(Etienne Gilson, *Discours de la méthode. Texte et commentaire*, Paris: Vrin, 1925, p. 383); voir aussi Francisco Suárez, *Disputationes metaphysicae*, XXX, 7, 28: "extra hunc autem mundum nihil est, nam spatium imaginarium non est, sed imaginatione fingitur (au-delà de ce monde, il n'y a rien; car l'espace imaginaire n'existe pas, mais est forgé par l'imagination)."; voir aussi *Disputationes metaphysicae*, LI, *De "ubi"*, passim.

"... je vous prie me mander s'il n'y a rien de déterminé en la religion, touchant l'étendue des choses créées, savoir si elle est finie ou plutôt infinie, et qu'en tous ces pays qu'on appelle les espaces imaginaires il y ait des corps créés et véritables ; car encore que je n'eusse pas envie de toucher cette question, je crois toutefois que je serai contraint de la prouver." (lettre à Mersenne du 18 décembre 1629, AT I, 86; O VIII 1, 41; B 25).

Descartes a renoncé à la publication après la condamnation de Galilée (cfr. la lettre à Mersenne 28 novembre 1633: "Mais comme je ne voudrais pour rien au monde qu'il sortît de moi un discours, où il se trouvât le moindre mot qui fut désapprouvé de l'Eglise, aussi aimé-je mieux le supprimer, que de le faire paraître estropié. (10)" (AT I, 270-271; O VIII 1, 108; B 60).

(10) Rapprocher du récit de la sixième partie du *Discours* (dont la rédaction se poursuit jusqu'en mars 1636, AT VI, 60 l. 4-61 l. 2 [O III, 121]) Il est peu crédible de mettre en doute la sincérité de Descartes : le protestant Claude Saumaise écrivait le 7 mars 1638 à l'abbé Ismaël Bouillard à propos du *Monde* que si Descartes « était moins bon catholique, il nous l'aurait déjà donné, mais il craint de publier une opinion qui n'est pas approuvée à Rome » (ce qui, de surcroît, aurait été contre-productif pour l'adoption de son système en France et chez les jésuites), texte inédit cité par Henk J. M. Nellen, « Ismaël Boulliaud (1605-1694) : astronome, épistolier, novelliste et intermédiaire scientifique; ses rapports avec les milieux du libertinage érudit », in *Études de l'Institut Pierre Bayle, Nîmègue*, 24, APA-Holland University Press, 1994, p. 70.

"Pendant l'été 1634, Descartes écrit à Beeckman au sujet de la propagation de la lumière. Aucune lettre connue de Descartes

ne date du début de l'année 1635. Mais le 16 avril 1635, Descartes écrit à Golius qu'il a lu à M. de Zuilichem, c'est-à-dire à Constantin Huygens qu'il vient de rencontrer, « une partie de sa *Dioptrique* (282) ». En mai, il réfléchit à « la cause de la lumière (283) » et évoque les couronnes et les parhélies. Puis, dans les mois qui suivent, il écrit que, « depuis la condamnation de Galilée », il a « entièrement séparé de son *Monde* le traité sur “les lunettes” », et qu'il l'a « revu et entièrement achevé ». Il se « propose de le faire imprimer seul dans peu de temps ». Il ajoute également qu'il « juge maintenant hors de saison » de « faire voir son *Monde* avec le mouvement défendu » (284).

Ces indications sont très précieuses parce qu'elles montrent d'une part que Descartes abandonne l'idée de publier *Le Monde*, et d'autre part qu'il se consacre maintenant à *La Dioptrique*, en vue de sa publication. De sorte que la composition de *La Dioptrique* a alors évolué, et qu'elle s'est notamment augmentée d'un approfondissement des réflexions inaugurales du *Monde* sur la lumière, mais plus encore des analyses du chapitre XVIII du *Monde* consacré à *L'Homme*. En effet, les références directes à *La Dioptrique* figurant dans *Le Monde* incluant *L'Homme* permettent de voir quel en était le noyau initial. Ainsi, *Le Monde* renvoie directement à *La Dioptrique* pour l'explication de la réflexion et de la réfraction (285), qui se trouve au discours second de l'*Essai* de 1637. *L'Homme* se réfère explicitement à *La Dioptrique* au sujet de la taille des verres (objet de la réflexion de Descartes depuis 1629), parce que la figure du cristallin ressemble à celle d'un verre hyperbolique (286), dont les particularités sont exposées au discours huitième de l'*Essai* de 1637.

L'Homme cite à nouveau *La Dioptrique* en ce qui concerne le mécanisme de la vision (287), exposé dans les discours troisième et sixième de l'*Essai* de 1637."

(287) AT XI, 187.

Introduction de Annie Bitbol-Hespériès à R. Descartes, Le Monde, l'Homme, Paris: Seuil, 1996, pp. XXXV.

"Pour les lunettes, je vous dirai que depuis la condamnation de Galilée (4), j'ai revu et entièrement achevé le Traité que j'en avais autrefois commencé (5) ; et l'ayant entièrement séparé de mon *Monde*, je me propose de le faire imprimer seul dans peu de temps (6). Toutefois parce qu'il s'écoulera peut-être encore plus d'un an, avant qu'on le puisse voir imprimé, si M. N. (7) y désirait travailler avant ce temps-là, je le tiendrais à faveur, et je m'offre de faire transcrire tout ce que j'ai mis touchant la pratique, et de lui envoyer quand il lui plaira." (lettre à Mersenne (?) mars 1635 ?, AT I, 322; O VIII 1, 121; B 75)

(4) Descartes est souvent revenu dans ses lettres à Mersenne sur la condamnation de Galilée (1633) : fin novembre 1633 (AT I, 270-273, [O VIII 1, 107-109;] B 60); février 1634 (AT I, 281-282, [O VIII, 1; 109-110] B63); 15 mai 1634 (AT I, 298-299, [O VIII 1, 114-118] B 66).

(5) La rédaction de la *Dioptrique*, dont Descartes a souvent entretenu Mersenne (25 novembre 1630, AT I 182 l. 13 sq., [O VIII 1, 82-85] B36; juin 1632, AT I, 254 l. 3 sq., [O VIII 1, 102-104] B 55).

(6) En effet, Descartes écrit à Golius le 16 avril 1635 : « Monsieur de Zuyleichem [Huygens], que j'ai eu l'honneur de voir ces jours à Amsterdam, après avoir eu la patience d'ouïr lire une partie de ma *Dioptrique*... » et envoie à Huygens une copie du texte le 25 avril 1635 (AT I, 585-586; [O VIII 2, 13-14] B 72).

(7) Cl-Inst : de Beaune (suivi par AT ? et AM ?); CM V 125 n. 5 suggère Mydorge, « plutôt que Ferrier, à qui Descartes avait déjà donné ses instructions depuis longtemps ».

8. ———. 1629 (octobre) - 1633. *L'Homme*.

AT XI, 119-215; B Op. II, 362-507. Ce traité est le XVIIIe Chapitre du *Monde*.

Premières publications :

1) Traduction latine de Florent Schuyl : *Renatus Des Cartes De Homine, figuris et latinitate donatus a Florentio Schuyl*, Leyden: P. Leffen & F. Moyardum. 1662.

2) Édition du texte original : Clerselier 1677, pp. 1-98.

Édition critique : *Le Monde, l'Homme*, Introduction de Annie Bitbol-Hespériès; textes établis et annotés par Annie Bitbol-Hespériès et Jean-Pierre Verdet, Paris: Seuil, 1996.

Dans une lettre à Mersenne du 18 décembre 1629 Descartes écrit : "je veux commencer à étudier l'anatomie. (44)" (AT I, 102; O VIII 1, 49; B 25).

(44) Première mention des études d'anatomie de Descartes : on retrouve ce souci dans à Mersenne, 15 avril 1630 (AT I, 137 l. 5-6 [O VIII 1, 68; B 30]), 20 février 1639 (AT II, 525 l. 14-18 [O VIII 1, 326; B 204]) et 13 novembre 1639 (AT II, 621 l. 3-15 [O VIII 1, 351; B 224]); Descartes en parle aussi au médecin Plempius le 15 février 1638 (AT I, 523, l. 1-3 [O VIII 1, 407; B 146]) ; voir aussi le *Traité de l'Homme* (AT XI 120 l. 25-121 l. 9) et le *Discours* (AT VI, 47 l. 1-8 [O III, 112]).

"Le plan suivi dans le *Traité de l'Homme*.

Ce traité, qui est une description systématique de la machine qu'est le corps, est très construit, de manière concertée et révélatrice d'une hiérarchie et du constant souci de totalité de Descartes. Car, encore que toute cette machine soit régie, en toutes ses fonctions, par les mêmes principes issus de la mécanique la plus élémentaire, Descartes ne laisse pas de suivre un ordre qui reproduit, dans le microcosme du corps, la

structure générale de l'exposé qu'il utilise pour décrire le macrocosme du monde.

Mais d'abord, les données : le plan du *Traité de l'Homme* est le suivant.

En un premier temps, c'est le cours du sang qui guide le développement, depuis son origine jusqu'à sa métamorphose en une autre substance :

- la digestion des viandes, le circuit des aliments, le foie, le sang ;
- la respiration ;
- la circulation du sang ;
- la croissance ;
- la raréfaction du sang, origine des esprits animaux.

La deuxième partie du développement suit maintenant le cours des esprits animaux, ce qui conduit Descartes à décrire les systèmes nerveux, moteur et sensible :

- le système nerveux, moteur, les nerfs-tuyaux et les muscles ;
- le système nerveux sensible, les nerfs-filets ;
- le mécanisme des sentiments intérieurs (faim, soif, etc.) ;
- les esprits animaux et les passions.

Enfin, une dernière parties² est centrée sur les fonctions du cerveau:

- les fonctions de la veille (imagination, mémoire, etc.) ;
- les fonctions du sommeil (les songes).

La conclusion insiste sur l'identité entre cette machine créée par la nature et celle issue de l'industrie humaine (horloge)."

Pierre-Alan Cahné, *Un autre Descartes. Le philosophe et son langage*, Paris: Vrin, 1980, pp. 259.

"Les notes de cette édition du traité de *L'Homme* montrent les points de rencontre nombreux entre le chapitre XVIII du

Monde et La Dioptrique. La convergence de ces textes ne doit d'ailleurs aucunement surprendre, puisque, nous l'avons vu, ils ont été élaborés dans les mêmes années. Mais, à plusieurs reprises, des phrases identiques se retrouvent d'un texte à l'autre, ce qui laisse penser qu'après la condamnation de Galilée Descartes a inséré dans *La Dioptrique* plusieurs passages du traité de *L'Homme* consacrés à l'explication du sens de la vue. Ce qui est intéressant à remarquer, c'est que l'esprit qui anime Descartes n'a pas changé entre le début de la rédaction de *L'Homme* et de *La Dioptrique*, et le remaniement du texte de *La Dioptrique* à partir de 1635, en vue de sa publication." *Introduction* de Annie Bitbol-Hespériès à René Descartes, *Le Monde, l'Homme*, Paris: Seuil, 1996, pp. XXXV-XXXVI.

9. ———. 1630. [*La théorie de la création des vérités éternelles*].

La théorie de la création des vérités éternelles comme fondement métaphysique de la physique.

Cette théorie est formulée pour la première fois dans une lettre à Mersenne : le débat commence le 15 avril 1630, en posant comme thème, en réponse à des lettres perdues de Mersenne, "les vérités mathématiques que vous appelez éternelles". La même année, le philosophe en discute aussi bien avec lui dans deux autres lettres, qu'avec Beeckman dans une lettre du 17 octobre de la même année. Le débat se prolonge jusqu'en 1649 : il est présent dans la correspondance avec Arnauld, dans la lettre à Mersenne du 27 mai 1638 et, surtout, dans celle à Mesland du 2 juin 1644. On peut considérer que le débat se termine le 5 février 1649 avec la discussion entamée avec More sur les vérités contradictoires. Dans les œuvres imprimées, la théorie ne sera publiée que dans les *Responsiones* (AT VII, 380 et 435-436). Vagues allusions dans le *Discours de la méthode*,

V (AT VI 41 ll. 12-13 [O III, 108]) et dans les *Principia philosophiae* (I, §§ 22 et 24; AT VIII-1, 13-14).

10. ——. 1630-31 (?). *La recherche de la vérité par la lumière naturelle*.

AT X, 495-527; B Op. II, 826-871; CO 249-341; dialogue (incomplet) écrit en français, dont l'original est perdu.

Les sources existant sont :

1) une copie (partielle) en français, conservée à Hanovre (H) faite par Ehrenfried Walther von Tschirnhaus (1651 - 1708) sur le manuscrit en possession de Clerselier, datée 16 novembre 1676 et envoyée à Leibniz en février 1677 (AT X pp. 495-514).

2) la traduction néerlandaise complète (N): Amsterdam 1684.

3) la traduction latine complète (A): *Inquisitio veritatis per lumen naturale*, in *Opuscula posthuma, physica et mathematica*, Amsterdam 1701, pp. 67-90 (AT X, 514-527).

CO donne le texte française pour la partie existante, la traduction latine et le texte néerlandaise avec la première traduction française de cette version (par Corinna Vermeulen).

Édition critique : René Descartes, *La Recherche de la vérité par la lumière naturelle*, sous la direction de Ettore Lojacono, textes établis par Erik Jan Bos, lemmatisation et concordances du texte français par Franco A. Meschini, index et concordances du texte latin et néerlandais par Francesco Saita, Milano: Franco Angeli, 2002, avec un essai de Ettore Lojacono. Pour une interprétation et une datation de *La Recherche de la vérité par la lumière naturelle de René Descartes*, (pp. VII-XL) et une note "La présente édition", par Erik-Jan Bos (pp. XLI-LXV).

Ettore Lojacono donne un bilan complet des débats consacrés à la datation du texte (pp. 161-201).

Traductions :

La recherche de la vérité par la lumière naturelle, Introduction, Appendices, Notice biographique et bibliographique par Ettore Lojacono, Introduction et

commentaire historique et conceptuel, textes revus par Massimiliano Savini, Paris: Presses universitaires de France, 2009.

La recherche de la vérité par la lumière naturelle, traduction et notes par Emmanuel Faye, Paris: Librairie Générale Française, (Le Livre de Poche), 2010.

"La première édition de la *Recherche de la vérité* fut publiée à Amsterdam, en 1684, dans une traduction néerlandaise. Sous le titre de *Onderzoek der waarheit door 't naturelijk licht* (N) le texte fut ajouté, avec une traduction des *Regulae*, à l'édition néerlandaise du vol. III de la *Correspondance* de Descartes, telle qu'elle avait été publiée par Clerselier. Enfin, dans le même volume on trouve une traduction du *Traité de la lumière* ou *Le Monde*. Le traducteur de la *Correspondance* et du *Monde* était J. H. Glazemaker. L'identité du ou des traducteurs de la *Recherche* et des *Regulae* est inconnue. Rieuwertsz avait commencé l'impression de la correspondance en l'automne de 1682. Elle était achevée au printemps de 1684." (*La Recherche de la vérité par la lumière naturelle*, "La présente édition", p. LIV).

"La version latine de la *Recherche*, *Inquisitio veritatis per lumen naturale* (A), due à un traducteur inconnu, fut publiée en 1701 dans le recueil des *Opuscula posthuma*, qui constituent le vol. IX (le dernier) des *Opera omnia de Descartes*, commencés en 1692 par une « Société de libraires ». Dans cette édition, A couvre 23 pages, la première de 28 lignes la dernière de 27, les autres de 38. Au sein des *Opuscula posthuma* A forme une unité typographique propre, avec sa propre pagination et sa propre page de titre : *Regulae ad directionem ingenii, ut et Inquisitio veritatis per lumen naturale : Regulae*, pp. 1-66; *Inquisitio veritatis*, pp. 67-90). Dans la *Préface* on ne trouve aucune indication sur la provenance des copies. En fait, l'éditeur anonyme s'est acquitté de sa tâche en donnant simplement quelques citations de Baillet." (*La Recherche de la vérité par la lumière naturelle*, "La présente édition", p. LVI).

"Dans la présente édition on trouve le texte intégral des trois sources, H, N et A. Le texte de H, comme source principale du

texte français, a été imprimé avant les autres. Il a été établi sur la base d'un collationnement du texte imprimé dans G. W. Leibniz, *Sämtliche Schriften und Briefe*, Zweiter Band : 1676-1679, Berlin, 1987 avec des photocopies de H. Enfin, on a collationné ce texte avec l'original de Hanovre. Dans l'édition de H pour une certaine mesure (voir § 3.1) le texte a été normalisé et en plusieurs passages on a préféré la leçon de N et A à celle de H (voir § 3.2). Pour N et A les textes de base ont été les exemplaires de la Bibliothèque universitaire d'Utrecht, collationnés avec quatre autres exemplaires (voir §§ 2.2 et 2.3). Pour l'édition de N et de A nous avons suivi les critères présentés ci-dessous. Pour faciliter une étude comparative de ces textes ils sont imprimés l'un en regard de l'autre." (*La Recherche de la vérité par la lumière naturelle*, "La présente édition", p. LIX).

Voir aussi: Siegrid Agostini, "2002-1013 : une décennie d'édition de *La Recherche de la vérité par la lumière naturelle*", *Bulletin cartésien XLIII*, *Archives de philosophie*, 77, 2014, p. 163-170.

11. ——. 1637. *Discours de la méthode. Pour bien conduire sa raison, et chercher la vérité dans les sciences. Plus la Dioptrique. Les Météores. Et la Géométrie. Qui sont des essais de cette Méthode*. Leyde: Imprimerie Ian Maire.

AT VI, 1-515; B Op. I, 24-653; O III, 81-508.

Avertissement V; Frontispice des Essais XIII; Discours de la méthode 1; La Dioptrique 79; Les Météores 229; La Géométrie 367; Avertissement 486; Tables des principales difficultés qui sont expliquées dans La Dioptrique 487; Tables des principales difficultés qui sont expliquées aux Météores 498; Table des matières de la Géométrie 511; Privilège 515.

Première édition anonyme : 8 juin 1637 (réimpression anastatique Lecce: Conte Editore, 1987).

Discours de la méthode : AT VI, 1-78.

Date de composition : hiver 1635-36 - printemps 1637 (sur la chronologie de l'œuvre voir les études de Gilbert Gadoffre,

Láscaris Comneno, Elie Denissoff et Edwin Curley, dans ma bibliographie sur les sources de la pensée de Descartes).

Après avoir renoncé à publier *Le monde*, Descartes entreprend en 1635 un nouveau projet, qui sera terminé en mars 1637 et aboutira dans la publication du *Discours* : "Pour le traité de physique dont vous me faites la faveur de me demander la publication (5), je n'aurais pas été si imprudent que d'en parler en la façon que j'ai fait, si je n'avais envie de le mettre au jour, en cas que le monde le désire, et que j'y trouve mon compte et mes sûretés. Mais je veux bien vous dire, que tout le dessein de ce que je fais imprimer à cette fois, n'est que de lui préparer le chemin, et sonder le gué. Je propose à cet effet une méthode générale (6), laquelle véritablement je n'enseigne pas, mais je tâche d'en donner des preuves par les trois traités suivants (7), que je joins au discours où j'en parle, ayant pour le premier un sujet mêlé de philosophie et de mathématique (8), pour le second, un tout pur de philosophie (9); et pour le 3e, un tout pur de mathématique (10), dans lesquels je puis dire que je ne me suis abstenu de parler d'aucune chose, (au moins de celles qui peuvent être connues par la force du raisonnement), parce que j'ai cru ne la pas savoir; en sorte qu'il me semble par là donner occasion de juger que j'use d'une méthode par laquelle je pourrais expliquer aussi bien toute autre matière, en cas que j'eusse les expériences qui y seraient nécessaires, et le temps pour les considérer. Outre que pour montrer que cette méthode s'étend à tout, j'ai inséré brièvement quelque chose de métaphysique, de physique et de médecine dans le premier discours (11). Que si je puis faire avoir au monde cette opinion de ma méthode, je croirai alors n'avoir plus tant de sujet de craindre que les principes de ma physique soient mal reçus; et si je ne rencontrais que des juges aussi favorables que vous, je ne le craindrais pas dès maintenant." (lettre à [Germain Habert, abbé de Cérisy], [avril ?] 1637, AT I 370-371; O VIII 2, 833; B109).

(6) Seule occurrence du syntagme « méthode générale » dans le corpus cartésien.

(7) Les trois *Essais* (*Dioptrique, Météores, Géométrie*).

(8) *La Dioptrique*.

(9) Les *Météores* (rappelons que « philosophie » signifie « philosophie naturelle », c'est-à-dire ce que nous appelons la « physique »).

(10) *La Géométrie*.

(11) Dans les 4^e et 5^e parties du *Discours* (AT VI, 31-60 [O III, 102-121]).

En 1636 Descartes, qui se trouve à Leyde, confie l'impression du livre à Mersenne : "Il y a environ cinq semaines que j'ai reçu vos dernières du dix-huit janvier, et je n'avais reçu les précédentes que quatre ou cinq jours auparavant. Ce qui m'a fait différer de vous faire réponse, a été que j'espérais de vous mander bientôt que j'étais occupé à faire imprimer. Car je suis venu à ce dessein en cette ville (2); mais les [Elzevier (3)] qui témoignaient auparavant avoir fort envie d'être mes libraires, s'imaginant, je crois, que je ne leur échapperais pas lorsqu'ils m'ont vu ici, ont eu envie de se faire prier, ce qui est cause que j'ai résolu de me passer d'eux (4); et quoique je puisse trouver ici assez d'autres libraires, toutefois je ne résoudrai rien avec aucun, que je n'aie reçu de vos nouvelles, pourvu que je ne tarde point trop à en recevoir. Et si vous jugez que mes écrits puissent être imprimés à Paris plus commodément qu'ici, et qu'il vous plût d'en prendre le soin, comme vous m'avez obligé autrefois de m'offrir (5), je vous les pourrais envoyer incontinent après la vôtre reçue. (...) Et afin que vous sachiez ce que j'ai envie de faire imprimer, il y aura quatre *Traité*s tous français, et le titre en général sera: *Le Projet d'une Science universelle qui puisse élever notre nature à son plus haut degré de perfection. Plus la Dioptrique, les Météores, et la Géométrie ; où les plus curieuses Matières que l'Auteur ait pu choisir, pour rendre preuve de la Science universelle qu'il propose, sont expliquées en telle sorte, que ceux mêmes qui n'ont point étudié les peuvent entendre*. En ce *Projet* je découvre une partie de ma *Méthode*, je tâche à démontrer l'existence de Dieu et de l'âme séparée du corps, et j'y ajoute plusieurs autres choses qui ne seront pas, je crois, désagréables

au lecteur." (lettre à Mersenne du mars 1636 AT I, 338-339; O VIII 1, 135; B 83).

Le 1 avril 1636 Descartes donne à lire son manuscrit à Constantin Huygens : "Je ne manquerai de me trouver demain à votre logis incontinent après votre dîner, puisqu'il vous plaît me faire la faveur de me le permettre (2); et je porterai avec moi tous ceux de mes papiers qui seront assez au net pour les pouvoir lire, afin que vous en puissiez choisir ceux dont la lecture vous sera le moins ennuyeuse, et que j'aie le bonheur de savoir au vrai le jugement que vous en ferez." (lettre à Huygens du 31 mars 1636 AT I, 605; O VIII 2, 21; B 86).

Dans le contrat d'édition avec l'imprimeur Jean Maire (Leyde, 2 décembre 1636) le titre change : "le dit DES CARTES mettra entre les mains du dit LE MAIRE toute la copie d'un livre intitulé: *La méthode etc. plus la Dioptrique, les Météores et la Géométrie*" (le contrat est publié dans Gustave Cohen, *Écrivains français en Hollande dans la première moitié du XVIIe siècle*, Paris: Champion, 1920, pp. 503-504).

L'expression "Discours de la méthode" fait sa parution dans deux lettres à Huygens et à Mersenne:

Lettre à C. Huygens du 25 février 1637: "Monsieur Golius m'avertit dernièrement de votre part que vous jugiez le mot de "discours" superflu en mon titre, et c'est l'un des sujets de remerciement que j'ai à vous faire. Mais je m'excuse sur ce que je n'ai pas eu dessein d'expliquer toute la méthode mais seulement d'en dire quelque chose, et que je n'aime pas à promettre plus que je ne donne, c'est pourquoi j'ai mis « *Discours de la Méthode* »; au lieu que j'ai mis simplement «la *Dioptrique*» et «les *Météores*», parce que j'ai tâché d'y comprendre tout ce qui faisait (6) à mon sujet. Que si cette raison ne vous contente et que vous m'obligiez de m'en faire savoir votre jugement, je le suivrai comme une loi inviolable. Il me semble aussi que je dois ôter toute la glose que j'avais mise à la fin (7) et laisser seulement ces mots « *Discours de la Méthode etc. plus la Dioptrique, les Météores et la Géométrie* qui sont des essais de cette méthode »." (AT I, 620-621; O VIII 2, 26; B 104).

(6) « Faire à » : convenir.

(7) Descartes avait proposé à Mersenne en mars 1636 le titre [déjà cité : *Le Projet d'une Science universelle*, etc.]

Lettre à Mersenne du 20 avril 1637: "Mais je n'ai su bien entendre ce que vous objectez touchant le titre; car je ne mets pas *Traité de la Méthode*, mais *Discours de la Méthode*, ce qui est le même que *Préface ou Avis touchant la Méthode*, pour montrer que je n'ai pas dessein de l'enseigner, mais seulement d'en parler. Car comme on peut voir de ce que j'en dis, elle consiste plus en pratique qu'en théorie, et je nomme les traités suivants des *Essais de cette Méthode*, parce que je prétends que les choses qu'ils contiennent n'ont pu être trouvées sans elle, et qu'on peut connaître par eux ce qu'elle vaut : comme aussi j'ai inséré quelque chose de métaphysique, de physique, et de médecine dans le premier discours, pour montrer qu'elle s'étend à toutes sortes de matières." (AT I, 349; O VIII 1, 139; B 83).

