its relata is achieved by other means.

My argument for this conclusion will be roughly Hegelian in form (though not at all in content). I begin with a thesis, the standard view on relations, and consider various problems to which it gives rise (§ 1). After considering what is required of a solution to these problems (§ 2), I propose an antithesis, the positionalist view, according to which each relation is taken to be endowed with a given number of argument-places, or positions, in no specified order (§ 3). But this view is beset with certain ontological and substantive problems; and I conclude with a synthesis, the antipositionalist view, which combines the virtues of the two previous accounts (§ 4) and is seen to lead to a distinctive conception of relations (§ 5).

I have largely confined my attention to metaphysical issues; and as a consequence, two important topics have not been pursued.

One is the logic of complex neutral relations; and the other is the role of neutral relations in the interpretation of language (and in our mental representation of reality). However, I hope enough has been said on the metaphysics of the issue to make clear why these topics are of interest and how they might be developed." (pp. 1-2)

4. ———. 2000. "A Counter-Exemple to Locke's Thesis." *The Monist* no. 83:357-361.

"Locke's thesis states that no two things of the same sort can be in the same place at the same time. The thesis has recently received extensive discussion, with some philosophers attempting to find arguments in its favour and others attempting to provide counter-examples.(1) However, neither the arguments nor the counter-examples have been especially convincing;and it is my aim, in this short note, to present what I believe is a more convincing counter-example to the thesis." (p. 357)

(...)

"Many philosophers have thought that no two things can necessarily always coincide even if they are not of the same sort. But if this second example is correct, it shows that things may necessarily coincide even when they are of the same sort. (2)" (p. 361)

(1) The detractors include Hughes [97a, b, c], Shorter[77], and Simons ([85], [87], [97]).The defenders include Wiggins ([68], [75], [80]),Odergard [96] and also, of course, all those who hold that no two things can coincide,whether of the same sort or not.

5. ———. 2001. "The Question of Realism." *Philosopher's Imprint* no. 1:1-30.

Reprinted in Andrea Bottani, Massimiliano Carrara, Pierdaniele Giaretta (eds.), *Individuals, Essence and Identity. Themes of Analytic Metaphysics*, Dordrecht: Kluwer 2002, pp. 3-48.

"My aim in this paper is to help lay the conceptual and methodological foundations for the study of realism. I come to two main conclusions: first, that there is a primitive metaphysical concept of reality, one that cannot be understood in fundamentally different terms; and second, that questions of what is real are to be settled upon the basis of considerations of *ground*. The two conclusions are somewhat in tension with one

another, for the lack of a definition of the concept of reality would appear to stand in the way of developing a sound methodology for determining its application; and one of my main concerns has been to show how the tension between the two might be resolved.

The paper is in two main parts. In the first, I point to the difficulties in making out a metaphysical conception of reality.

I begin by distinguishing this conception from the ordinary conception of reality (§ 1) and then show how the two leading contenders for the metaphysical conception -- the factual and the irreducible--both appear to resist formulation in other terms. This leads to the quietist challenge, that questions of realism are either meaningless or pointless (§ 4); and the second part of the paper (§§ 5-10) is largely devoted to showing how this challenge might be met. I begin by introducing the notion of ground (§ 5) and then show how it can be used as a basis for resolving questions both of factuality (§§ 6-7) and of irreducibility (§§ 8-9). I conclude with some remarks on the essential unity of these two questions and of the means by which they are to be answered (§ 10)." (pp. 3-4)

6. ———. 2002. "The Varieties of Necessity." In *Conceivability and Possibility*, edited by Gendler, Tamar Szabo and Hawthorne, John, 253-282. New York: Oxford University Press.

Reprinted in: *Modality and Tense. Philosophical Papers*, as chapter 7, pp. 235-260.

"Necessity abounds. There are the necessary truths of logic, mathematics and metaphysics, the necessary connections among events in the natural world, the necessary or unconditional principles of ethics, and many other forms of necessary truth or connection. But how much diversity is there to this abundance?

Are all necessary truths and connections reducible to a single common form of necessity? And if not, then what are the different ways in which a truth might be necessary or a necessary connection might hold?

It is the aim of this paper to show that diversity prevails.

I shall argue that there are three main forms of necessity - the metaphysical, the natural and the normative - and that none of them is reducible to the others or to any other form of necessity. Thus what it is for a necessity or possibility of any of these forms to obtain does not consist in the obtaining of some other form or forms of necessity or possibility.

Although the focus of the paper falls squarely within the philosophy of modality, some of my arguments may be of broader interest. For certain currently fashionable views on scientific essentialism and ethical naturalism entail the collapse of forms of necessity that I would wish to keep distinct. Thus I have found it essential to indicate what it is in these views that I take to be in error; and this has required consideration of questions from within the metaphysics of natural kinds and the epistemology of ethical belief." (p. 253)

7. ———. 2003. "The Problem of Possibilia." In *The Oxford Handbook of Metaphysics*, edited by Loux, Michael J. and Zimmerman, Dean, 161-179. Oxford: Oxford University Press.

Reprinted in: *Modality and Tense. Philosophical Papers*, as chapter 6, pp. 214-231.

"Are there, in addition to the various actual objects that make up the world, various possible objects? Are there merely possible people, for example, or merely possible electrons, or even merely possible kinds?

We certainly talk as if there were such things. Given a particular sperm and egg, I may wonder whether that particular child which would result from their union would have blue eyes.

But if the sperm and egg are never in fact brought together, then there is no actual object that my thought is about.(1) Or again, in the semantics for modal logic we presuppose an ontology of possibilia twice over.(2) For first, we countenance various possible worlds, in addition to the actual world; and second, each of these worlds is taken to be endowed with its own domain of objects. These will be the actual objects of the world in question, but they need not be actual simpliciter, i.e.,

actual objects of *our* world. What are we to make of such discourse? There are four options:

(i) the discourse is taken to be unintelligible; (ii) it is taken to be intelligible but nonfactual, i.e. as not in the business of stating facts; (iii) it is taken to be factual but reducible to discourse involving no reference to possibilia; (iv) it is taken to be both factual and irreducible.⁽³⁾ These options range from a full-blooded form of actualism at one extreme to a full-blooded form of possibilism at the other. The two intermediate positions are possibilist in that they accept the intelligibility of possibilist discourse but actualist in that they attempt to dispense with its *prima facie* commitment to possibilia. All four positions have found advocates in the literature. Quine, in his less irenic moments, favours option (i); Forbes ([85], p. 94) advocates option (ii), at least for certain parts of possibilist discourse; many philosophers, including Adams [74] and myself, opt for (iii); while Lewis [86] and Stalnaker [75] have endorsed versions of (iv), that differ in how full-blooded they take the possible objects to be.

My focus in the present article is on the third option. I wish to see to what extent reference to possibilia might be understood in other terms. Can we regard talk of possibilia as a mere *façon de parler*, perhaps somewhat in the same manner as talk of the average man or of infinitesimals? (4) I shall not be concerned to argue directly against any of the other options.

However, any argument for the viability of (iii) is indirectly an argument against the plausibility of these other options.

For (iv), especially in its more extreme forms, offends against what Russell has called our 'robust sense of reality', (i) offends against our even more robust sense of what is intelligible, while (ii) offends against our somewhat less robust sense of what is factual. It is therefore preferable to go with the third option, if we possibly can." (pp. 161-162)

(1) Cf Gupta ([80], 20, n.15.

(2) See Kripke [63] for a standard exposition of the semantics.

(3) See Fine [01] for a general discussion of what these various options amount to.

(4) As should be clear from Fine [01], the viability of any reduction will also depend upon its success in accounting for our understanding of modal discourse and our knowledge of modal

truth. See Peacocke [01] for a broader discussion along these lines.

8. ———. 2003. "The Role of Variables." *Journal of Philosophy* no. 50:605-631.

Reprinted in the *Philosopher's Annual* 2003; revised in Joseph Almog, Paolo Leonardi (eds.), *The Philosophy of David Kaplan*, New York: Oxford University Press, 2009 pp. 109-133.

"It is generally supposed - by logicians and philosophers alike - that we now possess a perfectly good understanding of how variables work in the symbolism of logic and mathematics.

Once Gottlob Frege had provided a clear syntactic account of variables and once Alfred Tarski had supplemented this with a rigorous semantic account, it would appear that there was nothing more of any significance to be said. It seems to me, however, that this common view is mistaken. There are deep problems concerning the role of variables that have never been properly recognized, let alone solved, and once we attempt to

solve them we see that they have profound implications not only for our understanding of variables but also for our understanding of other forms of expression and for the general nature of semantics.

It is my aim here to say what these problems are and how they are to be solved, and to indicate the implications for the rest of semantics. I begin with an antimony concerning the role of variables which I believe any satisfactory account of them should solve (section 1). I then argue that the three main semantical schemes currently on the market - the Tarskian, the instantial and the algebraic -- are unsuccessful in solving the puzzle (sections II-III) or in providing a satisfactory semantics for first-order logic (Sections IV-V). Finally, I offer an alternative scheme that it is capable of solving the antimony (section VI) and of providing a more satisfactory semantics for first-order logic (section VII). It is based upon a new approach to representational semantics, which I call *semantic relationism* ; and I conclude by discussing the implications of this approach for the semantics of names and belief-reports." (p. 605)

9. ———. 2003. "The Non-Identity of a Material Thing and Its Matter." *Mind* no. 112:195-234.

"Many philosophers have thought that a material thing is, or may be, one and the same as its matter - that a statue, for example, may be the same as the clay from which it is made or a river the same as the water which flows through it. There appears to be a powerful argument against such views, for the thing in each of these cases would appear to have properties not possessed by its matter.

Thus the clay of a statue may exist even though the statue itself has ceased to exist and the river may be composed of different water at different times even though this cannot be true of the water that composes it at any given time. However, these philosophers have responded to this argument by claiming that the apparent difference in properties represents, not a difference in the objects themselves, but a difference in the descriptions under which they may be conceived. We may

conceive of a given thing as a statue or some clay or as a river or a body of water, for example, and, depending upon how the object is conceived, we will say one thing about it rather than another.

It is the aim of this paper to show that this counter-response cannot be sustained and that the original argument against identity should therefore be allowed to stand. This is no easy task since there would appear to be nothing in the immediate linguistic data to settle the question one way or the other.

However, by working through the consequences of the counter-response for the rest of our language, I think it may be shown to be extremely implausible. The paper is in two main parts. The first (§§1-4) is largely concerned with setting up the problem. We characterize the different forms the identity theory can take (§1), explain how the argument in favor of non-identity might in principle break down (§2), present the most plausible versions of such arguments (§3), and then consider the most plausible counter-response to them (§4). The second part (§§5-8) embarks on a detailed investigation of the difficulties with the counter-response. It is shown to be unable to account for a wide variety of different linguistic data, that is loosely classified according as to how reference to a material thing might be achieved. Four main kinds of case will be considered: those in which a sort is explicitly invoked (§5); those in which it is implicitly invoked (§6); those in which the very notion of reference is itself used in securing reference (§7); and those in which there is reference to a plurality of things (§8)." (p. 195)

10. ———. 2005. "Replies [to Comments on 'Limits of Abstraction']." *Philosophical Studies* no. 122:367-395.

Replies to critics about *The Limits of Abstraction* .

"I am extremely grateful to the contributors for their careful, perceptive and sympathetic discussion of my book. For the most part, they have chosen not to criticize what I say but to see how the doctrines of the book might be developed or be used to throw light on other questions. A defense of the book is therefore out of place; and I can do no better than to continue the discussion of some of the questions that they raise. There is

perhaps only one point on which there is a substantive disagreement; and this concerns the status of second-order logic. Weir takes it to be epistemologically problematic; I do not. This issue was not discussed in the book, and I have here attempted to explain the grounds upon which I think its epistemic innocence might be defended." (p. 367)

11. ———. 2005. "Précis [of " *The Limits of Abstraction* "]." *Philosophical Studies* no. 122:305-313.

Symposium on Kit' Fine's book *The Limits of Abstraction*.

" Before dealing with the contributors' comments, I would like to provide a selective summary of the book. I will focus on two main themes: the development of a general theory of abstraction; and the critique of Hume's principle as a form of definition. There are several other topics from the book that I would have liked to have covered. They include the question of the identity of abstracts and the viability of the context principle, on the philosophical side (§1.5, §§11.3-5) and the analysis of invariance and the proofs of categoricity, on the technical side (§§6,7). But in the interests of brevity, I have had to exclude them.

The general idea of abstraction is one that has been discussed by philosophers throughout the ages but it was Frege who first showed how the idea could be put on a rigorous footing. For Frege, the idea of abstraction had two main components. The first related to the items upon which the abstraction was to be performed. These were to be taken to be related by an equivalence relation, i.e. by a relation that was reflexive, symmetric and transitive. As examples, we have the relation of parallelism on lines or the relation of equinumerosity on concepts. The second component related to the abstracts themselves. These were to be obtained from the items by means of a suitable operation of abstraction - the operation of forming directions in the case of parallel lines and of forming numbers in the case of equinumerous concepts. These two components, the equivalence relation and the operation of abstraction, were then to be connected by a principle relating the identity of the

abstracts to the equivalence of the items from which they were formed." (p. 305)

12. ———. 2005. "Class and Membership." *Journal of Philosophy* no. 102:547-572.

Abstract: "I wish to describe a construction that is capable of yielding a new solution to the set-theoretic paradoxes. Perhaps what is most distinctive about the construction is the reversal in the roles of the predicate of membership and the ontology of sets. On the usual conception of the cumulative hierarchy of Zermelo-Fraenkel set theory (ZF), we think of the membership predicate as given and of the ontology of sets or classes as something to be made out. Thus given an understanding of membership, we successively carve out the ontology of sets by using the membership predicate to specify which further sets should be added to those that are already taken to exist. Under the present approach, by contrast, we think of the ontology of classes as given and of the membership predicate as something to be made out. Thus given an understanding of the ontology of classes, we successively carve out extensions of the membership predicate by using conditions on the domain of classes to specify which further membership relationships should obtain. What unfolds is not the ontology of sets or classes but the meaning of membership. This "Copernican revolution" in our conception of class membership, once properly implemented, is capable of yielding a theory of classes that is just as natural as the standard theory of ZF and yet far more powerful in the strength of its principles and the scope of its applications."

13. ———. 2005. "Our Knowledge of Mathematical Objects." In *Oxford Studies in Epistemology. Vol. 1*, edited by Gendler, Tamar Szabo and Hawthorne, John, 89-110. Oxford: Clarendon Press.

"I have recently been attempting to provide a new approach to the philosophy of mathematics, which I call 'proceduralism' or 'procedural postulationism'.(1) It shares with traditional forms of postulationism, advocated by Hilbert (1930) and Poincaré (1952), the belief that the existence of mathematical objects and the truth of mathematical propositions are to be seen as the

product of postulation. But it takes a very different view of what postulation is. For it takes the postulates from which mathematics is derived to be imperatival, rather than indicative, in form; what are postulated are not propositions true in a given mathematical domain, but procedures for the construction of that domain.

This difference over the status of the postulates has enormous repercussions for the development and significance of such a view. The philosophy of mathematics is faced with certain fundamental problems.

How are we capable of acquiring an understanding of mathematical terms? How do we secure reference to mathematical objects? What is the nature of these objects? Do they exist independently of us or are they somehow the products of our minds? What accounts for the possibility of applying mathematics to the real world? And how are we able of acquire knowledge of mathematical truths? The procedural form of postulationism, in contrast to the propositional form, is capable of providing plausible answers to each of these questions. By going procedural, we convert a view that is beset with pitfalls to one that is worthy of serious consideration.

In what follows I shall focus on the last question concerning our knowledge of mathematics (although this will inevitably involve the other questions). I do this not because this question is the most interesting or even because it provides the most convincing illustration

of the value of our approach, but because it helps to bring out what is most distinctive—and also most problematic—about the approach. If one can go along with what it recommends in this particular case, then one is well on the way to accepting the view in its entirety.

As with the ‘big three’ traditional approaches to the philosophy of mathematics—logicism, formalism, and intuitionism—the present approach rests upon a certain technical program within the foundation of mathematics. It attempts to derive the whole of mathematics—or a significant part thereof—within the

limitations imposed by its underlying philosophy. Since the viability of the underlying philosophical view largely depends upon the possibility of carrying out such a program, it will be helpful to give a sketch—if only in the barest form—of what the program is and of how it is to be executed. I hope elsewhere to provide a much more extensive development of the view in both its philosophical and technical aspects." (pp. 90-90)

Previously unpublished and written up in the spring of 1984 as a talk for the conference 'Themes from Kaplan'.

Chris Peacocke was the commentator.

"There are three main concerns within current thinking on modality. One relates to the problem of essentialism, of making sense of *de re* modal discourse. Another relates to the problem of transworld identification, of individuating objects across possible worlds. The third relates to the problem of direct reference, of whether any terms can refer to their bearers independently of how they are described.

It has commonly been supposed that these various problems are connected and that a solution to the one will push us in a certain direction in regard to another. But I shall argue that, once the problems are properly understood, it will be seen that they are quite distinct and that the supposed connections among them are illusory." (p. 19)

15. ———. 2005. "Necessity and Non-existence." In *Modality and Tense. Philosophical Papers*, 321-354. New York: Oxford University Press.

Previously unpublished.

"Is it possible for Socrates to be a man and yet not exist? This is the kind of question that is likely to strike someone from outside philosophy as preposterous and that may not be taken seriously even by philosophers themselves. But I believe that the answer to this question has profound implications for our understanding of the concepts of existence, identity, and modality and for how these concepts connect to one another and to the world.

It is my central contention that, just as there is a distinction between tensed and tenseless sentences, so there is a distinction between worldly and unworldly sentences, between sentences that depend for their truth upon the worldly circumstances and those that do not. It is in terms of such a distinction that we should assess the possibility that Socrates might be a man and yet not exist, since his non-existence will be a matter of the circumstances while his being a man will not. But once the distinction is drawn, it will be seen to have consequences for a wide range of further questions. It will lead us to distinguish, within the realm of what are normally regarded as necessary truths, between the necessary truths proper, those that hold whatever the circumstances, and the transcendent truths, those that hold regardless of the circumstances. It will also lead us to make an analogous distinction, within the realm of what are normally regarded as necessary existents, between the necessary existents proper, those that exist whatever the circumstances, and the transcendent objects, those that exist regardless of the circumstances. Thus some objects will not properly be in the world just as it has been supposed that some objects are not properly in time. Finally, it will be suggested that the identity of an object—what it is—is not, at bottom, a worldly matter; essence will precede existence in the sense that the identity of an object may be fixed by its unworldly features even before any question of its existence or other worldly features is considered." (p. 321)

16. ———. 2006. "The Reality of Tense." *Synthese* no. 150:399-414.

Expanded version in: *Modality and Tense. Philosophical Papers*, as chapter 8, pp. 261-320.

"Is reality somehow tensed? Or is tense a feature of how we represent reality and not properly a feature of reality itself? Although this question is often raised, it is very hard to say what it comes to. For both sides to the debate can agree to certain tensed claims. They can agree that I am sitting right now, for example, or that Queen Ann is dead. So in a clear and obvious sense there are tensed facts. And so how can it sensibly be denied that reality is tensed?

My own view is that the question can only be made clear by drawing a distinction between how things are (*mere* reality) and how things are in reality (*metaphysical* reality). Thus what the antirealist about tense wishes to dispute is not how things are, which should be common ground between him and his opponent, but how things are in reality. Of course, he will say, Queen Ann is dead but this representation of the facts is not faithful to how things are in reality; and this is so, not because of the reference to Queen Ann or to her being dead, but because of the tense. In a faithful representation of how things are in reality, there will be nothing that corresponds to our use of tense. (1)"

(1) The more formal minded reader may suppose that there is a sentential operator 'in reality,_' by means of which the various realist claims are to be made (Fine 2000). I should add that this paper is a summary of views which are elaborated at much greater length in Fine (2005). In the interests of brevity, I have made no attempt to engage with the extensive literature on the topic.

17. ——. 2006. "Modal Logic and Its Application." *EOLSS Survey of Mathematical Logic* :1-25.

Summary; "Modal logic is a broad and rapidly expanding area of logic with applications to such diverse areas as computer

science, linguistics and philosophy. It deals with the logical behavior of such modal locutions as 'must' and 'might', 'was' and 'will', 'ought', and 'may'. It specifies formal languages within which such locutions may be encoded, it lays down axioms and rules by which the locutions are governed, it sets up an interpretation for the resulting symbolism, and it proves various general results concerning the system and its interpretation."

18. ———. 2006. "Arguing for Non-Identity: A Response to King and Frances." *Mind* no. 115:1059-1082.

"Jeffrey King and Bryan Frances are both critical of my paper, 'The Nonidentity of a Thing and its Matter' (Fine 2003), though in rather different ways. King engages in carpet bombing; his aim is to destroy every argument in sight, even to the extent of showing that the linguistic data cited by the paper favours the monist rather than the pluralist. Frances, by contrast, engages in strategic warfare; by 'taking out' certain key arguments, he attempts to demolish the paper as a whole.

I remain unmoved -- and, I hope, unscathed -- by their attacks.

King's carpet bombing may cause a great deal of collateral damage but not to its intended target; and Frances's strategic bombing may hit its target but without inflicting much harm. Still, their papers raise many interesting issues not discussed -- or, at least, not properly discussed -- in my original paper; and I am grateful to them for providing me with the opportunity to take these issues into account.

My response will be in three main parts: I begin by outlining the central line of argument of my original paper (Sect. 1); I then discuss King's criticisms of the paper (Sects 2, 3, 4); and finally I turn to Frances's criticisms (Sect. 5). I have tried to make my response reasonably self-contained and to bring out the independent significance of the issues under discussion but it would be helpful, all the same, if the reader had all three papers at hand." 19. ———. 2006. "In Defence of Three-Dimensionalism." *Journal of Philosophy* no. 103:699-714.

Reprinted in: Robin Le Poidevin (ed.), *Being: Developments in Contemporary Metaphysics*, Cambridge: Cambridge University Press, 2008, pp. 1-16.

"Let us use the term 'present' in such a way that a material thing can be said to be present both in space and in time. Thus on this usage we can say that the desk in front of me is present at any moment at which it exists and also that it is present at any position within its spatial location at that moment. We might similarly talk of presence throughout a period of time or a region of space and of the presence of other categories of objects, such as states or events.

Some philosophers, the "three-dimensionalists," have thought that there is a distinctive way in which material things are present in time as opposed to space. They have thought that a thing is somehow "stretched out" through its location at a given time though not through the period of during which it exists and that it is somehow present in its entirety at any moment at which it exists though not at any position at which it is located. Other philosophers, the "four dimensionalists," have denied that this was so; they have thought that a material thing is as equally "stretched out" in time as it is in space and that there is no special way in which it is entirely present at a moment rather than at a position.

We might use the term 'existence' for the way in which 3D-ers have thought that a thing is present in time and 'extension' or 'location' for the way in which 4D-ers have thought that a thing is present in space. The 3D-ers have then held that things exist in time but are extended in space while the 4D-ers hold that things are extended both in space and in time. (1)" (p. 699)

(1) My terms 'presence', 'existence', and 'extension' (deriving from my paper, "Compounds and Aggregates," *Nous*, xxviii, 2 (1994): 137-58) correspond to the more familiar terminology of 'persistence', 'endurance', and 'perdurance'. I prefer my own terminology since it is somewhat more general, allowing one to talk of existence or extension at a moment when one cannot very well talk of endurance or perdurance at a moment and allowing one to talk of existence or extension in space when one cannot very well talk of endurance or perdurance in space.

20. ———. 2006. "Relatively Unrestricted Quantification." In *Absolute Generality*, edited by Rayo, Agustin and Uzquiano, Gabriel, 20-44. New York: Oxford University Press.

"There are four broad grounds upon which the intelligibility of quantification over absolutely everything has been questioned—one based upon the existence of semantic indeterminacy, another on the relativity of ontology to a conceptual scheme, a third upon the necessity of sortal restriction, and the last upon the possibility of indefinite extendibility. The argument from semantic indeterminacy derives from general philosophical considerations concerning our understanding of language. For the Skolem-Lowenheim Theorem appears to show that an understanding of quantification over absolutely everything (assuming a suitably infinite domain) is semantically indistinguishable from the understanding of quantification over something less than absolutely everything; the same first-order sentences are true and even the same first-order conditions will be satisfied by objects from the narrower domain. From this it is then argued that the two kinds of understanding are indistinguishable tout court and that nothing could *count* as having the one kind of understanding as opposed to the other.

The second two arguments reject the bare idea of an object as unintelligible, one taking it to require supplementation by reference to a conceptual scheme and the other taking it to require supplementation by reference to a sort. Thus we cannot properly make sense of quantification over *mere* objects, but only over objects of such and such a conceptual scheme or of such and such a sort. The final argument, from indefinite extendibility, rejects the idea of a *completed* totality. For if we

take ourselves to be quantifying over all objects, or even over all sets, then the reasoning of Russell's paradox can be exploited to demonstrate the possibility of quantifying over a more inclusive domain. The intelligibility of absolutely unrestricted quantification, which should be free from such incompleteness, must therefore be rejected.

The ways in which these arguments attempt to undermine the intelligibility of absolutely unrestricted quantification are very different; and each calls for extensive discussion in its own right. However, my primary concern in the present paper is with the issue of indefinite extendibility; and I shall only touch upon the other arguments in so far as they bear upon this particular issue. I myself am not persuaded by the other arguments and I suspect that, at the end of day, it is only the final argument that will be seen to carry any real force. If there is a case to be made against absolutely unrestricted quantification, then it will rest here, upon logical considerations of extendibility, rather than upon the nature of understanding or the metaphysics of identity." (pp. 20-21)

21. ———. 2007. "Response to Correia." *Dialectica.International Journal of Philosophy* no. 61:85-88.

"Correia's paper contains two highly novel and interesting suggestions. The first is to generalize the Priorian perspective so that all that is required for there to be a fact about an object is that there be something that is the object though not necessarily something that exists. The second, building on the first, is to see essence as a form of Priorian implication. There is no doubt that these suggestions help to illuminate the concept of essence, in regard to both its Priorian underpinnings and its connection with modality. But I do not think that they are in tension with the central claims of ' *Essence and Modality* ' and nor do I think that they should lead us to suppose that essentialist statements might be formulated more directly in terms of an 'arrow' rather than a 'box'." (p. 88)

22. ———. 2007. "Response to Garcia-Carpintero." *Dialectica.International Journal of Philosophy* no. 61:191-194.

"I attempted to argue for a supervenient account of vagueness in an early paper, 'Vagueness, Truth and Logic' (VT&L) and Manuel García-Carpintero is concerned, in his rich and wide-ranging paper, to defend such an account against two objections from M. Andjelkovic and T. Williamson, 'Truth, Falsity and Borderline Cases', *Philosophical Topics* 28, 2000, pp. 211–244. I no longer hold a supervenient view but am inclined to agree with García-Carpintero that the objections are not successful, though not quite for the reasons that he gives." (p. 191)

23. ———. 2007. "Response to Horwich." *Dialectica. International Journal of Philosophy* no. 61:17-23.

"In a sustained series of articles and books, Horwich has attempted to deflate the pretensions of philosophy by showing how many of its problems are not problems at all and how many of its 'theories' are explanations of phenomena standing in no need of explanation and, in keeping with this general line of thought, he is concerned, in the present highly interesting and provocative paper, to show how even the modest aims of ' *The Question of Realism* ' go too far in attempting to breathe some life into realist disputes. He is concerned to argue, in particular, that two of the principles that are meant to belong to the common ground between the realist and the antirealist might plausibly be questioned and that the strategy of the paper therefore fails (p. 11)." (p. 17)

24. ———. 2007. "Response to Koslicki." *Dialectica. International Journal of Philosophy* no. 61:161-166.

"Koslicki's paper is an extraordinarily perceptive and comprehensive discussion of my published work on the nature of material things. Although she is sympathetic to my criticisms of the standard mereological approaches to this topic, she is not so happy with my positive views. She has three main objections in all, which she summarizes as follows:

Fine's theory gives rise, first, to a proliferation of primitive sui generis relations of parthood and composition, whose characteristics must be imposed on them stipulatively by means of distinct systems of postulates, tailored to the different

domains of objects. Secondly, we noted that, given its 'superabundance' of objects, Fine's theory is committed to its very own population of 'monsters'. Thirdly, once rigid embodiments are abandoned, the explicitly mereological aspect of Fine's hylomorphic theory is preserved only at the cost of abandoning the Weak Supplementation Principle. This, in turn, along with the other formal properties of Fine's system, makes us wonder why one should consider the primitive *sui generis* operations introduced by Fine's theory to be genuinely mereological at all (pp. 157–158).

Let me briefly consider the first and third of these objections but devote most of my attention to the second." (p. 161)

25. ———. 2007. "Response to MacBride." *Dialectica.International Journal of Philosophy* no. 61:57-62.

"Fraser MacBride's paper is a deep and searching treatment of the topic of neutral relations. He very clearly explains the motivation for wanting a theory of neutral relations, providing much more than my own paper by way of philosophical and historical context, and he subjects the available theories to a number of interesting and difficult challenges. Although he is critical of my own antipositional line, he shows a keen appreciation of the problems it was meant to solve and of the considerations that led me to adopt it.

I should like to take up two main issues from his paper – one concerning the question of symmetric relations and of whether the positionalist can provide an adequate account of them and the other concerning the question of 'solitary' relational states and of whether the anti-positional can provide an adequate account of how their *relata* are related." (p. 58)

26. ———. 2007. "Response to Weir." *Dialectica.International Journal of Philosophy* no. 61:117-125.

"In a recent paper, 'Our Knowledge of Mathematical Objects' (KMO), I have outlined a new approach to the foundations of mathematics. I call it 'procedural postulationism' and it is based upon the idea that one may lay down procedures for the expansion of a given domain. The ontology of mathematics is

taken to result from the execution of such procedures; and our knowledge of mathematics is to be attained by seeing what would true upon their execution.

Weir has raised some sharp and significant objections to this approach – one concerning the constraints by which postulation is governed, another concerning the ontological neutrality of second-order logic, upon which my approach is based, and a third concerned with my realist construal of the expanded domains.

Let me deal with each in turn." (p. 117)

27. ———. 2008. "Coincidence and Form." *Aristotelian Society, Supplementary Volume* no. 82:101-118.

Paper read at the Kit Fine Day: Ontology Talks, February 11, 2008, Paris.

Abstract. "How can a statue and a piece of alloy be coincident at any time at which they exist and yet differ in their modal properties? I argue that this question demands an answer and that the only plausible answer is one that posits a difference in the form of the two objects."

"Many philosophers are pluralists about material things. They believe that distinct material things may coincide at a time, i.e. that they may occupy the very same spatial region and be constituted by the very same matter at that time. A familiar example is that of an alloy statue and the piece of alloy from which it is made. They are clearly coincident, and they would also appear to be distinct, given that the piece of alloy may exist before the statue is created or after it has been destroyed.

A number of these philosophers also believe that two distinct material things may coincide in a world, i.e. that they may exist at the same times in the world and coincide at each time at which they exist." (p. 101)

(...)

"The account of an object as a given rigid or variable embodiment may be regarded as a *fundamental* account of what the object is, one that itself stands in need of no further

explanation. We may therefore claim, with some plausibility, to have traced the various features and differences of such objects to their source." (p. 116)

28. ———. 2008. "The Impossibility of Vagueness." *Philosophical Perspectives* no. 22:111-136.

"I wish to present a proof that vagueness is impossible. Of course, vagueness is possible; and so there must be something wrong with the proof. But it is far from clear where the error lies and, indeed, all of the assumptions upon which the proof depends are ones that have commonly been accepted. This suggests that we may have to radically alter our current conception of vagueness if we are to make proper sense of what it is.

The present investigation was largely motivated by an interest in what one might call the 'global' aspect of vagueness. We may distinguish between the indeterminacy of a predicate in its application to a single case (the local aspect) and in its application to a range of cases (the global aspect). In the first case, it is indeterminate how a predicate, such as a bald, applies in a given case; and, in the second case, it is indeterminate how a predicate applies across a range of cases.

Given such a distinction, the question arises as to whether one might understand the indeterminacy of a predicate in its application to a range of cases in terms of its indeterminacy in application to a single case; and considered from this point of view, the result can be seen to show that there is no reasonable way in which this might be done." (p. 111)

(...)

"I begin by giving an informal presentation of the result and its proof and I then consider the various responses that might be made to the alleged impossibility. Most of these are found wanting; and my own view, which I hint at rather than argue for, is that it is only by giving up on the notion of singlecase indeterminacy, as it is usually conceived, and by modifying the principles of classical logic that one can evade the result and thereby account for the possibility of vagueness. There are two

appendices, one providing a formal presentation and proof of the impossibility theorem and the other giving a counter-example to the theorem under a certain relaxation of its assumptions. The mathematics is not difficult but those solely interested in the philosophical implications of the results should be able to get by without it.

The general line of argument goes back to Wright [1987] and further discussion and developments are to be found in Sainsbury [1990, 1991], Wright [1992], Heck [1993], Edgington [1993], Gomez Torrente [1997, 2002], Graff-Fara [2002, 2004], and Williamson [1997, 2002]. It would be a nice question to discuss how these various arguments relate to one another and to the argument in this paper. I shall not go into this question, but let me observe that my own approach is in a number of ways more general. It relies, for the most part, on weaker assumptions concerning the underlying logic and the logic of definitely and on weaker constraints concerning the behavior of vague terms; and it also provides a more flexible framework within which to develop arguments of this sort." (p. 112)

29. ——. 2009. "The Question of Ontology." In *Metametaphysics: New Essays on the Foundations of Ontology* , edited by Chalmers, David J., Manley, David and Wassermann, Ryan, 157-177. New York: Oxford University Press.

"There are a number of difficulties with the standard quantificational view. They are for the most part familiar but it will be worth spelling them out, if only to make clear how far removed our understanding of the ontological question is from our understanding of their quantificational counterparts. Philosophers may have learned to live with the disconnect between the two, but their tolerance of the situation should not lull us into thinking that it is tolerable." (p. 138)

"This account of our method for settling ontological dispute requires that we have a grasp not only of an absolute conception of reality, of there *being nothing more than ...*, but also of a relative conception, of *there being nothing more to ... than ...* , since it is through our assessment of the relative claims that we attempt to adjudicate the plausibility of the absolute claims. Many philosophers seem to have supposed that our having a good working grasp of such notions depends upon our being able to define them in other terms, so that questions of metaphysics or ontology thereby become questions of semantics or epistemology or total science. I consider this to

be a serious methodological error: upon careful reflection we can see that our intuitive grasp of these notions is a sufficient guide in itself to their proper employment; and the attempt to define these notions in other terms has served merely to distort our understanding of the metaphysical questions and of the methods by which they are to be resolved." (p. 176)

30. ———. 2010. "Towards a Theory of Part." *Journal of Philosophy* no. 107:559-589.

Paper read at the *Kit Fine Day: Ontology Talks*, Paris, February 11, 2008.

"My aim in this paper is to outline a general framework for dealing with questions of partwhole. Familiar as this topic may be, my treatment of it is very different from more conventional approaches. For instead of dealing with the single notion of mereological part or sum, I have attempted to provide a comprehensive and unified account of the different ways in which one object can be a part of another. Thus mereology, as it is usually conceived, becomes a small branch of a much larger subject. (1)

My discussion has been intentionally restricted in a number of ways. In the first place, my principal concern has been with the notion of absolute rather than relative part. We may talk of one object being a part of another relative to a time or circumstances (as when we say that the tire was once a part of the car or that the execution of Marie Antoinette was as a matter of contingent fact a part of the French Revolution) or in a way that is not relative to a time or the circumstances (as when we say that this pint of milk is a part of the quart or that the letter 'c' is part of the word 'cat'). Many philosophers have supposed that the two notions are broadly analogous and that what goes for one will tend to go for the other. (2) I believe this view to be mistaken and a source of endless error. But it is not my aim to discuss either the notion of relative part or its connection with the absolute notion. (3)

In the second place, I have focused on the 'pure' theory of part-whole rather than its application to our actual ontology. Once given a theory of part-whole, there arises the question of how it

applies to the objects with which we are already familiar. This question becomes especially delicate and intricate on my own approach since, although we may recognize that such and such a familiar object is a part or whole, it may not be clear, according to the theory, what kind of whole or part it is. But despite the considerable interest of this question, my focus has been on the abstract development of the theory itself and not on its application to ontology.

Finally, I have only provided the merest sketch of the framework (on which I hope say more elsewhere). Many points are not developed and some not even stated. I have, in particular, said relatively little about the technical foundations of the subject, which are mathematically quite distinctive, or about some of the broader philosophical issues to which they give rise. I have given a rough map of the terrain rather than a guided tour, but I hope I have done enough to bring out the interest of the approach and to make clear how a more systematic and philosophically informed account might proceed." (pp. 559-560)

(1) The material outlined in this paper has been developed over a period of thirty years. It was most recently presented in a seminar at Princeton in 2000; and I am grateful to Cian Dorr, Michael Fara, Gail Harman, Mark Johnston, David Lewis and Gideon Rosen for their comments.

I am also grateful for some comments I received from Ted Sider and two anonymous referees for the journal; and I owe a special debt of thanks to Achille Varzi for his encouragement.

(2) As in T. Sider, *Four Dimensionalism* (Oxford: Clarendon Press, 2001), for example.

(3) The matter is briefly discussed in K. Fine, Things and Their Parts, *Midwest Studies in Philosophy* XXIII (1999), 61-74.

31. ——. 2010. "Some Puzzles of Ground." *Notre Dame Journal of Formal Logic* no. 51:97-118.

"In recent years there has been a growing interest in the concept of ground—of one thing holding in virtue of another, and, in developing an account of ground, a number of

philosophers have laid down principles which they regard as unquestionably true of the concept. (1) The purpose of this note is to show that these principles are in conflict with seemingly impeccable principles of logic. Thus a choice must be made; either one or more of the metaphysical principles or one or more of the logical principles should be given up.

Some philosophers—and especially those already unsympathetic to ground—may think that the conflict reveals some underlying defect in the concept. For if acceptance of the concept of ground has such untoward consequences, then this can only be because the concept was no good in the first place. My own view—which I suggest toward the end of the paper—is quite different. It is not that considerations of ground should be ignored or even that the principles of ground should be given up in the light of their conflict with the principles of logic. Rather we need to achieve some kind of reflective equilibrium between the two sets of principles, one that does justice both to our logical intuitions and to our need for some account of their ground. Thus the conflict, far from serving to undermine the concept of ground, serves to show how important it is to arriving at a satisfactory view of what in logic, as in other areas of thought, can properly be taken to hold.

The puzzle to which the conflict of principles gives rise bears some resemblance to the paradoxes of self-reference. It is not itself a paradox of self-reference: the puzzle, on the one side, makes no direct use of self-reference; the paradox, on the other side, makes no direct appeal to the notion of ground. But considerations of ground are often used to motivate certain solutions to the paradoxes, and the puzzle makes clear the reasoning behind these considerations and brings out the critical role played by the notion of ground. (2)" (pp. 97-98)

(1) They include Audi [1], Batchelor [2], Correia [3], Correia [4], Rosen [10], Schneider [11], and Schneider [12].

(2) I especially have in mind the kind of solution to the semantic paradoxes to be found in Kripke [8].

32. ———. 2010. "Semantic Necessity." In *Modality: Metaphysics, Logic, and Epistemology* , edited by Hale, Bob and Hoffmann, Aviv, 65-80. New York: Oxford University Press.

"In the recent monograph 'Semantic Relationism', I made use of a certain notion of what was semantically necessary, or required, in arguing that it might be a semantic requirement that two names were coreferential even though there were no intrinsic semantic features of the names in virtue of which this was so. In the present paper, I wish to consider the bearing of the notion on the nature and content of semantic enquiry. I shall argue that a semantics for a given language is most perspicuously taken to be a body of semantic requirements and that the notion of a semantic requirement should itself be employed in articulating the content of those requirements. There are two main alternatives to this conception to be found in the literature. According to one, a semantics for a given language is taken to be an assignment of semantic values to its

expressions; and according to the other, a semantics for a given language is taken to be a theory of truth for that language. I attempt to show how these alternatives do not provide us with the most perspicuous way of representing the semantic facts and that it is only in terms of our conception that one can properly appreciate what these facts are.

The importance of the notion of metaphysical necessity for metaphysics has long been appreciated, in regard to both explicating the nature of the subject and articulating the content of its claims. If the argument of this paper is correct, then it will help to show that the notion of semantic necessity has a similar and equally important role to play in understanding the nature and content of semantics." (p. 65)

33. ———. 2010. "Comments on Scott Soames' 'Coordination Problems'." *Philosophy and Phenomenological Research* no. 81:475-484.

"A major theme of 'Semantic Relationism' was that many of the familiar worries over the substitutivity of names in belief contexts may be resolved by going relational. But Soames, in his interesting and actionpacked paper, has argued that even if the more familiar worries are removed there are variants of them that will remain." (p. 475)

(...)

"So we see that the relationist does have a response to the worry that Soames raises. However, the way relationism comes in is not through embedding the speaker's report in a larger context of belief attributions, as Soames had supposed, but through seeing the speaker's report and the agent's belief as forming a single context, in which relationships of coordination relevant to the truth of the report may then be discerned."(p. 476)

34. ———. 2010. "Reply to Lawlor's 'Varieties of Coreference'." *Philosophy and Phenomenological Research* no. 81:496-501.

"The focus of Krista Lawlor's challenging paper [*] is on cases of confused reference. By way of illustration, she asks us to suppose that 'Wally says of Udo, " He needs a haircut" , and

Zach, thinking to agree, but looking at another person, says, 'he sure does' (p. 4). Zach is confused, since he takes the person he is looking at to be the same as the person Wally was referring to. This might not be a semantic confusion, which is what I think Lawlor is after, but a straight confusion over the facts.

For Zach's primary intention may be to refer to the same person as Wally or, alternatively, to the person he is looking at and he may mistakenly believe that these two people are the same. But let us suppose that Zach means to use 'he' indifferently as a pronoun anaphoric on Wally's original use of 'he' and as a pronoun that is deictic on the person he is looking at. We would then have a case of confused reference of the kind Lawlor has in mind." (p. 496)

35. ——. 2010. "Comments on Paul Hovda's 'Semantics as Information About Semantics Values'." *Philosophy and Phenomenological Research* no. 81:511-518.

"In SR [*Semantic Relationism*] (7-9), I posed the 'antimony of the variable'. How can the pair of variables x, y have a different semantic role from the pair x, x when x has the same semantic role as y ? In attempting to solve this antimony, I suggested that we appeal to the idea of the values that are taken, not merely by a single variable, but by a sequence of variables (SR, 23-4).

The semantic role of the two pairs of variables can then be distinguished, since the first pair will take a distinct pair of objects from the domain as values (assuming that the domain contains at least two objects) while the second pair will not.

Hovda's makes a marvelous alternative suggestion. [*] 'The basic idea', he writes (pp. 4-5) 'is that a variable can refer to anything and must refer to exactly one thing.' The more usual idea is that a variable actually takes all of the objects in the domain as values (or 'referents'). My own relational account of variables is an instance of this approach, but with the modification that variables can now take their values simultaneously and not merely singly." (p. 511)

[* Paul Hovda "Semantics as Information About Semantics Values", *Philosophy and Phenomenological Research* 81, 2010, pp. 485-495.]

36. ———. 2011. "Aristotle's Megarian Manoeuvres." *Mind* no. 120:993-1034.

Abstract: "Towards the end of *Theta 4* of the *Metaphysics*, Aristotle appears to endorse the obviously invalid modal principle that the truth of A will entail the truth of B if the possibility of A entails the possibility of B. I attempt to show how Aristotle's endorsement of the principle can be seen to arise from his accepting a non-standard interpretation of the modal operators and I indicate how the principle and its interpretation are of independent interest, quite apart from their role in understanding Aristotle."

"I begin by considering the different ways in which Aristotle's two principles might be formalized within the framework of propositional modal logic (Sect. 1). I then consider the deductive and semantic consequences of the different ways in which these principles might be formalized, using the apparatus of contemporary modal logic (Sect. 2). It is shown that the difficulties confronting Aristotle are even greater than might have been thought, since the second principle leads to 'modal collapse', the collapse of possibility to actuality, which is something that Aristotle had previously argued explicitly against.

Three recent attempts to get Aristotle 'off the hook' — those of Brennan (1994), Makin (1999 and 2006), and Nortmann (2006) — are considered and found wanting (Sect. 3). I then propose an alternative solution, which rests upon distinguishing between a world as the locus and as the witness of possibilities (Sect. 4). Once the semantics for Aristotle's use of the modalities is understood in this way, it becomes perfectly explicable why he would have wanted to endorse the converse principle and how he can avoid modal collapse. I defend this interpretation of Aristotle against some objections and try to indicate why it is of independent interest (Sect. 5). I conclude

with an attempt to vindicate Aristotle's argument for the first principle (Sect. 6)." (pp. 994-995)

37. ——. 2011. "An Abstract Characterization of the Determinate/Determinable Distinction." *Philosophical Perspectives* no. 25:161-187.

"My aim in this paper is to provide an account of what it is for the world to have a determinate/determinable structure. Patches have colors, people have heights, particles have mass. These are all instances of the determinate/determinable structure, with a given state of the world consisting in something's possessing a determinate (be it a given color or height or mass) from within a given determinable (color, height or mass). But what is it for the world as a whole to possess such a structure?

In the *Tractatus* , Wittgenstein took the atomic propositions, by which the world is to be described, to be completely independent of one another. But he later revised his view (Wittgenstein [1929]) and allowed that the atomic propositions might exhibit the kind of dependence that is characteristic of the way in which different determinants of a given determinable are exclusive of one another. Our question might therefore be put in the form: how in the most abstract terms should we conceive of the post-Tractarian world?" (p. 161)

James Garvey interview Kit Fine.

"We come finally to Fine's influential views on vagueness and the so-called "sorites" paradox.

The name comes from the Greek word for heap, "soros". Eubulides, an ancient Greek philosopher with a thing for paradoxes, asked, roughly, when do you go from a few grains of wheat to a heap? One grain doesn't count, neither do two or three or four, but keep adding grains and, eventually, you'd say that you do have a heap. The trouble is that for a range of borderline cases, we don't know what to do with the predicate "is a heap". There are a number of instances in which "This is a heap" is neither true nor false, but how could that be? When I ask Fine about his views on vagueness, he thinks for a very long minute, noticeably brightening as he does so, and finally tells me he's found an entirely new way to think about vague predicates.

"I can briefly outline my new view, which is very radical." He goes on, half smiling, "If I'm right almost everyone else is wrong." I lean in.

"Predicates can be vague. Take a predicate like bald. It's vague. Perhaps one way of expressing that is that the predicate is not completely determined in its application. Many people have thought that the phenomenon of vagueness is to be understood through borderline cases: what it is for a predicate to be vague is for there to be borderline cases. My view is that this approach to the problem of vagueness is fundamentally misguided. There is no intelligible notion of borderline case which is relevant to the phenomenon of vagueness. We have to achieve an understanding of vagueness in some other way.

(...)

The new thought is that that's a mistake, that the indeterminacy cannot be localised in that way.

We cannot point our finger at any one case.

“It means everyone else has been wrong. It leads to a very different conception of vagueness, the logic of vagueness, how you handle various problems. It leads to a completely new logic. It's something I've been thinking about.” (p. 27)

Kit Fine: annotated bibliography. Papers 2012-2022

Papers 2012-2022

1. Fine, Kit. 2012. "What is Metaphysics?" In *Contemporary Aristotelian Metaphysics*, edited by Tahko, Tuomas E., 8-25. Cambridge: Cambridge University Press.

"There are, I believe, five main features that serve to distinguish traditional metaphysics from other forms of enquiry. These are: the aprioricity of its methods; the generality of its subject-matter; the transparency or 'non-opacity' of its concepts; its eidicity or concern with the nature of things; and its role as a foundation for what there is. In claiming that these are distinguishing features, I do not mean to suggest that no other forms of enquiry possess any of them. Rather, in metaphysics these features come together in a single package and it is the package as a whole rather than any of the individual features that serves to distinguish metaphysics from other forms of enquiry.

It is the aim of this chapter to give an account of these individual features and to explain how they might come together to form a single reasonably unified form of enquiry. I shall begin by giving a rough and ready description of the various features and then go into more detail about what they are and how they are related." (p. 8).

2. ———. 2012. "Guide to Ground." In *Metaphysical Grounding: Understanding the Structure of Reality* edited by Correia, Fabrice and Schnieder, Benjamin, 37-80. Cambridge: Cambridge University Press.

"A number of philosophers have recently become receptive to the idea that, in addition to scientific or causal explanation, there may be a distinctive kind of metaphysical explanation, in which explanans and explanandum are connected, not through some sort of causal mechanism, but through some constitutive form of determination. I myself have long been sympathetic to this idea of constitutive determination or "ontological ground"; and it is the aim of the present chapter to help put the idea on a firmer footing – to explain how it is to be understood, how it relates to other ideas, and how it might be of use in philosophy. (1)" (p. 37)

(1) A number of other philosophers (they include Audi [forthcoming], Batchelor [2010], Schaffer [2009b], Correia [2005, 2010], Raven [2009], Rosen [2010], Schnieder [2011]) have done related work in defense of the notion; and I have not attempted to make a detailed comparison between their ideas and my own.

I am grateful to the participants at the Boulder conference on dependence and to Neil Tennant for many helpful comments on an earlier draft of the chapter. I should add that, for reasons of space, some of the material in the chapter originally submitted to the volume had been abridged.

3. ———. 2012. "A Difficulty for the Possible Worlds Analysis of Counterfactuals." *Synthese* no. 189:29-57.

"A number of different accounts of counterfactual statements have been proposed in the literature. It has been thought that they should be understood in terms of the closeness of possible worlds, for example, with the counterfactual from A to C being true if all sufficiently close worlds in which A is true are worlds in which C is true or that they should be understood in terms of some notion of cotenability, with the counterfactual from A to B being true if A in conjunction with truths cotenable with A entails C. But a common presupposition of almost all of these accounts is that counterfactual claims should be intensional. If the sentences A and AN or C and CN are necessarily equivalent then the substitution of AN for A or CN for C in the antecedent or consequent of a counterfactual should preserve its truth-value. Thus, under the usual form of the possible worlds account, the truth-value of a counterfactual will simply turn on the possible worlds in which the antecedent and the consequent are true and so the account will be unable to distinguish between the truth-values of counterfactuals whose antecedents or consequents are true in the same possible worlds and hence are necessarily equivalent while, under the entailment-based accounts, the entailments will remain the same under the substitution of necessary equivalents and so the truth-values of the counterfactuals will also remain the same. (1)

It is the aim of this paper to show that no plausible account of counterfactuals should take them to be intensional and that if

we are to describe the different kinds of counterfactual scenarios in the way we want and to reason about them in the way we would like, then the assumption of intensionality should be abandoned. Indeed, it is not merely the assumption of 'modal' intensionality that will fail but also the weaker assumption of 'logical' or 'classical' intensionality. For the cases we shall consider are ones in which the substitution of AN for A or CN for C should not be permitted, even though they are logical and not merely necessary equivalents." (pp. 29-30)

(1) The present paper expands on material in the first part of Fine, 'Counterfactuals without Possible Worlds', to appear in *Journal of Philosophy* [2012].

4. ———. 2012. "Counterfactuals Without Possible Worlds." *Journal of Philosophy* no. 109:221-246.

"Ever since the pioneering work of Stalnaker and Lewis (1), it has been customary to provide a semantics for counterfactuals statements in terms of possible worlds. Roughly speaking, the idea is that the counterfactual from A to C should be taken to be true just in case all of the closest worlds in which A is true are worlds in which C is true. Such a semantics is subject to some familiar difficulties - counterfactuals involving impossible antecedents, for example, or counterfactuals involving big changes consequential upon small changes. But it is not clear how seriously to take these difficulties - either because they might be met through some modification in the notion of closeness or because the intuitions on which the cases depend might be challenged or because the cases themselves might be dismissed as peripheral to the central use of the counterfactual construction; and nor has it been clear what a more satisfactory alternative to the possible world semantics might be put in its place." (p. 221)

5. ———. 2012. "Modal Logic and its Applications to the Philosophy of Language." In *The Routledge Companion to Philosophy of Language*, edited by Russell, Gilliam and Graff Fara, Delia 609-623. New York: Routledge.

"Modal logic is the logic of possibility and necessity and of other such notions. It began, as did logic in general, with Aristotle, in his theory of the 'modal syllogism'; and various notions and principles of modal logic were extensively discussed in the middle ages.

But the subject only came into its own at the beginning of the twentieth century (see Goldblatt 2005 for an account of its recent history).

I begin by presenting some basic material on the possible worlds' approach to modal logic and then show how it relates to certain key topics in the philosophy of language.

For reasons of space, I have had to be very selective and, inevitably, a great deal of interesting material has not been covered." (p. 609)

(...)

"7.6 Limitations

The possible worlds approach to meaning is subject to some well-known limitations. It cannot distinguish, for example, between knowing one necessary truth from knowing another. Or again, it may be permitted that I post the letter but not permitted that I post the letter or post the letter and burn down the post office, even though the two embedded clauses are true in the same possible worlds.

There is a question of how seriously to take these difficulties. My own view is that they cannot properly be overcome or ignored and that the possible worlds approach, for all of its success, can only be regarded as the first step towards a more adequate account of meaning." (p. 622)

6. ———. 2012. "The Pure Logic of Ground." *The Review of Symbolic Logic* no. 5:1-25.

"Ground is the relation of one truth holding in virtue of others. This relation is like that of consequence in that a necessary connection must hold between the relata if the relation is to obtain but it differs from consequence in so far as it required that there should also be an explanatory connection between the relata. The grounds must account for what is grounded. Thus even though P is a consequence of $P \& P$, $P \& P$ is not a ground for P , since it does not account for the truth of P .

It is the aim of this paper to develop a semantics and proof theory for the pure logic of ground. The pure logic of ground stands to ground as Gentzen's structural rules stand to consequence. One prescind from the internal structure of the propositions under consideration and simply asks what follows from what in virtue of the formal features of the underlying relation. Thus the claim that ground is transitive, that if P is a ground for Q and Q a ground for R then P should be a ground for R , is plausibly regarded as part of the pure logic of ground; but the claim that P is a ground for $P \& P$ will be part of the applied as opposed to the pure logic of ground, since it turns on the logical properties of $\&$." (p. 1)

7. ———. 2012. "Mathematics: Discovery or Invention." *Think* no. 11:11-27.

Abstract: "Mathematics has been the most successful and is the most mature of the sciences. Its first great master work – Euclid's 'Elements' – which helped to establish the field and demonstrate the power of its methods, was written about 2400 years ago; and it served as a standard text in the mathematics curriculum well into the twentieth century. By contrast, the first comparable master work of physics – Newton's *Principia* – was written 300 odd years ago. And the juvenile science of biology only got its first master work – Darwin's 'On the Origin of Species' – a mere 150 years ago. The development of the subject

has also been extraordinarily fertile, particularly in the last three centuries, and it is perhaps only in the last century that the other sciences have begun to approach mathematics in the steady accumulation of knowledge that it has been able to offer. There has, moreover, been almost universal agreement on its methods and how they are to be applied. What we require is proof; and, in practice, there is very little disagreement over whether or not we have it. The other sciences, by contrast, tend to get mired in controversy over the significance of this or that experimental finding or over whether one theory is to be preferred to another."

8. ———. 2013. "A Note on Partial Content." *Analysis* no. 73:413-419.

"Some philosophers have looked for a notion of partial content for which the content of A is in general part of the content of A & B but the content of $A \vee B$ is not in general part of the content of A. (1) But they have realized that these two requirements are in tension with one another. For A is logically equivalent to $(A _ B) \& A$ and so, if the content of $(A _ B)$ is part of the content of $(A \vee B) \& A$, it should also be part of the content of A.

There is a related difficulty for allied notions. Thus, one might want A & B to be partially true via A being true though not want A to be partially true via $A \vee B$ being true (since $A \vee B$ might be true through B being true, which has nothing to do with A). Or one might want A & B to have at least much truth in it as A even though A does not in general have at least much truth in it as $A \vee B$. Or one might want A to confirm A & B but not want $A \vee B$ to confirm A (since $A \vee B$ might in its turn be confirmed by B).

In this note, I show that this difficulty is of a quite general nature and does not simply arise from the desire to have the content of A be part of the content of A & B but not have the content of $A \vee B$ be part of the content of A." (p. 413)

Comments on Siders' 'Writing the Book

of the World' [*]

"Ted Sider's 'Writing the Book of the World' is a bold and ambitious work, offering original and provocative answers to a wide range of questions within metaphysics and meta-metaphysics. The book is focused on the topic of fundamentality—of what is fundamental and of what it is to be fundamental and, although Sider is largely concerned to develop his own positive views on the topic, he does devote a couple of sections (§§8.1-2) to my views, as laid out in the paper, 'The Question of Realism'. (1) I hope I may therefore be forgiven for devoting my attention to some of the more critical points that he makes in these sections." (p. 725)

10. ———. 2014. "Truth-Maker Semantics for Intuitionistic Logic." *Journal of Philosophical Logic* no. 43:549-577.

Abstract "I propose a new semantics for intuitionistic logic, which is a cross between the construction-oriented semantics of Brouwer-Heyting-Kolmogorov and the condition-oriented semantics of Kripke. The new semantics shows how there might be a common semantical underpinning for intuitionistic and classical logic and how intuitionistic logic might thereby be tied to a realist conception of the relationship between language and the world."

"I wish to propose a new semantics for intuitionistic logic, which is in some ways a cross between the construction-oriented semantics of Brouwer-Heyting-Kolmogorov (as expounded in [8], for example) and the condition-oriented semantics of Kripke [6]. The new semantics is of some philosophical interest, because it shows how there might be a common semantical underpinning for intuitionistic and classical logic and how intuitionistic logic might thereby be tied to a realist conception of the relationship between language and the world. The new semantics is also of some technical interest; it gives rise to a framework, intermediate between the frameworks of the two other approaches, within which several novel questions and approaches may be pursued.

I begin with a philosophical discussion and conclude with a long technical appendix. In principle, the two can be read independently of one another but it is preferable if the reader first gains a formal and informal understanding of the semantics and then goes back and forth between the philosophical and technical exposition. (1)" (pp. 549-550)

(1) An earlier version of this paper was presented at a conference on truthmakers in Paris, 2011, and at a conference on the philosophy of mathematics in Bucharest, 2012. I should like to thank the participants of these two conferences for helpful comments and also an anonymous referee for the journal. After completing the paper, I learned that Ciardelli's thesis [1] on inquisitive logic contains some related work.

In particular, the system HH of the appendix is similar to the system for inquisitive logic while lemma 22 corresponds to the disjunctive-negative normal form theorem for inquisitive logic. It would be worthwhile to explore the connections between the two approaches in more detail. I should like to thank Ivano Ciardelli for bringing his thesis to my attention and for helpful correspondence.

- "I propose a new theory of vagueness. It differs from previous theories in two main respects. First, it treats vagueness as a global rather than local phenomenon, i.e. vagueness always relates to a number of cases rather than a single case. Second, it treats vagueness as a logical rather than a material matter, i.e. vagueness can be expressed by logical means alone without the help of additional vagueness-theoretic primitives. I shall criticize alternative views, develop a logic and semantics for my own view, and explain how it deals with the sorites."
12. ———. 2014. "Recurrence: A Rejoinder." *Philosophical Studies* no. 169:425-428.

"I am grateful to Nathan Salmon (in Salmon [2012]) for being willing to spill so much ink over my monograph on semantic relationism [2007], even if what he has to say is not altogether complimentary. There is a great deal in his criticisms to which I take exception but I wish to focus on one point, what he calls my 'formal disproof' of standard Millianism. He believes that 'the alleged hard result is nearly demonstrably false' (p. 420) and that the disproof contains a 'serious error' (p. 407). Neither claim is correct; and it is the aim of this short note to explain why." (p. 425)

13. ———. 2014. "Permission and Possible Worlds." *Dialectica* no. 68:317-336.

"It is often taken for granted, by philosophers and linguists alike, that one can give an account of the truth-conditions of statements of permission in terms of possible worlds, that it will be permissible to see to it that p just in case p is true in some permissible or 'deontically accessible' world. In this paper, I shall argue that if statements of permission are to serve their purpose as a guide to action then no possible worlds account of their truth-conditions can possibly be correct. In a previous paper, I presented a simple argument against the possible worlds account of counterfactuals (The author [2012a], p. 45); and the present paper arose from my seeing that a similar form of argument applied with even greater force against the possible worlds account of statements of permission.

The objection may be briefly and loosely stated as follows. Suppose God has placed infinitely many apples a_1, a_2, a_3, \dots in Alternative Eden and tells Eve (for some reason, this is not mentioned in the Bible) :

You may eat infinitely many of the apples a_1, a_2, a_3, \dots

What then is Eve permitted to do?

She might initially have thought that she is permitted to eat all of the apples, say, or all but one, or every other apple, and so on. But whatever her other failings, she is not lacking in logical acumen. She realizes that eating infinitely many of the apples a_1, a_2, a_3, \dots is logically equivalent to eating infinitely many of the apples $a_0, a_1, a_2, a_3, \dots$, where a_0 happens to be the apple from the Tree of Knowledge in Original Eden and so, she reasons, if the truth of permission claims is preserved under the substitution of logical equivalents, as it should be under a possible worlds account, then God might just as well have said:

You may eat infinitely many of the apples $a_0, a_1, a_2, a_3, \dots$

But if God has said this she would have been permitted to eat the Forbidden Fruit in combination with an infinite selection of

the other apples; and so she goes ahead and eats the Forbidden Fruit.

Yet clearly, there is nothing in God's initial statement of permission that actually justifies Eve in eating the Forbidden Fruit, as she soon discovers to her dismay." (pp. 317-318)

14. ———. 2015. "Unified Foundations for Essence and Ground." *Journal of the American Philosophical Association* no. 1:296-315.

"There are, I believe, two different kinds of explanation or determination to be found in metaphysics - one of identity, or of what something is, and the other of truth, or of why something is so. One may explain what singleton Socrates is, for example, by saying that it is the set whose sole member is Socrates and one may explain why, or that in virtue of which, singleton Socrates exists by appeal to the existence of Socrates. One might talk, in connection with the first, of essence, of what singleton Socrates essentially is and, in connection with the second, of ground, of what grounds the existence of singleton Socrates. (1)

Of course, explanations of identity and of truth also occur outside of metaphysics, but what is characteristic of their occurrence within metaphysics is the especially tight connection between explanandum and explanans. Being a set whose sole member is Socrates is somehow constitutive of what Socrates is; and Socrates' existing is somehow constitutive of the existence of singleton Socrates. It is perhaps hard to say in general what constitutes a constitutive explanation but it is at least required, in any case of a constitutive explanation, that there should be metaphysically necessary connection between explanandum and explanans. Given that singleton Socrates is essentially a set whose sole member is Socrates, then it is metaphysically necessary that the set is one whose sole member is Socrates; and given that Socrates existence grounds the

existence of singleton Socrates, it will be metaphysically necessary if Socrates exists that his singleton exists." (p. 296)

(...)

"My present view is that the relationship between the two kinds of explanation is much closer than I had originally taken it to be. The decisive step towards achieving the desired rapprochement is to see both kinds of explanation as having a generic, as well as a specific, bearing on the objects with which they deal; they must be allowed to have application to an arbitrary individual of a given kind and not just to specific individuals of that kind. Once this step is taken, the initial disparities between essence and ground disappear and we are able to provide a unified and uniform account of the two notions. I had previously referred to essence and ground as the pillars upon which the edifice of metaphysics rests (Fine [2012], p. 80), but we can now see more clearly how the two notions complement one another in providing support for the very same structure." (p. 297)

(1) I should like to thank the members of audiences at Birmingham, Oxford and Oslo for many helpful comments. The present paper is a companion to my paper 'Identity Criteria and Ground' and the reader may find it helpful, if not essential, to have the other paper at hand. I should note that Correia [2014] attempts to provide unified foundations, of a very different sort, in terms of an underlying notion of factual identity.

There has been a growing literature on essence and ground in the recent philosophical literature. My own work on essence dates back to Fine [1994]; and a useful reference on ground is the anthology of Correia & Schnieder [2012].

15. ———. 2016. "Angelic Content." *Journal of Philosophical Logic* no. 45:199-226.

"In a number of publications dating from 1977, Angell developed various systems of analytic entailment. The intended interpretation of a statement $A \rightarrow B$ of analytic entailment is that the content of B should be part of the content of A, and a guiding principle behind the understanding of partial content is that the content of A and of B should each be part of the content of $A \wedge B$ but that the content of $A \vee B$ should not in general be part of the content of either A or B. Thus partial content cannot be understood as classical consequence or even as relevant consequence under its more usual interpretation.

Quite independently of Angell's work, I had attempted to develop a semantics for partial content in terms of truthmakers. It was taken to be an intuitive requirement on a truthmaker, or verifier, for a given statement that the verifier should be relevant to the truth of the statement and I had thought that one might take the analytic entailment $A \rightarrow B$ to hold if every verifier for A contained a verifier for B and if every verifier for B was contained in a verifier for A.

I was naturally interested in the resulting logic of entailment.

Much to my surprise, I discovered that the resulting logic coincided with the first degree fragment of Angell's system. Under the proposed account of partial content, his system exactly captures the logic of partial content, once the content of a statement is identified with a suitable set of verifiers."

(...)

"The paper has 10 sections in all. I detail the systems of analytic entailment to be considered (§1). I provide an outline of the truthmaker semantics (§2), give a definition of containment as a relation between contents (§3), and relate containment to the notion of subject-matter (§4). I establish soundness (§5) and then establish completeness by means of disjunctive normal forms (§§6-7). I consider two alternative semantics for the system, one in terms of falsifiers as well as verifiers (§8), and the other in terms of a many-valued logic (§9). I conclude by briefly considering some of the ways in which the system might be extended (§10)."

16. ———. 2016. "Identity Criteria and Ground." *Philosophical Studies* no. 173:1-19.

"Philosophers often look for criteria of identity or think they are not to be found. They may ask for a criterion of identity for sets, for example, or for propositions, or for persons across time, or for individuals across possible worlds. And in response to such requests, they have said such things as: a criterion of identity for sets is their having the same members; or a criterion of

identity for persons across time is their psychological continuity. (1)

But what are these philosophers asking for when they ask for such criteria? I shall argue that the usual way of construing these questions is seriously misguided. I shall also propose an alternative - and, I hope, preferable - way of construing these questions and shall briefly indicate its significance for our more general understanding of metaphysical explanation. In what follows, I shall often use the criteria of identity for sets and for persons as examples. But it is important to bear in mind that they are just that, examples, and that the points I make concerning them are meant to apply, across the board, to all identity criteria." (p. 1)

17. ——. 2016. "Williamson on Fine on Prior on the reduction of Possibilist Discourse." *Canadian Journal of Philosophy* no. 46:548-570.

"Timothy Williamson's *Modal Logic as Metaphysics* (2013; MLM) is a tour de force — comprehensive in its scope, brilliant in its argumentation, and startling in its conclusions. It merits discussion on a wide range of different fronts, but I hope I can be forgiven for focusing on chapter 7 of the book, in which Williamson criticizes my attempt to carry out Prior's project of reducing possibilist discourse to actualist discourse.

My response is in three main parts. I begin by discussing what the reductive project should be. Williamson and I disagree on this question and, although it is not important for the evaluation of my own reductive proposal, it is important for a broader understanding of the metaphysical issues at stake. I then discuss and evaluate Williamson's criticisms of my original reductive proposal. Although I believe that these criticisms can to some extent be met, they point to the need for a more satisfactory and less contentious form of reduction. Finally, I lay out the new proposed reduction; it is based on the

idea of finding a general way of extending a reduction of first-order discourse to higher order discourse." (p. 548)

18. ———. 2017. "The Possibility of Vagueness." *Synthese* no. 194:3699-3725.

"I wish in this paper to propose a new approach to the topic of vagueness. It is different from the supervaluational approach, which I had previously advocated in Fine (1975), and from almost all other approaches in the literature of which I am aware.(1) There are two principal respects in which it differs from previous approaches: one concerns the global character of vagueness, of how vagueness relates to a whole range of cases and not merely to a single case; the other concerns the logical character of vagueness, of how it is capable of being conveyed by logical means alone. And so let me say a little more about these two features of the view before proceeding to the account itself." (p. 3699)

(1) The one exception appears to be Zardini (2014), although his view appears to be very different from mine in a number of fundamental respects.

19. ———. 2017. "A Theory of Truthmaker Content I: Conjunction, Disjunction and Negation." *Journal of Philosophical Logic* no. 46:625-674.

Abstract: "I develop a basic theory of content within the framework of truthmaker semantics and, in the second part, consider some of the applications to subject matter, common content, logical subtraction and ground."

"The paper is in two parts - the present part dealing with the familiar concepts of conjunction, disjunction and negation and the subsequent part dealing with the less familiar concepts of

subject-matter, common content, logical remainder and ground.

We shall provide an account of the quasi-structural notions of conjunctive and disjunctive part in the present part, but it is only in the second part that the approach will come into its own and its distinctive contribution to the theory of content become most apparent. Each of the two parts begins with an informal exposition of the material and concludes with a technical addendum. In principle, the exposition and addendum could be read independently of the other, though the reader may find it helpful to go back and forth between them." (p. 626)

20. ———. 2017. "A Theory of Truthmaker Content II: Subject-matter, Common Content, Remainder and Ground." *Journal of Philosophical Logic* no. 46:675-702.

"We continue with the development of the theory of truthmaker content begun in part I, dealing with such 'non-standard' topics as subject matter, common content, logical remainder and ground. This is by no means an exhaustive list of topics that might have been considered but it does provide an indication of the nature and scope of the theory. As before, the paper is divided into an informal exposition and a technical addendum. Both can be read independently of the other but it would be helpful, in either case, to have the first part of the paper at hand." (p. 675)

21. ———. 2017. "Naive Metaphysics." *Philosophical Issues. A Supplement to NOÛS* no. 27:98-113.

"Metaphysics has two central concerns. One is with the nature of things, with what they are like; and the other is with reality, with what there is.

(...)

We therefore arrive at a traditional distinction within metaphysics between *ontology*, which is concerned with what there is, and what one might call *metaphysics proper*, which is concerned with the nature of what there is.(2) I wish, in this paper, to argue that this traditional division in the subject-matter of metaphysics is misguided and the connection

between its two branches misconceived and that it should be replaced by a different division of the subject matter — into what I call *naive* and *foundational metaphysics* — and by a different conception of how the two branches are related. If I am right, then a good deal of metaphysical enquiry has labored under a false or unduly limited view of what the questions of metaphysics are and of how they are to be answered and it is only by reconfiguring the metaphysical landscape that we can obtain a proper view of how the subject should be pursued." (p. 98)

(2) I have in mind here a recent tradition within analytic philosophy, perhaps derived from Quine, and not the more historical tradition deriving from Aristotle.

"My aim in the present chapter is to explain the basic framework of truthmaker or 'exact' semantics, an approach to semantics that has recently received a growing amount of interest, and then to discuss a number of different applications within philosophy and linguistics." (p. 556)

23. ———. 2017. "Form." *Journal of Philosophy* no. 114:509-535.

"This paper is a belated sequel to my paper on Cantorian abstraction.(1) In that paper, I attempted to defend Cantor's account of cardinal numbers as sets of units, using a theory of arbitrary objects that I had previously developed to explain what the units were.(2) Of course, no one now adopts Cantor's own account of cardinal number, preferring instead von Neumann's elegant treatment of cardinal numbers as initial ordinals; this may have led some readers—or potential readers—of my earlier paper to dismiss it as being of purely scholarly interest. But as I had already mentioned in the paper on Cantorian abstraction, "the Cantorian theory can be extended to provide a more general theory of types—covering not merely the abstract formal types of mathematics but also the more concrete types of ordinary and scientific discourse" [p. 602]; in

the present paper, I wish to consider the extension of the account to these other kinds of types (or what I now also wish to call *forms*)." (p. 509)

25. ———. 2018. "Compliance and Command II, Imperatives and deontics." *The Review of Symbolic Logic* :1-25.

"In this part of the paper, I am interested in providing a semantics and logic for deontic sentences and working out their connection with the previous semantics and logic for imperatives.

(...)

The plan of the paper is as follows. I begin by making some distinctions and stipulations which will be useful in the rest of the paper (§1); I introduce and explain the key notion of a code

of conduct, relative to which deontic formulas are to be interpreted (§2); I give the clauses for when a deontic formula is true or false relative to a code of conduct (§3) and spell out some of the consequences of these clauses, especially in regard to the contrast with the standard possible worlds semantics for deontic logic (§4); I consider various ways of reformulating the criterion of validity for deontic formulas and point, in particular, to a very close connection between this criterion and the criterion of validity for imperative inference proposed in part I (§5); I consider some of the characteristic inferences that are or fail to be valid (§6) and outline a system of deontic logic within the truthmaker approach (§7); I show how one might deal with the problem of deontic updating within the truthmaker framework (§8); and I conclude with a brief formal appendix.

I assume the reader is familiar with the basic material from part I, including the truthmaker semantics for imperatives and the definition of validity for imperative inference; and it would also be helpful for her to have some knowledge of the standard possible worlds semantics for deontic logic." (p. 1)

26. ———. 2018. "The World of Truthmakers." In *Being Necessary: Themes of Ontology and Modality from the Work of Bob Hale*, edited by Fred-Rivera, Ivette and Leech, Jessica, 36-59. Oxford: Clarendon Press.

"It is a common idea that the full resources of possible worlds semantics are not required to provide an intensional semantics for classical logic. For these purposes, one need only appeal to partial possibilities, or what I shall call 'states', as long as one is willing to modify the usual clauses for the connectives or the definition of validity or perhaps both.

Humberstone (1981), Hale (2013), Rumfitt (2015), and Holliday (2015) are among those who have attempted to develop a semantics of this sort; and manifestations of the same idea are to be found within situation semantics and in the more recent work on inquisitive semantics. It is an approach to semantics to which I myself have been attracted, both in earlier unpublished work and in some recent work on 'exact'

truthmaking; and, indeed, it was from the attempt to relate 'exact' truth-maker semantics to the other semantical approaches that the present work arose." (p. 36, notes omitted)

28. ———. 2019. "Verisimilitude and Truthmaking." *Erkenntnis* no. 86:1239-1276.

Abstract: "I provide and defend a hyper-intensional account of verisimilitude within the truthmaker framework."

"The main aim of this paper is to apply the recently developed framework of truthmaker semantics to the problem of verisimilitude, or likeness to the truth. Some important initial steps in this direction were taken by Gemes (2007); and some further steps have been taken by Yablo (2014, §6.7). My own thinking on the topic is somewhat different from theirs, however, both in its general conception of truthmaker semantics and in the specific application of the semantics to the concept of verisimilitude; and my hope is that these various accounts, when taken together, will go some way towards

demonstrating the general fruitfulness of the approach." (p. 1239, a note omitted)

29. Fine, Kit, and Jago, Mark. 2019. "Logic for Exact Entailment." *The Review of Symbolic Logic* no. 12:536-556.

Abstract: "An *exact truthmaker* for A is a state which, as well as guaranteeing A 's truth, is wholly relevant to it. States with parts irrelevant to whether A is true do not count as exact truthmakers for A .

Giving semantics in this way produces a very unusual consequence relation, on which conjunctions do not entail their conjuncts. This feature makes the resulting logic highly unusual. In this paper, we set out formal semantics for exact truthmaking and characterise the resulting notion of entailment, showing that it is compact and decidable. We then investigate the effect of various restrictions on the semantics. We also formulate a sequent-style proof system for exact entailment and give soundness and completeness results."

30. Fine, Kit. 2020. "The Identity of Social Groups." *Metaphysics* no. 3:81-91.

"I am of the opinion, along with a number of other philosophers, that social groups and organizations are of the same general nature as material things: the differences, insofar as they exist, are intra- rather than extra-categorical. Thus if we wish to understand what it is to be a member of a group, or to understand how a group can change its members while remaining the same, or to understand how two groups can have the very same members, then the answers we should give will be essentially the same as the answers we should give to the questions as to what it is to be a constituent of a material thing, or how a material thing can change its constitution over time,

or how two material things can have the very same material constitution.

I have attempted to answer these questions in the case of material things in an earlier paper (Fine 1999). My view, roughly speaking, is that there are three basic operations by which material things may be formed from some underlying matter. One of these is the familiar operation of compounding or fusion, whereby two or more things may combine to form a sum. The other two operations are less familiar and their admission constitutes a fundamental departure from standard mereological doctrine. I call them rigid and variable embodiment. Rigid embodiment is an operation whereby various objects are combined into a whole whose component parts bear certain properties or stand in certain relations to one another. Thus the component parts are not merely fused but integrated into some kind of structured whole. Variable embodiment, on the other hand, is an operation whereby we may form an object that is manifested as different, more particular, objects at different times or in different counterfactual circumstances. The one operation accounts for the constitution of the object at a time, while the other accounts for the actual or possible changes in its constitution." (p. 81, notes omitted)

31. ———. 2020. "Semantics." In *The Routledge Handbook of Metaphysical Grounding*, edited by Raven, Michael J., 501-509. New York: Routledge.

"It has often been supposed that there need only be a modal connection between a truth-maker and the sentence it makes true or that the truth-maker need only be partially relevant to the sentence it makes true, so that the fact that it is raining and windy, for example, would then be a truth-maker for the sentence 'it is raining or snowing'. It is therefore important to note that the notion of ground gives rise to a quite distinctive notion of truth-making, which requires not merely a modal connection but also a very strong relevant connection.

Truth-making has been used for two quite distinct ends, one metaphysical and the other semantical. By attempting to

discern the truth-makers of sentences, it has been thought that we might achieve a better understanding of the world via an understanding of *what* makes the sentences true and also that we might achieve a better understanding of language via an understanding of *how* the sentences are made true." (p. 502, note omitted)

32. ———. 2020. "Yablo on subject-matter." *Philosophical Studies* no. 177:129-171.

Abstract: "I discuss Yablo's approach to truthmaker semantics and compare it with my own, with special focus on the idea of a proposition being true of or being restricted to some subject-matter, the idea of propositional containment, and the development of an 'incremental' semantics for the conditional. I conclude with some remarks on the relationship between truth-maker approach and the standard possible worlds approach to semantics."

"I have recently developed a new approach to vagueness and, in this chapter, I wish to show how this approach applies to ontic indeterminacy—or vagueness in the world.

Although the supervaluational approach, which I previously endorsed in Fine (1975), is often associated with a representational conception of indeterminacy—vagueness in language or in thought, it is worth noting that I have always

been sympathetic to the idea of ontic indeterminacy. Thus in footnote 10 of the earlier paper, I write “Philosophers have been unduly dismissive over intrinsically vague entities.” I am therefore especially pleased that the present approach is not only able to rehabilitate the ontic conception of indeterminacy but to rehabilitate it in such a way as to make it continuous with the more usual representational conception of indeterminacy.(1)” (p. 141)

"Percival is interested in what Kierland and Monton (2007: 487) call the "Reality Principle":

(RP) Reality consists, and only consists, in things and how things are.

He is interested in two different ways in which the all-encompassing conception of reality suggested by this principle may be challenged. We may, on the one hand, wish to restrict reality to only some of the things or to only some of the ways in which things are. This is how my reality predicate from QO and my reality operator from QR work; they effect a division within things or within how things are. We may, on the other hand, wish to allow for something beyond the things or how things are and hence beyond reality itself if reality only consists in things and how things are. Percival considers a number of different ways in which each of these two restrictive conceptions of reality might play out and he considers a striking application of the second conception to the case of time: for under a certain restrictive version of presentism, one may wish to claim both that reality consists in present things or how things presently are and that the past is somehow beyond reality as so conceived.

In what follows, I shall simply focus on the application of the second restrictive conception of reality to the case of time, since I think the framework suggested by my RT and TR may help in providing a proper formulation of the view." (p. 403)

"Alasdair Urquhart's chapter is a wonderful mix of observations on the theory of arbitrary objects, ranging over a number of historical, logical, and philosophical aspects of the theory. I was especially interested in what he had to say about the evolving conception of variables in the history of mathematics and, in the light of my own previous somewhat casual remarks on the topic, I would now like to follow up on his discussion." (p. 418)

39. ———. 2020. "Comments on Gabriel Sandu's "Indefinites, Skolem Functions, and Arbitrary Objects." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 423-428. New York: Oxford University Press.

"The main focus of my monograph *Reasoning with Arbitrary Objects* (Fine 1985) was on the application of arbitrary objects to systems of natural deduction. But as Sandu points out, I also thought that appeal to arbitrary objects "would be useful for the semantic analysis of both mathematical and ordinary language." Although I spent a great deal of effort at the time in working on these further applications, I did not write up my work. I therefore hope it may be helpful if I say a little more on how I intended these applications to proceed. However, I

should warn the reader that my thoughts on the topic are still somewhat tentative and underdeveloped and that I have here made no attempt to defend the position or to compare it with any of the many other competing views on the topic." (p. 423)

40. ———. 2020. "Comments on Kathrin Koslicki's "Essence and Identity"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 429-434. New York: Oxford University Press.

"Kathrin Koslicki's chapter is a wonderfully bold and innovative attack on the question of crossworld-identity: Quine thought Aristotelian essentialism was the problem; and she takes Aristotelian hylomorphism to be the solution." (p. 429)

41. ———. 2020. "Comments on Graeme Forbes's "Fine's New Semantics of Vagueness"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 435-443. New York: Oxford University Press.

"Graeme Forbes is well known for his advocacy of a degree-theoretic approach to vagueness, especially in application to questions of identity; and I am grateful to him for casting his expert and critical eye over my own, very different, approach." (p. 435)

42. ———. 2020. "Comments on Steven T. Kuhn's "Necessary, Transcendental, and Universal Truth"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 444-449. New York: Oxford University Press.

"I should begin with an apology. In my paper "Necessity and Non-existence" (NN), I made no reference to the importantly related work of Prior in appendix C of Prior 1957 and to the importantly related work of Steven Kuhn in his superb thesis (Kuhn 1977). The oversight was doubly unfortunate in that Prior was my mentor and Kuhn my student; and my only excuse is that, in the haste to prepare my own paper for publication, I failed to take proper heed to the previous literature, even when it was already known to me.

In NN, I attempted to argue for a distinction between worldly and unworldly sentences, analogous to the distinction between

tensed and tenseless sentences. Kuhn is willing to accept the distinction, but he does not like my argument for the distinction and thinks that I mischaracterize the connection between the necessary and the unworldly." (p. 444)

43. ———. 2020. "Comments on Gideon Rosen's "What is Normative Necessity?"". In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 450-455. New York: Oxford University Press.

"Gideon Rosen supports the central theses of "Varieties of Necessity" (VN) concerning the distinction between metaphysical and normative necessity and the proper formulation of moral supervenience; and he takes the defense of these theses much further than I did in my own paper and makes the case for them especially vivid and compelling. I was especially impressed by his attempt to find out what might lie behind the distinction between metaphysical and normative necessity and the doctrine of supervenience and to show how the resulting metaphysical view might have significant implications for the epistemology of moral belief.

In what follows, I would like to draw a further distinction and to work through some of the consequences of this distinction for various of the issues that Rosen raises. Some of the points I make in this regard may be familiar, though not the general context in which they are made." (p. 450)

44. ———. 2020. "Comments on Bob Hale's "The Problem of *de re* Modality"". In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 456-460. New York: Oxford University Press.

"There is a great deal in Hale's chapter which I admire and with which I agree. In particular, I would go along with him in

drawing a distinction between the syntactic and semantic *de re*, in finding no reasonable basis for modality *de re* within a linguistic conception of modality, and in diagnosing where Quine's argument (or what I would call his "logical" argument) goes wrong. However, in typical philosophical fashion, I shall focus on two points of disagreement, one concerning the problem of accounting for the *de re* form of modality within the linguistic conception, and the other concerning whether Quine should be regarded as having one or two arguments against quantifying into modal contexts." (p. 456)

45. ———. 2020. "Comments on Penelope Mackie's "Can Metaphysical Modality Be Based on Essence?"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 461-465. New York: Oxford University Press.

"Penelope Mackie's chapter raises a serious challenge to the essentialist account of modality." (p. 461)

"I would like to think that in a properly systematic account of first-order metaphysical enquiry we could simply take the notion of necessitist essence as primitive and that nothing would be thereby lost, and something even gained, by defining the other notions in terms of it in the way I have explained. But I have to admit that, for certain—perhaps quite limited—purposes, this point of view may be unduly restrictive and that we should therefore be open to there being independently given notions of neutral essence or metaphysical necessity." (p. 465)

46. ———. 2020. "Comments on Fabrice Correia's "More on the Reduction of Necessity to Essence"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 466-470. New York: Oxford University Press.

"I have long admired Fabrice Correia's work on the conceptual foundations of metaphysics and his present chapter is a characteristically judicious and original contribution to the subject.

He is principally concerned with certain reductive theses that I propounded in "Essence and Modality" (EM; 1994). These are

that a metaphysical necessity is a proposition true in virtue of the nature of all objects, that a conceptual necessity is a proposition true in virtue of the nature of all concepts, and that a logical necessity is a proposition true in virtue of the nature of all logical concepts. Given that there are different notions of what it is for a proposition to be true in virtue of the nature of some objects, Correia's interest is in what notion or notions of this sort might underwrite these various reductive claims and, to this end, he is prepared in principle to relinquish any other desiderata one might wish to impose upon these notions." (p. 466)

47. ———. 2020. "Comments on Jessica Wilson's "Essence and Dependence"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 471-475. New York: Oxford University Press.

"Jessica Wilson's paper is a wonderfully sympathetic account of my general approach to metaphysics; and there is a special satisfaction to be had in being, not merely understood, but understood so well.

(...)

But her paper is not all praise. For she wishes to criticize my account of ontological dependence in terms of essence - perhaps as part of a larger critique of the use of a general notion of dependence in metaphysics (§ 4). In a number of papers, I have suggested that an object x will depend upon an object y if and only if y figures in the essence of x , i.e., if and only if, in giving an account of what x is, reference must be made

y . But she thinks that this equivalence may fail in the right to left direction, that an object y may figure in the essence of x without x depending upon y (she may be perfectly happy with the left to right direction, though this is not something that she discusses)." (p. 471)

48. ———. 2020. "Comments on Scott Shalkowski's "Essence and Nominalism"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 476-481. New York: Oxford University Press.

"Scott Shalkowski and I share a distaste for the ontological extravagance of modal realism and it is a delight to read him write with such eloquence and passion on the need for "sober metaphysics."

However, there is a point on which we appear to disagree and this has to do with the formulation and defense of nominalism; and it will perhaps help to illuminate the general doctrines of QR and QO by drawing out the contrast between our different views in this particular case." (p. 476)

QU = Question of Ontology

49. ———. 2020. "Comments on Robert Goldblatt's "Fine's Theorem on First-Order Complete Modal Logics"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 482-484. New York: Oxford University Press.

"I am grateful to Robert Goldblatt for his lucid and masterly chapter on "canonicity" in modal logic.

(...)

I have nothing of a technical interest to add to what Goldblatt writes, but I did think that it might be helpful to say something more about the context in which I pursued some of these early enquiries into the mathematical foundations of modal logic. There is no doubt that the Lemmon Scott notes served as a great stimulus to those of us who were working in the area. Kripke's original completeness proofs in terms of semantic tableaux were inelegant and unwieldy (as pointed out by Kaplan in his review; 1966), and the Lemmon Scott method of canonical models held out the hope of providing a simple and uniform method of proving completeness for a wide range of modal logics." (p. 482)

50. ———. 2020. "Comments on Gary Ostertag's "Fine on Frege's Puzzle"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 485-490. New York: Oxford University Press.

"Gary Ostertag's chapter is an intriguing and probing investigation into the concept of coordination, or *de jure* co-reference, in which he is concerned not only to criticize the views on coordination which I presented in "Semantic Relationism" (SR) but also to develop a view of his own, one in which coordination is not a feature of what we say, but of how we say it.

There are perhaps two main points on which Ostertag takes us to disagree: one concerns whether coordination is syntactic in nature; and the other concerns whether a coordinated sentence expresses a coordinated, as opposed to an uncoordinated, proposition. However, as I read through his chapter, it was hard for me to get a firm sense of where our disagreement lay; and I was inclined to think, at the end of the day, that there was perhaps no real disagreement between us at all." (p. 485)

51. ———. 2020. "Comments on Paolo Bonardi's "Coordination, Understanding, and Semantic Requirements"." In *Metaphysics, Meaning, and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 491-495. New York: Oxford University Press.

"Paolo Bonardi has written extensively and illuminatingly on direct reference theory, and I am grateful for his present comments on the conceptual foundations of semantic relationism.

Central to the doctrine of semantic relationism is the relation of coordination.

(...)

As I mention in *Semantic Relationism* (p. 40), "other philosophers can acknowledge the phenomenon [of

coordination]”; and, indeed, I think that any reasonable view should recognize the distinction between the two kinds of co-reference. What is distinctive about semantic relationism is that the phenomenon of coordination is taken to be both semantic (as opposed to syntactic) and essentially relational (as opposed to supervening on the intrinsic meanings of the individual terms)." "The present paper is a characteristically rich, original and thought-provoking contribution to the subject; and I am afraid that I can do no more than pick my way through one or two of the many interesting issues that she raises. However, any criticisms I make on this score should not be seen to detract from my broad agreement with much of what she says." (p. 496, a note omitted)

53. ———. 2021. "Constructing the Impossible." In *Conditionals, Paradox, and Probability: Themes from the Philosophy of Dorothy Edgington*, edited by Walters, Lee and Hawthorne, John, 141-163. New York: Oxford University Press.

"In recent years, I have been working on a version of situation semantics - one might call it 'truthmaker semantics'—which is meant to provide an alternative to possible worlds semantics. One of the things that has struck me about this alternative semantics is how easily it is able to accommodate the impossible. Rather than being an artificial addition to the possibilist semantics, the impossible emerges as a natural —one might almost say *inevitable* — extension of the possible, in much the same way in which the system of real numbers emerges as a natural extension of the rational number system or the system of complex numbers emerges as a natural extension of the real number system. It is the aim of this paper to show how this is so; and, if I am successful, then this will constitute an argument for the admission of the impossible into semantics—something which I myself have been slow to

appreciate — but also for truthmaker semantics itself as a viable and valuable alternative to the possible worlds approach.

I begin with an exposition of a standard approach to truthmaker semantics, using possible states in place of possible worlds (Section 9.1). I go on to describe a key construction, analogous to the extension of the rationals to the reals, for extending a space of possible states to one that also contains impossible states (Section 9.2). This has a number of advantages — mathematically and in theory and application — over the more usual approaches (Section 9.3-9.4). I then describe another construction, somewhat analogous to the extension of the reals to the complex numbers, which provides further resources for countenancing the impossible and further applications (Section 9.5).

I conclude with a lengthy formal appendix." (pp. 143-144)

54. ———. 2021. "Truthmaking and the is-ought gap." *Synthese* no. 198:887–914.

Abstract: "This paper is an attempt to apply the truthmaker approach, recently developed by a number of authors, to the problem of providing an adequate formulation of the is-ought gap. I begin by setting up the problem and criticizing some other accounts of how the problem should be stated; I then introduce the basic apparatus of truth-making and show how it may be extended to include both descriptive and normative truth-makers; I next consider how the gap principle should be formulated, attempting to deal as systematically as possible with the 'harmless' counter-examples; I also consider the relationship between the gap principle and various other doctrines concerning the separation between the normative and descriptive realms; and I conclude this part of the paper with some general remarks in favor of adopting the truth-maker approach over some of the alternative approaches. The paper concludes with a formal appendix, which gives precise expression to some of claims made in the previous informal part of the paper."

55. ———. 2021. "Some Remarks on the Role of Essence in Kripke's "Naming and Necessity"." *Theoria* :1-3.

First on line.

Abstract: discuss the use Kripke makes of the concept of essence in "Naming and Necessity".

"So much has already been written about *Naming and Necessity* ; and all that I would like to do in what follows is to make a few brief remarks about the relationship between the notions of essence and de re necessity in that work. Now, it might be thought that these remarks could be very brief indeed." (p. 1)

56. ———. 2021. "Critical Notice. The Metaphysics and Mathematics of Arbitrary Objects, by Leon Horsten. Cambridge: Cambridge University Press, 2019." *Mind* :1-16.

First online.

"This book is an attempt to develop a metaphysical and mathematical account of arbitrary objects. It is focused on two main applications: structuralism in the philosophy of mathematics; and the concept of a random variable in probability theory. However, the book deals with a host of other topics along the way.

(...)

"Clearly, I cannot deal with all of these topics in a single review.
(1)

But what I would like to do is to focus on certain central issues over which there is room for reasonable disagreement, even for those of us who are already willing to accept arbitrary objects."
(pp. 1-2)

(1) hope to deal with some of these topics, and especially the issue of how the theory of arbitrary objects should be axiomatized, in a new introduction to the re-issue of 'Reasoning with Arbitrary Objects' (Fine (1985)), to be published by OUP.

57. Fine, Kit, Boghossian, Paul, and Peacocke, Christopher. 2021. "The Live Concert Experience: Its Nature and Value." In *Classical Music* , 7-13. Open Edition Books.

"Virgil Thomson, the composer and music critic, wrote that we never enjoy a recorded performance in the same way as we enjoy a live performance (2014: 251). The same applies to live performance in the theatre and to attendance at a sports event, as opposed to seeing a performance or game on DVD or a TV recording. This difference is of great value to us. But why?" (p. 8)

Kit Fine: bibliography of the unpublished papers available on line

Unpublished papers

1. Fine, Kit. 1969. *For some Proposition and so many Possible Worlds*, University of Warwick.

Available at: [For some Proposition and so many Possible Worlds](#)

"In this thesis, I deal with the notions of a condition holding for some proposition and a proposition being true in a certain number of possible worlds. These notions are called propositional quantifiers and numerical modalizers respectively.

In each chapter, I attempt to dispose of a system. A system consists of: a language; axioms and rules of inference; and an interpretation. To dispose of a system is to prove its decidability and its consistency and completeness for the given interpretation. I shall, in passing, make applications to definability, translatability and other topics." (From the Abstract)

2. ———. 2010. "The Structure of Joint Intention (Draft)."1-50.

Available at [The Structure of Joint Intention \(Draft\)](#)

"The topics of joint intention and response dependence are not normally thought to be connected. But it is my belief that that there are problems concerning the very possibility of joint intention that can only be satisfactorily resolved by providing a response dependent account of what it is. Our having a joint

intention will in part be realized by our responding to it as a joint intention.

I shall begin by outlining the problems and then consider various attempted solutions to them. None of them turns out to be satisfactory. I shall then outline a theory of response dependent concepts and show how it is able to solve the problems and provide a satisfactory account of joint attention. I conclude by briefly considering the application of the theory of response dependence to other topics in social philosophy, including the prisoners' dilemma and the concept of law.

The paper was hurriedly written and very rough. Many important topics are barely discussed and some are not even mentioned. But I hope I have said enough to make clear how a number of issues concerning joint intention can be put on a firmer footing and how a theory of response dependence can be of help in resolving them." 4. ———. 2015. "Mathematics and the Method of Abstraction."1-10.

Available at [Mathematics and the Method of Abstraction](#)

Public Lecture.

"It is a familiar thought that mathematics derives from abstraction.

(...)

Abstraction may be a familiar idea but it is also vague. What exactly is abstraction?

From what do we abstract? To what do we abstract? And how do we get from the one to the other?

These are questions which have been discussed since the beginning of mathematics and philosophy. But what I want to consider is the discussion of the questions in a particular period and by a particular group of people. The period was the end of the nineteenth century and the early twentieth century. And the people in question were mathematicians who had a strong interest in foundational issues. They were not only concerned to do mathematics but also to put the subject on a firm foundation. All of the mathematicians involved - with one or two exceptions - were German. I do not know whether or not this was accidental, though it does speak to the great contribution that German mathematicians were then making to their subject." (p. 1)

5. ———. 2015. "A Theory of Truth-Conditional Content I: Conjunction, Disjunction and Negation."1-40.

Available at [A Theory of Truth-Conditional Content I: Conjunction, Disjunction and Negation](#)

"The semantic content of a statement is often taken to be its truth-conditional content, as constituted by the conditions under which it is true. But there are somewhat different ways to understand what these truth-conditions are. On the clausal approach, especially associated with the name of Davidson, the truth-conditions of a statement are not entities as such but the clauses by which a truth-theory specifies when a statement is true. On the objectual approach, by contrast, the truth-conditions are objects, rather than clauses, which stand in a relation of truthmaking to the statements they make true.

Under the most familiar version of the objectual approach, the truth-conditions of a statement are taken to be possible worlds and the content of a statement may, accordingly, be identified with the set of possible worlds in which it is true. Under a somewhat less familiar version of the entity-based approach, the truth-conditions are not - or not, in general - possible worlds but possible states or situations - fact-like entities that make up a world rather than the worlds themselves; and the content of a statement may, in this case, be identified with the set of verifying states or situations in which it is true.

In this paper I pursue the last of these options. However, my understanding of what it is for a state to verify a statement is somewhat unusual. It is often supposed that verification is monotonic; if a state verifies a statement then so does any more comprehensive state. But on the account that I wish to adopt, this will not be generally true. For it is to be a general requirement on verification that a verifier should be relevant as a whole to the statement that it verifies; and in extending a verifier with additional material, this holistic relevance of the verifier to the statement may be lost." (p. 1)

6. ———. 2015. "A Theory of Truth-Conditional Content II: Subject-matter, Common Content, Remainder and Ground." 1-25.

Available at [A Theory of Truth-Conditional Content II: Subject-matter, Common Content, Remainder and Ground](#)

"We continue with the development of the theory of truth-conditional content begun in part I, dealing with such 'non-standard' topics as subject matter, common content, logical remainder and ground. This is by no means an exhaustive list of topics that might have been considered but it does provide an indication of the nature and scope of the theory. As before, the paper is divided into an informal exposition and a technical addendum. Both can be read independently of the other but it would be helpful, in either case, to have the first part at hand.

One feature of great interest in the present account is that it deals with a number of the topics that lack an adequate treatment either within the possible worlds account or under a structural conception of propositions. The notion of common content, for example, can be readily handled within the present framework but cannot be properly handled in the other two frameworks without either introducing or deriving something like the present conception of verification. Thus we should not simply regard the present 'extensional' conception of content as a mere approximation to a structural conception but as an important conception in its own right." (p. 1)

7. ———. 2015. "The Sorites."

Available at [The Sorites](#)

"No treatment of vagueness is complete without an account of the sorites argument. This argument, in a familiar form, starts with the premiss that a given man (with no hairs on his head) is bald, it proceeds to the intermediate conclusion that a man with very slightly fewer hairs on his head is bald, given the assumption that a slight difference in the number of cranial hairs can make no difference to whether someone is bald, and it then proceeds, by a large number of further steps of this sort, to the final conclusion that a man with a full head of hair is bald, which is clearly absurd." (p. 1)

8. ———. 2016. "Acts and Embodiment." In, 1-17.

Available at [Acts and Embodiment](#)

"I wish in this paper to consider how the theory of embodiment outlined in some of my earlier papers (Fine [1982], [1999]) [2006]) can be applied to questions concerning the identity of acts. This will involve going over some old ground. But I also hope to elaborate on what I previously said and to relate it to some of the more recent literature on the topic." (p. 1)

Available at [Chisholm's Puzzle and Unconditional Obligation](#)

"In this paper, I would like to suggest a new angle on Chisholm's puzzle concerning contrary-to-duty obligations. It differs from previous approaches in its conception of what the problem is and how it is to be solved. I shall argue that the problem is, in no small part, about unconditional, rather than conditional, obligation and that, once it is viewed in this light, we obtain a somewhat different perspective on how the puzzle might be solved." (p. 1)

11. Fine, Kit, and Martin, Errol. 2020. "Progressive Logic." In, 1-45.

Available at [Progressive Logic](#)

"An argument is commonly taken to be circular when the truth of its conclusion is presupposed by its premisses. But exactly what is meant by such an account is not at all clear. For there is a sense in which the truth of the conclusion of any deductively valid argument is presupposed by its premisses. Thus if there is to be a significant distinction between those valid arguments that are circular and

those that are not, then some basis must be found for distinguishing between the trivial kind of presupposition and one that is more substantive." (p. 1)

12. Fine, Kit. 2021. "A Theory of Partial Truth." In.

Available at [A Theory of Partial Truth](#)

"I develop a theory of partial truth within the framework of truth-conditional content developed in two earlier papers (Fine [2015a] and [2015b]). It will be helpful, though not essential, to have these two other papers at hand, and especially the first, while reading the present paper. The paper should have interest both as an account of partial truth and as a partial vindication of the truth-conditional framework within which it is developed. For without something like the present framework, it is hard to see how a reasonable alternative account of partial truth might be developed. The concept of partial truth is intimately related to the concept of partial content, since we naturally suppose that a proposition is partially true when some part of it is true. The connection between the two concepts can also be put to work in the opposite direction, since we may provide a semantics for the logic of partial content by appeal to partial truth (as in §9 of Fine [2015]).

There is also a close connection with the concept of verisimilitude. For a proposition will be partially true when it has 'more truth' than a proposition that is not partially true; and the investigation of the concept of partial truth may, in fact, serve as a useful prolegomena to the investigation of the more complicated concept of verisimilitude.

(...)

I begin with an informal introduction to some of the main ideas and conclude with a formal appendix. The introduction and appendix can in principle be read in isolation from the other though they are best read together. The most extensive previous treatment of the topic that I know of is in Humberstone [2003]; and a related account of partial truth is given in §1.3 of [2014]. The major difference from Humberstone is that he stipulates the truth-tables for a logic of partial truth while I derive them from an underlying account of partial truth; and the major difference from Yablo is that I provide an account of partial truth directly in terms of truthmakers and not indirectly through the notion of partial content." (p. 1)

Available at [A Semantics for the Impure Logic of Ground](#)

"This paper establishes a sound and complete semantics for the impure logic of ground. Fine [2012a] sets out a system for the pure logic of ground, one in which the formulas between which ground-theoretic claims hold have no internal logical complexity; and it provides a sound and complete semantics for the system.

Fine [2012b, §§6-8] sets out a system for an impure logic of ground, one that extends the rules of the original pure system with rules for the truth-functional connectives, the first-order

quantifiers, and λ -abstraction. However, it does not provide a semantics for this system. The present paper partly fills this lacuna by providing a sound and complete semantics for a system GG containing the truth-functional operators that is closely related to the truth-functional part of the system of [Fine, 2012b].(1)" (p. 1)

(1) The main differences between the two systems are that we now only allow finitely many formulas to occur to the left of the ground-theoretic operator and that we have added the Irreversibility Rule, which should have been part of the original system.

Abstract: "Prior to Kripke's seminal work on the semantics of modal logic, McKinsey offered an alternative interpretation of the necessity operator, inspired by the Bolzano-Tarski notion of logical truth. According to this interpretation, 'it is necessary that A' is true just in case every sentence with the same logical form as A is true. In our paper, we investigate this interpretation of the modal operator, resolving some technical questions, and relating it to the logical interpretation of modality and some views in modal metaphysics. In particular, we present an hitherto unpublished solution to problems 41 and 42 from Friedman's *102 problems*, which uses a different method of proof from the solution presented in the paper of Tadeusz Prucnal."

Kit Fine. Annotated bibliography of the studies on His philosophy

Studies on the Philosophy of Kit Fine

1. Correia, Fabrice. 2005. *Existential Dependence and Cognate Notions*. München: Philosophia Verlag.

Contents: Preface 3; Introduction 7; 1. Preamble; 13; Introductory Break 35; 2. Simple Dependence: Presentation, and Rejection of Some Accounts 39; 3. Metaphysical Grounding 53; 4. Simple Dependence: The Foundational Approach 65, 5. Some Other Notions of Existential Dependence 89; 6. A Cognate Notion: Supervenience 131; Appendix 151; Bibliography 151; List of Figures 165; List of Symbols and Notations 167; List of Named Propositions, Conditions and Rules 169; Index 171.

"This is a work in analytic metaphysics. Its main purpose is to clarify a notion of central importance in metaphysics since Aristotle, to wit the notion of existential dependence. All currently available analyses of the notion are examined and then rejected, and a new account is defended. This work is the first comprehensive one on the topic. The first chapter is devoted to introducing and explaining some notions which are crucial for the central parts of the work, namely the notions of existence, necessity, (individual and plural) quantification and essence. In chapters 2 and 4 focus is made on the relation of "simple" existential dependence, the relation which holds between two objects when the first cannot exist without the other. Three accounts of simple dependence - each endorsed by some contemporary philosophers, among them Kit Fine, E. Jonathan Lowe, Kevin Mulligan, Peter Simons and Barry Smith

- are presented and then rejected. A new account, inspired by suggestions by Fine and Lowe, is defended. According to that account - the "foundational" account - simple dependence is to be defined in terms of a relation called *grounding*, which is presented in chapter 3. Chapters 5 and 6 deal with relations belonging to the family of simple dependence, among others (i) generic dependence, (ii) various forms of temporal dependence, and (iii) supervenience, a complex dependence relation largely invoked in current debates on the philosophy of mind. It is shown that foundationalist accounts of these notions - i.e. accounts framed in terms of grounding - are superior to other existing accounts. These chapters also contain some applications of the foundational conception of dependence, in particular a characterization of substances and a formulation of the distinction between two well known conceptions of universals, the Aristotelian and the Platonian conception. The last part of the work is a technical appendix where one can find, among other things, a system for the logic of essence, which is proved to be sound and complete with respect to a possible world semantics."

"The notion of metaphysical grounding is close to a notion Fine introduces in [Fine, 2001] (§5) and which he calls 'ground'. In Fine's sense, the proposition that A is grounded in the propositions that B, C,... iff its being the case that A consists in nothing more than its being the case that B, C,... According to Fine, grounding propositions explain what they ground. Fine's notion of ground is strictly stronger than metaphysical grounding: I wish to leave room for the view that the existence of a set is explained by, but does not merely consist in, the existence of its members. And it is likewise strictly stronger than logical grounding.

It is also close to Bolzano's notion of grounding. (2) One difference is that Bolzano takes this notion to express a relation between propositions or pluralities of propositions, construed as genuine, mind-independent entities. (3) For my part, as I previously stressed, I leave aside the question as to whether statements of ground point to propositions, facts or states of affairs. A second difference lies in that Bolzano takes it that

causal connections give rise to facts of grounding: for every causal fact, a proposition describing some relevant features of the effect is grounded in a proposition describing some relevant features of the cause. (4) This presumably does not hold of metaphysical grounding. Bolzano's notion of grounding is perhaps equivalent to the "logical sum" of all qualified notions of grounding." (p. 56)

3. Rieber, Steven. 2002. "A Defense of Indeterminism." *Acta Analytica* no. 17:75-82.

Abstract: "My goal is to defend the indeterminist approach to vagueness, according to which a borderline vague utterance is neither true nor false. Indeterminism appears to contradict bivalence and the disquotational schema for truth. I agree that indeterminism compels us to modify each of these principles. Kit Fine has defended indeterminism by claiming that ordinary ambiguous sentences are neither true nor false when one disambiguation is true and the other is false. But even if Fine is right about sentences, his point does not seem to generalize the utterances. What the indeterminist needs -- and what ordinary ambiguity does not provide -- is an ambiguous utterance where what is being said is indeterminate between two different propositions. I will show that such cases exist. These cases imply that the modifications that indeterminism makes to bivalence and the disquotational schema are required independently of indeterminism, in fact independently of vagueness."

4. Suster, Danilo. 2005. "The Modality Principle and Work-relativity of Modality." *Acta Analytica* no. 20:41-52.

"If we accept Fine's theory then modal properties, contrary to the modal principle, are not an independent guide to constitutive properties of an artwork. Rather, they depend on a prior decision on the identity of a work. Of course, all essential properties are necessary, so those modal intuitions that track the nature of the object in question still remain a guide to essentiality. But in the first part of my comment I expressed a fear that even those modal intuitions are not a reliable guide, they do not fix something objective and unique. Individual essences are murky properties and I am afraid that our appreciative engagement with a work of art cannot offer

objective answers about them. My scruples could be read as scruples about contextualism in general and not directed specifically to Davies' proposal. (*)

Anyway, maybe this is the price we have to pay when we evaluate ontological proposals on the basis of their fit with a more comprehensive philosophical framework that makes sense of our artistic practice as that practice is 'codified' upon rational reflection." (p. 52)

[David Davies, *Art as Performance*, Oxford, Blackwell 2004.]

5. Sosa, David. 2010. "The Fine Line." *Analysis* no. 70:347-358.

Critical notice of Kit Fine, *Semantic Relationism* (2007).

"The purpose of Fine's book is to show how the guiding idea, the 'semantic relationism' of the title, helps with deep puzzles in philosophy of language and mind. Russell's antinomy of the variable, Frege's puzzle in both a linguistic and a cognitive version, and Kripke's puzzle about belief are said to be solved adequately only by adopting his relationism. But the book is also a defence of 'referentialism' in philosophy of language. Fine holds that the fundamental semantic relations that need to be added to the assigned intrinsic values in our overall semantic theory, especially the relation he calls 'coordination', can do much of the work of sense. A relationist referentialism 'can secure many of the advantages of the Fregean position without being committed to the existence of sense'.

In this selective review, I will not evaluate how Fine's line on these matters fares overall. There's a risk of unfairness in that, since part of any view's success can be measured only holistically, by balancing whatever disadvantages it might have with such emergent features as its unifying power and generality, and the consistency of its successes (as against its failures). Having signalled this, however, I will focus on just a few specific passages, and raise some corresponding issues and concerns." (p. 347)

6. deRosset, Louis. 2015. "Better Semantics for the Pure Logic of Ground." *Analytic Philosophy* no. 56:229-252.

Abstract: Philosophers have spilled a lot of ink over the past few years exploring the nature and significance of grounding. Kit Fine has made several seminal contributions to this discussion, including an exact treatment of the formal features of grounding [Fine, 2012a]. He has specified a language in which grounding claims may be expressed, proposed a system of axioms which capture the relevant formal features, and offered a semantics which interprets the language. Unfortunately, the semantics Fine offers faces a number of problems. In this paper, I review the problems and offer an alternative that avoids them. I offer a semantics for the pure logic of ground that is motivated by ideas already present in the grounding literature, and for which a natural axiomatization capturing central formal features of grounding is sound and complete. I also show how the semantics I offer avoids the problems faced by Fine's semantics."

7. Correia, Fabrice, and Rosenkranz, Sven. 2012. "Eternal Facts in an Ageing Universe." *Australasian Journal of Philosophy* no. 90:307-320.

Abstract: "In recent publications, Kit Fine devises a classification of A-theories of time and defends a non-standard A-theory he calls fragmentalism, according to which reality as a whole is incoherent but fragments into classes of mutually coherent tensed facts. We argue that Fine's classification is not exhaustive, as it ignores another non-standard A-theory we dub dynamic absolutism, according to which there are tensed facts that stay numerically the same and yet undergo qualitative changes as time goes by. We expound this theory in some detail and argue that it is a serious alternative to the positions identified by Fine."

8. Simons, Peter M. 2008. "Modes of Extension: Comments on Kit Fine's 'In Defence of Three-Dimensionalism'." In *Being: Developments in Contemporary Metaphysics*, edited by Le

Poidevin, Robin, 17-22. Cambridge: Cambridge University Press.

"The debate between 3- and 4-dimensionalists is one of the most lively and pervasive in current metaphysics. At stake is a glittering prize: the correct metaphysical analysis of material things and other objects commonly thought to persist in time by enduring. Since we count ourselves among such objects the outcome of the debate is of more than merely academic interest to us. Obviously the ramifications of the debate, even of the points raised by Kit Fine, go far beyond what I can discuss here, so I shall simply select some salient issues and comment on them from my own somewhat heterodox point of view." (p. 17)

9. Cook, Roy T., and Ebert, Philip. 2004. "Discussion Note: Kit Fine's *Limits of Abstraction* ." *British Journal for the Philosophy of Science* no. 55:791-800.

"Kit Fine's recent *The Limits of Abstraction* , an extended version of his [1998] paper, contains four chapters. The first two deal with philosophical aspects of abstraction, while the latter two provide the formal framework for a general theory of abstraction. Here we focus on the philosophical material, and, given the depth and complexity of the material, cannot attempt even a superficial summary of the entirety of the philosophical material. Thus, we content ourselves with sketching the contents. Two particular issues will then be examined in greater detail."

10. Evnine, Simon J. 2009. "Constitution and Qua Objects in the Ontology of Music." *British Journal of Aesthetics* no. 49:203-217.

Abstract: "Musical Platonists identify musical works with abstract sound structures but this implies that they are not created but only discovered. Jerrold Levinson adapts Platonism to allow for creation by identifying musical works with indicated sound structures. In this paper I explore the similarities between Levinson's view and Kit Fine's theory of qua objects. Fine offers the theory of qua objects as an account of constitution, as it obtains, for example, between a statue and the clay the statue is made out of. I argue that Fine's theory

does not adequately characterize the constitution relation and that the problems it faces extend to Levinson's account of musical works as indicated structures. I develop an alternative theory of constitution, based on the notion of being made out of. This approach to constitution enables me to offer an account of musical works as abstract objects that are constituted by sound structures. I argue that my account has several advantages over the Levinson/Fine approach."

12. Correia, Fabrice. 2007. "(Finean) Essence and (Priorean) Modality." *Dialectica.International Journal of Philosophy* no. 61:63-84.

Abstract: "In Fine 1994, Kit Fine challenges the (widespread) view that the notion of essence is to be understood in terms of the metaphysical modalities, and he argues that it is not essence which reduces to metaphysical modality, but rather metaphysical modality which reduces to essence.

In this paper I put forward a modal account of essence and argue that it is immune from Fine's objections. The account presupposes a non-standard, independently motivated conception of the metaphysical modalities which I dub Priorean. Arthur Prior never endorsed that very conception, but in some respects his own views on the topic are so close to it, and different from all (most?) currently accepted views, that the label 'Priorean' is perfectly appropriate."

Abstract: "On standard versions of supervaluationism, truth is equated with supertruth, and does not satisfy bivalence: some truth-bearers are neither true nor false. In this paper I want to confront a well known worry about this, recently put by Wright as follows: 'The downside . . . rightly emphasized by Williamson . . . is the implicit surrender of the T-scheme'. I will argue that such a cost is not high: independently motivated philosophical distinctions support the surrender of the T-scheme, and suggest acceptable approximations."

14. Horwich, Paul. 2007. "The Quest for Reality." *Dialectica. International Journal of Philosophy* no. 61:5-16.

Abstract: "A widespread concern within philosophy has been, and continues to be, to determine which domains of discourse address real, robust, not-merely-deflationary facts, and which do not. But a threat to the legitimacy of this concern (together with the claims provoked by it) is the extreme lack of consensus amongst philosophers on the question of how to tell whether or not a given domain is oriented towards 'robust reality'. The present paper criticizes Kit Fine's attempt to settle that question. This discussion is followed by some considerations suggesting that there is no good answer to it, that (as the 'quietists' maintain) the notion of 'robust reality' is defective and ought to be abandoned."

15. Koslicki, Kathrin. 2007. "Towards a Neo-Aristotelian Mereology." *Dialectica. International Journal of Philosophy* no. 61:127-159.

Abstract: "This paper provides a detailed examination of Kit Fine's sizeable contribution to the development of a neo-Aristotelian alternative to standard mereology; I focus especially on the theory of 'rigid' and 'variable embodiments', as defended in Fine 1999. Section 2 briefly describes the system I call 'standard mereology'. Section 3 lays out some of the main principles and consequences of Aristotle's own mereology, in order to be able to compare Fine's system with its historical precursor. Section 4 gives an exposition of Fine's theory of embodiments and goes on to isolate a number of potential concerns to which this account gives rise. In particular, I argue that (i) Fine's theory threatens to proliferate primitive sui generis relations of parthood and composition, whose characteristics must be stipulatively imposed on them, relative

to particular domains; (ii) given its 'superabundance' of objects, Fine's system far outstrips the (arguably) already inflated ontological commitments of standard mereology; and (iii) there is a legitimate question as to why we should consider Fine's primitive and sui generis relations of parthood and composition to be genuinely mereological at all, given their formal profile. These three objections lead me to conclude that we ought to explore other avenues that preserve the highly desirable, hylomorphic, features of Fine's mereology, while avoiding its methodological and ontological excesses."

16. MacBride, Fraser. 2007. "Neutral Relations Revisited." *Dialectica. International Journal of Philosophy* no. 61:25-56.

Abstract: "Do non-symmetric relations apply to the objects they relate in an order? According to the standard view of relations, the difference between aRb and bRa obtaining, where R is nonsymmetric, corresponds to a difference in the order in which the non-symmetric relation R applies to a and b . Recently Kit Fine has challenged the standard view in his important paper 'Neutral Relations' arguing that non-symmetric relations are neutral, lacking direction or order.

In this paper I argue that Fine cannot account for the application of non-symmetric relations to their relata; so far from being neutral, these relations are inherently directional."

17. Weir, Alan. 2007. "Honest Toil or Sheer Magic?" *Dialectica. International Journal of Philosophy* no. 61:89-115.

Abstract: "In this article I discuss the 'procedural postulationist' view of mathematics advanced by Kit Fine in a recent paper [*]. I argue that he has not shown that this view provides an avenue to knowledge of mathematical truths, at least if such truths are objective truths. In particular, more needs to be said about the criteria which constrain which types of entities can be postulated. I also argue that his reliance on second-order quantification means that his background logic is not free of

ontological commitment and that his doctrine of 'creative expansion' only makes sense from a radically anti-realist perspective."

{* Fine, K. 2005, 'Our Knowledge of Mathematical Objects', in: T. Z. Gendler and J. Hawthorne eds., *Oxford Studies in Epistemology* Vol. 1, Oxford: Clarendon Press, pp. 89–109.]

18. Hinzen, Wolfram. 2003. "Constructive versus Ontological Construals of Cantorian Ordinals." *History and Philosophy of Logic* no. 24:45-63.

Abstract: "In a recent paper, Kit Fine offers a reconstruction of Cantor's theory of ordinals. It avoids certain mentalistic overtones in it through both a non-standard ontology and a non-standard notion of abstraction. I argue that this reconstruction misses an essential constructive and computational content of Cantor's theory, which I in turn reconstruct using Martin-Löf's theory of types. Throughout, I emphasize Kantian themes in Cantor's epistemology, and I also argue, as against Michael Hallett's interpretation, for the need for a constructive understanding of Cantorian 'existence principles'."

19. Kuhn, Steven T. 2006. "Review of *Modality and Tense: Philosophical Papers*, by Kit Fine." *International Philosophical Review* no. 46:492-502.

"Fine sees himself as defending two very plausible views--that the distinction between the necessary and the contingent is intelligible and that merely possible worlds are not real in the same sense as the actual world--against pervasive philosophical orthodoxies that deny them. I can't resist noting that his own theories occasionally lead him to views that seem implausible: Ordinary objects (or at least sequences of them) have logical form, abstract objects may exist contingently. A formula of the form [A if and only if the proposition expressed by A is true] may be false. "Being" should to be distinguished from existence and (as was noted above) there is a sense in which the fountain of youth exists. There are good reasons to embrace the view that reality contains contradictory facts. It is a testament to Fine's meticulous examination of the issues involved and his

skill in communicating it that many of these positions seem quite plausible, and all of them far less implausible, after the book is read." (p. 502)

20. Correia, Fabrice. 2000. "Propositional Logic of Essence." *Journal of Philosophical Logic* no. 29:295-313.

Abstract: "This paper presents a propositional version of Kit Fine's (quantified) logic for essentialist statements, provides it with a semantics, and proves the former adequate (i.e. sound and complete) with respect to the latter."

"The present paper can be considered as a companion to Kit Fine's papers 'The Logic of Essence' and 'Semantics for the Logic of Essence'. (1) In the first paper Fine presents a logical system for quantified essentialist statements, E_5 . (2) In the second he presents a semantics for a variant of the system, and proves this system adequate (i.e. sound and complete) with respect to that semantics. I propose here a Kripke-style semantics for $E_5\pi$, a propositional counterpart of E_5 , and prove the adequacy of the latter with respect to the former.

There are many, more or less natural, more or less interesting, ways to extend $E_5\pi$ (or one of its cousins) to a system of quantified logic of essence. $E_5\pi$, together with its semantics, is intended to constitute the core of subsequent, more expressive, logics of essence. So, the study of $E_5\pi$ per se, regardless of possible quantificational extensions, is of great interest.

Another interesting point about the present study lies in the fact that the completeness proof given here is much simpler than the one Fine gives for his quantificational system.

The reader is strongly urged to take a look at Fine's papers on the logic of essence, if only because no detailed comparison between Fine's material and mine will be offered." (p. 295)

(1) At the time I worked on the present paper only the first of Fine's papers was available to me. I became acquainted with 'Semantics for the Logic of Essence' after obtaining the results presented here.

(2) Fine aims at developing such a system in response to his own objections to the standard modal contruals of essence. See his 'Essence and Modality'.

21. Kremer, Philip. 1989. "Relevant Predication: Grammatical Characterisations." *Journal of Philosophical Logic* no. 18:349-382.

Abstract: "This paper reformulates and decides a certain conjecture in Dunn's *Relevant Predication 1: The Formal Theory* (*Journal of Philosophical Logic* 16, 347-381, 1987). This conjecture of Dunn's relates his object-language characterisation of a property's being relevant in a variable x to certain grammatical characterisations of relevance, analogous to some given by Helman, in *Relevant Implication and Relevant Functions* (in *Entailment: The Logic of Relevance and Necessity*, vol. 2, by Alan Ross Anderson, Nuel Belnap, and J. Michael Dunn et al.) In the course of the investigation this paper also investigates Kit Fine's semantics for quantified relevance logics, which appears in his appropriately titled *Semantics for Quantified Relevance Logic*."

22. Mares, Edwin D., and Goldblatt, Robert. 2006. "An Alternative Semantics for Quantified Relevant Logic." *Journal of Symbolic Logic* .

Abstract: "The quantified relevant logic RQ is given a new semantics in which a formula $\forall x A$ is true when there is some true proposition that implies all x -instantiations of A . Formulae are modelled as functions from variable-assignments to propositions, where a proposition is a set of worlds in a relevant model structure. A completeness proof is given for a basic quantificational system QR from which RQ is obtained by adding the axiom EC of 'extensional confinement': $\forall x(A \vee B) \rightarrow (A \vee \forall xB)$, with x not free in A . Validity of EC requires an additional model condition involving the boolean difference of propositions. A QR-model falsifying EC is constructed by forming the disjoint union of two natural arithmetical structures in which negation is interpreted by the minus operation."

"Kit Fine [10] showed that the quantified relevant logic RQ is incomplete over Routley and Meyer's relational semantics with constant domains. In its place he developed [9] an increasing domain semantics over which RQ is complete, and for which a model includes a set of frames which are related to one another by a number of relations and operators. This semantics is powerful and ingenious.

But Fine's semantics is very complicated. Since it was produced it in the mid-1980s relevant logicians have wanted to simplify it. J. Michael Dunn and Greg Restall say [7, p 83]:

[I]t must be said that while the semantic structure pins down the behaviour of RQ and related systems exactly, it is not altogether clear whether the rich and complex structure of Fine's semantics is necessary to give a semantics for quantified relevance logics.(1)

To those of us who have seriously attempted to simplify Fine's semantics, it is becoming clear that the "rich and complex structure" is in a certain sense necessary.

The elements of the theory seem to work in concert with one another and eliminating even one operator or relation seems to make the entire structure collapse. Thus, in order to create a simpler semantics for quantified relevant logic we need to take an alternative approach.

In this paper, we take an alternative approach. (2)" (pp. 163-164)

(1) Restall also says [14, p 5]: "The groundbreaking work of [9] is formally astounding but philosophically opaque".

(2) After seventeen years of trying to modify Fine's semantics, Mares in particular is glad that an alternative has suggested itself.

23. Savitt, Steven. 2016. "Kit Fine on Tense and Reality." *Manuscript* no. 39:75-96.

Abstract: "Kit Fine (2005, 2006) recently described and defended a novel position in the philosophy of time, fragmentalism. It is not often that a new (and even perhaps a

radically new) option appears in this old field, and for that reason alone these two essays merit serious attention. I will try to present briefly but fairly some of the considerations that Fine thinks favour fragmentalism. I will also weigh the merits of fragmentalism against the view that Fine presents as its chief rival, relativism, as well as the merits of both against the view that he calls anti-realism. Along the way, we should pick up a clearer picture of fragmentalism itself."

25. Bonardi, Paolo. 2020. "Coordination, Understanding, and Semantic Requirements." In *Metaphysics, Meaning and Modality: Themes from Kit Fine* , edited by Dumitru, Mircea, 360-367. New York: Oxford University Press.

"Coordination is the central notion of Kit Fine's (1007) theory of meaning called *semantic relationism* .

(...)

The present manuscript attempts to answer the following question: What is coordination between proper names? Fine proposes two characterizations of this sort of coordination, which he also labels *representing as the same*: an intuitive test; and a technical definition. On the basis of the intuitive

characterization, I will maintain that coordination (viz. representing as the same) is grounded in a notion of understanding

distinct from the notion of linguistic competence. Whereas—as I will argue—we need a characterization of understanding in order to elucidate Fine’s coordination, it is unclear how to provide one: three *prima facie* appealing proposals to characterize it will be examined and then dismissed as intrinsically implausible or as incompatible with Fine’s relational semantics. Not even his technical characterization of coordination, involving the notion of semantic requirement, will enable us to escape the impasse. Ultimately, the problem of determining what exactly coordination between names is will remain open." (p. 360)

26. Correia, Fabrice. 2020. "More on the Reduction of Necessity to Essence." In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 265-282. New York: Oxford University Press.

“Essence and Modality” has had a considerable impact on subsequent philosophical thinking about essence and modality. The paper argues that the traditional view that essence reduces to metaphysical modality is wrong. Many have found these arguments convincing and have accordingly abandoned the view. The paper also argues that the reduction goes the other way around, that is, that it is metaphysical modality which reduces to essence. Twenty years after the publication of “Essence and Modality,” Kit Fine’s reductive view has become widely recognized as one of the main contenders for a reductive account of metaphysical modality.

There are several ways in which such a reductive account can be spelled out. In Correia 2012, I raised objections against one natural way of doing so, and developed an alternative account—the “rule-based” account—which relies on a brief suggestion Fine makes in Fine 1995a. The aim of the present chapter is twofold: first, I wish to strengthen the case for the rule-based account by criticizing alternative accounts,

including some accounts based on other suggestions made by Fine, or inspired by material one can find in his work; and second, I wish to discuss certain objections to the rule-based account and suggest how they can be met." (p. 265)

"This book is the first edited volume on the philosophy of one of the most seminal and profound contemporary philosophers. Over the last forty-odd years, Kit Fine has been one of the most influential and original analytic philosophers. He has made provocative and innovative contributions to several areas of systematic philosophy, including philosophy of language, metaphysics, and the philosophy of mathematics,

as well as a number of topics in philosophical logic, such as modal logic, relevance logic, the logic of essence, and the logic of vagueness. These contributions have helped reshape the agendas of those fields and have given fresh impetus to a number of perennial debates." (p. 1)

28. Forbes, Graeme. 2020. "Fine's New Semantics of Vagueness." In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 164-179. New York: Oxford University Press.

"My conclusion about Fine's discussion of the three formulations of Sorites reasoning, then, is that it is a very great strength of compatibilist semantics that it diagnoses a problem in each of the three, using the same formal apparatus, and

other approaches which cannot do something like this are at an immediate disadvantage.

However, I also think that the fuzzy logic analysis of the three formulations is overall equally as effective, in particular because it is independently plausible that embedding fixed-point negation in “it is the case” produces an operator expressing semantic negation. So the seductiveness of apparent $\neg\wedge$ -formulations is explained by revealing them to be $\sim\wedge$ -formulations." (p. 178, note omitted)

"If the account I have sketched is cogent, you can now entertain an alternative to Strong Supervenience: the view that the normative supervenes on the natural as a matter of normative necessity. (This follows from the normative necessity of pure moral principles, together with the further assumption that all normative facts are ultimately grounded in pure principles plus nonnormative facts.) These views disagree about the modal classification of remote worlds—worlds in which act utilitarianism is true and the natural facts are just as they are, for example. Everyone agrees that such worlds are impossible in a sense. The open

question concerns the interpretation of the modal word in this formulation.

Having seen the alternative, are you confident that these remote worlds must be metaphysically impossible—ruled out by the *natures* of the moral properties and relations? If so, you see more deeply into these natures than I do." (p. 228)

"In his PhD research, completed in 1969, and over the next half-dozen years, Kit Fine made a series of fundamental

contributions to the semantic analysis and metatheory of propositional modal logic, proving general theorems about notable classes of logics and providing examples of failure of some significant properties." (p. 316)

(...)

"My interest here is in what was arguably the most influential contribution: the paper "Some Connections between Elementary and Modal Logic" (1975b), and in particular its Theorem 3, which will be referred to as *Fine's Canonicity Theorem*. It states that

any logic that is complete with respect to a first-order definable class of Kripke frames must be valid in its canonical frames." (p. 317)

31. Hale, Bob. 2020. "The Problem of Modality." In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 234-246. New York: Oxford University Press.

"There is no doubt that one major reason why *de re* modality has seemed especially problematic lies in the broadly linguistic conception of the source of necessary truth which was widely accepted by analytic philosophers throughout the middle decades of last century, in spite of Quine's major onslaught on the notion of analytic truth or truth in virtue of meaning. Indeed, Quine himself—somewhat surprisingly, given his

misgivings about analyticity—finds the essentialism to which he thinks acceptance of *de re* modalities commits us unpalatable precisely because it clashes with the logical empiricist orthodoxy that all necessity is rooted in meanings." (p. 235)

32. Koslicki, Kathrin. 2020. "Essence and Identity." In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 113-140. New York: Oxford University Press.

"4 Conclusion

My primary focus in this chapter has been on the question of how essentialists should attempt to meet Quine's demand for necessary and sufficient conditions for the crossworld identity

of individuals. I examined six contenders for the role of crossworld identity principles: (i) an object's qualitative character; (ii) matter; (iii) origins; (iv) haecceities; (v) world-indexed properties; and (vi) form.

(...)

On balance, then, the sixth option deserves to be taken very seriously as a possible response to Quine's challenge, especially by neo-Aristotelians who are already motivated for other reasons to take on board a

hylomorphic conception of unified wholes. Many of these hylomorphists also accept a non-modal conception of essence and thus face the further difficult task, over and above what is required to meet Quine's challenge, of having to explain an object's *de re* modal profile in terms of facts about its essence. Haecceities and world-indexed properties are unlikely to be of much help with respect to this second challenge, while the forms of hylomorphic compounds are in fact well suited for this purpose." (p. 136)

33. Kroon, Fred, and McKeown-Green, Jonathan. 2020. "Ontology: What's the (Real) Question?" In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 13-37. New York: Oxford University Press.

"One way to philosophize is to ontologize: about physical objects, moral properties, properties, possibilia, numbers, sets, and much else. For Kit Fine, ontologizing differs from what happens in ordinary life when I affirm that there are chairs and from what happens at school when I explain that there is a prime number less than three.

(...)

Fine's most extensive treatment is to be found "The Question of Ontology" (Fine 2009) and related considerations are advanced in "The Question of Realism" (Fine 2001). In the first three, expository, sections of this chapter, we present Fine's ideas in the context of broader views that he elaborates in "What is Metaphysics?" (Fine 2012). Then we offer our responses." (p. 13)

34. Kuhn, Steven T. 2020. "Necessary, Transcendental, and Universal Truth." In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 183-204. New York: Oxford University Press.

"The argument that Fine's puzzle, as originally formulated, provides evidence that Socrates' humanness is a transcendental, rather than a worldly, fact assumes that we are more reluctant to attribute necessity to propositions true because of the nature of individuals than to propositions true because of worldly circumstances, and that we find it still more difficult to attribute necessity to "hybrid" sentences. A simpler version of the argument, however, reaches the same conclusion under a more plausible understanding of the relation between necessary and transcendental truth. We may question Fine's emphasis on his two-premise puzzle and even, perhaps, his principal example of a transcendental truth. It is difficult to deny, however, the interest and importance of the worldly-unworldly distinction and Fine's thought about it. We should be grateful to him for bringing this, as many other neglected topics in metaphysics, into focus." (p. 203)

35. Mackie, Penelope. 2020. "Can Metaphysical Modality Be Based on Essence?" In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 247-264. New York: Oxford University Press.

"1 Introduction

In his hugely influential paper "Essence and Modality" (1994), Kit Fine argued that the then orthodox view that essence can be understood in terms of metaphysical modality is fundamentally flawed. He proposed, in its place, the view that all metaphysical modality has its source in the essences or natures of things, where the notion of a thing's essence or nature can be understood in terms of a broadly Aristotelian notion of real definition.

(...)

In spite of the attention that it has received, however, one aspect of Fine's revolutionary theory seems to me to have been surprisingly neglected. The theory appears to require that the relevant conception of real definition can itself be isolated without appeal to metaphysical modality. And I do not see how this requirement can be met. Hence I am genuinely puzzled about how an "essence-based" theory of metaphysical modality is possible. In this chapter, I explain my reasons for skepticism about this issue. I then briefly consider the implications of my argument for the relation between essence and metaphysical modality." (p. 247)

36. Moltmann, Friederike. 2020. "Variable Objects and Truthmaking." In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 368-394. New York: Oxford University Press.

"This chapter will focus on a philosophically significant construction whose semantics brings together two important notions in Kit Fine's philosophy: the notion of truthmaking and the notion of a variable embodiment, or its extension, namely what I call a "variable object."

The analysis of the construction this paper will develop will be based on an account of clausal complements of intensional verbs that is of more general interest, based on truthmaking and the notion of a cognitive product, such as a promise or a belief, rather than that of a proposition. On that account, the clausal complement of, for example, promise will characterize satisfaction situations of the reported promise,

and the clausal complement of believe will characterize the truthmakers of the reported belief." (p. 368)

37. Ostertag, Gary. 2020. "Fine on Frege's Puzzle." In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 337-359. New York: Oxford University Press.

"Kit Fine's *Semantic Relationism* (SR) provides a novel defense of referentialism—novel, in part, because of the specific challenge to referentialism it addresses and in part because of the techniques it introduces in its defense. SR takes on a

number of interrelated concerns, involving, principally, the interpretation of variables and the phenomenon of strict, or de jure, coreference. The purpose of the current chapter is to clarify, and place in a broader context, the problem of strict coreference and to provide a framework for understanding the proposed solution." (p. 337, a note omitted)

38. Percival, Philip. 2020. "Beyond Reality?" In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 38-51. New York: Oxford University Press.

"My focus is the divide between reality and that which is beyond reality. On what I call an "all-encompassing" view of reality, this is the divide between everything and nothing: reality encompasses everything, and beyond it there is nothing at all.

Opposed to the all-encompassing view is what I call a "restriction" view of reality: reality is coincident with some kind of restriction on, or partition of, what there is; it is not the case that what resides beyond reality is nothing.

I have two main aims: to first classify restriction views of reality (§ 1), and then to assess a species of the restriction view that pertains to time and modality (§ 2)." (p. 38)

39. Sandu, Gabriel. 2020. "Indefinites, Skolem Functions, and Arbitrary Objects." In *Metaphysics, Meaning and Modality: Themes from Kit Fine*, edited by Dumitru, Mircea, 98-112. New York: Oxford University Press.

"1 Introduction: Indefinites

Indefinites can occur in a nested sequence of quantificational phrases like

1. Every student read every paper that a professor recommended and also in combination with anaphoric pronouns as in
2. A man smiles. He is happy.

The nesting, on one side, and the anaphoric link, on the other, create an interpretational tension. The nesting favors a

quantificational interpretation of the indefinites according to which they behave more like any other quantificational NP, for example they enter into scopal (dependency) relations with other quantificational phrases. But the presence of discourse anaphora creates some pressure to interpret the indefinites referentially in a way which makes their semantical behavior resemble more that of proper names." (p. 98)

40. Shalkowski, Scott A. 2020. "Essence and Nominalism." In *Metaphysics, Meaning and Modality: Themes from Kit Fine* , edited by Dumitru, Mircea, 301-315. New York: Oxford University Press.

"Kit Fine has produced an extensive and rich body of work bearing on the philosophy of modality.

(...)

"What is less than usual, though, I will also argue that essentialism can be made safe for nominalists. Not only should we be unimpressed with philosophy that expands our ontology for the sake of eliminating modality, we should also be unimpressed with philosophy that expands the domain to admit the abstract when it is in the business of being completely sober, serious, and aiming at non-modal truth-telling.

Abstraction involves not arriving at principled, well-justified beliefs about abstract objects. It simply involves the failure to regard as important more and more features of (concrete) reality. One can hardly discover new ontology by caring less about—or by paying less attention to—the old ontology. The end result will be essentialism that is safe for nominalists." (pp. 301-302, anote omitted)

41. Urquhart, Alasdair. 2020. "Fine on Arbitrary Objects." In *Metaphysics, Meaning and Modality: Themes from Kit Fine* , edited by Dumitru, Mircea, 87-97. New York: Oxford University Press.

"Introduction

Fine's remarkable theory of arbitrary objects has attracted less attention than it deserves. He expounded his theory in two papers (Fine, 1983; Fine, 1985a), and a monograph (Fine, 1985b). The aim of the present chapter is to provide a brief introduction to the theory, to discuss some of the historical background, and finally to sketch some connections with other areas in logic and philosophy. In the historical section, I shall try to elucidate the extent to which earlier writers anticipated Fine's theory, while in the last section, I attempt to expand on some of Fine's brief but suggestive remarks in his monograph." (p. 87)

42. Wilson, Jessica. 2020. "Essence and Dependence." In *Metaphysics, Meaning and Modality: Themes from Kit Fine* , edited by Dumitru, Mircea, 283-300. New York: Oxford University Press.

"I have offered certain counterexamples to Fine's essence-based account of dependence, which more generally pose a difficulty for some of the principles (e.g., Localization) that he takes to characterize the connection between essence and dependence. Still, it will not have been lost on anyone that my criticisms here accept and aim to implement exactly the methodology that Fine took to show that modal accounts of essence and ontological dependence are incorrect, and for the same reason —namely, that it is of the first importance to characterize the key metaphysical notions in such a way that they do not inappropriately exclude any intelligible applications of those notions." (p. 299)

43. Frances, Bryan. 2006. "The New Leibniz' Law Arguments for Pluralism." *Mind* no. 115:1007-1022.

"Ordinary macroscopic material objects A and B coincide at a time if at that time they share the very same spatial regions and are made of the same underlying matter. Many philosophers hold that some easily possible or even actual material objects that coincide at a time are nonidentical, for example, a statue and the hunk of clay that it is materially coincident with. Following Kit Fine (2003), I will call those philosophers pluralists. Other philosophers, monists, think that there are no pairs of distinct coincident ordinary material objects.

Some of the paradoxes of material constitution are frightfully difficult to solve, and it is almost always agreed that any response to them will be at least somewhat counterintuitive, so the oddity of pluralism is not its refutation. (1) Fine (2003) has developed further than anyone else a new set of Leibniz's Law arguments for pluralism. Using Leibniz's Law to argue for pluralism is not new. Many find intuitive the idea that a statue but not the hunk of clay from which it is made cannot survive being flattened; by Leibniz's Law we can conclude that the statue is not the hunk of clay, or so it appears. The new arguments are intended to be superior to the familiar arguments in two ways: they do not rely on controversial modal and temporal intuitions, and they suggest serious errors in the monist's replies to the old Leibniz's Law arguments.

The new arguments are a welcome addition to the literature, as the traditional Leibniz's Law arguments for pluralism have already been very thoroughly examined. However, it seems to me that the monist has plausible responses to the new arguments. I agree with Fine that monism is probably false, but I do not see how the new arguments mount a good case against it." (pp. 1007-1008)

(1) I do not mean to imply that the problems of coincidence are the only problems of material composition. Even more serious composition problems are found when investigating the questions 'Under what conditions does composition happen?' and 'When taking atoms away from a pumpkin, when does one

no longer have a pumpkin?' Indeed, without a satisfactory solution to the latter problems, I do not see how we can be confident regarding our responses to the material coincidence problems.

44. King, Jeffrey C. 2006. "Semantics for Monists." *Mind* no. 115:1023-1058.

Abstract: "Assume that the only thing before you is a statue made of some alloy. Call those who think that there is one thing before you in such a case monists. Call those who think there are at least two things before you in such a case pluralists. The most common arguments for pluralism run as follows. The statue is claimed to have some property P that the piece of alloy lacks (or vice versa), and hence it is concluded that they are distinct. Most often, the predicates employed in such arguments to express the crucial property are predicates expressing 'temporal properties', such as existing at a certain time; or 'modal properties', such as possibly being spherical; or 'constitution properties', such as being made of a certain sort of material. In a recent paper, Kit Fine has noted that such predicates suffer from various defects that make it possible for the monist to plausibly resist the relevant versions of the pluralist's arguments. For this reason, Fine considers a number of predicates that do not suffer from these defects, and constructs new versions of the above argument using them. Fine argues that any attempt on the monist's part to resist his versions of the argument force the monist to adopt implausible positions in the philosophy of language. As against this, I argue that the monist has perfectly plausible responses to Fine's arguments that require the monist to adopt only quite reasonable positions in the philosophy of language."

45. Tallant, Jonathan. 2013. "A Heterodox Presentism: Kit Fine's Theory." In *New Papers on the Present: Focus on Presentism*, edited by Ciuni, Roberto, Miller, Kristie and Torrenco, Giuliano, 281-306. Munich: Philosophia Verlag.

Abstract: "Kit Fine ([Fine 2005]) has articulated a position according to which reality is fragmented. In this paper I will refer to this view as 'Heterodox Presentism'. I want to try and do two things. First, I want to try and undermine the arguments presented by Fine in favour of Heterodox Presentism and show that the view is unmotivated—in part by the fact that it fails to meet some of the standards that Fine sets for it. The second target aim is to offer some very informal and sketchy remarks as to how we might better construe the 'standard' view of realism, or 'presentism' to which Fine objects—the view that I will define here as 'only present objects exist'. As we shall see, my own view of presentism differs quite substantially from this pithy slogan.

46. Burgess, John P. 2004. "Book Review: Kit Fine. *The Limits of Abstraction*. Clarendon Press, Oxford, 2002." *Notre Dame Journal of Formal Logic* :227-251.

"Kit Fine's long article [13], introducing his distinctive take on neo-Fregeanism, has now been expanded into a short book of the same title. (For those familiar with the article version, the philosophical material from it appears as chapter 1 in the book, and the technical material as chapters 3 and 4. According to the book's preface, "The major change is the addition of a new part on the context principle." This addition constitutes chapter 2 of the book. There is also an index of technical terms, which would have been more useful if it had been arranged alphabetically.)

The present review of that book is divided into three parts of unequal length.

The long introduction Section 2 surveys recent neo-Fregeanism. Then Section 3 summarizes Fine's technical contributions, which presumably are what is of primary interest for readers of the present journal. The brief conclusion Section 4 touches on more purely philosophical issues.

M. Schirn, Oxford University Press, New York, 1998.

47. Correia, Fabrice. 2006. "Generic Essence, Objectual Essence, and Modality." *Noûs* no. 40:753-767.

Abstract: When thinking about the notion of essence or of an essential feature, philosophers typically focus on what I will call the notion of objectual essence. The main aim of this paper is to argue that beside this familiar notion stands another one, the notion of generic essence, which contrary to appearance cannot be understood in terms of the familiar notion, and which also fails to be correctly characterized by certain other accounts which naturally come to mind as well. Some of my objections to these accounts are similar to some of Kit Fine's compelling objections to the standard modal account of (objectual) essence (Fine 1994). In the light of these objections, Fine advances the view that it is metaphysical necessity which has to be understood in terms of essence, rather than the other way around, and takes essence to be unanalyzable. When formulating his view, Fine had only objectual essence in mind (or had both concepts in mind, but assumed that the generic is a special case of the objectual), and for that reason, I will argue, his account fails. I will suggest that Fineans should modify their view, and take it that metaphysical necessity is to be understood in terms of the two notions of essence—a view I myself find appealing.

Finally, I will end up with suggesting a further move which reduces the objectual to the generic, making metaphysical necessity reducible to generic essence alone—a move with which I myself have some sympathy."

48. Asay, Jamin. 2017. "Run Aground: Kit Fine's Critique of Truthmaker Theory." *The Philosophical Quarterly* no. 67:443-463.

Abstract: "Kit Fine, the leading proponent of the metaphysical project of grounding theory, has offered a number of potentially

devastating objections to truthmaker theory, the branch of metaphysics dedicated to exploring the ontological grounds for truths. In this paper, I show what presuppositions about truthmaker theory Fine's objections are based upon, and why they are false. I discuss four objections that Fine raises, and demonstrate how truthmaker theorists may respond to them. I then showcase the positive contribution that truthmaker theory can make to metaphysics, including its ability to speak to a core metaphysical topic (the ontological grounds for truths) that Fine's approach to grounding must ultimately remain silent on. I conclude by exploring what I take to be the best option when it comes to understanding how truthmaking and grounding fit together."

49. Shapiro, Stewart. 2004. "The Nature and Limits of Abstraction." *Philosophical Quarterly* no. 54:166-174.

"To what extent can abstraction principles serve as a foundation for a branch of mathematics? Like logicism, neo-logicism is an epistemological enterprise. The neo-logicist claims that basic arithmetic principles can become known on the basis of a derivation from Hume's principle. But of course the epistemic status of the conclusion of a deduction is closely tied to the status of its premises. Thus one key batch of philosophical issues concerns the epistemic status of acceptable abstraction principles, like Hume's principle. Are they analytic, or otherwise knowable a priori? Fine explores a number of options, and finds them wanting, some more so than others.

One natural possibility is to think of Hume's principle as a definition. But definitions come in many flavours. An 'orthodox' definition is a linguistic device to identify an item - object, property, function, etc. - which is already in the range of the bound variables of the language or theory in use. There are two types of orthodox definitions. An explicit definition stipulates that a new linguistic term is to be equivalent to a given expression. Abstraction principles do not have the form of explicit definitions. For example, Hume's principle does not provide a single expression that is equivalent to the 'number of operator." (p. 168)

(...)

"There is gold in these pages, but it is often difficult to mine. The book contains a number of annoying typographical and other minor errors. In most (but not all) cases, I was able to figure out what was meant, sometimes with effort. Part of the difficulty in reading this book can be traced to the fertile mind of its author. Fine explores many highways, byways and alleyways. For example, the philosophical material deals with intensional and extensional equivalence and with abstractions whose relations are contingent as well as necessary. On several occasions, distinctions are made and discussed for a while, and then dropped, sometimes with a remark that it does not matter. On the technical side, the book deals with both standard models and non-standard Henkin models. The play with predominantly logical abstractions is a result of Fine's admirable desire for his results to be as strong as possible, but the extra detail required for this introduces a wealth of intricacy that will challenge all but a diligent reader. The second half of the book is full of new technical terms and abbreviations, and it is easy to get lost in the linguistic jungle. The only help the reader gets in this regard is an 'index of first occurrence of formal symbols and definitions'. Unfortunately, this is arranged in the order in which these terms occur in the book, not in alphabetical order. So the reader who needs to look up a forgotten notion or symbol must look through seven entire columns of terms.

That said, this is a deep and penetrating book. It should be required reading for anyone with more than a casual interest in neo-logicism, or abstraction principles generally. No one can claim to be an expert on these philosophical and logical matters until they have mastered the arguments and ideas contained in this work." (pp. 173-174)

50. Wildman, Nathan. 2013. "Modality, Sparsity, and Essence." *Philosophical Quarterly* no. 63:760-782.

Abstract: "Rather infamously, Kit Fine provided a series of counter-examples which purport to show that attempts to understand essence in terms of metaphysical necessity are

‘fundamentally misguided’. Here, my aim is to put forward a new version of modalism that is, I argue, immune to Fine's counter-examples. The core of this new modalist account is a sparseness restriction, such that an object's essential properties are those sparse properties it has in every world in which it exists. After first motivating this sparseness restriction, I proceed to show how the resulting sparse modalism circumvents Fine's original counter-examples. After dismissing a potential problem concerning the membership relation, I conclude that, as at least one form of modalism is viable, the project of understanding essence in terms of metaphysical necessity is not so fundamentally misguided after all."

51. Forbes, Graeme. 2008. "Critical Review of Kit Fine's ' *Modality and Tense* '." *The Philosophical Review* no. 117:275-287.

"In this critical review I discuss the main themes of the papers in Kit Fine's *Modality and Tense: Philosophical Papers* . These themes are that modal operators are intelligible in their own right and that actualist quantifiers are to be taken as basic with respect to possibilist quantifiers. I also discuss a previously unpublished paper of Fine's on modality and existence."

52. "Symposium on Kit Fine's book *The Limits of Abstraction* ." 2005. *Philosophical Studies* .

Contents: Kit Fine: Précis [of " *The Limits of Abstraction* "] 305; Stewart Shapiro: Sets and Abstracts – Discussion 315; Alan Weir: On Kit Fine's ' *The Limits of Abstraction* ' – Discussion 333; Jamie Tappenden: On Kit Fine's ' *The Limits of Abstraction* ' – Discussion 349; Kit Fine: Replies 347-395.

53. King, Jeffrey C. 1991. "Instantial Terms, Anaphora and Arbitrary Objects." *Philosophical Studies* :239-265.

In recent work, Kit Fine has sought to resurrect the view that variables in mathematics refer to indefinite or, as he calls them, arbitrary objects. (3) Indeed Fine holds that instancial terms figuring in universal generalization and existential instantiation in systems of natural deduction, and some anaphoric pronouns in natural languages, refer to arbitrary objects as well. As against this, I intend to argue that the arbitrary objects account,

like the theories of indefinite numbers that preceded it, obscures rather than highlights the distinctive features of the various expressions it claims to handle; and that there is another view of the semantics of these expressions which is preferable to the arbitrary objects account. (4)

The plan of the present essay is first, to sketch Fine's theory of arbitrary objects; second, to sketch an alternative to Fine's account; third, to argue that Fine's arguments in support of arbitrary object theory also support the alternative; and finally, to argue that this alternative is preferable to arbitrary object theory." (p. 240)

(3) See 'A Defence of Arbitrary Objects' (henceforth, DAO), *Proceedings of the Aristotelian Society* Supplementary Volume 57, 1983, pp. 55-77; 'Natural Deduction and Arbitrary Objects' (henceforth, NDAO), *Journal of Philosophical Logic* 14 (1985) 57-107; and *Reasoning with Arbitrary Objects* Aristotelian Society Series Volume 3 (henceforth, RAO), Basil Blackwell, Oxford, 1985.

It may seem provincial of me to limit my attention to Fine's view and the alternative I intend to discuss, given the existence of sophisticated theories of anaphoric pronouns such as that outlined in Hans Kamp's 'A Theory of Truth and Semantic Representation' (in *Formal Methods in the Study of Language*, J. Groenendijk, T. Janssen, M. Stockhof (eds.), Mathematisch Centrum, Amsterdam, 1981, pp. 277-322). But Kamp's theory is incapable of handling much of the data that is at issue here. For example, that theory is incapable of handling the anaphoric pronoun in the following discourse

Every female professor has a computer. She is financially responsible for it.

(I intend 'a computer' to have narrow scope with respect to 'Every female professor').

Kamp's rules of DRS [Discourse Representation Theory] construction prevent the construction of what Kamp calls a complete DRS for this discourse; and one must construct a complete DRS for a discourse for Kamp's semantics to handle

the discourse. (In particular, Kamp's rule CR3 (p. 311) prevents substituting the "discourse referent" introduced by the processing of 'a computer' for 'it' in the second sentence, in effect preventing anaphoric connection between 'it' and 'a computer'; similarly for 'Every female professor' and 'she'.) More importantly, even if the rules were changed in order to allow the construction of a complete DRS for this discourse, the semantics would not come out right. For the value of the pronoun 'it' in the second sentence depends on the value of the pronoun 'She' in the sense that the truth of the sentence requires that for any female professor we choose (value of 'She') there must be a computer (value of 'it') such that the professor is financially responsible for the computer. Kamp's semantics does not include a device for keeping track of such dependence between the values of pronouns.

This lack prevents Kamp's theory from handling instantial terms in natural deduction and English arguments, and variables in mathematics as well. But this is just the sort of data that is the subject of this essay.

54. Shapiro, Stewart. 2005. "Sets and Abstracts – Discussion." *Philosophical Studies* no. 122:315-322.

"Kit Fine's *The Limits of Abstraction* (2002) is loaded with interesting and important model-theoretic results about abstraction principles. I propose to explore the bearing of these and related results on the philosophical goals of neo-logicism. I presuppose familiarity with the main themes of the book, at least as outlined in the précis published here.(1) Section 1 below analyzes particular results concerning abstraction principles, indicating consequences for acceptability of the neo-logicist program, at least as that program is articulated in the Fine study. Section 2 explores the role of set-theoretic meta-theory generally in foundational programs like that of neo-logicism (and logicism). What is an advocate of neo-logicism, or a neutral outsider, to make of the whole enterprise of model theory as based on set theory? What is a mathematician watching the neo-logicist development from the outside to make of neo-logicism?" (p. 315)

- (1) K. Fine, *Precis* [of " *The Limits of Abstraction* "], *Philosophical Studies* , 122, 2005, pp. 305-313.
55. Tappenden, Jamie. 2005. "On Kit Fine's ' *The Limits of Abstraction* ' – Discussion." *Philosophical Studies* no. 122:349-366.

"The best place to begin these comments is to say that I found this to be a wonderful book - genuinely thrilling to read. It is a challenge for me to find a contribution that hasn't been already advanced many times, since the core topics - reference to abstract objects, say, or impredicativity, to choose two among many - have received so much intense attention in recent decades. I'll try not to just repeat arguments that I already know are in the literature. Also, since many other people are in a better position than I am to comment on the technical side of the general theory of abstraction. I will refrain from comment, except to indicate my enthusiasm. Looking to a general account rather than remaining content with *ad hoc* justifications of this or that abstraction principle is clearly a crucial step to understanding the issues. Finally. I will have little that is critical to say, because I'm in broad agreement with those of the central reflections in *The Limits of Abstraction* on which I may have something novel to contribute. (1)" (p. 349)

(1) This is not to say I agree across the board, only that those disagreements I have – on impredicativity, for example – are for reasons that are completely unoriginal.

56. Weir, Alan. 2005. "On Kit Fine's ' *The Limits of Abstraction* ' – Discussion." *Philosophical Studies* no. 122:333-348.

"Kit Fine's *The Limits of Abstraction* is a magisterial study of the philosophical and technical issues raised by the neo-Fregean or neo-logicist project of founding mathematics on abstraction principles. The current interest in neo-logicism was largely generated by Crispin Wright, in his *Frege's Conception of Numbers as Objects* , and carried forward by Wright and others such as Bob Hale and Neil Tennant. Whatever one thinks of the philosophical plausibility of the project, it has been fortunate to attract the attention of superb logicians such as George Boolos and now Kit Fine, who have unearthed a

wealth of interesting mathematical logic from its technical foundations.

Fine writes not as a committed, card-carrying neo-Fregean (see, for example, p. 46) but more as a sympathetic bystander concerned to see how much light can be cast on mathematics from that perspective. This discussion, then, is not a critical review of Fine's book; rather I want to ask whether his work, in particular his 'General Theory of Abstraction', can be used by neo-Fregeans to rescue themselves from objections which have been made to their position." (p. 333)

57. Forbes, Graeme. 1993. "But *a* Was Arbitrary...." *Philosophical Topics* no. 21:21-34.

"I offer a philosophical defense of Gentzen-style quantifier rules which explains why they are sound without employing any such notion as "arbitrary name" or "arbitrary choice". I argue that while Fine's arbitrary object semantics directly justifies reasoning in which we seem to appeal to arbitrary objects, a parallel with standard vs. non-standard analysis, in which arbitrary objects are like infinitesimals, suggests that the Gentzen approach is more fundamental."

58. "Book Symposium - Kit Fine, *Semantic Relationism* ." 2010. *Philosophy and Phenomenological Research* no. 81.

Scott Soames: Coordination problems 464; Kit Fine: Comments on Scott Soames 'Coordination Problems' 475; Krista Lawlor: Varieties of Coreference 485; Kit Fine: Reply to Lawlor's 'Varieties of Coreference' 496; Paul Hovda: Semantics as Information about Semantic Values 502; Kit Fine: Comments on Paul Hovda's 'Semantics as Information About Semantic Values' 511-518.

59. Hovda, Paul. 2010. "Semantics as Information about Semantic Values." *Philosophy and Phenomenological Research* no. 81:502-510.

Abstract: "I suggest that the core ideas of Kit Fine's *Semantic Relationism* are the notion of semantic requirement and the notion of manifest consequence, the non-classical logical relation associated with semantic requirement.

Surrounding this core are novel “relational” systems of coordinated sequences of expressions, relational (as opposed to intrinsic) semantic values, coordinated propositions, and coordinated content. I take Fine to take the periphery to be reducible to the core (but see below). I will make some primarily exegetical remarks about the two core ideas, and then make more critical remarks about the periphery. I should say that I find the book, as a whole, illuminating and, for the most part, convincing. I hesitantly suggest that the core constitutes an important and novel model for thinking about semantics (and representation in general), while the periphery might result from an attempt to force the new model into the old mold.”

60. Lawlor, Krista. 2010. "Varieties of Coreference." *Philosophy and Phenomenological Research* no. 81:485-495.

Conclusion: "Does a comprehensive theory of language and cognition require primitive semantic relations? Fine thinks so, and I agree. Will incorporating primitive semantic relations have the result that traditional semantics will need to be dramatically re-written? Again, plausibly Yes—our understanding of compositionality, to take one instance, may have to be more subtle. Is strict coreference the right primitive in such a comprehensive theory? No, I think not—the semantic pro-form is a better primitive, because it affords a more general theory.

Naturally I've pressed criticisms here, but I greatly appreciate this book. We have Fine's work to thank for turning a powerful spotlight on coreference phenomena, illuminating how central they are in thought and language, and forcing us to think harder about how to understand them." (p. 495)

61. Sider, Ted. 2013. "Replies to Dorr, Fine, and Hirsch." *Philosophy and Phenomenological Research* no. 87:733-754.

Reply to Kit Fine, *Fundamental Truth and Fundamental Terms*, (2013).

"Kit Fine's paper raises important and difficult issues about my approach to the metaphysics of fundamentality. In chapters 7

and 8 (*) I examined certain subtle differences between my approach and his. Our approaches are kindred because they share the assumption that fundamentality-theoretic concepts are not to be defined modally, and that some such concepts are themselves to be adopted as conceptually primitive. (1) But they differ over which concepts are to be adopted, and over how those concepts behave."

(*) of Ted Sider, *Writing the Book of the World*, New York: Oxford University Press, 2011.

(1) This is not to say that all the approaches regard the concepts as *metaphysically* primitive.

62. Soames, Scott. 2010. "Coordination problems." *Philosophy and Phenomenological Research* no. 81:465-474.

"Although 'Rxx' and 'Rxy' are both applications of a two-place predicate to a pair of terms, 'Rxx' resembles a one-place predicate in that all one needs to evaluate it is an assignment to 'x'. A similar point applies

to the sequences 'Fx', 'Gx' and 'Fx', 'Gy' – even though neither is a one-place predicate. Kit Fine's semantic relationism aims to extract a common idea uniting these comparisons, and to use it to provide a Millian solution to Frege's Puzzle." (p. 463)

63. Deng, Natalja. 2013. "Fine's McTaggart, Temporal Passage, and the A versus B-Debate." *Ratio* no. 26:19-34.

Abstract: "I offer an interpretation and a partial defense of Kit Fine's 'Argument from Passage', which is situated within his reconstruction of McTaggart's paradox. Fine argues that existing A-theoretic approaches to passage are no more dynamic, i.e. capture passage no better, than the B-theory. I argue that this comparative claim is correct. Our intuitive picture of passage, which inclines us towards A-theories, suggests more than coherent A-theories can deliver. In Finean terms, the picture requires not only Realism about tensed facts, but also Neutrality, i.e. the tensed facts not being 'oriented towards' one privileged time. However unlike Fine, and unlike others who advance McTaggartian arguments, I take McTaggart's paradox to indicate neither the need for a more

dynamic theory of passage nor that time does not pass. A more dynamic theory is not to be had: Fine's 'non-standard realism' amounts to no more than a conceptual gesture. But instead of concluding that time does not pass, we should conclude that theories of passage cannot deliver the dynamicity of our intuitive picture. For this reason, a B-theoretic account of passage that simply identifies passage with the succession of times is a serious contender."

64. Gorman, Michael. 2005. "The Essential and the Accidental." *Ratio* no. 18:276-289.

Abstract: "The distinction between the essential and the accidental is nearly always understood in modal terms. After criticizing some recent writings by Kit Fine that question that understanding, I develop a theory according to which whether a given feature of a thing is essential turns on whether it is explained by other features of that thing. The theory differs from the modal view by leaving room for features that are accidental even though their bearers cannot exist without them. The theory has the additional advantage of being open to the results of scientific theory."

" Fine tries to explain essence in terms of definition but proceeds as if we already know the real definitions of things. I propose that we travel in the opposite direction and say that a good definition of something is a statement of its essence, i.e., a statement of its fundamental characteristic(s). In other words, we first inquire into a thing's essence, and then, once we know its essence, we can define it. If we do not yet know a thing's essence, then we are not able to state its real definition, although we might be able to formulate a substitute by invoking some necessary accident that all and only things of that type possess. Such substitutes can be extremely useful. For example, suppose we become convinced that a hydrogen atom's having exactly one proton is explained by some other fact about it, while being unsure what that other fact might be. In such a situation we would be unsure of the definition of hydrogen, but we would still be able to make a lot of progress investigating the characteristics of 'atoms with exactly one proton'.(22)" (p. 289)

(22) On substitutes for definitions see Aquinas, *Summa theologiae* I, q. 29, a. 1, ad 3. Oderberg connects essence with definition and also makes a point closely related to my remarks about substitutes, namely, that a grasp of proper accidents is the best means to grasping something's essence; see 'How to Win Essence Back', pp. 36-8, 40.

65. deRosset, Louis. 2014. "On Weak Ground." *Review of Symbolic Logic* no. 7:713-744.

Abstract: "Though the study of grounding is still in the early stages, Kit Fine, in "The Pure Logic of Ground", has made a seminal attempt at formalization. Formalization of this sort is supposed to bring clarity and precision to our theorizing, as it has to the study of other metaphysically important phenomena, like modality and vagueness. Unfortunately, as I will argue, Fine ties the formal treatment of grounding to the obscure notion of a weak ground. The obscurity of weak ground, together with its centrality in Fine's system, threatens to undermine the extent to which this formalization offers clarity and precision. In this paper, I show how to overcome this problem. I describe a system, the logic of strict ground (LSG) and demonstrate its adequacy; I specify a translation scheme for interpreting Fine's weak grounding claims; I show that the interpretation verifies all of the principles of Fine's system; and I show that derivability in Fine's system can be exactly characterized in terms of derivability in LSG. I conclude that Fine's system is reducible to LSG."

"Essentialism as applied to individuals is the claim that for at least some individuals there are properties that those

individuals possess essentially. What it is to possess a property essentially is a matter of debate. To possess a property essentially is often taken to be akin to possessing a property necessarily, but stronger – although this is not a feature of Aristotle’s essentialism, according to which essential properties are those properties a thing could not lose without ceasing to exist. Kit Fine (1994) takes essential properties to be those that an object has in virtue of its identity, while other essentialists refer (as Fine also does) to the nature of an object as the source of its essential properties.

It is sometimes important to distinguish the essential properties of a thing and the “full” essence of a thing. The latter is the set of the essential properties of a thing, when that set necessarily suffices to determine the thing’s identity. One might hold that something has essential properties without agreeing that it has an identity-determining essence.

(...)

"In this chapter I shall first outline certain claims and arguments concerning essentialism concerning individuals (second section). I shall then (third section) introduce the notion of a natural kind in more detail before discussing natural kind essentialism (fourth section)." (pp. 497-498)

Abstract: "In 1985, in his book *Reasoning with Arbitrary Objects*, Kit Fine observed and stressed three, in his opinion, important differences between A-objects and Skolem functions. The present paper rests on one of them. According to Fine, there is some kind of dependence relationship between objects that cannot properly be represented by any function. We will

analyze this claim from the perspective of natural language, and discuss the improvement that the use of arbitrary objects seemingly provides over Skolem functions in dealing with dependence."

"This Introduction to Brentano' is primarily aimed at conceptual interpretation even though it has been written with scrupulous regard to the texts and sets out its topics according to their chronological development. I have concerned myself at length with historical questions on other occasion, as when editing the Italian versions of the three volumes of Brentano's Psychologies published by Laterza in 1997. Again for Laterza,

and in accompaniment to the Psychologies I have written a short *Introduzione a Brentano* (Introduction to Brentano) of which this book is the development.

Before these publications, I have sought to outline the origin and influence of the theses put forward by the school of Brentano, and subsequently those of the school of Meinong with colleagues (L. Albertazzi et. al. ed., *The School of Franz Brentano*, Dordrecht, Kluwer 1996, and L. Albertazzi et. al. ed., *The School of Alexius Meinong*, Aldershot, Ashgate, 2001).

I have concentrated on these matters long enough to realize that it is still premature to attempt an exhaustive monograph on Brentano. Apart from the few texts published by Brentano during his lifetime, his writings -- and especially those published posthumously by his pupils -- are in a parlous state. And at the moment there seems to be no way out of the impasse." p. 1.

Essays

1. Albertazzi, Liliana. 1992. "Is There a Transcendental Object?" In *Theories of Objects: Meinong and Twardowski*, edited by Pasniczek, Jacek, 26-44. Lublin: Wydawnictwo Uniwersytetu Marii Curie-Sklodoskiej.

"Twardowski's ontology is to be listed among the jungle of ontologies which seem to be in fashion in contemporary philosophy. It has in common with Meinong's *Gegenstandstheorie* the description and definition of objects. But two are peculiar to Twardowski's ontology: the object in general and the general object. This stems from Twardowski's Kantian heritage and has to be related to a general Wolffian influence on the ontology of the Brentanists."

2. ———. 1995. "Forms of Completion." *Grazer Philosophische Studien* no. 50:321-340.

"The essay underlines the complementarity between theory and experimentation as a characteristic feature of the Meinong-school. In particular, it deals with the nucleus of a theory of presentation implicit in the theory of production. In fact, on the basis of Benussi's experimental results, I distinguish between

presentation and representation, relatively to the various phases of the moment-now as the qualitative primitive of cognition. This result has various consequences which shed light on the act-side: it shows that the production relation relates to the act and not to the produced object, clarifying some difficulties concerning the nature of ideal objects in Meinong's ontology; that the psychological act grants the objects of knowing on the basis of cognitive determinants which are assimilative determinants and determinants of connection. These cognitive aspects of the act are indeed forms of completions of the known objects. Finally, the essay deals with the a-modal development of Benussi's theory of the cognitive aspects of the act as performed by the Italian Gestaltist Gaetano Kanizsa."

6. ———. 1996. "Material and Formal Ontology." In *Formal Ontology*, edited by Simons, Peter and Poli, Roberto, 199-232. Dordrecht: Kluwer.

"We owe the concept of formal ontology to Husserl, who called it the 'formal theory' of objects. However, the concept of formal as used by Husserl in his definition should not be understood in the conventional sense, since in his thought 'formal' is equivalent to 'categorical'; it is closely connected with the structures of the intentional acts and, as we shall see, has morphodynamic implications.

In contemporary philosophy, formal ontology has been developed in two principal ways. The first approach has been to study formal ontology as a part of ontology, and to analyse it

using the tools and approach of formal logic: from this point of view formal ontology examines the logical features of predication and of the various theories of universals. The use of the specific paradigm of set theory applied to predication, moreover, conditions its interpretation. The second line of development returns to its Husserlian origins and analyses the fundamental categories of object, state of affairs, part, whole, and so forth, as well as the relations between parts and the whole and their laws of dependence - once all material concepts have been replaced by their correlative formal concepts relative to the pure 'something'. This kind of analysis does not deal with the problem of the relationship between formal ontology and material ontology." p. 199. (Notes omitted)

"A not up-to-date premise.

Can metaphysics be a science? The question has long been dismissed as obscurantist and in bad taste, as well as being obfuscatory, impossible to frame and methodologically inadequate. And yet it is an entirely legitimate question when stated in the following simple terms:

(i) what *exists*?

(ii) what are the best methods with which to *describe it*?

and, subordinately, why do things sometimes *appear* differently from what they *are*?

Questions of this kind stem from an empirical and experimental vocation.

The first step to take in analysis of an "elementary doctrine of the components of experience", as Kant put it, is an apparently simple one. One asks oneself, in order to remain on certain ground, what it is that exists here and now in the present moment.

A first answer concerns those apparently indubitable situations in which *something* - that is, *objects* of some kind - are seen, felt, smelt or touched. Yet an immediate certainty based on sounds, colours and things that are experienced apparently without mediations and usually with an emotional connotation - the bold red of a dress, the strident sound of violently applied brakes, the glittering gold of the decoration on the facade of a Viennese building, the pale moon that fades with the morning - at once raises the problem of the *terms used to describe it*, since these are extremely difficult to manipulate. *Here, now, something, object*, and so on, but also and more simply *colour, sound, emotion*, etc., are all terms which are widely abused and apparently bankrupt if analysed on the basis of linguistic definitions. And as for *seeing, feeling, hearing*, etc., these are veritable speculative pitfalls for the unwary. Are they acts? If they are, on what do they rest? Do they have some sort of substratum or are they wholly unconnected? And then, what is their origin? Metaphysics thus seems to oscillate perilously between the mute *deixis ad oculos* of the moment-now and the atemporality of abstract definitions of terms such as *be, exist, become*, and so on.

Not surprisingly, therefore, several philosophers have given up in the attempt and devoted themselves to the much more reassuring theories of epistemological *models* and logics of the existent, declaring metaphysics to be 'off limits'.

For those who persist in their empirical endeavour, the only option is to adopt a different approach: a minimalist one which analyses the *situation* to which these terms refer and their genesis in the duration. This is an essentially *descriptive* approach; it has close ties with psychology and it is, specifically, an *experimental phenomenology*." p. 257 (Notes omitted)

Brian Cantwell Smith *On the Origins of Objects*

Introduction

Contents: Preface VIII-XII; Introduction 3; Part I. Analysis; 1. Computation 27; 2. Irreduction 77; 3. Realism 85; 4. Particularity 117; 5. Physics 137; Part II. Construction; 6. Flex & slop 191; 7. Registration -- I 213; 8. Registration -- II 243; 9. Middle distance 277; 10. Transition 315; 11. Metaphysics 317; 12. Conclusion 345; Indexes; Sections 379; Figures 383; Sidebars 385; Topics 387; Names 407; References 411.

From the back-cover: "*On the Origin of Objects* is the culmination of Brian Cantwell Smith's decade-long investigation into the philosophical and metaphysical foundations of computation, artificial intelligence, and cognitive science. Based on a sustained critique of the formal tradition that underlies the reigning views, he presents an argument for an embedded, participatory, 'irreductionist,' metaphysical alternative. Smith seeks nothing less than to revise our understanding not only of the machines we build but also of the world with which they interact.

Smith's ambitious project begins as a search for a comprehensive theory of computation, able to do empirical justice to practice and conceptual justice to the computational theory of mind. A rigorous commitment to these two criteria ultimately leads him to recommend a radical overhaul of our traditional conception of metaphysics.

Along the way, Smith offers many fascinating ideas: the distinction between particularity and individuality, the methodological notion of an "inscription error," an argument that there are no individuals

within physics, various deconstructions of the type-instance distinction, an analysis of formality as overly disconnected ("discreteness run amok"), a conception of the boundaries of objects as properties of unruly interactions between objects and subjects, an argument for the theoretical centrality of reference preservation, and a theatrical, acrobatic metaphor for the contortions involved in the preservation of reference and resultant stabilization of objects. Sidebars and diagrams throughout the book help clarify and guide Smith's highly original and compelling argument."

From the Preface: "This is a book about metaphysics—one that attempts to do justice to the tundra, to gardening, to politics, to rock. As indicated, my path into these subjects has come through computer science, but that is mostly by the way. Although some technical material is reviewed in chapter i, computational considerations are largely set aside, in order to tell a tale about the territory into which that long exploration has led. The result is something of a metaphysical romp—occasionally riding rough-shod over turf already well explored (and well tilled) by generations of writers: from philosophy, feminism, theology, science studies, physics, poetry. Notwithstanding the germ of truth in the remark that "progress is made by stepping on the toes of giants," links with these literatures need to, and at some later point will, be forged. Nevertheless, my aim for the present text is simple: by presenting the story stripped of its computational heritage, to open up a conversation about perspectives, requirements, insights, and struggles—a conversation with others who have been led, via different routes, to this same metaphysical terrain.

To those inspired to take the trip—whether from explicit professional wrestling with such issues, or as the result of late night reservations about how to participate authentically in academic life—I hope to say two things. First: yes, it is possible to base uncompromising theoretical inquiry on alternative foundations: messier foundations, contested foundations, foundations that run closer to the wry and weathered texture of ordinary life. No one, least of all God, has decreed that intellectual rigor must (or even can) be founded on a pristine foundational atomism. Second, though, I also want to make evident just how much such a transformation costs. Politics, creativity, ambiguity, irreverence—none of these can be grafted, at a

later stage, onto a silent steel core, or even poured, like life-giving water, over inherently desiccated foundations. The whole story has to be turned upside down." p. IX-X.

From the Conclusion: "To say that this book has opened more doors than it has closed is not to say much, since anyway it is an argument against closed doors. Still, an attempt has been made to tell a coherent story, a story it will pay to review. For one thing, it is important to see how many of the desiderata laid down in the first few chapters have been met. Since I have barely scratched the surface of a positive proposal, it is also important to understand what work remains to be done. And a number of other loose ends need to be attended to, to bring even this much of an introduction to a close.

Overall, the project was to develop what I called a *successor metaphysics*, one that would honor the following pretheoretic requirements:

1. Do justice to what is right about:

a. *Constructivism*: a form of humility, or so at least I characterized it, requiring that we acknowledge our presence in, and influence on, the world around us; and

b. *Realism*: the view that adds to constructivism's claim that "we are here" an equally profound recognition that we are not all that is here, and that as a result not all of our stories are equally good.

2. Make sense of *pluralism*: the fact that knowledge is partial, perspectival, and never wholly extricable from its (infinite) embedding historical, cultural, social, material, economic and every other kind of context. The account of pluralism must:

a. Avoid devolving into *nihilism* or other forms of vacuous relativism, and in particular not be purchased at the price of (successors notions of) excellence, standards, virtue, truth, or significance; and

b. Not license radical *incommensurability*, provide an excuse to build walls, or in any other way stand in the way of interchange, communion, and struggle for common ends.

Two additional criteria were applied to how these intuitions are met:

3. Be *irreductionist* -- ideologically, scientifically, and in every other way. No category, from sociality to electron, from political power to brain, from origin myth to rationality to mathematics, including the category "human," may be given a priori pride of place, and thereby be allowed to elude contingency, struggle, and price.

4. Be nevertheless *foundational*, in such a way as to satisfy our undiminished yearning for metaphysical grounding. That is, or so at least I put it, the account must show how and what it is to be grounded *simpliciter* - without being grounded in a, for any category a.

Along the way, the account should:

5. *Reclaim* tenable, lived, work-a-day successor versions of many mainstay notions of the modernist tradition: *object, objective, true, formal, mathematical, logical, physical, etc.*" (pp. 345-346)

From: Brian Cantwell Smith, *On the Origin of Objects*, Cambridge: The MIT Press 1996.

Critical judgments and B. C. Smith' replies

"Smith's work may be aligned with the situated cognition tradition due to Barwise and Perry (Situations and attitudes, 1983). This approach emphasizes the importance of context in determining meaning. The situated semanticist is inclined to begin her theory of meaning with indexicals and other radically context sensitive representations. Tokens of 'I' have very little meaning independent of how, when, where, and by whom they are used. More generally, the situated approach to cognition places significant emphasis on the contribution of the situation of the organism to that organism's cognitive processes.

Smith argues that as soon as we register the world using a system of representation, we make a set of strong assumptions about the way the world is. His task has been to show the profound consequences of this insight for the study of systems of representation.

Smith makes use of an engaging imaginative strategy to draw attention to the theoretical moves required to explain the occurrence of representation using only the resources of a representation-free

physical world. Smith urges us to consider whether we need to think in terms of objects at all. Might an ontology consisting only of Strawson's (Individuals, 1959) 'features' be sufficient? When we declare that 'It's raining' we are drawing attention to a feature (raining) without being committed to any particular object that has that feature. Smith suggests we begin by thinking of the physicist's world as populated not by objects but field-densities. This field-theoretic description can be comprehensive while admitting only of field-densities for a small range of properties (for example, gravitational fields, electromagnetic fields, etc.).

Smith suggests that the common-sense world of middle-sized objects is an achievement of our representational practices. Representation is achieved when one aspect of the mish-mash of fields is able to separate in a certain way from the rest of the mish-mash. This region, the 's-region', is (or is becoming) the subject-something that represents the world. Smith first emphasizes the distance required between the representation and the represented, and secondly the need for coordination between the two. This coordination is likened to the actions of an acrobat who dances around a stage, but keeps a torch beam focused on one spot. The torch must undergo dramatic changes in orientation to maintain its focus at one point. The intentional acrobat is similarly dynamic in keeping its intentional objects stably registered." (p. 220)

From: Hugh Clapin (ed.), *Philosophy of Mental Representation*, Oxford: Clarendon Press 2002.

"Why re-tool our ontology? If we don't, if we complacently (or opportunistically) cling to the standard inventory, we will commit what Smith calls inscription errors or pre-emptive registration: (1) a tendency for a theorist or observer, first, to write or project or impose or inscribe a set of ontological assumptions onto a computational system (onto the system itself, onto the task domain, onto the relation between the two, and so forth), and then, second, to read those assumptions or their consequences back off the system, as if that constituted an independent empirical discovery or theoretical result. (Smith, On the origin of objects 1996 p.50) Pre-emptive registration is a sort of metaphysical anachronism, back-projecting onto our vision of ultimate-or at any rate more fundamental reality a

category or assumption that is in fact the effect or artefact of some later, higher-level, more 'expensive' development." (p. 224)

Notes

(1) The term 'inscription error' is from Smith (1996). Since writing the book, Smith has shifted to using the phrase 'pre-emptive registration,' on the grounds that it is more illuminating (based on 'pre-emptive representation', from Cussins, *Constructions of thought*, in preparation).

From: Daniel Dennett: "Brian Cantwell Smith on Evolution, Objectivity, and Intentionality", in: Hugh Clapin (ed.), *Philosophy of Mental Representation*, Oxford: Clarendon Press 2002.

"The first remark has to do with the project of naturalizing ontology. 'Why bother?' asks Dennett. The main reason, of course, is because I believe the subject matter demands it. What ends up as a methodological commitment is grounded in an empirical claim: that the theory of ontology and the theory of representation and intentionality are about intrinsically interconnected phenomena. To study one without studying the other would be like studying time without studying space. Time is not space, of course; no one thinks they are identical. But you would not get an adequate account of either space or time by studying it on its own. So too, I believe, for representation and ontology. How things are and how we take them to be, though by no means identical, are co-constituted in intricate ways.

I might say that I haven't always believed this.(*). During the 1980s I spent a long time trying to develop a theory of representation independent of ontology. I was particularly interested in taxonomies of representational types (symbols, icons, descriptions, models, simulations, etc.)-a theory, I might say, in which isomorphisms figured. Now I didn't have the smarts to invent targets to do the work that representations couldn't do. But my fundamental problem was that I couldn't hold the ontology fixed -- couldn't stabilize it adequately-in order to develop satisfying accounts of the plethora of correspondences that held between them. I was unable to determine (except by fiat, which didn't satisfy me) which items were objects or basic elements, which were properties of those elements, and which

were relations among them. Small variations in how I registered the basic domains wreaked havoc with how I ended up classifying the representations defined over those domains. In the end I was forced to admit that the (ontological) question of whether something was an object could not be answered except with reference to the (epistemological) question of whether it was being objectified by a representing or cognizing subject. That is: my independence assumption did not work. So there is a lot of failure behind this claim that representation and ontology are parts of the same subject matter. That really is the bottom line.

So I started over, to reconstruct ontology and representation together. It is not just an exercise, at the end of which you end up with the same recognizable parts. The theory that comes out-the benefits it gives you -- are different."(*) That's not quite true. What's more accurate is that I haven't always approached the subject, in my intellectual work, from an integrated perspective. Even in graduate school, I believed that ultimately they would have to be understood together. In fact my doctoral dissertation (1982) started out as one chapter in an integrated but unwieldy metaphysical project that, at the time, I was hopelessly unprepared to complete. On the origins of objects is essentially what that project turned into." (p. 238)

From: Brian Cantwell Smith, "Reply to Dennett", in: Hugh Clapin (ed.), *Philosophy of Mental Representation*, Oxford: Clarendon Press 2002.

"The identification and re-identification of objects involves an epistemic process of abstraction over the infinitely rich (and often surpassingly messy) ur-structure of the world. Among other things, the normative character of the intentional projects that agents are engaged in, when they commit these acts of abstraction, figures in the resulting 'clumping' of the world's effectively infinite detail. To be an object is to be a region or patch of the world that is successfully abstracted -- where the issue of 'success' is tied into the normative conditions governing the dynamic project of which the act of abstraction is a constitutive part. The fundamental character of (what it is to be) an object is thus intrinsically hooked into the intentional life practices of the objectifying subject.

One more point on this topic. As a way to muster support for simply availing ourselves of 'common-sense ontology', Dennett says 'Look, why not just assume sub-atomic particles and tables and mountains and galaxies, in the way that science does?' This leads me to mention a radical thesis that I hold, although I can't give it much defence here: namely, that science may not be committed to objects at all. Consider: an amoeba splits. Biology doesn't care about the individuals in the situation: whether one amoeba died and two new ones were born; or whether we now have a spatial distribution of unitary amoeba-ness; or whether one of the two emerging amoebae is the original one, and the other one is new; or any other possibility. Another example: in California I own an ancient redwood tree that has clumps of very substantial shoots (some as much as 50 feet high) sprouting around its base. How many redwood trees are there? Science doesn't know, and science doesn't care. Similar conclusions hold for fog, for the units of selection, for a myriad other examples. What this leads me to believe is that scientific laws (like animals) may in fact deal only in features; and that the objects we think of as constitutive of science may merely be simplifying epistemic devices that allow humans to calculate. Objects in science, that is, are in my view properly understood as part of the epistemic apparatus involved in the conduct of science as an intellectual activity (on a par with mathematical models); they are not ontological commitments of the theory as a whole.

Put it this way: ontology and abstraction need naturalizing as much as meaning, semantics, and content. Assuming a 'standard ontological inventory' for purposes of giving a naturalistic account of intentionality, as Dennett suggests, is thus a doomed project: it is viciously circular. Think about how appalled we would be (or anyway naturalistically unsatisfied) if someone were to propose a theory of representation that dined out on intentional notions, as if they were freely available. The naturalistic challenge is to explain intentionality without viciously presuming intentionality. A similar moral holds for ontology, in my view. Because ontological categories are in part intentionally constituted, attempting to explain representation while dining out on ontology is, for analogous reasons, fatally circular." (pp. 241-242, notes omitted)

Abstract: "The significance of any system of explicit representation depends not only on the immediate properties of its representational structures, but also on two aspects of the attendant circumstances: implicit relations among, and processes defined over, those individual representations, and larger circumstances in the world in which the whole representational system is embedded. This relativity of representation to circumstance facilitates local inference, and enables representation to connect with action, but it also limits expressive power, blocks generalisation, and inhibits communication. Thus there seems to be an inherent tension between the effectiveness of located action and the detachment of general-purpose reasoning.

It is argued that various mechanisms of causally-connected self-reference enable a system to transcend the apparent tension, and partially escape the confines of circumstantial relativity. As well as examining self-reference in general, the paper shows how a variety of particular self-referential mechanisms --- autonymy, introspection, and reflection --- provide the means to overcome specific kinds of implicit relativity. These mechanisms are based on distinct notions of self: self as unity, self as complex system, self as independent agent. Their power derives from their ability to render explicit

what would otherwise be implicit, and implicit what would otherwise be explicit, all the while maintaining causal connection between the two. Without this causal connection, a system would either be inexorably parochial, or else remain entirely disconnected from its subject matter. When appropriately connected, however, a self-referential system can move plastically back and forth between local effectiveness and detached generality."

History of Truth: *Aletheia* and Related Terms in Ancient Greek

Introduction

"Aristotle defines truth for classical philosophy: 'to say of what is that it is, and of what is not that it is not, is true.' (*Metaphysics* 1011b) This seems simple, but it is important to see that it is not. The formula synthesizes three distinct and in no way obvious or unobjectionable assumptions, assumptions which prove decisive for the career of truth in philosophy.

First, the priority of nature over language, culture, or the effects of historical experience. One can say of what is that it is just in case there exists a what which is there, present, with an identity, form, or nature of its own.

Second, the idea that truth is a kind of sameness, falsity a difference, between what is said and what there is. In another formula Aristotle says, 'he who thinks the separated to be separated and the combined to be combined has the truth, while he whose thought is in a state contrary to the objects is in error' (1051b). To be true, what you think separated must be what is separated—that is, they must be the same (the same form or *eidos*). To accommodate the priority of nature, however, truth has to be a secondary sort of sameness: according to the classical metaphor, the imitation of original by copy. It is up to us to copy Nature's originals, whose identity and existence are determined by causes prior to and independent of local convention. Thus a third feature of classical truth: the secondary and derivative character of the signs by which truth is symbolized and communicated. Classical truth subordinates the being (the existence and identity) of signs (linguistic or otherwise) to the natural,

physical, finally given presence of the non-signs they stand for." (pp. 9-10)

Heidegger remarks that 'in ontological problematic, being and truth have from time immemorial been brought together if not entirely identified (*Sein und Zeit*, 228). He thinks this is a kind of hint. There is, however, reason to think it is an originally meaningless accident of historical grammar. To be is spoken in many ways, but for Aristotle 'it is obvious that of these the what-something-is, which signifies the substance, is the first' (1028a). In a study of the Greek verb 'be' (*einai*), Charles Kahn shows the priority of its use as a predicating copula and the corresponding insignificance of the difference between existing and not existing. 'Both of them,' he writes of Plato and Aristotle, 'systematically subordinate the notion of existence to predication, and both tend to express the former by means of the latter. In their view to be is to be a definite kind of thing.' In contrast to what something is, the factor of existing, if it appears at all, appears secondary and of no distinct significance. For both, 'existence is always *einai ti*, being something or other, being something definite. There is no concept of existence as such.' This is not to say that Aristotle, for instance, is oblivious of the difference between what a thing is and its existence. Joseph Owens observes, 'Aristotle does not for an instant deny existence. He readily admits it in Being *per accidens*. But he does not seem even to suspect that it is an act worthy of any special consideration, or that it is capable of philosophical treatment.' (1) Kahn also describes a so-called veridical use of the Greek 'be' according to which it 'must be translated by 'is true,' 'is so,' 'is the case,' or by some equivalent phrase.' He remarks that 'instead of existence ... it was another use of to be that gave Parmenides and Plato their philosophical starting point: the veridical use of *esti* and on for 'the facts' that a true statement must convey. Thus the Greek concept of Being takes its rise from ... this notion of what is as whatever distinguishes truth from falsehood ... doctrines of Being first arose in Greece in connection with the question: what must reality be like for knowledge and informative discourse to be possible and for statements and beliefs of the form X is Y to be true?' To ask what reality must be like for sentences to be true implies that truth in sentences is their being like what is. Kahn writes, 'the pre-philosophic conception of truth in Greek ... involves some kind of

correlation or fit between what is said or thought, on one side, and what is or what is the case or the way things are on the other side.' As veridical, the Greek *esti* 'poses a relation between a given descriptive content and the world to which it refers or which it purports to describe ... truth depends on some point of similarity or agreement between the two.' Truth, in Greek, is the virtue of a discourse that subordinates itself to what is, assuming second hand the same form as the beings whose being makes the discourse true. 'If we bear in mind the structure of the veridical use of the verb, we will easily see how the philosophers' interest in knowledge and truth, taken together with this use of 'to be,' immediately leads to the concept of Being as ... the facts that make true statements true.' (2)" (pp. 14-15)

The idea of a veridical "be" has been questioned by Mohan Matthen, "Greek Ontology and the 'Is' of Truth," *Phronesis* 28 (1983) pp. 113-135.

From: Allen Barry, *Truth in Philosophy*. Cambridge: Harvard University Press 1993 (notes abbreviated).

"Our question is: how is truth related positively to historicity? Our guiding suggestion is that such an investigation itself needs to be conducted in a historical manner, by working through the generation of our present ways of thinking about truth. To propose this way of investigating the topic of truth and historicity is, however, to be brought face-to-face with a recurring problem. For straight away the

topic of our investigation seems to pose a dilemma for us at the level of method.

On the one hand, if we are to take our own historicity seriously, it would seem that the investigation will have to be undertaken in a historical manner; in short, to be an inquiry into the history of the idea of truth and of the idea of historicity. Yet, on the other hand, the topic of the relation of truth to historicity seems, in itself, to be a philosophical issue which a historical survey could, at best, only illustrate. Thus philosophy and history, as two different kinds of inquiry, seem to exhibit just that same polar opposition as do the ideas of truth and historicity. Accordingly, it is not surprising that the enterprise of carrying out an inquiry which is at once historical and philosophical should seem impractical. This methodological stumbling-block warrants careful pondering. (p. 7)

The historian of philosophy is operating with a consciousness different from that of the historical philosopher. The directedness of the former's thinking remains focused upon the thinkers of the past; their thoughts are what the inquiry is about. Thus, there is an inevitable epistemological 'distance' between the historian as subject and the past as object. But whoever philosophizes historically is engaged essentially in a complex act of self-consciousness. One enters into the past only to return to oneself; indeed, one recognizes elements of one's own way of thinking there in the past, and recognizes them as one's own. The historian of philosophy may be struck by flashes of self-recognition too, just as contrariwise the inquiry might lead to the revision of beliefs held now. But from the point of view of the teleology of the discipline, those results are accidental side-effects. For the historical philosopher, such outcomes are essential to the kind of self-conscious reflection engaged upon. Again, unrealized possibilities for thought forgone by past thinkers may be identified by historians of philosophy, especially by those whose procedure is hermeneutically sensitive. But for those who philosophize historically such identifications are only the first step towards the development of one's own position, in full self-consciousness, as both growing out of the inherited past and yet going beyond it." (p. 10)

From: Richard Campbell, *Truth and Historicity*, Oxford: Clarendon Press, 1992.