Le titre définitif ressemble à une œuvre de Jacopo Aconcio (1492 - 1567), *De Methodo, hoc est de recta investigandarum tradendarumque artium ac scientiarum ratione*, Basileë 1558, réimprimé en 1617 à Leyde par le même éditeur du *Discours*, mais une influence directe n'est pas démontrée.

Dans cette œuvre Descartes réutilise des écrits précédents :

La *Première partie* du *Discours* (AT VI, 1-11 [O III, 81-87]) reprend le projet d'une *Histoire de mon esprit* dont parle Guez de Balzac dans la lettre à Descartes du 30 mars 1628: "Au reste, Monsieur, souvenez-vous, s'il vous plaît, de l'*Histoire de Votre Esprit*. Elle est attendue de tous nos amis, et vous me l'avez promise en présence du Père Clitophon, qu'on appelle en langue vulgaire Monsieur de Gersan. Il y aura plaisir à lire vos diverses aventures dans la moyenne et dans la plus haute région de l'air ; à considérer vos prouesses contre les Géants de l'École, le chemin que vous avez tenu, le progrès que vous avez fait dans la vérité des choses, etc." (AT I 570; B 15).

La *Deuxième partie* (AT VI, 11-22 [O III, 88-95]) est une adaptation et une rectification des certains thèmes des *Règles*

pour la direction de l'esprit: "Pendant les dix années qui s'écoulèrent entre les deux, Descartes a très sensiblement modifié ses vues méthodologiques: les *Regulae* proposaient une mathématique universelle qui assimilait à des segments de droite — soit à une dimension spatiale — tout ce qui est susceptible de mesure, alors que la *Géométrie* achemine le lecteur vers une notion de mathématiques pures, vers une « géométrie qui est avant tout une algèbre ». Un pas décisif a été franchi, et Léon Brunschvicg (*) montre sans peine que le deuxième chapitre du *Discours* s'en trouve par là même éclairé : certains développements sont si étroitement liés qu'ils ne s'expliquent que l'un par l'autre. De même que la sixième partie est une introduction à la Dioptrique et aux Météores, la deuxième est une introduction à la Géométrie." (Gilbert Gadoffre, *La chronologie des six parties*, in : Nicolas Grimaldi et Jean-Luc Marion (éds.), *Le Discours et sa méthode*, Paris: Presses universitaires de France, 1987, p. 21.)

(*) Léon Brunschvicg, *Mathématiques et métaphysique chez Descartes*, Revue de Métaphysique et de Morale, juillet 1937, [pp. 277-324; repris dans: L. Brunschvicg, *Écrits philosophiques*, tome I, Paris, Presses Universitaires de France, 1951, pp. 11-54].

La *Troisième partie* (AT VI 22-31 [O III, 96-101]) contient la morale provisoire; sur les raisons de cette inclusion, voir la lettre à Henricus Reneri pour Alphonse de Pollot d'avril ou mai 1638 : "Au reste j'ai été obligé de parler de cette résolution et fermeté touchant les actions, tant à cause qu'elle est nécessaire pour le repos de la conscience, que pour empêcher qu'on ne me blâmât de ce que j'avais écrit que, pour éviter la prévention, il faut une fois en sa vie se défaire de toutes les opinions qu'on a reçues auparavant en sa créance : car apparemment on m'eût objecté que ce doute si universel peut produire une grande irrésolution et un grand dérèglement dans les mœurs. De façon qu'il ne me semble pas avoir pu user de plus de circonspection que j'ai fait, pour placer la résolution, en tant qu'elle est une vertu, entre les deux vices qui lui sont contraires, à savoir l'indétermination et l'obstination.

Il ne me semble point que ce soit une fiction, mais une vérité, qui ne doit point être niée de personne, qu'il n'y a rien qui soit entièrement en notre pouvoir que nos pensées ; au moins en prenant le mot de pensée comme je fais, pour toutes les opérations de l'âme, en sorte que non seulement les méditations et les volontés, mais même les fonctions de voir, d'ouïr, de se déterminer à un mouvement plutôt qu'à un autre etc., en tant qu'elles dépendent d'elle, sont des pensées. Et il n'y a rien du tout que les choses qui sont comprises sous ce mot, qu'on attribue proprement à l'homme en langue de philosophe : car pour les fonctions qui appartiennent au corps seul, on dit qu'elles se font dans l'homme, et non par l'homme." (AT II, 35-36; O VIII 2, 542; B 164).

Voir aussi l'*Entretien avec Burman* :

"III. Texte 64. AT VI 22, l. 29 [O III, 96] une moral par provision, qui ne consistait qu'en trois ou quatre maximes, DONT JE VEUX BIEN VOUS FAIRE PART (que je veux bien AJOUTER À MON ÉCRIT).

L'auteur n'écrit pas volontiers touchant la morale (6), mais les Régents et autres pédants l'on contraint d'ajouter à son écrit ces règles parce que, autrement, ils prétendraient qu'il n'a ni religion ni foi, et que, par le biais de sa méthode, il veut les renverser (7)." (Burman 144; AT V, 178).

La *Quatrième partie* (AT VI, 31-40 [O III,]102-108) est dédiée à la métaphysique et utilise le *Petit traité de métaphysique* (perdu) de 1629 : "Descartes présente lui-même la Quatrième Partie du *Discours* comme un abrégé par rapport à ce manuscrit latin qui, au contraire, semble être une sorte de première rédaction par rapport aux *Méditations* ou du moins par rapport à celles qui ouvrent l'ouvrage». Ainsi il y avait dans la pensée de Descartes plus que dans son texte lorsqu'il écrivait la Quatrième Partie du *Discours*. Quant à savoir quel est ce « plus », des hypothèses différentes sont permises : ce qui est certain, c'est que, en ce qui concerne l'épreuve critique du commencement, l'évolution de la pensée n'est pas seule en cause." (Henri Gouhier, *La pensée métaphysique de Descartes*, Paris: Vrin, 1962, p. 67).

Cette partie a été ajoutée au moment de l'impression : "Il est vrai que j'ai été trop obscur en ce que j'ai écrit de l'existence de Dieu dans ce traité de la *Méthode*, et bien que ce soit la pièce la plus importante, j'avoue que c'est la moins élaborée de tout l'ouvrage ; ce qui vient en partie de ce que je ne me suis résolu de l'y joindre que sur la fin, et lorsque le libraire me pressait. Mais la principale cause de son obscurité vient de ce que je n'ai osé m'étendre sur les raisons des sceptiques, ni dire toutes les choses qui sont nécessaires *ad abducendam mentem a sensibus*: car il n'est pas possible de bien connaître la certitude et l'évidence des raisons qui prouvent l'existence de Dieu selon ma façon, qu'en se souvenant distinctement de celles qui nous font remarquer de l'incertitude en toutes les connaissances que nous avons des choses matérielles; et ces pensées ne m'ont pas semblé être propres à mettre dans un livre, où j'ai voulu que les femmes mêmes pussent entendre quelque chose, et cependant que les plus subtils trouvassent aussi assez de matière pour occuper leur attention. J'avoue aussi que cette obscurité vient en partie, comme vous avez fort bien remarqué, de ce que j'ai supposé que certaines notions, que l'habitude de penser m'a rendu familières et évidentes, le devaient être aussi à un chacun; comme par exemple, que nos idées ne pouvant recevoir leurs formes ni leur être que de quelques objets extérieurs, ou de nous-mêmes, ne peuvent représenter aucune réalité ou perfection, qui ne soit en ces objets, ou bien en nous, et semblables; sur quoi je me suis proposé de donner quelque éclaircissement dans une seconde impression. (8)" (lettre à Antoine Vatiér du 22 février 1638, AT I, 560; O VIII 1, 574-575; B 149).

(8) C'est dans les *Méditationes* (1641) que Descartes pourra préciser sa définition des idées.

Descartes était bien conscient des limites de sa première publication sur la métaphysique: "Pour votre seconde objection, à savoir que je n'ai pas expliqué assez au long, d'où je connais que l'âme est une substance distincte du corps, et dont la nature n'est que de penser, qui est la seule chose qui rend obscure la démonstration touchant l'existence de Dieu (3), j'avoue que ce que vous en écrivez est très vrai, et aussi que cela

rend ma démonstration touchant l'existence de Dieu malaisée à entendre. Mais je ne pouvais mieux traiter cette matière, qu'en expliquant amplement la fausseté ou l'incertitude qui se trouve en tous les jugements qui dépendent du sens ou de l'imagination, afin de montrer ensuite quels sont ceux qui ne dépendent que de l'entendement pur, et combien ils sont évidents et certains. Ce que j'ai omis tout à dessein, et par considération, et principalement à cause que j'ai écrit en langue vulgaire, de peur que les esprits faibles venant à embrasser d'abord avidement les doutes et scrupules qu'il m'eût fallu proposer ne pussent après comprendre en même façon les raisons par lesquelles j'eusse tâché de les ôter, et ainsi que je les eusse engagés dans un mauvais pas, sans peut-être les en tirer. Mais il y a environ huit ans que j'ai écrit en latin un commencement de Métaphysique (4), où cela est déduit assez au long, et si l'on fait une version latine de ce livre, comme on s'y prépare, (5) je l'y pourrai faire mettre. Cependant je me persuade que ceux qui prendront bien garde à mes raisons touchant l'existence de Dieu, les trouveront d'autant plus démonstratives, qu'ils mettront plus de peine à en chercher les défauts, et je les prétends plus claires en elles-mêmes qu'aucune des démonstrations des géomètres en sorte qu'elles ne me semblent obscures qu'au regard de ceux qui ne savent pas *abducere mentem a sensibus*, suivant ce que j'ai écrit en la page 38 (6)". (lettre à Mersenne du 20 avril 1637, AT I, 349-350; O VIII 1, 139; B 104).

(4) En 1629 (à Gibieuf, 18 juillet 1629, AT I, 17 l. 7, B17; à Mersenne, 15 avril 1630, AT I, 144 l. 19, B30).

(5) La traduction latine du *Discours et des Essais* (sauf la *Géométrie*), œuvre d'Étienne de Courcelles, n'apparut qu'en 1644. CM suggère qu'un projet a pu se constituer dès 1637 avec le jeune Van Schooten, qui publia en 1649 une traduction latine de la *Géométrie*.

(6) AT VI, 37 [O III, 105] (« qu'ils n'élèvent jamais leur esprit au-delà des choses sensibles »). Voir les objections soulevées par Petit (lettre des 17-27 mai 1638, AT II, 144, l. 13-21; [O VIII 1, 187] B 167).

La *Cinquième partie* (AT VI 40-60 [O III, 108-121]) est un résumé du *Monde* et de ses études de physiologie, "particulièrement l'explication du mouvement du cœur" (AT VI, 1 [O III, 81]) commencés en 1629 ("je veux commencer à étudier l'anatomie", lettre à Mersenne du 18 décembre 1629, AT I, 102), après la découverte par William Harvey de la circulation du sang (*Exercitatio anatomica de motu cordis et sanguinis in animalibus*, Francfort 1628), cfr. la référence au "médecin d'Angleterre" (AT VI, 51 [O III, 115]).

"La première mention d'un «médecin», dans la correspondance de Descartes, figure dans la lettre au Père Mersenne du 8 octobre 1629, [AT I, 25; O VIII 1, 30; B 19] où Descartes écrit: «Pour la raréfaction, je suis d'accord avec ce médecin (27), et (28) ai maintenant pris parti touchant tous les fondements de la Philosophie ; mais peut-être que je n'explique pas l'*æther* comme lui. (29)»".

(27) Selon AT (I 30n), il s'agirait du médecin Christophe Villiers (1596-1661/70); mais CM (II 302 n. 2) propose Sébastien Basson, qui introduisit dans une physique corpusculaire l'hypothèse de l'éther pour expliquer les phénomènes de raréfaction et, de façon plus générale, le vide (*Philosophiae naturalis adversus Aristotelem libri XII*, Genève, 1621). Il fut lu par Beeckman (au printemps 1623, Beeckman II 243), et par Merline (*Quaestiones in Genesim*, 1623, col. 1838 ; *Impiété des déistes*, 1624, I, p. 238) ; Descartes le cite (parmi les *novatores*, entre Giordano Bruno (Giulio Cesare Vanini) dans une lettre à Beeckman (lettre du 17 octobre 10, AT I, 158, B 34). Dans les *Regulae* (AT X, 424 l. 13), Descartes envisage au-delà de l'air un éther très pur sur le modèle de Basson. Descartes nie le vide dans le *Monde* (il y travaille à partir de la fin de 1629) et dans ses lettres de février-avril 1630. C'est probablement de lui que Descartes écrit à Huygens : « Il n'est vaillant qu'à détruire les opinions d'Aristote » 8 mars 1636, AT I, 603; [O VIII 2, 20] B 84).

(28) Clerselier Lettres : « ai pris parti là-dessus, comme sur presque tous les fondements de la Physique ».

(29) Clerselier Lettres : « Lorsque j'aurai l'honneur de vous voir, nous aurons moyen de nous en entretenir plus particulièrement », *add.*

La *Sixième partie* (AT VI 40-78 [O III, 121-133]) a été rédigée dans les derniers mois du 1635, comme préface de la *Dioptrique* et des *Météores*.

"Or comme ce n'est pas des racines, ni du tronc des arbres, qu'on cueille les fruits, mais seulement des extrémités de leurs branches, ainsi la principale utilité de la Philosophie dépend de celles de ses parties qu'on ne peut apprendre que les dernières. Mais, bien que je les ignore presque toutes, le zèle que j'ai toujours eu pour tâcher de rendre service au public est cause que je fis imprimer, il y a dix ou douze ans, quelques essais des choses qu'il me semblait avoir apprises. La première partie de ces essais fut un *Discours touchant la Méthode pour bien conduire sa raison et chercher la vérité dans les sciences*, où je mis sommairement les principales règles de la Logique et d'une Morale imparfaite, qu'on peut suivre par provision pendant qu'on n'en sait point encore de meilleure. Les autres parties furent trois traités : l'un de la *Dioptrique*, l'autre des *Météores*, et le dernier de la *Géométrie*." *Lettre-Préface aux Principes de philosophie* (AT IX-2, 15).

12. ——. 1637. *La Dioptrique*.

AT VI, 81-226; B Op. I, 118-311; O III, 148-262.

La *Dioptrique* est le premier essai composé par Descartes : les premières notes sur l'optique et la réfraction sont dans les *Cogitationes privatae* de 1619-20 (AT X, 242-247); en 1632 Descartes écrit à Golius "je fis tailler un verre, il y a cinq ans" lettre du 2 février 1632 (AT I, 239, note; O VIII 1, 1023, n. 36; B 50) ; la composition de la *Dioptrique* pourrait donc être initiée en 1628. (Sur les relations de *La Dioptrique* avec *Le Monde* et *L'Homme* voir les notes à ces textes).

Dans le XVII^e siècle avec le terme *Dioptrique* était utilisé pour la théorie de la réfraction: "La troisième [partie de l'Optique] enseigne comment nous voyons par rayons qui sont rompus, comme quand nous regardons un bâton qui est partie dans

l'eau, partie dans l'air et se nomme *Dioptrique*, ou *Mesoptrique*, parce qu'elle considère la façon par laquelle les rayons passent par les milieux divers, comme quand il traversent l'air, l'eau, et le verre en même instant: on pourrait ainsi nommer cette partie *Anaclastique*, ou *Diaclastique*. L'art de la peinture dépend de ces 3 parties." Marin Mersenne, *La Vérité des sciences contre les Septiques [sic] ou Pyrrhoniens*, Paris: 1625, pp. 229-230 (édition moderne: *La Vérité des sciences contre les Sceptiques ou Pyrrhoniens*. Édition et annotation par Dominique Descotes, Paris: Champion, 2003.

Descartes la cite dans une lettre à Mersenne du 25 novembre 1630: "J'y veux insérer un discours où je tâcherai d'expliquer la nature des couleurs et de la lumière, lequel m'a arrêté depuis six mois, et n'est pas encore à moitié fait ; mais aussi sera-t-il plus long que je ne pensais, et contiendra quasi une physique tout entière (8) ; en sorte que je prétends qu'elle me servira pour me dégager de la promesse que je vous ai faite, d'avoir achevé mon *Monde* dans trois ans (9), car c'en sera quasi un abrégé. Et je ne pense pas après ceci a me résoudre jamais plus de faire rien imprimer, au moins moi vivant : car la fable de mon *Monde* (10) me plaît trop pour manquer à la parachever, si Dieu me laisse vivre assez longtemps pour cela; mais je ne veux point répondre de l'avenir. Je crois que je vous enverrai ce *Discours* de la lumière, sitôt qu'il sera fait, et avant que de vous envoyer le reste de la *Dioptrique*" (AT I, 179; O VIII 1, 83; B 36).

(8) Voir à Mersenne, 13 novembre 1629 (AT I, 70 l. 6-11, B 23) et 18 décembre 1629 (AT I, 85 l. 6-86 l. 1; [O VIII 1, 33] B 25).

(9) Voir à Mersenne, 15 avril 1630 (AT I 137 l. 15-17; [O VIII 1, 68] B 30).

(10) Voir à Mersenne, 13 novembre 1629 (AT I 70; [O VIII 1, 33] B 23).

"En fait, il semble que Descartes, loin d'avoir envoyé ce *Discours* de la lumière « avant le reste de la *Dioptrique* », en ait ajourné la mise au point ; car au cours de l'année 1632, il qualifie à deux reprises de « première partie » ce qui, dans la

rédaction définitive, constitue le Discours second, consacré à la réfraction (15). Par contre, ce Discours de la lumière, qui devait être un abrégé du *Monde*, prend de telles proportions qu'il devient bientôt un Traité de la Lumière appelé à couvrir tout le champ de la Physique (16).

Dernière remarque enfin : le *Monde* est « presque'achevé » en juillet 1633 (17), la *Dioptrique* « entièrement », dans le courant de 1635 (18), les *Météores*, repris en main une fois la *Dioptrique* terminée, en 1636 (19). Ces détails chronologiques un peu vétilleux, pour ne pas dire fastidieux, permettent d'affirmer qu'entre 1629 et 1636, Descartes a mené de front les trois traités, quitte à interrompre l'un pour se consacrer à tel autre (20)." (pp. 290-291), Simone Martinet, "Rôle du problème de la lumière dans la construction de la science cartésienne", *XVIIe siècle*, n° 136, 1982, pp. 285-309.

(15) Voir [à Golius], [janvier 1632], I, p. 235 [O VIII 1, 644-645; B 49], et à Mersenne, [juin 1632], I, p. 255 [O VIII 1, 102-103; B 55].

(16) Voir à Mersenne, 23 décembre 1630 : « Je vous dirai que je suis maintenant après à démêler le chaos pour en faire sortir de la lumière, qui est l'une des plus hautes et plus difficiles matières que je puisse jamais entreprendre, car toute la physique y est presque comprise (5)», I, p. 194 [O VIII 1, 88; B 40].

(5) Descartes est en train de rédiger son *Monde, ou Traité de la lumière* : Il insiste sur son importance à plusieurs reprises (à Mersenne, 13 novembre 1629, AT I, 70 l. 6-11, [O VIII 1, 33] B 23; 25 novembre 1630, AT I, 179 l. 10, [O VIII 1, 83] B 36, et au P. Vatier, 22 février 1638, AT I 562 l. 10 sq., [O VIII 1, 576] B 149).

(17) À Mersenne, 22 juillet 1633, AT I, p. 268 [O VIII 1, 107] B 59].

(18) Voir à Mersenne, date difficile à préciser [mars 1635 ?], AT I, p. 322 [O VIII 1, 121; B 75], et à Huygens, 1 novembre 1635, AT I, p. 591 [O VIII 2, 14; B 77].

(19) Voir à Huygens, 1 novembre 1635, AT I, p. 591 [O VIII 2, 14; B 77], et *Météores*, Disc. VI, p. 298, qui relate une observation personnelle « faite l'hiver passé 1635 ».

(20) De telle sorte qu'il n'est pas étonnant qu'il soit fait référence à la *Dioptrique*, dans le *Monde*, achevé pourtant antérieurement (cf. *Traité de la Lumière ou Monde*, ch. II, p. 9, ch. XIV, p. 102, ch. XV, p. 106) et dans les *Météores*, commencés, sinon terminés plus tôt (*Météores*, Disc. I, p. 233 et p. 234 ; Disc. V, p. 279; Disc. VIII, p. 331 et p. 337). Et que, inversement, Descartes se retranche volontiers derrière le « Traité qui contient tout le corps de [sa] Physique », soit pour justifier le statut des « suppositions » qui sont avancées au début de chacun des Essais (cf. *Discours de la méthode*, VI partie, p. 76), soit pour répondre à des questions ou à des objections qui lui sont adressées après la publication des *Essais*, cf. [à Vatier], [22 février 1638], AT I, p. 562 [O VIII 1, 575; B 149] ; à Ciermans, [23 mars 1638], AT II, p. 71 et p. 74 [B 159] ; à Morin, [13 juillet 1638], AT II, p. 201 [O VIII 2, 466-467; B 172] ; à Mersenne, 9 janv. 1639 et 19 juin 1639, AT II, p. 483 [O VIII 1, 310-311; B 200] et p. 564 O VIII 1, 336-337; B 216].

En janvier 1632 la première partie (Discours I et II) est terminée : "Au reste pour ce que vous me mandez, et que M. H[ortensius] (4) me témoigne que vous désirez voir de ma *Dioptrique*, je vous en envoie la première partie (5), ou j'ai tâché d'expliquer la matière des réfractions, sans toucher au reste de la philosophie." (lettre à Golius du janvier 1632, AT I 235; O VIII 1, 644-645; B 49).

(4) Clerselier-Lettres: "H." ; AT complète par le nom de Martin Van de Hove (Hortensius, 1605-1639), mathématicien et astronome.

(5) *Dioptrique* I et II (AT VI 81-105 [O III, 148-262])

Dans l'automne 1635 Descartes écrit : "Pour les lunettes, je vous dirai que depuis la condamnation de Galilée (4), j'ai revu et entièrement achevé le Traité que j'en avais autrefois commencé (5) ; et l'avant entièrement séparé de mon *Monde*, je

me propose de le faire imprimer seul dans peu de temps (6)." (lettre à X (Mersenne?), AT I 322 [O VIII 1, 121; B 75]).

(4) Descartes est souvent revenu dans ses lettres à Mersenne sur la condamnation de Galilée (1633) : fin novembre 1633 (AT I 270-273, [O VIII 1, 107-109] B 60); février 1634 (AT I 281-282, [O VIII 1, 109-110] B 63); 15 mai 1634 (AT I 298-299, [O VIII 1, 117-118] B 66).

(5) La rédaction de la *Dioptrique*, dont Descartes a souvent entretenu Mersenne (25 novembre 1630, AT I 182 l. 13 sq., [O VIII 1, 85] B 36; juin 1632, AT I 254 l. 3 sq., [O VIII 1, 102] B 55).

(6) En effet, Descartes écrit à Golius le 16 avril 1635 [AT I 314-316; O VIII 1, 647-648; B 71] : « Monsieur de Zuylichem (4), que j'ai eu l'honneur de voir ces jours à Amsterdam (5), après avoir eu la patience d'ouïr lire une partie de ma *Dioptrique*... » et envoie à Huygens une copie du texte le 25 avril 1635 (AT I 585-586, [O VIII 2, 13-14] B 72).

(4) Descartes venait de rencontrer Constantin Huygens (Monsieur de Zuylichem) à Amsterdam, du 29 mars au 6 avril 1635 (*Dagboek* [*Dagboek Van Constantijn Huygens*, éd. J. H. W. Hunger, *Bijlage Van Oud-Holland*, IIIe année, viii-88-14-viii pages, Amsterdam 1885], p. 26).

(5) Voir à Wilhem, 23 mai 1632 (AT I, 253-254, [O VIII 2, 1] B 54), et à Huygens, 11 décembre 1635 (AT I, 597-601, [O VIII 2, 17-19] B 80).

Le texte est terminé en 1635 : lettre à Golius du 16 avril 1635, AT I 314-316; O VIII 1, 647-648; B 71.

"En la *Dioptrique*, la matière des réfractions et l'invention des lunettes, j'y parle aussi fort particulièrement de l'Œil, de la Lumière, de la Vision, et de tout ce qui appartient à la Catoptrique et à l'Optique." (lettre à Mersenne du mars 1636 AT I, 338-340; O VIII 1, 134-136; B 83).

"Par la *Dioptrique*, j'eus dessein de faire voir qu'on pouvait aller assez avant en la Philosophie, pour arriver par son moyen jusques à la connaissance des arts qui sont utiles à la vie, à

cause que l'invention des lunettes d'approche, que j'y expliquais, est l'une des plus difficiles qui aient jamais été cherchées. Par les *Météores*, je désirai qu'on reconnût la différence qui est entre la Philosophie que je cultive et celle qu'on enseigne dans les écoles où l'on a coutume de traiter de la même matière." *Lettre-Préface aux Principes de philosophie* (AT IX-2, 15).

13. ——. 1637. *Les Météores*.

AT VI, 231-376; B Op. I, 314-487; O III, 284-390.

L'origine des *Météores* est le phénomène des parhélies (faux soleils) observé à Frascati le 20 mars 1629 par le Jésuite Christoph Scheiner (1573-1650).