Alethéia in Ancient Greek

"The study of early Greek notions of truth is still dominated, fifty years later, by Heidegger's influential restatement (1) of the view (2) that *to a-lêthes* is, originally and essentially, *to mê lanthanon* -- i.e., the "unhidden" or "unforgotten". If Heidegger and his followers are correct, *alêtheia* must be a quality inherent in objects perceived or information received: a certain self-evidence, abiding clarity or memorableness (3). Against this view (though also, by implication, against those who reject altogether the correctness or relevance of the derivation from the root *lath-* (4) Bruno Snell has recently suggested (5) that the *lêthê* excluded by *a-lêtheia* is something found in persons rather than things: forgetfulness rather than hiddenness or being forgotten. *A-lethes* is that which is retained in the memory without any of the gaps to which such *lêthê* would give rise. (p. 7)

In this "subjective" reformulation of the established, "objective" interpretation, *aletheia* becomes the result of the way an original apprehension remains in the perceiving subject's memory, not an aspect of objects or information as originally apprehended. But perception or apprehension continues to be of major, if no longer central, importance. The discussion which follows accepts Snell's subjective interpretation in the main but argues for further reformulation, this time in terms of the processes of communication rather than perception: *alêtheia* is that which is involved in, or results from, a 'transmission of information that excludes *lêthê*', whether in the form of forgetfulness, failure to notice, or ignoring (6). The semantic development thus posited, by which a word that originally meant something like "conscientious reporting" became a synonym for truth (*etymon* or *eteon* in the earliest attested Greek) has a close parallel in the transformation of Latin *accuratus* ("careful", usually of speech or writing) into English "accurate". The Greek counterpart to this development is more complex and harder to trace: *alêtheia* absorbs some of the original meaning of two other more specialized terms (*nêmertês*, *atrekês*) and transmits some of its own to a third (*akribês*) before finally becoming, in the mid-fifth century, the most general and important word for truth. Moreover,

the initial and terminal stages of its history are much better documented than the intervening ones. But the development in all its phases is worth an attempt at reconstruction, even if the consequences for the history of Greek thought are less spectacular here than where the Heideggerian etymology serves as a point of departure.

Snell's subjective reformulation, whether as originally presented by him or in the revised version to be offered here, removes the most 'crucial' problem posed by its objective alternative. Hiddenness (or failure to be remembered) and its opposite are conditions which should attach to things as well as to the content of statements. Yet it is almost, exclusively to the latter that *alêthes* refers in its first two and a half centuries of attestation. A Greek may, from the very beginning, speak the truth (or "true things"), but it is not until much later that he is able to hear it (Aesch. Ag. 680), or see it (Pind. N. 7,25), or be truly good (Simonides 542,1 Page), or believe in true gods (Herodotus 2, 174, 2). And it is later still that *alêtheia* comes to refer to the external reality of which discourse and art are imitations. Other *lanthanein* derivatives -- *lathra*, *lathraios* (and *alastos*, if it belongs to this group)--are applied freely, at all periods of their use, to persons, things and situations; why not *alêthes* as well (7). The question becomes fairly easy to answer if *alêtheia* is taken to be, in origin, a kind of "unforgettingness", a specifically human quality and one which is most crucially and consistently important in the realm of human discourse. (p. 28)

Notes

(1) In *Sein und Zeit* 33 and 220-223. Cf., also, *Platons Lehre von der Wahrheit*, 26-33 and ' *Aletheia* (Heraklit, Fragment 16) ', 54-61.

(2) First stated by J. Classen, *Beobachtungen über den homerischen Sprachgebrauch*, Frankfurt 1867, 197 [reprint Hildesheim: Georg Olms, 1977] (*)

(3) See, most briefly, the articles in the etymological dictionaries of Frisk (s.v. '*alêthês*') and Chantraine (s.v. '*lanthanô*'), and, most exhaustively, J.-P. Levet, *Le vrai et le faux dans la pensée grecque archaïque*, Paris 1976.

(4) E.g., A. W. H. Adkins, 'Truth, Kosmos and Arete in Homer', *Classical Quarterly* 66, 1972, 6-7. Cf., also, Friedländer's suggestion (Plato (2nd edition) vol. 1, eng. transl. New York 1958, 221 -- modified and largely abandoned in Plato (3rd edition) vol. 1, Berlin 1964, 234-236) that the word may not even be Indo-European.

(5) In *ALETHEIA, Festschrift für Ernst Siegmann* (= Wurzbürger Jahrbücher für die Altertumswissenschaft 1, 1975), 1-18. See, especially, 14 "ἀλήθεις ist das rm Gedächtnis lückenlos Festgehaltene (das in seiner Fülle hergezählt werden kann)", and 11, "... in einen bestimmten Wissens-Kontinuum nichts der Lethe anheimfallen lassen". Snell seems indebted to T. Krischer's study, 'ETYMOΣ und ΑΛΗΘΗΣ', *Philologus* 109, 1965, 161-174 for his notion of *aletheia* as the larger whole from all of whose parts the process or idea associated with the lath- root is excluded. For Krischer this idea is that of being "unnoticed" rather than "unhidden" or "forgetful", so that an *alethes logos* is "... der Bericht der die Dinge darstellt... ohne das dabei etwas unbemerkt bleibt" (op. cit. 167; cf. 165: "... so aussagen das nichts [dem Angeredeten] entgeht) ".

(6) As in the corresponding verbs *lanthano* and *lethomai*, the distinction between unintentional forgetting or failure to notice and intentional ignoring is not strictly observed. The meaning posited is broad enough to include both.

(7) Usage thus tells strongly against the relevance of W. Luther's contention (Wahrheit, Licht und Erkenntniss in der griechischen Philosophie bis Demokrit', *Archiv für Begriffsgeschichte* 10, 1966) that the Homeric world is one which knows "keinen Unterschied zwischen Wahrheit und Wirklichkeit" (31), and in which "die Dinge und die sie bezeichnenden Wörter noch in einem untrennbaren Wirkungszusammenhang stehen" (37). This may be true in general, and for *etymos* (text, p. 13), but not for *alêthes*. Cf. Snell (above, n. 5) 11, n. 4, and 17.

(*) [Note added by Raul Corazzon: The text by Johannes Classen is: "Wahr ist den Griechen das Unverhüllte, ἀ-λήθεις (von λήθω, λανθανω) und die Wahrheit, ἀλήθεια, kommt den Dingen und Worten zu, in so fern sie sich unsrer Einsicht nicht entziehen." in:

Über eine hervorsteckende Eigentümlichkeit der griechischen Sprache (1850), reprinted in *Beobachtungen... cit.*]

Remarks on the etymology of Alethéia

"*Aletheia* is the most important Greek counterpart of our 'truth'; *alethes* (true), *alethos* (truly) and *alethein* (to speak the truth) are related words. However, the Greek "truth-family" is much more comprehensive and consists of 14 words, among others (adjectives): *atrekes*, *nemertes*, *adolos*, *ortos*, *apseudos*, *etymos* and *etetymos*. It is characteristic that several words, including *aletheia* also, belonging to this variety begin with 'a'. The most common interpretation of this lexical phenomenon is to consider 'a' as a sign of privativum, that is, as a negative noun or adjective. This understanding of *aletheia* was proposed by Sextus Empiricus, Plutarch, Ohimpiodoros and the so-called *Lexicon Gudianum* in antiquity (see [Wilhelm Luther, *"Wahrheit" und "Lüge" im ältesten Griechentum* (1935), pp. 12-13; Paul Friedländer, *Platon: Seinswaheheit und Lebenswirklichkeit*, (1954) pp. 222, 375]). In our times, it was recalled by Leo Myers in his influential *Handbuch der griechischen Etymologie* (1901) and popularized by Rudolf Bultmann (see [*Der griechische und hellenistische Sprachgebrauch von ἀλήθεια*, p. 239]): "*aletheia* - etymologisch das Nicht(s) - *verheimlichen* - bedeutet". According to this interpretation, we should consider such words as complexes of the following structure: *a-letheia*, *a-trekes*, *a-dolos* or *a-apseudos*; *nemertes* can be understood in a similar way, because 'ne' functions as 'a', that is, as an indicator of a privative character. As far as the matter concerns *aletheia*, its etymology is derived as *a* + *lethe* + suffix. *Aletheia* as a noun occurred with so-called *verba dicendi*, [verbs of saying] that is, verbs like Greek counterparts of "to tell" or "to hear". So much about matters of lexicology and a simple grammar. Of course, semantic matters are much more important. Very schematically, if *V* (*aletheia*), where the letter *V* stands for a *verbum dicendi*, represents an *aletheia*-context, to *V* an *aletheia* consisted in issuing a concrete sentence in the present tense about something, usually supported by direct experience, particularly seeing (see [H. Boeder, *Der frügeschichte*

Wörtgebrauch von Logos und Aletheia (1959) pp. 68-71]). Then, applications of *aletheia*-contexts were extended to past and future events. Finally, *aletheia* became an abstract noun, denoting a property of sentences (judgements, etc.)." (p. 341)

From: Jan Wolenski, *Aletheia* in Greek Thought Until Aristotle, *Annals of Pure and Applied Logic*, 127: 2005, pp. 339-360.

A synthetic overview of Alethéia in Ancient Greek

1. For many years there has been a tendency in biblical studies to over-generalize about the uses of *alétheia* and *aléthes* in classical Greek. This has been done partly with a view to drawing a clear-cut contrast between Greek and Hebraic concepts of truth. It is then argued that whilst some New Testament writers preserve the Hebraic concept, other writers, especially John, achieve a fusion of these two views. Thus R. Bultmann too readily speaks of "the Greek use" of *alétheia* as over against "the semitic use" (*Theological Dictionary of the New Testament* I 238). According to this theory, *alétheia* in classical Greek denotes truth in contrast to mere appearance, whilst in Hebrew the parallel word denotes stability or faithfulness. It is also urged that truth in Greek writers is timeless, raised above the temporal and material world. It relates only to extra-historical being. Most scholars also insist that the basic meaning of *alétheia* in classical Greek is that of unhiddenness or unveiling. These traditional claims of nineteenth- and twentieth-century biblical scholarship are valid up to a point, but can be misleading unless they are carefully qualified.

2. The traditional approach depends largely on three arguments. (a) Much is made of the etymology of *alétheia* in ancient Greek. The word is said to derive from *letho* or *lanthano*, meaning to escape notice or to cause to forget, together with Alpha privative prefix, which negates the idea. The difficulty, however, is to show that the etymology of the word played a decisive part in determining its meaning in later Greek of the classical and Hellenistic periods. Indeed, even Homer shows little evidence that the word has this special nuance.

(b) *alétheia* does indeed mean truth in contrast to mere appearance in much Greek philosophy. But the vast majority of classical Greek writers and readers were not philosophers. J. B. Skemp observes, "There is one particular vice in the theological picture (or rather, caricature) of the Greeks. They are always represented as philosophical thinkers.... Such a description of the Greeks ignores the fact that many other Greeks at all the relevant times thought differently, and that a multitude of them did not think in this systematic way at all" (*The Greeks and the Gospel*, 1964, 3-4).

(c) The notion of truth as against mere appearance and as that which belongs only to the realm of timelessness and immateriality finds strong support in Parmenides and especially in Plato. This need not be denied. Nevertheless, even within Greek philosophy itself there are other views of truth besides Plato's, for example, that of the Sophists, which Plato himself attacks, and also that of Aristotle. In these writers truth has a more positive relation to the material world.

3. (a) In Homer *alétheia* is most frequently used in contrast to the telling of a lie or to the withholding of information, e.g. "Tell me all the truth [*pasan alétheian*] whether my son is by the ship" (*Ilyad* 24, 407); "I will tell you all the truth" (*Odyssey* 11, 507). When Odysseus with cunning "spoke not the truth", he simply tells a lie (*Od.* 13, 254). Achilles set an umpire to tell the truth of a race, i.e. the state of affairs as it really was (*Il.* 23, 361). However, this is not the only meaning of *alétheia* or *alethes* in Homer. In *Il.* 12, 433 *gyne chernetis alethes* means a woman who is careful, honest, accurate, or even perhaps reliable. (b) *alétheia* usually stands in opposition to falsehood in Herodotus, Thucydides and Xenophanes. For example, the cowherd in Herodotus "tells the truth" under threat of violence (1, 116). Thucydides speaks of "the actual truth" in contrast to mere empty boasts (2, 41, 2). An oracle provides true answers to enquiries (Herodotus., 1, 55). (c) This usage also persists in later Hellenistic writers. Thus Epictetus contrasts telling the truth with deceiving flatteries (*Discourse* IV, 1, 6, 7). Philo writes that Moses marvelled at the delusion (*pseudos*) which the multitude had bartered for the truth (*alétheia*) (*De Vita Moses* 2, 167). The evil spies sent out to view the land prefer deceit (*apate*) to truth (*Vit. Mos.* 1, 235). Josephus uses *alétheia* in several different senses.

(i) Truth is that which corresponds to the facts of the matter. Thus Jonathan did not question the truth (veracity) of David's words (*Antiquities of the Jews* 6, 225).

(ii) Truth is also proved to be such by historical events. The words of a prophet are thus proved true (*Antiquities* 2, 209); whilst in the previous passage Jonathan does not wait to see David's words proved true (*Antiquities* 6, 225). (iii) Josephus also uses *alethes* in the sense of "genuine" or "real". Thus Ahab killed the real owner (*ton alethe despoten*) of the vineyard (*Antiquities* 8, 360).

4. The use of *alethes* in Greek philosophical texts is best seen in Parmenides, the Sophists, Plato, and Aristotle. Some of Plato's uses also appear in Philo.

(a) Parmenides asks what is the nature of real being, and draws a contrast between the way of truth and the way of seeming. Change belongs only to the material world, which is the realm of mere appearance. There can be no change in what really exists (Fragment 8, 29). "What is not" is unthinkable and unknowable, but change would be the supposed movement of what is to what is not, or of what is not to what is. Hence truth, in contrast to appearance, belongs to the extra-historical realm of the changeless. That such a view occurs in Greek philosophical literature is therefore clear. What is less certain is the extent to which ordinary Greek writers shared the view of Parmenides.

(b) The Sophists clearly held a different view. In particular Protagoras refused to view the material world as mere illusion. His famous dictum that "man is the measure of all things" was not intended merely, as Plato implied, as an extreme form of relativism. He cited the example of a wind which may seem warm to one person and cool to another. It is not necessary, he urged, to say that one view is true and the other false. Each may be true for the person concerned. In this way Protagoras comes near to the modern notion of existential truth.

(c) Plato rejects this view.

(i) He replied that if "true" and "false" are only relative to the individual thinker, then as soon as someone says that the philosophy of Protagoras is false for him, it is therefore false (*Theaetetus* 171 a).

Falsehood, for Plato, is a matter of deception. It conceals reality (*ta onta*). False words, he believed, are merely a copy (*mimem*) of deception in the soul (*Republic* 2, 21, 382a-383b). Falsehood is the presentation of what is only appearance (*phantasma*). By contrast "the divine and the divinity are free from falsehood [*apseudes ... to theion*]" . God is true in deed and word (*alethes en to ergo kai en loge*) and neither changes himself nor deceives others (382e). Plato thus returns to the view, earlier outlined in Parmenides, that truth stands in contrast to appearance and to change, although he goes further than Parmenides in locating it in the realm of eternal ideas.

(ii) At the same time Plato also uses *alétheia* and *alethes* in more ordinary and less metaphysical ways. Truth sometimes means simply "the facts of the matter" (*Epistles* 7, 330). *alétheia* stands in contrast to legend (*Timaeus* 22d). "Equal to equal ... because of truth" (*Legibus* 2, 668a).

(d) Aristotle takes us closest to the view of truth found in modern propositional logic. Firstly, Aristotle distinguishes between the genuine proposition, which is true-or-false, and sentences such as pleas or commands. "We call propositions only those (sentences) which have truth or falsity in them" (*On Interpretation* 4, 17a, 4). Secondly, he considers the logical conditions under which the truth of a proposition entails the denial of its contrary. If it is true to say "Socrates is well", it is therefore false to say "Socrates is ill" (*Categories* 10, 13b, 14-35). Thirdly, he argues that "the truth of a proposition consists in corresponding with facts" (*hoi logoi aletheis hosper ta pragmata*, *On Interpretation* 9, 19a, 33). The principle is said to include statements about future states of affairs (18a-b). Often, however, the actual word *alétheia* is used in its ordinary everyday sense without philosophical content. The philosopher seeks to discover "the truth" that is in the universe (*De Mundo* 4, 39a).

(e) Philo uses *alétheia* in ordinary ways, as we have seen. As a Jewish theologian he speaks of "true doctrine" (*alethes dogma*, *Legum Allegoriae* 3, 229). But as a speculative writer who has been influenced by Platonism he also contrasts truth with mere appearance: "Moses desired truth rather than appearance [*tou dokein*]" (*De Vita Moses* 1, 48). However, he also sees the truth of

God manifested in historical events, as in a quick punishment for unbelief (*Vit. Mos.* 2, 284).” pp. 874-877

Pre-philosophical Concepts of Truth in Ancient Greece

The prephilosophical usage of Alethéia

Homer

Studies:

"As scholars have often pointed out, the word *Aletheia* only occurs in the *Iliad* and the *Odyssey* in connection with verbs of saying, and its opposite is a lie or deception. Someone always tells the truth to another. Of the seventeen occurrences, (a) this triadic pattern is explicit in all but six, and in those few cases the reference to a hearer is clearly implied. Truth has to do with the reliability of what is said by one person to another.

What is not so often pointed out are some quite distinctive features of the Homeric use of *Aletheia*. This is not the only word Homer uses to mean truth; he has a number of other words which mean 'true', 'genuine', 'accurate', and 'precise' (*atrekes, eteos, etetumos, etumos*). These words, as adjectives or adverbs, occur freely in the midst of stories and speeches. By contrast, *Aletheia* occurs almost always as a noun or neuter adjective (once the cognate adverb *alethes* is used). It is the word Homer uses when he wishes to signify 'the truth'.

Furthermore, it is very revealing that the sentence, 'Then verily, child, I will tell you the truth', occurs five times in the *Odyssey* with but minor variations. (b) It is a high-sounding formula used to introduce a speech. The repetition of lines and formulaic phrases-sometimes, indeed, a number of lines-is a feature of the Homeric style. That *Aletheia* should occur in such a context suggests that the sentence is one that has come down in the tradition as a ready-made formula which Homer inherited.

Again, significantly, the word often occurs in the phrase 'the whole truth' (*pasan alétheien*). (c) To tell the truth in this sense is not just to utter some sentence which is true—that is a much more modern conception. It is to give a whole account, to tell the entire narrative. So, for example, at *Iliad* 23.361, Achilles sets Phoenix as umpire to watch a chariot-race and to report back the truth. The same meaning underlies *Odyssey* 13.254, where Odysseus is about to address Athena, the daughter of Zeus, in a very fulsome account 'yet he spoke not the truth but checked the word ere it was uttered'. In many other occurrences one of the characters is entreated to tell the truth, or undertakes to do so, in relation to certain questions which have been asked. Here again, the notion is that the account given has to be complete and accurate, with nothing held back and with no deception. The Homeric notion of Aletheia which emerges from examining its uses is precisely the same, with the same force and flavour, as that enshrined in the traditional oath or solemn affirmation required of a witness in court proceedings: to tell the truth, the whole truth, and nothing but the truth.

Given this use in Homer, it appears that Aletheia is a matter of being truthful and open in one person's dealings with another, so that what is said can be taken by hearers as reliable and trustworthy. That being so, the meaning discernible in its use coincides with the etymology of the word given by most scholars, both ancient and modern. The word is generally taken to be derived from a root meaning 'to escape notice, detection'. The same root, with much the same meaning, underlies the Latin *lateo*, 'am hidden', 'remain unnoticed', from which English derives 'latent'. The word *lethe* in Greek means 'forgetfulness'. How prominent the nuance of not forgetting is taken to be in Aletheia is debatable. But from the evidence it does appear that in Homer the nuance of not hiding is strong. People speak the truth if they hide or conceal nothing from their hearers. (d)" (pp. 32-33)

Notes

(a) That is, excluding the occurrence of *aléthes* at *Iliad* 12.433, which is probably a corruption of *aletis* -- see H. J. Mette, 'Aléthes', in Bruno Snell (ed.), *Lexicon des frühgriechischen Epos* (Vandenhoeck and Ruprecht, Göttingen, 1955-).

(b) *Odyssey* 3.354, 16.61, 16.226, 17.108, 22.420.

(c) e.g. in the *Odyssey* 3.354 and 16.6, (already cited) and in 11.507, 17.297, and *Iliad* 24.407.

(d) See Mourelatos, *The Route of Parmenides*, 64 ff., and C. H. Kahn, *The Verb 'Be' in Ancient Greek* (Foundations of language Suppl. Series, 16; Reidel, Dordrecht, 1973), 364 ff.

From: Richard Campbell, *Truth and Historicity*, Oxford: Clarendon Press 1992.

"The result is that the epic texts entertain an endless dialogue and conversation on all the topics of archaic Greek thought. To begin with the notion of truth in relation to the language of poetry, the *Iliad*, the *Odyssey*, and Hesiod eavesdrop on each other, the *Odyssey* teasing slightly the notion of *kleos* [glory] in the *Iliad*, the *Odyssey* providing the foil for Hesiod's attack on the poets, *gasteres oion*, "mere bellies." In the age of writers, a man as wise as Xenophanes is not content with attacking by name, author to author, the hexametric poetry of Homer and Hesiod: he goes on to quote, and he quotes by alluding to a line of the poet he is condemning. So Xenophanes fragment 36, which reads *tauta dedoxastho men eoikota tois elumoisin*, "let these things be considered to resemble truth," cannot be separated either from Hesiod *Theogony* 27 or from *Odyssey* 19.203. (10) The textual parallels between Parmenides and the *Odyssey*, as Alexander Mourelatos writes, "have been commonplace for almost a century," and several incorporations of Odyssean phrases by Parmenides' text have in recent years been shown to contain a specific set of allusive interactions. (11)

The perception that the poetic language maintains a difficult and problematic relation with truth belongs to all the texts in question, but the economy of this relation and the strategies that are devised to save the notion of truth from the contiguity of falsity are as different as are the texts.

The question of truth (*aletheia*) in relation to being (*to on*) and to language (*logos*) remains fundamental. Heidegger has elaborated these questions in the Greek context beginning with *Iliad* 1.70, *ta t'eonta, ta t'essomena pro t'eonta*, in a famous essay, (12) where he defines being of *einai* as presencing and connects the Iliadic *ta eonta* with Anaximander's *ta eonta*. (pp. 242-243)"

Notes

(10) The resemblance between Xenophanes frag. 36 and Hesiod *Theogony* 27 is evident to some critics: see André Rivier, "Rémarques sur les fragments 34 et 35 de Xénophane," *Revue de Philologie* 30 (1956): 37-61.

(11) See Eric A. Havelock, "Parmenides and Odysseus," *Harvard Studies in Classical Philology* 63 (1958): 133-43; and Alexander P. D. Mourelatos, *The Route of Parmenides* (New Haven: Yale University Press, 1970), pp. 17-34.

(12) Martin Heidegger, "The Anaximander Fragment," in *Early Greek Thinking*, trans. David Farrell Krell and Frank A. Capuzzi (New York: Harper & Row, 1975), pp. 36 ff.

From: Pietro Pucci, *Odysseus Polutropos. Intertextual readings in the Odyssey and the Iliad*, Ithaca: Cornell University Press 1987.

"Truth beginning with the presocratic Parmenides assumed some kind of at least proto-eidetic, non-immediate and reflected status in the Greek culture. This was not the case in Homer's texts, where how a statement "rang true" depended to a much greater extent on its traditional linguistic power than on the idiosyncratic, individual behavior of a specific character or some universalized sense of character that Aristotle was yet to create in the *Nicomachean Ethics*. Homeric truth lay in a factual *mythos* ("myth"), not a fictive *logos* ("argument"). The archaic *mythos* was defined in its factual, even artifactual, relationship to an immediately recognizable "deed" (*ergon*), not to an *ergon* that Aristotle might wish to judge, through a problematically narrated *logos*, "certainly" (*akribes*), "decorously" (*to prepon*), and ultimately universally or "absolutely" (*haplos*). Consequently, as Vico perceived in his *De Antiquissima*, for Homer fact implied truth (*verum-factum*). Vico was to attribute to the ancient Latins the different Aristotelian notion that only certainty implies truth (*verum-certum*). So arises yet another difference linked to a common source, in this instance "truth. Again, it suggests a shift or skew that is central to our rhetoric and its powers of interpretation, that is, its hermeneutics". (p. 64)

"*Der Weg* (*) is an important collection of those essays that most clearly reveal Snell's insights into the idiosyncratic properties of

Homeric experience. Chapter 5 ("The Development of the Notion of Truth among the Greeks") was written specifically against Heidegger's false notion of archaic "Truth" and, as such, succeeds in dismissing any putative "onto-theological" essence of "Truth" from the Homeric treasure house of nonrepresentational mental activity. The chapter is a shortened version of an earlier essay entitled "ALETHEIA" (*Festschrift Ernst Siegmann* [Würzburg: Schöningh 1975], 9-17) which should be read by those interested in more Homeric examples to bolster the argument. In both pieces, as is the case in Snell's most popular work, *Die Entdeckung des Geistes*, 4th ed. (Göttingen, Vandenhoeck & Ruprecht, 1975), there lies an Aristotelian differentiation that too easily skews the cultural continuity of Homeric experience, with which we all must deal. If indeed, as Snell argues generally, mental activity moves from the concrete sense of Homeric experience to an abstract reflection of the philosophical sort, two reservations must always apply to any statement about how the Greeks or we "think": (1) the opposition concrete/abstract is purely an Aristotelian formulation designed by him, along with his notion of particulars and universals to arrive at a "proper judgment", and (2) the philosophical penchant for an abstract *lexis* does not in any way minimize the continual operation of Homeric perception to the present day.

Snell defines "the three significant aspects, under which Homer sees what one later named the truth." Here, too, it is necessary to identify the Aristotelian, philosophical *lexis* that tends to creep into Snell's modern German prose:

alethes is that consistent, solid surety in memory (that in its fullness can be enumerated), ["Memory" in any functional sense is not found in the Homeric texts; *mnemosyne* appears as hapaxlegomenon at *Iliad* 8.181, with an imperative: *mneomosyne tis epeita pyros deioio genestho* ("then let some memory of blazing fire come about") "Fullness" and "enumeration" are, however, characteristically Homeric perceptions of experience, especially when linked to "cataloguing".]

eteon is the factual [*Tatsächliche*], an objective Being, [*ein objektiv Seiendes*] (that as such draws necessarily specific consequences, in sharp antithesis [*Gegensatz*] to Not-Being [*Nichtseienden*]).

["Objective Being" suggests too strongly the *De Anima*, and Snell's argument is not convincing that at *Iliad* 2.299-300, when Odysseus asks the host to wait *ophra daomen / e eteon Kalchas manteuetai, ee kai ouki* ("that we may learn whether what Calchas foretells is true, or whether indeed it is not"), there arises the question of Being and Not-Being (Snell, *Der Weg*, 95-96). "Antithesis" or "opposition," moreover, too easily falls into some Aristotelian readings of a pre-Socratic, not entirely Homeric structure of thought. It is the relationship between *eteon* and the factual that is the insight here.]

nemertes is the Not-Falling [*Nicht-Verfehlende*] in especially the replying word (the "*Ant-Wort*"), that something factual [*ein Tatsächliches*] (*eteon*), at last come about [*trifft*], when one make inquiries about him. (Snell, *Der Weg*, 100)

It is Snell's understanding of *nemertes* as "truth" that forms a common definition of all lexical choices in Homer that attempt to express the force of the human experience. Snell's attempt to color *alethés* with a "subjective" tone over an "objective" one (*Der Weg*, 109) is probably explained by a zeal to crush Heidegger's "objective" fiction. Unfortunately, the philosophical debate tends to blur the central issue of language and human discourse that the root sense of all "truth" in Homer suggests (Cole "Archaic Truth", 27). (For distinctions among *nemertes*, *atrekes*, and *alethes* that Snell is unwilling to draw [*Der Weg*, 98], see Cole "Archaic Truth", 17)." (pp. 79-80)

"As we look beyond Homeric diction, however, at later stages in the history of Greek poetics, we can find evidence for the emergence of yet another word that marks speech as special -- so special that it is

set apart even from *múthos*, which in such contexts then becomes in its own turn "ordinary." I mean "ordinary" only to the extent that the given opposing word becomes even more special. The word in question is *alethés* 'true' or *alétheia* 'truth'. In the diction of a fifth-century poet like Pindar, for example, this word is used in explicit opposition to the word *múthos* in contexts where true speech is being contrasted to other forms of speech that are discredited, that cannot be trusted (*αλαθῆ λόγον*) versus *μύθοι* at *Olympian* 1.29-30, *μύθοις* versus *αλαθειαν* at *Nemean* 7.23-25)." (42)

There is, to be sure, nothing post-Homeric about the actual word *alethés* 'true' or *alétheia* 'truth', or even about the concept inherent in the formation of the word, which expresses an explicit denial, by way of the negative element *a-*, of forgetting, *leth-*, and thereby an implicit affirmation of remembering, *mné-*. (43) As Martin has shown convincingly, the Homeric word *múthos* is associated with narrating from memory, (44) which he describes as the rhetorical act of recollection. (45) This speech-act of recollection, which qualifies explicitly as a *múthos* (as at *Iliad* 1.273), is the act of *mné-* 'remembering'. An ideal example is the wording of Phoenix in *Iliad* 9.527 as he introduces the story of the hero Meleagros to Achilles and the rest of the audience: *μέμνημαι* 'I remember [*mné-*]'.(46) The failure of any such speech-act is marked by the act of *léth-* 'forgetting' (as with *λήθῆαι* at *Iliad* 9.259).(47)

The very concept of *aléthés* 'true' or *alétheia* 'truth' expresses the need to avoid such failure in the speech-act, the *múthos*, of recollection or narrating from memory, and Homeric diction can actually combine *aléthés* 'true' with a derivative of *múthos*, the verb *muthéomai* 'make a *múthos*', as in the expression *alethéa muthésasthai* 'speak true things' at *Iliad* 6.382 (the whole speech in question is introduced as a *múthos* at 6.381). The Homeric meaning of *muthéomai* 'make a *múthos*' has all the force of *múthos* itself, as we see from this description by Martin: "When this word for speech occurs, the accompanying discourse has a formal nature, often religious or legal; full detail is laid out for the audience, or is expected by the interlocutor in the poem; at times, a character comments on the formal qualities of the discourse labelled with this verb." (48)

Granted, then, that there is nothing post-Homeric about the actual word *aléthés* 'true' or *alétheia* 'truth'; also, that this word does not

enter into opposition with *múthos* in Homeric diction. In post-Homeric traditions, however, as we have seen, for example, in the diction of Pindar, *múthos* has indeed become an opposite of *aléthés* 'true' or *alétheia* 'truth', which is now marked as being distinct from *múthos*. In the Pindaric examples that we have already considered, the word *múthos* has defaulted into a vague plural (μύθοι at *Olympian* 1.30, μύθοις at *Nemean* 7.23), representing a murky multiplicity of discredited versions against which backdrop the singular truth of *alétheia* is being highlighted in shining contrast.(49) In brief, as I have argued at length in my earlier work on such post-contexts, the meaning of *múthos* as a speech-act has thus become marginalized.(50)

There are traces of this marginalization at even earlier stages. Let us consider the expression *aléthea gerúsasthai* 'announce true things' in Hesiod *Theogony* 28, which is a formulaic variant of *aléthea muthésasthai* 'speak true things', as attested at *Iliad* 6.382. (51) It appears from such variations that *gerúomai* 'announce' has become the marked member in opposition to *muthéomai* 'speak', which then becomes unmarked.(52) Similarly with *aléthea muthé sasthai* 'speak true things', as attested at *Homeric Hymn to Demeter* 121, as also at *Iliad* 6.382: this formula is in turn a variant of *etéuma muthésasthai* 'speak genuine things', as attested at *Homeric Hymn to Demeter* 44. Just as *gerúomai* 'announce' has become the marked member in opposition to *muthéomai* 'speak', so also *aléthea* 'true things' has become the marked member in opposition to *etéuma* or *étuma* 'genuine things'.(53) The latter opposition is made explicit in the quoted words of the Muses themselves in Hesiod *Theogony* 27-28, where the unique truth-value of the *Theogony* itself is heralded by the goddesses as *alethéa* 'true things' (28) in opposition to a multiplicity of versions that look like *étuma* 'genuine things' but are in reality *pseúdea* 'fallacies' ('many fallacies that look like genuine things' 27). (54)

In my earlier work, I have argued at length that such variations result from a chain of differentiations setting off a single marked pan-Hellenic version from a multiplicity of unmarked versions that are perceived as local or at least more local.(55) For now I need only emphasize that this newer concept is marked as distinct from earlier concepts that thereby default into an unmarked category. As the word

aléthes 'true' or *alétheia* 'truth' becomes marked in opposition to *mûthos*, which in turn becomes unmarked in the context of such opposition, the meaning of *mûthos* becomes marginalized to mean something like 'myth' in the popular sense of the word as it is used today in referring to the opposite of 'truth'. (pp. 122-124)

(...)

In short, the expression *aléthea gerúsasthai* 'to herald true things' in Theogony 28 designates not just the process of speaking something that is privileged: it explicitly marks a speech-act, an utterance with special authority. It seems to me not enough to establish that the adjective *aléthes* can be interpreted as 'verifiable', in the etymological sense that it negates the idea of "escape one's consciousness," as implicit in the root from which it is derived, *léth-* as in *léthe* 'oblivion' and *lantháno* 'escape the consciousness of'.(57) Yes, *aléthes* conveys the idea of seeing something "for real," but there is more to it: the negation of *leth-* serves as the equivalent of the positive concept *mne-*, which as we have seen means not just 'remember' but something like 'narrate from memory'. We may recall the intuitive formulation of Jean-Pierre Vernant, who defines *mne-* as 'recover the essence of being'.(58) In ancient Greek mythical thought, such an essence is beyond sensible reality, beyond time.(59) Even more important, as Marcel Detienne has shown, ancient Greek tradition claims that this essence is controlled by the poet, master of "truth" or *alétheia*.(60)

A problem remains: *alethéa* in Theogony 28 is opposed not to *lethe* but to *pseúdea* 'fallacies' in the previous line. It has been argued that such an antithesis represents "a later, more rational way of thinking, where *alétheia* means 'truth'".(61) It is as if a new rationalistic opposition of *alethéa* 'true things' versus *pseúdea* 'fallacies' were superimposed on an older myth-centered opposition of *alétheia* in the sense of 'no lapse of consciousness' versus *lethe* 'lapse of consciousness', with the result that the two oppositions overlap and in fact coexist.(62) Further, it has been argued that there is overlap even between *alétheia* and *lethe*, as also between *aléthea* and *pseúdea*, to the extent that no act of remembering is free of some kind of forgetting, no telling of the truth is free of some deception.(63) I agree that there is a thought-pattern where *mne-* in the sense of 'remember' includes an aspect of *leth-* 'forget'.(64). I disagree, however, with the notion that the adjective *aléthes* and the noun *alétheia* are similarly

inclusive; rather, as I have argued at length elsewhere, *alethés* and *alétheia* explicitly exclude a lapse of the mind.(65) The non-ambiguity or even absolutism of the words *alethés* and *alétheia* is a key to their denotation of a speech- act endowed with a distinctly authoritative and authorizing force." (pp. 125-127)

(57) There is an admirable survey of the semantics of *alethés*, and of various interpretations, in Cole *Archaic Truth* (1983), who resists Heidegger's formulation of an "objective" truth-value inherent in the word (the truth not "hidden" in what is perceived). Cole's own interpretation is a reformulation of earlier solutions insisting on a "subjective" truth-value (the truth not "forgotten" by the one who perceives). He suggests (p. 12) that "the forgetting excluded by *alétheia* involves primarily the process of transmission -- not the mental apprehension on which the transmission is based." Thus *alétheia* refers "not simply to non-omission of pieces of information through forgetting or failure to take notice or ignoring, but also to not forgetting from one minute to the next what was said a few minutes before, and not letting anything, said or unsaid, slip by without being mindful of its consequences and implications" (ibid.).

Hesiod

Texts:

ἴδμεν ψεύδεα πολλὰ λέγειν ἐτύμοισιν ὅμοια,

ἴδμεν δ', εὖτ' ἐθέλωμεν, ἀληθέα γηρύσασθαι.

"we [*the Muses*] know how to say many lies as if they were true,
and when we want, we know how to speak the truth"

Hesiod's Theogony, 27-28 - Translated, with introduction,
commentary, and interpretive essay by Richard S. Caldwell -
Cambridge, Focus Information Group, 1987, p. 29.

Studies:

"It was customary for a Greek singer to preface his recitation with a hymn to a god, of the kind represented by the extant 'Homeric hymns'. When the *Iliad* and *Odyssey* were written down, no introductory hymn was attached to them. This might indicate that they were not at that time intended for continuous recitation, though there might be other explanations. The *Theogony* and *Works and Days*, on the other hand, both had hymns attached from the first. The *Works and Days* is introduced by a short invocation of Zeus, the *Theogony* by a much fuller hymn to the Muses. Both types are paralleled in the Homeric collection.

(...)

The hymn to the Muses begins with a description of some of their characteristic activities (dancing and singing on Helicon by night) (1-21). This leads to an account of a particular occurrence in which they were involved -- their epiphany to Hesiod himself (22-34). Then we return to their habitual activities (singing to Zeus on Olympus) (35-52)."

From: Hesiod, *Theogony*, edited with Prolegomena and Commentary by Morris L. West, Oxford: Clarendon Press 1966, p. 150.

"The cryptic words that follow have provoked floods of controversy:

We know how to compose many lies indistinguishable from things that are real;

And we know, when we wish, to pronounce things that are true.
(*Theogony* 27-28)

Commentators have traditionally interpreted these enigmatic lines as Hesiod's proclamation of the truth of his song as opposed to the songs of other poets who only pronounce *pseudea polla*. Accordingly, the Muses' declaration should be understood as a polemic directed at Homer or perhaps at heroic epic in general.(38) Svenbro views Hesiod's polemic in social terms as an attack on those poets who depend on their aristocratic patrons, as opposed to Hesiod himself, who prides himself on his autonomy.(39) According to Nagy, on the other hand, Hesiod's targets are the poets who perform theogonies of only local interest, whereas his own is Panhellenic in its scope.(40) Recently, Arrighetti has proposed another interpretation of the Muses' mysterious statement: the object of Hesiod's polemics is not Homer, but his character, Odysseus, or indeed anyone like him, who may possess the ability to persuade and even enchant his audience, but who has not received from the Muses the gift of truthful song. (41)

To offer an exhaustive doxography of the Muses' enigmatic statement would lead too far afield.(42) Nevertheless, the importance of these verses for any reading of the *Theogony* requires us to grapple with their implications." (p. 58)

(...)

Aletheia, then, consists of "the truth, the whole truth, and nothing but the truth".(50) The legal terminology readily springs to mind, since *aletheia* involves a complete and veracious account of what one has witnessed. If the archaic Greek conception of *aletheia* has a far narrower range than our "truth," then the *Greek pseudos* has a wider range of meaning -- to which the Muses' assertion of the multiplicity of lies (*pseudea polla*) draws attention -- in comparison to our notion of falsehood.(51) *Pseudea* embrace not only consciously misleading statements intended to deceive, but also unwitting errors, omissions, and inaccuracies, as well as additions, embroideries, and even figurative speech. While the Muses would seem to be immune from simple mistakes, they seem quite proud to lay claim to all other kinds of *pseudea*. (52)." (pp. 61-62)

Notes

(38) Cf Puelma (1989) 75.

(39) Svenbro (1976) 46-73. For a critique of Svenbro, see Judet de la Combe (1993) 26-28.

(40) Nagy (1990) 45 Neitzel (1980) believes lines 27 and 28 refer to other poets who composed competing but inferior accounts of the gods. Otto (1952) 51-52, while regarding the lines as Hesiod's claim for the veracity of his song, detects in the *pseudea polla* not polemic, but the "Bezauberung durch die lebensvollen Bilder der Phantasie" which are also part of the Muses domain.

"The beginning of the *Works and Days* with its prayerful attitude clearly differs from the hymnic note struck at the opening of the *Theogony*. Hymns can be sung even on Olympus, but prayers originate on earth. The Muses further emphasize the distance separating gods and men in the *Works and Days* by concluding their celebration of their father with the phrase: "high-thundering Zeus, who inhabits the most exalted halls" (Ζῶς ὑπιβρεμέτης, ὅς ὑπέρτατα δῶματα ναίει, 8). Now suddenly, and even more abruptly, Hesiod breaks off a second time, without even the usual hymnic salutation (χαίρει) to Zeus:

δίκη δ' ἴθυνε θέμιστας τύνη· ἔγω` δέ κε, Πέρση, ἐτήτυμα μυθησαίμην.

Yours to make straight the decrees with justice,

But, as for me, I would declare to Perses the way things are. (Works and Days 9-10) (103)

Here again a significant difference between the *Theogony* and the *Works and Days*. In the former, Hesiod could indeed transmit the words of the Muses, but he could not guarantee the truth of those words, because of his inevitable mortal incapacity to distinguish *aletheia* from *pseudos*, that is, to ascertain the correspondence between the words of the Muses and reality. But in the *Works and Days*, where he speaks of human things whose knowledge is granted to men through their own experience, Hesiod can declare to Perses his intention to tell him *etetuma*, "things as they are." (104) Hesiod will immediately offer an illustration of the differences between the human and divine perspectives that inform the two compositions. In speaking about Eris, he revises the earlier teaching of the Muses by telling us that "on earth, it turns out that there are two Erides" -- not one, as claimed in the *Theogony*. What this means is that from the point of view of the gods, there is only one Eris, whereas for mankind, there are two.

"To summarize the complex scenario of the proem to the *Works and Days*: the Muses are to celebrate, i.e. praise their father Zeus and his power over mankind, more specifically, his power to punish. Zeus is to listen, observe and act. Zeus's actions, it becomes clear, affect specifically those who would pronounce crooked decrees, i.e. the kings; Hesiod, for his part, will tell *etetuma* to his brother.(105) This

cooperative undertaking and its division of labor, outlined in the proem, will structure the poem that follows. If in the *Theogony* Hesiod takes up the Muses' instructions to celebrate, i.e. praise the gods, here he pointedly does not praise; he tells things as they are."''

"Both the formal elements and the contents of the opening lines of the two Hesiodic poems reveal their respective orientations. On the basis of our foregoing analysis of the two proems, we can now offer an admittedly schematic but perhaps still useful diagram that plots the coordinates of the two compositions and demonstrates their complementarities (see the table)." (pp. 77-78)

Poem	<i>Theogony</i>	<i>Works and Days</i>
Authorization	Super-human authorization	Authorized by human experience
Proem form	Hymnic	Prayer
Subject-matter	Genesis of the gods; Zeus's order	Human life within Zeus's order
Register	Celebratory	Non-celebratory (telling it like it is)
Truth claim	Mixture of lies and truth	Things as they are (<i>etertuma</i>)
Emblematic gift	<i>thespis aude</i> : Muse-inspired song	<i>skeptron daphne</i> : Muse-inspired eloquence
Role of the poet	Servant of the Muses: <i>aidos</i> (Hesiod in <i>Theog.</i>)	Muse-honored king – or his surrogate (Hesiod in <i>W&D</i>)
Function	Pleasure Diversion from human pain Forgetfulness of human condition	Resolving quarrels Alleviation of human pain Reminding of human condition

To conclude: from its beginning, the *Works and Days* characterizes itself in opposition to the *Theogony*: the latter, through the mediation of the Muses, offers an Olympian perspective on the cosmos; the *Works and Days*, by contrast, directly and without the need for a divine intermediary, presents the human viewpoint. The task these two poems set for us entails highlighting these two visions and, while respecting their differences, integrating their perspectives into a larger whole. The best way to accomplish this goal would appear to be to examine the presentation of human beings in the *Theogony* and, conversely, the role of the gods in the *Works and Days*. But we must admit right at the outset to a certain lack of symmetry between the two compositions. That the gods should play an important role in human affairs is not surprising; their crucial presence in the *Works and Days* is hence predictable. But given the announced subject-matter of the *Theogony*, to sing the immortal gods and the "race of those that are forever," the γένος αἰέν ἔοντων, seems rather to exclude mention of the mortal race of men, which is, by definition,

ephemeral. But if mankind is doomed to die and inevitably evanescent, the human condition, as established by Zeus through his eternal decrees, is nevertheless eternal. Consequently, we may nevertheless discover within the confines of the *Theogony* an exploration of those eternal laws that determine the human condition." (p. 80)

Notes

(103) Rousseau (1996) 106-10 notes the urgent tone here and understands the phrase as "straighten the decrees which are crooked."

(104) Cf. Rousseau (1996) 113-13. Nagy (1990) 68, n. 84 and (1996) 50-52 conceives of ἐρήτυμαμυθήσασθαι as an earlier expression, which becomes an unmarked member as opposed to the newer, marked ἀληθέα γηρύσασθαι. This diachronic interpretation would blur the important distinction Hesiod makes between the contents of the two poems.

(105) Cf. Mazon (1914) 36.

"When the Muses come to the shepherds on Helicon and confer upon the intrepid Hesiod the letters patent for his poetic mission, they formally declare their authority by means of an opposition.

They inform their audience (at *Theogony* 27-8) that they know how to say 'many false things that are like the genuine' (*pseudea polta*

etymoisin homoia), but also, when they wish, how to 'speak true' (*alethea gerysasthai*). (2) Which said, they give Hesiod a sceptre of laurel and invest in him the power to celebrate the gods in song (29-34). Pietro Pucci finds in the Muses' declaration a general thesis about the medium of their power, language (or, as he puts it, 'the logos'): namely, that 'the logos signifies things by imitating them with some obliquity, distortion, and addition', because 'the "original" signified is always absent'; a thesis he explicitly labels as Derridean, comparing 'Derrida's insight that the . . . "signified" is always caught in the web of the differential, deferring, negative relationships that allow the emergence of meaning and can never appear as present hic et nunc'. (3) Pucci's Derridean interpretation has been followed as such and developed by Marilyn Arthur. Summarizing Pucci's position, she asserts that in Hesiod's formulation 'both the true discourse and the false one are "imitations", but the true logos ... imitates "things as they are", while "the concept of false discourse derives from the idea of imitation as difference from things, simulation of identity with things" '; and declares on her own account that 'in order to understand what Hesiod says' we must bring to bear 'the recognition that language itself -- the logos -- is a form of fiction, that representation itself is always, in some sense, a "lie" (4)

Both interpretations of the Muses' words have the merit of appreciating that in so generally phrased a statement, and one put on the lips of poetry's presiding spirits at the moment when the poet is confirmed in his craft, we would do well to look for an insight into how Hesiod conceived of the very workings of language -- the mastery of which he here accepts as the Muses' gift. Alternative interpretations of these much-contested lines, by contrast, have long sought to make the allusion more specific and locate the truth and falsehood to which the Muses refer in particular poems or bodies of poetry, Hesiodic and Homeric. Of course, the two lines of interpretation are not mutually exclusive; Hesiod could perfectly well be putting out a general statement about poetic language with particular targets in mind, or he could be conducting a special polemic which nevertheless through its phrasing reveals how he conceives of poetic languages as such. And any attempt to settle for one or the other of these latter alternatives would swiftly be reduced to mere speculation. The important point is that the possibility of these lines having a particular target should not be allowed to block

exploration of what they reveal, directly or indirectly, about Hesiod's more general conception of language. (5)

That the line of interpretation inspired by Derrida has vaulted this block is a significant achievement. However, the actual thesis that it distils from this passage of Hesiod seems to me to miss what is special -- and especially interesting -- about Hesiod's view of language. What I find striking in these two lines of the *Theogony* is that only of falsehoods, and precisely not of language in general, do the Muses say that they are 'like the genuine'. In expressing their capacity for truth-saying, the Muses make no reference to a relation of likeness or a talent for imitation, but simply state that they know how to 'speak true' (or 'truths'). Pucci and Arthur, invoking Derrida, generalize the 'obliquity' of likeness or imitation to describe the metaphysical relation between words and world; but for Hesiod's Muses such indirectness seems to characterize only the false things we say about the world, not the true things.

In effect, Pucci and Arthur read the couplet as if the line in which the Muses mention their ability to imitate the genuine (or 'real' or 'true') were in fact a general statement of their mastery of language, of which the following line describes a special case: to wit, when the result of their imitation is itself something true. They treat the second line as subordinate to the first, rather than coordinate with it. This is no straightforward misreading on their part. I have reproduced in this section only their conclusions, and have not yet considered the steps by which they come to their opinion. Before I do so, however, I will fill out what I take to be the widespread and philosophically intriguing pattern of archaic Greek thought which shows through this text on my reading of it, and which I feel their reliance on Derrida has led them to miss. I can then appeal to the distinctive character of this material in order to resist their attempted assimilation of it to the Derridean model." pp. 45-47.

Notes

(2) The use of polar opposition to express a god's power is frequent in archaic texts. A famous example is that of the two jars of Zeus at *Iliad* XXIV 527, one containing good, the other bad fortune; so too in Hesiod's *Works and Days* we read that a safe time for sailing is fifty days after the summer solstice, unless Poseidon or Zeus are set

against it, 'for in them lies the determination of both good and evil' (669); and cf. *Theognidea* 157-8 (West -- to whose edition of the work I refer throughout this paper). These examples set a positive against a negative value; but this is not invariably the case: e.g. *Odyssey* v 47-8 (Hermes uses his staff both to put mortals to sleep and to wake them from sleep, as he chooses); and x 22 (Aelus has the power to calm and to stir the winds, whichever he wishes). Thus we cannot tell simply from their use of the motif whether Hesiod's Muses in the *Theogony*, by setting lies against truth, are opposing something bad to something good. I have tried to make my translation of their words broad enough to reflect the fact that the Greek terms rendered as 'true', 'false', 'genuine' do not distinguish 'truth' -- a linguistic property applicable only to propositions -- from 'reality', said of things in general.

(3) The quotations are from P. Pucci, *Hesiod and the Language of Poetry*, Baltimore, MD, Johns Hopkins University Press, 1977, pp. 12, 13 and 13-14 respectively.

(4) I take the quotations from M. Arthur, ' *The dream of a world without women: poetics and the circles of order in the Theogony prooemium*', *Arethusa* XVI 1, 2, p. 105 (citing Pucci, op. cit., p. 16) and p. 106. Henceforth in this chapter 1 will refer to these two articles simply by author's name and page number.

(5) The variety of non-Derridean interpretations of the Muses' message is considerable, and beyond my brief to consider here. A good conspectus of the range can be extracted from the following sources: W. Stroh, 'Hesiods lügende Musen', in H. Gorgemanns and E. A. Schmidt (eds.) *Studien zum antiken Epos*, Meisenheim am Glan, Anton Hain, 1976; H. Neitzel, ' *Hesiod und die Lügenden Musen*', *Hermes* CVIII, 5, 1980, pp. 387-401; G. Nagy, ' *Hesiod*', in T. J. Luce (ed.) *Ancient Writers*, vol. I, New York, Scribner's, 1982, pp. 43-73; E. Belfiore, ' "*Lies unlike the truth*": *Plato on Hesiod, Theogony 27*', *Transactions of the American Philosophical Association* CXV, 1985, pp. 47-57.

From: Giovanni Ferrari, *Hesiod's mimetic Muses and the strategies of deconstruction* - in: Andrew Benjamin (ed.), *Post-structuralist Classics*, New York: Routledge 1988, pp. 45-78.

"In the *Works and Days*, Hesiod seems to offer us not only a different model of narrative reference through the *ainos* and its relatives but, in the word *etetuma*, an entirely different model of poetic truth from that suggested by the *Iliad* 2 [484-87] and *Odyssey* 8 [487-91] passages, a notion compatible with fiction in a way that those passages are not. Like *alethes*, *etetumos* is normally translated 'true.' This has encouraged many interpreters to assimilate Hesiod's claim to speak *etetuma* to Homer's claim in *Iliad* 2 and to a larger conception of archaic poetry as committed to *aletheia*. Nonetheless, several scholars who have examined the archaic vocabulary of truth in detail have argued that *etetumos* actually represents a notion of truth distinct from that represented by *aletheia*.(a) I will not discuss that work in detail here, some of which I do not perfectly understand, but I will discuss a few distinctions I think most easily defined.

Aletheia has a subjective component that *etetumos* does not.(b) The speaker of *aletheia* has fully in mind what really happened and wishes to speak it forth honestly and fully; the speaker's knowledge and good intentions are equally essential. A speaker of *etetuma* (or of *etuma*, I do not believe the two are distinguishable) need have no such knowledge or intention. The word merely describes a correspondence between the speaker's words and the reality he or she describes. For example, one may speak *etumon* (singular form) in conjecture, as Nestor does at *Iliad* 10.534, when he wonders if the sounds of approaching horses might signal the return of Odysseus and Diomedes, or as Helen does at *Odyssey* 4.140, where she ventures to identify Telemachus as Odysseus' son. Both ask before they speak, 'Will I say something true (*etumon*), or will I speak a falsehood (*pseusomai*)?' Likewise, dreams may come 'true' (*etuma*). In this case, truth has nothing to do with a knowledgeable or honest speaker; *etuma* describes the correspondence between reality and the description of reality in the dream. The etymologies of the two words seem to bear this distinction out: *aletheia* entails an absence of deception (*lethe*) that could only be possible in an account given by a knowledgeable and well-intentioned speaker, *etuma* is related to the verb 'to be' and thus reflects only conformity with 'what is.' Though both words may be opposed to *pseudos* (falsehood), *etumos* is used when that falsehood is of an unintentional kind, and *aletheia* is used when the falsehood is a deliberate fiction.(c) There is a certain amount of overlap between the two concepts. Though all examples of *etetuma*

are not *aletheia* -- some are not spoken by a knowledgeable speaker with the desire to reveal what he or she knows -- some clearly are. Moreover, I find it difficult to think of an example of *aletheia* that would not also be *etetuma*. Nonetheless, the two words have different emphases: *aletheia* places a much greater emphasis on the speaker's intentions. Thus, it is virtually always used in promises. In fact, Hesiod deviates rather strikingly from a familiar Homeric formula of promises (*alethea muthesthai*) when he uses the metrically equivalent expression *etetuma muthesaimen*."

Notes

(a) See Krischer 1965 and Levet 1976 on *etumos* and *alethes*.

(b) My conclusions are based on two sets of comparisons: between the use of the adjectives *alethes* and *et(et)umos*, and between the use of the neuter substantive *et(et)uma* and the neuter substantive *alethea* plus the noun *aletheia*. I can see no obvious distinction between *etetumos* and *etumos* or between *alethea* and *aletheia*. It should be noted that *etetuma* and *alethea* are metrically equivalent, so their differing uses can not be explained by metrical exigencies.

(c) See *Odyssey* 14.125, *Theogony* 27-28, and *Hymn to Hermes* 560-63 for the contrast *aletheia* / *pseudos*. All three passages explicitly mention desire as a necessary criterion for the speaking forth of *aletheia*.

Pindar

Studies:

"Pindar makes only two overt claims to truth (*aletheia*). Both occur in association with oaths and therefore seem intended to vouch for the sincerity of the poet's claims and for his personal knowledge of their validity. In Olympian 2, Pindar introduces his praise of Theron with the line 'I will speak forth a sworn report with truthful [*alatheia*] intention' (O. 2.92). With truthful (*alatheia*), Pindar seems to state his intention to reveal fully and honestly what he knows. Pindar also juxtaposes truth and oaths at Olympian 13.98-100. Here the voice of the herald, which is said to be both true (*alathes*) and made under oath, 'vouches for' (Nisetich, Frank - *Pindar's Victory Songs* - Baltimore, John Hopkins University Press, 1980) or 'lends weight to' (Slater, William J. *Lexicon to Pindar* - Berlin, Walter de Gruyter, 1969) Pindar's claims that the victor's family has won sixty victories at the games. There can be little question that Pindar is here using a notion of truth that is both referential and non-fictional. Indeed, Pindar can not acknowledge that in transferring such information, he is making things up or lying. At Nemean 7.63, Pindar claims to speak true (*etatumon*) praise. Here the focus may be more on validity than on the speaker's intent. The net effect of all three claims is, however, the same: to suggest a correspondence between the victor's worth and the praise offered, to insist on the validity of the poet's praise. Again, all of these passages discuss a specific responsibility of the epinician poet and therefore tell us little about the poet's appreciation of fictional narrative.

In two related passages, Pindar not only demands *aletheia* of his poetry, but asks the goddess Truth, *Alatheia*, to fend off lies (*pseudea*; fr. 205). The characterization of *Alatheia* in this passage as the 'font of great excellence' suggests that we are again in a context where the correspondence between praise and true worth, the evaluation of character, is essential. In a similar way, when Pindar calls on Olympia as the mistress of truth (*alatheias*; *Olympian* 8.2), he seems to have in mind the Olympic games as a testing ground for a man's true worth (Slater 1969).

In the opening lines to Olympian 10, Pindar calls on the Muse and *Alatheia*:

Read out for me the Olympian victor, son of Arcestratos, where he is written on my heart. For owing him a sweet song, I forgot [*epilelath*]
O Muse, you and *Alatheia*, the daughter of Zeus, with straight hand,

fend off the reproach that I mislead my friends with lies. (*Olympian* 10.1-6)

Here Pindar clearly plays on a notion of *aletheia* as a kind of unforgetting. (a) But this passage does not make truth synonymous with memory, for Pindar also opposes lies (*pseudea*) to truth here. Having made a promise, Pindar forgot; his promise thus turns out to be an invalid kind of speech. In Greek terms, because intentions are not an essential component of the *pseudos*, this makes the initial promise a falsehood (*pseudos*). (b) Pindar now wishes to bring his earlier promise to fulfillment and thereby to make it true. Consequently, he calls on Alatheia. (c) She may also be present to vouch for Pindar's original sincere intention."

Notes

(a) I tend to see this more as deliberate word play than as reflecting a mythical notion of truth.

(b) See also *Iliad* 19.107, 7.351, where the unintentional breaking of a promise and an oath makes the speakers of the oath / promise liar.

(c) The Muses probably represent the presence of memory that can counter Pindar's forgetfulness.

From: Louise H. Pratt, *Lying and Poetry from Homer to Pindar. Falsehood and deception in Archaic Greek poetics*, Ann Arbor: The University of Michigan Press 1993 pp. 118-119.

"In portraying himself as an interpreter of the Muse's oracle, Pindar draws attention to himself as master of an ambiguous code that transmits some divinely certified truth. (5) But he does not mean to suggest, even in the most oblique way, that his interpretations constitute or "construct" a realm of truth. That would imply an interpreter who does not discover truth, but fashions it himself through the persuasive power of poetic language. His use of oracle imagery to set forth his poetics goes out of its way to discourage any view that credits the poet with constructing the truths he communicates. It promotes instead the suggestion that he discovers them. Oracles utter coded messages of which interpretations are either correct or incorrect; oracular utterances have a determinate meaning, a right interpretation. In likening the poet to the specially

skilled interpreter of an oracle, then, Pindar claims that he is able to give the correct interpretation, one that discovers (does not construct) its true meaning. To suppose that Pindar's interpretations aim to provide merely a reading or a theory would be to neglect his model of poetry as interpretation that captures a divinely authoritative message." pp. 63-64 (notes abbreviated)

"We are now in a position to draw some conclusions about Pindar's place in place in the development of early Greek conceptions of literary fiction. Recent criticism emphasizes Pindar's role in a developing awareness of poetic language's persuasive power. Truth is not a matter that pits fact over fiction, but solely a matter of what poetry has the power to make appear convincing through its particular charm. According to this account, Hesiodic poetics began to question the Homeric assumption of poetry's truth by admitting the possibility that the Muses can fashion "lies similar to true things." Pindar pushes things a step closer to Simonides' more blatant claim that "appearance forces even truth." (fr. 598 *Poetae Melici Graeci*) Simonides' remark implies that there is no such thing as truth, but merely appearance; telling the "truth" is simply a matter of saying something persuasive. (25) Pindar is thought to move toward the Simonidean perspective by recognizing the "authenticating power of poetic language" in his own poetry. The power of language to create the appearance of truth is, according to this view, displayed not only by the poetry Pindar criticizes as "deceptive," but, together with a certain amount of self-consciousness, by his own poetry. In his highly self-conscious revision of the Tantalus story, for example, Pindar describes the deceitful versions as "embellished" and "intricate." (*Olympian* 1. 29) But elsewhere he applies the same terms to his own poetry with no negative connotation. (*Nemean* 8. 15 fr. 94b)

(...)

This account of the development of conceptions of truth confuses several issues and must be adjusted. Hesiod's poetics retains the idea of factual truth and holds to assumptions inconsistent with Simonides' radical view. In adopting the possibility that Muses deceive, Hesiod assumes that there is some reality about which the Muses are either truthful or deceptive. For the Muses to exercise their powers to deceive by conveying falsehoods, there must be some truths about which they can deceive mortals. Hesiod does not, then,

question the idea of factual truth. Unlike Homer, however, he does deny that poetry provides men with knowledge of that truth. Hesiod's innovation is epistemological rather than metaphysical: the audience is no longer provided a knower's master of any truths that Hesiod's poetry may convey. That there are truths to be shared or deceived about remains beyond question for Hesiod. In contrast, Simonides' view leaves no room for Hesiod's deception because for him there is no falsehood of which an audience can be persuaded.

Like Hesiod's, Pindar's poetics assumes that there are facts for poetry to convey. We have seen how, in his version of the Tantalus myth, Pindar promises to provide factual accuracy. Furthermore, in claiming that other versions of the tale are deceptive, he shares Hesiod's assumption that there is something about which to be truthful or deceptive. Pindar renders human access to truth problematic, but in a way very much milder than Hesiod. Pindar's Muse is not a potential deceiver like Hesiod's; in this respect Hesiod's is the more radical, and Pindar's the more traditional, view. But as the interpreter of the Muse's "oracle," Pindar admits the possibility that the poet may misinterpret the Muse. For example, in fragment 205 he prays to avoid stumbling into falsehood. For Pindar, then, human shortcomings rather than divine deception can break the audience's epistemological connection to the truth that poetry can convey. Although he admits the possibility of conveying falsehood, the focus in Pindar is on his poetry's truth.³³ It is not the authenticating power of poetic language that lies at the root of that truth, although Pindar indeed advertises the nearly magical power of poetic language and suggests that the particular charm of that language contributes to the persuasiveness of his poetry. But the truth his poetry conveys holds independently of charm or persuasion. As we have seen, the truths that are particularly of interest to Pindar praise his subjects. The Muse reveals such truths to him in a cryptic form that the poet must interpret. If Pindar interprets the Muse correctly and conveys such truths to his audience, then he conveys the moral reality behind the gods' evaluation of the victory, the victor, and his kinsmen. Provided that Pindar's poems interpret their inspiration accurately, they convey the god's evaluation, not the poet's or not only the poet's. From a Socratic perspective, Pindar's poetics command no authority. Pindar will be vulnerable to the charge of promoting moral authoritarianism, adhering to moral evaluations grounded only in avowed divine

authority. Socrates will expose the poet's claim to enjoy a natural, god-given knowledge as more often than not efforts to allow Pindar and others to uphold conventional, aristocratic values without defending them on any grounds more substantial than an appeal to divine decree. pp. 72-74 (notes omitted)

Notes

(5) Pindar explicitly connects the Muse with Truth at Olympian 10. 1-6: ("Read me the name of the Olympic victor, / the son of Arcestratos, where it is written / in my mind, for I owe him a sweet song and have forgotten. O Muse, but you and Zeus' daughter, / Truth, with a correcting hand / ward off from me the charge of harming a guest friend / with false promises.") See also *Olympian* 4. 17-18; 6. 20-21; 7. 20-21; 13. 52; 10. 3-4; *Pythian* 1. 86-87; fr. 205.

From: Grace M. Ledbetter, *Poetics before Plato. Interpretation and authority in early Greek theories of poetry*, Princeton: Princeton University Press 2003, p 63 n. 5.

"As Marcel Detienne has documented in his survey of Archaic Greek poetics, the poetic power of *mnemosune* 'remembering' is traditionally associated with light, which is in conflict with the darkness of *Léthé* 'forgetting'. (32) What is illuminated or obscured by poetry is what is respectively preserved or lost in the tradition.

The concept of *léthé* 'forgetting', however, is not only negative. As Detienne points out, *léthé* is not only the opposite of *mnemosune* 'remembering': it can also be an aspect of *mnemosune*. (33) For example, the goddess Mnemosune is described in the *Theogony* of Hesiod as giving birth to the Muses, divine personifications of the poet's power, so that they, through their poetry, may provide *mnemosune* 'forgetting' of sadnesses and of worries for humankind (53-55); whoever hears the Muses no longer *memnetai* 'remembers' his own ills (*Theogony* 98-103). By implication the highlighting of the glory of poetry is achieved by shading over anything that detracts from it. A bright light needs a background of darkness.

Such a concept of *mnemosune* can be achieved only through an ever-present awareness of its opposite, *léthé*. Without the obliteration of what need not be remembered, there cannot be memory -- at least, from the standpoint of Archaic Greek poetics.

Let us reformulate these thought patterns in terms of an opposition between unmarked and marked categories. (34) In an opposition of *mne-* 'remember' vs. *leth-* 'forget', *mne-* would be the unmarked member and *leth-*, the marked, in that *leth-* can be included by *mne-* as an aspect of *mne-*. Besides the passage just considered from the *Theogony*, I cite another striking illustration, from a different source: in the ritual of incubation connected with the cult of Trophonios, the initiate drinks from the springs of both *Lethe* and *Mnemosune*; this way the undesired mental state can be shaded over while the desired mental state is highlighted (Pausanias 9.39.8). (35)

To pursue the subject of these thought patterns even further, I cite an example of unmarked and marked opposition in the English language. In an opposition of the pronouns he and she, he is the unmarked member and she, the marked, in that she is included by he as the feminine aspect of being he. The masculine aspect of being he, by contrast, has to be achieved through an ever-present negation of the feminine. We may say something like: this is not a she, this is a he. Otherwise he does not, of and by itself, convey a masculine aspect. In generalizing statements, for example, he can stand for both he and she, as in "everyone may interpret as he chooses." (36)

Where the unmarked member excludes the marked member through a negation of the marked, the unmarked member receives a minus interpretation; where the unmarked member includes the marked, it receives a zero interpretation. (37) The minus interpretation of the unmarked member is ever-present in the context of a given Archaic Greek poem's references to itself as absolute truth, conveyed by a specialized *mnemosune* 'remembering' that excludes *lethe* instead of including it. These relationships can be visualized as a larger circle of *mnemosune* 'remembering' that includes an inner area of *lethe* 'forgetting' surrounding a smaller circle of specialized *mnemosune* 'remembering' that excludes the outer area of *lethe* 'forgetting'. The area of forgetting is visualized as the ongoing erasure of things not worth remembering, erasure by way of *lethe* 'forgetting'; the smaller circle of remembering, within the larger circle, is highlighted by the area of darkness surrounding it, the area of forgetting. In fact, a special word in the diction of Archaic Greek poetry formalizes this specialized and exclusive kind of remembering: that word is the negation of *lethe* 'forgetting', namely *a-letheia*, normally glossed in

English as 'truth'. A comparable case of minus interpretation in English can be seen in the word unforgettable. The aletheia 'truth' of the poet is the nonerasure of the poetic glory that is his to confer.³⁸ The same concept is evident in the periphrastic expression *oude me/se/he lethei* 'it does not escape my/your/his-her mind', which conventionally reinforces injunctions to be *memnemenos* 'mindful, remembering'. (39)

Besides contrasting with negative thoughts about human ills, (40) or erroneous thoughts that lead to injustice, (41) the aletheia of Greek poetry tends to contrast with the divergence of local poetic versions in the overarching process of achieving a convergent version acceptable to all Hellenes. (42) This argument brings us back to the observation of Levi-Strauss that the latest performance of myth is in principle an occasion for selecting from and thereby potentially erasing versions available from countless previous performances. (43) In what survives of Archaic Greek poetry -- and now I am using the word poetry in the broadest sense -- what we keep finding is the ultimate extension of this principle, to the point where the latest version becomes the last version, a canonization that brings to a final state of crystallization what had been becoming an ever-less fluid state of variation in performance. (44) I attribute this canonization not so much to the phenomenon of incipient literacy as to the broader social phenomenon of Panhellenization. (45) I reiterate that this phenomenon is relative from the standpoint of an outsider to the tradition, in that some compositions are more Panhellenic in scope than others. From the standpoint of the insider to the tradition, however, in the here and now of performance, the Panhellenic perspective is the absolutist perspective of *aletheia* 'truth'. (46)"

Notes

(32) Detienne *Les maître de vérité dans la Grèce archaïque*, Paris 1973 22-27. For example, Léthé or 'Forgetting' personified is descended from Night in Hesiod *Theogony* 227/224; Mnemosune 'Remembering' is contrasted with darkness in Pindar *Nemean* 7.12-16.

(33) Detienne, pp. 69-80.

(34) For these terms, see the *Introduction*, p. 5: The second of the two basic concepts of linguistics that I use throughout this book is the

distinction, from a synchronic perspective, between the marked and unmarked members of any opposition within the system of language. These terms are defined as follows by Roman Jakobson: "The general meaning of a marked category states the presence of a certain (whether positive or negative) property A; the general meaning of the corresponding unmarked category states nothing about the presence of A." (R. Jakobson *Shifters, Verbal categories, and the Russian verb* Cambridge, Mass. 1957; reprinted in *Selected writings* The Hague, Mouton, 1971 pp. 130-147). The unmarked category is the general category, which can include the marked category, whereas the reverse situation cannot hold.

(35) See the discussion by Detienne, p. 74.

(36) Waugh 1982 compares the French usage of the masculine gender as the unmarked member of an opposition with the feminine, in that the masculine can stand for the category as a whole: thus an adjective describing both masculine and feminine categories will be put into the masculine: *des hommes et des femmes intelligents*.

(37) (omitted)

(38) Given that the smaller circle within the larger circle symbolizes the specialized sort of *mné*, that is, *a-letheia*, I would say that the larger circle that contains *leth-* would correspond to the function of the Muses, who help humans forget some things so that they may remember others. The root * *mna-* of *mne-* 'remember' may in fact be related to the root * *mon-t-* (or * *mon-th-*) of Mousa 'Muse' (Hesiod *Theogony* 53-55, 98-103). The etymological connection is certain if Mousa is to be derived from the root * *men-*, expanded as * *mon-t-* (or * *mon-th-*), which is one of several possibilities entertained by Chantraine *Dictionnaire Étymologique de la Langue Grecque* 716. The relationship of the root * *men-* with the expanded form * *mna-*, as in *mne-*, is clear: Chantraine, p. 703.

(39) The pertinent passages are discussed in Nagy *Sema and Noesis: some illustrations* Arethusa (1983 16:35-55) 44. This expression *oude me/se/he lethei* 'it does not escape my/your/his-her mind' implies a synchronic understanding of the word *aletheia* as a compound consisting of privative *a-* and the root *leth-*. In the formulation of Cole 1983 12, the reference of *aletheia* is "not simply to non-omission of pieces of information ... but also to not forgetting from one minute to

the next what was said a few minutes before, and not letting anything, said or unsaid, slip by without being mindful of its consequences and implications." (For a critique of Heidegger's celebrated explanation of *aletheia*, see Cole, pp. 7-8.) Cf. also Detienne 1973 48g107.

(40) I cite again Hesiod *Theogony* 53-55, 98-103.

(41) On this theme, see Detienne 1973, 29-50.

(42) This is not to say, of course, that the convergent version may not be complex, containing multiformities within its overarching uniformity.

(43) Cf. p. 57; cf. also p. 80.

(44) A. P. Royce *The anthropology of dance* Bloomington 1977 104 points out, with reference to traditions of dance, that various structures of performance, as they become progressively more rigid, can suffer "abrupt confrontation and loss."

(45) The threat of "abrupt confrontation and loss," to use the expression quoted immediately above, could help promote an impetus for recording by way of writing. But a critical attitude toward myth is caused not by the technology of writing but rather, more fundamentally, by the between variants of myth. See p. 57.

(46) We may well ask: how does the local perspective contribute to the Panhellenic, and to what degree does the Panhellenic perspective recognize the local? From the standpoint of the local tradition, the best chance for self-assertion is a process of self-selection that accommodates the Panhellenic tradition. Note the discussion by Royce 1977 164 of the repertory of some 90 *sones* (dances) among the Zapotec of the Isthmus of Tehuantepec: in asserting their identity to outsiders, the Zapotec tend to select just three of these 90 *sones*. Royce notes (*ibid.*) that "these three are the dances that any non-Zapotec would name if asked about 'typical' dances of the Isthmus," and that it is these three dances that are synthesized by the Ballet Folklorico in its suite "Wedding in Tehuantepec."

Poets of Alexandrine Age: Callimachus, Theocritus, Apollonius of Rhodes, Herondas

Studies:

"This study aims at identifying and clarifying the meaning carried by the noun ἀλήθεια, the adjectives ἀληθής, ἀληθινός, and their synonyms in the works of the four most representative authors of the Alexandrine age: Callimachus, Theocritus, Apollonius of Rhodes, and Herondas.

The study breaks down into five chapters.

The first chapter analyses all passages of Callimachus' works featuring the adjectives ἀληθής and ἀληθινός.

Similarly, all excerpts including the lexemes ἀλάθεια, ἀλαθής, and ἀλαθινός in Theocritus, and the lexemes ἀληθειη, ἀληθής, ἀληθινός in Herondas, are examined in the second and third chapters, respectively.

The fourth chapter is dedicated to Apollonius' *Argonautica*. As no record of either the noun ἀλήθεια or the adjectives ἀληθής and ἀληθινός is available in the four books of the *Argonautica*, the study concentrates on the synonyms of ἀληθής and ἀληθινός used by Apollonius: ἔτεός, ἐτήτνμος, νημερτής, ἀτρεκής.

The fifth chapter focuses on the synonyms of ἀληθής and ἀληθινός which can be found in the works of Callimachus: ἔτεός, ἐτήτνμος, ἔτυμος, ἀτρεκής; Theocritus: ἔτεός, ἐτήτνμος, ἔτυμος, ἀτρεκής; and Herondas: ἔτυμος.

An introductory essay provides a detailed account of the study's general objective and specific aims.

The results of the research are summarised in the conclusions, which offer an overview of the analogies and differences of the authors under consideration with respect to their specific understanding of the notion of 'truth'.

The study also contains a bibliography and an index."

Eronda) Roma, Università "Tor Vergata", 2007.

Thucydides

Studies:

History of the Peloponnesian War: Chapter 1.1 - 1.23 ("Thucydides' Archaeology")

"Because the means by which a world is disclosed are hidden and, indeed, withdraw from view, there are several issues in the key programmatic sections of 1.21-3 that I believe have been consistently misunderstood. There is no better way further to illustrate the subtle workings of Thucydides's Archaeology than to dissolve some of the errors that surround it. The issues I will discuss relate to "unconcealedness" (*aletheia*), "what is appropriate" (*ta deonta*), "pre-text" (*prophasis*), "compulsion" (*ananke*), and "kind" (*toioutos*).

Unconcealedness (*Aletheia*)

Thucydides does seem interested in *aletheia*, which is usually translated as "truth." Truth is understood conventionally as positing a correspondence between word and world, and so, this interpretation maintains, when Thucydides discusses the importance of *aletheia*, he is emphasizing the importance of matching up his language to events (*logos to ergon*). Yet Thucydides uses neither *aletheia* nor *to alethes* particularly often in these opening sections (or generally, especially not in his own voice). He does, as we have seen, employ numerous visual words, such as *to saphes*, at crucial places. These words are in turn often translated in terms of "truth," even "historical truth," (1) but such translations put the cart before the horse. The converse seems far more apt; that is, *aletheia* should be understood in terms of *to saphes* and other visual terms rather than the other way around.

In Thucydides's *Archaeology* visual metaphors dominate *vis-a-vis* truth claims. (2) Further, in specific contexts, Thucydides is quite able to assert that a claim or description is true in the sense that it corresponds to reality,³ but Thucydides does not do this often, and he does not do it in the *Archaeology*. And thus we should not efface the explicit visual language as somehow "primitive" (i.e., aspiring to real truth) or metaphorical, especially when there is a sophisticated philosophical tradition both before and after Thucydides that takes

the priority of vision seriously -- see the preceding discussion of the Presocratics, *eros* in both Gorgias's Helen and Plato's Phaedrus (also the allegories in the Republic), and *sophia* in the *Nicomachean Ethics*. And it is not just the philosophical tradition, there is also the tragic tradition, which, as we have seen, relies upon and dramatizes the human situation as bounded by vision of a complex sort. Human vision is further complicated by its tendency not to see that which it has most need of seeing.

The word *aletheia* is generally, though not uniformly, believed to retain the visual force of its etymology -- "as that which is not concealed." (4) If this is true, then we have all the more reason for associating claims concerning *aletheia* with the dominant visual imagery. Thomas Cole has maintained (*contra* Friedlander) that *aletheia* does retain a connection with *lethe* (oblivion) and that this connection is exploited as late as Plato's Phaedrus. (5) Hence the significance of the words *a-letheia* and *a-kribeia* in the key sections of Thucydides's *Archaeology*. These two related alpha privative words convey the difficulty of using *logos* in a manner that does not cover up as much as, if not more than, it succeeds in bringing to light. (6) In fact, Cole observes that *akribeia* is a characteristic especially associated with written texts, and it is in Thucydides that for the first time *aletheia* too is claimed to be the product of the type of precise method seemingly possible only through writing. (7)

It can be argued that there is a *prima facie* distinction between "not-not-noticed" and "unconcealed." (8) I must admit that I have a hard time grasping this distinction because in both cases *aletheia* is a visual accomplishment related to *logos*. I presume that somehow not-not-noticed is more reasonable. (9) Heidegger's notion of unconcealedness sounds as if the objects of *aletheia* are glowing, demanding to be seen, (10) whereas what a *logos* can do is merely to keep a hero mentioned among human subjects again and again -- no glowing is required. Heidegger does employ visual vocabulary to illustrate his point about *aletheia*, but in so doing, he sees himself as following a tradition (which he is), and it appears dubious to object to his position merely on account of the violence with which he brings vision to the fore. After all, Heidegger plausibly rejects the whole subject-object distinction upon which Cole (following Snell) would seem to rely. If it is nonsense to say that truth lights up objects, it is,

arguably, at least as nonsensical (though very modern) to claim that to be true is to be kept in the minds of human subjects.

Finally, it is procrustean to read the bulk of Thucydides's narrative as something that corresponds to reality. Correspondence presupposes exactly that separation between logos and the world that I believe Thucydides's text is remarkable for constantly challenging. Indeed, Thucydides's success in opening a world through logos is a decisive argument against reifying this distinction." (pp. 155-157)

Aletheia dans la Pensée Grecque d'Homère à l'Âge Hellénistique

Vrai et Faux dans la pensée de la Grèce ancienne

"Par l'effet d'une particularité tout à fait singulière, la langue grecque désigne cette notion de vérité par des termes négatifs : l'adjectif ἀληθής et le substantif ἀλήθεια. Il y a là un mystère étonnant, qui n'est peut-être pas dépourvu de liens avec ce que l'on appelle le 'miracle grec'. Mais il ne faut pas oublier qu'ἀληθής et ἀλήθεια ne sont pas les seuls mots qui, à l'origine, s'appliquent à l'idée de vérité, bien que Platon et Aristote n'emploient pratiquement qu'eux pour la représenter, bien qu'ils traversent l'histoire du grec, d'Homère jusqu'aujourd'hui, bien qu'enfin, d'Homère à l'âge classique, ils connaissent un prodigieux développement, qui est contemporain de la disparition progressive de leurs anciens parents sémantiques. L'expression du vrai, en grec ancien, relève, en réalité, d'une terminologie complexe, composée de mots négatifs et positifs, que l'on se propose d'étudier ici, sans les séparer de leurs antonymes.

I. Les mots négatifs signifiant vrai.

A côté d'ἀληθής et d'ἀλήθεια, d'ἀληθώς, d'ἀληθεύειν, d'ἀληθίζεσθαι, d'ἀληθινός, d'ἀληθινώς et d'ἀληθοσύνη (ainsi que des composés dont le premier membre est ἀληθο- ou le second -ἀληθής), on remarque l'emploi d'ἀτρεκής, ἀτρεκεως, ἀτρεκειή, ἀτρεκειν (le substantif ἀτρεκότης est tardif) (1), de νημερτής (ναμερτής), νημέρτεια (ναμέρτεια), νημερτεως, d'ἄψευδής, ἄψευδεια, ἄψευδειν, ἄψευδέως (2).

II. Les mots positifs voulant dire vrai.

A époque ancienne, la représentation positive du vrai est assurée par la famille d'ἔτος. Outre ἔτος, qui est connu grâce à une glose d'Hésychius (3) et à des fragments de Callimaque (4) (il apparaît peut-être aussi dans quelques textes anciens) (5), elle comprend ἔτεός, 'τυμος, ἔτυμως, ἐτήτυμος, ἐτηύμως. Ἐτητυμία est tardif (6). Ἐτανός, ἔτυμώνιον, qui est éolien, ἔταυτός, ἐτέωνια, ἔτεωνειν, ne figurent que dans des gloses d'Hésychius (7). Les composés en ἔτυμο- se laissent classer en deux groupes différents, puisque l'on peut séparer ἔτυμόδρυς, qui se lit chez Théophraste (8), et ετυμηγόρος (9) des termes dans lesquels ἔτυμο- désigne le vrai sens d'un mot, son sens étymologique. Cette dernière valeur d'ἔτυμος figure pour la première fois chez Aristote (10). Les composés en ἐτέο/ω- sont peu nombreux. On doit citer Ἐτέοζουτάδης, ἔτεοδμώς (dont l'existence même est douteuse), Ἐτεόκριτες, ἔτεόκριθος (11), Ἐτέόκλειος, Ἐτεοκληειη et différents anthroponimes.

Bien après l'époque de rédaction des textes homériques, apparaissent dans la langue (en particulier dans la prose classique) quelques formes bâties sur la racine du verbe εἶναι (ὄντως, τῷ ὄντι, οὐσία) et l'adjectif ακριζής (dont sont issus le substantif ἀκίζεια, l'adverbe ακριζώς, le verbe ἀκριζοῦν et différents composés). Ces mots contribuent à l'expression de concepts voisins de celui de vrai : le concept de réel et celui d'exact." (pp. 1-3)

Notes

(1) Il apparaît dans une scholie (Euripide, *Hyppolite*, 1114).

(2) Pour ἀλανές ἀληθές (Hésychius), mot difficile à classer dont l'étymologie est mal connue, voir W. Prellwitz, *Glotta*, 19, 1930, p. 105 sq., et K. D. Georgoulis, *Platon*, 8, 1956, p. 228-229. Hésychius donne encore ἀλανέως ὀλοσχερως, Ταραντινοὶ et ἀλλανής ἀσφαλής, Αάχωνες ; W. Prellwitz hésite entre deux étymologies : ἀλανές peut-être apparenté à λανθάνω et ἀληθής ou à ἀλλανής, ἀλανέως, ἀλανέως (Elis).

Subjectivité et objectivité en grec ancien et en français

"En fin de compte, les analyses proposées ici distinguent quatre niveaux différents dans un énoncé :

- Le niveau de l'énoncé proprement dit détermine un acte de parole avec des interlocuteurs dans une situation de discours.

- Le niveau de la source de l'énoncé détermine un point de vue, ou un énonciateur, ou les deux.

- Le niveau du contenu de l'énoncé détermine la représentation d'une situation événementielle qui a pour support référentiel le référent du sujet.

- Le niveau inférieur est d'ordre lexical. Il détermine un procès abstrait avec sa structure actancielle, mais sans représentation spatio-temporelle (avant la promotion d'un actant en sujet, c'est-à-dire en support référentiel).

On peut admettre que toutes les catégories verbales peuvent être définies par rapport à ces différents niveaux et à leurs éléments. Rien n'empêche donc d'observer des distinctions semblables dans une autre langue, par exemple en français moderne. Cependant, en français moderne, certaines distinctions sont moins nettes, sans doute parce que la syntaxe en est moins subjective. C'est ce que semble confirmer un petit aperçu sur le vocabulaire du vrai et du réel.

1. Aperçu de syntaxe contrastive du grec et du français :

Le français moderne (comme le latin) ne connaît que deux types principaux de systèmes hypothétiques. Ils correspondent respectivement aux hypothèses d'addition et aux hypothèses de substitution du grec :

- Type I : *si* + indicatif quelconque (= I et II du grec).
- Type II : *si* + formes d'indicatif en *-ais* (= III et IV du grec).

Des subdivisions sont cependant possibles, qui correspondent aux divisions du grec, mais imparfaitement :

Dans le type I, l'indicatif futur, souvent exclu, est cependant parfois admis : - Type I, 1 : « Si vraiment tu viendras demain » I du grec) (14).

- Type I, 2 : « Si tu viens demain » II du grec).

Dans le type II, les formes composées sont parfois employées pour marquer une valeur d'irréel, sans considération temporelle :

- Type II, 1 : « Si tu venais demain » (= III du grec).
- Type II, 2 : « Si tu étais venu demain » (= IV du grec).

Voici comment on peut rendre compte des nuances entre I et II du grec et I, 1 et I, 2 du français.

- Le type I, 1 du français suppose une assertion objective, c'est-à-dire une assertion vraie pour tous. Le sens est exactement « s'il est reconnu par tous que » = « s'il est vrai que ». C'est une hypothèse de vérité, pas tout à fait identique à « si quelqu'un dit que », hypothèse d'assertion subjective du grec.

- Le type I, 2 du français suppose un fait objectif et ne correspond pas tout à fait au type II du grec, qui suppose non le fait lui-même, mais l'événement qui le manifeste, qui lui donne sa représentation subjective. En français le sens exact est « s'il arrive que », en grec, c'est « s'il se manifeste que ».

Si le grec distingue nettement hypothèse d'assertion et hypothèse de manifestation, le français distingue peu hypothèse de vérité et hypothèse de réalité, de même que vrai et réel sont peu distincts dans le vocabulaire (15).

Voici comment on peut rendre compte des nuances entre III et IV du grec et I, 1 et I, 2 du français.

- Le type I, 1 du français suppose une situation de vérité non actuelle, donc fictive. Le sens exact « s'il était vrai que » ne correspond pas tout à fait à « s'il apparaissait que », hypothèse de point de vue non actuel du grec (16).

- Or une situation de vérité, notion objective et générale, ne peut être qu'actuelle ou non actuelle, c'est-à-dire liée ou non à la situation de discours. En revanche un point de vue, qui est subjectif et particulier, peut en outre être actuel et non réel, c'est-à-dire être lié à la situation de discours mais en contredisant le point de vue réel du locuteur. C'est le type de point de vue que caractérise l'indicatif secondaire modal du grec.

Le système dominant du français n'a pas d'irréel analogue à celui du grec. Mais il a la possibilité de spécifier comme caduque et devenue impossible une situation de vérité non actuelle. Il a pour cela recours à la forme composée, celle-ci perdant alors sa valeur temporelle pour une valeur modale, comme dans « si tu étais venu demain » qui implique « tu ne viendras pas demain »(17). Il faut cependant pour cela que le contexte empêche toute interprétation temporelle. Ainsi « s'il avait plu hier » n'est pas ainsi spécifié, car on peut le dire sans savoir s'il a plu hier.

Il faut cependant se garder de trop figer les systèmes. Si, dans les protases hypothétiques, l'imparfait français correspond bien à l'optatif grec, il a des emplois différents qui en font un irréel. Dans « Un peu plus, le train partait sans moi », il correspond à un indicatif secondaire modal du grec. Ne serait-ce pas la marque d'une

détermination plus subjective, l'expression d'un point de vue actuellement caduc ? Le plus-que-parfait du subjonctif dans « s'il eût été là » peut aussi déterminer un point de vue subjectif (18). Inversement le grec tend à rendre plus objectives ses déterminations syntaxiques, comme le montrent l'affaiblissement de l'opposition de ὄν et l'emploi devenant mécanique de ἔν, la généralisation de l'augment...

Néanmoins, on peut dire qu'en général grec ancien et français moderne s'opposent comme le plus subjectif au plus objectif, surtout sur les deux points suivants :

- Là où le français détermine un fait, le grec ancien déterminait la représentation d'un fait dans une conscience.
- Là où le français détermine une situation de vérité valable pour tous, le grec ancien déterminait un point de vue particulier.

Ce résultat est une confirmation de l'opinion exprimée par Guillaume, *Temps et Verbe*, Paris 1929, p. 48 : « L'hypothèse, primitivement élément intérieur de visée, est devenue en français moderne un élément extérieur objectivable sur la ligne d'actualité. »

2. Le vocabulaire du réel et du vrai en grec et en français :

Le français parle en principe d'un fait réel et d'une assertion vraie, c'est-à-dire conforme au réel. Mais la distinction n'est pas très tranchée. Réalité et vérité peuvent se confondre dans l'usage courant, et on a vu que réel n'a pas le même sens selon qu'il est opposé à éventuel ou à irréel. Confusion et ambiguïté tiennent sans doute à l'objectivité des termes. En effet la vérité repose directement sur la réalité des faits, vérité et réalité s'impliquent réciproquement.

Rien dans le grec homérique ne correspond exactement aux mots français réel et vrai, qui sont positifs et objectifs. Les deux mots homériques qui s'en rapprochent le plus, ἀληθής et νημερτής sont négatifs et subjectifs, comme l'a montré Levet, *Le vrai et le faux dans la pensée grecque archaïque. Étude de vocabulaire* (19).

ἀληθής signifie étymologiquement « non voilé ». Ce mot qualifie le réel en tant qu'il est dévoilé à une conscience humaine. Ce n'est pas « le réel qui est », mais le réel qui se manifeste dans l'expérience. Pour un Grec donc, les faits objectifs en eux-mêmes ne suffisent pas à

établir la réalité, et par suite la vérité ; encore faut-il qu'ils soient perçus comme tels. Cette conception subjective de la réalité, que révèle le vocabulaire, se trouve correspondre à ce que nous avons dit du contenu de l'énoncé à partir de nos analyses syntaxiques : c'est un événement représenté, qui n'est pas ce qui arrive, mais ce qui se manifeste.

Aussi peut-on dire que le mensonge hypothétique d'Euryclée à Pénélope doit être découvert pour exister comme événement.

Νημερτή, quant à lui, qualifie étymologiquement l'absence d'erreur (ἄμαρτάνειν « se tromper »), c'est-à-dire « l'interprétation droite ». Pour un grec donc, la vérité ne découle pas simplement des faits, ni même de leur simple observation, mais d'une juste interprétation de ce qu'on observe. Cette conception de la vérité est illustrée par la notion de point de vue de vérité que nous avons tirée de l'analyse syntaxique de l'énoncé assertif. L'énoncé assertif est fondamentalement senti comme résultant d'un traitement personnel de l'information.

Les termes grecs ne caractérisent donc pas le fait réel et la proposition vraie (au sens logique de cette expression), mais l'expérience révélatrice et le jugement correct. Ces deux notions subjectives sont relativement indépendantes l'une de l'autre, contrairement à celles de réalité et de vérité. En effet l'expérience révélatrice n'implique pas nécessairement un jugement correct, alors que la réalité d'un fait s'exprime automatiquement dans une proposition vraie.

On pourrait facilement poursuivre cet aperçu sur le vocabulaire grec. Ainsi le ψευδος n'est pas le contraire du vrai, c'est-à-dire le faux, mais l'invention subjective (20).

Dans l'ensemble, les termes grecs du vrai et du faux reposent sur des significations plus subjectives que leurs homologues français. Cette plus grande subjectivité se retrouve dans les significations des catégories verbales du grec. De ce fait, celles-ci distinguent plus nettement qu'en français source énonciative et contenu de l'énoncé verbal. C'est pourquoi l'analyse syntaxique a abouti à distinguer trois sortes d'objets imaginaires qui déterminent les différents types de protases grecques : une assertion (type I, et chez Homère type IV),

un événement (type II), un point de vue (type III, et après Homère type IV)." (pp. 246-250)

Notes

(14) Cf. Grévisse, *Le bon usage*, Paris: Ducoulot 1975, p.1034.

(15) L'emploi de l'indicatif dans « si tu viens demain » suggère que l'indicatif français est moins assertif que l'indicatif grec (en tant que mode non marqué ?). Aussi le français confond-il habituellement l'hypothèse à vérifier (« s'il est vrai que ») et l'hypothèse à réaliser (« s'il arrive que »).

(16) Il y a de même une correspondance imparfaite entre l'optatif oblique du grec (point de vue passé) et l'imparfait français de concordance des temps, qui est « un imparfait de récit » (situation de vérité passée, cf. Le Guern, *Notes sur le verbe français*, 1986, pp. 26-9).

(17) Le tour avec forme en *-ais* composée est apparu au XVII^e siècle, en concurrence avec le plus-que-parfait du subjonctif, qu'il a presque supplanté (Robert Léon Wagner, *Les Phrases hypothétiques commençant par "si" dans la langue française, des origines à la fin du XVI^e siècle*, Paris : Droz 1939).

(18) De façon analogue, la valeur parfois non temporelle, mais encore aspectuelle de « j'ai mangé » (= « je suis repu ») suggère une conception plus subjective du contenu verbal (non le fait en lui-même, mais tel qu'il est perçu).

(19) Voir *l.l.* pp. 78-105 pour ἀλεθης et 141-60 pour νημερτής. Ετεόό, έτυμος, έτετυμος, signifient « vérifié, véridique ». Un autre mot négatif, άτρεκής, qualifie l'énonciation sincère (ibid. pp. 124-40).

Extrait de : Louis Basset, *La syntaxe de l'imaginaire. Étude des modes et des négations dans l'Iliade et l'Odyssée*, Lyon, Maison de l'Orient, 1989.

Homère

"Dans sa célèbre analyse de la *mimésis*, Éric Auerbach attire déjà l'attention sur le "réalisme" singulier de l'épopée homérique. En se fondant sur l'étude d'un épisode bien connu de l' *Odyssée*, la "cicatrice d'Ulysse", il y montre l'existence d'une conception de la vérité située aux antipodes de celle que met en scène l'univers biblique : "On a souvent taxé Homère de mensonge ; mais ce reproche ne diminue en rien l'effet des poèmes homériques : il n'a pas besoin de fonder ses récits sur une vérité historique, sa réalité est suffisamment puissante (...). La Bible ne prétend pas seulement à la vérité de façon beaucoup plus expresse qu'Homère, elle y prétend tyranniquement (...) Le monde des histoires de l'Écriture sainte ne revendique pas seulement la vérité historique, il se donne pour vérité unique" (155) Ainsi, à la Vérité conçue comme valeur universelle l'épopée homérique préférerait une autre mesure de la vérité, la réalité.

(...)

Il semble, en effet, que l'homme iliadique soit plus vigilant à ne pas déformer ce qu'il rapporte ou conserve de la réalité, qu'à transmettre une vérité objective pour tous. J. P. Levet a bien mis en évidence l'importance des verbes de déclaration dans les conditions de manifestation du "vrai" : "c'est dans l'échange verbal, écrit-il, que se dessine la fonction première de la langue, traitée comme outil privilégié et irremplaçable de communication, entre deux ou plusieurs consciences, d'une science qui est, primitivement, uniquement sensorielle" (159)

Car percevoir est toujours, dans les Poèmes Homériques, un acte concret, indépendant de toute réflexion au sens théorique du terme (160) et c'est justement parce qu'elle est fondée sur l'observation fine et méticuleuse des phénomènes que la connaissance, qui chez Homère n'est jamais théorique (161), transgresse la démarcation entre les sensations et la raison (162). Or, cette manière sensorielle d'acquérir la connaissance (dont nous avons constaté le rôle essentiel dans la querelle opposant Ajax et Idoménée), et les contraintes liées à sa communication, interdisent à l'homme de raisonner directement sur la réalité en sortant de lui-même pour aller au-devant de ce qui est objectivement. Comme l'a exprimé justement L. Basset, "ce n'est pas le réel qui est, mais le réel qui se manifeste dans l'expérience, qui

constitue le vrai" (163), ce qui revient à souligner l'importance structurelle de la focalisation dans la présentation des choses. L'individu est contraint de "travailler sur le donné installé en lui". Il ne peut transmettre la réalité telle qu'elle est et s'efforce de la rapporter telle qu'elle est reproduite en lui, sans la déformer (164). C'est pourquoi l'adverbe ἀτρεκέως, qui exprime la démarche de l'esprit dans son effort de passivité pour ne pas déformer ce qui est déposé en lui (165), convient bien à une énonciation qui doit à chaque instant capter avec acribie les fluctuations de la réalité en les nommant avec la plus grande précision, comme le fait l'aède dans l'épisode des jeux. Or, nous avons constaté que les locuteurs emploient fréquemment cet adverbe avec le verbe καταλέγειν, ce qui souligne à la fois que ce verbe désigne un mode d'expression bien connu des Grecs archaïques et que "l'on a pris au sérieux cette manière de donner des renseignements, en relation avec une manière de concevoir la réalité et limitée à la situation du donneur de renseignements" (166). Lorsqu'un sujet ne peut pas accéder directement à la réalité ou y faire accéder son interlocuteur (soit parce qu'il ne dispose plus que d'un souvenir, soit qu'il soupçonne son interlocuteur de déloyauté, soit pour une autre raison) tout ce qu'il peut faire, dit J. P. Levet, c'est lui donner un aperçu fidèle "point par point" de la réalité telle qu'elle est conservée en lui.

Pour l'homme homérique, la réalité n'est donc inscrite ni dans les choses (167), ni dans leur seule observation, mais elle prend forme dans la présentation que l'observateur en fait pour son destinataire, c'est-à-dire dans l'interaction où se construit le sens. Et le discours en catalogue, dont nous avons observé le pouvoir interactif, se révèle le mode discursif adéquat pour communiquer cette réalité, comme l'illustre avec force l'épisode où Ulysse n'entre en réelle communi(cati)on avec son épouse qu'au moment où il lui décrit en catalogue la fabrication de leur lit (168).

C'est sans doute la célèbre analyse que le philosophe M. Heidegger a menée sur la Vérité comme ἀλήθεια (169), qui explique la fascination des commentateurs des Poèmes homériques pour ce concept, en dépit de la rareté de ses occurrences dans les Poèmes, surtout dans l'*Iliade* (170). Ainsi, tout en critiquant l'interprétation étymologique heideggerienne de l'alétheia comme "dés-occultation" ou "dévoilement" et "ouverture", T. Krischer pense pouvoir mettre en

relation ce terme avec le verbe καταλέγειν (171). Conformément au sens premier du verbe καταλέγειν que Krischer propose, à partir du sens de l'expression ἐμὲ ἔλαθε, de traduire par "ne pas remarquer" (et non comme on le fait souvent, au prix de ce qu'il considère comme un " glissement sérieux ", par " être caché "), l'adjectif ἀληθής désigne en effet, si l'on tient compte de son préfixe privatif, le fait qu'un objet présent attire l'attention et est perçu par un témoin oculaire (172). T. Krischer préconise alors d'interpréter l'expression ἀλήθεια εἶπειν comme le fait de produire un énoncé qui présente l'objet de façon détaillée afin qu'il ne demeure pas "non remarqué". Or, ajoute-t-il, c'est le verbe καταλέγειν qui exprime en grec cette façon de dire précisément et concrètement quelque chose, d'en faire une "présentation réaliste et exacte qui la traverse point par point", sans rien laisser dans l'ombre, en considérant que chaque détail a son importance. Il conclut de ces remarques que "celui qui connaît la vérité sait la dénombrer et celui qui dénombre bien prouve par là qu'il dit la vérité", établissant ainsi un rapport de contiguïté entre la vérité comme *alétheia* et l'énonciation catalogale qu'il considère comme le mode privilégié de dénombrement du Vrai (173).

Si l'on ne peut que souscrire aux remarques lumineuses de T. Krischer concernant d'une part le sens perceptif de l'adjectif ἀληθής, d'autre part l'exhaustivité inhérente à la démarche présentative du καταλέγειν, on peut toutefois lui objecter que l'adjectif ἀληθής n'est jamais employé avec le verbe καταλέγειν. On trouve en revanche, associé à ce verbe, le substantif ἀλήθεια, une fois dans l' *Iliade*, dans le passage controversé de l'entretien entre Priam et Hermès en XXIV 407 (174, et six fois dans l' *Odyssée*, le plus souvent dans un vers formulaire. Or, à la différence de l'adjectif ἀληθής dont le sens reste concret, le substantif ἀλήθεια recouvre un concept dont la signification abstraite (175) ne peut s'adapter à la valeur sémantique concrète de καταλέγειν, ce que T. Krischer semble d'ailleurs pressentir lorsqu'il rappelle que "le concept abstrait est un outil qui rend l'énumération concrète superflue (176)." (pp. 279-284)

Notes

(155) *Mimesis. La représentation de la réalité dans la littérature occidentale*, 1946, traduction française Gallimard, Paris 1984 pp. 22-23, je souligne.

(159) *Le vrai et le faux dans la pensée grecque archaïque*, op. cit. p. 57.

(160) C'est ce qu'ont montré différentes analyses du mode de perception des anciens Grecs. En particulier K. von Fritz, dans un article éclairant ("Noos and Noein in the homeric poems", (Classical Philology XXXVIII, 1943, 79-93), explique comment, chez les Grecs d'Homère, la connaissance naît d'une perception (visuelle ou olfactive) et ne s'identifie jamais à un raisonnement. Certes, J. H. Leshner ("Perceiving and Knowing in the *Iliad* and the *Odyssey*", Phronesis XXVI 1981, 2-24) critique fortement ce point de vue, alléguant que si connaissance et visualité étaient synonymes, l'illusion, qui abonde dans l' *Odyssée* comme l'a bien remarqué Aristote (*Poétique* 1459b) y serait impossible (p.14 sq.). En fait, von Fritz n'a jamais identifié sensation visuelle et connaissance (p. 90). Il montre que dans l'acte de *noein*, se manifeste l'usage d'un "sixième sens", une faculté de pénétrer pleinement une situation afin d'en saisir toute la signification, comme le peut celui qui, par exemple, ayant beaucoup voyagé, dispose de l'horizon vaste d'une perception élargie du monde (comme en *Iliade* XV 80 sq. et I 508 où Zeus est présenté comme celui qui "voit loin" - *euruopa*-). Mais s'il y a bien une différence entre l'apparence d'une chose et la saisie de toute la subtilité de sa réalité, cette saisie n'est jamais abstraite. Comme l'ont souligné M. Detienne et J. P. Vernant (*Les Ruses de l'Intelligence, la Métis des Grecs*, Paris, 1974), elle est redevable de la *métis*, cette capacité de l'intelligence à s'orienter et à agir dans une situation concrète et complexe (p. 28), qui suppose un sens aiguisé de l'observation et de l'opportunité correspondant à ce que von Fritz appelait le "sixième sens", capable d'anticiper une réalité soumise au hasard. Voir aussi les remarques convergentes de G. Nagy, "Sêma and Noësis : some illustrations", *Arethusa* 16, 1983, p. 38.

(161) Voir Ch. Mugler (*Les Origines de la Science Grecque chez Homère*, Paris 1963 pp. 15-22, 46 et 158). B. Snell montre aussi qu'il n'existe pas d'abstraction chez Homère (*Die Entdeckung des Geistes*, Hambourg 1948). Selon R. A. Prier ("Some thoughts on the archaic use of metron", *The Classical World* 1976, 161-169), la pensée archaïque est même en deçà de l'opposition *abstrait / concret* qui prévaudra à partir de l'irruption de la pensée philosophique et rationaliste du VI^{ème} siècle. Le *noûs* y est la faculté de *saisir la*

dynamique immanente à une situation offerte naturellement (p. 167) et d'approprier le geste à la situation concernée.

(162) Ch. Mugler, *Les Origines*, op. cit. p. 215, et l'analyse de R. Brague ("Le récit du commencement. Une aporie de la raison grecque" *La Naissance de la Raison en Grèce*, Actes du Congrès de Nice, dir. J. F. Mattéi, Paris, PUF 1990, pp. 25-27) qui souligne le rôle essentiel de la vue dans le mode de connaissance archaïque.

(163) *La syntaxe de l'Imaginaire*, Paris 1989, p. 249.

(164) *Ibid.* p. 237.

(165) Voir *supra* pp. 28-29.

(166) J. P. Levet, *Le Vrai*, op. cit. p. 169.

(167) Comme le souligne M. Merleau-Ponty (*Le Visible et l'Invisible*, Paris 1964 p. 173), "nous ne voyons pas les choses toutes nues parce que le regard même les enveloppe, les habille de sa chair".

(168) Voir *supra* p. 189 sq.

(169) *Platons Lehre von der Wahrheit* 1943 ; *Alétheia in Vorträge und Aufsätze* 1954. La question est bien résumée par J. P. Levet, *Le Vrai...*, op. cit. pp. 48-51.

(170) Le terme apparaît sept fois dans l' *Odyssée* (on trouvera le relevé des occurrences chez J. P. Levet, *ibid.* p. 59) et seulement deux fois dans l' *Iliade* : en XXIV 407 (avec καταλέζω), et dans un passage de la course de chars en XXIII 361.

(171) "ETYMOΣ und ΑΛΗΘΗΣ", Krischer, T. (1965) "ETYMOΣ und ΑΛΗΘΗΣ," *Philologus* 109: 1965, p. 164.

(172) *Ibid.*, p. 162. Ainsi, en *Iliade* XIII 272-273, le verbe καταλέγειν a pour antonyme ίδμεναι dont le rapport sémantique avec la perception visuelle est bien connu. G. Nagy, dans un article où il s'intéresse précisément à certains passages du chant XXIII de l' *Iliade*, montre que l'expression ουδέ με λησει y est souvent utilisée comme synonyme de νομω), verbe de perception qui exprime simultanément "the noticing of signs and the recognition of what they mean" ("*Sêma and noesis...*", art. cit. 1983, p. 38).

(173) Cette interprétation inspire aussi les analyses de M. Finkelberg qui substitue à l'idée de dénombrement celle de succession narrative ("Homer's view of the epic narrative : some formulaic evidence", *Classical Philology* LXIII 1987, p. 138) : "The ordered succession was regarded as the form of a truthful narration and the truth as the content of a point-by-point narrative succession". Elle conclut son étude en affirmant que pour Homère, la "narration catalogale" constitue "le modèle formel de toute narration véridictive" (p. 138). Or nous avons pu établir au fil de cette étude que καταλέγειν ne désigne en toute rigueur ni un dénombrement, ni une narration, encore moins un modèle narratif de véridicité.

(174) Passage étudié supra p. 37.

Hésiode

Théogonie. Les travaux et les jours. Le bouclier - Paris, Belles Lettres, 1928 (réédition 2002)

ἴδμεν ψεύδεα πολλὰ λέγειν ἐτύμοισιν ὁμοίᾳ,

ἴδμεν δ', εὖτ' ἐθέλωμεν, ἀληθέα γηρύσασθαι.

"si nous savons dire bien des mensonges qui ont tout l'air d'être réalité

nous savons, quand nous le voulons, faire entendre des vérités"

(Hésiode, *Théogonie et autres poèmes suivis des Hymnes homériques*, Édition de Jean-Louis Backès, Paris : Gallimard, 2001, vv. 27-28)

"La Vérité et le Mensonge.

Le "vrai et le "faux" en tant que compléments de verbes énonciatifs, indiquent la conformité (ou la non-conformité d'un énoncé aux choses.

Pour dire qu'un énoncé est vrai, Hésiode dispose de deux termes. Le premier, employé deux fois, se présente sous les formes ἔτυμος et ἔτητυμος, cette dernière variante comportant, selon Chantraine, un redoublement expressif (204). Ces termes désignent des paroles conformes à la réalité (205), au point qu'on a supposé une origine commune du terme avec εἶναι et suggéré un type d'exactitude vérifiable dans la réalité sensible (206). On observe en effet cette conformité aux choses dans les développements des *Travaux* que le poète a annoncés comme des ἐτήτυμα destinés à instruire Perses de ses devoirs. Ces paroles exactes sont le fait du poète et des Muses, même si le vers 27 de la *Théogonie* les intègre au "savoir dire" des déesses au prix d'un détour par les mensonges "de même valeur que des paroles véridiques".

La valeur d'ἀληθής, "non caché", a fait l'objet de discussions. Pour certains, l'adjectif désigne une qualité des choses : dire des ἀληθέα signifie "reproduire dans un discours quelque chose qui existe sans se dissimuler (qui se révèle) au monde (207). Pour d'autres, il s'agit d'une qualité de la formulation, "dire la vérité de manière que l'objet qu'on a en vue ne demeure plus caché" (208). Je ne suis pas sûre qu'il y ait lieu de choisir : "dire le vrai nom" d'un jour, par exemple, suppose que ne soient cachés ni les actes auxquels il est propice ni sa désignation exacte. Pour Detienne, est ἀληθής ce qui n'est pas de l'ordre de l'oubli (λήθη) et relève de la mémoire (209). Cette valeur de l'adjectif est rendue particulièrement visible dans son emploi à propos de Nérée, dit à la fois "sincère" (ἀληθής) et "n'oubli(ant) pas" (οὐδε λήθεται) la justice (210). Elle ne contredit pas celle de "non caché", mais la complète : l'une et l'autre répondent aux sens attestés chez Hésiode pour les verbes λανθάνω, λήθω et ἐπιλήθω qui signifient à l'actif "être caché, échapper à la connaissance" et peuvent prendre au moyen la valeur d' "oublier" (211). Dans les cas où ces "vérités" renvoient à un énoncé, elles sont compléments des verbes signifiant "dire le nom" et "faire connaître par la voix" (212), qui supposent un savoir préalable que la parole rappelle ou révèle ; il n'y a pas de dévoilement sans mémoire et, si Hésiode accorde à cette dernière une place de choix dans la révélation du vrai, cela tient à sa conception de la parole poétique dont il sera question plus loin (213).

Ces termes exprimant diversement la vérité sont employés dans le sens qu'ils ont déjà chez Homère, où, quand ils sont impliqués dans

des situations d'énonciation, les mots ἀληθης et αληθειη supposent un exposé complet, un compte-rendu sans dissimulation (214) ; ἐτήτυμος s'applique à des paroles qui disent les choses comme elles sont (215) et s'oppose au non réalisé (216).

Cependant la qualité de vrai, chez Homère, concerne des propos que l'on exige ou tient présentement. Elle ne prend jamais la valeur générale que les constructions hésiodiques lui assignent : les "paroles véridiques" que le poète va "dire" désignent le poème dans son ensemble ; les "vérités" que les Muses savent "proclamer" semblent n'avoir d'autre limite que leur bon vouloir.

Il en va de même pour le faux, que les textes homériques appliquent au contexte étroit alors qu'Hésiode fait des Pseudéa des divinités emblématiques. On relève en outre une différence sémantique entre les deux poètes. Chez Homère, ψευδεα peut désigner l'erreur de bonne foi (217) ou un acte (la violation d'un pacte) (218). Aucun de ces deux sens ne figure chez Hésiode : les contextes supposent toujours une situation verbale et une distorsion consciente de soi. Le mensonge caractérisé est néanmoins plus net dans le verbe que dans le nom : le faux témoignage et la vantardise auxquels le verbe est associé dans les *Travaux*, la sévérité de la punition à laquelle expose le mensonge divin appuyé d'un parjure, donnant lieu à un exposé de plus de vingt vers dans la *Théogonie*, sont l'objet d'une dénonciation claire (219). Le nom "mensonges", quant à lui, semble, comme les λόγοι auxquels il est associé trois fois sur quatre (220), constituer une catégorie de talents rhétoriques dont l'effectuation précise n'est pas véritablement prise en compte. C'est évidemment le cas pour les puissances emblématiques descendant de Nuit, les frères Pseudéa et Logoi. Chez la femme, les "mensonges et discours trompeurs" s'intègrent dans la liste des qualités qui lui sont conférées à titre permanent lors de sa création. L'homme né le sixième jour sera beau parleur en toutes catégories : railleries, mensonges, discours trompeurs et furtifs. Dans les deux cas où ψευδεα et λόγοι sont employés séparément, chez les Muses et chez Zeus, ce caractère de généralité s'estompe. Les "discours trompeurs" de Zeus à Métis s'intègrent dans un épisode précis où un but leur est assigné (221). Les distorsions constitutives du savoir des Muses sont limitées par la vérité à laquelle elles sont reliées syntaxiquement et sémantiquement.

Mis en situation, ψεύδεα et λόγοι s'en vont dans des sens divergents. Chez Zeus, la tromperie l'emporte sur le discours, réduit à l'état de moyen. Chez les Muses, sont mis au premier plan, avec l'expression ἰδμεν...λέγειν, la parole et le savoir, mais aussi la valeur de vérité de ces ψευδεα ετυμοισιν ὁμοία. Contrairement aux ἀληθέα, indéterminés et ainsi absolus, les "mensonges" s'inscrivent dans l'horizon de la vérité et se définissent par rapport à elle. Il paraît raisonnable de leur attribuer la valeur de "fictions" mentionnée par Chantraine (222). Il serait en effet paradoxal de supposer qu'au moment même de son initiation, le poète prête aux Muses qui le légitiment une intention aussi manifestement contraire aux prétentions véridiques qu'il affiche. D'autre part la notion de "mensonge" se définit par la convergence de deux champs de signification qui peuvent être indépendants : l'intention d'induire en erreur sur le fond et l'inexactitude des paroles. Plusieurs emplois homériques mentionnés plus haut ne retiennent que la seconde acception. Rien n'interdit à Hésiode de choisir le cas de figure inverse : des distorsions intentionnelles au plan du récit sans intention de tromper sur le fond, et comportant au contraire, sous le contrôle du savoir des Muses, l'intention de ramener à la vérité. Des fables, par exemple, que même des têtes dures peuvent comprendre. Nous y reviendrons.

Ainsi les deux noms qui, chez les hommes, nomment une qualité générale, présentant le double caractère de la tromperie et de l'habileté rhétorique, se spécialisent-ils chez les dieux dans l'un ou l'autre registre tout en conservant plus ou moins à l'amère-plan la deuxième partie de leur sens. Inversement, la proclamation des vérités par les Muses a toutes les apparences d'une qualité générale. Il semble donc y avoir au moins la trace d'une différence entre hommes et dieux dans l'aptitude à dire vrai ou faux." (pp. 67-72)

Notes

(203) En *Th.* 233, l'adjectif prend la valeur de "franc". Il s'agit d'une qualité de Nérée et non d'une énonciation. Il en va de même pour ἀψενδής (*ibid.*).

(204) Chantraine, 1968, s.v. ἐτόος. Lüther, 1935, p. 51 ss.

(205) Chantraine, *ibid.* ; Pucci, 1976, p. 12.

(206) Krischer, 1965, p.166. Verdenius, 1962, p. 119, estime que les "vérités", au vers 10 des *Travaux*, suggèrent que la *Théogonie* n'a pas dit toute la vérité.

(207) Heitsch, 1962, p. 24-33 ; 1966 b., p. 193-235. Voir les remarques de Detienne, 1967, p. 48, 147. Ultérieurement Hommel, 1969. C'est la notion heideggerienne de *Unverborgenheit* ; voir par exemple *Sein und Zeit*, 1927, trad. fr. Vezin p. 270-271, et la conférence intitulée *Aletheia* des *Vortrage und Aufsätze*, trad. fr. *Essais et Conférences*, Paris, 1958.

"Celui-ci [Hésiode] fait en effet précéder le proème traditionnel de la Théogonie (v. 104-115) d'un autre proème, plus développé (v. 1-103), qui indique l'horizon de préoccupation à partir duquel l'héritage épique se trouve à la fois assumé et dépassé. La logique de cette mise

en perspective réfléchissante, dont la complexité et la virtuosité technique ont souvent été remarquées (3), est résumée dans l'adresse des Muses (v. 26-28) qui prélude au sacre du poète.

Hésiode y distingue les réalités fictives (*pseudéa*), qui naissent de l'imitation parfaite des réalités sensibles (*etuma*) dans l'élément du langage, des réalités vraies (*alétheia*), qui semblent relever d'un autre registre de la parole. Cette distinction n'instaure cependant pas, comme on l'a souvent soutenu, une opposition franche, voire polémique, entre la poésie didactique, que revendiquerait Hésiode, et la fiction traditionnelle, représentée par Homère. En effet, rien ne permet de penser que les Muses réservent à Hésiode une moitié seulement de leur double pouvoir. Bien au contraire, le fait même qu'elles rappellent leur habileté à forger des fictions, avant de faire état de leur capacité de proférer, à leur gré, des vérités, suggère qu'il existe un rapport étroit entre les deux registres de l'invention pure et de la connaissance.

La qualité cognitive exprimée par l'adjectif ἀληθής [*aléthes*] a été cernée à partir de deux hypothèses diamétralement opposées. La première est parfaitement représentée par l'article d'E. Heitsch, qui s'inspire de l'interprétation heideggerienne du terme (4). Partant de l'étymologie probable (ἀ-ληθη), qui indique quelque chose comme la suppression (α-) de l'état de non-perception (ληθη), l'auteur donne à la notion d'ἀληθεία le sens de "révélation" ou de "manifestation". Serait alors ἀληθής ce qui fait irruption dans l'univers des représentations familières pour y introduire une dimension méconnue du réel. La seconde hypothèse est défendue par H. J. Mette (5). Suivant son analyse, est ἀληθής ce qui est toujours déjà présent, mais échappe seulement à mon attention. En effet, le verbe λανθάνω ne signifie pas que j'ignore ce qui va se révéler ou se manifester en surgissant d'un ailleurs absolu, mais plutôt que je n'ai pas conscience de quelque chose qui est déjà là, pour ainsi dire sous mes yeux, et qui m'échappe parce que je me trouve momentanément incapable d'y porter mon attention. L'enquête minutieuse que T. Krischer a consacrée à l'ensemble des occurrences d'ἀληθής et d'ἔτυμος dans Homère (6) étaye les conclusions de Mette. Si ἔτυμον désigne, en accord avec l'étymologie (cf. εταζο), une réalité susceptible d'être vérifiée par un critère objectif et quasiment

"expérimental", ἀληθής, au contraire, évoque une réalité qui n'est pas vérifiable par un critère extérieur, mais qui s'impose immédiatement à la conscience. Ce qui frappe ainsi l'esprit ne saurait être confondu avec les données brutes de la sensation, même si la qualité particulière de la perception dite vraie prend appui sur une réalité d'abord présente dans les sens. De là s'explique que le terme d'ἀληθής ne sert pas tant à caractériser les faits eux-mêmes que le contenu du discours qui les rapporte. Dans la formule homérique "dire la vérité", l'accent est mis sur l'exactitude et l'exhaustivité du discours qui traite son objet sans rien ne déformer ni omettre. Les réalités dites vraies appartiennent à la réalité seconde du discours, par opposition aux réalités sensibles auxquelles il se réfère. La parole devient le seul garant des choses qu'elle recense quand celles-ci échappent au contrôle direct, en raison de leur éloignement dans l'espace ou de leur inscription éphémère dans le temps (8).

Ce dispositif conceptuel relativement simple, qui oppose les réalités appartenant à l'expérience sensible à leur restitution fidèle dans le discours, se trouve compliqué par l'existence d'un registre de la parole qui vient s'interposer entre l'un et l'autre type de certitude. Le caractère plausible des fictions mensongères d'Ulysse (9), qui permet au récit homérique tout entier de se refléter dans l'adresse inventive de son héros, fait découvrir une dimension du langage dont l'efficacité se confond avec l'essence même de la narration. Celle-ci est l'apanage premier des Muses, qui soumettent les ressources infinies de l'imagination au principe régulateur de la mémoire. Or l'univers ordonné de la fiction narrative creuse comme un écart avec le monde de l'expérience sensible et permet de redéfinir et d'approfondir la notion de la vérité.

C'est ce que fait Hésiode quand il prête aux Muses, outre le pouvoir d'imiter les réalités sensibles, la faculté de dire le vrai. En effet, les réalités dites vraies (ἀληθεα) se dégagent, à condition d'y prêter attention, du mouvement même de la fiction comme autant d'effets de signification dont l'évidence, purement intellectuelle, relève de l'ordre de la connaissance. Alors que les réalités sensibles (ετυμα) sont à la portée de tous les hommes, même des plus frustes, comme les bergers que vise l'invective du vers 26 et dont le ventre constitue la principale instance de vérification, l'appréhension des significations suppose l'acculturation à l'aide de la fiction, qui fournit

le support nécessaire à leur élaboration. Ainsi, la *Théogonie* se trouve définie comme une œuvre qui, avec les moyens de la fiction, déploie des significations vraies que la philosophie continuera à travailler pour en tirer ses systèmes.

Si le discours philosophique s'éloigne progressivement de la fiction, en passant de la cosmogonie à la cosmologie, puis à l'ontologie, le récit théogonique reste attaché à l'évocation fictionnelle d'événements s'inscrivant dans l'expérience sensible du monde, tout en faisant apparaître un ensemble d'articulations noétiques qui ne sauraient être vérifiées par les sens. Ces choses vraies, qui ne sont pas encore la vérité des philosophes mais qui l'annoncent, se présentent sous la forme d'un certain nombre d'implications conceptuelles (mises en relief par l'analogie et la répétition) qui confèrent aux événements relatés le statut réglé de la signification." (pp. 17-19)

Extrait de : Heinz Wismann, "Propositions pour une lecture d'Hésiode". In *Le métier du mythe. Lectures d'Hésiode*. Édité par

Fabienne Blaise, Pierre Judet de la Combe, et Philippe Rousseau - Villeneuve-d'Ascq, Presses Universitaires du Septentrion 1996.

"Il ne me semble pas suffisant d'établir que l'on peut interpréter l'adjectif *alèthés* comme signifiant "vérifiable" au sens étymologique où le mot nie l'idée d' "échapper à la conscience" implicite dans la racine dont il est dérivé, *lèth-*, de *léthé* "oubli" et *lanthánô* "échapper à la conscience de" (21). Il est vrai qu' *alèthés* exprime l'idée de voir quelque chose "pour de vrai" mais il y a plus que cela : nous devons examiner de quelle manière la négation de *léth-* sert d'équivalent au concept positif *me-*. La clé se trouve dans le fait que *mnè-* ne signifie pas seulement "se souvenir" mais très précisément "recouvrer l'essence de l'être" comme l'a montré Jean-Pierre Vernant (22). Dans l'ancienne pensée mythique grecque une telle essence est au-delà de la réalité sensible, au-delà du temps (23). Et surtout, comme Marcel Detienne l'a montré, l'ancienne tradition grecque affirme que cette essence est contrôlée par le poète, maître de "vérité" ou *alétheia* (24).

Reste un problème : au vers 28 de la *Théogonie*, *alèthéa* n'est pas opposé à *léthé* mais à *pseûdea* "choses fallacieuses" dans le vers précédent. On a soutenu que cette antithèse représentait " une manière de pensée plus tardive, plus rationnelle, dans laquelle *alétheia* signifie 'vérité' " (25). Tout se passe comme si une opposition nouvelle, d'esprit rationaliste, entre *alèthéa* "choses vraies" et *pseûdea* "choses fallacieuses" se surimposait à une opposition plus ancienne, mythique, entre *alétheia* pris au sens de "non-défaillance de la conscience" et *léthé* "défaillance de la conscience", avec le résultat que les deux oppositions se chevauchent et coexistent en fait (26). Et l'on a soutenu de surcroît qu'il se produisait même un chevauchement entre *alétheia* et *léthé* aussi bien qu'entre *alèthéa* et *pseûdea* au point qu'aucun acte de mémoire n'est exempt d'une certaine mesure d'oubli, aucune expression de la vérité exempte d'une certaine tromperie (27). J'accorde qu'il existe bien un schème de pensée dans lequel *mnê-* au sens de "se souvenir" inclut un aspect de *léth-* "oublier" (28). Mais je ne suis pas d'accord pour autant avec l'idée que l'adjectif *alèthés* et le nom *alétheia* se comportent de même ; tout au contraire, comme je l'ai montré longuement ailleurs, *arêtes* et *alétheia* excluent explicitement une inadvertance de l'esprit (29).

L'absence d'ambiguïté, voire la valeur absolue, des mots *alèthés* et *alétheia* explique qu'ils dénotent un acte de parole et de fait, à son tour, explique l'autorité et le pouvoir d'autoriser qui s'attachent à leur force illocutoire." pp. 45-47

(21) Cole, "Archaic Truth", *Quaderni Urbinati*, n.s. 13, 1983, p. 7-28, donne un exposé admirable de la sémantique d' *alèthes* et des interprétations proposées dans lequel il rejette la thèse heideggérienne qu'une valeur "objective" de la vérité est inhérente au mot (la vérité non "cachée" dans ce qui est perçu). L'interprétation propre de Cole est une reformulation de solutions plus anciennes insistant sur une valeur de vérité "subjective" (la vérité non "oubliée" par celui qui perçoit). Il suggère (p. 12) que " l'oubli exclu par *alétheia* concerne au premier chef le processus de la transmission -- et non l'appréhension mentale sur laquelle repose la transmission". Par suite *alétheia* "ne désigne pas seulement la non-omission d'éléments d'information du fait de l'oubli, du manque d'attention ou de l'ignorance, mais aussi le fait de ne pas oublier d'une minute à l'autre ce qui a été dit quelques minutes auparavant et de ne pas laisser passer quoi que ce soit de dit ou de non-dit sans être conscient de ses conséquences et de ses implications " (p. 12).

Extrait de : Gregory Nagy, "Autorité et auteur dans la *Théogonie* hésiodique". In *Le métier du mythe. Lectures d'Hésiode*. Édité par Fabienne Blaise, Pierre Judet de la Combe, et Philippe Rousseau - Villeneuve-d'Ascq, Presses Universitaires du Septentrion 1996. pp. 41-52.

"La profondeur et le sérieux de la réflexion à laquelle Hésiode soumet l'héritage épique traditionnel, tant en ce qui concerne le patrimoine expressif que le réseau complexe des valeurs et des idéaux ou, encore, les principes de la poétique propre à l'épopée, sont désormais des réalités bien établies (1). Dans ces conditions, la reprise quasi littérale du vers 203 d' *Odyssée* XIX, "Il fit paraître de nombreux mensonges semblables aux réalités", par le vers 27 de la *Théogonie*, "Nous savons dire de nombreux mensonges semblables aux réalités" peut, je crois, trouver une explication convaincante (2). Il est en effet légitime de se demander encore une fois quelle intention définie sous-tend la référence au texte homérique, à ce texte homérique précis : la référence à *Odyssée* XIX, v. 203 -- qui intervient dans un contexte polémique et dont il est difficile de penser qu'elle ne soit pas polémique elle-même -- n'a-t-elle qu'une valeur indicative, c'est-à-dire ne sert-elle qu'à désigner toute la poésie homérique -- ou, pour le moins, la tradition de la poésie héroïque --, ou bien peut-on y déceler des objectifs plus précis et plus circonscrits, et si oui, lesquels ?

La possibilité ou l'impossibilité de saisir les intentions d'Hésiode constitue selon moi le nœud du problème. Renoncer à définir l'objet de la polémique contenue dans le vers 27 (l'épopée dans son ensemble ou une partie ou un élément de l'épopée) reviendrait en effet à admettre qu'Hésiode n'a indiqué aucun critère qui permette de définir la part de mensonge et la part de vérité qui entrent selon lui dans ce type de production poétique. Autrement dit, si l'on n'établit pas une référence précise, hors de l'œuvre d'Hésiode, pour *Théogonie*, v. 27, il faut alors accepter comme présumé fondamental et contraignant pour toute interprétation de son œuvre

qu'il lui est impossible de sortir d'une situation d'incertitude entre mensonge et vérité, puisque les Muses peuvent inspirer aussi bien l'un que l'autre. Ce serait une position parfaitement légitime si chez Hésiode pris dans sa totalité, c'est-à-dire du premier vers de la Théogonie au dernier vers des Travaux, ne se manifestait pas la conscience claire et sûre de connaître la vérité et de posséder les moyens de l'enseigner à autrui (3). Nier cela revient à méconnaître le trait caractéristique de la poésie d'Hésiode, à savoir son intention didactique." (pp. 53-54)

Notes

Il n'est pas inutile de rappeler que j'ai déjà discuté ailleurs plusieurs des problèmes présentés dans ce texte, notamment dans les soixante premières pages de mon livre *Poeti, eruditi e biografì. Momenti della riflessione dei Greci sulla letteratura*, Pise, 1987 (Biblioteca di studi antichi, 52). Mais si ce travail suppose les développements que j'ai présentés dans cet ouvrage, je ne cherche pas à donner ici un résumé ou une répétition de ces pages, mais plutôt un prolongement et une confirmation des hypothèses que j'y propose. Par ailleurs, j'aborde ici des textes et des problèmes parmi les plus discutés par la critique hésiodique, et la bibliographie qui les concerne est très abondante. Je n'ai donc pas cru nécessaire d'exposer tous les travaux des autres (ce que j'ai fait ailleurs) ; les indications bibliographiques que je donnerai seront donc limitées aux recherches qui m'ont paru les plus significatives pour les questions que j'aborde ici. Il vaut la peine de signaler qu'entre-temps est paru le livre important de Marie-Christine Leclerc, *La Parole chez Hésiode* (Collection d'Études Anciennes, 121, série grecque), Paris, 1993, qui traite beaucoup de problèmes analogues à ceux qui sont discutés ici. Je voudrais, enfin, exprimer ma gratitude à Pierre Judet de La Combe, qui a traduit mon texte (publié, avec quelques modifications, dans : *Athenaeum*, n.s. 80, 1992, p. 45-63)."

(1) Voir G. Arrighetti, *Poeti, eruditi e biografì*, 1ère partie, chap. 1, et également G. A. : "Notte e i suoi figli : tecnica catalogica ed uso dell'aggettivazione", dans : *Tradizione e innovazione nella cultura greca da Omero all'età ellenistica*, Scritti in onore di Bruno Gentili, vol. I, Rome, 1993, p. 101-114.

(2) Sur le rapport formel entre le vers 27 de la *Théogonie* et *Odyssée* XIX, V. 203, voir par exemple H. Neitzel, *Homer-Rezeption bei Hesiod* (Abhandl. Kunst-, Musik-, Literaturwissenschaft, 189), Bonn, 1975, p. 8-10, avec la bibliographie. Il ne fait maintenant plus de doute, je crois, qu'avec le vers 27 Hésiode fait allusion à la production poétique des autres, par opposition à la sienne, et qu'avec le vers 28 il attribue à sa propre poésie le mérite de la véridicité. C'est le sens le plus clair et le plus évident que suggèrent les vers 26-28, et que confirme l'ensemble des contenus de l'œuvre d' Hésiode.

Cependant, pour établir cela encore une fois, il a fallu tout l'effort déployé par Neitzel dans son article d'Hermes 108, 1980 (p. 387-401). Pour ce qui est de la polémique contre les autres poètes, je suis absolument convaincu qu'Hésiode suppose chez ses destinataires une connaissance précise de l'épopée homérique ; voir sur cette question, J. U. Schmidt, *Würzburger Jahrbücher*, n.s. 14, 1988, p. 41 s. Schmidt fait également remarquer (p. 44) que les termes employés par les Muses au vers 27 sont une mise en garde de caractère général concernant toute poésie composée en leur nom. C'est vrai, mais la cible de la polémique, au vers 27, se laisse plus précisément identifier et circonscrire.

(3) La tentative de K. Latte (*Kleine Schriften*, Munich, 1968, p. 71-73) de définir en quoi la vérité d'Hésiode s'oppose à l'épopée doit être prise au sérieux, même si elle ne satisfait pas entièrement. Cette vérité serait la conscience, permanente chez Hésiode, de la mission d'enseignement de sa poésie et se manifesterait dans l'attention qu'il prête à la réalité concrète de la vie humaine : "la vérité que la Muse sait transmettre... est... la relation à sa propre existence". C'est vrai, mais cela ne vaut quasiment que pour les Travaux.

Extrait de : Giovanni Arrighetti, "Hésiode et les Muses. Le don de la vérité et la conquête de la parole". In *Le métier du mythe. Lectures d'Hésiode*. Edité par Fabienne Blaise, Pierre Judet de la Combe, et Philippe Rousseau, Villeneuve-d'Ascq, Presses Universitaires du Septentrion 1996. pp. 53-70.

Hérodote

"Dans les Histoires, le champ lexical de l' *alêthéia* se compose de 81 occurrences : 28 du substantif lui-même, 17 de l'adverbe *alêthéôs*, 34

de l'adjectif *aléthês* et 2 du verbe *aléthizomai* (333). Or Hérodote n'emploie ce vocabulaire qu'à quinze reprises dans des déclarations d'une portée généralement limitée. Ces déclarations se répartissent en effet en quatre catégories : ce sont ou bien des réserves sur la réalité du fait discuté et cela par neuf fois ; ou des "opinions de vérité (334)", dans deux cas ; ou encore, et à deux reprises, des précisions érudites de pur détail qui n'engagent nullement l'ensemble du développement dans lequel elles s'insèrent ; ce sont enfin des assertions hésitantes, dans deux cas seulement.

Examinons de plus près les passages ainsi répartis. Les réserves prennent parfois la forme de suppositions. Au lieu de s'interroger sur la réalité du fait, l'enquêteur adopte l'attitude surprenante qui consiste à faire l'hypothèse de son existence, afin de poursuivre une réflexion sur les modalités de sa réalisation ou sur ses conséquences. Il écarte ainsi une question qu'il ne peut ou ne veut résoudre -- celle de savoir si le fait s'est réellement produit -- et préfère examiner comment il s'est déroulé et ce qu'il a entraîné -- à supposer qu'il se soit produit.

La fondation conjointe de deux oracles de Zeus, l'un en Libye et l'autre à Dodone, en Grèce, fait, comme nous l'avons vu précédemment (335), l'objet de deux récits que l'enquêteur combine pour élaborer sa propre version des événements (11, 56). Et, de toute évidence, il est plus préoccupé de conduire cette synthèse que d'en prouver le fondement, entendons l'origine thébaine des oracles, et l'enlèvement perpétré par les Phéniciens, lorsqu'il déclare en introduction : "Quant à moi, je suis de l'opinion que voici. Si véritablement les Phéniciens enlevèrent les femmes consacrées et allèrent vendre l'une d'elles en Libye et l'autre en Grèce, je pense que cette dernière fut vendue..." Suit l'évocation du déroulement de cet événement dont l'existence même pose problème. Notons cependant que tout ce passage est placé sous le signe de l'opinion (*gnômé* ; *dokéei moi*). S'agit-il de la fontaine de jouvence des Éthiopiens "Longue-vie" ? Il suppose qu'elle existe réellement pour traiter de ce que produirait son éventuelle existence : la longévité du peuple qui utiliserait ses eaux. "Si cette eau est vraiment à leur disposition telle qu'on le dit, prend-il soin de déclarer, ce pourrait être grâce à elle que, s'en servant de façon constante, les Éthiopiens ont une longue vie" (11,23).

Il en va un peu différemment du chapitre IV,195, car, après avoir émis des réserves sur la réalité du fait, comme dans les cas précédents, l'enquêteur ne se résout pas à n'en rien pouvoir dire et à dévier sa recherche. C'est pourquoi il demande au raisonnement analogique de pallier les carences de son information et de le conduire, sinon à l' *alêthéia*, du moins sur la voie de celle-ci. Ce passage offre l'exemple exceptionnel dans les Histoires d'une recherche dans laquelle l'enquêteur place l' *alêthéia* en point de mire, tout en avouant qu'elle reste hors de sa portée et qu'il n'établit que du vraisemblable. Il fait un effort analogue pour évaluer le récit qui veut que le plongeur Skyllias de Skionè ait déserté chez les Grecs en plongeant aux Aphètes pour ne refaire surface que quatre-vingts stades plus loin, à l'Artémision (VIII,8). Après l'avoir mis en doute : "Je me demande avec étonnement si ce que l'on dit est véritable", il essaie cette fois de montrer que ce récit est mensonger en alléguant les autres traditions qui courent sur le plongeur : "On raconte sur le compte de cet homme beaucoup de choses qui ont tout l'air de mensonges et quelques-unes qui sont vraies." Mais il n'arrive pas plus à démontrer qu'un fait et le récit qui le rapporte sont faux qu'il ne parvient à établir leur réalité/vérité ; aussi conclut-il sur un avis personnel montrant qu'à ses yeux l'histoire de Skyllias est une fable : "Pour cette fois, qu'il me soit permis de dire qu'à mon avis il gagna l'Artémision sur un esquif." Hérodote reste en deçà du mensonge comme de la vérité.

Ces quelques exemples donnent raison à W. Luther (336) pour qui l' *alêthéia* hérodotéenne a gardé le sens de celle que, dans l' *Iliade* (XXIII, v. 361), Achille attend de Phoenix, quand il place son compagnon à l'extrémité de la carrière de sorte qu'il puisse observer la course de chars, en graver le souvenir dans sa mémoire (337) et en faire plus tard le récit. Dans tous les cas, le mot renvoie à la réalité du fait considéré et à la fidélité du discours qui en rend compte. Mais, si ses autres occurrences ne nous apprennent rien de plus sur son sens, nous croyons en revanche qu'elles sont de nature à remettre en question l'idée, également soutenue par W. Luther, que toute la recherche hérodotéenne s'efforce d'atteindre l' *alêthéia* (338).

Ailleurs, le mot entre dans des formules qui mettent le fait étudié en doute, mais l'enquêteur ne tente plus de transformer en incertitude l'ignorance où il se trouve ou bien de détourner sa réflexion sur un

thème annexe pour éviter l'aporie. Il s'en tient à une manifestation de scepticisme. Il en est ainsi pour les récits qui prétendent que l'île égyptienne de Chemmis flotte (11,156), ou que le Perse Mégabatès avait une fille que Pausanias aurait volontiers épousée (V,32).

Enfin, dans les deux derniers textes qu'il nous reste à examiner dans notre première rubrique (IV,18 et 187), Hérodote, qui a fait mine d'affirmer la réalité d'un phénomène, s'empresse de relativiser la portée de son assertion comme s'il voulait atténuer une audace : "Aussi, au-dessus des Androphages commence un désert véritable sans aucune population humaine, autant que nous le sachions" (IV,18). "En vérité, les Libyens sont, de tous les hommes que nous connaissions, les plus sains" (IV,187).

Le vocabulaire de l' *alêthéia*, en ce qu'il figure dans des formules permettant à l'enquêteur de poursuivre ses récits ou ses réflexions sans se laisser arrêter par des connaissances insuffisantes, et parce qu'il témoigne aussi que ce dernier n'est pas dupe de ses informateurs ou de la puissance de ses propres capacités de recherche, dessine en somme une notion de vérité aux fonctions contrastées. D'une part, cette notion autorise des pratiques qui d'emblée l'ont évincée et ont renoncé à l'atteindre et, de l'autre, elle constitue le but inaccessible de l'effort de recherche. Mais, facteur de libération et d'expansion de la recherche ou concept essentiel d'une critique négative de la connaissance qui tente de s'élaborer, la vérité se dérobe toujours et se place constamment hors de portée de l'enquêteur." (pp. 165-167)

2. Allen, Barry. 1993. *Truth in Philosophy*. Cambridge: Harvard University Press.

See in particular *Part One. Historical Introduction 1. Classical Philosophy of Truth* pp. 9-28; 2. *Modern Truth* pp. 29-37, for a brief sketch of the history of theories of truth.

"I begin with a historical introduction. What I call the classical philosophy of truth is an ensemble of four interdependent ideas in ancient philosophy (Greek and Christian) concerning truth's relation to nature, language, being, and the good. Together they define the historical discourse on truth I call onto-logic. The first principle of onto-logic is that the "logical" possibility of sentential truth-value derives from the "ontological" possibility of beings that "are what they are," that have an identity of their own. For onto-logic, truth is true to such beings; it takes its measure from what is, whose nature truth discloses.

In Part One, I look at versions of onto-logic first in Greek and Christian sources, then in modern philosophy. But it is not my intention to write the history of Western truth. The historical studies in Part One merely establish some context for the

- discussion of six philosophers which follows: Nietzsche and William James (Part Two); and Heidegger, Derrida, Wittgenstein, and Foucault (Part Three)."

Reprinted in: Jan Wolenski, *Essays in the History of Logic and Logical Philosophy*, Cracov: Jagiellonian University Press 1999, pp. 139-149.

"Although truth belongs to the family of crucial philosophical categories, writing its general history still remains a serious challenge for historians of philosophy. Also historical accounts of particular truth-theories are rather fragmentary. Since the classical (also called 'the correspondence') theory of truth has become the most popular and influential among all hitherto proposed answers to the philosophical problem of truth, a lack of its written history is specially strange, more than in the case of their various rivals; this theory maintains, roughly speaking, that truth consists in a relation of correspondence (agreement, adequacy or conformity) which holds between so-called bearers of truth (judgements, ideas, thoughts, propositions, statements or sentences) and reality.

This paper presents a sketch of how the gap could be filled with respect to the classical concept of truth (*CCT* for briefly). It is just a sketch which by no means pretends to any completeness. The history of the classical (as well as every other) theory of truth requires taking into account at least four points, namely:

(A) Statements which have been explicitly intended as definitions (or other explications) of *CCT*.

(B) Formulations which could be interpreted as definitions (or rather explications) of *CCT* independently of the intentions of their authors.

(C) The philosophical environment of formulations collected under (A) and (B); it is especially important for cases falling under (B).

(D) Criticism of *CCT* and its defenses against raised objections.

I would like to touch each of (A)-(D) but my principal goal is to contribute to (A) and (B)." (p. 139 of the reprint).

"Parmenides' philosophical work depends both on poetic features and on their transformation through critical analysis. His identification of the central role of deductive argument and thematic exploration of *to éon* grows from his engagement with poetry, and specifically from his view of *alétheia* as the orientation on a road to inquiry. A survey of the use of *alétheia* in archaic poetry (e.g., Homer, *Od.* 11, 507 ; Bacchylides 9, 81-87) shows that *alétheia* is opposed not only to falsehood, but also to *léthe* and its relatives; and illustrates the novelty of Parmenides' approach : by associating *alétheia* with a method of inquiry, Parmenides implies that there can be knowledge of something beyond what is available through observation, divine revelation, or reports."

"The truth of the pre-Socratics is not the truth of integrity, of the monumental wholeness of the text of Homer and Plato. In

fact, we now know the monumental Homeric corpus to have its own fragmentariness, not the fragmentation of the Analysts, who wanted to discard parts of the received text as interpolations, but a sedimentation, a complicated series of origins, an unevenness due to its oral composition that prevents it from being what was once considered the seamless, intentional production of an "author." So from the beginning, as we approach the pre-Socratics' work, their aphorisms, bits and pieces recorded in later philosophers, traces of their reputation shaping even in their absence the work of others, we cannot yet-perhaps we can never- achieve a sense of coherence, of systematic development of philosophical ideas, such as is perhaps possible with the works of Kant or Hegel.

I want to approach the notion of truth in the pre-Socratics fragmentarily, then, by looking at truth in the fragmentary remains of the work of Herakleitos and Parmenides, two radically different thinkers. I have not attempted here to present an encyclopedic survey of all occurrences of *alêtheia* in Homer, Hesiod, all the pre-Socratics. Rather, I want to give a sense of a cultural paradigm, of the ways in which the word *alêtheia* works within a semantic field, in its contrasts, for example, with other words for truth, and as it fits into a cultural and social field of seeking out the genuine, the true. Herakleitos seems to offer a suggestive and idiosyncratic notion of truth that has certain affinities with the dialogical practices of the later democracy, while Parmenides' sense of truth is more compatible with the traditions of epic and of the consultation of oracles." (p. 96)

"Plato returns to the pre-classical notion of the *basanos* as a proof of loyalty and truth; but even more importantly, he presents both a paradigm of truth as recollection, the recalling of time -- buried truth -- and a paradigm of the production of truth through the *elegkhos*, the philosophical conversation, a version of truth as dialectic, as process, as the making of a truth in time, between people, not as the revelation of something lost in the past but as the production of something in the present. This latter element seems to me the trace of the democratic in

- Plato, a trace that may be represented only to be disavowed within the larger corpus of Plato's arguments." (p. 107)

Résumé : "Dans cet article, je me concentrerai sur le concept de *ueritas* en lien avec la grammaire et la rhétorique à la fin de la République romaine, au moment où elles devenaient des disciplines indépendantes. D'un point de vue intralinguistique et « autonome », la *ueritas* peut être conçue comme un système conventionnel de procédures de vérification établissant une correspondance entre chaque unité et les règles analogiques.

Tel est l'arrière-plan sur lequel se découpent tant l'exkursus grammatical de l'*Orator* de Cicéron que le *De lingua Latina* de Varron. Mais un autre point de vue, extralinguistique et hétéronome celui-là, figure également dans l'oeuvre de ces deux auteurs. Cicéron

élabore une théorie philosophique et rhétorique du *uerisimile*, afin de prétendre à la même force persuasive que celle que détiennent les choses elles-mêmes, autrement dit la réalité de l'évidence. Varron estime que la reconstruction d'un système totalisant, tel que celui du langage, gouverné par l'analogie, conduit à l'acquisition d'une vérité universelle qui peut être découverte par le biais de l'analyse morpho-étymologique des mots latins."

45. ———. 2008. *Le vrai et le faux dans la pensée grecque archaïque d'Hésiode à la fin du Ve siècle*. Paris: Les Belles Lettres.

"Ce livre forme un ensemble avec la première partie d'une thèse de doctorat d'État soutenue à la Sorbonne en 1974 et parue en 1976." (Avant-Propos).

"L'analyse lexicale de la conception et de l'expression du vrai et du faux fait apparaître, dans l'*Iliade* et dans l'*Odyssée*, l'existence d'un système ancien, qui repose sur des énoncés subjectifs se révélant conformes au réel objectif (familles d'*etéos*, *etmos*, et *etétumos*, d'*atrekéos* et de *ypertés*) ou procédant de l'invention de pures fictions (*pseudos*, *pseudomai*).

Indépendamment de lui, l' *alethein* ancienne correspond à une révélation véridique prenant la forme d'un *non-voilé-dévoilant*.

Avec des prodromes déjà perceptibles chez Homère, la mutation de la psychologie de la connaissance tend progressivement à conduire à voir dans la vérité, dont le faux devient une déformation, le réel objectif connu, convenablement interprété par l'intelligence et fidèlement transmis.

Les catégories du faux et du vrai qui apparaissent alors relèvent dans le lexique de *pseudos* et d'*aletheia*, le terme, compatible, dès l'origine, avec la démarche décrite (un contenu objectif est communiqué), étant pourvu de nouvelles valeurs sémantiques. L'évolution est lente et considérable. Elle se fait par une série d'étapes successives.

D'Hésiode au Ve siècle, traits anciens et caractères nouveaux coexistent, mais petit à petit ceux-ci éliminent ceux-là. Un équilibre relatif est encore perceptible chez Hésiode, mais rapidement notions et mots archaïques s'effacent au profit de ce que représentent *alethés* et *aletheia*, *pseudos* et *pseudomai*, ainsi que les termes qui leur sont apparentés, tandis que se développent parallèlement des concepts et des vocables nouveaux. Ils entrent dans les structures évoluées de la cognition et de la communication du *vrai* et du *faux* telles que *alethés* et *aletheia*, *pseudos* et *pseudomai* en montrent l'existence et la nature.

C'est l'histoire de cette évolution majeure, considérée comme formant un ensemble cohérent, que décrit le présent livre, dans la continuité de l'apport homérique, sur le fondement d'une étude sémantique menée à partir d'une analyse des textes littéraires, rédigés en vers ou non, d'Hésiode à la fin de l'âge archaïque et avant la grande floraison de la prose classique.

Le critère permettant d'opposer *archaïque* et *classique* est celui que fournit, au moins en ce qui concerne l'attique, la disparition de l'usage vivant des concepts les plus anciens et de leurs supports linguistiques." (Présentation Générale).

- "This is an essay about the ontological presuppositions of a certain use of 'is' in Greek philosophy — I shall describe it in the first part and present a hypothesis about its semantics in the second.

I believe that my study has more than esoteric interest. First, it provides an alternative semantic account of what Charles Kahn has called the 'is' of truth, thereby shedding light on a number of issues in Greek ontology, including an Eleatic paradox of change and Aristotle's response to it. Second, it finds in the semantics of Greek a basis for admitting what have been called 'non-substantial individuals' or 'immanent characters' into accounts of Greek ontology. Third, it yields an interpretation of Aristotle's talk of 'unities' which is crucial to his treatment of substance in the central books of the *Metaphysics*." (p. 113)

"This paper aims to outline the course of 'truth' in Plato's and Aristotle's works, where it begins as the veridical reading of *einai*, and ends as a function of *logos*. In Plato's Socratic dialogues truth has no methodological implications. The dialogues on the theory of forms sustain the polysemy of being, using truth as a means of establishing the consistency of arguments (*Phaedo* 100a). The difficult coexistence of truth with infallibility (*Theaetetus* 152a-179c) leads to its emergence as a *poion* of *logos* (*Sophist* 263b). Aristotle's *De interpretatione* 1-6 points to a correspondence theory of truth, showing that only by affirming or denying *logos* is true or false."

"In the modern world truth is a fundamental intellectual and moral virtue. Courts of law demand, in a famous phrase, the truth, the whole truth, and nothing but the truth; statesmen must appear to be devoted to the truth; scholarly work is judged first on its truth and only thereafter for other qualities. The historian, for example, seeks to say true things, and hopes to guarantee the reputation of his work by amassing verified, precise detail, the hallmark of which is the learned footnote.

Recently I have been investigating the origins of this attitude along with other aspects of the incipient historical spirit, during the archaic period of Greek history (700-500 B.C.). (1) To my surprise there seems to have been only limited consideration of what the Greeks in this era generally meant by truth'. Correspondingly, the fact that their ideas of truth often differed markedly from modern concepts has not been stressed, even though early Greek views on the matter had a lasting influence not only on ancient historiography but also on classical thought. The following remarks are intended as a sketch of the evidence which may hopefully encourage more intensive discussion; my intent, let me be clear, is to suggest how varied were the meanings of truth at the time, not to analyze their relations to modern epistemological theories.

A cynic, indeed, might argue that here as elsewhere, the Greeks were simply more honest; for truth only slowly became a conscious, abstract virtue in Greek civilization, and never gained that unquestioned priority which we theoretically assign to it today. While Homer assessed the reality of events and distinguished true statements from prevarications, the words which he and other early Greeks used to express these ideas initially lacked the absolute quality implicit in the modern truth 'and lie'. In time the verbal distinctions became theoretical and general; otherwise history and philosophy could scarcely

have emerged. Yet thinkers had a cankering fear that only the gods could really know the truth, and rarely felt passionately the need for truth.

By 400 B.C. - the boundary of this essay - two modes of establishing verity, the speculative and the empirical, had emerged, but so too had conscious intellectual scepticism; only thereafter did epistemological analysis begin to develop. Perhaps even more devastating in its effects, as regards the mastery of the ideal of truth, was the emphasis upon form as a mode of evaluating the truth of a work."

76. ——. 2006. "Does lexicographical research yield "Hebrew" and "Greek" concepts of truth? (1978) and How does this research relate to notions of truth today? (New summary)." In *Thiselton on hermeneutics. Collected works with new essays*, 267-286. Grand Rapids: William B. Eerdmans.

"Although this was originally written as a dictionary article, this work is neither merely didactic nor merely a lexicographical survey. With the editor's agreement it entirely replaced the German-language article that it was first designed only to supplement. The article in the German edition had presupposed the dichotomy between "Hebrew" and "Greek" concepts of truth in ways that were open to question in the light of both semantic theory (not least in the work of James Barr), and actual lexicographical research, which invited fresh evaluation. The inclusion of the classical and Old Testament backgrounds makes the fallacies of the older approach clearer. (...)

The article, comes from Colin Brown (ed.), *The New International Dictionary of New Testament Theology*, volume 3 (Exeter Paternoster Press, 1978), pp. 874-902, but has been abbreviated in order to omit material that may not bear directly on the argument. The breadth of lexicographical data might seem at times to verge on the tedious, but the argument depends on covering a fair range of specific cases and evidence. The original article concluded with a substantial discussion of modern philosophical theories of truth. This is too lengthy to retain here, but a brief summary has been rewritten for this volume (2004) to demonstrate the role of the argument for the "second horizon" of hermeneutics."

"I. The Homeric formula 'to tell the truth' involves the idea of starting from beginning and proceeding, point by point, to the end. In the Orphic Pharsalos tablet, that epic formula occurs again but the meaning turns out to be completely modified. According to this religious context 'telling the truth' and 'drinking at the spring of Mnemosyne' are identical: the truth, associated with a cosmic Memory, becomes a fundamental religious virtue. The link between religious and logical truth arises here."

78. Wolenski, Jan. 2005. "*Aletheia* in Greek Thought Until Aristotle." *Annals of Pure and Applied Logic* no. 127:339-360.

"This paper investigates the concept of *aletheia* (truth) in ancient philosophy from the pre-Socratics until Aristotle. The meaning of *aletheia* in archaic Greek is taken as the starting point. It is followed by remarks about the concept of truth in the Seven Sages. The author discusses this concept as it appears in views and works of philosophers and historians. A special section is devoted to the epistemological and ontological understanding of truth. On this occasion, influential views of Heidegger are examined. The paper is concluded by a review of various meanings of truth in Aristotle."

Tome I. *Présentation générale. Le vrai et le faux dans les épopées homériques.*

Avant-Propos: "Ce livre est la première partie d'une thèse de doctorat d'État qui a été soutenue le 11 mai 1974 en Sorbonne".

"A la description de l'état homérique de la langue et de la pensée succédera, dans une seconde partie, une étude du vocabulaire historique. Cet examen accompli, il restera à depeindre l'évolution de chaque élément lexical jusqu'à la fin du Ve siècle, à travers le *Hymnes Homériques*, la poésie lyrique et élégiaque, les œuvres des poètes tragiques et comiques anciens, les écrits d'Hérodote, de Thucydide et d'Antyphon, les

fragments des Présocratiques et les passages du *Corpus Hippocratiique* que l'on peut dater du Ve siècle. On composera enfin une dernière synthèse résumant l'ensemble de l'évolution constatée et présentant l'état de langue et de pensée dont hérite le IVe siècle." (p. 5, note omise).

4. Daix, David-Artur. 2006. "Réalités Et Vérités Dans La *Théogonie* Et Les *Travaux Et Les Jours* D'Hésiode." *Métis. Anthropologie des Mondes Grecs Anciens* no. 4:139-164.

"Et d'abord quelle est cette vérité que nous chante Hésiode ? Nous pourrions répondre qu'il s'agit à l'évidence d'une vérité "poétique", autrement dit d'une vérité qui s'exprime au sein d'une composition littéraire -- étant entendu que la nature orale de cette composition ne nuit en rien à son caractère littéraire --, d'un ensemble de récits auxquels nous donnons souvent le nom de "mythes", où l'imagination et la fiction tiennent une place prépondérante. Toutefois, cette réponse fait surtout ressortir l'écart entre la conception que pouvaient avoir Homère ou Hésiode d'un discours véridique et celle que développera un philosophe comme Platon ou, dans un autre registre, un historien comme Thucydide, qui l'un comme l'autre se méfient hautement des artifices poétiques, au point de souhaiter les censurer, voire les expurger. Mais elle ne nous apprend en rien ce qu'Hésiode lui-même entend par "vérité". p. 140

(...)

"Conclusion.

Ni le mythe de Prométhée et de Pandora - qui, tel qu'il apparaît dans la *Théogonie* précisément, servirait à merveille le projet des *Travaux et les Jours* - - ni l'Éris iliadique n'ont perdu leur sens quand ils apparaissent au milieu des "réalités" qu'Hésiode rappelle à Persès. Mais ils sont en décalage par rapport à la perspective qu'adopte le poète et au monde qu'il veut célébrer.

Hésiode redéfinit les notions de lutte et d'exploit, de querelle et d'envie. Et, de même, il modifie l'équilibre entre les récits sur lesquels s'appuie sa démonstration. Il n'échappe pas pour autant au poids de la tradition, mais il assure la pertinence de son chant et se montre ainsi fidèle à ses patronnes, les Muses, "les filles à la langue habile du puissant Zeus" (29), dont les

paroles sont toujours ajustées à leur propos, et au pouvoir dont elles l'ont investi.

La vérité est au coeur des préoccupations d'Hésiode. Toujours ses compositions prétendent la dire. Reste que cette vérité même pose problème, tant il est vrai qu'elle offre, paradoxalement, elle aussi, deux visages, selon qu'elle habite le temps des dieux ou celui des hommes."

5. Ferrari, Giovanni. 1988. "Hesiod's Mimetic Muses and the Strategies of Deconstruction." In *Post-Structuralist Classics*, edited by Benjamin, Andrew E., 45-78. New York: Routledge.

"This essay has a narrow focus but a large penumbra. My focus is a current interpretation of the couplet spoken by the Muses in the prologue to Hesiod's *Theogony*, an interpretation avowedly influenced by the work of Jacques Derrida. I think it not just mistaken, but mistaken in an exemplary fashion. That is, in considering how it goes wrong I hope to reveal something more general about the impact of Derrida's work, actual and potential, bad and good, on classical studies. (This will eventually involve me in a quite detailed analysis of an exemplary piece by Derrida himself.) (1) In addition, I will offer the beginnings of an account of a significant and general pattern of archaic Greek thought evinced by Hesiod's couplet (one which has particular importance for the later development of Greek philosophy); a pattern which, I argue, is obscured by a certain pervasive anachronism that classicists engaged by Derrida have imported from his work."

Chapitre 1.2 *Hésiode: la vérité comme relation sociale* pp. 46-73.

"Au VIIe Chant [de l' *Odyssée*], Alcinoos donne un banquet en l'honneur d'Ulysse. "Laissez-moi manger dans ma détresse, dit Ulysse, car il n'y a rien de plus chien que le ventre odieux (*ou gar ti stugeréi epl gastéri kúnteron allo épleto*)" ; sans nourriture, Ulysse ne pourrait raconter ses aventures car, dit-il, son ventre lui "commande de manger et de boire" et lui "fait oublier" (*ek... léthanei*) ce qu'il a éprouvé. Or, la signification de la notion archaïque d'alétheia, étudiée entre autres par Detienne, nous permet de faire l'observation suivante: loin de correspondre à notre conception de "vérité", l'alétheia archaïque tend à garder son sens "étymologique" et signifie le "non-oubli" (a-létheia), de sorte qu'on pourrait dire d'Ulysse qu'il ne saurait dire l'a-létheia qu'à condition de recevoir à manger. C'est aussi le cas des trois Vierges dans l'Hymne homérique à Hermès qui après avoir mangé du miel blond disent volontiers la vérité (*alétheién agoreúein*)" tandis qu'elles "deviennent menteuses (*pseúdontai*)" aussitôt qu'elles en sont privées. (*)" p. 54

"L'analyse de ces deux notions (le Vrai et le Faux) donne lieu à maintes conclusions. Citons, à titre d'exemple, deux réflexions. Or, contrairement au Faux -- sur le plan moral -- qui est toujours double (*diplóos*) ou même multiple, bariolé, sinueux, furtif, qui se tapit dans l'obscurité, la Vérité morale, elle, est toujours unique, simple (*aletós*). Par ailleurs, ce qui m'a frappée au cours de mes recherches, c'est le fait que tandis que la vérité morale en tant que franchise, véracité, loyauté est claire, manifeste, ouverte à tous et dévoilée -- la vérité rationnelle-cognitive, elle, est cachée, difficile à trouver, invisible et insaisissable, résidant dans les profondeurs. Une autre observation -- que je partage avec M. Detienne (*) -- c'est le fait que le domaine du Vrai et du Faux se trouve gouverné -- dans toute la poésie archaïque grecque -- par deux lois fondamentales -- celle de la contradiction et celle de l'ambiguïté

-- autrement dit, que ces notions résident dans un couple de contraires antithétiques et complémentaires." pp. 88-89

2. Moles, John L. 1993. "Truth and Untruth in Herodotus and Thucydides." In *Lies and Fiction in the Ancient World*, edited by Gill, Christopher and Wiseman, Timothy Peter, 122-146. Exeter: University of Exeter Press.

"In this discussion, I want to mediate between 'literary' and 'historical' approaches to the question, primarily through a close reading of the prefaces of Herodotus and Thucydides (presented in my own very literal, and sometimes controversial, translations). What emerges, I think, from the content and form of these programmatic statements is the way in which 'literary' and 'historical' objectives are alike present and deeply interfused.

On the one hand, both writers see themselves as inheritors of the tradition of epic narrative, especially as expressed in Homer's commemoration of a great war in the *Iliad*. Both writers also see themselves as developing the project built into Homer's poem (a project itself not without a certain 'historical' concern), namely that of analysing the causation and process of war and conflict, and of doing so by the invention of significant

speeches and by the selection and presentation of concrete events. On the other hand, both writers also see themselves as engaged in a project which is distinctive from that of the poetic tradition in its attempt to establish factual truth and to distinguish this from factual 'untruth' or 'falsehood'.

Thucydides is more explicit about the nature and methodology of this project than Herodotus, and also about the kind of history (that is, primarily, recent history) in which this project can be pursued effectively. Indeed, in this respect especially, he presents himself as a critic, and rival, of Herodotus as well as a successor. But, in the prefaces of both historians, as in their full-scale narratives, we can recognize the combination of objectives (the perpetuation of epic narrative and interpretation and the innovative search for factual truth) that makes it so difficult to characterize their writings either in terms of 'literature' or 'history'. This combination also makes it difficult to characterize their work in terms of 'truth', 'falsehood' or 'fiction', though if we examine their own descriptions of their project, we have a better chance of seeing how these concepts match with theirs."

1. Constantineau, Philippe. 1987. "La Question De La Vérité Chez Parménide." *Phoenix. Journal of the Classical Association of Canada* no. 41:217-240.

"This article proposes a new interpretation of Fragment 2 based on a reading of verses 3 and 5 as questions rather than as assertions, a reading which is supported by references to similar Homeric formulae. It is argued that this reading solves all the problems that have plagued all previous interpretations of this fragment. It also sheds new light on the starting point of Parmenides' ontology as set against the background of the traditions of epic poetry and of Ionian cosmology."

"I begin by drawing three types of distinction between kinds of discourse. The first relates to the speaker's intended form of communication with a listener. This distinction involves two aspects: that between factual and fictional discourse, and that between forms of factual discourse. Factual discourse is intended either to convey to the listener what the speaker takes to be true ('veracious'), or to convey what the speaker takes to be false ('lying'). Fictional discourse is different in kind from factual: its statements (and other forms of expression) do not constitute truth-telling or lying, and in this sense fiction has no truth-status.

The second type of distinction differs from the first in that it characterizes discourse by reference to whether it is in fact true or false rather than whether the speaker intends to convey what he or she takes to be true or false.

The third type of distinction relates to the mode of expression. I have in mind such distinctions as that between analytic discourse and non-analytic (representative or narrative); between prosaic discourse (historical, philosophical) and poetic (epic, dramatic, lyric); between literal discourse and figurative (imagistic, musical); and between general and specific discourse. This type of distinction differs from the first two in several ways, notably in not designating truth-status in either of the senses involved in those distinctions. But I include this distinction here because the question of the truth-status of a given discourse is often connected closely with that of the mode of expression involved. Thus, for example, a given statement may be false (in intention or fact) on the literal level but true (in intention or fact) on the figurative level; or it may be false in a specific case but true in general. This is only the most obvious

way in which the distinctions drawn in the first two types may be connected with those in the third type.

My claim is that these distinctions, while broadly intelligible to modern readers, do not correspond in one crucial respect to the conceptual framework presupposed by Plato. The distinction between factual and fictional discourse, which is familiar to us, has no obvious equivalent in Plato's framework." pp. 39-40

10. Hestir, Blake E. 2000. "A Conception of Truth in *Republic* V." *History of Philosophy Quarterly* no. 17:311-332.

"Plato sometimes refers to truth (*aletheia*) as an object. The thesis of this paper is that Plato's "object" truth is being, an object of knowledge. I provide an examination of the difficult stretch of text at "Republic" V 476e-480a, where Plato argues for the separation of knowledge, belief, and ignorance with respect to their objects. Plato claims that knowledge is "set over" being, by which he means forms. Since philosophers are lovers of the sight of truth and Plato thinks that in one respect forms are truth, it follows that the being knowledge is set over is truth."

11. ———. 2003. "A Conception of Truth in Plato's *Sophist*." *Journal of The History of Philosophy* no. 41:1-24.

" Plato's solution to the problem of falsehood carries a notorious reputation which sometimes overshadows a variety of interesting developments in Plato's philosophy. One of the less-noted developments in the *Sophist* is a nascent conception of truth which casts truth as a particular relation between language and the world. Cornford and others take Plato's account of truth to involve something like correspondence; some find the origin of Aristotle's "correspondence" account of truth in Plato's *Sophist*. But all this assumes a lot about Plato, much less Aristotle. For one, it assumes that to claim that the statement 'Theaetetus is sitting' is true is to claim that it is true because it corresponds with the fact that Theaetetus is sitting.

Other scholars have been reluctant to accept Cornford's view, but few offer any explanation of what sort of account of truth we might ascribe to Plato by the end of the *Sophist*. Tarski has argued that truth is a simpler notion than that of correspondence. In fact, he claims his own "conception" of truth is similar to the classical conception we find in Aristotle's *Metaphysics* -- a conception of truth formulated in Greek in much the same way Plato formulates it in the *Sophist*. Unfortunately, Tarski never sufficiently explains what it is about the classical conception that makes it closer to his own. I argue that Tarski is generally right about the ancient conception of truth, but this is not to claim that Tarski's own conception is in Plato. By interpreting Plato's solution to the paradox of not-being and his solution to the problem of falsehood, I argue that Plato's account of truth implies a simpler notion of truth than correspondence. I outline various types of correspondence theory and show that none of these fits what Plato says about truth, syntax, and meaning in the *Sophist*."

12. ———. 2004. "Plato and the Split Personality of Ontological *Aletheia*." *Apeiron* no. 37:109-150.

"I argue that Plato conceives of truth in at least two distinct and fundamentally important ways: (T1) truth is simply that being or substance which he identifies as forms, and (T2) truth is the ontological stability of the forms which is the precondition for the forms being what they are insofar as they are forms and for each form having the particular F-property it has by virtue of itself, and which guarantees that each form will satisfy the Parmenidean requirements for knowledge. Plato's ontological truth has a split personality, the latter of which (T2) I argue has been misunderstood."

14. Knight, Thomas. 1993. "The Use of "*Alétheia*" for the "Truth of Unreason": Plato, the Septuagint, and Philo." *American Journal of Philology* no. 114:581-609.

"Orthodoxy about the semantic evolution of Aletheia in the Hellenistic period represents Philo Judaeus and Plutarch as the non-Christian representatives of a line of development beginning in Plato (where Aletheia is said to denote abstract, conceptual Truth, 'die Wahrheit') (1) and ending in the sense of absolute truth, specifically 'the content of Christianity as absolute truth.' (2) The problem of such a stemma is that it fails to stand up to close inspection; the present study considers one of the circumstances under which 'truth' was equated with doctrinal content in the Hellenistic period. (3) Specifically, I undertake to demark the distinction between 'truth' as Philo Judaeus understands it from 'truth' as it is used by the philosophers who are his stylistic and intellectual models; I intend to show that Philo's notion of pure truth is not a natural semantic extension of Platonic (or even contemporary philosophic) usage, but is rather an expression of deeper cultural determinants." p. 581

(1) Bultmann, 'Alétheia.' The passages he cites here in support of this development (Plut. De Isid et Os. 351c, e, and Hierocles Carm. Aur. 21-23 Mullach) are far too late to represent the direct semantic development of Platonic usage of the term. The same objection holds for Bultmann's citation of Epictet. (Diss. 1.4, 31; 3.24, 40) for the extension of Alétheia into 'the sense of 'correct learning.' From these observations he proceeds into his second major heading in the discussion of the Classical and Hellenistic evolution of the word, 'The Usage of Dualism.' In this section he again fails to make the crucial distinction between fourth- and third-century (and later) usage.

(2) Bauer, Arndt, and Gingrich, Lexicon, s.v. 'Alétheia', cite Plutarch (Is. and Os. 351e) and Philo (Spec. Leg. 4.178, 'the proselyte is a *metanastàs eis aletheian*') as the non-Christian

- antecedents for Alétheia denoting 'the content of Christianity as absolute truth.'

"This research aims to study the Aristotelian notion of truth (αλήθεια) in relation to the development of the so called logic of comparison from a historical and philosophical standpoint. The logic of comparison (or comparative logic) is defined as the proportioning way to make comparisons between different terms through major, minor or equal measure (Casari 1984; 1985). The main thesis of this research is that the Aristotelian notion of truth is not a gradable value, i. e. declinable by "more" or "less", but, because of that, it could be considered as the ultimate reference of validity for comparative logic. This is argued through the analysis of three chosen key-concepts: gradationism, truth and comparison. Firstly, it is shown how some Aristotelian conceptions about "more" or "less" were unduly taken over with ontological (mis)understanding by later metaphysics, up to consider them as logical justification of existence for degrees of being and corresponding truths, despite Aristotle's thought, from faulty sensibility to a highest level of absolute Truth. Some recent authoritative studies about the subject of the Aristotelian theory of αλήθεια are been considered here and the result is that none of those allows to attribute such a gradable notion to Aristotle. Then it is proposed a critique evaluation about the problem of the origins of the ancient comparative logic, showing that presumed degrees of truth are not detectable at all in the Aristotelian dialectic, but only more or less sound arguments always based on the criterion of bivalence (truth/false) provided by the Principle of Excluded Middle. Finally, the research ends arguing the groundlessness for attributing to Aristotle the idea

of an intuitive and pre-predicative truth as different, prior and superior to an alleged predicative truth through the contextual critique of the interpretations of A. Trendelenburg (1846), F. Brentano (1862) and M. Heidegger (1930) and their common Neo-Scholastic background. - From a theoretical point of view, the whole thesis can be read as a critique to the idea of «truer»."

"The study of truth is a central part of the philosophical tradition we have inherited from classical Greece. Aristotle played an important role in developing and sharpening the debate in this area and on many issues that are connected with it. I have two primary goals: to offer a precise reconstruction of all of Aristotle's most significant views on truth and falsehood and to gain a philosophical understanding of them. In this introduction I first offer an overview of Aristotle's theory of truth and then discuss the methodology I adopt in pursuing my primary goals.

I AN OVERVIEW OF ARISTOTLE'S THEORY OF TRUTH

Why an overview? Aristotle speaks about truth and falsehood in passages from several works, mainly the *Categories* (chapters 4, 5, 10, and 12), *de Interpretatione* (chapters 1-9), *Sophistici Elenchi* (chapter 25), *de Anima* (chapter 3.6), and the *Metaphysics* (chapters Γ 7, Δ 7, Δ 29, E 4, and Θ 10). Truth and falsehood are not the main topic of these works: their discussions of truth and falsehood are asides. Reconstructing an Aristotelian theory of truth and falsehood on the basis of such asides poses complicated problems of various sorts. To help readers to keep their orientation through the many bifurcations of the arguments addressing these problems, I decided to offer a concise but precise map of the territory — an overview of Aristotle's theory of truth. References to the passages from Aristotle's works that substantiate the attribution of a certain view to him, and an examination of the

- relevant secondary literature, will be found in the chapters that follow this introduction." (p. 1)

"The problem of the relation between the determinations of the concept of truth in the chapters E, 4 and Theta, 10 of Metaphysics in the modern exegesis has been prevalently framed in the distinction between a logical meaning and an ontological one of truth. In this article it is re-examined with reference to the strict connection between thought and being as a peculiar character of the Aristotelian (and generally Greek) thought of truth. The result is the character of *arché* and *aitia* of truth of *asuntheton* (as it presents itself in the *noein*) in relation to every determinable truth in the *dianoein*, and so the character of original foundation of the *eidōs*, as it shows itself to the thought in the simplicity of the intellectual intuition."

" Lorsque, en *Metaphysique* Δ, 29, Aristote parle de la « chose vraie », cela ne signifie pas que le Stagirite possède, outre sa conception de la vérité propositionnelle, une conception de la vérité ontologique. Dans le texte en question, Aristote adopte, pour les besoins de la polémique, la conception antisthénienne de la proposition et de la vérité, selon laquelle il ne peut y avoir qu'un *logos* par objet, ce qui entraîne l'impossibilité de la contradiction. Cette conception donne lieu à des paradoxes, auxquels Platon se heurte notamment dans le *Sophiste*; mais qui n'ont été définitivement résolus que par la distinction analytique effectuée par Aristote entre sujet et prédicat, distinction qui marque la naissance de la notion de proposition proprement dite."

History of Truth: *Veritas* in Latin Middle Ages from Augustine to Paul of Venice

Introduction

It is in the Middle Ages that for the first time were written treatises under the title of *De veritate* and the medieval definition of truth as "adequation of intellect to the thing" is well known; this page is about his history and the criticism made against it.

"The first medieval work on truth is the dialogue *De veritate* of Anselm of Canterbury (c. 1080-85). It is in many regards an original treatise. In Chapter One Anselm writes, "I do not recall ever having found a definition of truth; but if you wish, let us inquire as to what truth is by going through the various things in which we say there is truth." In the next chapters he examines not only what truth of the proposition and of thought is, but also that of the will, of action, of the senses and of things. In all these cases the analysis results in establishing truth as rightness or rectitude (*rectitudo*), denoting that something is as it ought to be, that it does that "for which it is made" (Ch. 2). Anselm's definition, then, is ultimately (Ch. 11), "rightness perceptible only to the mind" (*rectitudo mente sola perceptibilis*) - the addition is meant to exclude cases of a merely visible rectitude, e.g., that of a (straight) stick.

The definition rectitude reminds us of the rightness (*Richtigkeit*) of which Heidegger spoke. But Anselm's analysis is carried out on yet a different level. To be sure, Anselm too deals with the truth of the proposition (although as one of the areas in which truth can be found), and also for him an enunciation is true when it signifies that that which is, is. It is here, however - in the "rightness", if one will -

that truth manifests itself as rectitude, since in this way the statement fulfils the end contained in its nature. It is primarily this inner conformity which Anselm means by rightness, not the "correctness" of the proposition with respect to the outer world.

The adaequatio-formula is not mentioned by Anselm anywhere in the dialogue - another indication that, to quote De Rijk, the Middle Ages are not "typically medieval". Neither does the idea expressed in the formula play a crucial role. (...)

In the second medieval work on truth, the *Questiones disputatae De veritate* of Thomas Aquinas (1256-59), the matter is different, however In this writing the adaequatio-formula is to be found again and again. It is therefore especially owing to Thomas Aquinas that the formula has become so current.

In the first disputation he mentions a series of definitions of truth, derived from various traditions. Greek philosophy is represented by Aristotle, early Christian thought by Augustine, and pre-scholastic thought by the above-mentioned definition of Anselm, who was one of Thomas's main interlocutors in this disputation. Furthermore, Arabic philosophy is represented by Avicenna. Among the many determinations of truth is also the formula *adaequatio rei et intellectus*, ascribed by Thomas to a tenth-century Jewish philosopher, Isaac Israëli. No one, however, has been able to locate this definition in Israëli's works. Scholars suggest Avicenna and Averroës as possible sources." (pp. 5-6)

From: Jan A. Aertsen, *Medieval Reflections on Truth. Adaequatio ei et intellectus*. Amsterdam: VU Boekhandel 1984.

Veritas in ancient Latin

"*Verus* as an adjective was a very old Latin word that had several meanings. It could be used as a simple explicative or affirmative (*verum!*). Most often, in Plautus and Republican literature, it meant "true" in the sense of firm, capable of withstanding a test or trial. For example: "Farewell, ... continue conquering with true [*vera*, stalwart] courage as you have done so far" (*Casina* 87-88). In this sense the Romans seem to have related *verus* to words with similar sounds and meanings: *assevere*, *persevere*, *severus*. Cicero's Laelius affirms

that "a public meeting, though composed of very ignorant men, can, nevertheless, usually see the difference between a 'demagogue' (*popularis*), that is, a shallow, flattering citizen, and one who is *constans, verus, and gravis*." (*De amicitia* 95).

Veritas seems to have begun its Latin life as the abstraction of a quality of human behavior, like *gravitas* or *simplicitas*. It appears in a few instances as early as Terence and has a meaning not far from *severitas* (rigor, sternness, austerity, integrity of judgment), as opposed to compliance or levity: "There was stern *veritas* in his face, *fides* in his words" (*Tristis veritas inest in voltu atque in verbis fides* [Andria 858]). "*Obsequium* secures friends, *veritas* only enemies" (*Obsequium amicos, veritas odium paret* [Andria 68-69]). Livy's Capitolinus declares, "I know that I could say other things that you would be happier to hear, but necessity compels me, even if my *ingenium* did not admonish me, to speak *vera pro gratis*, the *vera* rather than the *gratis*. It is not that I do not wish to please you, Quirites, but I wish, much more, for you to be safe" (Livy 3. 68.9). Cicero, the first to make frequent use of the word *veritas* to translate the abstract truth, the *aletheia* of Greek philosophers, still, on occasion, employed it with its ancient associations with selflessness, severity, and constancy. "Friendships are nurtured by *veritas*, alliances by *fides*, close relationships by *pietas*" (*veritate amicitia, fide societas, pietate propinquitatis colitur* [Pro Quinctio 6.26])." (p. 68, notes omitted)

From: Carlin A. Barton, *Roman Honor. The Fire in the Bones*, Berkeley: University of California Press 2001.

Veritas: Origin of the definition "Adaequatio intellectus ad rem"

"Almost everyone knows that it was Aristotle who proposed the classical (or correspondence) theory of truth for the first time. However, the fact that his writings contain different and often mutually non-equivalent statements on truth is less recognized. This is a sample of Aristotelian explanations concerning the concept of truth (...):

3) To say of what is that it is not, or of what is not that it is, is false, while to say of what is that it is, and of what is not that it is not, is

true (*Metaphysics* 1011 b).

4) The fact of the being of a man carries with it the truth of the proposition that he is; and the implication is reciprocal: for if a man is, the proposition wherein we allege that he is, is true, and conversely, if the proposition wherein we allege that he is true, then he is. The true proposition, however, is no way the cause of the being of the man, but the fact of the man's being does seem somehow to be the cause of the proposition, for the truth or falsity of the proposition depends on the fact the man's being or not being (*Categories* 14 b).

5) But since that which is in the sense of being true or is not in the sense of being false, depends on combination and separation, and truth and falsity together depend on the allocation of a pair of contradictory judgements; for the true judgement affirms where the subject and predicate really are combined, and denies where they are separated, while the false judgement has the opposite of this allocation (*Metaphysics* 1027 b).

6) he who thinks the separated to be separated and the combined to be combined has the truth, while he whose thought is in a state contrary to that of the objects is in error (*Metaphysics* 1051 b).

7) It is not because we think truly that you are pale, that you *are* pale, but because you are pale we who say this have the truth (*Metaphysics* 1051 b).

8) Propositions correspond with facts (*Hermeneutics* [*De interpretatione*] 19 b).

The formulation 3) is usually taken as Aristotle's official definition of truth. Now 4) repeats the content of 3) but adds that being is in a sense more basic for truth than an assertion which is qualified as true. The two statements are not equivalent because neither does () follow from 3) nor does the reverse entailment hold. Statements 5) and 6) introduce an explicit ontological parameter, namely combination and separation; these statements seem to be equivalent (or at least "nearly" equivalent). On the other hand, there is no direct entailment from 5) (or 6)) to 3) or 4), and back.

Perhaps one might say that "a is b" is true if and only if the relation which holds between referents of a and b is mapped by the relation

holding between a and b, and false if the mapping is not in case. If we decide to label mapping as "combination" and not-mapping as "separation", we obtain something very close to 5) and 6). And if we look at combination as correspondence and separation as non-correspondence, 5) and 6) become popular formulations of the classical definitions of truth.

The statement 7) seems to exemplify previous explanations, particularly 3). Finally, 8) explicitly speaks about facts and correspondence but it is only a marginal remark made by Aristotle when he considered the celebrated sea-battle problem. Hence, there are no sufficient reasons to treat (8) as a serious proposal to define the concept of truth.

If we take 3) as Aristotle's official truth-definition (and, a fortiori, as the first mature explanation of CCT; [*Classical Concept of Truth*]), than other Aristotelian formulations should be understood rather as more or less auxiliary comments than proper definitions of truth. The point is very important because no idea of correspondence is directly involved in 3). Although, as my previous remarks show, "combination" can be replaced by "correspondence" but nothing forces us to dress Aristotle's truth-theory into "correspondence talk". In fact, 3)- 7) may be explained without any reference to such ideas as correspondence, agreement, adequacy or conformity; recall that 8) is only a marginal remark. I think that the best understanding of what is going on in Aristotle's theory of truth consists in looking at 3) as something which is very closely related to 1) and 2). Then if we think of Plato's philosophy of truth as a further step in the tradition beginning with old Greeks poems and continued by the Pre-Socratics, Aristotle should also be considered in the same way. Under this assumption, 3) schematically says how to answer the question: how is it? Although Aristotle supplements 3) with considerable ontological equipment, his main intuition concerning the concept of truth seems very simple.

Various explanations by Pierre Abélard of the concept of truth offered in his *Logica Ingredientibus* lead to (see De Rijk [*Petrus Abaelardus Dialectica*, Assen 1956] p. LIV):

(9) the sentence p is equivalent with "p is true" if and only if p is the case. Clearly, (9) anticipates the semantic definition of truth but it

was not properly understood in the Middle Ages (nor later).

The most famous medieval explanation of the concept of truth comes from Thomas Aquinas. His formulation is this:

10) *Veritas est adaequatio intellectus et rei, secundum quod intellectus dicit esse quod est vel non esse quod non est* (*De Veritate* 1,2).

The passage which begins with the word *secundum*, is simply a repetition of Aristotle's main formulation (see (3) above). But the first part of 10) -- *veritas est adaequatio intellectus et rei* -- is an obvious addition to Aristotle, actually related to (5) or (6). Usually, (10) is quoted in its simplified version limited to its first part: *veritas est adaequatio intellectus et rei*; in fact, this shortened formula is the most popular wording of the classical truth-definition. However, everybody who employs this simplified record of CCT as "Aristotelian", must remember that it is certainly not Aristotelian to the letter. The question whether and to which extent it is Aristotelian in spirit requires special investigations that exceed the scope of this paper. So I restrict myself to some remarks on *adaequatio intellectus et rei*.

One can link the meaning of *adaequatio* in 10) with the second (Aristotelian) part of this formula. However, Aquinas also uses such terms as *conformitas*, *correspondentia* and *convenientia* to explain his understanding of CCT. It suggests his *adaequatio* expresses (or at least might express) a content which is not quite reducible to Aristotelian intuitions.

What is going on in the first part of 10)? There are several possible answers. Let me indicate three. Firstly, *veritas est adaequatio intellectus et rei* may be regarded as a counterpart of 5) or 6). Secondly, the fact that the *adaequatio*-formula opens Thomas' definition seems to suggest that he changed the centre of gravity in the Aristotelian truth-theory in such a way that *adaequatio*, *correspondentia*, *conformitas* or *convenientia* became crucial ideas in defining truth. Thirdly, the *adaequatio*-formula was invented by the Schoolmen to capture intuitions concerning truth in a simple way; the Schoolmen very much liked brief formulations. It is very difficult to decide today which interpretation (I am very far from

claiming that my three cases exhaust all possible interpretations of 10)) is correct with respect to Aquinas' original intentions. However, the next development of Thomism rather followed the second interpretation. For instance, Francisco Suárez says that *veritas transcendentalis significat entitatem rei, connotando cognitionem seu conceptum intellectus, cui talis entitas conformatur vel in quo talis res representatur* (*Disputationes metaphysicae*, 8, 2.9). The content of 3) is completely absent in Suárez. He proposes instead an analysis of truth with the help of the concept of *representatio* and seems to assume that a *conformitas (adaequatio, correspondentia)* holds between thoughts and their objects. That is what I mean by "changing the centre of gravity". Most post-medieval thinkers adopted this route in their thinking on truth and tried to explain how *adaequatio* should be understood.

It is now proper to introduce an important distinction (see Wolenski-Simons [1989]), namely that of weak and strong concept of correspondence. If the concept of correspondence is governed by 3) (or similar statements), we are dealing with correspondence in the weak sense. On the other hand, Suárez's approach employs correspondence in the strong sense. I am inclined to regard the distinction of the two concepts of correspondence as fairly crucial for the history of CCT. Thus, we must always ask which concept of correspondence is used in particular truth-theories because many difficulties with interpreting philosophers' views on truth are rooted in their view of the distinction in question. As far as the matter concerns the concept of correspondence, it has been explained by notions like sameness, similarity, model, picture, co-ordination, isomorphism or homomorphism (...).

Let me finish this section with some historical remarks (see Gilson [1955]). Aquinas notes that his definition of truth is derived from *Liber de definitionibus* by Izaak ben Salomon Israeli; Aquinas also refers to Avicenna in this context. However, *adaequatio* does not occur in Israeli's truth-definition which (in Latin version) is this: *Et sermo quidem dicentis: veritas est quod est, enuntiativus est nature veritatis et essentiae ejus, quonian illud sciendum quod es res, vera est; est veritas nonnisi quod est*; this formula is fairly Aristotelian. Avicenna in his *Metaphysics* says (in Latin translation) that *veritas [...] intelligitur dispositio in re exteriora cum est ei aequalitas*; the

last word suggests the strong sense of correspondence. It was William of Auvergne who introduced the term *adaequatio* in philosophy for the first time. He refers (in *De universo*) to Avicenna in the following way: *et hoc [intentio veritas] ait Avicenna, est adaequalio orationis et rerum*. Then William adds that the truth is *intellectus ad rem*. In Albertus Magnus' treatise *De bono* we find that truth is *adaequalio rei cum intellectu*. Then comes 10)." (pp. 141-144 of the reprint).

From: Jan Wolenski, "Contributions to the History of the Classical Truth-Definition", in: *Logic, Methodology and Philosophy of Science* Vol. IX. Amsterdam: Elsevier 1994 pp. 481-495, Proceedings of the Ninth International Congress of Logic, Methodology and Philosophy of Science, Uppsala, Sweden, August 7-14, 1991. (Reprinted in: Jan Wolenski, *Essays in the History of Logic and Logical Philosophy*, Cracov: Jagiellonian University Press 1999, pp. 139-149.

"In the *Summa Theologica* (I, q. 16; a. 2, ad 2) of St. Thomas Aquinas we read: "Praeterea, Isaac dicit in libro *De efnitionibus*, quod "veritas est adaequatio rei et intellectus"." Also in his *De Veritate*, q. 1, a. 1, we find the statement: " Et sic dicit Isaac, quod veritas est adaequatio rei et intellectus ".

B. Geyer in his work, *Die Patristische and Scholastische Philosophie* (Berlin, 1928), p. 334, says " Bonaventura, Heinrich von Gent, Thomas von Aquin entnehmen die bekannte scholastische Wahrheitsdefinition: *veritas est adaequatio rei et intellectus* dem "Buch der Definitionen Isaaks. " He gives a reference to St. Bonaventure's commentary on First Book of Sentences (d. 40, a. 2, q. 1) where the definition is found. It is not there attributed to Isaac by St. Bonaventure and the footnote referred to below. is repeated distinctly saying it does not occur in Isaac.

In the work *S. Thomas d'Aquin* by A.-D. Sertillanges (Paris, 1910) Tome I, p. 41, we read: "Quant à celle d'Isaac, que saint Thomas semble affectionner par-dessus les autres: "La vérité est l'adéquation des choses et de l'intelligence" (*adaequatio rei et intellectus*), c'est une définition à double entente." J. de Tonquédec, in his *La Critique de la Connaissance* (Paris, 1929, p. 512) says: " Le vrai, dit Isaac, est l'équation de la chose et de l'esprit ", and in a footnote it is stated:

"La définition de la vérité se trouve dans le *Livre des Définitions*, comme le dit saint Thomas."

In the *Encyclopedia Britannica* (ed. IV, 1929, it is not in the 1910 edition) s. v. *Israeli, Isaac Ben Salomon* we read: " Through the labours of Gundissalinus he became very popular with the thirteenth century scholastics who took from his definitions the famous definition: *veritas est adaequatio rei et intellectus*. (1)" (p. 5)

(...)

Several other references might be given to modern writers on mediaeval philosophy who attribute the definition to Isaac.

Among mediaeval writers, St. Albertus Magnus attributes the following definition of truth to Aristotle: " Dicit enim Aristoteles in V primae philosophiae, quod "veritas est adaequatio rerum et intellectuum" " (*Summa Theologica*, P. II, Tr. 1; q. 1; m. 2; a. 1, Arg. 4.). Moreover he gives Isaac's definition of truth as follows: " Complexi autem sermonis veritas est secundum Isaac in libro de Definitionibus, affirmatio rei de qua vere praedicatur, vel negatio rei de qua vere negatur. " (I. Sum. Theol., Tr. VI, q. 25, m. 1). " Et hoc modo veritas, ut dicit Isaac in libro de definitionibus, quod veritas non est nisi quod est et quod res vere est. " (I. Sum. Theol., T. 6, q. 25, m. 1). " Dicit enim Isaac quod "veritas est id quod est res", vel secundum aliquos, "veritas est sermo quem confirmat demonstratio". " (I. Sum. Theol., T. 6; q. 25, m: 2.). " Secundum Isaac et secundum Augustinum, verum est id quod est. " (Ibid. No. 3.). " Et secum idum hoc dicit Isaac, quod "veritas est sermo quem affirmat demonstratio vel sensibiliter vel actualiter. " 1. Sum Theol., T. 6, q. 25, m. 1.

St. Bonaventure quotes the definition "adaequatio rei et intellectus" several times, (v. g. Sent., Lib. I, D. 40; Art. 2; q. 1. Sent., Lib. I, D. 46; Art. 1; q. 4. Sent., Lib. II, D. 37; Art. 2; q. 3. In Hex. Collationes, III. par. 8), but so far as I have discovered, he does not state where it is to be found.

In the Quaracchi Edition of his works (1882), Tom. I. p. 707, note 5, the editors call attention to the fact that they had read one ms. of Isaac (Monac. B. R. 8001, ff. 151v.-154r.) without finding the definition of truth which St. Thomas attributes to him. They quote

from Isaac a definition which will be referred to later on. In several other places where St. Bonaventure quotes the definition *veritas est sermo quem confirmat demonstratio*, they refer the reader to this note or repeat it in full." (pp. 6-7)

(...)