"Le 20 de mars on avait vu dans cette ville cinq soleils en même temps, c'est-à-dire quatre parhélies ou faux soleils autour du Soleil. Le P. Scheiner jésuite allemand, qui était pour lors à Rome, en avait fait l'observation avec quelques autres mathématiciens du lieu ; et le cardinal Barberin qui était toujours fort zélé pour l'avancement des sciences en avait envoyé une description à M. de Peiresc conseiller au parlement de Provence, avec la figure du phénomène. Monsieur Peiresc en avait fait faire plusieurs copies, pour communiquer la chose à tous les savants de sa connaissance, et pour les exciter à donner leurs réflexions sur le phénomène." (Baillet I, 188).

"C'est à cette observation des parhélies, que le public est redevable en partie du beau traité des *Météores* que M. Descartes lui donna quelques années après. Il interrompit ses *Méditations métaphysiques*, pour examiner par ordre tous les météores ; et il travailla plusieurs jours sur cette matière, avant que d'y trouver de quoi se satisfaire. " (Baillet I, 191).

Nicolas-Claude Fabri de Peiresc (1580-1637), ayant reçu la relation directement de C. Scheiner en donna des copies à Pierre Gassendi.

Ayant reçu une copie de Gassendi, Henri Reneri la publia avec le titre *Phaenomenon rarum et illustre Romae observatum 20 Martij Anno 1629*, (Amsterdam 1629) et en envoya une copie manuscrite à Descartes en juillet 1629 : "Car je n'ai point

l'esprit assez fort, pour l'employer en même temps à plusieurs choses différentes, et comme je ne trouve jamais rien que par une longue traînée de diverses considérations, il faut que je me donne tout à une matière, lorsque j'en veux examiner quelque partie. Ce que j'ai éprouvé depuis peu, en cherchant (4) la cause de ce phénomène duquel vous m'écrivez (5) ; car il y a plus de deux mois (6) qu'un de mes amis (7) m'en a fait voir ici une description assez ample, et m'en ayant demandé mon avis, il m'a fallu interrompre ce que j'avais en main (8), pour examiner par ordre tous les Météores, auparavant que je m'y sois pu satisfaire. Mais je pense maintenant en pouvoir rendre quelque raison, et suis résolu d'en faire un petit traité (9) qui contiendra la raison (10) des couleurs de l'arc-en-ciel (11), lesquelles m'ont donné plus de peine que tout le reste, et généralement tous les phénomènes sublunaires." (lettre à Mersenne du 8 octobre 1629, AT I, 22-23; O VIII 1, 29-30; B19).

(4) Clerselier-lettres : "pour trouver".

(5) Le jésuite romain Scheiner avait observé quatre parhélies (faux soleils) à Frascati le 20 mars 1629. Ces observations ont été connue de toute l'Europe savante par le relais de Peiresc, à qui le cardinal Barberini avait fait parvenir une copie. Gassend, informé par les frères Dupuy, s'employa à les expliquer, en particulier auprès de Peiresc, et au cours de son voyage en Flandres et aux Pays-Bas (été 1629), de Beeckman et de Reneri. La « description assez ample » dont parle Descartes peut être son explication *Phaenomenon rarum et illustre Romæ observatum*, dont le texte imprimé semble n'avoir été diffusé qu'en novembre-décembre 1629, mais qui fut remis par Gassend à Reneri le 14 juillet (voir lettre de Gassend à Peiresc, 21 juillet 1629, CM II 244 et 247n).

(6) Clerselier-lettres : « trois mois ».

(7) Henri Reneri, en juillet 1629. Il s'inscrit comme étudiant à Leyde le 13 octobre 1629.

(8) Le « petit traité de métaphysique », « commencé en Frise », dont Descartes parle à plusieurs reprises (à Mersenne, 15 avril 1630; AT I 136, [O VIII 1, 67] B 30; 25 novembre 1630, AT I

182, [O VIII 1, 85] B 36; vers le 20 avril 1637 AT I 350, [O VIII 1, 139] B 104; à Gibieuf, 18 juillet 1629, AT I 17, [O VIII 2, 790] B 17) est soit une première version des *Meditationes*, soit un « traité sur la divinité » (Baillet I, 170-171 et 190).

(9) Le huitième discours des *Météores* (qui paraîtra dans les *Essais* de 1637) ; le dixième discours porte sur les parhélies.

(10) Clerselier-lettres : « l'explication ».

(11) Descartes avait pu voir en Italie les arcs-en-ciel artificiels des fontaines de Tivoli.

Descartes retourne sur le sujet dans une lettre à Mersenne du 13 novembre 1629 : "Je suis bien marri de la peine que je vous ai donnée de m'envoyer ce phénomène (2), car il est tout semblable à celui que j'avais vu. Je ne laisse pas de vous en avoir très grande obligation, et encore plus de l'offre que vous me faites de faire imprimer ce petit traité que j'ai dessein d'écrire ; mais je vous dirai qu'il ne sera prêt de plus d'un an. Car depuis le temps que je vous avais écrit il y a un mois, je n'ai rien fait du tout qu'en tracer l'argument, et au lieu d'expliquer un phénomène seulement, je me suis résolu d'expliquer tous les phénomènes de la nature c'est-à-dire toute la physique. Et le dessein que j'ai me contente plus qu'aucun autre que j'aie jamais eu, car je pense avoir trouvé un moyen pour exposer toutes mes pensées en sorte qu'elles satisferont à quelques-uns et que les autres n'auront pas occasion d'y contredire." (AT I 70; O VIII 1, 32-33; B 23).

(2) Sur les parhélies, comme sur le « petit traité », voir la lettre 4 (AT I, 23; [O VIII 1, 29] B 19).

Lettre à Constantin Huygens du 1 novembre 1635 : "J'ai dessein d'ajouter les *Météores* à la *Dioptrique*, et j'y ai travaillé assez diligemment les deux ou trois premiers mois de cet été (4), à cause que j'y trouvais plusieurs difficultés que je n'avais encore jamais examinées, et que je démêlais avec plaisir. Mais il faut que je vous fasse des plaintes de mon humeur : sitôt que je n'ai plus espéré d'y rien apprendre, ne restant plus qu'à les mettre au net, il m'a été impossible d'en prendre la peine, non plus que de faire une préface que j'y veux joindre (5); ce qui sera cause

que j'attendrai encore deux ou trois mois avant que de parler au libraire." (AT I, 592; O VIII 2, 15; B 77).

(4) Dès février 1635, il avait noté des observations sur la chute de la neige (voir F. C. Frank, « Descartes' Observations on the Amsterdam Snowfalls of 4, 5, 6 and 9 February 1635 », *Journal of Glaciology*, 13, 1974, p. 535-539).

(5) [Première allusion au *Discours de la méthode* :] Le livre envisagé devait réunir la *Dioptrique*, les *Météores* et une préface (qui deviendra le *Discours de la méthode*). Descartes annoncera l'addition de la *Géométrie* dans la lettre à Mersenne de mars 1636 (AT I, 339 l. 16, [O VIII 1, 135; B 83] et racontera au P. Deriennes : « [...] c'est un traité que je n'ai quasi composé que pendant qu'on imprimait mes *Météores*, et même j'en ai inventé une partie pendant ce temps-là » (AT I, 457-458, à Deriennes 22 février 1638, [O VIII 2, 578-579] B 147).

"Au reste, si M. Gassendi a quelques autres remarques touchant la neige, que ce que j'ai vu dans Kepler, et remarqué encore cet hiver, *de Nive sexangula et grandine acuminata* (7), je serai bien aise de l'apprendre ; car je veux expliquer les météores le plus exactement que je pourrai (8)." (lettre à Mersenne, 4 mars 1630, AT I, 127 O VIII 1, 62; B 28).

(7) Kepler a publié en 1611 le traité *De nive sexangula et grandine acuminata*.

(8) Descartes a dû connaître (par Mersenne) l'observation de Gssend; (à la fin de son *Examen* du 4 février 1629 : voir Gassend 4 février 1629 (CM II 196-199).

Dans une lettre à Chanut du 6 mars 1646, Descartes écrit : "Une seule observation que je fis de la neige hexagone, en l'année 1635, a été cause du traité que j'en fait (5)." (AT IV, 377; O VIII 2, 668; B 545).

(5) Dans les *Météores* VI (AT VI 298 l. 8 sq. [O III, 329]); (observation du 5 février 1635 (voir AT XI, 623-624 et 626-627) ; voir à Mersenne, 4 mars 1630 (AT I, 127, [O VIII 1, 62] B 28) et 30 août 1640 (AT III 166, [O VIII 1, 404] B 269 : longue note

dans E. Lojacono (éd.), *Opere scientifiche di René Descartes*, t. 2, Turin, Classici UTET, 1983, p. 434.

Voir AT XI, p. 635 : "Par un vent du nord, avec neige et verglas la veille. Les grains de neige étaient de cette grosseur, ils ressemblaient à l'humeur cristalline de l'œil, étaient transparents, et j'en ai remarqué un ou deux qui avaient autour d'eux six rayons très-courts, tirant sur le blanc pâle, et surpassant la glace. Ce même jour, 5 février [1635], j'ai noté une grande diversité d'étoiles de neige. D'abord quelques lames solides taillées en hexagone, d'une parfaite transparence, polies et minces, de grandeurs égales." (texte en latin; traduction de Foucher de Careil, p. 81).

"Aux *Météores*, je m'arrête principalement sur la nature du Sel, les causes des Vents et du Tonnerre, les figures de la Neige, les couleurs de l'Arc-en-Ciel, où je tâche aussi à démontrer généralement quelle est la nature de chaque Couleur, et les Couronnes, ou Halones, et les Soleils, ou Parhelia, semblables à ceux qui parurent à Rome il y a six ou sept ans." (lettre à Mersenne, mars 1636, AT I 340; O VIII 1, 135; B 83).

"Par les *Météores*, je désirai qu'on reconnût la différence qui est entre la Philosophie que je cultive et celle qu'on enseigne dans les écoles où l'on a coutume de traiter de la même matière."
Lettre-Préface aux Principes de philosophie (AT IX-2, 15).

René Descartes. Bibliographie Chronologique et Annotée (Troisième Partie: (1637-1644))

Bibliographie

Pour la liste des éditions de références et des abréviations voir [René Descartes. Outils de recherche: Biographies, Dictionnaires et Lexiques des Ses Œuvres](#)

1. Descartes, René. 1637. *La Géométrie*.

AT VI, 368-485; B. Op. I, 490-653; O III, 415-512.

Une traduction latine par Frans Van Schooten (le jeune) (1615-1661) paru à Leyde: Maire 1649.

La *Géométrie* est le seul ouvrage mathématique publié par Descartes et résume les résultats de 19 années de recherches ; sa rédaction l'a occupé dans les premiers mois de 1637: "C'est un traité que je n'ai quasi composé que pendant qu'on imprimait mes *Météores*, et même j'en ai inventé une partie pendant ce temps-là (4); mais je n'ai pas laissé de m'y satisfaire, autant ou plus que je ne me satisfais d'ordinaire de ce que j'écris." (lettre à Jean Deriennes du 22 février 1638 (AT I, 458; O VIII 1, 578-579; B 147).

(4) La *Dioptrique* était prête pour l'impression dès octobre 1635 (Huygens à Descartes, 28 octobre 1635, AT I, 588 l. 5-6, B 76).

Lettre à Mersenne, fin décembre 1637: "Et je ne suis pas bien aise d'être obligé de parler avantageusement de moi-même; mais parce qu'il y a peu de gens qui puissent entendre ma

Géométrie, et que vous désirez que je vous mande quelle est l'opinion que j'en ai, je crois qu'il est à propos que je vous dise qu'elle est telle, que je n'y souhaite rien davantage; et que j'ai seulement tâché par la *Dioptrique* et par les *Météores* de persuader que ma méthode est meilleure que l'ordinaire, mais je prétends l'avoir démontré par ma *Géométrie*." (AT I, 477; O VIII 1, 149; B 136).

Sur la difficulté de l'œuvre voir:

l'Avertissement : "Jusques ici j'ai tâché de me rendre intelligible à tout le monde ; mais, pour ce traité, je crains qu'il ne pourra être lu que par ceux qui savent déjà ce qui est dans les livres de *Géométrie*: car, d'autant qu'ils contiennent plusieurs vérités fort bien démontrées, j'ai cru qu'il serait superflu de les répéter, et n'ai pas laissé, pour cela, de m'en servir." (AT VI 368)

et la lettre à Florimond de Beaune du 20 février 1639: "J'ai été extrêmement aise de voir vos *Notes* (*) sur ma *Géométrie* (2); et je puis dire, avec vérité, que je n'y ai pas trouvé un seul mot qui ne soit entièrement selon mon sens. En sorte que j'ai admiré que vous ayez pu reconnaître des choses que je n'y ai mises qu'obscurément (3), comme en ce qui regarde la généralité de la méthode, et la construction des lieux plans et solides, etc.

(...)

Toutefois je puis assurer que je n'ai rien omis de tout cela qu'à dessein, excepté le cas de l'asymptote que j'ai oublié. Mais j'avais prévu que certaines gens, qui se vantent de savoir tout, n'eussent pas manqué de dire que je n'avais rien écrit qu'ils n'aient su auparavant, si je me fusse rendu assez intelligible pour eux ; et je n'aurais pas eu le plaisir, que j'ai eu depuis, de voir l'impertinence de leurs objections. Outre que ce que j'ai omis ne nuit à personne ; car pour les autres, il leur sera plus profitable de tâcher à l'inventer d'eux-mêmes, que de le trouver dans un livre. Et pour moi, je ne crains pas que ceux qui s'y entendent m'imputent aucune de ces omissions à ignorance ; car j'ai partout eu soin de mettre le plus difficile, et de laisser

seulement le plus aisé." (AT II, 510-512; O VIII 2, 691-692; B 203).

(2) Voir à Mersenne, 9 février 1639 (AT II, 499 l. 20-24, [O VIII 1, 320] B 202). Les *Notes brèves* de Debeaune [dans le texte originel français] ont été publiées dans AM III 353-401 (voir aussi la lettre de Debeaune à Schooten, 1648-1649 dans AM III 321-322).

(*) [Ces *Notes* seront publiées dans la traduction latine de la *Géométrie* en 1649: *In geometriam Renati Descartes notæ breves*, Amsterdam, 1659.]

Après la publication, Descartes ne montre plus d'intérêt pour la géométrie : "Mais n'attendez plus rien de moi, s'il vous plaît, en géométrie; car vous savez qu'il y a longtemps que je proteste de ne m'y vouloir plus exercer, et je pense pouvoir honnêtement y mettre fin." (à Mersenne, 12 septembre 1638, AT II, 361-362; O VIII 1, 273-274; B 187).

"Enfin, en la *Géométrie*, je tâche à donner une façon générale pour soudre tous les problèmes qui ne l'ont encore jamais été. Et tout ceci ne fera pas, je crois, un volume plus grand que de cinquante ou soixante feuilles (8). Au reste, je n'y veux point mettre mon nom, suivant mon ancienne résolution (9), et je vous prie de n'en rien dire à personne, si ce n'est que vous jugiez à propos d'en parler à quelque libraire, afin de savoir s'il aura envie de me servir, sans toutefois achever, s'il vous plaît, de conclure avec lui, qu'après ma réponse ; et sur ce que vous me ferez la faveur de me mander, je me résoudrai." (lettre à Mersenne du mars 1636, AT I, 340; O VIII 1, 136; B 136).

(8) Le volume imprimé fera 66 feuilles, dont 10 pour le *Discours*.

(9) Voia à Mersenne, 25 novembre 1630 (AT I, 179-180; [O VIII 1, 83-64] B 36).

"Enfin, par la *Géométrie*, je prétendais démontrer que j'avais trouvé plusieurs choses qui ont été ci-devant ignorées, et ainsi donner occasion de croire qu'on en peut découvrir encore plusieurs autres, afin d'inciter par ce moyen tous les hommes à

la recherche de la vérité." *Lettre-Préface aux Principes de philosophie* (AT IX-2, 15).

2. ———. 1637. *Explication des engins par l'aide desquels on peut avec une petite force lever un fardeau fort pesant [Traité de mécanique]*.

AT I, 435-447; B 129; O III, 568-577.

Le texte est annexe à la lettre à Constantin Huygens du 5 octobre 1637 ; la première édition est celle publiée en 1668 par Nicolas Poisson avec le *Compendium musicae*.

3. ———. 1638. *Calcul de Mons. Des-Cartes*.

AT X 659-680; édition critique par Frédéric de Buzon in B Op. II, 1472-1528.

Dans le dernier paragraphe d'une lettre à Claude Mydorge du 1 mars 1638, Descartes écrit: "Si vous désirez que je vous envoie quelques adresses particulières touchant le calcul, j'ai ici un ami qui s'offre de les écrire (27), et je m'y offrirais bien aussi, mais j'en suis moins capable que lui, à cause que je ne sais pas si bien remarquer en quoi on peut trouver de la difficulté." (AT II 23; O VIII 1, 672; B152).

(27) Il s'agit de l'*Introduction à la Géométrie*, ou *Introduction au Calcul de Monsieur Descartes*, attribuée à Godefroid Van Haestrecht [1592/93 - 1659] (voir la présentation de F. de Buzon, in B Op. II, 1465-1529).

De ce document, il y a trois manuscrits :

- 1) H : retrouvé par Charles Adam dans la Bibliothèque Royale de Hanovre parmi les papiers de Leibniz et publié dans AT X.
- 2) L : retrouvé par Cornelis de Waard en 1917 parmi les papiers de Charles Cavendish et publié dans Charles Adam et Gaston Milhaud (éds.) *René Descartes. Correspondance*, Paris, Alcan 1936-, vol. III, pp. 323-352.
- 3) M : retrouvé par Frédéric de Buzon parmi les manuscrits de Marcus Meibom à la Bibliothèque Royale de La Haye et publié dans B Op. II, 1473-1529 avec le titre: *Recueil du Calcul, qui sert à la Géométrie du Sieur Des-Cartes*.

4. ———. 1639? *De refractione*.

AT XI, 645-646; B Op. II, 1390-1393.

La date précise de composition est incertaine.

5. ———. 1640. *Invention de la racine cubique des nombres binomes*.

AT III 188, l. 3 - 190, l. 19; nouvelle édition reprise de l'édition Costabel: AT V 612-615; B Op. II, 1440-1447.

Première édition : Pierre Costabel, "Descartes et la racine cubique des nombres binômes", *Revue d'histoire des sciences*, 22, 1969, pp. 97-116 (texte au pp. 99-102); repris dans P. Costabel, *Démarches originales de Descartes savant*, Paris, Vrin, 1982, pp. 122-126.

"Le document illustre la phase ultime du débat engagé en 1639 entre Stampioen et Waessenaer, celui-ci agissant pour le compte de Descartes." (p. 97).

6. ———. 1641. *Meditationes de prima Philosophia in qua Dei existentia et animae immortalitas demonstrantur*. Parisiis: Michaellem Soly.

AT VII : *Epistola 1; Praefatio ad Lectorem 7; Synopsis sequentium sex Meditationum 12; Meditatio I-VI 17-90; Objectiones Primae 91; Responsio Authoris 101; Objectiones Secundae 121; Responsio 128; Rationes Dei existentia et animae a corpore distinctionem probantes, more geometrico dispositae 160; Objectiones Tertiae cum Responsionibus Authoris 171; Objectiones Quartae 196; Objectiones Quintae 256; Responsio 347; Disquisitio metaphysica Gassendus Sorberio 392; Objectiones Sextae 412; Responsio 422; Objectiones Septimae cum Notis Authoris 464; Epistola ad patrem Dinet 563-603.*

B Op. I, 680-799; *Objectiones cum Responsionibus*, 800-1395.

Les VII *Objectiones* et l' *Epistola ad patrem Dinet* sont ajoutées dans la deuxième édition.

Date de composition : octobre 1639 - mars 1640.

Première édition : 28 août 1641.

Deuxième édition revue avec le titre : *Meditationes de prima philosophia, in quibus Dei existentia, et animae humanae a corpore distinctio, demonstrantur*. Amstelodami: Ludovicum Elzevirium, 1642 (réimpression anastatique Lecce, Conte Editore, 1992).

Après le *Traité de métaphysique* de 1628-29 (qui n'a pas été conservé) et la *Quatrième partie* du *Discours de la méthode* c'est le premier texte publié par Descartes sur la métaphysique (*La Recherche de la Vérité* a été publié seulement en 1684).

La première mention de l'œuvre est dans la lettre à Mersenne du 13 novembre 1639 : "Les opinions de vos Analystes, (*) touchant l'existence de Dieu et l'honneur qu'on lui doit rendre, sont, comme vous écrivez, très difficiles à guérir ; non pas qu'il n'y ait moyen de donner des raisons assez fortes pour les convaincre, mais parce que ces gens-là, pensant avoir bon esprit, sont souvent moins capables de raison que les autres. Car la partie de l'esprit qui aide le plus aux mathématiques, à savoir l'imagination, nuit plus qu'elle ne sert pour les spéculations métaphysiques. J'ai maintenant entre les mains un discours, où je tâche d'éclaircir ce que j'ai écrit ci-devant sur ce sujet ; il ne sera que de cinq ou six feuilles d'impression ; mais j'espère qu'il contiendra une bonne partie de la métaphysique. Et afin de le mieux faire, mon dessein est de n'en faire imprimer que vingt ou trente exemplaires, pour les envoyer aux vingt ou trente plus savants théologiens dont je pourrai avoir connaissance, afin d'en avoir leur jugement, et apprendre d'eux ce qui sera bon d'y changer, corriger ou ajouter, avant que de le rendre public." (AT II, 622; O VIII 1, 351-352; B 224).

(*) [Les géomètres de Paris]

La rédaction est terminée en mars 1640 : "Je ne ferai point imprimer mon essai de *Métaphysique* (14) que je ne sois à Leyde, où je pense aller dans cinq ou six semaines (15)" lettre à Mersenne, 11 mars 1640 (AT III, 35-36; O VIII 1, 367-368; B 246).

(14) Les *Meditationes* seront imprimés à Paris en 1641, puis à Amsterdam en 1642.

(15) Descartes date de Leyde toute une série de lettres écrites entre le 7 mai 1640 et le 18 mars 1641.

En novembre 1640 le livre est envoyé à l'imprimeur: "Le peu que j'ai écrit de métaphysique est déjà en chemin pour aller à Paris (5), où je crois qu'on le fera imprimer, et il ne m'en est resté ici qu'un brouillon si plein de ratures, que j'aurais moi-même de la peine à le lire, ce qui est cause que je ne puis vous l'offrir ; mais sitôt qu'il sera imprimé, j'aurai soin de vous en envoyer des premiers, puisqu'il vous plaît me faire la faveur de le vouloir le lire, et je serai fort aise d'en apprendre votre jugement." Lettre à Colvius du 14 novembre 1640, AT III, 248; O VIII 2, 586; B 287).

(5) Voir à Mersenne, 11 novembre 1640 (AT III 238-239, [O VIII 1, 424] B 285) « [...] je vous envoie enfin mon écrit de *Métaphysique*... »

Descartes envoie une copie du manuscrit à Huygens et Mersenne :

- Constantin Huygens : "J'ai envoyé dès hier ma *Métaphysique* à Monsieur de Zuylichem pour vous l'adresser ; mais il ne l'enverra que dans huit jours, car je lui ai donné ce temps pour la voir. Je n'y ai point mis de titre, mais il me semble que le plus propre sera de mettre *Renati Descartes Meditationes de prima Philosophia*; car je ne traite point en particulier de Dieu et de l'âme, mais en général de toutes les premières choses qu'on peut connaître en philosophant. Vous verrez assez, par les lettres que j'y ai jointes, quel est mon dessein; et je n'en dirai ici autre chose, sinon que je crois qu'il n'y aura pas de mal, avant que de la faire imprimer, de stipuler avec le libraire qu'il nous en donne autant d'exemplaires que nous en aurons de besoin, et même qu'il les donne tout reliés ; car il n'y a pas plaisir d'acheter ses propres écrits, et je m'assure que le libraire pourra bien faire cela sans y perdre. Je n'aurai besoin ici que d'environ trente exemplaires ; pour Paris, c'est à vous de juger combien il

nous en faudra." Lettre à Mersenne du 11 novembre 1640 (AT III, 235-236; O VIII 1, 424; B 283).

- Marin Mersenne : "Je vous envoie enfin mon écrit de *Métaphysique*, auquel je n'ai point mis de titre, afin de vous en faire le parrain, et vous laisser la puissance de le baptiser (2). Je crois qu'on le pourra nommer, ainsi que je vous ai écrit par ma précédente, *Meditationes de prima Philosophia*; car je n'y traite pas seulement de Dieu et de l'âme, mais en général de toutes les premières choses qu'on peut connaître en philosophant par ordre. Et mon nom est connu de tant de gens que, si je ne voulais pas le mettre ici, on croirait que j'y entendrais quelque finesse, et que je le ferais plutôt par vanité que par modestie (3).

Pour la lettre à Messieurs de Sorbonne (4), si j'ai manqué au titre, ou qu'il y faille quelque souscription, ou autre cérémonie, je vous prie d'y vouloir suppléer, et je crois qu'elle sera aussi bonne, étant écrite de la main d'un autre, que de la mienne. Je vous l'envoie séparée du traité, à cause que, si toutes choses vont comme elles doivent, il me semble que le meilleur serait, après que le tout aura été vu par le P. Gibieuf (5), et, s'il vous plaît, par un ou deux autres de vos amis, qu'on imprimât le traité sans la lettre, à cause que la copie en est trop mal écrite pour être lue de plusieurs, et qu'on le présentât ainsi imprimé au Corps de la Sorbonne, avec la lettre écrite à la main; en suite de quoi il me semble que le droit du jeu sera qu'ils commettent quelques-uns d'entre eux pour l'examiner (6); et il leur faudra donner autant d'exemplaires pour cela qu'ils en auront besoin, ou plutôt autant qu'ils sont de docteurs (7), et s'ils trouvent quelque chose à objecter, qu'ils me l'envoient, afin que j'y réponde; ce qu'on pourra faire imprimer à la fin du livre. Et après cela il me semble qu'ils ne pourront refuser de donner leur jugement, lequel pourra être imprimé au commencement du livre, avec la lettre que je leur écris. Mais les choses iront peut-être tout autrement que je ne pense; c'est pourquoi je m'en remets entièrement à vous et au P. Gibieuf, que je prie par ma lettre (8) de vouloir vous aider à ménager cette affaire: car la *Vélimitation* que vous savez (9) m'a fait connaître que, quelque bon droit qu'on puisse avoir, on ne manque pas d'avoir toujours

besoin d'amis pour le défendre. L'importance est en ceci que, puisque je soutiens la cause de Dieu, on ne saurait rejeter mes raisons, si ce n'est qu'on y montre du paralogisme, ce que je crois être impossible, ni les mépriser, si ce n'est qu'on en donne de meilleures, à quoi je pense qu'on aura assez de peine." Lettre du 11 novembre 1640 (AT III, 239-240; O VIII 1, 424-425; B 285).

(2) Voir à Mersenne, 18 mars 1641 (AT III 340, [O VIII 1, 457] B 305) : « vous en serez, s'il vous plaît, le parrain ».

(3) L'ouvrage, comme on sait, parut sous le titre *Renati Descartes Meditationes de prima philosophia, in qua Dei existentia et animae immortalitas demonstratur*.

(4) L'*Epistola dedicatoria* (AT VII 680-686) : en se tournant vers la faculté de théologie, Descartes montrait avoir renoncé à attendre un soutien de ses anciens maîtres jésuites.

(5) Clerselier Lettres : « Le P. G. », et ailleurs.

(6) Ce qui fut fait le 1er août 1641, avec la nomination de quatre docteurs (« commissaires »), Chastelain, Potier, Hallier et Cornet, « pour examiner la *Métaphysique* de Monsieur Descartes ». Il n'en est plus question par la suite, l'assemblée du 2 septembre se bornant à approuver les conclusions de l'assemblée précédente (l'achèvement d'imprimer des *Meditationes* est du 28 août) ; voir J.-R. Armogathe, « L'approbation des *Meditationes* par la faculté de théologie de Paris 1641 », *Bulletin cartésien* XXI-XXII, p. 1-3, *Archives de philosophie* 57, 1, 1994.

(7) C'était la procédure habituelle, qu'on trouve par exemple appliquée au livre de Pierre Dabillon, *De la divinité défendue contre les athées*, Paris, 1642, approuvé quelques semaines plus tôt par la Faculté.

(8) À Gibieuf, 11 novembre 1640 (AT III, 238 l. 8-9, [O VIII 2, 792] B 284).

(9) Sur l'affaire des thèses du P. Bourdin, voir lettre 76, n. 2, p. 940 et dossier Jésuites, lettre 6, [O VIII 1, 582-591] B 261.

7. ——. 1641. *Propositio demonstrata*.

Première édition: Clerselier, III, 1667, 475-479.

AT III, 708-714 (CCXLIII bis); O III, 519-524.

La proposition démontrée est la suivante : "Étant donné une section conique quelconque et un point situé comme on veut hors de son plan, on cherche un cercle qui soit une base du cône que décrit une droite tournant, à partir du point donné comme sommet, autour de la section conique donnée; car il n'est pas douteux que la surface ainsi décrite ne soit conique, et une fois qu'on a trouvé le cercle qui est une base, cela peut se démontrer facilement."

"Entre avril et septembre 1641, Descartes rédigea (ou fit rédiger) en latin une solution à un vieux problème géométrique qui aurait été repropoé à la communauté mathématique par Desargues. Mydorge et Roberval sont censés avoir donné également chacun la leur (dont on ne sait rien aujourd'hui).

Notre Annexe X montre que Fermat s'est aussi intéressé à la question.

Le texte de cette *Propositio* a été publié pour la première fois, sous le titre indiqué plus haut, par Claude Clerselier en 1667 dans le volume III de la *Correspondance* de Descartes, pages 475-479 (en annexe à la lettre LXXXIII du 12 octobre 1648. Le manuscrit semble perdu, et nul ne sait si, par exemple, les six figures qui y sont insérées sont plus ou moins de la main de Descartes, ou fortement interprétées - et dégradés - par son éditeur.

(...)

Une nouvelle traduction française de ce texte figure dans l'Annexe I. "

André Warusfel, *L'œuvre mathématique de Descartes dans La Géométrie: de la résolution des équations algébriques à la naissance de la géométrie analytique*, thèse de doctorat, 2010, disponible en ligne à l'adresse: philosophie.ac-creteil.fr/IMG/pdf/Geometrie.pdf (pp. 576-577, notes omises).

8. ——. 1642. *Meditationes De Prima Philosophia, In quibus Dei existentia, et animae humanae à corpore distinctio,*

demonstrantur. Amstelodami: Ludovicum Elzevirium.

AT VII : deuxième édition de l'œuvre publiée en 1641.

"De quelle façon maintenant convient-il d'utiliser les éditions anciennes, soit pour le contenu du présent volume, soit pour l'établissement du texte ?

Pour le contenu, la seconde édition, celle de 1642, doit évidemment faire loi. La première édition, en effet, est incomplète : il y manque les septièmes *Objections*, qui n'avaient pas été envoyées à temps pour y figurer, et qui d'ailleurs ont été faites, non pas, comme les autres, sur une copie manuscrite adressée avant toute impression par Mersenne aux théologiens ou philosophes dont il provoquait les critiques, mais sur le volume imprimé dès le 28 août 1641, et que le P. Bourdin, auteur des septièmes *Objections*, étudia de lui-même à seule fin de le critiquer. Descartes ayant joint, en outre, à ces septièmes *Objections*, accrues de ses propres Notes, la Lettre qu'il écrivit ensuite au P. Dinet, nous ne les séparerons pas non plus dans le présent volume." (AT VII, *Avertissement* à l'édition de 1983, p. XI).

"La différence la plus notable entre la première et la deuxième édition "est un assez long passage qui termine les *Réponses* de Descartes aux quatrièmes *Objections* d'Antoine Arnauld : ce passage très important sur l'Eucharistie, envoyé d'abord en 1640 à Mersenne, n'avait point paru dans la première édition, en 1641, sans doute afin d'obtenir plus aisément l'approbation de la Sorbonne ; il fut rétabli naturellement dans l'édition de 1642 (voir ci-après, p. 252, l. 22, à p. 256, l. 8)." (AT VII, *Avertissement* à l'édition de 1983, p. XIII).

9. ———. 1642. [*Epistola*] *Ad Reverendo Patri Dinet*.
Amstelodami: Ludovicum Elzevirium.

AT VII, 563-603; B Op. I 1426-1475.

Traduction française par Claude Clerselier dans la deuxième édition des *Méditations Métaphysiques* (1661).

Nouvelle traduction par Theo Verbeek dans : René Descartes et Martin Schoock, *La Querelle d'Utrecht*, Paris: Les impressions

nouvelles, 1988, pp. 131-151.

Table des matières : Jean-Luc Marion : Préface 7; Theo Verbeek: Introduction 19; Narration Historique de la manière dont la philosophie nouvelle a été soutenue d'abord, puis abolie, précédée du Témoignage de l'Académie d'Utrecht 71; René Descartes : Lettre à Dinet 125; Martin Schoock : L'Admirable Méthode 153; René Descartes : Lettre à Voet 321; René Descartes : Lettre Apologétique aux Magistrats d'Utrecht 401; Theo Verbeek : Notes 439-540.

Sur l'histoire de la *Querelle*, voir l'*Introduction* de Theo Verbeek, pp. 19-66.

Theo Verbeek a traduit en français les pièces principales de la controverse entre Descartes et Gijbert Voet (1589-1676) dans *La Querelle d'Utrecht*, cit. :

"...d'abord la *Lettre au Père Dinet*, qui, publiée en appendice à la seconde édition des *Meditationes* (1642) déclenche, en mentionnant les attaques de G. Voet contre Regius et Descartes, un conflit ouvert ; ensuite la réplique de Schoock, suscitée par G. Voet, sous le titre de *La Méthode Admirable de la nouvelle philosophie cartésienne* (1643) qui attire, en retour, la *Lettre à G. Voet* où, pour la première fois (mai 1643), Descartes accepte le combat direct ; la réponse prendra l'aspect d'une *Narration historique* (octobre 1643), suivant de peu un arrêt pris par les magistrats d'Utrecht contre Descartes (13 septembre 1643), précédant aussi de peu une intervention en faveur de Descartes de M. de la Thuillière, Ambassadeur de France. La querelle fut cependant assez vive pour que Descartes adresse encore, un an et demi plus tard, une *Lettre apologétique aux Magistrats d'Utrecht* (juin 1645) et tienne à la publier en mars 1648. L'importance du dossier se marque au nombre des pièces qui le composent (et de nombreuses lettres pourraient s'y adjoindre), mais aussi au temps que lui consacre Descartes — pourtant si soucieux de son loisir et de son repos : pendant près de six ans, tout son temps de travail (et il s'agit des *Principia* puis des *Passions de l'âme*) sera conquis sur la distraction et l'inquiétude d'une polémique de plus en plus âcre et dangereuse. Il paraît donc impossible, au simple vu de ces

titres et de ces dates, de sous-estimer, encore plus d'ignorer, un épisode aussi important et importun de la vie de Descartes. Le travail de Theo Verbeek se justifie donc entièrement, ne fût-ce que d'un point de vue historique ; il contribuera, comme un document indispensable, à la connaissance du premier cartésianisme hollandais."

(Jean-Luc Marion, *Préface à La Querelle d'Utrecht*, p. 8).

"Les Jésuites semblaient être un peu plus partagés que les pères de l'Oratoire sur la philosophie de M. Descartes ; et la diversité des opinions était grande dans leur Compagnie sur ses *Méditations métaphysiques*. Les uns se contentaient de goûter ses principes et ses raisonnements, ou de louer ses bonnes intentions et ses efforts, sans aller au-delà, comme le P. Noël, le P. Fournier, le P. J. François, le P. Grandamy, le P. Dinet, qui était provincial de France à Paris, le P. Charles son parent, qui était assistant du général de la Compagnie de Rome. Le P. Dinet qui avait été autrefois son préfet à La Flèche, ayant fait un voyage à Rome sur la fin de la même année [1642], ne manqua point d'entretenir le P. Charlet du livre de ses *Méditations*; et il voulut donner avis au philosophe de tout ce qui s'était dit de plus obligeant entre eux à son sujet, par une lettre qu'il lui en écrivit de Rome vers le commencement de l'avent. M. Descartes crut devoir faire part de la joie qu'il en reçut au P. Mersenne dans le même temps des étrennes de l'année suivante. Il lui marqua aux termes du P. Dinet l'estime que le P. Charlet faisait de ses études, et qu'il avait pour sa personne ; croyant que ce père n'attendait à se déclarer ouvertement pour sa philosophie qu'après la publication de ses *Principes*."

Baillet II, chapitre VIII, 159-160.

"De plus, je ne voudrais pas qu'on me croie sur parole lorsque je parle de la vérité des écrits que je promets, mais qu'on en juge par les *Essais* que j'ai déjà donnés. Car loin d'y avoir expliqué une ou deux questions, j'en ai discuté des centaines qui auparavant n'avaient pas été traitées de la sorte. Et quoique beaucoup de personnes aient lu mes écrits d'un œil jaloux et aient fait de leur mieux pour les réfuter, personne, autant que je

sache, n'a été à même d'y trouver autre chose que de la vérité. Qu'on fasse la liste de toutes les questions qui, depuis tant de siècles où il y a des philosophes, ont été résolues par leur moyen : on n'en trouvera probablement ni beaucoup, ni de très importantes. J'ose même prétendre qu'il n'y a jamais eu de question dont je ne pourrais montrer que la solution qu'on en a donnée à partir des principes propres à la philosophie péripatéticienne est fautive et mal fondée. Qu'on en fasse l'épreuve : qu'on les propose, non pas toutes il est vrai, car je ne crois pas qu'elles valent la peine d'y employer beaucoup de temps, mais quelques-unes des plus spéciales. On verra que je tiendrai mes promesses (42). Ma seule restriction, que je fais pour prévenir tout sujet de chicane, est que si je dis "principes propres à la philosophie péripatéticienne", je ne veux pas parler de ces questions dont la solution est tirée soit de l'expérience commune de tous les hommes, soit de la considération des figures et du mouvement qui est le fait des mathématiciens, soit enfin de ces notions métaphysiques qui sont généralement reçues et que j'admets comme les autres : on les trouvera dans mes *Méditations*.

Qu'on me permette encore ce qui paraîtra un paradoxe : en tant que cette philosophie est jugée péripatéticienne, et différente des autres, elle ne contient rien qui ne soit pas nouveau ; et la même chose qui ne soit pas ancienne. Car en ce qui concerne les principes, je n'admets que ceux qui, jusqu'ici, ont été partagés par tous les philosophes et qui de ce fait sont les plus anciens de tous. Et en ce qui concerne ce que j'en déduis par après, je ne fais que montrer ce que contenaient ceux-là d'une façon implicite, mais cela d'une façon tellement claire qu'on voit que cela aussi, se trouvant naturellement dans l'esprit des hommes, est en réalité très ancien. D'autre part, les principes de la philosophie ordinaire étaient de toute façon nouveaux à l'époque où ils furent inventés par Aristote ou par d'autres. Ils ne sont pas maintenant meilleurs qu'ils n'étaient jadis. On n'en déduit rien qui ne soit pas controversé, et qui ne puisse être changé ou adapté à la façon d'une École ou au gré du premier philosophe venu. Par conséquent il n'y a rien qui soit plus nouveau, puisqu'on la renouvelle tous les jours (43)." (*Lettre à*

Dinet, traduction de Theo Verbeek, *La Querelle d'Utrecht*, cit., p. 140, AT VII, 580).

(42) Voir le commentaire de Schoock, *Admiranda Methodus*, section II chap. 4.

(43) Voir pour tout ce passage, d'une part ce que dit Descartes dans son Discours (VI, AT VI, 77 ; [O III, 132-133]), d'autre part le commentaire mordant de Schoock dans l'*Admiranda Methodus*, section II, chap. I. C'est à partir d'une notion pareille que certains cartésiens amorceront la "philosophia novantiqua", synthèse originale d'aristotélisme et de cartésianisme ; voir A. Heereboord, *Meletemata Philosophica* (Lugd. Bat., 1654) ; *Philosophia Naturalis cum commentariis Peripateticis* (Lugd. Bat., 1663) ; J. de Raei, *Clavis Philosophiae Naturalis Aristotelico-Cartesianae* (Lugd. Bat., 1654) ; *De Sapientia Veterum* (Amstel., 1669) ; et en général J. Bohatec, *Die Cartesianische Scholastik in der Philosophie und reformierten Dogmatik des 17. Jahrhunderts*, Leipzig, 1912.

10. ——. 1642. *Excerpta P. Kircher, De magnete*.

AT XI, 635-639; B Op. II 1386-1389.

Annotations à l'œuvre d'Athanasius Kircher (1602-1680) *De magnete sive de arte magnetica* Romae: L. Grigarani, 1641.

Lettre du 5 janvier 1643 à Constantin Huygens : "... j'espère qu'elle ne retardera point l'impression de ma Philosophie, en laquelle j'approche de l'endroit où je dois traiter de l'aimant (8). Si vous jugez que le gros livre que vous avez de cette matière, duquel je ne sais point le nom (9), m'y puisse servir, et qu'il vous plaise de me l'envoyer, je vous en aurai obligation" (AT III 801; O VIII 2, 107; B379)

(8) Il s'agit des §§ 133-183 des *Principia* IVa (AT VIII-1 275-311).

(9) Le *Magnes* d'Athanasie Kircher (Rome, 1641, 916 p. in-4° ; Cologne, 1643, 797 p. in-4°); Huygens l'envoie à Descartes avec sa réponse du 7 janvier 1643 et un commentaire acerbe contre les jésuites : « Voici d'ailleurs l'Aimant de Kircherus, où vous trouverez plus de grimace que de bonne étoffe, qui est

l'ordinaire des jésuites. Ces écrivains pourtant vous peuvent servir en des choses *quæ facti sunt, non juris* [qui sont d'ordre du fait et non du droit]. Ils ont plus de loisir que vous à se pourvoir d'expériences : on se peut prévaloir au besoin de leurs rapports » (AT III 802, B380).

11. ———. 1643. *Epistola Renati Des-Cartes Ad celeberrimum Virum D. Gisbertum Voetium*. Amstelodami: Ludovicum Elzevirium.

La première édition est suivie de la traduction néerlandaise : *Brief van Rene Des Cartes aen den vermaerden D. Gisbertus Voetius*, Amsterdam 1643.

AT VIII-2, 1-194; B Op. I 1493-1691.

Traduction de Victor Cousin dans son édition des *Œuvres de Descartes*, vol. XI, Paris: Levrault, 1825, pp. 3-198 ; cette traduction a été reprise par Theo Verbeek dans *La Querelle d'Utrecht*, Paris: Les impressions nouvelles, 1988, pp. 327-399, avec l'omission de la sixième partie.

"C'est ainsi que, croyant écrire une lettre, l'abondance de la matière a produit un livre. Je l'ai divisé en neuf parties, afin que chacune pût se lire à part, et peut-être avec moins d'ennui.

Dans la première, je réponds à l'introduction du livre sur la *Philosophie Cartésienne* [1], dans laquelle l'auteur a voulu faire l'énumération sommaire de mes vices.

Dans la seconde, je récompense M. Voet en racontant quelques-unes de ses actions qui m'ont d'abord fait connaître ses vertus.

Dans la troisième, je parcours le premier et le second chapitre du même livre sur la *Philosophie Cartésienne*.

Dans la quatrième, j'expose mon sentiment sur l'usage des livres et la doctrine de Voet.

Dans la cinquième, je traite brièvement des autres chapitres de ce livre, c'est-à-dire du reste des deux premières sections.

Dans la sixième, j'examine le livre de la *Confrérie de la Vierge*.

Dans la septième, je considère les mérites de M. Voet, et l'exemple de charité chrétienne et de probité qu'il a donné dans cet ouvrage.

Dans la huitième, je reviens au livre sur la *Philosophie Cartésienne*, et j'en réfute la préface (que je n'avais pas encore vue) et la troisième section.

Dans la neuvième, je réponds à la quatrième et dernière section du même livre, et je montre en même temps que ses auteurs sont coupables de la calomnie la plus odieuse et la plus inexcusable."

(AT VIII-2, 11-12; *La Querelle d'Utrecht*, cit., p. 330).

[1] Martin Schoock (1614-1669, élève de Voetius), *Admiranda Methodus Novae Philosophiae Renati De Cartes*, Ultrajecti [Utrecht] : ex officina Joannis van Waesberge, 1643 (traduction française par Theo Verbeek, dans *La Querelle d'Utrecht*. cit., pp. 157-320).

"Il paraît d'abord incontestable que, dans ses trois textes polémiques, Descartes retrouve et parfois développe certaines des thèses caractéristiques de sa philosophie.

1. Il invoque, contre Voet, la *bona mens* (AT VIII-1, 45, ll. 12-13), pour la mettre en équivalence avec l'*humana sapientia* (43, ll. 15-17), sur le modèle de la *Regula I* (AT X, 359, l. 6 - 360, l. 15).

2. Cette *bona mens* définit à son tour le domaine de la lumière naturelle, où la théologie révélée ne peut intervenir (AT VII, 598, ll. 5-11), conformément à une distinction déjà fixée par la *Regula III* (AT X, 370, ll. 16-25) et le *Discours de la Méthode* (AT VI, 28, l. 16 [O III, 100]) : ce départ entre les deux lumières, naturelle (raison) et révélée (foi, volonté), devient d'ailleurs aussitôt un argument contre ceux qui prétendent censurer des thèses philosophiques au nom de l'autorité religieuse ; car Voet passe d'une *facultas* (théologie) à une autre (médecine ou philosophie) par une faute de méthode, avant tout abus de pouvoir : "... censuram tuam theologicam absque ullo rationis praetextu ad quaestiones pure philosophicas

extendere volueris..." (*) (VIII-2, 132, ll. 17-19). La *ratio naturalis* (51, l. 31) régente absolument le domaine qu'elle suffit à définir (3). Ainsi, face au décret de l'Université qui impose aux professeurs en débat théorique d'être "...contentos modica libertate disserendi in singularibus nonnullis opinionibus..." (AT VII, 593, ll. 11-12), de se contenter d'une liberté restreinte de discussion sur plus d'une opinion, il faut revendiquer sans concession la liberté philosophique, absolue dans les limites de la raison : "... liberum enim semper fuit philosophari." (AT VIII-2, 3, ll. 11-12).

3. Par suite, Descartes mentionne aussi ici sa *Methodus ad quaerendam veritatem* (53, 4-5), dans les termes mêmes de la *Regula IV*, qu'il oppose, comme le faisaient les *Regulae III* et *X*, à la logique de l'École : la *bona mens* ne peut s'exprimer en syllogismes (43, 17 sq.), sauf à sombrer dans la *Sophistarum Dialectica* (46, 16), "...puerilis illa Dialectica, cujus ope olim Sophistae, nulla scientiam habentes, de qualibet re copiose disserebant ac disputant"*** (50,19-22). Et, conformément à la *Regula IV*, la méthode ne disqualifie les figures du syllogisme que parce qu'elle utilise, comme autant de modèles de la vérité, les figures mathématiques (AT VII, 596, 19). Aucune "magie" (ibid.) ne peut lui être honnêtement opposée, puisque c'est elle qui élimine la magie des formes substantielles (4). Il convient aussi de noter d'autres thèses, directement liées aux *Meditationes*, dont elles offrent un commentaire indispensable. Ainsi la réponse à G. Voet nous donne-t-elle successivement une nouvelle définition de l'innéisme comme ce que "...ex proprii ingenii viribus cognoscere possimus" (AT VIII-1, 166, 24-25, et 166, 15-167, 14), une remarquable définition de *ens* "...ab essendo sive existendo..." (60, 13), une très éclairante distinction entre le *verus Deus* et l'*aliquis deceptor summe potens* de la *Meditatio I* (60, 16-26) (5). Enfin la cause habituelle de l'erreur trouve, dans le même texte, une détermination temporelle, qui anticipe sur la question de la liberté d'indifférence : "Si vero loquimini de diversis temporibus, quia ille qui nunc habet veram fidem, vel evidentem alicujus rei naturalis scientiam, potest alio tempore illam non habere : hoc inferi tantum infirmitatem humanae

naturae, quae semper iisdem cogitationibus non immoratur, non autem quod in ipsa scientia ullum dubium debeat esse" (AT VIII-1, 170, 8-14)***. Quelques mois plus tard, nous retrouvons en effet cet argument, d'abord dans la discussion avec le P. Mesland — " la nature de l'âme est de n'être quasi qu'un moment attentive à la même chose" —, puis dans l'entretien avec la princesse Elisabeth : "... nous ne pouvons être continuellement attentifs à la même chose, quelque claires et évidentes qu'aient été les raisons qui nous ont persuadé ci-devant quelques vérités..." (6) ; ce thème, qui provient certes de la *Meditatio V* (AT VII, 69, 18-20), trouve donc dans la polémique avec Voet un relais sur le chemin de son ultime développement. Ainsi, ces écrits de circonstances appartiennent-ils pourtant indiscutablement à l'œuvre théorique de Descartes : ils en mobilisent explicitement maints thèmes récurrents, qu'ils amplifient et qui, en retour, les confirment (7)." (Jean-Luc Marion, *Préface à La Querelle d'Utrecht*, cit., pp. 9-10)

(*) "...comment vous avez voulu étendre, sans l'ombre d'une raison, votre censure théologique à des questions purement philosophiques..."

(**) "cette Dialectique puérile à l'aide de laquelle les anciens Sophistes, sans posséder aucune instruction solide, dissertaient et disputaient avec une admirable faconde sur n'importe quel sujet"

(***) "Si vous voulez parler d'instantants différents, entendez-vous que celui qui a, maintenant, une foi véritable ou une connaissance évidente de quelque objet naturel pourrait ne pas l'avoir à un autre moment."

(3) G. Voet ne cesse, au contraire, de passer illégitimement d'un domaine à l'autre (AT VIII-1, 32,12-13 ; 33,12-18 ; 75,4-9; 88, 8-12 ; 132,15-20 ; 133,17-22 ; 242,18-243,14). Lorsque Descartes lui reproche d'usurper le rôle d'un prophète - "Sic ergo edam Voetius inter Prophetas" (103,27) -, il reprend en fait la mise en garde du *Discours de la Méthode* à propos de la théologie, pour laquelle "...il est besoin d'avoir quelque extraordinaire assistance du ciel, et d'être plus qu'homme." (D.M., AT VI, 8,

16-17 [O III, 86]), et dont il faut s'abstenir "...nisi quatenus modo extraordinario et supernaturali a Deo impellebantur" (AT VIII-1, 124, 13-14). Mais "...omnes homines sumus" (VIII-1, 91, 28), "...des hommes purement hommes..." (D.M., AT VI, 3, 21-22 [O III, 82]).

(4) Les formes substantielles sont discutées, durant la querelle d'Utrecht, en AT VII, 587, 6 sq., et AT VIII-1, 32, 10 ; 26,13 ; et 62, 18.

(5) Il faut insister sur l'importance de cette remarque pour l'interprétation des définitions successives de Dieu dans les *Meditationes* (voir notre analyse dans *Sur le prisme métaphysique de Descartes*, Paris, 1986, § 16, p. 223 sq.).

(6) Voir successivement *À Mesland*, 2 mai 1644, AT IV, 116, 6-8 [O VIII 1, 612; B 454], et *À Élisabeth*, 15 septembre 1645, AT IV 295, 24-28 [O VIII 2, 228; B 521].