I have just finished reading three mss. of Isaac *De definitionibus*, viz. (a) Paris B. N. 6443, ff. 187r-190r; (b) Paris B. N. 14700, ff. 153r-160v. Catalogued as belonging to the XIII. century, it bears the book-mark of the Abbey of St. Victor in Paris. (...) In none of these mss. did I find the definition of truth so persistently attributed to Isaac.

On f. 156v, 14700, there begins a long list of definitions which continue to the end of the work. This list is also in 6443, but the Vatican ms. lacks it. In these mss. Isaac gives the following definitions of truth: 1. "Diffinitio namque veritatis est quod est ; et diffinitio vanitatis est quod non est aliquid aut, narratio rei absque eo quod est." 14700, f. 155r. C. 1, 11. 12-13; 6443, f. 147v. C. 2, 11. 45. The Vatican ms. reads the same except that it has *autem* for *namque*, and *falsitatis* for *vanitatis*. (F. 47v. C. 2, 11. 25 sq.) 2. Diffinitio veritatis; and there is written in the margin, by the same hand I think, *veritas est quod est res*. And then the text goes on: " et diffinierunt eam disertores. Dixerunt enim, veritas est sermo quem firmat demonstratio aut sensibiliter aut intellectualiter. ... hec diffinitio est assumpta ex qualitate veritatis, non ex eius quiditate. Et illud ideo, quoniam cum aliquis dicit quid est veritas, est responsio in eo est quod est res, et cum dicit qualis est, dicitur ei quod est sermo quem demonstratio firmat aut intellectualiter aut sensibiliter... et sermo quidem dicentis veritas est quod est enuntiativus est nature veritatis et essentie eius, quoniam illud secundum quod est res, vere est veritas, non nisi quod est. ... falsitas est non quod est res, et dicitur falsitas, narratio rei cum diverso quod est ipsa et ipsius . contrario. " (14700, 158v, C. 2, 11. 30 sq.) Ms. 6443 is a very poor text. The above passage is faulty but the important parts relative to this question are the same. In the margin of 189r. C. 2, 1. 21 there is written in the first hand: " diffinitio veritatis; veritas est quod res est, " and in the same column 1. 39, we read: " sermo quidem dicentis: veritas est quod est essentialivum (sic) est nature veritatis et essencie eius quoniam illud secundum quod est res vera est; est veritas non

nisi quod est. "3. " Verum est affirmare rem rei cui est secundum veritatem aut expellere rem a re a qua vere removetur. ... Falsum est affirmare rem rei que ab ea removetur vere et remove rem a re que ei affirmatur secundum veritatem. " (14700, 159 r. C. 1, 11. 22 sq. = 6443, 189r C. 2, 11. 48 sq.) Monacensis 3001 as quoted in the Quaracchi Edition varies somewhat in wording from the above, but the meaning is much the same.

The definition of verum (number 3) perhaps comes nearest to the definition ascribed to Isaac by St. Thomas, yet it is by no means the same either in meaning or language. Perhaps some reader may know of a different manuscript tradition of Isaac wherein the classic definition is found." (pp. 7-8)

Notes

(1) The statement in the *Encyclopedia Britannica* might lead one to believe that Gundissalinus quoted the definition from Isaac. I have also read recently a ms. of Gundissalinus *De anima*, Vat. Lat. 2186, f. 104r.-119v. I found there this definition of truth; veritas autem cuiusque rei est id quod ipsa est. f. 118 v., 1. 30

From: Joseph Thomas Muckle, "Isaac Israeli's Definition of Truth", *Archives d'Histoire Doctrinale et Littéraire du Moyen Age* 8, 1933 pp. 5-8.

Selected Bibliography on the Theories of Truth in Latin Middle Ages

Bibliography

1. Aertsen, Jan A. 1984. *Medieval Reflections on Truth. Adaequatio rei et intellectus*. Amsterdam: VU Boekhandel.

Inaugural address on the occasion of his taking up the chair of Medieval philosophy of the Free University in Amsterdam on November 9, 1984.

"There are certain basic words which form the undertone of our thinking and of the manner in which we experience things. These basic words are not unchangeable; they often receive a different content . . . One such basic word is 'truth'."

This is the start of the report of the Synod of the Reformed Churches in the Netherlands, issued in 1981, "On the nature of the authority of Scripture".(1) How does it happen that the Bible is read so differently? In searching for an answer to this problem, the report adopts a course remarkable within the Reformed tradition. It poses a truly philosophical question: "What is truth?" That the Bible is read differently is related to the fact that not all people mean the same by what they call "truth".

If I want to raise this same question today, then I am in good company - though I must add at once that it is the matter rather than the company that motivates me. From the outset, that is, as early as with the Greeks, philosophy and truth are seen in an intimate connection. Aristotle, for example, describes

philosophy as the "theory" of truth.(2) It is in the Middle Ages, however, that for the first time treatises appear under the title of *De veritate*, where truth itself is explicitly made the object of reflection. I would like to draw your attention to medieval observations on the query about truth.

'*Adaequatio rei et intellectus*' as the medieval formula of truth and the criticism of it.

Is an exposition on this theme worthwhile, though? Do we not already know what truth was in the Middle Ages? Probably there is no formulation in scholastic thought that has become more widely known. Even those who did not enjoy the privilege of a classical education are able to say that truth is *adaequatio rei et intellectus*. What is meant by that seems to be clear. The formula appears to express the "natural" idea of truth, i.e., the correspondence between thought and reality. The determination of truth as *adaequatio* has become so self-evident that, as the *Handbuch philosophischer Grundbegriffe* states, it is the point of depart and reference for all contemporary discussions on truth.(3) It can be added that this occurs mostly in a critical sense. Two examples may suffice.

In the above-mentioned synodal report the first chapter sketches the changes in the concept of truth over the course of time. The so-called subject/object relation underlies the entire exposition, apparently from the unquestioning presupposition that this relation is fundamental to the phenomenon of truth as such. The changes in the concept of truth, then, are described in three phases. Successively the report speaks of "objective truth", "subjective truth" (in systems of thought like idealism and existentialism), and finally, of a newer conception called the "relational" concept of truth - the objective and the subjective in one. This means that "truth always occurs within a relation, within the 'relatedness' of man to something else."(4) As the report claims, moreover, this relational concept of truth links up with what the Bible calls truth.

The objective concept of truth - the most current idea of truth - is represented by the medieval formula, phrased "truth is the correspondence of the human way of picturing things with the

matters themselves." The human way of imagining things, the human consciousness, is like a mirror able to reflect "the objective state of affairs". This conception of truth is not only ascribed to Thomas Aquinas, but to a great variety of people: ". . . Greek philosophers, . . . the classical Reformed theologians, . . . the logician Bertrand Russell, . . . the Marxist Lenin". The drawback of this conception, in the assessment of the report, is that man is very passive. Does knowing the truth not demand man's activity, research; and wrestling? Without a human spirit there is no truth.

An entirely different criticism can be found in Heidegger, who dealt most thoroughly with the western conception of truth. The lectures he delivered at the University of Freiburg during the winter semester of 1942-43 appeared in 1982 in the *Gesamtausgabe* of his works under the title *Parmenides*.⁽⁵⁾ Strictly speaking, the title is misleading for actually these lectures deal with the essence of truth, the identical subject that engaged Heidegger in writing *Vom Wesen der Wahrheit*, which dates from the same time. In the lectures, however, there is "a more direct confrontation with the history of western thought".⁽⁶⁾ In his view a change in the essence and "locus" of truth has evolved in philosophy. Truth becomes "rightness" (*Richtigkeit*) of knowing and asserting; it is no longer "unconcealedness" (*aletheia*) of being, as it was for the early Greek thinkers. The medieval formulation fixes this essential transformation. "*Veritas est adaequatio intellectus ad rem*" *Im Sinne dieser Umgrenzung des Wesens der Wahrheit als Richtigkeit denkt das gesamte abendländische Denken von Platon bis zu Nietzsche*.⁽⁷⁾ Truth becomes a characteristic of a mental act within man. Inevitably the problem then arises how a psychical process in the inner man can be brought into agreement with things outside.⁽⁸⁾ This traditional and current conception of truth, however, is derivative (*abkünftig*). Parmenides' thought reveals "the road of truth, far away from the beaten track of men". (*Fragm. B 1, 27*). It can give us a reminder of the forgotten "primordial" sense of truth, the unhiddenness of being, which is the ground of the possibility of rightness.

But when the proper function of philosophy is to "re-mind", we are also allowed to ask of this twofold criticism: do we recall the meaning of truth as *adaequatio rei et intellectus* at all? Does it have a merely derivative sense, i.e., the rightness of thought? On the other hand, does the formula imply that truth is "reflection" and leave the human mind out of account? These questions lead, me this afternoon to focus on medieval views of truth, in which the idea of the *adaequatio* plays a central role." (pp. 3-5)

Concluding observations.

Looking back over the course of this discussion, we may conclude that the criticism of the medieval *adaequatio*-formula, outlined at the beginning, did not grasp its original meaning. Neither is this conception concerned with truth in a merely derivative sense, nor does it ignore man's activity. For in the previous analysis we observed that Thomas's notion of true includes first, transcendentality, second, relationality, third, anthropocentrism, fourth, the fulfilment in an act of the intellect, fifth, the necessity of a norm and measure, sixth the intrinsic connection with the word, seventh, the relation to the divine Logos, and finally, the identity with God Himself. These moments are implicitly or explicitly expressed in the formula *adaequatio rei et intellectus*, in which every term is charged with meaning.

Compared to the breadth of this conception, modern theories appear to be a reduction of the integral process of truth. It is philosophically important to note that in the medieval approach what is fundamental to truth is not the duality of subjective and objective from which then their togetherness has to be conceived. Rather, it is the primordial conformity of being and intellect that is fundamental to truth. Indeed, as we have seen, being and thinking are the same in the Origin.

Another remarkable aspect in this medieval view is the attempt to integrate philosophical and religious truth. This endeavour runs parallel to the philosophical introduction of the synodal report of the Reformed Churches, with which I began this address. Its intention is that the "relational" concept of truth

links up with what the Bible calls truth. Thomas's conception lies concretely in the notion of word, a good example of the way in which his understanding of truth is deepened by a theological reflection. But that which fundamentally enables the integration is the basic idea of the transcendental of truth. This conception underlies his entire discussion.

The medieval doctrine of the transcendentals - being, one, true, good, and beautiful - forms "the heart of scholastic ontology and metaphysics." (93) This doctrine will be the subject of my research over the coming years. Today I wanted to present you with a sample of it. (94)

History of Truth. Selected Bibliography on Medieval Primary Authors

The Authors to which I will devote an entire page are marked with an asterisk (*).

- Hilary of Poitiers
- Augustine of Hippo (*)
- Boethius (*)
- Isidore of Seville
- John Scottus Eriugena (*)
- Isaac Israeli
- Avicenna (*)
- Anselm of Canterbury (*)
- Peter Abelard (*)
- Philip the Chancellor
- Robert Grosseteste
- William of Auvergne
- Albert the Great
- Bonaventure
- Thomas Aquinas (*)
- Henry of Ghent

- Siger of Brabant
- John Duns Scotus (*)
- Hervaeus Natalis
- Giles of Rome
- Durandus of St. Pourain
- Peter Auriol
- Walter Burley
- William of Ockham (*)
- Robert Holkot
- John Buridan (*)
- Gregory of Rimini
- William of Heytesbury
- Peter of Mantua
- Paul of Venice

Hilary of Poitiers (ca. 300 - 368)

Texts

3. Rijk, Lambertus Marie de. 1981. "Boèce Logicien Et Philosophe: Ses Positions Sémantiques Et Sa Métaphysique De L'être." In *Atti Del Congresso Internazionale Di Studi Boeziani (Pavia, 5-8 Ottobre 1980)*, edited by Obertello, Luca, 141-156. Genova: Accademia Ligure di scienze e lettere.

"Le grand historien Etienne Gilson a bien remarqué que c'est à propos du problème du Bien que la pensée de Boèce fut la plus personnelle et la plus féconde. Avec Platon et Saint Augustin, il identifie dans son opuscule *Quomodo substantiae* l'être au Bien (comme le Mal au non-être). Il est évident que dans l'opinion de Boèce la doctrine de l'être obtient une importance décisive comme base de la théorie du Bien. Aussi la solution du problème du Bien et du Mal fut esquissé dans sa métaphysique de l'être.

L'identification de l'être et du Bien implique que pour tout ce qui est, c'est une seule et même chose *d'être* et *d'être bon*. Mais si les choses sont *substantiellement* bonnes, en quoi diffèrent-elles du Bien en soi, qui est Dieu? Dans cette question la

problématique du *Sophiste* de Platon a dû revivre. On sait que dans ce dialogue Platon a essayé de résoudre le problème fondamental de l'être des choses périssables par une analyse vraiment pénétrante des notions de «Même» (*tauton*) et «Autre» (*heteron*).

Il me semble que Boèce fait une chose comparable. Il n'est pas étonnant qu'il commence (dans *De hebdomadibus = Quomodo substantiae* etc.; voir l'édition de Stewart-Rand) ses exposés approfondis sur la notion de l'être par l'axiome qui a dû provoquer tant de commentaires pendant le moyen âge: *diversum est esse et quicquid quod est* (II 28-30: «il y a diversité entre "être" et "ce qui est"»). Cette formule, qui est valable pour tout être composé concerne la différence ontologique entre l'élément constitutif, ou la forme, de tout être composé d'un côté, et la chose elle-même, ou le tout établi par cette forme, de l'autre. Le tout doit son être à l'élément constitutif qui est la forme substantielle, sans laquelle il n'est pas du tout. Cependant la question sur son essence ne peut pas être résolue en désignant cette forme. (...)

Il semble être utile de prendre au sérieux la suggestion des commentateurs médiévaux et d'entreprendre la réponse à notre question du point de vue sémantique. Je propose de discuter d'abord (1) la notion de *qualitas* chez Boèce (2), ensuite son modèle sémantique (3), et ses idées sur le rôle (logico-sémantique) du nom et du verbe (4-5); enfin la signification exacte de sa notion de l'être (*esse*) sera discutée (6) et éclaircie en mettant en lumière le but et la méthode du traité *Quomodo substantiae* (7)." pp. 141-142 (Notes omitted).

2. Tweedale, Martin. 1967. "Abailard and Non-Things." *Journal of the History of Philosophy* no. 5:329-342.

"I explain how Abailard thinks he can justify saying that certain items, particularly what is said by a sentence, are not things. His grounds are that they are never referred to by any noun. He holds that nominalizations of sentences and of verbs, which appear to be nouns with such a reference, are not logically speaking nouns, and sentences which have a nominalization for a grammatical subject do not have any logical subject."

3. ———. 1976. *Abailard on Universals*. Amsterdam: North-Holland.

"This work shows how Abailard elaborated and defended the view that universals are words, avoided the pitfalls of an image theory of thinking, and propounded a theory of "status" and "dicta" as objects of thought without treating them as subjects of predication. His defense of these views is shown to depend on certain fundamental departures from the Aristotelian term logic of his day, including a proposal for subjectless propositions, the treatment of copula plus predicate noun as equivalent to a simple verb, and a transformation of the 'is' of existence into the 'is' of predication."

Chapter 4: The Way of Truth (*Via veritatis*) pp. 141-190.

2. ———. 1992. "Truth as Transcendental in Thomas Aquinas." *Topoi. An International Journal of Philosophy* no. 11:159-171.

"Aquinas presents his most complete exposition of the transcendentals in *De veritate* 1, 1, that deals with the question "What is truth?". The thesis of this paper is that the question of truth is essential for the understanding of his doctrine of the transcendentals.

The first part of the paper (sections 1--4) analyzes Thomas's conception of truth. Two approaches to truth can be found in his work. The first approach, based on Aristotle's claim that "truth is not in things but in the mind", leads to the idea that the proper place of truth is in the intellect. The second approach is ontological: Thomas also acknowledges that there is truth in every being. The famous definition of truth as "adequation of thing and intellect" enables him to integrate the two approaches. Truth is a relation between two terms, both of which can be called "true" because both are essential for the conformity between thing and intellect.

The second part of the paper (sections 5--7) deals with the manner in which Thomas gives truth a place in the doctrine of the transcendentals, and shows that his conception of truth leads to important innovations in this doctrine: the introduction of relational transcendentals and the correlation between spirit and being. If "truth" is transcendental, it must be convertible with "being". Sect. 6 discusses objections that Thomas advances himself to this convertibility.

Sect. 7 deals with a difficulty in his account of truth as a relational transcendental. Ontological truth expresses a relation to an intellect but the relation to the human intellect is accidental for the truth of things. Essential for their truth can only be a practical intellect that causes things. In this way, Thomas argues, the divine intellect relates to all things."

Texts

1. Hervaeus, Natalis. 2008. *A Treatise of Master Hervaeus Natalis (D.1323) the Doctor Perspicacissimus on Second Intentions*. Milwaukee: Marquette University Press.

Volume One - An English translation and Volume Two - A Latin edition by John P. Doyle.

"These volumes present a first critical Latin edition and an English translation of an important, but very difficult to read and understand, medieval treatise. As almost everyone knows, the notion of intentionality comes from the Middle Ages. What is less known is that Hervaeus Natalis, O.P. (d. 1323) was the first one explicitly to consider it as such. Even less known is the fact that he came to it not immediately from the Aristotelian *De Anima*, but rather from the division in Aristotle's *Metaphysics* between "being as being" and "being as true." Least of all known is the fact that Hervaeus, who uses the term "intentionality" in the present work 235 times, regards its significance as a relation of reason which runs in the direction of known or knowable to knower. Apart from its exceedingly obscure Latin style, what particularly makes this work difficult to understand is its multi-layered reflection on things and non-things, its reflection on Hervaeus thinking itself, and its reflection on his thinking about his thinking about things and non-things."

"In this paper, Ockham's theory of an ideal language of thought is used to illuminate problems of interpretation of his theory of truth. The twentieth century idea of logical form is used for finding out what kinds of atomic sentences there are in Ockham's mental language. It turns out that not only the theory of modes of supposition, but also the theory of supposition in general is insufficient as a full theory of truth. Rather, the theory of supposition is a theory of reference, which can help in the determination of truth values within the scope of simple predications. Outside this area, there are interesting types of sentences, whose truth does not depend on whether the terms supposit for the same things or not for the same things."

Martin Heidegger on *Aletheia* (Truth) as Unconcealment

Introduction

"We come now to a decisive point in Heidegger's development. The effort to ground metaphysics (fundamental ontology) began as a search to illuminate the intrinsic correlation between the Being-process as such and the finitude of the being that comprehends it, sc. There-being. The first step (*Sein und Zeit*) was to analyse There-being phenomenologically in order to find in the pre-ontic comprehension of Being some means of discerning the sense of Being. Subsequently the author has become more and more preoccupied with Being itself, but chiefly in terms of the problem of truth, since the sense of Being is its truth. The growing importance of the problematic of truth is discernible in all of the works that followed *SZ* and culminates now in the essay "On the Essence of Truth," where Heidegger thematizes the problem, retaining as intrinsic to it the problem of finitude, sc. the negativity of truth which he calls "un-truth."

Although published late (1943), the text dates initially from 1930. The author admits to several subsequent revisions, which, however, left the point of departure, fundamental position and basic structure of the original work unchanged. Taking him at his word, we assume that the text represents his thought as of 1930, and, although the matter would be very illuminating, must leave to historians the task of disengaging what alterations were made when.

We are relatively well prepared for the study we are about to undertake and do not approach it in a vacuum. We know: that the truth of conformity (between judgement and judged) supposes a still more fundamental truth that resides in the being to-be-judged and

enables us to discern whether or not the judgement is conformed to it; that this truth of the being-to-be judged is basically an un-hidden-ness, or open-ness, of that being to the knower; that beings become un-hidden to a finite knower because this knower has a comprehension of their Being- structure antecedent to his encounter with them; that this antecedent comprehension may be conceived as an open horizon, or domain of encounter, or the World (or, for that matter, Non- being), within which beings and There-being meet; that this sphere of open-ness is instituted by the transcendence of the finite There-being; that the transcendence of finite There-being is ontological truth, which, since it renders possible the encounter that occurs in There-being's comportment with other beings, enables the beings-to-be-judged to become manifest (ontic truth); that this transcendence liberates the beings which it encounters from the obscurity that initially enshrouds them by letting them be (manifest), hence must be called freedom; that this transcendence (freedom) is the primary sense of truth; that this transcendence is profoundly finite, therefore negated, so that truth comports non-truth; that one consequence of the negativity of There-being as transcendence (freedom, truth) is that it is prone to become absorbed in its preoccupation with the beings that measure the truth of its judgements, and forget its true self; that it re-collects its self in resolve, which thus becomes the eminent mode of truth." (pp. 211-212, notes omitted)

From: William J. Richardson, *Heidegger. Through Phenomenology to Thought*, The Hague: Martinus Nijhoff 1974.

Heidegger's reading of Plato

"For Heidegger, the de-volution of Western thought began with Plato, for it was with him that $\nu\omicron\epsilon\acute{\iota}\nu$ ceased to have the sense of containing the advance of over-powering $\phi\upsilon\sigma\acute{\iota}\varsigma$ and began to assume the special relation to $\acute{\iota}\delta\acute{\epsilon}\alpha$, which evolved into what the tradition would call "reason" (*Vernunft*). We discern the transition best, however, by examining not Plato's use of $\nu\omicron\epsilon\acute{\iota}\nu$ but rather the implications of $\acute{\iota}\delta\acute{\epsilon}\alpha$, for it was thus that he understood the Being which his predecessors had understood as $\phi\upsilon\sigma\acute{\iota}\varsigma$. It was Plato's conception of Being rather than of thought which was decisive in the birth of metaphysics. If we recall that $\phi\upsilon\sigma\acute{\iota}\varsigma$ (emergent-abiding-

Power) was for the pre-Socratics the process of truth, then the transformation of φύσις into ἰδέα may be discerned by examining what Plato understood by truth. This the author disengages by an essay upon the famous metaphor of the cave (*Politeia* VII, 514 a, 2 to 517 a, 7)." (p. 301)

(...)

In Plato metaphysics in the traditional sense takes its rise, for it is he who first conceives of thinking Being as a going "beyond" the beings of experience to their being-ness, which he conceives as their what-ness, their see-ableness, their Idea. Such a conception is possible only because a consequence of φύσις (process of shining-forth) is taken to be the essence of it. Hence φύσις itself becomes for him that-which-is-to-be-seen, a being (εἶδος). Being thus becomes conceived as a being. Likewise truth, no longer non-concealment, becomes correctness of view, conformity with the Ideas." (p. 308)

From: William J. Richardson, *Heidegger. Through Phenomenology to Thought*, The Hague: Martinus Nijhoff 1974.

"*Plato's Doctrine of Truth*.(34) This text was composed, according to Heidegger's notes, in 1940 and first published in 1942. (*) Heidegger indicates in a note that the origin of this text is the 1931-32 lecture course on "The Essence of Truth," which contains a long interpretation, first, of the cave analogy in the *Republic*, then of a portion of the *Theaetetus*, principally the discussion of *Theaetetus*'s second (though Heidegger calls it the "first") answer to the question of what is episteme, "knowledge is perception." The relationship between the published text, "Plato's Doctrine of Truth," and the lecture course is curious and deserves some initial comment. First, the lecture course contains the most careful, nuanced development of which I am aware of Heidegger's now well-known understanding of *aletheia* as "unhiddenness." Within its pages are careful, often rich reflections on certain implications both of the cave analogy and of the section of the *Theaetetus* that he treats." (p. 53)

(...)

Heidegger announces on the first page his guiding thesis: the "unsaid doctrine" that he will elicit in the cave analogy is "a change in what

determines the essence of truth" (p. 155). That change, we discover, is from the more originary notion of truth as *aletheia*, "unhiddenness," to truth as "correctness of vision," a change which, as Heidegger tells us toward the end of the essay, puts us on the fateful path toward modern subjectivism. Let us trace the crucial steps of this change, as Heidegger develops it.

Heidegger's first point is to show, very convincingly, that *aletheia* in its originary sense of unhiddenness is still very much at work in the cave analogy. He notes that the deeply visual character of the analogy, the notion of moving from shadows to seeing the fire to moving outside the cave to see the things that are "more unhidden," makes sense only within a framework of truth as unhiddenness. As he puts it, "Only the essence of truth understood in the original Greek sense of *aletheia*--the unhiddenness that is related to the hidden (to something dissembled and disguised)--has an essential relation to this image of an underground cave. Wherever truth has another essence, wherever it is not unhiddenness or at least is not co-determined by unhiddenness, there an 'allegory of the cave' has no basis as an illustration" (p. 172). So truth as unhiddenness is still present in the cave analogy.

But no longer purely. Heidegger now announces that truth as unhiddenness is already infected, as it were, by another, different and more problematic conception of truth that is also at work here. "And yet, even though *aletheia* is properly experienced in the 'allegory of the cave' and is mentioned in it at important points, nonetheless in place of unhiddenness another essence of truth pushes to the fore. However, this also implies that unhiddenness still maintains a certain priority" (p. 172). This fateful other essence of truth is truth as "correctness of vision"." (pp. 57-58)

Notes

(34) Heidegger adds in a reference note that the "train of thought goes back to the Freiburg lecture course of winter semester 1930–31, "On the Essence of Truth." It later was published as part of the collection, *Wegmarken* (Frankfurt am Main: Vittorio Klostermann, 1967). Available in English as *Pathmarks*, Cambridge: Cambridge University Press, 1998. The essay is pp. 155–182, the "reference" note

on p. 380. The essay is translated by Thomas Sheehan, whose translation I shall usually follow.

From: Drew A. Hyland, *Questioning Platonism. Continental Interpretations of Plato*, Albany: State University of New York Press, 2004.

"Heidegger's analysis of Plato attempts to show that a transformation occurs in the nature of truth in Plato's philosophy, as a consequence of which Being is subordinated to the correct perception of beings. This subordination, Heidegger maintains, characterizes the history of Western philosophy as metaphysics.

Platons Lehre von der Wahrheit(31) is an interpretation of Plato's *Republic*, 514A - 517A; an interpretation of the allegory of the cave. It is a reflection upon the relationship between education (*paideia*), truth (*alétheia*) and the good (*agathon*), with the transformation of *alétheia* as the principal concern.

The allegory of the cave is, for Heidegger, an illustration of the nature and process of *paideia*. At each level of ascent -- within the cave to the light, and out of the cave to the sun -- the individual experiences a painful blinding. Each stage requires an adjustment and transformation in vision. This transformation in vision expresses the turning of the soul from what is disclosed in one region to what is disclosed within another. This is *paideia*, according to Heidegger. The relationship of *paideia*, in this new sense, to *alétheia* is not apparent because, as Heidegger sees it, we have not only misunderstood the nature of education but, more importantly, have misconceived the nature of *alétheia* by conceiving it as "truth." If *paideia* is a transition from one abode to another, affected by the soul's receptivity to what is disclosed within each region, then *alétheia* is disclosure itself: "At first truth meant what was wrested from a concealment. Truth, then, is just such a perpetual wresting-away in this manner of uncovering." (*ibid.* p. 32)

Unlike the case of the two distinct senses in which Heidegger employs the term "metaphysics," the two senses in which he employs the term "truth" are made very explicit. Truth, conceived as *alétheia*, is the plenary mode; truth conceived as a correspondence between an idea and the thing it represents is a derivative mode. Because

Heidegger invariably assigns the correspondence concept of truth to "metaphysics," understood in the restricted sense in which it designates the history of Western philosophy, we have called it the "epistemological" concept of truth. "Ontological" truth, on the other hand, designates disclosure itself -- specifically, Heidegger's attempted disclosure of Being.

Heidegger's earliest systematic analysis of the epistemological concept of truth, as well as rejection of it, occurs in *Being and Time*.

Three theses characterize the way in which the essence of truth has 'been traditionally conceived and the way it is supposed to have been first defined: (1) that the "locus" of truth is assertion (judgment); (2) that the essence of truth lies in the "agreement" of the judgment with its object; (3) that Aristotle, the father of logic, not only assigned truth to the judgment as its primordial locus, but has set going the definition of "truth" as "agreement." (*Sein und Zeit*, 7 Aufl., Tübingen, 1953, p. 214).

In keeping with the original emphasis in *Being and Time*, Heidegger asserts the presence of this conception of truth in Aristotle, Aquinas and Kant, (rather than Plato and Nietzsche), before continuing with his explicit analysis of the "epistemological" concept of truth. In the course of his analysis several important points are raised. The problem underlying what we have called the "epistemological" concept of truth, Heidegger points out, is the nature of the agreement -- *adequatio, correspondentia, convenientia* -- between a judgment and its object: "Every agreement, and therefore 'truth' as well, is a relation. But not every relation is an agreement." (p. 215) Heidegger goes on to raise and answer in the negative the question whether the "agreement" can be conceived as a relation of equality. But "If it is impossible for *intellectus* and *res* to be equal because they are not of the same species, are they then perhaps similar?" (p. 216) With reference to similarity as a possible basis for the relation called "agreement," Heidegger points out that within the judgment itself we must distinguish between the psychological process and the ideal content of judgment. Any "similarity" relation of a judgment to its object (truth) must refer to the ideal content, rather than the psychological processes of judgment. But such a distinction merely raises

an additional problem: "*How is the relation between ideal being and real being to be grasped ontologically?*" (*ibid.*)

To this question, Heidegger maintains, the philosophic tradition has no meaningful answer: "Is it accidental that no headway has been made with this problem in over two thousand years?" (pp. 216-217) In fact, Heidegger goes even further in the sentence which immediately follows the preceding one, by suggesting that this entire procedure -- trying to discern the nature of the *adequatio* which characterizes a truth relationship between *rei et intellectus* -- may be fruitless: "Does the perversion of the problem already lie in the approach, in the ontologically unclarified separation of Real and Ideal?" 38 It is of some importance to emphasize that Heidegger not only discussed and rejected the "epistemological" concept of truth, as early as *Being and Time* (1927), but that he regarded it the sustaining one to be found in Western ontology. And, of course he suggested an alternative as well. The alternative, which I have called "ontological" truth, remains in its essential features the basis for his later critique of Plato and the history of metaphysics.

Heidegger indicates that what "truth" means is not so much a correspondence as it is a disclosure.

(...)

It may be instructive to remember once again that the duality of truth, epistemological and ontological, occupied Heidegger's thought almost from the period immediately after the publication of *Being and Time*, 1927, until 1947: "The publication [on Nietzsche] when reflected upon as a whole, ought to offer an insight into the path of thought which I have travelled from 1930 to the *Letter on Humanism* (1947). For the two small lectures, *Plato's Theory of Truth* (1942) and *On the Essence of Truth* (1943), which were published during the aforesaid period, were already conceived during the years 1930--'31." 42 Heidegger's early concern with "truth" apparently led to a step backward in the history of metaphysics, from Aristotle to Plato, in locating the "decisive" stages in man's forgetfulness of Being, through the transformation of ontological into epistemological truth." (pp. 69-73 some notes omitted)

Notes

Heidegger on truth

"Heidegger's way of understanding the originary phenomenon of truth is to "make clear the mode of being of the cognition itself." His starting point is a proposition that is not based on intuition. Someone says with his or her back to the wall: this picture hangs askew. The proposition embodies the claim to have discovered the picture (as a being) in the "how" (the mode) of its being. The proposition displays this "how" of being in language. In the attempt to verify the proposition by sensuous experience, the recognition, according to Heidegger, is directed only to the intended being (the picture) and not to the proposition. It is directed to the being itself (which is to be verified by perception) in its mode of uncoveredness (*Entdeckt-heir*), i.e., in its showing-itself. Confirmation (*Bewährung*) means this showing-itself of the being in the same way in which it is intended in the proposition.

A true proposition shows the being in its mode of uncoveredness. The phenomenon of "originary truth" does not have the character of correspondence. It is the ground of the concept of truth in the sense of correspondence and propositional truth. By unfolding the meaning of *alétheia* Heidegger shows us a more originary sense of truth as unconcealment (*Unverborgenheit*). He wants to show that this concept coincides with the first and originary concept of truth in Greek thinking. In this primary sense only the discovering human Dasein can be "true" while it is Being-discovering (*Entdeckend-Sein*). On the other hand, beings (*Seiendes*) that we can find in the world can only "be" in a secondary mode, i.e., as being-discovered (*Entdecktsein*). They can only make a claim to uncoveredness. Their fundament is the Being-discovering of the human Dasein. The being-true of a discovered being is only possible as being discovered by human Dasein as being-in-the-world.

The authentic Being of Dasein, the being-in-the truth, presupposes disclosedness (*Erschlossenheit*) of the world in states-of-mind (*Befindlichkeiten*), understanding, and discourse, i.e., the

constitution of the being (*Seinsverfassung*) of human Dasein as thrownness (*Geworfenheit*) and project (*Entwurf*). The mode of being of Dasein is characterized equiprimordially (*gleichursprünglich*) by the possibility of both authenticity (being-in-the-truth) and the deficient mode (Verfallsform) of inauthenticity. In the mode of the "they" (das Man), of obstruction (*Verstelltheit*), of gossip (*Gerede*), Dasein is in untruth. Thus the being-in-the-world of human Dasein is determined at the same time by truth and untruth. We must always fight anew for the truth of Dasein (Being-discovering). Following Heidegger, the negative expression "a-létheia" expresses the fact that hiding itself is a main characteristic of Being. In the hiding-itself of Being, human Dasein is hidden for itself in the mode of untruth.

Heidegger wants to make evident how the transition from the originary concept of truth as *alétheia* to "correspondence" came about. He wants to make clear that correspondence is only a derived form of truth: in a proposition Being should be displayed in the mode of its uncoveredness. In the inauthentic forms of mere reproducing and hearsay, the proposition becomes itself something ready-to-hand (*Zuhandenes*). Thus we have to engage in the demonstration of the uncoveredness that is preserved in the proposition. In this way the relation between proposition and discovered being then itself becomes something present-at-hand (*Vorhandenes*) and can be understood as a correspondence of proposition and being (*intellectus and res*). The fact that we are used to disregarding the originary dimension of truth is an aspect of our forgetfulness of Being (*Seinsvergessenheit*).

The originary dimension of truth in human Dasein "is given" (*gibt es*) only as long as there is Dasein. All truth is relative to the being of Dasein. Thus the claim that there could be "eternal truth" seems to Heidegger to be "fantastic." Against the background of this relativity of truth to the being of Dasein, Heidegger asks anew: why must we presuppose that truth "is given"? His answer is that the possibility of truth (authenticity) and untruth (inauthenticity) belongs to the facticity of human Dasein. From the point of view of existential ontology, the being of human Dasein (its disclosedness) and truth are synonyms." (pp. 711-712)

From: Dieter Lohmar, *Truth*, in: Lester Embree et alii (eds.), *Encyclopedia of Phenomenology*, Dordrecht: Kluwer 1997.

Heidegger on Alétheia

"alétheia and truth: Alétheia is Greek for 'truth; truthfulness, frankness, sincerity'. Aléthés is 'true; sincere, frank; real, actual'. There is also a verb, alétheuein, 'to speak truly, etc' (cf. GA XIX, 21ff.). The words are related to lanthanein, with an older form léthein, 'to escape notice, be unseen, unnoticed', and lithe, 'forgetting, forgetfulness'. An initial a- in Greek is often privative, like the Latin in- or the Germanic un-. (The 'privative alpha' occurs in many Greek-derived words: 'anonymous', 'atheism', etc.) Aléthés, alétheia are generally accepted to be a-léthes, a-létheia, that which is 'not hidden or forgotten', or he who 'does not hide or forget'.

We reach the 'essence of truth', the 'openness of the open', from two directions: from 'reflection on the ground of the possibility of correctness (adaequatio)' and from 'recollection of the beginning (alétheia)' (GA LXV, 338). The first procedure is characteristic of *Being and Time* and early lectures, the second of later works. But early on Heidegger says that alétheuein is 'to take out of hiddenness [Verborgenheit], to uncover [entdecken]' (GA XXII, 25. Cf. GA XXI, 131; *Being and Time*, 33, 219); alétheia is 'uncovering' (GA XXI, 162); and aléthes is 'unhidden [Unverborgen(es)]' (BT, 33, 219). This has three implications: 1. Truth is not confined to explicit assertions and discrete mental, primarily theoretical, attitudes such as judgements, beliefs and representations. The world as a whole, not just entities within it, is unhidden - unhidden as much by moods as by understanding. 2. Truth is primarily a feature of reality - beings, being and world - not of thoughts and utterances. Beings, etc. are, of course, unhidden to us, and we disclose them. Heidegger later coins entbergen; Entbergung; Entborgenheit, 'to unconceal; -ing; -ment', since unlike unverborgen, they can have an active sense: 'aléthes means: 1. unconcealed [entborgen], said of beings, 2. grasping the unconcealed as such, i.e. being unconcealing' (XXXI, 91). But beings, etc. are genuinely unconcealed; they do not just agree with an assertion or representation. 3. Truth explicitly presupposes concealment or hiddenness. DASEIN is in 'untruth [Unwahrheit]' as

well as truth. In *Being and Time* (222, 256f.) this means that falling Dasein misinterprets things.

'Untruth' is not plain 'falsity', nor is it 'hiddenness': it is 'disguisedness [Verstelltheit]' of the truth (GA XXXI, 91). Later, 'untruth' is still not 'falsity', but 'hiding, concealing [Verbergung]' (GA LXV, 362). What conceals is no longer man, but being. There are two types of unconcealing: (a) of the open, the world or beings as a whole; (b) of particular beings within this open space. The first type (a) involves concealment: everything was hidden before the open was established, and concealment persists in that the open reveals only certain aspects of reality, not its whole nature. The second type (b) involves a concealment that we overcome 'partially and case by case' (GA LXV, 338f.). Plato errs in assimilating truth to light. We lose the idea of hiddenness and thus the privative force of a-létheia: the light is constant - never switched on or off - and reveals everything there is to anyone who looks. We lose the idea of the open, which must persist throughout our unconcealing of beings: a single light cannot account both for the openness of the open and for the unconcealing of particular entities (LXV, 339).

Plato's error was fateful. He - not Aristotle, who did his best to repair the damage (*Nietzsche* II, 228 / *Nietzsche* IV [English translation], 171) - initiated the decline of a-létheia into 'correctness' and truth as agreement (GA XXXIV, 21ff; *Platons Lehre von der Wahrheit*, 201ff./ 215ff.). Alétheia was originally the basic feature of phusis (roughly, 'nature') and thus 'essentially rejects any question about its relation to something else, such as thinking' (LXV, 329). In Plato it 'comes under the yoke of the idea' (*Platons Lehre von der Wahrheit*, 228). Idea, from the Greek idein, 'to see', refers, on Heidegger's account, to the visual 'aspect [Aussehen]' of entities. The ascent of the prisoners out of the cave is a progressive 'correction' of their vision of this idea and the entity whose idea it is. Hence alétheia is no longer primarily a characteristic of beings: it is 'yoked' together with the soul, and consists in a homoiósis, a 'likeness', between them. Homoiósis has since become adaequatio and then 'agreement', and since Descartes, the relation between soul and beings has become the subject-object relation, mediated by a 'representation', the degenerate descendant of Plato's idea. Truth becomes correctness,

and its 'elbow-room [Spielraum]', the open, is neglected (GA LXV, 198, 329ff.)." (pp. 13-14)

Notes

"In references to Heidegger's texts, a slash separates the pagination of the German work from the pagination of the published English translation".

Heidegger Gesamtausgabe, Frankfurt: Klostermann 1975ss. = GA

From: Michael Inwood, *A Heidegger Dictionary*, Oxford: Blackwell Publishers 1999.

The "Romanization" of truth: from ἀλήθεια to veritas

"As Heidegger puts it elsewhere, in Plato and Aristotle beings with the *gigantomachia*, the struggle between Being and beings, for Being is now understood as the highest or first being (GA [*Gesamtausgabe*] vol. 33, pp. 24, 43-44; cf. *The End of Philosophy* pp. 9-10). As he explains in his wartime Parmenides lectures, in and with the philosophical tradition's understanding of truth and falsehood, *aletheia* is opposed to *pseudos*, to falsehood in the sense of incorrectness, which displaces the inceptive Greek senses of unconcealing and concealing (GA Vol. 54, pp. 24-56). The translation of *aletheia* as *veritas* is related to the political-moral economy of ancient Rome, and therewith, Heidegger makes clear, to the manifold successors to Rome: medieval Christianity, modernity, Nietzsche, and--I agree with William V. Spanos on this point-- National Socialism (pp. 57-72).(14)

The Latin *falsum* has the sense of "bringing to a fall" or "downfall," which is "only a subsequent effect [*Wesensfolge*] within the essential domain [*Wesensbereiches*] of dissembling and concealing which makes up the essence of *pseudos*" (p. 58).(15) "Imperium" and the "imperial" constitute the "essential domain" decisive for the "experiential domain" (*Erfahrungsbereich*) in, from, and for which "bringing to a fall" acquires its status as the designation for the counter-essence of "what the Greeks experience as *alethes*, the 'unconcealing' and the 'unconcealed.'" The experience of *imperium* is that of "command," of the taking over of a territory, which is ruled

by commandment. "Command," then, is the "essential ground of sovereignty" (*Wesensgrund der Herrschaft*) and, moreover, describes the characteristic actions of the god of the Old Testament and the gods of Rome, but not those of Greece (p. 59). In a further specification, "command" determines Roman law and right, *ius* and *iustum*; *iustitia* "has a wholly other [*ganz anderen*] essential ground than that of *dike*, which arises from *aletheia*." "Being superior" (*Obensein*) belongs to "command" and is the "constant surmounting [*Überhöhung*] of others, who are thereby the inferiors [*Unteren*]." Surmounting requires the power to "oversee" (*übersehen*), which means, therefore, to "dominate" (*beherrschen*) (59-60). The "overseeing" of *imperium* requires constant "action," by which enemies or rivals will be brought to fall through "'direct' attack" (*Ansturm*) or "subterfuge" (*Hintergehen*) or "trick," which, "not accidentally," is an "English" word (p. 60). Those who fall are not destroyed but rather "raised up" (*aufgerichtet*) within the boundaries established by those who rule; this "fixing" (*Abstecken*) is Roman peace. Indeed, the greatness of the imperial, Heidegger writes, lies in the subterfuge by which it secures its dominion. The expansion of early Rome through treaties and treachery shows this (pp. 60-61).

The "Romanizing" of the Greeks conditions not only all subsequent understanding of them in the history of the West but also the historical and metaphysical *Auseinandersetzung* of the modern world and antiquity. Even Nietzsche's metaphysics, as a modern attempt to recover antiquity, is conditioned by Rome and thus is ultimately "unGreek." The Roman experience of beings, encountered under the "Roman stamp" (*der Romisch Prägung*), reaches into Christianity and hence to the medieval and modern ages (pp. 64-72; cf. *The End of Philosophy* p. 13). "Romanization in the essential sense of the Greco-Roman historical domain," Heidegger writes, must be understood as a "change in the essence of truth and Being"; it is an "authentic event [*Ereignis*] in history" (p. 63). The transformations of *aletheia* and *pseudos* as correlates with the imperial experience mark an epochal boundary. "The imperial as a mode of Being of historical collectivities [*Menschentums*]," Heidegger explains, is not the ground for the essential change of *aletheia* into truth as correctness but is rather a following of the

enfolding of truth into the meaning of correctness (pp. 62-63). Heidegger makes clear that there is something "make-shift" (*Notbehelf*) in the phrase "change in the essence of truth," which does not speak clearly enough of the way "in which it unfolds itself and history 'is' (wie sie selbst west and die Geschichte 'ist']" (p. 63). This process exhibits the inner connection of the coherent modes of action which ground Western history, and is not to be understood causally." (pp. 180-181)

Notes

(14) William V. Spanos, *Heidegger and Criticism: Retrieving the Cultural Politics of Destruction*, pp. 148-49, 291 n. 22. Cf. Véronique M. Fóti, "Aletheia and Oblivion's Field: On Heidegger's Parmenides Lectures," and especially Éliane Escoubas, "Heidegger, la question romaine, la question impériale: Autour du 'Touruant.' "

(15) Heidegger agrees with the Brothers Grimm, who understood *falsch* as an "un-German" word. He goes on to add *verum* to this list (G54 57, pp. 67-73). For other such words, see *The Principle of Reason* (e.g., p. 29).

Selected Bibliography on Heidegger's Interpretation of *Aletheia* as Unconcealment

Heidegger's main texts on Alétheia and Veritas

Abbreviations: GA = Gesamtausgabe (Collected works); SS = Summer semester (from May to July); WS = Winter semester (from November to February)

In his work *Besinnung* (GA 67 p. 107), Heidegger give a list of nine texts where he examines the question of truth (I cite from the English translation, *Mindfulness*, translated by Parvis Emad and Thomas Kalary, New York, Continuum, 2006, pp. 89-90:

"Question of Truth: A directive.

1. *Vom Wesen der Wahrheit* (lecture of 1930) (1); in addition, interpretation of the simile of the cave in the lecture-course of 1931/32 (2)
2. *Vom Ursprung des Kunstwerks* (Freiburg lecture of 1935) (3)
3. *Vom Ursprung des Kunstwerks* (Frankfurt lectures of 1936) (4)
4. *Vom Wesen der Wahrheit* (lecture of 1937/38) (5)
5. *Die Grundlegung des neuzeitlichen Weltbildes durch die Metaphysik* (lecture of 1938) (6)
6. *Anmerkungen zu Nietzsches II. Unzeitgemässe Betrachtung, Abschnitt VI Wahrheit und Gerechtigkeit*, lecture-seminar of 1938/39 (7)

7. Lecture course of summer semester of 1939 (Nietzsche, *Wille zur Macht*, III. Buch, Der Wille zur Macht als Erkenntnis) (8)

8. *Beiträge zur Philosophie*, 1936, section: *Gründung* (9)

9. *Zu Aristoteles, Physik B 1 (physis), third term of 1940, pp. 22 ff. (10)*"

Notes:

(1) To appear in *Vorträge*, GA 80.

(2) See *Vom Wesen der Wahrheit: Zu Platons Hölengleichnis und Theätet*, lecture in the summer semester of 1931/32, GA 34, ed. Hermann Mörchen (Frankfurt am Main: 1988).

(3) To appear in *Vorträge*, GA 80.

(4) See *Holzwege*, GA 5, pp. 1-74.

(5) See *Grundfragen der Philosophie. Ausgewählte "Probleme" der "Logik"*, lecture in the winter semester of 1937/38, GA 45 ed. F.-W. v. Hermann (Frankfurt am Main: 1984).

(6) Published under the title "Die Zeit des Weltbildes", in *Holzwege*, GA 5, pp. 75-113.

(7) See *Zu Auslegung von Nietzsches II: Unzeitgemasse Betrachtung*, lecture-seminar in Freiburg in the winter semester 1938/39, GA 46, ed. Hans-Joachim Friedrich (Frankfurt am Main: 2003).

(8) See *Nietzsches Lehre vom Willen zur Macht als Erkenntnis*, lecture of the summer semester of 1939, GA 47 ed. Eberhard Hanser (Frankfurt am Main: 1989).

(9) See *Beiträge zur Philosophie (Vom Ereignis)*, GA 65, ed. F.-W. v. Hermann (Frankfurt am Main: 1989) pp. 293-392.

(10) On the 'fore-concept' of 'metaphysics', elucidated out of Aristotle's concept of *physis* see *Metaphysik und Wissenschaft*, to appear in GA 76.

The following is a more complete list in chronological order; references are to the German edition of the complete works by Martin Heidegger.

The first date is that of the Gesamtausgabe volume, English translation are cited when available.

1. Heidegger, Martin. 1989. *Phänomenologische Interpretationen zu Aristoteles. Ausarbeitung für die Marburger und die Göttinger Fakultät (1922)*

First German edition 1989; new edition Stuttgart, Reclam, 2003.

Phenomenological Interpretations in Connection with Aristotle. An Indication of the Hermeneutical Situation, in: Martin Heidegger, *Supplements. From the Earliest Essays to Being and Time and Beyond*, edited by John van Buren, New York: State University of New York Press, 2002, pp. 111-145.

On *Aletheia* see: *Eth. Nic. VI*, pp. 129-145.

2. ———. 1994. *Einführung in die phänomenologische Forschung*

Lecture course at the University of Marburg, WS 1923-1924.

GA 17, 1994.

Introduction to Phenomenological Research, Bloomington: translated by Daniel O. Dahlstrom, Indian University Press, 2005.

See Chapter Four: *Going Back to Scholastic Ontology: the VerumEsse in Thomas Aquinas*, pp. 120-147.

3. ———. 1992. *Platon, Sophistes*

Lecture course at the University of Marburg, WS 1924-1925.

GA 19, 1992.

Plato's Sophist, translated by Richard Rojcewicz and André Schuwer, Bloomington: Indiana University Press, 1997.

See in particular:

Preliminary Considerations § 3. First Characteristic of *alétheia* pp. 10-13.

Introductory Part: The Securing of *alétheia* as the Ground of Plato's Research into Being. Interpretation of Aristotle:

Nichomachean Ethics Book VI and Book X, Chapters 6-8;
Metaphysics Book I, Chapters 1-2, pp. 15-155.

4. ———. 1976. *Logik. Die Frage nach der Wahrheit*

Lecture course at the University of Marburg, WS 1925-1926.

GA 21, 1976.

Logic. The Question of Truth, translated by Thomas Sheehan,
Bloomington, Indiana University Press, 2010.

Translated in Italian as: *Logica. Il problema della verità* by
Ugo Maria Ugazio - Milano, Mursia, 1986.

5. ———. 1977. *Sein und Zeit*

First edition 1927. GA 2, 1977.

Being and Time, translated by John Macquarrie and Edward
Robinson (1962); reprinted Oxford: Blackwell, 2000.

Also translated by Joan Stambaugh, New York: State University
of New York Press, 1996.

See § 44: *Dasein, Disclosedness, and Truth*

a) The traditional conception of truth, and its ontological
foundations;

b) The primordial phenomenon of truth and the derivative
character of the traditional conception of truth;

c) The kind of being which truth possesses, and the
presupposition of truth.

6. ———. 1996. *Einleitung in die Philosophie*

Lecture courses at the University of Freiburg, WS 1928-1929.

GA 27, 1996.

Not translated in English.

Italian translation: *Avviamento alla filosofia*, edited by
Maurizio Borghi with the collaboration of I. De Gennaro and G.
Zaccaria, Milano: Christian Marinotti Edizioni, 2007.

See Chapter 3: *Wahrheit und Sein. Vom ursprünglichen Wesen der Wahrheit als Unverborgenheit* pp. 68-124.

7. ———. 1967. *Vom Wesen der Wahrheit*

Lecture given in 1930, first edition 1943.

Reprinted in: *Wegmarken (Essays 1919-1961)*, 1967 pp. 177-202.

GA 9, 1976. Revised and expanded 1978.

On the Essence of Truth, in: Heidegger, *Pathmarks*, edited by William McNeill, Cambridge: Cambridge University Press, 1998, pp. 136-154.

8. ———. 1982. *Vom Wesen der menschlichen Freiheit. Einleitung in die Philosophie*

Lecture course at the University of Freiburg, SS 1930.

Ga 31, 1982.

The Essence of Human Freedom. An Introduction to Philosophy, translated by Ted Sadler, New York: Continuum 2002.

See: Chapter Two, § 9, d, *The Greek Understanding of Truth (alétheia) as Deconcealment. The Being which is True (aléthes on) as the Most Proper Being. The Most Proper Being as the Simple and Constantly Present.* pp. 65-74.

9. ———. 1988. *Vom Wesen der Wahrheit. Zu Platons Höhlengleichnis und Theätet*

Lecture course at the University of Marburg, WS 1931-1932.

GA 34. 1988.

The Essence of Truth. On Plato's Cave Allegory and Theaetetus, translated by Ted Sadler, London, New York: Athlone Press, 2002.

10. ———. 1967. *Platons Lehre von der Wahrheit*

Lecture of 1931/32 revised 1940; first edition 1942, then in 1947 with the *Brief über den Humanismus*.

Reprinted in: *Wegmarken* (Essays 1919-1961), 1967 pp. 203-238 (second edition 1978 pp. 421-438).

GA 9, 1976. Revised and expanded 1978.

Plato's Doctrine of Truth, in: Heidegger, *Pathmarks*, edited by William McNeill, Cambridge: Cambridge University Press, 1998, pp. 155-182.

11. ———. 2001. *Sein und Wahrheit. 1. Die Grundfrage der Philosophie. 2. Vom Wesen der Wahrheit.*
 Vom Wesen der Wahrheit. Lecture course at the University of Freiburg, WS 1933-1934.

GA 36/37 2001.

On the Essence of Truth, in: *Being and Truth*, translated by Gregory Fried and Richard Polt, Bloomington: Indiana University Press, 2010.

12. ———. 1953. *Einführung in die Metaphysik*

Lecture course at the University of Freiburg, Summer Semester 1935.

GA 40, 1983 (First edition 1953).

Introduction to Metaphysics, translated by Gregory Fried and Richard Polt, New Haven: Yale University Press, 2000.

See Chapter Four: *The restriction of Being*, in particular pp. 107-122 and 201-210.

13. ———. 1977. *Der Ursprung der Kunstwerkes*

Written in 1935-36, first edition in: *Holzwege* pp. 1-72, 1950. GA 5. 1977.

The Origin of the Work of Art, in: *Off the Beaten Track*, translated by Julian Young and Kenneth Haynes, Cambridge: Cambridge University Press 2002, pp. 1-56.

Index: a) The thing and the work; b) The work and truth; c) Truth and art; d) Afterword; e) Appendix.

"Heidegger seeks to show the purely revelatory nature of the concept of truth when applied to the intellection of essences which, in 10. A. distinguishes this from the truth of judgements. In his 1925-6 course on logic (*Logik. Die Frage nach der Wahrheit*) Heidegger follows Bonitz in adding a negation (*ouk*) at 1051 b 32-3 and thus reading the passage as saying, 'with respect to these things, we search for what a thing always is and not whether it has this nature or not'. This negation is not to be found in any manuscript and may derive from a comment by pseudo-Alexander, who wanted to see in this passage an allusion to the vision of God. But, for Aristotle the intellection of essences too is infallible in the sense that the only alternative is ignorance. It is expressed in a definition and so does require that we enquire into whether it has this nature or not."

"The purpose of the article is a reassessment of Heidegger's central and dominating assertion on the role of *aletheia* in the origin of Occidental thought. It demands an epoché that allows for transcending resolutely his stance in the horizon of modernity -- as achieved by the distinction of the tasks of "reason" realized in its either "natural" or "mundane" or "conceptual" determination (cfr. H. Boeder, "Seditions", State University of New York Press 1997, ed. by Marcus Brainard). Only the latter has introduced the topic of *aletheia* into philosophy; contrary to Heidegger's assumption of an original concealment of *physis*. Not this, but the thematization of a primary *logos* and its divine revelation motivated the Parmenidean discussion of truth as distinct from human opinion. How then does Heidegger approach the truth in the first epoch of philosophy? Only seemingly. In truth -- *quod erat demonstrandum* -- he deviates in each case and obliterates its

motive thoroughly. He fulfills the modern destiny of thought not to recognise the achievement in conceptual thinking. His is an apocalyptic destiny, that he shares with Marx and Nietzsche -- not approaching to any fulfillment, but exhaustion. In this he is of admirable consequence: that of the "evil eye" (Nietzsche). It dooms necessarily, what was formerly regarded as "metaphysics". What enables to dismiss this assessment properly? In one word: the epoché due to "logo-tectonics".

17. Brancacci, Aldo. 1990. "Le vrai et le droit: la notion d'*orthon* chez Méliossos." In *La naissance de la raison en Grèce. Actes du Congrès de Nice, mai 1987*, edited by Mattéi, Jean-François, 197-206. Paris: Presses Universitaires de France.

"Dans sa *Platons Lehre* Heidegger a consacré des pages fort intéressantes à la mise en évidence du concept d'*orthotés*, dont le philosophe allemand retrouve, à tort, la première formulation chez Platon. Il est bien connu que, pour Heidegger, l'instauration de la notion de *Richtigkeit* marquerait l'avènement d'une primauté de l'*idea* sur l'*alethéia*: donc la constitution d'un concept de "cohérence" qui se substituerait à la notion de vérité comme dévoilement (*Unverborgenheit*). Dans cette perspective, l'*orthotés* en viendrait à exprimer l'adéquation entre le percevoir et l'énoncer, le se diriger (*Sichrichten*) qui se conforme (*gleich an*) à ce qui doit être vu (*was gesichtel sein soll*), condition préalable d'une conception de la vérité comme adaequatio (19). Les textes de Méliossos que j'ai examinés montrent combien cette interprétation -- qu'Heidegger lui-même a rétractée dans un écrit de 1964, sans pourtant mettre en question la compréhension du concept d'*orthothes* qu'elle suppose (20) -- doit être revue et repensée. En effet, si l'on peut admettre que la constitution de la notion d'*ôrthón* est liée à l'instauration d'une conception du vrai qui pose le Sujet par rapport à l'Objet, il n'en reste pas moins que cette notion apparaît comme la conséquence de la thèse

ontologique elle-même, qui l'engendre nécessairement et dont elle continue de dépendre. En d'autres termes, c'est à partir des thèses éléatico-mélistiennes qui posent l'être que s'élabore un concept d'*orthon* envisagé comme le critère qui rend possible la connaissance, ou qui la rendrait possible au cas où le *ghinoskein* aurait comme objet la réalité: *ta onta*. Dans les deux cas, la notion de relation est une notion centrale et désigne tantôt un lien positif, constitutif, entre le principe de la réalité et l'articulation de l'être en concepts, tantôt l'échec de la relation qui s'instaure, au sein d'un monde dépourvu de fondement ontologique, entre les facultés de la connaissance et leur objet, entre la réalité, toujours présupposée, et son apparaître. Dès lors, je crois être en mesure de conclure que le concept mélistien de rectitude exprime une notion éminemment catégoriale: *orthon*, entendu donc en tant qu' "orthogonalité", où Sujet et Objet sont à la fois unis et distincts." pp. 205-206

"Heidegger's attack on metaphysics is equivalently an attack on Platonism. Brief comments about Plato are not uncommon in Heidegger's published works, but there is only one published essay devoted exclusively to a text of Plato: *Plato's Doctrine of Truth*.

This essay's principal thesis is that Plato transformed the notion of truth from unconcealment (*Unverborgenheit*) to correctness. Though this was written at a time (1930/31) when Heidegger's thought was making the famed and controverted turn (*Kehre*), the critique of Plato remains essentially the same throughout Heidegger's work. There is, of course, the late concession in *The End of Philosophy and the Task of Thinking* that "the assertion about the essential transformation of truth [in Plato] ... from unconcealment to correctness is... untenable." But, as we will see below, this does not alter Heidegger's unrelenting critique of Plato. Unlike other aspects of Heidegger's work, his Plato critique has not elicited widespread discussion, presumably because he himself wrote so little on Plato. The best responses to Heidegger's essay on Plato have come from those close to and sympathetic with Heidegger's work yet unsympathetic with his Plato interpretation."

"Martin Heidegger insists, in his 1941-42 lecture course on Friedrich Hölderlin's "Andenken," that it is the poet who institutes (*stiftet*) history, whereas the thinker establishes its foundation (*grundet*). In his Parmenides lectures of the following year, Heidegger interlinks this poetico-philosophical understanding of historical origination with the problematic of *aletheia* which, by his own account, had preoccupied him intensely since the early 1930s, and which he then still understood in the sense of truth, rather than in the later sense of the pure opening (*Lichtung*). Although, as Jürgen Habermas points out, Heidegger "rigidly maintained the abstraction of historicity (as the condition of historical existence itself) from actual historical processes," his effort to think historicity as rooted in the aletheic "power to bring to word," which he pits against "a crude biological interpretation of history" (PL 83), carries historicopolitical import. This import and concern are not explicitly thematized; but they account for the fact that, as Manfred Frings notes, "long stretches of the lecture hardly deal with Parmenides himself" but seem to ramble over a bewildering plethora of topics. Frings advocates conjoining the text with Heidegger's 1943-44 lectures on Heraclitus which continue to develop a similar problematic. The present essay, however, will focus strictly on the Parmenides lectures. It will seek to show not only that this text is meaningfully organized and internally coherent, but also that it reveals certain important aspects of the historicopolitical dimension of Heidegger's thought." pp. 71-72 (notes omitted).

37. ———. 1974. "Protagoras Re-discovered: Heidegger's Explication of Protagoras' Fragment." *Journal of Value Inquiry* no. 8:112-123.

"This paper is written against the background of Heidegger's grasp of the destruction of metaphysics and its end in Nietzsche's concept of world, history and values through absolute subjectivity (over-man). It traces pre-socratic thought in light of the absence of subjectivism in Protagoras by showing how his fragment deals with being and nothingness, not with subjective relativism (sophism). Heidegger's identification of 'aletheia' and 'chaos' (Hesiod) is complemented by a novel look at the origin of language and myth."

38. ———. 1988. "Parmenides: Heidegger's 1942-1943 Lecture Held at Freiburg University." *Journal of the British Society for Phenomenology* no. 19:15-33.

"In what follows, I wish to present a number of essentials of Heidegger's lecture, originally entitled, "Heraclitus and Parmenides," which he delivered at Freiburg University in the Winter Semester of 1942/1943. This was at a time when the odds of World War II had turned sharply against the Nazi regime in Germany. Stalingrad held out and the Germans failed

to cross the Volga that winter. Talk of an impending "invasion" kept people in suspense. Cities were open to rapidly increasing and intensifying air raids. There wasn't much food left.

It is amazing that any thinker could have been able to concentrate on pre-Socratic thought at that time. In the lecture, there are no remarks made against the allies; nor are there any to be found that would even remotely support the then German cause. But Communism is hit hard once by Heidegger, who says that it represents an awesome organization-mind in our time.

There are two factors that somewhat impeded my endeavor of presenting the contents of this lecture:

1. Heidegger had originally entitled the lecture "Heraclitus and Parmenides." The 1942/43 lecture was followed in 1943 and 1944 by two more lectures on Heraclitus. When I read the manuscripts of the 1942/43 lecture for the first time, I was stunned that Heraclitus was mentioned just five times, and, even then, in more or less loose contexts. I decided that the title of the lecture should be reduced to just "Parmenides" in order to accommodate the initial expectations of the reader and his own thought pursuant to having read and studied it.

2. While reading the lecture-manuscripts for the first time, another troubling technicality came to my attention: long stretches of the lecture hardly even deal with Parmenides himself, and Heidegger seems to get lost in a number of areas that do, *prima facie*, appear to be irrelevant to Parmenides. And Heidegger was rather strongly criticized for this in the prestigious literary section of the *Frankfurter Allgemeine Zeitung* to the effect that it was suggested that I could have done even better had I given the lecture an altogether different title and omitted the name Parmenides."

(Notes omitted).

39. ——. 1990. "Heraclitus: Heidegger's 1943 Lecture Held at Freiburg University." *Journal of the British Society for Phenomenology* no. 21:250-264.

"In what follows I wish to present the pivots of thought of the second of three lectures on Pre-Socratic thought Heidegger

held during the period of 1942-1944. The content of the first, *Parmenides*, was covered in this Journal's Vol. 19, No. 1 (January 1988). When Heidegger delivered the second lecture that we are about to familiarize ourselves with, he was fifty-five years of age, and yet to live another thirty-three. During this remaining time of his life he gained global attention, albeit not always acceptance of his thought.

The summer of 1943 during which the second Pre-Socratic lecture was delivered, entitled: *Heraclitus. The Inception of Occidental Thought*, was marked by the end of the African and Sicilian campaigns of World War II, the breakdown of the German-Italian axis, and Mussolini's downfall. As was the case with the 1942/43 *Parmenides* lecture, Heidegger appears to have secluded himself from the turmoil of the War. His thought appears to dwell near the Inception of Western thought, out of which his own time, too, must have grown.

As I indicated at the beginning of the transferring into English of the pivotal points of the *Parmenides* lecture, the three lectures - as can clearly be seen from what follows - must be studied, and comprehended, in conjunction with one another in order to fully comprehend his doubtless novel contribution to the study of the Pre-Socratics.

On Heidegger's own invitation in 1976, I edited this second, and the third (1944) *Heraclitus* lectures for Vol. 55 of the German *Gesamtausgabe* (Collected Edition). Concerning the general state of the manuscript involved, I wish to refer the reader to my technical remarks to the coverage of the *Parmenides* lecture.

The last of the three Pre-Socratic lectures by Heidegger, entitled: *Logic. Heraclitus' Doctrine of Logos* (1944), will also appear in this Journal."

40. ——. 1991. "Heraclitus: Heidegger's 1944 Lecture Held at Freiburg University." *Journal of the British Society for Phenomenology* no. 22:64-82.

"There are two crucial points to be made concerning our third pre-Socratic lecture:

(1) The main goal of the 1943 Heraclitus lecture had been to establish an arrangement of ten Heraclitian fragments in terms of "thinking proper" (*eigentliches Denken*). Heidegger thought through ten fragments of which the second through the tenth were "falling into", as I then put it, the first, namely, Diels fragment 16. This "first" fragment we showed to be not "first" in terms of a sequence; rather, it showed itself as both center for, and surrounding the other eight. Further, it was shown that Heidegger's first fragment (16) does not "contain" the rest, but that it is "nearest" the "inception" itself of thinking-proper. Thus, the arrangement of the nine fragments falling into the scope of 16 ensued from thinking-proper, and neither from logical nor speculative argument.

(2) By contrast, the present 1944 Heraclitus lecture does not continue on from what had in 1943 been achieved. Heidegger does not investigate further fragments in the light of the exceptional, and inceptional, significance of fragment 16. Surprisingly enough, in 1944 fragment 16 is mentioned only three times (320, 350, 391). Instead, he now tells us that he will check into fragments "chosen" because of their containing the word "logos". This very different, now objective procedure brings with it that the 1944 lecture is only loosely tethered to the preceding two lectures which, we saw, are much intertwined. One such loose tether was already hinted at in the coverage of the 1943 lecture when we stated: "Logic, too, cannot match thinking proper. It cannot reach into the inception from which its own territory arises. The next 1944 Heraclitus lecture will have to say a lot more on this point." Some of the other links to the previous lectures will be shown in what follows.

The first 1943 Heraclitus lecture I divided into two parts in its German edition in Volume 55 of the Collected Works (*Gesamtausgabe*). I, on the other hand, divided the manuscripts of the 1944 lecture into three parts. Heidegger left it to the judgment of the editors that such divisions and other minor emendations be made to secure the maximum of clarity. My threefold division of the manuscripts will guide us in the following coverage of the lecture:

1. Logic: Its Name and Subject-Matter.
 2. The Staying-Away of Original Logos and the Paths of its Access.
 3. Regress into the Original Region of Logic."
41. ———. 1991. "Heidegger's Lectures on Parmenides and Heraclitus (1942-1944)." *Journal of the British Society for Phenomenology* no. 22:197-199.
- "This is a discussion of the coverage of three Lectures Heidegger held on Parmenides and Heraclitus from 1942 to 1944. It is designed on the background of his personal experience during the trip he made to Greece in 1962 as recorded in his diary. The question is raised whether his 1943 arrangement of 10 Heraclitus fragments could be extended by "refitting transformations" of other fragments. The three Lectures are seen as tethered to Heidegger's 1966/67 Heraclitus Seminar. Central to his trip was the island of Delos where he seemingly experienced the free region of Aletheia. A "fragment" in his diary is suggested as a motto for all three Lectures."

"First, it is shown that Gethmann has raised a convincing objection to Tugendhat's interpretation, according to which, Heidegger's definition of truth goes beyond that given by Husserl. Contrary to Tugendhat's view, Gethmann argues that Heidegger has not moved away from Husserl's definition of truth. Gethmann claims that Heidegger rather uses "truth" with two different meanings, one referring to the truth of assertions, whereas the second ("truth in a more primordial sense") describes the preconditions for the first. Secondly, with regard to this relationship, it is argued that Heidegger and Gethmann cannot provide an adequate analysis, primarily because truth in the primordial sense does not account for the difference between being true or false."

51. Grieder, Alfons. 1988. "What Did Heidegger Mean by "Essence"?" *Journal of the British Society for Phenomenology* no. 19:64-89.

"The word 'Wesen' ('Essence') frequently occurs in Heidegger's writings. It is indeed one of his key-words. Unless we understand what he means by it we are unlikely to understand his philosophy. After all, philosophy was for him essential thinking (*wesentliches Denken*). Yet 'Wesen' is also one of his most enigmatic terms and greatly in need of elucidation, despite the fact that he commented on its meaning in many places, scattered throughout his writings, from the thirties right through to the seventies. It is not only tedious to collect these comments but, as we shall soon see, difficult to understand and adequately interpret them.

In the following I shall focus on the three periods 1925-30, 1934-38, and 1949-57. In all three periods Heidegger's meaning of 'Wesen' is inseparable from that of 'Sein' ('Being') and 'Wahrheit' ('Truth'), and by the fifties its connection with 'Language', 'World' and 'Thing' assumes a new significance. From the mid-thirties he uses the word in an increasingly unfamiliar and puzzling manner. Its change of meaning is closely associated with the famous 'turn' ('Kehre'). One has to come to grips with this metamorphosis, otherwise what the later Heidegger has to say, for instance on art and technology, will hardly be intelligible.

Unfortunately, few commentators have bothered to analyse this term 'Wesen', and to my knowledge none has done so in sufficient detail and in a way which makes sense to the uninitiated too. Obviously, little is achieved by simply repeating Heideggerian phrases and assertions as if they were crystal-clear. (As a rule they are not at all.) I am aware, of course, that the following remarks and analyses are still in some sense provisional and cannot fill this important gap in the Heidegger literature: they will almost certainly have to be complemented and revised in the light of the many still outstanding volumes of the *Gesamtausgabe*."

54. Hahn, Robert. 1979. "Truth (*alétheia*) in the context of Heidegger's critique of Plato and the Tradition." *Southwest Philosophical Studies* no. 4:51-57.
- "According to Heidegger, the Pre-Socratic experience of "truth" as "unconcealment" is transformed by Plato so that "truth" becomes "correctness of perception" -- this marks both the origin of the "western tradition" and its decline. The paper examines Heidegger's "fourfold", a twentieth century expression of truth as "unconcealment", as a constructive response to the shortcomings of the "Tradition". Finally it is suggested that one way of reading what I call the "fourfold" in Plato's "Philebus" and "Timaeus" is to see Plato's project as the very one which Heidegger sets out to accomplish and which he denies to Plato."

63. ———. 2004. *Questioning Platonism. Continental interpretations of Plato*. Albany: State University of New York Press.

See Chapter One: *Heidegger's Plato* pp. 17-122.

"I shall begin with Heidegger's early (winter semester, 1924-25) lecture course on Plato's *Sophist*, where Heidegger, still very strongly under the influence of Husserlian phenomenology, interprets Plato (and Aristotle) largely from the standpoint of the existent to which they prepare the way for something like philosophy as scientific research in the phenomenological mode. From this vantage point, as we shall see in detail, Plato is to be criticized as falling far short of Aristotle. Since this is the only work of Heidegger's that engages in a thorough interpretation of an entire Platonic dialogue, I shall examine it in the greatest detail. The second text to be considered will be, significantly, Heidegger's only formally published work on Plato, "Plato's Doctrine of Truth," from 1931 to 1932 (although I shall also consider briefly several lecture courses from the same time period). There, Plato will again be criticized, but this time more as the thinker who begins the fateful transformation of *aletheia*, truth as "unhiddenness," into truth as "correctness," and so the beginning of the "forgetting of Being" that becomes the Western metaphysical tradition. As such, Plato's thinking is, so far as possible, to be got beyond, if not indeed overcome. Later, as Heidegger becomes more oriented toward the poetical and even mythic, both in his writing style and the matters he addresses, he becomes somewhat more sympathetic to Plato and to the dialogue form, while remaining in the end still profoundly suspicious of Plato's thought. I shall consider third, then, an example from this later, more poetic period in Heidegger's thinking, his 1943-44 lecture course on *Parmenides*. I shall there suggest that Heidegger's own

movement away from philosophy as science and toward a more poetic way of thinking ought to make him much, much more sympathetic to Plato than he in fact becomes. Finally, I shall consider two works of Heidegger's in which Plato is never mentioned, but in which it might be argued that the influence of Plato is -- or ought to be -- most apparent: Heidegger's two later attempts at writing dialogues, the "Dialogue with a Japanese," and "Conversation on a Country Path." There, we shall evaluate Heidegger's engagement not so much with his assessment of Plato's so-called doctrines, but with the Greek's choice of writing format." pp. 17-18

"Do the intimations of mortality in Heidegger's thought evanesce once he has abandoned the project of fundamental ontology? Or does the object of his fundamental ontology — finite existence as the site of all understanding of Being endure even after the meta ontological and frontal ontological turns? Does not the site of such understanding of Being, broaching as it does the questions of the *truth* and the *clearing* of Being, persist in bearing traces of finitude? That truth is always accompanied by untruth, and clearing by concealing and withdrawal — are these not also intimations of mortality in Heidegger's work?

The following three chapters will try to trace these intimations in Heidegger's interpretation of truth as *alétheia* and of the clearing of Being as revealing concealing. They will do so by focusing on three quite specific themes: first, Heidegger's early "discovery" of the question of "truth" and "being" in Brentano's Aristotle: second, the burgeoning notion of "the clearing" in *Being and Time* and in the later work; and third, the question of the imputed "turning" from Man to Being in Heidegger's career of thought.

Let me now address the first of these themes. One of the four senses attributed to "being" in Franz Brentano's dissertation on Aristotle is *on hós aléthes*, "being in the sense of the true." Does Brentano's account of "being in the sense of the true" have significant bearing on Heidegger's response to *alétheia* as the unconcealment of beings in presence? This chapter tries to

- answer that question by offering (1) a general account of Brentano's thesis, (2) a detailed résumé of its third chapter, concerning *on hós aléthes*, (3) a condensed treatment of what John C. Caputo has called Heidegger's "alethiological" notion of Being, and (4) a summary of results." (p. 67)

"A historical discussion of the intellectual relationship between Husserl and Heidegger and an analysis of articles on Plato's cave allegory by Heidegger and Fink demonstrates: (1) that Heidegger's project is true to (not contrary to) the spirit of Husserl's phenomenology by its being a more radical quest into "presuppositions" questioning the "givenness" of the structure of intentionality; (2) Fink's "what does the phenomenology of Edmund Husserl want to accomplish," throws light on the discussion of Bildung in Heidegger's "Plato's doctrine of truth." Fink and Husserl perceive the allegory as primarily concerned with "education;" Heidegger perceives the "unsaid" of the shift in the essence of truth from *aletheia* to *adaequatio intellectus et rei*, indicating a difference of focus for both projects rather than contradictions between them; and (3) essay concludes by suggesting that an adequate "phenomenological" description of the constituting of meaning in consciousness requires sensitivity to both moments: Husserl's description of intentionality and Heidegger's Seinfrage."

Reprinted in: Harold A. Durfee (ed.) - *Analytic philosophy and phenomenology* - The Hague, Martinus Nijhoff, 1976, pp. 125-146.

"In *Being and Time* Heidegger characterizes the traditional concept of truth, which comprises three theses:

- (1) The 'place' of truth is the statement (the judgment).
- (2) The essence of truth lies in the 'correspondence' of the judgment with its object.
- (3) Aristotle held theses (1) and (2).

In a later work, *On the Essence of Truth*, he gives the following account of the traditional concept of truth. "A statement is true if what it means and says corresponds with the thing about which it speaks. Also we say here : it agrees (*es stimmt*). But now, what agrees is not the thing but rather the proposition." (p. 7).

Heidegger goes on to say that this agreeing has a twofold character "... on the one hand the agreement of a thing with is meant in advance about it and on the other hand the correspondence of what is meant in the statement with the thing." (*ibid.*) That is, since the agreement or correspondence is a relation between two "terms" -- the statement and the thing

presupposes that both terms can enter into the relation, i.e., agree with one another. The two-fold character of this agreement is determined by these two "aspects" of the relation: the first is the "objective" aspect, where the thing corresponds to the statement or what is meant by the statement, the second is the "linguistic" aspect where the statement or what it means corresponds to the thing. The first is "objective truth," the second "propositional truth."

In this essay I propose to discuss Heidegger's first two theses about the traditional concept of truth (1) and (2) above in terms of Wittgenstein's own concept of truth as it is presented in his *Tractatus Logico-Philosophicus*. My main purpose in doing so is to see to what extent Heidegger's criticism of this concept is relevant to Wittgenstein and what this criticism really is. That is, I wish to generate a philosophical "dialogue" between these two thinkers who, on the face of it, are worlds apart in their philosophical methods, aims, interests, and conclusions. Many

philosophers today, especially those in the English-speaking world, would seriously doubt the possibility of such a dialogue. Even if they admitted that Heidegger's views are meaningful and important they might suppose that what he says is not really relevant to the kinds of problems Wittgenstein, or any other philosopher sharing his philosophical tradition, is concerned with. Thus, my first task is to show what Heidegger says about the traditional concept of truth is relevant to Wittgenstein. Second, in order to show the force of his criticisms they must be presented in such a way that they can be seen to meet Wittgenstein on his own terms. To achieve this a mere confrontation of two opposing philosophical positions must be avoided, at least so far as this is possible. Such an arbitrary confrontation would simply beg the question and lead nowhere. Rather, it must be shown that Heidegger's criticisms point out the inadequacies of Wittgenstein's position from within, and that these inadequacies point to, and can only be overcome by, Heidegger's own position. Heidegger's criticism of the traditional ("correspondence") theory of truth is that it is ultimately inadequate, i.e., it is only a partial and hence dependent explication of the nature of truth, and thus requires a foundation in a radically different understanding of truth, which understanding Heidegger claims to provide. Thus, I must try to show the nature of, and reasons for, this partiality and dependence. In the end, I hope to have indicated why a radically new rethinking of the essence of truth is necessary, and that Heidegger himself has opened up the path for this rethinking. I have of this paper. I will begin by discussing thesis (2) (above) - that the essence of truth is a correspondence between judgment and object - and will then turn to thesis (1) -- that the "place" of truth is the judgment. However, I wish to emphasize that this division is adopted only for the purposes of exposition. It will be seen that they are both intimately related, and that this relationship is a necessary one." (Notes omitted). pp. 125-127 of the reprint.

85. Nwodo, Christopher. 1979. "Friedlander *versus* Heidegger: A-létheia Controversy." *Journal of the British Society for Phenomenology* no. 10:84-93.

"Professor Heidegger is certainly one of the leading philosophers, perhaps the leading philosopher of our time. He has influenced, and continues to influence, in a profound and far-reaching manner, the thinking of contemporary scholars in various fields. He has also given rise to many a controversy particularly in connection with the way he interprets other philosophers and the basic concepts of traditional philosophy. In this article (1) some attempt will be made to analyze one (2) such controversy, namely, Professor Friedlander's disagreement with Heidegger over the latter's interpretation of *a-letheia*. This paper is therefore divided into three parts. Part One deals with a brief analysis of Friedlander's criticism. Part Two attempts a short sketch of the development of the concept of *a-letheia* in the two works of Heidegger cited by Professor Friedlander. Part Three concludes with an evaluation of both views.

Friedlander's criticism is limited to two works of Heidegger, *Sein und Zeit* (1927) (3) and *Platons Lehre Von der Wahrheit* (1947), (4) where Heidegger deals with the concept of *aletheia*. In these works Heidegger reconstructs *alethes* and *aletheia* as *a-lethes* and *a-letheia* (with the *alpha* privative). Furthermore, he construes the Greek *a-letheia*, as truth not in the sense of a correspondence or correctness, but as unconcealment or unhiddenness.

In PLW Heidegger claims that the primordial meaning of *a-letheia* was unconcealment and that the current interpretation of it as correspondence is a form of degeneration. More specifically, he situates the beginning of this degeneration in Plato's allegory of the cave (Chapter Seven of the *Republic*). A reasonable thing to do as a contribution to philosophy and to truth would be to reverse this process of degeneration in order to retrieve the original and therefore authentic meaning." p. 84

"The essay concerns two central themes of Heidegger's meditation on the essence of truth, which, intertwining and reacting on each other since the era of *Sein und Zeit*, lead to the *Kehre* of asking what implicitly underlies the lecture *Vom Wesen der Wahrheit*:

1) the impossibility of the theory, as a genuine discourse on truth, which discounts within its own structure the essence of truth as an auto-presupposition and which inevitably removes the problem;

2) the radical non-identity and, at the same time, co-appendage of *aletheia* and "truth" (*adaequatio*), that obstructs all dialectical "overcoming", in which it still would act as the presupposition of *aletheia* as the truth of "truth"; rather it refers to impropriety and to intimate discarding, concealed in the very possibility (essence) of the *adaequatio*, which the intellect must assume positively as truth of essence (being)."

89. Peperzak, Adriaan T. 1993. "Heidegger and Plato's Idea of the Good." In *Reading Heidegger. Commemorations*, edited by Sallis, John, 258-285. Bloomington: Indiana University Press.

"Heidegger's interpretation of Plato, as defended in his publications from 1927 until 1932 and in "Plato's doctrine of truth" (1942) is analyzed and criticized, especially with regard to "aletheia, paideia, idea" and "to agathon". Heidegger's characterization of Plato's thinking as "metaphysics" is challenged and some consequences of a different interpretation are indicated."

90. Philippousis, John. 1976. "Heidegger and Plato's notion of truth." *Dialogue. Canadian Philosophical Review*:502-504.

"This short discussion tries to re-examine Heidegger's famous interpretation of Plato's notion of "truth" ("Platons Lehre von der Wahrheit") and, proposing a new interpretation of the Platonic idea in the myth of the cave, It reaches the conclusion that Plato himself understood the notion of *aletheia* not as exactitude (*orthotes*) but as the unfolding of the *ousia* itself."

"In response to the controversy in the tradition concerning Heidegger's treatment of truth, I argue that Heidegger's early approach to that concept parallels his later approach to language, both of which seek the broader foundation of our common notions. I show that Heidegger takes us behind "truth as adequation" towards a more primordial conceptualization which is rooted in the Greek term, *aletheia*. Time and translation have deprived that word of much of its original meaning, but Heidegger holds that a deeper understanding of truth requires our recapturing its lost sense."

93. Proimos, Constantinos. 2002. "Reading Platonic and Neoplatonic notions of mimesis with and against Martin Heidegger." In *Neoplatonism and the Arts*, edited by Cheney de Girolami, Liana and Hendrix, John, 65-80. Lewiston: Edwin Mellen Press.

"Analyses some of the reasons for Heidegger's condemnation of the Platonic theory of mimesis, which goes hand in hand with the German philosopher's preference for *aletheia* (non-representational "unhiddenness") over *orthotes* (correctness of representation) in the theory of truth. Yet Heidegger underestimates such Neoplatonists as Plotinus, who also criticizes and transforms Platonic mimesis."

94. Radloff, Bernhard. 2000. "Heidegger's critique of Imperial truth." *Existentia. An International Journal of Philosophy* no. 10:51-68.

"With particular reference to Heidegger's *Parmenides* of 1942-43, and to the *Contributions to Philosophy*, the author argues that Heidegger offers a critique of imperialism as founded in the transformation of truth from *aletheia* to *veritas*. The "imperial" implicates the falseness and subjection of nature, and of a subject population, to the "imperial subject" of modernity. The

argument of the essay is especially unfolded by reference to the political projects of Bacon, Hobbes, and Locke, and concludes

that modern technology, and imperial, socio-technical discourses, are intimately linked."

Abstract: "This thesis tries to provide a critical review of Heidegger's interpretation of ancient Greek truth in the different stages of his career and it also examines the philological response that his work on this question elicited. The publication of *Sein und Zeit* made Heidegger's views on *alétheia* available to a wide public and thereby launched a heated debate on the meaning of this word. The introduction tries to give an account of the general intellectual background to Heidegger's interpretation of ancient Greek truth. It also looks at the kind of interpretative approach favored by the philologists responding to Heidegger's views on *alétheia*. The thesis first examines his arguments on ancient Greek truth and language in *Sein und Zeit* from the point of view of the larger philosophical project of Heidegger's seminal work. It then looks

at some initial philological responses to Heidegger along with Heidegger's views on *alétheia* in a few works following the publication of *Sein and Zeit*. As a next step, the bulk of the philological work responding to Heidegger is carefully examined with a special focus on the interpretative approaches of the various authors. Heidegger's attempt to respond to some of these philologists is also reviewed. Finally, Heidegger's retraction of his earlier views on *alétheia* is examined in light of a growing critical consensus among philologists. The very latest philological responses to Heidegger are also considered. The conclusion looks at the contributions made by Heidegger and his philological respondents to our knowledge of ancient Greek truth. Some suggestions are also made for future research on this topic."

106. Spanos, William V. 2001. "Heidegger's Parmenides: Greek modernity and the Classical legacy." *Journal of Modern Greek Studies* no. 19:89-115.

One of Heidegger's most insistent assertions about the identity of modern Europe is that its origins are not Greek, as has been assumed in discourses of Western modernity since the Enlightenment, but Roman, the epochal consequence of the Roman reduction of the classical Greek understanding of truth, as *alétheia* (un-concealment), to *veritas* (the correspondence of mind and thing). In the Parmenides lectures of 1942-43, Heidegger amplifies this genealogy of European identity by showing that this Roman concept of truth--and thus the very idea of Europe--is also indissolubly imperial. Heidegger's genealogy has been virtually neglected by Western historical scholarship, including classical. Even though restricted to the generalized site of language, this genealogy is persuasive and bears significantly on the conflicted national identity of modern, post-Ottoman Greece. It suggests that the obsessive pursuit of the unitary cultural ideals of the European Enlightenment, in the name of this movement's assumed origins in classical Greece, constitutes a misguided effort to accommodate Greek identity to the polyvalent, imperial, Roman model of the polity that informs European colonial practice. Put positively, Heidegger's genealogy suggests a

radically different way of dealing with the question of Greek national identity, one more consonant with the actual philosophical, cultural, ethnic, and political heterogeneity of ancient Greece (what Martin Bernal has called the "Ancient Model") and, thus, one less susceptible to colonization by *Europe*."

"Heidegger has carried on many thoughtful "conversations" with the central figures in the Western philosophical tradition. But one of the sources of this tradition - Plato - is an infrequent protagonist in these conversations. Although a quotation from the Sophist heads *Sein und Zeit* and Heidegger alludes to Plato in a variety of contexts, Plato's work as such is the explicit subject of just a single essay. But that essay expounds an especially important set of interpretations in light of Heidegger's conviction that subsequent philosophy has been a series of distorted variations on Platonic themes. Therefore, an evaluation of Heidegger on Plato is crucial for determining the legitimacy of what Heidegger takes as historically "given" when he attempts to rectify these distortions through his own work!"

Heidegger's conversations with other philosophers are notorious for their apparently arbitrary stresses, omissions, and random divinations. For example, he has himself admitted that Kant must be handled "with violence" before the ultimate significance of his philosophy becomes evident. There is substantial evidence to indicate that a "violence" of sorts has been done to Plato as well. But in this case violence is not just wrenching Plato from the shapes which the standard interpreters claim to apprehend. If interpretive violence is required to establish new perspectives on honorable and ancient philosophy, let there be violence. The violence I wish to describe emerges when Heidegger draws inferences from his interpretations of Plato which he claims are incompatible with

his own understanding of being (Sein), when in fact he has not given arguments to prove that these inferences must be incompatible. The violence is thus of a rather humble logical form. Plato may well be the primary source of the distortions Heidegger finds in the history of Western philosophy. But Heidegger has not given us reasons to accept the subsidiary claim that these distortions necessarily imply that being is distorted for Plato himself.

My evaluation is divided into three parts. Part I is a summary of Heidegger's essay "Platons Lehre von der Wahrheit," with references to other works introduced when relevant. Part II is a commentary on the key steps in Heidegger's argument. Part III is a defense of Plato against Heidegger in light of the "violence" just mentioned." (p. 118)

"This paper investigates the concept of *aletheia* (truth) in ancient philosophy from the pre-Socratics until Aristotle. The meaning of *aletheia* in archaic Greek is taken as the starting point. It is followed by remarks about the concept of truth in the Seven Sages. The author discusses this concept as it appears in views and works of philosophers and historians. A special section is devoted to the epistemological and ontological understanding of truth. On this occasion, influential views of Heidegger are examined. The paper is concluded by a review of various meanings of truth in Aristotle."

Reprinted in: Hubert Dreyfus, Mark Wrathall (eds.), *Heidegger Reexamined*, Vol. II: *Truth, Realism and the History of Being*, New York: Routledge, 2002, pp. 1-20.

"I argue in this paper that Heidegger, contrary to the view of many scholars, in fact endorsed a view of truth as a sort of correspondence. I first show how it is a mistake to take Heidegger's notion of 'unconcealment' as a definition of propositional truth. It is thus not only possible but also essential to disambiguate Heidegger's use of the word 'truth', which he occasionally used to refer to both truth as it is ordinarily understood and unconcealment understood as the condition of the possibility of truth. I then show how Heidegger accepted that propositional truth, or 'correctness', as he sometimes called it, consists in our utterances or beliefs corresponding to the way things are. Heidegger's objection to correspondence theories of truth was not directed at the notion of correspondence as such, but rather at the way in which correspondence is typically taken to consist in an agreement between representations and objects. Indeed, Heidegger took his account of unconcealment as explaining how it is possible for propositions to correspond to the world, thus making unconcealment the ground of propositional truth. I conclude by discussing briefly some of the consequences for Heidegger interpretation which follow from a correct understanding of Heidegger's notion of propositional truth."

121. ——. 1999. "The Conditions of Truth in Heidegger and Davidson." *The Monist* no. 82:304-323.

"In this paper I hope to demonstrate that, despite dramatic differences in approach, Analytic and Continental philosophers can be brought into a productive dialogue with one another on topics central to the philosophical agenda of both traditions. Their differences tend to obscure the fact that both traditions have as a fundamental project the critique of past accounts of language, intentionality, and mind. Moreover, writers within the two traditions are frequently in considerable agreement about the failings of past accounts. Where they tend to differ is in the sorts of positive accounts they give. By exploring the important areas of disagreement against the background of

agreement, however, it is possible to gain insights unavailable to those rooted in a single tradition.

I would like to illustrate this in the context of a comparison of Heidegger's and Davidson's accounts of the conditions of truth. I begin, however, with a brief discussion of some crucial differences between the Analytic and Continental ways of doing philosophy. An understanding of these differences provides the basis for seeing how Heidegger and Davidson, all appearances to the contrary, in fact follow a parallel course by resisting theoretical attempts at the redefinition or reduction of our pre-theoretical notion of truth. Indeed, both writers believe that truth is best illuminated by looking at the conditions of truth—that is, they both try to understand what makes truth as a property of language and thought possible in the first place. Both answer the question by exploring how, what we say or think can come to have content. I conclude by suggesting that Heidegger's "ontological foundations" of "the traditional conception of truth" can be seen as an attempt at solving a problem which Davidson recognizes but believes is incapable of solution—namely, the way the existence of language and thought presuppose our sharing a finely articulated structure which only language and thought seem capable of producing." p. 304

122. ——. 2004. "Heidegger on Plato, Truth, and Unconcealment. The 1931-32 Lecture on *The Essence of Truth*." *Inquiry* no. 47:443-463.

"This paper discusses Heidegger's 1931-32 lecture course on *The Essence of Truth*. It argues that Heidegger read Platonic ideas, not only as stage-setting for the western philosophical tradition's privileging of conceptualization over practice, and its correlative treatment of truth as correctness, but also as an early attempt to work through truth as the fundamental experience of unhiddenness. Wrathall shows how several of Heidegger's more-famous claims about truth, e.g. that propositional truth is grounded in truth as world-disclosure, and including Heidegger's critique of the self-evidence of truth as correspondence, are first revealed in a powerful (if iconoclastic) reading of Plato."

The Doctrine of Categories from an Historical Perspective

Introduction

"Metaphysics, in its minimal form, is the activity of categorial description. Its subject matter is the most fundamental aspects of the way we think about and talk about reality, the most fundamental features of reality as it presents itself to us. We divide the world into horses and trains, people and mountains, battles and towns, and a whole complex structure of different kinds of things; our language is the repository of this enormously rich furnishing of the world. But we can discern within this richness some overall divisions, between things and their properties for example, or between events and the times and places in which they happen, and it is with the overall pattern of our categorising of elements of the world that metaphysics concerns itself. The basic divisions which our thought and talk about reality entail are the quarry of categorial describers.

(...)

Aristotle's categories are 'predicables' because (with reservations to be looked at later) they are things predicated of something: when we say, for example, that 'Socrates is a man' we are predicating being a man of Socrates, i.e. a certain kind of substance. Again, when we say that 'Aristotle is in the Lyceum', we are predicating being in the Lyceum of Aristotle, i.e. a certain place, physical location. The ten predicables listed are the ten kinds of things that can be said of something. Now 'thing' is used here intentionally to convey the fact that Aristotle is, in the first place, talking about the world and not about language. It is being in the Lyceum as such that is predicated or said of Aristotle, not the expression 'in the Lyceum' which is (if at

all, and certainly in a different sense of 'said of') said of 'Aristotle' the name.

But 'thing' is used also to convey another fact about Aristotle's ten predicables, namely that the list involves a division into ten types or kinds of what can be variously called 'things', 'entities', 'existents' or 'beings'. Socrates is one kind of thing, a substance, and so is Aristotle; in-the-Lyceum is another kind of entity, a place or location; four-foot is a quantity; white is a quality; yesterday is a time; and so on. Aristotle, in drawing up a list of the ten different kinds of things predicable of something else, is drawing up a list of the ten different kinds of beings, entities, existents, or things. According to Aristotle we have to distinguish the categories of substance, place, time, quality, action and so on.

Now where does Aristotle get all this from, and is he right? (...)

How on earth could Aristotle have come up with this classification of things in existence in terms of ten categories? Clearly he did not engage in an empirical investigation of the things around him and arrive at his result as he would at a classification of species of animals or plants. The answer has to be that, insofar as the list is the product of investigation it was investigation of our thought and talk about the things which Aristotle could find around him. One commentator on Aristotle's list suggests that it was arrived at by distinguishing different questions which may be asked about something and noticing that ... only a limited range of answers can be appropriately given to any particular question. An answer to 'where?' could not serve as an answer to 'when?'. Greek has, as we have not, single-word interrogatives meaning 'of what quality?' and 'of what quantity?' ... and these, too, would normally collect answers from different ranges. (*)

Something along these lines has to be right, since Aristotle could not have investigated reality directly, and that for at least two reasons. One is that reality is not something which itself lies beyond or prior to our thought and talk about it in a way that allows of independent perusal, since reality is for us the very thing which our thought and talk concerns. If that looks tautological, let it be: a more substantial claim needs greater argument than I can offer now. The second reason is that any perusal of reality would need to rest upon a way of

classifying what is discovered in it: are we going to list places and times, qualities and numbers, relations and events? Well, that depends on the categories involved in our thought and talk. It is the very result of category division in our thinking and talking that the world divides up as it does. A way of putting this point is in terms of perception. To perceive the world is not, as a naive Lockean might think, to passively notice what is there; it is to conceptualise and hence pigeonhole what is there. And categories are the broadest, most fundamental and most general of our pigeonholing devices." (pp. 2-4)

Semantics and Ontological Analysis in Aristotle's *Categories*

Introduction

"The *Categories*, ascribed to Aristotle, has played a unique role in our tradition. It is the only philosophical treatise that has been the object of scholarly and philosophical attention continuously since the first century B.C., when people first began writing commentaries on classical philosophical texts. From early late antiquity until the early modern period, one would begin the study of Aristotle and the study of philosophy quite generally with the *Categories* and Porphyry's *Isagoge*. For several centuries, these two treatises, and the *De Interpretatione*, formed the core of the philosophical corpus which was still being seriously studied. Thus, it is hardly surprising that our received view of Aristotle -- whether we are aware of this in all its details or not -- was colored substantially by the *Categories*.

Already in late antiquity, however, doubts were raised about its authenticity, (1) though we know of no ancient scholar who, on the basis of such doubts, declared the treatise to be spurious. On the contrary, Ammonius claims that everyone agreed that it was authentic. (2) The writers of the Middle Ages and the scholastics of the early modern period seem to have had no doubt about the authenticity of the treatise; (3) presumably, they were relying mainly on the authority of Boethius. (4) It is tempting to suppose that this acceptance of the treatise by the scholastics is precisely what led Renaissance scholars like Luis Vives (5) and Francesco Patrizi (6) to raise doubts about this very foundation of both scholasticism and traditional logic, though they did not attempt to provide any detailed arguments for their conclusion. It remained for the nineteenth and twentieth centuries to examine the *Categories* critically with the aid

of the new philology. And soon enough, there was an impressive roster of those staunchly maintaining that the treatise was not genuine. (7) Even H. Bonitz considered it to be of doubtful authenticity. (8) During the present century, opinion has again shifted in favor of the view that it is a genuine work of Aristotle's, though, to be sure, the doubts have not been entirely silenced. I. M. Bochenski, writing in 1947, thought the treatise of doubtful authenticity; (9) and in 1949, S. Mansion tried to argue against its authenticity. (10) Doubts especially about the second part, the so-called *Postpraedicamenta*, have never really ceased. (11)

Given the enormous influence this treatise has had on our view of Aristotle and on our interpretation of his writings, it seems extremely important to me to try, as far as possible, to lay these doubts to rest. Yet, I hope this investigation will also be of interest to those already firmly convinced that the *Categories* is a genuine work of Aristotle's; for it raises questions that interpreters of the treatise, in general, do not address and whose answers might well alter the standard view of this text.

The question of authenticity, however, turns out to be crucially linked to the question of unity. Given that it seems highly questionable whether the *Postpraedicamenta* were originally part of the treatise or were appended by a later editor, (12) it might seem as if the question regarding the authenticity of the treatise needs to be asked as two questions, viz., questions regarding the authenticity of the first and second part individually. Many authors have indeed taken this for granted and have thus assumed that the first part was authentic, the second either probably or certainly not. (13) Since, however, interest traditionally has focused almost exclusively on the first part of this treatise, we also find the tendency to regard the question of authenticity as primarily the question of the authenticity of the first part and so to leave the question of unity and the problem of the authenticity of the second part to more or less take care of themselves. Buhle already exhibits this tendency characteristic of many modern interpreters. (14) After having called attention to the apparent lack of connection between the *Postpraedicamenta* and the *Praedicamenta* and after briefly remarking (without providing any specifics) that some things in the *Postpraedicamenta* do not mesh well with other aspects of Aristotle's thought, he writes: "sed fac esse

postpraedicamenta spuria, non idem tamen de *Categoriis* statuendum est." It is obvious -- as long as the authenticity of the first part is secure, it does not much matter to Buhle whether or not one considers the second part genuine. Such an approach, however, is methodologically highly suspect because the questions of unity and of authenticity cannot be separated without both prejudging the issue of unity and presupposing a certain interpretation of the Categories, especially since the lack of unity itself has been taken as providing strong prima facie grounds for judging the treatise to be spurious. (15) Therefore, in what follows, I will pay particular attention to the question of unity. The dangerous tendency to consider this treatise almost exclusively with reference to the first part and thus to jeopardize the status of the second part is, of course, reinforced considerably by the title. Hence. I will also discuss the title in connection with the question of unity." (pp. 11-12)

Congr. of Philosophy*, Amsterdam 1949, 1097-1100; cf. also her earlier paper, "La première doctrine de la substance: la substance selon Aristote" in: *Rev. Philos. de Louvain* 44 (1946) 349- 360.

(11) I. Düring says only that the authenticity of the *Postpraedicamenta* is likely (*Aristoteles*, 55); D. Ross thought that the *Postpraedicamenta* were generally regarded as spurious (*Aristotle*, 24 n. 2).

(12) See J. G. Buhle, *Aristotelis Opera*, vol. I, 1791, 436; Ch. A. Brandis in: *Abh. Berlin* 1811, 268ff.; E. Zeller. *Philos. d. Gr.*, II 2 (4th edition), 1921, 67 n. 1; Th. Gomperz, *Greek Thinkers*, IV, 514; Überweg-Praechter, 379; D. Ross, *Aristotle*, 10; L. M. De Rijk, *The Authenticity*, in: *Mnemosyne*. 4 (1951), 159; I. Düring. *R E Suppl*, XI, s v. Aristoteles, 205, 61; J. L. Ackrill, 70; V. Sainati, *Storia*, 151ff. Some ancient authors took this line (Olymp., *In cat.* 133, 14), especially Andronicus (Simpl., *In cat.* 379, 8ff.).

(13) E.g. J. G. Buhle, 436; E. Zeller, II 2 (4 ed.) 24, 1921, 67; H. Maier, *Die Syllogistik*, II 2, 292 n. We hear of this view being taken by some in antiquity (Ammon., *In cat.* 14, 18ff.; Olymp., *In cat.* 133, 14ff.). Whether Andronicus was among these, as is often claimed, is doubtful; at any rate, we never hear that he argued against the authenticity of the *Postpraedicamenta*; we would assume, if this had been the case, that he would be referred to by name when their authenticity was being discussed.

From: Michael Frede, *The Title, Unity, and Authenticity of the Aristotelian Categories*. In *Essays in Ancient Philosophy*. Minneapolis: University of Minnesota Press 1987, pp. 11-28.

"There is a theory called the theory of categories which in a more or less developed form, with minor or major modifications, made its appearance first in a large number of Aristotelian writings and then, under the influence of these writings, came to be a standard part of traditional logic, a place it maintained with more or less success into the early part of this century, when it met the same fate as certain other parts of traditional logic.

There are lots of questions one may ask about this theory. Presumably not the most interesting question, but certainly one for which one would want to have an answer if one took an interest in the theory at all, is the following: What are categories? It turns out that this is a rather large and difficult question. And hence I want to restrict myself to the narrower and more modest question, What are categories in Aristotle?, hoping that a clarification of this question ultimately will help to clarify the more general questions. But even this narrower question turns out to be so complicated and controversial that I will be content if I can shed some light on the simple questions: What does the word "category" mean in Aristotle? What does Aristotle have in mind when he talks of "categories"?

Presumably it is generally agreed that Aristotle's doctrine of categories involves the assumption that there is some scheme of classification such that all there is, all entities, can be divided into a limited number of ultimate classes. But there is no agreement as to the basis and nature of this classification, nor is there an agreement as to how the categories themselves are related to these classes of entities. There is a general tendency among commentators to talk as if the categories just were these classes, but there is also the view that, though for each category there is a corresponding ultimate class of entities, the categories themselves are not to be identified with these classes. And there are various ways in which it could be true that the categories only correspond to, but are not identical with, these classes of entities. It might, e.g., be the case that the categories are not classes of entities but rather classes of expressions of a certain kind, expressions which we--following tradition--may call "categorematic." On this interpretation these categorematic expressions signify the various entities we classify under such headings as "substance," "quality," or "quantity." And in this case we have to ask whether the entities are classified according to a

classification of the categorematic expressions by which they are signified, or whether, the other way round, the expressions are classified according to the classification of the entities they signify. Or it might be thought that the categories are classes of only some categorematic expressions, namely, those which can occur as predicate-expressions. Or it might be the case that the categories themselves are not classes at all, neither of entities nor of expressions, but rather headings or labels or predicates which collect, or apply to, either entities or expressions, i.e., the category itself, strictly speaking would be a term like "substance" or "substance word." Or it might be the case that categories are neither classes nor terms but concepts. All these views have had their ardent supporters." (pp. 1-2)

From: Michael Frede, Categories in Aristotle. In Dominc O'Meara (ed.), *Studies in Aristotle*, Washington: Catholic University Press 1981, pp. 1-25. (Reprinted in: M. Frede, *Essays in Ancient Philosophy*, Minneapolis: University of Minnesota Press, pp. 29-48).

"The precise position to be assigned to the Categories in the Aristotelian system has always been somewhat of a puzzle. On the one hand, they seem to be worked into the warp of its texture, as in the classification of change, and Aristotle can argue from the premiss that they constitute an exhaustive division of the kinds of Being (*A. Pst.* I 22, 83b15). On the other hand, both in the completed scheme of his logic and in his constructive metaphysic they retire into the background, giving place to other notions, such as causation, change, actuality and potentiality. Investigation, has, moreover, been hampered, especially in Germany, by attempts to correlate them with the Kantian Categories, with which they have obvious points of contact. But Kant's formal a priori concepts by which the mind makes for itself a world, to use Mr Bosanquet's phrase, imply an attitude to knowledge and reality so utterly opposed to the Aristotelian that the comparison has tended to confusion rather than elucidation. Scholars now realise better that the Aristotelian Categories can only be understood in connexion with the problems of Aristotle's own age.

The best general account of the Categories known to me is that given by Maier, who accepts the interpretation of Apelt in its main lines,

correcting it in some important points. (1) It is the great merit of Apelt to have firmly grasped the principle that, whatever the applications to which Aristotle put the scheme of the Categories, it is primarily connected with the use of linguistic thought to make assertions about reality and hence with the proposition, the judgment as expressed in language. In details, I think, he is misled by the associations of post-Kantian logic, which prevent him from entering fully into the attitude adopted by the early Greek logic towards the fact of assertion.

In view of the undoubted fact that the scheme of the Categories follows the lines of Socratic-Platonic thought, Gercke's suggestion (2) is tempting that it originated in the Academy. Gercke, whose own view of the Categories is strongly coloured by Kantianism, relies almost entirely on the greater point given to the arguments in the Ethics against the Idea of the Good if we suppose them to accuse Plato of inconsistency with his own doctrine of the Categories. Except as supplementing strong independent evidence an argument of this kind carries no weight. The case is certainly weakened if it can be shown that Aristotle uses the Categories to solve a philosophical problem in explicit opposition to the solution offered by the Academy. This can be done, I think. In *Meta.* XIV 2, 1088b18 he sets the Categories against Platonist doctrine. He is criticising the indefinite dyad, and traces the origin of this conception to 'their old-fashioned way of setting problems': the Platonists found it necessary to attack the Parmenidean dictum and establish the existence of 'what is not' (cf. Plato, *Sophist* 237A, 256D). But how will this account for the plurality of being (for being means sometimes substance, sometimes that it is of a certain quality, and at other times the other categories: 1089a7)? In the corresponding passage of the *Physics* (I 2, 184b15 sqq.) Aristotle solves the Parmenidean difficulty through the multiplicity of the Categories (186a25), and alludes to the inadequacy of the Academic solution (187a1).

The inference to be drawn from these passages, in conjunction with the chapter in the Ethics on which Gercke relies, is the negative one that Plato and his successors in the Academy did not apply the scheme of the Categories to the fundamental philosophical questions of Being and Good. Positive evidence must be sought in another aspect of the doctrine. Now the *Topics* exhibits the Categories in

intimate association with dialectical logic. The work itself purports to codify methods in regular use but not hitherto systematically treated. That these methods were employed in the Academy is amply attested by the Platonic dialogues. (3) Further, as the *Topics* and particularly the *Sophistici Elenchi* show, they were developed in close connexion with the eristic logic of Antisthenes and the Megarians. This fact at once establishes a contact with the treatment of the problem 'one thing, many names' in Plato's *Sophist* (251A). This difficulty was removed by drawing a distinction between different kinds of being, and Aristotle himself regards it as finally disposed of by the doctrine of the Categories. That some of the kinds of being included in the scheme were already recognised in the Academy is plain. In the *Topics* relatives have a number of their own *topoi* and the varieties of relatives enumerated in the Categories follow closely on the lines of division in the *Charmides*. (4) Much of the matter of the *Topics* must have been common to Academy and Lyceum. But this is not to say that the Categories as a complete and exhaustive scheme belonged to the Academy. Eudemus tells us that Plato solved the difficulties of Lycophron and others by a dual distinction of being.

I shall accordingly assume in what follows that the scheme of the Categories was evolved in the course of efforts to establish a doctrine of judgment which should settle the difficulties raised by Megarian and other critics; that the application to the solution of the larger metaphysical problems was a later development; that the foundations of the scheme were laid in the Socratic tradition of the Academy; that the completed scheme is probably Aristotle's own; and that the original working out of the scheme did not contemplate extension beyond the metaphysics implied in predication to the more fundamental metaphysics of the First Philosophy. Hence we must look to the analysis of empirical propositions for the origin of the scheme.

Now if we examine the scheme itself, we find three aspects of it to have special significance:

(a) The first is the distinction between accidental predication (*kata sumbebékos*) and essential predication (*kath' hauto*). (5) What is musical may be literate, but only 'in virtue of something else' (*kat' allo*), viz.: qua Callias; Callias is literate essentially (*kath' hauton*).

This distinction provides the first condition of scientific predication, and is regarded as of fundamental importance by Aristotle, who prefaces his accounts of such notions as unity and being with references to the accidental uses of these terms (*Meta.* V 6, 1015b16; 7, 1017a7).

(b) Closely connected with the previous distinction is the doctrine that all the Categories (including substance as predicate) imply a subject (*hupokeimenon*), which is the point of real connexion between the predicates, and provides the basis of their coexistence. The Categories classify the many 'names' which we apply to the individual (e.g. a man, *Sophist*251A), and give expression to the fact that he does not lose his unity in the process.

(c) Furthermore, all direct relations of implication and incompatibility lie within the Categories severally. They are, so to say, independent variables. The relation of genus to species is everywhere confined within the limits of a category and so is the relation of contrary opposition. This suggests a close connexion with the Platonic division, which, as we know from the *Sophist* and the *Politicus* and from Aristotle, was so prominent in the Platonic conception of scientific method." (pp. 75-77)

Notes

(3) Analysis of the arguments in the *Charmides* shows that nearly all make use of *topoi* dealt with by Aristotle in the *Topics*.

(4) Cf. with *Cat.* 6a36 sqq., *Charmides*, 168A. The list in *Rep.* 437B is the same and in the same order.

(5) See the distinction of 'being *kata sumbébekos*' and 'being *kath' hauto*' (*Meta.* V 7, 1017a7 ff.). Apelt's equation of 'being *kath' hauto*' with 'being said in virtue of no combination' (op. cit. 117) is manifestly wrong. *Kath' ho* or *kath' hauto* means that the determination attaches to the subject in respect of the subject itself

and not in respect of the determination. See *kath' ho* and *kath' hauto*, *Meta.* V 18, 1022a14 ff.

Charles Melville Gillespie, *The Aristotelian Categories*, *The Classical Quarterly* 19, 1925, pp. 79-84. Reprinted in: J. Barnes, M. Schofield, R. Sorabji (eds.), *Articles on Aristotle - Vol. 3, Metaphysics*, London: Duckworth, 1979, pp. 1-12

The problem of the authenticity of the Categories

"The little treatise of Aristotle which stands at the head of the Organon has caused a great deal of difficulty to students, both ancient and modern. The bulk of the discussion has centred about the question of its place in the Organon and in Aristotle's system, and the character of the ten categories to which the greater part of the book is devoted. But there have been found also critics who expressed a doubt as to the authenticity of all or part of the treatise in question. To say nothing of the ancient commentators of Aristotle, the earliest attempt in modern times to cast a doubt on the genuineness of the work seems to be that of Spengel in *Münchener Gelehrte Anzeigen* (Vol. XX [1845], No. 5, pp. 41 sq.). He was followed by Prantl in *Zeitschrift für Altertumswissenschaft* (1846, p. 646), and in his *Geschichte der Logik* (I, p. 60, n. 5), also by Valentinus Rose in *De Aristotelis librorum ordine et auctoritate* (p. 234 et seq.). Zeller, on the other hand (*Philosophie den Griechen*, 2nd ed., II, pt. a, p. 67, n. 1), decides in favour of the genuineness of the first part of the work, the *Categories* proper, and against the so-called *Postpredicamenta* from Chapter X to the end.

(...)

When we pass over to matters of doctrine, it is surprising how many points of contact there are between the two works [*Categories* and *Topics*]. I shall follow the *Categories* and point out the parallels in the *Topics*.

The homonyms, which are given a definition and an illustration in the beginning of the *Categories*, have a whole chapter devoted to them in the *Topics*, the fifteenth of the first book, where they are also called *pollachos legomena*. Of particular significance is 107a 18-20,

for in 20 we seem to have a direct allusion to the definition in the *Categories*. We must see, Aristotle says, if the genera designated by the given name are different and not subordinate to one another, (...) (which is therefore a homonym), for the definition of these genera as connected by the name is different (...). The greater space given to homonyms in the *Topics* is not due so much to a development in doctrine as to the necessities of the subject. The object of the *Topics* is a purely practical one, to provide the disputant with ready arguments properly pigeon-holed, and a single general definition of homonyms is not adapted to such use. We must needs go farther and show in what different special ways homonyms can be detected. The *Categories* have more the appearance of materials gathered in the shape of preliminary definitions of necessary concepts.

Synonyms are referred to in the *Topics* 109b 7, 123a 27, 127b 5, 148a 24, and 162b 37. Of these, the first is the most important, since it states that the genera are predicated synonymously of their species; *for the latter admit both the name and the definition of the former* (...), assuming it as established that this condition constitutes synonymy. This is neither more nor less than a silent reference to the definition in the *Categories* (1a 6) [When things have the name in common and the definition of being which corresponds to the name is the same, they are called *synonymous*]. Moreover we have almost the very words of the *Topics* in another place in the *Categories*, 3b 2, [And the primary substances admit the definition of the species and of the genera, and the species admits that of the genus; for everything said of what is predicated will be said of the subject also.] 148a 24 also gives the same definition of synonyms merely in passing. Aristotle is dealing with the definition, and makes a statement that if the opponent makes use of one definition for homonyms it cannot be a correct definition, for it is synonyms and not homonyms that have one definition connoted by the name (...). He speaks of the definition as already known. (...).

Paronyms also are made use of in the *Topics*, 109b 3-12, in a way which shows the definition in the *Categories* is not purely grammatical, as it may seem at first sight, but has a logical significance quite as important as that of the former two. Paronymous predication is predication *per accidens*, as contrasted with synonymous, which may be *per se* (cf. also Trendelenburg,

Geschichte der Kategorienlehre, p.27 et seq. and 30). Here also paronyms are not defined. It is assumed that the reader knows what they are. (...)

Categories 3, p. 1b 10-15 expresses very much the same thought as *Topics* IV, 1, p. 121a 20-6. The former states that whatever is true of the species is true of the individuals under the species (...), the latter that to whatever the species applies the genus does also (...). They both involve the logical hierarchy of genus, species and individual, and the two principles are: (1) The genus applies not only to the species but also to the individual ; (2) to the individual belongs not only the species but also the genus. What is especially important to notice is that, in the *Topics*, the principle is stated as already known and is applied to the particular case, thus assuming the existence of another treatise where these principles are stated and proved for the first time.

The treatment of the difference develops gradually in the *Topics* in the following passages: 107b 19 sq., 144b 12 sq., and 153b 6. The first of these is word for word the same with the statement in the *Categories*, 1b 16 sq., and they were both quoted above. Moreover the way in which the passage in the *Topics* is introduced, (...) makes it a direct reference to the *Categories*. Aristotle's doctrine concerning the difference so far is that of different genera which are not subordinated one to the other: the differences are different in species. In the second passage quoted above, 144b 12, Aristotle corrects this view by adding that the differences in the given case need not be different unless the different genera cannot be put under a common higher genus. In the third passage, 153b 6, Aristotle adds some more qualifications which make it clear that in the preceding statements the word *etéron*, in the phrase *etéron ghenon*, must be understood as including contrary genera (*enantía*). For there the case is different. If the contrary genera belong to higher contrary genera, their differences may be all the same.

The preceding examination seems to show very clearly that the *Topics* build upon the basis laid down in the *Categories* and carry the structure higher and broader. It would be a very absurd alternative to suppose that a later writer, making use of the *Topics*, found nothing else on the subject of logical difference than the first

passage, which he copied verbatim in his treatise, where,' besides, it has no particular reason for existence. As a thought tentatively suggested, with the view of further elaboration and insertion as a proper link in a chain, the passage in the *Categories* assumes a different meaning, and its lack of connection with the preceding and following ceases to cause us serious difficulty.

If the view of the *Categories* taken here is justified by the preceding arguments and by what is still to come, it might even be a legitimate procedure to make use of the *Topics* in determining a disputed reading in the *Categories*. And we have one at hand in the passage quoted above on the difference." (pp. 97-103)

From: Isaac Husik, *The Categories of Aristotle*, in: Milton C. Nahm and Leo Strauss (eds.), *Philosophical Essays, Ancient, Mediaeval, and Modern*, Oxford: Blackwell, 1952, pp. 96-112. (Greek text of the citations omitted).

The recent critical edition by Richard Bodéüs (Aristote. [*Catégories*], Paris: Les Belles Lettres, 2001) contains a detailed *status questionis* on the problem of authenticity at pp. XC-CX.

The conclusion is: "Malgré ses doutes sur l'authenticité de l'ouvrage, l'éditeur, nous semble-t-il, reste donc autorisé à imprimer celui-ci sous l'autorité traditionnelle d'Aristote." p. CX. (Despite his doubts about the authenticity of the book, the editor, seems to us, remains authorized to print it under the traditional authority of Aristotle.)

Aristotle's *Categories*. Annotated bibliography of the studies in English: A - B

Bibliography

1. Ackrill, John Lloyd, ed. 1963. *Aristotle's Categories and De interpretatione*. Oxford: Clarendon Press.

Translated with notes and glossary by John Lloyd Ackrill.

Contents: Translations. *Categories* 3; *De Interpretatione* 43; Notes. Introductory Note 69; *Categories* 71; *De Interpretatione* 113; Note on Further Reading 156; Glossary 159; Index of Subjects 161-162.

Chapter I-V are reprinted in: J. M. E. Moravcsik (ed.), *Aristotle. A Collection of Critical Essays*, Garden City (NY): Doubleday, pp. 3-12 (translation) and 71-91 (notes).

"The *Categories* divides into three parts. Chapters 1-3 make certain preliminary points and explanations. Chapters 4-9 treat of the doctrine of categories and discuss some categories at length. Chapters 10-15 deal with a variety of topics, such as opposites, priority, and change. The second part fades out in Chapter 9, and the passage serving as a transition to the third part (11b10-16) is certainly not genuine Aristotle. The third part itself (the *Postpraedicamenta*) has only a loose connexion with what precedes. There is no reason to doubt its authenticity, but probably it was not a part of the original *Categories* but was tacked on by an editor. The concept of categories plays an important part in many of Aristotle's works, specially the *Metaphysics*. But it undergoes developments and refinements

as Aristotle's thought develops. So the study of the *Categories* is only a first step in an investigation of Aristotle's ideas about categories." (pp. 69-70)

2. ———. 1972. "Aristotle on "Good" and the Categories." In *Islamic Philosophy and the Classical Tradition. Essays Presented by His Friends and Pupils to Richard Walzer on His Seventieth Birthday*, edited by Stern, S.M., Hourani, Albert and Brown, Vivian, 17-25. London: Bruno Cassirer.

"in the *Nicomachean Ethics* 1.6. 1096a23-29 Aristotle argues that goodness is not a single common universal: if it were it would be "said" in only one category, whereas in fact it is, like *being*, "said" in all the categories.

Aristotle discusses in many places the transcategorial character of ov and of ev , but most of his accounts of types of goodness or senses of "good" do not rest upon the point about categories — a point which is, however, taken up in the traditional treatment of *bonum* along with *ens* and *unum* as categorially unclassifiable. The *Ethics* passage is therefore of considerable interest, and it has not, I think, received sufficient attention or final elucidation from the commentators. The present discussion will be far from exhaustive, but it may raise some questions worth further examination." (p. 17)

3. Ademollo, Francesco. 2021. "The Anatomy of Primary Substance in Aristotle's *Categories*." *Oxford Studies in Ancient Philosophy* no. 60:145-202.

Abstract: "This paper investigates two related aspects of Aristotle's conception of primary substances in the *Categories*. In Section 1 I distinguish different interpretations of the relation between a primary substance and its accidental attributes: one (A) according to which a primary substance encompasses all of its attributes, including the accidental ones; another (B) according to which a primary substance encompasses only its essential attributes, whereas the accidental attributes are extrinsic to the substance, though related to it; and a third, intermediate one (C) according to which a primary substance encompasses neither all of its attributes nor only the essential ones, but all the necessary

ones. I trace the history of all three interpretations and argue in favour of (B). In Section 2 I defend the view that a particular human being, their soul, and their body all count as primary substances, and that the relation between these three substances is that soul and body are parts of the substance. I show that this hypothesis harmonizes both with some views advanced in the *Categories* and with some passages from other Aristotelian works. I conclude by drawing a comparison between this view and Aristotle's mature hylomorphic doctrine."

4. Allen, Reginald E. 1969. "Individual Properties in Aristotle's *Categories*." *Phronesis. A Journal for Ancient Philosophy* no. 14:31-39.

"At *Categories* 1 a 23-29, (1) Aristotle marks off a set of items which are present in but not predicable of a subject. Thus, for example, a certain knowledge of grammar (ἡ τις γραμματικὴ) is present in a subject, the soul, and a certain white (τὸ τι λευκόν) present in a subject, the body; but neither is predicable of a subject." (p. 31)

(...)

What is present in a subject as individual and one in number is incapable of existing apart from the particular subject it is in; for at 1 a 24-25, Aristotle defines presence as follows: "By present in a subject I mean what is in something, not as a part, but as incapable of existing separately from what it is in." It would seem to follow from this that an item present in an individual subject is itself individual, and numerically distinct from items present in other individual subjects.

Suppose this is so. Then if there are two pieces of chalk, A and B, and if they are of the same determinate shade of color, say, white, there will be a particular instance of white in A and a particular instance of white in B. Call those instances respectively s and t. Then s and t are the same in that they are instances of the same shade of color.

But they are different in that they are themselves numerically different individuals, and this difference is to be explained by

the fact that they are present in numerically different subjects: s is the white of A, and t is the white of B. Thus s and t are different members of the same species, the given shade of white, in a way precisely analogous to the way in which A and B are members of the same species, chalk. This situation will obtain generally in categories other than substance; that is, it will obtain, not only for qualities such as colors, but for sizes, shapes, places, times, and so on for any items present in but not predicable of a subject.

At least in outline, the foregoing interpretation of particular properties in the *Categories* has been widely accepted.⁴ But it has recently been challenged by Professor Owen.⁽⁵⁾" (p. 32)

(...)

"Professor Owen's interpretation has the virtue of simplifying the ontology of the *Categories* by doing away with the cloud of particulars that most readers have found in categories other than substance. A world which can dispense with these extraneous particulars is a neater, and therefore a better world than one which cannot: *entia non sunt multiplicanda praeter necessitatem*. Supposing that Professor Owen's interpretation is mistaken, it remains worth asking why Aristotle should have been led to multiply particulars with so lavish a hand." (p. 38)

Supplementary vol. I: E. N. Lee, A. P. D. Mourelatos, R. M. Rorty (eds.), *Exegesis and Argument. Studies in Greek*

Philosophy presented to Gregory Vlastos, Assen: Van Gorcum, 1973.

Abstract: "It is a characteristic common to every substance not to be in a subject. For a primary substance is neither said of a subject nor in a subject. And as for secondary substances, it is obvious at once that they are not in a subject. For man is said of the individual man as subject but is not in a subject: man is not in the individual man. Similarly, animal also is said of the individual man as subject but animal is not in the individual man. Further, while there is nothing to prevent the name of what is in a subject from being sometimes predicated of the subject, it is impossible for the definition to be predicated. But the definition of the secondary substance, as well as the name, is predicated of the subject: you will predicate the definition of man of the individual man, and also that of animal. No substance, therefore, is in a subject.(1)"

"The ontological square ('*Categoriae*', 1a, 20-1b, 10).

This passage of *Categoriae* is traditionally understood as making a distinction between universal substances, particular substances, universal accidents and particular accidents. The history of commentaries on the *Organon* provides an extensive number of paraphrases and presentations of this text. Boethius' text and other ancient commentators illustrate our, quoted passage by means of a diagram similar to ours above: a square in each of whose vertices one of the four classes of entities is located. The Aristotelian text explicitly states that this is a classification of entities, but it is of course contrary to traditional Aristotelianism to call universals entities *simpliciter*. In fact, Ioannes a Sancto Thoma elegantly modifies the formulation(17). Still, universals do enjoy an objective being, and *ens rationis* falls under *ens communissime sumptum*.

The classification of entities into four classes is achieved by means of two relations: to be in a subject and to be said of a subject." (pp. 12-13)

(17) Ioannes a Sto. Thoma, *Cursus philosophicus thomisticus. Tomus primus* (ed. Reiser), Marietti, Torino 1930, p. 476:

"Atque ita in hoc tertio antepredicamento distinguit Aristoteles duplex genus entium, scilicet substantiam et accidens, et duplex genus intentionum, scilicet universalitatis et singularitatis."

7. Annas, Julia. 1974. "Individuals in Aristotle's *Categories*: Two Queries." *Phronesis. A Journal for Ancient Philosophy* no. 19:146-152.

"Mr. Barrington Jones, in his recent article in *Phronesis*,(1) has suggested a new way of solving the standing debate about the nature of non-substance individuals in the *Categories*. Mr. Jones' article suggests some exciting new approaches to the *Categories*, but I would like to put forward two difficulties I find with the way he proposes to cut through the main problem.

In the *Categories*, but nowhere else, there seem to be individuals in non-substance categories, corresponding to primary substances. What sort of thing are these non-substance individuals? According to Ackrill (2) they are non-repeatable

individual instances of (for example) a property. An example would be the particular instance of white exhibited by this paper: it is peculiar to this piece of paper and will perish when it does. According to Owen (3) they are the most specific types of (for example) a property. The white exhibited by this piece of paper and all the paper in the same batch would be an example: it can continue to exist when this piece of paper perishes, as long as some other piece of paper from the batch continues to exhibit it.

I shall not go into the controversy that has arisen over these differing interpretations of Aristotle. I have the more limited objective of examining the way Jones proposes to restate the terms of the debate.

If Jones is right the alternatives just sketched represent a false dichotomy: the new solution supersedes them both. It is merely the proffered new solution that is my concern." (p. 146)

8. Anscombe, Elizabeth G. M. 1961. "Aristotle: The Search for Substance." In *Three Philosophers*, edited by Anscombe, Elizabeth G. M. and Geach, Peter Thomas, 1-63. Oxford: Basil Blackwell.

Contents: Analytical Table of Contents VI-XX; G. E. M. Anscombe: Aristotle: The Search for Substance 1; P. T. Geach: Aquinas 65; P. T. Geach: Frege 127-162.

"The doctrine of his *Categories* is very straightforward. First substance is introduced, and explained in the first place as what neither is asserted of nor exists in a subject: the examples offered are 'such-and-such a man' 'such-and-such a horse'. A 'first substance' then is what is designated by a proper name such as the name of a man or of a horse, or again, if one cared to give it a proper name, of a cabbage. A proper name is never,

qua proper name, a predicate. Thus what a proper name stands for is not asserted of a subject.

Aristotle explains the second point, that first substance does not exist in a subject, by giving as an example of what is 'in' a subject: 'such-and-such grammarianship. He means that an individual occurrence of grammatical science, such as a particular man's knowledge of grammar, while not being asserted of a subject, exists in a subject. The example is slightly obscure to us; 'such-and-such a surface' would perhaps be a better one. If we think of a particular surface, such as the surface of my wedding ring, this is not something that is asserted of a subject, but it exists in a subject—namely, the ring. (He explains that when he speaks of things being in a subject, he is not speaking of parts, such as arms and legs which are parts of a man.) Thus, we can see that when he speaks of 'first substance' Aristotle is talking about what modern philosophers discuss under the name 'particulars' or 'individuals'. But his doctrine has features not found in modern treatments. The most notable of these are, first the distinction we have just noticed between individuals that do, and individuals, or particulars, that do not, exist in subjects (though Aristotle rarely calls what exists in something else an individual, using that term mostly for substances); and second, that he speaks of 'first substance' and 'second substance'. Second substances, he says, are the kinds to which belong the first substances, such as man, horse, cabbage.

It will help us to understand this if we remember, and see the mistake in, Locke's doctrine that there is no 'nominal essence' of individuals. Locke said that if you take a proper name, 'A', you can only discover whether A is, say, a man or again a cassowary, by looking to see if A has the properties of man or a cassowary. This presupposes that, having grasped the assignment of the proper name 'A' you can know when to use it again, without its being already determined whether 'A' is the proper name of, say, a man, or a cassowary: as if there were such a thing as being the same without being the same such-and-such. This is clearly false. Aristotle's 'second substance' is indicated by the predicate, whatever it is, say 'X that is so

associated with the proper name of an individual that the proper name has the same reference when it is used to refer to the same X: with the restriction that the individual is not such as to exist in a subject, like an individual surface." (pp. 7-8)

Preface: "The present volume is the result of several years of research in ancient philosophy. It began with the main purpose of elucidating the theme of contrariety and the role it played in the Aristotelian treatises. But the many vexing problems which made their appearance as my inquiry progressed led me to extend my studies of this theme and look into its pre-Aristotelian history. A number of valuable ideas came to light as a result of the investigations into the concept of contrariety and its place in the various types of philosophical thinking from the early pre-Socratics down to Aristotle. This work in no wise claims to be an exhaustive study of contrariety in all ancient Greek thought, for a task of this kind would doubtlessly require the space of many volumes. The bulk of this work is centred around the philosophy of Aristotle with whom the principle of contrariety received, I believe, its most clear and classical formulation. The discussion on the pre-Aristotelian uses of this principle is so designed as to throw only what historical light was required for the full appreciation of the main theme. At the

same time I have tried to avoid doing injustice to Aristotle's predecessors by paying as close attention as possible to their own original writings, fragmentary as they are."

"The very fact that contrariety is necessarily joined with process, change, and development imposes the demand that it cannot occur in all the categories. Thus, contrariety is present only in those genera of *categoriae* which imply *change*: (35) *substance, quantity, quality, and place*. Within each of these four categories, there are two distinguishable *termini* which form the extremities of a distinct and inclusive categorical contrariety: (36) (1) in substance it is form-privation; (2) in quantity it is completeness-incompleteness; 3) in place it is up-down; and (4) in quality it presents no exhaustive general extremities; instead it yields a variety of contrarieties, such as white-black, hot-cold, (37) etc.

Each categorical contrariety when developmentally conceived stands for two directions or types of change characteristic of each category, as subsequent analysis will show." (p. 61)

(37) The qualitative pairs of contraries were hypostatized by Anaxagoras, who made them the ultimate constituents of the universe. See Diels, *Die Frag. der Vors.* (Anaxagoras), B 6; B 12.

10. ——. 1968. "The Aristotelian Doctrine of 'Homonyma' in the *Categories* and Its Platonic Antecedents." *Journal of the History of Philosophy* no. 6:315-326.

Reprinted as Chapter 4 in: J. P. Anton, *Categories and Experience. Essays on Aristotelian Themes*, Oakdale, N.Y.: Dowling College Press, 1996, pp. 87-114.

"The Aristotelian doctrine of *homonyma* is of particular historical interest at least for the following reasons: (1) It appears that the meaning of *homonyma* was seriously debated in Aristotle's times and that his own formulation was but one among many others. Evidently, there were other platonizing thinkers in the Academy who had formulated their own variants. According to ancient testimonies, the definition which

Speusippus propounded proved to be quite influential in later times.(2) The fact that Aristotle chose to open the *Categories* with a discussion, brief as it is, on the meaning of *homonyma*, *synonyma*, and *paronyma*, attests to the significance he attached to this preliminary chapter. Furthermore, there is general agreement among all the commentators on the relevance of the first chapter of the *Categories* to the doctrine of the categories. (3) The corpus affords ample internal evidence that the doctrine of *homonyma* figures largely in Aristotle's various discussions on the nature of first principles and his method of metaphysical analysis. This being the case, it is clear that Aristotle considered this part of his logical theory to have applications beyond the limited scope of what is said in the *Categories*.

Since we do not know the actual order of Aristotle's writings it is next to the impossible to decide which formulation came first. It remains a fact that Aristotle discusses cases of *homonyma* and their causes as early as the *Sophistici Elenchi*. Special mention of the cause of *homonyma* is made in the very first chapter of this work. We find it again in the *Topics*, *de Interpretatione*, the *Analytics* and the other logical treatises. He opens the *Sophistici Elenchi* with a general distinction between genuine and apparent reasonings and refutations, and then proceeds to explain why some refutations fail to reach their goal, that is, establish the contradictory of the given conclusion.(3)" (pp. 87-88)

(2) See *De Speusippi Academici scriptis*, ed. P. Lang (Bonn, 1911), frag, 32. Simplicius comments that Speusippus defended this formulation and remarks that once the definition is granted, it could be shown that *homonyma* are also *synonyma*, and vice versa (*In Aristotelis Categoriae Commentarium*, ed. C. Kalbfleisch, *Commentaria in Aristotelis Graeca*, VIII [Berlin, 1907] 29, 5-6).

(3) "It is impossible in a discussion to bring in the actual things discussed: we use their names as symbols instead of them; and, therefore, we oppose that what follows in the names, follows in the things as well, just as people who calculate suppose in

regard to their counters. But the two cases (names and things) are not alike. For names are finite and so is the sum-total of formulae, while things are infinite in number. Inevitably, then, the same formulae, and a single name, have a number of meanings. Accordingly just as, in counting, those who are not clever in manipulating their counters are taken in by the experts, in the same way in arguments too those who are not well acquainted with the force of names misreason both in their own discussions and when they listen to others. For this reason, then, and for others to be mentioned later, there exists both reasoning and refutation that is apparent but not real" (165a 5-20, Oxford trans.).

11. ———. 1968. "The Meaning of 'Ο λόγος τῆς οὐσίας in *Categories* 1a." *The Monist* no. 52:252-267.

Reprinted as Chapter 3 in: J. P. Anton, *Categories and Experience. Essays on Aristotelian Themes*, Oakdale, N.Y.: Dowling College Press, 1996, 61-85.

"The purpose of this paper is to inquire into the meaning of the troublesome Aristotelian expression ὁ λόγος τῆς οὐσίας; as it occurs at the very opening of *Categories* 1a 1-2, 7. That the passage has presented serious difficulties to commentators and translators alike can be easily ascertained through a survey and comparison of the relevant literature. It would seem from the disagreements among translators that the passage is either vague in the original Greek or that Aristotle did not have a special doctrine to put across at the very opening such that would require technical formulations that would comply with the ontology presented in this treatise.

The main body of this paper is given to an examination of the diverse difficulties the passage raises in connection with the doctrine of *homonymy* and the ontology which supports it. On the basis of this analysis, and after consideration of the available evidence, textual and historical, attention is given to the possibility of proving the thesis that ὁ λόγος τῆς οὐσίας; (hereafter abbreviated as *L of O*, L for *logos* and O for *ousia*) has a special doctrinal meaning and is, therefore, free from terminological imprecision. Accordingly, the interpretation

defended in this paper advocates a definite reading for *logos* and for *ousia*, and one that forbids a strict identification of *ousia* with the variant meaning of *tode ti* (individual existents or particular substances),(2) let alone taking liberties with the notion so that it may include in its denotation the *symbebethota* (accidental properties). More pointedly, an argument is presented in favor of interpreting *ousia* to mean substance in the sense of species, on the ground that only in this sense is *ousia* definable.(3)

The thesis that the expression *L of O* has a precise and technical meaning can be put as follows: if we admit that *ousia* can occur as both subject and predicate, and that as ultimate subject it denotes individual substances whereas as predicate it ranges in denotation from *infima species* to *summa genera*, it can be shown that Aristotle means to say in this context that *ousia* must be understood in the sense of being (a) definable and (b) predicable. If so, then, it can only mean secondary substance, with the added restriction that the highest genera be excluded on account of their undefinability. The context of the first chapter is unmistakably one in which *homonymy* is presented and explained as a topic highly requisite to the exposition of the ontology that undergirds the general doctrine presented in the *Categories*." (pp. 61-62)

(3) For *infima species*, *Post. An.* esp. *passim*; 73a 32. It must be remembered that unless *ousia* means species, *infima* or otherwise, it cannot be defined. *Post. An.* 83b 5.

12. ———. 1975. "Some Observations on Aristotle's Theory of Categories." *Diotima.Epitheoresis Philosophikes Ereunes* no. 3:66-81.

Reprinted as Chapter 6 in: J. P. Anton, *Categories and Experience. Essays on Aristotelian Themes*, Oakdale, N.Y.: Dowling College Press, 1996, 153-174.

"This paper deals with what seems to be a rather small topic but one, as I hope to show, which has significant implications. At many interpreters before me have said, the treatise titled

Categories brings together certain basic logical and ontological views of Aristotle. I find myself in agreement with this interpretation but I take it a step further to say that the treatise contains enough evidence to support the view that Aristotle intended and in fact did make a basic distinction between a theory of being and a theory of categories, and even more sharply than has been hitherto recognized.

I will argue that this distinction has been largely overlooked and even ignored by every major interpreter of Aristotle, with the subsequent result that these two basic doctrines as presented in the *Categories*, instead of being kept apart, have been treated as identical theories. One of the most serious consequences of the tendency to collapse the meanings of the key terms "being" and "category" is not so much that they have been used interchangeably, but more importantly, that their fusion obscures our understanding of that treatise. I propose to show that Aristotle's intent was to correlate the ultimate genera of being, *ta gene tou ontos*, and the logically fundamental modes of predication, *ta schemata tes kategorias*. I do not contend that scholars have been remiss to notice the fact that Aristotle has a theory which deals with these modes of predication but only that they have been misled by the prevailing tendency to overlook the difference between the two concepts, "being" and "category." (pp. 153-154)

13. ———. 1990. "The Unity of Scientific Inquiry and Categorical Theory in Aristotle." In *Greek Studies in the Philosophy and History of Science*, edited by Nicolacopoulos, Pantelis, 29-43. Dordrecht: Kluwer.

"The concept of the unity of the sciences as interrelated domains of inquiry, aside from its recent setting, had also an Aristotelian setting in antiquity. Its usefulness in the latter period was not to serve as the logical basis to build a system of systems. Although there is much to recommend it as a solution to the communication of 'public' knowledge, it also seems to have functioned as the basis for the continuity between being and the perception of being, between fact and value. There is more to the concept of the unity of the scientific inquiries than the sharing of methodological principles; for instance, the

pervasive axioms and the requirement for special theses and hypotheses, as Aristotelian terminology would have it in the concluding chapters of the *Posterior Analytics*, Book II. There is also the model of the ordered facts, i.e. the conceptual determination of the ultimate facts within a type of subjectmatter: the Aristotelian model of wholes qua *ousiai*, which constitute the ontological counterparts of the proper subjects of statements. These ontic wholes are the ultimate loci of the fundamental properties of typical facts, they are the irreducible wholes of parts. Thus the articulation of the mode of attribution of properties of facts to the facts as wholes, i.e. the connecting the *symbebekota* (co-incidentals) to their *ousiai*, is the function of scientific predication. Language, when it is canonical discourse covering the full span of all subject-matters, serves us well, both in announcing encountered facts and attributing properties to facts. Given that universal and near-universal statements can be made in each of the sciences, the explanation of phenomena, the securing of a conclusion in any demonstrative syllogism, is tied to the quest for middle terms, itself in line with the model of wholes and the rules of categorial theory." (p. 29)

14. ———. 1992. "On the Meaning of *kategoria* in Aristotle's *Categories*." In *Aristotle's Ontology*, edited by Preus, Anthony and Anton, John Peter, 3-18. Albany: State University of New York Press.

Reprinted as Chapter 7 in: J. P. Anton, *Categories and Experience: Essays on Aristotelian Themes*, Oakdale, N.Y.: Dowling College Press, 1996, 175-201.

"In a paper written in 1974 and subsequently published in 1975, (1) I argued that the Aristotelian texts, particularly that of the *Categories*, allow for a parallel yet distinct interpretation to the traditional and prevalent one that takes the categories to be terms, ultimate classes, types, and concepts. (2) My position there was that the primary use of *kategoria* refers to well-formed statements made according to canons and, to be more precise, to fundamental types of predication conforming to rules sustained by the ways of beings.

In trying to decide how Aristotle uses the term *kategoria* in the treatise that bears the same name, *Categories*, (3) provision must be made for the fact that there is nothing in the text to justify the meanings that ancient commentators and also modern writers assigned to it and that found their way both into translations of Aristotle's works and into the corpus of established terminology. (4) The present article is written in the hope that it will contribute in some small measure to understanding why certain distinctions in the treatise *Categories* should have prevented interpreters from assigning the traditional meaning of "genera of being" to the term *category*, hence giving it the meaning of "highest predicate" rather than "fundamental type of predication". (p. 175)

(1) Anton 1975, 67-81.

(2) The paper published here was presented at the December 28, 1983, meeting of the Society for Ancient Greek Philosophy, Boston, MA.

(3) The title of the treatise was a subject of considerable dispute in antiquity. For a recent survey on this problem see M. Frede 1987b, 11- 28. According to Frede "the question of authenticity is crucially linked to the question of unity" (12). The problem of the unity covers the relation of the early part of the treatise to the part that discusses the postpredicamenta.

(4) There are many surveys of interpretations concerning the categories. I do not plan to offer another survey, for my main interest lies in the investigation into what we can learn about the theory of categories in the *Categories*. Nor am I concerned with reproducing and commenting on the table of enumeration of the "categories" in Aristotle's works. The list can be readily found in Apelt 1891, conveniently reproduced in Elders 1961, 194-96. One can still raise the question about the intent of the list or lists. If a defense of objections can be made to the reading that makes the list of "categories" refer to classes of being, then we have an alternative before us, which has not been adequately explored, namely whether the list refers not to classes of being or classes of predicates, but to the types of statements that pertain to the attribution of genuine features

present in the entity named in the subject position. It is the existence of the concrete individual qua subject that sets the context for the selective lists of relevant types of attribution.

16. Antonelli, Mauro. 2017. "In Search of Lost Substance. Brentano on Aristotle's Doctrine of Categories." *Brentano Studien* no. 15:177-233.

Abstract: "Brentano's doctoral dissertation 'On the Manifold Senses of Being in Aristotle' (1862) takes up Aristotle's ontology and theory of categories in order to show that a realistic ontology requires the interweaving of factual being and its adequate logical expression. The scheme of categories manifests itself on a grammatical-linguistic level – as Trendelenburg pointed out – , but it is grounded in the variety and multiplicity characterising the level of real things – as Aquinas held. The logic-linguistic side of the categories is thus dependent on the ontological and founded by it. Brentano's first book thus has two main interpretative sources, one which is fundamental but hidden, the other more explicit but superficial: the first is Thomas Aquinas – for Brentano as a

young catholic seminarian, of course, 'sine Thomas mutus esset Aristoteles' – , the second Adolf Friedrich Trendelenburg, his Berlin teacher and leader of the Aristotelian revival in Protestant Germany. The Thomist influence lead Brentano to propose a univocal reading of the Aristotelian ontology, allowing that deduction of the categories from the general concept of being, that Aquinas had already worked out during the Middle Ages. Considering the Aristotelian ontological framework compatible with a deductive trend, which was aimed at bringing the equivocal nature of being back to an analogical structure, Brentano forced, at least partially, an interpretation that would be particularly appreciated by Heidegger, to the point that according to him it is due to Brentano that “the systematic impact of Aristotelian philosophy begins”. This Thomist influence is also analysed through a comparison between the printed version of the dissertation and its preliminary version, dating back to 1861, which is preserved as a manuscript in Brentano’s Nachlass (Werkmanuskripte, Frühe Schriften, Ms. 16)"

17. Asztalos, Monika. 2014. "Qualities in Aristotle's Categories." In *PARADEIGMATA. Studies in Honour of Øivind Andersen*, edited by Emilsson, Eyjólfur Kjalar, Maravela, Anastasia and Skoie, Mathilde, 155-161. Athens: The Norwegian Institute at Athens.

"It is commonly taken for granted that Aristotle’s main concern in *Categories* is to propose a classification in which each thing occupies one, and only one, place in a hierarchy consisting of genera that are divisible into species. Any passage in this work that seems to contradict this assumption is considered perplexing or even taken as evidence of ‘a weakness in the foundations of Aristotle’s theory of categories’.(1) So strong is this belief that the authenticity of 11a20–38, which comes at the end of the discussion of qualities in chapter 8, has been doubted.(2) The purpose of this contribution is to show that there is indeed a weakness, not, however, in Aristotle’s theory but in the commonly held assumptions about it. A full investigation of all problems involved and of previous research requires much more space than is available on this occasion.

Thus, my main focus will be on chapter 8, and I will refer to the translation and commentary by J. L. Ackrill, a work that has been, and still is, hugely influential on determining how *Categories* is understood.(3)" (p. 155)

(1) This is the verdict of Ackrill 1963, 109.

(2) One important instance is in Frede 1987, 13.

(3) Günther Patzig's appreciation has in all likelihood contributed to the influence: 'Als eine Erklärung des Textes, die auch Sachfragen erörtert, hat Ackrill's knappes Buch einen neuen Standard für die Interpretation antiker philosophischer Text gesetzt.' Patzig 1996, 105.

"Outline

Our attempt to solve the question of logos in Aristotle's philosophy shall cross six chapters: the first two *on his logical works (Categories, On Interpretation)*, the third and fourth *on his work of philosophy of nature (Physics and On the Soul)*, and the fifth and sixth *on his ethical-political works (Nicomachean Ethics and Politics)*.(93)

Let me give a more concrete outline of the book. In chapter 1, "Being," we will discuss the function of logos in Aristotle's *Categories*. At the very inception of the *Categories*, logos distinguishes homonymy and synonymy by providing an

answer to the question: “What is it for this being to be?” (*Cat.* 1, 1a2ff.).

Through a discussion of the questions emerging from its context, I will argue that *logos* here must mean something like “standard.” For, without this standard, the commonality between an ox and a human being as “animals” will be reduced to a relation between mere namesakes like a “spelling bee” and a “honey bee.” Thus, *logos* in the sense of “standard” requires a relation between a being and “what it is for it to be.” That a being has such a standard means that it holds on at once to its own being and to its claim concerning what it is for itself to be, without letting one yield, or remain indifferent, to the other. Yet what would such a standard mean if it is not truly inherent to the being in question, but arbitrarily imposed from without? How are we to warrant that a standard is in fact inherent to the being at hand?” (Introduction, p 27)

(93) The reader will notice that the use of *logos* in the *Metaphysics* (especially books VII and VIII) is scattered throughout the book.

19. Bäck, Allan. 2000. *Aristotle's Theory of Predication*. Leiden: Brill.

Table of Contents: Acknowledgments IX; Preface XI, Notation and Conventions XIV; Introduction 1; Chapter One The Linguistic Evidence 11; Chapter Two Aristotle's Precursors 31; Chapter Three Aristotle on the Uses of 'Be' in Greek 59; Chapter Four The Statement 98; Chapter Five The Categories as Predicates 132; Chapter Six Type of Predication 166; Chapter Seven Negations 199; Chapter Eight Inference 228; Chapter Nine Consequences 264; Bibliography 321; Index 339-346.

"In *Categories* 2 Aristotle presents a fourfold division of beings, known as the ontological square. There he distinguishes substance and accident, and the universal and the singular. The distinctions that he makes parallel distinctions that he makes elsewhere for types of predications: the essential versus the accidental, and, again, the singular versus the universal. Aristotle also uses these distinctions in his various discussions of the ten categories.

In the next chapter I shall discuss the types of predication. Here I wish to investigate the relation between Aristotle's theory of the categories and his views on predication. After all, 'category' ('κατηγορία') means 'predication', and Aristotle has said that the categories are the different ways in which being per se may be said.⁽¹⁾ He even calls the ten ultimate sorts of being, substance (τὶ ἐστίν) quantity, relation, ..., "the figures of predication". [*Metaph.* 1017a23] Above I have claimed that whatever, S, has being per se is such that 'S is' is true, where 'is' means real presence, and can be specified further through certain additional predicates. The categories would then be the types, or figures, of such predicates. In this way, Aristotle's doctrines about being per se in the *Metaphysics* embody the aspect theory of predication, so I have claimed. Here I shall consider whether what Aristotle says about the various categories agrees with this interpretation. Now Aristotle says too that "being" is divided into the four divisions of the ontological square. So I shall also have to consider the relationship between these two classifications, the one into four, the other into ten divisions." (p. 132)

(1) 'Predication' in the sense that "the kinds of predication define classes or kinds of predicates, namely the classes of those predicates which occur in a statement of a given kind of predication,"[sc., of being per se], as Michael Frede, "Categories in Aristotle," p. 32, says.

He also notes that Aristotle is using 'κατηγορία' in a new way. L. M. De Rijk, "On Ancient and Mediaeval Semantics and *Metaphysics*: 4. The Categories as Classes of Names," pp. 18-9; 21, notes that 'κατηγορία' here means 'predication', but originally 'accuse', or better 'reveal'.

20. Barnes, Jonathan. 1971. "Homonymy in Aristotle and Speusippus." *Classical Quarterly* no. 21:65-80.

Reprinted with the title *Aristotle and Speusippus on Homonymy*, in J. Barnes, *Logical Matters: Essays in Ancient Philosophy II*, New York: Oxford University Press, 2012, pp. 284-311.

"1. 'There are important differences between Aristotle's account of homonymy and synonymy on the one hand, and Speusippus' on the other; in particular, Aristotle treated homonymy and synonymy as properties of things, whereas Speusippus treated them as properties of words. Despite this difference, in certain significant passages Aristotle fell under the influence of Speusippus and used the words "homonymous" and "synonymous" in their Speusippean senses.

These sentences are a rough expression of what I shall call the Hambruch thesis. The thesis was advanced by Ernst Hambruch in 1904 in his remarkable monograph on the relation between Academic and early Aristotelian logic. (*)

Hambruch singled out *Topics* A 15 as peculiarly Speusippean, and he conjectured that it was based on some written work of Speusippus." (p. 65)

21. ———. 2011. "Aristotelian Quantities." In *Studi sulle Categorie di Aristotele*, edited by Bonelli, Maddalena and Guadalupe Masi, Francesca, 337-370. Amsterdam: Adolf M. Hakkert.

"A quantity is usually conceived to be a kind of property. It is thought to be a kind of property that admits of degrees, and which is therefore to be contrasted with those properties which have an all-or-none character (for example being pregnant, or being crimson). According to this conception, objects possess quantities in much the same way as they possess other properties, usually called 'qualities'(1).

That conception of quantities is Aristotelian:

Of things said without any complexity, each signifies either a substance or a quantum or a quale (...) Roughly speaking, substances are, say, a man, a horse; quanta, say, two-foot, three-foot; qualia, say, white, cultivated [...](2).

(Arist. *Cat.* 4, lb25-29)

Quanta (or quantities, as they are usually called) form the second of the ten groups of items (or the ten categories, as they are usually called) which Aristotle discusses in the central part of his *Categories* and to which he not infrequently alludes in his other philosophical writings. The third group of items consists of qualia (or qualities, as they are usually called): quanta stand alongside qualia, and objects are supposed to possess them 'in much the same way' as they possess qualia.

Quanta have a chapter to themselves in the *Categories*, and another in Book Δ of the *Metaphysics*, and there are remarks scattered elsewhere in the corpus³. But all told, Aristotle says little about quanta (in part perhaps because much of his science was qualitative rather than quantitative); and what he says in the *Categories* does not always chime with what he says in the *Metaphysics*. Moreover, the whole business (or so I find) is curiously elusive." (p. 337)

(*) This is a revised version of a paper which I gave at a Colloquium held in Bergamo in December 2010. The paper excited a flurry of criticism, to my great advantage. I thank also, and in particular, Maddalena Bonelli, who both organized and animated the Colloquium.

22. ———. 2012. "Aristotle's *Categories* and Aristotle's 'categories'." In *Logical Matters: Essays in Ancient Philosophy II*, 187-265. New York: Oxford University Press.

Revised English translation of: Les *Catégories* et les catégories, in Otto Bruun, Lorenzo Corti (éds.), *Les Catégories et leur histoire*, Paris: Vrin, 2005, pp. 11-80, with an Appendix on the new critical edition by Richard Bodéüs, *Aristote. Catégories*, Paris: Les Belles Lettres 2001, pp. 258-265.

"The history of Aristotle's theory of categories is the history of a doctrine and the history of a text — or rather, of a small corpus of texts. For the text which Aristotle himself wrote — the *Categories* — was abridged and paraphrased and attacked and defended and commented upon and translated, so that its fifteen pages are accompanied by a vast library of secondary literature. The *Categories* had an extraordinary success, in late antiquity and after, and the doctrine of the categories had an immense influence on the history of philosophy — ancient, medieval, and modern. But if the theory was familiar in all parts of the republic of letters, knowledge of the Aristotelian doctrine did not always carry with it an acquaintance with Aristotle's text. Sometimes it is plain that an author who 'cites' the *Categories* has read no more than an epitome or a doxographer's report. Often enough, Aristotle's theory is exploited on the basis of a paraphrase or a commentary. And in any event — what ought to depress but not to astonish — an understanding of the doctrine was always filtered through the secondary literature, and the doctrine took some flavour from the particular filter it passed through.

With hindsight, the triumph of the doctrine may seem inevitable — after all, a glorious future presupposes a distinguished past, and if the past is distinguished, then the future is likely to be rosy. But in reality things were otherwise. The birth of the doctrine (as I have just recalled) was difficult. Its adolescence was neither robust nor promising.

Aristotle's successors often worked on the same subjects and wrote under the same titles as he had done: they attempted to fill the gaps which he had left (and sometimes indicated), they

tried to state more clearly what he had set out obscurely or approximatively, and they sometimes sought to mend his errors." (pp. 198-199)

23. Barnes, Kenneth T. 1977. "Aristotle on Identity and Its Problems." *Phronesis. A Journal for Ancient Philosophy* no. 22:48-62.

Abstract: "There are certain problematic arguments, collective reference to which is often compressed into the expression, "the problems of identity."

Strictly speaking, of course, there are no problems of identity. But there are problems, if only apparent, for a certain view about identity, namely, the view that identicals are indiscernible. In light of the seeming freshness of these philosophical problems, it is remarkable that we find in Aristotle's early writings what seems to be a formulation of the view that identicals are indiscernible, as well as a confrontation with certain arguments that raise apparent difficulties for that view. Philosophers have not always been clear about these arguments, and some have taken them to prove the need to qualify the view that identicals are indiscernible. Aristotle is among those who have drawn such a conclusion, but so are some contemporary philosophers. In this paper I examine Aristotle's solution to certain problems of identity. I attempt to state the solution clearly and indicate the mixture of insight and error that influenced it."

24. Baumer, Michael R. 1993. "Chasing Aristotle's Categories Down the Tree of Grammar." *Journal of Philosophical Research* no. 18:341-349.

Abstract: "This paper addresses the problem of the origin and principle of Aristotle's distinctions among the categories. It explores the possibilities of reformulating and reviving the 'grammatical' theory, generally ascribed first to Trendelenburg. the paper brings two new perspectives to the grammatical theory: that of Aristotle's own theory of syntax and that of contemporary linguistic syntax and semantics. I put forth a provisional theory of Aristotle's categories in which (1) I propose that the categories sets forth a theory of lexical

structure, with the ten categories emerging as lexical or semantic categories, and (2) I suggest conceptual links, both in Aristotle's writings and in actuality, between these semantic categories and certain grammatical inflections."

25. Benson, Hugh. 1988. "Universals as Sortals in the Categories." *Pacific Philosophical Quarterly* no. 69:282-306.

"In his essay *Individuals in Aristotle*,⁽¹⁾ Michael Frede suggests that in the *Categories* Aristotle attempts to maintain the independence of the Platonic distinction between universals and particulars on the one hand, and his new distinction between properties and objects, on the other. Thus, according to Frede, in the *Categories* there are universal objects and particular objects as well as universal properties and particular properties.

As a result, Frede thinks we must reject, at least in the context of the *Categories*, what might be called the traditional analysis of the universal.

In this essay I want to defend this suggestion at greater length. (2)"

(...)

"First, I will briefly explain the distinction between the traditional analysis of the universal, (TA), and what I will call the sortal system analysis, (SA). The former is traditional in that it is commonly accepted as Aristotle's analysis of the universal/particular distinction. The latter may be equivalent to Frede's subjective part analysis.⁽³⁾ Second, I will defend the claim that in the *Categories* Aristotle is committed to the existence of particular properties, (A). This is a corollary of the suggestion that Aristotle took the universal/particular and property/object distinctions to be independent. Third, I will explain why such a commitment leads us to reject the traditional analysis, and why the sortal analysis is an appropriate replacement. Finally, I will sketch how an appeal to such an analysis might solve one of the more traditional problems of the middle books of the *Metaphysics*." (pp. 282-283)

(1) Frede (1978), first appeared as 'Individuen bei Aristotles' in *Antike and Abendland*.

Anscombe (1967) also suggests the independence of these distinctions when she discusses the two 'most notable' features of Aristotle's doctrine not found in modern treatments (p. 8).

(2) As we will see, this should not be taken as suggesting that I agree with either his position concerning the trope controversy (cf. n. 24 below) nor with his position concerning his resolution to one of the traditional difficulties of the central books of *Metaphysics*.

(3) Cf. n. 15 below.

English translation by Mary E. Meek of *Catégories de pensée et catégories de langue* (1958).

"We must enter into a concrete historical situation, and study the categories of a specific thought and a specific language. Only on this condition will we avoid arbitrary stands and speculative solutions. Now, we are fortunate to have at our disposal data which one would say were ready for our examination, already worked out and stated objectively within a well-known system: the Aristotle's categories. In the examination of these categories, we may dispense with philosophical technicalities. We will consider them simply as an inventory of properties which a Greek thinker thought could be predicated of a subject and, consequently, as the list of a priori concepts which, according to him, organize experience. It is a document of great value for our purpose.

Let us recall at first the fundamental text, which gives the most complete list of these properties, ten in all (*Categories* 4, 1)

(...)

Aristotle thus posits the totality of predications that may be made about a being, and he aims to define the logical status of each one of them. Now it seems to us-and we shall try to show-that these distinctions are primarily categories of language and that, in fact, Aristotle, reasoning in the absolute, is simply identifying certain fundamental categories of the language in which he thought. Even a cursory look at the statement of the categories and the examples that illustrate them, will easily verify this interpretation, which apparently has not been proposed before." (p. 57)

(...)

"In working out this table of "categories," Aristotle intended to list all the possible predications for a proposition, with the condition that each term be meaningful in isolation, not engaged in a συμπλοκή, or, as we would say, in a syntagm. Unconsciously he took as a criterion the empirical necessity of a distinct expression for each of his predications. He was thus bound to reflect unconsciously the distinctions which the language itself showed among the main classes of forms, since it is through their differences that these forms and these classes have a linguistic meaning. He thought he was defining the attributes of objects but he was really setting up linguistic entities; it is the language which, thanks to its own categories, makes them to be recognized and specified.

We have thus an answer to the question raised in the beginning which led us to this analysis. We asked ourselves what was the nature of the relationship between categories of thought and categories of language. No matter how much validity Aristotle's categories have as categories of thought, they turn out to be transposed from categories of language. It is what one can say which delimits and organizes what one can think. Language provides the fundamental configuration of the properties of things as recognized by the mind. This table of predications

informs us above all about the class structure of a particular language.

It follows that what Aristotle gave us as a table of general and permanent conditions is only a conceptual projection of a given linguistic state." (pp. 60-61)

27. Blackwell, Richard J. 1957. "The Methodological Function of the *Categories* in Aristotle." *The New Scholasticism* no. 31:526-537.

"It is a curious fact that the ten categories are listed in only two places in the writings of Aristotle.(1) In the majority of cases only five or less categories are listed.(2) Furthermore Aristotle unlike St. Thomas does not designate the categories by the definite number "ten" but rather merely gives a listing, usually a partial one, of the individual categories.

This situation, plus the lack of any explicit statement by Aristotle as to how the individual categories are established, has led to a complicated controversy among modern scholars regarding the nature and origin of the doctrine of the categories.

Most of the literature on this problem centers around the question of how Aristotle arrived at the listing of the ten categories which have become a permanent part of the Aristotelian tradition. The results have by no means been conclusive.

The controversy began with F . A. Trendelenburg's position that the categories are derived from the distinction of the various grammatical parts of speech. H. Bonitz disagreed with this interpretation, claiming that the categories indicate the different determinations in which the notion of being is predicated.(4)" (p. 526)

28. Block, Irving. 1978. "Predication in Aristotle." *Philosophical Inquiry* no. 1:53-57.

Abstract: "This article traces briefly the development of Aristotle's thoughts on predication as this progressed from the *Categories* to the *Posterior Analytics* with the *Topics* coming somewhere in between. In the *Categories* predication is only of essential attributes and the subject of a predicating statement need not be a substance. In the *Posterior Analytics*, predication is the attribution of either essential or accidental attributes and the subject must be a substance, otherwise it is not predication in the true sense. The *Topics* represents a half-way house in between as it makes no mention of the predication-inherence distinction of the *Categories* on the one hand, and on the other gives no predominance to the notion of substance when discussing the subject of predication, as we find in *Posterior Analytics*."

29. Bolton, Robert. 2013. "Two Doctrines of Categories in Aristotle: *Topics*, *Categories*, and *Metaphysics*." In *Aristotle on Method and Metaphysics*, edited by Feser, Edward, 68-101. New York: Palgrave Macmillan.

"Introduction. The aim of this chapter is to offer support for the view – one contrary to the main tradition represented by Alexander and most more recent commentators – that there are, in fact, two different sets and two different, and incompatible, doctrines of categories in Aristotle. I do not have in mind here any difference between the *Categories*, or the *Organon*, and the *Metaphysics*. Rather, both doctrines are present in the *Organon* and even in a single chapter of the *Organon*, *Topics* I.9. The proper explanation for this striking fact is not, as some would suggest, historical or developmental – that one doctrine came earlier in Aristotle's thinking, the other later. Nor is it, as others have suggested, that both

doctrines need to be mastered to adequately employ dialectic, so that both are present in the *Topics*. Instead, as we shall see, one doctrine, for Aristotle, is precisely suited to the needs of the art of reasoning *kata doxan*, i.e. to the practice of dialectic, the other to procedure *kat' aletheian*, or to the needs and the practice of science, indeed of metaphysical science. I go on to consider a main question for this result, one whose proper resolution helps us to understand better Aristotle's scientific method overall and the special, if limited, role of dialectic in it. I begin by developing a problem for the interpretation of *Topics* I.9." (p. 68)

30. Bostock, David. 2004. "An Aristotelian Theory of Predication?" *Oxford Studies in Ancient Philosophy* no. 27:141-175.

"In Section I I briefly assemble some reminders of what Aristotle has to say about predication in his logical works (and I shall confine my attention to these works only). To keep my discussion within reasonable bounds I have here had to be somewhat dogmatic on some issues which are still controversial, and I apologize for this.

In Section 2 I outline a modern reconstruction of why Aristotle may have thought as he did, and sketch in modern terms the theory to which it gives rise. In Section 3 I ask whether there really is good reason to attribute this theory to Aristotle. In Section 4 I ask whether it has merit anyway as a philosophical account of predication, irrespective of whether we may call it Aristotle's theory." (p. 141)

Contents: Acknowledgments 1; Preface 3; I: Recent Views of Aristotle's Universal 11; II: The Definition of Aristotle's Early Concept of the Universal 17; III: Interpretations of Aristotle's Doctrine of the Categories in Recent Times 21; Chapter IV: A Consideration of the Main Interpretations 31; V: The Categories and the Meaning of 'an Existent' at the Time of the *Prior Analytics* 55; VI: Fundamentals of Aristotle's Theory of the Simple Statement at the Time of the *De Interpretatione* and *Prior Analytics* 65; VII: Interpretations of 'is Said of' in the

Recent Literature 77; VIII: The Senses of 'Is Asserted of' 87; IX: Aristotle's Early, Middle and Late Views of the Universal 97; Selected Bibliography 111-113.

"The main interpretations. The fundamental question concerning Aristotle's doctrine of the categories is: Just what is it supposed to classify? Even on this most fundamental issue the chorus of voices arguing for one interpretation over another seems a virtual Tower of Babel — the literature, vast as it is, seems to encompass interpretations of every possible and impossible variety. This is to exaggerate, of course, but not by so very much.

It is possible, however, to sort out what has been said on this question in recent times. In the last 150 years or so there have been mainly five interpretations of what the doctrine is supposed to classify. According to one, the categories are categories of existing things — that is, of that general domain, not some sub-category of it; according to a second, they are categories of concepts — either 'real' of 'in the mind'; according to a third, they are categories of subject and predicate expressions; according to a fourth, they are categories of the meanings of subject and predicate expressions; and according to a fifth, they are categories of the different senses of the copula. Most commentators, I would venture to say, have accepted one or another of these interpretations — either in these 'pure' forms or some approximation of them, either one singly or several in combination. To illustrate this, let us consider some of the major studies of Aristotle's doctrine that have appeared in recent times. (p. 21)

The views of Trendelenburg, Bonitz, Brentano, Apelt, and De Rijk.

"Let us sum up this discussion. Trendelenburg seemed to hold that Aristotle's doctrine classifies subject and predicate expressions; Bonitz held that it classifies beings; Brentano held that it classifies beings, concepts (that is, 'real concepts') and predicates; Apelt held that it classifies concepts, predicates and copulae; and De Rijk, it seems, held that it classifies 'reality', the meanings of subjects and predicates, and the senses of the

copula. These scholars, then, illustrate that most commentators have accepted one or another of the five interpretations indicated at the outset - either in their 'pure' forms or some approximation of them, either one singly or several in combination.

However, other prominent writers have expressed views on the nature of Aristotle's categories, and we should consider at least some of these. For, even though they do not appear as the theses of major studies of the doctrine, these writers are prominent, and it therefore behooves us to consider whether what they have to say offers anything of interest that has not already been mentioned." (p. 26)

The views of H. W. B. Joseph (*), W. D. Ross, Ernst Kapp, Joseph Owens, Kneale and Kneale, J. L. Ackrill, and J. M. E. Moravcsik.

(*) [*An Introduction to Logic*, 2nd ed. (Oxford: Oxford University Press, Clarendon Press, 1916), pp. 48-66. First edition published in 1906].

"We can see, then, that these additional interpretations offer little that is new. Except for Joseph's view that the doctrine classifies universals and Owens' that it classifies individuals, every one of these interpretations is a combination of two or more of those indicated at the outset, either in their 'pure' forms or in some approximation to them." (p. 29)

32. Brentano, Franz. 1975. *On the Several Senses of Being in Aristotle*. Berkeley: University of California Press.

Translation of *Von der mannigfachen Bedeutung des Seienden nach Aristoteles* (1862) by Rolf George.

Contents: Editor's Preface XI; Preface XV; Introduction 1; Chapter I. The Fourfold Distinction of Being 3; Chapter II. Accidental Being 6; Chapter III. Being in the Sense of Being True 15; Chapter IV. Potential and Actual Being 27; Chapter V. Being According to the Figures of the Categories 49; Notes 149-197.

"This is Brentano's doctoral dissertation and his first book. In it he contemplates the several senses of "being," using Aristotle as his guide. He finds that (in Aristotle's view) being in the sense of the categories, in particular substantial being, is the most basic; all other modes, potential and actual being, being in the sense of the true, etc., stand to it in a relation of well-founded analogy. Many of his mature views are prepared in this work.

For example his discussion of being in the sense of being true appears to be the foundation of his later nonpropositional theory of judgment." (Editor's Preface XI)

"Thus the discussion of the several senses of being form the threshold of Aristotle's *Metaphysics*. This makes clear why these considerations must have had great importance for him, and this importance becomes even more obvious if one considers that in this context there is considerable danger of confounding several concepts which have the same name. For, as he remarks in the second book of the *Posterior Analytics* 10, it becomes more and more difficult to recognize equivocation the higher the degree of abstraction and generality of concepts. Thus the possibility of deception must be greatest with being itself since, as we have already seen, it is the most general predicate.

But we have not yet established the fact that, according to Aristotle, being is asserted with several significations, not only with one (*Categories* 1. 1a1. 6). To begin with we shall establish this through several passages of the *Metaphysics* and show, at the same time, how the various distinctions of the several senses of being can be initially subordinated to four senses of this name; subsequently we shall proceed to a special discussion of each of them." (p. 2)

"The modes of predication naturally correspond to the modes of being if one makes the subject [*hypokeimenon*] of all being into the subject of the sentence.

" 'To be' signifies as many different things as there are different ways of using it (*Met.* V. 7. 1017a23)." (p. 131)

33. ———. 1981. *The Theory of Categories*. The Hague: Martinus Nijhoff.

Translated by Roderick M. Chisholm and Norbert Guterman.

"This book contains the definitive statement of Franz Brentano's views on metaphysics.

It is made up of essays which were dictated by Brentano during the last ten years of his life, between 1907 and 1917. These dictations were assembled and edited by Alfred Kastil and first published by the Felix Meiner Verlag in 1933 under the title *Kategorienlehre*. Kastil added copious notes to Brentano's text.

These notes have been included, with some slight omissions, in the present edition; the bibliographical references have been brought up to date.

Brentano's approach to philosophy is unfamiliar to many contemporary readers. I shall discuss below certain fundamental points which such readers are likely to find the most difficult. I believe that once these points are properly understood, then what Brentano has to say will be seen to be of first importance to philosophy." (From the *Introduction to the Theory of Categories* by Roderick M. Chisholm. p. 1)

(...)

"Turning back now to Aristotle, we may say that he was mistaken in assuming that there is no unitary concept of being for both substance and accident. The categories, therefore, should not be thought of as different senses of being, nor even as constituting the different highest predicates or highest genera. It would be more nearly accurate to say that they are the various highest differences of being. But this is not entirely correct and it does not enable us to characterize the distinction between substances and the different types of accidents. For there are also several highest substantial differences which as such do not stand behind the highest accidental differences. ISS To arrive at the true concept of a category, we must take into consideration the results of what has just been said, for only in this way can we see the distinction between a subject and that

which the subject underlies. The highest classes of that which holds accidentally of a subject are greater in number than Aristotle had thought. And this may be said even though several of the determinations that he took to be accidental- for example, sensible quality, place, real time, and perhaps also extension and shape - are in fact substantial determinations." (pp. 99-100)

34. Butler, Travis. 1997. "The Homonymy of Signification in Aristotle." In *Aristotle and After*, edited by Sorabji, Richard, 117-126. London: Institute of Classical Studies.

"In using the notions of indication and announcement above, I have not intended to provide an ultimately illuminating analysis of Aristotle's concept of signification. Rather, I have tried only to sketch one way in which the homonymy of signification might have been seen by Aristotle as more than chance homonymy. According to the sketch, the definitions of being corresponding to the name 'signifier' in the case of words and things differ importantly, but they share the element of indication or announcement, or some similar notion. Given the sketch, moreover, it is likely that for Aristotle, as for Grice, the more fundamental notion of signification is the notion which has application to nonlinguistic items (e.g. primary substances), since this sort of signification depends not for its existence on the conventions of a linguistic community. Put the other way round, the way in which signification is said with respect to words is in some sense a descendant of the way in which it is said with respect to pieces of nonlinguistic reality. Drawing this conclusion together with the conclusion of Part I, it turns out that Aristotle's claim that nonlinguistic things signify is not only *not* a source of puzzlement for the semanticist interpreter, it is rather to be welcomed as a place from which analysis begins." Aristotle's *Categories*. Annotated bibliography of the studies in English: C - F

Bibliography

1. Carson, Scott. 2000. "Aristotle on Existential Import and Non Referring Subjects." *Synthese* no. 124:343-360.

Abstract: "Much contemporary philosophy of language has shown considerable interest in the relation between our linguistic practice and our metaphysical commitments, and this interest has begun to influence work in the history of philosophy as well.(1) In his *Categories* and *De interpretatione*, Aristotle presents an analysis of language that can be read as intended to illustrate an isomorphism between the ontology of the real world and how we talk about that world. Our understanding of language is at least in part dependent upon our understanding of the relationships that exist among the enduring πράγματα that we come across in our daily experience. Part of the foundations underlying Aristotle's doctrine of categories seems to have been a concern, going back to the Academy, about the problem of false propositions: language is supposed to be a tool for communicating the way things are, and writers in antiquity were often puzzled by the problem of how we are to understand propositions that claim that reality is other than it is.(2) Aristotle's analysis of propositions raises a particular problem in this regard: if the subject of a proposition does not refer to anything, how can the proposition be useful for talking about a state of the world?"

The problem falls into two separate but related parts: propositions whose subjects are singular terms and hence make claims about some particular thing, and propositions whose subjects are general terms and hence make claims about classes. In this paper I will explain Aristotle's treatment of each kind, focusing in particular on what has widely been perceived as a problem in his treatment of singular terms. My discussion of his treatment of general terms will be more brief, but will show that his treatment of them is consistent with his treatment of singular terms."

(1) An interesting treatment of this topic that illustrates how such concerns intersect with issues in the history of philosophy can be found in Diamond (1996), Introduction II (pp. 13–38). Whittaker (1996) also touches on these themes.

(2) On the treatment by ancient philosophers of the problem of falsehood see Denyer (1991).

"I. Meaning: language and Reality.

This part of the paper is divided into two Sections. Section I examines a three-part relation among objects, thought, and language from the *De interpretatione* that shows how Aristotle conceived of the nature of mental representation. Section II has to do with a parallel three-part relation from the *Categories* that shows how this conception of mental representation also grounds a conception of linguistic representation that serves to link the natural and the conventional aspects of psychosemantics in a unique account of meaning." (p. 320)

(...)

I.2 The *Categories* Scheme [pp. 326-332]

"The formal isomorphism that we have been examining in the *De interpretatione* lies in a three-place relation among things (*pragmata*), affections of the soul, and words (either spoken or written). There is a similar three-place relation described in the *Categories* that will serve to show how Aristotle conceives of the formal isomorphism between language and ontology that will complete our account of his representational scheme. The three-place relation that we find in the *Categories* is among things (here the phrase used is not *ta pragmata*, but *ta onta*, things that are), accounts (*logoi*) of what those things are, and names (*onomata*) that stand for those accounts. In this scheme *ta onta* and *onomata* play the same roles played by *ta pragmata* and the words (spoken and written signs) of the *De interpretatione* scheme. The middle place in the relation - the affections of the soul in the *De interpretatione* scheme - is held in the *Categories* scheme by "accounts" of the essences (*ousiai*) of the things being represented. It is not immediately clear that these "accounts" play the same role as that played by the affections of the soul in the *De interpretatione* scheme, but in what follows it will be seen that the roles are, indeed, the same. Showing the relation between the two schemes vis-a-vis this central part of the three-part relation will help to make clear how Aristotle conceived of the connection between the natural part of his scheme and the conventional." (p. 327)

3. Chen, Chung-Hwan. 1957. "On Aristotle's Two Expressions: καθ' ὑποκειμένου λέγεσθαι and ἐν ὑποκειμένῳ εἶναι: Their Meaning in *Cat.* 2, 1a20-b9 and the Extension of This Meaning." *Phronesis. A Journal for Ancient Philosophy* no. 2:148-159.

"In the second chapter of the *Categoriae* Aristotle deals chiefly with the division of entities; (I) καθ' ὑποκειμένου λέγεσθαι (II) ἐν ὑποκειμένῳ εἶναι serve here as two principles of division. By their combination, both in their affirmative (Ia, IIa) and in their negative (Ib, IIb) forms, entities are divided into four groups: first group characterized by Ia and IIb, for instance, man;

second group characterized by Ib and IIa, for instance, a certain grammatical knowledge, a certain whiteness; third group characterized by Ia and IIa, for instance, knowledge; fourth group characterized by Ib and IIb, for instance, a certain man.
(1)

The meaning of these two principles is far from being clear; each of them needs some explanation. First of all, let us note at once that the term ὑποκειμένον is very equivocal. ὑποκειμένον means in (I) the subject of which something is predicated, and in (II) the substrate in which something is present. Thus the two principles are of quite different nature: the one is a logical, and the other a metaphysical principle. Whether a clear distinction between the logical and the metaphysical is really Aristotelian or not, the fact remains that these two principles set up here are meant to be different from each other. Otherwise their combination would not divide entities into four different groups. Hence each of these principles must have a distinct realm in which it has its application." (p. 149)

4. ——. 1960. "Aristotle's Theory of Substance in the *Categoriae* as the Link between the Socratic-Platonic Dialectic and His Own Theory of Substance in Books Z and H of the *Metaphysics*." In *Aristotelismo padovano e filosofia aristotelica. Atti del XII Congresso Internazionale di Filosofia. Vol. IX*, 35-40. Firenze: Sansoni.

"In the *Sophist* Plato located the ultimate principles of individual things in the μέγιστα γένη. Aristotle is of a different opinion; for him the μάλιστα καθόλου are not ultimate principles. On the contrary, he holds in Books Z and H of the *Metaphysics* εἶδος, which is in fact the least universal, to be one of the constitutive principles of individual things. It seems the development of philosophy from Plato to Aristotle in respect of the location of principles is simply a lowering of ἀρχή from the most universal to the least universal. This may be true in general, but in detail the matter is more complicated. Aristotle's theory of substance in the central books of the *Metaphysics* is the final result of a development which takes its start from

Plato's theory of Ideas, or, more backward, from Socrates' searching for universals. But where does the middle-stage between these two extreme stages lie? If the right way of understanding a development is to follow its process step by step, then what else should we do in the present case than looking for this missing stage? Where does it really lie? It lies in the *Categoriae*. As a link its fifth chapter, the chapter on substance, connects these two extreme stages. How is it connected with the final stage we showed on another occasion [*]; we have to show here only how it is connected with the Socratic-Platonic dialectic." (p. 35)

5. Chriti, Maria. 2019. "Aristotle's semiotic triangle in *On Interpretation* and in the *Categories*: language and thinking in the frame of logic." In *Proceedings of the World Congress Aristotle 2400 years*, edited by Sfendoni-Mentzou, Demetra, 489-495. Thessaloniki: Aristotle University of Thessaloniki.

Abstract: "In Aristotle's semantic passage in *On Interpretation*, the text "with the greatest influence in the history of semantics/semiotics", scholarship traces the first attempt to formulate a "structuralistic" theory on interpreting mental states by means of linguistic utterance. According to Aristotle's "semiotic triangle", conventional spoken sounds represent the data of reality via mental states and the intrinsic connection between mental states and language is declared by the philosopher.

The *Categories*, on the other hand, is considered to be a treatise where the philosopher classifies the data of reality into ten general classes, giving a name to each class. However, does the philosopher apply his own "semiotic triangle" when he suggests names for his categories? The controversial issue of whether the *Categories* constitute an ontological or a linguistic treatise, i.e., of whether things were first and language followed in Aristotle's categorization or vice versa, has a long tradition in scholarship.

This paper aims at contributing to the above discussion by investigating whether Aristotle as a name-giver in the *Categories* applies what he describes as name-giving in *On Interpretation*: does Aristotle's semantic theory reveal — at least partly — the way he chooses names/terms for his categories? For the specific purpose, two particular aspects of Aristotle's "semantic triangle" are basic: a) the priority and common character that Aristotle attributes to mental states in comparison to language and b) his concept of 'convention' when it comes to human linguistic communication. By using also evidence from Aristotle's other treatises concerning his name-giving policies, the significance of conceptual affinities in Aristotle's linguistic use is quite evident and also of vital importance for understanding his logic."

6. Cleary, John J. 1988. *Aristotle on the Many Senses of Priority*. Carbondale: Southern Illinois University Press.

Contents: The Journal of the History of Philosophy Monograph Series XI; Preface XIII; Abbreviations XVI; Introduction 1; 1. Platonic Background of the Topics 7; 2. The Senses of Priority in the *Categories* 21; 3. The Senses of Priority in *Metaphysics Delta* 33; 4. The Focal Sense of Priority 53; 5. Getting the Priorities Right 64; Conclusion 93; Notes 97; Bibliography 122; Index 126-132.

"Aristotelian Commentators from all ages have usually acknowledged the thesis about the multiple senses of 'being' as a basic part of Aristotle's claim to have made significant progress over his philosophical predecessors. In contemporary scholarship, however, what is not adequately recognized is that this is closely related to an equally important thesis about the many senses of 'priority,' which itself is crucial for his break with Platonism. Therefore, in this monograph I intend to explore the significance of this latter thesis for the development of Aristotle's problematic about substance and the related question about the ontological status of mathematical objects. My point of departure will be a curious passage in the *Topics*, [*] where he appears to accept a schema of priorities that would make mathematical entities more substantial than sensible things. Given his own categorical framework, such an

implication represents a reversal of what are taken to be Aristotle's standard views on substance. In order to make sense of this, I will survey his treatment of priority in the *Categories*, while giving special attention to the criterion for natural priority. Through a comparison with the more expansive treatment of priority in *Metaphysics Delta*, I will try to show that at least some of the criteria are inherited from Plato. Even though this systematic treatment lists many of the "ways" of priority shared by his predecessors, it also facilitates Aristotle's basic claim that substance is prior in every important sense." (p. 1, notes omitted)

7. Code, Alan. 1985. "On the Origins of Some Aristotelian Theses About Predication." In *How Things Are. Studies in Predication and the History of Philosophy and Science*, edited by Bogen, James and McGuire, James E., 101-131. Dordrecht: Reidel.

"To facilitate the discussion of the TMA [Third Man Argument] and the [*Metaphysics*] Z6 thesis, I begin by stating briefly how the notion of predication figures into Aristotle's thought. (5)

Taking the two-place relations *Being* and *Having* as primitive, we may define *essential* and *accidental predication* as follows:

DEF 1: X is essentially predicable of Y iff Y Is X.

DEF2: X is accidentally predicable of Y iff Y Has X.

Predication is defined in terms of the disjunction of essential and accidental predication; *identity* is simply two-way, or reciprocal, essential predication.

A *universal* is an item that can be truly predicated of something distinct from itself; a *particular* is an item that cannot be predicated, either essentially or accidentally, of anything distinct from itself; an *individual* is an item not essentially predicable of anything distinct from itself.

Ontological predication helps us to understand linguistic predication. A universal is essentially predicable of a logical subject *X* if and only if both the name and the definition of that universal truly apply to *X*; otherwise, either the universal is not

predicable of *X*, or it is accidentally predicable. One consequence of this, crucial to my assessment of the significance of the TMA is that, since the definition of man applies to particular men, the associated universal is an essential predicate of those particulars. Furthermore, since the definition applies to both the universal man and the particular men, the universal is essentially predicable of itself and those particulars in the same way.

According to Aristotelian doctrine, a particular is a logical subject, or subject for predication, in virtue of the fact that it is something (definable) essentially. The species under which a particular falls is the definable something that it, the particular, must essentially Be if it is to be anything at all."

(...)

"Some linguistic predicates, such as 'man', signify universals that are essentially predicable of all the particulars of which they are predicable. These terms may be used to classify particulars according to their natural kinds. In the *Categories*, though not in the middle books of the *Metaphysics*, particulars are primary substances, the natural kinds that are essentially predicable of them (i.e. their species and genera) are secondary substances, and there are no other substances besides these." (pp. 103-104, some notes omitted)

(5) The ideas sketched in this section are given an extended treatment in my 'Aristotle: Essence and Accident', *Philosophical Grounds of Rationality: Intentions, Categories and Ends*, ed. by R. Grandy and R. Warner (Oxford, 1985). The definitions are adapted from unpublished work by H. P. Grice.

8. ———. 1986. "Aristotle: Essence and Accident." In *Philosophical Grounds of Rationality: Intentions, Categories, Ends*, edited by Grandy, Richard E. and Warner, Richard, 411-439. Oxford: Clarendon Press.

"In order to make sense of the development of Aristotle's thought on predication and his debt to Plato, it is necessary to see his metaphysical investigations against a shared background of problems, principles, and concepts. It is

important to see both the *Categories* and the middle books of the *Metaphysics* as rejecting some of, but continuous with, Platonic metaphysics." (p. 411)

"The main task of this paper is to show that the logic of Being and Having is a promising tool for the articulation of some of the basic ideas that Aristotle employs in his efforts to construct a sophisticated and flexible semantics together with a metaphysics of substance. Consequently, in what follows I offer the results of my own attempts to reconstruct Aristotle's understanding of Plato and the subsequent development of his own ideas on essence and accident. When characterizing and contrasting a 'Platonic' position and two Aristotelian positions (roughly, the *Cat.* and *Metaph.*), I present textual evidence and argument in order to make the main outline of my interpretation plausible, but still more detailed analysis of individual passages and arguments is required to sustain it. Often my interpretation is simply stated without adequate discussion of the alternatives." (p. 414)

9. Cohen, Sheldon Marc. 1973. "'Predicable of' in Aristotle's *Categories*." *Phronesis. A Journal for Ancient Philosophy* no. 1:69-70.

"If Stonecutter is said of Socrates, so is philosopher, Greek, and troublemaker. What is "said of a thing" is usually understood to specify what that thing is, in the sense of what its essence or nature is.

If that is correct, Socrates will be essentially a philosopher, Greek, troublemaker, and stonecutter; a most unaristotelian conclusion.

We might say that though the definition of a stonecutter is predicable of Socrates, to classify Socrates as a stonecutter is not to classify him in an absolutely fundamental way. But then we need a criterion for whether \emptyset is said of x over and beyond whether the definition of \emptyset may be said of x. Is there such a criterion in the *Categories*?

I do not think that there is. But I think there is the beginning of such a criterion, in the first section of chapter two." (p. 69)

10. ———. 2008. "Kooky Objects Revisited: Aristotle's Ontology." *Metaphilosophy* no. 39:3-19.

Abstract: "This is an investigation of Aristotle's conception of accidental compounds (or "kooky objects," as Gareth Matthews has called them) -- entities such as the pale man and the musical man. I begin with Matthews's pioneering work into kooky objects, and argue that they are not so far removed from our ordinary thinking as is commonly supposed. I go on to assess their utility in solving some familiar puzzles involving substitutivity in epistemic contexts, and compare the kooky object approach to more modern approaches involving the notion of referential opacity. I conclude by proposing that Aristotle provides an implicit role for kooky objects in such metaphysical contexts as the *Categories* and *Metaphysics*."

11. Corkum, Phil. 2009. "Aristotle on Nonsubstantial Individuals." *Ancient Philosophy* no. 29:289-310.

"As a first stab, call a property recurrent if it can be possessed by more than one object, and nonrecurrent if it can be possessed by at most one object. The question whether Aristotle holds that there are nonrecurrent properties has spawned a lively and ongoing debate among commentators over the last forty-five years.

One source of textual evidence in the *Categories*, drawn on in this debate, is Aristotle's claim that certain properties are inseparable from what they are in.

Here the point of contention is whether this commits Aristotle to holding that these properties are inseparable from individuals, since it is commonly held that a property is nonrecurrent, if it is inseparable from an individual. I argue that this evidence is neutral on the question whether there are nonrecurrent properties in Aristotle. One of my aims here is to disentangle the question of recurrence from local issues of individuality and universality in the *Categories*. But another aim is to turn from the textual considerations, which have dominated the debate, to broader methodological considerations. It is a shared assumption among all those who

look to textual evidence from the *Categories*, so to decide whether Aristotle believes there are nonrecurrent properties, that in this work Aristotle is engaged in a project where the question of recurrence is relevant. I argue that Aristotle's concerns in the *Categories* are disjoint from the question of recurrence, and so this shared assumption is false." (p. 289)

12. ———. 2013. "Aristotle on Predication." *European Journal of Philosophy*:793-813.

Abstract: "A predicate logic typically has a heterogeneous semantic theory. Subjects and predicates have distinct semantic roles: subjects refer; predicates characterize.

A sentence expresses a truth if the object to which the subject refers is correctly characterized by the predicate. Traditional term logic, by contrast, has a homogeneous theory: both subjects and predicates refer; and a sentence is true if the subject and predicate name one and the same thing. In this paper, I will examine evidence for ascribing to Aristotle the view that subjects and predicates refer. If this is correct, then it seems that Aristotle, like the traditional term logician, problematically conflates predication and identity claims. I will argue that we can ascribe to Aristotle the view that both subjects and predicates refer, while holding that he would deny that a sentence is true just in case the subject and predicate name one and the same thing. In particular, I will argue that Aristotle's core semantic notion is not *identity* but the weaker relation of *constitution*. For example, the predication 'All men are mortal' expresses a true thought, in Aristotle's view, just in case the mereological sum of humans is a part of the mereological sum of mortals."

13. Crivelli, Paolo. 2017. "Being-Said-Of in Aristotle's *Categories*." *Rivista di Filosofia Neo-Scolastica*:531-556.

Abstract: "The ontology of the *Categories* relies on several fundamental relations that obtain between beings. One of these is the relation of being-said-of. The most widespread view among commentators is that the relation of being-said-of amounts to essential predication.

After drawing attention to some relatively neglected textual evidence that tells against such an interpretation, I explore a different account of the relation of being-said-of.

On this alternative picture, while the relation of being-said-of is essential predication when it obtains between universals, it coincides with mere predication when it obtains between a universal and an individual. The relation of being-said-of turns out to be closely linked with paronymy: in most (but not all) cases where a property (e.g. generosity) is in an individual, a paronymous universal (e.g. generous) is said of that individual.

Also the alternative picture faces difficulties, however. In conclusion, it remains unclear what position, if any, can be coherently attributed to Aristotle."

14. Czerkawski, Maciej. 2023. "Aristotelian rhapsody: did Aristotle pick his categories as they came his way?" *Inquiry. An Interdisciplinary Journal of Philosophy*:1-23.

Published first online.

Abstract: "In the first *Critique*, Kant raises two objections against Aristotle's categories.

Kant's concern, in the first instance, is whether Aristotle generated all categories that there are and if he did not generate any spurious categories.

However, for Kant, this is only a symptom of the second – deeper – flaw in Aristotle's thinking. According to Kant, Aristotle generated his categories 'on no common principle.' This paper develops the two Kantian objections, offers an overview of Brentano's (1862. *Von der Mannigfachen Bedeutung des Seienden nach Aristoteles*. Freiburg im Brisgau: Herder'sche Verlagshandlung.) reconstruction of Aristotle's categories (which claims to have addressed them), develops three objections to this reconstruction, and recommends (Trendelenburg, A. 1846. *Geschichte der Kategorienlehre*. Berlin: Verlag von G. Bethge.) as a better – albeit still flawed – Aristotelian reply to Kant."

15. Dancy, Russell. 1975. "On Some of Aristotle's First Thoughts about Substances." *The Philosophical Review* no. 84:338-373.

"But here I shall be concerned only indirectly with Aristotle's criticism of Platonism; my primary object is getting clear on Aristotle's way of answering the question "What are the substances?" (p. 338)

(...)