(7) On relèvera aussi l'étonnante validation du cogito dans l'hypothèse où l'on conclurait seulement à *sibi videri existere* (AT VIII-1, 165, 11 - 166, 6).

12. ——. 1644. *Specimina philosophiae: seu Dissertatio de methodo rectè regendae rationis et veritatis in scientiis investigandae: Dioptrice, et Meteora*. Amstelodami: Ludovicum Elzevierium.

"Ex Gallico translata, et ab Auctore perlecta, variisque in locis emendata."

AT VI, 517-720.

Édition critique avec une introduction en anglais par Corinna Lucia Vermeulen, *René Descartes, Specimina philosophiae. Introduction and Critical Edition*, Utrecht, "Quaestiones Infinitae", volume 53, (2007).

"La présente édition critique remplace la seconde partie du volume VI de l'édition d'Adam et Tannery, très insuffisante et manifestement constituée avec peu de soin : C. Vermeulen y a distingué plus d'une centaine d'erreurs (cf. p. 73)." Kavier Kieft, *Bulletin cartésien XXXVIII* (2009), *Archives de philosophie*, 2010/1 (Tome 73), p. 33.

"Ces essais, que j'ai moi-même écrits en français [...] ont été, quelque temps après, traduits en latin par un de mes amis ; la version m'a été transmise afin que je puisse changer, à discrétion, tout ce qui ne me plaisait pas [...] ce que j'ai fait en plus d'un endroit ; mais, peut-être, en ai-je laissé passer beaucoup d'autres ; et ces derniers seront facilement reconnaissables, par rapport aux autres, parce que, presque partout, le traducteur fidèle s'est efforcé de faire du mot à mot, tandis que j'ai souvent changé le sens des phrases, et j'ai cherché à corriger non pas ses mots, mais mon sens." (Note de Descartes après l'*Index*, traduction par Giulia Belgioioso).

"Le sieur Elzevier voyant avancer son impression des *Principes* de M. Descartes vers la fin fit solliciter l'auteur de lui permettre d'imprimer en même temps la traduction latine de ses *Essais*, après laquelle les étrangers qui n'avaient point l'usage de la langue française aspiraient depuis la première édition de ces *Essais*. Cette traduction avait été faite depuis peu de mois par M. [Étienne] de *Courcelles*, l'ancien ministre et théologien français, retiré en Hollande comme M. Rivet, M. Desmarets, M. Blondel, M. de Saumaise, et plusieurs autres savants calvinistes de France. M. de Courcelles avait embrassé le parti des arminiens, et avait même donné lieu à quelques zélés gomaristes de le soupçonner de socinianisme. Il était originaire d'Amiens en Picardie, mais il était né à Genève le 2 de mai 1586. Après avoir été quelque temps ministre des réformés en France, il avait passé en Hollande, et avait succédé à Simon Episcopius dans la chaire en théologie des remontrants à Amsterdam, où il eut Arnaud de Poelenbourg pour successeur, | et après lui Philippe de Limborch. Il mourut à Amsterdam le 22 de mai de l'an 1659."

(...)

"Il mit en latin le *Discours de la méthode*, la *Dioptrique*, et le traité des *Météores*. Mais il ne toucha point à la *Géométrie*, soit qu'il la jugeât au-dessus de sa portée, soit qu'il eût avis que M. Schooten se fût chargé de la traduire.

M. Descartes, ayant donné son consentement pour l'impression de la traduction des trois traités, fut prié de la revoir

auparavant, pour juger de sa conformité avec son original. Il ne refusa point d'user de son droit d'auteur, et se servit de cette occasion pour y faire quelques changements, comme nous avons remarqué qu'il fit à ses *Méditations* sur la traduction française de M. le duc de Luynes. Ce fut donc sur ses propres pensées qu'il fit des corrections, plutôt que sur les paroles du traducteur latin, à qui il rendit le témoignage d'avoir été fidèle et scrupuleux, jusqu'à s'efforcer de rendre le sens de l'auteur mot pour mot. Ce témoignage de M. Descartes en faveur de M. de Courcelles se trouvant à la tête de la traduction latine a dû satisfaire toutes les personnes raisonnables, qui auraient été en peine de savoir la raison des différences qui se trouvent entre le français et le latin; et il peut servir à condamner la mauvaise foi du sieur Jacques de Rèves, dit *Revius*, (*) qui à prétendu faire un crime d'infidélité à M. de Courcelles de tous ces changements, et qui a fait injure à M. Descartes en soutenant que tous ces endroits n'exprimaient point sa pensée." (Baillet II, chapitre XIV, 213-215.)

(*) [Jakob Reefsens (1586 - 1658). Voir l'édition moderne de son œuvre éditée par Aza Goudriaan: *Jacobus Revius, A Theological Examination of Cartesian Philosophy. Early Criticisms (1647)*, Leyden, Brill 2002.]

"Le caractère propre du *Discours de la méthode* peut se rechercher aussi dans une deuxième direction : les conditions de sa réception. En effet le " projet " implique, en 1637, l'ambition d'une réception, d'autant plus qu'il s'agit d'une très large réception pour laquelle Descartes renonce au latin et se confie au français : « Et si j'écris en français, qui est la langue de mon pays, plutôt qu'en latin, qui est celle de mes précepteurs, c'est à cause que j'espère que ceux qui ne se servent que de leur raison naturelle toute pure, jugeront mieux de mes opinions, que ceux qui ne croient qu'aux livres anciens » (*Discours de la Méthode*, [AT VI] 77, 24-30 [O III, 97]).

(...)

Lors de sa première parution, rien ne laisse supposer que l'usage du français en ait accru la diffusion, bien au contraire. Ainsi, selon A. Baillet, c'est son éditeur lui-même qui suscita, en

1644, une traduction latine du *Discours* et des *Essais* (amputés de la *Géométrie*), les fameux *Specimina*.

(...)

On ne saurait mieux avouer que le vrai public scientifique - " les étrangers " -, que l'éditeur, mieux peut-être que l'auteur, connaît et devine, n'avait pas encore lu le *Discours* et les thèses avant 1644. Bref, s'il fallait encore «... traduire les *Essais* de sa philosophie en une langue qui put contribuer à rendre toute la terre cartésienne », c'est que, justement, le texte français n'avait pas encore suffi à rendre toute cette terre cartésienne. Cet aveu en demi-teinte trouve une indiscutable confirmation dans le nombre comparé des différentes éditions ; alors qu'entre 1637 et la fin du siècle, le *Discours* et les *Essais* ne comptent, en français, que cinq éditions (Leyde 1637 ; Paris 1657, 1658, 1668 deux fois), les *Specimina*, à partir de 1644, en connaissent dix (Amsterdam 1644, 1650, 1656 deux fois, 1664, 1672, 1685, 1692 et Francfort s/M. 1692) ; ainsi les *Specimina* ne font que retrouver l'étiage habituel des autres latins de Descartes : les *Meditationes* reçoivent quatorze éditions jusqu'en 1709 (tandis que leur traduction française n'en offre que quatre) (2). La publication du *Discours* remonte certes à 1637, mais l'on peut soutenir l'hypothèse que sa lecture et sa réception ne commencent vraiment qu'en 1644, avec les *Specimina Philosophiae seu Dissertatio de Methodo Recte regendae rationis et veritatis in scientiis investigandae ; Dioptrice et Meteora. Ex Gallico translata et ab Auctore perlecta, variisque in locis emendata*.

Cette double publication, et donc le retard qu'elle impose à la réception du *Discours* de la méthode et des *Essais*, produit plusieurs paradoxes qui ouvrent autant de questions à la recherche. - Les *Specimina* n'offrent pas seulement une simple traduction latine d'un texte français de référence : ils se donnent comme une édition révisée par l'auteur et par lui ?) corrigée, *ab Auctore perlecta, variisque in locis emendata*. Sans surévaluer la portée de cette indication, que son éditeur a parfaitement pu introduire sans l'avis ou la collaboration de Descartes, il faut relever certaines modifications et ajouts que

l'on peut, raisonnablement, attribuer à l'auteur ; ne serait-ce, par exemple, que la célèbre définition marginale de l'idée comme «... omni re cogitata, quatenus habet tantum esse quoddam objectivum in intellectu » [AT VI, 559]. L'étude systématique des variantes entre le texte français et sa version en latin n'a été, jusqu'ici, qu'esquissée (en particulier par E. Gilson) ; elle seule déterminera quel texte a effectivement été lu par le public philosophique." (Jean-Luc Marion, *Ouverture*, dans: Henry Méchoulan (éd.), *Problématique et réception du Discours de la méthode et des Essais*, Paris: Vrin 1988, pp. 18-20)

(2) Nous suivons ici les indications fournies par A. J. Guibert, *Descartes. Bibliographie des œuvres de Descartes publiées au XVIIème siècle*, Paris, C.N.R.S., 1976. Sur ces questions, on tiendra compte des remarques de P. Costabel, " Propos de bibliographie matérielle. Editions et émissions des œuvres de Descartes de 1657 à 1673 ", in *Bulletin Cartésien V, Archives de Philosophie*, 1976, p. 445-456.

13. ——. 1644. *Cartesius (Ms. de Leibniz)*.

Bibliothèque Royale de Hanovre. MS. de Leibniz. Catalogué par Eduard Bodemann, p. 54 de son ouvrage cité p. 549 ci-avant (*), note a avec l'indication : « *Bl. 19-22, ohne Uebersch., fehlerhafte, z. Th. von L. corrig. Abschr.* ».

(*) [*Die Leibniz-Handschriften der Kôniglichen ôffentlichen Bibliothek zu Hannover*, von Dr. Eduard Bodemann (Hannover und Leipzig, 1895)]

AT XI, 647-653; B Op. II, 1394-1405.

Édition critique par Vincent Carraud: "Cartesius", *Bulletin Cartésien XV, Archives de Philosophie*, 1985, 3, pp.1-6;
"Cartesius, ou les pilleries de Mr. Descartes" présentation, traduction et annotation par Vincent Carraud, *Philosophie*, mai 1985, pp. 3-19.

Cette copie MS. remplit deux grandes feuilles, dont chacune est pliée en deux : soit en tout quatre feuillets, ou huit pages d'écriture. Elle comprend deux parties bien distinctes, dont la seconde seule porte un titre : *Annotationes quas videtur D. des*

Cartes in sua Principia Philosophiae scripsisse. Cette seconde partie commence au tiers environ de la 6e page, et continue jusqu'à la fin de la 8e. Tout ce qui précède, pp. 1, 2, 3, 4, 5 et 6 (premier tiers de celle-ci), se compose de pensées ou réflexions détachées, dont chacune est séparée de la suivante par un signe : deux petits traits horizontaux, barrés de deux petits traits verticaux. (Le même signe sépare encore la seconde partie de la première.) Cette première partie porte seulement en tête le nom, écrit après coup et au crayon, de *Cartesius*. Les huit pages sont de la même écriture, qui n'est plus celle de Leibniz ; mais celui-ci a fait, de sa main, quelques corrections à des endroits fautifs. Le fait qu'il ait corrigé lui-même ce texte, montre qu'il y attachait une certaine importance, et qu'il le croyait sans doute de Descartes.

Est-ce bien cependant un texte authentique de notre philosophe ? Nous n'oserions l'assurer. Toutefois, dans la première partie, la date d'une observation astronomique, *20 sept. 1642* (p. 650), serait un argument favorable, et de même quelques renvois aux *Principes*, dans la seconde partie. (Voir ci-avant, p. 545.)" (AT XI, p. 647).

"Cette série de notes, découverte tardivement, constitue une énigme pour les chercheurs. Geneviève Rodis-Lewis a plaidé énergiquement en faveur de son authenticité (166), verdict que Pierre Costabel confirme sans hésitation (167), alors que Vincent Carraud y voit un assemblage éclectique et semble incliner à croire à une série de notes de lecture que Descartes aurait prise sur d'autres auteurs (168), plutôt que vers un ensemble de pensées appartenant au corpus philosophique cartésien." (Vlad Alexandrescu, *Croisées de la Modernité. Hypostases de l'esprit et de l'individu au XVIIe siècle*, Bucarest: Zeta Books 2012, p. 110)

"Avant d'aborder les points les plus originaux de ces pages, il convient donc de se demander quelle pourrait être leur provenance.

Le caractère fragmentaire des pensées, leur insertion parmi certaines observations scientifiques répondent bien au nom de miscellanea qu'emploie Leibniz, pour évoquer les registres que Clerselier lui a communiqués, ainsi qu'à « Mons. de Tschirnhaus » (5). Or Tschirnhaus est l'auteur de cette copie *Cartesius*, revue et corrigée de la main de Leibniz (6). Leibniz parle de « deux volumes de miscellanea, reliés l'un en in-4°, l'autre en in-8°, où il y a beaucoup de choses physiques, des expériences et observations anatomiques de Mons. des Cartes, quelques expériences sur les métaux, et en fait de médecine (... lacune). Je m'étonne pourtant, ajoutait-il, qu'il n'y a rien davantage de cette nature » (7). Les indications de Leibniz correspondent parfaitement à la description du « registre en petit

quarto », coté E dans l' « Inventaire succinct des Ecrits qui se sont trouvés dans les coffres de Monsr. Descartes après son décès à Stockholm en feb. 1650 » (8) : tableau des angles de réfraction selon Vitellio, poids des métaux, remarques sur l'aimant, et plusieurs séries de feuillets sur la génération des animaux, les « remèdes et vertus des médicaments », et « prenant ledit registre de l'autre côté, il y a seize pages d'observations sur la nature des plantes et des animaux ». " pp. 213-214 (Geneviève Rodis-Lewis, "Cartesius", *Revue philosophique de la France et de l'Étranger*, 2, 1971, pp. 211-220)

"Une note du registre *Cartesius* (AT XI 650/BC XIV, Liminaire 1) relate une expérience d'observation d'étoile fixe en date de septembre 1642." Sur cette note voir: Édouard Mehl, "Note complémentaire sur une observation astronomique et la recherche d'une parallaxe stellaire (septembre 1642)", dans *Bulletin cartésien XLV* (2014), *Archives de philosophie*, 2016/1 (Tome 79), pp. 189-193.

14. ———. 1644. *Principia philosophiae*.

AT VIII-1, 1-329; la première édition est précédée d'une lettre-dédicace à la princesse Élisabeth de Bohême (1618-1680); B Op. 1706-2211.

Traduction : *Principes de la philosophie, Première partie, sélections d'articles des parties 2, 3, et 4 et Lettre-Préface*, Texte latin de Descartes. Texte français de l'abbé Picot.

Traduction nouvelle par Denis Moreau. Introduction et notes par Xavier Kieft, Paris: Vrin 2009.

Descartes utilise pour la première fois l'expression "principes de ma philosophie" dans la lettre du février 1634 à Mersenne : "Pour la cause qui fait cesser le mouvement d'une pierre qu'on a jetée, elle est manifeste ; car c'est la résistance du corps de l'air, laquelle est fort sensible. Mais la raison de ce qu'un arc retourne étant courbé est plus difficile, et je ne la puis expliquer sans les principes de ma Philosophie, desquels je pense être obligé dorénavant de me taire." (AT I, 287; O VIII 1, 112; B 65).

"Que signifie « philosophie » ? Qu'est-ce qu'un cours de philosophie ? Comme l'indique la *ratio studiorum* des collèges jésuites, et plus généralement la très grande majorité des cours de philosophie, la philosophie comprend quatre parties distinctes : la logique, la physique, la métaphysique et la morale (2). Témoignent de la quadripartition de la philosophie le cours que Descartes a choisi de lire en 1640, celui d'Eustache de

Saint-Paul, *Summa Philosophiae quadripartita de rebus Dialecticis, Moralibus, Physicis et Metaphysicis* (Paris, 1609) (3) ou encore, parmi bien d'autres en latin, le premier cours complet de philosophie en langue française, celui de Scipion Dupleix : *Corps de Philosophie contenant la Logique, la Physique, la Métaphysique et l'Ethique* (4). La philosophie dont Descartes livre les *Principia* désigne donc, conformément à son projet initial, le « corps de philosophie tout entier » (AT IX-2, 17 ; Alquié III, 782). C'est pourquoi Descartes peut l'appeler sa Philosophie (5) ou sa *Summa philosophiae* (6), selon une appellation également scolaire. Une somme ne désigne pas un traité complet et qui descend dans les détails (c'est-à-dire « approfondit ») (7), mais au contraire une présentation d'ensemble, sommaire au sens propre, un abrégé. Au demeurant, le texte de la Lettre-préface aux *Principes* attribue-t-il à la philosophie la même étendue et une répartition analogue, selon la comparaison célèbre : « Ainsi toute la philosophie est comme un arbre, dont les racines sont la Métaphysique, le tronc est la Physique, et les branches qui sortent de ce tronc sont toutes les autres sciences, qui se réduisent à trois principales, à savoir la Médecine, la Mécanique et la Morale » (AT IX-2, 14 ; Alquié III, 779-780)." (Frédéric de Buzon, Vincent Carraud, *Descartes et les « Principia » II. Corps et mouvement*, Paris: Presses universitaires de France 1994, p. 10)

(2) Voir la présentation donnée par Etienne Gilson dans ses *Commentaires au Discours de la méthode*, Paris, Vrin, 6e éd., 1987, p. 117-119.

(3) Plusieurs fois réédité jusqu'en 1626 : voir AT III, 196, et les art. Eustache de Saint-Paul (par R. Ariew et F. Ferrier) du *Dictionnaire des philosophes* et de l'*Encyclopédie philosophique*, Paris, PUF, 1993 et 1992. Pour Abra de Raconis, *Totius philosophiae, hoc est Logicae, Moralis, Physicae et Metaphysicae... tractatio*, voir AT III, 236. Pour les Conimbres, Tolet et Rubius, voir AT III, 194-196, et Etienne Gilson, *Index scolastico-cartésien*, Paris, Vrin, 1979, p. VIII-IX.

(4) Titre de 1632, qui reprend les éditions des parties séparées de 1600, 1603, 1607 et 1610, souvent rééditées jusqu'en 1645. La collection du « Corpus des œuvres de philosophie en langue française » (Paris, Fayard) a publié ce *Corps de philosophie* (la logique, la physique, la métaphysique et l'éthique sont parues respectivement en 1984, 1990, 1992 et 1994, les trois dernières éditées par Roger Ariew). Deux motifs au moins rendent ces cours tout à fait intéressants. D'une part, ils permettent de prendre conscience de la nouveauté de la physique cartésienne et de son intérêt philosophique propre — tout en mesurant le très grand nombre de questions que Descartes ne traite pas. D'autre part, ces manuels imposent pour plusieurs siècles le vocabulaire technique de la philosophie en français. Voir les art. « Scipion Dupleix » [1569 - 1661] (par R. Ariew et J.-R. Armogathe) des dictionnaires cités ci-dessus.

(5) Par exemple dans les Lettres à Mersenne du 3 décembre 1640, ou du 2 février 1643 (AT III, 252, [O VII, 1, 429; B 289] AT III 615 [O VIII 1, 502; B 385]; Alquié III, 15).

(6) Lettre à Huygens du 31 janvier 1642 (AT III, 782; [O VIII 2, 99; B 342] Alquié II, 920).

(7) « Approfondir » ne signifie pas « remonter » aux principes, mais « descendre » dans toutes les conséquences, ou, comme dit Pascal, « pénétrer vivement et profondément les conséquences des principes » (fr. 511 [édition Lafuma des *Œuvres complètes*, coll. « L'Intégrale », Paris, Seuil, 1963]. Au demeurant Pascal « trouve bon qu'on n'approfondisse pas l'opinion de Copernic » (fr. 164). Les *Principia*, au moins dans leurs deux premières parties, n'approfondissent pas (fr. 553). Voir Vincent Carraud, *Pascal et la philosophie*, Paris, PUF, 1992, chap. III.

Dans une lettre à Mersenne du 30 septembre 1640 (avant même l'envoi du manuscrit des *Meditationes*) Descartes écrit : "Je ne ferai point encore mon voyage pour cet hiver (11) ; car, puisque je dois recevoir les objections des jésuites dans 4 ou 5 mois, je crois qu'il faut que je me tienne en posture pour les atteindre.

Et cependant j'ai envie de relire un peu leur philosophie, ce que je n'ai pas fait depuis 20 ans (12), afin de voir si elle me semblera maintenant meilleure qu'elle ne faisait autrefois. Et pour cet effet, je vous prie de me mander les noms des auteurs qui ont écrit des cours de philosophie et qui sont le plus suivis par eux, et s'ils en ont quelques nouveaux depuis 20 ans ; je ne me souviens plus que des Conimbres (13), Toletus (14) et Rubius (15).

Je voudrais bien aussi savoir s'il y a quelqu'un qui ait fait un abrégé de toute la philosophie de l'École, et qui soit suivi ; car cela m'épargnerait le temps de lire leurs gros livres. Il y avait, me semble, un Chartreux ou Feuillant qui l'avait fait ; mais je ne me souviens plus de son nom (16)." (AT III, 185; O VIII 1, 409; B 272)

(11) Voir à Mersenne, 30 juillet 1640 (AT III, 127; [O VIII 1, 389; B 262] : Descartes renonçait au voyage envisagé pendant l'été 1640.

(12) Clerselier-Lettres : « depuis 20 ans », omis.

(13) Il s'agit des *Commentaires* sur Aristote, qui constituaient un cours complet de philosophie, établis et publiés à partir de 1592 par des professeurs jésuites du collège de Coimbra, au Portugal (E. Goës, C. de Magalhães et S. Couto) sur la demande du général Claudio Aquaviva et du provincial du Portugal Pedro de Fonseca.

(14) Francisco Toledo (Toletus, 1532-1596), jésuite espagnol, en 1593, enseigna au Collège romain ; il publia à partir de 1561 de nombreux commentaires d'Aristote.

(15) Clerselier-Lettres : « Toletus et Rubius », omis. Antonio Rubio (Ruvius, 1548 - 1615), jésuite espagnol, auteur de plusieurs commentaires d'Aristote.

(16) Eustache de Saint-Paul (Asseline), religieux feuillant, *Summa Philosophica quadripartita*, Paris, 1609; voir à Mersenne, 11 novembre (AT III, 233 l. 11, [O VIII 1, 421] B 283), 3 décembre 1640 (AT III, 251 l. 15, [O VIII 1, 421] B 289 et 22 décembre 1641 (AT III, 470 l. 7 sq., [O VIII 1, 481] B 334).

Voir aussi Benoist Pierre, *La Bure et le Sceptre. La congrégation des Feuillants dans l'affirmation des États et des pouvoirs princiers (vers 1560-1660)*, Paris, 2006 (CD-Rom, annexe III).

Première annonce du livre dans la lettre du 11 novembre 1640 à Mersenne : "Pour la philosophie de l'École, je ne la tiens nullement difficile à réfuter, à cause des diversités de leurs opinions ; car on peut aisément renverser tous les fondements desquels ils sont d'accord entre eux ; et cela fait, toutes leurs disputes particulières paraissent ineptes. J'ai acheté la *Philosophie* du Frère Eustache de Saint-Paul, qui me semble le meilleur livre qui ait jamais été fait en cette matière ; je serai bien aise de savoir si l'auteur vit encore (7).

(...)

Je répondrais très volontiers à ce que vous demandez touchant la flamme d'une chandelle, et choses semblables ; je vois bien que je ne vous pourrai jamais bien satisfaire touchant cela, jusqu'à ce que vous ayez vu tous les principes de ma philosophie, et je vous dirai que je me suis résolu de les écrire avant que de partir de ce pays, et de les publier peut-être avant un an. Et mon dessein est d'écrire par ordre tout un cours de ma philosophie en forme de thèses, où, sans aucune superfluité de discours, je mettrai seulement toutes mes conclusions, avec les vraies raisons d'où je les tire, ce que je crois pouvoir faire en fort peu de mots ; et au même livre, de faire imprimer un cours de la philosophie ordinaire, tel que peut être celui du Frère Eustache, avec mes notes à la fin de chaque question, où j'ajouterai les diverses opinions des autres, et ce qu'on doit croire de toutes, et peut-être à la fin je ferai une comparaison de ces deux philosophies (9). Mais je vous supplie de ne rien encore dire à personne de ce dessein, surtout avant que ma *Métaphysique* soit imprimée ; car peut-être que, si les Régents le savaient, ils feraient leur possible pour me donner d'autres occupations, au lieu que, quand la chose sera faite, j'espère qu'ils en seront tous bien aises. Cela pourrait aussi peut-être empêcher l'approbation de la Sorbonne, que je désire, et qui me semble pouvoir extrêmement servir à mes desseins : car je vous

dirai que ce peu de métaphysique que je vous envoie contient tous les principes de ma physique.

(...)

Je verrai aussi le cours de philosophie de Monsieur de Raconis (12), qui, je crois, se trouvera ici : car s'il était plus court que l'autre (13), et aussi bien reçu, je l'aimerais mieux. Mais je ne veux rien faire en cela sur les écrits d'un homme vivant, si ce n'est avec sa permission, laquelle il me semble que je devrais aisément obtenir, lorsqu'on saura mon intention, qui sera de considérer celui que je choisirai, comme le meilleur de tous ceux qui ont écrit de la philosophie, et de ne le reprendre point plus que tous les autres. Mais il n'est point temps de parler de ceci, que ma *Métaphysique* n'ait passé." (AT III, 230-234; OT VIII, 1, 421-423; B 283)

(7) Eustache de Saint-Paul Asseline, religieux feillant (1573 - 26 décembre 1640), est l'auteur d'une *Summa philosophica quadripartita* (Paris, 1609) (*). Sur lui, voir l'article de M. Standaert (*Dictionnaire de spiritualité*, t. 4-2, Paris, 1961, col. 1701-1705).

(9) On sait que le projet, considérablement modifié, donnera en 1644 les *Principia philosophiae*.

(12) Charles-François Abra de Raconis [1580 - 16 juillet 1646], *Totius Philosophiae hoc est Logicae, Moralis Physicae et Metaphysicae : brevis & accurata tractatio*, Paris, 1637 [première édition 1617].

(13) La *Summa* d'Eustache de Saint-Paul.

(*) [Le premier volume de la *Summa philosophica quadripartita, de rebus Dialecticis, Moralibus, Physicis et Metaphysicis*, contenait la logique et l'éthique, le second la physique et la métaphysique.]

"En réalité, les *Principia*, annoncés dans cette lettre pour la première fois, seront un livre d'une conception totalement différente. Il ne s'agit pas d'une brève série de thèses, mais d'un grand livre de 300 pages (in-4°) (2); il ne contient pas un texte de philosophie scolastique comme point de comparaison; et,

par conséquent, sa composition était un travail d'au moins trois années (3). Nous n'avons aucune idée de la raison qui conduisit Descartes à abandonner son premier projet ; sa correspondance reste silencieuse sur ce point (4). Mais sa première déclaration reste très importante, parce qu'elle nous rappelle qu'on doit lire les *Principia* comme un livre de classe, un manuel. C'était une aide-mémoire d'instruction, qui portait comme un défi à une légion (toujours croissante) de publications scolastiques contemporaines et notamment, en France, aux deux manuels dont la correspondance de Descartes signale la lecture à l'automne de 1640, avant de se mettre à écrire les *Principia*: celui du feuillant Eustache de Saint-Paul (1573-1640), et celui d'un client de Richelieu, évêque de Lavaur, François d'Abra de Raconis (mort en 1646) (5)." (Lawrence W.B. Brockliss, "Rapports de structure et de contenu entre les *Principia* et les cours de philosophie des collèges", dans : Jean-Robert Armogathe, Giulia Belgioioso (éds.), *Descartes: Principia philosophiae* (1644-1994), Napoli, Vivarium 1996, pp. 491-492)

(2) Dans l'édition latine de 1644 in-4°.

(3) Les *Principia* ont été écrits au château d'Endegeest près de Leyde.

(4) Selon sa correspondance, il avait abandonné ce projet en décembre 1641, mais il est possible qu'il ait pris la décision beaucoup plus tôt : voyez A.T., n, p. 470: à Mersenne 22 décembre 1641.

(5) Eustache Asseline dit Eustachius de Sancto Paulo, *Summa philosophiae quadrupartita*, Paris, C. Chastellain, 1609; De Raconis, *Totius philosophiae brevis tractatio*, 4 parties en deux volumes, Paris, De la Noue, 1622. Il y avait des éditions de tous les deux à Paris jusqu'en 1640. Ils furent lus par Descartes en novembre 1640 : voyez AT III, pp. 233, 251: correspondance avec Mersenne, 11 novembre et 3 décembre [O VIII 1, 424-425; B 283; O VIII 1, 427-429; B 289].

"En résumé : les *Principia* appartiennent à une tradition bourgeonnante, une tradition toujours relativement neuve, celle du manuel de philosophie. Cependant aux mains de

Descartes, cette tradition fut développée dans une direction nouvelle. Les sciences de la philosophie étant réduites à deux, la physique devenait une science inorganique, et la méthode syllogistique, scolastique et historique était remplacée par une méthode quasi-euclidienne. Donc, les *Principia* n'étaient pas un manuel de type traditionnel. Mais, en revanche, il s'agissait certainement d'un manuel dont la structure, le contenu et la méthode d'argumentation étaient déterminés par le besoin de produire un ouvrage manifestement nouveau, mais suffisamment traditionnel pour retenir l'intérêt des lecteurs aristotéliens et susceptible de gagner leurs esprits comme un travail plus solide et plus moderne que ses concurrents. C'est-à-dire, pour comprendre les *Principia* comme texte, on doit réaliser qu'il s'agit d'un livre étroitement associé avec la philosophie des écoles, et pas simplement parce que Descartes restait dans une certaine mesure sous l'influence d'Aristote.

Il est en effet possible qu'un événement dans l'enseignement de la philosophie puisse expliquer pourquoi Descartes a composé les *Principia* au début des années quarante. Il semble qu'il prit la décision d'écrire un manuel pendant le mois d'octobre 1640, à la suite d'une première décision de lire des livres de philosophie scolastique, annoncée à Mersenne le 30 septembre. Cependant la décision de composer un manuel n'était pas une conséquence inévitable de sa lecture d'Eustache, parce que son dessein original était seulement de se préparer mieux pour répondre à une attaque lancée par les jésuites de Paris contre sa *Dioptrique* et ses *Météores* de 1637, attaque que Descartes avait du reste provoquée (52). Il est probable que cette seconde décision peut être attribuée aux activités du médecin mécaniste à l'université d'Utrecht, Henri Regius (1598-1679). Regius se disait disciple de Descartes : il avait été autorisé à expliquer les problèmes de physique à Utrecht en mai de 1640 et le 10 juin il organisa une soutenance publique où on discuta des mérites d'une physiologie mécaniste. Son enthousiasme lui gagna l'hostilité des autres professeurs, surtout du théologien Voetius, qui croyait que la philosophie mécaniste menaçait la foi : Descartes, pendant l'été, fut obligé de défendre son acolyte devant les autorités universitaires (53). On ne peut pas douter

que Regius fût un esprit fort, qui développait le mécanisme dans une direction matérialiste et anti-cartésienne (54). En conséquence, on peut suggérer que Descartes se trouva forcé de préparer son manuel pour révéler au monde (hollandais d'abord) quelle était en réalité sa physique et pour démontrer sa compatibilité avec la foi chrétienne (calviniste ou catholique). On doit rappeler que les *Principia* furent publiés d'abord à Amsterdam en latin et que dans le paragraphe final Descartes soumettait son livre au jugement de l'Eglise, pas spécifiquement l'Eglise catholique (55)." (Lawrence W.B. Brockliss, *op. cit.*, pp. 508-510)

(52) Un jésuite parisien, Bourdin, avait organisé une soutenance au collège de Clermont à Paris où les idées de Descartes étaient critiquées, et Descartes, par Mersenne, avait demandé que la Société lui communiquât ses objections directement : voyez AT III, pp. 160-85: lettres à Mersenne, 30 août, 15 et 30 septembre [1640; O VIII 1, 401-405; B 269; O VIII 1, 405-408; B 271; O VIII 1, 408-414; B 272].

(53) AT II pp. 568-9 [lettre de Regius à Descartes du 14 juillet 1639; B 217], 616-7 [lettre de Regius à Descartes, octobre-novembre 1639; B 223], 624-5 [lettre de Regius à Descartes du 3 décembre 1639 B 229]; III, pp. 1 [lettre de Regius et Emilius à Descartes, janvier 1640; B 238], 60-1 [lettre de Regius à Descartes du 5 mai 1640; B 251], 63-72 [lettre de Regius à Descartes du 5 mai 1640; B 251], 202-3 [lettre de Regius à Descartes du 7 octobre 1640; B 276]: correspondance entre Descartes et Regius, 1639-40.

(54) Regius continuait à soutenir une physique mécaniste à l'Université d'Utrecht en 1641 et Descartes commençait à critiquer plus fortement les idées de son admirateur : voyez AT III, pp. 365-75, 443, 462-4. Aujourd'hui on considère Regius comme un mécaniste dont les idées se développaient indépendamment de Descartes : voyez P. Dibon, *Der Cartesianismus in den Niederlanden*, in *Der Philosophie des 17. Jahrhunderts*, hrsg. von J.-P. Schobinger, Basel, Schwabe, 1992, vol. II, pp. 357-358.

(55) AT IX-2, p. 325. Il est intéressant de constater que dans la lettre à Mersenne où Descartes annonçait son intention d'écrire un manuel (11 novembre), il passa sa colère sur Voetius et informa Mersenne de la tentative du théologien hollandais pour réduire Regius au silence : AT IX-2, p. 231.

Descartes apprend que le Père Eustache est mort : "Je suis désolé de la mort du Père Eustache ; car encore que cela me donne plus de liberté pour faire mes notes sur sa philosophie, j'eusse toutefois mieux aimé le faire avec sa permission, et de son vivant. (22)" (AT III, 286; O VIII 1, 445; B 299)

(22) Voir à Mersenne, décembre 1640 (AT III, 259, [O VIII 1, 433-434] B 291). Eustache de Saint-Paul est mort le 26 décembre 1640.

Le projet originel est abandonné dans la lettre à Mersenne du 22 décembre 1641 : "Je vous renvoie la lettre du Père Bourdin, que j'ai trouvée peu judicieuse ; mais je n'en ai pas voulu toucher un seul mot, à cause que vous me l'aviez défendu (5). Je crois bien que son Provincial l'a envoyé, pour vous demander s'il était vrai que j'écrivisse contre eux, mais non pas pour me menacer de choses qu'ils savent bien que je ne crains pas, et qui peuvent bien plus m'obliger à écrire que m'en empêcher. Il est certain que j'aurais choisi le *Compendium* du Père Eustache, comme le meilleur, si j'en avais voulu réfuter quelqu'un; mais aussi est-il vrai que j'ai entièrement perdu le dessein de réfuter cette philosophie; car je vois qu'elle est si absolument et si clairement détruite, par le seul établissement de la mienne, qu'il n'est s besoin d'autre réfutation; mais je n'ai pas voulu leur en rien écrire, ni leur rien promettre, à cause que je pourrai peut-être changer de dessein, s'ils m'en donnent occasion. Et pendant je vous prie de ne craindre pour moi aucune chose ; car je vous assure que, si j'ai quelque intérêt d'être bien avec eux, ils n'en ont peut-être pas moins d'être bien avec moi, et de ne se point opposer à mes desseins : car, s'ils le faisaient, ils m'obligeraient d'examiner quelqu'un de leur cours, et de l'examiner de telle sorte, que ce leur serait une onte à jamais." (AT III, 470; O VIII 1, 481; B 334)

(5) Le P. Bourdin avait donc remis à Mersenne un écrit confidentiel, pensant bien que Descartes en aurait connaissance ; et celui-ci envoie à Mersenne une lettre destinée à être lue par le P. Dinet (voir dossier Jésuites).

Lettre à Constantin Huygens du 29 juillet 1641 : "Pour la Physique, ou plutôt le Sommaire de toute la philosophie, dont il vous plaît me demander des nouvelles, je ne saurais le faire si tôt imprimer à cause qu'il n'est que peu commencé (6) mais je suis résolu de n'entreprendre aucune autre chose jusqu'à ce qu'il soit achevé. L'épreuve que j'ai faite jusqu'ici des jugements et des objections qu'on me peut faire me donne espoir que je n'aurai pas beaucoup de peine à maintenir mes opinions lorsque je les aurai publiées, et que cela ne me détournera point du dessein que j'ai de continuer à chercher ce que j'ignore." (AT III, 773; O VIII 2, 95; B 323)

(6) Descartes écrivait déjà à Mersenne le 11 novembre 1640 (AT III 233, [O VIII 1,] B 283) : « Mon dessein est d'écrire par ordre tout un Cours de ma philosophie en forme de Thèses, où, sans aucune superfluité de discours, je mettrai seulement toutes mes conclusions, avec les vraies raisons d'où je les tire, ce que je crois pouvoir faire en fort peu de mots », et encore : 31 décembre 1640 (AT III 276, [O VIII 1, 441] B 293) : « J'ai résolu d'employer à écrire ma Philosophie en tel ordre quelle puisse aisément être enseignée. »".

Lettre à Constantin Huygens du 31 janvier 1642 : "Peut-être que ces guerres scolastiques seront cause que mon *Monde* se fera bientôt voir au monde (24), et je crois que ce serait dès à présent, sinon que je veux auparavant lui faire apprendre à parler latin; et je le ferai nommer *Summa Philosophiæ* (25), afin qu'il s'introduise plus aisément en la conversation des gens de l'École, qui maintenant le persécutent et tâchent à l'étouffer avant sa naissance, aussi bien les Ministres (26) que les jésuites". (AT III, 782; O VIII 2, 99-100; B 342)

(24) Le jeu de mots est de Huygens : voir à Descartes, 15 (AT II, 679, B 212) et 28 mai 1639 (AT II, 680, B 214).

(25) Voir à Mersenne, 22 décembre 1641 (AT III 465, [O VIII 1, 480-481] B 333).

(26) Les pasteurs calvinistes.

René Descartes. Bibliographie Chronologique et Annotée (Quatrième Partie: (1645-1650))

Bibliographie

Pour la liste des éditions de références et des abréviations voir [René Descartes. Outils de recherche: Biographies, Dictionnaires et Lexiques des Ses Œuvres](#)

1. Descartes, René. 1645. *Lettre apologétique aux Magistrats de la ville d'Utrecht Contre Messieurs Voëtius, Père et Fils*.

Première publication : traduction latine *Querela apologetica ad amplissimum Magistratum Ultrajectinum*, Vristadium: L. Misopodem, 1656; texte français dans: Claude Clerselier (éd.), *Lettres de Mr. Descartes* (3 vols.) Paris : Charles Angot, III : 1667, pp. 1-49.

AT VIII-2 201-273; B Op. II, 117-193.

"La *Lettre Apologétique*, adressée non pas exactement "aux Magistrats" mais à la Municipalité ou Corps de Ville d'Utrecht (1) est le dernier mot de Descartes sur l'affaire et la suite immédiate du procès de Groningue. D'après Baillet, en effet, Descartes "envoya incontinent ces Actes (c'est-à-dire le procès verbal de l'action contre Schoock) aux Magistrats d'Utrecht sans prétendre néanmoins leur reprocher leur mauvaise conduite, ou se constituer parti contre Voetius et Dematius, mais pour voir s'ils feraient quelque chose en réparation du passé." (Baillet, *Vie de M. Descartes*, vol. II, p. 257) (2). Mais la Municipalité, sans doute lassée de l'affaire et craignant de nouvelles polémiques, se contenta de réitérer son interdiction

de publier des écrits pour ou contre Descartes (Kernkamp I [G. W. Kernkamp, éd., *Actea et Decreta Senatus ; Vroedschapsresolutiën en andere bescheiden betreffende de Utrechtsche Academie*, vol. I, Utrecht, 1936], p. 218 ; cf. Baillet II, p. 257-258) et envoya une copie de ce décret à Descartes. Cette nouvelle interdiction était dirigée contre les adversaires de Descartes : Voetius était en train de résumer l'impression de la lettre ouverte de Schoock à Descartes, apparemment afin de discréditer le jugement de Groningue (Baillet II, p. 258). Mais le geste ne fut pas compris. Descartes expédia immédiatement la *Lettre Apologétique*, prête probablement depuis longtemps. Elle arriva Utrecht le 13 juin 1645, la lettre étant datée d'Egmond le 16 juin selon le nouveau calendrier : on suivait aux Pays-Bas le style "ancien", rejetant par anti-papisme le calendrier grégorien). Dans les *Actes*, en effet, on fait état d'un "latijnse missiv van Des Cartes aen Burgermeesteren ende Vroetschap deser Stadt, gedateert t'Egmond den XVIen deser, stilo novo" ("une missive latine de Descartes au Bourgmestres et à la municipalité de cette ville, en date d'Egmond, le 11 de ce mois, selon le style nouveau" Kernkamp, I, p. 219). On demanda au Secrétaire de la traduire, non pas parce que sans cela on ne pourrait en prendre connaissance (la plupart doivent avoir bien connu le latin (3)), mais probablement pour faire traîner les choses en longueur.

Ce premier texte était en latin, et c'est également en latin que la *Lettre* fut, pour la première fois publiée, en 1656. Toutefois, en 1648, Descartes avait fait faire deux traductions, l'une en néerlandais l'autre en français, qu'il envoya encore à Utrecht où elles sont reçues le 24 mars. De ces deux textes le premier seul a été conservé. Descartes a noté sur la dernière page :

"J'ai fait traduire cet écrit en flamand ; mais pour ce que c'est une langue que j'entends fort peu, je prie ceux qui le liront, d'avoir principalement égard au français, duquel seul je puis répondre." (AT VIII-2, 275).

Cette missive aussi est ignorée, et Descartes lui-même part, tout d'abord pour la France et, en 1649, pour la Suède où il mourra en 1650. Excepté le texte néerlandais dont nous avons

parlé, les originaux envoyés à Utrecht sont perdus. Cependant Descartes en avait conservé des copies qui, dans l'inventaire dressé après sa mort, figurent ainsi :

”L.- Renati Descartes querela apologetica ad amplissimum Magistratum Ultrajectinum contra Voetium et Dematium.

O.- Un écrit contenant neuf cahiers en forme de Lettre à Messieurs... contre le Sr Voetius.” (voir AT VIII-2, vii.)

Aussi est-ce sous le titre de *Querela Apologetica* qu'on publiera en 1656 le texte latin. L'occasion de cette édition est, comme le précise la page de titre, la *Theologia Naturalis* de Paul Voet, publiée également en 1656, dans laquelle celui-ci est revenu sur des questions vieilles de dix ans. Dans cet ouvrage, en effet, Paul, pour protester une nouvelle fois de l'honneur de son père, avait publié (p. 253-264) les témoignages de l'Académie, et du Consistoire, attestant de sa probité, le décret de la Municipalité qui avait déclaré la *Lettre à Voet* un "écrit diffamatoire", un jugement des trois professeurs de droit de Leyde sur le procès de Groningue, et le jugement de la Cour d'Utrecht sur le procès de Voetius et de Dematius contre Schoock (4). C'est pour répondre à ces accusations "des Voet et des Voetiens", dont il est dit dans la *Préface* qu'ils semblent vouloir "surpasser les flammes éternelles de l'Etna et du Vésuve", qu'on publie maintenant ce petit ouvrage inconnu du public. D'après le préfacier, on satisfait ainsi un désir de Descartes qui, en quittant les Pays-Bas pour la Suède, en avait laissé une copie chez des amis avec l'intention de la faire publier, au cas où il serait impossible d'obtenir sans éclat la réparation qu'il cherchait. Cette *Préface* pose par ailleurs un problème de critique textuelle, en avançant que le texte original avait été écrit en français et que le texte latin était une traduction faite par un ami. Sur ce point, cependant, les Actes de la Municipalité sont formels : la première missive était en latin. Dès lors, ou bien l'éditeur, qui est d'ailleurs inconnu (5), se trompe, ou bien il a travaillé sur la traduction française que Descartes avait fait faire et qui se trouvait également parmi les papiers décrits dans l'inventaire. Ainsi le texte latin pourrait bien ne pas être celui envoyé par Descartes à Utrecht.

Quant au texte français, il a été publié par Clerselier en 1667, dans le cadre de son édition des Lettres de Descartes, où la Lettre Apologétique aux Magistrats d'Utrecht figure dans le vol. III. C'est ce texte que nous avons retenu." (Theo Verbeek (éd.), René Descartes et Martin Schoock, *La Querelle d'Utrecht*, Paris: Les impressions nouvelles, 1988, pp. 403-405)

(1) C'est-à-dire Gysbertus Voetius et son fils Paul.

(2) Il s'agit du jugement du 16 mars 1642 (voir notre "Introduction" et *Narration*, p. 121-122).

(3) C'est effectivement ce qui est suggéré dans la brochure néerlandaise *Aengevengen Proceduuren* et qui a conduit Descartes à insister auprès des Etats de Groningue en 1644.

(4) Officiellement l'action contre Descartes n'a jamais été arrêtée ; on l'a étouffée pour complaire aux Etats, au Stathouder et à l'ambassadeur de France.

(5) Reneri était mort le 16 mars 1639 ; l'oraison funèbre avait été prononcée le 18 mars suivant par le professeur d'histoire Antonius Æmilius. Le texte avait été imprimé par l'imprimeur de l'Académie (des exemplaires se trouvent dans la Bibliothèque Universitaire d'Amsterdam et dans la British Library de Londres) et réimprimé dans le recueil des Orationes d'Æmilius [Antonius Æmilius, *Orationes, quarum pleraeque tractant argumentum politicum: Accedunt nonnulla eiusdem in utraque lingua Poemata*. Utrecht 1651.]

2. ——. 1647. *Les Méditations métaphysiques de René Descartes touchant la première philosophie dans lesquelles l'existence de Dieu, et la distinction réelle entre l'âme et le corps de l'homme, sont démontrés*. Paris: Chez la Veuve Jean Camusat et Pierre Le Petit.

AT IX, 1 : *Le Libraire au Lecteur* 1 ; [Épître] à Messieurs les Doyen et Docteurs de la Sacrée Faculté de Théologie de Paris 4 ; *Abrégé des six méditations suivantes* 9 ; *Méditations touchant la première philosophie* 13 ; *Premières Objections* 73 ; *Réponses* 81 ; *Secondes Objections* 96 ; *Réponses* 102 ; *Exposé géométrique* 124 ; *Troisièmes Objections et Réponses* 133 ; *Quatrièmes Objections* 153 ; *Réponses* 170 ; *Avertissement de*

l'Auteur touchant les Cinquièmes Objections 198 ;
Avertissement du traducteur 200 ; Lettre de Descartes à
Clerselier 202 ; Sixièmes Objections 218 ; Réponses 225 ;
Privilège 245-246.

B Op. I: *Avertissement de l'Auteur touchant les Cinquièmes
Objections*, 1396-1397; *Lettre de Monsieur Descartes à
Monsieur C.L.R.*, 1398-1411; *Avertissement du traducteur*,
1412-1413; *Le Libraire au Lecteur*, 1414-1417.

"Traduites du Latin de l'Auteur par Mr. le D.D.L.N.S. [Charles
d'Albert, Duc de Luynes] Et les Objections faites contre ces
Méditations par divers personnes très-doctes, avec les réponses
de l'Auteur. Traduites par Mr. C.L.R. [Claude Clerselier]."

"Malgré le désir de Descartes, Clerselier avait publié les
cinquièmes objections et réponses, en les rejetant à la fin du
volume, après les sixièmes. Elles étaient suivies d'une lettre de
Descartes répondant au recueil d'instances de Gassendi. Mais
les septièmes objections et réponses et la lettre au P. Dinet ne
figurèrent que dans la seconde édition française que Clerselier
fit paraître en 1661. Plus exigeant que l'auteur lui-même,
Clerselier avait revu et corrigé non seulement sa traduction des
objections et réponses, mais aussi et surtout celle du duc de
Luynes agréée par Descartes." (Geneviève Rodis-Lewis,
Introduction à R. Descartes, *Meditationes De Prima
Philosophia - Méditations Métaphysiques*, Texte latin et
traduction du Duc de Luynes, Paris: Vrin 1978, p. XII).

"Il [Descartes] écrivit à Chavagnes le 11 de Septembre [1644] à
l'abbé Picot qui lui avait mandé dans sa dernière qu'il avait déjà
traduit les deux premières parties de ses *Principes*, et il lui
marqua que pour lui il n'avait pas encore trouvé depuis son
départ de Paris le temps de lire la traduction française de ses
Méditations faite par M. le duc de Luynes (5), qu'il avait
apportée dans la pensée de s'en faire une occupation agréable
dans le cours de son voyage." (Lettre à Picot, 11 septembre
1644; Baillet II, 220; AT IV 138; O VIII 2, 507; B464)

(5) Voir à Clerselier, 10 avril 1645 (AT IV 193, [O VIII 2, 714-
715] B490)

"M. Descartes recevait de fréquentes nouvelles des grands fruits que faisait lecture de son dernier livre à Paris, où on l'assurait que personne ne s'était encore élevé contre sa doctrine (11). Ses progrès n'étaient pas moindres en Hollande : et dès le mois de Février M. de Hoogheland lui avait envoyé trois thèses différentes soutenues depuis peu à Leyde (12), et ne contenant que ses opinions. Ces succès le firent songer à faire imprimer les traductions Françaises de ses *Méditations* et de ses *Principes*. N'ayant pas remarqué tout l'empressement possible dans Elzevier pour ces éditions en notre langue (13), il prit des mesures avec Monsieur Clerselier et Monsieur Picot, pour les faire faire à Paris. Mais la version des *Principes* n'était pas encore achevée." (Lettre à Picot, 9 février 1645; Baillet II 265; AT IV 176; O VIII 2, 509; B484)

(11) Note en marge dans Baillet : « lettre MS à Picot du 9 février 1645. Lettre MS à Clerselier du même jour ».

(12) Voir à Pollot, 8 janvier 1644 (AT IV 77, [O VIII 2, 564-565] B441).

(13) Note en marge dans Baillet : « Elzevier se plaignait du peu de débit des *Principes*, comme Maire [de Leyde] s'était plaint au sujet des *Essais*. »

"Monsieur de Sorbière s'était habitué à Leyde (4) pour étudier plus particulièrement les défauts de Monsieur de Saumaise. Mais il ne s'occupait pas tellement de la considération de ce grand homme qu'il ne retournât souvent à Eyndegeest par manière de promenade, et qu'il n'en rapportât toujours quelque nouveau prétexte d'animer Monsieur Gassendi à écrire contre Monsieur Descartes. Mais pour donner un contrepoids au tort que la plume de cet excellent homme pourrait faire aux *Méditations* de Monsieur Descartes, Dieu permit qu'un Seigneur de la Cour de France entreprît de faire une traduction Française des mêmes *Méditations*, pour en faire connaître plus particulièrement le mérite dans le Royaume, et en procurer la lecture à tous ceux qui n'ayant pas l'usage de la langue des savants, ne laisseraient pas d'avoir de l'amour et de la disposition pour la Philosophie. Il faut avouer que la fin de l'auteur de la traduction n'avait été que la satisfaction

particulière qu'il trouvait à exercer son style sur de grands sujets, sans songer à rendre service au Public. Mais sa traduction ayant été recueillie et envoyée à Monsieur Descartes par sa permission, elle fut jugée propre à faire beaucoup honneur à notre Philosophe et à donner un grand relief à sa Philosophie, et Monsieur le Duc de Luynes son auteur fut prié d'en souffrir la publication (5).