"V. *Conclusion*. There is a cloud on Aristotle's horizon; we have glanced at it before. It is worth another, very brief, look. Nothing in the *Categories* tells us how to describe such drastic changes as the death and cremation of Socrates, or Jago's becoming a baboon. We need the notion of matter for that, and if we introduce that as a subject for predicates on a level lower than that of Socrates and Jago, we are in trouble: we shall no longer be able to pick out the primary substances by looking for rock-bottom subjects. And that same trouble may threaten from another direction, only I have been suppressing it. Aristotle talks as if the real subject that underlies white and black (2. 1a27-28, 5. 2a31-34, b1-3, 4a3-4, 8. 4a34-35) and disease and health (10. 12a5-6, 11. 14a1I6) were the *body* of the man or animal, and as if the real subject that underlies literacy (2. 1a25-26), knowledge (1b1-2), insanity, irascibility (8. 9b33 ff.), justice and injustice (11. 14a17-I8) were the *soul* of the man or animal. Only once (that I know of) does he make the man himself the underlying subject (compare 10. 12a13-14). But then, which are the primary substances? What are the interrelationships between matter, form, and the compound? Aristotle owes us something here; elsewhere he tries to pay the debt. I shall leave the question whether his balance is enough to cover his check for another occasion." (pp. 372-373)

16. ———. 1978. "On Some of Aristotle's Second Thoughts About Substances: Matter " *The Philosophical Review* no. 87:372-413.

"In *Metaphysics Z 3*, Aristotle tells us (1029a3-4) that by "matter" he means, "for example, the bronze" of which a statue is made, and a few lines later, at a20-2 1, that by "matter" he means "what is not in its own right called either something or

so big or any of the other things by which being is determined." But the bronze of which a statue is made is something in its own right, and in the *Meteorologica* (Γ 6 and elsewhere), Aristotle is prepared to tell us something about what it is in its own right.

The explanation I shall try to provide for this apparent contradiction makes it a reflection of a larger apparent contradiction.

Most of *Metaphysics Z 3* is an examination of the claim of "subjects" ("things that underly," ὑποκείμενα) to be substances (realities, οὐσίαι). It turns out that this claim at best demands clarification and at worst rejection, since people who take subjects to be substances might be forced into saying that matter is the ultimate subject, and so the chief substance - but matter isn't anything in its own right, and isn't knowable in its own right. So such people would be making substances, the ultimate realities, things about which there is no saying what they are. And that is no good. So the claim of subjects to be substances must either be clarified or rejected. But that claim was one Aristotle himself advanced, in the *Categories* especially, and it was fundamental in his rejection of Platonism. So Aristotle is attacking a view of his own.

What is needed is a sorting out of the various concepts: matter, subject, substance. That is what *Z 3* is about, and that is what this paper is about. The job is not done at the end of *Z 3*: the notion of form remains foggy. So it does in this paper. And the problem does not arise only at the beginning of *Z 3*: the *Organon* and the physical works had set it up. So let us first go back to the *Categories* and the rest of the *Organon*." (P. 373)

17. Derrida, Jacques. 1982. "The Supplement of Copula: Philosophy Before Linguistics." In *Margins of Philosophy*, 175-205. Chicago: University of Chicago Press.

Translation, with Additional Notes, by Alan Bass of *Le supplément de copule. La philosophie devant la linguistique* (1972).

Also translated by James S. Creech and Josué Harrani in *Georgia Review*, 30, 1976, pp. 527-564.

"We know that Benveniste, in "Categories of Thought and Language,"(6) analyzed the limiting constraints which the Greek language imposed upon the system of Aristotelian categories.

Benveniste's propositions are part of a stratified ensemble; nor does he restrict himself to the text which directly states the thesis of the ensemble. We will have to take this into account when the time comes. Moreover, this thesis already has encountered objections of the philosophical type;(7) together the thesis and the objections form a debate which in its development will be invaluable for us.

First, the thesis: "Now it seems to us—and we shall try to show—that these distinctions are primarily categories of language and that, in fact, Aristotle, reasoning in the absolute, is simply identifying certain fundamental categories of the language in which he thought" (p. 57)." (pp. 179-180)

(...)

"The concept or category of the category systematically comes into play in the history of philosophy and of science (in Aristotle's *Organon* and *Categories*) at the point where the opposition of language to thought is impossible, or has only a very derivative sense. Although Aristotle certainly did not reduce thought to language in the sense intended here by Benveniste, he did attempt to take the analysis back to the site of the emergence, that is to the common root, of the language/thought couple. This site is the site of "Being." Aristotle's categories are simultaneously of language and of thought: of language in that they are determined as answers to the question of knowing how Being is said (*legetai*); but also, how Being is said, how is said what is, in that it is, such as it is: a question of thought, thought itself, the word "thought" which Benveniste uses as if its signification and its history went without saying, in any case never having meant anything

outside its relation to Being, its relation to the truth of Being such as it is and in that it is (said)." (p. 182)

18. Devereux, Daniel. 1992. "Inherence and Primary Substance in Aristotle's *Categories*." *Ancient Philosophy* no. 12:113-131.

"In chapter 2 of the *Categories*, Aristotle makes use of two predication relations, *being said of* a subject and *being in* a subject, to distinguish four classes of entities. (i) Some things are neither *said of* nor *in* a subject; (ii) some are *said of* but not *in* any subject; (iii) some are both *said of* and *in* a subject; and (iv) some are *in* but not *said of* any subject. There is general agreement about the kinds of entities belonging to in the first class: in the first class are particular substances, e.g., a particular human being or a particular tree; in the second are the species and genera of these particular substances, e.g., Man, Animal, Tree; in the third class are the general kinds or types falling under non-substance categories, e.g. Color as a kind of quality, or Larger Than as a kind of relation. As one successively divides these non-substance kinds into species and sub-species, one arrives at entities such as 'this particular white' or 'this particular knowledge of grammar' which cannot be further subdivided. There has been a spirited debate in recent years over the exact nature of these entities belonging to the fourth class. Is the 'particular white' a specific shade of white that can be shared by a number of things? Or is it a particular instance of such a shade, belonging uniquely to one individual?

Entities in the fourth class have traditionally been regarded as instances or tokens of types, and it has been thought that this view is required by Aristotle's special notion of what it is to be

in a subject. Recent opponents of the traditional view have argued that a correct understanding of 'being in a subject' does not support the claim that entities of the fourth class are particular instances of qualities, quantities, etc., and that the weight of the textual evidence in the *Categories*. supports the view that they can be shared by a number of subjects.

In the following discussion I shall try to show that there are passages in the *Categories* that clearly imply that type (iv) entities cannot be shared by a number of subjects - passages that have not been exploited by defenders of the traditional view. I will then turn to the question of what Aristotle means by 'being in a subject', and will argue for an interpretation that seems to make better sense of the relevant texts than other views in the current literature." (p. 113)

19. ———. 1998. "Aristotle's *Categories* 3B10-21: A Reply to Sharma." *Ancient Philosophy* no. 18:341-352.

"In an article published several years ago in this journal (Devereux 1992). I argued for a new way of understanding Aristotle's explanation of what he means by the expression 'in a subject' at *Categories* 1 a24-25. One of my contentions was that although this explanation does not imply that things that are *in* but not *said of* a subject are particulars, there are other passages in the *Categories* that do have this implication: i.e., there are passages besides 1 a24-25 that clearly imply that 'first-order accidents' (things *in* but not *said of* a subject) are not universals but what are called 'tropes' in the contemporary literature. This latter claim is challenged by Ravi Sharma in a recent note in this journal (Sharma 1997).

Though his arguments have not persuaded me to give up my view, I have learned from Sharma's acute discussion." (p. 341)

21. Dobreski, Brian. 2021. "Re-examining Aristotle's *Categories* as a Knowledge Organization System." *Proceedings from North American Symposium on Knowledge Organization* no. 8:1-10.

Abstract: "In his *Categories*, Aristotle details the kinds of being that exist, along with what can be understood and predicated of existing things. Most notably within this work, Aristotle advances a set of ten, top-level categories that can be used to classify all kinds of being. Even today, the influence of the *Categories* is felt in many domains, particularly in knowledge organization (KO). Here, Aristotle's *Categories* bear deep, long-standing connections with works examining categorization, subject analysis, and theory of classification. Though its relation to ontology might seem obvious, connections to KO perspectives on knowledge organization systems (KOSs) and ontological modeling are curiously lacking. The aim of this work is to offer a re-examination of the *Categories* as a KOS, particularly through the lens of the KO field's understandings of ontology. Utilizing Zeng's [*] classification of KOSs as a theoretical framework, this study draws parallels between the first two sections of the *Categories* and the defining features of ontologies and offers an initial ontological model of this work. The results of this re-examination stand to offer a new view of a fundamental work in the KO canon, draw further connections between past and present perspectives in KO, and further contribute to the theoretical grounding of contemporary KOS research and practice."

"Chapter Five of the *Categories* contains the earliest version of Aristotle's theory of substance. In spirit, the chapter is strongly anti-Platonic."

(...)

While attempts have been made to find Academic antecedents for the doctrine of categories as a whole,(4) the properties shared by primary substances and the Receptacle have, as far as I can determine, passed unnoticed in the literature.

(...)

In this paper I will not examine the three-sided relationship between the Receptacle, primary substance, and primary matter. Such an examination would afford an interesting perspective from which to study the development of Aristotle's theory of substance from the *Categories* to the *Metaphysics*, but it would raise many difficult issues not easily resolved in a short paper. I will instead simply list the properties shared by the Receptacle and primary substance and discuss one important consequence of the link thereby established between *Timaeus* 49-52 and *Categories* V: that the well-known controversy between G. E. L. Owen and Harold Cherniss over the dating of the *Timaeus* must be decided in favor of Owen, at least with respect to the relative dating of the *Timaeus* and the *Sophist*. I propose to show, in other words, that *Categories* V owes a much greater debt to Plato than is usually thought and that an examination of this debt increases our understanding not only of Aristotle's theory of substance but also of the development of Plato's later philosophy." (pp. 253-254, notes omitted)

23. ———. 1981. "EIΔH in Aristotle's Earlier and Later Theories of Substance." In *Studies in Aristotle*, edited by O'Meara, Dominic, 129-159. Washington: Catholic University Press.

"My object in this paper is to cast doubt on the view of M. J. Woods (1) and G. E. L. Owen(2) that the species which is a secondary substance in the *Categories* is elevated to the status of primary substance in *Metaphysics* Z. Woods and Owen(3) commit themselves to this view in the course of very interesting

discussions of the differences separating Aristotle's early *Categories* theory and his later *Metaphysics* ZHΘ theory of sensible substance.(4) However, serious objections have been raised against both writers on the basis of Aristotle's remarks in chapter 13 of Z. My strategy will be to show that these objections can be met and the most important of Woods' and Owen's insights on Aristotle's two theories of sensible substance maintained provided only that their view on the upgrading of *Categories* species is abandoned.

The εἶδος which is primary substance in Z, I will suggest, is neither the species of the *Categories*, as Woods and Owen hold, nor the particular form of a particular substance, as Wilfrid Sellars(5) Edward Harter,(6) and Edwin Hartman(7) insist, but a third entity to be described below.(8)" (p. 129, notes abbreviated)

(1) M. J. Woods, "Problems in *Metaphysics* Z, Chapter 13," in *Aristotle: A Collection of Critical Essays*, ed. J. M. E. Moravcsik (Garden City: Doubleday Anchor, 1967), pp. 215-38.

(2) E. L. Owen, "The Platonism of Aristotle," *Proceedings of the British Academy*, 51 (1965): 125- 50, esp. p. 137; reprinted in *Studies in the Philosophy of Thought and Action*, ed. P. F. Strawson (London: Oxford University Press, 1968), pp. 147-74. References below are to the British Academy pagination.

(3) My reasons for believing that Owen is committed to the thesis as stated will be given in section 2 below.

(4) I will follow Woods and Owen in assuming that the *Categories* is an early authentic work of Aristotle and that Books ZHΘ of the *Metaphysics* date from much later in his career.

(5) Wilfrid Sellars, "Substance and Form in Aristotle," *Journal of Philosophy*, 54 (1957): 688- 99, and "Aristotle's *Metaphysics*: An Interpretation," in Wilfrid Sellars, *Philosophical Perspectives* (Springfield, Illinois: Charles C. Thomas Publishers, 1959), pp. 73- 124.

(8) See section 3 below, especially note 58. My aim here will not be to disprove the Sellars-Harter-Hartman position (a major undertaking which would require extended discussion of their complex arguments) but only to isolate a defensible alternative to it.

24. Duerlinger, James. 1970. "Predication and Inherence in Aristotle's *Categories*." *Phronesis. A Journal for Ancient Philosophy* no. 15:179-203.

"In *Categories* and *De Interpretatione* (Oxford, 1963), J. L. Ackrill has performed the notable task of clearly delineating a number of questions and alternative answers to these questions involved in the interpretation of Aristotle's discussions about predication and inherence in the *Categories*. As a result of Ackrill's excellent translation and penetrating analysis of the text of the *Categories*, we have arrived at a point at which Aristotle's early distinction between predication and inherence may be discussed with some degree of exactness and clarity. Although I do not agree with everything that Ackrill has said about predication and inherence, my disagreement is grounded in an account of the text which his translation and analysis have helped to make possible. In recent papers G. E. L. Owen ("Inherence," *Phronesis*, 1965) and J. M. E. Moravcsik ("Predication in Aristotle," *Philosophical Review*, 1967) have attempted to improve upon Ackrill's account of Aristotle's distinction between predication and inherence.

I shall use Ackrill's commentary and translation as a base from which to launch an investigation of predication and inherence in the *Categories*, but I shall find it convenient at times to refer to the comments of Owen and Moravcsik. I shall begin with a very rough summary of what I have to say about predication

and inherence, and then discuss them in more exact terms." (p. 179)

25. Duncombe, Matthew. 2015. "Aristotle's Two Accounts of Relatives in *Categories* 7." *Phronesis. A Journal for Ancient Philosophy* no. 60:436-461.

Abstract: "At *Categories* 7, 6a36-7 Aristotle defines relatives (R1), but at 8a13-28 worries that the definition may include some substances. Aristotle introduces a second account of relatives (R2, at 8a31-2) to solve the problem. Recent commentators have held that Aristotle intends to solve the extensional adequacy worry by restricting the extension of relatives. That is, R2 counts fewer items as relative than R1. However, this cannot explain Aristotle's attitude to relatives, since he immediately returns to using R1. I propose a non-extensional reading. R1 and R2 do not specify different sets of relatives, but rather different ways to understand each relative."

26. ———. 2018. "Aristotle's *Categories* 7 Adopts Plato's View of Relativity." In *Authors and Authorities in Ancient Philosophy*, edited by Bryan, Jenny, Wardy, Robert and Warren, James, 120-138. Cambridge: Cambridge University Press.

"Since the 1960s, scholars have thought that the *Categories* is an anti-authoritarian work. Aristotle engages with Platonism, rather than straightforwardly rejecting or blindly adopting any element of it. In particular, Owen argued that the *Categories* evinces an anti-Platonic linguistic theory."

(...)

"On the micro-level of *Categories* 7, scholars take a similar anti-authoritarian attitude. After defining relatives at 6a36, Aristotle draws out some formal features of them: some relatives have a contrary (6b15– 19); some come in degrees (6b19– 27); all reciprocate with their correlatives (6b28– 7b14); some are simultaneous with their correlative (7b15– 8a12).

Aristotle then raises a worry: some substances are relatives (8a13– 28). A hand is a substance, since a hand is part of a secondary substance, but a hand is also a relative, since a hand is said of something. To address this worry Aristotle introduces

a second account of relatives (8a31– 2). He then describes a test for whether a relative falls under the second account (8a35– b21).

(...)

"In part I, I argue Plato and Aristotle share a view of relativity.

First, I give textual evidence that both share the ‘intensional’ view of relatives. Second, Aristotle’s formal features have antecedents in Plato. In the second part of the paper, I argue that Aristotle draws directly on Plato’s view. For relativity, there is neither a shared source nor an intermediate source. In the third part, I show that Aristotle retains the first account of relatives." (pp. 120-122, notes omitted)

27. ——. 2020. *Ancient Relativity: Plato, Aristotle, Stoics, and Sceptics*. New York: Oxford University Press.

Chapter 5: Relativity in *Categories* 7, *Topics*, and *Sophistical Refutations*, pp. 90-117; Chapter 6: Aristotle on the distinction between substances and relatives, pp. 188-139.

"Chapter 2 begins to argue that Plato has a constitutive view of relativity, with an inference to the best explanation: key formal features of constitutive relativity are exclusivity, reciprocity, aliorelativity, and existential symmetry; Plato’s texts rely on such formal features; so, Plato at least tacitly endorses constitutive relativity. Chapter 3 begins to apply these results to look at constitutive relativity in the context of the separation of Forms and participants in the *Parmenides*’ critique of the Forms. Chapter 4 continues to examine how constitutive relativity works, this time in the context of Plato’s tripartite psychology. Chapter 5 shows that, although Aristotle is not the earliest thinker to have deep things to say about relativity, he gives a clear statement of constitutive relativity, and works out some of the language and formal features that constitutive relatives have. Chapter 6 shows why Aristotle introduces a nuance into his constitutive view of relativity, although he does not abandon the view. Chapter 7 continues to look at Aristotle’s view of relativity, this time his account in the *Metaphysics*. Chapter 8, again, concerns relativity and the Forms, but this

time looks at relativity and independence, driven by Aristotle's critique of the Forms, as recorded by Alexander of Aphrodisias. Chapters 9 and 10 argue for the presence of constitutive views of relativity in the Stoics. Chapter 11 looks at Sextus' brand of Pyrrhonian scepticism, again showing that he assumes a version of the constitutive view of relativity." (pp. 21-22)

28. Edel, Abraham. 1975. "Aristotle's Categories and the Nature of Categorical Theory." *The Review of Metaphysics* no. 29:45-65.

Abstract: "The aim of this paper is twofold. First, I want to propose a fresh approach to Aristotle's *Categories*. Second, I want to reflect, in the light of the outcome, on the expectations we can have for categories in metaphysics. No apology is needed for starting with Aristotle. Ever since the *Categories* was placed at the head of the *Corpus*, the foundational character of categorical theory has been explicit. That is why a fresh way of looking at the *Categories* is at the same time a fresh way of looking at Aristotle's metaphysics, and suggests a mode of reckoning with categorical theory generally."

29. Edelhoff, Ana Laura. 2020. *Aristotle on Ontological Priority in the Categories*. Cambridge: Cambridge University Press.

Abstract: "The main objective of this Element is to reconstruct Aristotle's view on the nature of ontological priority in the *Categories*. Over the last three decades, investigations into ontological dependence and priority have become a major concern in contemporary metaphysics. Many see Aristotle as the originator of these discussions and, as a consequence, there is considerable interest in his own account of ontological dependence. In light of the renewed interest in Aristotelian metaphysics, it will be worthwhile - both historically and systematically - to return to Aristotle himself and to see how he conceived of ontological priority (what he calls "priority in substance" (*proteron kata ousian*) or "priority in nature" (*proteron tei phusei*), which is to be understood as a form of asymmetric ontological dependence."

30. Erginel, Mehmet. 2004. "Non-Substantial Individuals in Aristotle's *Categories*." *Oxford Studies in Ancient Philosophy* no. 26:185-212.

"Aristotle's *Categories* (1) classifies entities by using two predication relations, being 'said of' a subject and being 'in' a subject.(2)

(...)

The traditionally accepted view, which I shall call the 'traditional view', is that a non-substantial individual is a property that cannot be shared by (be 'in') more than one individual substance; thus, on this view, the individual white 'in' Socrates cannot also be 'in' Plato (or anyone else). This interpretation of the *Categories* as challenged by Owen, setting of the modern debate.(4)

Owen and Frede(5) have argued that non-substantial individuals are maximally determinate properties, which can be shared by more than one individual substance; on this view, an individual white would be a particular shade of white, which could be 'in' both Socrates and Plato. One way of putting the difference is that the latter view does, whereas the former view does not, allow the recurrence of non-substantial individuals.

In this paper I shall defend a version of the latter view, arguing that the non-substantial individuals of the *Categories* may be 'in' several individual substances. I shall proceed by first discussing, and offering an interpretation of, 1A24–5, the critical passage that the traditional view originates from. After defending an interpretation of 1A24–5 that allows recurrence, I shall argue, in Section 2, that the interpretation commonly held by proponents of the traditional view is inconsistent with various passages in the *Categories*. In my third section I shall challenge attempts to find other passages that support the traditional view, and I shall show that the traditional view does not enjoy the purported textual support." (pp. 185-186)

(1) In this paper I mostly rely on, but occasionally differ from, J. L. Ackrill's translation in *Aristotle: Categories and De interpretatione* [Categories], translation and notes (Oxford, 1963).

(2) I shall use the terms 'said of' and 'in' in quotation marks when they are meant in Aristotle's technical sense. Likewise, it

is the technical sense of 'in' that is meant when I refer to the 'x is in y' relation.

31. Findlay, John N. 2007. "Aristotle and Eideticism II." *Philosophical Forum* no. 37:333-386.

"This article continues our publication of lectures given by J. N. Findlay (1903–87) at Boston University in 1978. The present article concludes Findlay's discussion of Aristotle, the first part of which was published in *The Philosophical Forum*, XXXVI, No. 4 (Winter 2005)." (The Editors).

"The *Categories*, probably an early treatise of Aristotle's and very individualistic in doctrine, deals with the basic types of predication, substantial and definitory, quantitative, relational, qualitative etc., which leads up, though this is not so clearly stated as elsewhere, to various different genera of entities each of which can be said to have being in a different sense, some primary some derivative in various manners. The issue is complicated by the fact that secondary and derivative entities can have their own series of divergent predications, some substantial and definitory, others quantitative, relational, qualitative etc. There are not only entities parasitic on primary entities in various manners, but entities parasitic on the parasites in a corresponding variety of manners. All this renders the ontology very complex. Though Aristotle approaches many issues through language, what he is dealing with is always conceived of as ontic, not linguistic." (p. 334)

[Follows a description of *Categories* 1-9, pp. 334-339.]

32. Fine, Gail. 1983. "Relational Entities." *Archiv für Geschichte der Philosophie* no. 65:225-249.

"Aristotle's theory of universals is sometimes thought to differ from Plato's in being nonrelational; it does not hold that

Socrates' being a man, or being rational, consists in or involves his standing in some relation to the universal man, or to the universal rationality." (p. 225)

(...)

"Why should a nonrelational account be preferred? Matthews and Cohen suggest that Plato's relational theory is vulnerable to an awkward dilemma: either particulars are "bare particulars", or else they are "mere relational entities" that owe their identity and continued existence to the relations they bear to other things. Aristotle's allegedly nonrelational theory is thought to go between the horns of this dilemma.(5)" (p. 226)

(...)

"I am sympathetic to some features of this general view. I agree that, on some accounts of relationality, Plato has a relational theory of universals. I also agree that Plato, but not Aristotle, separates universals.

I agree too that relational accounts are vulnerable to Matthews and Cohen's dilemma. But I do not agree that Aristotle's theory of universals is nonrelational. Or, at least, the arguments used to commit Plato to a relational account seem to me to commit Aristotle to one as well. Nor do I conclude that Plato's and Aristotle's theories are therefore both hopelessly misguided; for I do not find both horns of the dilemma unattractive. Although I reject bare particulars, I accept relational entities.(6) If it is a consequence of Plato's or Aristotle's theory that particulars are relational entities, that is a desirable consequence.

I ask first what a relational analysis is (I). I then turn to Matthews and Cohen's dilemma (II). In subsequent sections I ask whether Plato and Aristotle are vulnerable to their dilemma and, if so, whether that is an undesirable consequence of their views." (pp. 226-227)

(...)

"It is important to note, first of all, however, that nowhere in the *Categories*, at least, does Aristotle say that primary substances could exist if nothing else did; perhaps their

privileged status does not consist in existential independence from everything else. Certainly that is not the only sort of priority Aristotle recognizes.(48)" (p. 247)

(5) See, e.g., pp. 634f., 643f. Matthews and Cohen also suggest another difficulty with relational accounts or, at least, with Plato's holding one; see p. 633f. It is also often objected that relational accounts are vulnerable to a regress. See, for example, Armstrong I, Part 2, passim; P.P. Strawson; *Individuals* (London, 1959), esp. pp. 168-181; F.H. Bradley, *Appearance and Reality*, 2nd. ed. (Oxford, 1897), chapter 3.

Plato considers a regress argument, The Third Man Argument, at *Parm.* 132 ab. I do not discuss the TMA or regress arguments here ; but see my "Aristotle and the More Accurate Arguments, in *Language and Logos*, edd. M. Nussbaum and M. Schofield (Cambridge, 1982), and my "Owen, Aristotle, and the Third Man", *Phronesis* 27 (1982), pp. 13-33.

(6) As I shall use the phrase, a relational entity is an entity that possesses at least one essential property relationally. This is to be distinguished from Bradley's doctrine of internal relations, according to which all of a thing's relational properties are essential to it; I do not discuss Bradley's views in this paper. For Bradley, see esp. pp. 16-25.

(48) For some discussions of priority, see *Cat.*, chapter 12; *Met.* Δ, chapter 11; Z 1.

33. Finn, Collin. 1974. "The Concept of Substance in the *Categories* and the *Physics*." *Danish Yearbook of Philosophy* no. 11:72-119.

"The subject of the present paper is the Aristotelian concept of substance as treated in the *Categories* and in the *Physics*. Its form is determined by the fact that the contents and the definition of this concept depend on the wider philosophical

context, in which Aristotle discusses it. From this it follows that, in the first place, it is not possible to give a single, summarized account of this concept which would cut across the two mentioned works.

It is necessary to divide the discussion, taking the concept of substance in the *Categories* and the concept of substance in the *Physics* each by itself, even though naturally there is a considerable common core in this concept as treated in the two works. In the second place, it follows from the mentioned connection that the concept of substance, like the other central notions in Aristotle's philosophy, cannot be discussed in isolation from the context, the philosophical relationship, in which it appears. This necessitates treating these contexts at least briefly, in other words, reviewing the further philosophical lines of thought in the works which I have taken as my point of departure. I intend also to discuss various problems of detail in these works, not all of which are problems within the doctrine of substance.

To throw light on the concept of substance is, however, the goal towards which the discussion is constantly aimed." (p. 72)

34. Franklin, James. 2014. "Quantity and Number." In *Neo-Aristotelian Perspectives in Metaphysics*, edited by Novotný, Daniel D. and Novák, Lukáš, 221-244. New York: Routledge.

"Quantity is the first category that Aristotle lists after substance. More than any other category, it has an extraordinary epistemological clarity. " $2 + 2 = 4$ " is the paradigm of objective and irrefutable knowledge, and " $2 \text{ million} + 2 \text{ million} = 4 \text{ million}$ " is not far behind in certainty, despite its distance from immediate perception. Indeed, certainties about quantity extend to the infinite—for example, we know that the counting numbers do not run out. Nor does this certainty come at the expense of application to reality. If we put two rabbits and two rabbits in a box and later find five rabbits in there, it is our absolute certainty that $2 + 2 = 4$ that allows us to infer that the rabbits must have bred.

Continuous quantities are no less open to perfection of knowledge: The quantity π , the ratio of the circumference of

any circle to its diameter, is calculable to any degree of precision that computers can cope with (currently claimed to be ten trillion decimal places). The mathematics of quantity delivers certainty about reality, to the envy of other disciplines, including philosophy.

Despite its clarity, quantity is subject to some philosophical subtleties and unresolved puzzles. Let us start with two crucial distinctions that organize the types of quantity: extensive (or divisible) versus intensive quantity and continuous versus discrete quantity." (p. 221)

35. Fraser, Kyle. 2003. "Seriality and Demonstration in Aristotle's Ontology." *Oxford Studies in Ancient Philosophy* no. 25:131-158.

"Abstract: "In Aristotle's ontological framework, non-substances are defined as those entities that exist in virtue of inhering in a substrate. On account of their essential dependency on the category of substance the non-substances are held to be definable only in a secondary and derivative way, which Aristotle designates at *Metaphysics* as definition 'by addition'. Each non-substance contains, as part of its explanatory definition, the name or definition of the substance kind in which it essentially inheres, just as male and female must be defined as properties of animals, snubness as a property of noses, or colour as a property of surfaces. The non-substances are not only accidentally dependent on the category of substance; their derivative status is built into their essential being. Thus, for example, while pallor is per se independent of Callias or Socrates, or any individual who just happens to be pale, it is essentially dependent on 'surface' and must be defined by the inclusion of 'surface' in its explanatory account (1029b16-17). Leaving aside the per accidens entanglements of the non-substances, we discover that every non-substance is essentially the predicate of some substance kind, and thus can be said to have an 'essence' only in a derivative way."

36. Frede, Michael. 1981. "Categories in Aristotle." In *Studies in Aristotle*, edited by O'Meara, Dominic, 1-25. Washington: The Catholic University Press.

Reprinted in: M. Frede, *Essays in Ancient Philosophy*, Minneapolis: University of Minnesota Press, 1987, pp. 29-48.

"But one reason why he [Aristotle] actually makes so surprisingly little use of the categories in the *Topics* seems to be exactly this, that he does not have a clear view of the logical properties which might serve to distinguish the categories from each other in a systematic fashion.

Nor does it seem that Aristotle arrives at his list of categories by grammatical considerations as has been proposed again recently by Benveniste. It is true that Aristotle thinks that certain grammatical forms tend to go with certain categories; the active form of verbs, e.g., naturally goes with the category of doing and the passive with the category of suffering. But he also is aware of the fact that grammatical form in this respect can be quite misleading, and he thinks that a large number of fallacies are due to this.

It will, of course, be suggested that Aristotle arrives at his list of categories neither by logical nor by grammatical considerations, but by an ontological inquiry.

It will be suggested that Aristotle first established a list of ultimate classes of what there is by an ontological inquiry into what there is and then just assumed corresponding categories. On this view Aristotle, e.g., first determined that there is an ultimate class of entities consisting of all qualities and then introduced a category of quality which is characterized by the fact that the item predicated belongs to the antecedently determined class of qualities. Now, though this matter would require quite a bit of detailed argument, it seems to me that things are exactly the other way round. When Aristotle in the treatise *Categories* tries to give a general characterization of qualities, he relies on the fact that we already know what it is to say of something what it is like. Qualities are just those items which we attribute to something when we say what it is like; quantities are just those items which we refer to if we say of something of what amount it is, and so forth." (pp. 47-48)

37. ———. 1987. "The Title, Unity, and Authenticity of the Aristotelian *Categories*." In *Essays in Ancient Philosophy*, 11-

28. Minneapolis: University of Minnesota Press.

English translation of: *Titel, Einheit und Echtheit der aristotelischen Kategorienschrift*, (1983).

"The *Categories*, ascribed to Aristotle, has played a unique role in our tradition.

(...)

Already in late antiquity, however, doubts were raised about its authenticity,(1) though we know of no ancient scholar who, on the basis of such doubts, declared the treatise to be spurious."

(...)

"The question of authenticity, however, turns out to be crucially linked to the question of unity. Given that it seems highly questionable whether the *Postpraedicamenta* were originally part of the treatise or were appended by a later editor,(12) it might seem as if the question regarding the authenticity of the treatise needs to be asked as two questions, viz., questions regarding the authenticity of the first and second part individually. Many authors have indeed taken this for granted and have thus assumed that the first part was authentic, the second either probably or certainly not.(13)"

(...)

"Therefore, in what follows, I will pay particular attention to the question of unity. The dangerous tendency to consider this treatise almost exclusively with reference to the first part and thus to jeopardize the status of the second part is, of course, reinforced considerably by the title. Hence, I will also discuss the title in connection with the question of unity." (pp. 11-12)

(...)

"Thus, it is by no means the case that the incompatibility of the two theories of substance forces us to reject the *Categories* as spurious. On the contrary, it seems as if the theory of the *Categories* ought, rather, to be seen as a stage in a long development that proceeds from the forms of Plato's middle dialogues to the substantial forms of Aristotle's *Metaphysics*.

Thus, we have met the objection against the authenticity of the *Categories* that has survived the longest; and so we can, indeed, follow the tradition and attribute the treatise to Aristotle. However, we have also seen that we have reason not to follow the tradition blindly in its understanding of the treatise. Unlike the tradition, which sought to gloss over the differences between the *Categories* and the *Metaphysics*, we ought to take care not to project the universals of the *Categories* into the ontology of the *Metaphysics*." (p. 28)

(12) 12. See J. G. Buhle, *Aristotelis Opera*, vol. I, 1791, 436; Ch. A. Brandis in: *Abh.* Berlin 1833, 268ff.; E. Zeller, *Philos. d. Gr.*, II 24, 1921, 67 n. 1; Th. Gomperz, *Greek Thinkers*, IV, 514; Uberweg-Praechter, 379; D. Ross, *Aristotle*, 10; L. M. De Rijk, *The Authenticity*, in: *Mnemos.* 4 (1951), 159; I. During, *R E Suppl.* XI, s.v. *Aristoteles*, 205, 61; J. L. Ackrill, 70; V. Sainati, *Storia*, 151ff. Some ancient authors took this line (Olymp., *In cat.* 133, 14), especially Andronicus (*Simpl.*, *In cat.* 379, 8ff.).

(13) E.g., J. G. Buhle, 436; E. Zeller, II 24, 1921, 67; H. Maier, *Die Syllogistik*, II 2, 292 n.

We hear of this view being taken by some in antiquity (Ammon., *In cat.* 14, 18ff.; Olymp., *In cat.* 133, 14ff.). Whether Andronicus was among these, as is often claimed, is doubtful; at any rate, we never hear that he argued against the authenticity of the *Postpraedicamenta*; we would assume, if this had been the case, that he would be referred to by name when their authenticity was being discussed.

38. ——. 1987. "Individuals in Aristotle." In *Essays in Ancient Philosophy*, 49-71. Minneapolis: University of Minnesota Press.

English translation of: "Individuen bei Aristoteles", *Antike und Abendland*, 24, 1978, pp. 16-39.

"By way of introduction, I offer a few remarks to give an overview of the subject of this paper. Aristotle assumes that, in addition to objects, there are properties of objects. This assumption is rather stronger than one might think, since it turns out that statements about properties are not just

reducible to statements about objects; on the contrary, the truth of at least some statements about objects is to be explained by assuming that there are properties."

(...)

"Besides this division of things into objects and properties, Aristotle, in the *Categories*, makes use of the distinction between general and particular, between individuals and universals. Although Aristotle does not, in this treatise, use any term like 'universal' (*katholou*), he does speak of 'individuals', and he contrasts these with their kinds. These two divisions, into objects and properties, on the one hand, and into particular and general, on the other, do not turn out to be the same. For Aristotle counts as general not only properties but also the kinds, into which objects fall, i.e., the genera, species, and differentiae of substances; and these are to be differentiated strictly from properties."

(...)

"At this point, three difficulties arise. First of all, how is it possible to speak of individuals in the case of properties; second, how can there be a single notion of being an individual that can be applied to objects as well as properties; and third, what sorts of objects are these general objects, the genera and species, supposed to be? These difficulties, especially the first two, will be our concern in the first part of this paper, which deal with the *Categories*." (pp. 49-50)

39. Fritz, Kurt von. 1954. "Review of: *The Place of the Categories of Being in Aristotle's Philosophy* by L. M. De Rijk." *The Philosophical Review* no. 63:600-605.

"The author of this book tries once more to solve the difficult problem of the meaning of Aristotle's theory of categories or, more specifically, the question of whether the categories are a system of grammatical, of logical, or of ontological distinctions. He rejects from the outset the explanation of the categories as grammatical distinctions though he does admit-which is very important-that Aristotle in his metaphysical and logical analyses is, generally speaking, guided by the structure of his

native tongue. Concerning the two other main explanations which have been offered, he points out in his introduction that "the later distinction between the logical and the ontological aspect qua a conscious opposition which is carried through rigorously" should not be applied to ancient thought, i.e., to that of Aristotle, and expresses the opinion that "the seeming difficulty of interpretation disappears" if this distinction is not made. He tries to show that the solutions offered by his predecessors are all wrong or insufficient because they did not follow this principle of interpretation.

The author then elaborates his theory in six chapters and an appendix. The first three chapters deal with various aspects of the relation between logic and ontology in Aristotle's philosophy, namely: Aristotle's doctrine of truth, the distinction between "essential and accidental being" (κατ' αὐτό and κατὰ συμβεβηκός), logical and ontological accident. The second series of three chapters deals with the problem of the categories directly, first the categories in the *Metaphysics*, then the categories in the special treatise devoted to that subject, the first treatise of the *Organon*, and finally the use which Aristotle makes of the categories in his philosophy in general. The appendix deals with the various expressions by which Aristotle designates the categories, with their origin and their relation to the logical and the ontological aspects of the categories. Each chapter, as well as the appendix, concludes with a convenient summary of the theses which the author has tried to prove." (pp. 600-601)

40. ———. 1958. "Once More καθ' ὑποκειμένου and ἐν ὑποκειμένῳ." *Phronesis. A Journal for Ancient Philosophy* no. 3:72-73.

"On p. 148 ff. of the second volume of *Phronesis* Mr. Chung-Hwan Chen has published an article on the above subject taking his starting point from a review of a book by the Dutch scholar L. M. De Rijk which I had published some time ago in *The Philosophical Review*, vol. 53 (1954), p. 600 ff., but without knowledge of the book reviewed itself. As a consequence some special points have remained in the dark; and since this is in no way Mr. Chung-Hwan Cheng's fault, who

was unable to obtain a copy of the book reviewed, but to a large part my own fault and to a certain extent perhaps the fault of Mr. De Rijk, I would appear to be under some obligation to clear up the question." (p. 72)

(...)

"It is one of the main contentions of Mr. De Rijk in the book which I reviewed that it is wrong to make a sharp distinction between the ontological and the logical aspect of Aristotle's theory of the categories because the ontological aspect is always the essential one and the logical only its reflection. In contrast to this I had contended that Aristotle's theory has an ontological, a logical, and to some extent a grammatical aspect; and that to understand its philosophical meaning, as well as the difficulties with which Aristotle had to struggle in its elaboration fully, it is necessary to distinguish sharply between them." (p. 73)

41. Furth, Montgomery. 1988. *Substance, Form and Psyche: An Aristotelean Metaphysics*. Cambridge: Cambridge University Press.

Contents: Preface XI; §0. A short discourse on method 1; I. Cross- and Intra-Categorical Predication in the *Categories* 9; II. Substance in the *Metaphysics*: A First Approximation 49; III. The Zoological Universe 67; Bibliography 285; Index 291-300.

"My aim in what follows is to explain and to motivate a theory of essence, existence and individuation that I think is to be found in the later and more advanced of the extant writings of Aristotle. The view to be explored has several features that are noteworthy from a scientific as well as a philosophical standpoint: it centers especially, though not exclusively, on a concept of what an individual material object is - a concept that has both intrinsic interest and (if some suggestions I shall advance as to its provenance and motivation are accepted) a historical significance that has not always been accurately appreciated." (p. 1)

(...)

"largely dispense with questions like what differentiates the various nonsubstantial categories from one another, the rationale (if there be one) for comprehending into a single category the monstrous motley horde yclept Quality, the justification (which seems to me quite hopeless) for a category, co-ordinate with the others, of Time, and other such. It will be seen that numerous particular points will emerge along the way in the course of the general discussion of Inherence. But enough has even now been fixed to allow statement of three general truths about the relationship between the tetrachotomy of "things that are" and the total categorial scheme. None of them is explicitly stated in the work, but all of them are in practice observed with great fidelity, and their controlling place in the theory will become more evident in what follows (were one to essay the project, conceivably worthwhile, of axiomatizing the theory, they would be plausible candidates for axioms):

- (i) said-of is always intra-categorial, and conversely,
- (ii) inherence is always cross-categorial, and conversely,
- (iii) substances and only substances can be subjects of inherence." (p. 14)

Aristotle's *Categories*. Annotated bibliography of the studies in English: Gar - Kun

Bibliography

1. Garver, Newton. 1974. "Notes for a Linguistic Reading of the *Categories*." In *Ancient Logic and its Modern Interpretations*, edited by Corcoran, John, 27-32. Dordrecht: Reidel.

"1. If Aristotle's *Categories* provide a classification of things and not of sayings, as is traditionally insisted, the things classified are at any rate 'things that can be said'. It is interesting, therefore, to inquire whether the *Categories* may be regarded as containing, in rudimentary form, results that might be more appropriately and more completely presented in terms of current methods of linguistic analysis, applied to a level of language or discourse that linguists usually ignore.

2. Both the name 'categories', which signifies predications or sayings, and the position of the work at the beginning of the *Organon*, which deals with matters of logic and language, reinforce the temptation to interpret the *Categories* linguistically. Although neither the title nor the position of the work in the corpus is directly due to Aristotle, they do show that the inclination to treat the *Categories* as at least partially linguistic goes back to the very earliest tradition of Aristotelian scholarship.

3. The determination that the categories can be given a linguistic interpretation - even the conclusion that they are linguistic, Ackrill (1) and Benveniste (2) notwithstanding -

would not suffice to show that they are not also (in some sense) metaphysical, nor that they are not universal.

4. The most useful linguistic method to employ in this inquiry is distinctive feature analysis, (3) which has been used in several kinds of linguistic analysis. Passages in the *Categories* can be interpreted as employing a related method, if not an early version of the method itself." (p. 27)

(1) J. L. Ackrill, Aristotle's '*Categories*' and '*De Interpretatione*', Clarendon Press, Oxford, 1963, p. 71. I have used Ackrill's translation. His notes, to which I refer here, are both helpful and stimulating.

(2) E. Benveniste, *Problems in General Linguistics*, Univ. of Miami Press, Coral Gables; 1971, Chapter 6.

(3) This method of analysis is due to Roman Jakobson more than to anyone else. See R. Jakobson, C. G. M. Fant, and M. Halle, *Preliminaries to Speech Analysis*, MIT Press, Cambridge, Mass., 1952; N. Chomsky and M. Halle, *Sound Pattern of English*, Harper and Row, New York, 1968; and Fred W. Householder, *Linguistic Speculations* Cambridge Univ. Press, London, 1971. Most recent linguistic textbooks have a discussion of features.

2. Georgiadis, Costantine. 1973. "Two Conceptions of Substance in Aristotle." *The New scholasticism* no. 47:157-167.

"In Aristotle we find the view that an individual thing is a substance but we also find the view that form is substance. Is the meaning of substance (οὐσία) the same in the two cases? As the title of my paper suggests, I hold that it is not. I shall argue that there are two distinct, though related, conceptions of substance in Aristotle. These are what I call, on the one hand, the reistic conception of substance, according to which substance is an individual thing (res) (2) and, on the other hand, the archological (3) conception of substance, according to which substance is a principle (ἀρχή) of the individual thing." (p. 157)

(2) The use of the term 'reistic' here does not imply the narrowing of reality to individual objects alone as in T.

Kotarbinski's philosophy of reism but only underlines the central position of the individual within reality.

(3) Giovanni Reale, in his book *Il Concetto di Filosofia Prima e l'unità della Metafisica di Aristotele*, wrongly uses the term *archeologia* in the sense of aitiologia. He should have used the term *archologia*.

3. Ghimpu, Anca gabriel. 2011. "The lack of a deduction: Kant's opinion on Aristotle's theory of categories." *Studia Universitatis Babeș-Bolyai - Philosophia* no. 2:103-111.

Abstract: "This essay argues against Kant's reproach to Aristotle's deduction of categories as formulated in the *Critique of the Pure Reason*. In the first part we try to summarize the philosophical context in which Kant formulates his reproach, while in the second part we focus on Aristotle's perspective underlying philosophical aspects in the light of which Kant's objection seems unfounded. The most important aspects which our argumentation is based on are: first, we are dealing with two different philosophical intentions (categories of being versus categories of the understanding); secondly, Kant's reproach turns against him, so to speak, as he does not provide a principle of deduction either."

4. Gill, Mary Louise. 1984. "Aristotle on the Individuation of Changes." *Ancient Philosophy* no. 4:9-22.

Abstract: "In *Physics* V 4 Aristotle lists a set of conditions that must be met for a change to be an individual. This account should be viewed against the background of the *Categories*, where the problem of individuals is first addressed. In the *Categories* changes apparently fall into the two nonsubstance categories of doing and suffering. So one might expect that the characterization of individual changes in *Physics* V 4 will fit the account of individual nonsubstances proposed in the *Categories*. I do not think it does.

This paper aims to show how the two treatments differ and why individual changes require a different analysis from other nonsubstances."

5. ———. 1995. "Aristotle on Substance and Predication." *Ancient Philosophy* no. 15:511-520.

"Michael Loux and Frank Lewis share a perspective about Aristotle's *Metaphysics*, though they defend their positions in quite different ways. They agree that Aristotle revised his view from the *Categories*, where he treats individual physical objects as primary οὐσίαι, or substances, and that he defends instead the primacy of substantial forms. They also agree that he adapts his theory of predication from the *Categories* to the project of the *Metaphysics*. On their view Aristotelian forms are universals, and the ultimate subject of predication is prime matter, a stuff that has no character in its own right but is a subject for other things. Since Loux and Lewis defend a similar position, I shall treat their views together.

(...)

In this discussion I shall focus on Aristotle's treatment of predication (a relation between entities, not between linguistic items), which Loux and Lewis take Aristotle to adapt from the *Categories*. I shall argue that he replaces that account with a more flexible scheme, but one that still yields the result that Loux and Lewis want: form predicated accidentally of matter. It also yields some results that they do not want: form predicated of the composite, and the composite predicated of matter. Some of these results are also unacceptable to Aristotle, and to avoid them he introduces a new relation between form and matter: form as actuality, and matter as potentiality." (p. 511)

6. Gillespie, Charles Melville. 1925. "The Aristotelian *Categories*." *Classical Quarterly* no. 19:79-84.

Reprinted in: J. Barnes, M. Schofield, R. Sorabji (eds.), *Articles on Aristotle*, 3. *Metaphysics*, London: Duckworth, 1979, pp. 1-12.

"The precise position to be assigned to the *Categories* in the Aristotelian system has always been somewhat of a puzzle. On the one hand, they seem to be worked into the warp of its texture, as in the classification of change, and Aristotle can argue from the premiss that they constitute an exhaustive

division of the kinds of Being (*An. Post.* I. 22, p. 83 b 15). On the other hand, both in the completed scheme of his logic and in his constructive metaphysic they retire into the background, giving place to other notions, such as causation, change, actuality and potentiality." (p. 75)

(...)

"I shall accordingly assume in what follows that the scheme of the *Categories* was evolved in the course of efforts to establish a doctrine of judgment which should settle the difficulties raised by Megarian and other critics; that the application to the solution of the larger metaphysical problems was a later development ;(3) that the foundations of the scheme were laid in the Socratic tradition of the Academy; that the completed scheme is probably Aristotle's own; and that the original working out of the scheme did not contemplate extension beyond the metaphysics implied in predication to the more fundamental metaphysics of the First Philosophy. Hence we must look to the analysis of empirical propositions for the origin of the scheme." (p. 76)

8. Grafton-Cardwell, Patrick. 2021. "Understanding Mediated Predication in Aristotle's *Categories*." *Ancient Philosophy* no. 41:443-462.

Abstract: "I argue there are two ways predication relations can hold according to the *Categories*: they can hold directly or they can hold mediately. The distinction between direct and mediated predication is a distinction between whether or not a given predication fact holds in virtue of another predication fact's holding. We can tell Aristotle endorses this distinction from multiple places in the text where he licenses an inference from one predication fact's holding to another predication fact's holding. The best explanation for each such inference is that he

takes some predication facts to be mediated by others. Once the distinction between direct and mediated predication has been explained and argued for, I show how it can help solve a persistent problem for the traditional view of non-substantial particulars in the *Categories*—that is, the view that non-substantial particulars are particular in the sense of being non-recurrent. Along with vindicating the traditional view, the direct/mediated predication distinction gives us a distinctive way of understanding what it is for something to be recurrent (or non-recurrent) as well as a better understanding of Aristotle's broader commitments in the *Categories* as a whole."

The Incommensurability of the Systems 84; 5. The Hylomorphic Turn 119; 6. The Growth of S2: The Four Causes 156; 7. The Growth of S2: Potentiality and Actuality 183; 8. The Paradoxes of Substance: Matter 207; 9. The Paradoxes of Substance: Form 233; 10. S2 Without S1: What Aristotle Should Have Said 263; 11. The Two Systems Theory as an Interpretation of Aristotle 290; References 333; Index Locorum 347; Subject Index 354-359.

"The idea for this study emerged while I was still working on my dissertation, which I wrote on a topic in Aristotle's philosophy of action. As I was researching the history of the potentiality- actuality distinction, I discovered that Aristotle did not use his word 'matter' anywhere in the logical works. The discovery was a discovery only to me; it had long been known. Yet it seemed amazing to me that a principle as important as that of matter should not appear in so large a body of work. Did this omission have important consequences for the interpretation of Aristotle? I found that interpreters saw the omission as at most a curiosity; after all, the subject-matter of the logical works was unique. Yet the same interpreters had long ago abandoned the assumption that the logical works were purely devoted to logic. In particular, the *Categories* is

commonly taken to be a prime source of information about Aristotle's early metaphysical theory. But how could Aristotle have formulated anything like this mature metaphysical theory without the matter-form distinction? Was the unity of Aristotle's thought not really an illusion? Were there not really two sets of theories, two metaphysical conceptions, two philosophical systems?" (p. VII)

(...)

"In what follows I have tried to give my vision of Aristotle's two systems concrete expression in an argument with historical, philological, but above all philosophical dimensions. If the argument is right, a fact about Aristotle's development that has been relegated to asides and footnotes should have a central place in interpretations of Aristotle--should be a point of departure for many studies and provide a limit of inquiry for others. At present few scholars would agree with such claims. To be sure, many would grant that the metaphysical assumptions of the *Categories* are different from those of the *Metaphysics*; but this fact does not seem to have any far-reaching implications for their interpretations of Aristotle, and so I infer that they do not subscribe to a dualistic interpretative theory. A mere handful of scholars have advocated a two-systems theory in some form or other, and I believe that there is only one person who holds the Two Systems Theory with all its ramifications. However, as Socrates has taught us, it does not matter what the many think, but what the expert in truth has to say--that is, what the outcome of the argument is." (p. IX)

10. Granger, Edgar Herbert. 1980. "A Defense of the Traditional Position Concerning Aristotle's Non-Substantial Particulars." *Journal of Philosophy* no. 10:593-606.

"In this paper I shall defend the traditional claim that Aristotle's nonsubstantial particulars discussed in the second chapter of the *Categories* are unsharable particulars against G. E. L. Owen's claim that they are sharable universals. I shall proceed by presenting first a sketch of the traditional position that makes explicit why it holds that non-substantial

particulars are unsharable particulars. (1) Secondly, I shall sketch Owen's position and recount how it differs in certain important respects from the traditional position. (2) Thirdly, I shall present some of my own considerations that I believe support the traditional position at the expense of Owen's position. Finally, I shall offer what I take to be the primary reason Aristotle was committed to the existence of such odd items as non-substantial particulars." (pp. 593-594)

(1) My reconstruction of the traditional position is based on the following sources: W. D. Ross, *Aristotle*, 5th ed. (London: Methuen, 1949): 23-24, 24, n. 1 (hereafter cited as *Arist.*); J. R. Jones, "Are the Qualities of Particular Things Universal or Particular?" *Philosophical Review* 58 (1949): 152-156, 162-163; G. E. M. Anscombe and P. T. Geach, *Three Philosophers: Aristotle, Aquinas and Frege* (Ithaca: Cornell Univ. Press, 1961): 8-10; R. E. Allen, "Individual Properties in Aristotle's *Categories*," *Phronesis* 14 (1969): 31-32; Ignacio Angelelli, *Studies on Gottlob Frege and Traditional Philosophy* (New York: Humanities Press, 1967): 12-15. Angelelli's account is especially important because it reflects the opinion of scholars from late antiquity to the present.

11. ——. 1984. "Aristotle on Genus and Differentia." *Journal of the History of Philosophy* no. 22:1-23.

Abstract: "In Aristotle's writings there are at least three accounts of the nature of genus and differentia. These accounts may be briefly described in these terms: (I) genus and differentia are radically distinct in character, and the genus is the more important element in the definition; (II) genus and differentia are very similar in character and importance; (III) genus and differentia are similar in character, but the differentia is the more important element in the definition. These accounts represent, I believe, three stages in the development of Aristotle's thought. In this paper I shall examine each account and explain, at least in part, why Aristotle adopts them."

12. Granieri, Roberto. 2016. "Systems of Predication. Aristotle's Categories in *Topics*, I, 9." *Documenti e studi sulla tradizione filosofica medievale* no. 27:1-18.

Abstract: "In this paper I investigate Aristotle's account of predication in *Topics*, I, 9. I argue for the following interpretation. In this chapter Aristotle (I) presents two systems of predication cutting across each other, the system of the so-called four 'predicables' and of the ten 'categories', in order to distinguish them and explore their mutual relationship. I propose a semantic interpretation of the relationship between them. According to this reading, every proposition formed through a predicable constitutes at the same time a predication according to one of the ten categories, and, consequently, signifies one of them, expressing one of the predicative relationship conveyed by them. Further, Aristotle (II) explains the predicative connection between these two systems and the ten items signified by the 'things said without any combination' enumerated in Chapter 4 of the *Categories*, whose list is almost identical with that of categories in *Top.*, I, 9, with the only exception of their first members."

13. Gregoric, Pavel. 2006. "Quantities and Contraries: Aristotle's *Categories* 6, 5b11-6a18." *Apeiron* no. 39:341-358.

"The immediate purpose of this paper is fairly modest. I would like to provide an analysis of Aristotle's three counterexamples to his claim that no quantity has a contrary in *Categories* 6. I will have something to say about Aristotle's discussion of the first two counterexamples, although the bulk of my paper will be devoted to his discussion of the third counterexample at 6a11-18, a passage which has not received due attention by modern commentators. My analysis will then provide a basis for some suggestions of wider significance.

In *Categories* 6, 5b11 Aristotle introduces one salient characteristic of quantities, namely that none of them has a contrary (*enantion*). Immediately following the statement of this characteristic, Aristotle takes on an anticipated objection. The objection consists of two counterexamples: to the many the contrary is the few, to something large the contrary is

something small. Each pair of terms is supposed to present a counterexample to Aristotle's characteristic for one type of quantity: the former pair for discrete quantities, the latter for continuous quantities. Aristotle takes each pair of terms in turn, and shows that what they introduce are (a) neither quantities (b) nor contraries." (p. 341)

14. Hacking, Ian. 2001. "Aristotelian Categories and Cognitive Domains." *Synthese* no. 126:473-515.

Abstract: "This paper puts together an ancient and a recent approach to classificatory language, thought, and ontology. It includes on the one hand an interpretation of Aristotle's ten categories, with remarks on his first category, called (or translated as) *substance* in the *Categories* or *What a thing is* in the *Topics*. On the other hand is the idea of domain-specific cognitive abilities urged in contemporary developmental psychology. Each family of ideas can be used to understand the other. Neither the metaphysical nor the psychological approach is intrinsically more fundamental; they complement each other. The paper incidentally clarifies distinct uses of the word 'category' in different disciplines, and also attempts to make explicit several notions of 'domain'. It also examines Aristotle's most exotic and least discussed categories, *being-in-a-position* (e.g., sitting) and *having-(on)* (e.g., armour). Finally the paper suggests a tentative connection between Fred Sommers' theory of types and Aristotle's first category."

15. Hadgopoulos D. J. 1976. "The Definition of the Predicables in Aristotle." *Phronesis. A Journal for Ancient Philosophy* no. 6:110-126.

"It is a common belief among Aristotelian scholars that, according to Aristotle, *per se* accidents are properties in the following sense of the word:

Top. 102: a Property that which, while not showing the essence of its subject, belongs counterpredicated of thing.

But in 1970, Jonathan Barnes published a paper(1), where he defended the view that *per se* accidents are not properties. A

consequence of this was that the 'predicables' were not well defined by Aristotle.

In this paper, I will try to show that Barnes is mistaken. The argument he offers in support of his view seems to be a very good one, but it involves a faulty move." (p. 110)

16. Hamlyn, David W. 1961. "Aristotle on Predication." *Phronesis. A Journal for Ancient Philosophy* no. 6:110-126.

"In dealing with the Greek Philosophers we tend to take the notion of predication for granted: we tend to assume that we have the right to use the term 'predicate' without question, in discussing the theories put forward by e.g. Plato and Aristotle. An example of this tendency is the common assertion that Plato held that the Forms were self-predicable. While this assertion may be in some sense true, it does assume that the notion of predication may be taken for granted. This assumption is, perhaps, partly due to a further assumption that the notion of predication is a logical or even grammatical notion, and that Plato and Aristotle must therefore have seen its importance and employed it accordingly. I wish to question that assumption in Aristotle's case.

I have already questioned it in connection with Plato,(1) saying that Plato was continually trying to account for what we should call predication in terms of notions akin to that of identity. It is tempting to assume that because Aristotle had the term 'predicate' at his disposal, he must have known all about the notion. It is moreover, a feasible suggestion that in Aristotle 'κατηγορεῖν' is a technical term the origins of which are obvious. The use of the phrase 'κατηγορεῖν τι κατὰ τινος' stems from legal contexts; it thus comes to mean 'to maintain or assert something of something' and it perhaps retains something of an accusatorial aura.

But while the use of the phrase implies that Aristotle knew in some sense something about what it is to assert something of another thing, it does *not* imply that he could *ipso facto* provide

the correct theory about it. What is true is that the trend of Aristotle's metaphysical thought led him towards a view of predication which involved treating it as something much more than a mere grammatical notion." (p. 110)

17. ———. 1978. "Focal Meaning." *Proceedings of the Aristotelian Society* no. 78:1-18.

"In recent years much philosophical scholarship has been devoted to the place in Aristotle's thinking of what G. E. L. Owen has called 'focal meaning'; and much is due to Professor Owen in particular in this connexion. Less attention has perhaps been given to the question whether Aristotle should be complimented on that idea - whether, that is, the concept is one that we should welcome and accept into our inherited philosophical treasury. It is this question with which I am mainly concerned in this paper; a full answer would no doubt demand a broader conspectus of Aristotle's thought than I can take in the space available." (p. 1)

(...)

"I have pointed out that the explanation of the uses of 'healthy' by reference to health provides no true instances of primary and secondary uses or senses of a word, let alone cases. But when Aristotle says the substance is said to be in the primary way while things in the other categories are said to be in a secondary way we may be provided with an instance of primary and secondary senses, or so it might appear. In fact we are not provided with this in a technical sense, since Aristotle does not operate with a sense and reference distinction. That is why I, as in effect Aristotle normally does, put the point in terms of something's being said to be in a primary or secondary way.

That homonymy is for Aristotle something that belongs to things in relation to words rather than to words *simpliciter* is notorious; hence he approaches the relation between words and

things from the side of things, rather than from the side of words as we are perhaps inclined to do." (pp. 6-7)

18. Harari, Orna. 2011. "The Unity of Aristotle's Category of Relatives." *Classical Quarterly* no. 61:521-537.

"In *Categories* 7 Aristotle discusses relative terms, which he defines in the opening paragraph of this chapter as 'things as are said to be just what they are, of or than other things, or in some other way in relation to something else' (6a36-7).(1) In clarifying this definition, he presents two lists of examples; the first contains 'greater' and 'double' and the second contains 'states', 'conditions', 'perception', 'knowledge' and 'position' (6a38-b3). The terms of the second list seem to be foreign to this discussion. The definition of relatives and the terms presented in the first list suggest that relatives are incomplete predicates or relational attributes,(2) but states, conditions, perception, knowledge and position are complete predicates.

Linguistic usage does not require these terms to be followed by a preposition.

The difficulty involved in understanding the place of conditions and states in the category of relatives extends beyond linguistic considerations. Other linguistically complete predicates are included in Aristotle's category of relatives, but their categorial status seems pretty obvious. 'Slave', for instance, is a linguistically complete term, but it can easily be construed as implicitly referring to the correlative 'master': that is, the proposition 'x is a slave' may be construed as implying the proposition 'x is a slave of y (when y stands for x's master). Similarly, the term 'large', though linguistically complete, implies (as Aristotle says in *Categories* 6) that its subject is larger than other things of its kind (5b15-20). By contrast, the categorial status of conditions and states remains uncertain, even if their correlatives are supplied, because they seem to be internal dispositions of their subjects rather than relational attributes." (p. 521)

19. Harter, Edward D. 1975. "Aristotle on Primary ΟΥΣΙΑ." *Archiv für Geschichte der Philosophie* no. 57:1-20.

"In *Categories* 1-5 Aristotle argues that the primary ουσία (the most fundamental sort of being there is) is the concrete individual and that the secondary ουσία (the second-most fundamental sort of being there is) is the εἶδος (species) or γένος (genus) of a concrete individual. In *Metaphysics* Z-H he argues that the primary ουσία is the εἶδος of a concrete individual, that the secondary ουσία is the concrete individual, and that the γένος is not ουσία at all.

This raises some serious questions concerning the *Categories*, the *Metaphysics*, and primary ουσία.

Some scholars have maintained that this difference between the two treatises is merely apparent (e. g., terminological) and that the doctrine in the Metaphysics does not conflict with the one in the Categories; others that it is real and that the doctrine in the Metaphysics is the precise contrary of the one in the Categories.

I believe that neither of these views is correct, and I shall argue that the difference is indeed real but that it does not consist in this simple *volte-face*. The difference consists in the fact that in the *Metaphysics* εἶδος is conceived as the particular form, and not merely the universal species, of a concrete individual, whereas it is not so conceived in the *Categories*; this marks a radical development in Aristotle's metaphysical reasoning. I shall begin by developing briefly each of the two doctrines of ουσία (Section I); I shall then examine the relations between them (Sections II–IV); and I shall conclude by making some general observations on the *Categories* and the *Metaphysics* (Section -V)." (p. 1)

20. Hegarty, Seamus. 1969. "Aristotle's Notion of Quantity and Modern Mathematics." *Philosophical Studies (Dublin)* no.

18:25-35.

21. Heinaman, Robert. 1981. "Non-Substantial Individuals in the *Categories*." *Phronesis. A Journal for Ancient Philosophy* no. 26 (295):307.

Abstract: "There is a dispute as to what sort of entity non-substantial individuals are in Aristotle's *Categories*. The traditional interpretation holds that non-substantial individuals are individual qualities, quantities, etc. For example, Socrates' white is an individual quality belonging to him alone, numerically distinct from (though possibly specifically identical with) other individual colors. I will refer to these sorts of entities as 'individual instances.'

The new interpretation (1) suggests instead that non-substantial individuals are atomic species such as a specific shade of white that is indivisible into more specific shades. On this view, non-substantial individuals are what we would call universals (2) which can be present in different individual substances, but are labelled 'individuals' by Aristotle because, like individual substances, there is nothing they are *said of*. (3)

In this paper I will defend the traditional account by attempting to show that it is supported by the slender textual evidence that is available. I will begin by stating three serious objections to the traditional interpretation. Next I will show that in works later than the *Categories* Aristotle accepted individual instances of properties of the sort found in the *Categories* by the traditional interpretation. Finally, I will set out the evidence that supports the traditional interpretation and answer the three objections."

(1) G. E. L. Owen, "Inherence," *Phronesis* (1965), pp. 97-105; Michael Frede, "Individuen bei Aristoteles," *Antike and Abendland* (1978), pp. 16-31. In fact, it is not clear to me what Professor Frede considers non-substantial individuals to be. While he refers approvingly to Owen, Owen's account collapses the distinction between εἶδει εν and ἀριθμό εν in the case of non-substances whereas it appears that Frede wishes to retain this distinction (pp. 23-24). Since he does not explain what individual non-substances which are numerically different but

specifically identical are supposed to be or in virtue of what they are numerically different, by the "new interpretation" I will mean solely that explained in the text.

(2) This is not, as Allen, Matthews and Cohen think, an objection to the new interpretation (R. E. Allen, "Individual Properties in Aristotle's *Categories*," *Phronesis* (1969), p. 37; Gary Matthews and S. Marc Cohen, "The One and the Many," *Review of Metaphysics* (1968), pp. 640-41). There is no justification for the presupposition that Aristotle must have used the terms 'individual' and 'universal' in the *Categories* in the same way as in later works or as they are used today. (Of course, the word καθόλου' does not appear in the *Categories*).

(3) That is, for any individual x there is no y such that the name and definition of x are predicable of y (2a19-27).

22. Hetherington, Stephen. 1984. "A Note on Inherence." *Ancient Philosophy*:218-223.

"In Aristotle's *Categories* (2a34-b6: see also *Meta.* VII. 1), the category of substance is claimed to be prior in existence to the various categories of nonsubstance.

This priority is articulated in the *Categories* largely via Aristotle's relation of inherence. The latter is one of two relations whereby Aristotle purports to quarter the furniture of the world, the members of the categories. The other is that of 'being said of'. The quartering is effected thus (*Cat.* 1 a20-b9): some things are said of others but are not in anything: other things are said of a subject as well as being in a subject: still others are not said of anything, but are in a subject: the rest are neither said of nor in something; and these four combinations are mutually exclusive and jointly exhaustive.

Now, while the said-of relation is fairly straightforward, the inherence relation is not. According to *Cat.* 2a1 9-26, y is said of x if and only if y's name and y's definition, or account, are both predicated of x. And y is in x if and only if... what?

There are several competing interpretations of Aristotle's inherence relation, but it is not my aim in this paper to choose among them. I do want, however, to sharpen the terms of the

debate by formulating a particularly important one of those interpretations, G .E.L. Owen's, much more clearly than it has hitherto been formulated.

We will then be in a better position to evaluate the various merits of Owen's interpretation, some of which, up to now, have not been clearly perceived. Aristotle's notion of inherence is a technical one, but it is one that relies on a comparatively *nontechnical* notion of inherence. We shall see that understanding the latter is the key to the former, and hence that once the technical notion is precisely understood, Owen's interpretation can itself be properly assessed." (p. 218, notes omitted)

23. Hintikka, Jaakko. 1959. "Aristotle and the Ambiguity of Ambiguity." *Inquiry* no. 2:137-151.

Reprinted as Chapter 1 in: J. Hintikka, *Time and Necessity. Studies in Aristotle's Theory of Modality*, Oxford: Oxford University Press, 1973 pp. 1-26.

"Chapter I is a revised and expanded version of a paper which appeared under the same title in *Inquiry*, 2 (1959), 137-51. In its present form it also incorporates most of my note, 'Different Kinds of Equivocation in Aristotle', *Journal of the History of Philosophy*, 9 (1971), 368-72." (*Time and Necessity*, Preface, VII).

"*Homonymy v. synonymy* Aristotle explains his sense of homonymy (together with that of the contrary notion of synonymy) in the beginning of the *Categories*.

According to these explanations, two things are synonymous if both the same name (i.e. term) and the same definition (λόγος) are applicable to them. They are homonymous if they share only the name, the definitions (λόγοι) being different in the two cases. (In these definitions, λόγος should perhaps be understood as an explanatory phrase or an account of the meaning of the name rather than as a definition.) I have already pointed out that Aristotle sometimes violates his own definition of homonymy.

Similarly, he violates the definition of synonymy at least once by calling a pair of objects synonyms although, according to his own considered judgement, they share only the name but not the definition. (6)

These violations are little more than occasional reversions to looser usage. But in another respect Aristotle violates the definitions of homonymy and synonymy given in *Categories* 1 almost systematically. In so far as the definitions are concerned, only *things* can be called homonymous or synonymous, not *words*. And two things can be called synonymous only if the *same* term is applied to them. Both these limitations are transgressed by Aristotle. A word is said to be homonymous in *De Gen. et Corr.* 1 6. 322b29 ff.; (7) and similar uses of the notion of synonymy are found in *Top.* VIII 13. 162b37, *Soph. El.* 5. 167a24 and in *Rhet.* III 2. 1404b37-1405a2. In many other passages, too, Aristotle is obviously interested exclusively in the word and not in the things to which it is applied. In fact, he sometimes seems to express synonymy and homonymy by such phrases as *εν σημαίνειν* and *πολλά σημαίνειν* (or *πλείω σημαίνειν*), respectively. In the sequel, we shall take the same liberty as Aristotle and talk about synonymy (homonymy) in connection both with certain terms and with the entities to which they are applied." (p. 9)

(6) See *Met.* A 6. 987b10; cf. 9. 990b6, 991a6, and *Met.* I 10. 1059a13.

24. ———. 1983. "Semantical Games, the Alleged Ambiguity of 'Is' and Aristotelian Categories." *Synthese* no. 54:443-468.

Reprinted in: J. Hintikka, *Analysis of Aristotle. Selected Papers, Vol. 6*, Dordrecht: Springer 2004, pp. 23-44.

"Our findings concerning the multiple relations between different semantical phenomena may thus be summed up in the form of a list of correlated distinctions. They amount to differences among the following:

(10) (i) Different wh-words (and phrases).

(ii) Different widest classes of entities over which English quantifiers can range.

(iii) Different uses of the existential is in English.

(iv) Different uses of the is of identity in English.

(v) Different uses of the predicative is in English.

(vi) Different classes (mutually exclusive and collectively exhaustive) of simple predicates of English." (p. 35)

(..)

"Aristotelian categories reconstructed

At this point, a philosophical reader is likely to have a vivid *déjà vu* experience. For what seems to be emerging as a consequence of the basic assumptions of game-theoretical semantics is nothing but a modernized version of Aristotle's doctrine of categories, not in its details (after all, Aristotle was dealing with a different language), but in all of its leading theoretical ideas. Aristotelian scholars have found the combination of different ideas in Aristotle's distinction between different categories intensely puzzling. These different aspects of Aristotle's theory include the following:

(11) (i) Different questions one can ask about a given entity, and hence different question words (and certain related phrases) in a language. (Cf. Ockham (Loux), pp. 8–9; Ackrill, p. 79; Gomperz, p. 39; Kahn, *passim*.) Several scholars have argued on this basis that Aristotle's distinction is firmly based on the structure of Greek (Trendelenburg, Benveniste, Kahn).

(ii) Different highest predicates under one or other of which everything that is has to fall (Bonitz et al.).

(iii)–(v) Different senses of verbs for being in their different uses: (iii) existential, (iv) copulative (Apelt, etc.), (v) identifying.

(vi) Different widest classes of primitive predicates in the language in question. Indeed, (vi) is closest to Aristotle's

explanation of the categories in his *Categoriae* (see 1b25–2a10)." (pp. 35–36)

"In this paper, I shall try to enhance our understanding of Aristotle's thought by relating it to certain contemporary problems and insights of philosophical logicians. Now one of the most central current issues in philosophical logic is a challenge to a hundred-year old dogma. Almost all twentieth-century philosophers in English-speaking countries have followed Frege and Russell and claimed that the words for being in natural languages - "is", "ist", ἔστι, etc. - are ambiguous between the is of predication, the is of existence, the is of identity, and the generic is. The significance of this ambiguity thesis has not been limited to topical discussions but has extended to historical studies, including studies of ancient Greek philosophy." (p. 81).

(...)

"One of the most fundamental and most perplexing questions concerning Aristotle's distinction between different categories is: What is being distinguished from each other? What is Aristotle classifying in separating the different categories from each other?"

(...)

"Scholars have debated intensively which of these different things Aristotle "really" meant. For example, one persuasion maintains that the categories represent the different kinds of questions one can (according to Aristotle) ask of a given entity. This view is in different variants held by among others Ockham, Charles Kahn, Benveniste, and Ackrill.

Other scholars hold that Aristotelian categories are what he says they are, predicables. Others, led by the formidable Hermann Bonitz, have held that categories were for Aristotle first and foremost the widest genera of entities." (p. 100)

(...)

"Still others have held that Aristotle's category distinction is primarily a differentiation between several senses of *esti*, a reminder of the "systematic ambiguity" of words for being in Aristotle. This view is found, e.g., in *Phys. A 2*, 185 b 25 - 32. Among commentators, it has been represented by Heinrich Maier, and in a sense it can be maintained that G. E. L. Owen is another case in point. He has certainly been followed by a host of younger scholars." (pp. 100-101)

Contents: Preface IX; Acknowledgements XI; Part One: The Exegesis; Chapter 1: The Critics' Charges 1; Chapter 2: *Categories* 7 21; Chapter 3: *Metaphysics* V.15 55; Chapter 4: Interpreting Aristotle's Relatives 85; Chapter 5: Epistemological Issues; Chapter 6: Conclusion 141; Notes 143; Bibliography 147; Index 151-154.

"Many philosophers believe that Aristotle does not have, and indeed could not have, a theory of relation, even one that accounts for relations involving two terms, i.e., dyadic relations. Aristotle's logical, metaphysical and ontological views, especially his substance-accident ontology, are seen as restricting Aristotle to only one-place or monadic relations, and prohibiting the logical space for a separate entity, relation, to exist. Hence, Aristotle's conception of relation is perceived to be so divergent from our own that it does not count as a theory of relation at all. I aim to show that the critics are wrong to speak so poorly of Aristotle's account of relation.

I argue that Aristotle's theory has some of the basic features that a theory of relation must have. I begin in Part One by sketching out the critics' charges. I then outline the main features of Aristotle's philosophy that inform his treatment of the category of relation, and briefly survey Aristotle's discussion of relational issues scattered throughout the corpus. Next, I present an exegesis of Aristotle's two central texts on relation, *Categories* 7 and *Metaphysics* V 15, and discuss the various accounts of relational entities or relatives therein. In Part Two, I examine two problems. First, I address the problem of how best to interpret Aristotle's relatives. Second, I explore the epistemological difficulties stemming from Aristotle's view in the *Categories* that relation involves two relative items or terms and that if one relative item is known definitely the other item must also be known definitely.

I conclude that Aristotle's treatment of relatives reveals his commitment to the view that there be a dyad, i.e., at least two items, involved in a relation. Furthermore, I show that Aristotle includes in his theory something that accounts for the relation itself, i.e., something approaching a logical relational predicate. I do not suggest that Aristotle attempts to construct a relational theory comparable to our own. But I do suggest that given Aristotle's grasp of the dyadic nature of relation, we have good reason to believe Aristotle's theory of relation is more robust than many suspect." (Preface, p. IX)

27. Husik, Isaac. 1904. "On the *Categories* of Aristotle." *The Philosophical Review* no. 13:514-528.

Reprinted (conjoined with Husik 1939) in: I. Husik, *The Categories of Aristotle* (1942).

"The little treatise of Aristotle which stands at the head of the *Organon* has caused a great deal of difficulty to students, both ancient and modern. The bulk of the discussion has centered about the question of its place in the *Organon* and in Aristotle's system, and the character of the ten categories to which the greater part of the book is devoted. But there have been found also critics who expressed a doubt as to the authenticity of all or part of the treatise in question. To say nothing of the ancient commentators of Aristotle, the earliest attempt in modern times to cast a doubt on the genuineness of the work seems to be that of Spengel in *Münchener Gelehrte Anzeigen*, 1845, Vol. XX, No. 5, pp. 41 sq. He was followed by Prantl in *Zeitschrift für Alterthumswissenschaft*, 1846, p. 646, and in his *Geschichte der Logik*, I, p. 90, Note. 5, also by Valentinus Rose in *De Aristotelis librorum ordine et auctoritate*, p. 234 sq. Zeller, on the other hand (*Philos. d. Griechen*, second edition, II, pt. 2, p. 67, note i), decides in favor of the genuineness of the first part of the work, the *Categories* proper, and against the so-called *Postpraedicamenta* from ch. X to the end." (p. 514)

(...)

"I have shown, I trust, not only that the treatise of the *Categories* is closely related to that of the *Topics*, but also that it was written before the latter and serves as a basis for it upon which it builds, very often going beyond the *Categories*. This applies to the first nine chapters, properly called *Categories*, in the same measure as to the *Postpraedicamenta*. The unity of the book of the *Categories* as we now have it is also maintained by Valentinus Rose (*De Arist. libr. ord.*, etc., p. 235). Ergo, the whole work is genuine, and its peculiar character is to be explained on the ground of its being one of the earliest attempts of Aristotle." (p. 528)

28. ——. 1939. "The Authenticity of Aristotle's *Categories*." *Journal of Philosophy* no. 36:427-431.

With a postscript by William David Ross.

Reprinted (conjoined with Husik 1904) in: I. Husik, *The Categories of Aristotle* (1942).

"*Habent sua fata libelli*. Thirty-four years ago I published a paper, "On the *Categories* of Aristotle," in the *Philosophical Review*.⁽²⁾ Like the case of the proverbial Irishman who desired to be buried in a Jewish cemetery because that was the last place the devil would look for an Irishman, so it seems that the *Philosophical Review* at that time was the last place where an Aristotelian scholar would look for a literary-historical article on the *Categories* of Aristotle. And so the article was stillborn. No European student of Aristotle knew about it and it did not find its way into the bibliographies of the subject. Dupréel, whose article on the same subject appeared five years later,⁽³⁾ does not refer to my article and shows no knowledge of it." (p. 427)

(...)

"There would be no point in reproducing here the arguments advanced in my article of long ago. All I need do here is to give the gist of the argument, which can be done in a few sentences.

An examination of the treatise of the *Categories* and a comparison thereof with the *Topics*, in respect of terminology, style, and doctrine, proves conclusively that they are either the work of one author or that one was a close and deliberate imitator of the other. The same examination shows that the *Categories* was written before the *Topics*. Hence, since no one doubts the genuineness of the *Topics*, the *Categories* must be equally genuine, for no one has suggested that some one before Aristotle wrote the *Categories*, which Aristotle imitated in the *Topics*.

Dupréel, as I said before, is the only one who has made a considerable contribution to the question since my article was published.

His argument has no point of contact with mine, for he compares the *Categories* not with the *Topics*, but with the *Metaphysics*, and finds that they do not agree in doctrine.

I have no reason to quarrel with Dupréel when he tries to show that the first nine chapters, the categories proper, and the last six chapters, the *Postpraedicamenta*, are a unit and the work of the same author, for my comparison of the treatise with the *Topics* has led me to the same conclusion." (p. 429)

Two articles conjoined: "The Categories of Aristotle" (1930) and "On the Categories of Aristotle" (1904).

Reprinted in: I. Husik, *Philosophical Essays. Ancient, Mediaeval, and Modern*, Edited by Milton C. Nahm and Leo Strauss, Oxford: Blackwell, 1952, pp. 96-112.

30. Irwin, Terence H. 1981. "Homonymy in Aristotle." *The Review of Metaphysics* no. 34:523-544.

"What, then, are Aristotle's conditions for homonymy and multivocity?"

It is often assumed that the conditions are different, but that they both reflect differences in the senses of words. I will argue that each of these assumptions is less than the whole truth; homonymy and multivocity are often the same, and neither is intended to mark different senses of words." (pp. 523-524, note omitted)

(...)

[Aristotle] search for homonymy is not meant to encourage skepticism about the existence of essences for words to name, but to forestall skepticism that might result from the rejection of the Platonic attempt to see one essence for every name; Aristotle does not want to renounce the search for essences, but only to recognize different essences correlated with the same name. While the Wittgensteinian arguments about family resemblance are arguments against essentialism, Aristotle's

arguments are a defence of essentialism. The difficulties in his doctrine of homonymy are difficulties in his general views about real essences." (p. 544)

31. Jacobs, William. 1979. "Aristotle and Nonreferring Subjects." *Phronesis. A Journal for Ancient Philosophy* no. 24:282-300.

"It is a widely accepted view amongst scholars that Aristotle believed that the subject of an assertion might fail to refer. Two texts, *De Interpretatione* xi 21 a 25-28 and *Categories* x 13 b 12-35, are generally cited as evidence for this belief. In this paper I will argue that both passages have previously been misunderstood and that Aristotle did not accept the possible referential failure of the subject of an assertion. In Section I, after first discussing the standard interpretations of both texts, I note the difficulties which result from these accounts. In Section II I offer a brief general argument showing that Aristotle's own account of what an assertion is implies that it is impossible for the subject of an assertion to fail to refer. In Section III I present my own analysis of each passage and show that when properly understood neither is in any way concerned with the problem of referential failure." (p. 282)

32. Jacquette, Dale. 2012. "Brentano on Aristotle's Categories: First Philosophy and the Manifold Senses of Being." In *Franz Brentano's Psychology and Metaphysics: Upon the Sesquicentennial of Franz Brentano's Dissertation*, edited by Tănăsescu, Ion, 53-94. Bucharest: Zeta Books.

"Brentano's 1862 dissertation, *Von der mannigfachen Bedeutung des Seienden nach Aristoteles*, is a scholarly historical study and philosophical consideration of Aristotle's theory of categories.

The categories in Aristotle's first philosophy, as Brentano interprets them, are the mutually independent predicates of being at the highest levels of generality, in the variety of ways in which we speak about being. If correctly identified, the categories should correspond exactly to the multiple modes of existence or ways of being that are available to primary substances in the actual world as Aristotle conceptualizes them.

As such, they are the categories not only of our predicative thoughts, but of the real existence of primary substances.

Aristotle's categories accordingly constitute the rock bottom of his first philosophy. They are his ontology, built on the Greek word "ontos" for "being"; or, better, melding "ousia" as Aristotle's Greek term for 'substance', they are the fundamental concepts of his ousiology. The categories as the hierarchy of ways in which substance can have being are at the heart of Aristotle's metaphysics in his theory of pure being, of being as such or being qua being. To the extent that Aristotle's conceptual scheme for the being of substances captures the truth about the real objects whose multiple senses of being are thereby conceptualized, the categories of an Aristotelian first philosophy, as Brentano understands them, systematize the nature of being itself, of the most general ways and general senses in which anything can exist or be correctly said to exist. These not merely correspond to but are constitutive of the manifold ways in which being can be intelligibly predicated of things." (pp. 53-54 a note omitted)

33. Jansen, Ludger. 2011. "Aristotle's *Categories*." *Topoi* no. 26:153-158.

"We need reliable techniques of information retrieval: search engines, indices, and categorisation.

Faced with such an urgent need for categorisation, a book on categories is more than welcome.

Aristotle, a young philosopher from Athens in Greece with a Macedonian background, has now published a philosophical investigation on this topic.

Such could be the beginning of a review of Aristotle's *Categories*, were it published today. The aim of this essay as an "Untimely Review" is to speculate how such a review would continue. Such an exercise in counterfactual history is easier when we review some neglected and hitherto unimportant text. For such a text can really have a fresh impact on contemporary philosophy, whereas a classic text, being neither neglected nor unimportant, is, as a rule, already an active force that has

shaped and continues to shape the philosophical landscape. This applies in particular in the case of Aristotle's *Categories*, which has been for more than two millennia one of the most influential textbooks in philosophy." (p. 353)

(...)

"How could such a review conclude? Maybe thus: Aristotle's *Categories* can help to find our way around the internet. The first question of any retrieval technique that is more than a search for strings of characters should be: To which category does the thing that I am searching for belong? Aristotle's little treatise suggests helpful changes in perspective that could benefit contemporary ontology, and especially the steadily growing field of applied ontology. They can give new impulses towards applications in biomedical, legal or business information sciences, but also inspire new work on the old question: What is being?" (p. 158)

34. Jones, Barrington. 1972. "Individuals in Aristotle's *Categories*." *Phronesis. A Journal for Ancient Philosophy*:107-123.

"With the publication of J. L. Ackrill's translation of the *Categories*(1) and G. E. L. Owen's paper "Inherence"(2) a dispute has arisen over what Aristotle means in that work by an individual where the individuals in question are not prime substances. The bulk of published opinion has favoured Ackrill's account of the matter,(3) an account which is also found in the writings of W. D. Ross and Miss Anscombe.(4) However, this account involves certain difficulties.

The major difficulty is an internal one, the question of the interpretation of 2 a 34-b 6. This passage is described by Ackrill as "compressed and careless,"(5) while Owen claims that the matter "is put beyond question" in favour of his own view by the lines, and that "by themselves they settle the issue."(6) A second immediate difficulty is that such non-substantial individuals do not seem to reappear elsewhere in the Aristotelian corpus and are absent even from his discussion of the various categories in the *Categories* itself." (p. 107)

(...)

"Accordingly, I wish to re-examine the issue. I shall try to show that what Aristotle means by a non-substantial individual is fully captured by neither of the two current accounts, that 2 a 34-b 6 has been misconstrued by both parties, that Aristotle's account is entirely reasonable, relying simply on an accurate observation of what is presupposed by the activity of counting, and, finally, that the account offered in the present paper enables us to understand aright his distinction between synonymy, homonymy and paronymy.(9)" (p. 108)

(1) Aristotle's *Categories* and *De Interpretatione* (Oxford, 1963).

(2) *Phronesis*, X (1965), pp. 97-105.

Cohen, "The One and the Many," *Review of Metaphysics*, XXI (1968), pp. 630-655; R. E. Allen, "Individual Properties in Aristotle's *Categories*," *Phronesis*, XIV (1969), pp. 31-39.

(4) W. D. Ross, *Aristotle* (London, 1923), p. 24, n.1.; G. E. M. Anscombe and P. T. Geach, *Three Philosophers* (New York, 1961), pp. 7-10.

(5) Ackrill, p. 83.

(6) "Inherence," p. 100.

(9) I shall suppose that the *Categories* is a genuine work of Aristotle's. Unless otherwise indicated, all translations from the *Categories* are those of Ackrill and all translations from elsewhere in the corpus are my own. The technical vocabulary of the *Categories* is used according to Ackrill's translation throughout.

35. ——. 1975. "An Introduction to the First Five Chapters of Aristotle's *Categories*." *Phronesis. A Journal for Ancient Philosophy* no. 20:146-172.

"In an earlier paper (1) I have argued that a satisfactory account of Aristotle's postulation of individuals, both substantial and nonsubstantial, in the *Categories* can be achieved by taking

seriously his characterization of these individuals as things that are 'one in number' and by interpreting this characterization as 'a unit in a possible act of enumeration'. This approach to the *Categories* as important consequences for the interpretation of the remainder of the work.

In this essay I wish to present an account of the first five chapters (bar chapter 4 which lays out the categories themselves) based on the former paper.

In particular, I wish to examine the fourfold division of 'the things that are' in chapter 2 and the two relations of 'being said of' and 'being in' (or, rather, 'existing in') that are used to construct this fourfold division, and the nature of 'primary substance' (or, rather, 'primary being') and the basis for its distinction from 'secondary substance' (or, rather, 'secondary being'). The account that will be developed here is substantially and importantly different from any other that I am aware of, and, even if it does not secure conviction, its publication will hopefully make the dogma that the *Categories* is a 'common-sensical' work less readily tenable and force a re-thinking of the usual account of the work." (p. 146)

(1) "Individuals in Aristotle's *Categories*," *Phronesis*, 17 (1972) 107-123.

36. Jones, J. R. 1949. "Are the Qualities of Particular Things Universal or Particular?" *The Philosophical Review* no. 58:152-170.

"There are some curious things in the opening chapters of Aristotle's *Categoriae*. One is the admission, which seems to justify Porphyry's inclusion of the species as a fifth predicable, that "man" can be predicated of "the individual man." Another is the hint of a sense in which the qualities of a particular thing share in its particularity.

A distinction drawn in the second chapter between "presence in a subject" and "assertability of a subject" yields a division of fundamental entities in which the opposition of "man" to "this individual man" is paralleled by a similar opposition of "white" to "this individual white." This doctrine is nowhere else

repeated in Aristotle' and may have little relevance to a study of the development of the Peripatetic philosophy. But it does seem to me to provide a significant alternative to the view that all that is adjectival to a thing, that is, every quality of it, is universal. I have become increasingly dissatisfied with this view and would like, in what follows, to examine the alternative to it which seems to be implied in the passage of Aristotle's to which I am referring." [*Cat.* 1a, 16-1b, 9.] (p. 152)

(...)

"I submit that Aristotle pointed to the correct solution of his problem (but regrettably missed the significance of it) when he suggested that what is "present in" substance, namely, its accidents or attributes, can be "individual and one in number." For the moment it is thus recognized that characters may occur unrepeatably, the bare substantival "this" becomes clothed in the content of an adjectival or attributive "thisness" and its individual essence need no longer be sought in an empty material substratum.(34)

The view that characters are necessarily universals has been held by philosophers who have insisted that recognition presupposes acquaintance with a bare "this." But I should have thought it selfevident that an object which we may know by merely confronting must have content, as well as an existence, that is irrecurrably its own." (p. 170)

(34) It is sometimes claimed that Aristotle redeemed his doctrine of individual essence by suggesting that the individual may possess a distinct form as well as distinct matter, that is, content, as well as a substrate, that is irrecurrably its own. But, as Cook Wilson has seen, it is only in terms of a doctrine of particular qualities that this suggestion can be made good. Speaking of Aristotle's description of particularity as "matter which has the form," he points out that "form" here must be "the particular quality of the thing and not the universal; it is the particular definiteness of the thing" (*S.I.* ii, 713).

37. Kahn, Charles H. 1978. "Questions and Categories. Aristotle's Doctrine of Categories in the Light of Modern Research." In *Questions*, edited by Hiz, Henry, 227-278. Dordrecht: Reidel.

"The categories of Aristotle do not represent a complete logical inventory, a classification of all terms or concepts represented in language. They do attempt to classify all the terms of a basic object language, where these terms are specified by the questions that can be asked or answered concerning an individual subject. Hence the number of categories will be determined by the number of fundamentally distinct questions that can be raised concerning such a subject. As has often been pointed out, the full list of ten given in the *Categories* and in *Topics* 1.9 suggests that Aristotle must have taken a human being as his specimen subject, for only in this case would the two minor categories, Posture and Having (or Clothing) be natural topics of inquiry.

There is, then, a factual connection between Aristotle's list of categories and the linguistic forms of question or inquiry. But what is the philosophical significance of this connection? Reflection on this matter may proceed along two quite distinct lines of thought, each of which could provide material for a study devoted to questions and categories. On the one hand, we might consider Aristotle's doctrine simply as an early example of the genre, and widen the concept of category to include modern theories of logical, conceptual, and grammatical categories. Our topic would then become: the connection between interrogative forms and categorial distinctions in general. On the other hand, we may keep our attention fixed on Aristotle's doctrine but generalize the remark about interrogative forms to include other grammatical or linguistic considerations. Our topic will then be: the significance of the connections between Aristotle's scheme of categories and certain facts of grammar, including the grammar of questions in Greek. It is this second topic that I propose to study here: I will discuss Aristotle's theory, not category theories in general." (pp. 227-228, notes omitted)

(...)

"The doctrine of categories is not, after all, the central thesis in Aristotle's ontology. It provides a kind of introduction to metaphysics and to theoretical philosophy in general, by

sorting and circumscribing the domain of things that are beings per se, 'in their own right'. When the categorial scheme is applied in connection with the focal meaning of being, it effects a preliminary unification and ordering of this domain in its ontological dependence on substance or 'entity'. But in the final analysis the scheme does not tell us what is to count as an entity or how the structure of a substance is to be understood. The deeper analysis of substance itself and its relation to the dependent beings must be carried out by the use of different concepts, φυσικῶς not λογικῶς as Aristotle will sometimes say, concepts derived not from the theory of predication but designed specifically for the analysis of natural motion and change: concepts like mover and goal (τέλος), matter and form, potency and act. Both physics and metaphysics culminate in the theory of the Unmoved Mover, the entity (or entities) whose being is actuality, the final cause of all motion and change, the 'primary substance' on which all other substances depend (Λ.7, 1072b 14; cf. Γ.2, 1003b16–17, E.1, 1026a27-31). In this ultimate perspective for ontology, which Aristotle himself never worked out in full detail, the preliminary contribution of the categories in distinguishing substance from the various kinds of dependent beings must seem quite modest and elementary. All the more reason, however, why the categorial scheme itself should be firmly rooted in humble, everyday questions like What is it? How big? Of what sort or quality? In relation to what? Where? and When?" (p. 266)

38. Kampa, Samuel, and Wilkins, Shane Maxwell. 2018. "Aristotle as a Non Classical Trope Theorist." *History of Philosophy Quarterly* no. 35:117-136.

"A common refrain in Aristotle scholarship is that Aristotle countenances tropes. Roughly, trope theory is the view that properties are abstract particulars. In contemporary metaphysics, trope theory is an alternative to realism—the view that properties are abstract universals—and to nominalism—the view that properties are neither abstract particulars nor abstract universals. While contemporary trope theorists sometimes cite Aristotle as an influence, Aristotle's trope theory has yet to be thoroughly cashed out in the language of

contemporary metaphysics. Contemporary trope theory is not monolithic, so the claim that “Aristotle is a trope theorist” only communicates so much about Aristotle’s view. A more informative analysis would specify what kind of trope theorist Aristotle is. In this paper, we provide such an analysis.

We begin by describing realism, nominalism, and trope theory in terms recognizable to both historians of philosophy and contemporary metaphysicians. We distinguish two species of trope theory: classical and nonclassical. On the basis of critical passages from Aristotle’s *Categories* and *Metaphysics*, we argue that Aristotle’s view of properties aligns most closely with nonclassical trope theory. We conclude with a call for further research on Aristotle’s distinctive contribution to debates in contemporary trope theory." (p. 117)

39. Kapp, Ernst. 1942. *Greek Foundations of Traditional Logic*. New York: Columbia University Press.

Contents: Preface V-VIII; I. The origin of logic as a science 5; II. Concepts, terms, definitions, ideas, categories 20; III. Judgments, subject and predicate 43; IV. Syllogisms 60; V. Induction: ancient and modern logic 75; Books cited 89; Index 91-95.

On the categories see pp. 36-42.

"There is no doubt that the book *Categories* is partly responsible for the contents of this first part of traditional logic, because it professes to deal with the significance of unconnected parts of sentences; but the *Topics*, our earliest document, not only of Aristotle's treatment of syllogisms but also of categories, shows that the doctrine of categories was originally a doctrine of sentence-predicates and was only later transformed by Aristotle himself into some scheme for pigeonholing whatever carries a single word as its name." (p. 23)

(...)

"[*Categories*] contains, on the basis of a short but very interesting preparatory section (chaps. I-III), which one might call more logical than ontological, a minute description of the

first four categories (substance, quantity, relation, and quality), in which an ontological point of view seems to prevail. The doctrine here revealed is far from the flexible subtleties of Aristotle's fully developed metaphysics, but there are some striking coincidences with statements otherwise peculiar to the *Topics*; and the conclusion that the treatise *Categories* was a comparatively early work by Aristotle himself is fairly safe.

In any case, even without reference to the question of authorship and chronology it can be stated that nowhere else in Aristotle's writings is the source of the difficulties which are inherent in the later form of the doctrine so transparent as here." (p. 40)

40. ———. 1942. *Greek Foundations of Traditional Logic* New York: Columbia University Press.

Contents: I. The origin of logic as a science 3; II. Concepts, terms, definitions, ideas, categories 20; III. Judgments, subject and predicate 43; IV. Syllogisms 60; V. Induction, ancient and modern logic 75; Books cited 89; Index 91-95.

"As we learn from the *Topics*, it was the original function of the list of different "categories" to protect against fallacies and mistakes caused by the similar linguistic form of different predications." (p. 37)

(...)

"In any case, even without reference to the question of authorship and chronology it can be stated that nowhere else in Aristotle's writings is the source of the difficulties which are inherent in the later form of the doctrine so transparent as here. The book explains its subject in the following way. Assuming that there are "things which are said," it divides them into two groups (1a,16-19): some "are said" in sentence composition, for example "(a) man runs," "(a) man wins," others "are said" without such composition, for example, "man," "ox," "runs," "wins." Now, each of these latter things-which "are said" out of sentence composition and, accordingly, without being either true or false-signifies one of the ten categories (substance or quality or quantity, and so forth). This

looks at first sight as if the author were going to classify the significations of all uncombined words of language and as if the mention of sentences was merely complementary. But in fact nothing but the ten classes of sentence predicates is presented to the reader, and the actual function of the mention of sentences (previous to "things said without sentence composition") is to direct his attention exclusively to such "things said" as may be constituents of sentences like "man runs," and "man wins." Thus, there is actually no extension of the doctrine beyond its original limited subject matter; the only real difference is that things like "man," and "ox" may now be understood as sentence subjects, whereas in the original form of the doctrine the signification of the first category was derived from the meaning that predicates like "is (a) man" and "is (a) horse" display as soon as they are opposed to and compared with predicates like "is white" and "is six feet high."

Yet the historical importance of this seemingly slight change in the presentation of the doctrine of categories can scarcely be overestimated.

For, if nothing else, the illusion is certainly created that the ten classes of categories had been intended from the beginning and might be used, without scruple or further investigation, to cover the whole field of the possible signification of single words; and this is something that in ancient times, without modern transcendentalism and without modern psychology, nobody could in the long run keep distinguished from the field of "things in general." Because of the almost exclusive predominance of the treatise *Categories* in the development of traditional logic it is not necessary for us to consider, in their own aspect, the passages in undoubtedly Aristotelian writings, where use is made of the doctrine of categories in a wider sense than the original sense; but the complete lack of a new discussion of its principle of enumeration shows clearly that Aristotle himself was the first victim of such an illusion." (pp. 40-41)

41. Kenny, Anthony John Patrick. 1983. "A Stylometric Comparison Between Five Disputed Works and the Remainder of the Aristotelian Corpus." In *Zweifelhaftes im Corpus*

Aristotelicum. Studien zu einigen Dubia. Akten des 9. Symposium Aristotelicum, Berlin, 7-16 September 1981, edited by Moraux, Paul and Wiesner, Jürgen, 345-366. Berlin: Walter de Gruyter.

[The five dubious works examined are: *Categoriae*, *Meteorologica IV*, *De Motu Animalium*, *Metaphysica α*, *Metaphysica K*.]

"What can stylometric techniques tell us about the authenticity of the five possibly Aristotelian works which are the topic of this Symposium? In the present state of our knowledge it is not easy to give a precise answer to this question. There is no doubt, to my mind, that the statistical examination of literary style is a valuable auxiliary tool in the study of the questions which interest the philologist and the philosopher who approach an ancient text. But to decide whether a work is genuine or spurious is one of the most difficult tasks for stylometry." (p. 345)

(...)

"A firm stylometric conclusion about the authenticity of the works which are the topic of this symposium would have to be based on a truly gigantic amount of investigation: investigation which would take a very long time even now when machine-readable texts of Aristotle are available and when computers will produce concordances, word counts, and statistical analyses with a modicum of effort. The present essay offers only a minute contribution to such an investigation. It studies the use of twenty-four common particles and connectives in the dubious works, comparing the four commonest of them with virtually the whole Aristotelian corpus, and the other twenty with a large sample of some three hundred thousand words, which constitute about thirty per cent of the round million words of the entire corpus. The essay will provide only tentative indications of the genuineness or spuriousness of the works in dispute; but it will illustrate the difficulties and pitfalls of the use of stylometric methods in authorship attribution studies.

The four commonest particles in the Aristotelian corpus are καί, δέ, γάρ and μέν, in that order. Between them these four particles constitute around fourteen per cent of a typical Aristotelian text. Because of their frequency and topic-neutrality they provide suitable material for statistical study. We shall use them as a starting-point for a comparison between the dubious works and the rest of the Aristotelian corpus." (pp. 346-347)

(...)

"The overall conclusion, then, of this study is as follows. We have discovered in our examination of twenty four particles no real evidence suggesting the spuriousness of *Metaph.* K or of *Mot. Anim.* But the frequencies of άλλα, δή, διό, ὡσπερ and γε in *Cat.* and of καί, μέν, δέ, αν, γε, διό in *Mete.* IV are eccentric enough to be suspicious. And the overall picture of particle usage in *Metaph.* α appears to be quite different from that in other works of Aristotle." (pp. 365-366)

42. King, Colin Guthrie. 2018. "Aristotle's Categories in the 19th Century." In *Aristotelian Studies in 19th Century Philosophy*, edited by Hartung, Gerald, King, Colin Guthrie and Rapp, Christoph, 11-36. Berlin: de Gruyter.

Abstract: "This chapter explores interpretive debates about Aristotle's *Categories* in the 19th century. The interpretation of this text became the locus to pursue the further philosophical aim of defending logic against an epistemological recalibration of concepts such as that found in the transcendental and metaphysical deductions of Kant's *Critique of Pure Reason*. As Colin Guthrie King argues, this was the ultimate philosophical ambition of Friedrich Adolf Trendelenburg's interpretation of Aristotle's doctrine of categories, but perhaps more important than this project itself were its derivatives: a model for the proper philosophical interpretation of an ancient philosophical text, and an exemplary model of how to defend such a text against an influential anachronistic interpretation."

43. Kohl, Markus. 2008. "Substancehood and Subjecthood in Aristotle's *Categories*." *Phronesis. A Journal for Ancient Philosophy* no. 53:172-179.

Abstract: "I attempt to answer the question of what Aristotle's criteria for 'being a substance' are in the *Categories*. On the basis of close textual analysis, I argue that subjecthood, conceived in a certain way, is the criterion that explains why both concrete objects and substance universals must be regarded as substances. It also explains the substantial primacy of concrete objects. But subjecthood can only function as such a criterion if both the subjecthood of concrete objects and the subjecthood of substance universals can be understood as philosophically significant phenomena. By drawing on Aristotle's essentialism, I argue that such an understanding is possible: the subjecthood of substance universals cannot simply be reduced to that of primary substances. Primary and secondary substances mutually depend on each other for exercising their capacities to function as subjects. Thus, subjecthood can be regarded as a philosophically informative criterion for substancehood in the *Categories*."

44. Kosman, Louis Aryeh. 1967. "Aristotle's First Predicament." *The Review of Metaphysics* no. 20:483-506.

Reprinted in: Mary L. O'Hara (ed.), *Substances and Things. Aristotle's Doctrine of Physical Substance in Recent Essays*, Washington: University Press of America, 1982, pp. 19-42.

"Is the aristotelian list of categories, enigmatically entitled "κατηγορίαι-predicates," a list of terms classifying types of predicates, or a list of predicates classifying types of entities? Consider two ways in which a list of categories might be generated. Given some entity, we may distinguish different types of questions which we ask about it, such that each type determines a limited and exclusive range of appropriate answers."

(...)

"Alternatively, we might attend not to the different answers appropriate to different questions asked about the same entity, but to the different answers which result when, about *different* entities, the *same* question is asked repeatedly, the question "What is it?"

(...)

"Each ultimate answer will signify a supreme and irreducible genus of entity, not a *type* of predicate, but a predicate, effecting a classification of *things* into *their* ultimate types."
(pp. 483-484)

45. Kung, Joan. 1986. "Aristotle on "Being Is Said in Many Ways"." *History of Philosophy Quarterly* no. 3:3-18.

"It is a well-known Aristotelian dictum that "that which is may be so called in many ways" (*Met.* 1003a33). He also says, "Such things as signify the schemata of predication are said to be *per se*. For to be signifies in the same number of ways as these are spoken of" (*Met.* 1017a23), and he speaks of "categories of being" (e.g. at *Met.* 1045b28-29). Gareth B. Matthews(1) has raised the following question with regard to passages such as those just cited: Is Aristotle supposing in such passages that (a) there are different senses of "being,"(2) or (b) there are different kinds of being, or (c) both? Matthews has shown that the claims that a term has different senses and that it refers to different kinds are not two ways of saying the same thing. We should note also that his question is not the same question as whether the categories range over things or senses. I shall assume we may be confident that Aristotle takes himself to be talking about extra-linguistic and extra-conceptual entities, and I shall say a bit more about this in Section IV below. To answer the latter question, however, is not to answer the former." (p. 3)

(1) Gareth B. Matthews, "Senses and Kinds," *The Journal of Philosophy*, vol. 69 (1972), pp. 149-157. (2) The presence of a neuter "the" before "being" at 1003a33 may provide some slight evidence that he is speaking of the word.

46. Kunkel, Joseph C. 1971. "A New Look at Non-Essential Predication in the "Categories"." *The New Scholasticism* no. 45:110-116.

"Recent commentators appear in general agreement over the essential nature of the expression 'predicated of' in Aristotle's Categories(1) 'Predicated of' denominates the genus-species-individual or essence-singular relationship. Only the species,

genus, or essence is predicable of the individual subject. Accidental predication is prohibited. Moreover, the species and genera can be subjects, but individuals can never be predicates.

My opposition is not to the expression 'predicated of' including the species, genera, or essences as predicable of individuals, but to this expression as only including, or being equivalent to, that type of predication. Does 'predicated of' exclude accident. as predicable of substances? Reflecting the thinking or the other commentators, C.-H. Chen says, "What it is still more important to observe in this connection is that in the *Categoriae* no intergeneric predication and, therefore, also no intercategorical predication are conceived to be genuine predication.(2) I think the limitation of predication to essential, categorical lines is untenable for three reasons." (p. 110)

47. Kuntz, Marion Leathers, and Grimley, Kuntz Paul. 1988. "Naming the Categories: Back to Aristotle by Way of Whitehead." *The Journal of Speculative Philosophy* no. 2:30-47.

"Any one who looks at Aristotle's *Categories* in Greek must notice that the main category is expressed by a pronoun, and all the others are adverbs and verbs.(1) Without going through innumerable commentaries and translations one cannot have a full story; but the result in Latin and English is generally to

edge out the pronoun 'τι' in the question τι εστι' and to use only Aristotle's noun οὐσία and from then on all adverbs and verbs are translated into Latin or English nouns. This may seem a trivial point of grammar and indeed the dullest and somewhat dubious aspect of grammar, parts-of-speech. But if our language is to help us in ordering our activities and grouping our experiences into the structure of things and events, surely it makes a great difference whether we communicate in verbs or in nouns. If we communicate with an emphasis on the verb, we go naturally to the adverb to distinguish more subtly. If we communicate in nouns, we go to adjectives to make distinctions. It is the latter that leads to classification." (p. 30)

Aristotle's *Categories*. Annotated bibliography of the studies in English: Kwa - Ras

Bibliography

1. Kwan, Tze-Wan. 2008. "The Doctrine of Categories and the Topology of Concern." In *The Logic of the Living Present (Analecta Husserliana, Vol. 46)*, edited by Tymieniecka, Anna-Teresa, 243-301. Dordrecht: Kluwer.

"Introduction. There is little doubt that the problem of categories has been among one of the most frequently discussed topics in philosophy ever since Aristotle.

Important as it was, the problem of categories has however become in the eyes of today's students of philosophy an old-fashioned or even out-dated problem. If philosophy itself is for most people a marginal discipline of little practical value, then the problem of categories would turn out to be the most abstract and most detached issue of all. But is the problem of categories really that abstract?

Compared with more sensuous problems such as "Life and Death", "Freedom" or "Justice", the problem of categories gives us the impression of being a matter of theoretical technicality that is of mere scholastic interest. However, we will see bit by bit in the following, that the problem of categories has in the last analysis a strong relevance to the basic concerns of philosophy as well as to the very world perspective of man.

We will also show that as man's basic concerns vary from culture to culture and from one age to another, the respective

systems of categories will take up an utterly different structural outlook." (p. 243)

(...)

"To sum up Benveniste's observation of the ten categories, we can end up with the following table:

Οὐσία [τί ἐστὶ] Substantive

Ποσόν Adjective (quantitative)

Ποιόν Adjective (qualitative)

Πρὸς τι Adjective (comparative)

Ποῦ Adverb of place

Πότε Adverb of time

Κεῖσθαι Verb - middle voice

Ἐχειν Verb - perfect

Ποιεῖν Verb - active voice

Πάσχειν Verb - passive voice" (p. 260)

2. Labuda, Pavol. 2019. "The Ontological Status of Human Speech in Aristotle's "Categories"." *Filosoficky Casopis* no. 67:877-894.

Abstract: "The subject of this paper is the issue of human speech in Aristotle, especially in his work *Categories*. Its primary goal is to elaborate an interpretation of Aristotle's statements about human speech as a quantity (Cat. 4b20–b39, 5a15–b2) that would allow them to fit reasonably into the whole of Aristotle's theory of language. The structure of the paper is as follows. In the first part a certain approach to the question of the reconstruction of Aristotle's theory of language is proposed. The second part, by means of the introduction of the criteria of separability and ontological priority of the first substance, creates a framework for the subsequent analysis of the two basic classifications, which constitute the main theme of *Categories*. The third part supplies its own interpretation of the ontological status of human speech in the context of the classification schemes in *Categories*, and this, in the fourth

part, is inserted into the greater whole of Aristotle's theory of language."

3. Lang, Helen. 2004. "Aristotle's Categories "Where" and "When"." In *Categories: Historical and Systematic Essays*, edited by Gorman, Michael and Sanford, Jonathan J., 21-32. Washington: Catholic University of America Press.

"The word "category" itself comes from the verb κατηγορέω, meaning "to denounce," "to accuse," or, as we shall see in Aristotle, "to be predicated." In his entry "Categories" in the *Encyclopedia of Philosophy*, Manley Thompson turns first to "Aristotelian Theory" and asserts:

The word "category" was first used as a technical term in philosophy by Aristotle. In his short treatise called *Categories*, he held that every uncombined expression signifies (denotes, refers to) one or more things falling in at least on of the following ten classes: substance, quantity, quality, relation, place, time, posture, state, action, and passion.(1)

This list of categories is almost always attributed to Aristotle. But in fact it does not reflect Aristotle's language either in the *Categories*, which Thompson cites, or in the rest of the corpus. With the exception of the first category, substance, none of Aristotle's categories is a noun;(2) they are adjectives, adverbs, infinitives, and in one case ("relation") a prepositional phrase, made to stand as substantives. Although classical Greek certainly allows for the formation of substantives by means of a definite article, Aristotle does not always use an article when specifying categories, and even when he does, these expressions seem odd. Indeed, they are part of the reason why Aristotle's Greek is often thought of as Hellenistic rather than "classical," strictly speaking.

The question for a philosopher is not translation per se but what is at stake substantively in this apparently linguistic matter. Here I shall consider two of Aristotle's categories. They appear above as "place" and "time," but I shall argue that they are more properly "where" and "when"—indefinite adverbs that are sometimes best translated as "somewhere" and "sometime." I shall conclude that the translations "place" and "time" obscure

important substantive issues at stake in these categories. These issues appear clearly in both the historical origins of these categories in Plato and in the relation of these categories to Aristotle's physics." (pp. 21-22)

Contents: Preface 1; Introduction 7; Part I. Aristotle on Meaning and What Is Meant 23; Chapter I. The meaning of words 25; Chapter II. The unity of the components of definition 50; Chapter III. The structure of reality 60; Part II. Homonymy, Synonymy and Related Concepts 81; Chapter I. Aristotle's classification of the uses of predicate words and expressions and of sentences 83; Chapter II. Generalities on focal meaning and on analogy 114; Part III. Some Interpreters Treatment of Focal Meaning and Analogy 133; Chapter I. The prevailing accounts of focal meaning and of analogy and of Aristotle's employment of them in the context of his metaphysics 135; Chapter II. The synonymy account of focal meaning as applied to the being of the categories 162; Chapter III. The synonymy account of focal meaning as applied to the model-copy situation 182; Part IV. Close Analysis of the Logical Mechanism of Focal Meaning and f Analogy According to the Various Competing Accounts 203; Chapter I. Criticism of the synonymy account of focal meaning as applied to the being of the categories 205; Chapter II. Criticism of the synonymy account of focal meaning as applied to the model-copy situation 252; Chapter III. Introduction of some logical distinctions concerning relations and related terms and of some other

accounts of focal meaning 285; Chapter IV. The homonymy account of focal meaning and of analogy 303; Part V. Evidence for and Against each of the Competing Accounts of Focal Meaning and of Analogy 327; Chapter I. Examination of the evidence concerning Aristotle's alleged changes in his treatment of words with focal meaning and with analogy 329; Chapter II. Interpretation of the evidence concerning analogy 373; Chapter III. Interpretation of the evidence concerning focal meaning 387; Part VI. Aristotle's Criticism of Platonic Metaphysics 451; Chapter I. Self-defeating character of Aristotle's objections to Plato on the traditional account of his metaphysical thought 453; Chapter II. Suggestions towards the elimination of the alleged contradictions in Aristotle's metaphysical thought 486; Chapter III. Aristotle's methodology as contrasted with the methodology of the Academics 539; Bibliography 553; Indexes 567; Index of Texts 569; Index of Greek terms 579; Index of Subjects 583; Index of Persons 595-601.

"The generality of the main title of the present work may be misleading as to its actual scope, which is more appropriately defined by its subtitle. It is an inquiry into Aristotle's treatment of *ομωνυμία* and of its species, considered in the background of his metaphysical theories, which both condition and are conditioned by that logical treatment. It is the prevalence of an interest in these two-way conditionings which is expressed by the main title.

In spite of misgivings, then, I have preserved it on this ground, and also because the work is meant to be a part of a more comprehensive treatment of logic and metaphysics in Aristotle, which should include a detailed examination of the way in which the logical distinctions here introduced are used in dealing with fundamental words like "being", "one" and "good". At least in the conclusive chapter I have actually gone beyond (the theme defined by the subtitle by showing that Aristotle's treatment of types of equivocity is only one instance, if probably the most important and interesting one, of his methodology of definition." (Preface, p. 1)

5. Lewis, Frank A. 1991. *Substance and Predication in Aristotle*. Cambridge: Cambridge University Press.

Part I: *Aristotle's Earlier Metaphysical Theory*, pp. 3-82.

"The book is organized into four parts, corresponding to what I take to be the different stages in Aristotle's metaphysical thinking. Part I offers a sketch of perhaps the earliest phase of Aristotle's thinking in the *Categories* and his reaction to the background in Plato's metaphysical theory. Part II examines Aristotle's notions of substance, accident, accidental compounds, and the two sameness relations 'x is accidentally the same as y' and 'x is the same in being as y'. Part III extends the treatment of accidental compounds in Part II to form-matter compounds and to the notions of form and matter, which do not appear in Aristotle's earlier works but are central to the theories of the *Metaphysics*. Part IV, finally, addresses the special problems that Aristotle's new metaphysical theory brings. I set out some of the classic puzzles that bedevil Aristotle's later metaphysics - for example, the puzzle of how in the *Metaphysics* an Aristotelian form is apparently both a primary substance and a universal, while Aristotle also insists that "no universal is a substance," or again, the puzzle of how form is a primary substance and a universal, and hence predicated of many, while "primary substance is not predicated of any subject" - and argue that they result from Aristotle's attempt to adapt the various requirements on primary substance developed in his earlier works (the *Categories* and *Topics* especially) to the very different metaphysical picture - including a different choice of what to count as primary substance! - in the *Metaphysics*. I also show how the solutions I suggest to these puzzles fit within the overall theory, large parts of which have already been laid out in earlier chapters." (p. X)

6. ———. 2004. "Aristotle on the Homonymy of Being." *Philosophy and Phenomenological Research* no. 68:1-36.

"The topic of homonymy, especially the variety of homonymy that has gone under the title, "focal meaning," is of fundamental importance to large portions of Aristotle's work - not to mention its central place in the ongoing controversies

between Aristotle and Plato. It is quite astonishing, therefore, that the topic should have gone so long without a book-length treatment.

And it is all the more gratifying that the new book on homonymy by Christopher Shields should be so comprehensive, and of such uniformly high quality.⁽¹⁾

Everyone who cares about Aristotle will be in his debt.

Shields's book falls into two parts. In the first, he is concerned to lay out the basic structure of Aristotle's views about homonymy; in the second part, we are led through the various applications of the idea, to the analysis of friendship, for example, the homonymy of the body, the account of goodness and, not least, the homonymy of being. Shields's book brings out well how the topic of homonymy weaves in and out of the fabric of Aristotle's thinking in a variety of areas. I will resist the temptation to follow Shields through these various subject-matters, and instead take up essentially two topics. First, (I), the basic outline of Aristotle's notion of homonymy, more or less independently of its different applications (here, I follow Shields's example in the first half of his book). Thereafter, I discuss a single application: the homonymy of being (this is the subject of Shields's last and longest chapter). Here, I will be interested (II) in how homonymy relates to the theory of the categories; and (III) in the application of homonymy to the analysis of substance in the *Metaphysics*." (p. 1)

7. Lloyd, Antony C. 1962. "Genus, Species and Ordered Series in Aristotle." *Phronesis. A Journal for Ancient Philosophy* no. 7:67-90.

"Aristotle claims that when objects have an order of priority their common predicate or universal is not something apart from them.

It will be convenient from time to time to refer to such objects as terms, for they are terms of an ordered series; and for a similar convenience the groups containing them will be called

P-series. Aristotle's claim is expressly used as the premiss of more than one argument in his works; and the Neoplatonists made very interesting comments on it.

I wish to ask and to suggest an answer to the questions what Aristotle meant by it and why he made it. The matter was expounded some fifty years ago by Cook Wilson, not for the first time but in a way of his own which has been repeated (among others) by Sir David Ross.⁽¹⁾ Their interpretation is, I feel sure, quite misleading and I believe it to be just wrong. Apart from that there are more questions to be asked about the Aristotelian passages than it was Cook Wilson's purpose to ask and perhaps more than he recognised. Thirdly the ancient commentators' arguments, which he ignored, are both to the point and worth considering for their own development of Aristotelianism. Some of them are echoed in the criticisms of modern idealists. These arguments are concerned with the logical relationship of species to genus. I shall try to show that Aristotle's thesis about P-series raises the crucial problem how an "appropriate differentia" is to be distinguished from any apparently defining characteristic; and to solve this is to discover how the relation of a species like man or dog to the genus animal differs from the relation of a quasi-species like male or female." (p. 67)

(1) J. Cook Wilson, "On the Platonic doctrine of ἀσύμβλητοι ἀριθμοί", *Classical Review* XVIII (1904), pp. 247-60, esp. §§ 1 and 7; W. D. Ross *ad Ar. Met.* B 999a6-10. L. Robin, *Théorie platonicienne des idées et des nombres*, pp. 614-18 uses more material from A. but really says less that explains.

8. ———. 1966. "Aristotle's Categories Today." *Philosophical Quarterly* no. 16:258-267.

Review-article of: *Aristotle's Categories and De Interpretatione*, translated with notes, by J. L. Ackrill (Oxford: Clarendon Press, 1963).

"The *Categories* have always had at least three centres of interest: the distinction of primary and secondary substances, the concept of homonymy and synonymy and its application to the concept of being, and the more or less formal properties

discovered in the categories one by one. I shall be concerned mostly with the first.

To my judgement there is a comparatively simple way into the categories according to which the word translated 'substance' means 'being' and the primary notion of being is existence. (This is the εἶναι ἀπλῶς opposed to εἶναι ἐπὶ μέρους, i.e. εἶναι τοῦ ἢ τοῦ (of *An. Post.* II 2 and *Met. Z* 1, 1028a31.) About existence we can ask (or so it seems) "what is it to exist?" and "what exists" The first question is given, though not in the *Categories*, the answer "to be active" (*energeia*). The second question could be a request to identify everything that there is, which would not even *prima facie* be a sensible request. Or it could be a request to identify the sorts of thing that exist: this is given two answers in the *Categories*, individuals and those genera and species which are composed of individuals. But so as to understand the ten categories we can distinguish these two kinds of things from all the kinds of things-or, what it is superfluous to add, all the kinds of things there are (*onta*), which are the ten categories. The individuals and the species and genera are then called 'beings', in the plural and in the usage which has regularly been translated 'substances'." (p. 258)

9. Losev, Alexandre. 2019. "Aristotle's Categories, why 10?" *Philosophical Alternatives* no. 6:101-111.

"Aristotle's Categories is beyond dispute one of the most remarkable books in the Western intellectual tradition and it is hardly necessary to rehearse the historical circumstances of this fact. Observing the incalculable amount of commentaries devoted to it(1), the lack of consensus on the very principles underlying this brief treatise becomes obvious.

Incompatibilities or inconsistencies with other passages from the Aristotelian corpus are a source of puzzlings and misunderstandings. Among the various questions inquiries include usually considerations on the state of the transmitted text which is also problematic, to the point that its authorship has been questioned. Scholastics tried in every way to smooth out the problems, but the modern attitude does not allow to

ignore them. Not so long ago, a researcher warned that it was "a common mistake to consider the theory from *The Categories* for the Aristotle's theory of categories(2), which is a brutal reminder of how inevitable seem the moves to other places from the corpus and from there, imperceptibly, to things said by others. New readings appears to demand a stepping out of the tradition, that is to say, to reject the Neo-Platonic suggestions along with all ontotheology: Aristotle is not overly committed to hierarchizing and he is not obsessed about (non)existence." (p. 101)

10. Loux, Michael. 1997. "Kinds and Predications: An Examination of Aristotle's Theory of Categories." *Philosophical Papers* no. 26:3-28.

"The classificatory framework Aristotle calls the categories appears repeatedly throughout the corpus. The treatise that opens the corpus has come to be known as the *Categories* and is apparently concerned to delineate the central features of the most important and potentially most puzzling of the categories listed there.(1) The categories reappear in subsequent works of the *Organon*, where they are put to substantive philosophical

use in the resolution of semantical, logical, and epistemological problems. In numerous places in the *Physics*, we meet with the claim that there is a variety of different categories, each with its own distinct ontological properties, and the claim plays a significant role in delineating the general contours of the concept of change. In the *De Anima*, Aristotle's attempt to characterize the soul takes the classification provided by the categories as its theoretical backdrop.

Again, in the *Metaphysics*, there is regular reference to the framework of the categories, and the distinctions expressed by the framework prove crucial to the treatment of ontological problems about being, unity, and substance. Even in the ethical writings, Aristotle reminds us that there are different categories of being and uses the reminder as a vehicle for introducing us to central metaethical claims about the semantics of 'good'. It is not unreasonable, then, to conclude that Aristotle took the classification associated with the categories to be a fundamental feature of his own approach to philosophical issues." (p. 3)

(1) For doubts about the traditional reading of the *Categories*, see Michael Frede, 'Categories in Aristotle' in his *Essays in Ancient Philosophy* (Minneapolis: University of Minnesota Press), 1987, pp. 29-48.

11. Mahlan, John Robert. 2019. "Aristotle on Secondary Substance." *Apeiron* no. 52:167-197.

Abstract: "At the beginning of *Categories* 5, Aristotle distinguishes between two kinds of substance: primary substance and secondary substance. Primary substances include particular living organisms, inanimate objects, and their parts.

Secondary substances are the species and genera of these. This distinction is unique to the *Categories*, which raises the question of why Aristotle treats species and genera as substances. I argue that Aristotle has two distinct reasons for doing so, and contrast my interpretation with recent alternatives. On my view, species and genera enjoy two kinds of

fundamentality – ontological and epistemological – in virtue of which they warrant their status as substances."

12. Malcolm, John. 1981. "On the Generation and Corruption of the Categories." *The Review of Metaphysics* no. 33:662-681.

"It is tempting to assume that an obvious way in which Aristotle determined his list of categories was to take a primary substance as subject and classify its predicates. (1) The advantage of this suggestion is that it appears to give us the list of categories given at *Categories* 1 b25 ff. For example, if we take Socrates as subject, then, when we predicate man of him, we get a predicate which is a substance (*ousia*). When we consider "Socrates is grammatical" we get a predicate in quality or "how qualified" (*poion*). "Socrates is in the market place" gives us place or "where" (*pou*) and so on.

Although I shall propose that, in the case of the first category, *ousia*, this is not how Aristotle, in fact, proceeds in the *Categories* (see p. 674 below), the major shortcoming of this procedure is that it cannot account for individuals, and a fortiori individual substances, as items in the categories." (p. 662)

(...)

"My procedure, therefore, will not be to start with the SRPR [*subject restricted to substance predicate relative*] option and try to adjust it to harmonize with the doctrine of the work entitled *Categories*, nor indeed to take this work as my point of departure, for, somewhat paradoxically, I shall contend that the list of *Categories* 1b25 ff. was assembled in a rather haphazard fashion. I shall, in fact, begin with *Topics* 1.9 and, taking this as basic, endeavor to explain the other relevant passages in the Aristotelian corpus in the light of what is to be found there." (p. 663)

(1) See J. Ackrill, *Aristotle's Categories and De Interpretatione* (Oxford: At the Clarendon Press, 1963), pp. 78-79, for this alternative.

13. Malink, Marko. 2007. "Categories in *Topics* I.9." *Rhizai. A Journal for Ancient Philosophy and Science* no. 4:271-294.

"In the first sentence of *Topics* 1.9, Aristotle proposes to determine the γένη τῶν κατηγοριῶν. These are the ten categories he is going to discuss in this chapter. He seems to think of them as genera classifying items which are referred to as κατηγορίαι. What are these items? Commentators tend to agree that they are either predications or predicates.⁽¹⁾ In the first case, the categories would classify items such as 'Socrates is white' or 'man is animal'. In the second case, they would classify terms such as 'white' or 'animal' which are able to serve as predicates of predications. The two options need not be incompatible with each other, for the categories might provide a classification both of predicates and of predications. At any rate, we should like to determine the criteria by which the categories manage to classify either predicates or predications or both." (p. 271)

"1. The Project

In two of his early works—in the *Categories* especially, but also in the *Topics*—Aristotle presents a revolutionary metaphysical picture. This picture has had a peculiar fate. Its revolutionary theses are so far from being recognized as such that they have often been taken to be statements of common sense, or expressions of an everyday, pretheoretical ontology.² The most striking and far-reaching of those theses is the claim that, included among what there is, among the entities (τὰ ὄντα), there are things. Aristotle, famously, goes on to maintain that these things are ontologically fundamental. All the other entities are (whatever they are)³ by being appropriately

connected to the things, for example, either as their features (their qualities, sizes, relations-to-each-other, locations, and so on), or as their genera and species, that is, the kinds under which the things fall.⁴ These further claims and their proper interpretation have received considerable discussion. Yet the fundamental one has gone virtually unnoticed. To formulate it most starkly: before the *Categories* and *Topics*⁵ there were no things. Less starkly: things did not show up⁵ things, until Aristotle wrote those two works." (pp. 3-4)

(...)

"With a better understanding of Plato's metaphysical picture before us, we will be in a position to appreciate just how revolutionary and innovative Aristotle is being in the *Categories* and *Topics*. We will also be able to see how Aristotle set the stage for turning "the unaccustomed" into "longstanding custom" (Heidegger's phrase). The unique and central role which the *Categories* played in the philosophical curricula of late antiquity and the Latin middle ages obviously contributed enormously to this philosophical picture's successful ascendancy, to the point where it truly could appear to be nothing more than a reflection of common sense, precisely because it had become a part of common sense. And I am inclined to believe that this success, to a large extent, also explains why Plato is read in the ways he is commonly read: the mistake is neither one of simply overlooking something obvious—or not so obvious—nor one of inadvertently smuggling in Aristotelian notions. Rather, the ascent and dominance of the ontological picture of the *Categories* has so thoroughly eclipsed other pictures and interpretative possibilities that they cannot even come into view, much less be made to seem plausible, without considerable effort." (p. 6)

15. Matthen, Mohan. 1978. "The *Categories* and Aristotle's Ontology." *Dialogue. Canadian Philosophical Review* no. 17:228-243.

Abstract: "What were Aristotle's aims in the *Categories*? We can probably all agree that he wanted to say something about different uses of the verb 'to be' - something relevant to

ontology. The conventional interpretation goes further: it has Books Γ and Z of the *Metaphysics* superseding theories put forward in the *Categories*. We should expect then that the *Categories* and these books of the *Metaphysics* try to do the same sort of thing. Most exegetes do indeed ascribe to the earlier work fairly elaborate ontologies, though they are in disagreement as to what theory Aristotle held while writing it. I shall argue in this paper that the whole enterprise of reconstructing the ontology of the *Categories* from its small stock of clues is misguided; that the business of the *Categories* is to set out data for which the *Metaphysics* tries to account. This view is not without consequences relevant to some widely held theses. I shall claim that the differences between the *Categories* and the *Metaphysics* cannot uncritically be used to trace the development of Aristotle's ontology, that the differences between the two doctrines has been greatly exaggerated. More of this later: let me first explain the distinction on which I shall depend."

16. Matthews, Gareth B. 1989. "The Enigma of Categories 1a20ff and Why it Matters." *Apeiron* no. 22:91-104.

Of things there are: (a) some are said of a subject but are not in a subject ... (b) some are in a subject but not said of any subject. (By 'in a subject' I mean what is in something, not as a part, and cannot exist separately from what it is in.) ... (c) Some are both said of a subject and in a subject ... (d) some are neither in a subject nor said of a subject, ...'(1)

Perhaps no passage in Aristotle has excited more attention in recent years, or aroused more controversy, than the second paragraph of Chapter 2 of the *Categories*, from which the above quotation is taken.

I want to offer a fresh assessment of this recent discussion, as well as some thoughts on why the controversy remains philosophically important.

Paradoxically, I shall offer my fresh assessment by presenting some of the discussion of an ancient commentator, Ammonius. (2) After we have learned what we can from Ammonius, I shall

say a little about why it matters which interpretation of *Cat.* 1a2off we accept." (p. 91)

(1) *Categories* 1a2off. The translation is by J.L. Ackrill, *Aristotle's Categories and De Interpretatione*, (Oxford: Clarendon Press 1963).

(2) I choose Ammonius, not because he is especially original, but because I am currently working with Marc Cohen on an English translation of his commentary on the *Categories* and hence am most familiar with it. [Ammonius, *On Aristotle's Categories*, translated by

S. Marc Cohen and Gareth B. Matthews, Ithaca: Cornell University Press 1991]

Citations of Ammonius will give the page and line numbers in volume IV.4 of *Commentaria in Aristotelem graeca*, Berlin Academy edition of 1895, edited by A. Busse.

17. ———. 2009. "Aristotelian Categories." In *A Companion to Aristotle*, edited by Anagnostopoulos, Georgios, 144-161. Malden: Wiley-Blackwell.

"That which is there to be spoken of and thought of, must be. Parmenides, *Fragment 6* (McKirahan trans.)

The short treatise entitled *Categories* enjoys pride of place in Aristotle's writings. It is the very first work in the standard edition of Aristotle's texts. Each line of the thirty columns that make up this treatise has been pored over by commentators, from the first century BCE down to the present. Moreover, its gnomic sentences still retain their fascination for both philosophers and scholars, even today.

In the tradition of Aristotelian commentary, the first works of Aristotle are said to make up the *Organon*, which begins with the logic of terms (the *Categories*), then moves on to the logic of propositions (the *De Interpretatione*) and then to the logic of syllogistic argumentation (the *Prior Analytics*). But to say that the *Categories* presents the logic of terms may leave the misleading impression that it is about words rather than about things. That is not the case. This little treatise is certainly about

words. But it is no less about things. It is about terms and the ways in which they can be combined; but this "logic" of terms is also meant to be a guide to what there is, that is, to ontology, and more generally, to metaphysics.

The *Categories* text was not given its title by Aristotle himself. Indeed, there has long been a controversy over whether the work was even written by Aristotle. Michael Frede's discussion of this issue in "The Title, Unity, and Authenticity of Aristotle's *Categories*" (Frede 1987: 11-28) is as close to being definitive on this issue as is possible. Frede concludes that the *Categories* can only be the work of Aristotle himself or one of his students.

The question of authenticity is often connected with the issue of whether the last part of the *Categories*, chapters 10-15, traditionally called the "*Postpraedicamenta*," and the earlier chapters really belong to the same work. We shall have very little to say about the *Postpraedicamenta* here." (p. 144)

18. Matthews, Gareth B., and Cohen, S. Marc. 1968. "The One and the Many." *The Review of Metaphysics* no. 21:630-655.

The Platonic argument that Aristotle calls "The One Over Many" ([*Metaphysics*, Book 1] 990b13; 107B69) (1) doubtless had something like this as its key premiss:

Whenever two or more things can be properly said to be F, it is by virtue of some one thing, F-ness, that they are properly called F.

The following sentence from Plato's *Republic* suggests such a premiss:

We are in the habit of assuming one Form for each set of many things to which we give the same name.(2)

The pattern of reasoning is familiar. x and y are round. It must be in virtue of roundness (or in virtue of their participating in roundness) that they are properly said to be round. Exactly what is established by the reasoning -- for that matter, what is supposed to be established-is not obvious. Taken in one way, Plato's Theory of Forms presents us with nothing more than a manner of speaking.

(...)

But if we take Plato's theory this way, we ignore the perplexities that give rise to it. There are at least two distinguishable perplexities that lead to a doctrine like Plato's.(3) One perplexity is ontological: Why is it that things naturally fall into kinds? The other -- and it is this perplexity especially that gives life to the One-Over-Many Argument -- is linguistic.(4) The puzzle is this: How can it be that many things are properly called by one name? To take this puzzle seriously we must indulge (I) the inclination to take the case of one name for each thing named (i.e., the case of an ideal proper name) as the paradigm case of a name, and also (II) the inclination to suppose that 'wise' in 'Pericles is wise' and 'a man' in 'Callias is a man' are names. If we go along with these inclinations, then the puzzle, How can it be that many things are properly called by one name?, becomes real.

(...)

We want to try to show that the *Categories*, on at least one plausible interpretation, offers a more general answer to Plato than has usually been thought to be the case. We shall then make some comments toward assessing the philosophical strengths and weaknesses of this Aristotelian answer." (pp. 631-632, some notes omitted)

(1) Line references, unless otherwise identified, are to the works of Aristotle.

19. Menn, Stephen. 1995. "Metaphysics, Dialectic and the *Categories*." *Revue de Métaphysique et de Morale* no. 100:311-337.

Abstract: "I examine the status and function of the *Categories* in Aristotle's philosophy. The work does not belong to «first philosophy, » or indeed to philosophy at all, but to dialectic; not as a « dialectical discussion » of being, but in the strict sense that it is intended, together with the *Topics*, to help the dialectical disputant to decide whether a given term can fall under a proposed definition or a proposed genus. Although the *Categories*, like dialectic in general, has uses in philosophical argument, the supposed opposition between the accounts of substance in the *Categories* and in the *Metaphysics* depends on a misunderstanding of the different aims of the two works."

20. Mesquita, António Pedro. 2015. "Individual Substances and Individual Accidents in the "Categories" of Aristotle." *Revista Portuguesa de Filosofia* no. 71:399-421.

Abstract: "In the second chapter of *Categories*, Aristotle introduces a conceptual scheme in accordance to which, using only two criteria, "being in a subject" and "said of a subject", it is possible to distribute reality over four types of beings: individual substances, which are neither in a subject nor are said of a subject; universal substances, which are said of a subject but are not in a subject; individual accidents, which are in a subject, but are not said of a subject; and universal accidents, which are in a subject and are said of a subject. The problem arises with the third type of entity, individual accidents (or, in modern words, 'inherences'), due to the way they are defined in the text, namely as something which "cannot exist separately from what it is in". The importance of this clause, and therefore of its correct interpretation, goes far beyond the mere decision on textual or even doctrinal matters, if restricted to the passage and to the question under consideration. What is at stake here is the significance that Aristotle wishes to attribute to the individuality of inherences and, through that, the way in which the ontological distinction between individual substances and individual accidents - that is to say, between primary substances and their accidents as diverse types of individual items - is conceived by him. Here, then, is the scope of this paper: to grasp the meaning and the rationale of the distinction between individual substances and

- individual accidents in Aristotle, based on the analysis of the statute of inferences in the second chapter of the *Categories*."
21. ———. 2025. *Aristotle on Natural Simultaneity of Relatives in the Categories*. New York: Routledge.

Abstract: "This book addresses the issue of natural simultaneity of relatives, discussed by Aristotle in *Categories* 7, 7b15– 8a12.

Natural simultaneity is a form of symmetrical ontological dependence that holds between items that are not causally linked. In this section of the *Categories*, Aristotle introduces this topic in his analysis of relatives and maintains that although relatives seem to be for the most part simultaneous by nature, there seem to be some exceptions. He mentions two pairs of relatives as exceptions, namely the pairs knowledge/ knowable and perception/ perceptible, and argues at length for the priority of the second relative over the first one in each case. Through a close reading of this text, the author analyses Aristotle's arguments for the thesis of the exceptional character of these pairs and shows that all of them are unsuccessful in supporting the thesis. In order to draw this conclusion, the author highlights and carefully considers the properties that Aristotle is committed to attributing to relatives, taking into account the metaphysical framework of the *Categories* as well as their specificities within the set of non- substantial categories. Then, he shows that Aristotle's mature views on relatives in the *Metaphysics* can be construed as committing him to the rejection of such a thesis.

Although the issue of natural simultaneity is just one of several that Aristotle considers in his discussion of relatives throughout *Categories* 7, it is a particularly relevant issue, since it involves a number of puzzles whose analysis allows for a better understanding of the very notion of relativity in Aristotle. This is the first book to explore this issue from the perspective of illuminating the Aristotelian views on relatives."

22. Mignucci, Mario. 1986. "Aristotle's Definitions of Relatives in *Categories* Chapter 7." *Phronesis. A Journal for Ancient Philosophy* no. 31:101-127.

Reprinted in Andrea Falcon, Pierdaniele Giaretta (eds.), *Ancient Logic, Language, and Metaphysics: Selected Essays by Mario Mignucci*, New York: Routledge 2020, pp. 300-322.

"Chapter 7 of Aristotle's *Categories* is dedicated to a study of relatives, which are called "πρός τι". (p. 101)

(...)

"To sum up, I take Aristotle's definition of relatives to mean exactly that a property F is said to be a relative property if, and only if, it can be expanded into a relation that determines F univocally." (p. 104)

(...)

"Aristotle does not clarify the nature of the link that there is between a relative property and its constitutive relation. As we have seen, it is surely an intensional connection, which involves the senses both of the property and of the relation. But how senses are implied is not explicitly stated by him. Shall we leave the problem here? Perhaps an advance can be made if the definition of P1-relatives [*the class of relatives identified by Aristotle's definition*] at the beginning of Cat. 7 is compared with another definition of relatives which is discussed at the end of the same chapter." (p. 106)

(...)

"Many problems remain. One concerns the nature and meaning of stereotypes. Can they be conceived in the way in which Johnson-Leard has devised them, i.e. as frame systems in which default values are given?(26) And is this view consistent with Aristotle's doctrine about meanings and concepts?

I cannot try to answer these questions here. What my attempt to explain Aristotle's view aims at is to show that his position is far from being trivially false, as it is on the traditional interpretation, and that it can be credited with having some philosophical importance. Moreover, his attempt is stimulating because it approaches a modern problem from a different point of view. Nowadays we are accustomed to consider what is entailed by the fact that substitutivity does not hold in cognitive

contexts, and we try to explain why it does not obtain. Aristotle is well aware of these restrictions, (27) but he is more interested in isolating cases in which substitutivity can be safely applied. Perhaps this change of perspective may help to refresh our own patterns of analysis." (p. 126)

Reprinted in: L. Minio-Paluello, *Opuscola: the Latin Aristotle*, Amsterdam: Adolf M. Hakkert 1972, pp. 28-39.

Abstract: "The Latin versions of Aristotle's *Categoriae* have never received much attention from the editors of the Greek text. J. Th. Buhle (*Arist. Op. Omn.* I, Bipont. 1791) and Th. Waitz (*Arist. Organ.* I, Lpz., 1844) availed themselves of Latin texts, but in a very unsatisfactory way; and since then the Latin field has remained unexplored throughout the last hundred years, in which both Hellenists and Orientalists have done much to increase our knowledge of the textual tradition of the *Categ.* It is the purpose of these pages to give a summary account of the Latin tradition and to contribute to a revision of the Greek text by a collation of Boethius' recently discovered translation with the best printed Greek and Oriental sources."

24. Moon, Kyungnam. 2021. "Aristotle's Disturbing Relatives." *Apeiron* no. 54:451-472.

Abstract: "In *Categories* 7, Aristotle gives two different accounts of relatives, and presents the principle of cognitive symmetry, which seems to help distinguish between relatives and some secondary substances. I suggest that the longdisputed

difference between the two accounts lies in a difference in the determination of the categorial status of the object in question, and I formulate the principle of cognitive symmetry such that it plays a crucial role in making explicit how one conceptualizes the categorial status of the object. I then set out some consequences following from this understanding for certain interpretive issues, such as the unity of the *Categories*."

25. Morales, Fabio. 1994. "Relational Attributes in Aristotle." *Phronesis. A Journal for Ancient Philosophy* no. 39:255-274.

Abstract: "Aristotle's theory of relations involves serious difficulties of interpretation. By attempting to solve some of the problems posed by J. L. Ackrill in his famous commentary on the *Categories* (Ackrill, 1963), I hope to contribute to a better understanding of Aristotle's statements on the nature and status of relational attributes. In general, my procedure has been to analyze the criteria by which entities are supposed to fall under the category of 'the relative'. The following topics will be considered: i) Aristotle's two definitions of relatives in *Categories* 7, ii) the pseudo-relational character of the parts of substances, and iii) the threefold classification of relatives in *Metaphysics* chapter 15. A corollary of these discussions will be that relations may have played for Aristotle a far more conspicuous role in the 'definition' of substances and attributes than has been hitherto acknowledged."

26. Moravcsik, Julius M. E. 1967. "Aristotle's Theory of Categories." In *Aristotle: A Collection of Critical Essays*, edited by Moravcsik, Julius, 125-145. New York: Anchor Books.

"In several of his writings Aristotle presents what came to be known as a "list of categories." The presentation of a list, by itself, is not a philosophic theory.

This paper attempts a few modest steps toward an understanding of the theory or theories in which the list of categories is embedded. To arrive at such understanding we shall have to deal with the following questions: What classes of expressions designate items each of which falls under only one category? What is the list a list of? and what gives it unity? To show this to be a worthwhile enterprise, let us consider a few

passages in which the list of categories is introduced or mentioned." (p. 125)

(...)

"Conclusion. The theory of categories is partly a theory about language and partly a theory about reality.

With regard to language it states that certain elements of a language have key-designating roles, the full understanding of which requires that we understand the designata as falling within those classes which jointly form the set definitive of that to which a sensible particular must be related. We can see from this that Aristotle did not think of the structure of language as mirroring the structure of reality. But he did believe that there are specific items of language and reality the correlation of which forms the crucial link between the two." (p. 145)

27. ———. 1967. "Aristotle on Predication." *The Philosophical Review* no. 76:80-96.

28. Morrison, Donald. 1992. "The Taxonomical Interpretation of Aristotle's *Categories*: A Criticism." In *Aristotle's Ontology*, edited by Preus, Anthony and Anton, John Peter, 19-46. Albany: State University of New York Press.

"In the *Topics*, *Categories*, and *De Interpretatione*, Aristotle is struggling with a variety of problems that span the fields of metaphysics and philosophy of language. Both the problems and the attempted solutions have much relevance to some of the main issues in contemporary British and American philosophy. Thus it is unfortunate that though there is a large number of ancient commentaries on these texts, little has been written on these matters in modern times that is of genuine philosophical significance. Professor Ackrill's new translation and notes (1) make a fine contribution toward remedying this deficiency."

(...)

"One of the reasons for selecting predication as the nest of problems to be discussed is that though much has been written on this during the past sixty years, we seem far from any adequate solution." (p. 80)

(...)

"The point of this review is not to show that Aristotle succeeded in answering the general question that contemporary philosophers failed to answer. Aristotle did not attempt to answer that general question.

He discusses in the *Categories* -- to which we shall limit our attention several interesting features of predication, and then distinguishes between at least two different types of configuration that underlie predication. The suggestion of this review is that paying attention to these less sweeping problems of predication might be a useful way of adopting a fresh approach to this topic.

The following four claims will be discussed. (a) Ackrill interprets Aristotle as holding that general terms and the correlated abstract singular terms, whether in subject or predicate position, introduce the same entity. (b) Aristotle seems to be committed to the view that general terms have meaning both inside and outside of sentences. (c) Aristotle distinguishes at least two different ontological configurations underlying predication. (d) Aristotle takes predication to be showing the ontological dependence of the entity denoted by the predicate on the entity denoted by the subject." (p. 82)

29. Norris, Christopher. 1998. "Deconstruction, ontology, and philosophy of science: Derrida on Aristotle." *Revue Internationale de Philosophie* no. 52:411-449.

"Jacques Derrida's essay 'The Supplement of Copula' contains of the most detailed and convincing anti-relativist arguments found anywhere in the recent philosophie literature. (1) I have stated the case thus baldly — and italicized the crucial prefix —

since claim is likely to conjure scepticism (or outright disbelief) among many readers." (p. 411)

(...)

"In 'The Supplement of Copula' Derrida takes issue with some claims advanced by the linguist Emile Benveniste concerning Aristotle's doctrine of the catégories or modes of predicative judgment. (10) According to Benveniste these had their origin in a certain natural language (the ancient Greek) whose lexical resources and grammatical structures are everywhere drawn upon in Aristotle's quasi-universalist mode of argument. (11) Thus: 'Aristotle, reasoning in the absolute, is simply identifying certain fundamental catégories of the language in which he thought'. (12) And the same would apply to those thinkers after Aristotle (Kant among them) who criticized his table of the catégories but who sought to overcome its limitations through a further, more rigorous exercise of reason. For in their case also, as Benveniste contends, there is a failure to grasp that any such claim must rest upon this unconscious transfer of attributes from language to the putative laws of thought or a priori conditions for valid reasoning." (pp. 414-415)

(...)

"Rather than summarize Derrida's lengthy and complex response, shall begin by examining one crucial passage from 'The Supplement of Copula'. It is devoted to a single sentence in Benveniste's text, the only place — so Derrida maintains — where the issue comes clearly (if not perhaps consciously) into focus. This question of consciousness is crucial to his argument since it is Benveniste's claim that Aristotle, in his treatment of the catégories, was unconscious of the fact that these supposedly absolute (non-language-relative) necessities of thought were themselves the product of a merely contingent, 'empirical' set of lexico-grammatical constraints pertaining to Greek language." (p. 416)

30. Novak, Michael. 1965. "Toward Understanding Aristotle's *Categories*." *Philosophy and Phenomenological Research* no. 26:117-123.

"There are three positions one must gain in order to interpret the first five chapters of the *Categories* and, specifically, the meaning and role therein of 'present in a subject'. The first of these positions is a rejection of univocity; the second is the dual conception of accident; the third is the principle of discrimination on which Aristotle (implicitly) relies in sorting out the strands of his description "of things," (1a20)." (p. 117)

(...)

"'Present in a subject' thus operates in *Categories* 1-5 as a definition of accident, inadequately distinguished from secondary substance. It is inadequately distinguished because its meaning (incapable of existence apart from a subject) applies just as well to secondary substance, though for a different reason, and this reason is never stated by Aristotle. He says (3a8-10) that secondary substances are not present in a subject, while of course (1a24.1) accidents are. But neither accidents nor secondary substances are; capable of existence apart from primary substances (2b5-6). Some unspoken criterion is therefore operating to distinguish the exact natures of secondary substance, accident, and primary substance.

I have argued that the discriminating factor is the differing relation which each bears to the act of intelligence operating with imagination.

Secondary substances are universalizations of the necessity grasped in insight, are essences, apart from particulars, and yet

arising exclusively from insight into concrete particulars. They are not 'present in a subject', yet are incapable of existence apart from a subject. Accidents are, on the one hand, incapable of science because, occurring neither always nor for the most part, they are not necessarily relevant to any particular thing; and, on the other hand, are not capable of being pointed to as a 'this'. They alone are properly 'present in a subject.' Primary substance can be pointed to as a 'this', a unity, grasped not, however, by mere sense knowledge, nor imagination, but by intelligence which distinguishes the inessential from the essential, the permanent and independent from the adventitious, in the presentations of sense and imagination. They are not 'present in a subject,' but are subjects." (pp. 122-123)

31. O'Farrell, Frank. 1982. "Aristotle's Categories of Being." *Gregorianum* no. 63:87-131.

"It is no exaggeration to say that the understanding of Aristotle's First Philosophy and hence of his philosophy as a whole depends largely on the interpretation one gives to his categories of being. For as far as they express the theme itself of First Philosophy - being as being - to their understanding can be justly applied Aristotle's oft quoted words: « The beginning is greater in potentiality than in magnitude and therefore a small mistake in the beginning becomes immense in the end» (1).

But though one must agree with Brentano when he writes « Aristotle's division of categories has in a wonderful way defied the change time brings. When one follows the history of the doctrine of the categories, one sees how even their adversaries unconsciously pay homage to them » (2). Yet in the course of the two thousand odd years since Aristotle formulated them they have met with very varied and opposed interpretations. These changing interpretations have acted as a sort of apriori, a kind of pre-judice for each succeeding age trying to reach Aristotle's thought. For they formed part of the history of being in the Heideggerian sense of the word (3), i.e. what has become the universal unquestioned foreknowledge according to which and in function of which in each epoch one encounters reality."

(...)

"Being for Aristotle is not a subsistent idea - *auto to on* - as it is for Plato, but it is the categories (162). And being is the categories because of the plurality implied by *hupokeimenon* in its to be. And *hupokeimenon* in its to be is being as being according to Aristotle's way of conceiving it. Because therefore Aristotle understands being itself as meaning the categories, being is perceived by the ways of necessary predication (163).

Hence it is not the modes of necessary predication which found the categories of being, as Aubenque seems to believe (164), but it is the categories of being which require these modes of predicating to bring themselves to view and to be known in their truth. « For as each thing is as regards to be so is it as regards truth » (165)". 32. Oehler, Klaus. 1976. "Peirce contra Aristotle: Two Forms of the Theory of Categories." In *Proceedings of the C. S. Peirce*

Bicentennial international Congress, edited by Ketner, Kenneth Laine, 335-342. Lubbock: Texas Tech Press.

"The founder of the theory of categories is Aristotle. He made the word 'category' a technical term in philosophy, and his theory dominated the discussion of categories up to Kant. But even after Kant, Aristotle's

influence on some important points persisted, because Kant built his new conception of categories on the old Aristotelian foundations. Not until Peirce did a philosopher develop a radically new theory of categories, and he did this by using a set of new logical instruments that neither Aristotle nor Kant had at their disposal. To this extent it can be said that the form Peirce gave to the theory of categories is a rejection of the whole tradition established by Aristotle in this field. To recognize the fundamental difference between both conceptions, a brief reconstruction of both theories would be helpful. Then the questions of the superiority of Peirce's conception in comparison with the traditional one and its usefulness in the contemporary discussion of categories will be raised." (p. 335)

33. Owen, Gwilym Ellis Lane. 1960. "Logic and Metaphysics in some Earlier Works of Aristotle." In *Aristotle and Plato in the Mid-Fourth Century. Papers of the Symposium Aristotelicum held at Oxford in August, 1957*, edited by Düring, Ingemar and Owen, Gwilym Ellis Lane. Göteborg: Elanders Boktryckeri Aktiebolag.

Reprinted in: G. E. L. Owen, *Logic, Science and Dialectic. Collected Papers in Greek Philosophy*, Edited by Martha Nussbaum, Ithaca: Cornell University Press 1986, pp. 180-199.

"Much of Aristotle's early work in logic sprang from the practice and discussions of the Academy in Plato's lifetime. This is a commonplace, but I have tried to illustrate it here by evidence which throws an unfamiliar light on the development of some of Aristotle's most characteristic theories. The commonplace itself is not to be confused with a narrower thesis about the origins of the theory of syllogism: on that well-worn issue I have nothing to say here. I have confined myself to another part of Aristotle's logical studies, namely that part

which shaped his views on the nature and possibility of any general science of *to on hêi on* ('being qua being'), any inquiry into the general nature of what there is. Here his major issues were problems of ambiguity, particularly the ambiguity that he claimed to find in 'being' or *to on* as that expression is used in the different categories. And his problems were shared by his contemporaries in the Academy. By opposition and by suggestion they helped to form the logic that underlay First Philosophy." (p. 180)

(...)

"In sum, then, the argument of *Metaphysics* IV, VI seems to record a new departure. It proclaims that 'being' should never have been assimilated to cases of simple ambiguity, and consequently that the old objection to any general metaphysics of being fails. The new treatment of *to on* and cognate expressions as *pros hen kai mian tina phusin legomena*, - or, as I shall henceforth say, as having *focal meaning* - has enabled Aristotle to convert a special science of substance into the universal science of being, 'universal just inasmuch as it is primary.'" (p. 184)

(...)

"Nor does focal meaning find formal recognition in the class of paronyms which is introduced in the *Categories* and recognized in the *Topics*, for the definition of paronyms is merely grammatical. It shows, not how subordinate senses of a word may be logically affiliated to a primary sense, but how adjectives can be manufactured from abstract nouns by modifying the word-ending. Plainly the *Categories* does not and could not make any use of this idea to explain how the subordinate categories depend on the first. Nor does it use focal meaning for that purpose (2b4-6). If focal meaning can be seen in the *Categories* it is in the analysis of some one category - clearly enough in the definition of quantity (5a38-b10),) far more doubtfully in the account of the two uses of 'substance' (2b29-37, 3b18-21) - but not in that logical ordering of different categories and different senses of 'being' which lies at the root of the argument in *Metaphysics* IV." (pp. 188-189)

34. ———. 1965. "Inherence." *Phronesis. A Journal for Ancient Philosophy* no. 10:97-105.

Reprinted in: G. E. L. Owen, *Logic, Science and Dialectic. Collected Papers in Greek Philosophy*, Edited by Martha Nussbaum, Ithaca: Cornell University Press 1986, pp. 252-258.

"Often in the *Categories* and once in the *Topics* Aristotle draws a distinction between *being in a subject* and *being said, or predicated, of a subject* (*Cat.* 1a20-b9, 2a11-14, 2a27-b6, 2b15-17, 3a7-32, 9b22-24; *Postpred.* 11 b38-12 a 17, 14a 16-18; *Top.* 127b 1-4). Elsewhere he makes no use of the distinction, at least in this form. Once in the *Categories* he blankets it under the formula belonging to something (11b38-12a17). But it has earned a good deal of attention, and there is a fashionable dogma about it that I should like to nail. Hints of the dogma can be seen in older writers such as Porphyry and Pacius. Its modern exponents are Ross, *Aristotle* p. 24 n. 1; Jones, *Phil. Rev.* 1949 pp. 152-170; and most recently Miss Anscombe in *Three Philosophers* pp. 7-10, and Mr. Ackrill in *Aristotle's 'Categories' and 'De Interpretatione'* pp. 74-5, 83, 109." (p. 252)

(...)

"To say that if the Idea of man is a substance it cannot exist apart from that of which it is the substance is to say that its existence requires (indeed consists in) the existence of at least one individual falling under the classification human. And to say that pink or a particular shade of pink cannot exist apart from what contains it is to say, as Aristotle always says against Plato, that something must contain it if it is to exist at all." (p. 258)

35. ———. 1965. "Aristotle on the Snares of Ontology." In *New Essays on Plato and Aristotle*, edited by Bambrough, Renford, 69-95. New York: Humanities Press.

Reprinted in: G. E. L. Owen, *Logic, Science and Dialectic. Collected Papers in Greek Philosophy*, Edited by Martha Nussbaum, Ithaca: Cornell University Press 1986, pp. 259-278.

"Aristotle's commonest complaint against other philosophers is that they oversimplify. One oversimplification to which he is especially attentive is the failure to see that the same expression may have many different senses. And among such expressions there is one arch-deceiver against which he often issues warnings: the verb 'to be', 'einai'. I shall discuss part of his attempt to unmask this deceiver, namely his account of the verb in what is ordinarily, and too sweepingly, called its 'existential' use." (p. 259)

36. ———. 1965. "The Platonism of Aristotle." *Proceedings of the British Academy* no. 50:125-150.

Reprinted in: J. Barnes, M. Schofield, and R. Sorabji (eds.), *Articles on Aristotle*, Vol. 1 (Duckworth, 1975), pp. 14-34 and in G. E. L. Owen, *Logic, Science and Dialectic. Collected Papers in Greek Philosophy*, Edited by Martha Nussbaum, Ithaca: Cornell University Press 1986, pp. 200-220.

"Eight years ago, in a memorable Dawes Hicks Lecture to this Academy ,(1) David Ross spoke of Aristotle's development as a philosopher. One theory of that development he singled out as having established itself in the fifty years since it appeared. It was pioneered in this country by Thomas Case and in Germany, with great effect, by Werner Jaeger. It depicts Aristotle, in Sir David's words, as 'gradually emerging from Platonism into a system of his own'. Aristotle's philosophical career began in the twenty years that he spent learning and practising his trade in Plato's Academy, and it ended in the headship of his own school. So it is tempting to picture him first as the devoted partisan, then as arguing his way free of that discipleship." (p. 200)

(...)

"Next, in saying that Aristotle's logic was bred of discussion in the Academy, I do not imply that it was a donation from his colleagues. There used to be a myth, promoted by Burnet and Taylor, that the theory of categories was a commonplace of the Academy, derived from scattered hints in Plato's writings. This myth was exposed, not simply by the obvious lack of system in the supposed hints, but by the fact that no other Academic

known to us endorsed the theory and that Xenocrates, Plato's self-appointed exegete, denounced it as a pointless elaboration and went back to a simpler distinction derived from Plato's dialogues. Nor again do I mean that Aristotle's logic had come to full maturity before Plato's death. The division of the categories and probably the general theory of the syllogism, had been worked out by then; but Aristotle continued to review and develop these doctrines in his later work. The same is true of his theory of definition and, more generally of his theory of meaning. What is beyond question is that these theories were developed in practice and not as an independent exercise. The theory of definition was modified to keep pace with the work of a biologist who had once held that a definition could be reduced to a single differentia and then found himself, when he set out to define any natural species, faced with a set of competing criteria. The theory of meaning, of synonymy and homonymy, was enlarged to allow a value to philosophical inquiries which had been earlier denounced as trading on an equivocation. At every stage Aristotle's logic had its roots in philosophical argument and scientific procedure: it would be an anachronism to think otherwise. So what arguments lie at the root of his early account of substance and the categories?" (p. 207)

37. Owens, Joseph. 1960. "Aristotle on Categories." *The Review of Metaphysics* no. 14:73-90.

Reprinted in J. Owens, *Aristotle, the Collected Papers of Joseph Owens*, Edited by John R. Catan, New York: State University of New York Press 1981, pp. 14-22.

"In particular, the present paper would inquire whether the notion of category construction was intended in its beginnings to be an arbitrary procedure, whether it was meant to categorize words, and how it stands up to later examples of category mistakes. The paper, accordingly, will first examine briefly the doctrine of categories in its original Aristotelian setting; secondly, it will try to determine the type of treatment found there; and finally it will confront the Aristotelian doctrine with some irritant instances of category mistakes." (p. 14)

(...)

"This brief glance at the Aristotelian doctrine of categories and its confrontation with instances of category mistakes will indicate, it is hoped, some pertinent features of the earliest explicit category construction. It was based upon the natures of things and not upon the use of language. Because it was concerned with natures and not primarily with words, it was not at all an arbitrary procedure. The natures of things resist the manipulations of human whims, and keep the universe from becoming a world where everything is nonsense. But these natures exist in two ways, in reality and in cognition. Some predicates will belong to the nature just of itself, no matter where it is found. Other predicates will belong to a nature only in real existence. They are those concerned with its real history in some individual. Still other predicates will belong to it only as it exists in intellectual cognition, for instance that it is a species or a genus. These considerations show why categories are the concern of both the metaphysician and the logician, and why confusion in the three ways in which predicates apply will necessarily give rise to category mistakes. The Aristotelian doctrine likewise shows why the intrinsic principles of things cannot be placed directly in a category.

Its basic grooves of category construction, along with this warning, still serve quite well as dissolvents for such category mistakes as the ghost in the machine, the elephant with the baggage, or murder a relation. The category doctrine as found originally in the Stagirite's works is open to a great amount of development and elaboration, both to smooth out its own difficulties and to meet problems of current discussion. It offers a solid basis for profitable philosophic construction. It is far from complete, but what is there is very good." (pp. 21-22, notes omitted)

38. Perin, Casey Carlton. 2007. "Substantial Universals in Aristotle's *Categories*." *Oxford Studies in Ancient Philosophy* no. 33:125-144.

"Aristotle in the *Categories*, but not elsewhere, presents the distinction between individual substances such as Socrates or

Bucephalus and their species and genera as the distinction between primary (πρώται) and secondary (δευτέροι) substances (2A11–19).

The distinction between primary and secondary substances, in turn, is a distinction between substances that are particulars and substances that are universals.

(...)

"Therefore, according to the definitions of 'universal' and 'particular' Aristotle gives in *De interpretatione*, a primary substance is not a universal but a particular. In the *Categories* a secondary substance is the species or genus of a primary substance (2A14–19). The species human being, for instance, is said of, and so predicated of, all individual human beings (Socrates, Callias, Coriscus, etc.). The genus animal is said of, and so predicated of, its species (human being, horse, dog, etc.) as well as all individual animals (Socrates, Bucephalus the horse, Fido the dog, etc.). Since a secondary substance is predicated of more than one being or entity as its subject, it is not a particular but a universal. The question I want to try to answer here is why, according to Aristotle in the *Categories*, certain universals such as the species human being or the genus animal are substances." (pp. 126-127, notes omitted)

(...)

"On Aristotle's view in the *Categories*, then, the species or genus of a primary substance is both a subject for inherence, and for this reason a substance, and, being a universal, a predicable predicated of (said of) a plurality of subjects. The non-substantial items that

inhere in the species or genus of a primary substance are all of those non-substantial items that inhere in the primary substances of which that species or genus is predicated. As a result the species or genus of a primary substance, unlike a primary substance itself,

is a subject for inherence in which contraries can inhere at one and the same time. This view obviously invites a question that,

as far as I know, no commentator has yet answered: what kind of being or entity could *this* be?" (pp. 142-143)

39. Polsky, Elliot. 2022. "Secondary Substance and Quod Quid Erat Esse: Aquinas on Reconciling the Divisions of "Substance" in the *Categories* and *Metaphysics*." *American Catholic Philosophical Quarterly* no. 96:21-45.

Abstract: "Modern commentators recognize the irony of Aristotle's *Categories* becoming a central text for Platonic schools. For similar reasons, these commentators would perhaps be surprised to see Aquinas's *In VII Metaphysics*, where he apparently identifies the secondary substance of Aristotle's *Categories* with a false Platonic sense of "substance" as if, for Aristotle, only Platonists would say secondary substances are substances. This passage in Aquinas's commentary has led Mgr. Wippel to claim that, for Aquinas, secondary substance and essence are not the same thing and that Aristotle's notion of essence is absent from the *Categories*. This paper—by closely analyzing the apparently contradictory divisions of "substance" in Aquinas's *In V* and *VII Metaphysics*—shows that essence and secondary substance are not altogether distinct for Aquinas. Moreover, when the *Categories* is viewed by Aquinas as a work of logic, it is found largely to cut across the disputes between Platonism and Aristotelianism."

40. Raspa, Venanzio. 2020. "Brentano on Aristotle's *Categories*." In *Franz Brentano's Philosophy after Hundred Years: From History of Philosophy to Reism*, edited by Fisette, Denis, Frechette, Guillaume and Janoušek, Hynek, 185-203. Cham (Switzerland): Springer.

Abstract: "Brentano's dissertation *Von der mannigfachen Bedeutung des Seienden nach Aristoteles* (*On the Several Senses of Being in Aristotle*) (1862) is examined in the light of the nineteenth-century debate on the Aristotelian categories. After providing an exposition of the conceptions of the main representatives of this debate, Adolf Trendelenburg and Hermann Bonitz, this paper assesses Brentano's point of view on

the meaning and origin of the Aristotelian categories. It shows (i) that Brentano assumes non-Aristotelian elements in his reading of the Aristotelian categories, (ii) that this depends on the fact that he shares Bonitz's thesis, and (iii) that his reading is incomplete in the light of certain Aristotelian statements about non-being."

41. ———. 2025. "Kant and the Debate on Aristotle's Categories in the Nineteenth Century." In *Aristotle's Organon in Old and New Logic 1800–1950*, edited by King, Colin Guthrie and Raspa, Venanzio. New York: Bloomsbury.

"In the *Critique of Pure Reason*, Kant posed the celebrated question of "the guiding thread to the discovery of all pure concepts of the intellect." Aware of the criticisms traditionally directed at the Aristotelian theory of categories, that is, that the choice is arbitrary and the list incomplete, Kant searches for a principle that will justify both the choice and the number of categories. From this perspective, he accuses Aristotle of collecting his categories in a "rhapsodic" fashion and regards such a procedure as the cause of the defects of his theory.

Many people reacted to Kant's criticism during the nineteenth century, sparking a lively debate on Aristotle's categories that was to unfold over seven decades. Scholars have detected three main interpretations in these discussions: (1) Trendelenburg's linguistic-grammatical approach; (2) Bonitz's ontological perspective, and (3) Apelt's logical-semantic standpoint. This reconstruction, however, requires some refining and adjusting. Its main flaw lies in that it mixes the problem of the origin of the categories with that of their meaning. For Trendelenburg, who opened the debate, categories have a grammatical origin, but not a grammatical meaning; for Bonitz, categories have an ontological meaning, but not an ontological origin.

I will argue, first, that Kant not only criticized but also provided an interpretation of Aristotle's theory of categories; secondly, that many interpretations given during the nineteenth century, while intending to respond to Kant, move largely within the conceptual framework outlined by Kant, contain Kantian elements, both conceptual and terminological, or develop hints

provided by Kant. In retracing the debate, we will also see that these interpretations are not all reducible to the three mentioned above."

Aristotle's *Categories*. Annotated bibliography of the studies in English: Rij - Z

Bibliography

1. Rijk, Lambertus Marie de. 1951. "The Authenticity of Aristotle's *Categories*." *Mnemosyne* no. 4:129-159.

"Most scholars either deny Aristotle's authorship of the first treatise of the *Organon*, or else consider the problem of authorship to be insoluble. I maintain, however, that such judgements are wrong and that the treatise is of genuine Aristotelian authorship, and of considerable importance for our knowledge both of Aristotle's own development, and also that of later Platonism. I shall try to show the authenticity of the treatise in the following study, and shall divide my investigation into the following main divisions:

A. The view of the ancient commentators concerning the authenticity of *Categories* Chs. 1-9; B. Modern criticism of the authenticity of *Categories* Chs. 1-9;

C. The authenticity of *Categories* Chs. 10-15." (p. 129)

[See also the following note to *Ancient and mediaeval semantics and metaphysics* (Second part), *Vivarium*, November, 1978, p. 85: "Unlike some 30 years ago (see my papers published in *Mnemosyne* 1951), the present author has his serious doubts, now, on the authenticity of the first treatise of the *Organon*" and the review by Kurt von Fritz (1954)].

2. ——. 1952. *The Place of the Categories of Being in Aristotle's Philosophy*. Assen: Van Gorcum.

Contents: Bibliography I-III; Introduction 1-7; Chapter I. Aristotle's doctrine of truth 8-35; Chapter II. The distinction of essential and accidental being pp. 31-43; Chapter III. Logical and ontological accident 44-52; Chapter IV. The nature of the categories in the *Metaphysics* 53-66; Chapter V. The doctrine of the categories in the first treatise of the *Organon* 67-75; Chapter VI. The use of the categories in the work of Aristotle 76-88; Appendix. The names of the categories 89-92; Index locorum 93-96.

"It seems to be the fatal mistake of philology that it always failed to get rid of Kantian influences as to the question of the relation of logic and ontology. Many modern mathematical logicians have shown that the logical and the ontological aspect not only are inseparable but also that in many cases it either lacks good sense or is even impossible to distinguish them. Accordingly, the distinction of logical and ontological truth (especially of propositional truth and term-truth), that of logical and ontological accident and that of logical and ontological categories, has not the same meaning for modern logic as it seems to have for 'traditional' logic (for instance the logic of most Schoolmen).

I hope to show in this study that the distinction of a logical and an ontological aspect (especially that of logical and ontological categories) can be applied to the Aristotelian doctrine only with the greatest reserve. A sharp distinction carried through rigorously turns out to be unsuitable when being applied to Aristotelian logic. For both aspects are, for Aristotle, not only mutually connected but even interwoven, and this in such a way that the ontological aspect seems to prevail, the logical being only an aspect emerging more or less in Aristotle's generally ontological way of thinking." (pp. 6-7)

3. ——. 1978. "On Ancient and Mediaeval Semantics and Metaphysics. Part II. The Multiplication of Being in Aristotle's *Categories*." *Vivarium* no. 16:81-117.

"3. *The Multiplication of Being in Aristotle's Categories* 3.1. *Introduction*. One of the results of the preceding section may be that Lloyd (1956, p. 59) seems to be wrong in asserting that

in Plato's view the rôle of the universal is played by the Idea exclusively, and that only by the time of the Middle Academy, that is, for the Platonists of the first two centuries A.D., the performers of this rôle have been multiplied. As a matter of fact the distinction between Plato and his followers of the Middle Academy on this score would seem to be a different one. The ontological problems of participation were felt as early as in the Platonic dialogues (see our section 2), as well as the logical ones concerning predication (which will be discussed in a later section). Well, the Platonists of the first two centuries A.D., introduced explicitly a threefold distinction of the Platonic Form or rather of its status which was (only) implied with Plato. I think, Lloyd is hardly more fortunate in ascribing (ibid.) this introduction chiefly to the influence of Aristotelian logic on Platonic interpretation. It is true, in stating the basic distinction between *en hypokeimenôî* and *kath' hypokeimenou* Aristotle tried to face the same cluster of fundamental problems which induced later Platonists to the distinction of the Forms as taken before or after the *methexis* (cf. Simplicius, In Arist. Categ. 79, 12ff.). However, Plato's disciple, Aristotle (the most unfaithful one, in a sense, as must be acknowledged) was as deeply engaged on the same problems as were his condisciples and the Master himself in his most mature period. It is certainly not Aristotle who played the rôle of a catalyst and was the first to provoke the multiplication of the Platonic Form in order to solve problems which were not recognized before in the Platonic circle. On the contrary, Plato himself had saddled his pupils with a basic and most intricate problem, that of the nature of participation and logical predication. It was certainly not left quite unsolved in the later dialogues, but did still not have a perspicuous solution which could be accepted in the School as a scholastic one. So any of his serious followers, (who were teachers in the School, at the same time) was bound to contrive, at least, a scholastic device to answer the intricate question. To my view, Aristotle's solution should be discussed in this framework. For that matter, Aristotle stands wholly on ground prepared by his master to the extent that his works on physic and cosmology, too, are essentially discussions held within the Academy (Cp. Werner Jaeger, Aristotle).

Fundamentals of the history of his development, Oxford 1949, 308)." (pp. 81-82)

Categories and predicables; 3.3.1. The opposition of category and predicable; 3.3.2. The impact of the opposition; 3.3.3. The obscure position of the differentia; 3.3.4. Conclusion.

4. ——. 1980. "On Ancient and Mediaeval Semantics and Metaphysics. Part III. The Categories as Classes of Names." *Vivarium* no. 18:1-62.

"4. *The Categories as Classes of Names; 4.1. Status quaestionis.* The previous sections contain several hints to the close interrelation between three major issues in Plato's doctrine, viz. the question about the true nature of the Forms and those about participation and predication. Indeed, for the founder of the theory of the Forms, predication was bound to become a problem. Forms are immutable and indivisible; yet other Ideas have to participate in them; they are unique, by themselves and subsistent; yet, when saying '*John is man*' (or *white*), '*Peter is man*' (or *white*), should there be one perfect, eternal, immutable *etc.* Form of MAN (or WHITE) in the one and another in the other? Or, as I have put it above [1977: 85]: if John, Peter, and William are wise, does this mere fact mean that there must be something which they are all related to *in exactly the same manner*, namely WISDOM itself? And if '*John is wise*', '*Peter is wise*', and '*William is wise*' are all true statements, what exactly is the meaning of the predicate name '*wise*'? The former question is concerned with participation, the

latter with predication. Well, that the crux of the latter problem is not the separate existence of the Forms (*chôrismos*) clearly appears from the fact that also the author of the *Categories*, who had entirely abandoned all kind of *chôrismos*, could apparently not get rid of a similar problem: if the categories really are classes of 'things there are' (1 a 20) (i.e. 'real' substances, 'real' natures, and 'real' properties), rather than concepts (i.e. logical attributes), what kind of 'thing' is *meant by* a term *qua* 'category'? So for Aristotle the semantic problem still remained. His distinction between *en hypokeimenôî* and *kath' hypokeimenou* could only hide the original problem. It is often said that these phrases refer to different domains, the metaphysical and the logical one, respectively. We have already found some good reasons to qualify this opposition (see [1978], 84; 88). It seems to be useful now to collect all kind of information from Aristotle's writings, not only the *Categories*, about the proper meaning of the categories. This will be the aim of our sections 4.2-4.7." (pp. 1-2)

5. ———. 1988. "'Categorization' as a Key Notion in Ancient and Medieval Semantics." *Vivarium* no. 26:1-18.

"The aim of this paper is to argue for a twofold thesis: (a) for Aristotle the verb '*katêgorein*' does not as such stand for statemental predication, let alone of the well-known 'S is P' type, and (b) 'non-statemental predication' or 'categorization'

plays an important role in Ancient and Medieval philosophical procedure.

1. *Katêgorein and katêgoria in Aristotle* Aristotle was the first to use the word 'category' (*katêgoria*) as a technical term in logic and philosophy. It is commonly taken to mean 'highest predicate' and explained in terms of statement-making. From the logical point of view categories are thus considered 'potential predicates'.(*)

(...)

1.3 *Name giving ('categorization') as the key tool in the search for 'true substance'*

What Aristotle actually intends in his metaphysical discussions in the central books of his *Metaphysics* (Z-Th) is to discover the proper candidate for the name 'ousia'. According to Aristotle, the primary kind of 'being' or 'being as such' (*to on hêi on*) can only be found in 'being-ness' (*ousia*; see esp. *Metaph.* 1028b2). Unlike Plato, however, Aristotle is sure to find 'being as such' in the domain of things belonging to the everyday world.

Aristotle's most pressing problem is to grasp the things' proper nature *qua* beings. In the search for an answer name-giving plays a decisive role: the solution to the problem consists in finding the most appropriate ('essential') name so as to bring everyday being into the discourse in such a way that precisely its 'beingness' is focussed upon.

(...)

2. *The use of 'praedicare' in Boethius* The Greek phrase *katêgorein ti kata tinos* is usually rendered in Latin as *praedicare aliquid de aliquo*. The Latin formula primarily means 'to say something of something else' (more precisely 'of somebody'). Of course, the most common meaning of the Latin phrase is 'to *predicate* something of something else in making a statement of the form $S = P$ '. However, the verb *praedicare*, just as its Greek counterpart *katêgorein*, is used more than once merely in the sense of 'naming' or 'designating by means of a certain name', regardless of the syntactic role that name performs in a statement. In such cases *praedicare* stands for

the act of calling up something under a certain name (designation), a procedure that we have labelled 'categorization'. (...)

Boethius' use of *praedicare* is quite in line with what is found in other authors. Along with the familiar use of the verb for statemental predication, Boethius also frequently uses *praedicare* in the sense of 'naming' or 'designating something under a certain name' whereby the use of the designating word in predicate position is, sometimes even explicitly, ruled out." (pp. 1, 4, 9-10)

6. ———. 2002. *Aristotle: Semantics and Ontology. Volume I: General Introduction. The Works on Logic*. Leiden: Brill.

"In this book I intend to show that the ascription of many shortcomings or obscurities to Aristotle resulted from persistent misinterpretation of key notions in his work. The idea underlying this study is that commentators have wrongfully attributed anachronistic perceptions of 'predication', and statement-making in general to Aristotle. In Volume I, what I consider to be the genuine semantics underlying Aristotle's expositions of his philosophy are culled from the *Organon*. Determining what the basic components of Aristotle's semantics are is extremely important for our understanding of his view of the task of logic -- his strategy of argument in particular.

In chapter 1, after some preliminary considerations I argue that when analyzed at deep structure level, Aristotelian statement-making does not allow for the dyadic 'S is P' formula. An examination of the basic function of 'be' and its cognates in Aristotle's philosophical investigations shows that in his analysis statement-making is copula-less. Following traditional linguistics I take the 'existential' or hyparctic use of 'be' to be the central one in Greek (*pace* Kahn), on the understanding that in Aristotle *hyparxis* is found not only in the stronger form of 'actual occurrence' but also in a weaker form of what I term

'connotative (or intensional) be' (1.3-1.6). Since Aristotle's 'semantic behaviour', in spite of his skilful manipulation of the diverse semantic levels of expressions, is in fact not explicitly organized in a well-thought-out system of formal semantics, I have, in order to fill this void, formulated some semantic rules of thumb (1.7).

In chapter 2 I provide ample evidence for my exegesis of Aristotle's statement-making, in which the opposition between 'assertible' and 'assertion' is predominant and in which 'is' functions as an assertoric operator rather than as a copula (2.1-2.2). Next, I demonstrate that Aristotle's doctrine of the categories fits in well with his view of copula-less statement-making, arguing that the ten categories are 'appellations' ('nominations') rather than sentence predicates featuring in an 'S is P' formation (2.3-2.4). Finally, categorization is assessed in the wider context of Aristotle's general strategy of argument (2.5-2.7).

In the remaining chapters of the first volume (3-6) I present more evidence for my previous findings concerning Aristotle's 'semantic behaviour' by enquiring into the role of his semantic views as we find them in the several tracts of the *Organon*, in particular the *Categories*, *De interpretatione* and *Posterior Analytics*. These tracts are dealt with *in extenso*, in order to avoid the temptation to quote selectively to suit my purposes." (pp. XV-XVI)

7. Rohr, Michael D. 1978. "Aristotle on the Transitivity of *Being Said of*." *Journal of the History of Philosophy* no. 16:379-385.

Aristotle, in several of his treatises, discusses or makes use of the ontological tie or relation 'being said of (and its converse partaking of), whose importance to his thought has been recognized by many scholars. Its pervasiveness guarantees that there will be difficulties in its interpretation. (2) To isolate it as an object of Aristotelian exegesis, I shall tentatively identify it with the sortal tie and so take it as connecting (in Aristotelian terms) each genus to all the species and individuals falling under that genus and each species to all the individuals and

subordinate species (if any) falling under that species." (p. 379), two notes omitted)

(2) Some recent attempts at interpreting it may be found in Chung-Hwan Chen, "On Aristotle's Two Expressions," *Phronesis* 2 (1957):148-59; *Aristotle's Categories and De Interpretatione*, trans. J. L. Ackrill (Oxford: Clarendon Press, 1963), pp. 75-90; R. E. Alien, "Substance and Predication in Aristotle's Categories," in *Exegesis and Argument*, ed. E. N. Lee, A. P. D. Mourelatos, and R. M. Rorty (New York: Humanities Press, 1973), pp. 362-73; and Russell Dancy, "On Some of Aristotle's First Thoughts About Substances," *The Philosophical Review* 84 (1975): 338-73.

8. Ross, William David. 1939. "The Authenticity of Aristotle's *Categories*." *Journal of Philosophy* no. 36:431-433.

"Professor Husik (*) has done a service to students of Aristotle by reminding them of his earlier article, which, buried in the decent obscurity of a learned journal, had escaped my attention, as well as that of many other students.

The authenticity of the *Categories* is well attested by external evidence. The work was accepted as genuine by almost all the ancient scholars (πάντες παρτυρώσι, says Philoponus). A succession of scholars wrote commentaries on it as on a genuine work of Aristotle, from the third century A.D. onwards -- Porphyry, Dexippus, Ammonius, Philoponus, Simplicius, Olympiodorus, not to speak of the later commentators, Elias and David. Its genuineness was, however, probably doubted by some scholars, for several of the commentators devote themselves to refuting arguments against its genuineness -- e.g., Philoponus 12.34-13.5, Simplicius 379.7-380.15, Olympiodorus 22.38-24.20. The arguments which they set themselves to meet-arguments derived from supposed contradictions between the *Categories* and certain works of Aristotle- are invariably weak, and the answers given by the commentators are convincing." (p. 431)

"Ross's book gives a concise and comprehensive account of Aristotle's philosophical works—and no better account exists.

In this Introduction I will say something about Ross and about his book, and I will then outline some of the ways in which the study of Aristotle has developed in the years since he wrote it." (From the *Introduction* by J. L. Ackrill, p. VII).

(...)

"It is highly probable that the doctrine [of categories] began as an attempt to solve certain difficulties about predication which had troubled the Megaric school and other earlier thinkers.(18) Aristotle's object seems to have been to clear up the question by distinguishing the main types of meaning of the words and phrases that can be combined to make a sentence. And in doing this he arrived at the earliest known classification of the main types of entity involved in the structure of reality.

Why are they called categories? The ordinary meaning of is 'predicate,' but the first category has for its primary members individual substances, which according to Aristotle's doctrine are never properly predicates but always subjects. It has sometimes, therefore, been thought that primary substances do not fit properly into the doctrine of the categories. But this is not the case. 'Socrates' is, indeed, on Aristotelian principles no proper predicate; but if we ask what Socrates is, the ultimate, i.e. the most general, answer is 'a substance,' just as, if we ask what red is, the ultimate answer is 'a quality.' The categories are a list of the widest predicates which are predicable essentially of the various nameable entities, i.e. which tell us what kinds of entity at bottom they are." (pp. 23-24)

(18) This view is ably expressed in O. Apelt's: *Kategorienlehre des Aristoteles in Beiträge zur Geschichte der Griechischen Philosophie*. Leipzig, 1891

10. Rossitto, Cristina. 2017. "Aristotle and the "Categories"." In *Categories: Histories and Perspectives*, edited by D'Anna, Giuseppe and Fossati, Lorenzo, 11-34. Hildesheim: Georg Olms.

"In order to conclude, in this short and compendious description of the ategories, contained in the treatise called *Categories*, we tried to highlight just few aspects that may invite to further reflections. The Aristotelian conception of categories is very "rich" by itself, namely into the same Aristotle's background.

This constitutes one of reasons which have decreed its fortune, following on the recovery and resumption, in the philosophical tradition—and not just philosophical—, since ancient times up to now and beyond.

As for Aristotle, it is possible having an idea about what "he should have interiorized that" by only naming two of the copious places in which he uses what is widely known as his doctrine of categories. By electing that we have detached both from the three main perspectives we used before—linguistic, logic and ontological—, and in the strictly philosophical field, precisely theoretical or, as Aristotle would have said, of first philosophy.

It deals with two passages, the first contained into a work of psychology, namely of physics, as Aristotle affirmed at the beginning of *De anima* I, and the second of an ethical work, that is in the *Eudemian Ethics*:

First, surely, it is necessary to establish in which of the genera (έν τίνι τῶν γενῶν) the soul lies and what it is; I say it is this-somewhat and a substance, or quality or quantity or some other of the categories (κατηγοριῶν) which I have distinguished. Further, if the soul belongs to the beings potentially, or is it rather actually. This is not, in fact, something small (*De an.* I 1, 402a 23–27).

The good is called in many ways, indeed in as many ways as being (πολλαχῶς γὰρ λέγεται καὶ ἰσαχῶς τῷ ὄντι τοῦ ἀγαθόν). Being, as has been set out elsewhere, signifies what-is,

quality, quantity, when...; and the good occurs in each one of these categories—in substance, intelligence and God (ὁ νοῦς καὶ ὁ θεός); in quality, the just (τὸ δίκαιον); in quantity, the moderate (τὸ μέτριον), in the when, the right occasion (ὁ καιρός) (*Eth. Eud.* I 8, 1217b 25–32; Aristotle 1982 [*Eudemian Ethics. Books I, II and VIII.* Transl. and Commentary M. Woods, Oxford: Clarendon Press] : 9–10)." (p. 34)

11. Sanford, Jonathan J. 2004. "*Categories and Metaphysics: Aristotle's Science of Being.*" In *Categories: Historical and Systematic Essays*, edited by Gorman, Michael and Sanford, Jonathan J., 3-20. Washington: Catholic University of America Press.

"The relationship between Aristotle's *Categories* and his *Metaphysics* is a matter of some debate. If one assumes that the *Categories* is fundamentally a metaphysical work, then there appear to be irreconcilable differences between the notion of substance presented in the *Categories* and that presented in *Metaphysics Z* (VII). The *Categories* account of substance does not present matter as a component of hylomorphic substance, nor does it consider substance as a formal cause of unity, both of which are key ideas of *Metaphysics Z* (VII). The *Metaphysics* therefore represents a break with Aristotle's older metaphysical scheme. On the other hand, if one assumes that the *Categories* is fundamentally a logical work that makes no pretence to being a work of metaphysics, then the account of substance and the other categories in the *Categories* is at worst irrelevant to, and at best only obliquely related to, what Aristotle attempts to accomplish in the *Metaphysics*. I think that the truth lies somewhere between these two views. The *Categories* is best understood as both a logical and a metaphysical account. The metaphysics presented in the *Categories* is by no means complete, but Aristotle does not claim that it is. Aristotle does not, in the *Metaphysics*, break with his ideas in the *Categories*, but deepens them and works to fill out his metaphysics. In this essay I consider the relationship between Aristotle's metaphysics and his theory of categories from the perspective of the requirements of science. The *Metaphysics* presents

Aristotle's science of being, but, as his logical works show, science depends on categories.

Thus the *Metaphysics* cannot be understood apart from the works—especially the *Categories*, the *Topics*, and the *Posterior Analytics*—in which Aristotle explains what categories are, how they are used, and what their relationship to science is. There are indeed some difficulties in positing a close relationship between Aristotle's earlier and later works, especially in regard to what gives unity to a science and the importance of being in the sense of potentiality and actuality. Still, these problems are not so great as to constitute a disjunction between Aristotle's earlier and later works. Indeed, Aristotle's attempts to describe being in each of its four senses in the *Metaphysics* are possible only because of the close relationship between logic and metaphysics, a relationship that he elucidates in his *Categories* and some other earlier works." (pp. 3-4, notes omitted)

""Knowledge to be of value must be founded on reality. Hence it follows that unless our ideas faithfully reflect reality, our judgments about it will be false. One of the most evident illustrations of this fact is found in the divergent views philosophers have taken with regard to our widest universal concepts, the categories of being. It is, therefore, an important

task of metaphysics to inquire into the modes which characterize the being that these concepts represent.

Aristotle, the first philosopher known to have undertaken this task, presents a classification of categories in his logical treatise entitled *Categories*. Nor does he confine his doctrine to but this one of his works. Numerous references to the categories are found in practically all of his writings, especially in the *Metaphysics*.

To St. Thomas Aquinas, however, we owe the development and perfection of the theory of the categories. He, it is true, wrote no authentic logical treatise' on the subject as did Aristotle, but his doctrine of the categories can be culled from his numerous discussions of them throughout his more metaphysical works in particular, especially from the *Quaestiones Disputatae*, the *Commentary on Aristotle's Metaphysics*, and the *Summa Theologica*.

It is the purpose of this study, which is to be primarily metaphysical and Thomistic in character, to present the general teaching of St. Thomas on the categories. Our treatment of Aristotle, then, is to give the proper background, since obviously it is the Aristotelian plan that is the point of departure for all Thomistic study of the subject. Without this Aristotelian environment in which St. Thomas worked, his position would be much less clear. In a word, the Thomistic section of this study will reveal that St. Thomas developed and perfected Aristotelian thought.

The problem of the categories is twofold: logical, in so far as it involves a classification of our generic concepts ; metaphysical, in that it must necessarily regard and classify the objects of those concepts, that is, real beings Therefore, after considering the history and general nature of the categories in the first chapter of the Aristotelian section, we shall examine the logical and metaphysical aspect in the two chapters following. Chapter four will present the historical transition from Aristotle to St. Thomas. Since St. Thomas wrote no logical treatise on the categories, nor any commentary on Aristotle's logical treatment of them, it will be necessary for us to proceed in a somewhat

different manner in the Thomistic section of our work. In keeping with the primarily metaphysical trend in St. Thomas' thought, which is particularly evident in his treatment of the categories, we propose to present in the last three chapters respectively the general character of his teaching on the categories and a consideration of the nature of substance and the nature of accidents." (pp. IX-X notes omitted)

14. Scholz, Donald F. 1963. "The Category of Quantity." *Laval Théologique et Philosophique* no. 19:229-256.

"Because quantity itself is relatively well known to us, an analysis of its genus is not too difficult. This fact alone makes it interesting to us. Further, an examination of this genus is useful in coming to an understanding of Aristotle's procedure in the *Categories* as a whole.

For these reasons it would seem appropriate to reflect a little upon Aristotle's treatment of quantity in the *Categories*." (p. 229)

(...)

"In reflecting upon the ways in which Aristotle determines the properties of quantity, we can see that he proceeds inductively in all cases, showing the properties of quantity from its species. This might be taken as a sign of what we said at the beginning of our examination of this category, the genus is so general, so potential, that it can be understood only by making reference to something more actual, its species.

We have now completed our treatment of the category of quantity. We have seen how it is made known and we have seen its properties. We have judged Aristotle's method in exposing this doctrine to have been the proper one. Perhaps, by analyzing the other categories in this way, one would be able to obtain a relatively distinct knowledge of all of them. This in itself -would be no small accomplishment." (p. 256)

15. Sedley, David. 2002. "Aristotelian relativities." In *Le style de la pensée. Recueil d'hommages à Jacques Brunschwig*, edited by Canto-Sperber, Monique and Pellegrin, Pierre, 324-352. Paris: Les Belles Lettres.

Originally published in Italian as: "Relatività aristoteliche", *Dianoia*, 2, 1997 pp. 11-15 (first part) and 1998, 3, 11-23 (second part).

"In chapter 7 of the *Categories*, devoted to the category of relativity (πρὸς τι), Aristotle starts with a definition of the relative (6a 36-b 8)" (p. 324)

(...)

"At the end of the chapter (8a 13ff.) he raises a worry about whether this definition will allow some substances to be relative, namely those which are themselves the organic parts of larger substances. We must recall that in the *Categories* he has none of his later qualms about allowing some substances to be composed of substances (1). Hence his question: won't those substances which are parts of larger substances be relative, namely to the wholes of which they are parts? The worry is a proper one, because he has already spoken of the parts of substances as falling into both categories: in chapter 5, at 3a 29-32, they were substances, yet in chapter 7, at 6b 36-7 a 22, relatives include «wing», «head» and «rudder»." (p. 325)

(...)

"Aristotle's point is metaphysical, not linguistic. It is important not to be misled into thinking that he is in any way appealing to what can and cannot be said in the Greek language. It is not even obvious that Greek usage would consider an expression like πρὸς τι χεῖρ unacceptable. His observation about primary and secondary substances is rather, I suppose, as follows. If a hand appears to be relative, namely to its owner, it is not in virtue of being this particular hand that it is relative, but in virtue of being a hand- that is, not because of

its individuality, the hallmark of a primary substance, but because of its species, the hallmark of a secondary substance." (pp. 325-326)

(...)

"I hope that I have made a sufficient case, based on Aristotle's own text, for attributing to him the distinction between what I

have called soft and hard relativity. But now let me confess that my reading him this way was inspired by a much more lucid version of the same distinction, attributed by Simplicius to the Stoics. The report comes from his commentary on Aristotle's *Categories* (166.15-29) (22)" (p. 339)

(22) SVF [*Stoicorum Veterum Fragmenta*] II 403. The translation here is based on that at LS [A. A. Long, D. N. Sedley (eds.), A. A. Long, D. N. Sedley (eds.), *The Hellenistic Philosophers*, Cambridge University Press, 1987] 29B.