Peu de jours après Monsieur Clersefier, l'un des plus zélés et des plus vertueux amis de Monsieur Descartes entreprit de traduire aussi en notre langue les objections faites à ces *Méditations* avec les réponses de Monsieur Descartes. Cette traduction était excellente aussi bien que celle de Monsieur le Duc de Luynes. Mais l'un et l'autre jugèrent que si elles devaient voir le jour, il fallait qu'elles fussent revues auparavant par l'auteur même des *Méditations*, afin qu'en les confrontant avec ses pensées il pût les mettre le plus près de leur original qu'il serait possible et leur en imprimer le caractère. Monsieur Descartes fut obligé de se rendre à un avis si important. Mais, sous prétexte de revoir ces versions, il se donna la liberté de se corriger lui-même, et d'éclaircir ses propres pensées. De sorte qu'ayant trouvé quelques endroits (6) où il croyait n'avoir pas rendu son sens assez clair dans le Latin pour toutes sortes de personnes, il entreprit de les éclaircir dans la traduction par quelques petits changements, qu'il est aisé de reconnaître à ceux qui confèrent le Français avec le Latin. Une chose qui semblait avoir donné de la peine aux traducteurs dans tout cet ouvrage, avait été la rencontre de plusieurs mots de l'art, qui paraissant rudes et barbares dans le Latin même, ne pouvaient manquer de l'être beaucoup plus dans le Français, qui est moins libre, moins hardi, et moins accoutumé à ces termes de l'École (7). Ils n'osèrent pourtant les ôter partout, parce qu'ils n'auraient pu le faire sans changer le sens dont la qualité d'interprètes devait les rendre religieux observateurs. D'un autre côté Monsieur Descartes témoigna être si satisfait de l'une et de l'autre version, qu'il ne voulut point user de la liberté qu'il avait pour changer le style, que sa modestie et l'estime qu'il avait pour ses traducteurs lui faisait trouver meilleur que n'aurait été le sien. De sorte que par une déférence réciproque

qui a retenu les traducteurs et l'auteur, il est resté dans l'ouvrage quelques-uns de ces termes scolastiques, malgré le dessein qu'on avait eu de lui ôter le goût de l'école en le faisant changer de langue. Cet éclaircissement touchant la traduction des *Méditations* et des *Objections* est nécessaire, non seulement pour justifier les traducteurs sur les changements dont l'auteur est le seul responsable, mais pour faire voir aussi que la traduction Française vaut mieux que l'original Latin, parce que Monsieur Descartes s'est servi de l'occasion de la revoir pour retoucher son original en notre langue. C'est un avantage qu'a eu aussi dans la suite la version française des *Principes* de Monsieur Descartes faite par l'Abbé Picot (8). De sorte que tous ses Français tant originaux que traduits sont préférables à ceux qui sont Latins. C'est-à-dire que toutes les traductions qu'il a revues valent mieux que ses originaux mêmes.

Pour ne rien omettre de ce qui peut regarder la traduction des *Méditations*, il suffit de remarquer qu'encore qu'elle ait été faite en 1642, néanmoins la révision ou la correction par Monsieur Descartes ne s'en fit qu'en 1645, et que la première impression qui en fut faite à Paris ne fut en état de paraître que pour les étrennes de l'an 1647." (Baillet II 171-173; AT IV 193-195; O VIII 2, 715-716; B 490)

(4) Note en marge dans Baillet : « Lettr(es) et Disc(ours) de Sorb(ière) ».

(5) Il est souvent question de cette traduction des *Meditationes* dans la correspondance : voir à Picot, 11 septembre 1644 (AT IV 138, [O VIII 2, 507] B464) et 9 février 1645 (AT IV 177, [O VIII 2, 508-509] B484); à Clerselier, 10 avril 1645 (AT IV 192-195, [O VIII 2, 714-716] B490), 20 décembre 1645 (AT IV 338-339, [O VIII 2, 716-717] B531), 12 janvier 1646 (AT IV 357-358, [O VIII 2, 717] B539), 23 février 1646 (AT IV 362, [O VIII 2, 718] B542) et 9 novembre 1646 (AT IV 563-564, [O VIII 2, 725] B585); et enfin à Picot encore, 8 juin 1647 (AT V 63-64, [O VIII 2, 515-516] B626).

(6) Note en marge dans Baillet : « Lettr(e) MS de Desc(artes) à Clersel(ier) du 10 d'Avril 1645. »

(7) Note en marge dans Baillet : « Ibid. lettr(e) à Clerselier MS ».

(8) Voir à Picot, 17 février 1645 (AT IV 180-181, [O VIII 2, 509-510] B 486).

Michelle Beyssade et Jean-Marie Beyssade ont publié une nouvelle édition des *Méditations métaphysiques. Objection et Réponses*, Paris: Garnier-Flammarion 1979 (édition revue et corrigée 2011) :

"Les textes retenus ont été établis à partir des deux éditions Adam et Tannery (AT) et F. Alquié, mentionnées dans la bibliographie. Nous les avons vérifiés sur les éditions originales, latines (1641 et 1642) et française (1647). Pour la commodité des lecteurs, nous indiquons toujours la pagination correspondante dans l'édition AT à laquelle les commentateurs modernes font tous référence : soit que notre texte reproduise le texte d'AT, soit qu'il en donne une traduction (quand l'original latin n'a pas été traduit du vivant de Descartes, ou que la traduction n'a pas été revue et autorisée par lui, auquel cas elle ne figure pas dans l'édition AT).

Même revues et autorisées par Descartes, les traductions de Luynes et de Clerselier s'écartent souvent de l'original latin. Nous n'indiquons ni les dédoublements (deux mots français rendant un mot latin) ni les additions qui visent à expliciter une expression : nous ne signalons que les différences qui modifient le sens. Pour les *Méditations*, nos notes reprennent en caractères droits le dernier mot français qu'une traduction exacte garderait et ajoutent la suite en italiques.

Quand elles n'ont pas été revues et autorisées par Descartes, nous avons pourtant retenu de préférence les traductions de l'époque, en particulier celle de Clerselier, et nous en avons corrigé les inexactitudes les plus manifestes.

Nous avons modernisé l'orthographe, et modifié la ponctuation. Nous avons également retouché, pour le texte latin des *Méditations*, la répartition en alinéas, incertaine dans les éditions originales (dont Descartes a lui-même dénoncé de ce point de vue les insuffisances) et refaite arbitrairement dans

l'édition AT. Nous avons respecté les alinéas du texte français, sauf en de rares endroits où nous avons retenu les améliorations apportées par Clerselier dans l'édition de 1661.

Aux *Méditations*, et aux *Objections et Réponses* qui les suivent, nous joignons quatre lettres, écrites par Descartes entre la rédaction des *Méditations* et l'édition latine de 1642 : elles constituent autant de réponses à des objections, qui n'ont pas trouvé place dans l'œuvre publiée." (*Note sur le texte de cette édition*, pp. 31-32)

Michelle Beyssade a donné une nouvelle traduction du texte latin : *Descartes Méditations métaphysiques. Meditationes de prima philosophia*. Texte latin accompagné de la traduction du Duc de Luynes. *Méditations de philosophie première*. Présentation et traduction de Michelle Beyssade, Paris : Le Livre de Poche, 1990.

3. ——. 1647. *Les Principes de la philosophie écrits en latin par René Descartes et traduit en François par un de ses Amis*. Paris: Henry Le Gras.

AT IX-2, 1-325; traduction de Paul Picot (1614 - 1668).

Lettre à Picot du 11 septembre 1644 : "Ce fut au Crévis qu'il [Descartes] apprit que les exemplaires imprimés de ses *Principes* étaient enfin arrivés de Hollande à Paris ; Monsieur Picot lui manda qu'il n'avait point trouvé d'expédient plus propre à se consoler de son absence, que la traduction française de cet ouvrage, qu'il avait commencée dès son départ de Paris sur l'exemplaire imparfait (2) qu'il avait apporté par avance de Hollande dans sa valise.

(...)

Il écrivit à Chavagnes le 11 de Septembre [1644] à l'abbé Picot qui lui avait mandé dans sa dernière qu'il avait déjà traduit les deux premières parties de ses *Principes*, et il lui marqua que pour lui il n'avait pas encore su trouver depuis son départ de Paris le temps de lire la traduction française de ses *Méditations* faite par Monsieur le duc de Luynes (5), qu'il avait apportée dans la pensée de s'en faire une occupation agréable dans le

cours de son voyage." (Baillet II, 219-220; AT IV, 138; O VIII 2, 507; B 464)

(2) Note en marge de Baillet : « sans figures ».

(5) Voir à Clerselier, 10 avril 1645 (AT IV, 193; [O VIII 2, 714-716] B 490).

Lettre à Picot du 8 novembre 1644 : "Après la fête de saint Simon (2), le P. Mersenne délivré de l'impression du gros recueil de pièces physiques et mathématiques qu'il intitula *Cogitata Physico-Mathematica*, et n'ayant plus rien au départ de Monsieur Descartes qui pût le retenir à la Ville, partit pour un voyage de huit ou neuf mois en Italie (3) ; et Monsieur Descartes, ayant le reste des exemplaires de ses *Principes*, sous la disposition de Picot, chez la veuve Pelé, libraire de la rue Saint-Jacques (4), prit la route de Calais pour retourner en Hollande (5). Il fut arrêté par les vents dans cette ville pendant près de quinze jours, où il ne put s'occuper d'autre chose que de la lecture de la version français que l'abbé Picot son hôte avait faite de son livre des *Principes* et dont il avait apporté les deux premières parties avec lui. Il en écrivit au traducteur le 8 de novembre pour lui marquer qu'il la trouvait excellente, et qu'il ne pouvait la souhaiter meilleure." (Baillet II, 246-247; AT IV 147; O VIII 2, 508; B 468)

(2) Le 28 octobre.

(3) Constantin Huygens recommande Mersenne à Jean-Louis Calandrini à Genève, le 30 août 1644 (*Brwg [De Briefwisseling van Constantjin Huygens, (1608-1687), 6 voll., 's-Gravenhage, Martinus Nijhoff, 1911-1917] 55, vol. 4, n. 3723) et le même jour (n. 3724) à J. Van Santen, lieutenant du prince d'Orange, pour lui laisser visiter le château d'Orange.*

(5) Note en marge dans Baillet : « lettre à Picot du 8 novembre 1644 ».

Lettre à Picot du 9 février 1645 : "L'abbé Picot ne lui [à Descartes] envoya la troisième partie (2) que le mois de Février de l'année suivante, et il n'en parut pas moins satisfait (3). L'abbé l'ayant accompagnée de quelques difficultés dont il demandait l'explication, Monsieur Descartes en lui envoyant cette explication lui manda que ces difficultés mêmes, de la manière dont il les lui a proposées, faisaient honneur à sa traduction et montraient que le traducteur entendait parfaitement la matière ; parce qu'elles n'auraient pu tomber dans l'esprit d'une personne ne l'aurait entendue que superficiellement (4)." (Baillet II, 246-247; AT IV 147; O VIII 2, 508; B 468)

(2) De la traduction française des *Principia*.

(3) Note en marge dans Baillet : « t. 3 des *Lettres* p. 612 du 17 février [c'est la lettre suivante]; item lettre MS de Descartes à Picot du 9 février 1645 ».

(4) Note en marge dans Baillet : « lettre MS à Picot du 1er juin 1645 ».

Changements dans la traduction française :

"L'historique de cette traduction se trouve à sa place dans la *Vie de Descartes*, [de Paul Adam] au dernier volume de l'ancienne édition. (*) On ne donnera donc ici que les renseignements relatifs au texte même.

L'édition française de 1647, comparée à l'édition latine de 1644, offre d'abord une particularité importante. Entre l'*Épître* ou la Dédicace à la princesse Elisabeth, placée en tête dans l'une comme dans l'autre, et les *Principes* proprement dits, Descartes a inséré, dans la traduction, une *Lettre de l'Auteur à celui qui a traduit le Livre*, laquelle, ajoute-t-il, *peut ici servir de Préface.*" (p. III)

(...)

"De qui ce texte est-il exactement ? De l'abbé Picot seul, qui est, comme on sait, « l'ami de Descartes », qui a traduit le livre des *Principes* ? Ou bien, en certains endroits, de Descartes lui-même, qui a revu la traduction ? Ou même peut-être, car on

serait tenté ' aller jusque-là, de Descartes seul, qui aurait alors récrit en français, pour une partie, sinon en entier, ses *Principia Philosophiæ* ?

Pour la traduction des *Principes*, nous n'avons guère qu'une phrase, la première de la Lettre-préface à l'abbé Picot : « La version que vous avez pris la peine de faire de mes *Principes* est si nette et si accomplie, quelle me fait espérer qu'ils seront lus par plus de personnes en Français qu'en Latin, et qu'ils seront mieux entendus. » (Ci-après, p. 1, l. 5-9.)" (p. VII)

(...)

"Deux témoignages, l'un et l'autre du XVIIe siècle, semblent d'abord trancher définitivement la question. Le premier se trouve dans un vieil exemplaire de la première édition des *Principes* en français, celle de 1647 : les marges des pages donnent un assez bon nombre de notes manuscrites, de trois ou quatre écritures différentes; l'une est certainement de l'abbé Legrand, qui prépara, nous l'avons vu, une édition nouvelle des Œuvres de Descartes, mais mourut en 1704, sans avoir eu le temps de rien publier. Plusieurs de ces notes (non pas celles de Legrand, il est vrai), remontent à l'année 1659 ; c'est la date donnée par l'une d'elles, que nous reproduisons à la page 119 ci-après." (*Avertissement aux Principes de la philosophie*, AT 9-2, p. X)

"En regard de cet article, on lit à la marge de l'exemplaire annoté : « La version est ici de Mr D. (*Note MS. d'une première main, peut-être celle de Clerselier ? Ce qui suit est d'une autre main, sûrement celle de Legrand*) Ce que nous jugeons ainsi à cause de l'original que nous en avons entre les mains écrit de sa propre main (*primitivement de la propre main de Mr Desc., ces derniers mots barrés*). Et il n'est pas croyable que si cette version n'était pas de lui, il se fut donné la peine de la transcrire, lui qui d'ailleurs était si accablé d'affaires. » Cette note si importante a été discutée dans notre *Avertissement*."

Note de Paul Adam au § 41 de la Troisième partie : Que cette distance des Étoiles fixes est nécessaire pour expliquer les mouvements des Comètes (AT IX-2, p. 121)

"La première édition Adam-Tannery comportait ici la phrase :
« au premier volume de la présente édition », ce qui indiquait que l'intention initiale des éditeurs avait été de placer la *Vie de Descartes* en tête de leur publication et situait le commencement de la réaction du présent Avertissement à une époque antérieure à 1896. En fait, l'intention ne fut pas suivie d'effet, puisque la *Vie de Descartes* par Ch. Adam (datée de 1910) se trouve dans le dernier tome, numéroté XII, de ce qui est devenu maintenant l'ancienne édition Adam-Tannery.

D'où la correction introduite par nous dans le texte.

Voici l'essentiel de ce que l'on trouve au tome XII p. 360-361 concernant l'historique de la traduction évoqué en ce début de l'Avertissement des *Principes*.

« Sitôt les *Principes* publiés en latin, Picot se mit à les traduire.

Descartes était alors en France ; avant de retourner en Hollande, il avait déjà reçu la première et la seconde partie, mises en français.

Le reste vint le rejoindre à Egmond. Et à ce propos, une question encore se pose. Il a existé de cette traduction un manuscrit aujourd'hui perdu, manuscrit autographe qui commençait à l'article 41 de la troisième partie : ce manuscrit pouvait faire croire qu'à partir de là jusqu'à la fin, la traduction était de Descartes lui-même, et non de Picot ; bien mieux, ce n'était plus une traduction, mais le propre texte, et un texte français du philosophe (1). De fait, nous savons que quelques parties peut-être, ne fut-ce que celle qui est relative à l'aimant, ont été au moins résumées par lui en français pour son ami Pollot, qui ne savait pas le latin (2). Et nous savons aussi que la traduction française contient de nombreuses additions, lesquelles sans doute Picot n'eût point osé faire de son autorité, et qui, par conséquent, sont de Descartes. C'est même ce qui permet de résoudre le problème. Qui donc, en effet, pouvait insérer, chacune à sa place, toutes ces additions dans le texte déjà traduit, sinon l'auteur, et nul autre que lui ? Et il l'aura fait en recopiant le tout de sa main, travail délicat que lui seul encore pouvait faire, ce qui explique qu'il en ait pris la peine.

C'est ainsi que nous avons deux textes pour les *Principes de la Philosophie* : le texte latin, publié d'abord en 1644, et un texte français, publié en 1647, traduction du premier pour la plus grande part, et pour le reste addition de Descartes lui-même. Il ne sera pas sans intérêt de noter, chemin faisant, en quel sens ont été faites ces additions : quelle préoccupation ou arrière-pensée ne révèlent-elles pas ça et là ? »

On ne peut qu'être surpris de la différence de ton que cet « historique » (publié en 1910) présente avec les p. X à XVIII du présent *Avertissement* qui porte la signature de Ch. Adam à une date (décembre 1904) toute proche de la mort de P. Tannery (27 novembre).

Tandis que ces pages aboutissent à des conclusions très nuancées en raison des constatations concernant la traduction des règles du choc, l'« historique » se fait affirmatif pour l'attribution à Descartes lui-même de toutes les additions par rapport au texte latin. C'est donc un fait qu'entre 1904 et 1910 Ch. Adam n'a pas cru devoir conserver la prudence qui s'exprime si remarquablement à la fin de l'*Avertissement* p. XX.

Le lecteur qui suivrait l'invitation de ce premier paragraphe de l'*Avertissement* et se fierait à la version de l'« historique » telle qu'elle apparaît dans le tome XII de la précédente édition Adam-Tannery, risquerait d'être induit en erreur. Les nuances et la prudence que nous soulignons comme les qualités majeures de l'*Avertissement* sont à observer soigneusement.

Conformément à la suggestion de la page XVIII et à l'attention portée par Paul Tannery aux règles du choc, la comparaison attentive du texte latin et de la version française pour les articles 43 à 52 de la IIe partie est révélatrice. Mais, tandis que pour les articles 46 à 52 les corrections et additions sont pertinentes, pour les articles 43 à 45 les modifications par rapport au texte latin introduisent des non-sens flagrants que l'on ne saurait en aucune manière attribuer à Descartes. Cf. Pierre Costabel « Essai critique de quelques concepts de la mécanique cartésienne », *Archives Internationales d'Histoire des Sciences*, t. XX, N° 80, 1967, p. 235-252.

La critique interne impose au moins pour le passage indiqué la certitude d'une situation étrange : à savoir la juxtaposition, dans l'édition française des *Principes*, d'éléments corrigés et d'éléments abandonnés par l'auteur au jugement infirme de son traducteur.

L'histoire de la traduction est donc encore à faire et garde ses secrets.

Pour Picot, traducteur des *Principes*, voir la notice biographique au tome IV de la *Correspondance* de Descartes par Adam et Milhaud p. 402 et pour Pollot la notice au tome I de la même publication p. 459.

Notons encore que les remarques relatives au style de Picot, que le présent *Avertissement* contient p. VIII et IX, sont confirmées par la récente découverte d'une lettre de Picot à Carcavi, du 5 août 1649. Cette lettre où Picot est consulté en tant que commentateur autorisé des *Principes* est actuellement en cours de publication par les soins de J. Beade pour le dernier numéro du tome XXIV (1971) de la *Revue d'Histoire des Sciences* (P.U.F.). [*]" (*Appendice* de Bernard Rochot à la nouvelle édition de AT 9-2, Paris: Vrin 1989, pp. 354-355)

4. ——. 1647. *Lettre de l'Auteur à celui qui a traduit le livre laquelle peut ici servir de Préface* Paris: Henry Le Gras.

Première édition : *Appendice à la traduction des Principes de la philosophie* par Paul Picot.

AT IX-2, 1-20; B Op. I, 2214-2237.

Lettre-préface des Principes de la philosophie, présentation et notes par Denis Moreau, Paris: GF-Garnier-Flammarion 1996.

La préface est annoncée dans la lettre à Étienne Charlet du 4 décembre 1646 : "Les lettres que j'ai eu l'honneur de recevoir de la part de Votre Révérence m'ont extrêmement obligé (2), et j'aurai soin d'empêcher, autant qu'il sera en mon pouvoir, qu'aucun de mes amis ne fasse rien contre les bons conseils que j'y trouve. Ce m'est beaucoup quelles m'apprennent que vous ne trouverez point mauvais, si, sans attaquer personne en particulier, on dit son sentiment, en général, de la philosophie qui s'enseigne communément partout. C'est un sujet auquel il est malaisé de s'abstenir de tomber; mais, parce que avait été commencé par un de mes amis, ne m'a pas satisfait, je l'ai prié de ne point continuer ; et afin de pouvoir mieux user de toute la circonspection et retenue qui sera requise pour faire que cela n'offense personne, je pense que je prendrai moi-même la plume, non point pour en écrire un long discours, mais pour mettre seulement par occasion, dans une préface (3), les choses dont il me semble que ma conscience m'oblige d'avertir le public. Car je puis dire, en vérité, que si je n'avais suivi que mon inclination, je n'aurais jamais rien fait imprimer, et que je n'ai point d'autre soin que de m'acquitter de mon devoir, ni d'autre passion que celle qui est excitée par le souvenir des obligations que je vous ai, et me fait être..." (AT IV, 587-588; O VIII 1, 638; B 594)

"M. Descartes partit de La Haye le 7 de juin [1647] pour Rotterdam, d'où il écrivit le lendemain à l'abbé Picot sur le point de passer à Middelbourg pour s'embarquer le jour suivant à Flessingues, dans l'espérance d'arriver au bout de quinze jours à Paris, où il fut reçu et logé par cet ami, qui depuis le premier voyage de M. Descartes en France avait quitté la rue des Écouffes pour celle de Geoffroy-l'Ânier, où il avait pris une maison conjointement avec Mme Scarron de Mandine. Son dessein était de passer en Bretagne dès le commencement de juillet, pour régler les affaires qui servaient de prétexte à son voyage. Mais l'édition française de ses *Principes* qui s'achevait entre les mains de leur traducteur son hôte lui donna occasion de différer de quelques jours, tant pour y faire une préface, que pour voir entièrement débarrassé de cette occupation un

homme qui devait être de sa compagnie dans son voyage."
(Baillet II, 323)

5. ———. 1648. *Notae in programma quoddam sub finem anni 1647 in Belgio editum, cum hoc titulo: Explicatio mentis humanae, sive animae rationalis, ubi explicatur quid sit, et quid esse possit.* Amstelodami: Ex Officina Ludovici Elzevirii.

Remarques sur une œuvre de Henricus Regius (Hendrik De Roy, 1598-1679).

AT VIII-2, 341-369; B Op II, 2250-2287.

Traduction française de Claude Clerselier: *Remarques de René Descartes sur un certain placard imprimé aux Pays-Bas vers la fin de l'année 1647, qui portait ce titre : Explication de l'esprit humain, ou de l'âme raisonnable : où il est montré ce qu'elle est, et ce qu'elle peut être*, dans Clerselier-Lettres, t. I, p. 434-462, repris Alquié, t. III (1643-1650), pp. 787-820.

Descartes. Lettres à Regius et Remarques sur l'explication de l'esprit humain, Texte latin, traduction, introduction et notes par Geneviève Rodis-Lewis, Paris: Vrin 1959.

Table des matières : Introduction 7-19; Lettres de Descartes à Regius (texte latin et traduction) [16 lettres de Descartes à Regius; 2 lettres de Regius à Descartes) 21-141; Notes sur le Placard de Regius : XIX. Lettre d'envoi de Descartes [à Hogelande ?], [décembre 1647] 142; Remarques de R. Descartes sur un certain placard... intitulé : Explication de l'Esprit humain ou de l'Ame raisonnable, où il est montré ce qu'elle Est et ce qu'elle peut être 143; Texte de Regius 146; Examen du placard 154;

Appendice.

I. Extraits de l'Epître de Descartes à Voet [mai 1643] (sur quelques objections à sa métaphysique)

A. 190; B. 192;

II. Textes choisis de Regius (*Philosophia naturalis...*)

A. Critique du privilège du *Cogito* 196; B. Rapports de la pensée et de l'étendue 196; C. Douter du corps n'implique pas que

l'esprit en soit réellement distinct 198; D. L'âme peut aussi bien être mode corporel, attribut ou substance 200; E. L'âme ne pense pas toujours en acte : sa dépendance des conditions organiques 202; F. Certitude et révélation divine 202; G. Critique des idées innées et des preuves cartésiennes de l'existence de Dieu 206-213.

"Ces divers textes, ainsi rapprochés, sont rendus plus accessibles au grand public par la confrontation avec l'original latin d'une traduction française suffisante pour la compréhension d'ensemble du texte. Des versions anciennes utilisées (5) sont assez lâches et devraient inciter le lecteur à interpréter plus strictement le détail du latin : pour l'y aider nous les avons revues de près, mis entre crochets dans le texte français les additions et paraphrases dont Clerselier surtout est coutumier, souligné par des caractères gras, les divergences portant sur un ou deux mots, corrigé directement sans le mentionner à chaque fois quelques erreurs de détail incontestables, et indiqué en note une traduction plus précise dans les seuls cas où cette rectification pouvait embarrasser un débutant." (pp. 17-18, notes omises)

(5) Dans le premier volume des *Lettres de Descartes* publié en 1657, Clerselier donne le texte latin des lettres à Regius, qu'il nomme M. De Roy : lettres n° 81-99, suivies pour les « Remarques sur un certain placard... » par une version « faite autrefois » (préface), sans le texte original. C'est cette traduction des *Notae* qui est ici reproduite et pour les lettres à Regius, celle des éditeurs parisiens de 1724-1725, t. II, p. 228-482, 1. no· 12-30 (cf. notre édition des *Lettres à Arnauld et Morus*, Vrin, 1953, Introduction, p. 8-9). Pour les deux passages de l'*Epistola ad Voetium*, qui n'avait jamais été traduite avant l'édition V. Cousin (1825, t. II), la parenté du style des éditions anciennes avec celui de Descartes ne jouant plus, nous proposons notre propre version, comme pour les textes de Regius traduite en *Appendice*.