16. Sharma, Ravi K. 1997. "A New Defense of Tropes? On *Categories* 3b10-18." *Ancient Philosophy* no. 17:309-315.

"A long-standing debate among interpreters of the *Categories* concerns the nature of first-order accidents, the entities designated by expressions such as 'the particular white' (το τι λευκόν). Some interpreters maintain that Aristotle takes them to be *universals*, entities that may be *present in* many substances; others, that Aristotle takes them to be *tropes*, each of which is peculiar to a single substance.(1)

In a recent issue of this journal, Daniel T. Devereux offers a new defense of the tropes-reading, one that is not based, as most others have been, on Aristotle's cryptic remark concerning the *present-in* relation at 1a24-25.(2) If Devereux is right, the debate has now been settled in favor of tropes. In this note, I shall maintain that Devereux misreads the passage crucial to his argument and that the proper reading undermines his proposed defense." (p. 309)

(1) 1 Throughout this discussion, I italicize 'present in' (έν) and 'said of (λέγεσται κατά) when those locutions are used technically, for relations between entities.

(2) See Devereux 1992 ['Inherence and Primary Substance in Aristotle's *Categories*', *Ancient Philosophy* 12: 113-131]. The term 'trope' is my choice; Devereux expresses the same idea by speaking of tokens, or particular instances, of types.

17. Shatalov, Keren Wilson. 2020. "Hypokoimenon versus substance." *The Review of Metaphysics* no. 74:227-250.

"There is a curious lacuna in scholarship on Aristotle's logic and metaphysics, in that few authors investigate Aristotle's notion of ὑποκείμενον, or subject, in its own right, even by confining this investigation to his logical works. Though they tend to agree that it is offered as a criterion for substancehood in *Categories*, discussion of what it is to be a ὑποκείμενον is generally offered only in passing. There is a reason for this: Substance seems the more compelling topic, since it is about this that Aristotle is in a disagreement with Plato, and it is in the interest of this disagreement that Aristotle introduces the notion of ὑποκείμενον. But if being a ὑποκείμενον is so key to Aristotle's exposition of his anti-Platonic view of substance, at least in his logical works, to the extent that we do not understand being a ὑποκείμενον we cannot understand what Aristotle is trying to tell us about what it is to be an οὐσία, or substance." (p. 227)

(...)

"When comparing the different sciences and considering the way in which they are related, one finds oneself in the perspective of metaphysics, according to which substance is the only, the ultimate, ὑποκείμενον. It is according to this perspective, the perspective of metaphysics, that Aristotle is writing in *Categories* when he so closely associates being a subject with being a substance.!" (p. 250)

18. Shields, Christopher. 1999. *Order in Multiplicity. Homonymy in the Philosophy of Aristotle*. Oxford: Clarendon Press.

Contents: Abbreviations XIII; Introduction 1; Part I: Homonymy as Such. 1. The Varieties of Homonymy 9; 2. The Promises and Problems of Homonymy 43; 3. Homonymy and Signification 75; 4. Core-Dependent Homonymy 103; Part II: Homonymy at Work. 5. The Body 131; 6. Oneness, Sameness, and Referential Opacity 155; 7. The Meaning of Life 176; 8. Goodness 194; 9. The Homonymy of Being 217; Afterword: Homonymy's Promise Reconsidered 268; Bibliography 271; Index of Passages Cited 281; General Index 287-290.

"Aristotle's treatments of the homonymy of core philosophical concepts, including especially being and goodness, are sometimes highly abstract, and they must be understood as arising from the polemical contexts which motivate them.

For these reasons, I consider these topics only after recounting Aristotle's general framework for introducing homonymy. Accordingly, I divide the study into two parts.

In Part I, I consider homonymy as such, mainly by reflecting on the uncontroversial cases upon which Aristotle himself relies when trying to explicate and motivate homonymy. I begin, in Chapter 1, by recounting Aristotle's introduction of homonymy in the *Categories*, settling some exegetical difficulties concerning his general conception of its nature."

(...)

In Part II, I investigate homonymy at work. I do not move through Aristotle's appeals to homonymy seriatim. Rather, I consider a very few cases, selected for their importance, interest, and representative character. In two cases, I urge that some of Aristotle's critics have failed to appreciate the power of homonymy in meeting objections to substantive Aristotelian theories.

(...)

Although I maintain that Aristotle cannot establish the homonymy of being, I do not infer that his commitment to homonymy as such is misguided. On the contrary, I maintain that outside this one application, Aristotle's commitment to homonymy is altogether well motivated; in particular, the method of definition it introduces is of genuine and lasting importance. At the very minimum, I argue, Aristotle is right to advocate homonymy as a form of constructive philosophical analysis. He has identified a framework which has too often been overlooked by those disenchanted with the prospects for genuine philosophical progress. Accordingly, I end Part II with a concluding afterword in which I appraise in a fully general way homonymy's enduring value." (pp. 3-5)

19. Simons, Peter. 1988. "Aristotle's Concept of State of Affairs." In *Antike Rechts- und Sozialphilosophie*, edited by Gigon, Olof and Fischer, Michael W., 97-112. Bern: Peter Lang.

"The concept of state of affairs (*Sachverhalt*) is one which is of general interest in philosophy in connection with the theory of truth, but is also of special interest for legal philosophy.(1) Its heyday in philosophy was the late (2) nineteenth century and early twentieth century ; it is therefore tempting to regard the concept in its philosophical employment as a thoroughly modern invention. Nevertheless, a similar concept was known to medieval philosophy(3), and the medievals in question - as was usual then - referred back to the authority of Aristotle in support of their views. I claim that those medievals who ascribed something like a concept of state of affairs to Aristotle were right.(4) Discussing the identity of concepts, especially over a time-span of millennia, is fraught with difficulties, so I shall need first to establish what conditions a concept must satisfy to be a concept of state of affairs. This will occupy § 2. I shall then in § 3 endeavour to show that Aristotle's works employ a concept closely answering these conditions." (p. 97)

"The evidence from Aristotle

The texts supporting my interpretation come mainly from the logical works "Categories" and "De interpretatione". In particular, I claim that the term *pragma* is used on several occasions with a meaning corresponding closely to that of "state of affairs" as specified above. First, some preliminary remarks on interpreting these texts.

We must be clear from the start that in these works Aristotle's discussion is so compressed and so full of ambiguities that no interpretation can be uncontroversial. In discussing semantic matters, Aristotle uses no specially developed terminology, and he is also sparing in his use of examples. It is no accident that medieval commentators on these writings of Aristotle, which were for a long time the chief source of information on his work, diverged widely in their interpretations. Having now got

used to making distinctions and employing more specific semantic concepts than Aristotle, it would be futile for us to expect to find, sitting in his work, a concept of state of affairs which unambiguously coincides with the one specified in the previous section. The best we can expect, even using plausible interpolations and taking interpretative risks, is an anticipatory approximation. But while Aristotle does not have a fully-fledged modern concept of state of affairs, it is surprising, in view of the subsequent history of semantics, how close he comes to one. (pp. 101-102)

20. Stein, Nathanael. 2011. "Aristotle's Causal Pluralism." *Archiv für Geschichte der Philosophie* no. 93:121-147.

Abstract: "Central to Aristotle's metaphysics and epistemology is the claim that 'aitia' – 'cause' – is "said in many ways", i.e., multivocal. Though the importance of the four causes in Aristotle's system cannot be overstated, the nature of his pluralism about *aitiai* has not been addressed. It is not at all obvious how these modes of causation are related to one another, or why they all deserve a common term. Nor is it clear, in particular, whether the causes are related to one another as species under a single genus, such that there is a univocal definition of 'aitia' which applies to all of them, or whether Aristotle means to assert that the four causes are homonyms. It is argued here that although there are strong reasons to group the four causes together, there are also powerful considerations on the side of homonymy. It is further argued that the four causes are more closely tied to the ontological theory of categories and predication than is often recognized. As a result, we can reconcile the competing demands of unity and plurality by taking one mode of causation, the formal cause, as basic, and accounting for the other modes with reference to it, in the manner of so-called pros hen homonyms."

21. Stough, Charlotte L. 1972. "Language and Ontology in Aristotle's *Categories*." *Journal of the History of Philosophy* no. 10:261-272.

"Yet there is an attendant danger in reading the *Categories* freely in the light of later works such as the *Metaphysics*. It is

altogether too easy to find in that early text the more sophisticated ideas of a maturer period of Aristotle's philosophical development and hence unwittingly to incorporate into our procedure the assumption, dubious at best, that Aristotle's views remained virtually unchanged throughout his philosophical career. Thus there would seem to be *prima facie* reason for raising some questions of a rather special sort about the body of the *Categories* as such --- about what can be said of Aristotle's notion of categories of being without going beyond that work (or at least the *Organon*) for support.

One question in particular deserves attention, because it strikes at the very center of the theory expounded in the *Categories*. Granted that Aristotle attached a privileged status to the category of substance -- a status importantly not enjoyed by the other nine categories -- we want to know what he conceived that special status to be. Our question concerns the relation between substance and the remaining categories. Aristotle had some important things to say on this subject in later works, (1) but how much of that was originally central to the theory of categories cannot be uncovered by his subsequent remarks. Very little can be said about the philosophical significance of the early doctrine of categories until we understand precisely how Aristotle ordered the category of substance in relation to the nine nonsubstantial forms of predication in the *Categories* itself. As might be expected, Aristotle offers no easy answer to this question, but his own words are suggestive in ways that are worth exploring and yet, at the same time, quite easily overlooked." (p. 261)

(1) For example, *Met.*, Zeta 1 (cf. *Delta* 11); Aristotle's doctrine of τα πρὸς ἐν λεγόμενα set forth in central sections of the *Metaphysics* may represent his most finished thoughts on this subject.

22. Striker, Gisela. 2011. "A Note on the Ontology of Aristotle's *Categories*, chapter 2." In *Episteme, etc.: Essays in Honour of Jonathan Barnes*, edited by Morison, Benjam and Ierodiakonou, Katerina, 141-151. New York: Oxford University Press.

Abstract: "This paper argues that the four-fold classification of entities in chapter 2 of Aristotle's *Categories*, with its unusual terminology, contains a criticism of Plato's metaphysics, showing that the term 'participation' covers two distinct relations. This criticism prepares the way for the reversal of priorities in chapter 5, in which Aristotle bestows the rank of primary substance on concrete individuals. However, the ontological status of the species of primary substances—universals that are not attributes—remains ambiguous. A possible solution of these difficulties may be found in *Metaphysics* Z.13, with the rejection of universals as substances from Aristotle's ontology."

23. Studtmann, Paul. 2003. "Aristotle's Category of Quality: A Regimented Interpretation." *Apeiron* no. 36:205-227.

"In Chapter Eight of the *Categories*, Aristotle divides the genus, quality, into four species: (1) habits and dispositions; (2) natural capabilities and incapacities; (3) affective qualities and affections; and (4) shape." (p. 205)

(,,)

"in this paper, I argue that there is an alternative interpretation to the canonical interpretation, what I will call the regimented interpretation, that can go some way toward removing the dissatisfaction that he and others have had with it. I do not think that such an interpretation can entirely remove all the difficulties with Aristotle's discussion — some peculiarities will remain. Nonetheless, as I hope to show, there is a way to regiment the category that makes it vastly more systematic, and as a result, far more philosophically interesting than the canonical interpretation suggests.

My main argument for the regimented interpretation proceeds in two stages. First, I examine the details of Aristotle's discussion of the first three canonical species and conclude not only that they are subsumed under the single genus of dispositions but also that the genus of dispositions admits of a more or less systematic and symmetrical differentiation.

As a result, the category of quality should be understood as being primarily divided into two species: shape and dispositions. And because the genus of dispositions is systematically differentiated and Aristotle does not differentiate shape at all, any arbitrariness in the category of quality must be located in the division of the genus, quality, into the two species, shapes and dispositions. In the second stage of the argument, I propose a hypothesis about the way Aristotle understands the nature of quality itself, a hypothesis that leads to a very plausible division of quality into shape and dispositions. Hence, the divisions in the category of quality can be understood as flowing systematically from the very nature of the genus being divided." (p. 207)

24. ———. 2004. "Aristotle's Category of Quantity: A Unified Interpretation." *Apeiron* no. 37:69-91.

"Aristotle provides two different treatments of the category of quantity: one in *Categories* V and one in *Metaphysics* V 7. Interestingly (and perhaps not surprisingly) the treatments differ in important respects. In the *Categories*, Aristotle provides two different differentiations of quantity.

According to the first, quantity divides into continuous and discrete quantity; the former then divides into line, surface, body and time, and the latter into number and speech. According to the second, quantity divides into quantities whose parts have a relative position with respect to one another and quantities whose parts do not (*Cat.* 4b20-2). Although the differences between these two differentiations are interesting, for the purposes of this paper I shall focus on the first. For, in the first instance, the differentiations appear to be compatible; and second, by presenting the division into continuous and discrete quantities before the other division, Aristotle, it would seem, gives priority to the former. In this paper, therefore, not only will I assume that the two differentiations do not need philosophical correction to make them compatible but I will also follow Aristotle's lead and take the division into continuous and discrete quantities to be the more fundamental." (p. 69)

25. ———. 2008. *The Foundations of Aristotle's Categorical Scheme*. Milwaukee: Marquette University Press.

Contents: Chapter 1: Whence the Categories? 7; Chapter 2: The Body Problem in Aristotle 25; Chapter 3: Form 49; Chapter 4: Prime Matter 79; Chapter 5: Quality 101; Chapter 6: Quantity 125; Chapter 7: Substance 141; Index 173-175.

"Aristotle's categorial scheme had an unparalleled effect not only on his own philosophical system but also on the systems of many of the greatest philosophers in the western tradition.

The set of doctrines in the *Categories*, what I will henceforth call *categorialism*, play, for instance, a central role in Aristotle's discussion of change in the *Physics*, in the science of being qua being in the *Metaphysics* and in the rejection of Platonic ethics in the *Nicomachean Ethics*."

(...)

"Despite its influence, however, categorialism raises two fundamental questions that to this day remain open. The first concerns Aristotle's list of highest kinds." (p. 7)

(...)

"Unlike the first question, the second concerns the way in which categorialism relates to doctrines Aristotle articulates in other works. The question arises as a result of a rather common story that is told about the categories and its apparent deep tensions with hylomorphism." (p. 9)

(...)

"This book contains a series of interrelated chapters that collectively support an interpretation that provides answers to the two great questions concerning Aristotle's categories. According to the interpretation, Aristotle's categorial scheme is derivable from his hylomorphic

ontology, which itself is derivable from very general theses about the nature of being." (p. 15)

26. ———. 2012. "Aristotle's Categorical Scheme." In *The Oxford Handbook of Aristotle*, edited by Shields, Christopher, 63-80. New York: Oxford University Press.

"In this chapter I shall discuss a tradition of interpretation that has for the most part been abandoned and shall do so by way of discussing two questions concerning Aristotle's categorialism that are not often treated together. By pointing out just how controversial any approach to Aristotle's *Categories* is bound to be, I hope to forestall any initial strong objections to the admittedly non-standard approach I shall take. And even if I fail to convince the reader of the cogency of the approach by the end of the chapter, I hope that the reader will have benefitted from seeing Aristotle's categorial scheme treated from a heterodoxical perspective. For what it is worth, it is my contention that Aristotle's categorial scheme, as is the case with many works in the history of philosophy, is best illuminated by opposing beams of interpretive light.

The following discussion is framed by two questions concerning Aristotle's categorialism: (1) How did Aristotle arrive at his list of categories? and (2) What is the connection between Aristotle's categories and his hylomorphic ontology. These questions are not often treated together, which is not altogether surprising, since each question is extremely difficult to answer in its own right. Hence, treating them together piles difficulty upon difficulty. Moreover, owing to their difficulty scholars have given wildly different answers to each of the questions. So the amount of scholarly disagreement about the issues involved is rather daunting. Nonetheless there is an interpretively and philosophically interesting reason for discussing both questions in a single paper, namely the possibility of interestingly coordinated answers to the questions. The possibility stems from a tradition of interpretation that finds its origin in the Middle Ages. Because of its medieval origin, the interpretation is out of step with recent scholarly trends. Nonetheless, I hope at least to show the interest in the interpretation. My goal in this chapter is not to present anything like a definitive case for an interpretation of Aristotle's *Categories* but rather to discuss what I take to be a provocative and interesting interpretation

that has the resources to provide systematic and co-ordinated answers to two very large questions concerning Aristotle's categorial scheme. In short, according to the interpretation, Aristotle's list of highest kinds can be derived a priori from his hylomorphic ontology. To understand the import of such a claim, however, first requires a discussion of the two questions I have just mentioned." (pp. 64-65)

The Five Voices, Essence, and Quiddity 217; 4. The Problem of the Universal (General) 221; 5. Intellect, Reason, and Rational Intellect 223-228.

"The starting point of the present paper was the symbolic interpretation - of a logical-mathematical type - of the first chapters of Aristotle's work *Categoriae* - work which is usually not taken into account by the modems. Beginning with the first attempts I was surprised to notice that the mentioned texts are lending themselves -more than any other text - to a logical-mathematical formalisation, the difference being that they show, besides the currently interpretable forms, other ones that are not to be found either within symbolic logic, or within the classical-traditional one. We named them "prejudicative forms", since they have a certain resemblance with the classical

judgements, but precede them, without being judgements in their own right, that is affirmations or negations.

The prejudicative forms represent an unstudied field, so far. Their affinity with symbolic forms grants them a prejudicative character and complete these last ones in many respects, which leads to the conclusion that, although the symbolic logic is the most recent logic, its field is anterior - from a logical point of view - to the classical field. And certainly Aristotle and some ancient commentators of the *Organon* had this intuition.

By means of the entities they focus on, the prejudicative forms - the individual, the singular, the species, the genus and the supreme genus - contribute to the solving of some of the generally philosophical issues which are still debatable on, as the problem of universal, which also appeared in relation with Aristotle's logic and was pointed out by Porphyrius Malchus in his famous *Isagoge*.

Coming back to Aristotle, one can indeed wonder whether it was possible for him to accomplish so many things in the field of logic and, moreover, to foresee - explicitly or not - problems which find a reasonable explanation just nowadays. One should not forget that subtle scholars preceded Aristotle, and that the problems of logic were so to say "floating" in the atmosphere of Greek philosophy. Moreover, once discovered, the field of logic could have been unrestrictedly covered, as there were no hindrances. Aristotle did cover it. Faced with a savage and hardly coverable field, he was often forced to clear it. Today, these soundings are astonishing, since the field is crossed by large railways and rapidly covered. Nevertheless, there are some moments when nobody can say "Dig here!"

Aristotle did not finish, but he gave a lot of suggestions, and, if we do not think in a different way, but we think something else, his logic will still be a precious source of hints and information." (Foreword, pp. XII-XIII)

28. Tarán, Leonardo. 1978. "Speusippus and Aristotle on Homonymy and Synonymy." *Hermes. Zeitschrift für klassische Philologie* no. 106:73-99.

Reprinted in: Leonardo Tarán, *Collected Papers 1962-1999*, Leiden: Brill, 2001, pp. 421-454.

"Modern scholarship since the middle of the last century has generally accepted it as an established fact that Speusippus made an exhaustive classification of words or names (ὀνόματα) in relation to the concepts they express and that he gave definitions of *homonyma* and *synonyma* only in reference to words and their meanings; that is to say that for him *homonyma* and *synonyma* are properties of linguistic terms and not of things, whereas for Aristotle, especially in the first chapter of the *Categories*, they are properties of things." (p. 421)

(...)

"He [Jonathan Barnes, "Homonymy in Aristotle and Speusippus," *Classical Quarterly*, N.S. 21 (1971), pp. 65-80] contends, in the first place, that Speusippus's conception of *homonyma* and *synonyma* is essentially the same as that of Aristotle, the slight differences between their respective definitions of each being trivial, and, secondly, that even though in a few places Aristotle does use *homonyma* and *synonyma* as properties of linguistic terms, this is due to the fact that Aristotle's use of these words is not as rigid as the *Categories* would lead one to believe; he could not have been influenced by Speusippus because the latter conceived homonymy and synonymy as properties of things and, in any case, if influence of one on the other be assumed, it could as well have been Aristotle that influenced Speusippus.

Though I believe that his two main contentions are mistaken, I am here mainly concerned with the first part of Barnes' thesis; for, if he were right in believing that for Speusippus *homonyma* and *synonyma* are properties of things and not of names or linguistic terms, then Hambruch's [*] notion that Speusippus did influence Aristotle when the latter uses *synonymon* as a property of names would be wrong, even though Barnes himself were mistaken in his analysis of the Aristotelian passages he reviews in the second part of his paper. Whereas, on the other hand, if Speusippus's classification is really of ὀνόματα, then,

since Barnes himself admits that Aristotle does sometimes use *homonyma* and *synonyma* as properties of names, the influence of Speusippus on Aristotle is at least possible; and it becomes plausible and probable, regardless of the relative chronology of their respective works, when it is seen, as I shall try to show, that in some cases Aristotle is in fact cracking doctrines which presuppose a use of *homonyma* and *synonyma* such as can be ascribed to Speusippus or is using synonymon in the Speusippean sense, different from Aristotle's own notion of synonymous words." (pp. 422-423)

(...)

"Our only source for Speusippus's classification of names is the three texts that Lang has assembled as frags. 32a, 32b, and 32c, (7) three passages from Simplicius's commentary on Aristotle's *Categories*."

29. Titcomb, Margaret Rae. 2015. "Aristotle's Category Construction and the Why Behind It." *Akadimia Filosofia* no. 1:9-15.

Abstract: "Aristotle's *Categoriae*, or the *Categories*, is a comprehensive classification system for every object of human understanding that can be either a subject or a predicate of a proposition. There are ten categories: Substance, Quantity, Qualification, Relative/Relation, Place, Time, Position, State (Condition), Action, and Affection. The first part of this paper will explain each of the categories in the order in which they are presented in the chapters of *Categoriae*. The second half of the paper will discuss the guity in the approach Aristotle uses to

both construct and find meaning in these categories. Fr. Joseph Owens examines the use of metaphysical, logical and grammatical ways in which Aristotle presents the categories. Owens observes the benefits and disadvantages of Aristotle's mixed approach, and questions the usefulness of the system as a whole. This paper will argue that Aristotle successfully uses all three approaches, sometimes separately and sometimes in combination, to create a thorough process for systematizing all objects of human cognition."

30. Thorp, John. 1974. "Aristotle's Use of Categories. An Easing of the Oddness in "Metaphysica" Δ 7." *Phronesis. A Journal for Ancient Philosophy* no. 19:238-256.

"We are accustomed to think that when Aristotle introduces a list of categories into an argument he is effecting a *division* of the matter into ten separate kinds or predicates or senses. For example, at *de anima* 410 a 23 when he is wondering what sort of thing the soul is,

he gives a list of the categories to show what sorts of things there are and goes on to ask of each sort whether the soul belongs to it.

The list of categories divides up all that is into ten departments for easier handling. Again in the *Categoriae* he divides up predicates into ten sorts by a list of categories, and goes on in the rest of the book to give the peculiar logical and grammatical features of the sorts - although the treatment of the later sorts is not extant. Here the list of categories serves almost as a table of contents, dividing up the matter for piecemeal treatment. Let us call this use of a list of categories to divide the matter into ten departments "use (a)". No doubt this is the most prevalent use in Aristotle: a philosopher of analytic temperament like the Master is always dividing things up." (pp. 244-245)

(...)

"Conclusion

The orthodox view of the mesh of four uses with ten senses - that only per se being has ten senses - can now be revised. There are five uses of εἶναι, not four, and only the fifth, the

existential use (not mentioned in A 7) is divided into ten senses according to the categories.

Per se being is semantically unvarying. (p. 256)

31. Ushida, Noriko. 2003. "Before the *Topics*? Isaak Husik and Aristotle's *Categories* revisited." *Ancient Philosophy* no. 23:113-134.

"I. Husik, in arguing for the authenticity of the *Categories* (in: *Philosophical Review* 13, 1904, pp. 514-528), substantially overstated the case for the similarity of that treatise to the *Topics*. The two works differ greatly in their treatment of the theory of substance (*Cat.* 5, 3 B 10-21; *SE* 22, 178 B 38ff.)."

32. van Polanen Petel, H. P., and Reed, K. 2021. "How to Derive Aristotle's *Categories* from *First Principles*." *Axiomathes* no. 41:1-35.

First online: 5 September 2021.

Abstract: "We propose a model of cognition grounded in ancient Greek philosophy which encompasses Aristotle's categories. Taking for *First Principles* the brute facts of the mental actions of separation, aggregation and ordering, we derive Aristotle's categories as follows. First, Separation lets us see single entities, giving the simple concept of an individual. Next, Aggregation lets us see instances of some kind, giving the basic concept of a particular. Then, Ordering lets us see both wholes-with-parts as well as parts-of-some-whole, giving the subtle concept of a relational or Gestalt. The basic and the subtle concept give us the major and minor categories. The categories constitute a top-level ontology and describe universal usage so that any other category necessarily describes particular or domain usage."

33. Verdenius, Willem Jacob. 1948. "Two Notes on the *Categories* of Aristotle " *Mnemosyne* no. 4:109-110.

"Cat. 6 a, 19-22: Aristotle does not say: "A thing which is two cubits long does not possess its length to a higher degree than a thing of three cubits possesses its length of three cubits", but: "One thing cannot be two cubits long to a higher degree than

another". That means: a thing of a certain length does not possess this length to a higher degree than things which are longer or shorter, for these things do not have this length at all. The same applies to numbers: "three is not three to a higher degree than five is three, nor is five five to a higher degree than three is five", i.e. a number does, or does not, possess a certain amount. This meaning is clearly expressed by the traditional text." (p. 109)

(...)

"Cat. 8 a, 31-32: Aristotle wants to say that the use of a wide definition should not induce us to suppose that the possession of a relation makes a thing essentially relative in the sense that its existence can only be explained in terms of a relation to another thing."(p. 110)

34. Ward, Julie K. 2007. *Aristotle on Homonymy: Dialectic and Science*. Cambridge: Cambridge University Press.

Systematic homonymy 77; 4. The homonymy of *Being* 103; 5. *Physis, Philia*, and homonymy 137; 6. Homonymy and science 168; Afterword 201; Bibliography 207; Index of passages 215; General index 219-220.

"The present book had its origin in many puzzles I encountered about *pros hen* predication." (p. VII)

(...)

"This work examines homonymy, a topic that lies within Aristotle's theories of language and predication. In Aristotle's work, the idea of homonymy is paired with that of synonymy, and in fundamental ways, rests upon it. To English speakers, homonymy is known as a grammatical category referring to the case in which the same word has different meanings, and synonymy, the case in which different words have the same meaning. In contrast, Aristotle finds homonymy and synonymy to be concerned not merely with words, but also, and primarily, with things. As he explains in *Cat.* 1, synonymy refers to the

situation in which two or more things have the same name, or term, and the same defining character (cf. *Cat.* 1a6–7)." (p. 1)
(...)

"The present book on homonymy seeks to augment recent discussions, particularly aspects of Irwin's and Shields' work, by furthering the investigation in some areas and initiating study in others. In brief summary, the present chapters fall into three areas: (1) Aristotle's account of homonymy in *Cat.* 1 and its possible precursors, (2) the utility of homonymy for refining premises in scientific arguments, and (3) the application of homonymy to specific concepts." (p. 3)

35. Wardy, Robert. 2000. *Aristotle in China. Language, Categories and Translation*. Cambridge: Cambridge University Press.

Contents: Preface page IX; 1. The China syndrome: language, logical form, translation 1; 2. Aristotelian whispers 69; Epilogue 150; Glossary of technical terms 153; References 161; Index 166-170."

"Aristotle in China is about the relation between language and thought. That is, of course, a topic of absurdly ambitious scope: it is only slightly less absurd to say that it concerns the particular question of the relation between language and philosophical thought, or even the relation between the Chinese language and Chinese logic. Perhaps readers will concede at the outset that my decision to explore these huge issues through reading Aristotle's *Categories* in Chinese is mere wilful circuitousness, rather than outright absurdity; and I trust that, if they persevere, they will discover that indirection has its compensations.

Chapter 1 introduces, defines and dissects varieties of linguistic relativism, with specific reference to the China question. Chapter 2 is entirely devoted to a reading of the (*ming li t'an*), 'The Investigation of the Theory of Names', a seventeenth century translation of Aristotle's *Categories* into Chinese; indeed, one of my goals is to reanimate an ancient tradition,

both Chinese and Western, by producing a sort of metacommentary.

In principle, philosophers could read chapter 1 and dispense with chapter 2; and Sinologists could study chapter 2 and avoid philosophy: but of course my intention is to address philosophers, classicists, Sinologists, linguists, anthropologists and devotees of missionary studies throughout." (p. IX)

36. Warnock, Mary. 1950. "A Note on Aristotle: *Categories* 6 a 15." *Mind* no. 59:552-554.

"In *Categories* 6a 11 Aristotle says that though it is a characteristic of quantities that they cannot have opposites, it looks as if they could in the case of spatial measurements. This lead him to make a general remark on the notion of opposition, namely that when people talk of opposites they are using a spatial metaphor; that they mean by " opposites " those things which, in the same class, are separated by *the greatest possible distance* from each other. There are two things to notice here. First that Aristotle aims to distinguish, at least roughly, between kinds of terms, by asking whether or not they have opposites. Secondly, that, while he talks about a spatial metaphor, his only attempt to elucidate this metaphor is by translating it into another spatial metaphor, that of " greatest distance between"." (p. 552)

37. Wedin, Michael. 1979. "'Said of' and 'predicated of' in the *Categories*." *Philosophical Research Archives* no. 5:23-34.

Abstract: "Anyone with more than casual interest in Aristotle's *Categories* knows the convention that "predicated of" ["κατηγορεῖται"] marks a general relation of predication while "said of" ["λέγεται"] is reserved for essential predication. By "convention" I simply mean to underscore that the view in question ranks as the conventional or received interpretation. Ackrill, for example, follows the received view in holding that only items within the same category (not arbitrarily, of course) can stand in the being-said-of relation and, thus, that only secondary substances can be said of primary substances. Despite its long received status the convention has never received a fully comprehensive examination and defense. In

fact such an account is needed because, while enjoying considerable textual support, certain passages of the *Categories* appear to clash with the convention. My aim in this paper is, first, to develop and defend the standard interpretation, as I shall call it. Since the standard interpretation has lately been challenged in a closely argued article by Russell Dancy, my defense will proceed partly with an eye to his criticisms. Having met these, I go on to raise some difficulties with the rather unorthodox reading Dancy gives the *Categories*. The crucial point here turns out to be what Aristotle understands by a paronym."

38. ———. 1993. "Non-Substantial Individuals." *Phronesis*. *A Journal for Ancient Philosophy* no. 38:137-165.

Abstract: "The rock bottom items of the *Categories* are individuals. Those neither present-in nor said-of a subject are unproblematic. They are primary substances such as Socrates and Secretariat. But the exact nature of those that are present-in but not said-of a subject is a matter of lively debate. Roughly, two schools of thought dominate discussion. For some, type-III individuals, as I call them, are nonrecurrent accident particulars; for others, they are fully determinate accident properties. I begin with Ackrill's version of nonrecurrence, the progenitor of the modern debate, and then turn to Owen's attack, which established what may be called the new orthodoxy. (1) After assaying Owen's arguments, I consider a kindred but improved version due to Frede. Finally, I argue for a revised version of the standard nonrecurrence view."

(1) Owen, G. E. L. 1965. "Inherence." *Phronesis* 10, 97-105.

39. ———. 1997. "The Strategy of Aristotle's *Categories*." *Archiv für Geschichte der Philosophie* no. 79:1-26.

"The *Categories* begins without fanfare. Missing is the promotional pitch customary in Aristotle's works, and even the obligatory announcement of subject matter is absent. Instead, we are given definitions of three technical notions: homonymy, synonymy, and paronymy. That is all the first chapter contains. In particular, there is no hint as to why Aristotle begins with these notions or how they fit into the *Categories* as a whole. In

fact, by most accounts it is not clear that much would be lost were the first fifteen lines simply omitted. Indeed, chapter two's discussion of $\tau\alpha\ \omicron\nu\tau\acute{\alpha}$ or things that are is arguably a more natural starting place for what follows. For this reason, perhaps, most scholarship has focused on the three *onymies* themselves to the neglect of their wider role in the *Categories*. Some scholars would go so far as to maintain that the first four chapters are little more than a random assemblage of scraps. I shall argue, on the contrary, that the three *onymies* are part of a carefully drawn strategy that underwrites the unity of the first five chapters of the *Categories*. In particular, I propose that they are grouping principles, introduced to isolate the one relation that is able to provide the foundation for the system of categories, namely, synonymy." (p. 1, notes omitted)

40. ———. 2000. *Aristotle's Theory of Substance. The Categories and Metaphysics Zeta*. New York: Oxford University Press.

"This book offers a compatibilist account of the relation between the *Categories* and *Metaphysics Z*. The basic idea is a simple one. The incompatibilist is worried, for example, about the fact that each of these treatises makes a different proposal about the identity of primary substances. According to the first, primary substances are substance individuals—items such as Socrates, Secretariat, and Madame Curie. To avoid unwieldy tags, such as "*Categories*-primary-substances," I shall call these items c-substances. According to the second treatise, primary substances are the forms of c-substances. Because these proposals are deemed incompatible, so are the theories containing them, and likewise for the treatises themselves. However, this line of reasoning, a staple of incompatibilism, assumes that Aristotle meant the theories to occupy the same explanatory space. This seems to me to be false. The theory of *Metaphysics Z* is meant, rather, to explain central features of the standing theory of the *Categories* and so, in effect, it presupposes the essential truth of the early theory. This is the basic idea." (pp. 2-3)

41. Weidemann, Hermann. 1980. "In Defence of Aristotle's Theory of Predication." *Phronesis. A Journal for Ancient Philosophy* no. 25:76-87.

"One of the most characteristic features of Aristotle's theory of predication is the fact that he divides, as G. E. L. Owen puts it, all the predicates of any individual into two groups: those which hold good essentially or *per se* of their subject, as *man* does of Socrates; and those which merely happen to be true of their subject, as *white* does of Socrates.(1)

(...)

The first part of present paper is intended to show that Aristotle's argument in 1007a20-33 relies on a way of distinguishing between essential and accidental predications which does not commit him at all to the alleged confusion of the former with statements of identity that has been ascribed to him not only by Kirwan, but also, as it seems, by Owen, to whom the second part of the present paper is intended to be a rejoinder." (p. 76)

42. Wheeler, Mark Richard. 1999. "The Possibility of Recurrent Individuals in Aristotle's *Organon*." *Gregorianum* no. 80:539-551.

"In 1965, G.E.L. Owen's article "Inherence" sparked a contemporary debate concerning whether or not the nonsubstantial individuals posited by Aristotle in the *Organon* are universals.(1) Owen's antagonists claim that nonsubstantial individuals are nonrecurrent particulars. Owen's defenders claim that nonsubstantial individuals can recur and, hence, are universals.

In this paper, I present an analysis of Owen's position in "Inherence", arguing that Owen commits Aristotle to the possibility of recurrent nonsubstantial individuals which are one in number. The implications of Owen's position for Aristotle's theory of primary substance in the *Organon* are considered. I demonstrate that the modal status of recurring

individuals cannot be determined by Aristotle's explication of being present in a subject at 1a24 of the *Categories*. I then argue that, according to the sameness conditions laid down by Aristotle in the *Topics*, it is impossible for something which is one in number to recur and, hence, that it is impossible both for substantial individuals and for nonsubstantial individuals to be universals." (pp. 539-540, notes omitted)

43. ———. 2001. "κατηγορία in the *Topics* and the *Categories*." *Journal of Neoplatonic Studies* no. 8:37-60.

"The term *kategoria* in Aristotle's *Topics* and *Categories* denotes predicates. Hence the categories are best understood as classifying predicates and not predications. The equivocal use of the term in *Top.* 1, 9 is related to its use in signifying either linguistic or non-linguistic entities, and not because it can be used to mean *predication*."

44. Zingano, Marco. 2024. "Aristotle's Categories: Ontology Without Hylomorphism." In *New Essays on Aristotle's Organon*, edited by Mesquita, António Pedro and Santos, Ricardo, 35-49. New York: Routledge.

"In examining Aristotle's *Categories*, I will mainly focus on attempting to understand what Aristotle means to do with the list of categories he provides us with in Chapter 4 of this treatise, some of which he goes on to examine in detail.(1) This is a classical topic and a hotly debated one since antiquity as well. My goal is limited, for I only want to see whether the text as it now stands can give us clues about this issue when we pay attention to its formal structure and put aside – even if only momentarily – other works, especially his *Metaphysics*, in which hylomorphism is the key notion on which to ground the categories. Hylomorphism is absent from the *Categories*, and I will try to read this treatise neither as announcing it nor as being conceived under its shadow. Whether or not such an enterprise pays off depends on how far we are willing to read the *Categories* free from Aristotle's favoured and most celebrated view of matter and form as the principles of what there is.

My proposal is thus to read the *Categories* free from any shadow of hylomorphism.

Avoiding hylomorphism requires one not only to abandon the search for the concepts of matter and form, or their antecedents, but also, and more importantly, not to seek for a causal link between primary substances and the secondary substances or the other categories. Hylomorphism, in effect, is

doctrine in which form is the cause of this piece of matter being the determinate object it is. In the *Categories*, in contrast, Aristotle is keen on emphasising his grounding thesis as he reiterates six times in Chapter 5 that individuals or primary substances are the basic ontological items because everything else is either said of them (secondary substances) or inhere in them (all the other categories) but eschews from engaging in any causal explanation of his dependency doctrine. He does speak of soul and body in the *Categories* but does not take them as pieces of an explanatory scheme of what a thing is, nor is he interested in examining the nature of soul or its relation to the body. When writing the *Categories*, Aristotle is, or so I will argue, innocent of hylomorphism; and I would like to see how successful such an enterprise can be, and to which extent." (p. 35)

(1) I take for granted the unity and authenticity of the *Categories*. For an illuminating study on this issue, see Michael Frede's paper (1987), originally published in 1983 and, more recently, Bodéüs (2001).

Bibliographie des études en Français sur les *Catégories* d'Aristote (A - F)

Bibliographie

1. Achard, Martin. 2000. "Tradition et histoire de l'Aristotélisme. Le point de vue des indices externes dans le problème de l'authenticité du traité des *Catégories*." *Laval Théologique et Philosophique* no. 56:307-351.

Résumé : "Un examen critique des indices externes mis de l'avant pour défendre l'authenticité des *Catégories* ne permet pas de conclure de façon positive. On trouvera ici un résumé de l'état de la question de ce point de vue externe, plutôt qu'une analyse du contenu du traité qui seule pourrait faire avancer le débat."

2. Aubenque, Pierre. 1962. *Le problème de l'être chez Aristote. Essai sur la problématique aristotélicienne*. Paris: Presses Universitaires de France.

"Notre ambition est simple et se résume en peu de mots : nous ne prétendons pas apporter du nouveau sur Aristote, mais au contraire tenter de désapprendre tout ce que la tradition a ajouté à l'aristotélisme primitif. On pourrait sourire de cette prétention et n'y voir que la fausse modestie de tout interprète, toujours préoccupé d'annoncer qu'il va laisser parler son auteur. Mais cette volonté de dépouillement et de retour aux sources a, lorsqu'il s'agit d'Aristote, un sens précis. Ce n'est pas ici le lieu de rappeler dans quelles conditions, de mieux en mieux dégagées par l'érudition contemporaine (3), l'oeuvre d'Aristote a été transmise à la postérité.

Mais il n'est pas indifférent, même et surtout pour la compréhension philosophique, d'avoir toujours présentes à l'esprit les circonstances particulières de cette transmission : l'Aristote que nous connaissons n'est pas celui qui vivait au IV^e siècle av. J.-C., philosophe philosopant parmi les hommes, mais un Corpus plus ou moins anonyme édité au I^{er} siècle av. J.-C. Il n'est pas surtout que, dans l'ignorance de la chronologie, nous ayons décidé d'envisager ces écrits comme s'ils étaient contemporains les uns des autres et que nous ayons entrepris d'en dégager une doctrine commune : il va de soi que notre compréhension du kantisme en eût été singulièrement altérée et probablement affaiblie. Une première conclusion s'impose, qui va à l'encontre d'une erreur d'optique largement répandue : les commentateurs, même les plus anciens, et même s'ils avaient en leur possession des textes que nous avons perdus depuis lors, n'ont par rapport à nous aucun privilège historique. Commentant Aristote plus de quatre siècles après sa mort, séparés de lui non par une tradition continue, mais par une éclipse totale de son influence proprement philosophique, ils n'étaient pas mieux placés que nous pour le comprendre. Comprendre Aristote autrement que les commentateurs, même grecs, ce n'est donc pas nécessairement le moderniser, mais peut-être s'approcher davantage de "l'Aristote historique." (pp. 3-4. deux notes omises)

3. ——. 1967. "Aristote et le langage." *Annales de la Faculté des Lettres d'Aix* no. 43:85-105.

Avec une "Note annexe sur les Catégories d'Aristote. À propos d'un article de M. Benveniste" (pp. 103-105), sur Émile Benveniste, *Catégories de pensée et catégories de langage*, Études Philosophiques, 4, 1958.

Repris dans: P. Aubenque, *Problèmes aristotéliens. I. Philosophie théorique*, Paris, Vrin 2009, pp. 11-30.

"L'étude ci-dessus était entièrement rédigée lorsque nous avons pris connaissance d'un important article de M. E. Benveniste sur «Catégories de pensée et catégories de langage », qui nous

avait échappé lors de sa première publication (*Études philosophiques*, n° 4, 1958) et qui vient d'être reproduit dans un ouvrage du même auteur, *Problèmes de linguistique générale* (Paris, 1966, p. 63-74). Dans cette étude, l'éminent linguiste veut montrer, en prenant comme exemple la liste des dix catégories d'Aristote, que des catégories qui se donnent pour des « catégories de pensée », donc pour des « catégories universelles », sont, en réalité, quoique de façon « inconsciente » (p. 63), des « catégories linguistiques », lesquelles sont toujours « catégories d'une langue particulière » (p. 65): ainsi, « Aristote, raisonnant d'une manière absolue, retrouve simplement certaines des catégories fondamentales de la langue dans laquelle il pense » (p. 66)." (p. 26)

(...)

"Le langage est avant la lettre pour Aristote l'équivalent de ce que Kant appellera le « transcendantal » et quel' auteur de la *Critique de la Raison pure* aura peut-être le tort de vouloir chercher dans une pensée qui serait en deçà du langage - comme si une telle pensée existait. En tout cas, lorsque M. Benveniste dit des « penseurs grecs » que « les catégories [grammaticales] qu'ils ont instaurées (nom, verbe, genre grammatical, etc.) reposent toujours sur des bases logiques ou philosophiques » (p. 19), nous ne pouvons pas le suivre, dans l'exacte mesure où lui-même nous montre que la philosophie grecque des catégories et la logique grecque de l'attribution tirent leur substance de leur substrat linguistique. En fait, la grammaire grecque dérive bien de la logique et de la philosophie, mais d'une logique et d'une philosophie qui, chez Aristote du moins, sont une réflexion sur le langage. C'est ce mouvement qui, du langage spontané, conduit par la philosophie à son « administration » par la logique et la grammaire, que nous avons essayé de décrire chez Aristote." (p. 29)

"Les études ici rassemblées sont issues des travaux du Centre de recherches sur la Pensée antique de l'Université de Paris-Sorbonne (Centre Léon-Robin), laboratoire associé au C.N.R.S. Elles s'inscrivent dans un projet d'ensemble, qui vise à dégager les interférences entre pensée et langage dans le monde antique. Il nous a semblé que la question devait être envisagée d'abord à propos des catégories, ces concepts généraux qui organisent la perception et la compréhension que nous avons des choses et du monde et dont on peut se demander s'ils sont des structures universelles de toute pensée ou s'ils sont liés aux particularités sémantiques ou syntaxiques d'un système linguistique déterminé." (Préface, VII)

(...)

"Dans le séminaire qui est à l'origine des contributions qu'on lira ci-dessous, nous avons pris pour base le texte du traité aristotélicien des *Catégories* et son commentaire par Simplicius, lequel nous a du reste amenés à étendre nos

recherches du côté du néoplatonisme. Après une bibliographie critique due à D. O'Brien et une étude de B. Dumoulin, qui s'interroge sur l'authenticité aristotélicienne du traité des *Catégories*, on trouvera dans ce recueil des études consacrées à chacune des principales catégories : l'essence et ses traductions latines (J. F. Courtine), la quantité (D. O'Brien), la relation (F. Zaslowsky), la qualité (M. Narcy), l'action et la passion (N. Vamvoukakis), le lieu et le temps (Ph. Hoffmann et L. Routila). Une étude qu'a bien voulu nous confier J. Pépin éclaire ensuite, sur un point particulier, la postérité des catégories aristotéliciennes.

A la façon dont le traité des *Catégories* se termine par des « Post-prédicaments », nous avons joint à ce recueil trois études portant sur des notions générales et difficilement définissables, liées d'une façon ou d'une autre à la problématique des catégories, et dont l'examen autorise d'intéressantes comparaisons entre l'aristotélisme et d'autres doctrines, notamment le stoïcisme : il s'agit des notions de *pragma* (P. Hadot), de *diathesis* (R. Brague) et de *ptôsis* (casus) (J. L. Delamarre)." (Préface, XIV)

5. ———. 1980. "Pensée et langage chez Aristote. À propos des *Catégories*." In *Concepts et catégories dans la pensée antique*, edited by Aubenque, Pierre, VII-XIV. Paris: Vrin.

Repris dans P. Aubenque, *Problèmes aristotéliciens. Philosophie théorique*, Paris: Vrin 2009, pp. 31-38.

"La question des rapports entre la pensée et le langage s'est cristallisée dans l'Antiquité autour de la notion de *catégorie*. Cette expression désigne à partir d'Aristote les concepts généraux qui organisent la perception et la compréhension que nous avons des choses et du monde. Certes, de tels concepts apparaissent à Aristote comme des catégories objectives de l'être et non comme des catégories subjectives de la pensée. Mais cette opposition n'est pas aussi tranchée qu'il y paraît, car les catégories sont d'abord et avant tout des catégories du langage. Or il est permis aujourd'hui de se demander, avec les progrès de la linguistique et de la philosophie comparée, si les catégories aristotéliciennes sont des structures universelles de

toute pensée, universelles parce que reflets objectifs de la réalité, ou si elles sont liées aux particularités contingentes, tant syntaxiques que sémantiques, d'un système linguistique déterminé.

Pour apporter quelques éléments de réponse à cette question, on voudrait ici, sinon esquisser une histoire de la doctrine des catégories, du moins indiquer quels problèmes d'interprétation ont été soulevés à leur propos dès l'Antiquité et montrer comment cette problématique traditionnelle s'est enrichie depuis le xix^e siècle de perspectives nouvelles." (p. 31)

6. Barnes, Jonathan. 2005. "Les *Catégories* et les catégories." In *Les Catégories et leur histoire*, edited by Bruun, Otto and Corti, Lorenzo, 11-80. Paris: Vrin.

"Bien que maintes préfaces affirment le contraire, les actes d'un colloque ne constituent jamais un livre. Les Actes du Colloque de Genève ne font pas exception: même si un thème commun les unifie, ils ne racontent pas une histoire linéaire. C'est pourquoi nous avons ajouté aux Actes une longue introduction. Ce chapitre, *Les Catégories et les Catégories*, de la plume de Jonathan Barnes, vise à esquisser, dans ses grandes lignes, l'histoire des *Catégories* d'Aristote et de la théorie aristotélicienne des Catégories, et d'y encadrer les différents épisodes décrits par chacun des chapitres suivants. Un lecteur qui voudrait lire ce volume comme on parcourerait un livre pourrait donc suivre le texte de l'introduction, tout en y intercalant les chapitres là où une note en bas de page les mentionne. L'index nominum et rerum, l'index locorum et la bibliographie, qui se trouvent à la fin de ce volume et qui s'appliquent à tous les chapitres, lui permettront d'établir d'autres liens entre eux." (Préface, p. 7)

7. Benveniste, Émile. 1958. "Catégories de pensée et catégories de langue." *Les Études Philosophiques* no. 13:419-429.

Repris dans: É. Benveniste, *Problèmes de linguistique générale*, Paris: Gallimard, 1966, pp. 63-74.

Translated in English as *Categories of Thought and Language*, by Mary E. Meek in: *Problems in General Linguistics*, Coral

Gables: University of Miami Press, 1971, pp. 55-64.

"Tout en admettant que la pensée ne peut être saisie que formée et actualisée dans la langue, avons-nous le moyen de reconnaître à la pensée des caractères qui lui soient propres et qui ne doivent rien à l'expression linguistique ? Nous pouvons décrire la langue pour elle-même. Il faudrait de même atteindre directement la pensée. S'il était possible de définir celle-ci par des traits qui lui appartiennent exclusivement, on verrait du même coup comment elle s'ajuste à la langue et de quelle nature sont leurs relations.

Il semble utile d'aborder le problème par la voie des « catégories » qui apparaissent en médiatrices. Elles ne présentent le même aspect suivant qu'elles sont catégories de pensée ou catégories de langue. Cette discordance même pourrait nous éclairer sur leur nature respective.

(...)

"Or, nous avons la bonne fortune de disposer de données qu'on dirait prêtes pour notre examen, élaborées et présentées de manière objective, intégrées dans un ensemble connu : ce sont les catégories d'Aristote."

(...)

"Aristote pose ainsi la totalité des prédicats que l'on peut affirmer de l'être, et il vise à définir le statut logique de chacun d'eux. Or, il nous semble - et nous essaierons de montrer - que ces distinctions sont d'abord des catégories de langue, et qu'en fait Aristote, raisonnant d'une manière absolue, retrouve simplement certaines des catégories fondamentales de la langue dans laquelle il pense. Pour peu qu'on prête attention à l'énoncé des catégories et aux exemples qui les illustrent, cette interprétation, non encore proposée apparemment, se vérifie sans longs commentaires. Nous passons en revue successivement les dix termes." (pp. 65-66)

8. Bernier, Réjane. 1999. "La quantité chez Aristote : son rôle en physique, mathématique et métaphysique." *Archives de Philosophie* no. 62:595-637.

Résumé : "L'article présente d'abord quelques considérations épistémologiques et rappelle que, pour Aristote, le principe de connaissance de la quantité est le sens commun qui regroupe et unifie les données des sens propres relativement à chacun de leurs objets. Par la suite, l'étude analyse les différents modes de quantité : discrète et concrète et montre que, en physique, c'est surtout la quantité concrète qui joue un rôle dans l'être matériel en étant à l'origine des déterminations des espèces de qualités : 1) états - dispositions et aptitudes - inaptitudes ; 2) qualités sensibles ; 3) forme-figure. L'article soulève les difficultés du passage de la physique à la mathématique et recherche la nature de la quantité utilisée en géométrie. En dernier lieu, il propose une réflexion sur l'être de la quantité et signale les difficultés soulevées par la considération d'une part, de la quantité comme accident proposée dans les *Catégories* et d'autre part, de celle de la matière composante de la substance de la théorie hylémorphique. L'étendue au terme de l'abstraction des dimensions est-elle autre que la matière ?"

9. Bodéüs, Richard. 1984. "Aux origines de la doctrine aristotélicienne des *Catégories*." *Revue de Philosophie Ancienne* no. 2:121-137.

"Les commentateurs anciens d'Aristote avaient l'habitude de justifier le titre des ouvrages du Stagirite qu'ils se proposaient d'expliquer(1). Touchant le court traité des *Catégories*, certains ont eu soin de noter d'emblée que le terme Κατηγορία n'avait point, en l'occurrence, la signification ordinaire que lui confère la langue du droit ("accusation" ou "chef d'accusation") (2). Mais aucun ne s'est risqué à dire si la signification du même terme dans le langage spécialisé de la logique avait quelque rapport avec celle, d'ailleurs historiquement plus ancienne, que possède le mot dans le vocabulaire judiciaire. Aussi bien n'ont-ils pas, non plus que les modernes à notre connaissance, posé la question de savoir dans quelle mesure la notion aristotélicienne de "catégorie" et, plus généralement, la doctrine des figures de prédication pouvaient être héritées des réflexions que fit naître, en Grèce, la pratique des tribunaux et des cours de justice.

C'est cette question que nous voudrions ici tâcher d'éclairer."
(p. 121, note 3 omise)

10. ——. 1995. "Sur l'unité stylistique du texte des *Catégories*." In *Aristotelica Secunda. Mélanges offerts à Christian Rutten*, edited by Motte, André and Denooz, Joseph, 141-154. Liège: Université de Liège. Faculté de Philosophie et Lettres.

"Monsieur Christian Rutten a jadis proposé une chronologie relative de différents morceaux découpés dans le texte des *Catégories*(= C) (1). Mais il a naguère reconnu comme « non négligeables» les arguments de M. Frede en faveur de l'unité de ce texte sur le plan linguistique(2). Il acceptera donc, je l'espère, de considérer les observations que j'avance ici à l'appui de la même thèse.

L'enjeu de celle-ci est la question de savoir si le texte de C, comme on le croit traditionnellement, juxtapose artificiellement l'ébauche d'un traité des « catégories» (chap. 1-9 = CA) et les notes qui constituent les « postprédicaments » (chap. 10-15 = CB) ou bien s'il présente, au contraire, les pièces d'une enquête unitaire, d'abord intitulée *Avant les lieux*, où entrent, au même titre, les exposés de la première et ceux de la seconde partie, de la même façon que dans le répertoire analogue de *Métaphysique* Λ . En faveur de la seconde hypothèse, il y a précisément le parallélisme des matières principales traitées en C et en Λ 3. Ce parallélisme ne nie pas les différences de toutes sortes, spécialement doctrinales, entre les deux répertoires, mais il établit empiriquement la possibilité que C soit, lui aussi, comme Λ , un répertoire qui unit en série les distinctions de CA et de CB. L'unité stylistique de ces deux parties devrait offrir à cet égard un argument supplémentaire. On l'établira, ci-après, en relevant les ressemblances significatives qu'on peut observer entre CA et CB et qui

paraissent opposer leur style commun à celui, différent, de Λ ." (pp. 141-142)

11. ——. 1996. "En relisant le début des *Catégories*. L'expression $\lambda\acute{o}\gamma\omicron\varsigma$ τς οσίας." *Revue des Études Grecques* no. 109:709-718.

"Les commentateurs anciens d'Aristote avaient l'habitude de justifier le titre des ouvrages du Stagirite qu'ils se proposaient d'expliquer(1). Touchant le court traité des *Catégories*, certains ont eu soin de noter d'emblée que le terme $\kappa\alpha\tau\eta\gamma\omicron\rho\iota\alpha$ n'avait point, en l'occurrence, la signification ordinaire que lui confère la langue du droit ("accusation" ou "chef d'accusation") (2). Mais aucun ne s'est risqué à dire si la signification du même terme dans le langage spécialisé de la logique avait quelque rapport avec celle, d'ailleurs historiquement plus ancienne, que possède le mot dans le vocabulaire judiciaire. Aussi bien n'ont-ils pas, non plus que les modernes à notre connaissance, posé la question de savoir dans quelle mesure la notion aristotélicienne de "catégorie" et, plus généralement, la doctrine des figures de prédication pouvaient être héritées des réflexions que fit naître, en Grèce, la pratique des tribunaux et des cours de justice.

C'est cette question que nous voudrions ici tâcher d'éclairer (3)." (p. 709)

(1) A ce sujet, voir, en dernier lieu; P. Donini, *Le scuole, l'anima, l'impero: la filosofia antica da Antioco a Plotino*, Turin, 1982, pp. 54 sqq.

(2) Comparez, par exemple: Olympiodore dans CIAG, XII, p. 22; Philopon dans CIAG, XIII, l, p. 12 et Elias dans CIAG, XVIII, p. 127.

(3) Simplicius (*Comm. in Cat.*, 2, pp. 15 - 25), suivi par Ammonios (*Comm. in Cat.*, 14, 1 - 3; 54. 3), déclarait que l'inventeur des catégories n'était pas Aristote, mais Archytas de Tarente. Il ajoutait cependant que l'ordonnance des catégories en système était l'oeuvre d'Aristote. En l'absence de renseignements précis sur l'originalité d'Archytas, nous sommes exposés au risque de prêter au Stagirite des trouvailles dont il

n'a peut-être pas le mérite. Nous tâcherons ici d'éviter l'écueil en considérant principalement la systématisation des catégories en une doctrine et en nous demandant ce que pareille systématisation pourrait devoir à une réflexion sur les pratiques judiciaires.

12. ———. 1997. "Le texte grec des "Catégories" d'Aristote et le témoignage du *Commentaire* de Porphyre." *Documenti e Studi sulla Tradizione Filosofica Medievale* no. 8:121-141.
13. ———. 1997. "Sur un passage corrompu des *Catégories* d'Aristote." *Philologus* no. 141:39-45.

"Je voudrais ici tâcher de résoudre un problème épineux que pose l'établissement du texte d'Aristote en *Catégories*, 5, 2b 3 - 6 et tirer les enseignements que suggère la solution de ce problème.

Voici le contexte où prend place le passage litigieux que je considère. Ayant distingué la substance de ses accidents (qui sont dans un sujet) et la substance première de la substance seconde (qui se dit d'un sujet), Aristote pose, en 2 a 34-35, la thèse suivante: «tout le reste ou bien se dit de sujets que sont les substances premières ou bien se trouvent en elles comme

sujets». Cette these étant posée, le philosophe passe à son illustration à l'aide de deux exemples, l'un de nature substantielle, l'autre de nature accidentelle (1 a 35-b 3), puis, il conclut. C'est ici que se situe le passage controversé." (p. 39)

14. ——. 1997. "Une glose chrétienne fourvoyée dans le texte des *Catégories* d'Aristote." *Revue des Études Grecques* no. 110:627-631.

"Le texte intitulé traditionnellement *Catégories*, qui fait partie du *Corpus Aristotelicum*, n'a rien d'un texte théologique. Et s'il y est question de la «substance première» (2 A 11 et sqq.), cette appellation ne vise pas la substance divine ; elle est réservée à toutes les individualités substantielles, par opposition à leurs espèces et à leurs genres, réputés « substances secondes ».

En fait, l'époque hellénistique semble d'abord avoir reconnu dans ce texte un recueil de distinctions à l'usage de la dialectique. Il portait alors le titre Avant les lieux (Τα προ τῶν τοπῶν), attesté dans les plus anciens catalogues des oeuvres d'Aristote (Diogène-Laërce, V, 24; *Vita Menagiana*, n° 57 dans *Ar. opera*, III, Ed. O. Gigon, Berlin, 1987, p. 25 a 8). Encore défendu comme authentique au IIe siècle de notre ère, notamment par Adraste d'Aphrodise et Herminos, ce titre ancien paraît avoir été disqualifié très tôt au profit de l'appellation *Catégories*, peut-être déjà par Andronicos de Rhodes (Ier siècle avant J.-C.) et ses principaux successeurs, qui placèrent l'ouvrage en question en tête du *Corpus*.

Cette situation nouvelle entraîna plusieurs conséquences. Passant pour une introduction à la philosophie aristotélicienne, le traité reçut une avalanche de commentaires jusqu'à la fin de l'Antiquité et bien au-delà. D'autre part, l'attention des commentateurs se concentra sur la première partie du texte, la seule où il soit question des quatre principales « catégories » (substance, quantité, relation et qualité), et avec laquelle, selon certains manuscrits médiévaux, s'achève le traité des *Catégories* (τέλος τῶν Ἀριστοτέλους κατηγοριῶν, lit-on, après 11 b 15, dans le Vat. Urbinas 35, le Ven. Marcianus gr. 201 et le Flor. Laurentianus gr. 72,5). Quoique beaucoup plus maigres,

des commentaires anciens de la seconde partie sont néanmoins conservés.

Ceux de Dexippe, Ammonios, Simplicius, Philopon, Olympiodore et David (Elias) l'ont été dans des manuscrits indépendants. Certains alternent, dans d'autres manuscrits, avec le texte des *Catégories* lui-même; on en retrouve aussi la trace sous forme de gloses marginales, dans plusieurs manuscrits (à commencer par Y Urbinas 35), qui transmettent essentiellement le texte des *Catégories* et où se mêlent d'autres gloses de provenances diverses, que l'on n'a pas encore étudiées en profondeur. Je propose ici d'identifier l'une de ces dernières gloses, qui paraît d'origine chrétienne et qui s'est introduite dans le texte des *Catégories*, tel que rapporté dans plusieurs manuscrits importants, parce qu'anciens." (p. 627)

15. ———. 2001. "Introduction." In *Aristote. [Catégories]*, XI-CLXXXVII. Paris: Les Belles Lettres.

"D'un point de vue particulier, les « catégories » sont simplement les différents genres d'indications fournies par les imputations que supposent l'attribution à un sujet de son espèce ou de son genre. D'un point de vue universel, les mêmes imputations sont ramenées à l'unité d'un genre nouveau (l'essence), et celles qui peuvent en outre s'attribuer à « autre chose » (c'est-à-dire, le plus souvent, à la substance) apparaissent à titre d'imputations accidentelles. Le point de vue est plus universel parce qu'il introduit une distinction plus générale que la première, faisant apparaître, de façon explicite, que toutes les imputations peuvent être essentielles et, de façon implicite, que toutes, sauf celle qui indique une substance, peuvent être aussi accidentelles. Mais cette nouvelle distinction (de l'essence et de l'accident) n'empêche pas de voir que ce qui fondamentalement distingue les imputations les unes des autres, c'est la nature de l'indication fournie sur un sujet par un prédicable. L'indication d'une qualité, à titre essentiel ou non, se distingue de l'indication d'une quantité, uniquement par la nature des prédicables. Et, à titre essentiel, elle ne se distingue également de l'indication d'une substance qu'en raison de la nature des prédicables en cause.

Par conséquent, on peut légitimement supposer, sans contradiction, deux tables des « catégories », l'une universelle, qui prend en considération le genre des imputations essentielles aux côtés des neuf imputations non essentielles, et l'autre, particulière mais incluse dans la première, qui se borne à considérer les imputations essentielles." (p. LXXXV)

16. ———. 2005. "La substance première dès *Catégories* à la *Métaphysique*." In *La "Métaphysique" d'Aristote : Perspectives Contemporaines*, edited by Nancy, Michel and Tordesillas, Alonso, 131-144. Paris: Vrin.

"L'opinion commune aujourd'hui veut que la *Métaphysique* (en tout cas. les livres centraux ZHΘ) modifie l'ontologie ancienne qu'Aristote aurait défendue dans le traité des *Catégories*. Cette opinion « génétiste » repose sur deux arguments. D'un côté, la *Métaphysique* transférerait sur la forme individuelle la primauté sustantielle reconnue par les *Catégories* au composé individuel ; de l'autre, elle refuserait désormais le statut de substance attribué à l'universel par les *Catégories*. La théorie des *Catégories* serait ancienne en ceci qu'elle témoignerait d'une époque où l'individu substantiel n'aurait pas encore été analysé de façon appropriée en forme et matière(2).

L'opinion commune et ses arguments perdent de leur crédit si l'on peut montrer d'abord que l'analyse de l'individu se présente, en fait, de manière identique dans tous les textes incriminés." (pp. 131-132)

(2) « L'analyse des *Catégories* est antérieure. [...] Aucun des ouvrages inclus dans l'*Organon* [...] ne mentionne la matière. La raison peut en être (i) qu'Aristote n'y avait pas, encore pensé (sic), ou (ii) qu'il pensait que cela n'avait rien à voir avec les sujets étudiés dans l'*Organon*. La première explication est probablement (bien qu'elle n'ait rien d'incontestable) préférable » (T. Irwin & G. Fine, *Aristotle : Sélections*, Translated with Introduction, Notes, and Glossary, Indianapolis-Cambridge, 1995, p. xvi).

17. Brague, Rémi. 1980. "De la disposition. A propos de *DIATHESIS* chez Aristote." In *Concepts et catégories dans la*

pensée antique, edited by Aubenque, Pierre, 285-307. Paris: Vrin.

"Le mot *diathesis* a connu dans l'histoire de la langue et de la pensée grecques, depuis son apparition, probablement chez Antiphon le Sophiste, jusqu'à l'explosion rhétorique, patristique, scientifique, un parcours long et mouvementé. Il ne s'est jamais fixé sur une seule acception technique, et il est resté toujours ouvert sur l'évolution vivante de la langue, dont il a sans cesse reçu de nouvelles spécialisations. S'il est difficile d'en isoler le sens ou les sens proprement philosophique(s) de ses autres acceptions, techniques ou non, il est facile de le traduire : le français « disposition » le décalque assez exactement, et en reprend à peu près tous les aspects. Chez Aristote également, le mot, ainsi que les verbes qui y correspondent, a de multiples sens. Plutôt que d'en rechercher une unité a priori ou que de classer ses différentes acceptions, nous essaierons de parcourir la série de celles-ci en suivant la logique interne du concept."
(p. 285)

18. Brentano, Franz. 1992. *Aristote. Les diverses acceptions de l'être*. Paris: Vrin.

Traduction française par Pascal David de *Von der mannigfachen Bedeutung des Seienden nach Aristoteles* (1862).

Présentation. "Cette dissertation légendaire de Franz Brentano (1838-1917), éditée à Fribourg en 1862, prend pour fil conducteur de son interprétation de la « métaphysique » comme science de « l'être en tant qu'être » le leitmotiv : « l'être se dit pluriellement ». Mais quelle en est alors la signification directe et unitaire?

L'ambition de Brentano est de reconstituer une doctrine dont il s'agit à la fois de montrer et de sauver la cohérence. Le primat accordé à l'acceptation catégoriale de l'être amène à restituer un « arbre généalogique » des catégories dont le chatoiement correspond strictement à la diversité des modes de prédication de la « substance première ». Même si la question reste posée de savoir si la plurivocité de l'être se ramène essentiellement à la diversité catégoriale, ou si, au contraire, les catégories

n'illustrent qu'une pluralité restreinte, au sein d'une acceptation de l'être dont elles déclinent les « modalités » ou les « figures », mais dont rien ne dit qu'elle serait souveraine, cette magistrale initiation demeure un jalon incontournable dans l'histoire de la réappropriation moderne d'Aristote et du problème que pose la constitution d'une ontologie."

Table des matières : Véronique Brière : Présentation 1; Leone Gazziero : οἰκείως τῇ λογικῇ πραγματεία (Simplicii in *Aristotelis categorias commentarium*, 12.11). Contraintes disciplinaires – anciennes et modernes – de l'interprétation logique des Catégories d'Aristote 9; Francis Wolff : Des genres de la prédication aux genres de l'être 59; Annick Jaulin : L'usage aristotélicien des catégories dans la Métaphysique 81; Stephen Menn : Métaphysique, Dialectique et traité des Catégories 99; Richard Bodéüs : La postériorité des relatifs selon Aristote 131; Maddalena Bonelli : Les relatifs dans les Catégories d'Aristote 149; Jonathan Barnes : Syllogistique et classification des prédicats 169; Véronique Brière : Catégories et enjeux du skhêma dans les Réfutations sophistiques 191; Jean Baptiste Gourinat : Les stoïciens et les catégories d'Aristote 231; Valérie Cordonier : Problématique passion : les catégories du changement selon Alexandre d'Aphrodise 261; Annexe : traduction de la Question I, 21 313; Philippe Hoffmann : Les analyses de l'énoncé : catégories et parties du discours selon les commentateurs néoplatoniciens 315; Juliette Lemaire : Vers les catégories et au-delà. Porphyre et les catégories 363; Bibliographie 379-399.

"L'objet de ce volume n'est pas le traité des *Catégories* en tant que tel, pas plus qu'il ne s'agit de discuter des traductions en tant que telles ; nous souhaitons tenter de synthétiser, à partir de quelques-une des lectures actuelles les plus pertinentes, les perspectives sur des questions de fond, touchant en particulier à la cohérence et à l'unité potentielle des analyses et des usages aristotéliciens de la *kategoria* : par l'interprétation des liens et des continuités entre les différents textes, au gré de l'écho

donné par les lectures anciennes qui ont voulu prendre la mesure de ce concept aristotélicien (par les néoplatoniciens et les stoïciens), les études rassemblées ici illustrent la profondeur même de la doctrine des catégories, en reconnaissant aussi bien une identité formelle, une certaine permanence de l'objet *kategoria* et de son contenu, que la diversité même des styles d'approche ou des usages de la notion par Aristote." (p. 4)

20. Brunschwig, Jacques. 1969. "La proposition particulière et les preuves de non-concluance chez Aristote." *Cahiers pour l'Analyse* no. 10:3-26.

Repris dans Albert Menne, Niels Offenberger (Hrsg.), *Über den Folgerungsbegriff in der aristotelischen Logik*, Hildesheim: Georg Olms, 1982, pp. 182-205.

"Je me propose ici d' étudier une incidence particulière avec quelque détail: le problème que posent le sens et l'usage de la proposition particulière, notamment en rapport avec le rôle qu'elle joue dans les procédures par lesquelles est démontrée la non-concluance des couples de prémisses autres que ceux des modes syllogistiques valides. J'espère en effet montrer que les textes relatifs à ces questions manifestent une modification significative de l'attitude d'Aristote, et qu'ils permettent de saisir sur le vif le travail du logicien, d'abord victime des équivoques du langage naturel, prenant ensuite de ces équivoques une conscience progressive, sous la poussée interne des problèmes eux-mêmes, et parvenant enfin à les maîtriser. Au terme de cette évolution, la proposition particulière abandonne celles de ses connotations usuelles qui perturbent son maniement logique, et n'est plus définie que par sa place dans un système d'oppositions, avec toutes les conséquences que cela comporte." (p. 5)

21. Caujolle-Zaslavsky, Françoise. 1980. "Les relatifs dans les *Catégories*." In *Concepts et catégories dans la pensée antique*, edited by Aubenque, Pierre, 167-195. Paris: Vrin.

"La présente étude des relatifs ($\tau\acute{\alpha}$ πρὸς τι) porte exclusivement sur les *Catégories*, notre intention étant de souligner que la recherche menée dans ce traité a un caractère propre et distinct, caractère dont l'originalité semble échapper aux

commentateurs qui ont lu les *Catégories* à la lumière de la *Métaphysique*.

1. La question de l'ordre des catégories. Le point de vue logique.

Les relatifs n'occupent pas toujours la même place dans l'énumération des catégories : on les trouve — notamment — tantôt avant et tantôt après la qualité. Ainsi, par exemple, dans la liste du début des *Catégories* (1b 25 sqq.), ils sont précédés par la substance, la quantité et la qualité, alors que dans le corps de l'ouvrage ils sont étudiés avant la qualité, tout de suite après la quantité ; l'ordre initialement indiqué n'étant d'ailleurs pas mieux respecté pour les catégories restantes : en fin de compte, seules les deux premières catégories de la liste (substance et quantité) conserveront leur rang initial. Dans les autres ouvrages, les relatifs sont promenés de la cinquième place de la table jusqu'à la première elle-même, suivant les circonstances. C'est en quatrième position, toutefois — après la substance, la quantité et la qualité (ou la qualité et la quantité), qu'ils figurent le plus souvent dans les textes (énumérations simples ou analyses de détail)." (p. 167)

23. Côté, André. 1964. "Le nombre des catégories aristotéliennes." *Laval théologique et philosophique* no. 29:165-175.

"Il nous est parvenu d'Aristote un petit traité de logique(2) dont l'unique but, semble-t-il, est de vouloir ramener toutes choses à l'une ou l'autre de dix catégories. L'usage constant que fait l'auteur des noms de ces catégories dans tous ses autres traités n'est pas sans suggérer qu'il serait tout à fait impossible de faire oeuvre de science telle que l'entend Aristote sans l'aide de ces catégories. Or, l'on est forcé de noter que l'énumération qu'il en fait lui-même en plusieurs traités différents n'est pas toujours la même : en fait, et le nombre et l'ordre des choses énumérées varient.

La chose n'a pas été sans attirer l'attention de nombreux successeurs d'Aristote, et, disciples comme critiques lui ont le plus souvent accordé un intérêt qui dépassait la simple curiosité. Mais les explications

proposées par les uns ou les autres n'ont pas toujours touché, à notre avis, le fond du problème qui nous apparaît comme étant strictement d'ordre logique. Il semble donc que toute solution éventuelle du problème tel que posé devrait s'appuyer sur les réponses aux deux questions préliminaires suivantes, à savoir : quel est le rôle précis que jouent les *Catégories* dans l'ensemble de la logique aristotélicienne; et, est-il possible de démontrer, d'une preuve proprement logique, le nombre de ces catégories ?

Nous nous limiterons ici à suggérer une réponse à ces deux questions, réponse que nous croyons se rattacher à une certaine tradition logique à laquelle nous aimerions associer les noms de Porphyre, Boèce et Albert le Grand en particulier." (p. 165, une note omise)

25. Courtine, Jean-François. 2004. "La question des catégories : le débat entre Trendelenburg et Bonitz." In *Aristote au XIX siècle*, edited by Thouard, Denis, 63-80. Villeneuve d'Ascq: Presses Universitaires du Septentrion.

"La critique de Bonitz

Le petit traité de Hermann Bonitz (*Über die Kategorien des Aristoteles*, 1853) trouve son point de départ dans une confrontation critique explicite avec Trendelenburg; «l'objet de la recherche et la nécessité d'un débat critique explicite avec Adolf Trendelenburg», telle est l'ouverture du traité où l'auteur déclarait d'emblée : « Je ne peux pas être d'accord, sur des points essentiels, avec les résultats que présente Trendelenburg ». Ce que Bonitz se propose donc d'étudier, en «philologue», c'est le sens qu'avait la doctrine des catégories,

«pour Aristote lui-même», ainsi que la place et la fonction de cette doctrine dans la « structure globale » de sa pensée. C'est seulement après que ce point de départ aura été solidement assuré qu'il deviendra ensuite possible de s'interroger sur l'évolution de la problématique et ses transformations éventuelles à travers les époques (44).

Ainsi, même si Bonitz partage avec Trendelenburg certains présupposés communs : l'importance du «retour» à Aristote en particulier, et s'il peut faire siennes les déclarations de Trendelenburg dans les *Logische Untersuchungen*, que nous avons rappelées ; s'il est, lui aussi, soucieux de proposer une nouvelle articulation philosophique et philologique, anti-idéaliste (en sens postkantien), il entend pourtant et d'emblée « défendre un point de vue différent », en s'attachant à ces deux questions directrices :

1) Quelle est la signification des catégories pour Aristote ?

2) Comment Aristote est-il parvenu à établir cette table des catégories ?" (p. 74)

(...)

"Et s'il faut accorder à H. Bonitz que les catégories aristotéliennes sont bien des catégories de l'être, qu'elles renvoient au «tout de l'expérience», à «ce qui est», cette référence (*Bezug, Bedeutung*), parfaitement reconnue par Trendelenburg, n'est elle-même possible, dans le registre du traité *Catégories*, qu'en raison de l'entrelacement entre «dire et être», ou mieux encore et plus précisément, parce que *ce qui se dit est* aussi et du même coup *ce qui est dit* des étants (conformément aux deux acceptions, indissociables, du verbe λέγεσθαι)." (p. 77)

26. Crubellier, Michel. 2015. "Domestiquer l'excès de l'être. La catégorie des relatifs entre Platon et Aristote." *Quaestio. Journal of the History of Metaphysics* no. 13:3-15.

"A l'intérieur du corpus aristotélicien, la notion des relatifs (*pros ti*) est présente dans deux types de contextes sensiblement différents :

(I) Des contextes dialectiques, et plus précisément topiques, c'est-à-dire des contextes qui concernent la pratique de l'argumentation : des prédicats sont examinés dans la perspective de leur utilité pour construire des arguments. J'appelle « propriétés topiques » les propriétés qui concernent la recherche des arguments ; ce sont des propriétés du prédicat en tant que prédicat. Par exemple, puisque les relatifs admettent des contraires(1) et qu'ils admettent le plus et le moins(2), ils pourront être utilisés pour argumenter a contrario ou a fortiori.

Les deux principaux passages pertinents sont le chapitre 7 et le chapitre 10 des *Catégories*. Dans ces occurrences, il est intéressant de noter que les relatifs posent manifestement des problèmes de délimitation : ils figurent notamment dans la plupart des « cas de catégorisation litigieuse », c'est-à-dire les cas où un même terme semble pouvoir être rangé dans (au moins) deux catégories différentes(3).

(...)

(II) Des contextes métaphysiques, dans lesquels Aristote souligne le peu de consistance ontologique et la position en quelque sorte marginale des objets qui relèvent de la catégorie des relatifs.

Outre la notice de *Métaphysique* Δ 15 spécifiquement consacrée à la notion du *pros ti*, les principaux passages pertinents se trouvent dans des discussions tournées contre Platon et l'ancienne Académie, et tendent à souligner le peu de consistance ontologique et la position en quelque sorte marginale des objets qui relèvent de la catégorie des relatifs(6)." (pp. 3-4)

(1) Aristote, *Catégories*, 7, 6b15-19.

(2) Aristote, *Catégories*, 7, 6b19-27.

(3) L'expression « catégorisation litigieuse » est de F. Ildefonse et J. Lallot, qui parlent aussi de « chevauchement de catégories ». Voir F. Ildefonse / J. Lallot, *Aristote : Catégories*, présentation, traduction et commentaires, Le Seuil, Paris 2002,

pp. 162-178, pour un inventaire et une discussion approfondie de ces cas.

(6) Il faut rattacher à cette liste différents contextes physiques, dans lesquels la caractérisation d'un objet ou d'un phénomène comme un relatif vise à diminuer ou à rejeter entièrement sa réalité et sa valeur explicative. Un passage typique est celui de *Physique*, V, 2, cité plus loin (cf. infra, p. 13).

27. Delamarre, Alexandre J.L. 1980. "La notion de πῶσις chez Aristote et les Stoïciens." In *Concepts et Catégories dans la pensée antique*, edited by Aubenque, Pierre, 321-346. Paris: Vrin.

"Lorsque Denys le Thrace, disciple d'Aristarque, définit la grammaire comme « l'étude empirique de l'usage le plus courant de la langue chez les poètes et les prosateurs », il apparaît encore comme un philologue attaché à l'examen des textes. Mais son ouvrage lui-même, un petit opuscule qui porte précisément le titre de *Grammaire*, est en fait la première grammaire de l'histoire, et l'origine de toutes les grammaires postérieures(1). Traduite, transposée, adaptée, elle domine la théorie occidentale de la langue, et nous la retrouvons dans les manuels des écoliers. Que contient cet opuscule? Une division et une définition systématiques des principales catégories grammaticales. Les éléments : voyelles, semi-voyelles, consonnes ; les diphtongues, les muettes, les aspirées, les liquides, l'accent; les parties du discours, au nombre de huit (§ 13) : le nom, le verbe, le participe, l'article, le pronom, la préposition, l'adverbe, et enfin la conjonction. On remarque que, presque à chaque fois, le terme français semble être, plus encore que la traduction, la transcription exacte, par l'intermédiaire du latin, du terme grec original. Ainsi, par exemple, le participe, μετοχή, qui participe de la propriété des noms comme de celle des verbes. Cependant, nous ne nous interrogerons pas sur ce passage du grec au latin, et sur les effets qui en sont résultés. Nous voudrions au contraire remonter au-delà de la grammaire elle-même, pour déterminer l'origine prégrammaticale d'une de ses catégories." (p. 321)

(1) Sur ces problèmes, voir Steinthal, *Geschichte der Sprachwissenschaft*, II. [1863].

28. Delcomminette, Sylvain. 2009. "Catégories. prédication et relation." *Anais de Filosofia Clássica* no. 3:30-49.

Résumé : "Contre les interprétations qui voient dans les catégories d'Aristote des notions primordialement métaphysiques, le présent article cherche à montrer que l'origine des catégories se situe dans la théorie logico-linguistique de la prédication telle qu'elle s'élabore en particulier dans le *De Interpretatione*. Pour ce faire, il se concentre sur le chapitre 9 du premier livre des *Topiques* et en dégage la notion de *fonction prédicative*, qui s'avère la plus apte à rendre compte de la signification des catégories aristotéliennes et permet de comprendre en quoi celles-ci peuvent être caractérisées aussi bien comme des genres de prédications que comme des genres de prédicats ou encore des genres de l'être. Les catégories ainsi conçues ont pour rôle principal de structurer l'expérience pour la transformer en objet de science possible."

29. Denooz, Joseph. 1996. "L'étendue du lexique chez Aristote." In *Aristotelica Secunda. Mélanges offerts à Christian Rutten*, edited by Motte, André and Denooz, Joseph, 81-90. Liège: Université de Liège. Faculté de Philosophie et Lettres.

"Pour ce volume d'hommage, nous avons choisi un sujet qui s'inscrit dans la ligne des études stylométriques que le Professeur Christian Rutten a consacrées au Stagirite: il s'agit d'une enquête comparative sur la diversité du vocabulaire chez quelques auteurs grecs." (p. 81)

(...)

"Dans les tableaux que nous présentons ci-dessous, nous ne prendrons en compte que trois données, à savoir la longueur du texte exprimée en nombre de mots-formes, le nombre de vocables et la moyenne d'emploi de chaque vocable. Cette dernière se calcule, pour un texte donné, en divisant le nombre de mots-formes par le nombre total de vocables.

À partir du nombre de mots-formes que nous désignerons par n , du nombre de vocables symbolisé par v et de la moyenne d'emploi représentée par m , on peut considérer comme l'a proposé Ch. Muller(2) que le vocabulaire de l'oeuvre x est plus riche que le vocabulaire de l'oeuvre y si $vx > vy$ et $nx \leq ny$." (p. 82)

(...)

"Les valeurs observées pour le Stagirite montrent que, dans la *Métaphysique* et la *Physique*, le vocabulaire est plus pauvre que dans le *De partibus animalium*.

De même, le lexique des *Catégories* est moins étendu que celui de la *Poétique* : la différence entre ces deux oeuvres est nettement marquée puisque la *Poétique*, avec 154 mots-formes de moins que les *Catégories*, contient à peu près exactement le double de vocables (640-1241).

La moyenne d'emploi du *De anima* (15,82) comparée à celle des *Catégories* (16,37) montre que le vocabulaire du premier est plus riche, étant donné les valeurs de n et de v pour ces deux oeuvres. De même, le lexique est plus étendu dans le *De partibus animalium* que dans les *Catégories*." (pp. 84-85)

30. Derrida, Jacques. 1971. "Le supplément de copule. La philosophie devant la linguistique." *Langages*:14-39.

Repris dans J. Derrida, *Marges de la philosophie*, Paris: Éditions de Minuit 1972, pp. 211-246.

"Si, à partir de l'opposition, naïvement reçue, entre langue et parole, langue et discours, on tentait d'élaborer une théorie du discours philosophique, il serait difficile de contourner la question classique: le discours philosophique est-il réglé — jusqu'à quel point et selon quelles modalités — par les contraintes de la langue ? En d'autres termes, si nous considérons l'histoire de la philosophie comme un grand discours, une puissante chaîne discursive, ne plonge-t-elle pas dans une réserve de langue, réserve systématique d'une lexicologie, d'une grammaire, d'un ensemble de signes et de valeurs ? Dès lors n'est-elle pas limitée par les ressources et l'organisation de cette réserve ?

Comment déterminer cette langue de la philosophie ? Est-ce une « langue naturelle » ou une famille de langues naturelles (grec, latin, german, indo-européen, etc.) ? Est-ce plutôt un code formel élaboré à partir de ces langues naturelles ? Ces questions ont une vieille histoire, elles remontent sans doute à l'origine de la philosophie elle-même. Mais on ne pourrait les ré-élaborer sans transformer ou déplacer les couples de concepts qui la constituent." (p. 211)

(...)

"Au lieu de suivre cette immense problématique en pleine mer, si l'on peut dire, peut-être vaut-il mieux, étant donné les exigences et les limites de cet essai, partir ici des propositions d'un linguiste moderne. On sait que Benveniste a analysé dans « Catégories de pensée et catégories de langue » (6) les contraintes par lesquelles la langue grecque limiterait le système des catégories aristotéliennes.

Ses propositions font partie d'un ensemble stratifié; il ne se limite pas au texte qui en énonce directement la thèse. Nous devons en tenir compte le moment venu. Cette thèse, d'autre part, a déjà rencontré des objections de type philosophique(7) qui forment donc avec elle un débat dont l'élaboration nous sera précieuse.

Voici d'abord la thèse: « Or, il nous semble — et nous essaierons de montrer — que ces distinctions sont d'abord des catégories de langue, et qu'en fait Aristote, raisonnant d'une manière absolue, retrouve simplement certaines des catégories fondamentales de la langue dans laquelle il pense » (p. 66).

"Les interprètes d'Aristote ne se sont semble-t-il pas avisés que ce passage [*] constitue un démenti formel d'une thèse qui connut naguère un certain retentissement, à savoir celle où Benveniste (1958) affirme que les catégories aristotéliennes ne sont en fait que la transposition inconsciente des catégories de la langue grecque. [...]. En présence de trois verbes qui ont manifestement tous le même type de signifiant (ὑγιαίνειν, τέμνειν et οἰκοδομεῖν), soit un signifiant caractéristique des verbes à l'actif, Aristote nous met en garde contre la tentation de les considérer tous trois comme des "actions". En effet, le verbe ὑγιαίνειν n'est pas une action, et ce en dépit du fait que son signifiant est habituellement la marque distinctive des verbes qui expriment une action. Ce passage fournit donc un exemple d'un cas où Aristote établit une distinction entre des mots dont les signifiants semblent attester l'appartenance à une même catégorie linguistique. [...]. Les considérations d'ordre purement linguistique ne suffisent donc pas à expliquer pourquoi les verbes ὑγιαίνειν et νοσεῖν ont été rangés sous la catégorie de la disposition. La décision du Stagirite de ne pas considérer ὑγιαίνειν comme une action prouve, s'il en était besoin, que les catégories ne sont pas le décalque inconscient des catégories de langue » (pp. 230-231)

[*] Aristoteles *Topica et sophisticus elenchi*, W. D. Ross (éd.), Oxford, Clarendon Press, 1958, 4, 166b 18-21: οἷον τὸ ὑγιαίνειν ὁμοίως τῷ σχήματι τῆς λέξεως λέγεται τῷ τέμνειν ἢ οἰκοδομεῖν· καίτοι τὸ μὲν ποιόν τι καὶ διακείμενον πῶς δηλοῖ, τὸ δὲ ποιεῖν τι. τον αὐτὸν δὲ τρόπον καὶ ἐπὶ τῶν ἄλλων. (En effet, il est possible de signifier par l'expression ce qui ne relève pas des actions comme une des actions; par exemple « être en bonne santé » est dit de la même façon par a forme de l'expression que « couper » ou « construire »; cependant le premier montre une qualité et un certain état, alors que les autres montrent une action. Et en va de même pour les autres cas.]

32. Duhot, Jean-Joël. 1994. "L'authenticité des *Catégories*." *Revue de Philosophie Ancienne* no. 12:109-124.

"L'authenticité des *Catégories* d'Aristote, qui n'avait fait l'objet d'aucune suspicion pour les Grecs(1), a commencé à être mise en cause au début de ce siècle. Jaeger, A. et S. Mansion, arguant de la singularité de la doctrine de la substance que présente l'opuscule, inclinaient à ne pas y voir la main du Stagirite(2). Reprenant les deux séries d'arguments, B. Dumoulin reconnaît ne pas pouvoir trancher la question(3). En revanche, d'un tout autre point de vue, la stylométrie, C. Rutten se montre favorable à l'authenticité(4). Nous nous proposons d'aborder ce problème à travers un autre critère, qui nous semble permettre l'authentification de l'opuscule : l'origine même du terme de catégorie. Le concept titre de l'opuscule a suscité bien des interrogations. On a dépensé beaucoup d'habileté à essayer d'établir des relations entre les sens philosophique et judiciaire (accusation) du terme. Plutôt que de rapprocher catégorie et accusation, ce qui peut donner lieu à des subtilités gratuites, il semble opportun d'examiner le texte d'Aristote." (p. 100)

33. Dumoulin, Bertrand. 1980. "Sur l'authenticité des *Catégories* d'Aristote." In *Concepts et catégories dans la pensée antique*, edited by Aubenque, Pierre, 23-32. Paris: Vrin.

"L'ouvrage intitulé *Catégories*, généralement attribué à Aristote, témoignerait, selon Werner Jaeger, d'une «inversion nominaliste»(1) de la doctrine propre au Stagirite. Il caractériserait, selon le même historien, « la période de naturalisme et d'empirisme qui a marqué le Lycée après la mort

d'Aristote »(2). Si on prend à la lettre l'expression de Jaeger, dans la proposition « Socrate est un homme », les *Catégories* voient en Socrate la substance première et dans homme la substance seconde, alors que dans la perspective d'Aristote, homme serait au contraire la substance première, et Socrate la substance seconde !"

(...)

"S. Mansion défendait une position presque aussi radicale : « le traité des *Catégories* doit-il être tenu pour un ouvrage de jeunesse d'Aristote? a-t-il été écrit par un de ses disciples? ou par un Académicien de cette époque? Il paraît sûr en tout cas que l'opuscule ne reflète pas la pensée du Stagirite arrivée à sa maturité et cela nous justifie d'avoir négligé le contenu du traité pour notre exposé sur la substance aristotélicienne.»(3)

Disons tout de suite que nous n'allons pas chercher à résoudre en lui-même et dans son ampleur le problème de l'authenticité des *Catégories*. Occupé présentement à l'analyse génétique de la *Métaphysique* d'Aristote, nous voudrions seulement montrer le caractère inacceptable du jugement cité de W. Jaeger, et le caractère excessif de certaines formules de A. Mansion (selon qui le traité des *Catégories* « couvre des conceptions qui ne sont guère conciliables avec celles de la *Métaphysique* »(4). Nous aboutirons cependant à des conclusions de fond et de méthode voisines de celles que nous venons de citer sous la plume de S. Mansion...

W. Jaeger et A. Mansion semblent considérer que, mises à part les *Catégories*, il existe chez Aristote une doctrine uniforme de la substance, et que les *Catégories* sont aberrantes par rapport à cette doctrine. Il importe donc de montrer l'évolution de la doctrine aristotélicienne de la substance." (pp. 23-24)

Jaeger, *Aristoteles, Grundlegung einer Geschichte seiner Entwicklung*, Berlin, 1923, p. 45, n. 1 ; nous citerons sous le titre *Aristotle* la trad. angl., 1934, ici p. 46, n. 3.

(2) Jaeger, *Aristotle*, même page.

(3) S. Mansion, *Le jugement d'existence chez Aristote*, Louvain, 1946, p. 233, n. 61.

« Les suspicions que nous avons élevées contre l'authenticité des *Catégories* n'ont pas réussi à ébranler l'opinion traditionnelle à leur sujet », reconnaît l'auteur dans une longue note, assortie d'une bibliographie, ajoutée à la réédition de son livre, mais elle réaffirme et précise sa position de 1946 (voir *Le jug. d'exist. chez Ar.*, Louvain, 1976, note 94, p. 351-354).

34. ——. 1983. "L'ousia dans les *Catégories* et dans la *Métaphysique*." In *Zweifelhaftes im Corpus Aristotelicum. Studien zu einigen Dubia. Akten des 9. Symposium Aristotelicum, Berlin, 7-16 September 1981*, edited by Moraux, Paul and Wiesner, Jürgen, 57-72. Berlin: Walter de Gruyter.

"Je tiens d'abord à dire que je ne suis pas un spécialiste du traité des *Catégories*, ni de la logique d'Aristote en général. Mon travail a jusqu'ici porté sur les *Ethiques*, sur le premier Aristote, et sur la *Métaphysique*; je cherche à reprendre à nouveaux frais l'entreprise illustrée par l'Aristoteles de Werner Jaeger, car cet historien me paraît avoir mêlé des confusions dommageables à des intuitions profondes. C'est mon essai d'une analyse génétique de la *Métaphysique* [*] qui m'a donné la conviction que le traité des *Catégories* n'était pas l'oeuvre d'Aristote, mais celle d'un disciple plus ou moins éloigné. L'aimable insistance de P. Moraux m'amène aujourd'hui à tenter de vous faire partager cette conviction." (p. 57)

(...)

"L'originalité de mon propos consistera donc à tenter de résoudre le problème de l'authenticité des *Catégories* en situant ce traité dans la courbe évolutive de l'ousiologie d'Aristote. Pour ce faire, je vais surtout m'attacher à des textes dont l'authenticité n'est pas contestée (par exemple, je ne ferai guère usage du livre K de la *Métaphysique*) (3).

Pour retracer les grandes lignes de la doctrine aristotélicienne de l'ousia, je commencerai par quelques remarques sur les *Topiques* (I). Je considérerai ensuite les chapitres 9 et 10 du

livre M de la *Métaphysique* (II), puis je résumerai la doctrine du livre Z de la *Métaphysique* (III). J'en viendrai alors au point névralgique de mon exposé, qui consistera dans une comparaison entre l'ousiologie des *Catégories* et celle de *Métaphysique* M 9 - 10 (IV). Une remarque de méthode pour terminer cette introduction: l'analyse génétique n'a des chances d'être concluante que si elle s'appuie sur l'examen du vocabulaire avant de rechercher l'enchaînement chronologique des idées." (p. 58)

"La question de savoir si l'écrit intitulé *Κατηγορίαι* est ou n'est pas l'oeuvre d'Aristote, après avoir été débattue déjà dans l'Antiquité, s'est posée de nouveau des que l'étude critique de l'aristotelisme a été remise en honneur. Spengel, Valentin Rose et Prantl(1) furent les premiers adversaires modernes de l'authenticité du traité des *Categories*.

Je dirai tout de suite que ces auteurs me paraissent avoir justifié leur thèse, bien qu'un certain nombre de leurs arguments se trouvent être sans valeur : mais la majorité des savants n'en a pas jugé ainsi, et la thèse classique de l'authenticité du Traité, profitant d'une réaction qui dure encore contre le radicalisme critique, a trouvé plus de défenseurs que d'adversaires. Zeller(2) a rallié à l'opinion traditionnelle la plupart des savants qui ont formulé leur avis sur la question, et récemment Gomperz(3), traitant de l'activité scientifique d'Aristote, a pris le traité des *Categories* comme point de départ et comme base de son exposé." Bibliographie

1. Gamba, José Miguel. 2013. "La définition des relatifs dans les *Catégories* et son emploi dans les *Topiques*." *Philosophie antique* no. 13:225-242.

Résumé : "Le premier livre des *Topiques* constitue une sorte d'introduction théorique à la compilation de stratégies dialectiques présentée dans les livres centraux de cette oeuvre. Nombre des notions principales employées dans les règles d'inférence contenues dans les τόποι sont systématiquement exposées et ordonnées dans ce premier livre. Parmi elles, l'exemple le plus clair est celui des «prédicables». Il y a, néanmoins, d'autres notions, dont l'exposition doctrinale doit être recherchée dans les *Catégories*. Par exemple, les diverses sortes d'opposition entre termes, qui sont abondamment utilisées dans les *Topiques*, mais ne s'y trouvent pas définies. Dans cet article, je présente une analyse formelle des deux définitions des relatifs que l'on trouve dans *Cat.* 7, pour montrer ensuite comment elles sont employées dans les τόποι qui impliquent la prédication essentielle des relatifs, démontrant ainsi la cohérence de cette théorie et la dépendance étroite entre les deux oeuvres."

2. Gazziero, Leone. 2019. "οἰκείως τῇ λογικῇ πραγματείᾳ (*Simplicii in Aristotelis categorias commentarium*, 12.11). Contraintes disciplinaires – anciennes et modernes – de l'interprétation logique des *Catégories* d'Aristote." In *Qu'est-ce*

qu'une catégorie? Interprétations d'Aristote, edited by Brière, Véronique and Lemaire, Juliette, 1-57. Louvain-la-Neuve: Peeters.

Abstract: "In addition to understanding the very notion of « category » according to its different Aristotelian contexts, the first order of business of an archaeology of Aristotle's categories is to inquire into its influential evolution at the hands of Late Ancient commentators. The essay retraces the origin and development of the « logical » interpretation which held sway both in ancient and modern times. It shows first that the key to understand the debate between Benveniste and Derrida over Aristotle's categories is to be found in the Neoplatonic exegesis of the work of the same name. It shows next the powerful dynamic that led the commentators to dismiss more than a few hints in the text itself in order to build a remarkably consistent interpretation that understood the notion of category as the simplest and most fundamental element in a building block theory of linguistic expression and argumentation."

Résumé : "Face au foisonnement qui caractérise l'instruction contemporaine du dossier des « catégories » d'Aristote, il est encore et toujours utile de suivre le fil historique inauguré par Adolf Trendelenburg, réinventé par Emile Benveniste et élevé par Jacques Derrida au rang d'impératif méthodologique. Le geste inaugural d'une archéologie de la notion de « catégorie » consiste donc à se prémunir contre le risque d'évacuer le problème historique des catégories à la faveur d'une catégorialité anachronique ou passe-partout : ce qui n'est possible qu'à condition de replacer les « catégories » dans les différents contextes aristotéliens où elles sont utilisées et d'interroger les contraintes disciplinaires qui ont structuré le débat autour de leur nature chez les commentateurs de l'Antiquité tardive."

3. Goldschmidt, Victor. 1956. "La théorie aristotélienne du lieu." In *Mélanges de philosophie grecque offerts à Mgr. Diès par ses élèves, ses collègues, ses amis*, 79-119. Paris: Vrin.

Repris dans V. Goldschmidt, *Écrits, Tome I. Études de philosophie ancienne*, Paris: Vrin, 1984, pp. 21-62.

4. Ildefonse, Frédérique. 2018. "Présentation a Adolf Trendelenburg, *Les catégories d'Aristote.*" *Les Études Philosophiques* no. 183:337-343.

"Ainsi, toutes les parties du discours, peut-on penser, ont donné lieu à leur catégorie. Il reste certes les conjonctions ; mais, puisque les catégories sont issues de la dissolution de l'énoncé*, les conjonctions sont par elles mêmes exclues des catégories. Quant aux pronoms qui, une fois mise à part la matière propre des notions si l'on peut dire, ne conservent que la nature du genre, tant s'en faut qu'on puisse leur assigner des catégories propres, qu'ils ont imposé leur nom, à une grande partie de ces catégories. *Ousia* en effet est qualifié habituellement de *tode ti***, par quoi on signifie ce qui est défini à tous égards de telle sorte qu'on puisse le montrer dans son lieu. La seconde et la troisième catégorie sont intitulées *poson* et *poion*, qui sont des pronoms adjectifs ; *pou* et *pote*, qui sont des expressions du lieu et du temps, pourraient être appelés des pronoms adverbiaux.

Voilà à peu près ce qui dans les catégories se ressent de son origine grammaticale.

Tel ne fut pas, pourtant, le tour d'esprit d'Aristote de ne s'attacher qu'aux simples formes de langues ; toutes les traces qu'il paraît en avoir décelées, il les a perfectionnées de façon à faire porter son investigation sur les contenus des notions, après avoir mis à l'écart ces formes." (p. 358)

(...)

"Donc, une fois abandonnée l'idée d'une origine pythagoricienne des catégories, il fallait rechercher leurs causes dans le système même de la philosophie aristotélicienne. Si nous avons réussi, sinon à mettre en évidence l'ensemble des causes, du moins à en élucider une espèce, qui ait conduit le philosophe à établir précisément ces genres de notions, il nous semble avoir en tout cas fait avancer la question." (p. 362)

5. Ildefonse, Frédérique, and Lallot, Jean. 2002. "Introduction." In *Aristote. Catégories*, 9-53. Paris: Éditions du Seuil.

"Ce qui frappe d'abord à la lecture des écrits de ces deux savants(39), c'est l'étroit parallélisme, à un premier niveau, des observations que leur inspire à chacun la liste du chapitre 4. Chacun d'eux à son tour(40) présente comme des évidences, d'une part, la relation qui unit les catégories à des classes linguistiques du grec - parties du discours ou sous-classes de l'une d'elles -, d'autre part, l'orientation de cette relation - de la catégorie de langue vers la catégorie de pensée." (p. 26)

(...)

"Confronté à de telles affirmations, plus d'un lecteur a élevé des objections, et chacun a pris position. Si nous devons le faire à notre tour, sur le point précis des rapports des catégories à la langue grecque, nous dirons ceci.

1) Comme nous l'avons noté à plusieurs reprises, la langue grecque, sous les espèces de 'ce qui se dit', est constamment présente dans la réflexion de l'auteur des *Catégories*. Un des exemples les plus forts à nos yeux du poids dont pèse la langue sur cette réflexion est la façon dont Aristote définit et traite la catégorie du relatif. Au-delà encore de ce que relèvent Trendelenburg et Benveniste, à savoir la prise en compte de la catégorie grammaticale du comparatif, la définition du relatif comme ce dont l'être même «est dit être d'autres (choses), ou, de quelque autre manière que ce soit, relativement à autre chose » renvoie, nul ne le conteste, à la construction syntaxique des relatifs, caractérisée par une complémentation adnominale, prototypiquement au génitif, occasionnellement à un autre cas. Dans l'examen de la catégorie au chapitre 7, la prégnance de cette composante syntaxique se manifeste à chaque instant(42).

2) Cela étant, nous ne pouvons pas ne pas prendre au sérieux le constat de correspondance entre catégories de langue et catégories de pensée qu'ont fait indépendamment l'un de

l'autre, à un siècle d'intervalle, un grand historien de la logique et un grand linguiste.

3) Cependant, comme le montrent, entre autres, les critiques qui furent adressées à l'article de Benveniste, le problème se pose d'interpréter cette correspondance et de mesurer les conclusions qu'elle autorise. Paul Ricœur, dans la *Métaphore vive*(43), nous montre la voie pour avancer dans cette direction :

La corrélation établie par É. Benveniste est indiscutable, aussi longtemps qu'on considère seulement le trajet qui va des catégories d'Aristote, telles que celui-ci les énumère, en direction des catégories de langue. Mais qu'en est-il du trajet inverse?

Nous comprenons que ce qui est « indiscutable », c'est l'idée, commune à Benveniste et à Trendelenburg, selon laquelle la liste des dix catégories aristotéliennes nous renvoie à des structures linguistiques du grec. Quant au « trajet inverse », nous y voyons celui que mentionnait Trendelenburg en termes d'« étude approfondie » (*pertractatio*), désignant par là l'élaboration philosophique des catégories 'soufflées', certes, par la langue, mais aussi assumées sélectivement, retravaillées et intégrées à un nouvel appareil conceptuel."

(39) Trendelenburg (1833, 1846) ; Benveniste (1958).

(40) Et chacun ayant le sentiment d'innover : « la chose n'a guère été vue », écrit Trendelenburg (1833 : 12); « pour peu qu'on prête attention à l'énoncé des catégories et aux exemples qui les illustrent, cette interprétation, non encore proposée apparemment... », fait écho Benveniste (1966 [1958] : 66). Le fait que Benveniste ait ignoré Trendelenburg ne donne que plus de force à la convergence des points de vue.

6. Jaulin, Annick. 1996. "Form, individu et universel." *Revue de Philosophie Ancienne* no. 14:57-73.

"L'intitulé de ma communication : "Forme, individu et universel" tend à établir une partition entre la forme d'une part, l'individu et l'universel d'autre part. Cette partition reflète la distinction, proposée au livre Z, entre ce qui est nommé *ousia prôtè* - la forme -, et les deux sortes d'*ousiai synoloi* que sont l'universel et l'individu. Le développement de cette distinction, bien établie par le livre Z, me paraît de nature à éclairer les débats récurrents sur le fait de savoir si l'*ousia* est un universel ou un individu : l'*ousia* n'est ni l'un ni l'autre. La récurrence des débats (qui s'illustre par les conclusions opposées de deux livres parus la même année : 1988, M. Frede, G. Patzig, *Metaphysik Z* (München, Beck) pour qui l'*ousia* est un individu, tandis qu'elle est un universel pour M. Furth, *Substance, Form and Psyche : An aristotelian Metaphysics* (Cambridge University Press) me paraît être le signe de la non-pertinence de la question plus que celui de son aspect bien-fondé. Si, en outre, le fait de distinguer l'*ousia*, comme *ousia prôtè*, des deux formes de *synoloi* que sont l'universel et l'individu, permet d'établir la cohérence de la théorie de l'*ousia* proposée dans le traité des *Catégories* et dans les traités métaphysiques, il semble valoir la peine d'essayer de convaincre que cette distinction est nécessaire." (p. 57)

7. ———. 2011. "Les Catégories d'Aristote : instrument ou doctrine ?" *Revue Philosophique de la France et de l'Étranger* no. 201:3-16.

"Il est sans doute important de rétablir le statut dialectique du traité des *Catégories*, car « les dialecticiens argumentent sur tout ; or l'être est commun à tout et, à l'évidence, ils argumentent sur ces questions parce qu'elles sont propres à la philosophie »(2). Ainsi les questions dialectiques sont également philosophiques. Sans ouvrir le dossier complexe du rapport entre dialectique et philosophie première chez Aristote, il suffit ici de rappeler qu'elles sont le fait de la même « puissance (*dunamis*) »(3). La question ne sera plus alors de savoir si la logique est un instrument ou une partie de la philosophie, mais si une philosophie peut aller plus loin que les instruments qu'elle se donne.

La *Métaphysique* ne semble pas utiliser dans la recherche des causes, lors de la critique des thèses platoniciennes, des instruments autres que les catégories. Quelles que soient les subtilités herméneutiques déployées par Porphyre et ses successeurs pour contourner, à partir de la primauté de la forme dans les traités métaphysiques, le statut premier des substances sensibles dans les *Catégories*(4), il semble difficile de nier que l'ordre instauré entre les substances par ce traité ait quelque conséquence doctrinale. La question principale sur les objets présentés par le traité se trouverait ainsi déplacée : elle ne concernerait plus tant la nature des objets que l'ordre de leur présentation." (p. 16)

"S'il est bien vrai que le propre de la logique c'est le jugement - dit Trendelenburg -, le lieu du vrai et du faux, et que dans le

jugement il faut bien reconnaître une forme de synthèse (la *συνπλοκή*), tout le problème est dans la façon dont il faut comprendre la nature d'une telle synthèse. Or, la première *Critique* kantienne nous avait appris que les catégories sont déduites à partir des formes du jugement, et c'est en ce sens précis que Kant peut reprocher à Aristote de ne pas avoir suivi un critère systématique dans la compilation de sa table des catégories (*KdrV*, A 81/B 107). La critique kantienne à l'égard d'Aristote est double : n'ayant pas reconnu que la *Verbindung* [connexion] propre au jugement est à l'œuvre dans l'activité synthétique de l'entendement et, en dernière instance, de la connexion entre sujet et prédicat opérée par le Je pense - qui *lie* aussi bien le multiple dans l'intuition que le sujet et le prédicat dans le jugement -, Aristote n'a pas pu reconnaître non plus le seul critère qui préside à la déduction des catégories : le critère transcendantal. Deux objections donc, dont l'une est la prémisse de l'autre : 1) Aristote s'est trompé au sujet de la véritable nature de la synthèse et *donc* 2) il n'a pas suivi un critère cohérent pour la déduction des catégories.

Or, dans le texte de 1833, Trendelenburg répond aux deux objections en retournant contre Kant ses propres arguments. La thèse, d'ores et déjà exposée de façon claire et nette, est la suivante : chez Aristote les catégories sont tirées non pas des formes du jugement, mais plutôt de ses parties, et parce que Kant, lui, s'est trompé quant à la nature du caractère synthétique du jugement qu'il a pu accuser Aristote de ne pas avoir suivi un critère systématique pour la déduction des catégories." "C'est à Trendelenburg que revient le mérite d'avoir relevé la critique adressée à Aristote par Kant puis réitérée, dans une tout autre perspective, par Hegel à l'égard de l'absence d'un critère directif de la table des catégories, dont l'énumération n'aurait été que le résultat fortuit d'une rhapsodie." (p. 448)

(...)

À défaut d'une solution en principe définitive, nous estimons que ces apories peuvent du moins indiquer la « question » avec laquelle l'analyse est appelée à se confronter. C'est là notre hypothèse de recherche qui nous amène à réévaluer la réception que l'*Aristoteles Kategorienlehre* a généralement rencontrée : dans les hésitations du texte aristotélicien, Trendelenburg entrevoit les lignes directrices d'un plus vaste projet en vue d'une nouvelle philosophia fundamentalis, à même de combiner logique et métaphysique(13)." (p. 451)

- ne trouvera son accomplissement que lorsque l'origine des concepts et la génération des choses procéderont ensemble. »
13. Morrison, Donald. 1993. "Le statut catégoriel des différences dans l' *Organon*." *Revue Philosophique de la France et de l'Étranger* no. 183:147-178.

"Il n'est pas facile d'arriver à comprendre clairement la conception aristotélicienne de la différence. Les théories d'Aristote sur la division, sur la définition, sur l'essence et la substance, sur l'explication scientifique et la démonstration, exercent toutes un effet sur la notion de différence ; et inversement, elles sont toutes affectées par cette notion.

De plus, la conception qu'Aristote s'est faite de la différence a évolué de façon significative dans le cours de sa carrière.

Beaucoup des questions qui entourent la théorie aristotélicienne de la différence ont fait l'objet de discussions étendues. Mais il est un problème majeur qui n'a reçu que peu d'attention soutenue de la part des interprètes modernes : celui du statut catégoriel de la différence." (p. 147)

14. Narcy, Michel. 1980. "Qu'est-ce qu' un figure ? Une difficulté de la doctrine aristotélicienne de la qualité." In *Concepts et catégories dans la pensée antique*, edited by Aubenque, Pierre, 197-216. Paris: Vrin.

"Au chapitre 8 des *Catégories*, consacré à la qualité (ποιότης), Aristote, comme il l'a fait à propos des catégories précédentes (substance, quantité, relation), fait suivre son exposé de l'examen de deux questions : savoir, si dans l'ordre de la qualité (κατά το ποιόν 10 b 12) se trouvent contrariété (ἐναντιότης) et accroissement ou diminution (το μάλλον και τό ήττον). On peut noter d'ailleurs qu'à la réponse à ces deux questions se limiteront, au chapitre 9, les indications fournies au sujet des catégories de l'action et de la passion. Questions dont on a pu reconnaître qu'elles constituent comme l'application aux catégories aristotéliciennes d'un système catégoriel plus ancien, provenant de l'Académie et dérivé, à travers le platonisme, du pythagorisme(1). Il peut paraître étrange de délimiter ici, en vue d'une étude de la catégorie de qualité, un passage d'allure adventice, où vient pour ainsi dire s'entrecroiser avec le fil de

l'exposé d'Aristote, et contredire l'assurance de sa classification(2), une problématique qui semble d'autant moins lui appartenir en propre qu'elle contribue surtout à jeter le doute sur la cohérence de l'exposé qui précède." (p. 197)

1)Cf. Ph. Merlan, *Beiträge zur Geschichte des antiken Platonismus I. Philologus* 89 (1934), pp. 44-46.

(2) Aristote distingue, rappelons-le, quatre sortes de qualités : état et disposition (ἐξίς καὶ διάθεσις 8 b 26-9 a 13), aptitude et inaptitude (δύναμις-ἀδυναμία 9 a 14-27), qualités affectives et affections (παθητικαὶ ποιότητες καὶ πάθη 9 a 28-10 a 10), enfin figure et forme (σχῆμα καὶ μορφή 10 a 11-26).

15. Nef, Frédéric. 2009. "Les catégories aristotéliennes et la division de l'être : types de divisions et types d'ontologies." *Cahiers de philosophie de l'université de Caen* no. 46:1-26.

"L'ontologie catégorielle a ses racines dans la doctrine aristotélienne exposée dans le traité éponyme et plus particulièrement dans le fameux chapitre deuxième. L'interprétation de ce texte bute notamment sur deux problèmes : s'agit-il d'une division de la réalité ou de l'espace conceptuel ? Existe-t-il dans la doctrine d'Aristote des accidents individuels, des particuliers abstraits ? La réponse à ces questions détermine le sens de ce chapitre de l'histoire de l'ontologie. Je me propose de discuter de ces questions à la lumière de l'ontologie contemporaine. Les travaux récents de R. Chisholm et de E. J. Lowe en l'ontologie catégorielle montrent l'actualité de la doctrine aristotélienne : la réponse aux questions que nous venons de mentionner n'a pas seulement des conséquences historiques, mais peut contribuer à déterminer la place des catégories dans l'ontologie et plus largement à poser le problème du découpage catégoriel de la réalité. Je commencerai par examiner le sens de la division de l'être, puis je livrerai quelques réflexions sur le texte d'Aristote, avant d'exposer les développements des représentations semi-formelles sous forme de représentations géométriques (carrés, arbres, cubes), puis je discuterai des propositions de E. J. Lowe.

L'hypothèse que je serai conduit à évaluer consiste à soutenir que dans l'histoire de l'interprétation des *Catégories* il y a une

corrélation, d'une part, entre le développement d'ontologies de constituant et les représentations sous forme d'arbres et, d'autre part, entre l'émergence d'ontologies des relations et les modèles sous forme de carrés. L'intérêt de ces carrés ontologiques est alors (si l'hypothèse a quelque vraisemblance) de contenir au moins en puissance une théorie des relations – une autre manière de voir les choses est de dire que ces représentations obligent à expliciter les relations entre les pôles des figures et jouent donc implicitement un rôle de catalyseur pour la réflexion." (pp. 1-2)

" *L'école d'Oxford et le commentaire du Professeur J. L. Ackrill sur les 'Catégories' d'Aristote*. L'influence de la philosophie dite « linguistique » ou « analytique » de l'école d'Oxford se fait ressentir dans plus d'une faculté de philosophie en Angleterre. Qui plus est, l'intérêt des philosophes de cette école ne s'est pas borné aux problèmes de la pensée contemporaine ; en effet, malgré l'esprit délibérément novateur — pour ne pas dire iconoclaste — d'un Ayer ou d'un Ryle, un intérêt porté à certains aspects de la philosophie de l'antiquité fait bien partie

de la tradition qui s'inspire des ouvrages, *Language, truth and logic* (1936) et *The concept of mind* (1949) ; en témoignent, entre autres choses, les deux séries de la Clarendon Press dédiées, la première à Aristote (à partir de 1962), la seconde à Platon (à partir de 1973).

Les contributions à ces deux séries se caractérisent par des traits communs ; on y voit notamment une tendance à privilégier la portée proprement philosophique d'un ouvrage de l'antiquité, par rapport aux problèmes de philologie et d'histoire. Évidemment, cette manière d'aborder le sujet soulève des questions de méthode fondamentales pour la recherche sur la pensée de l'antiquité ; et je ne cache pas, pour ma part, les réserves que m'inspirent les réponses contenues implicitement dans les ouvrages parus jusqu'ici dans les deux collections citées.

Il ne s'agit pourtant pas d'approfondir ce problème en une soixantaine de pages ; ce n'est donc que pour signaler l'existence du problème, et pour poser un tout premier jalon, que l'exposé actuel s'est présenté sous la forme qu'il a. Je m'y suis borné, en effet, à l'étude d'un seul texte, et à l'examen du commentaire qu'en a fait l'un des adhérents les plus distingués de l'école d'Oxford. Le texte, celui des *Catégories* où Aristote cherche à montrer que les quantités ne peuvent pas avoir un rapport de contrariété (chap. 6, 5b11 sqq.) ; le commentaire, celui du Professeur J. L. Ackrill, qui occupe en ce moment une chaire de philosophie à l'Université d'Oxford, et qui s'intéresse notamment aux philosophes de l'antiquité.

Je ne m'en tiendrai pas cependant à une œuvre purement critique — à fabriquer le commentaire d'un commentaire ; en passant par la critique, j'espère pouvoir apporter des éléments positifs pour éclairer les problèmes, à la fois linguistiques et conceptuels, qui ont fait de ce texte l'un des plus difficiles dans le traité des *Catégories*." (pp. 89-90, notes omises)

19. Pellegrin, Pierre, and Crubellier, Michel. 2007. "Introduction." In *Aristote. Catégories. Sur l'interprétation. Organon I-II*, edited by Pellegrin, Pierre. Paris: GF Flammarion.

Introduction générale à l'*Organon* par Pierre Pellegrin.

Introduction, traduction, notes et index des *Catégories* par Peirre Pellegrin et Michel Crubellier.

Introduction, traduction, notes et index de *Sur l'interprétation* par Catherine Dalimier.

"A l'issue de cette brève présentation du texte des *Catégories*, beaucoup d'incertitudes demeurent. Non seulement nous n'avons pas tranché le problème de l'authenticité du traité, mais nous n'avons finalement même pas donné un argument qui rendrait l'authenticité plus probable que l'inauthenticité ou l'inverse. Au moins avons-nous tenté de relativiser l'importance de certains problèmes qui avaient paru cruciaux à nos prédécesseurs. Qu'importe, après tout, que nos *Catégories* aient été directement inspirées par Aristote ou soient le manuel d'un Péripatéticien tardif ? Ce qui est sûr, c'est qu'il reflète une doctrine qui est l'une des conditions d'existence de l'aristotélisme. (...) Quant à la question, qui elle aussi a paru fondamentale, de savoir si les *Catégories* penchaient du côté du dire ou de l'être, nous avons tenté de retrouver la tranquille assurance de l'auteur lui-même qui juxtapose sans l'ombre d'une réticence les deux points de vue. Il ne fait guère de doute qu'Aristote a conçu les catégories comme des types de prédication et/ou de prédicats, mais aussi comme une Mine de réseau qui structure la réalité. Mais nous n'avons pas déchu les *Catégories* de leur place capitale, pour reprendre l'image de Syrianus et de Simplicius." (pp. 86-87)

20. Pelletier, Yvan. 1987. "Le propos et le proème des *Attributions* (*Catégories*) d'Aristote." *Laval Théologique et Philosophique* no. 43:31-47.

Résumé : "Le but de cet article est de manifester qu'Aristote, dans ses *Attributions* (*Catégories*), a pour propos de fournir le premier principe systématique de toute recherche de définition. Ce but est atteint en deux temps: 1) par l'exposé direct de la

conception que s'en fait l'auteur de l'article; 2) par la vérification de cette conception à travers une lecture rigoureuse des quatre premiers chapitres formant le proème aux *Attributions*."

21. Philippe, Marie-Dominique. 1958. "Le relatif dans la philosophie d'Aristote." *Revue des Sciences Philosophiques et Théologiques* no. 42:689-710.

"Sans prétendre à une étude exhaustive, essayons ici de dégager la pensée d'Aristote sur le relatif, selon les étapes suivantes : 1° partir des critiques qu'Aristote fait aux platoniciens sur ce point, puisque c'est à partir du platonisme et face à lui qu'il élabore sa propre philosophie ; 2° analyser *Catégories*. Il conviendra alors d'approfondir déterminer du point de vue métaphysique du relatif ; 4° ses modalités spécifiques dont Aristote le met en oeuvre dans ses divers traités." (pp. 689-690)

(,,)

"Voilà bien les deux catégories extrêmes [substance et relatif] qui s'éclairent mutuellement : l'une exprime ce qui est entièrement soi-même, ce qui ne dit référence à rien d'autre, ce qui constitue un «premier» tant dans l'ordre de la détermination que du point de vue de l'existence; l'autre exprime ce qui est pure référence à un autre, ce qui est entièrement dit en dépendance d'un autre ou orienté vers un autre, et qui par le fait même n'est en rien pour soi.

Ces deux catégories ne font d'ailleurs que traduire les deux manières extrêmes dont notre intelligence exprime le réel : ou bien comme un absolu ayant sa propre détermination et sa manière propre d'exister; ou bien comme un relatif totalement orienté vers un autre, incapable de posséder sa propre forme par lui-même." (p. 692)

22. Purnelle, Gérald. 1996. "La proportion des conjonctions de subordination dans six oeuvres d'Aristote." In *Aristotelica Secunda. Mélanges offerts à Christian Rutten*, edited by Motte, André and Denooz, Joseph, 91-102. Liège: Université de Liège. Faculté de Philosophie et Lettres.

"Mon propos sera ici d'utiliser les méthodes habituelles de la stylométrie dans une perspective différente de celle des études de chronologie et d'authenticité, afin d'appréhender, indépendamment de ces implications, certains traits stylistiques des textes étudiés. Je m'intéresserai aux matériaux étudiés (les mots, les catégories, leur fréquence) pour eux-mêmes, en cherchant à déterminer la manière dont les emploie Aristote dans six de ses textes.

Les mots outils, même s'ils sont moins porteurs de sens que les mots pleins, n'en sont évidemment pas totalement exempts. Prépositions, conjonctions de subordination et même particules participent à la construction du sens de la phrase et du texte. S'il n'y a aucun inconvénient à regrouper toujours dans une même catégorie des mots tels que και. (conjonction) et τε, on conviendra que les conjonctions de subordination, par exemple, sont sémantiquement très différentes les unes des autres, et qu'une proposition causale n'est pas une consécutive. Il m'a dès lors paru intéressant d'aller plus loin que le simple dénombrement indifférencié des représentants d'une partie du discours, en éclatant l'une de ces catégories afin d'examiner la fréquence, dans quelques textes, de chacun des vocables qui lui appartiennent.

Dans cette perspective, les conjonctions de subordination constituent un premier cas intéressant à étudier. Les différents vocables qui entrent dans cette classe sont peu nombreux (bien moins que les substantifs, les verbes ou les adverbes), et ce sont typiquement des mots outils. En outre, en tant que telles, les conjonctions participent à la construction du sens du texte d'une manière différente, par exemple, de celle des prépositions : le niveau de syntaxe auquel elles participent (les propositions) est supérieur à celui des prépositions.

(...)

Les textes examinés sont au nombre de six ; ce sont ceux qui ont été lemmatisés et analysés au LASLA et ont été constitués en fichiers informatisés contenant, pour chaque mot, une code de catégorie grammaticale. Il s'agit des *Catégories*, du *Traité de l'âme* (*De Anima*), de la *Métaphysique*, des *Parties des*

- animaux*, de la *Physique* et de la *Poétique*. Cet ensemble paraît relativement varié, où se mêlent traités de philosophie, de logique et de biologie." (p. 92, note omise)

24. Stevens, Annick. 2000. *L'ontologie d'Aristote. Au carrefour du logique et du réel*. Paris: Vrin.
- "Les définitions de l'homonymie, de la synonymie et de la paronymie constituent la première partie du traité des *Catégories*, tandis que dans sa dernière partie figurent de nombreux exemples de termes plurivoques à propos desquels il n'est jamais précisé si cette plurivocité correspond à l'une des trois formes définies. Cette constatation, et aussi le fait qu'après les trois définitions le texte passe abruptement à une autre problématique, a pu faire douter de l'homogénéité du traité et, partant, de l'authenticité des chapitres 1 et 10-14. Cependant, dans toute son œuvre, Aristote utilise toujours ces termes en accord avec les définitions données ici et en reproduit quelquefois des parties (cf. *Topiques*, VI 10, 148 a 23 sq.) En outre, la disposition des problématiques ne doit pas nous étonner, car le traité des *Catégories* se veut un inventaire, successivement, des différentes portées sémantiques d'un mot (champ sémantique unique ou multiple), des différents types d'expressions (combinées ou non combinées), des différents statuts ontologiques auxquels renvoient les mots (sujet, attribut, inhérent), des principaux genres des étants (les dix catégories), et enfin de quelques déterminants qui peuvent s'appliquer à des étants de chaque genre (comme « opposé », « antérieur », « ensemble »...). On peut donc considérer les définitions fournies comme une base fiable pour aborder les termes plurivoques dans le corpus." (p. 62)

Résumé : "La célèbre théorie de Benveniste sur les catégories de pensée et les catégories de langue, par laquelle il essayait de prouver que la pensée n'est qu'un reflet de la langue, en analysant les catégories selon Aristote, ne résiste pas à l'examen quand on essaie de l'illustrer par des comparaisons entre la philosophie et la grammaire en sanskrit et en chinois.

Les notions grammaticales sont inconscientes et élaborées par le sens commun, tandis que les concepts fondamentaux mis au point par les philosophes sont une formalisation consciente des idées cosmologiques de chaque peuple."

28. Thouard, Denis. 2004. "Une métacritique des catégories : l'usage critique d'Aristote chez Trendelenburg." In *Aristote au XIX siècle*, edited by Thouard, Denis, 37-62. Villeneuve d'Ascq: Presses Universitaires du Septentrion.

"Aristote est un partenaire essentiel pour la discussion de la question des catégories qui fut vive au cours du siècle. Remise par Kant à l'ordre du jour, cette question fut l'un des enjeux de l'idéalisme, en tant que celui-ci s'est donné pour tâche de ramener la pensée à ses conditions subjectives : non seulement ce qui apparaît, le phénomène, n'est qu'à la condition d'être présenté en tant que tel dans les formes générales de la subjectivité, mais les grandes fonctions de la pensée, qui lui donnent un contenu déterminé et se répartissent en catégories, sont intégralement réductibles à l'auto-position de la subjectivité. Le primat du jugement établi par Kant doit être fondé par la réconduction des catégories à l'acte de la pensée. Autrement dit, la déductibilité des catégories est une pièce décisive du projet idéaliste en tant qu'il a partie liée avec l'élaboration du «synthétique a priori». Mais cette recherche d'un unique fondement des catégories a suscité des réserves sceptiques. Ces réticences se sont volontiers exprimées à travers un retour à Aristote, retour qui signifiait dans le même temps une interrogation sur la formation de la langue de la

philosophie, sur le vocabulaire grec des catégories, sur le latin scolaire et sur la philosophie en langue nationale. L'attention aux catégories s'inscrit, comme on peut le montrer, dans la problématique générale de la métacritique, autrement dit d'une remise en question de la critique kantienne à partir du langage, soit pour l'invalider, soit pour la compléter. Cette orientation, quasiment contemporaine de la critique kantienne, a nourri l'opposition à l'idéalisme philosophique avant d'être reprise dans l'orientation anti-spéculative de la «critique du langage» ou *Sprachkritik*, puis dans la réduction de la philosophie à l'analyse du langage." (p. 37, une note omise)

29. Touratier, Christian. 1992. "Catégories de langue et catégories de pensée : (Benveniste lecteur d'Aristote)." *Lalies.Actes des Sessions de Linguistique et de Littérature* no. 10:367-376.

Résumé : "Alors que Benveniste pense que les catégories de la logique d'Aristote ne sont que la transposition des catégories de la langue grecque, on essaie de montrer que, même chez Aristote, les catégories linguistiques ne sont pas parallèles aux catégories logiques, et que s'il y a parallélisme c'est entre les catégories aristotéliennes et les définitions logicisantes des catégories linguistiques, que la tradition grammaticale a du reste abusivement empruntées à la logique d'Aristote elle-même."

30. Trendelenburg, Friedrich Adolf. 2018. "Les Catégories d'Aristote." *Les Études Philosophiques* no. 183:345-362.

"Ainsi, toutes les parties du discours, peut-on penser, ont donné lieu à leur catégorie. Il reste certes les conjonctions ; mais, puisque les catégories sont issues de la dissolution de l'énoncé*, les conjonctions sont par elles mêmes exclues des catégories. Quant aux pronoms qui, une fois mise à part la matière propre des notions si l'on peut dire, ne conservent que la nature du genre, tant s'en faut qu'on puisse leur assigner des catégories propres, qu'ils ont imposé leur nom, à une grande partie de ces catégories. *Ousia* en effet est qualifié habituellement de *tode ti***, par quoi on signifie ce qui est défini à tous égards de telle sorte qu'on puisse le montrer dans son lieu. La seconde et la troisième catégorie sont intitulées

poson et *poion*, qui sont des pronoms adjectifs ; *pou* et *pote*, qui sont des expressions du lieu et du temps, pourraient être appelés des pronoms adverbiaux.

Voilà à peu près ce qui dans les catégories se ressent de son origine grammaticale.

Tel ne fut pas, pourtant, le tour d'esprit d'Aristote de ne s'attacher qu'aux simples formes de langues ; toutes les traces qu'il paraît en avoir décelées, il les a perfectionnées de façon à faire porter son investigation sur les contenus des notions, après avoir mis à l'écart ces formes." (p. 358)

(...)

"Donc, une fois abandonnée l'idée d'une origine pythagoricienne des catégories, il fallait rechercher leurs causes dans le système même de la philosophie aristotélicienne. Si nous avons réussi, sinon à mettre en évidence l'ensemble des causes, du moins à en élucider une espèce, qui ait conduit le philosophe à établir précisément ces genres de notions, il nous semble avoir en tout cas fait avancer la question." (p. 362)

31. van Aubel, Madeleine. 1963. "Accident, catégories et prédicables dans l'oeuvre d'Aristote." *Revue Philosophique de Louvain* no. 61:361-401.

"La philosophie scolastique, lorsqu'elle définit la notion d'*accident*, accorde à ce terme, c'est bien connu, une double signification.

Elle parle d'*accident* logique (ou prédicable) et d'*accident métaphysique* (ou prédicamental).

Cette présentation, qui se réfère à deux théories bien distinctes - la théorie métaphysique des *Catégories* ou genres suprêmes de l'être, et celle des prédicables ou modes de la prédication -,

se réclame d'ordinaire directement de la philosophie de saint Thomas, et indirectement de celle d'Aristote.

Or, lorsqu'on entreprend l'étude du sens qu'avait pour Aristote le terme το συμβεβηκός - traduit *accidens* par les scolastiques -, on est amené bien vite à se demander s'il est permis d'attribuer à Aristote la distinction précise et explicite établie depuis des siècles entre l'accident logique et l'accident ontologique.

Car, s'il est indiscutable que l'on trouve chez Aristote tous les éléments qui ont permis la distinction aujourd'hui nettement définie entre les deux théories dont nous parlons, il n'apparaît cependant pas de façon aussi claire qu'elle soit déjà Jormellement perçue par Aristote, que celui-ci ait déjà présenté comme tels un accident logique et un accident métaphysique bien distincts l'un de l'autre.

Face à cette constatation, nous nous sommes posé la question qui constituera l'objet de cette étude : comment Aristote comprenait-il l'accident ?

Cela nous force d'ailleurs à nous demander préalablement ce que représentaient pour le Stagirite la théorie des prédicables et celle des catégories, et à tenter ensuite de déterminer la place qu'occupait la notion d'accident dans la pensée du philosophe." (p. 361)

32. van Schilfgaarde, Paul. 1963. "Les catégories d'Aristote." *Revue de Métaphysique et de Morale* no. 68:257-267.

"Par catégories aristotéliennes, on entend le plus souvent des énonciations, déclarations, expressions, prédicats; mais le verbe grec signifie " s'adresser à " avec le sens accessoire d'accuser, obliger. Je ne discute pas ce qu'ont entendu les autres, dans une autre façon de penser, cette notion : dans l'esprit d'Aristote la vérité du monde ou de l'univers est adressée par les catégories et en même temps cette vérité est jugée responsable de cette dénomination ou qualification, de telle façon ce n'est pas l'homme qui en raisonnant attribuerait quelque chose monde ou qui ferait des observations plus ou moins véridiques sur monde (thèse jusqu'à présent maintenue par un nominalisme soit ouvert, soit déguisé) ; mais bien que le

monde est appelé par la raison l'homme par son vrai nom - un appel qui à la fois contient un défi une accusation. Si l'on s'adresse, par exemple, à la nature animale par désignation "cruelle", sous condition que ce nom soit accepté par nature animale (c'est-à-dire qu'il soit "vrai"), alors cette nature male est responsable (dans le sens scientifique, non pas dans le moral) de sa crudélité et en porte la "culpabilité". (p. 257, notes omises)

33. Villevieille, Laurent. 2018. "Du « Je parle » au « Je pense » : l'origine des catégories selon Trendelenburg et Brentano." *Philosophie*:39-54.

"La présente étude n'entend donc pas établir l'importance, pour la lecture d'Aristote, de l'apport trendelenburgien, auquel de nombreux travaux, ces dernières décennies, ont pleinement rendu justice. Encore moins vise-t-elle à donner raison à Trendelenburg dans le débat qui l'oppose à Bonitz. Elle tente plutôt de débusquer, derrière le débat avec Bonitz qui, justement, leur ont longtemps fait écran, les enjeux proprement philosophiques de l'interprétation trendelenburgienne des catégories d'Aristote. Nous tenterons en effet de montrer que ces enjeux exigent, au-delà de la fausse alternative bonitzienne entre catégories de langue et catégories de l'être, de reconduire la lecture trendelenburgienne à la véritable alternative où elle s'inscrit : l'alternative entre catégories de langue et catégories de pensée.

Sans doute la meilleure illustration de ce débat décisif peut-elle être trouvée, comme nous le verrons un peu plus loin, dans le rapport que le plus illustre élève de Trendelenburg, Franz Brentano, a entretenu avec l'héritage de son maître." (p. 40)

34. Vuillemin, Jules. 1967. "Le système des *Catégories* d'Aristote et sa signification logique et métaphysique." In *De la logique à la théologie. Cinq études sur Aristote*, 44-125. Paris: Flammarion.

Deuxième étude: Le système des *Catégories* d'Aristote et sa signification logique et métaphysique, p. 44-125.

"Dans la querelle toujours renaissante concernant la signification des catégories d'Aristote, un linguiste éminent(1)

est intervenu pour montrer que celles-ci appartiennent d'abord à la langue grecque et que si l'on prétend les traduire dans une langue très éloignée du groupe indo-européen, la même notion se voit exprimée par plusieurs catégories linguistiques sans que d'ailleurs ces catégories possèdent, pour tout autre que pour un sujet formé à la langue grecque, une unité propre." (p. 75)

(...)

"Cette démonstration possède un double mérite.

D'abord, elle fait apercevoir l'organisation de la table des catégories à laquelle on avait toujours reproché son caractère rhapsodique.(2) Les six premières catégories se réfèrent toutes à des formes nominales, les quatre dernières à des formes verbales." (p. 75)

(..)

"En second lieu, on conclut que, croyant classer des notions, Aristote a classé en réalité des catégories de langue, eu sorte que les particularités de la langue grecque ont dominé le destin de la philosophie en Occident.

Cette seconde conclusion, toutefois, outrepassé ce que l'argumentation a démontré. En effet, de ce qu'une philosophie emprunte aux oppositions d'une langue les concepts et les oppositions reconnues fondamentales pour la pensée, il est légitime de conclure non seulement que la langue propose ses suggestions à la pensée, mais qu'il est impossible de penser ce qui n'y est pas exprimé; toutefois, il est illégitime de conclure que la table des catégories de la pensée reflète celle des catégories de la langue. Pour pouvoir aller jusque-là, il faudrait avoir montré que le tableau des catégories empruntées à la langue est aussi le tableau complet de ces catégories quant à la langue. Dans le cas contraire, il y aura sélection et, si le philosophe choisit dans les catégories linguistiques, c'est que son choix n'est précisément plus dicté uniquement par la considération de la langue. Or c'est bien ce qui se passe, puisqu'on ne saurait prétendre que la structure des catégories de la langue grecque est exhaustivement exposée dans le tableau d'Aristote.

En fait, celui-ci suit une articulation logique qui, en même temps, possède une portée ontologique et c'est en ressaisissant la nature de cette articulation, une fois qu'elle a été mise au jour par l'analyse de la langue, qu'on trouvera peut-être le fil directeur de la déduction aristotélicienne, qui semble avoir jusqu'ici échappé à l'analyse." (pp. 76-77)

36. Zhang, Yijing. 2019. "Les catégories d'Aristote à l'épreuve du «sophiste» chinois Gongsun Long." *Revue Philosophique de Louvain* no. 117:3-30.

Résumé : "Confrontées au chinois, l'universalité des catégories aristotéliciennes pose deux questions: (1) ces catégories sont-elles traduisibles en chinois? (2) La pensée chinoise possède-t-elle les mêmes catégories? Nous les examinons ici l'une et l'autre par le biais d'une aporie célèbre: «Cheval blanc n'est pas cheval» – cas où les deux traditions philosophiques sont les plus «comparables» puisqu'il s'agit du même problème du rapport entre la couleur blanche et un corps blanc, mais aussi les plus «incomparables» puisque les différences linguistiques et philosophiques sont très frappantes. En réinterrogeant les positions de certains chercheurs modernes qui défendent, les uns l'universalité de la logique aristotélicienne, les autres la singularité de la pensée chinoise, nous mettons en lumière la difficulté à se dégager des concepts occidentaux en interprétant la pensée chinoise, difficulté par excellence de tout dialogue transculturel."

Aristotele, *Categorie*. Bibliografia degli studi Italiani

Bibliografia

1. Apelt, Otto. 2020. *La dottrina delle categorie di Aristotele*. Macerata: Quodlibet.

A cura e con un saggio di Venanzio Raspa. Traduzione di Italo Cubeddu e Venanzio Raspa.

"Se alla dottrina aristotelica spetta un qualche duraturo significato filosofico, ossia più che meramente storico, allora essa deve in qualche modo poter essere spiegata e legittimata anche a partire dalla natura e dallo stato della nostra conoscenza. E non crediamo di metterci dalla parte del torto, se abbiamo il coraggio di chiamare in causa le conquiste della più recente filosofia per valutare le concezioni aristoteliche. Una cosa è giudicare un autore antico partendo da nuovi punti di vista, un'altra è attribuirgli qualcosa di nuovo e di estraneo. Rifiutare fin dal principio una valutazione filosofica dell'intera questione, come fa Bonitz a p. 35 (5), significa in sostanza rinunciare a un suo vero apprezzamento. Davvero la filosofia, nel corso dei millenni, non ha conseguito risultati sicuri? Si deve veramente giudicare Aristotele solo a partire da Aristotele e non è possibile farlo diversamente senza diventare ingiusti? Questa per noi moderni sarebbe quasi una dichiarazione di bancarotta. Ma come, se in questo modo non soltanto si comprendesse meglio Aristotele, ma anche lo si giustificasse? E come, se ad esempio proprio Kant ci venisse in soccorso, e se, attraverso il controllo reciproco dell'antico mediante il nuovo e del nuovo mediante l'antico, le concezioni di entrambi trovassero la loro conferma? Vale la pena tentarlo!

A questo però ci apriamo innanzi tutto una strada interrogando precisamente lo stesso Aristotele sull'intento che egli ha avuto con la sua suddivisione categoriale. Qui naturalmente solo lui ha la parola, qui cioè ci guardiamo nella maniera più rigorosa dall'interferire con recenti concezioni, concedendo piuttosto ad Aristotele di essere il commentatore di sé stesso. Come ho già detto, cercheremmo inutilmente negli scritti di Aristotele specifiche ed esplicite informazioni sull'origine e l'intento di questa dottrina. Tuttavia, egli non ci lascia completamente soli con accenni alla via che ha seguito per arrivare alla sua esposizione. Soprattutto, menziona almeno il campo che ritiene di avere completamente suddiviso con le sue categorie. È possibile che, con una corretta spiegazione dell'idea che sta alla base della suddivisione, si riesca a sollevare in una certa misura il velo dietro il quale si cela il mistero.

Non è nelle *Categorie* che dobbiamo cercare questa spiegazione.

La troviamo in altri scritti, e prima di tutto nella *Metafisica*. Ma si vedrà che il primo scritto non è in contraddizione con il secondo, soprattutto perché mi sembra che, per il suo contenuto, il trattato sulle categorie sia assolutamente autentico, anche se la forma non può essere attribuita interamente ad Aristotele." (pp. 100-101)

2. Belardi, Walter. 1976. "Le *Categorie* aristoteliche e la cultura linguistica dell'epoca." *De Homine* no. 57:3-24.

Ristampato ed ampliato in W. Belardi, *Filosofia, grammatica e retorica nel pensiero antico*, Roma: Edizioni dell'Ateneo, 1985, capitolo VII, pp. 147-165.

"Secondo alcuni c'è un argomento filosofico che più di ogni altro sembra implicare uno stretto collegamento tra filosofia e grammatica: le dieci categorie aristoteliche. Poiché Aristotele non ci informa sulla via da lui percorsa per arrivare alla individuazione e alla definizione delle dette categorie, la critica ha supposto in alternativa tre possibili diverse genesi: logica, grammaticale, ontologica. Secondo la prima ipotesi le categorie

rifletterebbero universali logici, colti direttamente dal pensiero speculativo di Aristotele, ispirato, in parte, da riflessioni di predecessori; per la seconda, invece, le categorie sarebbero una trasposizione sul piano logico dei fondamentali valori formalizzati, cioè grammaticali, propri della lingua greca antica; secondo la terza ipotesi, le categorie sarebbero dei πρώτα metafisici necessari per pensare la sostanza nei suoi aspetti. In genere, la prima ipotesi non tiene conto del fatto che le categorie - come dice lo stesso Aristotele in 1 b 25 - si colgono attraverso la considerazione di «dicibili», con i quali si costruisce il discorso. La seconda ipotesi - riproposta di recente da E. Benveniste - è programmaticamente riduttiva nel ricondurre le categorie aristoteliche a fatti e classi grammaticali; la terza, nella considerazione dell'essere circoscritto trascura il fatto che la pensabilità si attua passando attraverso i «significati» ai quali Aristotele si riferisce più volte nella *Metafisica*. L'origine logica - così autorevolmente sostenuta soprattutto da O. Apelt(1) - sarebbe dimostrata dall'essere le categorie dotate di « logische Bedeutung »; ma c'è da chiedersi di che tipo sia la logicità che inerisce a predicati come «giace » o « è armato », esempi della settima e dell'ottava categoria. L'origine « ontologica metafisica », riproposta da G. Reale(2), sembrerebbe indubitabile, solo nella misura, però, in cui il discorso si sposta, illegittimamente, dal predicabile all'oggetto di cui si predica, altrimenti l'ontologismo delle categorie si riduce al solo fatto che virtualmente la categoria ha una riferibilità ontologica, come altre espressioni semantiche per lingua. Per quanto i fautori più accorti della seconda ipotesi pensino che l'operazione di trasposizione non sia stata preceduta e accompagnata da consapevolezza critica, la seconda ipotesi reclama di necessità che si ammetta la presenza in Aristotele di una sensibilità per i valori linguistici assai accentuata anche se inconscia, e sviluppata al punto da cogliere nella lingua greca tutti quei valori grammaticali che poi nell'*Organon* ci vengono presentati come « categorie logiche »." (pp. 147-148 della ristampa)

- (2) G. Reale, *Filo grammaticale e filo conduttore ontologico nella deuzione delle categorie aristoteliche*, in « Riv. di filosofia neoscolastica » 49 (1957), pp. 423-458. Il fatto che le categorie riguardino l'ὄν non basta a farle essere ontologiche.
3. Benveniste, Émile. 1971. "Categorie di pensiero e categorie di lingua." In *Problemi di linguistica generale*, 79-92. Milano: Il Saggiatore.

"Con questa tavola delle « categorie » Aristotele intendeva passare in rassegna tutti i possibili predicati della proposizione, a condizione che ciascun termine fosse significante da solo, non inserito in una συμπλοκή, noi diremmo in un sintagma. Inconsciamente ha seguito come criterio la necessità empirica di una espressione distinta per ciascun predicato. Era quindi destinato a ritrovare, senza volerlo, le distinzioni che la lingua stessa rende evidenti fra le principali classi di forme, dato che è per le loro differenze che tali forme e tali classi hanno un significato linguistico. Aristotele credeva di definire gli attributi degli oggetti, mentre non enuncia che degli enti linguistici: è la lingua che, grazie alle proprie categorie, permette di riconoscerli e di specificarli. Abbiamo così una risposta alla domanda formulata all'inizio e che ci ha condotti a fare questa analisi. Ci domandavamo di che natura fossero le relazioni fra categorie di pensiero e categorie di lingua. Nella misura in cui vi si riconosca una validità, per il pensiero, le categorie di Aristotele si rivelano come la trasposizione delle categorie di lingua. È ciò che si può dire che delimita e organizza ciò che si può pensare. La lingua fornisce la configurazione fondamentale delle proprietà che la mente riconosce alle cose. Questa tavola dei predicati ci informa dunque prima di tutto sulla struttura delle classi di una particolare lingua. Ne consegue che quanto Aristotele ci dà come un quadro di condizioni generali e permanenti non è che la proiezione concettuale di una data situazione linguistica. Si può anzi estendere questa osservazione. Al di là dei termini aristotelici, al di sopra di questa categorizzazione, si spiega l'idea di « essere » che racchiude tutto. Pur senza essere un predicato, l'« essere » è la condizione di tutti i predicati. Tutte le varietà dell'« essere in un certo modo », dello « stato », tutte le idee possibili del « tempo

», e così via, dipendono dalla nozione di « essere ». Anche qui, questo concetto riflette una proprietà linguistica molto specifica. Il greco non soltanto possiede un verbo « essere » (cosa che non è affatto una necessità di ogni lingua), ma ne fa degli usi del tutto singolari. Gli fa svolgere una funzione logica, quella di copula (Aristotele stesso già osservava che in tale funzione il verbo non ha un significato proprio, ma opera soltanto una *synthesis*), e ha perciò avuto un'estensione maggiore di qualsiasi altro." (pp. 86-87)

"L'unità che le Categorie formano con le altre opere logiche di Aristotele e, dunque, l'unità dello studio del linguaggio e del sillogismo appaiono, in realtà, molto più forti nell'interpretazione stoica che nello stesso Aristotele. Bodéüs ha sottolineato come, diversamente dall'impianto stoico della logica - in cui i ragionamenti complessi possono essere scomposti in proposizioni complesse, e queste, a loro volta, in proposizioni semplici e in ulteriori elementi -, la teoria del sillogismo formale, in Aristotele, non necessita di uno studio preliminare delle premesse, in quanto i sillogismi vengono definiti dalla posizione relativa dei termini contenuti nelle premesse e simboleggiati da lettere.(9)

"Il volume si articola in tre parti. La prima parte contiene un saggio introduttivo curato da Carlo Natali sul tema e la

struttura delle *Categorie*.

La seconda parte riporta i saggi di analisi e commento ai diversi capitoli dell'opera, curati da Maddalena Bonelli, Barbara Botter, Lisa Bressan, Elisabetta Cattanei, Paolo Fait, Francesca Masi, Stefano Maso, Carlo Natali, Cristina Rossitto, Rita Salis, Cristina Viano, Diego Zucca. La divisione dei saggi, da un lato, riflette la divisione degli argomenti adottata durante il seminario, dall'altro, rispecchia l'esigenza di suddividere la tematica in unità più brevi e più adatte alla segmentazione e ai tempi delle lezioni o delle sessioni dei seminari universitari. In molti casi, perciò, uno stesso capitolo è stato suddiviso in due parti e affidato all'analisi di più studiosi. Ogni contributo, inoltre, è pensato per introdurre il lettore alle principali problematiche affrontate da Aristotele in ciascun capitolo dell'opera e per orientarlo nelle diverse posizioni e soluzioni critiche che si sono presentate sia nella tradizione esegetica antica che in quella moderna e contemporanea. Abbiamo lasciato che ogni autore interpretasse liberamente questa indicazione. Ne è risultata, tuttavia, con nostra soddisfazione, un'impostazione tutto sommato omogenea. I saggi dedicati ai primi nove capitoli dell'opera riportano una traduzione, per quanto possibile originale, del passo esaminato, un'analisi e una divisione degli argomenti trattati nella porzione di testo considerata, un esame puntuale del testo in forma, per lo più, di commento continuo. I saggi dedicati ai *Postpraedicamenta*, data la loro tematica e la loro articolazione interna del tutto peculiari, sono stati pensati diversamente dagli altri, vale a dire non come un commento continuo, bensì come un'esposizione complessiva del tema affrontato e della sua funzione nel contesto complessivo dell'opera.

La terza parte è occupata da due articoli di approfondimento rispettivamente scritti da Jonathan Barnes e Walter Cavini e dedicati l'uno ad una riflessione teorica più generale sulla categoria della quantità e l'altro sulle nozioni di vero e falso nelle *Categorie*.

Seguono ai contributi critici gli indici. Per quanto riguarda quest'ultimi, abbiamo optato per una soluzione il più possibile

agile e minimale. L'indice analitico, in particolare, riporta solo le nozioni intorno a cui ruotano i saggi. L'indice delle fonti registra i passi tratti da opere diverse dalle *Categorie* effettivamente commentati e/o citati, nonché i passi delle *Categorie* discussi e citati nei saggi di Natali, Cavini e Barnes." (p. 13)

7. Bonitz, Hermann. 1995. *Sulle categorie di Aristotele*. Milano: Vita e Pensiero.

Traduzione italiana di *Über die Kategorien des Aristoteles* (1853).

Prefazione (7-9), introduzione (13-31), Nota bio-bibliografica (33-43), di Giovanni Reale; traduzione e indici di Vincenzo Cicero.

"Bonitz ha scritto questo saggio che presento nel 1853, come ho già detto, proprio in polemica con Trendelenburg, rilanciando in modo massiccio la prima delle tesi sopra elencate (le categorie come figure dell'essere), cercando di darle una ben precisa coerenza e consistenza.

(...)

In questo saggio sulle categorie, Bonitz, seguendo un criterio metodologicamente assai corretto, non parte dalla discussione della tesi di Trendelenburg, che intende confutare, ma fa questo nella seconda parte, dopo aver stabilito, mediante una accurata analisi dei testi, quale sia il vero e proprio significato delle categorie e quale sia stata la via percorsa da Aristotele per stabilire la tavola di esse.

In particolare, Bonitz vorrebbe, nella misura del possibile, rileggere e interpretare la problematica delle categorie aristoteliche senza lasciarsi condizionare dagli influssi dei vari ripensamenti teoretici delle medesime (errori in cui non pochi studiosi sono caduti), e quindi accertare in modo preciso quanto segue: la questione più importante è la seguente: quale significato aveva la dottrina in questione per lo stesso Aristotele, e in quale rapporto sta con l'impalcatura globale del suo pensiero? Solo a partire da questa domanda, infatti, sarà possibile misurare interamente l'ampiezza delle trasformazioni

e delle evoluzioni che le singole dottrine hanno subito nelle fasi successive»(7).

Ecco, allora, le due domande di fondo che Bonitz si pone: in primo luogo, bisogna stabilire quale sia oggettivamente il significato che le categorie di Aristotele assumono nei suoi testi; in secondo luogo, bisogna cercare di stabilire quale sia stata la via percorsa da Aristotele per giungere alla scoperta delle categorie.

Per rispondere in maniera metodologicamente corretta a tali domande, dal momento che Aristotele non presenta nei suoi scritti una precisa definizione del concetto di «categoria», Bonitz nella prima parte del suo saggio(8) inizia con l'esame dettagliato di alcuni passi-chiave nei quali Aristotele nel discutere problemi di vario genere fa uso del concetto di «categoria», per giungere a una serie di chiarificazioni intorno a tutti i termini usati dallo Stagirita in connessione con tale concetto.

Nella seconda parte del saggio(9), Bonitz cerca di ripercorrere, come ho già detto, quella via seguendo la quale Aristotele è pervenuto alla dottrina delle categorie, ed è proprio nel corso di questa parte che egli ingaggia una serrata polemica con la tesi di Trendelenburg." (Giovanni Reale, p. 15)

8. Botter, Barbara. 2010. "La predicazione delle differenze nelle Categorie di Aristotele." *Journal of Ancient Philosophy* no. 1:1-18.

Abstract: "In chapter 3 of the *Categories* Aristotle introduces a principle that is widely taken to assert the transitivity of the *said-of* relation. In this paper we shall show than something different may be going on in the transitivity principle that

straightforward invocation of the transitivity of the *said-of* relation."

9. Brentano, Franz. 1995. *Sui molteplici significati dell'essere secondo Aristotele*. Milano: Vita e Pensiero.

Traduzione italiana di *Von der mannigfachen Bedeutung des Seienden nach Aristoteles* (1862).

Prefazione, introduzione, traduzione dei testi greci, progettazione e impostazione editoriale di Giovanni Reale; traduzione del testo tedesco e indici di Stefano Tognoli.

Indice: Prefazione di G. Reale IX; Saggio introduttivo di G. Reale XIII; Note al Saggio introduttivo LVII; Nota bibliografica LXV-LXXIII;

Sui molteplici significati dell'essere secondo Aristotele

Premessa 5; Introduzione 7; Note all'introduzione 9; I. L'essere è un omonimo: la molteplicità dei suoi significati si ordina nella quadruplica distinzione dell'essere per accidente, dell'essere come vero,

dell'essere delle categorie e dell'essere in potenza e in atto 13; Note al capitolo primo 17; II. L'essere per accidente 19; Note al capitolo secondo 29; III. L'essere nel significato di vero 35; Note al capitolo terzo 47; IV. L'essere in potenza e in atto 55; Note al capitolo quarto 79; V. L'essere secondo le figure delle categorie 91; Note al capitolo quinto 195-243.

"Abbiamo conosciuto l'essere in tre significati, ma, ciononostante, la parte più difficile del nostro lavoro non è stata ancora compiuta. Più importante di tutti, infatti, è quel quarto significato dell'essere che viene indicato più esattamente come l'essere secondo le figure delle categorie (κατὰ τὰ σχήματα τῶν κατηγοριῶν *Metaph.*; Θ 10, 1051 a 34). Vedremo in dettaglio che esso stesso comprende, a sua volta, una grande molteplicità di significati, e che si rivelerà, per questo, ai fini della nostra trattazione, tanto fecondo di risultati quanto irto di difficoltà. Comunque troveremo qui un aiuto di non poco conto nei lavori di moderni ricercatori e soprattutto nel meritevole scritto di Trendelenburg (*Storia della dottrina delle categorie*) a cui va la nostra piena gratitudine. Alle sue approfondite

spiegazioni rinverremo spesso, quando non riterremo opportuno proseguire oltre una questione che ci condurrebbe troppo lontano." (p. 91)

10. Cavini, Walter. 1979. "Categorie e predicazione in Aristotele." *Annali dell'Istituto di Filosofia - Università di Firenze* no. 1:1-16.

"Le Categorie aristoteliche contengono sia una teoria della predicazione (e dei tipi di enti possibili) o *Antepredicamenta* (capp. 1-3), sia una teoria dei *Predicamenta* o categorie dell'essere (capp. 4-9), che insieme formano il nodo essenziale di logica e metafisica, teoria del discorso apofantico e filosofia prima, caratteristico di tutto il pensiero aristotelico; nodo che nei *Postpredicamenta* (capp. 10-15) viene a includere, in particolare con la nozione di ' mutamento' (κίνησις), anche i principi della :fisica o filosofia seconda.

(...)

Si tratta dunque di delineare tali rapporti fra predicazione, categorie e copula in Aristotele." (pp. 1-3, note omesse)

11. ——. 2011. "Un nuovo papiro delle «Categorie». *PHarris I 2 e Arist. Cat. 10.*" In *Papiri filosofici. Miscellanea di studi VI*, 241-251. Firenze: Olschki.

"Quando nel 1936 Enoch Powell pubblicò P.Harris i 2 in *The Rendel Harris Papyri of Woodbroke College* di Birmingham, ritenne evidente che i frammenti di testo contenuti nelle due colonne superstiti derivassero da un trattato di retorica («evidently from a treatise on rhetoric») e li considerò parte di una definizione dei termini ἀπόφασις e κατάφασις, suggerendo come modello quella datane da Aristotele in *Int. 6*, 17a25-37." (p. 241)

"In conclusione, nessuna delle tesi enunciate inizialmente da Enoch Powell si è rivelata sostenibile. il papiro, come già avevano visto Kapp, Snell e Körte, non contiene un trattato di retorica, ma uno scritto di logica; non riguarda la definizione di affermazione e negazione, ma quella di affermazione e negazione opposte; infine, il testo a cui riferirsi non è il *De interpretatione* di Aristotele, ma le *Categorie*, dove

l'affermazione e negazione opposte sono definite per esemplificazione tramite gli enunciati aperti 'x è seduto' e 'x non è seduto'." (p. 251)

12. ———. 2011. "Vero e falso nelle *Categorie* di Aristotele." In *Studi sulle Categorie di Aristotele*, edited by Bonelli, Maddalena and Guadalupe Masi, Francesca, 371-406. Amsterdam: Adolf M. Hakkert.

"Nelle *Categorie* aristoteliche non compaiono mai i sostantivi 'verità' (ἀλήθεια) e 'falsità' (ψεῦδος), ma sempre gli aggettivi corrispondenti 'vero' (ἀληθής) e 'falso' (ψευδής o ψεῦδος usato come aggettivo) applicati agli enunciati dichiarativi (λόγοι) e alle credenze (δόξαι) che essi esprimono. Questo lavoro vuole essere una lettura mirata del testo aristotelico alla luce dei predicati semantici 'vero' e 'falso' allo scopo di delineare la teoria della verità e falsità soggiacente all'uso di tali aggettivi. La coppia di antonimi 'vero'/'falso' ricorre nel testo aristotelico sia come coppia disgiuntiva 'vero o falso' sia come coppia congiuntiva 'vero e falso'. Nel § 1 esamino il significato della coppia disgiuntiva 'vero o falso' sia applicata al singolo enunciato sia applicata alla coppia di enunciati contraddittori. Nel primo caso la coppia disgiuntiva ha valore disgiuntivo: ogni enunciato dichiarativo è vero o falso (Principio di Bivalenza); nel secondo caso invece ha valore distributivo: ogni affermazione e negazione opposte sono l'una vera l'altra falsa (Regola delle Coppie Contraddittorie). Nel § 2 esamino il significato che la coppia congiuntiva 'vero e falso' assume alla fine di *Categorie* 5, cioè quello di ora vero ora falso, in relazione al problema della variazione diacronica dei valori di verità degli enunciati e delle credenze, e del mero cambiamento *à la* Cambridge cui sono soggetti rispetto al cambiamento reale cui è soggetta la sostanza. Nel § 3, infine, esamino un passo di *Categorie* 12 in cui Aristotele enuncia sia i principi di discesa e ascesa semantiche (da essere vero a essere e da essere a essere vero), sia il principio di priorità causale di essere o non essere rispetto a essere vero o falso. La tesi che intendo sostenere è che vero e falso nelle *Categorie*, e in generale nel pensiero aristotelico, sono da considerarsi non proprietà ontiche o reali,

ma proprietà logiche genuine degli enunciati e delle credenze che essi esprimono." (pp. 371-372, note omesse)

13. Cicero, Vincenzo. 1994. "L'interpretazione linguistica delle categorie aristoteliche in E. Benveniste." In *Adolf Trendelenburg. La dottrina delle categorie in Aristotele*, 285-353. Milano: Vita e Pensiero.

"Il problema moderno del filo conduttore grammaticale nell'interpretazione delle categorie di Aristotele.

Friedrich Adolf Trendelenburg è stato il primo studioso a tematizzare in modo esplicito la possibilità che lo schema categoriale di Aristotele fosse il risultato di una deduzione sistematica condotta a partire da un principio ben definito. In particolare, la sua tesi per cui a far da guida nella costruzione di questo schema sarebbe stato, almeno in un primo momento, un filo conduttore grammaticale, ha costituito nel corso della seconda metà del XIX secolo un punto di riferimento imprescindibile, sebbene quasi sempre polemico, per tutti coloro che hanno rivendicato la presenza di un'impalcatura quanto meno organica nella dottrina delle categorie di Aristotele.(1)" (p. 287)

(...)

"È un fatto, però, che l'esito delle ricerche di Trendelenburg sia stato inequivocamente aporetico. Esso potrebbe riassumersi nel modo seguente: Aristotele sembra aver scoperto le categorie, in quanto predicati supremi, seguendo un filo conduttore grammaticale (un *proteron pros hemas*), cioè la scomposizione della proposizione, e precisamente l'analisi dell'espressione e della forma del giudizio; le categorie, però, hanno anche un significato «reale», ontologico, e perciò in diversi luoghi delle opere aristoteliche il fondamento generativo, ciò che è anteriore per natura (*il proteron dei physei*), è apparso come il vero punto di vista della classificazione; in conclusione, «alla questione, posta in termini aristotelici: in che misura questo "primo per noi" (*proteron pros hemas*) coincide con il "primo per natura" (*proteron dei physei*), ovvero in che senso se ne distingue?, non riceviamo alcuna risposta».(10)" (pp. 289-290)

(...)

"La nostra trattazione si propone piuttosto di collocare una volta per tutte il problema del filo conduttore grammaticale nella sua giusta dimensione speculativa, e in questo senso sarà dedicata prevalentemente ad un confronto diretto con le critiche «radicali» che Benveniste, prendendo lo spunto dalle categorie aristoteliche, ha mosso al pensiero filosofico in generale." (p. 292)

15. Esposti Ongaro, Michele. 2005. "Dialettica e grammatica nella dottrina delle categorie di Aristotele." *Elenchos.Rivista di Studi sul Pensiero Antico* no. 26:33-64.

"Una tradizione storiografica assai antica ha interpretato le *Categorie* di Aristotele come un'analisi logica dei concetti del giudizio, e dunque come un'opera propedeutica al *De interpretatione* e agli *Analitici*, dedicati, rispettivamente, alla trattazione della proposizione e a quella del sillogismo.

Nella recente edizione francese dell'opera⁽¹⁾, il curatore R. Bodéüs, oltre a rivedere il testo stesso e i criteri che avevano presieduto alle edizioni precedenti, ha chiarito definitivamente l'arbitrarietà di tale collocazione e il carattere artificioso del sistema dottrinale costituito dall'*Organon*: l'ordinamento delle opere aristoteliche, stabilito da Andronico di Rodi nel I secolo a.C., sarebbe stato accettato successivamente dai filosofi neoplatonici al fine di creare un impianto logico in parte simile a quello della dottrina stoica, e ad esso rivale." (p. 33)

"L'aspetto prettamente filologico dello studio di Bodéüs sembra difficilmente contestabile, e non intendo metterne in

discussione né il metodo né le conclusioni: ma tale aspetto concerne esclusivamente

la collocazione dottrinale e il titolo dell'opera(13). Le altre conclusioni chiamano invece in causa specifiche opzioni ermeneutiche, che rivelano a mio avviso elementi di debolezza. Ritengo infatti che proprio l'ipotesi della continuità tra *Topici* e *Categorie* dovrebbe condurre a un esame critico del concetto di categoria, un esame che prenda in considerazione non solo il significato del concetto, ma anche la funzione della tavola delle categorie nella filosofia aristotelica e, soprattutto, il problema della deduzione della tavola delle categorie. L'analisi di questi tre aspetti consente a mio avviso di convalidare l'ipotesi di una matrice linguistico-dialettica dello scritto, sancendone al contempo il carattere autenticamente aristotelico.

E tale matrice deve essere a sua volta posta in connessione con l'ipotesi, che costituisce l'oggetto principale della presente indagine, secondo la quale la deduzione della tavola delle categorie ha seguito un filo conduttore di tipo grammaticale." (pp. 36-37)

16. Fait, Paolo. 2004. "La predicazione linguistica nelle *Categorie* di Aristotele." *Rivista di Estetica* no. 44:23-36.

Abstract: "The paper deals with the relations of *being said of* and *being in* which are indirectly introduced in Aristotle's *Categories*. Is Aristotle distinguishing two kinds of ontological predication, corresponding respectively to essential predication and accidental predication, or not? Unlike many interpreters who answer this question in the affirmative, I deny *being in* to be a kind of predication at all. My aim is to show that in the few passages of the *Categories* in which Aristotle has recourse to a generic concept of predication, covering both essential and accidental predication, what he has in mind is just *linguistic*

predication. The problem with linguistic predications, however, is that sometimes they do not mirror their ontological underpinnings, thereby misleading people into such absurd positions as that held by the "late-learners" depicted in Plato's *Sophist*."

18. Maso, Stefano. 2008. "Come determinare la sostanza? Aristotele, 'Categorie' 5." *Lexis* no. 26:185-200.

"È noto a tutti gli studiosi di Aristotele che, intorno all'individuazione e alla definizione della sostanza, si gioca gran parte dell'ontologia aristotelica. Lo Stagirita affronta il problema a più riprese, in particolare nel capitolo V delle *Categorie* e nel libro VII della *Metafisica*. Si tratta di due opere molto diverse quanto a concezione, storia e tradizione. La prima, insieme ai *Topici*, è oggi pressoché concordemente riconosciuta autentica e ritenuta uno tra i primi lavori del filosofo (almeno tra quelli pervenutici), destinata a essere messa a disposizione dei discepoli per le indagini di fisica e metafisica.

Appartenenti all'*Organon*, le *Categorie* infatti esibiscono immediatamente il loro carattere logico-linguistico, strumentale alla determinazione di ciò di cui ci si occupa allorché si fa filosofia e, insieme, all'analisi del linguaggio che tale ricerca e tale determinazione consente." (p. 185, note omesse)

19. Melandri, Enzo. 2017. *Alcune note in margine all' Organon aristotelico*. Macerata: Quodlibet.

Settima nota. Sulle categorie, 45-57; Ottava nota. Sul problema delle categorie 59-69.

"Precisione terminologica - La parola " categoria" (latino medievale *praedicamentum*) deriva da "kategorein " _ (accusare, giudicare, asserire) e quindi dovrebbe significare

semplicemente "predicato", nel senso verbale di participio passato (ciò che è giudicato vero, valido ecc.). In realtà la parola e i suoi derivati ("categorico", "categoriale"), in senso tecnico, assumono tre diversi significati:

(i) Quanto alla forma della predicazione, una proposizione o un giudizio si dicono "categorici" quando presentano la struttura soggetto-predicato, con qualità positiva o negativa della copula ("è" oppure "non è") e quantità universale o particolare del termine soggetto ("tutti" oppure "non-tutti"). In questo senso si parla anche di forma "categoriale" del giudizio.

(ii) Quanto alla modalità dell'asserzione, una proposizione o un giudizio si dicono "categorici" quando asseriscono l'esistenza o la non esistenza di qualcosa, cioè quando valgono quali "verità di fatto", indubitabili ma contingenti, ossia non necessarie e non impossibili.

(La modalità assertoria comprende il "vero" e il "falso"; le altre modalità, quelle così dette in senso stretto, sono il "possibile" e l'"impossibile", il "necessario" e il "non-necessario"). In questo senso si suole contrapporre alla modalità "categorica" (il vero o il falso) del giudizio la modalità "pre-categoriale" (o "antepredicativa") del concetto, con riferimento al suo non essere né vero né falso.

(iii) Quanto alla generalità del predicato, si dicono "categorie" i generi sommi. A questo riguardo, sarebbe bene evitare (per le ragioni di cui si veda la nota successiva) di chiamare "categorie" quei concetti fondamentali che (come per esempio l'"essere") non si predicano in forma categoriale." (p. 50)

20. Natali, Carlo. 2011. "Struttura e organizzazione del trattato aristotelico detto *Categorie*." In *Studi sulle Categorie di Aristotele*, edited by Bonelli, Maddalena and Guadalupe Masi, Francesca, 17-30. Amsterdam: Adolf M. Hakkert.

"A conclusione di questo percorso, rispetto alla divisione tradizionale delle *Categorie* in *Prepraedicamenta* (capitoli 1-3), *Praedicamenta* (capitoli 4-9) e *Postpraedicamenta* (capitoli 10-15)¹⁵, noi vorremmo proporre alcune modifiche. Le *Categorie* ci paiono composte di tre blocchi, ma diversi tra loro,

e dalla divisione tradizionale, sia per estensione sia per struttura. I tre blocchi costitutivi ci paiono essere (1) Categorie 2-9, (2) Categorie 10-15, (3) Categorie 1.

Il blocco (1) mostra un filo conduttore lineare e coerente, inizia con un'affermazione universale e poi la sviluppa nei dettagli, come tante altre opere di Aristotele. Nella nostra analisi la svolta concettuale più importante si situa a metà del capitolo 2, e questo potrebbe sembrare strano, ma va ricordato che la divisione in capitoli non è aristotelica e ad essa non va data eccessiva importanza. Il blocco (2) è un insieme di capitoli distinti, accomunati dall'essere tutti analisi della molteplicità dell'uso di termini o di specie di un genere. Esso somiglia alle analisi della seconda parte del blocco (1), capitoli da 5 a 8, perché, come in quella sezione, anche qui si studiano i molti sensi dei termini e degli enti. Il blocco (3) analizza alcune distinzioni tra i modi di dire un termine non univoco, utili sia alle discussioni del blocco (1) sia alle discussioni del blocco (2), e richiamate qua e là in essi. In modo poco felice gli editori più antichi hanno pensato di porre questo blocco alla testa degli altri due. Lasciamo da parte qui la questione della seconda versione delle *Categorie*, prima citata, che, modificando il testo, cerca di dare ragione del perché il blocco (3) sia stato posto all'inizio dell'opera. Essa comunque attesta che un certo disagio per l'ordinamento dello scritto venne percepito già in epoca molto antica." (p. 27)

21. Negro, Camillo. 1960. "Note per una definizione del concetto di categoria in Aristotele, *Cat.* 1-5." In *Miscellanea Adriano Gazzana. Vol. II*, 5-22. Milano: Marzorati.
22. Palù, Chiara. 2000. "Le definizioni dei relativi nelle *Categorie* di Aristotele: una risposta a David Sedley." *Diánoia* no. 5:39-55.

"This paper analyzes the two definitions of relatives in chapter 7 of Aristotle's *Categories* starting from David Sedley's recent article on this topic. In particular, using Simplicius's *Commentary*, I suggest some new arguments for Sedley's emendation at 8b18, which make it possible to read the expression '*aute e kephale*' in the sense of the head in itself (a

substance) in opposition to the head as a part of the body ('per accidens'). The consequence of this interpretation is that it changes the meaning of the second definition of relatives, making it able to distinguish between what is a relative as such and what is a relative accidentally."

23. Ragnisco, Pietro. 1871. *Storia critica delle categorie, dai primordi della filosofia greca sino ad Hegel*. Firenze: Cellini.

Due volumi.

"Noi esponghiamo la dottrina delle categorie di Platone non nel senso logico o formale, ma nel terreno della dialettica reale, perchè reale è appunto il valore della logica platonica. Le categorie poi di Aristotele meritano un particolare esame intorno al valore non solo formale, ma specialmente metafisico di che la nostra storia soprattutto deve tener conto: lo che sarà chiaro quando avremo dimostrato come la logica è ispirata sopra i principii della metafisica. Finalmente le categorie degli stoici saranno ancora esaminate nel valore logico e reale: e si dimostrerà come la dottrina delle categorie perdeva nella scienza il suo interesse a misura che la scienza stessa non era animata da nuovi principii.

Tutto ciò formerà l'argomento del primo libro della storia delle categorie: esso mostrerà come sia nata la dottrina delle categorie, come sia elevata a poco a poco al più alto apogeo in Platone ed in Aristotele, e come sia decaduta dalla metafisica nella grammatica. La dottrina delle categorie nella filosofia greca è di sommo rilievo, e noi abbiamo fatto particolari e diligenti investigazioni per mostrare come in essa

si contenga il fiore dell'ellenico sapere.

Il secondo libro contiene la storia delle categorie platoniche aristoteliche e stoiche, ovvero la storia dei diversi modi onde quelle furono interpretate. La dottrina delle categorie seguì l'istessa fortuna della filosofia. Dopo i grandi sistemi di Platone, di Aristotele e degli stoici, la scienza si versò nei commenti e nella interpretazione di quelle dottrine senza nulla aggiungere che fosse veramente grandioso." (pp. 53-54)

(...)

"Il secondo libro perciò verserà intorno alla storia delle categorie di Aristotele, esponendo non solo il vario modo onde fu interpretata ognuna delle dieci categorie, ma soprattutto il valore di quelle. In esso poco o nulla di nuovo abbiamo ad osservare; poichè, tranne le categorie di Plotino, di Erigena, e di Lullo in cui si trova qualche idea diversa da Aristotele, il resto non contiene altro che un cumulo di commenti

inutili e di nessuno interesse. Bisogna aspettare sino ai tempi del Cusano, del Bruno e del Campanella per avere qualche cosa di notevole nella scienza delle categorie. Questi filosofi però sono i profeti della filosofia moderna e fanno quasi parte più del terzo che del secondo libro." (pp. 55-56)

24. Raspa, Vincenzo. 2020. "Categorie e linguaggio. Trendelenburg interprete di Aristotele." *Paradigmi*:293-335.

Abstract "Trendelenburg's essay *De Aristotelis categoriis* is presented for the first time in Italian translation.[*]

It exposes the famous theses concerning the derivation of the Aristotelian categories from the analysis of the proposition and their correspondence with the parts of speech.

While highlighting the connection of the Aristotelian categories with the spoken language, at the same time it points out that Aristotle's primary interest was in the nature of things and concepts. The introduction, through a biographical draft, sketches Trendelenburg's cultural formation; subsequently, it presents an analysis of *De Aristotelis categoriis*; finally, it discusses the reception of Trendelenburg's interpretation in the nineteenth and twentieth centuries. In addition to the criticisms of scholars like Heinrich Ritter, Eduard Zeller, Hermann Bonitz, Carl Prantl, Franz Brentano and Otto Apelt, it examines the affinities between Trendelenburg's concept and those of two front-ranking linguists, Émile Benveniste and Louis Hjelmslev. The bibliography contains all the works cited in Trendelenburg's essay and those related to it."

25. ———. 2020. *Origine e significato delle categorie di Aristotele. Il dibattito nell'Ottocento*. Macerata: Quodlibet.

"Il presente volume verte su un singolo capitolo, breve ma significativo, della storia delle interpretazioni dei testi di Aristotele. Esso non vuole però essere solo un lavoro storiografico e, quindi, offrire uno sguardo complessivo sulla produzione filosofica e filologica che in un determinato periodo storico, precisamente nel XIX secolo nei paesi di lingua tedesca, ha interessato la teoria delle categorie di Aristotele.

Intende, invece, offrire uno strumento interpretativo utile per la comprensione di tale teoria e, allo stesso tempo, dare uno specifico contributo a una storia dei concetti filosofici. Il XIX secolo non ha senz'altro esaurito il discorso sulla dottrina delle categorie di Aristotele, un discorso che è proseguito, proprio perché le interpretazioni date allora non sono apparse decisive, anche se non pochi risultati sono stati acquisiti; ma ha offerto al secolo successivo una scelta accurata del materiale su cui lavorare, nuove piste da esplorare, intuizioni da approfondire. Intraprendendo il tentativo di dipanare il groviglio di fili che, intrecciati, costituiscono il dibattito ottocentesco sulle categorie di Aristotele, questo piccolo volume intende, a sua volta, offrire un commento." (pp. 18-19)

26. Raspa, Venanzio. 2020. "L'interpretazione logico-semantica delle categorie di Aristotele. Otto Apelt e il dibattito nell'Ottocento." In *Otto Apelt. La dottrina delle categorie di Aristotele*, 11-81. Macerata: Quodlibet.

"Il saggio di Otto Apelt (1845-1932) *Die Kategorieenlehre des Aristoteles* [La dottrina delle categorie di Aristotele] fu pubblicato nel 1891 all'interno di una raccolta di testi dell'autore intitolata *Beiträge zur Geschichte der griechischen Philosophie* [Contributi alla storia della filosofia greca]. Con esso Apelt prendeva posizione all'interno di un dibattito sulla dottrina delle categorie di Aristotele che aveva attraversato la filosofia di lingua tedesca per gran parte del XIX secolo.

Il saggio rappresenta il punto più maturo di tale dibattito e si pone quasi a suo suggello. Alla rigorosa analisi testuale e alla

profonda conoscenza degli scritti aristotelici, Apelt unisce una tesi interpretativa forte, per mezzo della quale ci introduce con sapienza filologica e acume filosofico nella teoria delle categorie di Aristotele." (p. 11)

27. Reale, Giovanni. 1957. "Filo conduttore grammaticale e filo conduttore ontologico nella deduzione delle categorie aristoteliche." *Rivista di Filosofia Neo-Scolastica* no. 49:423-458.

Edizione riveduta col titolo: *Filo conduttore grammaticale, filo conduttore logico e filo conduttore ontologico nella deduzione delle categorie aristoteliche e significati polivalenti di esse su fondamenti ontologici*, in: Adolf Trendelenburg, *La dottrina delle categorie in Aristotele*, Milano: Vita e Pensiero, 1994, pp. 17-70.

"Conclusioni riassuntive sulla tesi di Trendelenburg

Possiamo fissare la tesi di Trendelenburg nei seguenti punti:

- 1) Le categorie sono state scoperte grazie ad osservazioni di indole linguistico-grammaticale, precisamente, in base all'analisi e alla scomposizione della proposizione semplice.
- 2) Le considerazioni grammaticali non chiariscono invece l'articolazione delle categorie in dieci concetti, nel senso che non chiariscono come esse non possano essere più o meno quanto al numero.
- 3) Inoltre, il filo conduttore grammaticale non guida la deduzione dei «modi» di ogni singola categoria, i quali non si articolano da una unità di pensiero, ma sono semplicemente posti l'uno accanto all'altro.
- 4) Infine, il punto di vista grammaticale non guida la determinazione della successione, la *Reihenfolge*, la quale si chiarisce, invece, in funzione del criterio ontologico di: ciò che è primo per natura

(πρότερον τῆ φύσει).

Se grammaticale è l'origine delle categorie, nell'ambito della grammatica esse non esauriscono il loro valore: «Ita Aristoteles

categoriarum genera ex grammaticis fere orationis rationibus invenisse videtur, inventas autem ita pertractavit, ut, relicta origine, ipsam notionum et rerum naturam spectarent»(50).

La valenza antologica delle categorie non viene, in generale, misconosciuta, ma è ben lungi dall'essere ritenuta definitoria; sull'aspetto logico Trendelenburg fa leva nel precisare la natura delle categorie; le categorie sono «logische Kategorien»: precisamente, sono i sommi generi della predicazione (*summa praedicationis genera*)(51), sono i predicati più universali (*die allgemeinsten Prédicate*)(52), dunque, figure della logica." (pp. 32-33)

28. ——. 1995. "Significato e importanza del saggio di Hermann Bonitz "Sulle categorie di Aristotele". In *Hermann Bonitz. Sulle categorie di Aristotele*, 11-31. Milano: Vita e Pensiero.

"Bonitz ha scritto questo saggio che presento nel 1853, come ho già detto, proprio in polemica con Trendelenburg, rilanciando in modo massiccio la prima delle tesi sopra elencate (le categorie come figure dell'essere), cercando di darle una ben precisa coerenza e consistenza.

(...)

In questo saggio sulle categorie, Bonitz, seguendo un criterio metodologicamente assai corretto, non parte dalla discussione della tesi di Trendelenburg, che intende confutare, ma fa questo nella seconda parte, dopo aver stabilito, mediante una accurata analisi dei testi, quale sia il vero e proprio significato delle categorie e quale sia stata la via percorsa da Aristotele per stabilire la tavola di esse.

(...)

Ecco, allora, le due domande di fondo che Bonitz si pone: in primo luogo, bisogna stabilire quale sia oggettivamente il significato che le categorie di Aristotele assumono nei suoi testi;

in secondo luogo, bisogna cercare di stabilire quale sia stata la via percorsa da Aristotele per giungere alla scoperta delle categorie.

Per rispondere in maniera metodologicamente corretta a tali domande, dal momento che Aristotele non presenta nei suoi scritti una precisa definizione del concetto di «categoria», Bonitz nella prima parte del suo saggio⁸ inizia con l'esame dettagliato di alcuni passi-chiave nei quali Aristotele nel discutere problemi di vario genere fa uso del concetto di «categoria», per giungere a una serie di chiarificazioni intorno a tutti i termini usati dallo Stagirita in connessione con tale concetto.

Nella seconda parte del saggio⁽⁹⁾, Bonitz cerca di ripercorrere, come ho già detto, quella via seguendo la quale Aristotele è pervenuto alla dottrina delle categorie, ed è proprio nel corso di questa parte che egli ingaggia una serrata polemica con la tesi di l'rendelenburg." (p. 14)"

(9) Dal titolo *Il significato che le categorie assumono per Aristotele*, cfr. infra, pp. 9-93.

29. ———. 1995. "Il significato e l'importanza teoretica e storico-ermeneutica del libro di Franz Brentano *Sui molteplici significati dell'essere secondo Aristotele* e alcune osservazioni critiche di complemento." In *Franz Brentano. Sui molteplici significati dell'essere secondo Aristotele*, XIII-LXVI. Milano: Vuta e Pensiero.

"Aristotele non presenta un solo elenco dei vari significati dell'essere, ma su tutti uno emerge in modo preminente: quello illustrato nel settimo capitolo del libro quinto, elenco che fa da schema nel corso del libro sesto, in particolare ai capitoli secondo, terzo e quarto.

Questo elenco presenta quattro significati:

- 1) essere per accidente,
- 2) essere come vero e non essere come falso,
- 3) essere come categorie,

4) essere come potenza e come atto.

Vedremo che più che di quattro significati si tratta, in realtà, di quattro gruppi di significati, così che la molteplicità dei significati dell'essere si infittisce ulteriormente." (p. XV)

(...)

"Con la discussione sulle categorie Brentano raggiunge i vertici della propria trattazione e, sotto certi aspetti, ci presenta il meglio che nel secolo scorso sia stato scritto sull'argomento.

Ancora oggi, queste pagine contengono osservazioni che si impongono come punti di riferimento irrinunciabili.

Brentano distingue tre posizioni assunte dagli interpreti circa l'essenza e il significato delle categorie(28).

La prima intende le categorie non come concetti, bensì come strutture o schemi in cui si collocano i vari concetti. Si tratterebbe, in altri termini, di strutture di classificazione che ordinano i diversi concetti, e che quindi non sono semplici predicati, ma si pongono al di sopra di essi. Eduard Zeller, che a questa tesi ha dato un'ampia risonanza con la sua *Filosofia dei Greci*, scrive: «Le categorie non sono esse stesse, immediatamente, predicati; bensì indicano solo il luogo per certi predicati»(29). Dunque, secondo questa prima interpretazione, esse rappresenterebbero forme di predicazione, più che semplici predicazioni.

Un secondo gruppo di interpreti ha sostenuto, invece, che le categorie sono veri e propri concetti considerati in rapporto con il giudizio, o meglio parti del giudizio, ossia predicati, e precisamente i predicati più universali. Come esempio emergente Brentano cita Adolf Trendelenburg, il quale afferma: «Le categorie appaiono pertanto come i concetti universali sotto i quali cadono i predicati della proposizione *semper* Ece [...]. Le categorie sono i predicati più universali»(30).

Un terzo gruppo di interpreti ritiene invece che le categorie siano concetti reali. Hermann Bonitz, per esempio, ha dimostrato che le categorie aristoteliche indicano «i diversi

significati in cui noi esprimiamo il concetto di essere»; esse sono «i supremi generi dell'essere»³¹.

Brentano è convinto che la terza interpretazione sia quella preferibile, ma riconosce anche alle altre due «elementi fondati che ci sembrano del tutto compatibili con la terza»^(32.)

Abstract: "This article discusses the ontological status of the parts of substances in Aristotle's theory of categories. Since in this theory the substantial parts, as well as the wholes, are primary subjects of predication, i.e. substances, a part may be to its whole as Socrates is to Callias so that the mereological composition of substances can be regarded as an accident (a relation). It is argued here

that in *Cat. 7* Aristotle is trying to rule out this possibility by redefining the boundaries of the category of relatives itself. Starting from the framework of the Academic debate and then

following closely the text of *Cat.* 7, the author provides a detailed reconstruction of Aristotle's argument in order to establish the reason for which the parts of substances hold such an uncertain status. Furthermore, he shows that the *Categories* do not provide a definitive solution to the mereological problem, which has rather to be sought in the *Metaphysics*. The following results are attained: a moderately systematic component is revealed in Aristotle's *Categories* and a mereological element is detected in the very core of his theory of substance."

"Vista l'importanza dell' omonimia nella filosofia aristotelica, è curioso costatare che solo nelle *Categorie* troviamo una definizione esplicita di enti omonimi e di enti sinonimi; secondo alcuni studiosi, peraltro, la definizione concernente gli enti omonimi non sarebbe per nulla chiara, e si riuscirebbe a capirne il senso solo con l'aiuto di scritti successivi alle *Categorie*. Oltretutto, tale definizione si trova proprio all'inizio del trattato e Aristotele non ci spiega se e come essa servirà nel seguito di questo. Del resto, vi sono state numerose discussioni, sia tra i commentatori antichi sia tra gli studiosi moderni, di quale sia l'oggetto dell'intero trattato *Categorie* - parole o enti e di che cosa siano le categorie stesse.

Fatta questa premessa, vorrei ora esaminare la definizione di enti omonimi e di enti sinonimi data in *Categorie* 1 con lo scopo di mostrare che, al contrario di quanto molti ritengono, Aristotele, già nelle prime opere - le *Categorie* sono un'opera concordemente ritenuta dell' Aristotele giovane -, aveva una nozione di omonimia e di sinonimia ben definita." "Il II maggior assertore della genesi grammaticale delle categorie è stato il Trendelenburg, il quale, sia nella *De Aristotelis Categoriis* prolusio, Berlin 1833 che — soprattutto — in *Historische Beiträge zur Philosophie*, Bd. 1, *Geschichte der Kategorienlehre, Zwei Abhandlungen: I Aristoteles Kategorienlehre* (pp. 1-195); II *Die Kategorienlehre in der Geschichte der Philosophie* (pp. 196-380), Berlin 1946, dopo aver indicato la caratteristica precipua delle categorie nell'essere esse i supremi predicati («die Kategorien sind die allgemeine Prädicate»), ne puntualizza la derivazione dalla grammatica nel modo seguente: la categoria della sostanza corrisponde al sostantivo, quelle della quantità e della qualità all'aggettivo (la prima può essere espressa anche dal numerale, la seconda ridà invece le proprietà particolari), la relazione ha un significato più ampio di quello che può esprimere l'aggettivo al grado comparativo, ma porta sicuramente in sé le tracce della sua derivazione da questo, il dove e il quando corrispondono agli avverbi di luogo e di tempo, il fare e il patire esprimono la

forma attiva e passiva del verbo, il giacere esprime, almeno in parte, la condizione dei verbi intransitivi, l'aver le particolarità del perfetto. Il significato logico delle categorie è stato affermato soprattutto da O. Apelt, *Die Kategorienlehre des Aristoteles*, in *Beiträge zur Geschichte der griechischen Philosophie*, Leipzig 1891, pp. 140 sgg., (...)

Oltre ad un significato linguistico e logico, il Bonitz ha rivendicato alle categorie anche un significato ontologico (cfr. H. Bonitz, *Über die Kategorienlehre des Aristoteles*, in «Sitzungsberichte der Kaiserlichen Akademie der Wissenschaften», Philosophische-historische Klasse, 10 Band, 5 Heft, Wien 1853, pp. 591-645). Sul valore ontologico delle categorie si sono recentemente espressi, in Italia, G. Reale. *Filo conduttore grammaticale e filo conduttore ontologico nella deduzione delle categorie aristoteliche*, in «Rivista di filosofia neoscolastica» XLIX (1957), pp. 423-458; L. Lugarini, *Il problema delle categorie in Aristotele*, in «Acme» VII (1955), pp. 3-107. Una interpretazione semantica delle categorie è stata sostenuta da M. Wesoly, *Verso un'interpretazione semantica delle categorie di Aristotele*, in «Elenchos» V (1984), pp. 103-140. Va anche segnalato il tentativo di R. Bodéus, *Aux origines de la doctrine aristotélicienne des Catégories*, in «Revue de Philosophie ancienne» III (1984), pp. 121-137, di individuare nell'ambito giuridico greco la genesi delle categorie." (pp. 81-82)

40. ———. 2010. "Omonimia, non-omonimia e sinonimia nell'«argomento dei relativi» del *De Ideis* " *Éndoxa: Series Filosóficas* no. 25:13-42.

Riassunto: "La nozione di «non-omonimia» surruga nel *Perì ideon* quella di sinonimia, istituita nelle *Categorie* sulla base della già effettuata critica delle Idee platoniche, in un momento, quale quello della composizione del *Perì ideon*, in cui Aristotele si accinge a operare detta critica. L'uso, qui, della nozione di sinonimia avrebbe infatti comportato l'introduzione di una nozione non ancora fondata."

Aristoteles Kategorienlehre: Bibliographie von deutschsprachigen Studien

Bibliographie

1. Apelt, Otto. 1891. "Die Kategorienlehre des Aristoteles." In *Beiträge zur Geschichte der griechischen Philosophie*, 101-216. Leipzig: Teubner.

Nachdruck: Aalen: Scientia Verlag, 1975.

"Sind die Kategorien des Aristoteles die Grundbegriffe, auf denen die Möglichkeit der Erfahrung überhaupt und die Regeln ihrer inneren Verknüpfung und Einheit beruhen? Das war es, was Kant unter Kategorie verstand und war er, zufolge eines verzeihlichen Vorurteils, auch als die eigentliche Absicht der aristotelischen Kategorienlehre ansah. Dafs die aristotelischen Kategorien dies nicht sind tnd nicht sein sollten, hat sieb in der Folge immer sicherer herausgestellt. Tieferes Studium und wachsendes Verständnis der aristotelischen Schriften führten zu der Erkenntnis, dafs es sich bei dieser Lehre nicht um die obersten Regelbegriffe der Naturerkenntnis, sondern um eine Einteilung der Begriffe überhaupt handele. Über Ursprung und Bedeutung aber dieser Einteilung gingen die Meinungen wit auseinander." (ss. 103-104)

2. Baumgartner, Hans-Michael, Gerhardt, Gerd, Konhardt, Klaus, and Schönrich, Gerhard. 1976. "Kategorie, Kategorienlehre." In *Historisches Wörterbuch der Philosophie. Band 4*, edited by Ritter, Joachim and Gründer, Karlfried, 714-776. Darmstadt: Wissenschaftliche Buchgesellschaft.

"Kategorie (griech. κατηγορία, wörtl. Anklage, i. ü. S. Aussageform, von κατηγορέω, ich spreche gegen jemanden, ich klage an; lat./ital. categoria, frz. catégorie, engl. category), Kategorienlehre. – Die philosophische Entdeckung des K.-Begriffs ist nicht gleichen Ursprungs mit dem Anfang philosophischer Reflexion selbst. Der Terminus <K.> verdankt seinen Ursprung nicht der die anfängliche philosophische Fragestellung bestimmenden Erkenntnishaltung der intentio recta, sondern einer eigenartig kritischen Rückwendung der philosophischen Reflexion auf sich selbst, auf Bestimmungen des «Logos», die ebenso dem Sprechen wie dem Denken eignen, sofern beides auf Sein und Seiendes bezogen ist und dieses inhaltlich auslegend zu definieren und zu klassifizieren unternimmt.

Aus diesem Grunde indizieren Verständnis und Bestimmung des K.-Begriffs ebenso ein spezifisches Selbstverständnis von Philosophie im Ganzen, wie umgekehrt jene durch dieses erklärt und interpretiert werden können. «Was für eine K.-Lehre man wählt, hängt davon ab, was für ein Philosoph man ist» [1]. In dieser Perspektive ist die Geschichte des K.-Begriffs [2] zugleich eine Geschichte philosophischer Selbstinterpretation." (714)

3. Berka, Karel. 1960. "Über einige Probleme der interpretation der aristotelischen Kategorienlehre." *Studia antiquano*. 8:35-43.

"Wenn wir nun unsere Aufmerksamkeit auch auf die ontologischen und logischen Aspekte der aristotelischen Kategorienlehre richten werden, so stoßen wir auf weitere Probleme, an denen sich ebenfalls die Unklarheiten seiner Lehre aufweisen lassen. Die ontologischen und logischen Aspekte seiner Kategorienlehre zeigen sich am schärfsten in seinen Erwägungen über die οὐσία, die die wichtigste Kategorie

seiner ganzen Lehre ist. In den 'Kategorien' wird die Substanz in zwei Unterklassen geteilt: in die πρώτη οὐσία und die δευτερά οὐσία. In beiden Fällen ist die Substanz dadurch gekennzeichnet, dass nur dieser Kategorie eine selbständige und unabhängige Existenz angehört. Darum ist gerade nur die οὐσία, wie dies besonders in der 'Metaphysik' betont wird, die Grundlage aller Veränderung, der Träger aller anderen Kategorien, die dann von diesem ontologischen Aspekte aus gesehen nur als συμβεβηκότα betrachtet werden. Aus demselben Grunde bildet sie auch die Grundlage der Prädikation im kategorischen Urteil. Dies führt aber zu der Ansicht, dass die Substanz in einem richtig gebildeten kategorischen Urteil nie Prädikat sein kann.(25) Diese Einschränkung, in der sich klar die Unstimmigkeit des logischen und ontologischen Charakters der Substanz äussert, bezieht sich in Wirklichkeit offensichtlich nur auf die da ein Individuum, z. B. 'Kallias', von keinem Subjekt ausgesagt werden kann. Die δευτερά οὐσία, obzwar sie auch die Grundlage der Prädikation bilden, können allerdings ganz beliebig im kategorischen Urteil als Subjekt oder Prädikat vorkommen. Falls wir ferner die einzelnen Kategorien selbst vom Standpunkt ihrer Funktion in den hierarchisch geordneten Begriffsreihen als die umfangreichsten Begriffe auffassen, von denen nichts mehr ausgesagt werden kann, so ist es ganz verständlich, dass sie im kategorischen Urteil nur als Prädikate stehen können, z. B. 'Der Mensch ist eine Substanz'. Von diesem Aspekt aus können wir dann die Kategorien selbst als die höchsten Prädikate(26) ansehen. Diese Auffassung ist wohl richtig nur in dem Falle, dass wir den Begriff der Substanz lediglich im Sinne der Σερεγατ οὐσία auffassen. Dies wird höchstwahrscheinlich der Hauptgrund gewesen sein, warum Aristoteles die πρώτη οὐσία in seinen späteren logischen Erwägungen nicht mehr in Betracht zieht." (ss. 40-41)

Von der mannigfachen Bedeutung des Seienden nach Aristoteles 1

Inhalt

Einleitung 11; I. Kapitel. Das Seiende ist ein ὁμώνυμον. Die Mehrheit seiner Bedeutungen ordnet sich der vierfachen Unterscheidung des ὄν κατὰ συμβεβηκός, des ὄν ὡς ἀληθές, des ὄν der Kategorien und

des ὄν δυνάμει καὶ ἐνεργείᾳ unter 15; II. Kapitel. Von dem ὄν κατὰ συμβεβηκός 18; III. Kapitel. Von dem ὄν ὡς ἀληθές 29; § 1. Von dem Wahren und Falschen 29; § 2. Von dem ὄν ὡς ἀληθές und dem μὴ ὄν ὡς ψεῦδος 38; IV. Kapitel. Von dem ὄν δυνάμει καὶ ἐνεργείᾳ 45; § 1. Bestimmung der Bedeutung dieses Seienden 45; § 2. Verbindungen von Zuständen der Möglichkeit und Wirklichkeit. Die κινήσις 55; V. Kapitel. Von dem Seienden nach den Figuren der Kategorien 73; § 1. Einleitende Bemerkungen. Die Kategorien sind von Aristoteles in bestimmter Zahl aufgestellt. Verschiedene Auffassungen der Aristotelischen Kategorien durch neuere Erklärer 73; § 2. Die Kategorien sind reelle Begriffe 81; § 3. Die Kategorien sind verschiedene, analoge Bedeutungen des ὄν. Nähere Bestimmung ihrer Analogie 84; § 4. Die Kategorien sind die höchsten Gattungen des Seienden 95; § 5. Die Kategorien sind die höchsten Prädicate der ersten Substanz 98; § 6. Princip der Kategorieneintheilung 103;

Stellenregister 197; Personenregister 203-206.

"In drei Bedeutungen haben wir das Seiende kennen gelernt, aber dennoch ist der schwerste Theil unserer Arbeit noch nicht gethan, denn jene vierte Bedeutung des Seienden, in welcher es näher bezeichnet wird als das Seiende nach den Figuren der Kategorien, τὸ ὄν κατὰ τὰ σχήματα τῶν κατηγοριῶν (*Metaph.* Θ, 10. p. 1051, a, 34.), ist die wichtigste von allen, und da sie selbst wieder, wie wir des Näheren sehen werden, eine große Mannigfaltigkeit der Bedeutungen umfaßt, so ist sie insbesondere für unsere Abhandlung ergiebig sowohl als reich an Schwierigkeiten. Indessen werden wir hier in den Arbeiten neuerer Forscher und vorzüglich in Trendelenburgs verdienstreicher Schrift: „Geschichte der Kategorienlehre,“ eine nicht geringe Hülfe finden, die unseren vollen Dank verdient. Auf seine gründlichen Darlegungen werden wir auch öfter verweisen, wo wir eine Frage, die uns zu weit fortführen würde, nicht weiter verfolgen wollen." (s. 73)

7. ——. 1933. *Kategorienlehre*. Leipzig: Felix Meiner.

Herausgegeben von Alfred Kastil. Nachdruck: Hamburg: Meiner 1985.

"Blicken wir nach dieser Erörterung auf Aristoteles zurück, so zeigt sich, daß er mit Unrecht dem Begriffe des Seienden die Einheitlichkeit für Substanz und Akzidens abgesprochen hat. Von den Kategorien kann darum nicht im Sinne von verschiedenen Bedeutungen des Seienden, noch auch von verschiedenen höchsten Prädikaten oder höchsten Gattungen, sondern nur etwa von verschiedenen höchsten Differenzen des Seienden gesprochen werden. Doch auch dies wäre nicht das Rechte und Reichte zur Charakteristik des Unterschiedes der Substanzen und der verschiedenen Klassen von Akzidentien nicht aus. Gibt es doch auch mehrere höchste substantielle Differenzen, welche als solche hinter höchstens akzidentellen nicht zurückstehen. Der wahre Begriff einer Kategorie ist nur zu gewinnen im Hinblick auf die Ergebnisse der eben von uns geführten Untersuchung, welche den Unterschied von Subjekt und etwas, dem ein Subjekt unterliegt, erkennen läßt. Auch zeigt sich, daß die Unterschiede, welche sich bei der Bestimmung der höchsten Klassen dessen, was einem Subjekt akzidentell zukommt, ergeben, noch mannigfaltiger sind als Aristoteles geglaubt hatte, obwohl manche der von ihm für akzidentell gehaltenen Bestimmungen, wie z. B. sinnliche Qualität, Ort und reale Zeit, sowie vielleicht Ausdehnung und Figur vielmehr zu den substantiellen gehören." (s. 129)

8. ———. 1993. "Zur Kategorienlehre. Ein unveröffentlichter Text (Nachlass Metaphysik 91)." *Brentano Studien* no. 4:251-272.

Herausgegeben von Mauro Antonelli.

9. Detel, Wolfgang. 1998. "Eine terminologische Rekonstruktion von Aristoteles, *Categoriae* 1-5." In *Amicus Plato magis amica veritas. Festschrift für Wolfgang Wieland zum 65. Geburtstag*, edited by Enskat, Rainer, 60-81. Berlin: Walter de Gruyter.

"Aristoteles unterscheidet im Rahmen seiner frühen Ontologie in der Kategorienschrift vier Arten von Entitäten, und ein bedeutender Teil der Forschung hat sich seit jeher mit der Rekonstruktion dieser Entitäten beschäftigt.

Die traditionelle Interpretation, die bis heute ihre Vertreter gefunden hat, nimmt an, daß Aristoteles eine ontologische Klassifikation in konkrete Einzeldinge („individuelles

Substantielles", erste Usia), Spezies und Genera („allgemeines Substantielles", zweite Usia), bestimmte, individuelle Eigenschaften („individuelles Nichtsubstantielles") und allgemeine Eigenschaften oder Spezies bzw. Genera von individuellen Eigenschaften („allgemeines Nichtsubstantielles") mit einem ontologischen Primat der ersten Usia vorschlagen wollte. Dabei wird unterstellt, daß individuelle Eigenschaften nur durch ihre Träger individualisiert werden, nicht mehreren Dingen zugesprochen werden können und jeweils mit ihren individuellen Trägern untergehen.

Die vieldiskutierte Untrennbarkeitsbehauptung in Cat. 2, 1 a 24 –25 wird daher so verstanden, daß eine individuelle Eigenschaft ihrer Existenz nach von der Existenz genau ihres spezifischen individuellen Trägers abhängig ist.(1)" (p. 60)

(1) Vgl. Oehler (1984) [Aristoteles, *Kategorien*. Übersetzt und erläutert von K. Oehler, Berlin], ad Cat. 2.

10. Ebert, Theodor. 1985. "Gattungen der Prädikate und Gattungen des Seienden bei Aristoteles. Zum Verhältnis von *Kat.* 4 und *Top.* I.9." *Archiv für Geschichte der Philosophie* no. 67:113-138.

"Die Untersuchungen (des ersten Teils) der Kategorienschrift sind zwar, wie gerade *Kat.* 2 deutlich macht, am Leitfaden der prädikativen Aussage orientiert; aber sie fragen nicht nach *deren* Struktur, sondern benutzen bestimmte Strukturen prädikativer Aussagen, um etwas über die Struktur der Welt in Erfahrung zu bringen. Der Begriff, der dabei eine prominente Rolle übernimmt, ist nun gerade nicht der Begriff des (prädizierbaren) Prädikates, ist nicht der Begriff der κατηγορία, sondern der Begriff des Subjektes: ὑποκείμενον ist das Schlüsselwort im analytischen Instrumentarium der Kategorienschrift. Für eine ontologische Untersuchung scheint das auch nur natürlich. Denn nur die Frage nach dem, was Subjekt und was nur Subjekt sein kann, führt die Ontologie zu einem sicheren Fundament.

Diese ontologische Thematik der Kategorienschrift wird aber durch ihren jetzigen Titel nur verunklärt. Vielleicht sollten wir tatsächlich dem bei Simplikios überlieferten Vorschlag folgen

und ihr den Titel „Über die Gattungen des Seienden“ zurückgeben.“ (s. 138)

11. Ermano, Andrea. 2000. *Substanz als Existenz. Eine philosophische Auslegung der prōtē ousia: mit Text, Übersetzung und Diskussion von: Aristoteles, Categoriae 1-5*. Hildesheim: Georg Olms.

"Meine Fragestellung ist die folgende: Was für einen Sinn und was für eine Bedeutung kann die Aristotelische?

Grundkategorie der ersten Substanz (πρώτη οὐσία) für ein philosophisches Verständnis unserer Existenz haben? Um diese Frage dreht sich die vorliegende Untersuchung, die in drei Teile gegliedert ist, in welchen vor allem die Hervorhebung folgender Aspekte des Substanzbegriffs anvisiert wird: 1) Die logisch-ontologische Funktion der Kategorien und in erster Linie der Substanz hinsichtlich der Bildung eines ganz allgemeinen Begriffs des Seienden gemäß seiner Möglichkeit, sich zu 'bewegen'.(5) - ii) Der spezifische Sinn der πρώτη οὐσία im Kontext einer Reflexion über das Wesen des Menschen, sofern dies als unabhängige, individuelle und veränderungsfähige Existenz gedacht wird. - iii) Die ganz besondere

Bedeutung unserer Grundkategorie im Bereich einer 'archäologischen' Verankerung der Wahrheit in der Anerkennung des Anderen gemäß seiner ontologischen Würde und also seiner eigenen Substantialität.(6)

In fortschreitender Annäherung an diese fundamentale Bedeutung der Substanz wird eine philosophisch engagierte Auslegung der Aristotelischen Ousiologie aufgrund der Kategorienschrift versucht. Die Stellung der Grundkategorie πρώτη οὐσία im Selbstverständnis unserer Existenz wird am Schluß der Untersuchung hervorgehoben. Die hermeneutische Beziehung zwischen Text- und Selbstverständnis spielt allerdings von Anfang an eine wichtige Rolle. Dieser methodische Ansatz ist für die Interpretation des Aristotelischen Textes einfach entscheidend.

Und deshalb läuft die ganze Textinterpretation wiederum auf ein bestimmtes, wenngleich nicht systematisch entfaltetes

Seinsverständnis hinaus, das auf der ersten Substanz als Existenz des Anderen beruht. Im Sinne dieser methodischen Auffassung wird also der Aristotelische Substanzbegriff als Grundkategorie der Existenz zum Gegenstand der Auslegung gemacht." (ss. 26-27)

(5) Unter 'Bewegung' (κίνησις) fallen nicht nur die Veränderungen in der Natur, sondern auch die innerhalb der menschlichen Seele - von der einfachsten Empfindung bis zum praktischen Schluß des vernünftigen Willensaktes.

(6) In der Sprache Heideggers zusammengefaßt, entsprechen die drei erwähnten Aspekte, die in den drei Teilen der Arbeit hervorgehoben werden sollen, der ontischen, der ontologischen bzw. der fundamentalontologischen Dimension der Substanz.

12. Fonfara, Dirk. 2003. *Die Ousia-Lehren des Aristoteles. Untersuchungen zur Kategorienschrift und zur Metaphysik.* Berlin: Walter de Gruyter.

"Im Corpus Aristotelicum findet sich nicht nur die in der Metaphysik vertretene Substanz- oder Ousia-Lehre, sondern es lassen sich bei Aristoteles zwei unterschiedliche Versionen der Ontologie-Konzeption ausmachen: (1) Gemäß einer frühen Ontologie in der Kategorienschrift (*Cat.* 5) gilt als erste Ousia das bestimmte Einzelwesen (τόδε τι), nur als 'zweite Ousiai' (δεύτεραι οὐσίαι) werden hingegen die Gattungen (γένη) und Arten (εἶδη) bezeichnet, welche jeweils ein bestimmtes Einzelwesen als erste Ousia voraussetzen.

Diese Ousia-Lehre transformiert damit implizit die Ontologie Platons (vgl. Kap. I 5), nach der die Idee in ihrer Allgemeinheit sich als Ousia erweist. Bei Plato erhielt der Terminus, der von τό ὄν (das Seiende) abgeleitet ist und zunächst die konkrete Bedeutung 'Anwesen', 'Besitz' hatte, eine philosophische Bedeutung als das an sich und beständig Seiende, die Idee. Trotz jener inhaltlichen Umdeutung bleibt auch für Aristoteles die Ousia die leitende Bedeutung des Seienden als Bezeichnung für das primär Seiende.

(2) Nach der späteren Lehre des Aristoteles in *Met. Z* (vgl. Kap. III-IV), die in *Met. Δ* 8 angedeutet ist (vgl. Kap. II), gilt das

Eidos als erste Ousia (*Met. Z 7, Z 11*). Wenn aber das Eidos als Definiens der Wesensbestimmung (ορισμός) ein Allgemeines ist (*Met. Z 12*), wie kann es dann Ousia, ja sogar Ousia im primären Sinne sein, als welche in der Kategorienschrift noch das bestimmte konkrete Einzelindividuum (τόδε τι) angesehen wurde?

Handelt es sich bei der Ousia-Lehre von *Met. Z* mit ihrer Auszeichnung des Eidos als erster Ousia um eine Rückkehr des Aristoteles zur Platonischen Ontologie?

Dies ist unmöglich, da in *Met. Z 13* behauptet wird, kein Allgemeines könne Ousia sein (1038b8-12). Inwiefern gilt dann aber angesichts dieser Entsubstantialisierung des Allgemeinen das Eidos als erste Ousia? Oder bleibt Aristotelesvielmehr dabei, daß primäre Ousia weiterhin das bestimmte Einzelwesen (τόδε τι) ist, dessen ontologische Bestimmungen und konstitutive Möglichkeitsbedingungen nun eingehend zu analysieren sind?

Die These der Arbeit lautet, daß das Eidos erste Ousia ist, aber nicht das Eidos als solches, sondern nur, sofern es die Essenz (το τί ἦν εἶναι, zum Terminus vgl. Kap. II 2d) eines Einzelwesens darstellt, die dessen wirkliches Sein und wesentliches Wassein ausmacht, während das Eidos im Rahmen der Definition - gedacht in der letzten Differenz - ein Allgemeines ist, damit aufgrund seiner Unveränderlichkeit und Notwendigkeit gemäß den *Analytica posteriora* Gegenstand der Wissenschaft ist und auf diese Weise erst eine wissenschaftliche Erkenntnis des jeweiligen Einzelnen ermöglicht. Darin liegt die epistemologische Bedeutung des Eidos⁴; denn gerade das stofflich bestimmte, konkrete Einzelwesen ist als solches nicht definierbar und damit philosophischer Erkenntnis unzugänglich (vgl. *Met. Z 15*).“ (ss. 1-2, Notizen weggelassen)

13. Frede, Michael. 1978. "Individuen bei Aristoteles." *Antike und Abendland*:16-39.

"Mit diesen Schwierigkeiten, vor allem den ersten beiden, beschäftigt sich der erste Teil des Aufsatzes, welcher die aristotelische Kategorienschrift betrifft.

In der Metaphysik nun bestreitet Aristoteles die Existenz des Allgemeinen, zumindest jedenfalls die Existenz von Arten von Gegenständen. Folglich verwirft er auch den Individuenbegriff der Kategorienschrift, welcher die Existenz des Allgemeinen, die Existenz von Universalien voraussetzt. Da aber Aristoteles nicht die Eigenschaften mit dem Allgemeinen identifiziert, hat auch die Leugnung des Allgemeinen keineswegs zur Folge, daß nun der Begriff des Individuums mit dem des Gegenstandes zusammenfällt. Vielmehr bringt es die Leugnung des Allgemeinen mit sich, daß nun erst recht die Beziehung zwischen Gegenständen und Eigenschaften nicht als die zwischen Einzeldingen und allgemeinen Begriffen, unter welche die Dinge fallen, betrachtet werden kann. Daraus ergeben sich in der Metaphysik des Aristoteles merkwürdige Konsequenzen dafür, was eigentlich als der einzelne, individuelle Gegenstand, was als die erste Substanz zu gelten habe. Mit diesen Konsequenzen beschäftigt sich der zweite Teil des Aufsatzes." (ss. 16-17)

14. ——. 1983. "Titel, Einheit und Echtheit der aristotelischen Kategorienschrift." In *Zweifelhaftes im Corpus Aristotelicum. Studien zu einigen Dubia. Akten des 9. Symposium Aristotelicum, Berlin, 7-16 September 1981*, edited by Moraux, Paul and Wiesner, Jürgen, 1-29. Berlin: Walter de Gruyter.

"In Anbetracht des Einflusses, welchen die Schrift auf unser Aristotelesbild und auf unsere Interpretation der aristotelischen Schriften hat, scheint es mir von großer Wichtigkeit zu sein, diese Zweifel soweit wie

möglich aufzuklären. Jedoch hoffe ich, daß eine solche Untersuchung auch für die von Interesse ist, die ohnehin schon fest von der Echtheit der Schrift überzeugt sind. Denn sie wirft Fragen auf, mit denen sich die Interpreten der Schrift in der Regel nicht auseinandersetzen und deren Beantwortung das gängige Bild von der Schrift erheblich verändern könnte.

Die Frage nach der Echtheit der Schrift wird nämlich von der Frage "Deshalb werde ich im folgenden gerade der Frage der Einheit besondere Beachtung schenken. Die gefährliche Tendenz, unsere Schrift fast ausschließlich vom ersten Teil her

zu betrachten und damit den Status des zweiten Teils zu präjudizieren, wird natürlich durch den Titel der Schrift erheblich verstärkt.

Und so werde ich im Zusammenhang mit der Einheit der Schrift auch auf ihren Titel eingehen."nach ihrer Einheit überlagert." (ss. 2-3)

(..)

Nachdruck: K. von Fritz, *Schriften zur griechischen Logik*, Stuttgart: Frommann-Holzboog, 1978, vol. 2, pp. 9-61; Fritz-Peter Hager (ed.), *Logik und erkenntnislehre des Aristoteles*, Darmstadt: Wissenschaftliche Buch-Gesellschaft, 1972.

"Ein Versuch, die Kategorienlehre des Aristoteles historisch zu verstehen, wird von diesem zweiten Element der Kantischen Kritik — ganz gleichgültig, wie man sich zur Kantischen Philosophie als solcher verhält — zunächst absehen müssen. Sie wird vielmehr von jenen Voraussetzungen ausgehen, die Aristoteles selbst für die Beurteilung seiner Kategorien an die Hand gibt, und dies um so mehr, als Aristoteles selbst nirgends eine genaue Begriffsbestimmung der Kategorie gibt. Sie wird also vor allem prüfen, ob die Kategorien diesen Voraussetzungen entsprechen, und worin die Schwierigkeiten liegen, wenn dies nicht der Fall ist. Sie wird weiter den eigentlichen Kern dieser Unstimmigkeiten suchen, indem sie in jedem Falle fragt, aus welchen ganz konkreten Problemen die Kategorienlehre des Aristoteles bzw. die verschiedenen

Formen, in denen sie in seinen einzelnen Schriften erscheint, zum erstenmal hervorgegangen sind. Erst damit wird eine ganz sichere Unterlage für eine philosophische Kritik sowohl dieser Problemstellung selbst als auch der Lösung der Probleme durch Aristoteles gegeben sein." (s. 450)

16. ———. 1935. "Zur aristotelischen Kategorienlehre." *Philologus* no. 90:244-248.

Nachdruck in Fritz-Peter Hager (Hrsg.), *Logik und Erkenntnislehre des Aristoteles*, Darmstadt: Wissenschaftliche Buch-Gesellschaft, 1972.

17. Fugali, Edoardo. 2012. "Trendelenburg, Brentano und die Aristoteles-Renaissance in der deutschen Philosophie des 19. Jahrhunderts: die Frage nach dem Ursprung der Kategorien." In *Franz Brentano's Psychology and Metaphysics: Upon the Sesquicentennial of Franz Brentano's Dissertation*, edited by Tănăsescu, Ion, 13-52. Bucharest: Zeta Books.

"Sowohl für Trendelenburg als auch für Brentano geht es hauptsächlich um die Neubegründung einer Fundamentalphilosophie. Trendelenburg legt ihren Schwerpunkt aber an erkenntnistheoretische Fragen und gestaltet die Beziehung zwischen Logik und Metaphysik zugunsten des ersten Moments. Das ist der Grund dafür, dass er auf dem sprachlich-grammatikalischen Ursprung der Kategorien besteht und ihre Genese in der Zerlegung der Satzverbindung – und damit im Urteil – erkennt. Die Bedeutung des Seins nach den Kategorien fällt also mit der unechten Bedeutung des Seienden nach dem Wahren und dem Falschen zusammen und die Kategorien werden auf die Tätigkeit des Urteilens des erkennenden Subjekts verlegt. Im Einklang mit der romantischen Physiognomie seiner organischen Weltanschauung will Trendelenburg die Entstehung der Sprache – und im Allgemeinen unserer Einstellungen zur Wirklichkeit – auf die schaffende, als konstruktive Bewegung aufgefasste Tätigkeit des Geistes zurückführen. Von der Komponenten der konstruktiven Bewegung legt Trendelenburg unter dem zweifachen Einfluss Aristoteles und Kants den Vorrang der Anschauung und der

Imagination bei. Die durch die konstruktive Bewegung erzeugten Formen – vorerst die Sprache – sind das notwendige Vermittlungsglied für jede Beziehung zum Seienden. Es ist also kein Zufall, dass Trendelenburg unter den Kategorien jene der Relation auf Kosten der Substanz bevorzugt. Die Sache verhält sich anders bei Brentano, der sich für die metaphysische Relevanz der Kategorienlehre ausspricht, obwohl er eine gewisse Plausibilität der These Trendelenburg zuspricht, und in der Kategorie der Substanz das Prinzip erkennt, das die Deduktion der übrigen Kategorien leitet. Brentano erarbeitet also eine univozistische Ontologie, die dazu neigt, die aristotelische These der mannigfachen Bedeutungen des Seienden zugunsten des Vorrangs der Substanz herabzusetzen. Das zeigt sich insbesondere bei Brentanos Wahl des Prinzips der Analogie nach einem einzigen Terminus anstatt jenes der Proportionalität wie in Trendelenburg, um die Beziehungen zwischen den verschiedenen Kategorien zu bestimmen." 20. ———. 1983. "Aspekte der Ontologie in der Kategorienschrift." In *Zweifelhaftes im Corpus Aristotelicum. Studien zu einigen Dubia. Akten des 9. Symposium Aristotelicum, Berlin, 7-16 September 1981*, edited by Moraux, Paul and Wiesner, Jürgen, 30-56. Berlin: Walter de Gruyter.

"In *Cat.* 2 skizziert Aristoteles eine Grundeinteilung dessen, was ist (ὄντα). Diese Einteilung hat folgendes Aussehen:

[A] Es gibt Dinge wie Spezies (ζ. B. Mensch), die von einem Subjekt gesagt werden, aber in keinem Subjekt sind (1 a 20—22).

[B] Es gibt Dinge von der Art einer bestimmten Grammatikkenntnis (ἡ τις γραμματικῆ) oder eines bestimmten

Weiß-Tones (το τί λευκόν), die zwar in einem Subjekt sind, jedoch von keinem Subjekt gesagt werden (1 a 23-29).

[C] Es gibt Dinge wie Spezies nicht-substantieller Dinge (z.B. Wissen), die sich in einem Subjekt (z.B. Seele) finden und von einem Subjekt (z. B. Grammatikkenntnis) gesagt werden. Doch handelt es sich nicht um das gleiche Subjekt (1 a 29—b 3).

[D] Es gibt Dinge von der Art primärer Substanzen (vgl. 5, 2 a 11 — 14), die sich weder in einem Subjekt finden noch von einem Subjekt gesagt werden (1 b 3—6).

Diese Ontologie ist nicht nur erheblich komplexer als die der dichotomischen Einteilungen in *Metaph.* Γ 1,1003 b 6—10 und Z 1, 1028 a 13—20. Sie ist auch reichhaltiger. Denn sie rechnet nicht nur mit der Existenz von Individuen und Eigenschaften, sondern auch mit der Existenz von Spezies und Gattungen derselben. Eine vergleichbare Einteilung findet sich in *Anal. Pr.* I 27, 43 a 25 - 43." (ss. 30-31)

21. Heimsoeth, Heinz. 1952. "Zur Geschichte der Kategorienlehre." In *Nicolai Hartmann. Der Denker und sein Werk, fünfzehn Abhandlungen mit einer Bibliographie*, edited by Heimsoeth, Heinz and Heiß, 144-172. Göttingen: Vandenhoeck & Ruprecht.
22. Hirschberger, Johannes. 1960. "Paronymie und Analogie bei Aristoteles." *Philosophisches Jahrbuch* no. 68:191-203.

"Einer der Hauptsätze der mittelalterlichen Analogielehre lautete: Die Analogie ist ein Mittleres zwischen Äquivokation und Univokation."

(...)

"Da das Mittelalter sich in seiner Analogielehre ständig auf Aristoteles beruft, denkt man bei der Behauptung eines Mittleren zwischen Äquivokation und Univokation natürlich an den locus classicus, an dem die beiden Begriffe erklärt werden, an den Anfang der Kategorienschrift, die man ja Aristoteles zuzuteilen pflegt. Aber das Buch tut uns nicht den Gefallen, nach der Homonymie (Äquivokation) und der Synonymie (Univokation) die Analogie wenigstens zu erwähnen, sondern bringt den Begriff der Paronymie.

Der Optimist, der seine sogenannte thomistisch-aristotelische Philosophie bei Aristoteles daheim glaubt, kommt aber nicht in Verlegenheit. Er beruft sich eben dann auf die bekannte Lehre des Aristoteles von den verschiedenen Bedeutungen des Seienden, die alle auf einen Ursinn von Sein bezogen sind, den Begriff der Substanz. Das Beispiel, das Aristoteles dafür bringt (*Met.* Γ, 2; K 3), ist das von gesund und Gesundheit, eben dasjenige, das das Mittelalter auch immer für Analogie zu bringen pflegt. Allein Aristoteles tut uns wieder nicht den Gefallen, diese Sache Analogie zu heißen. Er nennt das vielmehr die Pros-hen- oder Aph-henos-Aussage, was man mit „bezogene Vieldeutigkeit“ wiedergegeben hat, und was hier einfach denominative Prädikation genannt werden soll. Boethius übersetzt paronyma mit denominativa (*In Arist. categ.* I; Migne lat. 64, 167 ss.). Da sich uns zeigen wird, daß in der Paronymie die Pros-hen-Aussage steckt, benützen wir diesen Terminus auch für sie selbst.

Die Beobachtung, daß bei Aristoteles nicht auch Analogie heißt, was später so genannt wurde, - wenn idi recht sehe, hat in neuerer Zeit zunächst Muskens(1) darauf hingewiesen, dann Owens(2) und Lyttkens(3) könnte zu der Ansicht führen, daß bei Aristoteles überhaupt keine Seinsanalogie vorliege, zumal er bekanntlich die Analogie für die Ethik und das Gute reklamiert, für das Sein aber auf seiner Pros-hen-Aussage besteht.

Man sollte sich da freilich vor allzu großer Eile hüten; denn in der Philosophie hängen die Dinge zwar auch an den Termini, aber es ist nicht immer so; und wenn der Terminus fehlt, kann die Sache trotzdem da sein, dann eben unter einem anderen Namen. Wir wollen Aristoteles daraufhin untersuchen, und zwar im Anschluß an einen Begriff, der in dem so verdienstvollen Werk von H. Lyttkens über die Analogie bei Thomas und ihren ideengeschichtlichen Hintergrund nicht eigens vorgenommen wurde, den Paronymie-Begriff." (ss. 191-192)

23. Jansen, Ludger. 2006. "Aristoteles' Kategorie des Relativen zwischen Dialektik und Ontologie." *Philosophiegeschichte und logische Analyse* no. 9:79-104.

"Ein alter Streit geht darum, ob die Kategorienschrift nicht zu Unrecht unter die logischen Schriften des Aristoteles gezählt wird und nicht vielmehr ein Text zur Ontologie ist. Tatsächlich erfüllen die Kategorien sowohl logisch-dialektische als auch ontologische Funktionen. Dies will ich im Folgenden anhand der Kategorie des *pros ti*, des Relativen oder Bezüglichen, erläutern. Es ist der Wunsch, Fehlschlüsse zu verhindern, der eine eigene Kategorie für das Relative aufgrund der dialektischen Funktion der Kategorien erforderlich macht (§ 1). Das Relative hat zudem aber einen besonderen Seinsmodus, der auch aufgrund der ontologischen Funktion der Kategorien eine eigene Kategorie für das Relative rechtfertigt (§ 2).

Ich werde zeigen, daß diese beiden Funktionen voneinander unabhängig sind und keineswegs dieselben Elemente der Kategorie des Relativen zuordnen (§ 3). Die konsequente Berücksichtigung dieser doppelten Funktion hilft bei der Interpretation der zwei Definitionsvorschläge in *Cat.* 7 (§ 4.i) und der Behandlung der Eigenschaften des Relativen (§ 4.2), der Frage nach der Gleichursprünglichkeit oder ontologischen Unabhängigkeit korrespondierender Relativa (§ 4.3), dem am Ende von *Cat.* 8 angesprochenen Genus-Spezies-Problem (§ 4.4) und der kategorialen Zuordnung von *dynamis* und *energeia* (§ 4.5)." 24. Kapp, Ernst. 1968. "Die Kategorienlehre in der aristotelischen Topik." In *Ausgewählte Schriften*, edited by Diller, Hans and Diller, Inez, 215-253. Berlin: Walter de Gruyter.

Habilitationsschrift, München 1920.

"Die sogen. Kategorienlehre spielt in den verschiedenen Teilen der aristotelischen Philosophie eine mehr oder weniger bedeutsame Rolle und erscheint, abgesehen von der kleinen Schrift mit dem traditionellen Titel Κατηγορίαι, in den Analytiken, in der Physik, der Schrift über Entstehen und Vergehen, über die Seele, über die Träume, in der Metaphysik, der Ethik und der Rhetorik. Wenn gleichwohl der folgenden Untersuchung im Gegensatz zu den bisherigen Behandlungen nur ein einziges Werk, die Topik, zugrunde gelegt wird, so ist damit von vornherein auf Vollständigkeit verzichtet. Freilich glaube ich, daß diese Beschränkung der Aufgabe, wie die Dinge liegen, nicht nur äußere Vorteile mit sich bringt. Nahegelegt wird sie durch die bekannte, aber überhaupt noch wenig ausgenutzte Sonderstellung der Topik den größeren übrigen philosophischen Lehrschriften gegenüber, die m. E. allerdings zwingt, sie bis auf einzelne Zusätze (namentlich in Buch Θ) relativ früh anzusetzen, jedenfalls aber, da die Topik in erster Linie der

Übung dienen will, zu der Erwartung verhältnismäßig einfacher und durchsichtiger philosophischer Voraussetzungen berechtigt." (s. 215)

"Zur Erklärung der dem Aristoteles zu geschriebenen Kategorienschrift

Anlässlich der Erörterung der Kategorien der ουσία, des ποσόν, des πρὸς τι, des ποιόν, des ποιειν, endlich des πάσχειν werden in der Kategorienschrift immer wieder zwei Fragen aufgeworfen: die erste, ob die unter die betreffende Kategorie

fallenden Gegenstände ein εναντίον haben, die zweite, ob sie ein μάλλον και ήττον zulassen.

So heißt es bei der Kategorie der ουσία (c. III, 18, 3b 24–25): υπάρχει δε ταις ουσίαις και τό μηδέν αύταίς εναντίον είναι — der bestimmte Mensch, das bestimmte Lebewesen hat keinen Gegensatz. — Weiter (c. III, 20, 3b 34–35) liest man: δοκεί δε ή ουσία μη έπιδέχεσθαι τό μάλλον και τό ήττον. Dies bedeutet nicht etwa, daß jede ουσία in demselben Maße ουσία ist, wie jede andere, denn dies trifft nur auf die ούσiai einer bestimmten Stufe untereinander, dagegen nicht mehr auf das Verhältnis der zweiten usw. ουσία zur ersten zu (των δέ δευτέρου ουσιών μάλλον ουσία τό είδος του γένους — c. III, 6, 2b 7–8); vielmehr heißt dies, daß jede ουσία das, was sie ist, nicht mehr noch weniger sein kann. Die ουσία ανύρωπος kann weder μάλλον noch ήττον diese ουσία, d. h. αν&ρωπος, sein." (s. 35)

27. Oehler, Klaus. 1984. "Einleitung." In *Aristoteles. Kategorien*, 41-182. Berlin: Akademie-Verlag.

Einleitung: 1. Zur Geschichte der Kategorienlehre 41; 2. Stationen der Auslegungsgeschichte der Kategorien seit der Mitte des 19. Jahrhunderts 65; 3. Einleitung in die aristotelische Kategorienlehre 96; 4. Zur Überlieferung und literarischen Form der Kategorien 128; 5. Bibliographie 143; A. Textausgaben 143; B. Kommentare 144; C. "Ähnlichkeiten werden von Aristoteles, zum Teil auch in der Form von Analogien oder Homonymien, immer dann herangezogen, wenn das allgemeine Art-/Gattungsgefüge Lücken aufweist oder sich die sonst verbindlichen Genauigkeits- und Rationalitätsstandards als nicht anwendbar erweisen.

Dieses Phänomen des Ausweichens auf nur Ähnliches oder sich Nahestehendes ist in der Aristoteles-Forschung anhand von Begriffen wie Analogie, Topos oder Umriß (τύπος) geläufig. Bemerkenswert ist nun, daß Aristoteles, wenn er auf Ähnlichkeitsverhältnisse zurückgreift, die so erfolgten Bestimmungen gar nicht – wie man es aufgrund seines Akribieverständnisses erwarten müßte – als etwas Defizientes zu behandeln

scheint, sondern hierin eine eigenständige, in sich konsequente Begründungsebene mit ihren eigenen Rationalitätskriterien sieht. Nach einem Blick auf die Aristotelische Einordnung der Ähnlichkeit behandelt der

vorliegende Aufsatz verschiedene, voneinander unabhängige Zusammenhänge, in denen Aristoteles Ähnlichkeitsverhältnissen eine solchermaßen selbständige und durch begriffliche Qualifikationen nicht ersetzbare

Funktion überträgt." (ss. 536-527)

"Der unangebrachte Streit um die Echtheit der Kategorien

Der Traktat über die Kategorien hat bei den Aristoteles-Interpreten seit jeher Unbehagen und Verlegenheit ausgelöst. Auch wenn an dieser Stelle von der vielfältigen und häufig spekulativen Argumentation um den Begriff der "Kategorien" abgesehen werden soll, (die von Plotin bis Kant bzw. Hegel, sowie von Mill bis zum italienischen Neoidealismus von polemischen Angriffen auf den aristotelischen Ansatz geprägt war) muss, dennoch auf die fortdauernden Divergenzen zwischen den Historikern über die authentische Bedeutung der Lehre bzw. über ihre Zugehörigkeit zum aristotelischen

Textbestand (wie bereits im vorhergehenden Kapitel angedeutet) eingegangen werden.

Zur Zeit muß man jedoch eine notwendige Voraussetzung für alle zukünftigen Diskussionen - wenn es sich dabei nicht um einfache Schulübungen handeln soll - hervorheben: die Anerkennung der Echtheit der Kategorien. Es lassen sich beim aktuellen Forschungsstand keine stichhaltigen Gründe anführen, die die aristotelische Urheberschaft der Kategorien in Frage stellen könnten." (s. 26)

Abstract: "According to the Greek Commentators in late antiquity, Aristotle's *Categories* is primarily concerned with simple expressions in so far as they signify things. But what is it for a simple expression to signify a thing? As for (non-empty) singular terms, it is safe to say that they denote things. But what about general terms? How do they signify things? The question is crucial to the theory of the *Categories*, since, as is argued in the first section of this paper, there is some truth in the Commentators' thesis that (part of) the *Categories* aims to elucidate the signification of simple expressions, including general terms. Of course, various prima facie plausible accounts of how general terms signify things are available; the second section discusses the basic assumptions which underlie them. A detailed analysis of *Cat.* 2a19-34 in the third section shows that the *Categories*' account is two-fold: On the one hand some general terms denote things (among the latter, the most prominent are τὰ καθ' ὑποκειμένου λεγόμενα). What is denoted by a given general term does not stand in any relation

to the objects falling under the term but is something that they are. Some general terms, on the other hand, connote things. What is connoted by a general term is a property

which the objects falling under the term are related to by virtue of having it (τα ἔν ὑποκειμένῳ ὄντα are such properties)."

F. A. Trendelenburg, *La dottrina delle categorie nella storia della filosofia. Profilo e valutazione critica*, A cura di Renato Pettoello, Monza: Polimetrica, 2004.

"Wenn die Kategorien die höchsten und letzten Begriffe darstellen, die als solche allen andern festen Halt und sichere Ordnung geben: so müssen sie in einem so ausgebildeten System der Philosophie, wie das aristotelische ist, ihre Beziehungen und Consequenzen offenbaren.

Es ist daher nicht genug, sie in ihrer nackten Eintheilung zu betrachten. Erst wo sie wirken, wird man erkennen, was sie leisten oder was sie nicht vermögen; und wo an ihre Stelle durch die Sache selbst andere Begriffe treten, da bemerkt man ihre Mängel. Sie werden erst im Zusammenhang mit den realen Fragen und in der Anwendung auf besondere Begriffe wahrhaft erkannt; und was der Urheber mit ihnen wollte, sieht man erst da, wo sie in seiner Hand zu Werkzeugen der Untersuchung werden. Es sind zwar von Alters her über Aristoteles Kategorien viele Commentare geschrieben, und sie sind ebenso oft in Auszügen dargestellt. Aber man hat die Aufgabe immer in

beschränktem Sinne gefasst und sich um die eben bezeichneten Gesichtspunkte selbst da nicht bekümmert, wo die Philosophie des Aristoteles in ihrem Zusammenhange sollte angeschauet werden. Man hat in den Commentaren über die Kategorien allerhand Eigenes bemerkt und für und wider die gegebenen Bestimmungen gesprochen; aber man hat meistens versäumt, sie als aristotelisch aus dem Aristoteles zu erläutern."(s. 2)

"Die Kategorienlehre des Aristoteles hat die Philosophiegeschichte der letzten hundert Jahre stark beschäftigt. Vornehmlich standen dabei der Ursprung und das Wesen der Kategorien im Blick der Forschung. Ein Entscheid über das Wesen der Kategorien ist ersichtlich auch ein Entscheid über ihren Ursprung und umgekehrt. Eine kurze Übersicht über die hauptsächlichsten Positionen soll dazu dienen, die Fragestellung dieser Untersuchungen klar zu machen. Vollständigkeit ist dabei nicht angestrebt.

TRENDELENBURG erklärt, daß "die Kategorien die aus der Auflösung des Satzes entstandenen Elemente" sind (Geschichte der Kategorienlehre, 13). Die Kategorien sind bei ihm grammatische Prädikate (a.a.O., 18 f.). Mit dieser Ansicht ist Trendelenburg allerdings allein geblieben.

BONITZ deutet die Kategorien als "die obersten Geschlechter, deren einem jedes Seiende sich muß unterordnen lassen" (Über die Kategorienlehre des Aristoteles, 623). Die Kategorien werden als Bedeutungen bestimmt, in denen der Begriff des Seienden gebraucht und ausgesagt werden kann (a. a.O., 622). Man kann diese Deutung der Kategorien als die ontologische bezeichnen (siehe Prantl, Geschichte der Logik im Abendland, I, 195, und Zeller, Die Philosophie der Griechen, II, 2, 186).

Dir kann die logische Deutung der Kategorien entgegengestellt werden, wie sie hauptsächlich APELT vertreten hat (Die Kategorienlehre des Aristoteles). Danach sind die Kategorien die Arten der Aussage im Urteil (a.a.O., 105). Das Sv ist für ihn nicht wie für BONITZ das ens reale; er nimmt es vielmehr als die Bezeichnung des kopulativen "ist" (a.a.O., 107), dessen verschiedene Bedeutungen in den Kategorien gefaßt werden (a. a. O., 119).

MAIER (Die Syllogistik des Aristoteles, II 2, 297) hält dafür, daß die Kategorien eine Klassifikation aller Bedeutungen des Seins sind, während die kopulative nur eine davon ist." (s. 1)

2. Calvo, Tomás. 1991. " La fórmula 'kath' hautó' y las categorías: a vueltas con *Metafísica V 7*." *Méthexis* no. 4:39-57.

"En este artículo pretendo comentar el conocido pasaje del libro quinto de la *Metafísica* de Aristóteles (c. 7, 1017a7-30) en que se contraponen y explican las expresiones 'ser accidentalmente' (*katà symbebekós*) por sí mismo' (*kath' hautó*). Como es bien sabido, el paso de lo primero a lo segundo se abre con la siguiente declaración: "Por otra parte, dice que son por sí mismas (*kath hautá*) todas las cosas significadas las distintas figuras de la predicación" (1017a20-21). Esta afirmación ha provocado a menudo cierta perplejidad entre los estudiosos y comentaristas de Aristóteles, especialmente entre los contemporáneos. A discutir y esclarecer esta tesis aristotélica dedicaré las páginas siguientes. de subrayar las dificultades que el texto plantea, comenzaré (un análisis de la oposición entre 'accidentalmente' y por sí' recorriendo aquella línea que lleva lógicamente a aplicar la última fórmula ('por mismo', *kath' hautó*) exclusivamente a las entidades o sustancias. A continuación, (II) someteré a crítica ciertas interpretaciones contemporáneas de nuestro pasaje. Por último, (III) tras ofrecer algunas consideraciones acerca de las distintas aplicaciones y sentidos que Aristóteles atribuye a la fórmula, concluiré proponiendo aquella interpretación que

considero más razonable y congruente no sólo con el contexto inmediato sino también con la doctrina aristotélica de los distintos sentidos de ser'." (p. 39)

3. Garcia Norro, Juan José. 2002. "¿Es correcta la división aristotélica de los predicables?" *Anuario Filosófico*:165-182.

"En la Edad Media la cuestión de la *sufficiencia praedicabilium* consistía en mostrar sobre todo que el elenco de los cinco predicables que Porfirio propone en su *Isagoge* era completo, en el sentido de que todo lo que se predica, todo lo universal, es género, especie, diferencia, propio o accidente. Como se sabe, Porfirio se limitó a enumerar los predicables y a exponer sus rasgos distintivos, amén de compararlos entre sí para poner de relieve sus semejanzas y diferencias, pero en ningún pasaje de su celebrado opúsculo aclaró de modo explícito cuáles eran las razones que avalaban su enumeración de cinco predicables. Por tanto, sus comentaristas heredaron la tarea de probar que la división pentapartita de lo universal que Porfirio propuso en su *Isagoge* era adecuada y correcta. La cuestión se volvía tanto más acuciante cuanto que divergía de la enumeración del propio Aristóteles que podemos leer en los *Tópicos*." (p. 165)

4. González Suárez, Lucero. 2020. "Sobre los sentidos de la ousía en las *Categorías* y la *Metafísica* de Aristóteles." *Logos* no. 134:75-95.

Resumen: "Partiendo del reconocimiento y de la dificultad que supone la comprensión de la noción ousía, esta reflexión busca explicitar los sentidos que la misma adquiere tanto en las *Categorías* como en la *Metafísica*. La finalidad última es explicar que la aparente contradicción provocada por el hecho de que en las *Categorías* Aristóteles sostiene que la proté ousía es el individuo (*sýnolon*), mientras que en la

Metafísica dice que es el *eîdos*, se resuelve al entender que éste último no es una forma abstracta sino el principio de determinación del compuesto individual."

5. Mié, Fabián. 2004. "Identidad y substancia en la posición original de la teoría aristotélica de las categorías." In *Diálogo con los griegos: estudios sobre Platón, Aristóteles y Plotino*,

edited by Santa Cruz, María Isabel, Marcos, Graciela E. and Di Camillo, Silvana G., 217-238. Buenos Aires: Colihue Universidad.

"Entre los principales problemas que presenta actualmente la interpretación de la teoría aristotélica de las categorías (TAC) se destacan dos cuestiones interrelacionadas. Por un lado, algunos autores (Michael Frede, Theodor Ebert) han tratado de explicar que el concepto original de las categorías debe entenderse en el sentido de un tipo de predicación o tipo de predicado. El intento que guía esta interpretación es el de explicar la discutida vinculación entre los llamados 'predicables' –que aparecen en los *Tópicos*– y las 'kategoríai'. El diagnóstico al que arriba Frede dice que no existe equiparación posible entre las categorías –entendidas por él como 'clases de predicados'– y los tipos de predicación representados por los tradicionales predicables(1). La buena orientación de esta interpretación –en tanto ella procura explicar la vinculación entre predicables y categorías sin dar por supuesta la TAC que se presenta en *Categorías*(2)– tiene su contrapartida en un aspecto que, a mi juicio, debe llevar a revisarla."

(1) Cf. Michael Frede, "Categories in Aristotle", en *Essays in Ancient Philosophy*, Minneapolis, Oxford University Press, 1987, pp. 29-48, p. 36.

(2) Tal es el intento programático en la elucidación del significado de 'ousía' en *Tóp.* I 9, llevado adelante por Frede, ob. cit. Theodor Ebert, "Gattungen der Prädikate und Gattungen des Seienden bei Aristoteles. Zum Verhältnis von Kat. 4 und Top. I 9", *Archiv für Geschichte der Philosophie*, 67 (1985), 113-138, por su parte, diferencia los 'géneros de los predicados' (*Tóp.* I 9) de los 'géneros del ser' (*Cat.* 4).

6. ——. 2006. "Sustancia e inherencia en las *Categorías* de Aristóteles." *Diánoia* no. 55:17-53.

Resumen: "Las combinaciones y los tipos de relaciones posibles entre las distintas entidades que acepta la ontología de las *Categorías* regulan la economía ontológica de la primera metafísica aristotélica, estableciendo vínculos de prioridad y

posterioridad entre las sustancias sobre la base de ciertos criterios que Aristóteles se esfuerza por clarificar. Pero el primer esencialismo aristotélico se elabora a medida que el autor de las *Categorías* fija una distinción entre propiedades esenciales y accidentales a fin de explicar qué es necesariamente una cosa y qué puede o no tener sin que por ello se vea afectada su propia identidad. Este texto pretende reconstruir la relación transversal entre sustancias y accidentes, perfilando la noción de accidente junto a otras de orden semántico. Esta relación, R2, se distingue de la predicación esencial, R1, que tiene lugar verticalmente entre sustancias segundas y primeras."

7. Stahl, Gérold. 1989. "Categorías aristotélicas y categorías intensionales." *Theoria: Revista de Teoría, Historia y Fundamentos de la Ciencia* no. 4:461-469.

Abstract: "Did Aristotle, with his categories, classify only expressions or also some thing extralinguistic? In the second case his classification seems to be not exclusive, at least if the usual universes of discourse are considered. However, if we use certain enlarged universes, which may have more than one individual for each individual of the usual universes, we may construct exclusive general classifications that approach the aristotelian categories. The latter ones should then be considered second order classes that classify classes of (extralinguistic) individuals. If the individuals are taken from one of the indicated enlarged universes, we can obtain the exclusivity that we do not have for the usual universes."

1. do Nascimento Flores, Valdir , Gomes, Filipe Almeida, and Hoff, Sara Luiza. 2022. "A relação pensamento-lingua em Benveniste e a preeminência do linguístico." *Acta Scientiarum. Language and Culture* no. 44:1-11.

Resumo: "O presente texto busca apresentar uma leitura do artigo seminal de Émile Benveniste 'Categorias de pensamento e categorias de língua'. Para isso, realiza-se uma análise intratextual rigorosa desse texto. Observa-se que, quando de

sua publicação, o artigo obteve grande repercussão e também recebeu severas críticas no meio filosófico em função da análise empreendida pelo linguista das categorias aristotélicas. Tendo isso em vista, este artigo busca, em um primeiro momento (cf. Introdução), contextualizar alguns aspectos da recepção do texto e apresentar alguns argumentos filosóficos que ilustram a crítica recebida por Benveniste em função de seu artigo. Em seguida, na primeira seção, opera-se uma leitura detalhada do artigo, explicitando não somente os argumentos apresentados pelo linguista, mas também o modo como eles são expostos ao longo do texto. Finalmente, na segunda seção, busca-se fundamentar uma hipótese segundo a qual Benveniste assume o ponto de vista do linguístico para propor a sua reflexão, enfatizando a função desempenhada pela língua na relação pensamento-língua. Demonstra-se, assim, que não é possível avaliar a reflexão do linguista no âmbito da compreensão da metafísica aristotélica."

2. Morici, Igor Mota. 2015. "O problema das categorias nas *Categorias* de Aristóteles: uma abordagem baseada nos relativos." *Ética e Filosofia Política* no. 18:76-96.

Resumo: "O propósito deste artigo é elucidar a noção de categoria tal como figura nas *Categorias* de Aristóteles. Embora tal noção seja central no pensamento de Aristóteles, jamais recebeu em seus textos qualquer definição. Após criticar a influente ideia de que as categorias são gêneros supremos, procuramos explicar o que são as categorias e qual é o papel que desempenham no opúsculo em questão. Através de uma análise dos relativos, caracterizamos a predicação como uma relação, cujos termos são as categorias. Assim, pensamos ter obtido uma chave de leitura para o problema."

3. Oliveira, Thiago Silva Freitas. 2019. "Em defesa das *Categorias* de Aristóteles." *Prometheus* no. 30:299-318.

Resumo: "Já se tornou chavão começar qualquer texto sobre as *Categorias* de Aristóteles tentando justificar sua inserção ou não no plano ontológico do autor, bem como sua autenticidade. Esse não é o nosso propósito aqui. Não que em leituras posteriores não possamos tentar apontar para alguma relação

entre o texto em questão e outros que comporiam o eixo ontológico do pensamento de Aristóteles. De fato, e a despeito de todas as críticas (bem fundamentadas, inclusive) à linguagem, estrutura e propósito das *Categorias*, acreditamos que essa obra cumpriu um papel peculiar no pensamento do autor, a saber, que lhe permitiu iniciar uma distinção, mesmo que precária, entre tipos de entes, e suas classificações."

4. Santos da Silva, Flávia, and Chaves-Tannús, Marcio. 2017. "A interpretação de Benveniste sobre as *Categorias* de Aristóteles." *Educação e Filosofia, Uberlândia* no. 31:1033-1054.

Resumo: "As *Categorias* de Aristóteles, sobre o estudo do termo e dos diferentes gêneros do ser, têm provocado uma série de discussões e interpretações no meio científico, tanto na Filosofia como em outras disciplinas a ela relacionadas. A esse respeito, Émile Benveniste escreve o artigo "Catégories de pensée et catégories de langue", em 1958. Esse texto, por sua vez, foi lido por alguns especialistas da Filosofia e recebeu interpretações. Dentre elas, Lallot e Ildefonse (2002) afirmam que Benveniste defende um tipo de determinismo linguístico e Pellegrin e Crubellier (2007), que a relação entre língua e pensamento é posta por ele apenas em termos gramaticais. Desta maneira, neste trabalho, temos o objetivo de examinar essas duas interpretações, comparando-as com o próprio texto de Aristóteles, a fim de discutir alguns problemas postos pela tradição por oportunidade da leitura desse autor."

5. Zingano, Marco Antônio de Ávila. 2013. "As *Categorias* de Aristóteles e a doutrina dos traços do ser." *DoisPontos* no. 10:225-254.

Resumo: "Neste artigo, propõe-se uma leitura das categorias no tratado aristotélico homônimo como um primeiro esboço de uma ontologia regional, centrada nas substâncias sensíveis. Tendo por foco substância, quantidade, qualidade, relativo, agir e sofrer, este trabalho busca expor as duas estratégias principais que Aristóteles parece empregar para chegar a uma lista das categorias: (a) características básicas, cuja satisfação ou não satisfação de cada uma determina a natureza categorial

de cada item e (b) a propriedade única que caracteriza cada categoria em contraste com todas as outras. São, então, feitas considerações para vincular esse primeiro esboço ontológico a temas discutidos nos livros Lambda e Zeta da *Metafísica*, de modo a sugerir as direções principais que a sua ontologia nova (e geral) seguirá ao evoluir para uma teoria unificada da substância."

6. Zuppolini, Breno Andrade. 2014. "Forma lógica das proposições científicas e ontologia da predicação: Um falso dilema nos *Segundos Analíticos* de Aristóteles." *Philosophos - Revista de Filosofia* no. 19:11-45.

Resumo: "Nos *Segundos Analíticos*, Aristóteles impõe alguns requisitos à formulação de proposições científicas: (i) seus termos têm de poder desempenhar tanto a função de sujeito como de predicado; (ii) seus termos devem ser universais; (iii) toda demonstração deve envolver sujeitos "primeiros", designados por termos que não podem "ser ditos de um subjacente distinto". Diversos intérpretes, inspirados por teses do tratado das *Categorias*, julgaram que este terceiro requisito remete a nomes ou descrições de substâncias particulares como sujeitos básicos de enunciados predicativos, por se tratar de termos que não podem desempenhar a função lógica de predicado. Esta leitura, porém, coloca o terceiro requisito em conflito com os dois primeiros. Argumentarei que a mencionada interpretação está equivocada e que este terceiro requisito não atribui a termos singulares o papel de sujeitos básicos do discurso científico, mas apenas reconhece certa prerrogativa de predicados substanciais para ocorrerem em locuções denotativas. Consequentemente, as três exigências de Aristóteles revelar-se-ão compatíveis entre si."

The Stoic Doctrine of *Supreme Genera* (Categories)

Introduction

"In addition to developing the hypothetical syllogism, Stoic logic also elaborated categories, which likewise stand in contrast to Aristotelian thought. The Stoics teach that there are four categories: substance, quality, disposition, and relative disposition.(140) Rather than being horizontal, signifying aspects of an enduring substance which are accidental and which can be shorn from it without destroying its essence, the Stoic categories are vertical. They move from lesser to greater levels of concreteness. None is accidental; all must be present in a given reality if that reality is to be grasped in all its individuality. Substance denotes the materiality of a thing and is possessed by everything except the incorporeals. Quality denotes the way in which matter is organized to form an individual being. Disposition includes times, places, actions, size, and color. It describes the particular situation and attributes of the individual. All the features covered by the category of disposition, including color, (141) are regarded by the Stoics as inherent in the individual. This view harmonizes with the doctrine in Stoic physics that bodies create their own extension and their own time and space, so to speak, through their *tonos* and activity. Relative disposition denotes the way that an individual thing is related to other phenomena. None of the four Stoic categories can be removed from an individual being without that being ceasing to be itself. At each level of specificity the categories refer to something integral to the individual being's reality. The categories mirror the physics of concrete individual events taught by the Stoa. Although officially classified under logic, the Stoic categories are really pertinent to physics since they are modes of expressing reality.(142)"

4. de Lacy, Phillip. 1945. "The Stoic Categories as Methodological Principles." *Transactions and Proceedings of the American Philological Association* no. 76:246-263

"The Stoics used the four categories, *substance, quality, disposition, and relative disposition*, as methodological principles in all three branches of their philosophy. Moreover, in each case the third and fourth categories, disposition and relative disposition, embraced the most important questions. To the extent that the categories supply a methodological framework common to all three departments of philosophy,

they constitute a unifying element. Perhaps they cannot provide an instrument for resolving all the contradictions attributed to the Stoics, but at least they give a clue to that inner unity of which the Stoics themselves boasted."

13. Hadot, Pierre. 1969. "Zur Vorgeschichte des Begriffs 'Existenz'. Hyparchein bei den Stoikern." *Archiv für Begriffsgeschichte* no. 13:115-127

"Das Wort existentia erscheint erstmalig im Lateinischen in den theologischen Werken des Marius Victorinus, in denen es fast immer zur Übersetzung von hyparxis; dient, im Gegensatz zu dem Wort substantia das ousia übersetzt, und zu subsistentia, das hypostasis wiedergibt. (1) Exsistentia ist abgeleitet von exsistere, das in der philosophischen Sprache oft für esse eintrat, zumal in der Form des Partizips.(2) Exsistere seinerseits wurde auch zur Übersetzung von hyparkein verwendet, wie aus der Timaios-Übersetzung des Calcidius ersichtlich.(3)

Für das Verständnis der Vorgeschichte des Begriffes Existenz ist es daher unerlässlich, sorgfältig die Bedeutung zu präzisieren, die das Wort hyparkein innerhalb des technischen Wortschatzes der griechischen Philosophie aufweist, und die vorliegende Studie möchte einen Beitrag zu einer derartigen Untersuchung liefern. Zunächst soll zu zeigen versucht werden, daß das Wort hyparkein innerhalb der Stoa eine Seinsweise bezeichnet, die dem Geschehen, dem Akzidenz, dem Prädikat zukommt und der Seinsweise des Subjektes gegenübergestellt wird. Danach soll diese Bedeutung des hyparkein einerseits mit dem aristotelischen, andererseits mit dem neuplatonischen, Gebrauch dieses Wortes verglichen werden." p. 115

14. ———. 1980. "Sur divers sens du mot *pragma* dans la tradition philosophique grecque." In *Concepts et catégories dans la pensée antique*, edited by Aubenque, Pierre, 309-319. Paris: Vrin

Repris dans P. Hadot, *Études de philosophie ancienne*, Paris: Les Belles Lettes 2010, pp. 61-76.

"Les articles consacrés au mot *pragma* dans les dictionnaires de la langue grecque sont en général assez longs et ils énumèrent d'habitude les sens suivants : au singulier, le résultat de l'action, l'action elle-même, l'affaire, notamment au sens juridique, le sujet en question, la chose comme réalité concrète ; au pluriel, les circonstances, les affaires de l'état, les ennuis et désagréments. Mais il se trouve assez souvent que le mot *pragma* prend, dans les textes philosophiques, des sens techniques très précis, pour lesquels les dictionnaires apportent peu de secours. Il est vrai que, dans ces cas difficiles, les traducteurs en difficulté recourent la plupart du temps au mot « chose » ou au mot « fait » qui permettent, par leur généralité et leur imprécision, de dissimuler le problème. La présente étude voudrait recenser quelques-uns de ces sens techniques du mot *pragma* et en laisser entrevoir l'arrière-plan rhétorique et philosophique." (p. 309)

(...)

"Nous avons donc étudié six types d'emplois différents du mot *pragma* dans la langue philosophique grecque. Ces emplois sont, en général, étroitement liés. De la notion de « ce dont on parle », on passe naturellement à celle de « sens », de « contenu conceptuel », d'« unité de sens » et d'« incorporel ». Dans tous ces sens, *pragma* est étroitement lié au discours et à la pensée. Il est dangereux de traduire, dans ces cas, *pragma* par le mot « chose », si l'on entend par « chose » une réalité extralinguistique, indépendante, extérieure à la pensée et au discours, alors que, précisément, *pragma* connote très souvent un rapport au discours et à la pensée. Ou bien alors, il faudrait

- réviser complètement la notion traditionnelle de « chose ». La présente étude pourrait ainsi apporter une modeste contribution à la réflexion sur des notions les plus confuses et pourtant les plus centrales de la tradition philosophique." (p. 319)

Plotinus' Criticism of Aristotle's Categories (*Enneads* VI, 1-3) [42-44]

Introduction

"In VI, 1-3 [42-44] Plotinus severely criticizes the Aristotelian (VI, 1 [42], 1-24) and the Stoic (VI, 1 [42], 25-30) doctrines of categories. Following in the footsteps of Plato for the Intelligible world (VI, 2 [43]), he proposes five categories, being, identity, otherness, movement and repose, the "greatest kinds" of the 'Sophist'. For the sensible world he presents us with an emended and simplified system of five Aristotelian categories, substance, quantity, quality, relation and movement (but he certainly seems to derive these latter from the Intelligible in VI, 2 [43], 21,24-59).

1) What are the categories of the sensible world and what is their status? Are they classifications of words, concepts or things? Does Plotinus subordinate the Aristotelian categories to the Platonic genera or does he accept Aristotle's categories as proposed but limit their usefulness exclusively to the domain of the sensible?

Evangeliou argues that Plotinus accepted only the ontological interpretation of the Aristotelian categorical theory and, therefore, rejected them. Anton tends more to the view that while Plotinus rejects Aristotelian doctrine, he also subordinates it to the Platonic genera of VI, 2 [43]. Wurm also holds the view (at the beginning of his book) that Plotinus uses Aristotle's categories to express the divisions of the sensible world and presents them as a sort of intermediate help to the knowledge of the intelligibles, but he also contradicts this at the end of his book, which perhaps accurately reflects Plotinus' altogether negative attitude in VI, 3 [44]. (25)

2) How is sensible substance, then, to be related to intelligible substance? C. Rutten had argued that Plotinus' treatment of the categories was nominalistic, that it made of his system an absolute idealism re Intelligibles, but a nominalism re sensibles. Against this mistaken, but widely accepted thesis, Wurm has shown convincingly that Plotinus' philosophy is objective, not merely psychological, and that the objective knowledge of Intelligible entities is the ground for the perception of sensible substances, which are a collection of qualities in matter manifesting intelligible *logoi* and not merely a projection of thought upon appearances. Therefore, the charge of nominalism re sensibles is not well founded.

3) But how is homonymous sensible substance grounded in Intelligible substance? Plotinus refuses to grant that the term "substance" can be attributed synonymously to all the substances admitted by Aristotle. But at VI, 1 [42] 3,1-5 he does suggest that we might take Intelligible substance, matter, form and compound together as an individual category in the same way as we might say the clan of the Heracleidae constitutes one genus, in the sense that they are all derived from one source. This would make of Intelligible substance the focal unity of the otherwise purely homonymous principles, form and matter, in sensible things and would perhaps permit of interpretation along the lines of an Aristotelian *pros hen* equivocal.

Hadot, in a fascinating and extremely careful piece of detective work, (26) has uncovered, from the commentary of Dexippus on the 'Categories', a residue of a lost commentary by Porphyry on the 'Categories' and addressed to Gedalius (and transformed by Iamblichus in Simplicius according to Iamblichus' own metaphysical assumptions), in which Porphyry tried to show that the systematisation of substances in Bk. XII of the 'Metaphysics' was not incompatible with the Plotinian doctrine of substance (Dexippus, In Categ., 40, 13 --42, 3 Busse). Aristotle speaks of three kinds of substance (two sensible and one an immobile, Intelligible substance), Porphyry of a) sensible, composite substance, b) physical substance i.e. incorruptible substance in the light of the incorruptible principles of the physical world, matter and form, and c) Intelligible substance (Dexippus, p. 41); and they are related in such a way that although there is homonymy between sensible and Intelligible

substance, there is also a relation of analogy based upon developments in that notion in *Metaph. XII* (1070 B 30-1071 B 3) which require that all substances ultimately have reference to Intelligible substance from which they come forth (Hadot, p. 44).

Aubenque, by contrast, has stressed (1) that it is from Plato (*Rep.* 508 BC), and not from Aristotle, that the idea could be developed that analogical unity is founded on the unity of convergence (*pros hen*) or dependence (*aphi enós*) (27) and (2) that there is a genuinely Aristotelian refusal (implicit in Plotinus, explicit in Proclus) to confuse focal unity and analogy and to play simultaneously on the two tableaux, the vertical and the horizontal. Such a confusion, according to Aubenque, would be to suppress the liberty of the One in favour of "*une sorte d'administration de la procession*", (73-74). This makes us see quite clearly how important is the radical gulf between Intelligible reality and its images. This concern has also been urged by Hadot.

4) Wurm (*Substanz and Qualitat*, Berlin, 1973) has maintained, in a similar vein, that Plotinus only employs the Aristotelian immanent, substantial form in such cases where there is no nearer concept. Hence, the disappearance of the substantial form in sensible substances in VI, 3 [44] is Plotinus' true position, perhaps a correction of his earlier avowed position in II, 6 [17], according to which quality may be viewed in either of two ways: as inhering in substance it is an act, as coming after substance it is pure quality (for the 'correction' VI, 2 [43], 14). Strange (Diss. U. of Texas, Austin, 1981) sees this as clear evidence for a development in Plotinus' thought. This new position where the sensible species of the object is nothing more than the conjunction of the sensible *differentiae* leads to the position of the 'Isagoge' (18, 23-19, 3), that the form-species is constituted by the sum of the *differentiae*. Szlezák (GGA 227, 216-225) criticizes Wurm's position; the productive *logos* of VI, 3 [44], 15, 27ff. is the Aristotelian form, which Plotinus does not reject. One may say in review of Szlezák's view that, on the one hand, it does not square with the sharp dichotomy of the logical treatises between Intelligible and sensible; on the other hand, however, the foundation of discourse is what is important to Plotinus here. In VI, 1 [42] and 3 [44] the ultimate ground is matter and, therefore, no principle of inner organic unity can reveal itself. Perhaps then one should not

reject too strictly a place for the "psychological" in Plotinus' thinking. But there is no need because of the Platonic form of argument in VI, 103 [42-44] to disregard genuine dialogue with Aristotle in a context elsewhere. Plotinus' thought is full of apparent inconsistencies, but the difference between II, 6 [17] and the logical treatises may still only be one of standpoint. Where the inquiry is founded upon Being, then quality, quantity, movement, even matter and bodies (as Porphyry's argument in Dexippus might well be understood to claim) will be discovered "there" (VI, 2 [43], 21, 24-59) to be reflected later in an *ad hoc* "material" classification which has already lost the focus of any objective foundation for thought.

In the views of this "new wave" of scholars, then (Wurm, Szlezák, Evangeliou, Anton, Strange, Hadot, Henry), Plotinus' treatment of the genera of being is given a more sympathetic treatment. Anton emphasizes the importance of Plotinus' reconstruction of categorical theory for the history of the criticism of classical Aristotelianism.

Hadot, Henry and Wurm have done most to bring about this change of attitude by locating Plotinus' written philosophy within the larger context of Plato and Aristotle or of a Plotinian oral teaching on substance, quantity etc. in Porphyry, Dexippus and Simplicius. Thus, it has become legitimate to ask not only (1) what does Aristotle mean, (2) how does Plotinus understand and refute him and (3) how is this viewed by later commentators, but also (4) who is right, to what degree and in what sense. (28)" (pp. 579-581)

In: Plotino, *Enneadi*. Prima versione integra e commentario critico a cura di Vincenzo Cilento. Vol. I: *Enn.* I, II, 1947; Vol. II: *Enn.* III, IV, 1948; Vol. III, Parte I, *Enn.* V, VI, 1949; Vol. III, Parte II Commento ad *Enn.* V, VI e Bibliografia, 1949.

Publicata anche in volume a parte (1463 titoli).

2. Bonetti, Aldo. 1971. "Studi Intorno Alla Filosofia Di Plotino." *Rivista di Filosofia Neo-Scolastica* no. 63:487-511.

Review of the most significant studies on Neoplatonism beginning with Eduard Zeller (1903) up to Pietro Prini (1968).

3. Blumenthal, Henry J. 1987. "Plotinus in the Light of Twenty Years' Scholarship, 1951-1971." In *Aufstieg Und Niedergang Der Römischen Welt (Anrw). Teil II: Principat. Band 36: Philosophie, Wissenschaften, Technik. I. Teilband: Philosophie (Historische Einleitung; Platonismus)*, edited by Haase, Wolfgang, 528-570. Berlin: de Gruyter.

"The text of this article was completed in January 1973. - Though some important work appeared thereafter, the general picture remained substantially the same four years later, when the bibliography was added. This, combined with supervening pressures, dissuaded me from attempting to rewrite the whole *Forschungsbericht* at that time (April 1977). Details of work

known to me up to the beginning of 1977 which had not been taken into account in the article itself will be found in the bibliography, which was compiled then, at the editors' request. It also includes some works that were not thought worth mentioning in the original article. In view of the constantly impending but repeatedly delayed imminent publication of the volume in which it appears, I have made no further changes since 1977." p. 528

"The year 1951 easily chose itself for the start of a survey of recent work on Plotinus. It saw two events of outstanding importance. First the appearance of the first volume of HENRY and SCHWYZER'S edition, undoubtedly the most important contribution to Plotinian scholarship since Porphyry published the 'Enneads'. In the same year was published SCHWYZER'S article 'Plotinos' in PAULY-WISSOWA, the first comprehensive and scholarly survey of Plotinus. It remains the best and most reliable introduction to the study of Plotinus even after the considerable progress that has been made over the last twenty years. This article will not attempt to emulate SCHWYZER'S work, or to produce what could be little more than a condensed version of it, but will refer the reader to it for an introduction, and much more, to the subject: he will find that all work of any importance up to that time has there been taken into account. Instead it will try to show what has been done since, against a background of the hitherto accepted position, and to indicate some of the more important tasks for the immediate future." p. 529.

5. Dufour, Richard. 2001. "Plotinus: A Bibliography 1950-2000." *Phronesis. A Journal for Ancient Philosophy* no. 46:235-411.

Compiled by Richard Dufour with help in translation from Hanneke Teunissen.

Contents: Acknowledgments 235; Introduction; 237-239; Reference Works 241; Abbreviations 243; List of collected volumes, miscellanea and Conference proceedings 253; Greek text and translations 257; Studies 271 [1542 entries] 271; Index of themes 395; Index of Authors and Themes 401; Index of Treatises 409; Index of Greek Words 411.

Reprinted as separate volume: Leiden, Brill, 2002.

From the Introduction: "This bibliography covers the fruits of Plotinian scholarship over the last fifty years (1950-2000). Completed with four different indexes, it will provide students and scholars with easy access to modern Plotinian studies.

My work derives much inspiration from Luc Brisson's bibliography of Plato, which served as an exemplary model and the principles of which have guided me throughout the compilation of this bibliography. With the exception of the indexes, the presentation of my bibliography follows the general principle of Luc Brisson's work in *Lustrum* (now published by Vrin).

This bibliography aims to be exhaustive. References were systematically taken from indexes, bibliographies, journals, conference proceedings, annuals and collections of articles. A full list of these is given later.

Fewer references are listed for 1995 and the following years due to the fact that most Bibliographical reference works have not yet reached the Year 2000. *L'Année Philologique*, for example, has just published the volume covering the year 1997. For this reason we not only miss three full years of indexing up to 2000, but also supplements to the preceding years. It is possible, in fact, that the volume covering the year 2000 will provide bibliographic references from 1995 to 2000. In order to close the gap, I studied library catalogues, frequented bookshops and consulted most recent issues of the major journals. These efforts, however, can never contend the incredible amount of work by institutions like *L'Année Philologique*. As a result, the

exhaustiveness of this bibliography is slowly reduced as we near the new millennium.

(...)

Four different indexes may be consulted referring to all information in the respective entries. In order, these indexes are arranged by:

- 1) Theme. Key-words are arranged in alphabetical order.
- 2) Author-theme. All entries which include an author other than Plotinus are listed in this index. Sub-categories have been added in order to facilitate specific searches. It is thus possible to search for all articles pertaining to, for example, Plotinus and Aristotle.
- 3) Treatise. Adhering to the Porphyrian system of classification of the *Enneads*, a list of studies concerning a specific treatise has been assembled. Only references which explicitly refer to one treatise are listed. For example, not every article concerning the Gnostics is automatically included in Column II, 9. All references to Gnostics may be found in the index "Author-theme" under the heading "Gnostics".
- 4) Greek word. All words and expressions in ancient Greek occurring in the entries are listed in transliterated form." pp. 237-239.

4. Baltzly, Dirk C. 1998. "Porphyry and Plotinus on the reality of relations." *Journal of Neoplatonic Studies* no. 6:49-75

"Porphyry and Plotinus disagree over the question whether Aristotle was successful in dividing the world at its joints in the *Categories*, with Plotinus (*Enn.* VI, 1-3) arguing that he was not successful, Porphyry (in his commentary on the *Categories*) arguing that he was. Porphyry, however, has the clearer account of relations and relational properties and, consequently, Plotinus' account does not adequately meet objections to the autonomy of Aristotle's category of relation. This is a problem for Plotinus because he retains the category of relation in his own five-fold scheme of categories."

13. Collette, Bernard. 2002. *Dialectique et hénologie chez Plotin*. Bruxelles: Ousia

"Qu'est que le monde intelligible pour Plotin et comment l'homme peut-il y accéder ? Telles sont les deux questions à la base de cet ouvrage dans lequel l'auteur a choisi de confronter le dire et le faire, la doctrine métaphysique et la pratique philosophique. Pour y répondre, il analyse, dans un premier temps, la théorie des facultés de connaître et celle du langage telles qu'elles se laissent dessiner au fil des Ennéades, afin de mettre en évidence à la fois les potentialités propres à chacune de ces facultés et le type de discours philosophique le plus apte à révéler le monde intelligible dans toute sa complexité. De la première recherche, il ressort que : ce que Platon, dans le *Sophiste*, appelle la " science des hommes libres " apparaît, chez Plotin, comme la "partie précieuse de la philosophie" dont le lieu propre est le Noûs. Dans la deuxième partie de l'ouvrage, l'auteur explique comment, dans le traité VI.2 (43) intitulé *Des genres premiers de l'Être*, Plotin se sert de la méthode dialectique pour révéler les cinq genres premiers que sont l'être, le mouvement, le repos, le même et l'autre. Par là, il nous donne l'occasion de rentrer dans l'un des plus difficiles traités plotiniens et aussi l'un des moins commentés, où le monde intelligible se dévoile comme une sontaxis, un système d'ordonnement, à travers les deux structures hénologiques que sont le genre-espèces et le tout-parties."

23. ———. 2001. "Plotinus' criticism of materialism." In *Neoplatonism and Indian Philosophy*, edited by Gregorios, Paulos, 199-209. New York: State of New York University Press
 "In *Ennead* VI. 1, Plotinus criticized not only Aristotle's set of categories, but also what he considered as the Stoic set of categories. He found both sets of categories unacceptable for many reasons, but especially for their inapplicability to the intelligible realm of being which, for him, is more important than the realm of sensible becoming. The study examines

- critically the reasons for Plotinus's criticism of the Stoic doctrine of categories, to the logic of which he objected primarily because of its presupposed ontological materialism."
24. ———. 2002. "Plotinus' Set of Categories for the κόσμος αἰσθητός." In *Neoplatonism and Nature. Studies in Plotinus' Enneads*, edited by Wagner, Michael F., 209-239. Albany: State University of New York Press

"In *Ennead* VI. 1, Plotinus criticized Aristotle's categories one by one. He found the Aristotelian doctrine of categories as a whole unacceptable for many reasons, but especially for its inapplicability to the intelligible realm of being and its superficiality regarding the sensible realm of becoming, for which it was intended. In *Ennead* VI.3, he proposed a new set of categories for the *kosmos aisthetos*, which is characterized by a reduction of Aristotle's set by fifty per cent and by the introduction of motion as one of the five categories. The study examines critically Plotinus's reasons for such a radical reduction and such a Platonic innovation."

- "Plotinus' apparent incapability of accomplishing his general purpose in VI, 1-3 [42-44] and his specific task in VI, 2[43] 20 of relating Neoplatonic ontology and Aristotelian logic is due to a mistranslation and misinterpretation of two sections, vi, 2, 20, 4-6 and vi, 2, 20, 20-32."

28. Haas, Frans A.J.de. 2001. "Did Plotinus and Porphyry Disagree on Aristotle's *Categories*?" *Phronesis. A Journal for Ancient Philosophy* no. 46:492-526

"In this paper I propose a reading of Plotinus Enneads VI.1-3 [41-43] On the genera of being which regards this treatise as a coherent whole in which Aristotle's *Categories* is explored in a way that turns it into a decisive contribution to Plotinus' Platonic ontology. In addition, I claim that Porphyry's *Isagoge* and commentaries on the *Categories* start by adopting Plotinus' point of view, including his notion of genus, and proceed by explaining its consequences for a more detailed reading of the *Categories*. After Plotinus' integration of the *Categories* into the Platonic frame of thought Porphyry saw the possibilities of exploiting the Peripatetic tradition both as a means to support the Platonic interpretation of the *Categories* and as a source for solutions to traditional questions. His allegiance to a division of being into ten, and his emphasis on semantics rather than ontology can be explained from this orientation. In the light of our investigation the alleged disagreement between Plotinus and Porphyry on the *Categories* changes its appearance completely. There are differences, but these can be best explained as confirmation and extension of Plotinus' perspective on the *Categories* and its role in Platonism." (p. 492)

36. Maskaleut, Steve. 2005. "Critique du relatif par Plotin: le traité des genres de l'être VI, 1[42], 6-9." *Dionysius* no. 23:7-29
- "Plotinus' treatise on the kinds of being (VI, 1[42]) criticizes the category of the relative (*pros ti*) found in Aristotle and in Stoic writers. Starting from a different foundation, Plotinus postulates certain Platonic principles which control his own theory of the relative -- a theory he does not explain, but which

he uses in part in order to support his criticism. Examination of the premises of Plotinus' criticism, its logic, and its limitations allows us to evaluate its pertinence compared with the two other theories of the relative against which it argues. Plotinus effects a separation between two different kinds of relative. From this premise come certain consequences : 1) Plotinus does not succeed in giving sense and unity to the relative except by way of detour into the Forms. 2) Thus Plotinus does not respond directly to the problem posed by the relative. 3) The unity of the relative in Aristotle implicates a necessary variability which Plotinus has not taken into account, because it conflicts with the idea of a homogenous ordered sequence. 4) The question of what relation the Forms have to each other remains open."

Summary: "Aristotle regards the informed particular as primary substance and real.

Plotinus as a Platonist sees intelligible substance as real and the particulars that belong to a genus as secondary substance and ontically deficient. To avoid the infinite regress involved in predicating the Form both of the particular and the Form Aristotle locates the Form in the particular. Plotinus preserves the transcendence of Form by replacing the Aristotelian predication by synonymy with a system of predication built on pros hen equivocity. The Form then becomes eidos aneideon, "formless form." This formless form is, not a restricted entity,

- but rather as an ocean of possibility. As such it dismisses the world of Aristotelian science and opens up new possibilities for understanding art. The Form is regarded as an individual aspect of the intelligible world which is expressed in a P-series which extends from the intelligible world to sensible reality."

2. Abbate, Michele. 2016. "Il noeîn parmenideo (DK 28 B3) nella concezione plotiniana del Noûs." *Methodos. Savoirs et Textes* no. 16:1-21.

English abstract: "The present paper aims to show how Plotinus, in a perspective that remains essentially Platonic, interprets the notion of noeîn in Parmenides, especially in the light of the well known Fr. 3 DK, on the identity of being and thought. It needs to point out that Plotinus, with Clement of Alexandria, is our source of this fragment. The plotinian interpretation is essential to understand the nature and the ontological-metaphysical function of Plotinus' hypostasis Nous. The Parmenidean conception of the identity of eînai and noeîn is profoundly reshaped by Plotinus and integrated into a perspective compatible with the Platonic and Neoplatonic ontology. According to the plotinian theory, in the hypostasis of Noûs, i.e. in the intelligible reality as a whole, being and thought are connected to each other in a dynamic and not motionless identity, which characterizes the nature of Noûs as

uni-multiplicity (hen pollá). In accordance with what Plato states in *Sophist*, Plotinus conceives the intelligible reality as something intrinsically living and alive. Plotinus' conception of Noûs and his interpretation of Parmenidean noeîn in Fr. 3 DK appear to be central in the whole Neoplatonic tradition and in particular in Proclus' reflection on the nature of intelligible world."

8. Brisson, Luc. 1985. "Temps et éternité dans la philosophie grecque." In *Mythes et représentations du temps*, edited by Tiffeneau, Dorian, 59-85. Paris: Éditions du Centre national de la recherche scientifique.

Rèsumé: "Le concept d'éternité tel qu'on le rencontre chez Plotin ne se trouve chez aucun de ses prédécesseurs. Or, c'est Plotin lui-même qui a occulté ce fait d'histoire, en se donnant pour le disciple fidèle de Parménide et de Platon, qu'il s'évertue à défendre contre le matérialisme d'Aristote.

En vérité, Platon et Aristote ont ceci de commun qu'ils pensent l'éternité comme absence de temps et de changement, et non comme absence de durée. Plotin, au contraire, oppose le temps à l'éternité comme la durée à son absence, introduisant ainsi le

- concept d'éternité qui sera celui de Boèce et de tout le Moyen Age."

Ancient Greek Commentaries on Aristotle's *Categories*

Introduction

“The five introductions to the study of Aristotle by Ammonius, Olympiodorus, Elias, Philoponus and Simplicius give us a very good idea of the organization of the neoplatonic exegesis. The elaborated plan, and the long list of predecessors which Simplicius gives, make it certain that the five extant prolegomena are the result of a long development. Part of the material used in the prolegomena is old, especially the facts presented in the chapter on the names of the different philosophic schools (see Diels, *Doxographi* p. 246). But the scholastic approach and outlook is so apparent even in the earliest of these prolegomena, that of Ammonius, that we cannot go too far back. Porphyry, Iamblichus, Syrian and Proclus were great individualists, compared to Ammonius and his disciples, and their prolegomena have a different character. Simplicius says, CIAG [*Commentaria in Aristotelem Graeca*] VIII, p. 3.3, that he has freely used and transcribed Iamblichus' commentary, and it is possible that Iamblichus added prolegomena of the later type, but on the whole I am more inclined to regard Ammonius as the real originator of this scholastic type of introduction. Littig and, more recently, Moraux are certainly wrong in assuming that the elaborate neoplatonic classification of Aristotle's writings goes back to Andronicus. Firstly, there is no ancient evidence at all for this hypothesis, and that in itself ought to be enough; secondly, the prolegomena are throughout coloured by neoplatonic conceptions and doctrines; thirdly, they are intimately connected with a type of scholastic and professional study of Aristotle which cannot have existed earlier than in the fourth or fifth century; they are also so closely connected with Porphyry's famous *Isagoge* that, as Praechter says, the whole course could be

entitled "Erklärung von Porphyrius' Eisagoge mit Einleitung in die Philosophie". Generally speaking, the highly speculative character of this classification is incompatible with what we know of Andronicus and his period. We may compare the Alexandrian and Hellenistic approach in the extracts preserved by Diogenes III 65.

The edition of Aristotle's works used in the neoplatonic school in Athens about 500 A. D. was the same as that we possess, i.e., in principle, Andronicus' edition. It was introduced by the *Categories*, preceded by a short biography of Aristotle, late copies of which we possess in the *Vitae* Marciana and *Vulgata*. This biography, which included a list of Aristotle's writings, was an epitome of Ptolemy's *Vita.*" (pp. 444-445)

Selected bibliography on the Ancient Greek Commentaries on Aristotle's *Categories*

Editions of the Ancient Commentaries to Aristotle's Categories and Porphyry's Isagoge

Eight Neoplatonic commentaries are extant: seven in Greek by Porphyry, Dexippus, Ammonius, Philoponus, Olympiodorus, Simplicius, Pseudo-Elias (David), published in the series of *Commentaria in Aristotelem Graeca* by the Berlin Academy (1882-1909, 23 volumes; this edition is reprinted by Walter de Gruyter) and one in Latin by Boethius.

1. Porphyry. 1887. *Porphyrii Isagoge et in Aristotelis Categoriae commentarium* . Berlin: Reimer
Commentaria in Aristotelem Graeca: IV/1, edidit Adolf Busse.
2. Dexippus. 1887. *Dexippi In Aristotelis Categoriae commentarium* . Berlin: Reimer
Commentaria in Aristotelem Graeca: IV/2, edidit Adolf Busse.
3. Boethius. 1860. "In Categoriae Aristotelis." In *Manlii Severini Boethii opera omnia* , edited by Migne, Jacques Paul. Paris: Garnier
Patrologia Latina, v ol. 64, colL 159A - 294C.

A critical edition and an English translation are in preparation by Monika Asztalos: "At present I am editing the text and at the same time preparing an English translation of it to appear in

- Ancient Commentators on Aristotle.*" (" Boethius on the *Categories* ", in Alain Galonnier (éd.), *Boèce ou la chaîne des savoirs* , Louvain-Paris: Éditions Peeters, 2003, p. 195.)
4. ———. 1906. *Anicii Manlii Severini Boethii In Isagogen Porphyrii commenta* . Vienna: Tempsky
Copiis a Georgio Schepss comparatis suisque usus, recensuit Samuel Brandt.
Corpus scriptorum ecclesiasticorum latinorum vol. 38.
Anastatic reprint: New York: Johnson Reprint Corporation, 1966.
First Commentary on *Isagoge* pp. 3-132; Second Commentary on the *Isagoge* pp. 135-348.
 5. Ammonius. 1895. *In Aristotelis Categorias commentarius* . Berlin: Reimer
Commentaria in Aristotelem Graeca: IV/4, edidit Adolf Busse.
 6. Philoponus. 1898. *Philoponi (olim Ammonii) In Aristotelis Categorias commentarium* . Berlin: Reimer
Commentaria in Aristotelem Graeca: XIII/1, edidit Adolf Busse.
 7. Olympiodorus. 1902. *Olympiodori Prolegomena et In Categorias commentarium* . Berlin: Reimer
Commentaria in Aristotelem Graeca: XII/1, edidit Adolf Busse.
 8. Simplicius. 1907. *Simplicii In Aristotelis Categorias commentarium* . Berlin: Reimer
Commentaria in Aristotelem Graeca: VIII, edidit Karl Kalbfleisch.
 9. Pseudo-Elias, (David). 1900. *Eliae In Porphyrii Isagogen et Aristotelis Categorias commentaria* . Berlin: Reimer
Commentaria in Aristotelem Graeca: XVIII.1, edidit Adolf Busse.

10. Porphyre. 2008. *Commentaire aux Catégories d'Aristote* . Paris: Vrin
Édition critique, traduction française, introduction et notes par Richard Bodéüs.
11. Szlezák, Thomas A., ed. 1972. *Pseudo-Archytas über die Kategorien* . Berlin: Walter de Gruyter
Vorbermerkung VII-VIII; Inhalt IX-X; Einleitung 1; Texte pp. 27-68; Übersetzung pp. 69-86; Kommentar 87; Index Verborum 189; Stellenregister 211; Literaturverzeichnis 22-226.

Reprinted as Chapter 5 in: J. P. Anton, *Categories and Experience. Essays on Aristotelian Themes*, Oakdale, N.Y: Dowling College Press, 1996, pp. 115-149.

"The main purpose of this paper is to offer an exposition and a critical examination of the ancient interpretations of Aristotle's doctrine of *homonyma*.(1) A circumlocution of what Aristotle means by *homonyma* things is given in *Categories*, ch. 1. The ancient interpretations with which we are concerned in this paper are to be found in the extant commentaries on this treatise. Evidently, more commentaries had been written on the *Categories* than the vicissitudes of time allowed to survive, but we have only those of the following writers: Porphyrius (c. 233-303), Dexippus (fl. c. 350), Ammonius (fl. c. 485), Philoponus (c. 490-530), Olympiodorus (fl. c. 535), Simplicius (fl. c. 533), Elias (ft. c. 550). One might add here the relevant writings of John Damascene (675-749), Photius (820-91), and Michael Psellus (1018-79), which are useful paraphrases rather than full commentaries; for that reason, the interpretations they support are not discussed in this paper.

The main body of this paper is given to a discussion of the interpretations which the ancient commentators offered and to an analysis of the assumptions which underlie them. It can be stated here in anticipation of what follows that the commentators often attached to Aristotle's meaning of *homonyma* aspects that were quite foreign to his views and that by doing so these commentators were taking extensive liberties with the text at hand. As we hope to show, the commentators brought into their discussions of this particular portion of the *Categories* issues and views that were far more relevant to their own ontologies and logical theories than to Aristotle's doctrines. In order to show how this is the case, we must first give a summary of what we believe our text permits us to say about the meaning of *homonyma*, as given in the opening chapter of the *Categories*. Suffice it to add at this point that the

interpretations of the doctrine of *homonyma* with which we are concerned here are only those that are discussed exclusively in the relevant commentaries on this work." (pp. 115-116)

(1) This essay, the second of a two-part article, was originally published in *The Journal of the History of Philosophy*, VII/1 (1969), 36-57, and is printed with minor changes. It was based on an invited paper presented at the annual meeting of the Society for Ancient Greek Philosophy in New York City, Dec. 27, 1965. For a full discussion of the doctrine of *homonyma* and the background against which it can be understood, see my "The Aristotelian Doctrine of *homonyma* in the *Categories* and its Platonic Antecedents," also in *The Journal of the History of Philosophy* VI, 4 (Oct., 1968), 315-326). I tried to show in that paper how Aristotle's formulation is indebted linguistically to Plato but was worked out not in response to Plato's usage but to his own philosophical position and as part of his logical apparatus to attack the Speusippean wing of the Academy. On the whole, the textual evidence from the Platonic writings indicates clearly that Plato had not proposed a technical use of *homonyma*. Speusippus and Aristotle, however, offered two different and opposing technical formulations intended to fit their respective ontologies.

9. Barnes, Jonathan. 2005. "Les *Catégories* et les catégories." In *Les Catégories et leur histoire*, edited by Bruun, Otto and Corti, Lorenzo, 11-80. Paris: Vrin.

"Bien que maintes préfaces affirment le contraire, les actes d'un colloque ne constituent jamais un livre. Les Actes du Colloque de Genève ne font pas exception: même si un thème commun les unifie, ils ne racontent pas une histoire linéaire. C'est pourquoi nous avons ajouté aux Actes une longue introduction. Ce chapitre, *Les Catégories et les Catégories*, de la plume de Jonathan Barnes, vise à esquisser, dans ses grandes lignes, l'histoire des *Catégories* d'Aristote et de la théorie aristotélienne des *Catégories*, et d'y encadrer les différents épisodes décrits par chacun des chapitres suivants. Un lecteur qui voudrait lire ce volume comme on parcourerait un livre pourrait donc suivre le texte de l'introduction, tout en y intercalant les chapitres là où une note en bas de page les mentionne. L'index nominum et rerum, l'index locorum et la bibliographie, qui se trouvent à la fin de ce volume et qui s'appliquent à tous les chapitres, lui permettront d'établir d'autres liens entre eux." Abstract: "The subject of this paper is the way that Neoplatonic commentators on Aristotle treat the word classes that designate the philosopher's categories.

In the *Categories* Aristotle provides us with the first "model" of a conceptual classification. These classes are designated by specific linguistic utterances, the possible categorization of which has been puzzling thinkers and scholars ever since antiquity: why did the philosopher choose these specific terms for his categories? Neoplatonic philosophers who comment on the first logical treatise believe that only certain linguistic utterances can render Aristotle's ten classes and their approach emerges from: i) the treatment of the *Categories*' purpose, as related to the subject matter of *On Interpretation*; ii) their discussion of the 'parts of expression' (*lexis*) in connection with the grammatical 'parts of speech' (*logos*)."

"Porphyry has recently been criticized for "muddling" Aristotle's doctrine of predicables by adding species to the list. I argue that a careful comparison of the two lists shows that they differ more profoundly than Porphyry's critics suspect, and that these modern critics, unlike the ancient commentators, have been misled by the title of *Isagoge* which they interpret as "Introduction" to *Topics* or *Categories* exclusively. It is shown that this is not the case."

 38. Falcon, Andrea. 2018. "The Early Reception of Aristotle's *Categories*: Comments on Michael Griffin." *Documenti e Studi sulla Tradizione Filosofica Medievale* no. 29:1-12.

Abstract: "Griffin's book [*] provides a compelling narrative to tell the intricate story of the rediscovery of the *Categories* and its subsequent appropriation by philosophers working in different traditions between Andronicus of Rhodes (first century BC) and Alexander of Aphrodisias (late second and early third century AD). Andronicus is clearly the hero in this story. By placing the logical writings at the outset of the Aristotelian corpus, and the *Categories* at the head of the logical writings, Andronicus gave a prominent position to this hitherto obscure work. But a slightly different story could be told. In this alternative story, the focus is shifted away from Andronicus of Rhodes in order to concentrate on Boethius of Sidon (first century BC) and his important contribution to the reception of the *Categories* in the ancient commentary tradition."

Abstract: "Boethius identifies beings that are in a subject with what the Scholastics called predicamental accident, and predication by accident with the predication of what is in a subject. The first of these questionable assimilations went on to become terminology commonly accepted by Scholastics of all

eras. On the other hand, the second, which seems quite consistent with the thinking of Aristotle, was only admitted with many reservations, probably because of the bewildering claims of Aristotle in *Cat.* 5, 2a27-34 about the predication of what is *in* the subject. In what follows I will try to show how these phrases, properly understood, are consistent with the idea that what is in the subject is said by accident of the substance, although they implicate a difficulty poorly resolved by Boethius himself and those who followed him on this point, of whom I will only mention by way of example some Scholastics from the 16th century."

Abstract: "At *Categories* 12b5-16 Aristotle appears to regard the referents of declarative sentences, such as 'Socrates is sitting,' as what later writers were to call '*complexe significabilia*', i.e., items such as 'that Socrates is sitting'. Simplicius's discussion of this passage in his commentary on the *Categories* clearly shows the influence of Stoic philosophy of language; but, if we follow the text printed by Kalbfleisch, Simplicius's commentary is seen to be a muddle of Stoic and Aristotelian elements, neither properly understood. It is possible, however, by making a crucial emendation. On that line Simplicius would be adopting the view that a declarative sentence refers to a thought in the first instance and a '*complexe significabile*' in the second instance. This view is plausibly the upshot of combining the *Categories* text with the first chapter of *De Interpretatione*."

Abstract: "This paper shows the role of ὀνοματοποιεῖν in Neoplatonism and how this practice is ruled by an onto-logical canon. While ὀνοματοποιεῖν itself means the making of a brand new name, its usage is manifold.

As Aristotle explains in *Rh.* III 2, poets take advantage of ὀνοματοποιεῖν to catch the undefined and give it a recognisable image, by means of a metaphorical name. In science, this practice, codified by Aristotle, is twofold: ὀνοματοποιεῖν meant both to re-semanticize words well known and to create names ex novo for things not discovered or studied yet. After analysing ὀνοματοποιεῖν's recurrence in Aristotle, I illustrate that, according to Neoplatonic Commentators, impositio can be, both natural and technical, only of things in actuality, having a solid consistency.

Intermediates between contraries, presumed relatives and powers as qualities are nameless – as Philoponus notices in his *In Categorias* – since they haven't an independent status and aren't definable. This bond between the original rhetorical practice and the ontological perspective, sketched in *Int.* 1, was strengthened by Alexander, who filled Aristotle's gaps, stating that names signify things' being, i.e. the form acquired in actuality."

51. Granieri, Roberto. 2021. "Xenocrates and the Two-Category Scheme." *Apeiron* no. 54:261-285.

Abstract: "Simplicius reports that Xenocrates and Andronicus reproached Aristotle for positing an excessive number of

categories, which can conveniently be reduced to two: τὰ καθ' αὐτὰ and τὰ πρὸς τι. Simplicius, followed by several modern commentators, interprets this move as being equivalent to a division into substance and accidents. I aim to show that, as far as Xenocrates is concerned, this interpretation is untenable and that the substance-accidents contrast cannot be equivalent to Xenocrates' per se-relative one. Rather, Xenocrates aimed to stress the primacy of Plato's binary distinction of beings, as presented at *Sophist* 255c13–4, over Aristotle's list of the categories."

"One of the more provocative mysteries of later ancient philosophy is how Porphyry came to situate the *Categories* of Aristotle at the outset of the nascent Neoplatonic curriculum." (p. 69)

(...)

"In this essay, I would like to offer a possible explanation for the tension that I have attributed to Porphyry above, which I think also sheds light on the early surge of interest in the *Categories*. Specifically, I will argue that the protreptic to the study of the *Categories* contained mainly in Porphyry's shorter surviving commentary *By question and answer* – that is, the 'semantic' treatment of the *Categories* as a map of the genera of being, only insofar as it is a map of the genera of simple, significant terms – is derived more or less unaltered from a Peripatetic tradition dating to Andronicus of Rhodes, while Porphyry's own critical response to this tradition was developed primarily in his longer, now lost commentary addressed To Gedalius. The former semantic theory, I argue, has been somewhat blurred by our effort to filter it through the

lens of the rather different theory from which Porphyry, in his longer commentary, developed his own considered view." (p. 72)

(...)

"Through this sketch of the evidence, I hope to have suggested that there is, in any case, more to the 'bipartite' theory than a compendious treatment or compression of the 'tripartite' material by Porphyry, and that attention should be drawn to it as a separate and distinct layer of the tradition. I have also explored some of the ways in which both 'layers' may be seen as predating Porphyry, while Porphyry's approach to the *Categories* in the shorter commentary could be seen as building on an earlier source." (p. 90)

56. ———. 2020. "Articulating Preconceptions: A Reconsideration of Aristotle's *Categories* in the Early Roman Empire." *Documenti e Studi sulla Tradizione Filosofica Medievale* no. 31:1-38.

Abstract: "In this contribution, I respond to several points raised by Andrea Falcon, Stephen Menn, and Riccardo Chiaradonna in the course of their engagements with my monograph *Aristotle's Categories in the Early Roman Empire*. In particular, I reply to concerns raised by Falcon about my reliance on evidence from Ptolemy for Andronicus' catalogue, and try to situate more clearly my focus on Andronicus'

pedagogical treatment of the *Categories* within the wider context of evolving scholarship on its early reception. In response to challenges raised by Menn, I also argue in favour of Andronicus' interest in a

principled distinction between essential and accidental predication, and defend the value of Boethius' *De Divisione* as a witness to Andronicus, while highlighting Menn's ingenious reconstruction of Andronicus' interpretation of the 'said of' and 'in' relations in *Categories*, 2. Finally, in response to concerns raised by Chiaradonna in the opening chapter of Rashed and Chiaradonna's new and standard setting edition and discussion of Boethus of Sidon, I offer a provisional justification for my attribution to Andronicus and Boethus of a pedagogical view about the elementary articulation of kinds of

predication, motivating the introductory role of the *Categories* in logic and philosophy."

Résumé: "Cet article représente une contribution de plus à ma critique générale des thèses de Praechter selon lesquelles l'école neo-Platonicienne dite "d'Alexandrie" se distinguerait, non seulement par le lieu de son enseignement, de celle dite "d'Athènes", mais encore et surtout par ses doctrines philosophiques et par son attitude envers l'oeuvre d'Aristote. La comparaison entre elles des Préfaces des cinq commentaires neo-Platoniciens des *Catégories* d'Aristote, dont l'un, celui de Simplicius, appartiendrait, selon Praechter, à l'école d'Alexandrie, fait apparaître la concordance fondamentale de la philosophie neo-Platonicienne qui était enseignée à Athènes avec celle qui était enseignée à Alexandrie: toutes deux interprètent la philosophie d'Aristote dans la même perspective neo-Platonicienne et la même volonté d'harmoniser Platon et Aristote."

64. ———. 1980. "Sur divers sens du mot *pragma* dans la tradition philosophique grecque." In *Concepts et catégories dans la pensée antique*, edited by Aubenque, Pierre, 309-319. Paris: Vrin.

Repris dans P. Hadot, *Études de philosophie ancienne*, Paris: Les Belles Lettes 2010, pp. 61-76.

"Les articles consacrés au mot *pragma* dans les dictionnaires de la langue grecque sont en général assez longs et ils énumèrent d'habitude les sens suivants : au singulier, le résultat de l'action, l'action elle-même, l'affaire, notamment au sens juridique, le sujet en question, la chose comme réalité concrète ; au pluriel, les circonstances, les affaires de l'état, les ennuis et désagréments. Mais il se trouve assez souvent que le mot *pragma* prend, dans les textes philosophiques, des sens techniques très précis, pour lesquels les dictionnaires apportent peu de secours. Il est vrai que, dans ces cas difficiles, les traducteurs en difficulté recourent la plupart du temps au mot « chose » ou au mot « fait » qui permettent, par leur généralité et leur imprécision, de dissimuler le problème. La présente étude voudrait recenser quelques-uns de ces sens techniques du mot *pragma* et en laisser entrevoir l'arrière-plan rhétorique et philosophique." (p. 309)

(...)

"Nous avons donc étudié six types d'emplois différents du mot *pragma* dans la langue philosophique grecque. Ces emplois sont, en général, étroitement liés. De la notion de « ce dont on parle », on passe naturellement à celle de « sens », de « contenu conceptuel », d'« unité de sens » et d'« incorporel ». Dans tous ces sens, *pragma* est étroitement lié au discours et à

la pensée. Il est dangereux de traduire, dans ces cas, pragma par le mot « chose », si l'on entend par « chose » une réalité extralinguistique, indépendante, extérieure à la pensée et au discours, alors que, précisément, pragma connote très souvent un rapport au discours et à la pensée. Ou bien alors, il faudrait réviser complètement la notion traditionnelle de « chose ». La présente étude pourrait ainsi apporter une modeste contribution à la réflexion sur des notions les plus confuses et pourtant les plus centrales de la tradition philosophique." (p. 319)

68. Hoffmann, Philippe. 1980. "Les catégories ποῦ et ποτέ chez Aristote et Simplicius." In *Concepts et Catégories dans la pensée antique*, edited by Aubenque, Pierre, 217-245. Paris: Vrin.

"L'exposé que l'on va lire ne se propose pas d'étudier les concepts de lieu (τόπος) et de temps chez Aristote et son commentateur Simplicius (1), mais de scruter les quelques indications qu'Aristote, dans son *Traité des Catégories*, nous donne sur les prédicats ποῦ et ποτέ, ou que l'on peut trouver dans certains passages de *Physique* IV. La matière fournie par les textes aristotéliens étant peu abondante, notre attention se portera principalement sur le Commentaire de Simplicius.

Si les catégories ποῦ et ποτέ ne se confondent pas avec les concepts de lieu et de temps, c'est pourtant par rapport à eux, c'est-à-dire par différence avec eux, qu'elles prennent sens et consistance. C'est pourquoi, et bien que ce ne soit qu'à titre secondaire, la méditation sur le temps et le lieu nourrit le commentaire de Simplicius, chez qui elle fonde (ainsi d'ailleurs que chez nombre de commentateurs antérieurs) l'ordre relatif des deux catégories : selon que le temps, ou le lieu, est considéré comme plus « proche » de l'essence, plus « apparenté » à elle, la catégorie ποτέ (ou la catégorie ποῦ) se situera plus près de Ουσία dans la liste des catégories. Tel étant le critère du classement, l'analyse catégoriale court toujours le risque d'être remplacée par une étude « physique » du temps ou du lieu. Mais Simplicius situe la doctrine des catégories au niveau d'une étude des signifiés et des significations. Un second danger se présente alors, qui est de confondre l'analyse catégoriale et l'analyse grammaticale des « parties du discours ». En effet, les catégories ποῦ et ποτέ correspondent presque exclusivement à deux classes d'adverbes, qui sont, respectivement, les adverbes de lieu et les adverbes de temps(2).

Nous verrons que Simplicius, analysant et classant les significations des adverbes (et compléments) de lieu, ne fait que reprendre, sur ce point, la doctrine grammaticale classique, telle qu'on la voit exposée dans la Grammaire de Denys le Thrace, dans les Scholies relatives à cette Grammaire, ou chez un auteur comme Apollonius Dyscole. Guidé par l'idée d'une étroite parenté entre les catégories kou et ttots, Simplicius étudie les adverbes de temps en suivant comme modèle la doctrine grammaticale des adverbes de lieu.

A la suite de Jamblique, il défend contre les attaques de Plotin la thèse soutenue par Aristote dans son Traité des Catégories : twk et koü sont des catégories distinctes et propres, tandis que temps et lieu relèvent de la quantité. Pour fonder cette distinction, Jamblique et Simplicius établissent que koü signifie « la relation au lieu de ce qui est dans le lieu », et 7cot£ « la relation au temps de ce qui est dans le temps ». D'autre part, koü et 7cot£ se différencient des relatifs, en ce que la relation

constitutive de ces derniers est convertible, ce qui n'est pas le cas de la relation constitutive de ces deux catégories : il s'agit, par exemple, de la relation au lieu de ce qui est dans le lieu, et non de la relation du lieu à ce qui est en lui." (pp. 217-218)

(1) Aristote, *Traité des Catégories*, ch. IV, 1 b 25 - 2 a 10 ; 11 b 10-15. Simplicius, *Commentaria in Aristotelem Graeca* VIII, pp. 340-364.

(2) Cette affirmation peut sembler contestable, du fait que les exemples donnés par Aristote et repris par les commentateurs sont « ἐν Λυκειῷ », « ἐν ἀγορᾷ », et ne sont pas à proprement parler des adverbes. On peut répondre à cela que le « titre » de la catégorie est un adverbe, et que Simplicius, à la suite, semble-t-il, des grammairiens, établit une équivalence sémantique entre de telles expressions et les adverbes de lieu : c'est cette équivalence qui nous importe, puisque la table des catégories est issue, aux yeux de Simplicius, d'une analyse des significations.

Abstract: "Griffin, Rashed, and Chiaradonna have shown how we can use Simplicius' *Categories* commentary to reconstruct much of Porphyry's greater *Categories* commentary (also witnessed by the Archimedes Palimpsest), and then use this to reconstruct much of the work of Boethus, and to a lesser extent Andronicus, on the *Categories*. In some cases building on Griffin, in other cases disagreeing with him, I bring out some ways in which Andronicus and Boethus differ from most later interpreters; this can help us understand Alexander's and Porphyry's responses. I reconstruct (i) Andronicus'

interpretation of 'in' and 'said of', which is based on Aristotle's distinction between abstract nouns and paronymous concrete nouns, and avoids the metaphysical freight that later interpreters load onto the notion of 'said of'; (ii) Boethus' use of *De Interpretatione 1* to explain how a universal term can be synonymous without positing either universals in re or Stoic λεκτά, and the consequences he draws for the different aims of the *Categories* and *De*

Interpretatione; and (iii) Boethus' solution to the tension between Aristotle's hylomorphism and the *Categories*' account of substance. Boethus, unlike later interpreters, thinks the form is in the matter, and is therefore not a substance but (typically) a quality, but that it is nonetheless able to constitute the composite as a substance distinct from the matter. I bring out the Aristotelian basis for Boethus' reading, connect it with Boethus' accounts of *differentiae* and of the soul, and show how Boethus' views help motivate Porphyry's responses. In some cases Porphyry constructs his views by triangulating between Boethus and Alexander."

"Pourquoi les commentateurs antiques, tel Simplicius, estimaient-ils que les *Catégories* devaient être lues préalablement aux œuvres de logique ? Dans quel sens pensaient-ils que l'étude de la logique présuppose celle de) la doctrine des catégories ?

Les commentateurs affirment que les *Catégories* constituent l'introduction naturelle à l'*Organon*, lequel sert à son tour d'ouverture au reste du corpus aristotélicien. Il n'est peut-être pas inutile de traiter brièvement des raisons sur lesquelles ils se fondent pour considérer l'*Organon* comme l'introduction appropriée à l'ensemble du corpus. Cela exerce en effet une certaine influence sur les motifs avancés par les commentateurs qui regardent les *Catégories* comme l'ouverture de l'*Organon*.

Ammonius, Simplicius, Élias et Philopon débutent tous leurs commentaires sur les *Catégories* par dix questions relatives à l'étude du corpus aristotélicien(2). Cela est dû au fait que les *Catégories* constituent l'ouverture traditionnelle du corpus aristotélicien. Il ne semble pas qu'il existe une unité particulière entre les questions et on pourrait en soulever davantage ; il est difficile de résister à la pensée peu charitable que le nombre de dix ait pris une certaine signification en raison des dix catégories." (p. 103)

(...)

"Parmi ces questions, celles qui nous intéressent dans la liste principale concernent la nature du corpus aristotélicien, la subdivision des écrits, et l'endroit où nous devons débiter la lecture ; dans la sous-liste générée par la dixième question, [Pour chaque traité d'Aristote, quels sont les principaux points à examiner, combien sont-ils et quelle est leur justification?] notre intérêt porte sur le problème de l'utilité des *Catégories* et de leur place dans l'ordre de lecture des œuvres d'Aristote."

Texte traduit de l'anglais par Annick Weizmann.

(2) Proclus semble être l'auteur de ces questions (Élias, *In Cat.* 107.24-6). Quelques commentaires consacrés à d'autres œuvres possèdent également les mêmes questions. Voir K. Résumé : "Simplicius utilise (et transforme) le concept d'ὑπογραφή (d'origine stoïcienne) pour décrire les genres premiers et les êtres sensibles qui, chez Aristote, ne sont pas susceptibles de définition. Or un examen attentif du statut de la science chez Aristote (en référence à la doctrine de l'incommunicabilité des genres et au problème de l'individuation) montre que la tentative de Simplicius est inconciliable, ou difficile à concilier, avec l'aristotélisme (d'Aristote)."

"Boethus is surely one of the most important thinkers of the first century bc.

Though only few testimonies, and no clear fragment, remain, their number and content are sufficient to show how insightful he was in commenting upon Aristotle.(1) It is not just that he was typical of this first generation of commentators who have struck modern historians by the free spirit with which they

approached Aristotle's text.(2) Boethus' fragments on substance testify to more than a free attitude towards the Philosopher: it is also possible to recognise, through the many layers of the tradition – Alexander,

Porphiry, Iamblichus and Simplicius – a coherent and unitary doctrine.

His doctrine, of course, is not un-Aristotelian; it does not even stand somewhere halfway between Aristotle and other thinkers of antiquity, the Stoics in particular (even if it is obviously inspired by a general Stoic atmosphere). Boethus has consciously built, out of a few indications in the text of Aristotle, a certain kind of Aristotelianism among other possible ones.(3) This doctrinal approach is probably both the cause and the effect of a cultural fact: the Peripatos' nearly exclusive focus, in the first century bc, on the Categories.(4) For sure, the treatise of the Categories, by itself, does not necessarily produce a definite account of the world. But by contrast with what is the case with other parts of the Aristotelian corpus, its basic ontological features seem naturally at home in the framework of a doctrine upholding the primacy of the individual material substance." (p. 53)

(1) Curiously enough, there has been until now no collection of Boethus' fragments. I am currently working, together with Riccardo Chiaradonna and Philippe Hoffmann, on just such a project. Our book, to be published with de Gruyter, will include all the fragments (Greek and Arabic), a French translation, and a commentary. [R. Chiaradonna, M. "A re-examination of the question why, in the revival of interest, in the first century B.C. in Aristotle's esoteric works, as opposed to his doctrines, the work *Categories* played so large a part. The answers suggested are that the work aroused interest just because it did not easily fit into the standard Hellenistic divisions of philosophy and their usual agendas, and that, more than Aristotle's other works with the possible exception of the *Metaphysics*, it revealed aspects of Aristotle's thought that had become unfamiliar during the Hellenistic period."

"The hermeneutic tradition concerning Aristotle's *Categories* goes back to Eudorus and his contemporaries in the 1st cent. B.C. Initially a perplexing text, it forces the Platonist to consider a variety of new dialectical questions. The criticisms of Eudorus demonstrate the desire for orderly arrangements and pose questions that the hermeneutic tradition, culminating in the commentary of Simplicius, would try to answer. His pursuit of a critical agenda does not warrant the labels "anti-Aristotelian" or "polemical", but it does show why he preferred to be known as an Academic rather than a Peripatetic."

Eriugena, *Periphyseon* Book I: Aristotelian Logic and Categories

Logic and Categories in the Periphyseon

Categories are discussed in the Book I (462D 8 - 524B 12); numbers are that of columns in Heinrich Joseph Floss (ed.), *Joannis Scoti opera quae supersunt omnia* in: Jacques-Paul Migne (ed.), *Patrologia Latina*, vol. 122, Paris 1853, coll. 439-1022 and are reproduced in modern editions and translations.

"[John the Scot] unique qualities appear first in the treatise that Archbishop Hincmar commissioned in 850 as a reply to Gottschalk's thesis of double predestination.(26) To Gottschalk's argument that God has without qualification predestined the just to salvation and the unjust to perdition John the Scot replied by asserting the fundamental unity of God. We cannot know this unity. We can know, if only by analogy, the manifestations of this unity: God's will, his life, his power. We can recognize also that created nature is itself a manifestation of God: another form in which he is partly accessible. However trivial, and however misguided, individuals may be, as part of that creation they are all inescapably manifestations of the one ultimate unity. Gottschalk's thesis, whereby part of creation is absolutely opposed to another part (the just to the unjust), has always been so opposed and cannot conceivably resolve this opposition, introduces into creation a division that goes right back to God himself, dividing his will, and beyond that his unity; which is unthinkable. Now John is arguing here along familiar Neoplatonist lines. Where he is exceptional (for the ninth century at least) is in seeing the relationship of God to the creation in terms of contemporary logic. In the treatise against Gottschalk this is not spelled out. John makes it clear in his major independent work, the *De divisione naturae*. For the ultimate genus, which covers everything, including God. John proposes the name *natura*.(27) The *genus natura* sums up four *species*: the first creates and is not created, the second is created and creates, the third is created and does not itself create, the fourth neither creates nor is created. Now this raises a host of questions, which cannot be discussed here. But

the essential is that within the all-embracing genus nature John has included both God and the created world. The further analysis of the first species, the uncreated creator, God, takes up the rest of Book I of the *De divisione naturae*. In what sense can the ten logical categories of substance, quantity, quality, and the rest be applied to God? How are these categories related one to another? In this rather violent change of direction we can see what is almost certainly the major logical text underlying Book 1. A discussion of *genera* and *species* that points in the direction of John's comprehensive *natura* can be found in the *Isagoge*,⁽²⁸⁾ Aristotle's fundamental account of the categories alone was known, though not widely available.⁽²⁹⁾ Where the two are combined, and a much closer precedent offered for John's *natura*, is in the *De decem categoriis*, the late fourth-century text that I have mentioned already as a source for Sedulius Scotus. The author of the *De decem categoriis* begins with the idea of *species* building up into ever more comprehensive *genera*. Finally, he says, the vast name of infinite capacity which comprehends everything else is substance, beyond which nothing can be found or thought to exist. This is one of the ten categories.⁽³⁰⁾

He goes on to expound each of the categories in turn. Though John the Scot has not followed the *De decem categoriis* slavishly, he could find in it a model for the general structure of Book I of the *De divisione naturae*, as well as the source for specific passages. Hugh of Saint Victor saw the parallel when he called John's treatise the *De decem categoriis in Deum*.⁽³¹⁾ Both in the first book of the *De divisione naturae* and in the argument already cited from his treatise on predestination, John the Scot is thinking within the framework of the *De decem categoriis*.

The first book of the *De divisione naturae* is John's most explicit statement of the logical basis of his theology. The rest of the treatise, however, depends principally on texts that he himself had translated from the Greek: the writings of the Pseudo-Denis, Gregory of Nyssa, Maximus the Confessor.⁽³¹⁾ Here John the Scot had gone so far beyond his contemporaries that this part of his work had very little immediate effect. He had opened up a vein that no one else at that time could develop. We may remember the reception that the writings of Pseudo-Denis had met with in France earlier in the century. The Greek emperor had sent a copy to Louis the Pious, who

gave it to Abbot Hilduin of Saint Denis. Within twenty four hours of its arrival at Saint Denis, nineteen miracles had been recorded from the mere presence of the wonderful volume within the walls of the abbey.(32) To do Hilduin justice, he then sat down and translated it; but the first reaction is the more typical, even for the later ninth century. The Greek philosophers were totally removed from the main currents of contemporary learning; and here John by his fluency in Greek was to some extent isolated from the ordinary masters of his day.

I have spoken so far of individual scholars and their work: Gottschalk, Sedulius, John the Scot. With John the Scot we are brought up against the question of what impression, if any, was made by these great men on the ordinary school curriculum. Though the study of any one institution here is bound to be inadequate, we can see the beginnings of an answer in the group of masters who taught at the monastery of Saint Germanus in Auxerre. Their founder seems to have been the monk Haimo, who was active as a teacher circa 840 to 860.(34) Younger than Haimo and roughly contemporary with each other were Heiric, also a monk of Saint Germanus, and Hucbald his pupil, who was a monk of Saint Amand, near Tournai, Finally the youngest and most prolific of the group was Remigius, who taught in Auxerre circa 876 to 893 and then moved on to Rheims and possibly Paris.(35) The school of Auxerre had a continuous existence for over fifty years: during that whole period the library was being built up; and successive masters could establish a routine of accepted texts. We do not know how far their currency elsewhere was due to the school of Auxerre; we can see only that they are in practice the texts that are generally available in France and Germany over the next hundred years.

In the first place the school of Auxerre confirms the growing interest in logic. The first (and perhaps the only) commentary on the *De decem categoriis* is attributed to Heiric of Auxerre, who had himself been taught by a pupil of John the Scot. There is a trace of John's influence at the very beginning, where a phrase from Alcuin's preface is explained by a quotation from the *De divisione naturae*, but substantially it is a sober and meticulous exposition of the text. It seems to have been exactly what was needed; for it was copied again and again throughout the tenth and eleventh centuries, until the *De*

decem categoriis itself went out of use.(36) The other major texts of the *logica vetus* were already furnished with the commentaries of Boethius. So on the face of it there was less need to produce new ones. What we do find, however, are adaptations of the Boethian commentaries to meet current needs. A series of glosses on the *Isagoge* for example, which should perhaps be ascribed to Heiric's pupil Hucbald of Saint Amand, is essentially based on Boethius's commentaries on the same text.(37) The author has drawn attention to the passages that are specially important, and quoted the parts of the Boethian exposition that he thinks will be helpful. This might be dismissed as a mere abridgment, were it not so typical of the way in which the *Isagoge* and similar texts were to be treated in the future. Like Heiric's commentary on the *De decem categoriis*, these notes are an attempt to drill the ordinary student in logic: to pitch the Boethian commentary at classroom level. Here they exemplify the principal concern and achievement of scholarship over the next 150 years. Both in France and Germany *marginalia* of this type can be found throughout the tenth and eleventh centuries.(38) Notker's German paraphrases of the *Categories* and the *De interpretatione* have the same purpose.(39) Though material of this kind is not philosophically original, it is of the greatest interest as an index of where and how the *logica vetus* was being mastered. Heiric's commentary on the *De decem categoriis* and the glosses on the *Isagoge* that may be the work of his pupil Hucbald are representative of a great deal of later work in the same field. On the linguistic side of the curriculum the school of Auxerre made a contribution that was clearly useful, and may prove to have been fundamental.

The other aspect of Carolingian learning may broadly be called "scientific": the enthusiasm for speculating on how the universe is put together - what keeps the stars on their courses and the material of this world in a coherent order. Most students would encounter such questions first in their study of Vergil." (pp. 6-9)

"The first book of Eriugena's *Periphyseon* can and should be read as a text within the tradition of commentary on the *Categories*. Although the object of Eriugena's remarks is the pseudo-Augustinian *Categoriae decem*, the paraphrase of the *Categories* that, in the era of Constantius and Theodosius, originated in the school of Themistius, his treatment of predication is altogether systematic and is at least as conformable to Aristotle's text as is the commentary of Ammonius. (1) That the *Categoriae decem* is a text derivative from that of Aristotle, Eriugena well understands. (2)

Since there is no evidence than, apart from the *Categoriae decem*, Eriugena enjoyed access to the *Corpus Aristotelicum*, it seems that he could not have brought, as did Ammonius, the interpretative weight of such works as the *Metaphysics* to bear on his understanding of the *Categories*. Thus, for Eriugena, but unlike Ammonius, matter has no place in the category of substance.

Since Eriugena, is treating the categories, upholds it as a cardinal principle that all the categories, considered in themselves, are incorporeal, (3) he already has grounds for thinking that corporeal beings, with their matter, are at least as marginal as Ammonius had understood them. Believing, as he does, that substance -- in itself -- is incorporeal, Eriugena maintains that whatever inhere in substance is likewise incorporeal. (4) So the investigation of substance, for Eriugena, requires no investigation of matter.

As Eriugena would have it, the category of substance does include genera, species, and individuals but, because no substance is extended, no substance may be corporeal. The contents of the category of substance are, therefore, purely formal. As being purely formal, they are completely immaterial." (p. 19)

Latin Medieval Commentaries on Aristotle's *Categories*

Introduction: the place of logic in Late Antiquity

"The centuries between Aristotle and Porphyry bequeathed few logical works to the early Middle Ages. Cicero wrote a *Topics*, professedly based on Aristotle's work on the subject, but probably derived from a later source. The book was quite widely read in the Middle Ages, at the time when Aristotle's *Topics* was unknown. A work attributed to Apuleius, and bearing the same Greek title (transliterated) as the *De Interpretatione – Peri hermeneias* – enjoyed a certain vogue among the earliest medieval logicians. For modern scholars, it is a useful source of Stoic logical theories; but its philosophical content is slight.

By the time of Porphyry, however, a development had taken place in the status, rather than the doctrine, of Aristotelian logic, which would be of great importance for medieval philosophy. Aristotelian logic had been adopted by the Neoplatonists and given a definite place in their programme of teaching. Whereas their use of Aristotle's philosophical works was piecemeal and distorting, his logic was studied faithfully as a whole. Aristotle had rejected the notion of Platonic Ideas; and he had consequently treated genera and species in his logic purely as class-designations for individual things. The Neoplatonists assimilated this approach, which contradicted the very basis of their metaphysics, by limiting the application of Aristotelian logic to the world of concrete things. Stripped of its metaphysical relevance, the tendency was for logic to become more purely formal than it had been for Aristotle. However, the extra-logical aspects of the *Categories* and the *De interpretatione* were too

intrinsic to these works to be ignored; and the result was the growth of a body of philosophical discussion and commentary within the Neoplatonic logical tradition, only vaguely related to Neoplatonic metaphysics, and sometimes seemingly antithetical to its principles.

Porphiry himself did more than anyone to establish Aristotelian logic within the Platonic schools. He commented the *Categories* and the *De interpretatione* and wrote a short *Isagoge* (Introduction') to logic, which quickly became established as a prologue to the Aristotelian corpus. The *Isagoge* is devoted to explaining five concepts which play an important part in the *Categories*: genus, species, difference, property and accident. It illustrates well Porphyry's formal approach to logic; and he avoids a philosophical discussion of the nature of genera and species, listing various opinions, but refusing to discuss them further in a work which is designed as an introduction.

The language of philosophy in the Roman Empire was Greek. The few philosophers who wrote in Latin were of vital importance in transmitting the logical tradition to the Middle Ages, even -perhaps especially - where their activity was limited to translation and paraphrasing. From the circle of Themistius (c. 317-88) derives a Latin epitome of the *Categories*, known as the *Categoriae Decem*, much read in the ninth and tenth centuries. This work adds some further remarks, on quantity, space and the relationship between ousia and the other categories, to a summary of Aristotle's text. The author begins by treating Aristotle's text as a discussion of speech (133:1-8) -- a term he believes should principally apply to nouns and verbs which, unlike other words, designate things (133:11-15). He searches for a word which will include (that is, presumably, designate) all things, and arrives (134:16-20) at the conclusion that this word is ousia 'one of the ten categories'. This seems a fair enough conclusion from Aristotle's theory, since every thing is an ousia and can therefore be signified by the word ousia. But, a little later (145:25-146:2), the author produces a similar definition, but one which this time applies not to the word 'ousia', but the concept designated by it: 'ousia has no genus because it sustains everything'. The suggestion here is that ousia refers, not to the individual thing as in the *Categories* (although this definition is also given by the paraphraser), but to that which every individual has in common by

virtue of being something at all. The implication may well not have been intended by the epitomist who, in general, tries to give a faithful impression of Aristotle's text; oversight or not, it proved influential.

Marius Victorinus seems to have been a prolific translator of philosophical and logical works into Latin. Augustine used his versions of the Platonists' books' (probably parts of Plotinus and Porphyry); Boethius - whose opinion of him was low - used his adaptation of Porphyry's *Isagoge* in his first commentary on it (see below, pp. 30-1); and there is evidence that he wrote a commentary on Cicero's *Topics*. But the only part of his logical work which reached the Middle Ages intact was a brief treatise *De diffinitione*, an aid to studying the *Topics*.

In the Middle Ages, the *Categoriae Decem* was attributed, wrongly, to Augustine. But Augustine's authentic comments about the Categories, as well as the misattributed work, made him an authority for the earliest medieval logicians. In the *Confessions* (iv.xvi.28), Augustine describes his first contact with Aristotle's treatise, which he found himself capable of understanding without the aid of his teacher. When he came to write his *De trinitate*, he included a discussion (v. ii. 3) of a type frequent among the Neoplatonists, about the Categories and their inapplicability to God. But he stated that *ousia* could be applied to God: indeed, that it was God to whom it most properly applied. This idea, fully consistent with Augustine's ontology (see above, pp. 15-16), was to influence ninth-century interpretations of the Categories. A short treatise, *De dialectica*, was also attributed to Augustine in the Middle Ages; and most scholars now accept its authenticity. The work is remarkable for its linguistic approach to dialectic. Having separated words into single and combined (I) - as Aristotle distinguishes at the beginning of the Categories between things said with and without combination - Augustine devotes most of his energies to discussing single words, how they gain their meaning and how ambiguity is possible. Dialectic includes, says Augustine (iv), the discussion of the truth or falsity of sentences and conjunctions of sentences; but the treatise does not go on to consider this topic." (pp. 23-26)

Note about the history of the Commentary genre

"It is generally assumed that Homer was the first author to be subjected to commenting, and I see no reason to dispute this most reasonable assumption. It is scarcely imaginable that anything meriting the name of commentary was composed before 400 BC, but by 300 BC the literary commentary must have been around for some time, and the philosophical commentary appears. The first one evidenced was by Crantor and dealt with Plato's *Timaeus* (2).

We have to wait almost half a millennium to find a fully preserved philosophical commentary. Indeed, the second- to third-century Aristotelian commentaries of Aspasius and Alexander of Aphrodisias are among the oldest commentaries on any text that we have got and among all preserved commentaries from Antiquity those on Aristotle or Plato are massively represented -- the two philosophers are in the heavyweight league together with the Bible and Hippocrates. The bulk of the preserved commentaries are from the fifth or the sixth century, with a special concentration of Aristotle commentaries in the sixth century. Most of them are in Greek, the most notable exception being Boethius' works, which belong in the sixth-century group.

The sixth century, then, was to have a very strong influence on the medieval approach to philosophical texts, whether in the East, where people read Aristotle with Ammonius, Simplicius and Philoponus at their elbow; or in the West, where Boethius alone made an impact as strong as that made by his three Greek colleagues together in the East. In the formative period of Western scholasticism in the twelfth century, commentators imitated the format and the formulae of Boethius' Aristotle commentaries, and even commentaries on Plato's *Timaeus* use a Boethian format rather than that used by Calcidius in his exposition of Plato's work. (3)

Teachers, whether ancient or medieval, Greek or Latin, would give their pupils a few hints about the general contents of the relevant text in their introductory lectures, which appear as proems in the

written versions of commentaries. But much more important than those lectures were the compendia, the sort of books that since Antiquity have often carried the title of Introduction to... whatever the subject (*Eisagogé, Introductiones...*). Most of the extant ancient specimens, insofar as they are philosophical, are about logic. In principle, and sometimes in practice, such works can be independent of any particular authoritative text. Thus there is no reason to see Galen's Introduction to Logic as a sort of summary of one or two of the classics of logic. On the other hand, Boethius' Introduction to Categorical Syllogisms⁴ makes no secret of the fact that it tries to summarize the syllogistics presented in Aristotle's Prior Analytics, and for good measure, it starts with a summary of the doctrine of terms and propositions from the *Perihermeneias*. Basically the same matter is covered in Apuleius' *Perihermeneias*.

Boethius used a work by Porphyry for his models. We cannot tell for certain how closely he followed his model, but at least the general structure is likely to have been the same in Porphyry. If so, Porphyry's Introduction to the Categories (the *Isagoge*) and his Introduction to categorical syllogisms together offered a compendium of a very large part of the Organon.

A brief compendium of logic may also be found in Martianus Capella and an ultra-brief one in Cassiodorus. Together with Boethius they gave inspiration to the revitalizing of the compendium genre in medieval Latin scholasticism, with Peter of Spain's *Summulae* as the most famous specimen. The genre also survived in Byzantium, but only barely so -- only three reasonably complete ones are extant, dating from 1007, ca. 1260, and ca. 1325, respectively ; there is convincing evidence that not a lot more ever existed'. The typical Latin compendium or *summulae* is characterized by combining sections that summarize certain parts of the *Organon* with sections that deal with more recent parts of logic. This is not the case with the Byzantine compendia.

Most often people would read a compendium before they read the original texts. In that way the compendia could be very influential by preconditioning students for a certain way of reading the authoritative texts." (pp. 1-3)

Notes

(2) Referred to by Plutarch in *De animae procreatione in Timaeo*, and by Proclus in his *In Timaeum*. The sources do not allow us to decide whether his work was some sort of essay on the *Timaeus* or more like a series of explanatory notes on the text.

(3) Thus in the anonymous scholia on *Timaeus* published as Bernhard of Chartres, *Glosae super Platonem*. Edited by P.E. Dutton, Studies and Texts 107, PIMS, 1991.

(4) I use this title for the work of which the first version appears as *De syllogismo categorico* in Migne's *Patrologia Latina* 64, whereas the incomplete revised version appears as *Introductio ad syllogismos categoricos*. Christina Thomsen Thornqvist of the university of Gothenburg will discuss the title question in her forthcoming critical edition of the first version. [Anicii Manlii Severini Boethii *De syllogismo categorico*. Gothenburg: University of Gothenburg 2008.]

(5) See *Patrologia Latina* 64 : 813C " ipse Porphyrius ", and cf. 814C " Hos ergo quatuor in prima figura modos in Analytics suis Aristoteles posuit. Caeteros vero quinque modos Theophrastus et Eudemus addiderunt, quibus Porphyrius, gravissimae vir auctoritatis, virus est consensisse ".

Problems in Aristotle' Categories

"Among the main problems of Aristotle's theory of the categories are the nature of their members, their number and how this number is arrived at. We find these problems discussed in modern research (1), but they are also dealt with in medieval philosophy.

To have a better understanding of the theories of the categories, we would like to point out that, in our view, ancient and medieval authors took for granted a parallelism between thought and reality. By 'parallelism' we mean that they accepted that there are things that exist in reality, and that there can be, and is knowledge of those things. These things as conceived by human understanding are designated by a term. So human understanding involves a subjective element when the thing is conceived or named, but thanks to the parallelism, the thing conceived by man is also the thing in nature. Now different authors put emphasis on different things, i.e. either on the things conceived (the objective (point of view) or on the conception of things (the subjective point of view). The question need not be asked whether a kind of gap had to be overcome: there is no gap. (2)

In a number of studies, L.M. de Rijk has made a fruitful distinction between a name in its *descriptive* function and in its *deictic* function. The use of e.g. the term 'man' implies a descriptive function, by which we can describe the class of men, and a deictic function, by which we can refer to the members of the class. Within the latter he distinguishes between 'actuality' and 'factuality'. A term in its deictic function refers to things, though they need not factually exist, i.e. they are contingent. Signification of factual existence is a complementary function of the name.(3)

In the categories of being items are collected and ordered by which man can name reality, or by means of which he can form complex wholes (for instance 'white man'), and even propositions (for instance 'men are white'), by which he can speak about reality and refer to it in the way he wants. So the theory of the categories is fundamental for philosophy. One could even say that the choice of a particular theory of categories depends on what kind of a philosopher one is.

What is the nature of the members of the categories? Are these members primarily terms which refer to something in reality? Or are

they things so far as, and only so far as, these are captured in a linguistic expression or thought? When the nature of the members of the categories has been determined, the question arises for medieval philosophers how they are divided, i.e. how many categories there are, and which. Is their number ten, which is usually supposed to be held by Aristotle. Can this number be established by proof (or deduction)? Especially from John Duns Scotus onwards, not only positive terms, which are a privileged group, are studied, but also non-positive terms, such as 'blindness', fictional terms (for instance 'chimera'), terms of second intention, negative terms etc., which complicates the interpretation of the categories." (pp. 183-184)

The importance of the Commentaries on the Categories

"Aristotle's *Categories* is the subject of an extensive number of commentaries and of an unusual amount of debate, and for good reasons.(1) To begin with, in spite of its relatively short length, it can

be a rather difficult text to understand, even for the trained philosopher, to say nothing of those who are just beginning their study of philosophy. Yet, because it laid the foundation for many subsequent philosophical discussions in general, and for logic in particular, it was, during much of the Middle Ages, often the very first philosophical text students encountered. Even contemporary philosophers who are steeped in philosophy and who have studied the *Categories* in depth often find it difficult, albeit for different reasons. One difficulty, as the ancient commentators on the *Categories* recognized, is that Aristotle himself is ambiguous about the subject of the work. What exactly is he categorizing? Is it 'things that are' or 'things that are said' or something in between, such as a concept? Furthermore, depending on how one understands its purpose, the *Categories* can be seen in harmony with, in contrast to, or even in contradiction to, Plato's own theory of the five highest genera. For all of these reasons the *Categories* has historically acted like a magnet, attracting commentaries from Aristotelians, Platonists, and Stoics alike. Quite naturally, some of these commentaries defend Aristotelianism, whereas others defend either Platonism or Stoicism by attacking Aristotle's *Categories*. Finally, still others, especially during the Late Middle Ages, use the *Categories* as a means to expound their own philosophical systems in the process of interpreting Aristotle.

Though many of the ancient and medieval commentators, such as Porphyry, Boethius and Albert the Great, did write original treatises on philosophical issues, their commentaries are in themselves valuable contributions to philosophy, particularly those from the later Middle Ages.(2) Consequently, studies of the various commentaries, and especially those dealing with the *Categories*, are valuable projects, as the following Essays amply demonstrate. As Robert Andrews points out, medieval "Categories commentaries are the repository of centuries of analyses of the basic concepts of Western thought, all carefully organized and awaiting modern rediscovery." (3) And while most of those commentaries are still awaiting rediscovery, the following Essays, I hope, will convince everyone that the effort is worthwhile." (pp. 1-2)

Notes

(1) According to my count of the texts listed by Charles Lohr, roughly two hundred extant Latin commentaries on the *Categories* were written during the Middle Ages. Of course, this number does not take into account the commentaries that are not extant, nor the ones written in Greek, Arabic, or Hebrew. Cf. the lists of extant commentaries cited by Charles Lohr in *Traditio*, vols. 23-29.

(2) Compare Fr. Wippel's description of St. Thomas' commentaries: of his theological commentaries, "two are commentaries in the strict sense, i.e., on the *De Hebdomadibus* of Boethius and on the *De divinis nominibus*; the other two offer brief expositions of the texts of Boethius and of Peter and use them as occasions for much fuller and highly personal disquisitions by Thomas himself." John E Wippel, *The Metaphysical Thought of Thomas Aquinas: From Finite Being to Uncreated Being* (Washington, D.C.: Catholic University Press, 2000), p. XVIII.

(3) Robert Andrews, "Question Commentaries on the Categories in the Thirteenth Century," *Medioevo* 26 (2001), 265-326, p. 266.

From: Lloyd A. Newton, "The Importance of Medieval Commentaries on Aristotle's *Categories*", in: Lloyd A. Newton (ed.), *Medieval Commentaries on Aristotle's Categories*, Leiden: Brill, 2008, pp. 1-8.

"The interest of *Categories* commentaries for the contemporary philosopher is worth reviewing. Categorization of items constituting the world is today called ontology; the medievals attempted to classify the world according to the ten categories of Aristotle. The modern accusation, that medieval philosophers were actually dealing with linguistic classification, was in fact acknowledged by many medievals. While the medieval treatment of some categories (and here I am thinking especially of relation) was arcane, resulting from a particular interaction of theology and philosophy, other discussions, such as on the nature of number, involved speculative thought comparable to modern reflections on the subject. Medieval discussions have contributed directly to the development of contemporary philosophical concepts, such as intentionality, "haecceity", and the distinction de ditto / de re. Medieval *Categories* commentaries are the repository of centuries of analyses of the basic

concepts of Western thought, all carefully organized and awaiting modern rediscovery.

The study of the *Categories* is uniquely able to take advantage of the continuity and traditionalism of the Middle Ages. Not only was the *Categories* the first Aristotelian work introduced to the Latin Middle Ages, but it was the only work of dialectic available for several centuries, in one form or another. During the beginnings of Latin scholasticism, when the study of philosophy faced a struggle for acceptance, Church Fathers such as Tertullian and Peter Damian denounced all pagan learning, including Aristotle. Against them it was argued that the study of dialectic (and grammar) is useful for the correct interpretation of Sacred Writings. The utilization of the *Categories* during the period of the seventh through tenth centuries escaped censure in special measure because it was available in two vehicles associated with St. Augustine. Augustine's *De trinitate* systematically analyzes whether each category can be applied to God. Boethius's *De trinitate* – a model and paradigm of the application of dialectic to theology – follows the relevant sections of Augustine. Furthermore, to Augustine was mistakenly attributed the Themistian paraphrase *De decem praedicamentis*, (2) placating those who feared the pagan Aristotle. This work was utilized by commentators during the time when no complete work of Aristotle was accessible, as informatively recounted by Marenbon in *From the Circle of Alcuin to the School of Auxerre*.(3)

When the *logica vetus* began circulating with the commentaries of Boethius in the 11th century, (4) the *Categories* was packaged with Porphyry's *Isagoge*, a work purporting to be an introduction to and an explication of key concepts in the *Categories*. When the *logica nova* was introduced, the *Categories* was recognized as first in a ranked order of logical works; its subject matter, individual words, is requisite for the understanding of sentences (in *De interpretatione*), syllogisms (Prior analytic) and science (Posterior analytic). This order was later overturned by the terminist logicians, who proposed an analysis of language which treated sentences, rather than words, as fundamental." (266-267)

6. ———. 2001. "Question Commentaries on the *Categories* in the Thirteenth Century." *Medioevo.Rivista di Storia della filosofia Medievale* no. 26:265-326.

"A philosophical genre new to the thirteenth century was the question commentary. Commentaries on Aristotle's *Categories* (a book "read by children"), extending in an unbroken tradition back to antiquity, by 1300 had developed into sophisticated analyses of the fundamental concepts underlying the rest of logic and philosophy. In this article I present, from both published and manuscript sources, texts selected with two purposes in mind: to examine the development of the question commentary out of the inserted *dubia* of the literal commentary, and to point out a particular shift in the concept of quantity, which may serve as a criterion for relative dating of *Categories* commentaries."

7. Ashworth, Earline Jennifer. 1991. "A Thirteenth-century interpretation of Aristotle on equivocation and analogy." *Canadian Journal of Philosophy* no. Supplementary volume 17:85-101.

"This paper is a case study of how Aristotle's remarks about equivocation were read in the thirteenth century. I analyze the divisions of equivocation and analogy found in an anonymous commentary on the *Sophistici Elenchi* written in Paris between 1270 and 1280; and I show the part played by four sources: 1) the Greek commentators of late antiquity; 2) the new translations of Aristotle's *Physics* and *Metaphysics*; 3) Arabic works, particularly those of Averroes; 4) new grammatical doctrines, notably *modi significandi*."

8. ———. 1997. "L'analogie de l'être et les homonymes. *Categories*, 1 dans la "Guide de l'étudiant"." In *L'enseignement de la philosophie au XIII siècle. Autour du "Guide de l'étudiant" du ms. Ripoll 109. Actes du Colloque International*, edited by Lafleur, Claude and Carrier, Joanne, 281-295. Turnhout: Brepols.
9. Asztalos, Monika. 1993. "Boethius as a Transmitter of Greek Logic to the Latin West: the *Categories*." *Harvard Studies in Classical Philology* no. 95:367-407.

"...my purpose in this paper is to bring out what these commentaries, and especially the ones on the *Isagoge* and the *Categories*, reveal about Boethius' working methods in his earliest works on Greek logic. I intend to deal less with the end product than with the road to it, and to point to the stages of development and improvement exhibited within these early works." (p. 367)

(...)

"Boethius devoted his first effort in Greek philosophy to Porphyry's *Isagoge*, and later, in the year of his consulate (510), when he was in all likelihood in his late twenties, he spent all his spare time commenting for the first time on a work by Aristotle, the *Categories*. Ever since Samuel Brandt attempted a chronology of Boethius' works on the basis of their internal references, it has been commonly held that when Boethius began commenting on the *Categories*, he had already written both his expositions of Porphyry's *Isagoge* (hereafter *Isag. 1* and *Isag. 2*), the first one a dialogue in two books based on Marius Victorinus' apparently incomplete Latin version, the second a five book commentary on his own, complete translation. (2) This is certainly not the place for a full discussion of the chronology of Boethius' works, but for the arguments of this paper it is necessary to establish the order between *Isag. 2* and the commentary on the *Categories* (CC)." (p. 368)

(..)

"... I am not in a position to judge whether or not Boethius displays real originality in his later, more mature works. But I think that it would be unfair to expect novel interpretations in commentaries like the *Isag. 1* and CC, which, if my assumptions in the first sections of this paper are correct, are not only the earliest of Boethius' works on Greek philosophy but also the context in which he first encountered Aristotle. He seems to have come quite unprepared to both the *Isagoge* and the *Categories*, unarmed with proper translations and unfamiliar with the work he was commenting on. Boethius is indeed an epitome of the expression *docendo discimus*." (p. 407)

(2) S. Brandt, "Entstehungszeit und zeitliche Folge der Werke von Boethius," *Philologus* 62 (1903), 141-154 and 234-275. See also pp. XXVI-XXIX of the Prolegomena to *Anicii Manlii Severini Boethii In Isagogen Porphyrii commenta*, rec. S. Brandt, *Corpus*

Scriptorum Ecclesiasticorum Latinorum 48, Wien/Leipzig, 1906. In his "Stylistic Tests and the Chronology of the Works of Boethius," *Harvard Studies in Classical Philology* 18 (1907), 123-156, A. P. McKinley's conclusions concerning the chronology of *Isag. 7*,

Isag. 2, and the commentary on the *Categories* (hereafter CC) are the same as Brandt's.

McKinley studied the frequency of certain particles in these commentaries as well as in Boethius' translations of the *Isagoge* and *Categories*, assuming that Boethius' language was influenced by his translations of Porphyry and Aristotle. Now, some of McKinley's data corroborate Brandt's chronology whereas others support the one I will suggest below. Furthermore, McKinley's tests were made before the appearance of L. MinioPaluello's critical editions of Boethius' translations in the *Aristoteles Latinus* and would therefore have to be remade. I also believe that a necessary preliminary stage in examining whether Boethius' translating activities influenced his choice of particles is to compare his Latin commentaries with the extant Greek sources. Since there is no adequate source apparatus in any of the editions of Boethius'

commentaries, this would mean a great deal of work.

Concerning the question whether Boethius wrote *Isag. 2* before or after CC, L. M. De Rijk follows Brandt's view on pp. 125-127 of "On the chronology of Boethius' works on logic," *Vivarium* 2 (1964), 1-9 and 125-162, on exactly the same grounds as the ones on which Brandt based his conclusions and without corroborating them further.

14. Bos, Egbert Peter. 1998. "The division of Being over the Categories according to Albert the Great, Thomas Aquinas and John Duns Scotus." In *John Duns Scotus (1265/6-1308): renewal of philosophy*, edited by Bos, Egbert Peter, 183-196. Amsterdam: Rodopi.

Acts of the Third Symposium organized by the Dutch Society for Medieval Philosophy Medium Aevum (May 23 and 24, 1996).

"In this contribution we shall investigate the views held by Albert the Great, Thomas Aquinas and John Duns Scotus concerning the nature and number of the categories. As is traditional in medieval logic, one first has to determine the nature of something, and then its division (in this case their number). Each in their own way, Albert the Great and Thomas Aquinas intended to safeguard the number of ten by way of a proof, i.e. a deduction. Duns Scotus, however, believes that such a proposition is impossible. He also investigates the opinions of those who try to infer the nature of the categories from the various *modi predicandi*, thus possibly criticizing Albert and Thomas -- be it justly or unjustly. In his opinion, the members of the categories refer to distinct 'realities' ('realities' in a Scotistic sense). None of them can be reduced, neither to each other, nor to something else. All members possess a certain formal reality, although this is not merely identical with the being of an actual thing. (5) Scotus accepts the number of ten categories with reference to tradition, (6) but he gives some negative arguments. He demonstrates that there are neither more categories (for instance *motus* as an eleventh category), (7) nor less than ten (for instance *ens per se* and *ens in alio* alone). So he concludes to the number of ten in a negative way: there are no more, and no less." pp. 183-185

(6) Just as his (supposed) disciple Francis of Mayronnes would. E. P. Bos, 'The Theory of Ideas According to Francis of Meyronnes (*Commentary on the Sentences (Conflatus)*) I, dist. 47), in L. Benakis (ed.), *Néoplatonisme et philosophie*

médiévale. Acts du colloque international de Corfu, 6-8 octobre 1995, Bruges 1997, 211-227.

(7) Which is also suggested by Aristotle in one place of his work, where it said that for each category there is a substrate, for instance for the *quale*, for the *quantum*, for the when, for the where, and for the motion. See Aristotle, *Metaphysics*, VII, 4 1029b 25.

"Conclusions.

1. The number of categories turns out to be a problem for medieval philosophers. It is pointed out that the Philosopher himself was not too consistent in his listings of the categories. Avicenna, for instance, does not accept the number of ten just like that.

2. Some Medievals try to deduce the ten categories. Albert the Great and Thomas Aquinas do so each in their own (although quite similar) ways, starting from their own respective ontology.

3. Scotus does not undertake any kind of deduction. He stresses the *realiter* difference between the diverse categories. He only accepts the number of ten categories on the basis of tradition. He differentiates between the way the metaphysician and the logician views the list of ten categories.

4. Scotus does reduce *non-entia*, *figmenta*, and so on to *entia*, as members of the categories. To Scotus this seems to be a matter of far greater concern than it was to his predecessors. After Scotus philosophers are very much interested in the problem whether those non-positive terms can be regarded as members of the ten traditional categories." (p. 196)

15. Bos, Egbert P. 1999. "John Buridan on Substance in his Commentary (*Summulae*) on Aristotle's *Categories*." In *Signs and Signification. Vol. I*, edited by Gill, Harjeet Singh and Manetti, Giovanni, 85-99. New Delhi: Bahri Publications.

"As a master of arts John Buridan commented on Aristotle's logic. The *quaestiones*, in which specific problems are

discussed in the traditional medieval form, are more elaborate and detailed commentaries.

One of Aristotle's text to be commented are the *Categories* (*Praedicamenta*). The *Quaestiones in Praedicamenta* have been edited recently by J. Schneider (München, 1983); I have prepared a critical edition of Buridan's commentary (*summulae*) on the same work, which is due to appear soon. This edition is part of an international project, of which it is the intention to issue the first complete edition of Buridan's *Summulae*, which contains eight treatises, supplemented with a new edition of his *Sophismata*.

In the present contribution I shall give an analysis of Buridan's commentary on the category of substance. Before entering this subject, I shall make some remarks on the general nature of the work. This contribution is practically the same as a part of the introduction to my forthcoming edition." p. 85

"4. A summary of the Contents

Buridan starts with a discussion on *aequivocatio*, *univocatio* and *denominatio*. Sometimes, he says, *aequivocatio* is attributed to a *word* having signification, sometimes to *things* signified. Here (3.1.1.) Buridan attributes *aequivocatio* to things as far as they are signified equivocally by one and the same word. This signification is not matched by one concept (*ratio*, 3.1.2), but by two, or more, one for each thing. E.g. a dog, a star and a fish are signified by the word *canis* ('dog') that may have supposition for them under different concepts.

There is univocation when the several things signified are united, not only by a common designation, but also by a common definition. Buridan emphasizes (3.1.2) that both *equivocatio* and *univocatio* are on the level of conventional terms and propositions, and are *not* properties of *mental* terms and propositions.

Equivocation and univocation are mutually opposed in an exhaustive division. The third item of the *Antepraedicamenta*, denomination (*denominatio*), is different. For a term to be denominative it must satisfy both a morphological-cum-

semantical criterion and a purely semantical one. First, (1.a) it must be a concrete term (a term signifying concrete entities), and (1.b) it must be morphologically related to the corresponding abstract term; *album* ('white [thing]') satisfies (1.a-b), having *albedo* ('whiteness') as its abstract counterpart. Second, (2) the term must have appellation. This, Buridan explains, means that it must 'evoke' or 'connote' some disposition which is extrinsic to the nature of that for which the term supposit. *Album* ('white [thing]') satisfies this condition; it may supposit, say, for a man, but it also connotes something which is extrinsic (nonessential) to man, namely whiteness. By contrast, *homo* ('man') only satisfies criteria (1.a-b); it is a concrete noun with a morphologically related abstract counterpart, viz. *humanitas*. Criterion (2) remains unsatisfied because humanity is essential to all supposit of *homo* and thus cannot fulfil the role of an extrinsic disposition connoted by the term." p. 91 (notes omitted).

18. Boulnois, Olivier. 2008. "Les catégories selon Duns Scot." In *Giovanni Duns Scoto. Studi e ricerche nel VII Centenario della sua morte in onore di P. César Saco Alarcón. Vol I*, edited by Nuñez, Martín Carbajo, 357-377. Roma: Antonianum.

"...la question des catégories constitue une aporie que toute métaphysique doit traverser, et que Duns Scot lui-même a parcouru minutieusement. Son traitement des catégories est-il

déjà un fondement de l'univocité? Ou, *a contrario*, une doctrine qu'il lui a fallu abandonner?

L'élucidation du statut des catégories va évidemment de pair avec une interprétation de l'ouvrage éponyme (attribué à Aristote, mais peut-être d'origine scolaire): les *Catégories*. L'indécision portant sur le *skopos* du traité donne aux interprètes du grain à moudre. En tous cas, si nous pouvons maintenant s'efforcer de renouer avec une compréhension de l'aristotélisme authentique, nous le pouvons qu'en tenant compte de la tradition de l'interprétation. et notamment de l'interprétation médiévale. Celle-ci, tantôt a fait surgir des questions essentielles, tantôt a recouvert le texte de questions étrangères. Dans un cas comme dans l'autre. il nous faut les reprendre, soit pour les faire nôtres, soit pour les détruire.

Dans ce cadre historique et herméneutique plus vaste, je me limiterai ici à une de ces interprétations, celle de Duns Scot. Nous bénéficions depuis peu d'une nouvelle édition critique de son *Commentaire par questions sur les Catégories*. Pour l'architecture d'ensemble de l'ouvrage, il est frappant que Scot ajoute une réflexion préliminaire sur le concept de catégorie en général, alors qu'une telle réflexion est absente chez Aristote. Il consacre en effet 4 questions à des considérations générales sur les catégories, - avant d'examiner en 7 questions l'objet des chapitres 1 à 3 des *Catégories* (Univoques, équivoques et paronymes; genres et espèces). et de consacrer 33 questions aux diverses catégories en particulier, ainsi qu'aux postprédicaments.

Ces quatre questions sont les suivantes:

1. Le livre des *Catégories* pose-t-il sur dix sons vocaux signifiants? (Problème du rapport entre la grammaire et la logique).
2. Ce livre a-t-il pour sujet les dix catégories? (Problème du rapport entre le nominalisme et le réalisme).
3. Y a-t-il un prédicat intentionnel commun à ces termes les plus généraux?

4. L'être est-il univoque aux dix catégories?

Je suivrai le fil conducteur de ces 4 questions." (pp. 357-358, note omise)

24. Côté, André. 1964. "Le nombre des catégories aristotéliennes." *Laval Théologique et Philosophique* no. 20:165-175.

"Il nous est parvenu d'Aristote un petit traité de logique dont l'unique but, semble-t-il, est de vouloir ramener toutes choses à l'une ou l'autre de dix catégories. L'usage constant que fait l'auteur des

noms de ces catégories dans tous ses autres traités n'est pas sans suggérer qu'il serait tout à fait impossible de faire oeuvre de science telle que l'entend Aristote sans l'aide de ces catégories. Or, l'on est forcé de noter que l'énumération qu'il en fait lui-même en plusieurs traités différents n'est pas toujours la même : en fait, et le nombre et l'ordre des choses énumérées varient.

La chose n'a pas été sans attirer l'attention de nombreux successeurs d'Aristote, et, disciples comme critiques lui ont le plus souvent accordé un intérêt qui dépassait la simple curiosité. Mais les explications proposées par les uns ou les autres n'ont pas toujours touché, à notre avis, le fond du problème qui nous apparaît comme étant strictement d'ordre logique. Il semble donc que toute solution éventuelle du problème tel que posé devrait s'appuyer sur les réponses aux deux questions préliminaires suivantes, à savoir : quel est le rôle précis que jouent les *Catégories* dans l'ensemble de la logique aristotélicienne ; et, est-il possible de démontrer, d'une preuve proprement logique, le nombre de ces catégories ?

Nous nous limiterons ici à suggérer une réponse à ces deux questions, réponse que nous croyons se rattacher à une certaine tradition logique à laquelle nous aimerions associer les noms de Porphyre,

Boèce et Albert le Grand en particulier." (p. 165, notes omises)

In *Papers in the History of Linguistics: Proceedings of the Third International Conference on the History of the Language Sciences (ICHoLS III), Princeton, 19-23 August 1984*, edited by Aarsleff, Hans, Kelly, L. G. and Niederehe, Hans-Josef, 53-64.

"Many people throughout the centuries have been fascinated by Aristotle's theory of the categories. Here I would like to put forth the view that in terms of contemporary linguistic theory it may be regarded as a theory of componential semantics. This discussion will be primarily historical, tracing the development of the theory up to what may be considered its high point in the late 13th and early 14th centuries. The history of the theory will also stand as the main argument for the interpretation herein, in lieu of a detailed treatment of specific points in terms of current semantical theory.

Following Lyons (1977:317-335), we can define a theory of componential semantics as a view that the meanings of words (lexemes) in languages exhibit structural relations within conceptual fields. Within these fields there are atomic sense components (SC's) into which meanings can be factorized.

The 'basic', literal, semantical meanings within language are thus regarded as molecular structures built up from atomic SC's. Elsewhere (McMahon 1980b:147-148) I have taken the fairly standard position that Aristotle's categories are semantical. Here I want to add the contention that the ten Aristotelian categories are a suggested list of atomic SC's. and hence the theory of the categories would actually be the original theory of componential semantics within Western thought." (p. 53)

"Originally, I planned to include essays on all three main philosophical traditions alive throughout the Middle Ages, namely, those written by Jewish, Christian and Islamic philosophers. Essays pertaining to the Jewish tradition, however, are noticeably absent due to the lack of contemporary scholarship in this area. Consequently, the preponderance of the remaining articles focuses mainly on Christian philosophers. The scope of the project has, however, stayed away from theological issues, even though discussions of the categories often have tremendous theological implications, especially concerning the doctrines of Transubstantiation and the Trinity. Consequently, the issues raised in the following essays are properly philosophical issues, not theological.

What follows is a collection of fourteen original essays, all devoted to one or more medieval commentaries on Aristotle's *Categories*, written by a wide variety of philosophers from Europe, Canada, and the United States." (p. 2)

 86. Rijk, Lambertus Marie de. 1988. "'Categorization' as a Key Notion in Ancient and Medieval Semantics." *Vivarium* no. 26:1-18.

"The aim of this paper is to argue for a twofold thesis: (a) for Aristotle the verb '*katêgorein*' does not as such stand for statemental predication, let alone of the well-known 'S is P'

type, and (b) 'non-statemental predication' or 'categorization' plays an important role in Ancient and Medieval philosophical procedure.

1. *Katêgorein and katêgoria in Aristotle*

Aristotle was the first to use the word 'category' (*katêgoria*) as a technical term in logic and philosophy. It is commonly taken to mean 'highest predicate' and explained in terms of statement-making. From the logical point of view categories are thus considered 'potential predicates'.(*)

(...)

1.3 *Name giving ('categorization') as the key tool in the search for 'true substance'*

What Aristotle actually intends in his metaphysical discussions in the central books of his *Metaphysics* (Z-Th) is to discover the proper candidate for the name 'ousia'. According to Aristotle, the primary kind of 'being' or 'being as such' (*to on hêi on*) can only be found in 'being-ness' (*ousia*; see esp. *Metaph.* 1028b2). Unlike Plato, however, Aristotle is sure to find 'being as such' in the domain of things belonging to the everyday world.

Aristotle's most pressing problem is to grasp the things' proper nature *qua* beings. In the search for an answer name-giving plays a decisive role: the solution to the problem consists in finding the most appropriate ('essential') name so as to bring everyday being into the discourse in such a way that precisely its 'beingness' is focussed upon.

(...)

2. *The use of 'praedicare' in Boethius*

The Greek phrase *katêgorein ti kata tinos* is usually rendered in Latin as *praedicare aliquid de aliquo*. The Latin formula primarily means 'to say something of something else' (more precisely 'of somebody'). Of course, the most common meaning of the Latin phrase is 'to predicate something of something else in making a statement of the form S = P'. However, the verb *praedicare*, just as its Greek counterpart *katêgorein*, is used more than once merely in the sense of

`naming' or `designating by means of a certain name', regardless of the syntactic role that name performs in a statement. In such cases *praedicare* stands for the act of calling up something under a certain name (designation), a procedure that we have labelled `categorization'. (...)

Boethius' use of *praedicare* is quite in line with what is found in other authors. Along with the familiar use of the verb for statemental predication, Boethius also frequently uses *praedicare* in the sense of `naming' or `designating something under a certain name' whereby the use of the designating word in predicate position is, sometimes even explicitly, ruled out." pp. 1, 4, 9-10.

Selected Bibliography on the Latin Medieval Commentators of Aristotle's *Categories*

A selection of Latin Commentators on Aristotle's Categories

(Page under construction)

For the bibliography on medieval authors see: Charles H. Lohr - *Latin Aristotle Commentaries*. Vol. II. *Renaissance Authors* - Firenze: Leo S. Olschki, 1988; Vol. III: *Index initiorum; Index finium* - Firenze: Leo S. Olschki, 1995; Vol. V: *Bibliography of secondary literature* - Firenze: Edizioni del Galluzzo, 2005.

To facilitate research, for every author I give the name in English, Latin, French and Italian.

Marius Victorinus ca. 300 - 370 [Victorinus Afer (Caius Marius Victorinus) - Marius Victorinus - Mario Vittorino]

(Pseudo) Augustine 4th century [(Pseudo) Augustinus - (Pseudo) Augustine - (Pseudo) Agostino]

Boethius ca. 480 - 524/5 [Boethius Anicius Manlius Severinus - Boèce - Boezio]

[John Scottus Eriugena ca. 800 - ca. 877](#) [[Johannes Scotus \(Eriugena\)](#) - [Jean Scot Érigène](#) - [Giovanni Scoto Eriugena](#)]

William of Champeaux ca. 1070 - 1122 [Guillelmus de Campellis - Guillaume de Champeaux - Guglielmo di Champeaux]

Gerlandus of Besançon 11th century [Garlandus - Gerlando]

Peter Abelard 1079 - 1142 [Petrus Abaelardus - Pierre Abélard - Pietro Abelardo]

Gilbert of Poitiers 1085/90 - 1154 [Gilbertus Porretanus - Gilbert de la Porrée - Gilberto Porretano]

William of Sherwood 1200/5 - 1266/71 [Guillelmus de Shirwode - Guillaume de Shyreswood - Guglielmo di Shyreswood]

Albert the Great 1193/1206 - 1280 [Albertus Magnus - Albert le Grand - Alberto Magno]

Thomas Aquinas 1225/6 - 1274 [Thomas de Aquino - Thomas d'Aquin - Tommaso d'Aquino]

Lambert of Auxerre 13th century [Lambertus Autissiodorensis - Lambert d'Auxerre - Lamberto di Auxerre]

Boethius of Dacia 13th century [Boethius Dacus - Boèce de Dace - Boezio di Dacia]

Peter of Spain 13th century [Petrus Hispanus - Pierre d'Espagne - Petro Ispano]

John Pagus 13th century [Johannes Pagus - Jean Pagus - Giovanni Pago]

Robert Kilwardby ca. 1215 - 1279 Robertus de Kilwardby - Robert Kilwardby - Roberto Kilwardby]

Roger Bacon 1214 - 1294 [Rogerius Bacon - Roger Bacon - Ruggero Bacone]

Martin of Dacia d. 1304 [Martinus de Dacia - Martin de Dacie - Martino di Dacia]

Peter of Auvergne - d. 1304 [Petrus de Alvernia - Perre d'Auvergne - Pietro d'Alvernia]

Simon of Faversham ca. 1260 - 1306 [Simonis de Faversham - Simon de Faversham - Simone di Faversham]

Thomas of Sutton ca. 1250 - ca. 1315 [Thomam de Sutona - Thomas of Sutton - Thomas of Sutton]

Giles of Rome ca. 1243 - 1316 [Aegidius Romanus - Gilles de Rome - Egidio Romano]

John Duns Scotus c. 1265/6 - 1308 [Johannes Duns Scotus - Jean Duns Scot - Giovanni Duns Scoto]

Radulphus Brito ? - d. 1320 [Radulphus Reginaldi Britonis - Raoul le Breton - Rodolfo il Bretone]

(Pseudo) Richard of Campsall ca. 1324-34 [(Pseudo) Richard de Campsall - (Pseudo) Richard de Campsall - (Pseudo) Riccardo di Campsall]

Walter Burley (or Burleigh) 1274/5 - 1344 [Gualterius de Burley (Burleaus) - Walter Burley - Walter Burley]

William Ockham ca. 1285 - 1347 [Guillelmus de Ockham - Guillaume Ockham (Occam) - Guglielmo di Ockham (Occam)]

Gerardus Odonis ? - 1348 [Gerardus (Giraldus) Odonis - Geraldus Odonis - Geraldus Odonis]

John Buridan ca. 1300 - after 1358 [Johannes Buridanus - Jean Buridan - Giovanni Buridano]

William of Heytesbury before 1313 - 1372/3 [Guillelmus de Heytesbury (Heitesbeurus) - Guillaume Heytesbury - Guglielmo Heytesbury]

Marsilius of Inghen ca. 1340 - 1396 [Marsilius de Inghen - Marsil d'Inghen - Marsilio di Inghen]

Robert Alyngton ? - 1398

Blasius of Parma ? - 1416 [Blasius Pelacanius de Parma - Blaise de Parme - Biagio Pelacani da Parma]

Paul of Venice 1369 - 1429 [Paulus Nicolettus Venetus - Paul de Venise - Paolo Veneto]

Marius Victorinus

Author of the first Latin translation of the *Categories* (now lost).

Texts

For the extant Fragments of Victorinus' translation see Boethius: *Categoriarum supplementa*.

Studies

(Pseudo) Augustine

Texts

- "Pseudo-Augustini Paraphrasis Themistiana [Categoriae Decem]." In *Categoriae Vel Praedicamenta. Translatio Boethii, Editio Composite, Translatio Guillelmi De Moerbeka, Lemmata E Simplicii Commentario Decerpta, Pseudo-Augustini Paraphrasis Themistiana*, edited by Minio-Paluello, Lorenzo. 133-175. Bruges: Desclée De Brouwer, 1961.

Anicius Manlius Severinus Boethius

Texts

- *Categoriae Vel Praedicamenta. Translatio Boethii, Editio Composite, Translatio Guillelmi De Moerbeka, Lemmata E Simplicii Commentario Decerpta, Pseudo-Augustini Paraphrasis Themistiana*. Bruges: Desclée De Brouwer, 1961.

"This volume contains five Latin versions of Aristotle's Categories. Numbers 1 and 2 both stem from Boethius, who is responsible for the Latin translations that were most widespread. One of them is more literal, the other more elegant. William of Moerbeke, on the other hand, was the author of a Latin version not only of Aristotle's work, but also of Simplicius' commentary, which contains the abbreviated lemmas of the Aristotelian text. Moreover, Aristotle's work was known by means of a Roman paraphrase attributed to Augustine and influenced by Themistius."

- *Categoriarum Supplementa. Porphyrii Isagoge, Translatio Boethii, Et Anonymi Fragmentum Vulgo Vocatum "Liber Sex Principiorum"*. Bruges: Desclée De Brouwer, 1966.

"This volume constitutes a supplement to the Latin versions of the Categories. It contains Porphyry's famous Introduction to Aristotle's Categories in Boethius' translation and an extract of

an anonymous 12th century Latin writing, which was widespread under the title *Liber sex principiorum*: it deals mainly with the last six categories, treated more briefly in Aristotle's work. The volume also contains the fragments quoted by Boethius from an older Latin version of Porphyry's Introduction, done by Marius Victorinus."

The Problem of Universals in Antiquity and Middle Ages

Introduction

"One of the most debated problems during the Middle Ages was the problem of the nature of general concepts. Greek logic, after long discussions, established the theory of the concept, which became classic, and was transmitted by commentators in their manuals and compendia. In the Middle Ages, the problem of the nature of general concepts, called by the logicians of the time *universalia*, was placed in the centre of logical and philosophical concerns, and gave rise to the famous "dispute of the universals".

(...)

This dispute lasted throughout the Middle Ages, though in certain periods a particular conception might prevail. This problem originates from a famous passage in Porphyry's Introduction to Aristotle's *Categories* -- *Isagogé* -- translated by Boethius, a treatise which represented the corner-stone of all dialectical studies. This passage appears at the beginning of the above mentioned work and it raised the following problem: are genera and species real, or are they empty inventions of the intellect? Here is that famous passage, opening the Prooemium in Porphyry's *Isagogé: De generibus speciebus illud quidem sive subsistent, sine in nudis intellectibus posita sunt, sive subsistentia corporalia sent an incorporalia, et utrum separata a sensibilibus an in sensibilibus posita et circa ea constantia, dicere recusabo; altissimum mysterium est hujus modi et majoris indigens inquisitionis* ("I shall avoid investigating whether genera and species do exist in themselves, or as mere notions of the intellect, or whether they have a corporeal, or incorporeal existence, or whether they have an existence separated

from sensible things, or only in sensible things; it is quite a mystery which requires a more thorough investigation than the present one"). This problem, raised by Boethius, had been left aside for a while in the Middle Ages, but it arose again as soon as Aristotle's texts became better known.

(...)

Let us now see how this extraordinary problem of the universals arose. Aristotle said, (...) that there was no other science but of the universal. This thesis was adopted by the Scholastic logicians, who kept repeating: *Scientia est de universalibus, existentia est singularium* -- "Science concerns the universals, existence refers to singular (objects)" or, with another formula: *Nulla est fluxorum scientia* -- "There is no science of transient (ephemeral) things". It is therefore clear that the universal will be the central problem of any science, its whole foundation, its starting point. They granted such a great importance to this problem because they wanted first and foremost to lay the basis of science, without which science itself could not exist. Also, at the beginning of this dispute, a nominalist thinker, Roscelin, appeared, who denied the universal; this shocked the Aristotelian and Latin minded Middle Ages and gave rise to the discussion.

The treatises on the history of philosophy simplify, generally, the solutions the Scholastic proposed to the problem of the universals, and deal with only three or four main solutions. This simplification is made in order to detect the general directions of the Scholastics' thinking. As we shall see, the problem was far more complicated and subtle. Of course, it appeared simple to the first Scholastics. F. J. Thonnard remarks (*Précis d'histoire de la philosophie*, Paris, Tournai, Rome, 1963 p. 285) : "In the Middle Ages, the first philosophers did not realise initially all the nuances, and they answer by yes, or by no". According to Thonnard, only two groups of philosophers should be considered: (1) the realists, embracing a metaphysical point of view, and who assert that the universals are definitely objects; (2) the antirealists, adopting a psychological standpoint, and raising objections which force the realists to be more precise in their solutions.

The problem of the universals, as defined by Porphyry, and taken over by Boethius, was called *prima quaestio* -- "the first problem". Great importance was attached to this problem because of the numerous trends and nuances implied by the solutions. We possess a complete classification of these solutions, made by a mediaeval logician, John of Salisbury (twelfth century), in his work *Metalogicus* (Metalogicon). In this work, the author enumerates 13 directions in the problem of the universals.

Metalogicus was a treatise on logic which the author himself confessed to have written (1159) from memory, after a rather long interruption of his studies of logic. His intention was to prove the usefulness of logic, opposing the attacks against this discipline by certain philosophers. The value of the work is that it is a vast source of information about the conceptions of the time.

Here are the 13 conceptions in the problem of the universals, such as given by John of Salisbury.

- 1) Roscelin's conception, in keeping with which the universals are mere words -- votes (nominalism).
- 2) Abelard's, and his disciples' conception, with whom the general concepts are reduced to sermons, predication being possible only in *sermo* (judgement), as the predicate of an object cannot be an object.
- 3) Another position upheld that the universal is *intellectus* (idea), or *notio*, such as Cicero (that is the Stoics) had seen it. Thinking cannot discriminate the particular and corporeal concrete from the sensation, but only the abstract, namely the general abstract, which is devoid of reality.
- 4) Walter of Mortaigne's position, who maintained the universals to be closely united with the individuals (*res sensibiles*), but to have a mode of existence -- status -- according to which way they are considered. It is the so-called theory of the status.

Walter of Mortaigne was a professor in Paris, and died as a bishop of Laon in 1174. His position is interesting because he professed, basically, a multiplicity of ontological status. The *species* and *genera*, up to the supreme *genus*, have different existential states. So, the status of the general, united to the individual, depends on the

consideration of the individual as belonging to one or to another species. (This idea, of "the multiple states of the Being" originated with Aristotle. See the relevant chapter). The idea of multiple ontological states has appeared in contemporary logic since the establishment of the many-valued logics where the proposition can have more than two values, truth and falsehood. A close examination of Walter of Mortaigne's theories in this respect would certainly prove very interesting.

5) The platonic realism of Bernard of Chartres.

6) Gilbert of Poitiers' conception concerning the native forms - *forma nativae*.

Gilbert de la Porrée, bishop of Poitiers (1076-1154), is known also as Gilbertus Porretanus, or Pictaviensis (of Poitiers). His most important work on logic is *De sex principiis*, which played an important part later on. He started from the Platonic conception of ideas -- principles; these have copies -- the native forms -- which become multiple and distinct in the individuals. Comparing these forms, the intellect shapes by abstraction a unique form, the genus, or the species, which conforms with the divine idea. Therefore in Plato's existence he saw a special "subsistence" *subsistentia* -- the essence of the individual Plato, this "Platonity" -- *Platonitas* --, his distinct form, a copy of the idea of man.

7) Gauslenus of Soissons' opinion, according to which the universal exist only in collections.

Gauslenus of Soissons (1125-1151), bishop of Soissons, held that the universal concept exists only in the collection of individuals belonging to the same class, and not in the individual. The author of the treatise *Metalogicus* wrote that "Gauslenus Suessionensis episcopus situated the universal in objects gathered in a collection" (*rebus in unum collectis*) and denied it with isolated individuals.

8) The so-called theory of "manners" -- *maneries*.

This conception, just like that of Gauslenus of Soissons, of the collections or of native forms, is to be found in a work, written in the Middle Ages, *De generibus et speciebus*. This conception is a

nominalist variant, in keeping with which the thing -- *res* -- is mere word -- *vox*.

The term *maneries* means "way of treating" or "way of handling", and is the origin of the French "manière". The canonist Huguccio (d. 1212), author of *Summa Decretorum* defined, in this sense, the species (*species*) as being *rerum maneries* (the "manner" of things). In short, a thing is a word -- *vox* --, and genus is its manner -- *maneries*.

9) The opinion according to which the universals are abstract form similar to the mathematical forms.

10) The so-called *ratio indifferentiae* doctrine, in keeping with which one thing can be at the same time individual and universal, although there is nothing universal in things, but the universal is what is similar between them.

Charles de Rémusat in *Abélard* (2nd ed., Paris, 1855) supplied a few excerpts from Abelard *Glossulae super Porphyrium* which explain this *ratio indifferentiae* conception. What in Plato, or in Socrates, is non-differentiated, or similar, *indifferens vel consimile*. Certain things are mutually convening, or agreeing, that is similar in nature, such as animals, bodies, so they are both universal and particular -- universal in that they are several in a community of essential attribution, and particular in that each of them is different from the other.

11) William of Champeaux's (1070-1120) opinion, who held a rather strange realism, finally coming to a *theoria indifferentiae*.

12) The conception according to which the distinction between *genus* and individual lies merely in a particularity of existence, as the universal exists at the same time in several and in the particular object.

13) The conception of the unknown author of the above mentioned -- *De generibus et speciebus*, a sort of Platonism, the "theory of identity". According to it, the genus, mankind for instance, is unique and identical with all the individuals, which are only accidentally distinct." (pp. 62-66)

Selected Bibliography on the Problem of Universals in Antiquity and Middle Ages

Bibliography

1. "Twelfth-Century Nominalism Bibliography." 1992. *Vivarium* no. 30:211-215.
2. Adams, Marilyn McCord. 1977. "Ockham's Nominalism and Unreal Entities." *Philosophical Review* no. 76:144-176.
3. Amerini, Fabrizio. 2005. "What Is Real: A Reply to Ockham's Ontological Program." *Vivarium* no. 43:187-212.

"When Ockham's logic arrives in Italy, some Dominican philosophers bring into question Ockham's ontological reductionist program. Among them, Franciscus de Prato and Stephanus de Reate pay a great attention to refute Ockham's claim that no universal exists in the extra-mental world. In order to reject Ockham's program, they start by reconsidering the notion of "real", then the range of application of the rational and the real distinction. Generally, their strategy consists in re-addressing against Ockham some arguments extracted from Hervaeus Natalis's works. Franciscus's and Stephanus's basic idea is that some universals are not acts of cognition, but extra-mental, predicable things. Such things are not separable from singulars, nonetheless they are not the same as those singulars. Consequently, it is not necessary to allow, as Ockham does, that if two things are not really identical, they are really different and hence really separable. According to them, it is possible to hold that two things are not really identical without holding that they are also really non-identical and hence really

different. Basically, their reply relies on a different notion of the relation of identity. Identity is regarded as an intersection of classes of things, so that it is possible to say that two things are really identical without saying that they also are the same thing. Franciscus and Stephanus, however, do not seem to achieve completely their aim."

5. Benson, H. 1988. "Universals as Sortals in the *Categories*." *Pacific Philosophical Quarterly* no. 69:282-306.

"In this essay I argue that Aristotle is committed to a sortal analysis of the universal. According to this analysis something is a universal ("to katholou") just in case it is predicated "essentially" of a plurality of entities. I find evidence for such an analysis in the *Categories*, *Posterior analytics*, and *Metaphysics Gamma*. Finally, I suggest that an appeal to this analysis may help resolve a longstanding difficulty in *Metaphysics Zeta*, viz., Aristotle's commitment to (a) substances are not universals; (b) forms ("eide") are substances; and (c) forms ("eide") are predicated of a plurality of entities."

22. Cresswell, Max J. 1975. "What Is Aristotle's Theory of Universals?" *Australasian Journal of Philosophy* no. 53:238-247.

"Aristotle's theory of universals is expounded by contrast with Plato's. Where Plato had said that X is F iff X participates in the form of F, Aristotle has two analyses. If F is a substance predicate then X is F iff X is specifically identical with an F. If F is an accidental predicate then X is F iff there is a Y in X which is specifically identical with an individual in the appropriate category for F."

30. ———. 2011. *L'homme Commun. La Genèse Du Réalisme Ontologique Durant Le Haut Moyen Âge*. Paris: Vrin.

"Le présent livre propose l'étude de la constitution, durant le haut Moyen Âge latin, d'une position philosophique: le réalisme de l'immanence à propos des universaux. Cette position est fondée sur la conviction qu'il existe, dans le monde qui nous entoure, certes des individus particuliers -- ce tilleul, cette tortue --, mais aussi des entités universelles. Ces entités n'existent pas séparées des individus, mais intégralement

réalisées en eux, sans variation ni degré. Cet engagement philosophique résulte d'une exégèse des *Catégories* d'Aristote, réinterprétées selon des philosophèmes issus de la pensée de Porphyre. La généalogie de cette position est ici retracée en abordant successivement ses sources tant grecques que latines et ses ancêtres patristiques (avant tout Grégoire de Nysse), puis son élaboration conceptuelle durant les premiers siècles du Moyen Âge latin jusqu'à la critique qu'en donnera Pierre Abélard, et ce, par l'analyse de l'ontologie des quatre philosophes qui l'ont soutenue: Jean Scot Érigène, Anselme de Canterbury, Odon de Cambrai et Guillaume de Champeaux. Ce parcours permet de dessiner les contours d'un projet philosophique: comprendre, analyser et décrire le monde sensible au moyen des concepts issus de la logique aristotélicienne."

32. Gerson, Lloyd P. 2004. "Platonism and the Invention of the Problem of Universals." *Archiv für Geschichte der Philosophie* no. 86:233-256.

"In this paper, I explore the origins of the 'problem of universals'. I argue that the problem has come to be badly formulated and that consideration of it has been impeded by falsely supposing that Platonic Forms were ever intended as an alternative to Aristotelian universals. In fact, the role that Forms are supposed by Plato to fulfill is independent of the function of a universal. I briefly consider the gradual mutation of the problem in the Academy, in Alexander of Aphrodisias, and among some of the major Neoplatonic commentators on Aristotle, including Porphyry and Boethius."

34. Henry, Desmond Paul. 1986. "Universals and Particulars." *History and Philosophy of Logic* no. 7:177-183.

"The medieval version of the Problem of Universals centers around propositions such as "'man" is a species' and "'animals"

is a genus'. One of C. Lejewski's analyses of such propositions shows that semantic status of their terms by means of Ajdukiewicz-style categorical indices having participial or infinitive forms as their natural-language counterparts. Some medievals certainly used such forms in their corresponding analyses, thus avoiding the alleged referential demands generated by nominally-termed propositions. Boethius exemplifies the confusion which may still arise from the traditional definition of "universal" in terms of predication "of many". Unnecessary adherence to nominally-termed analyses not only grounded a tendency towards Nominalism and Platonism, but also towards the moderns' 'way of ideas'."

36. Hull, Gordon. 2006. "Hobbes's Radical Nominalism." *Epoché. A Journal for the History of Philosophy* no. 11:201-223.

"This paper analyzes Hobbes's understanding of signification, the process whereby words come to have meaning. Most generally, Hobbes develops and extends the nominalist critique of universals as it is found in Ockham and subsequently carried forward by early moderns such as Descartes. Hobbes's radicality emerges in comparison with Ockham and Descartes, as, unlike them, Hobbes also reduces the intellectual faculty entirely to imagination. According to Hobbes, we have nothing in which a stabilizing, prediscursive mental language could inhere.

Hobbes thus concludes that all thinking is affective and semiotic, and depends on the regulation of conventionally established regimes of signs. Establishing this regulation is one of the central functions of the Hobbesian commonwealth."

44. Klima, Gyula. 2003. "Natures: The Problem of Universals." In *The Cambridge Companion to Medieval Philosophy*, edited by McGrade, Arthur Stephen, 196-207. Cambridge: Cambridge University Press.

"Aristotelian science seeks to define the essential nature of a thing and then to demonstrate the features the thing must have because of that nature. A philosophically inevitable question thus arises for Aristotelians: what is a nature? Is it a reality over and above (or perhaps "in" the things whose nature it is? Is it a mental construction, existing only in our understanding of things, if so, on what basis is it constructed? This is the medieval problem of universals, or at least one way of thinking about the problem. In a classic formulation, Boethius states the problem in terms of the reality of *genera* and *species*, two main types of universals involved in an Aristotelian definition of essential nature (as in "a human being is a reasoning / speaking animal," which places us in the genus of animals and marks off our species by reference to our "difference" from other animals in reasoning or using language): "Plato thinks that genera and species and the rest are not only understood as universals, but

also exist and subsist apart from bodies. Aristotle, however, thinks that they are understood as incorporeal and universal, but subsist in sensibles." A rigorous tradition of, mainly Aristotelian, discussion originates from Boethius's tentative exploration of the problem thus stated. But a more Platonic solution had been put into play about a century before Boethius by Augustine, and this, too, would have a rich development."

- "In the *Fifth Meditation*, Descartes makes a remarkable claim about the ontological status of geometrical figures. He asserts that an object such as a triangle has a 'true and immutable nature' that does not depend on the mind, yet has being even if there are no triangles existing in the world. This statement has led many commentators to assume that Descartes is a Platonist regarding essences and in the philosophy of mathematics. One problem with this seemingly natural reading is that it contradicts the conceptualist account of universals that one finds in the *Principles of Philosophy* and elsewhere. In this paper, I offer a novel interpretation of the notion of a true and immutable nature which reconciles the Fifth Meditation with the conceptualism of Descartes's other work. Specifically, I argue that Descartes takes natures to be innate ideas considered in terms of their so-called 'objective being'."
64. ——. 1998. "Descartes' Theory of Universals." *Philosophical Studies. An International Journal for Philosophy in the Analytic Tradition* no. 89:161-180.

"I argue that Descartes holds a conceptualist account of both the ontology and the origin of universals. Universal mathematical objects, such as the number two, are merely innate ideas that are made occurrent by a process of abstraction. Although Descartes's conceptualism is fairly explicit textually, the details of his theory are not. I recover this theory by linking it to his account of attributes--an attribute being something which we distinguish from a substance within our thought where there is no distinction in real.

This approach uncovers Descartes's diagnosis of how the realist goes wrong in positing universals outside thought."

- "While the medievals spilled much ink over the 'problem of individuation', the moderns scarcely mention it. My aim here is to explore what *philosophical* reasons, as opposed to historical or sociological ones, might lie behind the disappearance of a philosophical problem that vexed minds for centuries. I argue that Ockham clearly saw that a commitment to nominalism removes the need to take seriously the problem of individuation. Suarez, who did take seriously the problem, but who also advocated nominalism, will be shown to be subject to important Ockham-inspired arguments. To the extent, then, that Ockham's nominalism carried the day into the moderns, it is understandable, philosophically, that the moderns should turn a deaf ear to the problem of individuation."

"Daniel Devereux has argued that "Categories" 3b10-18 provides evidence for the view that Aristotle's first-order accidents are tropes. However, the passage should be interpreted differently than as Devereux proposes and the proper interpretation is neutral as between a tropes-view and a universals-view."

81. Sharples, Robert. 2005. "Alexander of Aphrodisias on Universals: Two Problematic Texts." *Phronesis. A Journal for Ancient Philosophy* no. 50:43-55.

"Two texts that raise problems for Alexander of Aphrodisias' theory of universals are examined. *De anima* 90.2-8 appears to suggest that universals are dependent on thought for their existence; this raises questions about the status both of universals and of forms. It is suggested that the passage is best interpreted as indicating that universals are dependent on thought only for their being recognised as universals. The last sentence of *Quaestio* 1.11 seems to assert that if the universal did not exist no individual would exist, thereby contradicting Alexander's position elsewhere. This seems to be a slip resulting from the fact that species with only one member are the exception rather than the rule."

83. South, James B. 2002. "Singular and Universal in Suárez's Account of Cognition." *Review of Metaphysics* no. 55:785-823.

"In this essay, I argue that the typical way of thinking about the problem of universals and the cognition of them (realism vs. nominalism, abstraction) is inapplicable to the account Suárez gives in his *Commentary on the De anima*. I show how he justifies objective universal concepts while rejecting the notion of a common nature, as well as the typical nominalist appeal to

intuitive cognition. His proposal, I conclude, provides an interesting contrast to the traditional nominalist account of cognition, while retaining the emphasis on the primacy of the singular in intellectual cognition."

84. Spade, Paul Vincent, ed. 1994. *Five Texts on the Mediaeval Problem of Universals: Porphyry, Boethius, Abelard, Duns Scotus, Ockham*. Indianapolis: Hackett.

Contents: Introduction VII; Note on the text XVI; Porphyry the Phoenician: *Isagoge* 1; Boethius: From his *Second Commentary on Porphyry's Isagoge* 20; Peter Abelard: From the " *Glosses on Porphyry*" in His *Logica 'ingredientibus'* 26; John Duns Scotus: Six questions on individuation from his *Ordinatio* II. d. 3, part 1, qq. 1-6 57; William of Ockham: Five questions on universals from his *Ordinatio* d. 2, qq. 4-8 114; Glossary 232; Bibliography 235-238.

"It is well known that the problem of universals was widely discussed in mediaeval philosophy --indeed, some would say it was discussed then with a level of insight and rigor it has never enjoyed since. The five texts translated in this volume include the most influential and some of the most sophisticated treatments of the problem in the whole Middle Ages.

The first text is Porphyry's *Isagoge*, translated here in its entirety. Porphyry was a third-century Greek neo-Platonist, a pupil and the biographer of Plotinus, and the one who arranged Plotinus's writings into six groups of nine essays (the " *Enneads*").

(...)

Despite its importance in this respect, perhaps the main influence of the *Isagoge* lies not in what it says, about the predicables or anything else, but in what it does not say. For in his introductory remarks, Porphyry raises but then modestly refuses to answer three questions about the metaphysical status of universals, saying only that they belong to "another, greater investigation". [*Isagoge*, 2] It is this brief passage that raised the problem of universals in the form in which it was first

discussed in the Middle Ages. It contains some of the most consequential lines in the entire history of philosophy.

Porphyry's silence means that there really is no detailed theory of universals in the *Isagoge* -- or for that matter in his other writings. Taken by himself, therefore, Porphyry would not have been a very important figure in the history of our problem. But he cannot be taken by himself. His importance lies in the fact that his *Isagoge* was translated into Latin in the early Middle Ages and used as the occasion for discussing the problem of universals directly and in detail. It was as though commentators found his silence intolerable and were irresistibly drawn into the very questions Porphyry himself had declined to discuss.

The most important of these early mediaeval discussions is undoubtedly Boethius's.

(...)

In addition to works of Aristotle, Boethius also translated Porphyry's *Isagoge* and wrote two commentaries on it. (His first commentary was based on an earlier translation by Marius Victorinus, who is known to readers of Augustine's *Confessions* VIII. 2 & 4.) Although Boethius addressed the problem of universals in several places, the discussion in his *Second Commentary on Porphyry* was the longest and probably the most influential. The relevant portion of that commentary is translated below.

(...).

Abelard wrote on the problem of universals in several places. The most well known of them is in the "*Glosses on Porphyry*" in his *Logica 'ingredientibus'*. Once again the relevant passage is a discussion of Porphyry's three unanswered questions.

(...)

By the time of the last two authors represented below, John Duns Scotus (c. 1265-1308) and William of Ockham (c. 1285-1347), philosophy had become a specialized and highly technical academic discipline, carried on almost exclusively in a

university context. These last two texts are here translated into English for the first time, and are by far the longest and most intricate in this volume. " pp. VII-XI.

85. ———. 2005. "The Problem of Universals and Wyclif's Alleged "Ultrarealism"." *Vivarium* no. 43:111-123.

"John Wyclif has been described as "ultrarealist" in his theory of universals. This paper attempts a preliminary assessment of that judgment and argues that, pending further study, we have no reason to accept it. It is certainly true that Wyclif is extremely vocal and insistent about his realism, but it is not obvious that the actual content of his view is especially extreme. The paper distinguishes two common medieval notions of a universal, the Aristotelian/Porphyrian one in terms of predication and the Boethian one in terms of being metaphysically common to many. On neither approach does Wyclif's theory of universals postulate new and non-standard entities besides those recognized by more usual versions of realism. Again pending further study, neither do Wyclif's views appear to assign philosophically extreme or novel roles to the entities he does recognize as universal. On the contrary, by at least one measure, his theory of universals is less extreme than Walter Burley's, as Wyclif himself observes. For Wyclif, the universal is numerically identical with its singulars, but numerical identity is governed by something weaker than the Indiscernibility of identicals."

89. Tweedale, Martin. 1976. *Abailard on Universals*. Amsterdam: North-Holland.

"This work shows how Abailard elaborated and defended the view that universals are words, avoided the pitfalls of an image theory of thinking, and propounded a theory of "status" and "dicta" as objects of thought without treating them as subjects of predication. His defense of these views is shown to depend on certain fundamental departures from the Aristotelian term logic of his day, including a proposal for subjectless propositions, the treatment of copula plus predicate noun as equivalent to a simple verb, and a transformation of the 'is' of existence into the 'is' of predication."

90. ———. 1984. "Alexander of Aphrodisias Views on Universals." *Phronesis. A Journal for Ancient Philosophy* no. 29:279-303.
91. ———. 1987. "Aristotle's Universals." *Australasian Journal of Philosophy* no. 65 (4):412-426.

"This paper is devoted in the main to arguing for certain negative theses of the general form: Aristotle did not himself hold such and such a view of universals; but in the course of the discussion some points about Aristotle's own positive conception of universals, to the limited extent that he had one, will emerge. In fact, Aristotle's negative remarks about universals, e.g. that they are not substances, not separate, not in addition to the particulars, etc., are much clearer and less tentative than any of his positive ones, and it is little wonder that interpreters through the ages have attributed to him radically different and opposed positive theories. The words they found in their authority could not easily be used to decide the issue between their competing interpretations.

In order to clarify the aim of this essay I want first of all to distinguish with regard to any topic Aristotle treats the question of what view he himself held, if any, from the question of what view he *should* have held given the basic tenets and thrust of his whole philosophy. The views which are definitely not, as I shall claim, ones Aristotle himself held, i.e. not defensible answers to the first question, may well be tenable answers to the second. Indeed, I am rather inclined to think there are several mutually incompatible theories that will answer as well as any the question of what view Aristotle *should*

have taken of universals. On that whole matter I shall have nothing more to say in this place.

The two interpretations I shall discuss see Aristotle as a nominalist and a conceptualist respectively. By 'nominalism' I mean any theory which says that what is universal is universal only in so far as it is a certain sort of sign. In other words, being a sign is necessary to being a universal, although the converse is not true. Just what the things are which serve as universal signs is left entirely open on this definition of nominalism. Signs may be spoken sounds, written marks, mental images, mental states or any thing you please. Also the definition is non-committal on just what sort of a sign it is that is universal; theories about this will vary with the semantic theory the nominalist adopts. There is perhaps a place for a narrower sense of 'nominalism' in which the nominalist must maintain that universals are all certain expressions of a written or spoken language. In this narrower sense Ockham, for example was not a nominalist since the signs he thought of as universal were primarily those of a mental language, although he was certainly a nominalist in the broader sense I first proposed.

By 'conceptualism' I mean the view that nothing could be a universal unless there were in existence thought and cognition of an intellectual sort. In this broad sense all nominalists are conceptualists, since presumably there could not be signs unless there were thought. But there is a narrower sense of 'conceptualism' too, in which the conceptualist must maintain that universality applies only to mind-dependent entities, e.g. concepts, mental images, etc. (Even words when they are conceived as not identifiable with their physical manifestations are things that cannot exist unless there are minds and so are mind-dependent in my sense.)

The difference between the broad and narrow senses has this noteworthy consequence: someone can be a conceptualist in the broad sense and believe that what is universal is some entity independently existing outside the mind as long as they also accept that it is a universal only when it is thought of or conceived in some way. But such a person is not a conceptualist

in the narrow sense. Also nominalists need not be conceptualists in the narrow sense since they can hold that the things which are signs are mind-independent objects with a wholly physical existence, for example sounds or marks.

My task will be to convince the reader that Aristotle was neither a nominalist nor a conceptualist in any of these senses. I shall begin with the nominalist proposal, but to some extent my refutation of it will be incomplete until I have finished with conceptualism. From the fact that Aristotle was not a conceptualist in the broad sense it will follow that he was not a nominalist, so the evidence against broad conceptualism argues against nominalism as well." pp. 412-413.

The Realist Ontology of John Duns Scotus

The first object of knowledge according to Duns Scotus

"The problem from which a systematic reconstruction of Scotistic thought must take its start is the problem of the proper object of the human intellect. It is only thus that the natural logical order of the Scotistic system is properly emphasized.

The Subtle Doctor was confronted with two conflicting solutions. Henry of Ghent, who was at the time the most influential representative of the Augustinian school, taught that the first and proper object of the human intellect is God, or the supreme being. This thesis is implicitly contained in every theory of intellectual illumination, such as that prevalent, with very few exceptions, among the Augustinians of the thirteenth century. Henry of Ghent is to be credited with having stated explicitly what had been previously said in a confused manner. The advantages of this doctrine are evident. If God is the proper object of the human intellect, one can readily understand why man should not concentrate upon any created thing, for man is led by an interior logic to fix his attention upon what is eternal, infinite, absolute. This deep interior "drive" might well be called man's divine vocation.

In contrast with the Augustinian solution, stands the Aristotelian-Thomistic doctrine, according to which the proper object of the human intellect is the quiddity of a material thing. This is tantamount to saying that the natural object of our knowledge is the essence abstracted from matter. This opinion seems to be confirmed by our daily experience, which shows that all human knowledge has sensation as its necessary starting point.

Duns Scotus is not satisfied with either of the two solutions, and he makes this clear by pointing out their grave disadvantages. When the first object of the intellect is discussed, it is immediately necessary to define the meaning of the term "first." The question, "What is the first object of the human intellect?" can be understood in different ways. One way of stating it is, "What is the first thing that man knows in the order of time?" Another way is, "What is the most perfect thing (first in the order of perfection) that can be known by the human mind?" Still another way of stating it is, "What is the object to which the human intellect is directed by its very nature?" It is in this third sense that the question is taken here. To ask, therefore, what the first object of the human intellect is, is equivalent to asking, "What is the adequate object, that is, the object that fully corresponds to the natural power of the human intellect?"

Man is not born perfect. This means that man is not in possession from the first moment of his existence of all the acts of which he is capable. Like all other creatures, man is a complex of potentialities, to be developed gradually as he comes in contact with reality. To the law of this gradual development and becoming, not only his body is subject but also his soul. Thus man's intelligence and will have a natural tendency toward the possession of their objects. When this possession is completed, the perfection of these two faculties is attained, i.e., fully actuated.

The object specifies the faculty, i.e., the object is the measure of the perfection of the faculty. Moreover, any development of the faculty is only possible in virtue of its object, in the sense that it is necessarily a pursuit of its object, since it is only in view of its object that the faculty is determined to act.

By applying these general considerations to the particular case of human knowledge, it becomes evident: (1) that the human intellect can know nothing that does not somehow enter the sphere of the natural object for which it was made; (2) that the human intellect knows things in the light of its object, which thus becomes the necessary point of view from which it sees everything. This can be realized in a perfect way, as in the case of God, who knows all possible things in the unique object of His divine mind, or imperfectly, as in the case of man, who does not know all things in

the idea of being, yet cannot know anything apart from the idea of being. In fact, "the adequacy of the object," writes Scotus, "can be considered from the point of view of its power (*secundum virtutem*) and from the point of view of its predication (*secundum praedicationem*). From the point of view of its power, that object is adequate to its faculty which, once it is known, makes all other possible objects knowable to the intellect. In this sense the divine essence is the adequate object of God's intellect. From the point of view of its predication, that object is adequate to its faculty which is per se and essentially the predicate of all things that can be known by the intellect.(1)" (pp. 27-29)

Notes

(1) *De anima*, q. 21 n. 2.

From: Efrem Bettoni, *Duns Scotus. The Basic Principles of His Philosophy*, Washington: Catholic University of America Press 1961.

The univocity of the concept of being

"The obvious consequences that follow from such a standpoint did not escape Duns Scotus. The first of such consequences is the univocity of the concept of being. The proper object of a faculty, in the sense that has just been explained, must be only one, just as the faculty is only one. Therefore, in order that being be the proper object of our intellect, and consequently the point of view from which and the reason why we know God and creatures, immaterial and material beings, it must be predicated univocally, i.e., in the same sense, of all things. It cannot be otherwise, for the simple fact that being is the means by which, and the light through which, all things are known.

In the Augustinian philosophy there remained the difficulty of explaining how, from the concept of God, man could descend to the concept of creatures without passing through the intuition of the divine essence. In the Aristotelian-Thomistic philosophy the difficulty was reversed: a way had to be shown how one could ascend from the concept of creatures to the concept of God. Both Augustinians and Thomists solved the difficulty with the doctrine of analogy: an analogy that goes from God to creatures for the

Augustinians, an analogy that goes from creatures to God for the Thomists. With his doctrine of the univocity of the concept of being, and consequently of the other transcendental concepts, Duns Scotus opens a new way to the solution of the problem. He does so very modestly, as the following passage indicates:

"In the second place, it can be said, although not definitely because it is not in accordance with the common opinion, that of God we possess not only concepts which are analogous to those of creatures, that is, entirely different from those had of created things, but also concepts which are univocal to God and creatures.(2)" (pp. 33-34)

Notes

(2) Opus Oxoniense, I, d. 3, q. 2, n. 5. [Obviously, in this passage Duns Scotus does not use the term "analogous" in the sense it is used by modern Thomists. When he states that the concepts we possess of God are "entirely different" from the concepts we have of creatures, he simply means that the reality expressed by these concepts is in itself essentially different. God is an infinite, self-subsistent being; creatures are limited, participated beings. (*Translator: B. Bonansea*)]

From: Efrem Bettoni, *Duns Scotus. The Basic Principles of His Philosophy*, Washington: Catholic University of America Press 1961.

Duns Scotus on the Problem of Universals

"In *Quaestiones in librum Metaphysicorum VII, quaestio 18* Scotus recognizes three meanings for the term 'universal'. In one sense it refers to universality, i.e. the property of being suitable to be predicated of many; in another sense it means what has that property. But, he says, something can be either the near (proximate) subject of that property or the remote subject; but it is not easy to see what this latter distinction amounts to. Scotus says that the near subject is of itself a numerically single entity with an indeterminateness which rejects its being identified with any particular case of the universal in question. If we are talking about the universal human in this sense, then it is numerically one, but it cannot be any one individual human; likewise, the universal animal is numerically one, but it cannot be any particular species of animal.

The remote subject, on the other hand, is not of itself numerically one and though it is not of itself determined to any one particular of the universal-in question, it does not reject such determination either.

It is clear that the remote subjects of universality are the natures that we have discussed earlier. Scotus takes over from Avicenna the doctrine that there are three ways of talking about natures: (1) where there is no assumption of either the existence or non-existence of the nature and all that is true of the nature concerns what that nature is and is not of itself; (2) where we say what is true of the nature on account of its actual existence in real things; (3) where we say what is true of the nature on account of its existence in the mind. When we say that a nature is universal we are talking about what holds of it in the third sort of discourse. Universality is a "thing of second intention" and hence can only belong to first intentions, which are natures existing as objects of thought. Things existing as objects of thought are said to have *esse objectivum* and to be *entia objectiva*. An *ens objectivum* is another one of Scotus's accidental beings; it comes into existence as soon as something becomes an object of thought. Since *esse objectivum* does not belong to a nature taken absolutely and in itself; it is accidental to that nature, just as is individuation, as we saw above. We may think of the *ens objectivum* as the nature-as-conceived-by-a-mind; it is a single, mind-dependent entity whose own numerical oneness derives ultimately from the numerical oneness of the mind doing the conceiving.

As Scotus and other scholastics view the matter, the *ens objectivum* is the immediate object of thought and represents the nature, which then becomes the remote object of thought. This theory is saved from the idealism that afflicts representational theories of thought in modern times only by this doctrine that the *ens objectivum* just is the nature-as-thought. It is not some real entity distinct from the nature itself, and from whose character we are somehow to infer the character of the nature; rather in apprehending it we are apprehending the nature directly but in a certain way.

The near subject of universality, according to Scotus, is this *ens objectivum* through which we apprehend the nature. The nature itself is only a universal because this *ens objectivum* is the nature-as-

thought. To be a universal something must be suitable to be predicated of many, and, on the sort of view Scotus and many other scholastics subscribed to, only something that is a single object of thought, yet intrinsically indeterminate in respect of its particular instances could have this suitability. The item which is predicated has to be some single thing which many can be said to be; otherwise, the singleness of meaning of the predicate over its many applications to different particulars would evaporate." (pp. 409-410)

"En 1928, étudiant en philosophie, je me voyais assigner comme dissertation une synthèse de la métaphysique scotiste. Je remis un essai sur l'être, la distinction formelle, les universaux et la nature commune. Je ne sais ce qu'il me faut admirer le plus des deux: ma présomption juvénile ou le charisme prophétique de mon professeur. C'est ce noviciat scotiste qui me vaut de vous parler, un demi-siècle plus tard, de

la première école scotiste, dans cette université où l'esprit subtil d'un frère mineur d'Écosse lui a donné naissance.

Je me suis initié au scotisme dans la *Philosophie du Bx Jean Duns Scot* d'Ephrem Longpré, et dans *l'Avicenne et le point de départ de Duns Scot* d'E. Gilson, deux médiévistes qui faisaient alors une tournée de conférences à Montréal. Quelques années plus tard, je voulus déposer un sujet de thèse sur l'être, objet de l'intelligence et de la métaphysique selon Duns Scot. Quand le professeur eut compris que je me proposais de critiquer mes deux guides, il m'avisa de changer le sujet, parce qu'aucun jury ne me donnerait raison contre ces deux médiévistes chevronnés, même s'ils n'étaient pas d'accord entre eux. Autant valait changer tout de suite. Je me rabattis sur la théorie de la connaissance chez Duns Scot pour finir par *La connaissance de l'individuel au moyen âge*. La publication de l'ouvrage aux Presses universitaires de France et la préface magistrale de Paul Vignaux me valurent de passer pour son élève. Je me sens donc à l'aise parmi vous que l'amitié réunit autour d'un vénérable maître, avec qui j'ai partagé pendant vingt ans l'enseignement de la pensée franciscaine à l'Institut d'études médiévales de l'université de Montréal.

I. La naissance du scotisme.

Je me suis intéressé de bonne heure à l'école scotiste, en raison de l'imbroglie que j'y découvris au sujet de la connaissance du singulier et dont je trouvai la clef en dépistant parmi les incunables de la bibliothèque un livre, fait de textes de Scot, dont l'auteur était Antoine André. Je compris que, pour remonter jusqu'à Scot à partir des scotistes, il me fallait passer par sa médiation. Il y a quelques années, en faisant la recension du volume VII de *l'Ordinatio* de Scot, je manifestai quelque réticence sur l'efficacité du recours au commentaire littéral d'Antoine André sur la *Métaphysique* d'Aristote, publié sous son nom en 1482, mais édité de nouveau sous le titre *d'Expositio*, en 1501, par Maurice du Port l'attribuant cette fois à Scot, parce que, selon les éditeurs de *l'Ordinatio*, le disciple n'aurait, en somme, que repris à son compte un commentaire du Docteur Subtil. J'avais consigné le résultat de ma première

étude dans mon livre sur la connaissance du singulier, mais puisque cela était passé inaperçu, il fallait reprendre le problème du crédit à accorder à Antoine André comme témoin et interprète de Scot, là où Aristote entre en jeu. J'y reviendrai dans la dernière partie de cette communication.

En parlant de l'école primitive, je veux me limiter à un point de vue. J'ai essayé de comprendre dans quel esprit et selon quelles méthodes les disciples de Scot ont transmis ce trésor de doctrines émanées des lèvres de leur Maître autant que de ses écrits. Cela me paraît une condition préalable pour rejoindre à travers eux le message original de Scot dans sa verdeur primitive, et comprendre ce qui fait du Docteur Subtil un des grands penseurs de l'histoire." pp. 9-10

"The thesis of this article is that Scotus makes a special contribution with his theory of intuition, not for giving new answers to the questions asked, for example, by Aquinas, but for asking different questions; and that the significance of this contribution cannot be appreciated until one sees why, with respect to the questions asked by Aquinas, Scotus is in (substantial) agreement with the Aristotelian analysis. The author tries, in an informal way, (1) to point out some confusions that have led to a misunderstanding of Scotus's (or anyone else's) defense of an Aristotelian account of abstraction, and (2) to isolate the phenomena that makes Scotus's theory of intuition suggestive."

41. ———. 1992. "Transcendental Being: Scotus and Scotists." *Topoi* no. 11:135-148.

"Of singular importance to the medieval theory of transcendentals was the position of John Duns Scotus that there could be a concept of being univocally common, not only to substance and accidents, but even to God and creatures. Scotus's doctrine of univocal transcendental concepts violated the accepted view that, owing to its generality, no transcendental notion could be univocal. The major difficulty facing Scotus's doctrine of univocity was to explain how a real, as opposed to a purely logical, concept could be abstracted from what agreed in nothing real, in this case, God and creatures. The present article examines Scotus's solution to this difficulty and its interpretation in four of his noted fourteenth-century

followers. It is shown that the balance Scotus's solution achieved between the competing demands of the real diversity between God and creatures, on the one side, and the conceptual unity of transcendental being, on the other, is taken in opposed directions by his interpreters. Either the real diversity of God and creatures is given priority, so that the concept of being becomes a purely logical notion, or the real unity of the concept of being is stressed, so that some sort of real community is posited between God and creatures."

43. ———. 1995. "The Origin of Scotus's Theory of Synchronic Contingency." *Modern Schoolman* no. 72:149-167.

"It has been widely accepted in the literature that Scotus was the first to advance the so-called synchronic' view of contingency, where something is contingent if, at the very moment when it occurs, there is a real possibility for its opposite. This is usually contrasted with a statistical' construction of contingency, found in Aristotle and scholastics before Scotus, according to which something is contingent if its opposite can be actually realized at some other time. The present article examines the background to Scotus's treatment of this theory of synchronic contingency and traces its proximate origin to Peter Olivi."

46. ———. 2005. "Duns Scotus's Parisian Question on the Formal Distinction." *Vivarium* no. 43:7-62.

"The degree of realism that Duns Scotus understood his formal distinction to have implied is a matter of dispute going back to the fourteenth century. Both modern and medieval commentators alike have seen Scotus's later, Parisian

treatment of the formal distinction as less realist in the sense that it would deny any extra-mentally separate formalities or realities. This less realist reading depends in large part on a question known to scholars only in the highly corrupt edition of Luke Wadding, where it is printed as the first of the otherwise spurious *Quaestiones miscellaneae de formalitatibus*. The present study examines this question in detail. Cited by Scotus's contemporaries as the *Quaestio logica Scoti*, we establish that it was a special disputation held by Scotus at Paris in response to criticisms of his use of the formal distinction in God, identify its known manuscripts, and provide an analysis based upon a corrected text, showing in particular the total unreliability of the Wadding edition. Our analysis shows that the *Logica Scoti* does not absolutely prohibit an assertion of formalities as correlates of the formal distinction, even in the divine Person, so long as their non-identity is properly qualified. That is, the positing of formalities does not of itself entail an unqualified or absolute distinction."

"In the development of logical theory from the Twelfth to the Fourteenth century, the "new logic" was distinguished from the "old logic" when the last four books of Aristotle's "Organon" were translated, and the "modern logic" was distinguished from the "ancient logic" when the principles of demonstration were found in rhetorical or dialectical topics or sophistical paradoxes rather than in analytical causes. The "old logic" and the "new logic" continued to be used to designate two sets of problems, and William of Ockham wrote treatises on both. "Moderns" was not a synonym for "nominalists" in the Fourteenth century, and the innovations in logic of that century were made by both "ancients" and "moderns." According to Duns Scotus the problems of the old logic are problems of the interpretation of sentences and the definition of simple terms from that interpretation; the problems of the new logic are problems of the analysis of inference and the interpretation of sentences from that analysis."

"In both versions of his *Commentary on the Sentences*, Scotus alludes to a great controversy among his contemporaries over the question of whether a spoken word signifies a thing or a concept.

He does not give a detailed account of this controversy, but confines himself to saying, "in short, I grant that what is properly signified by a spoken word is a thing." This brief statement may seem trivial at first sight, but it turns out to be innovative when it is assessed against the background of medieval Aristotelian semantic theory. From Boethius onwards, the overwhelming majority of the commentators on *De interpretatione* held that it is a concept and not a thing that is primarily and directly signified by a spoken word.

In this paper, I intend to examine the reasons that led Scotus to criticize and revise the dominant theory. Such an examination can scarcely be restricted to a logico-semantic analysis. An adequate understanding of the relationship between a sign and its significate not only necessitates an examination of the question of *how* this relationship is established, but also a discussion of the question of *what* exactly the sign and the significate are—what kind of entities they are. Therefore, the following analysis aims at investigating not only the semantic aspects of Scotus's theory of signification, but also its ontological commitments." (notes omitted).

"This study compares the teachings of Thomas Aquinas and John Duns Scotus on the issue of being and individuality. Its primary aim is to contrast Scotus's individuating principle, *haecceitas*, with Aquinas's actualizing principle, *esse*, attending both to their rather striking similarities as well as to their significant differences. The article's conclusion is that, while Scotus's crowning principle, *haecceitas*, is the unique entity

internal to each thing, rendering the nature complete and singular as nature, Aquinas's crowning principle, *esse*, actualizes the nature without individualizing it. This is not to imply that Scotus overlooked the importance of a thing's being, any more than Aquinas overlooked the importance of a being's singularity. It does mean, however, that the primal integrating focus and the resulting philosophical synthesis of these two seminal thinkers of the Middle Ages did significantly differ. The conclusion of the paper might be stated thus: what most distinguishes their respective philosophies is that, while Scotus's primary concern was with the existing individual, Aquinas's was with the existing individual."

"The names of certain of the great scholastic thinkers of the middle ages-St. Anselm, Abelard, Hugh of St. Victor, St. Albert the Great, St. Thomas Aquinas, St. Bonaventure, Roger Bacon, John Duns Scotus, Henry of Ghent, and the rest-are familiar not only to students of philosophy and theology but also in varying degrees to the educated public. Abelard is known for his *Historia calamitatum* and as a figure in romantic literature, if not for his work in ethics and the theory of knowledge. Like Zeno's paradoxes and the Cartesian "cogito ergo sum," a passage in St. Anselm has become the subject of unending discussion. Certain of St. Bonaventure's books have been translated and find readers. But with the exception of St. Thomas Aquinas first-hand knowledge of the writings of the medieval masters is not a common thing.

For reasons that have varied throughout the modern era John Duns Scotus has not always received the general recognition that what he was and what he did should have brought to him. However, inadequate understanding and even hostility are being displaced by something better. Appropriately, this change is due in large measure to the research and writings of his fellow Franciscans, but the books and articles of many other scholars have aided them in their labors. As a result, the record of Scotus' life has been made fuller and clearer, what he actually taught on various subjects has been brought to light, and translations of his writings begin to appear. But the most important thing of all is the essential work of the *Commissio Scotistica* on the canon and the critical edition of his writings, which proceeds year by year in spite of the inherent difficulties

of the task and those caused by the turmoil of our era. To all such labors the present volume, a cooperative effort of European, American, and Canadian scholars, is added as a further monument raised in honor of John Duns Scotus on the seventh centennial of his birth." (from the Foreword).

Texts translated into English with commentary by Martin M. Tweedale.

"This work is meant to make accessible to students of philosophy and later medieval thought the key texts in one of the most crucial philosophical debates of that period. The concentration is on Scotus's positive doctrine since it is difficult and has not received the detailed attention it deserves. Ockham's polemic against Scotus raises a host of objections to the internal coherence of Scotus's reworking of the traditional line. Some of these are ones it seems to me Scotus could have countered quite easily; others would have required some revisions, but ones that are basically within the spirit of the doctrine. Some, however, are very difficult indeed, and I shall leave to the commentary and its introductory essay the exposition of my own view on whether Scotus's position can survive intact. There is also a positive side to Ockham's views about universals, and that is only partially covered in what follows. The texts that show how Ockham envisioned preserving all the essentials of Aristotelian science even after real universals have been excised, are presented and discussed, and the very real issue of whether Ockham's effort here could possibly succeed is broached but not definitely resolved one way or the other."

110. ———. 1999. *Scotus Vs. Ockham - a Medieval Dispute over Universals. Vol. II: Commentary*. Lewiston: The Edwin Mellen

Press.

"The commentary which composes the greater part of this volume attempts not only to explain the texts translated in the first volume and to understand the positions adopted by the protagonists in this debate, but also to assess the cogency of the various arguments put forward. After all that work is done, however, there remains the task of drawing attention to the crucial issues that have emerged and arriving at some understanding of the debate as a whole and the relative merits of the positions put forward. It is this task that this introductory essay undertakes. Perhaps it would be better read after a thorough study of the commentary, but I am inclined to think that some awareness of the general issues and positions taken by Scotus and Ockham helps in making one's way through the individual texts and their often elaborate argumentation. In explaining these issues and positions I have made free use of philosophical ideas of our own day, at least to the extent that this is not grossly anachronistic."

"The realist-nominalist controversy in the fourteenth century owes its origin to Duns Scotus and William Ockham, the two men whom C. S. Peirce in his Harvard lectures on British logicians praised as "decidedly the greatest speculative minds of the middle ages, as well as two of the profoundest metaphysicians that ever lived." Scotus's reputation as a realist, even if his realism be what neo-scholastics call "moderate" and Peirce "halting," rests on his conception of how the specific nature of anything exists in individuals of any given kind."

A Bibliography of Allan B. Wolter, O.F.M. 335; Index of Names 345; Index of Subjects; 347-356.

"Over the last four decades, Allan B. Wolter, O.F.M., has done more than anyone else to make the philosophical theology of John Duns Scotus accessible to the English-speaking world, by preparing English translations of primary sources as well as interpretative essays introducing readers to Scotus' central ideas.

These tasks have been both hindered and made more urgent by the painfully slow progress of the new Vatican edition of Scotus' writings (volume I containing the Prologue of Scotus' Oxford commentary on the Sentences appeared in 1950; as of 1988, only nine volumes have been published, and the critical edition of the Oxford commentary is not yet complete). Although useful, the seventeenth-century Wadding edition is unreliable both in its attributions and readings. Difficult issues of authenticity, dating, and the interrelation of Scotus' works

remain. Thus, beginning with his dissertation, Wolter formed the habit of reverting to the manuscripts to produce his own provisional editions, consulting with Vatican editors on the Scotus Commission where possible.

Wolter's career as a Scotus translator began in 1947, when Paul Weiss requested some material for the first volume of his new journal *Review of Metaphysics*. Remarking on Scotus' notoriously tangled Latin, Wolter described the work of translating it as "a special vocation" and vowed never to do it again. Necessity is a sign of calling, however, and Wolter began translating topical selections for summer-school students at the Franciscan Institute in the early fifties. Many of these were published, with Wolter's Latin editions on the facing pages, in *Duns Scotus: Philosophical Writings: A Selection* (first published by Thomas Nelson, 1962, and English only in Bobbs-Merrill's *Library of Liberal Arts* series, 1962; reprinted by Hackett, 1987). Over the years, Wolter has made many more of Scotus' works available, always preferring the format of publishing the English and Latin together: principally, *John Duns Scotus: God and Creatures*, the *Quodlibetal Questions* (with Felix Alluntis); *John Duns Scotus. A Treatise on God as First Principle. A Latin Text with English Translation of the De Primo Principio*; and *Duns Scotus on the Will and Morality*. By now, Wolter has given us enough for a reasonably comprehensive and balanced course on Scotus.

Duns Scotus is not called "the Subtle Doctor" for nothing, however. Diving into his highly technical philosophical corpus without benefit of an interpretive guide is heroic at best. Yet, when Wolter began, reliable guides were unavailable. While not without value, the secondary literature was on the whole confused and confusing, and/or marred by polemical distortion. Together with Wolter's pioneering first book on Scotus, his published dissertation *The Transcendentals and Their Function in the Metaphysics of Duns Scotus* (finished in one semester of intensive interaction with Philotheus Boehner), Wolter's interpretive essays over the last forty years supply us with our needed map. Collected here from many (often inaccessible) journals and books, they are a paradigm of

method and a treasure of illuminating insights. Wolter's consistent response to interpretive puzzlement has been to return to the primary sources and to offer readings as detailed and philosophically subtle as the texts themselves. Thus, in the early days, when Scotus' ideas were "known" and criticized mostly from hearsay, Wolter refuted misguided attacks with careful analyses of the texts (see chapters 10 and 11 below). Throughout, Wolter's own philosophical penetration of the material has enabled him to make clear what seems in Scotus complex and confusing (e.g., regarding the formal distinction, chapter 1, and Scotus' theory of universals, chapter 2). Again, Wolter's identification of Scotus' doctrine of the will as the key to his ethics resolves old and false puzzles (see chapters 7-9). At the same time, Wolter's sensitivity to philological issues and to the historical development of Scotus' thought has enabled him to illuminate Scotus' notion of intuitive cognition (see chapter 5) as well as his account of Divine foreknowledge (see chapter 13). All of the essays reflect Wolter's philosophical and historical curiosity and a reasoned and reasonable open-mindedness. Paying Scotus the respect due a great philosopher, Wolter was glad to return to old topics because he always learned something new (e.g., his treatment of formal distinction in chapter 1 makes new points not found in his dissertation). Wolter's interests in analytic philosophy surface as he relates Scotus' semantics and metaphysics to twentieth-century analytic thought (see chapters 3 and 12)." (from the Foreword)

The Nominalist Ontology of William of Ockham

Introduction

"Like most philosophers in the Aristotelian tradition, Ockham distinguishes between propositions and the terms out of which they are composed. Central to Ockham's analysis of the concept of a term is his distinction between categorematic and syncategorematic terms. We can get at this dichotomy if we distinguish between expressions that do and expressions that do not yield a meaningful proposition when substituted for x in 'This x -es' or 'This is (a/an) x '. The former (including predicate-expressions, proper names, demonstratives, and pronouns) Ockham calls categorematic terms; the latter (including articles, particles, interjections, quantifiers, and truth-functional connectives) he calls syncategorematic terms.

It is among categorematic terms that Ockham locates the distinction between singular and general, or employing Ockham's own terminology, the distinction between discrete and common terms. Very roughly, this is the distinction between categorematic terms that can and categorematic terms that cannot function as predicate in subject-predicate propositions, or that at least is the way a contemporary Ockhamist would express the dichotomy. Ockham himself construes the subject-predicate nexus more broadly to include identity-statements, existential propositions, and propositions incorporating either the universal or particular quantifier. Against this broad interpretation of subject-predicate discourse, Ockham tells us that while the discrete term is predicable of just one thing, the common term is predicable of many.

I have indicated that this distinction has traditionally been associated with the distinction between universals and particulars.

For the medieval, the view that these two distinctions are related was legitimized by Aristotle's claim that the universal is that which is predicable of many. In a number of medieval philosophers this relation was explicated in terms of the notion of signification. The claim was that while discrete or singular terms signify particulars, common or general terms signify universals.

In medieval semantics, 'signify' was used as a transitive verb linking categorematic terms with their non-linguistic counterparts. Underlying this usage was the notion that categorematic terms are signs of objects, and the concept of a sign at work here was interpreted in psychological terms. A categorematic term is the sign of an object in the sense that the utterance of the expression has the effect of "bringing that object before the mind" of anyone familiar with the conventions governing the language in which the expression is embedded. The fact that signification involves a word-thing relationship suggests that the medieval notion of signification corresponds to the contemporary notion of reference; but in fact, the two concepts are quite different. The contemporary view tends to be that terms refer (or are used to refer) to objects only within the context of a proposition. The medievals, however, held that the signification of a term is a property which it exhibits quite independently of its role in any particular proposition; and they claimed that, at least in the case of univocal terms, the significatum of a categorematic expression is invariant over the various referential uses to which the term is put. Although it is explicitly relational, the medieval notion of signification is probably closer to the contemporary notion of meaning. In contemporary terms, the medievals were claiming that to know the meaning of a categorematic term is to know which object is its significatum." (pp. 1-2)

Selected Bibliography on the Ontology of William of Ockham

Bibliography

1. Adams, Marilyn McCord. 1963. "Things Versus "Hows", or Ockham on Predication and Ontology." In *Essays in Ontology*, edited by Allaire, Edwin B., 175-188. The Hague: Martinus Nijhoff.

Ockham's account of the truth conditions for categorical propositions of the forms '*N* is *B*' and '*A* is *B*' is dictated by his two-fold ontological program: to eliminate universals other than names or concepts and to restrict particular things (*res*) to the categories of substance and quality.(1) For endorsing

(T1) '*N* is *B*' is true if and only if *B*-ness inheres in *N*

and

(T2) '*A* is *B*' is true if and only if something that is *A* has *B*-ness, or *B*-ness inheres in something that is *A*

for all substitutions of proper names for '*N*', concrete general terms for '*B*', and abstract general terms for '*B*-ness' would be tantamount to adopting the ontology of the moderns with a distinct kind of thing for each of the ten Aristotelian categories. According to Ockham's description in the *Summa Logicae*, the moderns saw substances such as Socrates as having a certain layer-like structure: at the core is a particular substance composed of prime matter with several substantial forms; it is made one by the inherence of discrete quantity and extended by the inherence of dimensive quantity; other absolute quality-accidents such as color, flavor, odor, shape, etc. inhere in

dimensional quantity immediately and substance mediately. Accidents in the remaining seven categories are relative things (*respectus*) that have their foundations either in the substance, quantity, or qualities and their term in something else. For example, when Socrates and Plato are similar, a relative similarity thing inheres in Socrates' whiteness and is Socrates' similarity to Plato, while another relative similarity-thing inheres in Plato's whiteness and is Plato's similarity to Socrates. For reasons that lie beyond the scope of this paper,(2) Ockham thought this ontology was as prolific of contradiction and absurdity as it was of entities. His own contention is that the truth of a proposition depends not merely on which things exist, but on how they exist.

In what follows, I shall explain how Ockham sacrifices the simplicity of across-the-board adherence to (T1) and (T2), applying them only to a certain range of cases in the category of quality. Then I shall examine a series of objections that his own ontology offers no advantage commensurate with this loss. (p. 175).

(...)

"SUMMARY. Ockham's theory of truth-conditions is calculated to accommodate his ontology. He adopts a two-name theory of predication for categories involving absolute terms only, and admits the inherence-analysis for only a restricted range of concrete quality terms. Although he argues extensively that its wider application to the last eight Aristotelian categories of accident leads to contradiction and absurdity, his own positive proposal -- to treat all terms in those categories as connotatives that signify particular substances and/or particular qualities existing one way or another -- remains essentially programmatic. A full development of it would involve supplementing (T3)-(T7) by stating truth-conditions for statements about how things are related, quantified, active, etc., using absolute terms that name only substances and qualities. Ockham never delivers on the promissory notes he issues. Nevertheless, we must ask how many nominalists have gone further, and by how much, and how recently? In

Ockham's view, the realists' program is demonstrably impossible; how much less an evil, if his own is merely incomplete." (p. 188.).

(1) Although Ockham thinks that unaided natural reason will restrict its ontology to substances and qualities, he himself feels forced by the doctrines of revealed Christian theology -- viz., the Trinity, the Incarnation, and transubstantiation -- to admit really distinct relations of Paternity, Filiation, and Spiration in the Godhead, a relation of assumption in the human nature of Christ, real relations of inherence between matter and form, substance and accident, and relation of union between parts of the continuum (*Ordinatio* I, d. 30, q. 4; OT IV, 360-374).

"When the treatises on knowing and doubting first appeared as separate specialized pieces of logical literature in the first half of the 14th century, (1) Ockham was already deeply involved in political controversies.(2) His work on logic and theoretical philosophy was certainly behind him by 1330 and his personal Odyssey began, ending in Munich in 1347. Although he left us with many detailed discussions of the most important logical theories of the day, his treatment of epistemic-logical materials indicate that he was himself struggling to understand what little he found on the subject in his predecessors, to fit it properly into his own *Summa logicae* and to show its use in the formulation of the theory of scientific demonstration.(3) The main aim of this paper is to identify the epistemic principles involved in a demonstrative syllogism and to recognize the pragmatic dimension of language in which such a syllogism is expressed. To achieve our goal, we must begin with observations about the state of epistemic logic in Ockham's time and about some of the problems which comprised such logic." p. 241

"Summary and Conclusion.

Ockham's contributions to epistemic logic are diversified, ranging from his recognition of several special modes (*scire, credere, opinari, dubitare*, etc.), through his extensive concern with epistemic syllogistic moods in all three figures, and through his perceptive judgment regarding composite and

divided sense of epistemic proposition, and culminating perhaps in his epistemization of the theory of demonstration. Although there is a sparsity of the most general rules of consequence (i.e. the propositional rules) in Ockham, there are at least some. Moreover, Ockham says enough in various places on the basis of which we can reconstruct his most important presuppositions and his implied awareness of general principles of epistemic logic, especially those which are relevant for the theory of demonstration. One such principle is that if the antecedent is known by *a*, the consequent is known by *a*, but only on the condition that *a* knows that the consequence is sound. Whereas other writers on *Post. Anal.* and on scientific demonstration concentrated on the objective side of the matter, treating demonstration as if it were a matter of logical and extra-logical connections independently of the investigator, questioner, or doubter, Ockham showed a great deal of attention to the role of the knower and he recognized most vividly that the reference to the epistemic subject in the statement of epistemic/doxastic principles is essential and not accidental or superfluous." p. 255

(1) One of the earliest special treatises on the subject of knowing and doubting was written by Ockham's younger contemporary William Heytesbury whose *De scire et dubitare* appeared as one of the chapters of *Regulae solvendi sophismata* (ca. 1335). In this chapter Heytesbury refers back to the famous Grosseteste's characterization of the various senses of 'to know' (*scire*), but, unlike Ockham, he concerns himself with explicating primarily the nature of knowing in the sense of knowing "necessary" propositions of the sort which can become objects of scientific demonstration.

(2) The most comprehensive presentation of Ockham's ideas is undoubtedly that of Marilyn McCord Adams, *William Ockham* (2 vols.), Notre Dame University Press (Publications in Medieval Studies, 26), 1987, xvii + 1402 pp. The unique contribution to Ockham studies, however, goes to the editors of *Collected Works of William of Ockham* at the Franciscan Institute at St. Bonaventure University who finally made possible studies grounded in definitive, critically-edited texts.

One should also keep in mind the studies of two other scholars, Philoteus Boehner and Ernst A. Moody, who made the thought of the great medieval thinker palatable to modern tastes. Cf. P. Boehner, *Collected Articles on Ockham*. Ed. Eligius M. Buytaert. Franciscan Institute. St. Bona-venture, N.Y. 1958; and E. A. Moody, *The Logic of William Ockham*. Russell & Russell, New York 1965.

"Connotation plays a central role in Ockham's analysis of the language of natural philosophy and mathematics. Some simple connotative terms belong to the deep structure of mental language. Ockham's program cannot guarantee the objectivity of things being quantified or located in space and time without his connotation-theory. Ockham's theory provides a partial explanation of why fourteenth- century philosophers shifted attention from discussion about the objects of mathematics to discussion of mathematics as a language. The shift explains in

- part the adoption of mathematical and metalinguistic approaches to philosophical and theological problems."

"Many medieval grammar and logic texts contain treatments of *relativa grammaticalia*, expressions some of which we now call anaphoric pronouns. The first philosopher who paid attention to these treatments seems to have been Peter Geach.

Apparently, Geach found their treatments both stimulating and frustrating.' In his main work on semantics, *Reference and Generality* (1), he presents some theses of Walter Burleigh's on this topic, a fourteenth century logician and opponent of William Ockham, at considerable length. Elsewhere, however, he remarks that while 'the logic of pronouns with antecedents was extensively studied by medieval logicians in their chapters de suppositione relativorum; [...t]his medieval treatment of pronouns was inconclusive" (2) and that "[...] the medievals who discussed *relativa* - pronouns with antecedents - were groping in the dark despite all their ingenuity'. (3) What Geach deplored was the apparent tendency of 'the medievals' to treat anaphoric pronouns, *relativa grammaticalia substantiae*

identitatis in terms of co-reference, of ' *supponere pro eodem*'. As is well known, Geach himself favors a rather different approach, according to which it is nonsense to talk about the reference of such pronouns at all, for they act like bound variables. His view on pronouns has now a considerable number of adherents and a few critics - most notably Gareth Evans. (4)

I am not concerned here with the question whether Geach's own theory of pronouns is correct, but whether his verdict about *medieval* theories of *relativa* is justified. His verdict is of unrestricted generality: it is not *some* medieval treatment of pronouns that is inconclusive, but "the" medieval treatment. This makes his claims an easy target for counterattack: Just find some medieval logician, whose theory does not fit Geach's claims. I have done this elsewhere. (4) Here I want to consider two logicians Geach has actually dealt with himself: Burleigh and Ockham.

"This volume gives an introduction to William Ockham's theory of signs, his ontology, his epistemology, and the interrelations between these fields. Some recent results of analytic philosophy turn out to be useful instruments for the interpretation of Ockham's thought.

Part one contains a presentation of the basic concepts of Ockham's semantics. It is followed by an investigation of his ontology, including a comparison with modern ontology. Part three deals with the common and different elements in the

- conceptions of supposition and of quantification. Part four shows some similarities of Ockham's views on the truth of sentences with those of Davidson. The final part presents Ockham's epistemology within the discussion of his contemporaries and confronts it with actual issues raised by Quine and Putnam."

Handbook of the history of logic: Vol. 2.

"This paper is going to outline the innovative semantic theories of the two great 14th-century nominalist thinkers whose work

eventually gave rise to the quasi institutional separation of the nominalist *via moderna*, the "modern way", from the realist *via antiqua*, the "old way" of doing logic, science, philosophy, and theology in the late Middle Ages. The person who initiated these changes was the English Franciscan theologian, William Ockham. However, the person who was primarily responsible for establishing Ockham's nominalism as a genuinely viable theoretical alternative was the French secular Master of Arts, John Buridan." p. 389 (note omitted)

"Buridan's semantics starts out in the same way as Ockham's. Acknowledging the subordination of written to spoken, and spoken to mental terms (i.e., concepts), establishes for him a "semantic triangle", in which concepts are natural signs of whatever we conceive by means of them, whereas the utterances and inscriptions subordinated to them are the conventional signs of the same, in virtue of their conventional subordination to concepts. Not all concepts have, however, the function of conceiving something; some concepts merely serve to determine *how* we

conceive of things conceived by other concepts. This is the basis of Buridan's primary distinction between categorematic and syncategorematic concepts, and the corresponding spoken and written terms." p. 414

"The distinctions between singular and general terms, on the one hand, and abstract and concrete terms, on the other, play crucial roles in discussions of ontological issues. Although these dichotomies can be expressed in purely grammatical terms, they have traditionally been thought to point to two overarching distinctions among things. Philosophers have frequently claimed that the singular-general term distinction is rooted in a distinction between objects that are particulars and objects that are universals; whereas, the distinction between concrete and abstract terms forces us to confront the distinction between substances (minimally interpreted to include material bodies and persons) and the various characteristics they possess or exhibit.

But because they appear to carry these far-reaching metaphysical implications, these grammatical dichotomies receive detailed treatment at the hands of the nominalist. If his theory is to be at all plausible, the nominalist must have the resources for providing a metaphysically neutral account of the singular-general and concrete-abstract dichotomies. In this essay I want to examine William of Ockham's ontology by focusing on his treatment of these distinctions. My aim here is twofold. By examining Ockham's analysis I hope to provide an introduction to the central themes of Part I of the *Summa Logicae* and to clarify the concept of a nominalistic ontology in general." p. 1

"The author analyses philologically and philosophically the two different expressions 'nomen' and 'terminus' used by Ockham in the chapters given up to the supposition theory in his "Summa logicae". By that we can say that Ockham's logic of terms is interested primarily in the words, and in the concepts

- just with reference with these last ones, without qualifying Ockham's logic as 'nominalist': in fact 'nomen' receives his own capacity of meaning by the concept as natural linguistic sign."

"Within the Ockhamist semantics, the predicate 'true' is explained by another more basic semantical relation, the relation of supposition.

The author shows how this relationship between two semantical predicates figures in the analysis of the truth-conditions of propositions about the past, and demonstrates that it is a model that can be extended to propositions about both the future and the possible. The author indicates how the semantics of alethic modalities is in continuity with the semantics of propositions about the past and about the future. If we consider another aspect of Ockham's modal theory, viz., the fact that modalities are defined as any term that can be predicated of a whole proposition, the importance of this point becomes clear. In conclusion, the author points out the different levels of analysis of alethic modalities within an Ockhamist framework."

"William of Ockham's *Summa Logicae* is a classic of analytical metaphysics, using a typical fourteenth century logic treatise to defend a reductionist ontology. For Ockham, everything is an individual, and this is to be shown by the correct logical analysis of language, reinterpreting Aristotle's *Categories* as a taxonomy of the many ways in which terms can be predicated. The ultimate

basis is the attribution of an individual quality to an individual substance. This theory of the signification of terms is then extended to an account of the truth-conditions of propositions and the truth-preservation of arguments, but always with the reduction to individuals as the key. This classic work in the logical analysis of language still contains lively insights for contemporary scholars."

Reprinted as chapter XIV in: *Through language to reality: studies in medieval semantics and metaphysics*.

"IV. Schlußbetrachtung. Ockham anerkennt ohne Einschränkung den transzendenten Bezirk, d. h. das Metaphysische oder Übersinnliche als Bezirk; in diesem Sinne ist er also gewiß kein Antimetaphysiker. Aber verwirft er denn die Metaphysik als Wissenschaft, oder höhlt er sie zumindest aus? Zuerst muß anerkannt werden, daß Ockham im Prinzip der Metaphysik das Weisungsrecht über die Seienden (d. h., für Ockham, die individuellen Seienden) keineswegs abspricht. Zugleich kann nicht geleugnet werden, daß bei ihm der Metaphysik eine auffallend bescheidene Stelle zukommt. Wie läßt sich das unter Berücksichtigung von Ockhams unzweifelbarer Ehrfurcht vor dem Übersinnlichen erklären?"

Der Schlüssel zur Lösung dieser Frage liegt nicht bloß in Ockhams Ontologie des individuellen Seins, sondern auch in seinen anthropologischen Auffassungen. Der Mensch ist nach ihm in seinen Denken und Sprechen nicht imstande, das Erhabene wesentlich zu durchforschen. Dessen soll sich der Mensch fort während eingedenk sein. Dies ist für Ockham in zwei deutliche Strategien übersetzbar:

- a) nicht jedem modus significandi oder loquendi entspricht ein modus essendi in der Wirklichkeit
- b) viele maßgebende Aussagen, sowohl sakrale wie profane, soll man nicht de virtute sermonis (dazu reicht unser Sprechen zuwenig aus), sondern der Absicht des Redners oder Schriftstellers entsprechend deuten." pp. 326-327 (Notes omitted).

Nijmegen: Ingenium Publishers.

Reprinted as chapter XIII in: L. M. De Rijk, *Through language to reality: studies in medieval semantics and metaphysics*, (edited by E. P. Bos), London, Variorum Reprints, 1989.

" *Conclusion*. There is no single reason, I think, to ascribe to Ockham any feelings of hostility towards metaphysics on this account. God created 'true and real being', but He created it in shaping 'what is truly and really being', individual beings, that is. As created, it is radically changeable and contingent as well. Uncreated, unchangeable being is not to be created, not even as some mysterious constituent present in creatural being.

Human beings are not entitled to sublimate their (indispensable) conceptual tools (e.g. universal terms) so that they represent unchangeable ontic standards. Whenever we are inclined to do so, Ockham's razor comes in, not however, to make us say that the metaphysical domain is void. Rather logic (and human thought in general) should make us recognize our own limitations, and refrain from speaking about the unspeakable when, and inasmuch as, our linguistic tools are bound to lead us astray. The same applies to Ockham's view of proofs of God's existence. He only admits the proof of God as first preserver of these actual things in this actual world and rejects all atemporal proofs. However, his faith is unshakeable and not involved in any philosophical thinking either. Likewise it is Ockham's ontology (doctrine of being) which is modest, the *onta* 'beings') are as abundant as they are. For that matter, Ockham let them really be (*ontôs einai* Plato would say). Well, in order to let them *be*, human thinking should be prudent in cautiously managing its homemade conceptual apparatus." pp. 38-39

146. ———. 1990. "Ockham's Theory of Demonstration: His Use of Aristotle's *Kath' Holou* and *Kath' Hauto* Requirements." In *Die Gegenwart Ockhams*, edited by Vossenkühl, Wilhelm and Schönberger, Rolf, 232-240. Weinheim: VCH-Verlagsgesellschaft.

"Far from being a sceptic William of Ockham made every effort to corroborate the basis of philosophical and theological thought by purifying it of all sorts of untenable presuppositions. His main contribution to fourteenth century philosophical and

theological development lies in systematically rethinking scholastic doctrines, and especially their assumptions, on the firm basis of his own favourite leading principles: the strictly individual nature of all that really is and the radical contingency of all creatural being.

These two principles also play a major part in Ockham's way of dealing with the Aristotelian theory of demonstration. The present paper aims at investigating Ockham's doctrine of demonstrative proof, focusing on the way in which he felt forced to adapt or rephrase the special requirements Aristotle had laid down for propositions to enter into syllogistic proof, especially strict proof (the so-called '*demonstratio potissima*'). Our main argument will concern Aristotle's rather peculiar '*kath holou*' requirement and Ockham's appliance of the '*kath hauto*' (Latin: `per se') notion which is also involved in framing correct premisses for demonstrative proofs. A few preliminary remarks will be made about the essentials of Aristotle's theory of demonstration." p. 232

(...)

"Conclusions.

To sum up our findings: Ockham's adaptations and manipulations of Aristotle's requirements for genuine demonstrative propositions are as many demands imposed by his own metaphysical views. He comments on Aristotle, always starting from his own favourite views. Though Aristotle is the Master, Ockham is the one to say what the Master meant, or what he should have meant. On the other hand, his introducing the '*per se strictissimo modo*' rather seems to be a matter of technicality. Whereas in *Posterior Analytics* Aristotle deals with the scientific procedure of *apodeixis* in general, in which the apodeictic syllogism is merely a vehicle for correctly framing an *apodeixis*, the Medievals, and Ockham in particular, were apt to reduce Aristotle's theory of demonstrative proof to a theory of demonstrative syllogism. That is why the '*demonstratio potissima*' (including its specific demands) so heavily influenced Ockham's theory of demonstration." p. 239

147. ———. 1995. "Ockham as the Commentator of *His* Aristotle. His Treatment of *Posterior Analytics*." In *Aristotelica Et Lulliana: Magistro Doctissimo Charles H. Lohr Septuagesimum Annum Feliciter Agenti Dedicata*, edited by Domínguez Reboiras, Fernando, Imbach, Ruedi, Pindl, Theodor and Walter, Peter, 77-127. The Hague: Martinus Nijhoff.

1. Introduction; 2. Preliminary: Aristotle on demonstrative or epistemonomic proof; 2.1 On the three requirements '*kata pantos*', '*kath' hauto*', '*kath' holou*', 2.2 On the notion of necessity; 2.3 On the four types of questions. On 'Middle' and 'Definiens'; 2.3.1 Subject and attribute. The Middle; 2.3.2. On definition and the four question-types; 2.3.3 The role of definitions in epistemonomic proof; 2.3.4 Recipes for the discovery of definitions; 2.4 The '*kath' holou*' requirement revisited; 2.5 Particulars and the proper objects of Aristotle's epistemonomic proof; 3. Ockham as a Commentator of *Posterior Analytics*; 3.1 Ockham's treatment of the four basic question-types; 3.2 Ockham's view of the '*kath' holou*' requirement; 3.3 The impact of Ockham's ontology upon his theory of demonstration; 3.3.1 Ockham's problem concerning the First Subject; 3.3.2 Ockham's introduction of 'Non-First Subject'; 3.3.3 '*Demonstratio particularis*' in Ockham; 3.3.4 Ockham's view of necessity; 3.5 '*Dici per se*' and '*propositio per se vera*' in Ockham; 3.5.1 Two kinds of '*per se*' assignment; 3.5.2 The '*propositio per se (vera)*' in Ockham; 3.5.3 The strict and strictest senses of '*per se*'; 4. Conclusion.

"The present paper aims to clarify the attitude towards Aristotle adopted by one of the leading lights of fourteenth century philosophical and theological thought, William of Ockham, by investigating (a) how in some of the vital subjects of Aristotelian doctrine, the Venerable Inceptor understood and interpreted the Master, (b) how and why on specific occasions, he deliberately took the liberty to stray from Aristotle's teachings. It goes without saying that in such an undertaking, one has to confine oneself to certain doctrinal themes the choice of which might seem quite arbitrary. The present author has picked out the Aristotelian doctrine of demonstrative proof as interpreted by Ockham." p. 78

Reprinted in: Edwin B. Allaire [and others], *Essays in Ontology*, The Hague, Martinus Nijhoff, 1963, pp. 79-91.

"The logic of William of Ockham is commonly -- and, I believe, rightly - thought to be nominalistic. It is also commonly -- and, I believe, wrongly -- thought to be helpful in the solution of those philosophical problems which cluster about the issue of the "one and the many." The allegedly helpful features of his logic are the theories of signification and supposition. I intend

to show that these theories, far from being helpful, lead to certain intolerable results, in particular, (1) construing singular propositions, like "Socrates is a man," either as analytic or as no propositions at all (i.e., neither true nor false) and (2) construing all general propositions as either analytic or contradictory. These results follow from taking Ockham as offering object language analyses of object language propositions. Taking him as offering metalanguage analyses of object language propositions is to start off with attributing an intolerable "result" to his logic. It will be helpful, at the end, briefly to compare his logic with that of a contemporary nominalist, Nelson Goodman, for neither of the intolerable results follows from Goodman's logic. Whether the latter is, therefore, acceptable is another issue.

My strategy is as follows. In Part I, I wish to show that a rather straightforward interpretation of Ockham does have him offering metalinguistic analyses of object language propositions and also to show how certain contemporary interpreters and Ockham himself have managed to blind themselves to this fact. In Part II, I wish to show that the so-called "descent to singulars" affords a possibility of construing Ockham as offering object language analyses of object language propositions and to show how, given the doctrines discussed in Part I, he is led to adopt the 'is' of identity, the latter in such a way as to lead into the "intolerable results" mentioned above. In Part III, I wish to make the brief comparison with Goodman's logic.

No detailed descriptions of the Ockhamite theories of signification and supposition will be attempted. Ockham states them quite clearly, and there exist excellent contemporary accounts of both, especially those of Fr. Boehner and Prof. Moody.(*). I shall discuss just what is necessary to make good the several claims listed above. The discussion will, furthermore, be limited to Ockham's doctrine of categorical propositions of present time. This is quite enough, for his doctrines of past, future, and modal propositions are directly dependent upon his doctrine of present-time categoricals." (pp. 79-80 of the reprint).

Texts translated into English with commentary by Martin M. Tweedale.

"This work is meant to make accessible to students of philosophy and later medieval thought the key texts in one of the most crucial philosophical debates of that period. The concentration is on Scotus's positive doctrine since it is difficult and has not received the detailed attention it deserves. Ockham's polemic against Scotus raises a host of objections to the internal coherence of Scotus's reworking of the traditional line. Some of these are ones it seems to me Scotus could have countered quite easily; others would have required some revisions, but ones that are basically within the spirit of the doctrine. Some, however, are very difficult indeed, and I shall leave to the commentary and its introductory essay the exposition of my own view on whether Scotus's position can survive intact. There is also a positive side to Ockham's views about universals, and that is only partially covered in what follows. The texts that show how Ockham envisioned preserving all the essentials of Aristotelian science even after real universals have been excised, are presented and discussed, and the very real issue of whether Ockham's effort here could possibly succeed is broached but not definitely resolved one way or the other."

169. ———, ed. 1999. *Scotus Vs. Ockham - a Medieval Dispute over Universals. Vol. II: Commentary*. Lewiston: Edwin Mellen

Press.

"The commentary which composes the greater part of this volume attempts not only to explain the texts translated in the first volume and to understand the positions adopted by the protagonists in this debate, but also to assess the cogency of the various arguments put forward. After all that work is done, however, there remains the task of drawing attention to the crucial issues that have emerged and arriving at some understanding of the debate as a whole and the relative merits of the positions put forward. It is this task that this introductory essay undertakes. Perhaps it would be better read after a thorough study of the commentary, but I am inclined to think that some awareness of the general issues and positions taken by Scotus and Ockham helps in making one's way through the individual texts and their often elaborate argumentation. In explaining these issues and positions I have made free use of philosophical ideas of our own day, at least to the extent that this is not grossly anachronistic."

"The importance of the connotation theory in Ockham's semantics and metaphysics can hardly be overstated--it is the main mechanism that brings forth Ockham's famous ontological elimination. Yet none of the extant interpretations can satisfactorily accommodate three widely accepted theses: (1) there is no synonym in mental language; (2) a connotative term has a semantically equivalent nominal definition; and (3) there are simple connotative terms in Ockham's mental language. In this paper I offer an interpretation that I argue can accommodate all."

Comparative Philosophy: Non-Western Logic and Ontology

Preliminary note

The purpose of these pages is to give both the beginner and the more experienced reader a brief guide to the literature on ontology and logic available in non-Western traditions.

This is an important and original, but often neglected, subject and I will made an attempt to list the more important studies of African, Buddhist, Chinese, Indian and Arabic traditions that are available in English.

In its initial form the page will contain a selection of readings, with brief annotations on the content (for the most important books, also the index will be included); subsequently these will be expanded to include more specific Essays on selected problems and the most relevant studies in French, Italian and German.

This is a very hard job and will require a long amount of time to be completed; suggestions and criticisms will be particularly welcome. In the sections for beginners, preference will be given to those books more readily available. In other sections some books could be out of print; if your Library does not possess the volume, it may be possible to obtain it via interlibrary loan.

Every effort will be made to provide details that facilitate Bibliographical research.

The task of Comparative Philosophy

"Comparative philosophy is a field of inquiry that has been little explored. It could not have come into existence before intellectually

significant contacts among the philosophical traditions. China had such a contact with India during the early centuries of the Christian era, mainly through Buddhism; but India remained unaffected. Between Greece and India the encounter was sporadic and short-lived; neither made a deliberate attempt to study the other. But the world situation has now changed. The East and the West have come once for all into intimate contact on a vast scale. Each feels the necessity for mutual understanding and even for assimilating whatever in the other is true and useful. This need to understand is no longer a matter of mere intellectual curiosity but of survival. The eastern and western minds need to be integrated. It has been asserted and is still being maintained today that each has a different kind of soul. But if the two are to be integrated, we have to assume a deeper soul comprehending the manifest souls of both. This common soul must always have been, without either component being conscious of its presence. The encompassing soul has to be discovered and understood; and in its terms the separate souls have to be reappraised.

There have been works useful for the study of comparative philosophy, such as source books, treatises on philosophical beginnings, separate histories, evaluations of cultures, and some syntheses. However, they have not presented the philosophical traditions with a unified perspective from which they can be studied comparatively. Comparative philosophy must have a philosophical aim. Only when the aim is clarified can the work be given a definite shape. The aim has to illuminate the perspective; then the traditions thrown into perspective take on a definite meaning and significance. The aim of comparative philosophy is the elucidation of the nature of man and his environment in order that a comprehensive philosophy of life and a plan for thought and action may be obtained. It is with this end in view that the present the Indians who are acquainted with both western and Indian philosophies have little knowledge of the Chinese. Similarly, many Chinese know very little of the western and the Indian except Buddhism. Moreover, each has many wrong notions about the other philosophies and cannot get the feel of them. There is therefore a need for a book in which all three traditions are given in outline. From this book the reader can learn the general trends and central ideas of each.

In comparing and evaluating, the reader should be allowed to draw his own conclusions. He need not accept those given by authors, not even by the present writer. But he can draw his own conclusions only if the traditions are presented according to a single plan, and if he is given some insight into them. He should know fairly well what he is to compare before he does compare.

There are many standard works on the separate histories of the philosophical traditions. But often they are so detailed that it is difficult to understand the main trends and interests. One cannot easily rise above the minutiae in order to view all the traditions together. There are also briefer histories of philosophy. But they have not been written from any single point of view, not even according to any single plan, with the result that one becomes confused when attempting to get a comparative view. The reader belonging to any one tradition should get an understandable impression of the others. This purpose can be achieved only if all the traditions can be presented according to a generally common plan and common concepts. This volume undertakes to do this in a modest fashion by introducing the western, Indian, and Chinese readers to each others' philosophies.

A few books have been written about the world's philosophies, but often without an adequate grasp or exposition of their natures. The result is that the reader finds the unfamiliar traditions strange and outlandish, and is unable to form an opinion about them. Some of the authors treat several different philosophies sympathetically. Yet sympathy, though essential, is not enough, unless it leads to deeper understanding. That is why their interpretations are often curious, and not very helpful. If reason is the same everywhere and many of life's problems are shared, this strangeness ought to be minimized. Any presentation of all philosophies together should lessen this strangeness and increase understandability.

One great hurdle in preparing a work on comparative philosophy is the difficulty of learning all the languages involved. The project could have taken the form of a symposium by a number of specialists.

Nevertheless, even when a uniform plan is outlined, it is hard to obtain uniformity of treatment, since the minds of individual investigators operate along different lines.

How long, then, are we to wait till a master of all languages and philosophies offers the world a work on comparative philosophy? Some one has to start the task, and the author, along with a few others before him, has ventured to begin, even though aware of the perils.

He accepts dependence on translations as inevitable for any treatment of comparative philosophy. One who attempts to master several languages as well as the philosophies written in them risks shallowness.

The language barrier is likely to confront every writer on comparative philosophy who wishes to base his work entirely on original sources, but any defect that may result from the difficulty will rectify itself in course of time, as thinkers of different traditions, interested in comparative philosophy, cooperate with one another through mutual criticism." (Preface, pp. V-VII)

Bibliography

1. Abe, Masao. 1975. "Non-Being and *Mu* - the Metaphysical Nature of Negativity in the East and the West." no. 11:181-192.

Reprinted in Masao Abe, *Zen and Western Thought*, London: Macmillan, pp. 121-134.

"In Volume I of his Systematic Theology, Paul Tillich says, 'Being precedes nonbeing in ontological validity, as the word "nonbeing" itself indicates.'(1) Elsewhere, he says 'Being "embraces" itself and non being' ,(2) while 'Nonbeing is dependent on the being it negates. "Dependent" points first of all to the ontological priority of being over nonbeing.(3) Tillich's statements reflect a tendency among some Christian thinkers to take God as Being itself. The same understanding of the relation of being to non-being can be discerned in major strands of Greek philosophy in the ideas of *to on* and *me on*.

(...)

An objection must be made to this understanding of being, however, for in reality there is no ontological ground on which being has priority over non-being. It is assumed that being embraces both itself and non-being. But the very basis on which both being and non-being are embraced must not be 'Being' but 'that which is neither being nor non-being'. That being has priority over" is somehow superior to, and more fundamental than, non-being, has been assumed, perhaps uncritically, not only by Tillich in particular but for quite some time by the West in general." (p. 121)

2. ———. 1985. *Zen and Western Thought*. London: Macmillan.

Edited by William R. LaFleur.

Foreword by John Hick.

"The selection of essays constituting this book were written at one time or another during the past eighteen years. The focus is on Zen, Buddhism, and the comparative study of Buddhism and Western thought. The essays were selected primarily to present my understanding of Zen, especially its philosophical and religious significance in its encounter with Western thought. Some address themes with which I was asked to deal, while others elucidate subjects I myself wanted to explore. Several were directed to Japanese readers and hence were originally written in Japanese. Others were directed to a Western audience and were written in English. The selection includes addresses which were originally delivered orally and are hence somewhat informal in comparison to the more academic articles. Accordingly, the book was not written systematically with a consistent intention. Heeding the advice of the editor, Professor William R. LaFleur, I have tried to select and compile the essays in such a way as to make the work as systematic as possible. The result is the book now before you." (p. XXI)

3. ———. 1997. *Zen and Comparative Studies*. London: Macmillan.

Edited by Steven Heine.

Part two of a two-volume sequel to *Zen and Western Thought*.

"The title of this collection of essays, which I wrote over a period of two decades, highlights the sharp contrast and conflict as well as the areas of compatibility and

complementarity between Zen and comparative studies. In Part One, Fundamentals of Zen, I elucidate the meaning of Zen as a self-transmission of mind in its own terms. These essays take up the topics of 'ordinary mind is Tao,' life and death and good and evil, emptiness, selfhood, and education. On the other hand, in the essays in Part Two, Zen, Buddhism, and Western Thought, I situate Zen in a comparative philosophical context through discussions of the Aristotelian notion of Substance, Whitehead's notion of process, and Plato's idea of Form (*eidos*). Focusing on the problem of death, the article on 'The Problem of Death in the East and West' tries to elucidate the essential characters of Platonism, Christianity and Buddhism, especially Zen, through a systematic comparative approach.

In Part Three, Current Issues in Buddhism, I pick up a number of contemporary topics such as monotheism versus monism, time and self, human rights and religious tolerance from the angle of comparative studies. Finally, Part Four, Zen and Japanese Culture, attempts to clarify the role of Zen in terms of the intellectual history of Japan from ancient literature and Tokugawa Shinto thought to modern philosophy." (pp. XII-XIV)

"Traditional scholars of philosophy and religion, in both the East and the West, have often placed a major emphasis on analyzing the nature of self. But with a few significant exceptions, they have dismissed or devalued the role of culture in their specific formulations of "the self," arguing instead for some view of an objective, ahistoric, universal self. When they have cited cultural conditionings and variables, moreover, these scholars have usually described them as subjective, illusory, and distorting influences, thus obscuring the deeper, underlying, objective view of "the self" that transcends all such particular historical and cultural expressions." (Introduction, p. XI)

(...)

"The chapters of this book—with their primary emphasis on comparative philosophy, religion, and culture—have been divided into four parts: Multiple Asian and Western Perspectives, Chinese and Western Perspectives, Indian and Western Perspectives, and Japanese and Western Perspectives. Included among these analyses are Vedanta, Samkhya-Yoga, and other Hindu approaches; Buddhist, Confucian, Taoist, and other Indian, Chinese, and Japanese perspectives; Cartesian and other dominant Western perspectives; and Marxist, Nietzschean, Sartrean, feminist, and other challenges to dominant Western interpretations of culture and self."

(Introduction, p. XII)

6. Allinson, Robert E. 2001. "The Myth of Comparative Philosophy or the Comparative Philosophy *Malgré Lui*." In *Two Roads to Wisdom? Chinese and Analytic Philosophical Traditions*, edited by Mou, Bo, 269-291. La Salle, IL: Open Curt.

""Comparative philosophy" such as it has been practiced is normally "comparative-inclusive," "comparative-exclusive," or a mixed type.(8)"

(...)

Comparative exclusive philosophy, practiced as a discipline separate from philosophy proper can be classified into two streams.(10) One stream, represented by the positive comparativist, searches for likenesses and unlikenesses between the two traditions but normally shows a preference for the likeness. This stream, while searching for positive correlations, does not generally attempt to borrow from the content or the methodology of the other tradition or lend the content or the methodology of its own tradition to the other tradition. Generally speaking, the positive comparativist searches for analogues of Western concerns, issues, and methodology in Chinese philosophy. Normally, the positive comparativist does not first find issues, concerns, and methodologies in the Chinese tradition that are borrowed for use within the Western tradition.

The standpoint of the positive comparativist is a stand-alone standpoint in which parallel developments in each tradition may be noted, but normally there is no active expropriation of issues, concerns, or methods found originally in the other tradition and consequent alteration of methods in one's own tradition.

Another stream, represented by the negative-exclusionist comparativist (for future reference, for convenience's sake these types will be referred to as negative or positive comparativists), possesses the tendency to find that the traditions or the terms compared are incommensurable. This stream also remains intact within the secure boundaries of its own philosophical heritage. Negative comparativists are not completely negative since, irrespective of the internal inconsistency in approach this implies, generally consider that Western categories are useful in understanding the other tradition even though the other tradition remains alien to one's own." (pp. 271-272, some notes omitted)

(8) This set of types is not intended to be an exhaustive classification of types but it does represent a good starting point for investigations. (...)

(10) This is not intended as an exhaustive classification of comparative philosophy but only as an identification of two tendencies. (...)

7. Ames, Roger T. 1990. "Directory of Comparative Philosophers." *Philosophy East and West* no. 40:73-97.

Second part: vol. 41, pp. 537-556.

"One important function of *Philosophy East and West* is to keep our readership informed on the progress of scholarly research in the field of Asian and comparative philosophy. In an effort to realize this objective, in the late summer of 1988 a letter was circulated to our active list of comparative philosophers in order to begin compiling a directory which will describe the ongoing research and the recent publications in our field. This compilation also provides the *Society for Asian and Comparative Philosophy* with a resource from which to

draw the themes and potential participants for future panels and programs.

In this issue, we are bringing to print the first installment of the *Directory of Comparative Philosophers*, and, at the same time, are again circulating a letter in preparation for the second installment, to be published at the beginning of next year. We encourage active comparative philosophers to provide us with the appropriate information on their research projects and publications to help us keep colleagues with similar interests informed.

Roger T. Ames, *Editor*" (p. 73)

8. Angle, Stephen C. 2006. "Making Room from Comparative Philosophy: Davidson, Brandom, and Conceptual Distance." In *Davidson Philosophy and Chinese Philosophy: Constructive Engagement*, edited by Mou, Bo, 73-100. Leiden: Brill.

"Over the last three decades, one of the principal resources on which comparative philosophers could draw when they sought assurance has been the work of Donald Davidson." (p. 73)

(...)

"Davidson has argued convincingly that anything we can recognize as a language must, in principle, be translatable into any other language.

As I will elaborate below, this argument has sometimes been misunderstood, but it nonetheless stands as an important support for the enterprise of comparative philosophy.

As significant as Davidson's work has been, however, my thesis in this essay is that comparative philosophers need still more than Davidson's theory is able to provide. It is not enough to know that translation is possible in principle: we need to be able to talk about conceptual differences with more subtlety, and to reason about what is at stake in overcoming them." (p. 74)

(...)

"Davidson is not wholly without resources to explain the range of conceptual differences and the dynamics of language change. I will point to some promising ideas in his later work, as well as to some

elaborations of his basic theories proposed by others. But in the end, the best solution to these matters is to be found in the work of Robert Brandom. In many respects Brandom's views are Davidsonian; turning to Brandom is not to abandon Davidson's core insights, but to recast them in a framework that allows them fuller expression.

My goal will be to show why the creative philosophical projects of contemporary comparative philosophy are possible, even though they are often difficult." (p. 74)

9. ———. 2010. "The Minimal Definition and Methodology of Comparative Philosophy. A Report from a Conference." *Comparative Philosophy* no. 1:106-110.

Abstract: "In June of 2008, the International Society for Comparative Studies of Chinese and Western Philosophy (ISCWP) convened its third Constructive Engagement conference, on the theme of "Comparative Philosophy Methodology." During the opening speeches, Prof. Dunhua ZHAO, Chair of the Philosophy Department at Peking University, challenged the conference's participants to put forward a minimal definition of "comparative philosophy" and a statement of its methods. Based on the papers from the conference and the extensive discussion that ensued, during my closing reflections at the end of the conference I offered a tentative synthesis of the conference's conclusions. That summary has already been published on-line as part of the bi-annual ISCWP newsletter (Angle 2008). In this brief essay, I recapitulate the themes of my earlier summary and expand, in my own voice, on some of the key points."

10. Bahm, Archie John. 1977. *Comparative Philosophy: Western, Indian and Chinese Philosophies Compared*. Albuquerque: Universal Publications.

Contents: Acknowledgments VIII; Preface IX; I. What is Comparative Philosophy? 1; II. Standards for Comparative Philosophy 25; III. Eastern and Western Philosophies Compared 45; Appendix 82; Index 95-98.

"Comparative philosophy is a relatively new field of study, research, achievement in understanding and teaching. The purpose of this work is to help clarify the nature of comparative philosophy; to survey views about the kinds of standards that may be used as bases for comparisons; and to propose an hypothesis comparing pervasive traits of the philosophies of Western, Indian and Chinese civilizations." (Preface, p. IX)

11. Balslev, Anindita N. 1997. "Philosophy and Cross-Cultural Conversation: Some Comments on the project of Comparative Philosophy." *Metaphilosophy* no. 28:359-370.

Abstract: "This paper seeks to highlight the East-West asymmetry in philosophical exchanges. It draws attention to the absence of Eastern thought in the curriculum of philosophy in the West and suggests that cliches and stereotypes about cultures in general and thought-traditions in particular are perpetuated in this manner. The aim of the paper is to encourage 'cross-cultural conversation' among philosophers. A critical review of the project of 'comparative philosophy' is made to disclose the fact that despite the difficulties of such an endeavor, it is an attempt to bring thought-traditions together and is thereby useful for promoting intercultural understanding."

12. Benesch, Walter. 1997. *An Introduction to Comparative Philosophy: A Travel Guide to Philosophical Space*. London: Macmillan.

"This travel guide to philosophical space in the broadest sense is a comparative introduction to philosophy and philosophizing as these are aspects of the human condition everywhere. It focuses in a more specific sense upon the concern for meaning

and the corresponding development of thinking methodologies in certain Greco-European, Indian, and Chinese philosophical systems. The text introduces these Eastern and Western traditions in two unique ways:

Firstly: It addresses philosophical space as four different but related dimensions of human thought and experience: (1) the significance and nature of the objects of experience and their interrelationships about which we think; (2) the significance and nature of the thinking *subject* in whose awareness objects mean what they mean; (3) the significance and nature of the situations in which thinking subjects encounter both their own awareness and the objects of which they are aware; (4) the nature and significance of these subject, object and situational elements as aspects and perspectives within a human/nature continuum. These are the sources of the object, subject, situational, and aspect/perspective dimensions of philosophical space. They are introduced and explained using texts from various Eastern and Western philosophies.

Secondly: The guide is more than a compilation of information on various Eastern and Western views, for in each dimension, once it has been explained and explored, one or more of the thinking and reasoning techniques that have been developed within it, will be presented so that readers can incorporate these techniques into their own thinking processes. The travel guide is both an introduction to comparative philosophy and to comparative philosophizing.

The reader will encounter the object logics of the West, the subject logics of the Indian Jains, the situational logics of the Buddhists and Nyaya, and the aspective/perspective logics of the Taoists, Confucians and Mohists." (pp. 1-2)

13. ———. 2002. "Comparative Philosophy as Feedback Loops and Fractals of Philosophical Space: The Butterfly Effect Meets the Butterfly Dream." *APA Newsletters* no. 2:32-35.

"Conclusions

The physicist, Erwin Schroedinger once said that "...it may perhaps be possible for logical thinking to disclose at least this

much: that to grasp the basis of phenomena through logical thought may in all probability be impossible, since logical thought is itself a part of phenomena, and wholly involved in them.”(15) The molecular biologist, Friedrich Cramer in applying chaos theory and the idea of fractals to ‘living systems’ maintains that “Systems are fundamentally complex if, despite deterministic initial conditions, they have indeterminate or chaotic solutions. In these systems, predictability fails not only for practical reasons but also for fundamental ones.”(16) I would suggest that just as the discovery of chaos and fractals in physical spaces offers a new access to and awareness of the nature aspect of the nature/mind continuum, so do chaos and fractals as paradoxes in philosophical space offer a new access to and appreciation of the mind aspect of the continuum." (p. 35)

14. Berger, Douglas. 2021. *Indian and Intercultural Philosophy: Personhood, Consciousness, and Causality*. New York: Bloomsbury Academic.

"There are, to be sure, many exemplary collections on Indian philosophy already in print, penned by the last several generations of scholars who have achieved monumental successes in making classical and modern Indian thought accessible to and most relevant for intercultural philosophical discussion today. And so, in putting forward my own assemblage of republished and original chapters here, I am obligated to set forth for the reader what is distinctive about these contributions. I will do so in three steps. First, I will rehearse in brief outline my own autobiography of learning in Indian philosophy in order to narrate who my teachers and greatest influences were, as well as what topics and issues in Indian and intercultural philosophy have been most important to me. Next, I will provide a skeleton review of the parts and chapters found in this volume, to give the reader a glimpse at

which problems I have been most concerned to resolve in these fields. Finally, I will attempt to accentuate the most important discoveries I have so far made as a result of my encounters with Indian philosophical traditions. These discoveries not only relate to important aspects of India's traditions, but have to a great degree shaped my own philosophical views." (pp. 1-2)

15. Berger, Douglas, and Kramer, Eli. 2019. "Lessons from Intercultural Philosophy: Getting Over Reductive Comparisons and Attending to Others: Douglas Berger interviewed by Eli Kramer." *Eidos: A Journal for Philosophy of Culture* no. 1:134-140.

"EK: What are the most important tools for doing cross-cultural/comparative philosophy of culture in a responsible, thoughtful, and impactful way?

DB: I would say at this point that the three most important tools for doing intercultural philosophy responsibly and thoughtfully – impact can never be guaranteed by oneself – are:

- 1) an openness to learn the ideas, concepts, frameworks and assumptions of the tradition with which one is trying to engage;
- 2) either a solid comprehension of the language(s) of the tradition with which one is trying to engage or at least good translations of their source texts or narrative traditions and discourse and;
- 3) a community of mutually interested engagement.

The first tool is vital because, as the last four centuries or so of European colonial history have amply and tragically demonstrated, one all-too-easy but all-too-flawed way of approaching cross-cultural philosophy is to take the entire or partial European history of philosophy, with its stock of ideas, vocabulary and assumptions about the world, persons, ethics, and even of philosophy itself, as normative and judge other philosophical positions on those bases. This approach has led to a variety of more or less unfortunate consequences. The consequences range from merely distorting the ideas of a philosopher or tradition of thought, or in some cases an entire cultural heritage, by claiming they are pursuing the same ideals

and ends as one's own, to claiming that other cultural traditions are incapable of attaining the supposedly truly philosophical status of European cultures, to using one's knowledge and assessments of another cultural tradition in order to politically rule it or control it." (pp. 134-135)

Concept of Moral Free Will 247; 17. Gordon F. Davis: Conceptions and Intuitions of the Highest Good in Buddhist Philosophy: A Meta-ethical Analysis 263;

Index 277-279.

"This volume attests to the impact of Dr. Shaw's career, if in no other way than the extent and quality of the articles represented here from leading philosophers, thinkers and logicians from all over the world. Jaysankar Shaw has tirelessly worked to solve some of the pressing and key problems of contemporary philosophy of language, logic, epistemology, metaphysics and morals from the perspectives of classical Indian philosophers using comparative analytical approaches, as his 11 books and some 90 published papers testify. Thus the significance, in no small, measure, of Indian, especially Nyāya logic, epistemology, semantics and cognitive ontology has not escaped the attention of Western scholars who have seen the convergence or at least a point of fecundity with the long tradition of systematic thinking in these areas." (p. 2)

17. Blitstein, Pablo A. 2016. "Sinology: Chinese Intellectual History and Transcultural Studies." *The Journal of Transcultural Studies* no. 7:136-167.

"The guest editors of this journal issue have kindly asked me to provide a short overview of the relation between transcultural studies and Chinese intellectual history in Euro-American academia. There was a certain risk in accepting this request, as it might be either too small or too big a task. It would be too small if I narrowed it down to a review of explicit references to transcultural studies within Chinese intellectual history; but it would be too big if I extended it to a study of all the questions, approaches, and methods that the two fields have developed in the last few decades. To overcome these difficulties, I decided

to focus on the legacy of one shared methodological point: the critique of so-called “methodological nationalism,” that is, of the assumption (explicit or not) that the nation is the ultimate framework of research.⁽¹⁾ This critique has become a constitutive principle of transcultural studies, while it came to represent only a particular approach within Chinese intellectual history. Still, the two fields have developed a shared agenda in this regard. This essay limits itself to pointing out the presence of this critique in both fields—which might be as much a sign of open scholarly exchanges as evidence of the parallel adoption of common references—and offers an illustration of the complex relations that exist between institutional labels, methodological agendas, scientific communication, and actual scholarly practice.”

(1) This concept, undoubtedly inspired by “methodological individualism,” seems to have first been used in the 1970s. The term has become more widespread in the last few decades, partly because of its critical use in global history and transcultural studies. For a discussion of this methodological assumption and a brief history of the expression, see Andreas Wimmer and Nina Glick Schiller, “Methodological Nationalism and Beyond: Nation-State Building, Migration and the Social Sciences,” *Global Networks* 4, no. 4 (2002): 301–334.

18. Blocker, Gene H. 1999. *World Philosophy: An East-West Comparative Introduction to Philosophy*. New York: Prentice Hall.

Contents: Preface VII-XII; 1. Introduction: What is Philosophy? 1; 2 Logic and Language 42; 3. Epistemology, or Theory of Knowledge 78; 4. Metaphysics 105; 5. Ethics 159; 6. Social and Political Philosophy 201; Bibliography 232; Glossary 235; Timelines 244-246.

"In this book, Chinese, Indian, and Western philosophers of roughly the same sort and of comparable stature are brought together on the same philosophical topics and issues (arranged, for convenience, in traditional clusters—logic in chapter 2, epistemology in chapter 3, metaphysics in chapter 4, ethics in

chapter 5, and social and political philosophy in chapter 6)." (p. VII)

(...)

"In this book, I treat the strictly philosophical arguments as being roughly similar across cultures, while the larger cultural contexts in which they occur I present as being considerably different. The Indian background of karma, for example, is quite distinct from anything in the West (except, perhaps, Socrates's and Plato's belief in reincarnation), but karma raises serious questions about the nature of causality, and when Indian philosophers tackle the problem of causality, their analyses are very similar and certainly comprehensible to their Western counterparts (who also are interested in causality, but for different reasons). Thus, students will get a chance to learn something about the differences among Western and non-Western cultures, while at the same time recognizing some of the philosophical similarities." (p. XI)

Contents: Preface; Time Line;

PART I. AFRICA

Ancient Egypt: From The Instruction of Ptahhotep; The Song from the Tomb of King Intef; The Dispute Between a Man and His Ba; From The Instruction of Any; From The Book of the Dead; Enlightenment Ethiopia: Zera Yacob, from The Treatise of Zera Yacob; Walda Heywat: from The Treatise of Walda Heywat; Contemporary Perspectives: Frantz Fanon: from The Wretched of the Earth; Kwasi Wiredu: from Philosophy and an African Culture

PART II. WEST ASIA, NORTH AFRICA, AND SPAIN

Platonism: Philo: from Allegorical Interpretation; Philo: from On the Account of the World's Creation Given by Moses; Philo: from On Drunkenness; Philo: from On the Confusion of Tongues; Philo: from The Special Laws; Philo: from On

Rewards and Punishments; Philo: from Concerning Noah's Work as a Planter; Origen: from On Principles; Augustine: from The Enchiridion; Augustine: from The City of God; Augustine: from Answer to Skeptics;

Creationism: Al-Kindi: from On First Philosophy; Saadia ben Joseph: from The Book of Beliefs and Opinions; Al-Ghazali: from The Incoherence of the Philosophers; Maimonides: from The Guide of the Perplexed; Maimonides: The Purpose of Man;

Rationalism: Al-Farabi: from Principles of the Views of the Citizens of the Best State; Avicenna: from A Treatise on Logic; Avicenna: On the Nature of God; Averroës: from The Incoherence of the Incoherence;

PART III. SOUTH ASIA

Samkhya, Yoga, and the Bhagavad Gita: from the Katha Upanishad; From the Bhagavad Gita (Song of God); From the Yogasutra; Isvarakrsna: from the Verses on Analysis of Nature (Samkhya-karika);

Early Buddhism: The First Sermon; From the Majjhima-Nikaya; Buddhaghosa: from The Path of Purification (Visuddhi-Magga); From Questions to King Milinda (Milindapanha); Buddhaghosa: The Duration of Life;

Jainism: From the Acaranga Sutra; Vadi Devasuri: from The Ornament Illuminating the Means and Principles of Knowledge (Pramana-naya-tattvalokalankarah);

Nagarjuna and Madhyamika Buddhism: Nagarjuna: from Averting the Arguments; Candrakirti: from Reasoning into Reality;

Buddhist Idealism and Logic: From The Surangama Sutra; Dignaga: from The Investigation of the Object of Awareness (Alambanapariksa) With Extracts from Vinitadeva's Commentary; Dharmakirti: from The Pith of Right Thinking (Nyayabindu) With a Commentary by Dharmottara;

Mimamsa (Exegesis): Kumarila: from The Slokavarttika;

Carvaka Skepticism: From Madhava's Compendium of Philosophy;

Nyaya-Vaisesika Epistemic Logic and Ontology: From the Vaisesika Sutra; From the Nyaya-sutra With a Commentary by Vatsyayana; Udayana: from Proofs of the Existence of God; Gangesa: from The Jewel of Thought about Reality (Tattvacintamani);

Vedanta: From the Rg Veda; From the Brhadaranyaka Upanishad; From the Mundaka Upanishad; Sankara: from Brahmasutra Commentary; Sriharsa: Critique of Difference; Rupa Gosvami: The Mystical Theology of Passion; Vivekananda: Addresses at the Parliament of Religions; Aurobindo, from The Life Divine;

Modern Academic Philosophy: J. N. Mohanty: Gilbert Ryle's Criticisms of the Concept of Consciousness; B. K. Matilal: from Perception: An Essay on Classical Indian Theories of Knowledge;

PART IV. EAST ASIA

Confucianism: Confucius: from The Analects; The Great Learning; Mencius: from The Book of Mencius; Hsun Tzu: from the Hsun Tzu;

Taoism: Lao Tzu, from Tao-te Ching; Chuang Tzu: from the Chuang Tzu; The Yang Chu Chapter;

Other Schools: Mo Tzu: from Universal Love; Wang Ch-ung: from Balanced Inquiries;

Chinese Buddhism: Hsuan-tsang: from The Treatise on the Establishment of the Doctrine of Consciousness-Only; Fa-tsang: from Treatise on the Golden Lion; Fa-tsang: from Hundred Gates to the Sea of Ideas of the Flowery Splendor Scripture; The Recorded Conversations of Zen Master I-Hsuan;

Neo-Confucianism: Chu Hsi: from The Philosophy of Human Nature; Wang Yang-Ming: from Instructions for Practical Life; Wang Yang-Ming: from Record of Discourses; Wang Yang-

Ming: from Reply to Ku Tung-Ch'iao; Wang Fu-chih: from The Surviving Works of Wang Fu-Chih;

Japanese Buddhism: Kitaro Nishida: from An Inquiry into the Good; D. T. Suzuki: from Zen Buddhism; Keiji Nishitani: from Science and Zen;

Pronunciation Guide; Glossary; Index.

20. ———. 2009. *Introduction to World Philosophy: A Multicultural Reader*. New York: Oxford University Press.

Abstract: "Ethics in the philosophical traditions of India -- Chinese ethics -- Ancient Greek ethics -- Medieval Christian, Jewish, and Islamic ethics -- Ethics in modern philosophy -- African ethics -- The self in Indian philosophy -- The self in Chinese Buddhism -- Ancient Greek philosophy of mind -- Mind and body in early modern philosophy -- African philosophy of mind -- Indian theories of knowledge -- Chinese theories of knowledge."

21. Bontekoe, Ron. 2017. "Some Opening Remarks on the Exclusionary Tendency in Western Philosophy." *Philosophy East and West* no. 67:957-965.

"There is a serious danger involved in taking the idea of the "philosophical tradition" too narrowly. Many readers of this journal will be familiar with the dangers of cultural exclusion — in particular with the long-standing tendency of many Western philosophers to reject out of hand the legitimacy of Chinese, Indian, and Japanese philosophy, on the grounds that these Asian modes of thinking do not appear to address the same problems that Western philosophers are interested in, in the same kind of way that Western philosophers prefer to approach these problems. This culturally myopic view of what is entitled to be called "philosophy" is deplorable, and needs to be resisted, but it probably helps to remember in this regard that the Asian philosophical traditions have not been the only victims of this attitude.

It was not that long ago, no more than fifty or sixty years, in fact, that many Anglo-American analytic philosophers were

adopting a similarly exclusionary attitude toward European Continental philosophy — declaring that Nietzsche and Heidegger, for example, were “*not philosophers.*” This, it turned out, meant little more than that coming to understand these alien thinkers required more effort than the deniers of their philosophical *bona fides* were willing to put in. In time influential thinkers emerged — William Barrett and Walter Kauffman come immediately to mind — who were willing to put in the effort required to understand what these seminal Continental figures were saying, and to explain their messages in terms that more typical Anglo-American analytic philosophers could grasp. And thus the legitimacy of the phenomenological and existential approaches to philosophy came gradually to be accepted even in the most die-hard analytical departments.” (p. 957

22. Botz-Bornstein, Thorsten. 2006. "Ethnophilosophy, Comparative Philosophy, Pragmatism: Toward a Philosophy of Ethnoscapes." *Philosophy East and West* no. 56:153-171.

"In this essay I would like to reflect on the place of philosophy within a "globalized" world and reconsider its status as a phenomenon that is potentially linked to a "local" culture. Whenever we question the authority of "general" truths and we look for ways of integrating "local discourses" into the overall construction called "global philosophy," we come across the old idea of "ethnophilosophy." Far from suggesting ethnophilosophy as a model for the philosophy of the future, I intend to rethink certain themes of ethnophilosophy and contrast them with disciplines such as "comparative philosophy" and pragmatism. I will sketch an approach that I believe to be appropriate for the development of philosophy in times of globalization.

One of the negative undertones of the term "globalization" is that it is seen as a uniformizing and flattening power that eliminates existing cultural differences. On the other hand, there is an important side effect of globalization represented by those movements acting against it, stressing the importance of "localization" or "regionalization."

Ethnophilosophy, in spite of its outdated origin and its potential dangers, remains interesting as an intellectual model as long as it is not formulated in a radical fashion. When it is formulated in a radical fashion it has to face the reproach of relativism and of enclosing itself in a cultural sphere that it declares to be inaccessible to others." (p. 153)

23. Bradley, D. Park. 2006. "The Critical Presence of the Other: Comparative Philosophy, Self-Knowledge, and Accountability." *Journal of Philosophy and Culture* no. 3.

Abstract: "Western philosophy has traditionally taken justification as necessary for constituting genuine knowledge. On the contemporary scene, however, several influential epistemological theories (Gadamer, Polanyi, Kuhn, Sellars) see the project of epistemological transparency as undermined by the fact that implicit conditions necessarily underlie our explicit knowing. In this paper, I argue that "we" must engage non-Western traditions of thought, if we are to remain committed to justifying the conditions of our knowing. To put it differently, philosophical accountability requires discarding the delusion of self-critique and coming to recognize our dependence on the critical distance provided by Other traditions."

24. Brooks, Thom. 2013. "Philosophy Unbound: The Idea of Global Philosophy." *Metaphilosophy* no. 44:254-266.

Abstract: "The future of philosophy is moving towards "global philosophy." The idea of global philosophy is the view that different philosophical approaches may engage more substantially with each other to solve philosophical problems. Most solutions attempt to use only those available resources located within one philosophical tradition. A more promising approach might be to expand the range of available resources to better assist our ability to offer more compelling solutions.

This search for new horizons in order to improve our clarity about philosophical issues is at the heart of global philosophy. The idea of global philosophy encourages us to look beyond our traditions to improve our philosophical problem solving by our own lights. Global philosophy is a new approach whose time is

coming. This essay offers the first account of this approach and an assessment of its future promise."

25. Brown, Nahum, and Franke, William, eds. 2016. *Transcendence, Immanence, and Intercultural Philosophy*. Cham (Switzerland): Palgrave Macmillan.

Heiner Roetz: Who Is Engaged in the "Complicity with Power"? On the Difficulties Sinology Has with Dissent and Transcendence 283;

Index 319-327.

"What is still divisive in this question of transcendence and immanence is something like what makes the question of belief, especially religious belief or faith, so fractious. Our ability to

reason critically and to attempt to persuade one another by logical argument has limits. Some of our conclusions and convictions seem to be not less firm and certain simply because of their being more difficult to explain and justify rationally to others. There are some things that we appear to know without knowing exactly how and why we know them. Even a strict Aristotelian logic of knowing allows for first principles that are self-evident and not subject to further grounding discourses. A decision to favor either transcendence or immanence is likely to presuppose some kind of unmediated assumption or presumed truth that implicitly excludes mediation by its opposite.

In an experiment to see whether forging such a mediation might not be possible after all, Nahum Brown and William Franke convened an international conference at the University of Macau under the auspices of the Programme of Philosophy and Religious Studies in March 2015 in order to explore this key issue in the area specifically of intercultural philosophy. We present the results of our investigation and exchange in the form of this collective volume of selected essays by participants in the conference combined with several supplementary invited contributions." (preface, p. X)

26. Bruya, Brian. 2017. "Ethnocentrism and Multiculturalism in Contemporary Philosophy." *Philosophy East and West* no. 67:991-1018.

"In what follows, I will make a case for diversifying philosophy in regard to subject matter. I'll do this in several steps. First I will motivate the project by describing a certain generic model of ethnocentrism. Like the implicit bias project, this model of ethnocentrism demonstrates a depressing fact about human decision making, but rather than leaving it at the level of the individual, it considers the effects of individual action at the level of the group. What is especially distressing about this model is that the decision-making mechanism leverages the strategy of cooperation to implement exclusionism, thereby masking discrimination beneath the self-congratulatory appearance of altruism. The second step will be to give a justification for the benefits of diversity in problem solving, drawing largely from the work of Scott Page, a specialist in

political philosophy and complex dynamic systems. Next, I will highlight the benefits of multiculturalism at the individual level from the perspective of experimental psychology. For this, I will draw on the work of psychologist Ying-yi Hong 康螢儀 among others. From these three mathematical and empirical resources, I will conclude that increasing diversity in philosophy by increasing its multicultural content is instrumentally desirable for students and for the profession. Having established the need for cultural diversity, I show how micromotives biased by ethnocentrism in philosophy are having macroeffects on the field. Finally, I suggest ways to act to help promote cultural diversity in the field of philosophy." (pp. 991-992)

27. ———. 2017. "Reply to Robert Neville." *Philosophy East and West* no. 67:1021-1022.

"First, a clarification. Professor Neville says that "the point is not to bring in more Chinese (and other ethnic groups with minority status in America) philosophers."

This is stated correctly in the sense that my main point is not about identity diversity, but the statement could be misconstrued as an opposition on my part to increasing identity diversity in philosophy programs. I want to prevent such a misconstrual by

stating plainly that I think the demographic makeup of American philosophy departments should more or less reflect the demographic makeup of American society." (p. 1021)

28. Burik, Steven. 2009. *The End of Comparative Philosophy and the Task of Comparative Thinking: Heidegger, Derrida, and Daoism*. Albany: State University of New York Press.

"The idea of comparative philosophy which guides me in this book thus has the following characteristics: Comparative philosophy should focus on two things: similarities and differences between ways of thinking.

It should however not content itself with merely pointing to these similarities and differences but should instead seek to make them productive in the sense that through these

similarities and differences we come to understand better first of all what we are comparing, and second the way in which we compare these philosophies, and that means also our contemporary philosophies and presuppositions of how we perceive our world. I do not believe in one overarching theory or methodology of comparative philosophy. In that sense my approach is hermeneutic, in that it recognizes the necessity of perspectives. There are however a couple of ideas which comparative philosophy should adhere to. It should seek a dialogue, between two different cultural perspectives (and it must be noticed that the Western philosophical tradition, although often one of the interlocutors, is not necessarily always involved), that is based on equivalence. This dialogic approach means that comparative philosophy should try as much as possible to position itself in-between the different cultures. How this in-between is to be perceived is addressed in this book." (p. 4)

29. ———. 2018. "Comment on "Comparative Philosophy: In Response to Rorty and Macintyre" by Rui Zhu." *Philosophy East and West* no. 68:266-270.

"The brief response by Rui Zhu provides an interesting take on the (by now) perennial problem of what comparative philosophy is or should be. While Zhu makes some interesting observations about and suggestions for comparative philosophy, he chooses contributions to the thinking about the possibilities and methodologies of comparative philosophy that are rather old, though, and my first wonder is: why these two papers, and not more recent contributions to the development of the methodology of comparative philosophy, as can be found in numerous recently published work? Such more recent publications tend to take a more nuanced approach to the idea of (in-)commensurability than the two essays from 1991, given the developments in comparative philosophy in the last twenty-five years."

(...)

"In my view, it is a definite advancement that recent comparative philosophy is trying to step away from

essentialism, the concept of 'essence' not even being prominent in other traditions such as the Chinese in the first place. This means that postmodern thinkers who have actively challenged the dominant Western tradition provide a more fruitful platform for comparison, since they display the kind of openness often lacking in the 'stricter' philosophers.

Second and following up on this, using the term 'philosophy' is problematic for comparative philosophers since by the very nature of our profession we would then have to widen the scope of philosophy, which would inevitably result in disagreements about the limits and boundaries of what philosophy is in general." (pp. 266-267)

30. ———. 2022. "Comparative Philosophy without Method: A Plea for Minimal Constraints." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 203-222. New York: Bloomsbury.

"When Robert, Ralph, and I first met to discuss this project, my first impression was that I would write a paper on what I thought was the methodology of comparative philosophy. Then I realized that what I thought was the method that I would employ in my work would only be one of the various possible methods. Then I thought that if this was the case, there may virtually be no limit to the number of methods of comparative philosophy. And that informs my claim here: that methodological constraints on comparative philosophy should be minimal and kept minimal." (p. 203)

Notes on Contributors 257; Index 261,

"This volume was brought to fruition out of a recognition that, while comparative philosophy is thriving, and while a number

of texts within that field of study have been written in a manner that is explicit about its methodological commitments, very little work has been done to bring these many considerations on method and methodology in comparative philosophy together." (p.1)

(...)

"The intended audience for this book is intentionally broad. On the one hand, it is meant to serve as a primer for anyone looking to undertake the task of comparative philosophy. Because there are currently no clear and accessible resources laying out the variety of methodological considerations that are available, younger scholars should find this a valuable resource for weighing these considerations, making an informed choice among them, or perhaps even developing their own approach.

On the other hand, it is also intended to broaden the awareness of even seasoned veterans, who would benefit from a more concise, explicit, and recent account of these methods for use in their own work. Ultimately, then, this should be an important resource for anyone writing on comparative philosophy, since upon publication of this text there should be no excuse for any lack of methodological awareness in such works." (pp. 5-6)

32. ——. 2022. "Introduction." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 1-15. New York: Bloomsbury.

"In the early texts of *Philosophy East and West*, a lot of discussion revolved around world philosophical synthesis (Behuniak 2017) and the desire for world peace is palpable, given that the Second World War had just ended. One would have to assume that our own positionalities and political environments have similar impacts not only on the aims and purposes we attach to our work in comparative philosophy but also to discussions of method within it.

This book seeks to join ongoing efforts to remedy this situation by presenting, in a concise and accessible format, a diverse set of methodological considerations for comparative philosophy.

While it would not be possible to include all of the available alternatives within one volume, presenting a substantially diverse array of such alternatives is enough to challenge myopic understandings of comparative method and encourage a more informed consideration of method.

Accordingly, this book includes essays by scholars from East Asia, South Asia, the Middle East, Africa, Europe, and America, with representatives from a wide variety of philosophical traditions.

Each essay is meant to be cutting edge insofar as it reflects the authors' latest work in methodology, so that every chapter can serve as an up-to-date methodological resource and viable methodological alternative for any would-be philosophical comparativist." (p. 5)

33. ———. 2022. "Epilogue." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 241-255. New York: Bloomsbury.

"One of the primary purposes of this volume has been to capture the present methodological moment in the history of comparative philosophy. This collection of essays from a wide array of contemporary comparativists reflects on the methodological challenges of our day. Although hardly exhaustive, it provides a snapshot of the present moment, a collective record of sorts, representing many of the shared assumptions, live disagreements, and anticipated possibilities for our field of study in the early part of the twenty-first century. Yet in this century, such documentation is hardly enough:" (p. 241)

34. Burt, E. A. 1948. "How Can the Philosophies of East and West Meet?" *The Philosophical Review* no. 57:590-604.

With my own attempt to understand the philosophies of the East I found myself making little headway until a key idea which I had hitherto failed to appreciate dawned in my mind." (p. 590)

(...)

"The key idea which has brought considerable and steadily increasing illumination to my mind as I confront this situation is that which the modern West usually denotes by the word "context." It gradually became clear to me that when one approaches the philosophy of a different culture whatever success he achieves will be contingent on his pursuing the task in two ways: (1) making full use of such apparent linguistic equivalents as are already available for probing his way into the details of that culture and its specialized forms of thinking; and (2) catching, as soon as he can, something of the genius of its point of view toward life and the world as a whole, and using that insight to throw light on the ideas which have perplexed him and their pattern of relationships with others. Each of these approaches is necessary, because the second cannot be performed in any promising fashion apart from the first, while if the first dispenses with the second it may yield some understanding of the technology, art, and science of the culture studied, but it will not open the door to its philosophy. The indispensability of the second approach is naturally indicated by the term "context," in the special meaning of an all inclusive orientation conceived to be required for the understanding of this or that philosophically relevant detail." (p. 591)

35. Butnor, Ashby, and McWeeny, Jennifer. 2009. "Why Feminist Comparative Philosophy?" *APA Newsletters* no. 9:4-5.

"We see feminist comparative philosophy as a natural outgrowth of both comparative philosophy and feminist philosophy. East-West comparative philosophy and feminist philosophy already share much in terms of methodology: a hermeneutic of openness and respect for difference, a crossing of philosophical boundaries and traditions, a rejection of the dichotomy of theory and practice, and the pursuit of new ways of looking at the world. In our work, we seek to show how

bringing diverse philosophical traditions into dialogue with each other can provide fresh insights on questions of specific interest to feminists and global theorists generally. We believe that what distinguishes feminist comparative philosophy from transnational/global/postcolonial feminist theories is that feminist comparative methodology engages an analysis of original and primary *philosophical* sources from the tradition in question. Most importantly, we wish to emphasize that feminist comparative methodology fosters the development of original, creative concepts and ideas that may not have emerged had the philosopher been thinking within the confines of one tradition only" (p. 5)

36. Chakrabarti, Arindam. 2002. "Analytic versus Comparative: A Bogus Dichotomy in Philosophy." *APA Newsletters* no. 2:39-42.

"In the rest of this paper, I propose to indicate a specific research-program in (what Mark Siderits, one of the finest practitioners of analytic comparative Indian philosophy has called) "fusion philosophy," that derives its inspiration from an in-depth study of Abhinavagupta's epistemology of self-consciousness.

Such fusion philosophy is nothing very new.

In a profoundly creative way, K.C. Bhattacharya practiced it when he wrote his "Subject as Freedom" although his writing style is more phenomenological than analytic. In our own times, besides J.N. Mohanty who combines analytic clarity with phenomenological concerns and deep roots in Indian philosophy, Mark Siderits, Jonardon Ganeri and Roy Perrett have published quite a lot of Indian-Western fusion-analytic philosophy in the journals." (p. 40)

38. ———. 2016. "Introduction." In *Comparative Philosophy without Borders*, edited by Chakrabarti, Arindam and Weber, Ralph, 1-33. New York: Routledge.

"Three concepts need to be clarified before we can speak intelligibly about *Comparative Philosophy without Borders* avoiding calculated confusion or foreseeable misunderstanding: the concept of *philosophy*, the concept of *comparison* (from which the concept of "comparative" is derived), and the concept of *borders*. Everybody understands and agrees that "without" simply means lacking, which, in this context, must signify coming to lose or erase rather than never having had. Therefore, we need not dwell separately and tediously on the meaning of "without," although in some branches of classical and contemporary Indian metaphysics, the meaning of the particular sort of negation that expresses that peculiar "absence" whereby one thing lacks or sheds another thing or property is also a hot topic. Of the three crucial concepts, then, let us start with the concept of a border, since the concept of philosophy is inexhaustibly controversial (two sides across a border often do not mean the same by "philosophy") and paradox-generatingly self-inclusive and we shall have much more substantial and provocative things to say about comparison." (p. 1)

39. ———. 2022. "Global Post-Comparative Philosophy as Just Philosophy." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 159-179. New York: Bloomsbury.

"This chapter revisits some recent controversies around the apparent difficulty of integrating comparative and "non-European philosophy" into philosophy departments in an attempt at distinguishing political from philosophical concerns. How to frame and label the philosophical concerns is important for the political discussion and crucial for achieving a more just philosophy. We argue for a global post-comparative approach, similar to what is also called fusion philosophy. But the results of such an approach should also constitute just-and nothing more than-philosophy, that is, amount to nothing qualitatively different from philosophy. The gist of the matter has to do with methodology, that is, with how to do philosophy. In this spirit, we offer two brief methodological arguments, one pertaining to a weak historicism, the other to the philosophical value of polyglotism, hopefully working toward facilitating the non-exclusionary inclusion of "non-European philosophy," no longer deserving of the label, in a future globally decentered philosophy."

40. Chakrabarti, Kisor K. 2002. "The Problem of Induction: A Comparative Approach." *APA Newsletters* no. 2:36-38.

"The classical problem of induction was introduced into Indian philosophy fairly early. The legendary figure commonly associated with this is Carvaka (6th century BCE?). His own writings are lost. But many later writers have carefully developed his views." (p. 36)

(...)

"We do not imply that Carvaka and Hume hold exactly the same views. [For example, one difference is that for Hume but not for Carvaka, memory is knowledge.] But the similarities are patent enough to merit a comparison. For Hume, the inductive leap from observed to unobserved cases cannot be justified

unless one assumes the principle of uniformity of nature and that the future will resemble the past; this involves begging the question. For Carvaka induction cannot be justified by observation alone because the inductive leap invariably goes beyond observation. At the same time, induction cannot be justified by inference or any other non-observational means. The latter must depend on premises that go beyond observation and are themselves dependent on further premises that too go beyond observation. This is doomed to end in infinite regress or circularity; this is similar to Hume's argument. Both again hold that this has no bearing on practical activities that can go on from expectation or habit based on probable opinion rather than knowledge." (p. 36)

41. Chimakonam, Jonathan O., and Chimakonam, Amara E. 2022. "Two Problems of Comparative Philosophy: Why Conversational Thinking Is a Veritable Methodological Option." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 223-239. New York: Bloomsbury.

"This chapter will investigate what we take to be two of the most urgent comparative philosophy problems. These preceding discussions will pave the way for our proposal of conversational thinking as a veritable methodological option for comparative philosophy. Part of our goal will be to offer "conversational thinking," a burgeoning cross-cultural method, as another veritable option besides Mou's proposal. Another goal would be to produce a conception of comparative philosophy that clearly delineates its boundary. And then, in aligning both our conception and the method of conversational thinking, we will plot a new but clear trajectory for the field of comparative philosophy." (p. 225)

42. Chmielewski, Janusz. 1978. "The Principle of Reductio ad Absurudum against a Comparative Background." *Studia Semiotyczne — English Supplement* no. VIII-XII:139-222.

Originally published as "Zasada redukcji do absurdu na tle porównawczym," *Studia Semiotyczne* 11 (1981), 21–106.

Translated by Lesław Kawalec.

"The subject of this discussion is the peculiar applications of the logical principle that states that if any sentence implies its own negation, the sentence is false and thus its negation is true." (p. 139)

(...)

"Of the issues that merit particular attention in comparative terms, three groups ought to be mentioned that could be summed up in the following initial propositions:

1. firstly, the principle of the *reductio ad absurdum* was first devised independently (in the sense of being applied in peculiar reasonings) in all three ancient cultural circles that had created their own philosophical speculation: European (Greek), Chinese and Indian (Buddhist Indian);

2. secondly, relevant reasonings, testified to in these otherwise different philosophies using different languages, are not only similar in form but concern similar if not identical issues and serve similar goals, with the Buddhist Indian circle differing uniquely from the others,

3. thirdly, the reductive reasonings, which were revelatory in their day, in the light of modern semantics, prove to be covert paralogisms, which in practice do not so much constitute examples of the application of the principle of the *reductio ad absurdum* but, rather, illustrations of unconscious overuse of the principle." (pp.138-139)

43. Collins, Randall. 1998. *The Sociology of Philosophies: A Global Theory of Intellectual Change*. Cambridge, MA: The Belknap Press.

"The topic of this book is a sociology of philosophies, which is to say the abstract conceptions produced by networks of specialized intellectuals turned inward upon their own arguments. This network displays definite social dynamics over the expanse of world history. This topic is not the same thing as the production of popular culture, such as the advertising, pop stars, tourist industry, personal apparel, electronic networks,

and their multiplex intercombinations that make up the topics for postmodernist sociology of culture." (p. 12)

(...)

"The first three chapters present the general theory. Chapter 1 lays out the theory of interaction ritual chains, which is the micro-core of the argument for the social predictability of intellectuals' thinking. Chapter 2 gives a theory of the network structure which determines the location of creativity, and compares the evidence of networks of Chinese and Greek philosophers over several dozens of generations. The subsequent chapters confront the theory with long-term segments of these intellectual networks and those of India, Japan, the medieval Islamic, Jewish, and Christian worlds, and the European West through the 1930s. Each chapter highlights a particular analytical theme. The chapters need not be read in any particular sequence, although Chapter 3, on ancient Greece, presents some central principles that figure in what follows. A

brief summary of the analytical model is given in "Conclusions to Part I: The Ingredients of Intellectual Life." Chapter 15 presents the conclusions of the entire analysis in a sketch of the pathways along which intellectuals through their debates drive the sequence of ideas during long periods of time. The reader may find it useful as a road map of the book. The Epilogue draws epistemological conclusions from the whole argument." (p. 15)

44. Connolly, Tim. 2015. *Doing Philosophy Comparatively*. New York: Bloomsbury.

"This book is divided into three parts. Part I covers the definition of comparative philosophy and its central concepts. Critics have challenged both the comparative and the philosophical aspects of the field, and we begin by considering whether these criticisms are justified, focusing first on the definition of "philosophy" in comparative philosophy (Chapter 1). From there we turn our focus to the meaning of "comparison;" examining two main ways in which the study of thinkers and texts from culturally distinct traditions has been

thought to be philosophically fruitful (Chapter 2). Finally, we look at the meaning of "culture" and "tradition" themselves and how they are related to the practice of comparative philosophy (Chapter 3).

Part II focuses on the central methodological problems of comparative philosophy. Because the thinkers or texts being compared have been formed according to the languages, concepts, and standards of justification of their distinctive cultures and traditions, there is the issue of whether it is possible for philosophers from one tradition to understand and evaluate those from another—the problem of incommensurability (Chapters 4 and 5). Even if it is possible, the forced or unequal application of one tradition's categories can lead to a distorted image of the other—the problem of one-sidedness (Chapter 6). Finally, there is the difficulty of situating the items compared within the larger cultural traditions of which they are part—the problem of generalization (Chapter 7). We will consider the various challenges each problem poses as well as the main strategies that comparative philosophers have developed to overcome them.

Part III gives brief discussions of four approaches to comparative philosophy: universalism (Chapter 8), pluralism (Chapter 9), consensus (Chapter 10), and global philosophy (Chapter 11). While in reality there are as many approaches to comparative philosophy as there are comparative philosophers, I focus on these four because they illustrate basic orientations toward similarity and difference. Universalism emphasizes points of convergence between different philosophical-cultural traditions; pluralism, points of divergence; consensus, a means of balancing points of convergence and divergence; and global philosophy, a rejection of the convergence / divergence model of comparison in favor of creative interaction between traditions at specific points. I hope that this last section of the book not only gives readers some sense of the competing models under which productive work in comparative philosophy has taken place, but also encourages them to think about how to improve or go beyond these models." (p. 7)

45. Cooper, David E. 2002. *World Philosophies: A Historical Introduction*. Oxford: Wiley-Blackwell.

Second revised edition (First edition 1996).

"The title of this book is ambiguous. 'World philosophies' might refer to philosophies from around the world, or it might mean something like 'world-views', theories on the grand scale about 'The World'. My title is intended to bear both senses, so it is a pun." (Introduction, p. 1)

(...)

"The present book, then, attempts to redress an imbalance: the 'world philosophies' it presents are indeed from 'around the world', sizeable chunks of it, at any rate: India, China, Japan, the Near and Middle East, and Africa, as well as Europe and North America." (p. 2)

(,,)

"Indeed, it is not only geographical comprehensiveness that the book lacks: for its subject is not philosophy at large, but philosophies. 'Philosophy', as the name of a very general intellectual activity, does not have a plural, no more than does 'music'; and philosophies no more exhaust the field of philosophy than music consists entirely in the outpouring of musicals. Philosophies, like musicals, are particular products of the more general activity." (p. 2)

46. Creller, Aaron B. 2016. "Introducing the World: Making Time for Islamic and Chinese Material alongside the Western Canon." *ASIANetwork Exchange* no. 23:124-138.

Abstract: "In this essay I consider the challenges faced by non-specialists in comparative philosophy. I address several familiar objections to incorporating non-Western material into standing philosophy courses (i.e., the view that the material is, indeed, not included in the category philosophy, or the worry that there simply is not enough time to cover such material). In answering these objections, I emphasize that what we today call the "Western" canon has historically been shaped by a plurality of cultures. I then conclude with several sample course modules,

designed to help non-specialists incorporate sessions on Islamic and Chinese philosophy into introductory classes."

47. ———. 2018. *Making Space for Knowing: A Capacious Approach to Comparative Epistemology*. Lanham: Lexington Books.

"Contemporary mainstream epistemology suffers from an overly narrow focus on propositional knowledge." (p. X)

(...)

"In this book, I focus on illustrating not only how this narrow definition has prevented analytic epistemology from adequately integrating its own accounts of non-propositional knowledge (i.e. skill-based knowledge or interpersonal knowledge), but also on how it fails to adequately account for the structure of propositional knowledge itself. In response to this narrow definition, I construct an alternative using Western and non-Western resources that both solves this initial problem as well as addresses the problems of objectivity and cross-cultural, comparative approaches to knowledge. In this way, I seek to reopen the space closed by analytic epistemology in order to better account for knowledge in its various forms, especially across cultural divides." (p. XI)

48. Dallmayr, Fred. 1996. *Beyond Orientalism: Essays on Cross-Cultural Encounter*. Albany: State University of New York Press.

"This book is a collection of essays rather than a systematic treatise - for reasons having to do with the topic of inquiry. Proceeding in linear fashion from start to finish, a systematic treatise presupposes a standpoint outside or above the welter of competing cultures and life-forms, a standpoint permitting an objective and "totalizing" overview.

This assumption goes against the very grain of cross-cultural encounter, which has to start "from the ground up" and in a dialogical fashion, offering only the uncertain prospect of a learning experience. Coming from a European or Western background, I certainly cannot pretend to a superior or encompassing perspective; all I can claim is to have been

sometimes the instigator and always the beneficiary of cultural learning-in a manner which hopefully will also be beneficial to readers. In the contemporary political climate, I definitely do not wish to give aid and comfort to a homogenizing globalism or universalism, which often is only a smokescreen for neocolonial forms of domination.

Although a collection of essays, this book is not simply a string of haphazardly linked vignettes. In a cautious and subdued manner, the sequence of chapters is held together by a line of argument which moves forward (without being coercively systematic). The opening chapter discusses the broad range of possible "modes" of cross-cultural encounter in a historical perspective. Following a path of normative-ethical ascent, the discussion ranges from strategies of conquest, conversion, and assimilation to more benign forms of interaction, culminating in a model of dialogical reciprocity and exchange. Drawing its inspiration chiefly from Gadamer and Derrida, the book then develops as preferred option the notion of a 'deconstructive dialogue' or a 'hermeneutics of difference' where dialogical exchange respects otherness beyond assimilation.

Concentrating on the relation between India and the West, subsequent chapters examine the work of several prominent bridge builders across cultures, primarily the Indian philosophers Radhakrishnan and J. L. Mehta and the German-American philosopher and Indologist Wilhelm Halbfass. Proceeding to a broader comparative level, a centerpiece of the book juxtaposes Western thought and Indian thought along the lines of a distinction between decontextualized and context-bound modes of cultural discourse. The remaining chapters shift the accent to more concrete social-political problems, including the issues of social development (or "modernization"), multiculturalism, and the prospects of a globalized democracy." (Preface, pp. XI-XII)

49. Davidson, Donald. 1974. "On the Very Idea of a Conceptual Scheme." *Proceedings and Addresses of the American Philosophical Association* no. 47:5-20.

Reprinted in D. Davidson, *Inquiries into Truth and Interpretation*, Oxford: Clarendon Press 1984, pp. 183-198.

"Philosophers of many persuasions are prone to talk of conceptual schemes. Conceptual schemes, we are told, are ways of organizing experience; they are systems of categories that give form to the data of sensation; they are points of view from which individuals, cultures, or periods survey the passing scene. There may be no translating from one scheme to another, in which case the beliefs, desires, hopes and bits of knowledge that characterize one person have no true counterparts for the subscriber to another scheme. Reality itself is relative to a scheme: what counts as real in one system may not in another.

Even those thinkers who are certain there is only one conceptual scheme are in the sway of the scheme concept; even monotheists have religion. And when someone sets out to describe "our conceptual scheme," his homey task assumes, if we take him literally, that there might be rival systems.

Conceptual relativism is a heady and exotic doctrine, or would be if we could make good sense of it. The trouble is, as so often in philosophy, it is hard to improve intelligibility while retaining the excitement. At any rate that is what I shall argue." (p. 5)

50. Davis, Bret. 2009. "Step Back and Encounter: From Continental to Comparative Philosophy." *Comparative and Continental Philosophy* no. 1:9-22.

Abstract: "By drawing on the insights of a number of continental as well as Asian thinkers, this article reflects on the "significance" of comparative philosophy—both in the sense of discussing the "meaning" and in the sense of arguing for the "importance" of this endeavor. Encountering another culture allows one to deepen one's self-understanding by learning to "see oneself from the outside"; this deeper self-understanding in turn allows one to listen to what the other culture has to say. These two moments, or movements, are interdependent and mutually supportive. Without the step back to self-understanding, we unknowingly reduce the other to the unrecognized categories of our own thinking; but without encountering another culture, our understanding of our own

culture remains shallow. This article argues that an engagement with non-Western philosophy, particularly with a set of traditions as rich and radically different as those of Asian thought, can and should take place as a hermeneutic circling between self-understanding and openness to encounter: the dialogical step back and step forward are mutually supportive endeavors. For only by way of such dialogue do we attain the concrete freedom and possibility for transformation and change, that is, the ability to critically and creatively develop old customs or modes of thought and to critically and creatively adopt new ones. Moreover, only through such dialogue can we learn to not only let others be, but to share insights with them, and to build together a global community which neither reifies nor abolishes cultural differences."

51. Daye, Douglas Dunsmore. 1976. "Language and the Languages of East-West Philosophy: An Introduction." *Philosophy East and West* no. 26:113-115.

"To continue the lineage of workshops sponsored by the Society for Asian and Comparative Philosophy, there was held in the Spring, 1975, a series of four panels, which focused upon various aspects of the theme of this year's workshop, Language and the Languages of Philosophy: East and West. This workshop, held in conjunction with the annual meeting of the Association for Asian Studies on March 23 and 24, 1975, consisted of three major papers and three critics during each of four sessions."

(...)

"From the twelve excellent papers noted above, five were chosen to be included in this issue, since they illustrated many of the various philosophical directions exemplified in the four panels." (p. 113)

Papers included in in this issue:

Richard S. Y. Chi, *A Semantic Study of Propositions, East and West*, pp. 211-223.

Ashok K. Gangadean, *Formal Ontology and Movement between Worlds*, pp. 167-188.

52. Defoort, Carine. 2001. "Is There Such a Thing as Chinese Philosophy? Arguments of an Implicit Debate." *Philosophy East and West* no. 51:393-413.

"It is certainly not my intention to solve the crucial question concerning the legitimacy of Chinese philosophy once and for all - this would be an impossible task given the indecision governing the definition of the concept of philosophy even in the West. Nor do I wish to call into question the legitimacy or value of two domains that are closely adjacent to the theme of this essay, namely philosophy in China - the philosophical activities of contemporary Chinese academics - and current Chinese philosophy, insofar as this refers to a purely geographical variant of something like contemporary Continental philosophy. The arguments presented here concern only the traditional Chinese body of thought, which is generally labeled as Chinese philosophy. A clear definition of our domain is thus our first task." (p. 394, a note omitted)

53. ——. 2020. "The Exclusion of Chinese Philosophy: "Ten Don'ts," "Three Represents," and "Eight Musts"." *Philosophy East and West* no. 70:214-225.

Book discussion of: *Chinese and Buddhist Philosophy in Early Twentieth-Century German Thought*. By Eric S. Nelson. London, Oxford, New York, New Delhi, Sydney: Bloomsbury Academic, 2017.

Abstract: "The legitimacy of Chinese philosophy is a thorny topic that has returned in waves during the last decades. The high tides were 2003 and 2016. While the topic can and has been discussed from a wide variety of points of view, most debates focus on the Chinese side: either on the nature and quality of early Chinese master texts (e.g., "Do they fit the

demands of philosophy?") or on current research at Chinese philosophy departments (e.g., "How should the Chinese intellectual heritage be studied?" "Is it philosophically interesting?"). Such reflections are important and deserve to be continued.

However, one side of the issue usually remains out of view: the Western philosophers themselves, who lay the burden of proof almost exclusively with the Chinese masters or scholars. Since when, where, and how have scholars denied Chinese masters the label of "philosophy"? How explicit has the debate been? What were the various views and their historical or intellectual contexts? How did the debate evolve? What are its current implications and future prospects? These historically inspired philosophical questions differ in orientation from the dominant approaches. Even though they may not necessarily solve the disagreement concerning the legitimacy of Chinese philosophy, they do throw a fascinating light on the nature of (Western) philosophy." (A note omitted)

54. Deng, Xize. 2010. "Problem and Method: The Possibility of Comparative Study—Using "Lun Liujia Yaozhi" as an Example." *Frontiers of hilosophy in China* no. 5:575-600.

Abstract: "On the basis of general characteristics, comparative studies can be restricted by cross-cultural comparison in a narrow sense. In this paper, I take "Chinese philosophy" as an example to investigate the current problems within comparative studies. However, it is possible to embark on comparative study.

"Lun Liujia Yaozhi" 论六家要旨 ("Discussion on the Main Points of the Six Schools") conducts a successful comparison, from which we can extract the comparative method of "Problem and Method," and it points directly to the basic structure of survival activities, and furnishes the possibility for cross-cultural comparisons."

"The essays in this volume from among many of the leading thinkers from numerous countries throughout the world were first presented at the Sixth East-West Philosophers' Conference, which was held in August 1989 in Honolulu, Hawaii, and which I had the honor to direct. While never forming a melody quite as lovely as any of Mozart's, the authors did address several common problems under the general theme "Culture and Modernity: The Authority of the Past" in a spirit which sought mutual cross-cultural understanding through careful interpretation and frank critical engagement. Many voices were heard and listened to artfully.

Although there is always something of a tension among philosophers engaged in comparative work between those who are disposed to look for, find, and announce similarities and those who seek, discover, and celebrate differences in modes of thought, styles of argumentation, basic ideas, and presuppositions among diverse cultures and different individuals within those cultures, the conference on the whole was concerned more with the plurality issuing from differences than with the singularity following from sameness—while all the time its participants being very much aware of a common

human/natural/spiritual world that has emerged so suddenly in world history and whose very fate rests so largely on the success of cooperative undertakings by those who represent very different worlds within that common matrix." (Preface, pp. X-XI, a note omitted)

"Comparative philosophy — or what we might today better call “cross-cultural,” “trans-cultural,” or simply “global” philosophy — has throughout its history and development exhibited a rich diversity of aims, methods and styles. Let me briefly sum-up a few of the most enduring of these and then set forth some features of what I take to be its most vital intentionality, namely to contribute to creative philosophical thinking." (p. 23)

Index 581-587.

"The purpose of this work is to provide a sophisticated, one-volume companion to the study of select non-Western philosophical traditions. It has become increasingly evident to many teachers and students of philosophy as well as to general readers that philosophy is not the exclusive province of the West: that indeed other traditions have a depth and range comparable to Western thought and exhibit distinctive features, the knowledge of which can enrich philosophical understanding and creativity wherever it occurs. This volume will strive at once to introduce some of the finest thinking within and about non-Western traditions to teachers, students and general readers, and to offer interpretations and insights relevant to the work of other scholars in the field." (from the Introduction, p. XII)

5. Devaraja, N. K. 1967. "Philosophy and Comparative Philosophy." *Philosophy East and West* no. 17:51-59.

"The philosophical temper both in the East and in the West, being rooted in human nature, is more or less the same, the differences in the lines of development followed and results obtained being due largely to historical and cultural factors. In particular, I wish emphatically to deny the distinction that, as against the rational method employed by Western philosophers, Indian thinkers are inclined to use the method of intuition. Currency to such a view was given, during the latter

half of the nineteenth and the first half of the twentieth century, by some spokesmen of the Indian tradition who were unaccustomed to doing philosophy in a rigorous way, and had but passing acquaintance with the golden age of logico-epistemological development in Indian thought lying between the first and the tenth centuries A.D. I am more inclined to agree with the view of Dr. P. T. Raju that the Indian philosophical tradition is naturalistic and rationalistic." (pp. 58-59)

6. Dilworth, David A. 1989. *Philosophy in World Perspective: A Comparative Hermeneutic of the Major Theories*. New Haven: Yale University Press.

"In this work I will sketch the outline of the architecture of theories, East and West, by examining the implications of a series of comparative judgments. In essence, I will show that all the major theory-formations fall under four generic types, themselves systematically related—Sophistic, Democritean, Platonic, and Aristotelian. (This nomenclature refers to and is drawn from historical paradigms, for the principles of philosophy come to light in exemplary texts and can be known in their essential variety from no other source. But I will demonstrate that, while they are associated with classical Athenian philosophers, the four pure types transcend their historical models.)

All the other possible theory-formations are contractions of these four types. In a current economic idiom, the mixed types of philosophical texts are subsidiaries. While they seem to function independently, they still presuppose and ultimately rely on their parent companies. In this sense each of the four pure modalities of theory-formation has its own synoptic character." (p. 7)

7. Dorter, Kenneth. 2018. *Can Different Cultures Think the Same Thoughts? A Comparative Study in Metaphysics and Ethics*. Notre Dame: University of Notre Dame Press.

"The project of this book has two aims. One is to explore issues in metaphysics and ethics, including the way metaphysics can be foundational for ethics. I approach these issues through the

works of major thinkers in the three main philosophical traditions—India, China, and the West— comparing philosophers from two traditions in each chapter. An advantage of this approach is that examining a subject from different directions gives us different perspectives and allows us to see limitations and assumptions that may be inconspicuous otherwise. The comparison may also provide us with a perspective that is more than the sum of its parts.

Each of the chapters addresses its theme through the work of a different pair or group of philosophers, while the Conclusion compensates for this diversity of voices with an overview of the book as a whole." (Preface, p. IX)

8. Du Oluwagbemi, Jacob. 2010. "Intercultural Philosophy, Africa's Predicament and Globalization: Finding the Missing Link." *Annals of Humanities and Development Studies* no. 1:301-312.

Abstract: "That the world has become a global community is no longer an issue. What has become an issue is the paradox in the midst of this globality. This paradox manifests in the clash between cultural identity and cultural diversity. Against the backdrop of particularism, as pursued by the vanguards of interculturality, I examine the essential ingredients of intercultural philosophy with a view to showing how this approach can be used by African philosophers to address the pressing issues of contemporary Africa. The thesis of this paper is: in light of the interdependence and intensification of inter-relations within the globe, no culture, African or non African can remain shut up in its cocoon or operate as a windowless monad because the globalizing dynamics call for mutual complementarity and enrichment. Within the universalizing phenomenon of globalization, Africa can find its missing link through interculturality. This will not only enable African philosophers to reflect and interpret other cultures but also appropriate what has enabled other cultures to excel in order to transform the African condition."

9. Dussel, Enrique. 2009. "A New Age in the History of Philosophy: The world dialogue between philosophical

traditions." *Philosophy & Social Criticism* no. 35:499-516.

Abstract: "his article argues the following points. (1) It is necessary to affirm that all of humanity has always sought to address certain 'core universal problems' that are present in all cultures. (2) The rational responses to these 'core problems' first acquire the shape of mythical narratives. (3)

The formulation of categorical philosophical discourses is a subsequent development in human rationality, which does not, however, negate all mythical narratives. These discourses arose in all the great urban neolithic cultures (even if only in initial form). (4) Modern European philosophy confused its economic, political and cultural domination, and the resulting crises in other philosophical traditions, with a Eurocentric universality claim, which must be questioned. (5) In any case there are formal universal aspects in which all regional philosophies can coincide, and which respond to the 'core problems' at an abstract level. (6) All of this impels entry into a new age of inter-philosophical dialogue, respectful of differences and open to learning from the useful discoveries of other traditions. (7) A new philosophical project must be developed that is capable of going beyond Eurocentric philosophical modernity, by shaping a global trans-modern pluriverse, drawing upon the 'discarded' (by modernity) own resources of peripheral, subaltern, postcolonial philosophies."

11. Fleming, Jesse. 2003. "Comparative Philosophy: Its Aims and Methods." *Journal of Chinese philosophy* no. 30:259-270.

"My first answer to all such objections to the enterprise of comparative philosophy is that it is almost inevitable that we understand, or interpret, the new and unfamiliar by comparing it with that with which we are already familiar. According to this phenomenological or hermeneutic principle, someone first encountering the *I Ching*, for example (or any other alien philosophical system), will always think about ways in which this unfamiliar philosophy is similar to the philosophical terrain that is our conceptual "home turf" so to speak. After first identifying what we take to be similarities between the two philosophical theories (or systems, concepts, or traditions), we naturally move on to identifying significant differences: similarities and differences in regard to logic and method of proof, in regard to values, assumptions, and aims. It is by identifying both similarities and differences that we can better understand the two (or more) things (here, theories) better. There is a natural, if logically and epistemologically unjustifiable, tendency to see similarity of different philosophical theories as somehow confirming each of them (insofar as they are similar), just as in science a theory or experiment gains credence if repeated elsewhere under similar but different circumstances.

At the very least, such comparisons (of say, the "Tao" with "Nature") help shed light on how one concept or theory in comparison with others could have been proven differently from the way it was, or what its practical consequences might be, contrary to what one has usually assumed them to be. In fact, it seems obvious to me that highlighting similarities (and differences) between two philosophical theories or traditions helps us to notice assumptions we make without being aware of it—assumptions regarding how a theory can be proven to be true (or false), and what the theoretical and practical implications of a philosophical position are." (p. 2670)

12. Frazier, Jessica. 2020. "The View from Above': A Theory of Comparative Philosophy." *Religious Studies* no. 56:32-48.

Abstract: "What if doing philosophy across cultures is always implicitly a matter of metaphilosophy – of articulating more clearly the nature of philosophy itself? What if it forces us to 'stand back' hermeneutically and map out a 'view from above' of the underlying fabric of ideas – in their constitutive concepts, their relations to other ways of thinking, and their potential to be configured in alternative fascinating and fruitful ways?"

This article incorporates existing approaches to comparative philosophy within a single scheme of complementary philosophical activities, and a single overarching metaphilosophical project. These approaches are (1) 'archival' (exploring parallel but separate philosophical traditions), (2) 'equivalentist' (comparing traditions in terms of analogies and contrasts), and (3) 'problem-solving' (using multiple traditions to provide philosophical solutions). I situate these within (4) the overarching hermeneutic project of 'mapping' concepts and their possibilities. This entails the theory that philosophies drawing on multiple perspectives are always implicitly engaged in mapping out the underlying eidetic structure upon which philosophy does its work, and charting the conceptual possibilities surrounding any idea."

13. Freschi, Elisa. 2022. "Thinking Along with Texts from Afar: Why One Doesn't Understand Texts without Philosophical Reflection and Can't Do Philosophy without Inspiration." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 97-117. New York: Bloomsbury.

"In this chapter, I will argue in favor of doing intercultural philosophy confronting philosophers of the past. I will start by discussing whether at all one needs to engage with other philosophers while doing philosophy and claim that comparisons are just the normal way we think, and that in this sense the real choice is not between comparing and not

comparing but between comparing explicitly or implicitly, that is, between comparing while being aware of what one is doing and comparing while being unaware of the way one is accessing a new idea through the lenses of a familiar one. Next, I will argue in favor of the engagement with philosophical texts that are remote in time, space, or other circumstances, in order to challenge our ideas and seeming intuitions. I will then move on to the constructive part of this paper, in which I will promote engaging with great thinkers of the past, since this engagement will sharpen one's understanding of them as well as one's philosophical acumen. The greatness of an author depends on what one is looking for and, for instance, an epistemologist might not recognize the greatness of Martin Buber and viceversa.

(...)

Last, I will speak in favor of the very unfashionable topic of translations as a philosophical exercise.

(...)

How do the topic of engaging with philosophers of the past and that of translations hold together? Because the latter is an indicative test of the effectiveness of the former and because both require a close engagement. In both cases, one needs to step out of one's comfort zone and move toward a confrontation with the other thinker." (pp. 97-98, notes omitted)

14. Freschi, Elisa, and Keating, Malcolm. 2017. "How Do We Gather Knowledge Through Language?" *Journal of World Philosophies* no. 2:42-46.

The present issue of *Journal of World Philosophies* will host a series of papers discussing the phenomenon of linguistic communication² from a philosophical point of view and from a cross-cultural perspective.

The papers' authors discussed the topic together with some other scholars in a workshop in Athens, 2015.

(...)

The present series of contributions will deal with these topics from different points of view, elaborating on materials from the classical Indian, ancient Greek, and medieval Arabic traditions. We hope to contribute to a debate whose foundations have been set by works such as Matilal and Chakrabarti's *Knowing from Words*,⁽⁶⁾ which focused on the topic of testimony from the perspective of Indian Philosophy (especially Nyāya) and of analytic philosophy.

The contributions are organized around the following four issues:

1. What do we know?
2. How (through which instrument of knowledge) do we know it?
3. What is the role of language as a medium?
4. What is the role of the social context?" (p. 42, some notes omitted)

15. Frisina, Warren G. 2016. "Thinking Through Hall and Ames: On the Art of Comparative Philosophy." *Dao: A Journal of Comparative Philosophy* no. 15:563-574.

Abstract: "With the publication of their first collaborative book *Thinking Through Confucius*, David Hall and Roger Ames launched a comparative philosophical project juxtaposing American pragmatism and Chinese Confucianism (Hall and Ames 1987).

This essay focuses on the role pragmatic assumptions play in Hall's and Ames's announced goal of opening a "new route" into Chinese intellectual history. Hall and Ames aim to teach scholars whose scholarly sensibilities have been formed in the West what they must acknowledge about their own traditions before they can engage Chinese thinkers constructively. After happily acknowledging my own debt to Hall and Ames and

defending as hugely helpful the broad arc of their work, this essay raises questions about the way they deploy pragmatic assumptions as tools for “removing the useless lumber” that they claim “block” Western thinkers’ access to Chinese intellectual history. Specifically it argues that the “useless lumber” metaphor is misplaced.”

16. Ganeri, Jonardon. 2016. "Symposium: »Is Reason a Neutral Tool in Comparative Philosophy?«." *Confluence: Online Journal of World Philosophies* no. 4:134-142.

149Abstract: "Is Reason a Neutral Tool in Comparative Philosophy? In his answer to the symposium’s question, Jonardon Ganeri develops a »Manifesto for [a] Re:emergent Philosophy.« Tracking changes in the understanding of ›comparative philosophy,‹ he sketches how today’s world of academic philosophy seems to be set to enter an »age of re:emergence« in which world philosophies will (and can) be studied through modes of global participation. In their responses, the symposium’s discussants tease out implications of this Manifesto for different issues: While Mustafa Abu Sway suggests that comparative philosophy be understood as an intra-philosophical dialogue, whose aim depends on its participants, Paul Boghossian questions whether there can be conflicting, yet equally valid, ways of arriving at justified beliefs about the world. For her part, Georgina Stewart draws out the similarities between Ganeri’s understanding of comparative philosophy and the ethical stance involved in studying Maori science. In his Reply, Ganeri fleshes out his understanding of a pluralistic realism. Only an epistemic culture, which is open to a plurality of epistemic stances, he contends, can propel polycentric modes of knowledge production."

A Reply to Ganeri’s ›Re:emergent Philosophy‹ 149; Georgina Stewart: What’s In a Name? In Support of *A Manifesto for Re:emergent*

Philosophy 154; Reply; Jonardon Ganeri: Reflections on Re:emergent Philosophy 164; References 183-186.

17. ———. 2022. "Why Philosophy Needs Sanskrit, Now More than Ever." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 139-158. New York: Bloomsbury.

"Let me begin by trying to identify the sources of the doctrine that European philosophical tradition, its classics and its canon, occupies a privileged position in the global intellectual history of humanity. I'll then review a different, Sanskritic, conception of classicity, and go on to describe the critique of European exceptionalism by anticolonial thinkers from the first half of the twentieth century.

That part of the chapter will be diagnostic, but I also want to say something constructive, and I'll move in the final third of the chapter to sketch an alternative model for philosophical practice to that which currently prevails, one grounded in a defense of pluralism, a pluralism about ways of interrogating the single reality we share, and a model itself retrieved from Sanskrit thinkers." (p. 139)

18. Gangadean, Ashok K. 1976. "Formal Ontology and Movement between Worlds." *Philosophy East and West* no. 26:167-188.

"In this article I shall focus on one aspect of a general problem of movement between worlds. The concept of a world is an ontological one. Different worlds involve different ontologies. A world, an ontology, is reflected in a language.

Thus, from an ontological point of view, different languages are worlds apart.

When I speak of different languages in this article I do not mean different in terms of linguistic criteria but different from an ontological point of view. This means that movement between worlds involves movement between different languages.(1)"

(1) When I speak of different languages here I mean different in terms of ontological criteria.

Thus, although English and French are from a linguistic point of view different languages, from an ontological point of view they may well be the same language. Alternatively, although English may, from a linguistic point of view, be considered one language, it is possible that from an ontological point of view it involves more than one language. Criteria determining what is to count as one language is discussed in part II.

19. ———. 1980. "Comparative Ontology: Relative and Absolute Truth." *Philosophy East and West* no. 30:465-480.

"Perhaps the most important challenge for comparative thought is whether there can be univocal truth between different worlds. For if there is not an *interworld* concept of truth, a concept of truth which is prior to and independent of any particular world, an ontologically neutral truth which is common to all possible worlds, in short, an *absolute* truth, then the possibility of rational discourse between worlds is questionable. The urgency of this concern is seen when the radical difference between worlds is appreciated. A world, in the classical ontological sense, is a particular categorial structure which materially defines what is possible and intelligible for experience and human understanding as a whole. What makes sense in one world may fail to make sense in another. What is possible in one world may not be a possibility in another. This means that worlds differ in the most radical way-propositional content and ontological possibilities being radically incommensurable between different worlds. And since meaning and truth are relative to a given particular ontology (for an ontology or worldview defines the very possibility of meaning and truth for the world in question) this seems to preclude the possibility of an absolute truth which is univocal, ontologically neutral, and common to all worlds." (p. 465. a note omitted)

21. Gorong, Yang. 2008. "Being and Value: From the Perspective of Chinese-Western Comparative Philosophy." *Philosophy East and West* no. 58:267-282.

"When a human being begins to examine a thing, the following questions will always be asked: "What is it?" "What does it mean?" "What should it be?" The first question mainly concerns the inherent specifications or simply the features of the thing; the second, its meaning to the human being; and the third, the necessity and way of realizing such a meaning.¹ Both of the last two questions relate particularly to the issue of value. The inherent connection of the three questions is rooted in the close relationship between being and value and consequently the very concreteness of

being." (p. 267)

22. Graham, Angus Charles. 1989. "Conceptual Schemes and Linguistic Relativism in Relation to Chinese." *Synthesis Philosophica* no. 4:713-732.

Reprinted in in A. C. Graham, *Unreason within Reason: Essays of the Outskirts of Rationality*, La Salle, IL: Open Court 1992, pp. 59-83 and in Bo Mou (ed.), *Philosophy of Language, Chinese Language, Chinese Philosophy: Constructive Engagement*, Leiden: Brill 2018, pp. 247-268.

"Philosophers discussing conceptual schemes seem generally to treat them as assumptions in propositional form behind the thought of different cultures, cosmologies, or phases in the history of science. On the one hand, conceptual schemes appear as conflicting systems of assumed truths which are only imperfectly testable by observation, and bring us uncomfortably near to epistemological chaos; on the other, suspicion arises that the notion of a conceptual scheme may not be coherent at all: As Donald Davidson argues in his paper, "On the Very Idea of a Conceptual Scheme", we seem to end up with

nothing definite but “the simple thought that something is an acceptable conceptual scheme or theory if it is true.”(1) For inquirers into the thought and language of other cultures, the issue is inescapable. That very idea is one of their indispensable tools, to which Davidson’s objections do not directly apply, since their own tendency is to think of it in terms, not of propositions,(2) but of classification by naming, and perhaps of syntactic structures. I wish to argue that examination of their usage can open up a different perspective on the philosophical problems.

At the roots of the systems of propositions called ‘conceptual schemes’ by philosophers there are patterns of naming pre-logical in the same sense as patterns of perception are pre-logical, and I shall myself use the term exclusively of these." (p. 713)

(1) Davidson in *Post-Analytic Philosophy*, ed. John Rajchman and Cornel West (New York: Columbia University Press, 1985), 139.

(2) For practical reasons I shall speak of ‘propositions’ where Davidson and others say ‘sentences’, reserving the latter for sentences in natural languages, English, Chinese.

23. Hackett, Stuart Cornelius. 1979. *Oriental Philosophy: A Westerner’s Guide to Eastern Thought*. Madison: University of Wisconsin Press.

"This book will attempt to explain, in language intelligible to the Western reader and with as few technical complications as possible, the main philosophical positions associated with the religious traditions of Confucianism, Taoism, Buddhism, Hinduism, and Jainism.

It is a real introduction to oriental thought directed to the level of the upperclass college student and therefore explicitly intended as a basic text for courses in this area. It is, however, not an exhaustive treatment of the subject, and its ideal function would be to provide an expository and critical framework to be supplemented both by class lectures and by

supplementary readings in primary source materials, such as those listed in the bibliography.

As it stands, the book has numerous qualities that contribute to its usefulness: it contains not only expositions of the perspectives discussed, but also evaluative critical sections which attempt to assess these views along lines carefully explained in the introduction. A further distinctive feature is the marginal outline, which provides a basis both for understanding the text and for developing organized insight into the views discussed. There is also a glossary which briefly and clearly defines the principal special terms that are used, as well as a general bibliography which will guide the reader into accessible literature on the subject in the English language. A final unusual quality of the book is that each section ends with" (Preface, p. VII)

24. Halbfass, Wilhelm. 1985. "India and the Comparative Method." *Philosophy East and West* no. 35:3-15.

Reprinted in W. Halbfass, *India and Europe: An Essay in Philosophical Understanding*, Albany: State University of New York Press, 1988, pp. 419-433.

"The expression "comparative philosophy" itself is ambiguous. It does not make it clear whether philosophy is the subject or the object of comparing.

Do we philosophize while we are comparing, i.e. in and through comparison, or do we just deal with philosophy or philosophies as objects of comparative historical or anthropological research? If "comparative philosophy" is supposed to be *philosophy*, it cannot just be the comparison of *philosophies*. It cannot be the objectifying, juxtaposing, synoptic, comparative investigation of historical, anthropological or doxographic data.

Comparative philosophy is philosophy insofar as it aims at self-understanding.

It has to be ready to bring its own standpoint, and the conditions and the horizon of comparison itself, into the process of comparison which thus assumes the reflexive, self-referring dimension which constitutes philosophy. And, of

course, in applying the term and concept of philosophy cross-culturally and beyond the sphere in which it was created and originally used, we cannot be sure whether we are indeed comparing philosophies, or whether we are comparing the Western tradition of philosophy with other traditions which, in spite of all analogies, are ultimately not philosophical traditions. But this might be a deeper challenge to self-understanding than merely dealing with what is explicitly referred to as philosophy, i.e. with the history of philosophy under the secure and thoughtless guidance of the word "philosophy." (p. 433)

25. Hall, David L. 2001. "Just How Provincial *Is* Western Philosophy? 'Truth' in Comparative Context." *Social Epistemology: A Journal of Knowledge* no. 25:285-297.

"I shall claim that the putative absence of speculations concerning 'truth' in the Chinese tradition is a direct consequence of quite different approaches the Chinese have taken to the three Western suppositions cited above—namely, the necessity to distinguish things as they appear from the way they really are; the belief that the cosmos or world is a one rather than a many, and the preference for substantive over processive understandings of the way of things. I would argue that these are necessary cultural requisites for the development of truth theories as we have come to think of them in the West.

In the following section I will provide some evidence that the cultural requisites for the development of Western-style truth theories were not effective in shaping the development of classical Chinese cultural sensibilities." (p. 288)

(...)

"In the West, truth is a knowledge of what is real and what represents that reality. For the Chinese, knowledge is not abstract, but concrete and specific. Truth is not representational, but performative and participatory. It is a kind of know-how, a practical understanding of how to follow the proper path.

Truth-seekers begin with —a wide-eyed wonder at the natural world around them—and proceed to the development of theories of the way things are, and finally become well-nigh obsessed with discovering if their theories are *true*. This leads to a concern for propositional and doctrinal consensus, *orthodoxy*.

Way-seekers search out those forms of action that promote harmonious social existence. Theirs is a concern for orthopraxy. For the way-seekers, truth is a quality of persons, not of propositions. Truth as ‘way’ refers to the genuineness and integrity of a fully functioning person.

27. Hashi, Hisaki. 2016. "The Logic of ‘Mutual Transmission’ in Huayan and Zen Buddhist Philosophy- Toward the Logic of Co-existence in a Globalized World." *Asian Studies* no. 4:95-108.

Abstract: "Is it true that in the history of East Asian cultures there was less “philosophy”, less “logic” and “rationality” before the process of modernization began in the nineteenth century? A number of scholars of East Asian Studies believe this is a form of prejudice. For example, Nishida Kitarō stated that in East Asian cultures there is another form of logic, which can be called the “logicus spiritus” (心の論理). This article examines the essential parts of this logic with regard to Huayan and Zen Buddhist philosophy, and is thus an effort at comparative philosophy."

28. Hengelbrock, Jürgen. 1996. "Some reflections on Aristotle's notion of time in an intercultural perspective." In *Time and Temporality in Intercultural Perspective*, edited by Tiemersma, D. and Oosterling, H.A.F., 43-52. Amsterdam: Rodopi.

"It may be surprising to look back at Aristotle's way of thinking from an intercultural point of view. Aristotle is reputed as the thinker of the universals suppressing the differences, as the theorist of abstraction, neglecting particularities - natural particularities as well as those which are constitutive elements of culture.

Indeed Aristotelian philosophy aims at transgressing what we name cultural phenomena. It tries to constitute a universal science of being, beings and essences, valid for all people at all times.

On the other hand Aristotle's thought seems to have derived from the Greek language. The structure of Greek syntax: had it not been the model of his doctrine of categories? In his well-known book on the Hopi language (1956) B. J. Whorf even suggests that Aristotle was duped by his Greek mother tongue. From this point of view, the Aristotelian ontological substance is the equivalent to the subject of the Greek sentence, and the grammatical complement in the sentence is transformed into the ontological accident. Aristotle's ontology, in this context, is just the grammar of Greek language. From this point of view the Aristotelian assumption that there is a universal science appears as a grand illusion. Today someone might even consider this assumption as grand arrogance: by his pretention he imposes the Greek model of understanding on mankind as the only valid one." (p. 43)

30. Heubel, Fabian. 2011. "Kant and Transcultural Critique: Toward a Contemporary Philosophy of Self-Cultivation." *Journal of Chinese Philosophy* no. 38:584-601.

"How may it be possible to relate German and French critical theory on the one side and contemporary Neo-Confucianism on the other, two philosophical movements that have had very little mutual influence on and interest for each other? In an earlier article, I mainly refer to the Confucian manifesto of 1958 and the critical reflection on Chinese modernity, which undertakes to give a preliminary answer to this question.⁽¹⁾ In this article, the constellation of modernity, capitalism, subjectivity, and self-cultivation serves as a point of entry. More precisely, the contrast between two paradigms of self-cultivation, that of spiritual cultivation in Pierre Hadot and that of aesthetic cultivation in Michel Foucault, is what now constitutes an analytic perspective that allows us to establish a connection between aesthetic cultivation in Foucault and spiritual (or moral) cultivation in contemporary Neo-Confucianism." 31. Hofmeyr, Murray. 2004. "The Promise and Problems of Intercultural Philosophy." *Phronimon* no. 5:51-76.

Abstract: "In this paper I sketch the main elements of Heinz Kimmerle's conceptualisation of intercultural philosophy: a

new concept of difference that makes possible a new take on "different and equal" which is the foundation for real dialogue. I interrogate the concept of culture in intercultural philosophy, and argue that for the South African context sufficient emphasis must be placed on power relations as they impact on cultures and the legacy of a history of cultural domination. I try to show that Kimmerle's notion of the equality of cultures implies that a particular context is taken seriously as a valid instance of the human condition, and in that sense it is of equal status with all other situations. All 'localities' are linked in some way or another. It thus belongs to adequately conceptualising the thoughts and feelings of a specific locality that the need for dialogue should be reflected. A philosophy that negates these shifts would be disqualified as inadequate. The fact that it seeks dialogue is indicative of the experience of an aporia.

It is lack, incompleteness, which is universal!. I also tentatively propose "contextual philosophy" as a more appropriate name for intercultural philosophy in South Africa."

32. Hongladarom, Soraj. 2019. "How to Understand the Identity of an Object of Study in Comparative Philosophy." *Comparative Philosophy* no. 10:119-126.

"Bo Mou has presented a list of methodological principles concerning how to maintain adequate methodological guiding principle in doing philosophy comparatively. Its main idea is that these principles should maintain rationality and objectivity of comparative philosophy. Perhaps the most important principle in his list is the first one: in Mou's words, "A methodological guiding principle is considered adequate (in this connection) if, given an object of study, it enables the agent to recognize that there is a way that the object objectively is such that it is not the case that "anything goes," and we can all talk about that same object even though we may say different things (concerning distinct aspects of the object) about it." (Mou 2018,1-2 [Mou 2016, 269-70]). In other words, an adequacy condition for a fruitful undertaking of comparative philosophy is that both sides recognize that there exists at least an object in common.

(...)

In this paper I would like to take up this argument and show that in some cases comparative philosophy and constructive dialogs between different philosophical traditions could indeed take place successfully even without sharing an objective individual thing that Mou argues for. This, however, does not imply that “anything goes” because both the traditions can engage in a common enterprise even though they don’t share any individual object in common. My example will come from comparing Buddhist philosophy with Aristotle’s philosophy on individuals. The Buddhist and the Aristotelian can, as I shall argue, engage in a very constructive dialogue with each other even though they don’t share anything in common in their respective ontologies. Not sharing anything does not entail that anything goes because the Buddhist and the Aristotelian still can debate and understand each other’s point through translations of their respective vocabularies.” (pp. 119-120)

[Editorial note: the partial contents of this unpublished paper under the engaging discussion in this “Constructive-Engagement Dialogue” section previously appear in Bo Mou (2016), “How Constructive Engagement in Doing Philosophy Comparative is Possible”, *Synthesis Philosophica* 62.2: 265-277; the interested reader can see them in this published article.]
33. Hoogland, Jan. 1996. "The necessity of intercultural philosophy." In *Time and Temporality in Intercultural Perspective*, edited by Tiemersma, D. and Oosterling, H.A.F., 25-41. Amsterdam: Rodopi.
- "In some of his writings Heinz Kimmerle states that there is a 'philosophical-historical necessity' (*philosophiegeschichtliche Notwendigkeit*) for an intercultural dialogue within philosophy (eg. Kimmerle 1994, 131f.). I think he is right. At the same time

I have some critical questions about the meaning of this concept of necessity. In this essay I will make clear that a truly open dialogue between philosophers from different cultures can be hindered by a certain kind of dogmatism, which is characteristic for Western thinking. I will show this on the basis of the work of Herman Dooyeweerd. This does not mean that I will undermine the thesis that this dialogue is necessary as such. On the contrary, it is once again Dooyeweerd's philosophy which can illustrate how necessary such a dialogue is, because of the prejudices in his judgements about 'primitive' cultures.

In another essay I already investigated the meaning of the concept of 'necessity' in Kimmerle's argument.⁽¹⁾ In this essay I will consider the subject from a different perspective. In his *Die Dimension des Interkulturellen* Kimmerle illustrates his thesis by means of the problem of time in Western thought (Kimmerle 1994). Starting from the critique of Derrida on the Western way of thinking about time, he pleads for an intercultural exchange of ideas about this subject to overcome the aporias within the Western concept of time." (p. 25)

34. Izutsu, Toshihiko. 1983. *Sufism and Taoism: A Comparative Study of Key Philosophical Concepts*. Berkeley: University of California Press.

Abstract: "In this deeply learned work, Toshihiko Izutsu compares the metaphysical and mystical thought-systems of Sufism and Taoism and discovers that, although historically unrelated, the two share features and patterns which prove fruitful for a transhistorical dialogue.

His original and suggestive approach opens new doors in the study of comparative philosophy and mysticism.

Izutsu begins with Ibn 'Arabi, analyzing and isolating the major ontological concepts of this most challenging of Islamic thinkers. Then, in the second part of the book, Izutsu turns his attention to an analysis of parallel concepts of two great Taoist thinkers, Lao-tzu and Chuang-tzi. Only after laying bare the fundamental structure of each world view does Izutsu embark, in the final section of the book, upon a comparative analysis. Only thus, he argues, can he be sure to avoid easy and superficial comparisons. Izutsu maintains that both the Sufi and Taoist world views are based on two pivots—the Absolute Man and the Perfect Man—with a whole system of ontological thought being developed between these two pivots. Izutsu discusses similarities in these ontological systems and advances the hypothesis that certain patterns of mystical and metaphysical thought may be shared even by systems with no apparent historical connection."

35. Jenco, Leigh Kathryn. 2007. "'What Does Heaven Ever Say?' A Methods-centered Approach to Cross-cultural Engagement." *American Political Science Review* no. 101:741-755.

Abstracty: "How can we conduct cross-cultural inquiry without reproducing the ethnocentric categories that prompt critique in the first place? Postcolonial and comparative political theorists have called into question the "universal" applicability of Western liberal political norms, but their critiques are drawn most often from competing Western discourses (e.g., poststructuralism) rather than from the culturally diverse traditions of scholarship whose ideas they examine. In contrast, I suggest attending to these culturally situated traditions of scholarship, especially their methods of inquiry, in addition to their substantive ideas. This method-centered approach reinterprets cross-cultural engagement, not as a tool for modifying existing parochial debates on the basis of "non-Western" cases, but as an opportunity to ask new questions through alternative frames of reference. Examining the interpretive methodologies of two Chinese classicists, I show how their methods offer not only new ideas but also new methods for the

practice of political and cross-cultural theory."

36. ———. 2012. "How meaning moves: Tan Sitong on borrowing across cultures." *Philosophy East and West* no. 62:92-113.

"This essay offers an attempt at a cross-cultural inquiry into cross-cultural inquiry by examining how one influential Chinese reformer, Tan Sitong (1865–1898), thought creatively about the possibilities of learning from differently situated societies." (p. 92)

(...)

"I center my discussion on a theory about the relationship between dao and qi that the radical reformer Tan Sitong formulated around 1895, in support of "total Westernization" (quanpan Xihua). Following but ultimately contesting the dominant ti/yong paradigm of the more conservative Foreign Affairs School, Tan parses the problem out in this way: how, if at all, are the particular concrete manifestations of the Western world that seem so brilliantly useful — steam engines, guns, tall buildings — related to the values or principles that Western people seem to uphold? How can they come not only to be imitated by Chinese but also to have meaning for them? Tan recognized that these meanings were related but irreducible to the ideas individuals held separately in their minds, or the values enforced by state institutions. In response, he produces an original and unusually metaphysical account of how values and meaning are produced and consumed across society, as well as how they work to support more observable external phenomena such as parliamentary government, technological development, and social practices of equality." (p.93)

37. Jiménez Estrada, Vivian M. 2005. "The Tree of Life as a Research Methodology." *Australian Journal of Indigenous Education* no. 34:44-52.

Abstract: "This paper is grounded on the premise that research, as a colonising practice, needs constant reconceptualisation and rethinking. I propose a methodology based on some of the values, visions and stories from my own Maya Indigenous culture and knowledge in addition to other Indigenous cultures across the world. I argue that researchers need to constantly

acknowledge and change the negative impacts of ignoring multiple ways of knowing by engaging in respectful methods of knowledge collection and production. This paper contributes to the work Indigenous scholars have done in the area of research methodologies and knowledge production. First, a general overview of the values and concepts embedded in the Ceiba or the "Tree of Life" is presented; then, a discussion of what respectful research practices entail follows; finally, it concludes with a reflection on how the Ceiba is a small example of how researchers can adapt their research methodology to the local context."

38. Jung, Hwa Yol. 2011. *Transversal Rationality and Intercultural Texts: Essays in Phenomenology and Comparative Philosophy*. Athens: Ohio University Press.

"This book of thirteen selected essays spans almost half a century from 1965 (chapter 3) to 2009 (chapters 9 and 13). Many, if not all, of them are experimental and exploratory in nature." (Introduction, p. X)

(...)

"Chapter 2 advances the concept of transversality, which is central to the main themes of this book. It begins with a critique of the notion of universality in modern Western philosophy. It targets Hegel— the modernist incarnate— in particular, who had a dark view of the non- Western world, particularly China and India. His overarching Eurocentric universality is founded on the fallacious assumption that what is particular in the West is made universalized whereas what is particular in the non- West remains particular forever." (p. XII)

(...)

"Transversality means to overcome and go beyond ("trans") the clash of ethnocentrism both "Orientalist" and "Occidentalism" as a result of "essentializing" (to use Edward W. Said's phrase) the Orient or the Occident. We are warned not to take it simply as a middle point between bipolar opposites. Rather, it breaks through bipolarity itself (theory and practice, philosophy and nonphilosophy, mind and body, femininity and masculinity,

humanity and nature, Europe and non-Europe, etc.). What must be recognized as important is the fact that transversality is the paradigmatic way of overcoming all polarizing dichotomies and ready for the conceptualization of "world philosophy." The end product of transversality in the fusion of cultural (and disciplinary) horizons is hybridity or creolization. Viewed in this way, what is traditionally called "comparative philosophy" is not just a neglected and underdeveloped branch of philosophy, but *it is poised to transform radically the very conception of philosophy itself.*" (pp. XII-XIII)

39. Kaipayil, Joseph. 1995. *The Epistemology of Comparative Philosophy: A Critique with Reference to P. T. Raju's Views*. Rome: Centre for Indian and Inter-Religious Studies.

"Comparative philosophy has been in existence as an organized discipline with plausible aims and methods of its own for over the past fifty years. Its potential was well exploited to facilitate East-West understanding, exchange, and cooperation in philosophy. For all this, the debate about the philosophical rationale of comparative philosophy, i.e. its place and function in the wider context of philosophical enterprise, is far from over. Now it is time for us to do a "stocktaking" or a state of the art assessment of the subject, and this is what we intend to do by analysing P .T, Raju' s views on comparative philosophy. Raju is used as a case study because he, of all writers on/in comparative philosophy to date, is of singular importance and special consideration for both the theoretical contribution to the subject and the amount of literature produced in the field.

As for the format of our study, the work consists of a general introduction and four chapters. The first three expository chapters present Raju's views on comparative philosophy and his philosophical synthesis. As a rule these chapters contain Raju' s views only, excepting those comments and observations we make in the footnotes. The fourth chapter offers critiques of Raju' s comparative philosophy and calls for a paradigm shift in East-West studies in philosophy. While we question the justification for pursuing comparative philosophy as an independent discipline, we maintain the need and relevance of cross-cultural and comparative studies in philosophy and argue

for a fresh perspective of philosophical studies and a new syllabus for history of philosophy." (From the Preface)

40. Kakol, Peter. 2002. "A General Theory of Worldviews Based on Madhyamika and Process Philosophies." *Philosophy East and West* no. 52:207-223.

Abstract: "The aim of this essay is to make a contribution to the emerging field of "cross-cultural analysis of worldviews" by showing how the basic insights of process philosophy and Madhyamika Buddhism can be combined into a comprehensive theory of worldviews that is both developmental and typological (or diachronic and synchronic). It is hoped that this theory of worldviews will enable cross-cultural analyses of worldviews to go beyond mere comparison of similarities and differences between worldviews by showing how worldviews can mutually transform one another through dialogue. I will begin by outlining the basic ideas of both process thought and Madhyamika Buddhism, their respective theories of worldviews, and how these relate to contemporary thought. I will then argue that these two theories are compatible with one another and that their combination can contribute to the development of a general theory of worldviews. Finally, I will show how such a general theory of worldviews- which is also necessarily a general theory of values-can be used in the evaluative analysis of worldviews.

41. Kalmanson, Leah. 2015. "Have We Got a Method for You! Recent Developments in Comparative and Cross-Cultural Methodologies." *Confluence: Online Journal of World Philosophies* no. 3:205-214.

Abstract: "Recent developments in comparative and cross-cultural philosophy converge on the question of philosophical methods. Three new books address this question from different perspectives, including feminist comparative philosophy, Afrocentricity, and metaphilosophy. Taken together, these books help us to imagine interventions in the methodologies dominant in Western academic philosophy through a fundamental reevaluation of how we think, reason, and argue. Such reevaluation underscores the problems that Eurocentrism

poses for feminist discourse and the resources that comparative philosophy offers for addressing these problems."

"In several recent articles, Leigh Kathryn Jenco questions the use of Eurocentric methodologies in conducting cross-cultural research within and about Chinese traditions.(3)" (p. 399)

(...)

"In what follows, I begin with Jenco's claim that we might look to several scholars of the Ming and Qing dynasties for examples of research practices that could be adopted widely today. These include meditation routines meant to prepare the mind for scholarly research, and memorization techniques aimed at internalizing texts to catalyze philosophical insight and, ultimately, self-transformation. As I show, these methods are part of a general "ritual methodology" evident across all the sanjiao 三教(8) traditions (i.e., the "three teachings" of Ruism, (9) Daoism, and Buddhism) and informed by a certain conception of the mirror-like functioning of the mind. From within this context, I consider both the viability and desirability of such a ritualized approach to scholarship for contemporary professional philosophers." (p. 400)

(8) Sanjiao or the “three teachings” is a term that goes back to at least the Sui dynasty; I use it here to emphasize certain methodological similarities that underlie these various East Asian traditions.

(9) Following Robert Eno in *The Confucian Creation of Heaven*, I use “Ruism” in place of “Confucianism” to better approximate the Chinese term rujia 儒家 or “scholarly lineage.”

43. Kasulis, Thomas P. 2002. *Intimacy or Integrity: Philosophy and Cultural Difference*. Honolulu: University of Hawai'i Press.

The 1998 Gilbert Ryle Lectures.

"This book is not a study of any particular culture, although I cannot deny I have often had specific cultures or subcultures in mind as I developed the theory. As the next chapter will explain, for example, I doubt that I would have developed the reiterative patterns in this way if it had not been for my exposure to Japanese culture. Yet the book is not intended to be an analysis of any single culture, even Japanese culture. It is more like a thought experiment that raises fundamental issues about the nature of culture itself, especially the relation between culture and thought. One aim of this book is to present the case for understanding at least some cultural phenomena in terms of the reiterative or recursive analysis. The role of the philosopher is not just to analyze but also to give us better tools for analysis. My readers are therefore invited, indeed encouraged, to use the tools in relation to whatever cultures or subcultures they wish. It is unlikely that any culture is ever a perfect example of either an intimacy-dominant or integrity-dominant culture (generalities always have qualifications or exceptions), but the hope is that the analysis and critical tools presented here may help us see connections and differences we might have otherwise missed. If this hope is realized, communication and understanding across cultures will be

assisted and the book will have served its ultimate purpose." (p. 11)

44. Kessler, Gary E. 2015. *Voices of Wisdom: A Multicultural Philosophy Reader*. Andover (Hamshire): Cengage Learning.

Ninth edition.

"Since the publication of the first edition of *Voices of Wisdom*, I am gratified to note that more introductory textbooks now incorporate a multicultural perspective, a perspective that was unique to this introductory reader when it was first published in 1992.

At that time the introductory readers that were available treated philosophy as if it were entirely an Anglo-European male phenomenon. Little or no attention was given to Hindu, Buddhist, Chinese, African, Native American, Latin American, and feminist philosophy. *Voices of Wisdom* helped to change that situation, offering to those who wished it the possibility of assigning significant readings that represent the global nature of philosophizing." (preface, p. XI)

45. Kimmerle, Heinz. 1996. "How can time become time (again)? How to repeat what never has been?" In *Time and Temporality in Intercultural Perspective*, edited by Tiemersma, D. and Oosterling, H.A.F., 11-23. Amsterdam: Rodopi.

"Time can never become what it essentially is: the pure openness of being and of becoming. But we can work on a way of understanding it, which is more open, less fixed into the opposition of time or no time, of being or not being.

We can do this if we opt for a pluriformity of time or Being as being experienced in different ways. I do not mean this in a highly speculative sense, rather in a more practical sense. How can we think and act in ways which are more adequate to the being of time? On the one hand we can follow the thinking of Heidegger, Derrida and Lyotard who deal with this difficult question. On the other hand we can find the pluriformity of being and of time directly and concretely in the pluriformity of cultures. And it is a very practical exercise to work on the maintenance of this pluriformity. Therefore, with regard to our

present issue, we will first ask how time is thought of by Lyotard and also by Heidegger and Derrida and secondly how time is experienced in other cultures and how this experience is conceptualized. As an example I have chosen the concept of time in African thought. Thus a highly speculative and a more practical approach come together, for thinking is also a way of living and as philosophers we have to learn how we can to live by working out how we must think. This 'must', of course, is not a purely logical imperative; nor is it orientated to a certain direction: east or west, south or north, but to the openness of Being as happening to be." (p. 12)

46. ———. 2007. "Transdisciplinary research in the cooperation between intercultural philosophy and empirical sciences." *TD: The Journal for Transdisciplinary Research in Southern Africa* no. 3:95-103.

Abstract: "This article will examine how philosophy and empirical sciences can cooperate in research. It is presupposed that in philosophy and in the empirical sciences different types of discourses are used. This difference causes a large gap between them, which has to be bridged. Intercultural philosophy is understood as a specific approach to philosophy as a whole. It is necessary to make philosophy fit into a world in which exchanges are happening on a global level in many fields. In the dialogues between the philosophies of different cultures, support is needed from certain empirical sciences for the understanding of the philosophy, which is based on the the participation of philosophers in everyday life and everyday language. Therefore, in addition to the the support by empirical sciences, living in a foreign culture, participating in its life, is necessary for intercultural philosophers."

47. ———. 2010. "My Way to Intercultural Philosophy." *Recerca. Revista de Pensament i Anàlisi* no. 10:35-44.

Abstract: "My way of philosophical thought led me from hermeneutics, via dialectics and philosophies of difference to intercultural philosophy with special attention for African philosophy. I studied hermeneutics with the theologians Gerhard Ebeling and Ernst Fuchs at Tübingen, Philipp

Vielhauer at Bonn and the philosopher Hans-Georg Gadamer at Heidelberg in the 1950ies. Reading Hegel and Marx I came to accept the position of materialist dialectics. My favorite author was Ernst Bloch who combines his position of materialist dialectics with a critical interpretation of religion, especially Jewish-Christian religion. Jacques Derrida's deconstruction of Hegelian dialectics brought me to the philosophies of difference. The concept of the Other in these philosophies formed the entrance to contribute to the foundation and the development of intercultural philosophy."

48. ———. 2011. "Respect for the Other and the Refounding of Society: Practical Aspects of Intercultural Philosophy." In *Intermedialities: Philosophy, Arts, Politics*, edited by Oosterling, Henk and Plonowska Ziarek, Ewa, 137-152. Lanham: Rowman & Littlefield.

"The aim of "Intercultural" philosophy is to add a new dimension to Western philosophical traditions. From a Western point of view, this type of philosophizing is carried out by leading dialogues between Western and non-Western traditions of thought. The position that every culture has its own specific way or style of thought and of philosophy is taken as an important starting point. Or, to formulate it in a negative manner, Western philosophy is not chosen as the criterion for judging where philosophy can or cannot be found. If philosophy occurs in traditional African ways of thought, which is generally acknowledged since African philosophy is a regular section at the World Congresses of Philosophy, this means that philosophy can be found also in cultures that do not practice primarily written forms of communication and tradition. From here the step can be taken to ascribe philosophy to all cultures. The reflection of a culture on the right of its existence and its specific way of life among other cultures and in the middle of nature brings about philosophy in that particular culture. The dialogues between the philosophies of different cultures are treating topics, which are of common interest for them and/or of an importance that exceeds the problems of one of the cultures in

question. Intercultural philosophical dialogues presuppose that the philosophies of all cultures are equivalent in rank and different in style as well as in contents." (p. 137)

50. Kirloskar-Steinbach, Monika, and Kalmanson, Leah. 2021. *Practical Guide to World Philosophies: Selves, Worlds, and Ways of Knowing*. New York: Bloomsbury Academic.

"As our subtitle indicates, this introduction to "world philosophies" is also a book about selves, worlds, and ways of knowing. As such, it accomplishes two interrelated tasks: (1) it not only brings a world philosophical approach to bear on these fundamental issues; but (2) it also shows how our very understanding of the meaning of the terms "selves," "worlds," and "knowing" is transformed in the process.

Although we intend for this volume to stand on its own as an exercise in world-philosophical practice, we have also designed it to serve as a guidebook to the Bloomsbury series *Introductions to World Philosophies*. The series is an educational resource that provides in-depth introductory texts in world-philosophical traditions appropriate for classroom use as well as accessible to a general audience. Each volume in the series responds to the thematic framework indicated in our subtitle, such that together the contributions provide a diverse array of philosophical perspectives on fundamental questions related to selves, world, and ways of knowing." (p. 1)

51. Kirloskar-Steinbach, Monika, Ramana, Geeta, and Maffie, James. 2014. "Introducing Confluence: A Thematic Essay." *Confluence: Online Journal of World Philosophies* no. 1:7-63.

Abstract: "In the following thematic introduction, we seek to situate *Confluence* within the field of comparative philosophy and substantiate why we deem a new publication necessary. For this purpose, we reconstruct the salient stages in the development of comparative philosophy in Section I, and then proceed to expound the rationale underlying *Confluence* in Section II. Our reconstruction of these stages pursues an exploratory rather than a documentary approach."

52. Koller, John M. 2018. *Asian Philosophies*. New York: Routledge.

Seventh edition (First edition 1970).

"By studying the great philosophical traditions of Asia, it is possible for us to understand these traditions' carefully considered answers to these questions, answers that are supported by profound insights and good reasons. Because these answers have guided the thought and action of the peoples of Asia over the centuries, they provide the basic clues to the guiding ideas and values of Asian societies today. And in today's world, where the very future of humankind depends upon understanding and cooperation among people with diverse values and ideas, it is imperative that these values and ideas be understood.

As each of us tries to creatively develop our own personal philosophy, we can benefit enormously from an understanding of the different ways that the basic questions of life have been answered by the great thinkers in the Asian traditions." (from the Preface)

53. Kramer, Eli. 2021. *Intercultural Modes of Philosophy, Volume One: Principles to Guide Philosophical Community*. Leiden: Brill.

"This work is part of a larger project, a three-volume series entitled "Intercultural Modes of Philosophy". Each volume engages the reader in a different philodynamic image of a mode of the philosophical life. My method in this project is what I call radically empirical philosophy of culture, which transitions Cassirerian cultural phenomenology out of critical idealism and into a Jamesian and Whiteheadian inquiry into the higher thresholds of experience (human culture). In this first volume, I explore the neglected communal mode of philosophy (philosophical community) through meta-ethical principles that articulate what makes it robust, successful, and valuable. In the second volume, I will trace the enactments of philosophical wanderers. These philosophical wanderers enact reflective life as the force that, as an exercise in being obnoxious, awakens

culture out of its settled dogmatisms and onto new and more ethically rich routes in the wider world. The third volume will meditate on and with philosophical speculators, as those who create and maintain philodynamic cosmic images for reconstructive contemplation. In other words, it will explore the structure of systematic philosophical inquiry both for creator and audience. Together, these three modes of philosophy can be thought of as the "three tripod legs" that support (ground) robust philosophical life within, and effective for, a culture." (Preface)

54. Krishna, Daya. 1988. "Comparative Philosophy: What It Is and What It Ought to Be." In *Interpreting Across Boundaries. New Essays in Comparative Philosophy*, edited by Larson, Gerald James and Deutsch, Eliot, 71-83. Princeton: Princeton University Press.

Reprinted in N. Bhushan, J. L. Garfield, D. Raveh (eds.), *Contrary Thinking. Selected essays of Daya Krishna*, New York: Oxford University Press 2011, pp. 59-67.

"To search for the distinctive philosophical problems seen as problems or for distinctiveness in the solutions offered to similar problems is not only to see the alien tradition in a new way but to enrich oneself with the awareness of an alternative possibility in thought, a possibility that has already been actualized.

The awareness of this alternative actualized possibility may, one hopes, free one's conceptual imagination from the unconscious constraints of one's own conceptual tradition.

Thus comparative philosophy has the chance to function as a mutual liberator of each philosophical tradition from the limitations imposed upon it by its own past, instead of being what it is at present, the imposition of the standards of one dominant culture upon all the others and the evaluation of their philosophical achievements in terms of those alien standards." (p. 83)

55. Kupperman, Joel J. 2001. *Classic Asian Philosophy: A Guide to the Essential Texts*. New York: Oxford University Press.

"I came therefore to view this book, which is a generalist rather than a specialist project, as an extension of teaching. The organizing principle is simple. Each of the eight chapters focuses on one classic Asian text (or, in one case, cluster of texts), which is widely available in paperback, frequently in more than one translation. Each of these eight books, incidentally, is one that at some time or other I have used as one of the assigned books in an undergraduate course. The goal of each chapter is not only to explicate the text (or texts) but also to make it come alive. That is, we should be able to see Asian philosophers as struggling with important questions, ones that could matter to us too, and as offering answers that (even were we to find in the end that we cannot entirely accept them) would be plausible—in relation to those questions—to an intelligent person." (Preface, VI)

56. ———. 2002. "The Purposes and Functions of Comparative Philosophy." *APA Newsletters* no. 2:26-29.

"There are many reasons for comparative study of philosophies that represent different traditions and possibly originate in different cultures. The two that stand out are (1) appreciation, including deeper understanding of philosophical texts, and (2) the suggestiveness of philosophy in an unfamiliar tradition, providing new prompts for philosophical investigation. The first can grow out of fascination with great philosophy of a variety of kinds. The second can emerge in a working life, part of which is designed to create new philosophy." (p. 26)

57. Kwee, Swan Liat. 1951. "Methods of Comparative Philosophy." *Philosophy East and West* no. 1:10-15.

"Methodical evaluation goes farther than the formal preparatory stages of translation and collation. Comparative philosophy is a multiple and integral approach to the common issues of philosophy. In its historical development, from about the middle of the last century to the present, we see many phases." (p. 12)

(...)

"The comparative approach. This involves, as a next step, the schematic analysis of the total subject matter of philosophy, and may center about problems (comparative metaphysics, comparative logic, comparative ethics, etc.) or about pervasive attitudes (realism, idealism; monism, dualism, pluralism, etc.). This method of schematic comparison is the first stage in evaluation. Comparison involves the finding of analogies and, as a result, of specific differences. This process deepens our insight into the structural correlations in philosophy. Comparison may be considered as the most fundamental element in evaluation. The danger in attempts at comparison is that the starting point, the viewpoint of comparison, may be biased. Many Western scholars try to evaluate Eastern systems of thought by comparing them from a Christian standpoint, which tacitly is assumed as the only correct one. Comparison must do justice to every item compared both by stating the common analogical pattern and by relevating important specific differences. Both methods deserve equal attention. Comparison tends to overstress the analogy and to neglect the essential differences, often resulting in a false conviction that all philosophy or religion is essentially the same." (p. 13, notes omitted)

58. ———. 1953. *Methods of Comparative Philosophy*. Scheveningen - Leiden: Offsetdrkkerij Dorsman.

Contents: Preface V-IX; Part One: The Meaning of Comparative Philosophy. 1: Introduction 3; 2. Analysis of the phenomenon 18; 3. A historical perspective 30; Part Two: The Meaning of Philosophy. 4. Phenomenology of philosophy 61; 5. The function of philosophy 68; 6. The contents of philosophy 84; 7. The systematics of philosophy 92; Part Three: The Methods of Comparative Philosophy. 8. A triangulation of methods 111; 9. The historical and sociological approach 120; 10. The anthropological and psychological approach 139; 11. The linguistic and logical approach 154; 12. The transcendental re-evaluative approach 171; Bibliography 187; Index 207-217.

"The analysis of methods of comparative philosophy, originally intended to serve as a base for the design of a new program of applied philosophical studies in Indonesia, is presented here as

a general survey of the phenomenon of comparative philosophy as such, without references to Indonesian thought. As a survey it strives after comprehensiveness rather than completeness. No such survey has been attempted yet. Those who are engaged in the study of comparative philosophy may have some knowledge of some of the other projects with analogous purposes, but a comprehensive and systematic treatment of comparative philosophy, covering the whole field of studies, is still lacking. The present study by no means pretends to fill up this gap completely. It does not attempt to give a detailed and accurate picture of the scene, but rather to indicate the main horizons. As in a usual triangulation some points of reference are marked off with some emphasis while intermediate areas are left out of consideration. The only possible merit of such an undertaking lies in what has-not-yet-been-said rather than in what is actually propounded, It serves to stimulate to further, more systematic and more integral researches rather than to register objectively what has been achieved at the moment. It serves to link apparently disconnected projects and themes, and so to open unexpected vistas and to readjust and enlarge existent perspectives, When it succeeds to evoke some fertile criticism, to bring about more-effective co-ordination in the many contemporary projects of comparative philosophy, and to contribute to the growth of practical transcultural understanding, the author's main intentions have been amply rewarded.

Because this work is itself a survey it is impracticable to add a summary to it. The three parts of which it is composed, respectively dealing with a systematic analysis of the phenomenon of comparative philosophy, asystematic analysis of the phenomenon of philosophy itself, and the current methods of comparative philosophy, constitute a systematic whole." (pp. VI-VIII)

"This study is composed of three parts.

The first part will be an analysis of *the meaning of comparative philosophy*. A first mapping of the phenomenon is carried out in three sections. Some of the most significant recent studies

are mentioned in this chapter. A second chapter will be devoted to an analysis of the main problems. Then, the phenomenon is viewed in a historical perspective.

The second part will contain an analysis of *the meaning of philosophy* itself. The phenomenon of philosophy being the formal object of study in comparative philosophy, a mapping of this phenomenon itself is indispensable for an adequate integration of the various fragmentary endeavours in comparative philosophy. On the base of a comprehensive phenomenology of philosophy the systematic study of comparative philosophy will be facilitated. The third and last part is a comprehensive survey of current *methods of comparative philosophy*. A triangulation of methods is an efficient means to reveal the actual character of comparative philosophy as a consistent discipline." (pp. 4-5)

Bibliography

1. Lacertosa, Massimiliano. 2017. "For a philosophy of comparisons: the problems of comparative studies in relation with Daoism." *Asian Philosophy* no. 27:324-339.

Abstract: This paper reflects on the problems of cross-cultural interpretations and translations analysing how these are rooted in theories and philosophical assumptions. Inquiring the concept of philosophy per se, the paper discusses key passages of Heidegger and the related problem of 有(you) and 無(wu). The conclusion is that to translate such terms, it is necessary to revise the coercive ontotheological assumptions of metaphysics. This can trigger a process of re-grounding grounds with the consequent possibility of language transformation, which, in turn, activates new relations between cultural diversities. Thus, philosophy itself becomes an eminently comparative dialogue between cultures. Without setting a single method for all these problems, the paper argues that comparisons themselves call for necessarily different methodological approaches. Hence, whilst Daoism helps to illuminate these issues defining one of the possibilities that a philosophy of comparisons entails, this same reasoning opens a way for another reading of the *Daodejing*."

3. Leaman, Oliver. 1999. *Key Concepts in Eastern Philosophy*. New York: Routledge.

"The premise on which I am working here is that Eastern philosophy is philosophy, and not something special and esoteric which we need special non-philosophical tools to operate. On the other hand, there is no doubt that Eastern philosophy is closely connected with the religions of the East, and it is impossible to understand that philosophy unless one also understands something of the religions. I have tried to explain enough about the relevant religion or culture to make the context of the philosophy comprehensible. For this reason I have included some material that is far more relevant to religion than to philosophy.

It is always difficult to know if one has gone into enough depth, and if one has spent too much time on the religion and not

enough on the philosophy. This is a book on philosophy, and not on religion, and a book on religion would include far more discussion of the key religious concepts than I have done." (Introduction, p. XI)

4. Levine, Michael. 2016. "Does Comparative Philosophy Have a Fusion Future?" *Confluence: Online Journal of World Philosophies* no. 4:208-237.

Abstract: "This essay challenges the claim that fusion philosophy is the successor to comparative philosophy. Comparative philosophy should find itself deeply at odds with the approach to various philosophical problems and traditions that fusion philosophy is taking, and comparative philosophers will surely deny Mark Siderits (2003: xi) claim that they have been superseded. The manner then in which fusion philosophy dismisses comparativist concerns and objections is to admit that such objections are valid in some case but to deny that they are intrinsic to good fusion philosophy. Comparativists however generally do not claim that fusion philosophy is necessarily or inherently bound to make the mistakes and contribute to misunderstandings that they claim it often does. Their claim is that from the start such philosophy often does make just these kinds of problematic errors and assumptions, and that this is what comparativist philosophy must seek to avoid. By the time fusionists are done defending – actually sanitizing – fusion philosophy from comparativist objections, one is left not with fusion philosophy but with what is – from the comparativist perspective – comparative philosophy. There is no succession from comparative philosophy to fusion philosophy and no segue from one to the other."

5. Li, Chenyang. 1999. *The Tao Encounters the West: Explorations in Comparative Philosophy*. Albany: State University of New York Press.

Contents: Acknowledgments IX; Introduction 1; Chapter 1. Being: perspective versus substance 11; Chapter 2. Truth: Confucius and Heidegger 35; Chapter 3. Pragmatic versus semantic 63; Chapter 4. Ethics: Confucian *Jen* and Feminist Care 89; Chapter 5. Family: duty versus rights 115; Chapter 6.

Religion: multiple participation versus exclusionism 139;
Chapter 7. Justice: Confucian values and democratic values
163; Concluding remarks 191; Notes 193; Bibliography 217;
Index 229.

From the Introduction: "The book may be seen as a study of Chinese and Western versions Tao. "Tao", as the word is used in Chinese, is not limited to Taoism; in all major Chinese systems it refers to the right way (the Ways or cosmic order even though different schools have different interpretations.' Chinese philosophy, therefore, may be seen as studies of various aspects of the Tao. Neither Chinese nor Western philosophy is homogeneous. There are, however, certain philosophies and philosophers who have had a defining influence within their own cultures and traditions, and I believe that a comparative study of these philosophies and philosophers can be used to demonstrate different thought patterns of the two cultures. Such a study illuminates the Chinese harmony model of life, which serves as a cornerstone of my argument for the coexistence of Confucianism and democracy.

This book serves a dual purpose. While each chapter contributes directly or indirectly to the main thesis, each also stands on its own as a comparative study *of* a specific dimension of Western and Chinese philosophical and ethico-religious traditions.

Chapter 1, "Being: Perspective versus Substance," investigates the differences between Chinese ontology and Aristotelian ontology, which is the most influential in the West. Aristotle's view of being is a substance ontology, according to which the world is composed *of* various individual substances. The Chinese philosopher Zhuang Zi's ' ontology, which reflects on the background *of* Chinese thinking in general, is a perspective ontology. According to this ontology, the being or identity of an entity is always contextually situated and perspective-dependent. These ontological differences occur at a fundamental level and thus underlie many other philosophical positions that distinguish Chinese from Western views.

Communication and mutual understanding can be enhanced with a clear understanding of these differences. For example, the Chinese "contextual perspective" ontology has profound implications for people's attitudes toward many other significant aspects of life, including truth, morality, and religious practice. Because of the significance of Chinese ontology for Chinese philosophy in general, this first chapter not only provides the basis for chapter 2, on truth, it also has direct relevance to chapters 4 and 5 as the foundation of the Confucian understanding of `personhood."

Chapter 2, "Truth: Confucius and Heidegger," investigates various concepts of truth, which is a central value in the West and in China. In the West, truth is usually understood semantically; it is a relation between language and reality. The Chinese understand it primarily as a matter of being a good person, as a way of life; being true is the way to realize one's potential for becoming fully human. Different understandings of truth in Western and Chinese philosophies affect value judgments in significant ways. Heidegger is chosen here not because he represents a typical Western understanding of truth (he does not), but because he presents a root metaphor of truth that is shared by both the Chinese and the Westerner. Through exploring Heidegger's view on truth, this chapter demonstrates how the Chinese and Western notions of truth, although sharing the same common metaphor of "unveiling (*aletheia*)," lead in different directions. This understanding of Chinese truth as a way of life and self-realization provides further ground for discussion in chapters 4, 5, 6, and 7." (pp. 2-3)

6. ———. 2002. "Asian and Asian-American Philosophers and Philosophies. From the Editor." *APA Newsletters* no. 2:19.

"Comparative philosophy can be understood broadly as philosophizing across two or more philosophical systems or traditions. Today, when people say comparative philosophy they typically mean philosophizing across cultural traditions, even though the lines between cultures are not always easily drawn. We do not need a precise definition of comparative philosophy to see the value and benefit of doing comparative philosophy. Different philosophies may have different issues to

deal with because of their respective understandings of the world and human society; they may also share some philosophical problems, even if they do not tackle these problems in the same way. As we compare, we see both differences and similarities. Seeing differences helps us better understand one another; seeing similarities makes us feel less distant from one another and enhances our human solidarity.

Comparative philosophy, however, is not merely about seeing differences and similarities across traditions. Drawing rich resources from other traditions can help one's own practice of philosophy become more fruitful. Philosophizing across traditions enables us to expand our horizons and to see things from different perspectives. In the contemporary world, philosophizing without looking beyond one's own philosophical system or tradition proves increasingly impoverished and parochial."

7. ———. 2016. "Comparative Philosophy and Cultural Patterns." *Dao. A Journal of Comparative Philosophy* no. 15:533-546.

Abstract: "As a genus of philosophy, comparative philosophy serves various important purposes. It helps people understand various philosophies and it helps philosophers develop new ideas and solve problems. In this essay, I first clarify the meaning of "comparative philosophy" and its main purposes, arguing that an important purpose of comparative philosophy is to help us understand cultural patterns. This function makes comparative philosophy even more significant in today's globalized world."

8. Liang, Shuming. 2001. "The Cultures of the East and West and Their Philosophies." *Dao: A Journal of Comparative Philosophy* no. 1:107-127.

Translated by Andrew Covlin and Jinmei Yuan.

"Editor's note: This is the first installment of a series of translations of selected articles from the important debate on the Cultures of the East and West which took place in China during the early twentieth century. Generally speaking, this debate involved two groups of people: Proponents of Western

Culture, and proponents of Eastern Culture. The former, represented by Hu Shi, believed that traditional Chinese culture was no longer viable in the modern world and maintained that we should accept Western culture as a whole; the latter, represented by Liang Shuming, the author of the following selection, argued that Chinese culture is superior to Western culture and represents the future of world culture.

Translated below is chapter 2 of Liang's famous book, *The Cultures of the East and West and their Philosophies*. It can be seen in this chapter that although Dang is a proponent of Eastern Culture, he also tries very hard to incorporate into Chinese culture what he sees as valuable aspects of Western culture, particularly Mr. Science and Mr. Democracy. The section numbers are added by translators.."

9. Libbrecht, Ulrich. 2006. *Within the Four Seas... Introduction to Comparative Philosophy*. Leuven: Peeters.

"The purpose of Part I is not to deal with the problem of globalization in depth: this is far beyond my capacities. It intends only to prove that comparative philosophy must actually be the culmination of globalism, because it studies encounters between civilizations in depth, not as commercial or political strategies. Some scholars are of the opinion that comparative thinking is nothing more than an academic diversion alienated from political, economic and social reality. ActualJy, it is a project for the future, a revival of Erasmus' dream on a worldwide scale, free from traditional Eurocentrism, and also far removed from flat commercialism." (pp. 1-2)

(...)

"It is not the task of a comparative philosophy to blend these philosophies into a kind of world philosophy, but to bring them together in a model that enables global dialogue. Such a dialogue does not aim at a kind of ecumenism or mutual respect and tolerance in the first place, but at a philosophical act which brings out the similarities and especially the differences, because precisely the latter augment the spiritual wealth of mankind. In Part 2 we try to build a model which makes this

comparison possible. In Part 3 we shall deal with the three main philosophies themselves, restricting our analysis to the most extreme world-views: Greek rationality, Buddhist mysticism and Taoist nature philosophy.

It is perhaps not superfluous to remind the reader that we are not dealing with religions, but only with philosophies." (p. 44)

10. Lin, Ma, and van Brakel, Jaap. 2018. "On the Interpreter's Choices: Making Hermeneutic Relativity Explicit." *Dao: A Journal of Comparative Philosophy* no. 17:453-478.

Abstract: "In this essay, we explore the various aspects of hermeneutic relativity that have rarely been explicitly discussed. Our notion of "hermeneutic relativity" can be seen as an extension, with significant revisions, of Gadamer's notion of *Vorurteil*. It refers to various choices and constraints of the interpreter, including beliefs concerning the best way of doing philosophy, what criteria are to be used to evaluate competing interpretations, and so on. The interpreter cannot completely eliminate the guidance and constraint originating from his/her "background." However, *in principle* the interpreter can "choose" to be guided by other constraints. Hence, we speak of "choices" or "commitments." Hermeneutic relativity is the major cause for the variation of competing interpretations."

12. Lott, Tommy L. 2011. "Comparative Aspects of Africana Philosophy and the Continental-Analytic Divide." *Comparative Philosophy* no. 2:25-37.

Abstract: "Critical engagement involving philosophers trained in continental and analytic traditions often takes its purpose to be a reconciliation of tensions arising from differences in style, or method. Critical engagement in Africana philosophy, however, is rarely focused on method, style, or orientation because philosophic research in this field, regardless of

orientation, has had to accommodate its empirical grounding in disciplines outside of philosophy. I focus primarily on the comparative dimensions of three important strands of this research: (1) a history of ideas, (2) a problem-orientation, and (3) a sub-area specialization, to indicate why a need to reconcile tensions between continental and analytic orientations has very little currency in Africana philosophy. Socio-economic problems faced by African-descended people require multiple perspectives to accommodate the wide variety of diasporic social contexts for a given proposal. I employ a selection of cases to illustrate how Africana philosophy benefits from an interplay of many intersecting factors and that, as an interdisciplinary area of research with a commitment to the incorporation of multiple perspectives, it fosters cross-pollination and hybridization of continental and analytic traditions."

13. Loy, David. 1988. *Nonduality: A Study in Comparative Philosophy*. New Haven: Yale University Press.

Reprint: Atlantic Highlands: Humanities Press, 1997.

"This study divides naturally into two parts. Part 1 extracts various claims from the major nondualist traditions, Buddhism, Vedanta, and Taoism, in order to construct a "core doctrine" of nonduality largely consistent with all three. The process of selection is unsystematic, making use of assertions and arguments that provide helpful insights while ignoring most of the rest. This yields a theory about the nature of nondual experience that also explains the apparent "delusion" of our more usual way of understanding experience. But the disagreements among the nondualist systems—especially between Mahayana Buddhism and Advaita Vedanta—cannot be lightly dismissed. So part 2 works backward, using the core theory as a perspective from which to approach and resolve the disagreements. There we shall be able to understand how the same phenomenological experience may be subjected to different and even contradictory descriptions.

In this introduction, the term *nonduality* refers exclusively to the nonduality of (more narrowly) seer and seen, (more

broadly) subject and object. Such nonduality is my main concern, but is by no means the only meaning of the term in the literature. At least five different meanings can be distinguished, all of them intimately related; three of those are of interest in part 1. Chapter I sets the parameters of the study by discussing the role of these three nondualities within Buddhism, Vedanta, and Taoism. It demonstrates their prevalence, importance, and relationships, dwelling particularly upon the third nonduality of subject and object, of self and nonself, of my consciousness and the world “I” find myself “in.” Each of the following chapters of part 1 investigates what such nonduality might mean in one particular mode of our experience—perceiving, acting, and thinking, respectively. How can we understand the assertion that each of these is actually nondual?” Introduction, p. 9)

14. Lu, Mingjun. 2020. *Chinese-Western Comparative Metaphysics and Epistemology: A Topical Approach*. Lanham: Lexington Books.

"A primary objective of this project is to examine the wisdom of Chinese and Western sages through a comparative analysis of their philosophical discourses. By wisdom, I refer chiefly to the metaphysical knowledge of universality, a view that draws on Aristotle's (384–322BC) definition of wisdom in his *Metaphysics*. Aristotle calls metaphysics *philosophia prima*, the “first science” or “first philosophy” that takes “wisdom” or “truth” as its object of study (1026a28–30).² Unlike empirical study that aims at action, Aristotle observes, the end of metaphysical inquiry is “knowledge of the truth” (993b20–21). By wisdom or truth, he means “knowledge about certain causes and principles,” especially “the first causes and principles of things” (982a1; 981b29). Since great wisdom “must belong to him who has in the highest degree universal knowledge,” Aristotle remarks, “wisdom is a science of first principles” (982a20–21; 1059a18). In his *Nicomachean Ethics*, he declares that wisdom of universality is “the most finished of the forms of knowledge” (*NE* 1141a16).” (p. 2)

(...)

"It is a key argument of this project that Chinese wisdom or truth resides in its metaphysics of the first principle as well. As to be demonstrated in Chapter 1, the first principle also constitutes the primary hypothesis of Chinese originaive metaphysics as represented in the Laozi of Laozi 老子 (c. 600–531 BC), founder of the Taoist philosophy, and the ten commentaries made by Confucius 孔子 (551–479 BC) and his followers on the Yijing 易经, *The Book of Changes*.

Laozi's work is also called *Daode Jing* 道德经, *The Dao and Its Virtue*. The ten Confucian commentaries or "wings" are collected and give rise to the *Yizhuan* 易传, which will be referred to as the Yi Commentaries. Like Aristotelian metaphysics, Chinese originaive metaphysics as represented in the Taoist and Confucian classics constitute the foundational framework for later philosophers to think about metaphysical and epistemological issues." (p. 3, a note omitted)

15. Ma, Lin, and van Brakel, Jaap. 2016. *Fundamentals of Comparative and Intercultural Philosophy*. Albany: State University of New York Press.

"The title of this book is "Fundamentals of Comparative and Intercultural Philosophy," but yet we often solely use the expression "intercultural philosophy" in a broad scope, including every intercultural philosophical activity that involves translation, interpretation, and exposition of the conceptual schemes of a certain philosophical tradition in terms of the conceptual schemes of another tradition. Sometimes, we shorten this long phrase to "cross-cultural interpretation" or "interpretation across traditions." Because intercultural and comparative have different semantic fields in philosophy, we use both in the title. However, except for a few cases,(1) we use the phrase intercultural philosophy to include comparative philosophy. In terms of "fundamentals" in the title, this book is concerned primarily with the necessary preconditions of intercultural philosophy. Occasionally we address the methodology of intercultural philosophy, but this is not our main subject. "Necessary preconditions" is more fundamental than "methodology." (p. 1)

(...)

"In the remaining part of this introduction we present an overview of all the chapters. In the first chapter, we provide preliminary explications concerning the central concepts of philosophy and language and introduce the Sapir-Whorf hypothesis of linguistic relativism. After reviewing a number of views with respect to Western, Chinese, and African philosophy, we argue that philosophy is a family resemblance concept.

Interaction across traditions does not require that the two sides employ the same concept of philosophy. Similarly, no sharp boundaries between “philosophy” and other reflective practices are needed; partitions such as those among philosophy, history, religious studies, and literature are conventional, and classifications may be different, as in the history of the Chinese traditions." (p. 5)

(1) We may use the words compare or comparative when the author(s) whose work is discussed use such words. We use the words intercultural and cross-cultural as synonyms.

16. ———. 2016. "On the Conditions of Possibility for Comparative and Intercultural Philosophy " *Dao. A Journal of Comparative Philosophy* no. 12:297-312.

Abstract: "In this essay, we present a theory of intercultural philosophical dialogue and comparative philosophy, drawing on both hermeneutics and analytic philosophy.

We advocate the approach of “de-essentialization” across the board. It is true that similarities and differences are always to be observed across languages and traditions, but there exist no immutable cores or essences. “De-essentialization” applies to *all* “levels” of concepts: everyday notions such as green and *qing* 青, philosophical concepts such as emotion(s) and *qing* 情, and philosophical categories such as forms of life and *dao* 道. We argue that interpretation is a holistic multi-directional process constrained by the principle of mutual attunement. It is necessary to assume that “the other” is a human being, who, in most cases, is consistent and stating that which is true or right.

This is the condition of possibility for intercultural philosophical dialogue and comparative philosophy. No more necessary conditions are needed.

There is no need to presuppose concepts or categories that are universal for all humans and their languages (such as emotion(s) and *qing* 情)."

17. ———. 2016. "A Theory of Interpretation for Comparative and Chinese Philosophy." *Dao. A Journal of Comparative Philosophy* no. 15:575-589.

Abstract: "Why should interpretation of conceptual schemes and practices (forms of life) across traditions work at all? In this paper we present the following necessary conditions of possibility for interpretation in comparative and Chinese philosophy: the interpreter *must* presuppose that there are mutually recognizable human practices; the interpreter *must* presuppose that "the other" is, *on the whole*, sincere, consistent, and right; the interpreter must be committed to certain epistemic virtues. Some of these necessary conditions are consistent with the fact that interpretation is not thwarted by the "danger" of relativism or of incommensurability. Some other conditions are suggestive of reorientations of methodologies of comparative and Chinese philosophy.."

18. ———. 2018. "On the Interpreter's Choices: Making Hermeneutic Relativity Explicit." *Dao: A Journal of Comparative Philosophy* no. 17:453-478.

Abstract: "In this essay, we explore the various aspects of hermeneutic relativity that have rarely been explicitly discussed. Our notion of "hermeneutic relativity" can be seen as an extension, with significant revisions, of Gadamer's notion of *Vorurteil*. It refers to various choices and constraints of the interpreter, including beliefs concerning the best way of doing philosophy, what criteria are to be used to evaluate competing interpretations, and so on. The interpreter cannot completely eliminate the guidance and constraint originating from his/her "background." However, in principle the interpreter can "choose" to be guided by other constraints. Hence, we speak of

- “choices” or “commitments.” Hermeneutic relativity is the major cause for the variation of competing interpretations.”
19. MacDonald, Paul. 2013. "Palaeo-Philosophy. Archaic Ideas about Space and Time." *Comparative Philosophy* no. 4:82-117.

Abstract: "This paper argues that efforts to understand historically remote patterns of thought are driven away from their original meaning if the investigation focuses on reconstruction of concepts, instead of cognitive 'complexes'. My paper draws on research by Jan Assmann, Jean-Jacques Glassner, Keimpe Algra, Alex Purves, Nicholas Wyatt, and others on the cultures of Ancient Greece, Israel, Egypt, Mesopotamia, and Etruria through comparative analyses of the semantic fields of spatial and temporal terms, and how these terms are shaped by their relation to the sphere of the sacred. It shows that there are three super-ordinate timeframes - the cyclical, the linear and the static - each of which is composed of lower-order cycles (days, lunar months, and seasons). These timeframes reflect their cultures' ideas about the nature, scope and power of the gods, and structure the common point-of-view about the present, the past and eternity. There are also super-ordinate spatial frames which reflect their cultures' ideas about the heavens and which structure both the sacred precinct and the profane field of action and exchange. Close analysis of texts that use words such as eternity, forever, past, present, and future, for example, do not reveal that there is anything like a general abstract concept of time in virtue of which some thing or event can be said to be in time or to have its own time. Archaic patterns of thought do not differ from our "modern" patterns in having different concepts, but in not having anything like concepts at all."

20. MacIntyre, Alasdair. 1991. "Incommensurability, Truth, and the Conversation Between Confucians and Aristotelians about the Virtues." In *Culture and Modernity: East-West Philosophical Perspectives*, edited by Deutsch, Eliot, 103-121. Honolulu: University of Hawaii Press.

"We may compare Confucianism and Aristotelianism from a Confucian standpoint, or from an Aristotelian; or we may

compare both or either with some third, different, equally incompatible and incommensurable standpoint, such as that of Buddhism or of Kantianism, but we cannot find any legitimate standing ground outside the context of the points of view. And when we have undertaken comparative study in a manner which recognizes this, we shall soon find that our task is not so much that of comparing Confucianism and Aristotelianism as that of comparing Confucian comparisons of Confucianism and Aristotelianism with Aristotelian comparisons of Confucianism and Aristotelianism. The key to comparative studies is the comparison of comparisons." (p. 120)

21. Maffie, James. 2001. "Editor's Introduction: Truth from the Perspective of Comparative World Philosophy." *Social Epistemology: A Journal of Knowledge, Culture and Policy* no. 15:263-273.

"What role does this issue of Social Epistemology play in the dialogue of comparative world philosophy? The issue's contributors address from a variety of perspectives the theme of truth. Do all philosophical traditions possess the concept of truth, and if so, do they incorporate truth into their conceptions of epistemology and knowledge? If not, what do they use in place of truth?"

Many Western philosophers view correspondence truth as occupying the centre stage of Western epistemology's conceptions of knowledge and justification since Plato and Aristotle." (p. 267)

(...)

"Contemporary Western philosophy, however, standardly regards truth as applying primarily and literally to propositions alone and only derivatively and metaphorically to persons and things. Smith and Deutsch point out that this emphasis is unique to Western philosophy. In non-Western traditions, truth is typically conceived primarily as a predicate of persons or things, not propositions. Smith situates contemporary Western philosophy in historical and what he calls 'spatial' context: "To lift from the pool of truth's total, undifferentiated meaning a single referent—propositions—and develop its

meaning in that direction is our Western contribution to the subject' (Smith, 1980, p. 425). There are different emphases in other cultures' conceptions of truth, differences that were originally subtle but have become gradually more pronounced as each culture developed its own distinctive identity. Over time South Asia has tied truth to things; East Asia, to persons; the West, statements. In sum, conceiving truth as a predicate of propositions is a historically novel development of post-Renaissance Western philosophy; one not shared by East and South Asia.¹⁰ (p. 268)

(10) Despite his prominence as a scholar of world religions, Huston Smith neglects to test the merits of his thesis regarding the threefold nature of truth beyond the pale of Europe, East Asia and South Asia.

22. Malhotra, Ashok. 1980. "Introductory Remarks on the Symposium "The Problem of Truth"." *Philosophy East and West* no. 30:421-424.

Abstract: "This article offers a brief summary of the main points raised in the four papers read in the Symposium on "East-West perspectives on truth" which was organized by the society for Asian and comparative philosophy from December 27-28, 1978 in Washington, d c. The papers covered the Chinese, Japanese, Indian and comparative perspectives on truth. The Symposium revealed that the time had come when a dialogue between Eastern and Western philosophers was not only important but necessary. the Symposium achieved its aim of broadcasting this essential message."

23. Mall, Ram Adhar. 1998. "Philosophy and Philosophies – Cross-culturally Considered." *Topoi* no. 17:15-27.

"The central thesis proposed, discussed and defended here is this: There are different philosophical traditions of cultures which can make substantial contributions to philosophy in general and to the various philosophical disciplines in particular. This they may accomplish by drawing our attention to the philosophical questions put and to the philosophical answers suggested. This is where an intercultural philosophical orientation begins, and it leads us to consider the philosophies of other cultures with a view to their contributions to the general concept of philosophy which is always a response to a felt need in the face of the problems we are confronted with in our attempt to understand and explain the world of things and beings.

That we are all human beings makes one thing abundantly clear: in spite of cultural differences, there are fundamental similarities between different philosophical traditions. Philosophy in world context today, i.e. philosophy cross-culturally considered pleads for the thesis that the general applicability of the concept of philosophy remains unaffected by our recognition and acceptance of more than one genuine philosophical tradition. The naive dogmatism of identifying philosophy exclusively only with one particular philosophical convention amounts to some sort of ethnocentrism, and such a move is always suspect. One particular contextual and relative perspective is thereby put in an absolute universal position. The Western philosophy, backed by so many extra-philosophical factors e.g. social, economic, imperial, colonialistic and religious did universalize itself from the days of Diogenes Laertius up to say Husserl, Heidegger and even Gadamer and Rorty." (p. 15)

24. ———. 2014. "Intercultural Philosophy: A Conceptual Clarification." *Confluence: Online Journal of World Philosophies* no. 1:67-84.

Abstract: "In this paper I would like to show how belonging to different cultures does not impede intercultural philosophizing and instead favors it. To that end, I will first pinpoint what exactly intercultural philosophy stands for in Section II. In Section III I will sketch certain crucial features of what is in fact

a hermeneutical situation. In Section IV I will develop my own theory of an interculturally-oriented »analogous hermeneutic« and then try to show in Section V that it can furnish what is necessary to do comparative philosophy. A short conclusion will follow in Section VI."

25. Marchal, Kai. 2020. "A Few Thoughts on the Possibility of Intercultural Thinking in a Global Age." *Philosophy East and West* no. 70:238-246.

Book discussion of: *Chinese and Buddhist Philosophy in Early Twentieth-Century German Thought*. By Eric S. Nelson. London, Oxford, New York, New Delhi, Sydney: Bloomsbury Academic, 2017.

"Until recently, most humanities scholars (including philosophers) in North America and Europe lived in a world where China was notable for its absence.

(...)

Only most recently, with the changed geopolitical situation, are Chinese thinkers starting to receive more attention. In this context, Eric S. Nelson's book *Chinese and Buddhist Philosophy in Early Twentieth-Century German Thought* makes an important contribution to further opening up the West to Chinese discourses. Nelson's book is a historical study about the reception of Chinese philosophy by German-speaking philosophers in the early twentieth century.

The history of Western philosophy, Nelson writes programmatically in his introduction, "is historically already interculturally and intertextually bound up with non-Western philosophy" (p. 3)." (p. 238)

(...)

"Reviewers have already highlighted the numerous strengths of this volume. It is a landmark study in intercultural philosophy that will shape the research field for years to come. In my essay, I would like to describe a few difficulties that, in my understanding, still hamper a project like Nelson's. I want to focus on two aspects: (1) the relationship between philosophy

and its history and (2) Heidegger and the “hermeneutic primacy of interpretation”.” (p. 239)

26. Masson-Oursel, Paul. 1926. *Comparative Philosophy*. London: Kegan Paul, Trench, Trubner & Co.

Reprint: London: Routledge, 2000.

Translated from the French edition: *La philosophie Comparée*, Paris: Alcan, 1923.

"Thus, although comparative philosophy ought to be universal, we have the right and the duty, by virtue of a methodological opportunity, to restrict it for the present to the study of those peoples already dowered with a history.

For the rest, little as we are able to illuminate the historic times by the dark earlier ages, the arcana of prehistory will only be reduced by the progress of history, gradually pursued from the more to the less known. And amongst the fractions of mankind susceptible of historical investigation, only three are met with whose development has taken place in strict parallel during some three millennia; these three are precisely those of which the past has been or can be best elucidated. We refer to Europe, India, and China." (pp. 35-36)

27. ———. 1951. "True Philosophy is Comparative Philosophy." *Philosophy East and West* no. 1:6-9.

Translated from the French by Harold E. McCarthy. [Editor's note.]

"Just as it is possible to compare religions, so it is possible to compare philosophies. Such a comparison will not take the form of a simple inventory, or the form of a pure theory, although we are familiar with both.

Rather, comparative philosophy will be the general examination of the ways in which human beings of all races and cultures reflect upon their actions and act upon their reflections.

The scope of comparative philosophy is universal history and the cosmos.

But each individual is situated within his own little sphere, and each people within its own historical tradition and its own habitat. Man's dependency upon the world does not have the same significance for primitive peoples that it had for Plato and Newton, because concrete consciousness is to be located elsewhere than in astronomical time and geometrical space. In like manner, each individual lives in society without being localized there as a physical object, for he delights in residing in himself-indeed, in God. Thus, comparative philosophy is neither psychology nor sociology, but the study of modes of action which are, at one and the same time, both individual and collective, capable of becoming stabilized in structures which are certainly not eternal but are, rather, temporal and changing." (pp. 6-7)

29. McDermott, Charlene, ed. 1983. *Comparative Philosophy: Selected Essays*. Lanham: University Press of America.

"By drawing on a wide variety of views and belief systems, the present volume makes available to the reader a rich stock of alternatives for purposes of comparison and contrast. Fundamental epistemological and metaphysical issues are introduced by means of selections from writers of the first rank — both Eastern and Western. Each selection is preceded by an explanatory essay, making it a self-contained unit. In addition, a bibliography of suggested readings is appended to each of the two principal subsections. Finally, a glossary of technical terms and a set of notes on each philosopher or philosophical school included in the anthology further serve to make the book useable with minimal burden on the reader. In this way, speculations from a far-off century of an exotic cultural milieu can be held up as a kind of "distant mirror"(2) in which to view critically the outline of more familiar theories and reflections with a freshness not otherwise possible." (Preface, pp. IX-X, a note omitted)

30. McEvelley, Thomas. 2002. *The Shape of Ancient Thought: Comparative Studies in Greek and Indian Philosophies*. New York: Allworth Press.

"I will not telegraph now what my own methods and conclusions are. In the following twenty-five chapters of argument from evidence I will make a measured attempt to establish significant intrusions first from India to Greece in the pre-Socratic period, then from Greece back to India in the Hellenistic period. In addition I will continue to extend and refine the typological comparisons that scholars have been making since Jones in 1799. Perhaps other scholars will correct me on one point or another, an event which would be welcome, for this is a shared human project that deserves the involvement of many minds. Surely the relationship between ancient Greek and Indian traditions of thought is the

foundational level of comparative philosophy." (Form the Foreword)

"In this introduction, we provide an initial articulation of the scope, methods, content, and aims of feminist comparative philosophy with reference to three guiding questions: 1. What is the relationship between feminist comparative philosophy and each of its namesakes—feminist philosophy and comparative philosophy? 2. How can this new methodology overcome those patterns of exclusionary vision that have frustrated its predecessors' capacities for consistently recognizing privilege and difference? and 3. Why does it makes sense to think of feminist comparative philosophy as a liberatory practice, that is, as an activity that helps people politically and spiritually? After addressing these defining questions in the following three sections, we go on to provide summaries of the book's themes and chapters.

We conclude by considering the future of feminist comparative philosophy in terms of its potential for development and transformation." (p. 3)

33. ———. 2014. "Feminist Comparative Philosophy and Associated Methodologies: A Bibliography." In *Asian and Feminist Philosophies in Dialogue: Liberating Traditions*, edited by McWeeny, Jennifer and Butnor, Ashby, 279-300. New York: Columbia University Press.

"The purpose of this bibliography is to provide readers with a sense of what has already been published in the emerging field

of feminist comparative philosophy and to serve as an invitation to further explore its literature, history, and methodologies.

Consistent with our present desire to render visible those philosophical inquiries that emerge jointly from the insights of feminist and Asian traditions, we have limited our list of publications in feminist comparative philosophy to those that engage Asian philosophical texts. However, as explained in this book's introduction, we believe that many other pairings of cultural and social locations are consistent with feminist comparative practice and we hope that the future of this field will blossom with a diversity of fresh juxtapositions. In regard to this bibliography's sections on "Feminist Methodology" and "Comparative Methodology," we have sought to list only those resources that speak to these philosophical methodologies in general and have therefore not included publications on specialized methodologies like those used to address, for example, feminist ethics or Chinese-Greek comparisons. Moreover, our accounts of feminist methodology and comparative methodology respectively reflect those sources most relevant to the development and proliferation of feminist comparative practice, rather than to different or broader understandings of feminism and comparative studies." (p. 279)

37. ———. 1951. "Some Problems of Comparative Philosophy." *Philosophy East and West* no. 1:67-70.

"At the second East-West Philosophers' Conference, held at the University of Hawaii during the summer of 1949, a great deal was accomplished in directing the attention of the philosophical world to the important area of East-West philosophy. Those who participated in the proceedings of the Conference were convinced that philosophy is now entering upon a new stage of its development, a stage that will be characterized by trans-cultural co-operation and world perspective. Although the Conference members attempted to come to some tentative conclusions in the three fields of methodology, metaphysics, and ethical theory, everyone realized the difficulties involved in formulating any concrete conclusions at all, however tentative. It was realized in the first place that Eastern philosophies cannot be simply grouped together as a homogeneous unit compared as such with Western philosophies similarly grouped together. It was realized, moreover, that no characterizations of either the Eastern or the Western philosophical tradition could possibly indicate more than general, and sometimes rather vague, tendencies. It was also realized that where definite conclusions could be agreed upon by Conference members such agreement would sometimes be gained only by partially ignoring important variations of interpretation." (p. 67)

38. ———. 1951. *Essays in East-West Philosophy. An Attempt at World Philosophical Synthesis*. Honolulu: University of Hawaii Press.

"The report of the Second East-West Philosophers' Conference, held at the University of Hawaii from June 20 to July 28, 1949."

39. ———. 1952. "Keys to Comparative Philosophy." *Philosophy East and West* no. 2:76-78.

"The problems raised in this issue by Mr. Rosan in his paper "A Key to Comparative Philosophy" are important ones.

For the sake of better understanding, however, a few comments on behalf of the Second East-West Philosophers' Conference are in order, especially since my discussion note in this journal(1) appears to have given Mr. Rosan an incorrect impression of the work and conclusions of that Conference." (p. 76)

(...)

"In conclusion, may I say that there are surely many keys to the study of comparative philosophy. No one key will open all the doors. The important problem is not that of finding a key of universal applicability. The crucial task is, rather, that of constructing and applying various keys in the progressive investigation of the multiplicity of problems which inevitably arise in the study of comparative philosophy." (p. 78)

40. ———, ed. 1962. *Philosophy and Culture: East and West. East-West Philosophy in Practical Perspective*. Honolulu: University of Hawaii Press.

East-West Philosophy in Practical Perspective. Proceedings of the conference, held at the University of Hawaii under its sponsorship during the summer of 1959.

"The title of this volume, *Philosophy and Culture—East and West*, reflects the purpose and the work of the conference which it reports, that is, the effort to achieve mutual understanding of the practical aspects of the lives of the peoples of Asia and the West by reference to their basic and underlying philosophies, in the sense that "culture is the manifestation of the human mind in human behavior." This Preface deals exclusively with the text of the volume and not with the subject-matter or with the conference of which this is the official Report. The background of this volume, the conference itself, and its predecessors are dealt with in the Introduction.

This volume contains the proceedings of the Third East-West Philosophers' Conference, held at the University of Hawaii during the summer of 1959. It contains all the formal papers, in the order in which they were presented at the conference. It is divided into six major Sections, following the agenda of the conference.

Some of the discussion which took place at the conference meetings is included as "Questions" and "Answers" at the end of some of the papers—in those cases where the authors wished to include such discussion.

In an Appendix are included the five Public Lectures presented to general audiences during the period of the conference by representatives of the major traditions considered at the conference. (The style of these lectures, and the editing, are less formal and academic than in the case of the technical papers.)" (Preface, p. V)

"When comparative projects are critically evaluated, there seem to be four sorts of complaint. The alleged 'sins' are these: (1) over-simplification; (2) over-use of external resources; (3) exaggerated distinction; and (4) blurring assimilation. They, or some of them, are sometimes taken for granted in two senses: first, it is thought that any simplifying the object of study or using external resources to characterize it are doomed to be excessive and thus deserve to be charged with negative 'over'-character; second, it is assumed that the four complaints may be made indiscriminately in evaluating any comparative project without regard to the orientation and methodological strategy of that study. A metaphilosophical examination of the four 'sins' will help to effectively identify the distinct character and objectives of a variety of orientations and their approaches." (p. 42)

44. ———. 2010. "On Constructive-Engagement Strategy of Comparative Philosophy: A Journal Theme Introduction." *Comparative Philosophy* no. 1:1-32.

Abstract: "In this journal theme introduction, first, I explain how comparative philosophy as explored in the journal *Comparative Philosophy* is understood and how it is intrinsically related to the constructive engagement strategy. Second, to characterize more clearly and accurately some related methodological points of the constructive-engagement strategy, and also to explain how constructive engagement is possible, I introduce some needed conceptual and explanatory resources and a meta-methodological framework and endeavor to identify adequacy conditions for methodological guiding principles in comparative studies. Third, as a case analysis, I show how the constructive-engagement reflective practice bears on recent studies of Chinese and comparative Chinese-Western philosophy, especially in the past decade, for two purposes: to illustrate the foregoing theoretic characterization of the constructive engagement strategy, and to identify and explain some constructive morals that might have general significance for comparative studies."

45. ———. 2016. "How Constructive Engagement in Doing Philosophy Comparatively Is Possible." *Synthesis Philosophica* no. 62:265-277.

Abstract: "In this article I intend, on the basis of some previous relevant works on the issue, to further examine a range of conditions for maintaining adequate methodological guiding principles concerning how to look at the relation between distinct methodological perspectives in comparative-engagement exploration in philosophy. The purpose of this paper is to explore how, in the global context, distinct

approaches in philosophy can be engaged in order to constructively talk to each other and make a joint contribution to the development of philosophy and society."

46. Mudimbe, V. Y. , and Kavwahirehi, Kasereka eds. 2021. *Encyclopedia of African Religions and Philosophy*. Dordrecht: Springer.

"This comprehensive encyclopedia presents African thinkers, concepts and traditions, with a focus on African religious and philosophical practices. It offers a dependable and significant synthesis of African studies that encompasses major trends in the field since the early 1980s. The encyclopedia considers all religious and philosophical systems of Africa, both indigenous and non-indigenous. It also recognizes the determining role of the Diaspora in understanding African traditions and African identity. The work has benefited immensely from commitments in advanced interdisciplinary exchanges in a number of domains, including comparative research in epistemology and from surveys in postcolonial studies and social sciences, along with religious and philosophical compendia. In brief, this is an encyclopedia made from the viewpoint of African studies and in dialogue with scientific traditions."

47. Nakamura, Hajime. 1964. *Ways of Thinking of Eastern Peoples: India, China, Tibet, Japan*. Honolulu: East-West Center Press.

Revised English translation edited by Philip P. Wiener (Original Japanese edition 1960).

"If we are to hazard any conclusions about Eastern peoples as a whole, it must be as a tentative hypothesis in a comparative study of the data. Generalized conclusions drawn before such individual preparatory studies have been made will perforce be hasty and dogmatic. Thus, in order to deal with the ways of thinking of Eastern peoples, it is first necessary to examine the ways of thinking of each of the peoples individually. However, such a study of all the peoples of the East is, from a practical point of view, impossible at this time. | intend to concentrate on India, China, Tibet, and Japan. My reason is that among these four peoples alone did there exist—however imperfectly—

a study of traditional Buddhist logic, which came first from India to the other three areas, and then developed independently in each.

I believe that the various other peoples of the East have nearly the same ways of thinking as one or another of these four. Specifically, one may say that Ceylon, Burma, Thailand, and western Indo-China (Cambodia and Laos) are akin to India. Central Asia and Mongolia are akin to pre-Communist Tibet. Manchuria, Korea, and eastern Indo-China (Vietnam) are akin to China. Thus, an examination of the ways of thinking of these four is, in effect, a study of the most influential peoples of the East. It is only after such a study, if at all, that a generalized view of the ways of thinking of Eastern peoples can emerge." (p. 4)

48. ———. 1975. *Parallel Developments: A Comparative History of Ideas*. New York: Harper & Row.

Second edition with the title: *A Comparative History of Ideas*, New Delhi: Kegan Paul International, 1986.

49. Nasr, Seyyed Hossein. 1972. "Conditions for Meaningful Comparative Philosophy." *Philosophy East and West* no. 22:53-61.

"Finally, a comparative study in depth of Eastern doctrines and Western schools can help achieve an understanding between East and West based on immutable truths, whose attainment is made possible by the spiritual experience that is accessible to qualified men, Eastern or Western. It is only intellectual intuition and the spiritual experience, of which a metaphysical doctrine is in a sense the fruit, that can make possible the attainment of that Unity which in its transcendence comprehends both the East and the West. Today many men who have been exposed to the modern world, in a sense, carry both the Orient and the Occident as two poles and tendencies within themselves. A comparative study in depth can make possible, through the removal of those current errors which together comprise the modern world, the attainment of that "light that is neither of the East nor of the West,"(15) wherein alone the East and the West can be united. To seek this noble

end, which would mean the rediscovery of the immutable nature of man generally forgotten in the modern world and which is the only way possible to correct the optical illusions to which the modern world is victim, must be the purpose of all serious comparative studies of Eastern and Western doctrines and philosophies. It is a goal whose achievement the truly contemplative and intellectual elite are urgently summoned to by the very situation of man in the contemporary world. (pp. 60-61)

(15) This is in reference to the light verse (*ayat al-nur*) in the *Qur'an* XXIV.35."

50. Needham, Joseph. 1969. *Within the Four Seas. The Dialogue of East and West*. London: George Allen & Unwin.

"Reprinted here are some of the most significant of his essays, lectures and broadcasts on these subjects, together with some more personal thoughts stimulated by his own travels and experiences in China, including a number of poems that he has on occasion felt moved to write there."

"For three thousand years a dialogue has been going on between the two ends of the Old World. Greatly have they influenced each other, and very different are the cultures they have produced. We have now good reason to think that the problems of the world will never be solved so long as they are considered only from a European point of view. It is necessary to see Europe from the outside, to see European history, and European failure no less than European achievement, through the eyes of that larger part of humanity, the peoples of Asia (and indeed also of Africa)." (*The Dialogue of East and West*, p. 11)

51. Nelson, Eric S. 2017. *Chinese and Buddhist Philosophy in Early Twentieth-Century German Thought*. New York: Bloomsbury.

"The chapters of this book consist of a series of philosophically oriented historical case studies, focusing primarily on the intersection between Chinese and German philosophy. They explore instances of the encounter, dialogue, and exchange—

and lack and failure thereof—between “Eastern” Chinese and “Western” German thinkers and discourses. “Eastern” and “Western,” as Gihwa noted, are only relative situational concepts. The history of this already existing and ongoing communicative interaction and cultural exchange compels us to consider, more seriously than hitherto, whether a more nuanced and historically appropriate conception of philosophy can emerge through critically engaging and reflecting on the modern encounter between Western and non-Western philosophy, and articulating its intercultural and intertextual dynamics; if it proves impossible to transgress these borders, the old reductive myths of the exclusivity, exceptionality, and isolation of Western philosophy and civilization will continue to hold sway.” (Introduction, p. 2)

52. ———. 2020. "Intercultural Philosophy and Intercultural Hermeneutics: A Response to Defoort, Wenning, and Marchal." *Philosophy East and West* no. 70:1-13.

"Carine Defoort, Mario Wenning, and Kai Marchal offer three ways of engaging with *Chinese and Buddhist Philosophy in Early Twentieth-Century German Thought* and the philosophical, hermeneutical, and historical issues it attempted to articulate and address. This work is historical with a contemporary philosophical intent: to reexamine a tumultuous contested epoch of philosophy's past in order to reconsider its existing limitations and alternative possibilities. One dimension of this book is the investigation of constellations and entanglements of historical forces and concepts for the sake of articulating critical models and alternatives for the present. In the book, I contested the modern self-image of philosophy as exclusively and intrinsically Occidental by genealogically tracing how philosophy is already intercultural through a series of case studies focusing primarily on early twentieth-century German philosophy in its broader historical context." (p. 1, notes omitted)

53. Netton, Ian Richard. 2006. *Islam, Christianity and Tradition: A Comparative Exploration*. Edinburgh: Edinburgh University Press.

"This is not an Introduction to Islam, nor is it a textbook. There are many excellent introductions and textbooks in the marketplace already.

(...)

This book is a research monograph which aims to do much more than that. It operates generally within the sphere of comparative religion and is, specifically, a comparative exploration of the role of tradition/Tradition within two distinct faiths, Islam and Christianity. Specific leitmotifs include the roles of authority, fundamentalism, the use of reason, *ijtihad*, and original comparisons between Islamic Salafism and Christian Lefebvrism. 'Salafism' refers to that strain in Islam which looks backwards to the thought, practices and traditions of the Salaf (pious ancestors); 'Lefebvrism' is a reference to the traditionalist thought and practices of the schismatic Archbishop Marcel Lefebvre (1905–91) who rejected much of the teaching of the Second Vatican Council (1962–65) and what he perceived as that Council's overthrow of tradition/Tradition. It is recognised in my text that the word 'tradition/Tradition' in both Islam and Christianity has a variety of senses and definitions." (p. VII)

54. Neville, Robert Cummings. 2001. "Two Forms of Comparative Philosophy." *Dao: A Journal of Comparative Philosophy* no. 1:1-13.

"Two fundamental approaches to comparison now dominate the field. For convenience, and with the proviso that the names can be defined through the discussion below as terms of art, they can be called the objectivist and normative approaches, respectively. The objectivist approach treats the positions to be compared as finished objects, takes up a perspective of distance upon them, and measures its comparative judgments in empirical ways over against the evidence of the positions. The normative approach centers first on addressing contemporary philosophical problems and looks to the historical positions as resources for contemporary thinking, bringing them into comparative perspective against the contemporary background. The normative approach thus involves reconstructing the

traditions, as any living tradition does in growing to meet new philosophical situations, and does so by bringing them into comparative interaction. Just as a contemporary European philosopher can learn from both Plato and Aristotle in constructing a response to an issue neither Plato nor Aristotle imagined, so a contemporary philosopher in a global public can learn all the world's traditions to contribute to a philosophy for our time." (p. 2)

55. ———. 2002. "Beyond Comparative to Integrative Philosophy." *APA Newsletters* no. 2:20-23.

"The thesis of this essay is that vital and creative philosophy today needs to operate within a public that integrates reflections from as many of the world's philosophic traditions as possible. To support this thesis I shall first make some remarks about an appropriate philosophic public for vital philosophy. Then I shall comment on some of the kinds of comparative philosophy that are helpful for the integration of the world's philosophic traditions into a public. Finally, I shall suggest a two-tiered agenda for integrative philosophy." (p. 20)

56. ———. 2017. "Response to Brian Bruya's "Ethnocentrism and Multiculturalism in Contemporary Philosophy"." *Philosophy East and West* no. 67:1019-1021.

"So I would extend Professor Bruya's thesis in this way. He says that we should bring currently marginalized cultural approaches to philosophy into the center of the profession, both in our teaching and in our professional organizations. Right. Nevertheless, they might still be little balkanized in-groups within departments, curricula, and professional structures. This is not enough. I say that they need to be brought into conversation with one another, inventing new ways of carrying on that conversation.

The audience or public for our philosophical work should not be limited to those of our ethnocentric in-group. It should include considered address to anyone who might have an interest in the outcome of our work. If our work is not interesting to many different approaches to philosophy, once they get what it is about, chances are it is not interesting to any

except those in our professional in-group — and there go the undergraduates, and with them go the jobs. To put the point less defensively, should we not make our work vulnerable to examination and correction by anyone from any tradition who might have something to contribute? Of course, none of us can do all that should be done in this regard. But we can build a global philosophical conversation into which each of us can enter and learn. To do so is to build the human beyond the evolutionary success, but humane limitations, of ethnocentrism." (pp. 1020-1021)

57. ———. 2022. "Reflections on Methods of Comparative Philosophy." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 17-30. New York: Bloomsbury.

Chapter summary: "Robert Neville asserts that "the critical problem for comparative philosophy is Western bias" (18). While bias is a problem more generally for comparison, Western bias is a particular problem because of the current predominance of Western philosophical traditions across the globe—including in many historically non Western regions. Neville reviews and assesses several approaches to addressing bias, ultimately arguing in favor of what he calls "two-faced comparison," which attends to the development and ongoing correction of both comparisons and the categories that inform them. Comparative philosophy, he argues, has generally neglected the latter process, refusing to indicate explicitly the respects in which a comparison is made and rendering itself unable to assess whether the respect of comparison is appropriate to what is compared. As a result, it remains vulnerable to charges of excessive bias. However, if it attends adequately to the development and correction of those categories as well as how everything that is interpreted in terms of that category relates to each other, then it can move toward what he calls "objective comparison," the truth-value of which can be assessed by the broader academic community."

59. Nisbett, Richard E. 2003. *The Geography of Thought: How Asians and Westerners Think Differently . . . and Why*. London: Nicholas Brealey Publishing.

"I began a series of comparative studies, working with students at the University of Michigan and eventually with colleagues at Beijing University, Kyoto University, Seoul National University, and the Chinese Institute of Psychology. The research shows that there are indeed dramatic differences in the nature of Asian and European thought processes. The evidence lends

support to the claims of nonpsychologist scholars and extends those claims to many surprising new mental phenomena.

In addition, surveys and observational research document differences in social practices that dovetail with the differences in habits of thought. The new research has provided us, as prior evidence could not, with enough information so that we can build a theory about the nature of these differences, including how they might have come about, what their implications are for perceiving and reasoning in everyday life, and how they affect relations between people from different cultures."

61. Nylan, Michael, and Verhoeven, Martin. 2016. "Does Comparative Philosophy have a Fusion Future? Responses Fusion, Comparative, "Constructive Engagement Comparative," Or What? Third Thoughts on Levine's Critique of Siderits." *Journal of World Philosophies* no. 1:119-127.

Invited responses to Michael Levine's discussion paper 'Does Comparative Philosophy Have a Fusion Future?' *Confluence: Online Journal of World Philosophies*, 4 (2016): 208-37.

1. Michael Nylan, On Comparative, Constructivist, Fusion, and Diagnostic Philosophy; 2. Martin Verhoeven, Does Philosophy Have a Buddhist Future?

Abstract: "We have been invited to contribute a short assessment of Levine's response to Siderits' position in the emerging debate between "fusion philosophy" and "comparative philosophy." Perhaps a brief word is in order regarding our backgrounds: Michael Nylan is a student of early China, with strong interdisciplinary training and interests, who has attempted work in both philosophy and translation. Martin Verhoeven is a historian by training, a translator by avocation, and a Buddhist practitioner. Both of us have committed ourselves for decades to past traditions that can only be accessed through classical Chinese language, and that surely colors our views. At the same time, those views are not identical but stereophonic."

62. Nzegwu, Nkiru. 2016. "Symposium: How (If at All) is Gender Relevant to Comparative Philosophy?" *Journal of World Philosophies* no. 1:75-118.

Abstract: "The symposium, "How (if at all) is gender relevant to comparative philosophy," focuses on relevance of gender as an analytic and critical tool in comparative philosophical understanding and debate. Nkiru Nzegwu argues that gender as conceived by contemporary Euro-American feminism did not exist in pre-colonial Yorùbá as well as many Native American societies, and that therefore employing gender as a conceptual category in understanding the philosophies of pre-colonial Yorùbá and other non-gendered societies constitutes a

profound mistake. What's more, doing so amounts to a totalizing Euro-American colonial imposition that does violence to nongendered societies that reject gender as an ontological category. Hence, gender is ill-suited as a universal comparative philosophical tool. Nzegwu's three co-symposiasts, Mary I. Bockover, Maitrayee Chaudhuri, and María Luisa Femenías enrich and complicate this question by bringing to bear both conceptual, ethical and empirical considerations drawn from the United States, India, and Latin America respectively."

Bibliography of Intercultural and Comparative Philosophy: O-S

Bibliography

1. Olberding, Amy. 2009. "Asian and Asian-American Philosophers and Philosophies." *APA Newsletters* no. 9:3.

"In February of this year, the Committee on Asian and Asian-American Philosophers and Philosophies hosted a panel at the APA's Central Division meeting in Chicago. The focus of the panel concerned the intersections of Asian philosophies and feminism. While the essays and commentary delivered for the panel reflected the specific academic research foci of our participants, there are of course many ways to understand how Asian philosophies and feminism intersect, or fail to intersect. Consequently, this section of the *Newsletter* aspires to expand on the discussions of our panel, as well as to explore additional territory. For it, some of our panel participants and several other scholars working in Asian philosophy reflect on a variety of related subjects. These include, for example, the search for affinities between feminist concerns and the concerns found in Asian materials; the state of the field of Asian philosophy as it pertains to incorporating feminist consciousness; the personal experiences of feminist scholars who seek to enliven their work with both historical sensitivity and feminist commitments; and the capacity of feminist readings of Asian philosophies to foster scholarly development and political progress. As the work presented here illustrates, there are many ways to frame and understand the import of feminism for Asian philosophies."

2. Oldmeadow, Harry. 2007. "The Comparative Study of Eastern and Western Metaphysics: A Perennialist Perspective." *Sophia*

no. 46:49-64.

Abstract: "The comparative study of Eastern and Western philosophy has been hindered and/or distorted by Eurocentric assumptions about "philosophy", especially the overvaluation of rationality as an instrument of knowledge. The widespread discounting of Eastern thought derives, in large measure, from the modern Western failure to understand the nature of the traditional metaphysics of both the Occident and the East. This failure can be remedied by recourse to the work of a group of "traditionalist" or "perennialist" thinkers who expose the limitations of many approaches to the comparative study of philosophy in general and metaphysics in particular."

3. Ouyang, Min. 2012. "There is No Need for *Zhongguo Zhexue* to be Philosophy." *Asian Philosophy* no. 22:199-223.

Abstract: "In this paper, I shall argue that philosophy proper is a Western cultural practice and cannot refer to traditional Chinese thinking unless in an analogical or metaphorical sense. Likewise, the Chinese idiom 'Zhongguo zhexue' has evolved its independent cultural meaning and has no need to be considered as philosophy in the Western academic sense. For the purpose of elucidating the culturally autonomous status of Zhongguo zhexue, as well as the possible counterparts of Western philosophy in other cultures, I contend that Davidsonian anomalous monism may provide a proper explanatory framework for the intercultural relationships between different 'sophias' from various traditions. As for the equivocal English term 'Chinese philosophy', I suggest replacing it with a more precise new word: 'sinosophy'."

4. Ouyang, Xiao. 2018. "Rethinking Comparative Philosophical Methodology: In Response to Weber's Criticism." *Philosophy East and West* no. 68:242-256.

"Ralph Weber's (2013, pp. 593–602) illuminating study of the recent works on "(meta-)methodology in comparative philosophy" shows that this trend has persisted well into contemporary studies and enhances its influence in the community — "all [authors] seem to rely to some degree on the presumption that comparative philosophy is best understood as

‘intercultural philosophy’.”(4) Weber argues, however, that this “contemporary dominance of cultures in comparative philosophy,” namely the “rely[ing] on cultures as [a] philosophically relevant pre-comparative tertium,” has been an “unwarranted assumption” and has caused problems concerning “reification” and “the effect of inclusionary exclusion.”(5) He therefore calls for a “(self-)critical engagement with comparative philosophy” with the help of his “analytical tool” of comparison, which consists of five variables that are “distinguished in standard conceptualizations,” namely “the comparer, the comparata, the pre-comparative tertium, the tertium comparationis, the result of the comparison.”(6)" (p. 244)

(4) Weber’s use of the term “intercultural” and Moore’s preference “transcultural” are not essentially different. Both refer to interaction among multiple cultures.

Another synonym is “cross-culture.” Therefore, in my argument I am using the terms interchangeably.

(5) It can be understood as a kind of “two-edged sword.” Weber (2013, p. 601) thinks that “the same factors that allow scholars of these cultures to claim a niche for themselves within philosophy can be and are used by others to (dis)qualify that area of scholarship as being about something other than philosophy proper.”

(6) Weber (2014, p. 162) defines the “tertium comparationis as the respect in which determined comparata are compared” and the “‘pre-comparative’ tertium” as “which is at work in the setting up of the comparison.”

5. ———. 2018. "Rejoinder to Ralph Weber." *Philosophy East and West* no. 68:261-263.

"Ralph Weber's reply to my comment, as we have come to expect from his writing, is both well articulated and instructive. His clarification has helped me to further grasp the consideration that underpins his methodological criticism. I am also encouraged to find agreement on the worth of a historical study of comparative philosophy as an established sub-discipline. In addition, Weber's attitude toward "disagreement" is thought-provoking. However, I would like to suggest that disagreement is positive and meaningful if and only if (1) it is not based on misunderstanding, and moreover if (2) disagreement itself should not be regarded as the purpose. The ideal intellectual exchange should be able to encompass both (1) the aim and endeavor to achieve a potential agreement, and (2) the possibility for an ongoing dialogue and disputation.

In this spirit, I will now respond to some points raised by Weber in his reply to my comment." (p. 261)

6. Pang-White, Ann A. 2009. "Chinese Philosophy and Woman: Is Reconciliation Possible?" *APA Newsletters* no. 9:3-4.

"The choice of transcending the facticity of masculine discourse shouldn't be limited to the Western canon but open to all, including Asian philosophy. One can dwell on the fact that most of what Confucius, Mencius, or Xunzi says has nothing to do with women's liberation, or well-being per se, or one can choose to suspend that limitation and extract the relevance of the ideas of *ren*, reciprocity, and relationality to a more wholesome vision of human society where gender oppression is a historical past, not an ongoing struggle. Much of the prejudice against the incorporation of, or just a sheer neglect of, the relevance of Asian philosophy to feminism in the West has been centered on the explicit sexist references found in the tradition. But this facticity of masculine discourse is common to all traditions, be they East, West, North, or South, so my question would be this: Why selectively exclude non-Western canons in feminist discourse?" (p. 4)

7. Panikkar, Raimundo. 1988. "What Is Comparative Philosophy Comparing?" In *Interpreting Across Boundaries. New Essays in Comparative Philosophy*, edited by Larson, Gerald James and Deutsch, Eliot, 116-136. Princeton: Princeton University Press.

"Comparative studies are still fashionable today because they belong to the thrust toward universalization characteristic of western culture. The West not being able any longer to dominate other peoples politically, it tries to maintain—most of the time unconsciously—a certain control by striving toward a global picture of the world by means of comparative studies.

Yet, this very thrust toward homogenization and "global thinking" may boomerang into decentralization and pluralism once the wisdom of other cultures becomes better known.

Paradoxically enough, comparative philosophy, which has an inbuilt trend to overcome the plurality of cosmo-visions, may end by legitimizing mutually irreconcilable systems and becoming the stronghold of pluralism.

I shall offer a definition of comparative philosophy and argue that it is different from all other comparative studies by virtue of the subject matter under comparison. And this uniqueness finds its paradoxical expression in my thesis that, strictly speaking, comparative philosophy is an impossible independent discipline, which nevertheless thrives in the very recognition of its impossibility.(1)" (p. 116)

8. Quintern, Detlev. 2017. "Beyond Cross-Cultural Philosophy: Towards a New Enlightenment." *Philosophical Investigations (University of Tabriz-Iran)* no. 11:191-204.

Abstract: "The acculturation of humanities from the late 1980ies onwards led not only to imagined different worlds (e.g. West / Islam), postmodernity overshadowed also common grounds of world`s philosophies. Christianity and Islam share far more than what might separate them, and we find Islam in

„the West “ as Christianity „in the East“. The Logos of Life Philosophy as developed by Anna-Teresa Tymieniecka (1923-2014) strives towards deciphering the deep layers of philosophy and its common grounds. Tracing back to Gnostic, Platonic (neo-platonic) and Islamic shaped philosophies - Ikhwan as-Safa will serve as an example - the Logos of Life / Aql Al-Kulli (universal reason) will be historicized in the following while introducing approaches towards a New Enlightenment (A.-T. Tymieniecka) as an alternative to the current crisis in meta-sciences."

9. R'boul, Hamza. 2022. "Intercultural philosophy and internationalisation of higher education: epistemologies of the South, geopolitics of knowledge and epistemological polylogue." *Journal of Further and Higher Education* no. 46:1149-1160.

Abstract: "The enduring colonial-like relations among Northern and Southern spaces continue to influence knowledge production and dissemination. Critical scholarship on epistemic diversity in higher education has argued that knowledge circulation is often unilateral considering how global partnerships among universities and higher education models are still unidirectional. While Northern ways of knowing dominate what is taught and researched in higher education institutions, indigenous knowledges are

not always represented in their local universities due to skewed geopolitics of knowledges. That is why emerging forms of resistance such as the calls for decolonising the curriculum have emphasised the need to deconstruct the ideological systems of exclusion in contemporary higher education. This article discusses how the internationalisation of higher education may be running the risk of reproducing epistemic injustice and uneven geopolitics of knowledge. With the West-led internationalisation discourse and the ascendancy of neoliberal tendencies, universities in the Global South might be experiencing deeper epistemic dependency.

To undermine the dominance of western epistemologies, less popular ways of knowing are expected to assume a central

position in the global geopolitics of knowledge. This article makes a case for embracing intercultural philosophy as an emancipating framework that offers the possibility of reconciling the world's epistemologies by promoting interepistemic dialogue. The nuance of intercultural philosophy and its analysis of the epistemic relationships at play granted by epistemological polylogue can encourage pluri-epistemologies in higher education."

11. Raju, Poolla Tirupati. 1947. "The Western and the Indian Philosophical Traditions." *Philosophical Review* no. 56:127-155.

"Without entering further into the principles of comparative philosophy, we may adopt, as a *modus operandi* for the comparison of the two traditions, the comparisons of their origins, of their developments, and of their endings. Their origins are of the past and can no longer change.

The endings, so far as we are concerned, are what they are in the present. In the future, the two traditions may blend ; and the future historian of philosophy may trace two origins for the philosophy of his time, just as European culture of the present traces its birth to both Greece and Rome. Or possibly the two traditions may continue without regard for each other, which is certainly not to be desired. And as the endings for us are what

they are now, the modes of their respective developments are also of the past. A careful understanding of the two traditions in these three aspects should enable us to determine the individuality of each with respect to the other." (pp. 128-129)

12. ———. 1955. "Idealisms: Eastern and Western." *Philosophy East and West* no. 5:211-234.

"Since World War II, humanity has become world-conscious. People have come to realize that every part of the world is now more closely knit with every other part than before. Events which previously would have been considered to be only of national importance are now of international importance. Even countries which are self-sufficient in every respect no longer think they can cut themselves off from the rest of the world. Great and rich nations are worried about the poverty of small nations. Economically and politically, the parts of the world have come closer and closer. But should they not also come close psychologically and reflectively? Or should we conclude that we are coming dangerously closer? Dangerously or helpfully, we are coming closer, and we have to spread the feeling of common humanity. We want mutual understanding of cultures; but cultures attain reflectiveness in their philosophies. So mutual understanding of cultures will be mere dilettantism without mutual understanding of philosophies. And mutual understanding of philosophies is not possible unless it is accepted that, essentially and in truth, man and his reason are the same everywhere. Hence the need for comparative philosophy, which will naturally lead to philosophies with broader outlook. Our sense of what is important will become truer." (p. 212)

13. ———. 1957. "Being, Existence, Reality, and Truth." *Philosophy East and West* no. 17:291-315.

"For philosophy the concepts of Being, Existence, Reality and Truth are very important, if not central; but no other concepts are more vague than they, and no other terms are more loosely used than theirs. For a student of comparative philosophy, the difficulty becomes all the greater in understanding them, because each is used in different senses by different

philosophers and sometimes by the same philosopher in different places. Again, in some languages separate words are not found to mean the different concepts. Further, as will be shown in this paper, some of these words do not naturally express the meanings they are sought to express, and our understanding becomes vague and confused. Now that English is one of the languages for the intercommunication of philosophies and cultures, it is important to find out not only the distinct meanings of these words but also how English expresses these meanings clearly and naturally. And these words and concepts are of primary importance for philosophy in general and for comparative philosophy in particular, the study of which is being taken up seriously. Much confusion will be prevented if the meanings they can naturally express are delimited." (p. 291)

15. ———. 1963. "Comparative Philosophy and Spiritual Values: East and West." *Philosophy East and West* no. 13:211-225.

"The tendency is strong to identify spiritual values with what we call intellectual, ethical, and aesthetic values, or Truth, Goodness, and Beauty.

But, when the reality of spirit is rejected, these values must be considered as relevant only to the physical body or the biological principle. It is not realized that by denying the reality of spirit we destroy the very foundation of these values. For whom are these values meant and on what are they based? Our physico-chemical and biological nature is what it is, and there

is no question of its becoming something different from what it is: it does not strive for the realization of Truth, Beauty, and Goodness. The originator of these values has, then, to be conceded to be spirit. But how are we to identify and locate it?" (p. 212)

16. ———. 1970. *Lectures in Comparative Philosophy*. Poona: University of Poona.

"For the meaning of " comparative philosophy " one should not go merely to its etymology and philology. Etymologically, the term may mean " any philosophical work that compares " or " any philosophy that is developed by comparing any other philosophies. " In either case, the philosophies compared may be any two philosophies of the same tradition or even of the same period of that tradition, as for instance the philosophies of Plato and Aristotle. But such work is not called comparative philosophy, although it is comparison of two philosophies. Without restricting and defining the meaning of the term, we lose its true significance and importance.

Again, comparative philosophy is not a system of philosophy, just as comparative religion is not any established religion. But comparative philosophy may and ought to lead to a more comprehensive and adequate system of philosophy, just as comparative religion may and ought to produce a religious genius who can start a new and comprehensive and adequate religious outlook that meets the needs of modern man
Comparative philosophy is a philosophical discipline and ought to be recognized as the most important philosophical activity of the present, in which the East and the West are both violently and non-violently merging with each other." (pp. 1-2)

17. Ramose, Mogobe B. 2015. "On the contested meaning of 'philosophy'." *South African Journal of Philosophy* no. 34:551-558.

Abstract: "The thesis to be defended in this essay is that the meaning, and by implication the use, of philosophy continues to be contested. I will focus primarily on philosophy in South Africa in order to elucidate this thesis. In doing so, I will argue that the future of philosophy in South Africa lies precisely in

the willingness to contest its meaning and use. Such a contestation must be in the form of a dialogue predicated on the principle of the equality of all human beings and the openness to learn from one another without precluding the possibility of change in oneself and the existential conditions that prevail. My starting point is that the present is the child of the past and the present in turn is the parent of the future. I will therefore look back with the view to arriving at the present that is the field of contestation."

Foreword by Gregory Nagy.

19. ———. 1994. "Skeptical Strategies in the "Zhuangzi" and "Theaetetus"." *Philosophy East and West* no. 44:501-526.

"Both the *Qi wu lun*[*] and *Theaetetus* engage in extended discussions of the nature of knowing, language, explanation, perception, and perceptual judgment. Paul Woodruff asks a question about Plato that can also be applied to *Zhuangzi*: "Which came first, the sceptic or the epistemologist?" The epistemologist asks what knowledge is and how it can be acquired; the skeptic tries to detach her from that project. *Zhuangzi*, like Plato, may be doing something different from either of these, though it smacks of both.⁶ The *Qi wu lun* is the major consideration of epistemology in Warring States writings; the *Theaetetus* is the only Platonic dialogue devoted to a discussion of episteme, knowing. Yet we may observe that *Zhuangzi* never offers his own theory of knowing, and Socrates never reaches a definition of *episteme*. In this essay I compare several ostensibly skeptical elements in the *Qi wu lun* chapter of the *Zhuangzi* and the *Theaetetus* of Plato. I argue that the *Zhuangzi* and the *Theaetetus* use remarkably similar skeptical methods to explore epistemological problems in ways that are unique within their respective traditions.

My purpose in making this case is twofold. One, I want to show that methods of argument in China and Greece may have more in common than we may be predisposed to suppose. Two, the

comparison allows us to reexamine our own understanding of what skepticism is and does." (pp. 501-502)

[*] The second chaptet of *Zhuangzi*.

20. ———. 2002. "Gender and Virtue in Greece and China." *Journal of Chinese philosophy* no. 29:415-436.

"This article concerns a particular aspect of gendered virtue, namely, the claim that women "think differently than men"—more specifically, the claim that men and women differ in intellectual and ethical capacities, including capacities for moral reasoning and political and ethical judgment. Claims of this kind are legion. They are the property of no one culture or tradition, and have been used—across cultures—to deny political and civil rights to women by the imposition of an epistemological and ethical double standard.

(...)

Even feminists engage in this debate: some hold that gender predisposes women toward certain virtues, and men toward certain vices; others attack that position with equal vehemence.

After a brief consideration of metaphorical and rhetorical uses of gender, I present two sets of gendered virtue controversies. The Greek arguments begin in Plato's *Republic* and *Laws*, continue in Aristotle's *Politics*, and resume in the European Enlightenment in the works of Rousseau and his critics. The Chinese arguments begin with the *Analects of Confucius*, reappear in Han dynastic histories, and continue in contemporary debates about Confucianism, feminism, and the status of women in contemporary Asian societies. These comparative controversies show that arguments about

gendered virtue and debates about the relative ability of women and men to make intellectual and ethical judgments are not the property of any one "tradition," Asian or Western, ancient or modern. In the final part of the article, I use these debates to consider some contemporary ramifications of the "Asian values" debate, including claims that Confucianism is "feminist," or "more" or "differently" benign or feminist than Western philosophy." 21. Raud, Rein. 2006. "Philosophies versus Philosophy: In Defense of a Flexible Definition." *Philosophy East and West* no. 56:618-625.

"It is strange that no one has taken up Carine Defoort's clearly formulated and timely argument about the intercultural tensions in interpreting what philosophy is, although the issue deserves at least a roundtable, if not an international conference.(1)

I doubt that this is because there is a general consensus that the matter is now settled, and I would therefore like to develop the argument a bit further and offer a few additional factors to consider. It is also obvious that the problem is not limited to the subject of Chinese philosophy alone: all traditions of thought from all over the world, but most notably the Indian, Islamic, and Japanese heritages, are affected by the positions we adopt. As in most debates about the commensurability of cultural traditions, we can find differences when we look for them, and similarities if these are what we would like to see, so the "conflict of sensitivities"(2) is also a matter of attitudes.

My own position is that regardless of what we prefer to call the practice of deeper thought (and 'philosophy' is a very good name), it would be extremely useful for all of its participants, whatever their origin and upbringing, to find a common denominator for them to be able to exchange ideas and mutually enrich each other on its basis. In what follows I shall try to sketch a perspective from which this could, in my opinion, be theoretically grounded." (p. 618)

22. Reding, Jean-Paul. 2004. *Comparative Essays in Early Greek and Chinese Rational Thinking*. Aldershot: Ashgate.

"Comparing ancient Chinese to ancient Greek philosophical thinking is certainly a fascinating enterprise. But it is also a questionable one. What is the philosophical justification for such an undertaking? And why should we compare ancient Chinese to ancient Greek thought, rather than to Indian, Arabic or African ways of thinking? We might ask, further, if we have at our disposal a comparative method adaptable to a project of this scope.

Let me begin by trying to answer the last question first. The comparative method is firmly established in the natural sciences, where we have a number of comparative disciplines, such as comparative zoology and comparative anatomy. Historical linguistics, comparative law, religious studies and comparative mythology also deserve to be mentioned in this context. Comparative philosophy, however, is rather ill famed, and has never acquired the status of a unified and independent philosophical discipline. Even the very notion of comparative philosophy as a discipline distinct from pure philosophy is rejected sometimes.

Comparative philosophy is also seen very often as nothing more than a broader approach to the study of the history of philosophy, by including Indian, Chinese and African philosophies as appendices to standard histories of Western philosophy. The most common way of practising comparative philosophy, however, is to spot marked differences or similarities between specific doctrines or global attitudes of Western and Eastern philosophy. The goal I have set myself is to rehabilitate the comparative method as a more rigorous way of doing philosophy with a cross-cultural perspective."
(Introduction, p. 1, notes omitted)

23. Rein'l, Robert L. 1953. "Comparative Philosophy and Intellectual Tolerance." *Philosophy East and West* no. 2:333-

339.

"Comparative philosophy may be studied either for the purpose of determining the relations among the different systems, where the objects studied are the systems rather than the objects with which the systems profess to be concerned, or for the sake of obtaining wisdom. The second of these purposes implies the first, but only the second is philosophic inquiry in the fullest sense. In connection with the first, Mr. Kwee has indicated the necessity of approaching a philosophy through its historical and socio-cultural setting, and has suggested eight approaches to the problem of comparative philosophy in general.(1) To these an addition is suggested, not in the sense of another method, but as an attitude that is required by all these approaches. The attitude is tolerance, specifically a variety that might be called intellectual. One must be intellectually tolerant if one is to reach out beyond the boundaries of one's own culture, and even more tolerant if one is to pursue investigations of a comparative nature." (p. 333)

(19 J. Kwee Swan Liat, "Methods of Comparative Philosophy," *Philosophy East and West*, I, No. 1 (April, 1951), 10-15. The eight approaches are: the philological, the historical, the comparative, the formal-evaluative, the psychological, the phenomenological, the sociological and anthropological, and the total-integrative." 25. Rorty, Richard. 1991. "Philosophers, Novelists, and Intellectual Comparisons: Heidegger, Kundera, and Dickens." In *Culture and Modernity: East-West Philosophical Perspectives*, edited by Deutsch, Eliot, 3-20. Honolulu: University of Hawaii Press.

Also published in R. Rorty, *Philosophical Papers, Vol. 2: Essays on Heidegger and Others*, Cambridge: Cambridge University Press 1991, pp. 66-82.

"When tolerance and comfortable togetherness become the watchwords of a society, one should no longer hope for world-historical greatness. If such greatness — radical difference from the past, a dazzlingly unimaginable future — is what one wants, ascetic priests like Plato, Heidegger, and SusIov will fill the bill. But if it is not, novelists like Cervantes, Dickens, and Kundera may suffice. The fact that philosophy as a genre is closely associated with the quest for such greatness — with the attempt to focus all one's thoughts into a single narrow beam and send them out beyond the bounds of all that has been previously

thought — may help explain why it is among the philosophers of the West that contemporary Western self-hatred is most prevalent. It must be tempting for Africans and Asians — the principal victims of Western imperialism and racism — to see this self-hatred as about what the West deserves. But I would suggest that we take this self-hatred as just one more symptom of the old familiar quest for purity which runs through the annals of the ascetic priesthood in both East and West. If we set these annals to one side, we may have a better chance of finding something distinctive in the West which the East can use, and conversely." (p. 20)

26. ———. 1996. "The Ambiguity of 'Rationality'." *Constellations* no. 3:73-83.

Symposium on Critical Theory by David Hoy and Thomas McCarthy (Malden: Blackwell 1994).

"It is tempting to describe Critical Theory as an American version of the Habermas-vs.-Foucault debate, a debate which has agitated Europe in the ten years since the publication of Habermas's *The Philosophical Discourse of Modernity*. It is also tempting to read it as a contribution to the debate over postmodernism which is presently agitating the American academy.

But neither description is quite right." (p. 73)

(...)

"In his rejoinder to Hoy, Thomas McCarthy agrees that we need Foucauldian "critical histories of contingent regimes of rationality." But he disagrees with Hoy on the question of "whether there is anything universal at all to say about reason, truth, objectivity, and the like, or rather anything that would not be too 'thin' to be of any use" (223). McCarthy thus lays out what I take to be the central issue of the book: namely, whether these traditional topics of philosophical debate are relevant to socio-political deliberation." (p. 73)

27. Rosán, Laurence J. 1952. "A Key to Comparative Philosophy." *Philosophy East and West* no. 2:56-65.

"The present writer therefore wishes to suggest that the key to comparative philosophy is not the contrast of cultures but rather the contrast of basic philosophical *attitudes* or *types* of philosophy. There are certain philosophical attitudes that appear again and again at widely separated points in space and in widely separated periods of time, each of which is logically consistent within itself but in fundamental conflict with each of the others. Much further study would be required to determine the exact number and nature of these attitudes. But for the purposes of this article and in order to demonstrate the significance and value of this conception, let me arbitrarily speak of three such fundamental attitudes, understanding that this number represents undoubtedly a great simplification, although not, I hope, a falsification. The following paragraphs, therefore, are not intended to convey any new factual knowledge but rather to clarify and integrate the field of comparative philosophy. The examples offered as illustrations of each particular philosophical attitude are not meant to be exhaustive but merely suggestive, so that the reader will be able to think of many others which could have been used. Perhaps in certain cases there may be some disagreement about the classification of a particular author, but this, I imagine, will not affect the general validity of my approach. Of course, many writers cannot be clearly classified inasmuch as they mingle elements of two or more attitudes within themselves; since this would imply real inconsistency, however, I believe that the greatest philosophers will be those most amenable to classification." (pp. 56-57)

28. ———. 1961. "Are Comparisons between the East and the West Fruitful for Comparative Philosophy?" *Philosophy East and West* no. 11:239-243.

"In an earlier issue there appeared an article entitled "A Key to Comparative Philosophy," by the present writer.(2)"

(...)

"This article evoked a comment, printed in the same issue, entitled "Keys to Comparative Philosophy," by the editor of this Journal, Charles A. Moore.(3) Moore made good criticisms of

some particular aspects of the typology that I suggested, but he did not attack the conception itself."

(...)

"But the purpose of the present article is not polemical, though the foregoing paragraph may seem somewhat contentiously phrased. On the contrary, I take seriously Moore's conclusion that there are probably several very different interpretations of comparative philosophy. What I would like to examine now is the question: Why are there these different "keys" to comparative philosophy? And I would like to suggest—neither facetiously nor pedantically, however the words may seem to strike the reader—that the reason there are different approaches to the problem of comparative philosophy is simply that there are different philosophies to begin with, and that each type of philosophy will, very naturally, offer a solution to this particular problem that will be consistent with the rest of its metaphysical and ethical views. In other words, whereas in my previous article I attempted a "typology of philosophies" as the key to comparative philosophy, I am here accepting the fact that there are several such "keys," but suggesting that there is a necessary reason for the variety of these "keys" themselves. In short, there is a "typology of the solutions to the problem of comparative philosophy," and this typology may be similar or even parallel to the typology of the philosophies themselves." (pp. 239-240)

29. Rosemont, Henry Jr. 2014. "Symposium: Does the Concept of »Truth« Have Value in the Pursuit of Cross-Cultural Philosophy?" *Confluence: Online Journal of World Philosophies* no. 1:150-217.

Abstract: "The symposium »Does the Concept of >Truth< Have Value in the Pursuit of Cross-Cultural Philosophy?« hones on a methodological question which has deep implications on doing philosophy cross-culturally.

Drawing on early Confucian writers, the anchor, Henry Rosemont, Jr., attempts to explain why he is skeptical of pat, affirmative answers to this question. His co-symposiasts James Maffie, John Maraldo, and Sonam Thakchoe follow his trail in working out multi-faceted views on truth from Mexican, Japanese Confucian, and Tibetan Buddhist perspectives respectively. As these positions substantiate, the aforementioned non-Anglo-European traditions seem to draw on an integrated view of thinking, feeling, and living a human life. For their practitioners, truth is less of a correspondence with a given external reality.

In fact, it enables human beings to strike the right path in living good, social lives."

30. Rošker, Jana S. 2013. "Cross-Cultural Dialogues in Modernization Theory: the Impact of Western Philosophies Upon Modern Confucianism in East Asia." *Dve domovini: razprave o izseljenstvu* no. 37:85-91.

Abstract: "As a major source of social values, Modern Confucian theory has assumed great significance amidst the proliferation of instrumental rationalities in contemporary China. This neo-conservative current is distinguished by a multifaceted attempt to revitalize traditional thought by means of new influences borrowed or derived from Western systems. It is defined by a search for a synthesis between "Western" and traditional Chinese thought, aiming to elaborate a new system of ideas and values suitable for the modern, globalized society."

31. ——. 2015. "Two Models of Structural Epistemology: Russell and Zhang Dongsun." *International Communication of Chinese Culture* no. 2:109-121.

Abstract: "Zhang Dongsun (1886–1973) who belongs to the leading Chinese philosophers of the twentieth century, has developed his own system of thought, based upon the so-called pan-structural epistemology according to which the external cause of our sensation is not a substance, but the structural order of the external world. In his *Introduction to Mathematical Philosophy* (1919), Russell had proposed a similar idea. The present article is based upon a comparative analysis of both structural epistemology models and aims to determine the specific and unique features of Zhang's theory, focusing upon the elements deriving from traditional Chinese thought. Although in his pluralistic epistemology Zhang rejected 'substance', he namely still considered the dualistic theories of idealism and materialism to be completely wrong. While elements of both approaches can be found in Zhang Dongsun's model, it cannot be identified with either one of them."

32. ———. 2015. "Intercultural Methodology in Researching Chinese Philosophy." *Zhèxué yu wénhuà yuèkàn* no. 42:55-76.

"In Western research on Chinese philosophy, the non-reflected use of a theoretical analysis, which is a result of specific (Western) historical processes and the related, typical organizational structure of societies, may prove to be a dangerous and misleading mechanism.

Concepts and categories can namely not simply be transferred from one socio-cultural context into another.

Thus, in current intercultural discourses, the debate on the philosophical dimensions of Chinese texts and their role in the context of Chinese thought has been developed increasingly successfully under the aegis of rediscovering and applying specific traditional Chinese methodological approaches, concepts and categories. Based on the awareness of the importance of such revival of classical Chinese philosophical methodologies, the present paper aims to clarify the difference between external (外在超越性) and internal (or immanent) transcendence (内在超越性) and the difference between Cartesian dualistic models and binary categories (对立范畴).

On this basis, the author provides a short evaluation of the application of analytical vs. hermeneutic methods in investigating classical Chinese texts and proposes an innovative mode of hermeneutics, which is based on the *fusion of jingjies* (境界融合), aiming to replace the controversial Western hermeneutical method, rooted in the concept of the *fusion of horizons*."

33. ———. 2016. "Modern Confucianism and the Intercultural Exchange between China and Central-Eastern Europe." *Taiwan Journal of East Asian Studies* no. 13:127-146.

Abstract: "The topical processes of modern identity-making within Central and Eastern Europe on the one hand, and China, on the other, are fundamentally results of different forms of cultural and economic transformation, conflict and harmonious social adjustments. The aim of the present paper is to expose the need to appreciate the role of culture not only as a background to, but also as a constitutive part of, economic dynamics. Thus, it assumes that any comparative analysis of the rise of transitional societies must deal with questions connected to respective value systems, i.e. of moral education, political authority, social solidarity, and religious beliefs.

It is not coincidental that the recent rapid development of the P.R. China owes much to such crucial traditional virtues as social hierarchy, self-discipline, social harmony, strong families and a respect for education. In this context, the present article examines the revival of Confucian tradition in China. According to previous research results, traditional East European values were in many aspects closer to such virtues than traditional Western values, which focused heavily on the idea of individual autonomy. This paper follows the presumption that the Central and Eastern Europe could function as a cultural and axiological bridge

between China and Western Europe."

34. ———. 2019. "A Philosophical Relation Between Taiwan and Japan: Models of Dialectical Thought in Mou Zongsan's and Nishida Kitaro's Theories." *Asian Philosophy* no. 29:333-350.

Abstract: "The article opens with a discussion of recent theoretical and methodological innovations in the field of comparative philosophy. In this regard, I propose and explain a new possible method of contrasting particular aspects of divergent philosophical texts or discourses and denote it as a 'philosophy of sublation'. Then, the paper provides a concrete example for such a post-comparative method of reasoning, I will try to apply a 'sublation philosophy' approach for a reinterpretation of certain aspects of the complex philosophical intersections between modern Japanese and Chinese philosophies through the lens of a contrastive analysis of Nishida Kitarō's and Mou Zongsan's dialectical thought. In this way, I hope to shed some new light upon some general questions regarding different models of dialectics."

35. ———. 2019. "Li Zehou and his Rocky Relationship with Marx: Class Struggle as a form of Kantian Transcendental Illusion." *Asian Studies* no. 7:201-215.

Abstract: "The present paper deals with Li Zehou's contributions to the discussions of Marxism in the second half of the 20th century. In Li's philosophy, Marx's theories were reshaped, modified, and upgraded in a theoretical framework that differed from the original. He agreed with Marx's presumption that the making and using of tools was the basic material practice, which made human evolution possible. Nevertheless, he saw Marx's further development of this theory as problematic, because he saw it as being one-sided: progress from the means of production to the relations of production, and then on to the superstructure, only concerned the external developments of the relation between the manufacture and use of tools. At this point, Li was more interested in their internal influences, i.e., in the ways in which the making and use of tools has reshaped the human mind. He was highly sceptical of Marxist economic theories and criticized the crucial concepts elaborated by Marx in his through the lens of Kantian "transcendental illusions."

Proceeding from his combination of Marx and Kant, the present paper will critically analyse some crucial differences between the Marxian idea of the class struggle as a driving force

of social progress, and Li's own version of historical materialism."

36. ———. 2020. "Chinese Philosophy, "Postcomparative" Approaches and Transcultural Studies: A Reply to Vytis Silius." *Asian Studies* no. 8:305-316.

"In the previous issue of *Asian Studies* (May 2020), Vytis Silius published a paper entitled *Diversifying Academic Philosophy: The Post-Comparative Turn and Transculturalism*, in which he dealt with some basic, significant and hitherto still unsolved questions regarding the so-called "post-comparative shift" in Chinese and intercultural philosophy (see Silius 2020). The paper is well written, topical and very relevant. In spite (or all the more because) of the fact that it contains some controversial issues, it represents an important contribution to the present debates in the field. In this light, I would like to challenge the author (and his readers) by addressing the following issues, with which I aim to expose some of the minor problems contained in the paper on the one hand, but also propose some further general considerations of the delineated problems, on the other." (p. 305)

37. ———. 2020. "Modern New Confucianism and the Challenges of Chinese Modernity: Intercultural Dialogues in Chinese philosophy." *Culture and Dialogue* no. 8:196-219.

Abstract: "During the last decades of the previous century, the rebirth and the modernization of classical Confucianism gained increasing relevance. These tendencies have manifested themselves in a clearest and most influential way in the current of Modern New Confucianism. The representatives of this stream of thought aimed to elaborate upon a new ethical model of specifically Chinese modernity based upon traditional values that could in a renewed form meet the requirements of the new era. They aimed to

preserve Chinese cultural identity while at the same time making their own original contributions to the development of a philosophical and theoretical dialogue between Euro-American and Chinese cultures. In this context, it is important to ask the question

whether a model of modernization that is rooted in traditional Confucianism is truly capable of generating a non-individualistic version of modernity. Following this supposition, and focusing upon the works of the so-called “Second Generation” of Modern New Confucianism, this article aims to demonstrate that the alleged relation between modernity and individualism, which was almost exclusively seen as selfevident and undeniable by the Western modernization theories, is actually a result of Western historical paradigms.”

38. ———. 2021. *Interpreting Chinese Philosophy: A New Methodology*. New York: Bloomsbury Academic.

"Since this book is written mainly for Western readers, it automatically deals with its subject through the lens of cultural differences.

When reading Chinese philosophy, readers born, educated, and socialized in Western languages and social environments are confronted with different epistemologies, different perspectives, perceptions, and patterns of knowledge acquisition and transmission. To a certain extent, and especially when it comes to ancient and traditional philosophies, this problem also affects today’s Chinese readers who live in a globalized world where the standards of conception and understanding have been adopted from Western cultures.

Therefore, our approach to Chinese philosophy is intercultural in the sense of interaction and engagement of several cultures. Interculturality is a specific type of interaction or communication between discourses, where differences in cultures play a role in the formation of meaning." (p. 13)

(...)

"In this book, the concept of culture is understood to be based on a metaphysics of relations. In this sense, I continue to use the two terms, that is, both intercultural and transcultural: although it is impossible to draw firm and constant boundaries between them because they form a complex and often

overlapping web of meaning, I use the former when referring to concrete interactions between different cultures(7) and their various elements, and the latter when referring to the goal and results of such interactions, that is, to see oneself in the other." (p. 14)

(7) Eric Nelson (2020, 249) even believes that concept of the "intercultural" is better described as the interaction of lifeworlds instead of cultures.

39. ———. 2021. "Intercultural Methodology in Sinology: Transculturality, Textual Criticism and Discursive Translations." *Acta Universitatis Carolinae. Philologica* no. 3:135-151.

Abstract: "For Western researchers, the understanding of Chinese culture is conditioned by differences in language, tradition, history and socialization.

The interpretation of various aspects and elements of different cultures is always connected to the geographic, political and economic positions of the interpreter as well as the object of interpretation. In Western research on China, the non-reflected use of theoretical analyses that are in themselves results of specific (Western) historical processes and the related structure of societies, often proves to be a dangerous and misleading mechanism. A fundamental premise of the present paper is that Western epistemology represents only one of many different models of human comprehension of reality. On this basis, it questions traditional intercultural methodologies hitherto applied in Sinology and Chinese studies.

The article presents the main methodological paradigms of a transculturally aware research that could improve the understanding of general principles underlying the particular research questions and objects under investigation."

40. ———. 2021. "Intercultural Dialogues in Times of Global Pandemics: The Confucian Ethics of Relations and Social Organization in Sinic Societies." *Ethics & Bioethics* no. 11:206-216.

Abstract: "Since COVID-19 is a global-scale pandemic, it can only be solved on the global level. In this context, intercultural dialogues are of utmost importance. Indeed, different models of traditional ethics might be of assistance in constructing a new, global ethics that could help us confront the present predicament and prepare for other possible global crises that might await us in the future. The explosive, pandemic spread of COVID-19 in 2020 clearly demonstrated that in general, one of the most effective tools for containment of the epidemics is precisely human and interpersonal solidarity, which must also be accompanied by a certain degree of autonomous self-discipline.

The present paper follows the presumption that these types of personal and interpersonal attitudes are—inter alia—culturally conditioned and hence influenced by different traditional models of social ethics. In light of the fact that East-Asian or Sinic societies were more successful and effective in the process of containing and eliminating the virus compared to the strategies of the Euro-American regions, I will first question the widespread assumption that this effectiveness is linked to the authoritarian political traditions of the Sinic East and Southeast Asian areas.

Then, I will critically introduce the Confucian ethics of relations, which in various ways has influenced the social structures of these regions, and clarify the question of whether and in which way the relics of this ethics had an actual effect on the crisis resolution measurements. The crucial aim of this paper is to contribute to the construction of theoretical groundworks for a new, transculturally grounded global ethics, which is more needed today than ever before."

41. ———. 2021. "Kant, Confucianism, and "Global Rooted Philosophy" in Taiwan: from Mou Zongsan to Lee Ming-huei." *Synthesis philosophica* no. 36:217-128.

"In Taiwan, the Confucian revival was always defined by the search for a synthesis between Western and traditional Confucian thought. Taiwanese Modern Confucians aimed to create a system of ideas and values capable of resolving modern, globalised societies' social and political problems. Mou Zongsan, the best-known member of the second generation of Modern New Confucianism, aimed to revive the Chinese philosophical tradition through a dialogue with Modern European philosophy, especially with the works of Immanuel Kant. His follower Lee Ming-huei is arguably the most renowned expert on Kantian philosophy in the entire Sinitic region. The present paper aims to compare their respective approaches and evaluate them in a broader context of modern Chinese thought. I will first introduce Mou Zongsan's elaborations on Kant. In the following, I will present the main aspects of Lee Ming-huei's development of Mou's theories and provide in later sections a critical assessment of Lee's philosophical innovation, focusing upon the evaluation of his conceptualisation of immanent transcendence and Confucian deontology."

42. ———. 2021. "Modernization of Confucian Ontology in Taiwan and Mainland China." *Asian Philosophy* no. 29:160-176.

Abstract: "The present paper compares three models of modernized Confucian Ontology. The philosophers under debate belong to the most important, well-known and influential theoreticians in modern Taiwan and mainland China respectively. Through a contrastive analysis, the paper aims to critically introduce three alternative models of ontology, which have been developed from the Chinese philosophical tradition by the most well-known Taiwanese philosopher Mou Zongsan and by two most influential mainland Chinese theoreticians, Li Zehou and Chen Lai respectively. In this paper, I will analyze and critically introduce Li Zehou's and Chen Lai's respective critiques of Mou Zongsan's basic assumptions that have been reflected in his methodological paradigms, while also exposing some major differences within their own lines of thought."

43. ———. 2022. "Chinese and Global Philosophy: Postcomparative Transcultural Approaches and the Method of Sublation." *Dao*:

A Journal of Comparative Philosophy no. 21:165-182.

Abstract: "The essay deals with problems encountered by Western researchers working in the field of Chinese philosophy. It begins with a discussion of intercultural and transcultural methodologies and illuminates some of the most common issues inherent in traditional intercultural comparisons in the field of philosophy. Taking into account the current state of the so-called postcomparative discourses in the field of transcultural philosophy and starting from the notion of culturally divergent frames of reference, it focuses upon semantic aspects of the Chinese philosophical tradition and exposes the need for discursive translations. On this basis, a new postcomparative approach in transcultural philosophical studies of Chinese philosophy is suggested. In this context, the author proposes the application of an innovative principle, based upon what can preliminary be denoted as the method of sublation."

44. ——. 2022. "Sublating Sinic Relationism: On A Winding Path from Transcultural to Global Ethics." *Asian Studies* no. 10:81-104.

Abstract: "This paper aims to bring into the global ethics debate concrete alternative models of specific relational ethics developed in the context of Sinic traditions that have not yet been widely introduced into Western scholarship or integrated into the framework of global discourses on ethics and morality. Although much research has been done on certain elements and aspects of such ethical models, there have been no concrete attempts to incorporate them into a global axiological framework that could have helped humanity develop strategies for solving the current global crises we face.

The paper first provides a critical overview of the conceptual history, specific characteristics, and social relevance of relationism. It then addresses the question of how relational ethical models could be integrated into the value system of contemporary global ethics without reproducing the still dominant normativity of Western epistemology and its corresponding axiology. After highlighting some problems

related to the methodology and structure of traditional models of comparative philosophy and ethics, the author suggests that this integration of relationism into the general framework of global ethics could be done by applying a new method, which can be tentatively called the method of transcultural philosophical sublation. Starting from different frames of reference that define the basic tenets of modern Western and traditional Chinese axiology, the author demonstrates the application of this method on the example of different conceptions of the human self."

45. ———. 2022. "Comparing Logical Paradoxes through the Method of Sublation: Hui Shi, Zeno and the "Flying Arrow Problem"." *Asian Studies* no. 10:299-312.

Abstract: "This article addresses some basic methodological problems in the field of transcultural post-comparative studies of ancient logic by comparing the famous flying arrow paradox of Hui Shi (370–c. 310 BCE) with an apparently similar paradox attributed to Zeno of Elea (495–430 BCE). The article proceeds from a general introduction to the basic framework of semantically determined classical Chinese logic, to an illumination of Hui Shi's specific contributions to the field, and finally to a preliminary explanation that emerges from a contrastive analysis of Zeno's and Hui Shi's respective views on the problem of motion and stasis as manifested in their corresponding paradoxes. The contrastive analysis, based on an exposition of some basic problems in the field of transcultural methodology and a description of the so-called sublation method, points to the importance of considering different paradigms and frames of reference in identifying differences between apparently similar theses."

46. Ross, Donald. 2019. *Introduction to World Philosophy*. London: Austin Macauley Publishers.

"About the Book: What would it be like to go back in time and converse with the great sages of China, of India, of classical Greece and Rome, of the Christian and Islamic worlds, of Europeans of the Enlightenment? This book, *Introduction to World Philosophy*, aims to communicate some of the

excitement and “mind-stretchingness” that such an encounter would produce. It is intended to engage interested laypersons while remaining faithful to the standards of professional scholarship. It is written in an informal style yet does not talk down to the reader. Representatives from each of the five aforementioned periods are presented in pairs—one philosopher a more “head-in-the-clouds” thinker and the other a more “feet-on-the-ground” one. Besides demonstrating how each tradition offers a range of perspectives rather than a single, dominant one, such an approach achieves an optimum balance between breadth and depth. Ideas found in these texts range from mind-bending metaphysical speculation and the theory of knowledge, to questions of ethics and politics, to points of elementary logic. The whole discussion is prefaced by an extended exploration of what philosophy is. The author feels that it is important to reach out to the general public, to feed a genuine hunger out there for an accessible guide to the subject, and also acknowledge the relevance of non-Western, as well as Western, cultures to an increasingly globalized world.”

From the Preface: "Because I hope that newcomers to the history of philosophy will be among the readers of this book, I have taken care to explain whatever I think they need to know. The book begins with the reasons for studying philosophy comparatively and with the difficulties raised by such study, and it ends with a view of philosophy that is personal but that rests on all of the preceding discussion. The philosophers dealt with represent certain attitudes, schools, and traditions, but they are remembered most interestingly and accurately as individuals. So even though I have had to omit a great deal and make schematic summaries, I have in each instance tried to suggest the philosopher's style, density, and order of thought. In its later chapters the book tends to grow more difficult and elaborate, like the philosophies it deals with; but the early chapters prepare for the later ones, and, whatever the difficulty, I have always written as simply and clearly as I can.

To avoid making a long book forbiddingly longer, I have limited not only the number of philosophers dealt with but also the range of thought by which each of them is represented. Plato, for example, is limited to his theory of Ideas and Kant (except in the later discussion) to his Critique of Pure Reason. In keeping with the needs of a particular comparison, I have sometimes drawn a broad sketch and sometimes entered into details. When it has seemed natural, I have shared my own views with the reader—there is no good reason to pretend that I am a neutral, disembodied voice. But however I judge each philosopher's thought, I have committed myself to expound it with a minimum of bias." (p. XI)

48. ———. 2001. "How important is truth to epistemology and knowledge? Some answers from comparative philosophy." *Social Epistemology: A Journal of Knowledge* no. 15:275-283.

"What can I say in a few pages to persuade someone with philosophical interests but without prior experience in comparative philosophy that he or she is living an unreasonably restricted intellectual life? With respect to the present subject, I'm sure that the senses, implications and varieties of such an inescapable conception as that of the usefulness of truth will be grasped in a richer, more mature way if the field of inquiry is broadened beyond contemporary Western philosophy.

The so-called 'primitives' are the hardest to investigate for such a purpose because of their great variety, the uneven character of what evidence there is, and the fact that the presuppositions of their thought are of course not laid out and defended in treatises but remain for the most part implicit in their ways of life. I can do no better here than confine myself to a few hints, by way of examples that have for one reason or another interested me. I should add that I may refer to acts or attitudes in the present tense, though they may now be obsolete." (p. 276)

49. Schepen, Renate, and Graness, Anke. 2019. "Heinz Kimmerle's intercultural philosophy and the quest for epistemic justice." *The Journal for Transdisciplinary Research in Southern Africa* no. 15:1-7.

Abstract: "Since the 1990s epistemic (in)justice has been a central issue of post-colonial and feminist studies. But only during the last decade the term has become paradigmatic and new aspects of the issue have been addressed – particularly because of the works of De Sousa Santos (2012, 2014) and Fricker (2007). One of the pioneers of an intercultural approach to philosophy is the German philosopher Heinz Kimmerle (1930–2016), who in the 1980s began to focus his research on African philosophies. Intercultural philosophy aimed for more epistemic justice in the academy long before the term epistemic or cognitive injustice was coined and became a new paradigm in the social sciences and humanities. Kimmerle, for example, was one of the main proponents of a radical reform of the Eurocentric curricula in academic philosophy, and he called for the inclusion of philosophical traditions from various regions of the world. Similarities in the

starting point of research and research questions in philosophy and post- or decolonial studies, and proposed solutions to epistemic injustice in these disciplines, give enough reason to combine the social sciences' theories of epistemic justice with the methods of intercultural philosophy for a reciprocal cultural enrichment between these disciplines. This article shows that theories of 'epistemic justice' could benefit from Heinz Kimmerle's method of dialogue and reflective listening. Similarly, insights derived from post-colonial, decolonial and feminist theory could strengthen an awareness of structural power inequalities in intercultural philosophy.

Therefore, we explore how theories of epistemic justice and intercultural philosophy can complement each other."

50. Schiltz, Elizabeth. 2014. "How to Teach Comparative Philosophy." *Teaching Philosophy* no. 37:215-231.

Abstract: "This article articulates a range of possible pedagogical goals for courses in comparative philosophy, and discusses a number of methods and strategies for teaching courses intended to achieve those ends. Ultimately, it argues that the assignment to teach comparative philosophy represents an opportunity to design a course with remarkable freedom and tremendous potential. Comparative philosophy courses can engage students in unique ways that not only increase their understanding of the fundamental assumptions and beliefs of non-Western traditions, but also facilitate the development of the skills and dispositions that enable them to become better philosophers."

51. Seaford, Richard. 2020. *The Origins of Philosophy In Ancient Greece and Ancient India: A Historical Comparison*. Cambridge: Cambridge University Press.

"This book is devoted to a unitary argument, but over such a wide range of material that I offer the reader preliminary guidance in this chapter, beginning with an overview.

The next chapter (concluding Part A) presents explanations of the similarity between the earliest philosophy in India and Greece.

Part B describes the polytheist reciprocity that, among an elite, was replaced in both cultures by monism. Part C centres on the main factors behind this replacement in India: the individual *interiorisation* of what I call the cosmic rite of passage, and *monetisation*. Part D describes the similar factors behind the similar development of ideas in Greece. The conclusion (Part E) summarises and explores the variety of factors behind the new imagining of universe and inner self." (from the Summary, p. 3)

52. Selusi, Ambrogio. 2021. *Chinese and Indian Ways of Thinking in Early Modern European Philosophy: The Reception and the Exclusion*. New York: Bloomsbury Academic.

The purpose of this work is to examine the European understanding of China and India within the histories of philosophy from 1600 to 1744. The year 1600 is the publication of *Barbaricae philosophiae antiquitatum* by Otto van Heurn and 1744 the year of release of the last book of the *Historia critica* by Jakob Brucker, which was entitled 'De Philosophia Exotica'. Heurn's book is our *terminus post quem*, since in this work it was introduced for the first time in a 'history of philosophy' a chapter about modern or contemporary Indians, together with a chapter about ancient Indians.

About Brucker, he provided a very long and detailed chapter on contemporary Asians in his widespread history of philosophy, while, after him, Asians were usually excluded from the histories of philosophy; that is the reason for choosing Brucker as our *terminus ante quem*. The two authors represent two opposite historiographical paradigms and the latter author

openly rejected the method and the historical asset of the former. Therefore, we shall, on one side, investigate the description of these two Asian civilizations in a century and a half of 'histories of philosophy', on the other side, we shall try to understand the change of historiographical paradigms and appreciate the effects of these changes in the description of the two civilizations with which we are concerned" (p. 1)

53. Senghass, Dieter. 2002. *The Clash within Civilizations: Coming to terms with cultural conflicts*. New York: Routledge.

"Intercultural philosophy must face the realities of today's world, particularly when in pursuit of politico-theoretical and socio-philosophical issues.

This world is, however, completely different from the one that existed at the time when classical philosophy came into being. This is why all contemporary philosophies, and especially philosophies from non-European, non-Western cultures, must turn to the political, socioeconomic and cultural complexities emerging in their own environment.

Such a confrontation will inevitably lead to differentiation processes which in the light of such historic changes it will be hard to confine to any form of cultural-essentialist straitjacket. It is this issue that creates such inner turmoil within cultures and their characteristic philosophical profiles; as a rule, it is hardly possible to reduce the many solutions put forward to a common denominator. Cultures, in the current, holistic sense of the word, and in the sense of civilizations, disintegrate, some earlier, some later; for some the process is slow, for others it is more accelerated; ultimately, however, this disintegration is irreversible.³⁰" (p. 23, a note omitted)

54. Shaner, David Edward, Nagatomo, Shigenori, and Yasuo, Yuasa. 1989. *Science and Comparative Philosophy: Introducing Yuasa Yasuo*. Leiden: Brill.

"This book was written with a diverse group of readers in mind. We intended to serve the interests of both philosophers and scientists by introducing a broad conceptual framework in which different research methods can be shown to be mutually

beneficial. An implicit theme running through the text is our belief that even an elementary understanding of complex patterns of human cognition and behavior requires that scholars employ several research strategies. Both scientific and phenomenological methods are constrained by their use of precisely defined—and therefore restrictive—sets of models, theories, laws, and patterns of explanation. Although these models, etc., constitute the pillars upon which sound research strategies are based, their employment requires embracing a — diversity of assumptions. While these methodological assumptions give direction to different research programs, the exclusive use of any single research strategy can systematically distort and oversimplify the complex subject matter of studies focusing upon 'human nature'." (Preface, p. XVII)

56. Sheldon, Wilmon H. 1956. "What Can Western Philosophy Contribute to Eastern?" *Philosophy East and West* no. 5:291-304.

"Notice that we are here treating of philosophy as a distinct pursuit, not as a phase of cultural differences between East and West.

True, indeed, the culture of a region, nation, race and its philosophy are deeply interwoven. But we are asking only what the individual philosophers as independent truthseekers of the Western arena can offer to the individual truthseekers of the East, giving them, if possible, truths in addition to what they already have. And if in the following we seem to dwell overlong on the weaknesses of Western thought, remember the old counsel: Set your own house in order first, then go out to help your neighbors." (p. 291)

57. Shen, Vincent. 2003. "Some Thoughts on Intercultural Philosophy and Chinese Philosophy." *Journal of Chinese Philosophy* no. 30:357-372.

"But what is an intercultural philosophy? This should not be limited to only doing comparative philosophy, as is in the cases of comparative religion, comparative linguistics, etc., which are often limited to the studies of resemblance and difference between different religions or languages. Although doing comparative philosophy in this manner could lead to a kind of relativism in philosophy, it could not really help the self/mutual understanding and practice of philosophy itself.

For me, the real target of doing intercultural philosophy is therefore to put into contrast between, rather than sheer comparison of, different philosophical traditions. I understand "contrast" as the rhythmic and dialectical interplay between difference and complementarity, continuity and discontinuity, which leads eventually to the real mutual enrichment of different traditions in philosophy.(3)" (p. 358)

(3) I have worked out a philosophy of contrast in my works, especially in my *Essays in Contemporary Philosophy*, (Taipei: Li-ming Publishing Company, 1985) and *Contrast, Strangification and Dialogue* (Taipei:Wunan, 2002).

58. Shi'er, Ju. 2010. "The Cultural Relativity of Logic: From the Viewpoint of Ethnography and Historiography." *Social Sciences in China* no. 31:73-89.

Abstract: "The concept of general argumentation has expanded the family of logic so that it incorporates the logic of other cultures besides modern culture. Based on reports of fieldwork among the Azande and the fruits of research on ancient Chinese logic and the logic of Buddhism, this paper attempts to provide a factual foundation for the proposition "the cultural relativity of logic" from a descriptive perspective. Adopting deductive argument as a meta-method, this paper argues for the existence of the cultural relativity of logic in modern culture and of the translated version of the logic of other cultures in modern culture. With the aid of ethnography and the historical research findings, we show that the logic of other cultures also has its own cultural relativity. We also seek to show through the concepts of language games and life forms that deductive argumentation as a meta-method likewise possesses cultural relativity."

59. Siderits, Mark. 2017. "Comparison or Confluence In Philosophy?" In *The Oxford Handbook of Indian Philosophy*, edited by Ganeri, Jonardon, 75-92. New York: Oxford University Press.

"Later chapters in this volume will focus on particular figures or texts important to the history of Indian philosophy, and explore their approach to a given philosophical issue. They thus convey important information about the Indian philosophical tradition. The present essay concerns one of the uses to which that information might be put. The question to be addressed here might be put in the following way. It is currently standard practice to include a component on the history of philosophy in the undergraduate philosophy curriculum. But what is included there is almost always exclusively Western. Suppose the history

of the Indian philosophical tradition were studied at a degree of depth comparable to that given the Western tradition in the typical undergraduate curriculum. What would be the point? How might this be thought to contribute to the practice of philosophy?

We think we know how to answer the comparable question when we are asked to defend the study of earlier periods of the Western tradition. The student working on the ontological status of abstract objects might, we think, benefit from knowing about the views of Plato, Aristotle, and Ockham on universals; work in meta-ethics would seem to require some knowledge of the varieties of ethical theories that have been proposed and worked out in the past; and so on. This explains why we are not shocked when Spinoza's name is casually dropped into a discussion of the grounding problem—a problem that only began to be discussed a few decades ago. When we see the practice of philosophy as chiefly concerned with trying to solve unresolved philosophical problems, we can see why it might prove useful to know the genealogy of the problem and how related issues were addressed in the past." (p. 75)

Bibliography of Intercultural and Comparative Philosophy: Sil-Z

Bibliography

1. Silius, Vytis. 2020. "Diversifying Academic Philosophy: The Post-Comparative Turn and Transculturalism." *Asian Studies* no. 8:257-280.

Abstract: "The article asks why, in Western universities, the success of the academic field of comparative philosophy has so far failed to significantly diversify the curricula of academic philosophy. It suggests that comparative philosophy has mainly relied on the same approaches that have made academic philosophy Eurocentric, namely, on the history of philosophy as the main mode of teaching and researching philosophy. Further, post-comparative philosophy and transcultural studies are presented as providing tools to address the foundations of the institutional parochialism of academic philosophy, while preserving one of the most fundamental tenets of philosophy—the quest for universal knowledge that transcends cultural particularities."

2. Sjödin, Anna-Pya. 2011. "Conceptualizing Philosophical Tradition: A Reading of Wilhelm Halbfass, Daya Krishna, and Jitendranath Mohanty." *Philosophy East and West* no. 61:534-546.

Abstract: "This article takes as its point of departure the question of how Wilhelm Halbfass, Daya Krishna, and Jitendranath Mohanty have conceptualized tradition in relation to "Indian" philosophy. They have all reacted to, and criticized, homogeneous and static conceptions of Indian philosophies,

and by articulating different ways of apprehending tradition they have tried to come to terms with such limiting images. My reading of their texts has been informed by a questioning of how they, in turn, conceptualize tradition. Most of all this is related to the tendency, on the one hand, to stress that tradition is open-ended and dynamic but at the same time to speak of tradition as one singular and universalizable phenomenon, sometimes even as a reified phenomenon ("it"). This discussion is connected to a concern of mine regarding how to conceptualize a plurality and heterogeneity while avoiding a reifying, generalizing language. Toward the end I present a reading of the *Nyayasutra* and how the concept of *siddhanta* could be understood in the light of three of its commentaries. This reading is here framed as the practical and philosophical outcome of the reflections made in the analysis of Halbfass, Krishna, and Mohanty."

3. Skof, Lenart. 2008. "Thinking between Cultures. Pragmatism, Rorty and intercultural philosophy." *Ideas y Valores* no. 138:41-71.

Abstract: "The paper discusses Rorty's critique and special relation to intercultural thinking.

It looks into the history of both pragmatism and intercultural philosophy, discusses some of their possible points of convergence, and finally follows the implications of this encounter for our intercultural understanding of Rorty's version of pragmatism, especially in the context of a contemporary North-South intercultural dialogue."

4. Smart, Ninian. 2008. *World Philosophies*. New York: Routledge.

Revised second edition edited by Oliver Leaman (First edition 1999).

5. Smid, Robert W. 2009. *Methodologies of Comparative Philosophy: the Pragmatist and Process Traditions*. Albany: State University of New York Press.

"This text examines one small but important source of such contributions: namely, comparative philosophers. While cross-

cultural influence is hardly unprecedented in the study of philosophy, twentieth-century philosophers experienced this influence on a scale far beyond that of any previous century: more cultures converged in a greater variety of venues and to a greater extent than had ever done so before. The rise of comparative philosophy in the twentieth century represents the attempt of many of these philosophers to understand these cross-cultural influences and consider their philosophical implications. Perhaps as a validation of their efforts, comparative philosophy has grown in both interest and influence and now represents a vibrant subfield in the discipline of philosophy." (p. 2)

6. ———. 2022. "On the Taming of Comparison: Methodological Myopathy, Plurality, and Creativity." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 181-202. New York: Bloomsbury.

"My argument proceeds in three steps. In the first section, I offer a definition of comparison that underscores the role of difference in the comparative encounter and links the negotiation of that encounter with interest.

(...)

Yet both concepts have roots that go much deeper than that, reaching as far back as the initial encounter with difference, and the interests that inform that encounter can continue to affect the comparative process in often unacknowledged ways. In the second section, then, I identify two seams in the comparative process that provide an indication of some of these interests: namely, the question of what makes a comparison "interesting" and the close relation between philosophical commitments and comparative method.

(...)

In the third section, then, I offer three recommendations for becoming more critically aware of the interests driving method, each of which seeks to provide critical distance between comparativists and their methodological choices. The end

result is an embrace of a provisional methodological pluralism, which represents not an underlying philosophical commitment but rather a methodological stance. Embracing methodological pluralism in this way, I argue, amounts to the reintroduction of invention at the level of methodology. In the conclusion, I offer some observations regarding the role of creativity in comparison and its relation to the methodological interests highlighted in this chapter." (pp. 183-184)

7. Smith, Huston. 1980. "Western and Comparative Perspectives on Truth." *Philosophy East and West* no. 30:425-437.

Abstract: "My article consists of four parts. Beginning with the comparative side of our symposium theme, I divide this into a temporal, historical comparison (Part I) and a geographical, spatial comparison (Part II). In Part III, I turn expressly to our Western handling of the truth issue, reserving Part IV for pulling these various strands together."

8. Soldatenko, Gabriel. 2022. "Reflections for Comparative Method from a Latin American Philosophical Perspective." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 119-138. New York: Bloomsbury.

"This brief introduction through Nietzsche gives us a general frame through which to take up and look more closely at the conceptual points where comparative and Latin American philosophy intersect; more specifically, through the concept of culture and crosscultural method; secondly, by way of the related and corollary goal of pushing back against Western philosophic universality and creating philosophy anew; and thirdly, through the metaphilosophical question of the overarching goal and purpose of philosophy. To that end, this chapter is divided into three sections: the first two offering close readings of essays that were foundational to Latin American philosophy and how they relate and contribute to thinking about comparative thought; and the third offering a brief review of useful signposts that Latin American philosophy offers for further reflection on comparative method." (p. 122)

11. Soni, Jayandra. 1998. "Intercultural Relevance of Some Moments in the History of Indian Philosophy." *Topoi* no. 17:49-55.

"The history of Indian philosophy since ancient times has been characterized by its dialogic attitude. Discussion and debate, whether they were in a written form or actually conducted in public, were the hallmarks of any school of thought, because other views were first taken into account before presenting its own so-called established position. The history of the emergence of each of the different schools was generally based on a fundamental work which set forth its basic categories. Most of these basic works were compiled in a very cryptic and curt style, sometime in the four hundred years just before and after our common era. Commentators elaborated the basic philosophy from within their own tradition in order to make the basic views understandable to the uninitiated, whilst at the same time defending the tradition against attacks from opponents. This paper attempts to recall certain moments in the early development of Indian philosophy which directly or indirectly reflect an attitude to philosophizing relevant in an intercultural context. Two such interrelated moments will be mentioned here: 1. the significance of debate and the emergence of rules of debate which ultimately led to a discussion of logical issues when discussing an argument; 2. the significance of epistemology for the view of the world, the objects to be known, and the subject who knows. By way of an introduction and orientation to some of the issues in Indian philosophy a few presuppositions will be considered in order to show that the differences among the various schools are more important than certain generalities which in some cases may be drawn." 14. Stenger, Georg. 1998. "Structures of World-Oriented Encounter: The World Concept and the Intercultural Basic Situation." *Topoi* no. 17:37-47.

"Interculturally motivated thinking is increasingly becoming the crucial test of the general endeavours of thought and their being comprehended as categories.

Amongst other aspects, this is revealed in the fact that almost all spectres of philosophy deal with the topic of interculturality."

(...)

"All these aspects contribute to a situation which is philosophically and politically precarious, yet also challenging and exciting.

A possible attempt to, first of all, become conscious of this new overall situation, which I want to call "intercultural basic situation" (*interkulturelle Grundsituation*), could be to set the theme of world-concept (Weltbegriff) which has always appeared in philosophical tradition, but now, due to the intercultural discussion, moves towards the centre of attention in a different way. The basic concept of "world" is probably that with the largest dimension, i.e. it is able to embrace universal structures as well as regional or individual ones, even the microstructures of environmental and physiological-organical conditions. Of course I do not want to give a description of the history of the world-concept. Instead, the topic is to be examined in terms of its relevance for intercultural thinking. I want to present some thoughts about what is really meant by "world", how we can meet a world, and especially how its notion is to be seen in very different ways and circumstances. It is undergoing a change and transformation so that we can not start form a world-concept, but rather have to talk about a "World-liness" (Welthaftigkeit) or, even more accurate, a "world-phenomenon". I want to suggest some steps, demonstrating the "structures of world-oriented encounter". (pp. 37-38)

16. Struhl, Karsten J. 2010. "No (More) Philosophy Without Cross-Cultural Philosophy." *Philosophy Compass* no. 5:287-295.

Abstract: "Philosophy is a radical inquiry whose task is to interrogate the fundamental assumptions of some given activity, discipline, or set of beliefs. In doing so, philosophical inquiry must attempt to delineate a problem and to develop a method for resolving that problem. However, to be true to its intention, philosophy must be able to examine not only the object of its inquiry but also its own method of interrogation. To accomplish this task, philosophical inquiry must be able to create a distance not only from the assumptions under investigation but also from its own assumptions, which is to say, that it must be able to raise questions about its own method. This self-reflexivity requires that any given philosophical investigation must be examined from an alternative vantage point. Since the assumptions which inform the inquiry are deeply imbedded within a given culture, immanent critique is insufficient. The only way to step outside the boundaries of these cultural presuppositions is to reflect on the given problem from the vantage point of another culture's philosophical tradition. Thus, I argue that philosophical inquiry is unable to go beyond certain limits without being cross-cultural philosophy. I illustrate the way in which cross-cultural

philosophy does this with respect to the problem of the self by placing the Western philosophical approach to this problem in dialogue with the Indian Hindu-Buddhist narrative."

18. ———. 2014. "Introduction: The Project of Intercultural Philosophy." In *What is Intercultural Philosophy?*, edited by Sweet, William, 1-18. Washington: The Council for Research in Values and Philosophy.

"One response to the contact of different cultures and traditions during the past century has been the proposal of a comparative or of an intercultural philosophy. Such a response is not

without precedent; we see similar responses, for example, in literary, religious, and political studies. In intercultural philosophy, however, we find an attempt to have philosophers from different cultures or traditions actively engage one another – and to do so in a way that shows not only mutual respect, but also the recognition that one's own philosophical views are not complete, that there are other, legitimate philosophical views, and that one's own views may need a rearticulation or even revision." (p. 1)

19. Tanaka, Koji. 2016. "Ways of Doing Cross-Cultural Philosophy." In *Learning from the Other - Australian and Chinese Perspectives on Philosophy*, , edited by Makeham, John, 59-67. Canberra: Australian Academy of the Humanities.

"That said, some scholars have claimed that there is, strictly speaking, no tradition of studying *logic* in the East, or if there is, that it fails to match the sophistication achieved in the West. (5) That is, it is claimed that even though philosophers of the Eastern traditions have taken debates and argumentation as important to topics of philosophical inquiry, they have nevertheless failed to reflect on and examine the principles that underly argumentation and rational reasoning. According to these scholars, argumentation has been put to use in elaborating on the nature of language, knowledge, reality and ethics; yet, there are no investigations of the principles underlying these modes of argument apart from the particular arguments that employ them. It is claimed that Eastern philosophers have not abstracted principles of reasoning and argumentation from particular instances and they have not formalised those principles in order to examine the features and properties of the principles.

This is often unified in the idea that there is no development of *formal* logic in the East. As we will see, this has been taken to imply that there is no tradition of logic in the East.

In this paper, I will first show that there is, indeed, no development of formal logic in the East. However, I will argue that the lack of the development of formal logic does not entail the lack of the development of logic *tout court* . I will use this

point to show how to undertake a cross-cultural dialogue between Eastern and Western logicians.

My examination of the possibility of cross-cultural dialogue about logic will serve as a case study of showing how to do cross-cultural philosophy and how to use non-Western materials as part of contemporary philosophy." (p. 60)

20. Tang, Yijie. 1983. "A Perspective on the Meaning of Comparative Philosophy and Comparative Religion Studies: The Case of the Introduction of Indian Buddhism into China." *Chinese Studies in Philosophy* no. 15:39-106.

Abstract: "In this essay I do not intend to analyze or study the entire history of the introduction of Indian Buddhism into China; rather, I wish simply to investigate a bit the relationships which existed between Buddhism, after it was introduced into China in the period of the Wei, the Jin, and the North and South dynasties, and the prior existing ideologies and cultures in China at the time, and use that to illustrate the meaning of studying comparative philosophy and comparative religions."

21. Tanner, Jeremy. 2009. "Ancient Greece, Early China: Sino-Hellenic Studies and Comparative Approaches to the Classical World: A Review Article." *The Journal of Hellenic Studies* no. 129:89-109.

"This review article offers an introduction to some of the major contributions and debates within Sino-Hellenic studies. It has two purposes. First, to demonstrate the intrinsic intellectual interest of Sino-Hellenic studies, and in particular to show how such studies enrich and deepen our understanding of the Classical world.

Second, to offer a critical overview of the highly varying styles of comparison which characterize the different sub-fields

within Sino-Hellenic studies, and thus offer a model of some of the range of ways in which fruitful comparative Classical studies might be conducted. Correspondingly, my review is organized by fields: science and medicine; philosophy; comparative literature." (p. 90)

22. Tartaglia, James. 2014. "Rorty's Thesis of the Cultural Specificity of Philosophy." *Philosophy East and West* no. 64:1018–1038.

"Given the central importance he placed on dialogue between independent discourses, then, it does seem frankly amazing that in his few explicit statements on dialogue with non-Western philosophy (Rorty 1989, Rorty 1991, Balslev 1991), Rorty's attitude was almost entirely dismissive.

(...)

What brought Rorty around to this apparently anomalous view? The underlying reason, I shall be arguing, is that non-Western philosophy presents the most glaring counterexample possible to a thesis that is central to Rorty's critique of philosophy, and hence to his thought as a whole, namely his thesis of the cultural specificity of philosophy. To defend this thesis required him to reject any extension of the philosophical "conversation" beyond the Western world, despite the fact that this rejection was at odds with many other aspects of his thinking. The cultural specificity thesis is false, however, which is one of the main overall problems with Rorty's case for pragmatism.⁴ This essay will continue as follows. In the next two sections I consider and reject Rorty's various reasons for disparaging dialogue with non-Western philosophy. Then, in section IV, I sketch an alternative to the cultural specificity thesis, according to which it is no more surprising that different cultures have independently developed philosophy than that they have independently developed mathematics or astronomy." (p. 102)

"What seems to be emerging here is a hazy picture of history in which our understanding will be embedded. It rejects altogether the Hegelian single line of development, but it retains something like the notion of potentiality.

This structures at least local history into a before and after, and allows us to speak of advance. But because potentialities are diverse and frequently, at least by our present lights and capacities, incompatible, the gains will also involve losses, and the goods of different cultures will clash.

But this shouldn't frighten us into a relativization of goods, or into a disclaimer of the universal relevance of our own goods, about which we could never be sincere anyway.

It does point us to a future of humanity in which the kind of undistorted understanding of the other aimed at by "the comparativist enterprise" will be increasingly valuable. Not only to avoid political and military conflict where possible, but also to give people of every culture some sense of the immense gamut of human potentialities. This will serve not only to enlighten our judgments where goods clash, but will help where imagination and insight are capable of mediating the clash, and bring two hitherto warring goods to some degree of common realization. We can hope to advance in this direction, to the extent that the community of comparativists will increasingly include representatives of different cultures, will in effect start from different home languages." 24. Tuck, Andrew P. 1990. *Comparative Philosophy and the Philosophy of Scholarship: On the Western Interpretation of Nāgārjuna*. New York: Oxford University Press.

"Rather than contributing one more theoretical discussion of hermeneutics, or offering one more attempt at textual exegesis, this study examines the degree to which specific interpretations of a specific text have/been determined by factors often apparent only from the standpoint of another interpretive era or perspective. Furthermore, this study demonstrates the often stated principle that, rather than an ahistorical search for a preferred method or philosophy of interpretation, the enterprise of interpretation is inherently historical. Every reading of a text including, of course, the most carefully contextualized and historicised readings - will, in some ways, be unavoidably determined by some set of prejudgments. The choice is, therefore, not between good readings, undetermined by irrelevant considerations, and bad readings, rendered inaccurate by interpretive prejudice. The choice between one reading and an even better reading is a difference in degree and not in kind.

Within any set of rules for what counts as a desirable interpretation, choices between more and less preferable readings of texts can and will be made. And a study such as this suggests that our conventionally agreed - on rules of interpretation - the rules that tell us what is relevant, and what sorts of judgments are harmfully prejudiced - are anything but constant. Our preferences in regard to what constitutes a good interpretation are just as determined as our readings themselves." (Preface, pp. VI-VII)

25. Udoidem, Iniobong S. 1987. "Wiredu on How Not to Compare African Thought with Western Thought: A Commentary." *African Studies Review* no. 30:101-104.

"Kwasi Wiredu, a prominent African philosopher from Ghana, recently published an essay entitled "How Not To Compare African Thought to Western Thought" (1984) in which he criticized the prevalent method of comparing what is regarded as African philosophy with Western philosophy. Wiredu begins

the essay with the assertion that all cultures are characterized by two levels of thought, namely, the traditional non-scientific and the theoretical or scientific thought (p. 149-50). He also notes, although without examples, that some contemporary philosophers both in Africa and the West are in the habit of comparing the traditional non-scientific thought of the African people with the highly theoretical and scientific thought of the Western world. He sees this type of comparison as improper and argues that since there is traditional folk thought in Africa as well as in the West, if there is to be any comparison at all, it must be with folk thought to folk thought and scientific thought to scientific thought (p. 157).

Wiredu's essay is an excellent academic treatise in its own right, but as an African who is attempting to reflect philosophically and possibly attempting to provide leadership for the thrust of African philosophical search, there are some pitfalls in the essay which need to be pointed out. The purpose of this commentary is to highlight and hopefully clarify some of the misleading innuendoes in contemporary literature about African philosophy and the role of an African philosopher within the world of philosophy." (p. 101, a note omitted)

26. van Binsbergen, Wim. 1999. "'Cultures does not exist': Exploding self-evidences in the investigation of interculturality." *Quest: An African Journal of Philosophy* no. 13:37-114.

"The structure of my argument is as follows. To begin with, I shall indicate how the concept of 'culture' has taken root as a key concept in our contemporary social experience and in philosophy. Precisely because it has done so, it is of the greatest importance to subject to empirical and philosophical scrutiny such self-evidences as attach to 'culture'.

(...)

As a next step, I shall explore the conditions under which my claim that 'cultures do not exist' may acquire meaningfulness. Since in this connection I put forth the social sciences as an example for philosophy, I am compelled to discuss the place of empirical knowledge within philosophy. I shall stress that

intercultural philosophy ought to take into account such knowledge as the empirical sciences have gathered through explicit and well-tried methods; and here I am thinking particularly of the empirical discourse on African ethnicity, and of the neo-diffusionist arguments in favour of extensive cultural connections in space and time informing Africa's cultural history and its place in the world as a whole. But as a next step I shall argue — by reference to my own complex itinerary through Africanist cultural anthropology — how this particular empirical science, despite its unmistakable relevance for intercultural philosophy, is yet so philosophically naïve, and so disposed towards a North Atlantic epistemological perspective from an epistemological point of view, that cultural anthropology can at best constitute a mere point of departure for our theoretical explorations of interculturality. Finally I posit that intercultural mediation ideally situates itself beyond any specific cultural orientation, which allows me to characterise intercultural philosophy as the search for a transgressive and innovative, metacultural medium for the production of knowledge. It is the quest itself which makes this a commendable undertaking, even though its metacultural goal is unlikely to be ever reached." (p. 38)

27. van Brakel, Jaap. 2006. "De-essentialising Across the Board: No Need to Speak the Same Language." *Rechtstheorie & Rechtspraktijk* no. 35:263-284.

"Let me repeat and stress that on my view there are no linguistic, cognitive, emotional, etc. universals. I admit that there may be a few cultural universals, but these universals are contingent (not genetically fixed for all times and places) and they are not sufficient to support communicative interaction for any length of time. And it remains the case that a rich or 'thick' interpretation and understanding of them is different in different lifeworlds. Note, for example, that trading may take place, while both sides may have their own banking system and different reactions in case of undue performance." (p. 284, a note omitted)

28. ———. 2014. "Heidegger on Zhuangzi and Uselessness. Illustrating Preconditions of Comparative Philosophy." *Journal*

of Chinese philosophy no. 41:387-406.

Abstract: "In this article, I look at those passages in the *Zhuangzi* usually associated with "uselessness." I discuss in what way these passages may have been suggestive to Martin Heidegger to explain his ideas of the necessity of the other thinking and of the "waiting people" being entirely unusable to others. Then I make some brief comments concerning basic conditions of interpretation, using examples taken from the *Zhuangzi* passages discussed. These conditions include family resemblance across the board, a principle of agreement, and the issue of "planetarization" (Heidegger's term)."

29. van Brakel, Jaap, and Ma, Lin. 2015. "Extension of Family Resemblance Concepts as a Necessary Condition of Interpretation across Traditions." *Dao: A Journal of Comparative Philosophy* no. 14:475-497.

Abstract: "In this paper we extend Wittgenstein's notion of family resemblance to translation, interpretation, and comparison across traditions. There is no need for universals. This holds for everyday concepts such as green and qing 青, philosophical concepts such as emotion(s) and qing 情, as well as philosophical categories such as form(s) of life and dao 道. These notions as well as all other concepts from whatever tradition are family resemblance concepts. We introduce the notion of quasi-universal, which connects family resemblance concepts from a limited number of traditions. The possibility and necessity of extending family resemblance concepts across traditions dissolves the false antinomy of universalism versus relativism."

30. ———. 2022. "Necessary Preconditions of the Practice of Comparative Philosophy." In *Comparative Philosophy and Method: Contemporary Practices and Future Possibilities*, edited by Burik, Steven, Smid, Robert W. and Weber, Ralph, 31-53. New York: Bloomsbury.

"In this contribution, we embrace a rather broad notion of comparative philosophy. We consider that it involves such a wide range of activities as translation, interpretation,

exposition of the conceptual schemes of an "alien" philosophical tradition in terms of the conceptual schemes of the interpreter's "own" tradition, as well as comparison of these conceptual schemes in a learnable meta-language constructed by the interpreter. Our use of the word "interpretation" includes translations and any other form of interpretation of human actions, experiences, and utterances/inscriptions (including comparative philosophy). We ask: What are the necessary conditions and/ or unavoidable constraints of interpretation practice, in particular comparative interpretation of philosophical traditions? In clarifying more abstract considerations, we shall draw our examples from comparison of classical Chinese texts and their interpretations in modern languages (including modern Chinese)." (p. 31, notes omitted)

31. van der Wesfhuizen, Jacob. 2005. "One more time: Views on Aristotle's philosophy and Intercultural Philosophy." *Phronimon* no. 6:71-79.

Abstract: "In my view a philosopher is a person of wisdom who produces a guide to life, providing us with some tools for dealing with practical problems and survival issues on at least five adaptation domains. These are a) metaphysics: man's relationship to the cosmos; b) politics: man's relationship with others; c) ethics: man's relationship with himself and his behaviour toward others; d) epistemology: man's relationship with his mind and his method of thinking,. and e) aesthetics: man's relationship with and appreciation of beauty. This paper is destined to mainly present an unshackled response to the informed and well-versed papers by Anastasios Ladikos titled *Revisiting the virtue of courage in Aristotle*, . and Murray Hofmeyer: *The Promise and Problems of Intercultural Philosophy* ; (*Phronimon - Journal of the South African Society for Greek Philosophy and the Humanities* -Volume 5(2) 2004). My concern with Aristotle's ideas stems from the fact that his propositions are connected to ancient battlefield circumstances and conditions, as well as the Spartan Culture of his time. If juxtaposed with scenes of violence in our time we can draw many parallel behavioral patterns that can pass as valid and reliable characteristics of modern-day soldiers in

mortal face-to-face combat or victims of crime in violent confrontation with rapists, murderers and assaulters."

32. van Hensbroek, Pieter Boele 2013. "Beyond Crossing Borders. Beyond Intercultural Philosophy." In *Hegel's Twilight: Liber Amicorum Discipulorumque Pro Heinz Kimmerle*, edited by Ramose, Mogobe B., 31-41. Leiden: Brill.

"Heintz Kimmerle is the exemplary philosopher of crossing borders and of cross-border dialogues in

Philosophy.

(...)

What concerns us in this article is the mission of Kimmerle in relation to Philosophy and Intercultural Philosophy. In its broadest meaning this mission concerns reshaping the western tradition in Philosophy by making it move beyond its Eurocentric heritage. Kimmerle argues that the western tradition in philosophy is not equipped to face the new realities of a globalised world in which there is no hegemonic place for western culture. There is a real need for Philosophy to renew itself and to go intercultural. Such a move is not just a matter of adding a new branch of Intercultural Philosophy to mainstream Philosophy, but one of groping for an intercultural idea of Philosophy. In Kimmerle's words, it involves a "Annäherung du einen interkulturellen philosophie Begriff"

(Kimmerle 1994, 15)." (p. 31)

(...)

"In sum, the idea that philosophy is basically western philosophy is not well substantiated.

This provides space for Intercultural Philosophy as an attempt at elaborating an 'intercultural dimension' which can lead the discipline of Philosophy into the age of globalization. I will now proceed to a critical discussion of this argument." (p. 37)

33. Van Norden, Brian W. 2017. *Taking Back Philosophy: A Multicultural Manifesto*. New York: Columbia University Press.

Foreword by Jay L. Garfield.

"Jay Garfield and I did not anticipate the storm of controversy that would result when we published "If Philosophy Won't Diversify, Let's Call It What It Really Is" in *The Stone* column of the *New York Times* blog (May 11, 2016). Perhaps we should have: after all, we were calling upon ethnocentric philosophy departments to rename themselves "departments of Anglo-European philosophy" to reflect their intentional disregard of everything outside the mainstream philosophical canon.

However, it immediately became obvious that our challenge to the chauvinism of US philosophy departments had struck a nerve. This book is an effort to develop in detail the case for a multicultural approach to philosophy.

Like the original editorial, this book is polemical and intentionally provocative in the hope that it will incite discussion and raise awareness. This work is also intended to be interesting and accessible to general readers. Since the point is to get nonspecialists excited about the issues so they will want to read more and gain a deeper understanding, my argumentation is less guarded and less detailed than I would produce in a work intended solely for my fellow scholars."
(Preface, p. XXIII)

(...)

"To assist those who want to learn more about philosophy outside the Anglo-European canon, I maintain a bibliography, "Readings on the Less Commonly Taught Philosophies," at <http://bryanvannorden.com>. I am grateful to James Maffie and Sean Robin for suggestions of some titles to include related to Native American thought, and to Travis W. Holloway for advice about readings in Continental thought." (Preface, p. XXIV)

34. Wang, Xinli. 2018. "Incommensurability and Comparative Philosophy." *Philosophy East and West* no. 68:564-582.

"My challenge to the viability of comparative philosophy between two disparate cultural traditions, such as the Western and Chinese philosophical traditions, concerns the two most

prevailing forms of comparative philosophy: as cross-cultural philosophic understanding and as cross-cultural philosophic communication, which I will call the Gadamerian model of comparative philosophy (section 4). Based on my presuppositional interpretation of the thesis of incommensurability as cross-language communication breakdown (section 2), effective cross-cultural language communication between Chinese and Western cultural-language communities (section 3) is inevitably partial due to substantially distinct cultural schemes embedded within both cultural traditions. More precisely, there are two special forms of incommensurability faced by comparative philosophers: the failure of mutual understanding (the radical form of incommensurability) and effective communication breakdown (the modest form of incommensurability). Consequently, a comparative philosophy that predicates on mutual understanding and communication between the two cultural-language communities is severely compromised. Cultural relativism based on the incommensurability thesis continues to impede the effort of comparative philosophy (section 5). However, this does not mean that no meaningful semantic comparison is possible between two distinct cultural-philosophic traditions, as some radical relativists claim. A different kind of comparability, namely the presuppositional comparison at the cultural-schemes level, will be discussed as a promising

solution (section 6)." (pp. 564-565)

35. Wawrytko, Sandra A. 2009. "Feminism and/in Asian Philosophies." *APA Newsletters* no. 9:5.

"Feminism has much to gain from a close reading of Asian philosophies. Stereotypical views of Asian cultures as irretrievably misogynist obscure both the constructive and deconstructive contributions Asian philosophies can make to feminist discourse. I will briefly outline doctrines found in key schools that can support and further feminist aims: 1) Daoism's radical reassessment of the "feminine" (Yin), 2) Confucianism's advocacy of the universal potential for self-cultivation, and 3) Mahayana Buddhism's deconstruction of sexism as one among

many forms of discrimination. Since I have already discussed points two and three elsewhere, my main focus here will be Daoism." (p. 5)

36. Weber, Ralph. 2013. "'How to Compare?' – On the Methodological State of Comparative Philosophy." *Philosophy Compass* no. 8:593-603.

Abstract: "From early on, comparative philosophy has had on offer a high variety of goals, approaches and methodologies. Such high variety is still today a trademark of the discipline, and it is not uncommon of representatives of one camp in comparative philosophy to think of those in other camps as not really being about 'comparative philosophy'. Much of the disagreement arguably has to do with methodological problems related to the concept of comparison and with the widely prevailing but unwarranted assumption that comparative philosophy should be about comparing 'culturally different philosophies'.

This paper seeks to problematize this assumption by clarifying conceptually the notions of 'comparative philosophy' and of 'comparison', by showing the prevalence of the assumption in recent second-order discussions of methodology in comparative philosophy and its restraining implications in a randomly selected contribution of 'Chinese philosophy'. At the end, a rallying call for a (self-)critical comparative philosophy is issued."

37. ———. 2013. "A Stick Which may be Grabbed on Either Side: Sino-Hellenic Studies in the Mirror of Comparative Philosophy." *International Journal of the Classical Tradition* no. 20:1-14.

Abstract: "Recently, Jeremy Tanner has published a highly informative review article in the *Journal of Hellenic Studies*, in which he introduces and advertises "Sino-Hellenic Studies" as a new and upcoming subfield in academic inquiry. Tanner particularly focuses on what he terms "Sino-Hellenic comparative philosophy," while developing his perspective clearly from within contemporary Classicists' academic parameters. In this paper, I approach the matter precisely from

the other end, i.e. from within contemporary comparative philosophy, distinguishing four different approaches in comparative philosophy, pointing out some pitfalls in comparison and offering a perhaps provocative conclusion by provincializing and politicizing “Sino-Hellenic Studies”. The paper not only seeks to supplement Tanner’s review, but also and more importantly to introduce some fundamental methodological problems to be dealt with in any comparative inquiry.”

38. ———. 2014. "Comparative Philosophy and the *Tertium* : Comparing What with What, and in What Respect?" *Dao: A Journal of Comparative Philosophy* no. 13:151-171.

Abstract: "Comparison is fundamental to the practice and subject-matter of philosophy, but has received scant attention by philosophers. This is even so in “comparative philosophy,” which literally distinguishes itself from other philosophy by being “comparative.”

In this article, the need for a philosophy of comparison is suggested. What we compare with what, and in what respect it is done, poses a series of intriguing and intricate questions. In Part One, I offer a problematization of the *tertium comparationis* (the third of comparison) by examining conceptualizations of similarity, family resemblance, and analogy, which it is sometimes argued can do without a *tertium comparationis*. In Part Two, I argue that a third of comparison is already required to determine what is to be compared, and insofar as that determination precedes the comparison that *tertium* may be called “pre-comparative.” This leads me to argue against incomparability and to show how anything can indeed be compared to anything.

In Part Three, I relate my arguments to what is today commonly labelled “comparative philosophy.” Finally, I raise some questions of ontology and politics in order to demonstrate the relevance of a philosophy of comparison.”

39. ———. 2018. "Reply to Xiao Ouyang." *Philosophy East and West* no. 68:256-261.

"I read Xiao Ouyang's comments on "Rethinking Comparative Philosophical Methodology" as a contribution to these important discussions in methodology and particularly regarding the aims of comparative philosophy. That he has chosen my work on comparison and criticism of comparative philosophy as a springboard to articulate these larger issues honors me, and I shall of course take the opportunity to clarify some of my views and respond to some of the criticism from Ouyang's side.

Nonetheless, I should also like to engage with some of the more encompassing thoughts offered by Ouyang. There is much that he writes that I can agree with, and I am especially thankful for his revisiting the early methodological debates published in the first few volumes of *Philosophy East and West*. These earlier contributions to comparative philosophy are important not only in terms of what they have to say, but also in terms of raising awareness that there is a history to the discipline. Critical reflections on the history of comparative philosophy, as well as other aspects, are in my view still fundamentally lacking. Further professionalization of the discipline would mean that we start writing local and global histories of the discipline, posing questions pertaining to the sociology of comparative philosophy and investigating the broader intellectual and political contexts that have influenced the formation and development of the discipline. Many key figures featured in the first volumes of *Philosophy East and West* and writing about methodology spoke out firmly in favor of a plurality of approaches, which is as sound an intellectual position as it is necessary for the flourishing of any discipline." (p. 257)

40. ———. 2021. "Comparative Philosophy and Comparison." In *Comparative Methods in Law, Humanities and Social Sciences*, edited by Adams, Maurice and Van Hoecke, Mark, 149-174. Cheltenham, UK: Edward Elgar Publishing.

"This chapter discusses comparative philosophy and some of its theoretical insights into comparison. Like every academic discipline, comparative philosophy is a practice that has its own history, sociology, politics, economy, and so forth. This is why

understanding the past and present practice is important to contextualize theoretical insights." (p. 149)

(...)

"This diversity in voices and approaches is why this chapter begins with an overview of the discussion around the subject of comparative philosophy.

It starts by introducing some of the dominant views that are currently being advocated in the discipline or sub-discipline. This will help readers new to the subject with starting points from which to read further, as well as orient them in the field. The chapter also deals with the present conceptualization of the logic of *comparison* and offers distinctions that may be useful in discussing *comparing* from the point of view of comparative philosophy and traverse other related disciplinary and interdisciplinary areas. Against this backdrop, the chapter concludes with some of the other theoretical issues being discussed in the field of comparative philosophy and comparative studies more generally at the present." (p. 153)

41. Weber, Ralph, and Kahteran, Nevad. 2021. "Towards Post-Comparative Philosophy: Interview with Ralph Weber." *Asian Studies* no. 9:211-221.

[Question:] "*Comparative Philosophy without Borders* (written together with Arindam Chakrabarti, currently at Stony Brook University in New York) speaks about four phases of Comparative Philosophy in a Pluralistic World. According to your best insights and knowledge, in which phase are we right now?"

[Answer:] "Now, in our book, *Comparative Philosophy without Borders*, Arindam Chakrabarti and I wanted to put a spin on the practice of comparative philosophy at the third, current stage, which eventually might lead us to a fourth stage. The spin would take us beyond comparative philosophy to what I prefer to call "post-comparative" philosophy, but others, who work towards similar ends like, for example, Jonardon Ganeri, call by various different names. It would amount to just doing philosophy as one thinks fit for getting to the truth about an

issue or set of issues, by appropriating elements from all philosophical views and traditions one knows of but making no claim of “correct exposition”, and instead just addressing hitherto unsolved problems and possibly raising issues that have never been considered before, anywhere. The crucial point is one about epistemic authority. An argument is not persuasive because it is one made, say, from within Indian philosophy, but it is persuasive because it is a good argument." (pp. 214-215)

42. Wen, Haiming. 2010. "A Survey of Roger Ames's Methodology on Comparative Philosophy." *Contemporary Chinese Thought* no. 41:52-63.

"This article discusses Roger Ames's methodology of comparative philosophy.

The crux of Ames's philosophy is to correct Western thought, especially Western misinterpretations of Chinese philosophy. His academic career is based on two themes that surround this central problem. The first is traditional Western philosophy's misunderstanding of Chinese philosophy, and the other is illustrating and advancing the profundity of Chinese philosophy. The thrust of his method is achieved through three academic fields of research: classical translations of Chinese philosophy, commentaries on Chinese philosophy and thought, and English and Chinese works on comparative philosophy. These three fields of research draw from four theoretical frameworks: neo-Confucian interpretations of Chinese philosophy, Western Sinological training, American pragmatism, and important theoretical questions in contemporary Chinese–Western comparative philosophy. This article discusses his methodology of comparative philosophy from these multiple angles." (p. 53)

43. Wenning, Mario. 2020. "Intercultural Encounter in the Age of Hybridity: A Response to Eric S. Nelson." *Philosophy East and West* no. 70:225-237.

Book discussion of: *Chinese and Buddhist Philosophy in Early Twentieth-Century German Thought* . By Eric S. Nelson. London, Oxford, New York, New Delhi, Sydney: Bloomsbury Academic, 2017.

"In short, the book is more ambitious than its historical theme and modest tone suggest. In broad agreement and sympathy with the hermeneutic vistas and normative pillars of this attempt at a rescuing critique that combines the best of immanent and external critique, this essay will suggest two dimensions to complement Nelson's narrative: (1) the role of the imagination in the Sino-German philosophical encounter and (2) the need to self-critically question the extent to which the models of intercultural understanding developed a century ago can be relevant given the contemporary situation.² In particular, the challenge of increasing forms of cultural hybridity for intercultural hermeneutics will be highlighted. The conclusion of this essay will briefly draw on Karl Löwith, who has anticipated the task of rethinking the challenge of the East-West entanglement of cultural traditions in his reflections on Japanese modernity." (P. 227)

(2) From a different perspective, Kai Marchal has formulated a related doubt concerning the applicability of the early twentieth-century reception of Asian traditions in Germany for current debates in East-West philosophy (see in this issue of *Philosophy East and West*).

44. White, David. 1956. "Translation and Oriental Philosophy: An Introductory Study." *Philosophy East and West* no. 6:247-255.

"It is the purpose of this introductory study to demonstrate briefly a method for reading Asian texts in translation. This method is not original with the writer; it has been well practiced by A. K. Coomaraswamy, Heinrich Zimmer, D. T. Suzuki, Arthur Waley, and many others. But its application to the problem at hand is perhaps sufficiently unfamiliar to warrant this effort." (p. 248)

(...)

"This completes the effort to show that a little general knowledge makes it possible to read Indian texts in translation with understanding. Of course, an Indian philosopher would find the explication incomplete. The positive content of the term "mokṣa" has not been developed, for example; and such important presuppositions as those provided by Atman (Self)

and Brahman ("undifferentiated Absolute" or Godhead) have not been mentioned.

These and many other omissions are due to the limited purpose of the study. If the Western philosopher objects, however, that, though this exercise has demonstrated a method for reading in translation, it has scarcely shown much of philosophic import, it might similarly be pointed out that one does not get much of the detailed essence of Descartes' thought from a first acquaintance with a single short section of the *Discourse on Method* (in translation). What we have seen here is simply that it is possible to get accurate initial understanding of an Indian text in translation by employing that general knowledge of Indian thought and culture which is available to any Western reader who is interested in taking advantage of it." (p. 255)

45. Wimmer, Franz Martin. 1998. "Introduction." *Topoi* no. 17:1-13.

"Intercultural philosophy is dealing with the question of whether it is possible and necessary to develop new ways of philosophizing because of the present condition of humankind. We are living in a global world, while we are still thinking in frameworks conditioned by regionally bound cultural traditions. The answer to our question therefore shall be: problems of philosophy can and ought to be made clear by way of interculturally orientated polylogues. What that means and why it is the answer to the question can only be sketched here.

Recently the subject of interculturality has been discussed in growing intensity within several academic disciplines. Thereby it is not primarily concerned with problems of multicultural societies; i.e. not questions concerning the necessary and sufficient conditions to be fulfilled in a society in which the members are rooted in different and sometimes even incompatible traditions. Further, the question is not about a theory of the foundations and the origin of cultures, nor about their mutual relationships. The question is about nothing but philosophy itself." (p. 1)

46. ———. 1998. "Intercultural Philosophy – a New Orientation in Philosophy." In *Philosophie et démocratie en Europe*, 165-182.

Sofia: Commission nationale de la Bulgarie pour l'UNESCO.

Summary: "Probably every human culture has developed typical ways of philosophising in the sense that there were given explanations of the world, of what man is, and of the right relationships between human beings.

Some of the cultures of the past have invented systems of writing and documentation, thereby establishing long lasting traditions of thought. Amidst a period of globalisation of many aspects of human life, the problem now arises, whether there will be one single form or method of philosophy in the future. If so: what then will be the role of the different traditions in shaping this future thinking? If not: must we give up the idea that philosophy ever can argue for universally acceptable truths or insights?

This paper deals with some aspects of these questions by discussing the role of (Euro-) centrism in the historiography of philosophy, and by analysing the impact of the different languages of philosophy on thinking itself."

47. ———. 2002. *Essays on Intercultural Philosophy*. Chennai: Satya Nilayam Publications.

"I am quite sure about the necessity of intercultural dialogues and polylogues in a global society. And I am also sure about the inevitability for a global philosophy with such dialogues. Perhaps, this will happen beside academic philosophy. If they turn out to be fruitful, that would not be the first case in the history of philosophy when something necessary and fruitful was not primarily dealt with by institutionalised discourse.

Wherever such dialogues are initiated, we can ask what probably will be the topics and the possible outcomes of intercultural philosophy in the future. We can only guess from the past and present. It can be expected that encounters of philosophers from different regions will intensify in the future, that there will be discussions of values and norms as well as on logical and epistemological questions, where the different traditions may criticise each other. Of course, there can be a broader understanding of the varieties of human reasoning

during the ages, together with increased knowledge about particularities and about possible universality. Hopefully, such encounters and discourses can contribute establishing peace and humanity. That can only be the case, if philosophical discourse is practised in the spirit of mutual interest and esteem, encountering one another on an equal footing in spite of differences." (p. 4)

48. ———. 2007. "Cultural Centrisms and Intercultural Polylogues in Philosophy." *International Review of Information Ethics* no. 7:1-8.

Abstract: "A "dilemma of culturality" for philosophy, tending to universality, is given with the fact that there is not one and the definitely adequate language or tradition of philosophy. There are many, each of them being cultural, not natural. The question is about the possibility of systematic philosophy with the presupposition that there are different cultural coinages in every philosophical thinking which can be influential on every level of reflection and argumentation. Intercultural philosophy is bound to reflect on this problem. In the following text, I propose to distinguish four different types of centrism being influential in intercultural encounters: expansive, integrative, separative, and tentative centrism. Then some examples are given for certain types of centrism in the fields of history and philosophy. Finally, I shall argue for dialogical or rather: polylogical interactions, in the field of philosophy."

49. ———. 2013. "Intercultural Philosophy - Problems and Perspectives." *Cirpit Review* no. 4:115-124.

Abstract: "This article aims to describe some basic questions and challenges of the project of an interculturally orientated philosophy. Firstly, the challenges of historiography of philosophy in a global perspective is discussed, which is not restricted to comparisons.

Further there are questions of a theory of culture, particularly with regard to the dilemmatic situation of philosophy between cultural conditionality and intended universality. Concepts of different types of centrism and polylogic interaction are

discussed in view of extra-philosophically conditioned inequalities of philosophical discourses on a global scale."

50. ———. 2015. "Symposium: How Are Histories of Non-Western Philosophies Relevant to Intercultural Philosophizing?" *Confluence: Online Journal of World Philosophies* no. 3:125-161.

Abstract: "The view that philosophy is a uniquely and essentially European endeavor rooted in ancient Greece became dominant in Europe only in the late eighteenth century, eclipsing several centuries during which Europeans had denied this proposition. Advocates of intercultural philosophy aim to integrate Western and non-Western philosophical histories and traditions in hopes of better addressing the crucial questions facing global humankind. A Native American standpoint charges this project with being exploitative, and disrespectful."

51. Wiredu, J. E. [Kwasi]. 1997. "How Not to Compare African Traditional Thought with Western Thought." *Transition: A Journal of the Arts, Culture and Society* no. 75/76:320-327.

Reprinted in K. Wiredu, *Philosophy and an African Culture*, Cambridge: Cambridge University Press 1980 and in Albert G. Mosley, *African Philosophy: Selected Readings*, Englewood Cliffs, NJ: Prentice Hall 1995, pp. 159-171.

"Many Westerners have been puzzled by the virtual ubiquity of gods and spirits in traditional African explanations of things. Robin Horton, the Western anthropologist, has suggested that this failure of understanding is partly attributable to the fact that many Western anthropologists "have been unfamiliar with the theoretical thinking of their own culture."(1) I would like to

suggest that a much more significant reason is that they have also been unfamiliar with the folk thought of their own culture. Western societies, too, have passed through a stage of addiction to spiritistic explanations of phenomena. What is more, significant residues of this tradition remain a basic part of the mental makeup of a large mass of the less sophisticated sections of Western populations. More importantly still, elements of the spiritistic outlook are, in fact, deeply embedded in the philosophical thought of many contemporary Westerners: philosophers and even scientists. Obviously, it is a matter of first-rate philosophical importance to distinguish between traditional, that is, prescientific, spiritistic thought and modern scientific thought by means of clearly articulated criteria. It is also of anthropological and psychological interest to try to understand how traditional modes of thought function in the total context of life in a traditional society. Since African societies are among the closest approximations in the modern world to societies in the pre-scientific stage of intellectual development, the interest anthropologists have shown in African thought is understandable." (p. 320)

- (1) Robin Horton, "African Traditional Thought and Western Science," reprinted in *Rationality*, edited by Bryan Wilson (Oxford, Basil Blackwell) from *Africa*, vol. 37, nos. 1-2 (1967).
52. Wiredu, Kwasi. 1998. "Can Philosophy Be Intercultural? An African Viewpoint." *Diogenes* no. 46:147-167.

"Actually, the question of whether philosophy can be intercultural must sound highly redundant to contemporary African academic philosophers, most obviously because their philosophical discourse is generally in the language of some foreign culture, either English, French, German, Spanish, or possibly Portuguese.

One direct implication of this is that the philosophies of our own cultures, as expounded in such languages must, in principle, be intelligible to the people who own the languages concerned." (p. 147)

(...)

"What do these considerations show? They show not only that philosophy can be, but also that it has sometimes been and sometimes still is, intercultural. This is obvious but sometimes denied by implication. Thus it is sometimes thought to be sufficient proof of error to comment that somebody is using Western intellectual canons to evaluate some African conception. No, that can never be sufficient. One must go further to show that there is something wrong with the specific canons in question or that they are inapplicable for specific reasons. This law of criticism would apply also to someone criticizing another for using some canons of reflection deriving from African thought in evaluating some doctrine in Western philosophy. The point now is that one can only go beyond such parochialism by a mode of reasoning intelligible to both the African and Western sides, in other words, by what I have called independent considerations." (p. 148)

53. Wong, David B. 2003. "Comparative Philosophy." In *Encyclopedia of Chinese Philosophy*, edited by Cua, Antonio S., 51-58. New York: Routledge.

"Doing comparative philosophy compels one to examine one's deepest assumptions about value, knowledge, the structure of reality, and the proper way to do philosophy itself. The comparison of Chinese and western traditions has yielded fresh and illuminating perspectives on the basic assumptions of each tradition. Comparative philosophy, however, presents special pitfalls as well as special benefits. The desire to draw an interesting and dramatic contrast between traditions often leads to overgeneralization and oversimplification of each tradition, making both appear more different than they are. On the other hand, the desire to make another tradition speak to the problems of one's own tradition often leads to a blurring of genuine differences." (p. 51)

54. Xiao-ming, Wu. 1998. "Philosophy, Philosophia, and Zhe-xue." *Philosophy East and West* no. 48:406-452.

"In other words, is it possible to treat philosophy not from philosophy's own point of view, but from another point of view, the point of view of the other? Indeed, one may want to

separate oneself from philosophy, in order to describe and decri its law from "the absolute exteriority of another place," a place that might as well bear the name "China." Is China not one of the names synonymous with exteriority and alterity in (Western) philosophical discourse? "But," Derrida says, "exteriority and alterity are concepts which by themselves have never surprised philosophical discourse. Philosophy by itself has always been concerned with them" (*M* , p. xiii). Thinking that one can treat philosophy from outside philosophy is to ignore the logic of the philosophical logos and to be reappropriated by it. Setting oneself up in direct opposition to philosophy, one plays into the hand of philosophy and loses the game." (p. 407)

"This book explores, and seeks to offer new ways of thinking about, the epistemological conditions of what I would like to call "comparative intercultural inquiry." It is a critical-comparative study of the epistemes, or presuppositional perspectives, of intercultural discourse. By focusing on how conceptual resources of cultures (such as underlying assumptions, implicit categories of thought and belief, and unconscious or semiconscious social imaginaries) may prefigure our perspectives and predetermine our habits of mind, the book argues for the *cognitive, conceptual, and epistemological* nature of comparative intercultural inquiry, alongside with and apart from its historical, social, political, and ethical dimensions. Cultural exchange or dialogue may sometimes seem to be merely an ideal or even an illusion, but it is real in the impact of encounters between cultures." (p. 1)

57. Xu, Keqian. 2010. "Chinese "Dao" and Western "Truth": A Comparative and Dynamic Perspective." *Asian Social Science* no. 6:42-49.

Abstract: In the Pre-Qin time, pursuing “Dao” was the main task in the scholarship of most of the ancient Chinese philosophers, while the Ancient Greek philosophers considered pursuing “Truth” as their ultimate goal. While the “Dao” in ancient Chinese texts and the “Truth” in ancient Greek philosophic literature do share or cross-cover certain connotations, there are subtle and important differences between the two comparable philosophic concepts. These differences have deep and profound impact on the later development of Chinese and Western philosophy and culture respectively. Interestingly, while the modern Chinese philosophy has gradually accepted and established the Western conception of “Truth” on its way towards modernization, the “post-modern” Western philosophy is just undergoing a process of deconstructing its traditional concept of “Truth”, thus, in a certain sense, going closer to the traditional Chinese “Dao”. From a comparative, relative and dynamic perspective, there could possibly be a fusion of horizon between the Chinese “Dao” and the Western “Truth”.

59. Yang, Guorong. 2005. "Knowing, Being, and Wisdom: A Comparative Study." *Dao: A Journal of Comparative Philosophy* 57-72.

"Knowing and being are often regarded as the respective subject-matters of epistemology and ontology." (p. 57)

(...)

"In this article, drawing on the rich resources from both Chinese and Western philosophical traditions, I attempt to make a general but concrete examination of the ontological dimension of knowing. I will first investigate the known with its metaphysical implication as the unity of things-in-themselves and things-for-us and their internal order that makes it possible for us to understand them. I then move to the knower to bring to light the significance of human existence in the process of knowing. I argue that, as the subject of knowing, the knower cannot be reduced to abstract reason; instead, the knower possesses various cognitive faculties; it is the union of cognition and evaluation and the union of reason, emotion, and will. Third, I turn to the ontological foundation of objective knowledge. In opposition to Kant and Locke, I argue that the relationship between the known and the knower is both intrinsic and extrinsic, which makes interaction between them possible and provides a concrete ontological foundation for the objectivity of knowledge. Finally, by disclosing the interaction of knowledge and wisdom, I analyze the fusion of the horizon of epistemology and that of ontology, which will manifest, on a deeper level, the unity of being and knowing." (P. 58)

60. Yang, Xiaomei. 2011. "Do Differences in Grammatical Form between Languages Explain Differences in Ontology between Different Philosophical Traditions?: A Critique of the Mass-Noun Hypothesis." *Dao: A Journal of Comparative Philosophy* no. 10:149-166.

Abstract: "It is an assumed view in Chinese philosophy that the grammatical differences between English or Indo-European languages and classical Chinese explain some of the differences between the Western and Chinese philosophical discourses. Although some philosophers have expressed doubts about the general link between classical Chinese philosophy and syntactic form of classical Chinese, I discuss a specific hypothesis, i.e., the mass-noun hypothesis, in this essay. The mass-noun hypothesis assumes that a linguistic distinction such as between the singular terms and the predicates is sufficient to justify or necessarily leads to a specific ontological distinction

such as the distinction between the particular and the universal. I argue that one cannot read off semantic properties simply from syntactic ones and hence the syntactic differences do not automatically translate into the semantic differences between languages, that the syntactic features of Chinese nouns do not have explanatory significance in explaining why the particular-universal problem does not arise in the classical period of Chinese philosophy, and that the part-whole ontology allegedly informed by the mass-noun-like semantics does not provide a natural or intuitive picture of the language-world relation."

61. Zene, Cosimo. 2015. "World Philosophies in Dialogue: a Shared Wisdom?" *Confluence: Online Journal of World Philosophies* no. 2:11-32.

Abstract: "Martin Heidegger's lecture in 1964 ›*The End of Philosophy and the Task of Thinking*‹ signalled a crisis and the acknowledgement of substantial changes within Western philosophy. Reflecting upon the concept of critical dialogue among World Philosophies (WP) can be seen as a corrective of this crisis and a novel advancement. I aim to substantiate this by referring to the work of three authors: i) Jean-Luc Marion's reflections on Heidegger will give us the chance to overcome a narrow understanding of ›philosophy‹ and the possibility of discovering »new horizons« for the discipline which are revealed as a »donation« towards »wisdom«; ii) Reyes Mate's considerations on ›*Thinking in Spanish*‹ will offer, aided by Walter Benjamin, a concrete example for renegotiating the space and the place for those »excluded from thinking«; and iii) Paul Ricoeur's meditation *On Translation* puts forward the ethical element of »linguistic hospitality« and transformation of the self when encountering alterity. While it is impossible to do justice to these authors in a short article, I maintain that their work deserves close attention because it depicts the struggle within Western philosophy on its way towards maturity: still entangled with so many challenges derived from its troubled history, this maturity appears only faintly, on the horizon, precisely, in the form of ›traces‹. On these grounds, I believe that Anglo-European philosophy can no longer

postpone opening up to an indispensable dialogue with other systems of thought wherein the presence of WP and the renewed effort of many philosophers committed to this endeavour is recognised."

62. Zhang, Ji. 2012. *One and Many: A Comparative Study of Plato's Philosophy and Daoism Represented by Ge Hong* . Honolulu: University of Hawai'i Press.

"Why does this book compare Ge Hong (AD 284–344?) with Plato (428–347 BC)? Reasons of personal intellectual history are involved. When I encountered Platonism in the field of Christian systematic theology, I admired its persistent search for inner coherence of truths and was deeply impressed by its transcendentalism and its unshakable influence on two streams of Western thought, philosophy and theology. Although I resonated with its idealism, over the years it became increasingly clear to me that this intellectual tradition imposed on me a demand that restricts the development of my own thought rooted in Chinese tradition. In contrast, Daoism has provided me with the free space that I was looking for in the formation of my intellectual identity. I first encountered Ge Hong when I attended a seminar at Harvard University in 1998. Since then I have felt that I was coming home to something that had unconsciously shaped my thought yet had not been properly named. Eagerness to come to terms with Daoism and Ge Hong's religious philosophy in particular has become the inner drive for the current study." (introduction, p. XIII, a note omitted)(1)

63. Zhang, Longxi. 2007. *Unexpected Affinities: Reading across Cultures* . Toronto: University of Toronto Press.

"Since this book contains the first set of Alexander Lectures to discuss a wide range of texts from the perspective of East-West studies, the opening chapter tries to lay the ground for such broadly comparative work through a critique of cultural incommensurability, that is, the idea that East and West are mutually exclusive and have nothing in common. By showing the inherent difficulty of the incommensurability argument and the ironic commonality of this argument in both East and West,

the first chapter makes the case that we need the broad cross-cultural perspective to understand and appreciate different literary and cultural traditions. The remaining three chapters build on that ground to show the validity and significance of cross-cultural understanding through a discussion of specific themes and textual details.

(...)

All these chapters are conceptually linked by images and ideas, and they all demonstrate the thematic patterns of textual encounters, the similarities in conception and expression, and the unexpected affinities between literatures and cultures East and West." (preface, pp. XIII-XIV)

64. ———. 2016. "Comparison and Correspondence: Revisiting an Old Idea for the Present Time." *Comparative Literature Studies* no. 53:766-785.

Abstract: "Analogical thinking that relates everything to everything else in a complicated system of correspondences was common in ancient Mesopotamia, ancient Greece, early modern Europe, as well as ancient China. Such premodern theories of knowledge about correspondences between the cosmos and the human world are discredited in modern scientific thinking, but by revisiting some of the old ideas, of which the value has not been sufficiently recognized in modern scholarship, we may find them helpful in rethinking the disciplinary compartmentalization of knowledge and the possibilities of dialogues between different disciplines in comparative studies."

65. ———. 2017. "East-West Comparative Studies: A Challenge and an Opportunity." *Know: A Journal on the Formation of Knowledge* no. 1:45-65.

"There is always so much to learn and to know. Today we have a much better condition for East-West comparative studies as the world has become more connected as a "global village" and also as there is much more interest in the non-Western world and its literatures and cultures among Western scholars and students. At the same time, our world today is also suffering

from much conflict and regional wars, humanitarian crises, massive numbers of displaced people as exiles and migrants, the rise of religious fundamentalism, the threat of terrorism, and many other disasters stemming from the lack of tolerance and understanding, especially understanding across cultures, histories, and traditions. In a real sense, East-West comparative studies is not just an academic pursuit of knowledge but has particular relevance to our world and the way we live our lives.

It is my strong belief that when the world pays more attention to the value of cross-cultural understanding beyond the fundamental differences of East and West, we will have a world that is not just better in understanding, but better in every sense." (pp. 61-62)

66. Zhang, Xianglong. 2010. "Comparison Paradox, Comparative Situation and Inter-Paradigmaticity: A Methodological Reflection on Cross-Cultural Philosophical Comparison." *Comparative Philosophy* no. 1:90-105.

Abstract: "It is commonly believed that philosophical comparison depends on having some common measure or standard between and above the compared parts. The paper is to show that the foregoing common belief is incorrect and therewith to inquire into the possibility of cross-cultural philosophical comparison. First, the "comparison paradox" will be expounded.

It is a theoretical difficulty for the philosophical tendency represented by Plato's theory of Ideas to justify comparative activities. Further, the connection of the comparative paradox with the obstacles met by cross-cultural philosophical comparisons will be demonstrated. It will be shown that to attribute the difficulty of cross-cultural comparisons to incommensurability of traditions is irrelevant and misleading. It is to be argued that the original possibility of comparison depends on the "comparative situation", i.e., the mechanism of meaning-production that functions in a non-universalistic and anonymous way. A philosophical paradigm does facilitate the attendance of such a situation, but it is also possible for the

situation to emerge between paradigms in a gamesome way. Accordingly, the genuine comparison at issue will not originate primarily and merely on the level of concepts and propositions, but can only be achieved through inter-paradigmatic conditions, where we have the sharp awareness of a paradigm's boundary from which we can attempt to achieve situational communication with another paradigm. In light of this, the perspective of a philosophical comparison differs not only from the traditional or universalistic one, but also from Gadamer's hermeneutics, such as the doctrine of "fusion of horizons". The new perspective finds an illustration in Heidegger's relations with Daoism."

67. Zhu, Rui. 2018. "Comparative Philosophy: In Response to Rorty and MacIntyre." *Philosophy East and West* no. 68:264-266.

"In my view, comparative philosophy, done either through the comparison of life experiences or through the comparison of comparisons, in order to be genuinely philosophical, must cultivate irony, especially an insider's irony. The point of comparison lies neither in the search for mutual understanding or a common ground, which may or may not be found, nor in the final adjudication of winners and losers, which, though happening all the time, shall never constitute a proper philosophical concern. Instead, comparative philosophy, conducted with a uniquely alert intercultural consciousness, not aimed at striking a dialogue or taking still shots of various comparable historical answers to satisfy curiosity, may represent an object-centered self-reflection.

(...)

In other words, comparative philosophy, as philosophy, is perhaps best conducted by a specialist of a foreign culture who not infrequently casts a backward glance at one's own culture, as opposed to by a specialist of one's own culture looking out into an exotic foreign culture for similarities and differences that may be used to confirm some preferred transcultural wisdoms or character types. In brief, what comparative philosophy ought to do to philosophy may resemble something

like what Michael Taussig's symbolic anthropology has done to anthropology — it teases and criticizes one's own culture, aiming to unself one's own deep-entrenched illusions, to expose the limit of one's consciousness, as opposed to strengthening and expanding it at the expense of the rivals'." (pp. 265-266)

68. Zhu, Rui, and Beckford, Corey. 2018. "Reply to Steven Burik." *Philosophy East and West* no. 68:271-276.

"Important objections are raised by Steven Burik in his comment on Rui Zhu's response to Rorty and MacIntyre. We will try to address them without proceeding in an eristic, point-by-point manner. In general, it seems that at least some of Burik's objections are based on his misreading of Zhu's response. Burik is not to blame, however.

Zhu's response was short and many of the points made there were not sufficiently explained or developed. By way of his generous commentary Burik has provided us a much needed opportunity to offer some remedies.

A key distinction in Zhu's response was its reference to comparative philosophy as a form of intercultural studies and as philosophy. The former compares philosophies and the latter does philosophy. It goes without saying that the two are difficult to separate. Nevertheless, the distinction is real and can be felt by any comparative philosopher through the tension between scholarly expositions and creative philosophizing. In this reply to Burik we will recalibrate the distinction in terms of that between understanding and thinking, even though the profile drawn here might be a bit too sharp for our comfort. But such is the risk we have to bear for the sake of heuristics." (p. 271)

69. Zong, Desheng. 2010. "A New Framework for Comparative Study of Philosophy." *Dao: A Journal of Comparative Philosophy* no. 9:445-459.

Abstract: "The aim of this essay is to outline a conceptual framework for a type of philosophy (or approach to philosophy) to be herein called "non-sentential philosophy."

Although I will primarily concern myself with the conceptual coherence of the framework in this essay, illustrations will be provided to show that the notion has rich implications for comparative studies. In particular, I believe this theoretical framework will be of interest to those looking for a way to capture the differences between certain non-Western philosophical traditions—such as Chinese philosophy—and Western philosophy, a tradition in which the sentential approach is dominant."

African Philosophy: A Survey of Contemporary Studies

Introduction: African and Western philosophy

"In the past three decades, philosophers -- especially African-born who are trained in Western philosophy -- have engaged in a metaphilosophical debate over whether there exists an African philosophy and, if so, what its nature is. This debate regarding the nature and existence of African philosophy has culminated in two camps, which I shall call the universalists and the particularists. Wiredu characterizes the latter as the anti-universalists or the nationalists.(1) The former camp, represented by the works of Bodunrin, Wiredu, Appiah, and Hountondji, among others, argues that the concept of 'philosophy', in terms of the methodology and subject matter of the discipline, should be the same in both the Western and African senses.(2) The latter camp, as seen in the works of Ayoade, Gyekye, Sodipo, and Onwuanibe, among others, argues that different cultures have different ways of explaining reality; hence Africans must have a philosophy that is essentially different from other philosophies. Perhaps it is along this line of trying to articulate the essential nature of 'African philosophy', Safro Kwame argues, that the metaphilosophical approach of the Western analytic tradition is not African, and as such, it is not and should not be a legitimate approach in African philosophy.(3) Some of the people in this camp have thus questioned the use of the term African philosophy, and three of these have been criticized by the universalists as unphilosophical. The universalists argue that, compared to their paradigm view of the nature of philosophy -- that is, the contemporary analytic tradition of Western philosophy -- African philosophy does not have the requisite

features of a tradition of writing and a rigorous and critical analytical approach to debates over universal conceptual and abstract issues that are engaged in by individuals. However, it is my view that there are both universalist and particularist elements in African philosophy. In other words, although there are culturally determined philosophical ways of constructing meaning, these ways are not incommensurable. As such, we can use the 'known' universal (?) philosophical concepts and methods of one 'culture' to analyze and make understandable the philosophical beliefs and worldviews of another culture that may 'appear' arcane -and this, in my view, is what many of the particularists have tried to do with African worldviews. This does not imply, as the universalists have claimed, that the beliefs and worldviews of one culture (Western) are comparatively superior to another philosophically, to the extent of denigrating one (African) as unphilosophical or denying its existence as a philosophical system."

Selected Bibliography on African Philosophy

Bibliography

1. Abimbola, Wande. 1975. "The Yoruba Concept of Human Personality." In *La Notion de Personne en Afrique Noire*, 73-89. Paris: Editions L'Harmattan.

"After a brief introduction to Yoruba cosmology, the author analyzes representations associated with the main components of the human person. *Ara* (the body) refers to the set of physical elements. The "spiritual" components the most important are: *èmí*, (the soul), *orí* (the inner head) and *esé* (the leg). *Emí*, imperishable element, is created by *Olòdùmarè* (the Supreme Being). That is, in every individual, a parcel of "divine breath". *Orí* (the inner head) is associated with personal destiny. Every human being chooses it freely before coming into the world. *Esé* (the leg) represents the activity and the power. This is the element that allows you to update the potentialities received with the *orí*. The analysis is based on poetic texts extracted of the oral literature relating to *Ifa* (Yoruba divinatory system)."

L'Ontologia in Italia. Una Guida per gli Studenti di Filosofia

Introduzione

(Pagina in costruzione - sarà aggiornata nei prossimi mesi)

Negli ultimi anni anche in Italia si è manifestato un interesse crescente per l'ontologia, ma non esiste una pagina web che presenti agli studenti italiani le pubblicazioni disponibili nella nostra lingua ed i Centri di studio dedicati all'argomento; il mio obiettivo è di contribuire a colmare, almeno in parte, questa lacuna; chi desidera approfondire l'argomento con riferimenti agli studi in altre lingue troverà nelle altre pagine del sito informazioni sufficienti, che non saranno ripetute qui.

Negli ultimi anni in Italia sono stati organizzati alcuni importanti convegni sulla storia dell'ontologia:

- a Bolzano la Mitteleuropa Foundation diretta da Liliana Albertazzi e Roberto Poli ha organizzato diversi convegni dal 2002 ad oggi.

- a Torino a cura del Laboratorio di Ontologia diretto da Maurizio Ferraris nel dicembre 2002 (atti pubblicati nella *Rivista di Estetica* n. 1 del 2003).

- a Milano nel maggio 2003 dall'Astufilo - Associazione Studenti di Filosofia dell'Università Statale (atti pubblicati nel volume *La Storia dell'ontologia*, edito da E. Storace, 2005)

- all'Università di Bari nel maggio 2008 si è tenuto l'importante convegno internazionale *Nascita e trasformazioni dell'ontologia: secoli XVI e XX* i cui atti sono stati pubblicati sulla rivista *Quaestio. Annuario di Storia della Metafisica* nel numero 9 del 2010.

Questi ed altri avvenimenti e la pubblicazione di lavori sia di carattere introduttivo che di livello più avanzato, mi sembrano una ragione sufficiente per tentare un panorama delle pubblicazioni disponibili in lingua italiana; considerato il carattere informativo di questa pagina, come del resto di tutto il sito, saranno prese in considerazione opere di diverse tendenze (filosofia analitica, fenomenologia, ecc.): il criterio prevalente per l'inserimento nella pagina sarà la qualità dei lavori e per i testi più importanti saranno riportati gli indici e dei brevi estratti.

Particolare attenzione sarà riservata ai lavori disponibili in italiano sui maggiori ontologi dell'Ottocento e del Novecento, a cui sono dedicate alcune pagine monografiche.

Critiche, suggerimenti e segnalazioni di eventuali errori sono particolarmente gradite; il sito è aperto alla collaborazione di tutte le persone interessate all'argomento che abbiano un contributo originale da dare.

Libri recenti sull'ontologia: testi introduttivi

Indice: Introduzione 3; 1. Dalla metafisica alla ontologia 9; 2. Dalla ontologia all'epistemologia 21; 3. Apriori concettuale 31; 4. Apriori materiale 41; 5. Prescrivere e descrivere; 6. Il ritorno della ontologia 55; Riferimenti bibliografici 61; ANTOLOGIA. 67-159; Glossario 161-166.

"È nel 1613 (*) che si trovano le prime attestazioni del termine 'ontologia', nelle opere di due autori di enciclopedie filosofiche che operano indipendentemente l'uno dall'altro: Rudolph Göckel (o Rodolphus Goclenius, nella latinizzazione da lui stesso proposta; Corbach 1547-Marburgo 1628, *Antologia*, 5), che ne tratta di sfuggita nel *Lessico filosofico* e Jacob Lorhard - su cui non ho trovato ragguagli -, nel *Teatro filosofico*, e che credo codificano - in qualità di lessicografi - un uso ormai invalso. Non è secondario che questo battesimo abbia luogo nell'epoca in cui si scatena la rivoluzione scientifica: i metafisici si concepivano come dei commentatori di Aristotele, gli ontologi ritengono - a torto o a ragione - di rompere con la tradizione aristotelica e scolastica, alla luce dello sforzo di risistemazione metodica delle conoscenze che caratterizza un periodo in cui assistiamo o alla radicale riforma di saperi tradizionali, come la logica, la fisica e la matematica, o all'invenzione di saperi nuovi, come la semiotica, l'estetica e, per l'appunto, l'ontologia." p. 14-15

"Le possibilità applicative che si aprono per l'ontologia riflettono le due anime, descrittiva e prescrittiva, che hanno attraversato la nostra storia, specie nel suo tratto terminale. Nell'approccio prescrittivo, l'opzione di fondo è quella per cui l'ontologia costituisce un elemento di un processo unificato sotto il profilo epistemologico. L'ontologia, qui, sarebbe una scienza assimilabile alla chimica o alla fisica, sottoposta a revisioni e a progressi determinati da scoperte empiriche. Se questo è il suo assetto metodologico, quanto alle finalità l'obiettivo è la costituzione di un linguaggio ontologico universale, che valga per ogni livello di realtà, dal fisico al

sociale. Nell'approccio descrittivo, invece, l'ontologia applicata si configura come una riattivazione delle problematiche delle scienze dello spirito ma con un più marcato impianto oggettivistico.

La prima opzione è prevalente nei problemi su cui portano l'attenzione, nei brani antologizzati, Nicola Guarino (Messina 1954, Antologia, 27) e Barry Smith (Antologia, 28). Qui il problema è *classificare*, e l'idea di fondo è dimostrare l'applicabilità dei metodi e delle teorie ontologiche all'informatica, movendo dall'ipotesi di lavoro che l'ontologia tradizionale abbia tutti gli strumenti per risolvere una delle difficoltà principali con cui l'informatica ha dovuto confrontarsi in questi anni, cioè la ricerca di una lingua franca che semplifichi la condivisione delle conoscenze e la loro comunicabilità, ossia che permetta l'integrazione sistematica dei database. Tuttavia, anche una buona classificazione e chiarificazione di oggetti ed eventi sociali costituisce un indispensabile campo di indagine, più vicino agli interessi di una metafisica descrittiva e di una fisica ingenua. Qui il problema è *esplicitare* l'ontologia soggiacente a entità e relazioni invisibili e immateriali (diritti, pretese, obblighi, *status*) che risultano tuttavia, come scriveva un allievo di Husserl, Adolf Reinach (Mainz 1883-Dixmuiden, Belgio 1917), solide 'come alberi e case', tali dunque da limitare e indirizzare il nostro rapporto con il mondo, che non apparirà più - come volevano i teorici delle scienze dello spirito - una pura creazione storica, pur rivelando una complessità bene attestata nel brano di John Searle (Denver 1932, Antologia, 29) con cui si chiude il nostro compendio." pp. 58-59.

Nota di Raul Corazzon: in realtà il termine "ontologia" compare per la prima volta nel 1606, nel sottotitolo di un libro di Jacob Lorhard (fl. 1597) Rettore dell'Università di S. Gallo in Svizzera, "Ogdoas Scholastica", ignorato finora dagli studiosi e da me scoperto il 16 maggio 2003.

10. Gnoli, Claudio, and Scognamiglio, Carlo. 2008. *Ontologie E Organizzazione Della Conoscenza*. Lecce: Pensa MultiMedia.

"Questo libro si propone come introduzione critica all'ontologia per la *knowledge organization*, in primo luogo per rispondere a un'esigenza editoriale, non essendo attualmente presenti nel panorama librario strumenti analoghi in lingua italiana. Secondariamente, per lo stile prospettico che lo caratterizza, il testo vuole accompagnare il proprio profilo introduttivo con una proposta di lavoro interdisciplinare e metterne in evidenza le potenzialità .

A partire da un'indagine sopra il rapporto tra la nozione filosofica di ontologia e le sue varianti "applicative" in ambito informatico e di organizzazione delle conoscenze, il volume presenta sistematicamente i modelli teorici e applicativi dell'indicizzazione semantica, illustrandone i limiti e le parzialità . Quale prospettiva di cambiamento e di riorganizzazione del paradigma scientifico, i due autori insistono sull'importanza dell'approccio ontologico nella risoluzione dei problemi di interoperabilità tra basi di dati e sistemi informativi. Il meta- modello dei livelli di realtà, rielaborato a partire dall'ontologia di Nicolai Hartmann e mediato da teorie più recenti, può costituire l'architettura di un sistema di organizzazione della conoscenza capace di presentare l'interconnessione di tutti gli aspetti della realtà e al contempo la loro irriducibile diversità ."

"In quanto segue cercheremo di illustrare un po' meglio le ramificazioni di questo genere di considerazioni, intorno alle quali verte gran parte della discussione filosofica attualmente dedicata all'ontologia. In particolare, nella prima parte (capitoli 1 e 2) ci concentreremo su due ordini di questioni, e cioè (a) se l'ontologia si riduca davvero alla domanda «Che cosa esiste?», e (b) quali siano gli strumenti di cui ci si può servire per affrontare questa domanda (ed eventualmente altre che rientrano nel campo d'indagine dell'ontologia). Tanto (a) quanto (b) sono principalmente questioni di carattere metafilosofico, e fanno tutt'uno con il problema di demarcare il campo d'interesse dell'ontologia rispetto a quello della metafisica in senso lato. Nella seconda parte del testo (capitolo 3) cercheremo invece di fornire un quadro dei quesiti concreti di cui si occupano gli ontologi nel momento in cui procedono con l'esercizio effettivo della loro professione, quali che siano la visione di fondo e le metodologie a cui fanno riferimento. Sarà un quadro molto approssimativo, ma consentirà di identificare almeno alcune delle linee di ricerca attualmente più seguite. Del resto questo sarà anche il nostro limite: tanto nell'ultima parte quanto nei capitoli che la precedono ci limiteremo appunto al panorama attuale. La storia dell'ontologia meriterebbe un trattamento a parte e qui non verrà considerata se non in maniera tangenziale." pp. 4-5.

Testi: Analogia, logica formale e paradossi 267; Sergio Parenti: L'analogia dei nomi: dai paradossi al linguaggio teologico 333; Bibliografia generale 365; Notizia sugli autori 389-392.

Dalla Presentazione: "Che l'autoreferenzialità sia una caratteristica discriminante della modernità, è oggi una affermazione quasi scontata. Ma chi la sostiene dovrebbe essere in grado di rispondere ad almeno due questioni preliminari: a che cosa si sostituisce, da che cosa è preceduta l'autoreferenzialità? E in secondo luogo: è davvero certo che l'autoreferenzialità sia una "scoperta" della modernità? Alla prima questione si può rispondere in modo inequivocabile: il mutamento di paradigma che sancisce l'inizio dell'epoca moderna concerne il passaggio dal primato della analogia al primato della autoreferenza. L'analogia rappresenta l'orizzonte speculativo all'interno del quale si muove per lo più la filosofia classica e medievale. In essa trova posto una concezione stratificata del reale il cui fondamento metafisico risiede nella dottrina della partecipazione. Solo quando questa concezione stratificata (dal particolare all'universale, dalla specie al genere e così via) viene messa in discussione, si può cominciare a parlare di modernità. D'altra parte è altrettanto legittimo dubitare della ricostruzione storica che attribuisce alla modernità il primato dell'autoreferenzialità. Nelle argomentazioni logiche e gnoseologiche sia classiche che medievali l'operazione autoreferenziale è già conosciuta e affrontata in modo rigoroso, sia nei suoi risvolti positivi (l'autocoscienza ad esempio), sia nei suoi risvolti negativi (i paradossi). Resta allora da capire in che cosa consista davvero la cesura che separa le strutture teoriche ed epistemologiche moderne da quelle premoderne e in quale misura la modernità sia del tutto scevra da problematiche di tipo analogico.

Colmando una lacuna notevole della cultura filosofica e scientifica contemporanea, questo libro si propone come primo passo verso una comprensione dei complessi e articolati rapporti che sussistono fra analogia e autoreferenza. Gli studi qui raccolti prediligono un livello di argomentazione teoretico piuttosto che storico-ricostruttivo, come mostrano del resto le nuove formalizzazioni della analogia presentate nei

saggi di Basti, Testi e Strumia, le quali si affiancano alla "classica" formalizzazione di Bochenski, qui per la prima volta tradotta in italiano. I contributi di Cevolini, Parenti e

D'Agostini mirano d'altra parte a chiarire il nesso che lega fra loro autoreferenzialità, analogia e paradossalità, discutendo di volta in volta sia la possibilità di paradossi non autoreferenziali (D'Agostini), sia la possibilità di concepire l'analogia fisica come presupposto dell'autoreferenzialità moderna (Cevolini), sia infine la possibilità di usare l'analogia come strumento di soluzione dei paradossi linguistici (Parenti)."

Indice: Prefazione di Toni Negri 5; Introduzione. Gilles Deleuze. L'anomalia materialista. 7; I. *Dýnamis tôn pánton* 13; II. Ontologia positiva: *Sein ist Zeit* 33; III. Materia-tempo 63; IV. Della potenza d'essere. "Gioia eterna del divenire" 87; Conclusioni. Del pensare e del creare. In nome di un "popolo a venire" 123-127.

"Un'«ontologia materialista» è il titolo di questo lavoro su Deleuze di Francesco Lesce. Un discorso singolarmente maturo

che riesce infatti a percorrere, ad un tempo, l'itinerario filosofico di Gilles Deleuze e a costituirlo in una articolata ontologia materialista per il presente. Il confronto che Gilles Deleuze sviluppa con le filosofie del '900 è qui ricostruito in maniera piena. Con qualche passaggio che senz'altro arricchisce le letture che di Deleuze si sono fatte.

C'è in Deleuze una capacità di definizione e scavo dell'immanenza assoluta che strappa la fenomenologia del moderno alla caratterizzazione che ne avevano dato Heidegger e la fenomenologia. Successivamente, l'analisi della temporalità si confronta qui con lo «slancio vitale» di Bergson, anche in questo caso strappando il contesto ontologico ad ogni precostituzione ed ad ogni teleologia dell'essere. Il bergsonismo costituisce uno degli strati dell'indagine deleuziana, in nessun caso la soluzione del problema ontologico. In positivo: prima Hume, poi Spinoza, permettono a Deleuze la definizione della potenza d'essere; quanto la demistificazione empirista degli universali e dei processi di causazione sia importante e come questa si impianti sui presupposti dell'immanentismo moderno, Lesce comincia a mostrarlo con estrema chiarezza. Del legame Spinoza-Deleuze sappiamo ormai tutto, ma del processo costitutivo humiano, da Deleuze così profondamente letto, in realtà nella letteratura deleuziana si dice poco. Si preferiscono riferimenti generici a qualche corrente pragmatista o letteraria americana piuttosto che l'insistenza sulla critica humiana (Hume come alternativa di Kant). E a partire da questo inquadramento generale che - secondo Lesce - la dimensione della *praxis* diventa fondamentale in Deleuze e rappresenta la soluzione del suo pensiero. Una soluzione positiva, una politica che si fa immediatamente ontologia, che assume la critica e la dissoluzione del positivo come apertura all'avvenire, come avventura etica." p. 5.

19. Poli, Roberto. 1992. *Ontologia Formale*. Genova: Marietti.

"L'autore che con più attenzione ha cercato di delimitare il concetto di ontologia formale è stato Husserl. Dalla prima formulazione delle Ricerche logiche, alle analisi presenti nella successiva e variamente stratificata produzione teoretica husserliana, il concetto di ontologia formale, pur presentando raffinamenti e articolazioni, rimane sostanzialmente immutato nei suoi tratti fondamentali. Il fatto è degno di nota perché indica che la retrocessione genetica al fondamento costitutivo dell'esperienza esula dall'ambito pertinente alle questioni di ontologia formale. Le motivazioni che supportano questa osservazione rinviano al fatto che l'ontologia formale tratta l'oggetto come qualcosa che è già stato costituito e che in un qualche modo è dato, mentre non si cura del processo di costituzione dell'oggetto né dei suoi modi di dati soggettiva. Questo solo fatto è sufficiente a spiegare la ragione per cui si è finiti con il parlare di ontologia formale in due distinti sensi. Una accezione perfettamente congruente al main stream della filosofia contemporanea è quella che possiamo definire analitica: l'ontologia formale è quella sezione dell'ontologia che si ricomprende dal punto di vista della logica formale. Il principale esponente di tale posizione è certamente Nino Cocchiarella. A partire dal riconoscimento che ogni particolare scienza riguarda il suo specifico «modo di essere», egli afferma che «la metafisica..., o ciò che possiamo chiamare ontologia formale, riguarda lo studio e lo sviluppo di differenti formalizzazioni che concernono il sistematico coordinamento di tutti i 'modi' o categorie dell'essere sotto le più generali leggi. Usualmente... ogni 'modo di essere' all'interno di una particolare ontologia formale è rappresentato da un tipo di variabile vincolabile, il cui ruolo sintattico dovrebbe riflettere... il ruolo ontologico di tale "modo di essere"». In tale accezione l'ontologia formale studia in particolare le caratteristiche logiche della predicazione e delle varie teorie degli universali. L'altra accezione, che chiameremo fenomenologica, trova come detto i propri riferimenti primari nei lavori di Husserl, in particolare nelle Ricerche logiche, nelle Idee, in Logica formale e trascendentale e in Esperienza e giudizio. In prima istanza, di

essa possiamo dire che è interessata in particolare ai problemi delle parti e dell'intero e della dipendenza. Nonostante le loro differenze, le due forme di ontologia formale presentano, per molti aspetti, rilevanti sovrapposizioni. In ogni caso a tutt'oggi manca sia uno studio sistematico delle categorie e degli strati che compongono la ontologia formale sia una analisi sistematica dei temi affrontabili da una ontologia formale. Una delle ragioni che può contribuire a spiegare tale mancanza risiede nel fatto che la distinzione fra le due accezioni di ontologia formale, per quanto apparentemente semplice e non problematica, nasconde in effetti sia le ragioni della loro sostanziale unità sia i reali motivi della loro effettiva differenza teoretica." pp. 51-52 (note omesse).

Privacy policy

This Application does not collect Personal Data from its Users.

[Cloudflare](#) for best performance see [Cloudflare Support](#) for more details.

Additional information about Data collection and processing Legal action

The User's Personal Data may be used for legal purposes by the Data Controller, in Court or in the stages leading to possible legal action arising from improper use of this Application or the related services. The User declares to be aware that the Data Controller may be required to reveal personal data upon request of public authorities.

Additional information about User's Personal Data

In addition to the information contained in this privacy policy, this Application may provide the User with additional and contextual information concerning particular services or the collection and processing of Personal Data upon request.

System Logs and Maintenance

For operation and maintenance purposes, this Application and any third party services may collect files that record interaction with this Application (System Logs) or use for this purpose other Personal Data (such as IP Address).

Information not contained in this policy

More details concerning the collection or processing of Personal Data may be requested from the Data Controller at any time. Please see the contact information at the beginning of this document.

The rights of Users

Users have the right, at any time, to know whether their Personal Data has been stored and can consult the Data Controller to learn about their contents and origin, to verify their accuracy or to ask for them to be supplemented, cancelled, updated or corrected, or for their transformation into anonymous format or to block any data held in violation of the law, as well as to oppose their treatment for any and all legitimate reasons. Requests should be sent to the Data Controller at the contact information set out above.

Changes to this privacy policy

The Data Controller reserves the right to make changes to this privacy policy at any time by giving notice to its Users on this page. It is strongly recommended to check this page often, referring to the date of the last modification listed at the bottom. If a User objects to any of the changes to the Policy, the User must cease using this Application and can request that the Data Controller removes the Personal Data. Unless stated otherwise, the then-current privacy policy applies to all Personal Data the Data Controller has about Users.

Information about this privacy policy

The Data Controller is responsible for this privacy policy.

Definitions and legal references

Personal Data (or Data)

Any information regarding a natural person, a legal person, an institution or an association, which is, or can be, identified, even indirectly, by reference to any other information, including a personal identification number.

Usage Data

Information collected automatically from this Application (or third party services employed in this Application), which can include: the IP addresses or domain names of the computers utilized by the Users who use this Application, the URI addresses (Uniform Resource Identifier), the time of the request, the method utilized to submit the request to the server, the size of the file received in response, the numerical code indicating the status of the server's answer

(successful outcome, error, etc.), the country of origin, the features of the browser and the operating system utilized by the User, the various time details per visit (e.g., the time spent on each page within the Application) and the details about the path followed within the Application with special reference to the sequence of pages visited, and other parameters about the device operating system and/or the User's IT environment.

User

The individual using this Application, which must coincide with or be authorized by the Data Subject, to whom the Personal Data refer.

Data Subject

The legal or natural person to whom the Personal Data refers.

Data Processor (or Data Supervisor)

The natural person, legal person, public administration or any other body, association or organization authorized by the Data Controller to process the Personal Data in compliance with this privacy policy. Data Controller (or Owner) the natural person, legal person, public administration or any other body, association or organization with the right, also jointly with another Data Controller, to make decisions regarding the purposes, and the methods of processing of Personal Data and the means used, including the security measures concerning the operation and use of this Application. The Data Controller, unless otherwise specified, is the Owner of this Application.

This Application

The hardware or software tool by which the Personal Data of the User is collected.

Cookie

Small piece of data stored in the User's device.

Summary

These are the cookies used by this website June 7, 2015 (date in brackets to expire):

_cfduid CloudFlare cookie (6/6/2016)

About Cloudflare:

“The __cfduid cookie is used to override any security restrictions based on the IP address the visitor is coming from. For example, if the visitor is in a coffee shop where there are a bunch of infected machines, but the visitor's machine is known trusted, then the cookie can override the security setting. It does not correspond to any userid in the web application, nor does the cookie store any personally identifiable information.” Note: This cookie is strictly necessary for site security operations and can't be turned off.“ From [Cloudflare Support](#).

Third-party domains:

None.

Informativa sulla Privacy

Norme sulla Privacy e Siti Web

Nel maggio 2011 il Parlamento Europeo ha emanato una nuova legge sulla privacy, la EU Cookie Law (legge europea sui cookies - [testo in formato PDF](#)) che obbliga i siti internet a richiedere il permesso degli utenti ad utilizzare i cookie relativi ai servizi offerti. La parte più rilevante per l'utilizzo dei cookie si trova nell' art. 5, p. 20 di 26:

«3. Gli Stati membri assicurano che l'archiviazione di informazioni oppure l'accesso a informazioni già archiviate nell'apparecchiatura terminale di un abbonato o di un utente sia consentito unicamente a condizione che l'abbonato o l'utente in questione abbia espresso preliminarmente il proprio consenso, dopo essere stato informato in modo chiaro e completo, a norma della direttiva 95/46/CE, tra l'altro sugli scopi del trattamento. Ciò non vieta l'eventuale archiviazione tecnica o l'accesso al solo fine di effettuare la trasmissione di una comunicazione su una rete di comunicazione elettronica, o nella misura strettamente necessaria al fornitore di un servizio della società dell'informazione esplicitamente richiesto dall'abbonato o dall'utente a erogare tale servizio.»

Questa normativa è entrata in vigore in Italia il 3 giugno 2015.

Informativa sui Cookie

Che cos'è un [cookie e a cosa serve?](#) Un cookie è un file di dimensioni ridotte che un sito invia al browser e salva sul computer dell'utente che visita un sito Internet. I cookie vengono utilizzati per far funzionare il sito o per migliorarne le prestazioni, ma anche per fornire informazioni ai proprietari del sito.

Con la nota "[Individuazione delle modalità semplificate per l'informativa e l'acquisizione del consenso per l'uso dei cookie](#)" dell'8

maggio 2014 [doc web n. 3118884] il Garante della Privacy ha stabilito quanto segue:

(Le parti più rilevanti per l'uso di questo sito sono evidenziate in grassetto).

"Al riguardo, e ai fini del presente provvedimento, si individuano pertanto due macro-categorie: cookie "tecnici" e cookie "di profilazione".

a. Cookie tecnici.

I cookie tecnici sono quelli utilizzati al solo fine di "effettuare la trasmissione di una comunicazione su una rete di comunicazione elettronica, o nella misura strettamente necessaria al fornitore di un servizio della società dell'informazione esplicitamente richiesto dall'abbonato o dall'utente a erogare tale servizio" (cfr. art. 122, comma 1, del Codice).

Essi non vengono utilizzati per scopi ulteriori e sono normalmente installati direttamente dal titolare o gestore del sito web. Possono essere suddivisi in cookie di navigazione o di sessione, che garantiscono la normale navigazione e fruizione del sito web (permettendo, ad esempio, di realizzare un acquisto o autenticarsi per accedere ad aree riservate); cookie analytics, assimilati ai cookie tecnici laddove utilizzati direttamente dal gestore del sito per raccogliere informazioni, in forma aggregata, sul numero degli utenti e su come questi visitano il sito stesso; cookie di funzionalità, che permettono all'utente la navigazione in funzione di una serie di criteri selezionati (ad esempio, la lingua, i prodotti selezionati per l'acquisto) al fine di migliorare il servizio reso allo stesso.

Per l'installazione di tali cookie non è richiesto il preventivo consenso degli utenti, mentre resta fermo l'obbligo di dare l'informativa ai sensi dell'art. 13 del Codice, che il gestore del sito, qualora utilizzi soltanto tali dispositivi, potrà fornire con le modalità che ritiene più idonee.

b. Cookie di profilazione.

I cookie di profilazione sono volti a creare profili relativi all'utente e vengono utilizzati al fine di inviare messaggi pubblicitari in linea con le preferenze manifestate dallo stesso nell'ambito della navigazione

in rete. In ragione della particolare invasività che tali dispositivi possono avere nell'ambito della sfera privata degli utenti, la normativa europea e Italiana prevede che l'utente debba essere adeguatamente informato sull'uso degli stessi ed esprimere così il proprio valido consenso.

Ad essi si riferisce l'art. 122 del Codice laddove prevede che "l'archiviazione delle informazioni nell'apparecchio terminale di un contraente o di un utente o l'accesso a informazioni già archiviate sono consentiti unicamente a condizione che il contraente o l'utente abbia espresso il proprio consenso dopo essere stato informato con le modalità semplificate di cui all'articolo 13, comma 3" (art. 122, comma 1, del Codice)."

Con la nota del 5 giugno 2015 [Chiarimenti in merito all'attuazione della normativa in materia di cookie](#) Il Garante della Privacy ha precisato quanto segue:

- I siti che non utilizzano cookie non sono soggetti ad alcun obbligo.
- Per l'utilizzo di cookie tecnici è richiesta la sola informativa (ad esempio nella privacy policy del sito). Non è necessario realizzare specifici banner.
- I cookie analitici sono assimilati a quelli tecnici solo quando realizzati e utilizzati direttamente dal sito prima parte per migliorarne la fruibilità.
- Se i cookie analitici sono messi a disposizione da terze parti i titolari non sono soggetti ad obblighi (notificazione al Garante in primis) qualora:

A) siano adottati strumenti che riducono il potere identificativo dei cookie (ad esempio tramite il mascheramento di porzioni significative dell'IP);

B) la terza parte si impegna a non incrociare le informazioni contenute nei cookie con altre di cui già dispone.

- Se sul sito ci sono link a siti terze parti (es. banner pubblicitari; collegamenti a social network) che non richiedono l'installazione di cookie di profilazione non c'è bisogno di informativa e consenso.

- Nell'informativa estesa il consenso all'uso di cookie di profilazione potrà essere richiesto per categorie (es. viaggi, sport).
- È possibile effettuare una sola notificazione per tutti i diversi siti web che vengono gestiti nell'ambito dello stesso dominio.
- Gli obblighi si applicano a tutti i siti che installano cookie sui terminali degli utenti, a prescindere dalla presenza di una sede in Italia."

Che tipo di cookie utilizza questo sito e a quale scopo?

Cookie Tecnici.

Si tratta di cookie utilizzati per migliorare la velocità di caricamento delle pagine. I Cookie Tecnici non necessitano di consenso.

Cookie Analitici.

Questi cookie sono utilizzati da [Google Analytics](#) per elaborare analisi statistiche sulle modalità di navigazione degli utenti sul sito, sul numero di pagine visitate o il numero di click effettuati su una pagina durante la navigazione.

Su questo sito l'indirizzo IP del visitatore è anonimizzato:

“Quando un cliente di Google Analytics richiede l'anonimizzazione dell'indirizzo IP, Google Analytics anonimizza l'indirizzo non appena ciò è tecnicamente possibile nel passaggio più a monte della rete in cui avviene la raccolta dei dati. La funzione di anonimizzazione IP in Google Analytics imposta l'ultimo ottetto di indirizzi IP dell'utente IPv4 e gli ultimi 80 bit degli indirizzi IPv6 su zero in memoria subito dopo l'invio alla rete di raccolta di Google Analytics. In questo caso l'indirizzo IP completo non è mai scritto su disco.”

Per maggiori dettagli consultare: [Anonimizzazione IP in Google Analytics](#)

Per disabilitare i cookie analitici e per impedire a Google Analytics di raccogliere dati sulla navigazione, è possibile installare il Componente aggiuntivo del browser per la [Disattivazione di Google Analytics](#).

Che tipo di cookie NON utilizza il sito?

Cookie di profilazione.

Sono i cookie utilizzati per tracciare la navigazione dell'utente in rete e creare profili sui suoi gusti, abitudini, scelte, ecc. Con questi cookie possono essere trasmessi al terminale dell'utente messaggi pubblicitari in linea con le preferenze già manifestate dallo stesso utente nella navigazione online. Se si utilizzano cookie di profilazione è obbligatorio richiedere preventivamente il consenso dell'utente.

Come è possibile disabilitare i cookie?

La maggior parte dei browser (Internet Explorer, Chrome, Firefox, Safari etc.) sono configurati per accettare i cookie, che possono essere disabilitati utilizzando le impostazioni del browser; per le istruzioni consultare, ad esempio, [Cinque principali accorgimenti](#).

Sommario

Su questo sito non è richiesto l'utilizzo del banner con la richiesta del consenso da parte dell'utente perchè i cookie utilizzati sono solo quelli tecnici.

Richieste di terze parti:

Due da Google Analytics.

Cookie installati da terze parti:

Nessuno.

Log di sistema e manutenzione

Per necessità legate al funzionamento ed alla manutenzione, questa Applicazione e gli eventuali servizi terzi da essa utilizzati potrebbero raccogliere Log di sistema, ossia file che registrano le interazioni e che possono contenere anche Dati Personali, quali l'indirizzo IP Utente.

Proprietario del sito web e titolare del trattamento dei dati:

Raul Corazzon