Une traduction inédite du texte latin sous la direction de Denis Moreau est disponible à l'adresse : caphi.univ-nantes.fr/Traduction-inedite-du-texte-latin

"« Opuscule des plus rares, dont L. Elzevier a été l'éditeur, mais qui sort des presses de Fr. Hackius à Leyde », ajoute Alphonse Willems, p. 269-270 de son ouvrage, *Les Elzevier* (Bruxelles, 1880).

Dès 1650, le même texte fut reproduit, au volume des *Méditations* en latin, après les sixièmes *Objections et Réponses*, dans les cinq éditions successives des Elzevier, 1650, 1654, 1663, 1670 et 1678, et plus tard dans celles des Blaeu, à Amsterdam, à partir de 1683. (Voir notre t. VII, p. IX-XII.)

Cependant Clerselier avait donné, au tome I, p. [542-571], de ses *Lettres de Mr Descartes*, 1657, à la suite de la lettre 99, une version française des *Notæ in Programma*, sous le titre suivant : REMARQUES DE RENÉ DESCARTES, Sur un certain Placard imprimé aux Pays-Bas vers la fin de l'année 1647, qui portait ce titre : *Explication de l'Esprit humain, ou de l'Ame raisonnable, où il est montré ce qu'elle est et ce qu'elle peut être. Version.* Clerselier avertit, dans la Préface de ce tome I, qu'il a fait autrefois cette version lui-même. (Voir notre t. V, p. 625, l. 25-28.) N'étant donc qu'une version de Clerselier, elle n'a pas à figurer dans une édition des *Œuvres* de Descartes, et nous n'avons à nous occuper que de l'original, qui est le texte latin." (AT VIII, 2, *Avertissement*, p. XI.)

"Sur la fin de l'année 1647 l'on vit paraître en Hollande deux écrits latins auxquels il semblait que M. Descartes ne devait point se montrer indifférent. Le premier était directement contre lui, et était intitulé *Considération sur la méthode de la philosophie cartésienne*. Il avait pour auteur ce Revius théologien de Leyde qui, n'ayant pu réussir à faire condamner les écrits de M. Descartes, n'avait su faire autre chose que d'appliquer à ses chagrins le remède qu'il avait entre ses mains, et de prendre la voie des satires et des libelles, pour se donner une satisfaction, qu'il n'avait pu recevoir de ses supérieurs. M. Descartes ayant remarqué que ce libelle n'était rempli que de *cavillations inutiles*, et de calomnies trop noircies pour pouvoir être crues de personne, jugea qu'il devait plutôt en rendre grâce à son auteur que de s'en tourmenter, parce que cet auteur montrait assez par là qu'il n'avait rien trouvé dans ses écrits

qu'il pût reprendre avec quelque apparence de justice, et qu'ainsi il en confirmait mieux la vérité, que s'il avait entrepris de les louer publiquement.

L'autre écrit latin qui parut en même temps le toucha davantage, quoiqu'il ne s'adressât à lui qu'indirectement, et qu'il pût dissimuler la chose sans intéresser sa réputation. Il avait pour titre *Explication de l'Esprit humain ou de l'Ame raisonnable, où l'on montre ce qu'elle est et ce qu'elle peut être*. Il fut imprimé à Utrecht, premièrement en forme de petit livre sous le nom de M. Regius son ancien disciple, et ensuite en feuille étendue par manière de programme ou placard pour être affiché dans les places et les rues, sans nom d'auteur ni d'imprimeur. M. Descartes l'ayant reçu de cette seconde forme reconnut aussitôt l'auteur par le style et par le bruit commun. Il y remarqua plusieurs opinions qu'il jugeait fausses et pernicieuses ; et parce qu'on était encore assez communément persuadé que M. Regius était toujours dans les sentiments qu'il lui avait inspirés autrefois, il se crut obligé de découvrir les erreurs de cet écrit, de peur qu'elles ne lui fussent imputées par ceux qui, n'ayant pas lu ses , et surtout ses *Méditations*, tomberaient par hasard sur la lecture de cet écrit de Regius. Il en composa la réfutation en latin sur la fin du mois de décembre, et elle fut imprimée à Amsterdam avant qu'il en sût (a) rien, et sans sa participation, avec des vers et une préface qui n'eurent point son approbation, quoique les vers fussent de son ami M. Heydanus (b) qui n'avait pas jugé à propos d'y mettre son nom (c). Nous avons aujourd'hui cette réfutation traduite en français au premier volume de ses lettres précédée de l'écrit ou placard de M. Regius, contenant vingt et un articles ou assertions par manière de thèses sur l'Ame raisonnable, où cet auteur avait mis pour conclusion ce que M. Descartes avait dit autrefois dans l'Épître dédicatoire de ses *Principes*, qu'il n'y a point de gens qui parviennent plus aisément à une haute réputation de piété que les superstitieux et les hypocrites. M. Regius fit une réponse assez modeste aux observations que M. Descartes avait faites sur son placard. Mais toute sa modération ne fut point capable d'attirer une réplique de M. Descartes." (Baillet II, 334-335)

(a) a. Sous le titre de *Nota in Programma quoddam*, etc.

(b) Je croirais que c'est plutôt M. Huyghens.

(c) Tome I, p. 434, 439.

unige.ch/lettres/philo/publications/engel/liberamicorum/ ("Le « sujet cartésien » est sorti du placard en janvier 1648, avec les *Notae in Programma* publiées en réponse au libelle de Regius, et mises à l'Index dès 1663." (p. 656).

6. ———. 1647/1648. *La description du corps humain et de toutes ses fonctions*.

Première publication : Clerselier 1664, pp. 99-154 avec le titre "*La formation du fœtus*", qui est de Clerselier: voir l'*Avertissement* dans AT XI p. 219.

AT XI 223-286; B Op. II, 510-597.

Préface de Claude Clerselier aux éditions 1664 et 1677 du *Monde* et de l'*Homme*, AT XI, pp. XI-XXIV; B Op. II, 598-669.

Première partie : Préface 223 ; Seconde partie : Du mouvement du Cœur et du Sang 228 ; Troisième partie : De la Nutrition 246 ; Digression, dans laquelle il est traité de la formation de

l'Animal. Quatrième partie : Des parties qui se forment dans la semence 253 ; Cinquième partie : De la formation des parties solides 273-286.

L'Inventaire de Stockholm, à la lettre G donne cette description du manuscrit : "Un traité intitulé *La Description du corps humain*, où il y a quatre feuillets de suite, et deux autres feuillets dont la suite ne se trouve point jointe, aussi un (en blanc), contenant le titre des chapitres d'un traité à faire de la nature de l'homme et des animaux. A cette liasse ont été joints dix ou douze feuillets, en partie interrompus, qui traitent du même sujet, mais sans qu'il paraisse de liaison avec les précédents." (AT X, 9-10).

"L'inventaire des papiers de Descartes indique, à la lettre G, un Traité MS. intitulé : *La Description du corps humain*. Voir t. X, p. 9, l. 17.) Une lettre MS. de Clerselier, que nous avons aussi imprimée (*ibid.* p. 13-14) , en donne le commencement.

Or ce commencement est identique aux premières pages d'un Traité que Clerselier a publié, dans son volume de 1664, à la suite du *Traité de l'Homme*, sous le même titre initial de *La Description du Corps humain*, bien qu'il imprime en haut des pages ce titre différent *De la Formation du Fœtus*.

L'authenticité de cette publication est donc assurée incontestablement.

A vrai dire, ce double titre de Clerselier demande explication. Mais c'est que le Traité, d'ailleurs inachevé, comprend aussi deux parties distinctes : la première, en effet, entreprend une description du corps humain, ou plutôt de ses fonctions, avec un programme complet que s'était tracé Descartes (p. 112-113, édit. Clerselier), et qu'il n'a fait qu'entamer ; la seconde apparaît comme une digression, et c'est bien ainsi que Clerselier la présente (*ibid.*, p. 137) ; elle explique la formation de l'animal. Mais entre les deux la soudure existe, et non pas une soudure artificielle : Descartes l'a faite lui-même de sa main.

Toutefois le second titre de Clerselier : *De la Formation du Fœtus*, semble bien être de l'éditeur ; outre qu'il ne convient

pas à l'ensemble du traité, et ne désigne réellement que la seconde partie, la « digression », Descartes aurait intitulé celle-ci *De la Formation de l'animal*; et c'est aussi le titre que nous mettrons en haut des pages, pour cette seconde partie, réservant pour la première : *Description du Corps humain*." (AT XII, 219-220)

Lettre à la princesse Élisabeth du 31 janvier 1648 : "... j'ai maintenant un autre écrit entre les mains, que j'espère pouvoir être plus agréable à Votre Altesse : c'est la description des fonctions de l'animal et de l'homme." (AT V, 112 = Baillet II, 337-338; O VIII 2, 292; B642).

7. ———. 1648. *Projets d'une école des arts et métiers (Extraits de Baillet)*.

Baillet II 433-434; AT XI, 659-660; B Op. II, 918-921.

"Une offre d'un autre ami, M. d'Alibert lui plut davantage. Celui-ci songeait à fonder une École des arts et métiers, dont il aurait fourni les frais, et qui devait être ouverte en dehors des heures ou des jours de travail, aux artisans et ouvriers désireux de s'instruire. L'idée répondait bien aux vues de Descartes sur l'union de la théorie et de la pratique, ou de la science et de ses applications : la science toute seule reste sans effets utiles, et l'art ou le métier, sans la science, n'est qu'une routine aveugle, incapable de se perfectionner." (Charles Adam, *Vie et œuvres de Descartes*, Paris: Cerf, 1910, p. 470.)

Renati Descartes, *Meditationes De Prima Philosophia, In quibus Dei existentia et animae humanae a corpore distinctio demonstrantur. His adiunctae sunt variae objectiones doctorum virorum in istas de Deo et anima demonstrationes; Cum Responsonibus Authoris. Secunda editio septimis objectionibus antehac non visis aucta.* Amstelodami, Apud Ludovicum Elzevirium, 1642);

Renati Des-Cartes, *Principia Philosophiae*, Amstelodami, Apud Ludovicum Elzevirium, Anno 1644);

Renati Descartes, *Notae in Programma quoddam, sub finem anni 1647 in Belgio editum cum hoc titulo: Explicatio mentis humanae sive animae rationalis, ubi explicatur quid sit et quid esse possit*, Amstelodami, Apud Ludovicum Elzevirium, 1648

Renati Des Cartes, *Specimina Philosophiae seu Dissertatio De Methodo...* Amstelodami, apud Ludovicum Elzevirium 1644).

"Ce sont donc des difficultés proposées de vive voix à Descartes par Burman, avec les réponses recueillies par le même Burman de la propre bouche du philosophe, à Egmond, le 16 avril 1648. Quelques mots du feuillet 88, recto, I. 6-7, permettent de

reconstituer la scène : ce fut une conversation pendant le repas ; on était à table et on causait en mangeant (*jam ego concipio et cogito simul me loqui et edere*, dit Descartes donnant comme exemple ce qu'il fait en ce moment). Ailleurs, ayant à citer, (f. 36 verso, l. 5) deux noms de ville, les premiers qui lui viennent à l'esprit sont Alcmaer, la ville la plus proche d'Egmond, et Leyde, la ville natale de son interlocuteur.

François Burman, en effet, était né à Leyde, en 1688. Fils de pasteur, il devint lui-même pasteur ; on le trouve un an à Hanovre, en cette qualité, puis un an à Leyde sous-régent au collège des Etats, enfin professeur de théologie à Utrecht où il mourut le 21 novembre 1679 ; son oraison funèbre fut prononcée par Grævius, dont nous avons rencontré le nom tout à l'heure, dans le même cahier, avec la date de 1691. Burman était donc un tout jeune homme en 1648 : il n'avait que vingt ans, et on ne sait ce qu'on doit le plus admirer des difficultés qu'il propose à cet âge ou de la complaisance avec laquelle lui répond le philosophe, âgé de cinquante-deux ans déjà, et de plus auteur du *Discours de la méthode*, des *Méditations métaphysiques* et des *Principes de Philosophie*. Peut-être aussi Descartes avait-il connu le père à Leyde ; on s'expliquerait alors qu'il causât en toute liberté devant le fils d'un ami. Il parle, en effet, sans ménagement aucun, des théologiens et même de Saint Thomas ; il dit son mot sur Aristote et sur la Bible ; il met enfin ce petit étudiant dans la confiance de ses derniers travaux, l'hiver de 1647-1648, et même de son régime de vie, régime intellectuel (s'occuper de physique surtout, bien plutôt que de métaphysique) et régime du corps ; bien des détails intimes et tout personnels viennent ainsi confirmer ou compléter ceux que l'on connaissait déjà sur Descartes.

De retour à Amsterdam, Burman y rencontre Clauberg, qui, né en 1623, n'était son aîné que de six ans, et lui fait part de cette conversation. Avait-elle été rédigée déjà, séance tenante, par Burman seul ? ou bien les deux jeunes gens s'entendirent-ils pour la rédiger ensemble, le 10 avril, c'est-à-dire quatre jours après la date même de la conversation, qui avait eu lieu le 16 avril ?

Sont-ce enfin les propres paroles de Descartes, en quelque sorte sténographiées par son interlocuteur, ou seulement le souvenir qu'il en avait gardé, et qu'il a peut-être arrangé avec un ami préoccupé comme lui des doctrines cartésiennes ? Les mots : *responsiones Renati des Cartes... ab ipso haustæ* réponses recueillies de la bouche même de Descartes, et pour ainsi dire puisées à la source), ainsi que l'indication exacte de plus de soixante pages ou articles avec une ligne de chacun textuellement citée rendent la première supposition des plus vraisemblables. Eu tout cas Clauberg prit lui-même copie du texte ainsi rédigé, et c'est la copie de Clauberg qui a été copiée ensuite à Dordrecht, le 13 et 14 juillet, on ne sait en quelle année ni par qui. Clauberg mourut à Duisbourg, le 31 janvier 1665 ; en 1691, parut à Amsterdam une édition de ses *Opera philosophica*, 2 vol. in-4, où ne se trouve pas cette conversation de Descartes et de Burman. Faut-il conjecturer de là qu'elle aurait été copiée pour compléter l'édition, et vers le même temps, cette année 1691 étant aussi mentionnée dans le cahier manuscrit, au feuillet 21, comme date d'une lettre à Grævius ? Le cahier ne serait d'ailleurs entré que plus tard dans la bibliothèque de Crusius [*] (né lui-même en 1715, peut-être seulement à la date de 1751, inscrite, nous l'avons vu, en haut de la première page." (Charles Adam, "Manuscrit de Gottingen. Descartes (Méditations, Principes, Méthode)", *Revue Bourguignonne de l'Enseignement supérieur*, 1896, pp. 2-3)

"Le MS. est paginé seulement au recto des feuilles ; f. 27 à f. 43 inclus. Il comprend trois parties : objections et réponses, 1° sur les *Méditations*, 2° sur les *Principes*, 3° sur le *Discours de la Méthode*.

Les passages sont indiqués avec renvois aux pages de la seconde édition latine des *Méditations* (Amsterdam, Louis Elsevier, 1642), aux articles de chaque livre des *Principes*, et aux pages de la traduction latine du *Discours de la Méthode*, etc. (Amsterdam, Louis Elsevier, 1644). Après l'indication de chaque passage se trouve ordinairement une objection, puis la réponse de Descartes, puis une nouvelle objection, puis une nouvelle réponse, etc. Les réponses sont le plus souvent annoncées par la lettre R, tandis que rien n'annonce les

objections. Cela n'a pas d'inconvénient, lorsqu'il n'y a qu'une objection et aussi qu'une réponse à la suite. Mais, s'il y a deux, ou trois, ou même quatre objections successives, il a fallu trouver l'endroit où chacune d'elles commence et se détache de la réponse qui précède. Nous avons indiqué cet endroit par la lettre O entre crochets (O désignant les objections, comme R les réponses). (Charles Adam, AT V, 150).

[*] "Le cahier catalogué à Göttingen Cod. Ms. philol. 264, fit partie de la bibliothèque d'un Crusius (on lit au verso du premier feuillet : « Ex Bibl. M. Crusii »).

"Adam (2), suivi par John Cottingham (3) et Jean-Marie Beyssade (4), estime qu'il doit s'agir de Christian August Crusius (1715-1775), adversaire de Leibniz et Wolff, qui devint professeur de théologie à Leipzig en 1750. Mais en réalité, comme l'indique Hans Werner Arndt (5), il doit plus vraisemblablement s'agir de Magnus Crusius (1697-1751), le livre paraissant être entré dans l'actuelle Niedersächsische Staats und Universitätsbibliothek où M. Crusius était théologien, l'année même de sa mort, comme l'atteste la date 1751 inscrite sur le premier feuillet où apparaît également un cachet Ex Bibliotheca Acad. Georgiæ Augustæ - George Auguste étant le nom de l'Université, fondée en 1737." (Xavier Kieft, "L'Entretien de Descartes avec Burman : un malentendu historico-philosophique", *Klesis. Revue philosophique*, 11, 2009, pp. 108–134)

(3) *Descartes' Conversation with Burman*, translated with introduction and commentary by J. Cottingham, Oxford, Clarendon, 1976 (désormais cité « Cottingham »), p. XII.

(4) Beyssade [1981], p. 5.

(5) R. Descartes, *Gespräch mit Burman*, Übersetzt und herausgegeben von H. W. Arndt, Hambourg, Meiner, 1982 (désormais cité « Arndt »), p. I et pp. XXVII-XXVIII. Arndt pense même avoir identifié l'écriture du dit Magnus Crusius.

Johannes Clauberg cite un passage de l'*Entretien avec Burman* (AT V 177) dans le chapitre XVIII de sa *Defensio cartesiana*, Amstelodami, 1652 (repris dans *Opera Omnia Philosophica*, Amstelodami 1691, p. 1000, réédition Hildesheim: Georg Olms 1968)

9. ——. 1648. [*Traité de l'érudition*].

Dans une lettre à Descartes du 5 décembre 1647 Élisabeth de Bohême, princesse Palatine, écrivait :

"Cela vous montre combien le monde a besoin du *Traité de l'Érudition*, que vous avez autrefois voulu faire. Je sais que vous êtes trop charitable pour refuser une chose si utile au public, et que, pour cela, je n'ai pas besoin de vous faire souvenir de la parole que vous [m']en avez donnée." (AT V 97, 4-19 = Baillet II, 337; B636).

Le 31 janvier 1648 Descartes répond :

"J'ai reçu les lettres de votre Altesse du 23 décembre presque aussitôt que les précédentes, et j'avoue que je suis en peine touchant ce que je dois répondre à ces précédentes, à cause que votre Altesse y témoigne vouloir que j'écrive le *Traité de l'Érudition*, dont j'ai eu autrefois l'honneur de lui parler. Et il n'y a rien que je souhaite avec plus de zèle, que d'obéir à vos commandements ; mais je dirai ici les raisons qui sont cause que j'avais laissé le dessein de ce traité, et si elles ne satisfont à votre Altesse, je ne manquerai pas de le reprendre. (2) La première est que je n'y saurais mettre toutes les vérités qui y devraient être, sans animer trop contre moi les gens de l'École, et que je ne me trouve point en telle condition que je puisse entièrement mépriser leur haine (3). La seconde est que j'ai déjà touché quelque chose de ce que j'avais envie d'y mettre dans une préface qui est au-devant de la traduction française de mes *Principes*, laquelle je pense que votre Altesse a maintenant reçue. La troisième est que j'ai maintenant un autre écrit entre les mains, que j'espère pouvoir être plus agréable à Votre Altesse : c'est la description des fonctions de l'animal et de l'homme." (AT V, 111-112 = Baillet II, 337-338; O VIII 2, 292; B642).

(2) On peut se demander s'il ne s'agit pas ici des *Regulae* (voir Descartes, *Écrits de jeunesse*, éd. V. Carraud, Paris, 2013).

(3) Allusion à ses démêlés à Leyde (avec Revius) et à Utrecht (avec Voet).

10. ———. 1649. *Les passions de l'âme*. Paris: Henry Le Gras.

AT XI, 301-488; B Op. I, 2300-2527.

Traduction latine : *Passiones animae per Renatum Descartes: Gallice ab ipso concriptae, nunc autem in exterorum gratiam Latina civitate donatae ab H.D.M.I.V.L.*, Amstelodami apud L Elzevirium, 1650 (la traduction est de Henricus Des-Marets, fils de Samuel Desmarets (1599-1673); voir : Paul Dibon, "La Traduction latine des Passions de l'âme", dans *Regards sur la Hollande du siècle d'or*, Napoli, Vivarium, 1990, pp. 523-550.)

Premières références au thème des "passions de l'âme" dans les écrits de Descartes :

"En ce qui concerne la variété des passions que la musique peut exciter par la variété de la mesure, je dis qu'en général une mesure lente excite en nous également des passions lentes, comme le sont la langueur, la tristesse, la crainte, l'orgueil, etc., et que la mesure rapide fait naître aussi des passions rapides, comme la joie, etc. Il faut en dire autant des deux genres de battue : la mesure carrée, qui se résout toujours en membres égaux, est plus lente que celle qui est battue en triplât, c'est-à-dire celle qui se compose de trois parties égales. La raison en est que celle-ci occupe davantage le sens parce qu'il y a en elle plus de membres à remarquer — à savoir trois —, tandis qu'il n'y en a que deux dans l'autre. Mais une recherche plus exacte de cette question dépend d'une excellente connaissance des mouvements de l'âme, et je n'en dirai pas davantage." (AT X 95; traduction du latin par Frédéric de Buzon, *Abrégé de Musique. Compendium Musicae*, Paris: Presses Universitaires de France, 1987, 62).

"A la suite de cela, il faudrait maintenant parler des diverses vertus des consonances à exciter les passions ; mais une recherche plus exacte de cette manière peut être tirée de ce qui

a été dit, et dépasserait les limites d'un abrégé. Car ces vertus sont si variées et dépendent de circonstances si légères qu'un volume entier ne suffirait pas à épuiser la question." (AT X, 111; *Abrégé de Musique cit.*, 88)

"De là, et d'autres choses semblables on pourrait déduire plusieurs choses concernant la nature des degrés, mais cela serait long. Il suit que je devrais traiter maintenant de chaque mouvement de l'âme qui peut être excité par la musique, et je pourrais montrer par quels degrés, consonances, rythmes et choses semblables ils doivent être excités ; mais cela dépasserait les limites d'un abrégé." (AT X, 140; *Abrégé de Musique, cit.*, 138)

"Il y a dans tout esprit certaines parties qui, touchées même légèrement, excitent des passions fortes.

Ainsi un enfant qui a l'âme généreuse, si on le gronde, ne pleurera pas, mais il s'emportera ; un autre versera des larmes.

Si l'on nous dit que de grands malheurs sont arrivés, nous nous attristerons ; si l'on ajoute qu'il y avait en cause quelque méchant, nous nous mettrons en colère. Le passage d'une passion à une autre se fait par les passions voisines ; quelquefois pourtant il y a des passages violents par les contraires : supposez par exemple que la nouvelle d'un grand malheur se répande tout à coup au milieu de la joie d'un festin.

De même que l'imagination se sert des figures pour concevoir les corps ; de même l'intelligence emploie certains corps sensibles pour figurer les choses spirituelles, comme le vent, la lumière. Une philosophie plus profonde peut élever l'esprit par la connaissance à des hauteurs sublimes." (*Cogitationes privatæ*, AT X 217 (traduction du latin par Foucher de Careil, I, 11).

"Premièrement, pour ce qui est des esprits animaux, ils peuvent être ou moins abondants, et leurs parties plus ou moins grosses, et plus ou moins agitées, et plus ou moins égales entre elles une fois que l'autre (138) ; et c'est par le moyen de ces quatre différences, que toutes les diverses humeurs ou inclinations naturelles (139) qui sont en nous (au moins en tant

qu'elles ne dépendent point de la constitution du cerveau, ni des affections particulières de l'âme) sont représentées en cette machine. Car, si ces esprits sont plus abondants que de coutume, ils sont propres à exciter en elle des mouvements tout semblables à ceux qui témoignent en nous de la *bonté*, de la *libéralité* et de l'*amour*; et de semblables à ceux qui témoignent en nous de la *confiance* ou de la *hardiesse*, si leurs parties sont plus fortes et plus grosses ; et de la *constance*, si avec cela elles sont plus égales en figure, en force, et en grosseur ; et de la *promptitude*, de la *diligence*, et du *désir*, si elles sont plus agitées ; et de la *tranquillité d'esprit*, si elles sont plus égales en leur agitation. Comme, au contraire, ces mêmes esprits sont propres à exciter en elles des mouvements tout semblables à ceux qui témoignent en nous de la *malignité*, de la *timidité*, de l'*inconstance*, de la *tardiveté* (a), et de l'*inquiétude*, si ces mêmes qualités leur défont (b).

Et sachez que toutes les autres humeurs ou inclinations naturelles sont dépendantes de celles-ci (140). Comme l'*humeur joyeuse* est composée de la promptitude et de la tranquillité d'esprit ; et la bonté et la confiance servent à la rendre plus parfaite. L'*humeur triste* est composée de la tardiveté et de l'inquiétude, et peut être augmentée par la malignité et la timidité. L'*humeur colérique* est composée de la promptitude et de l'inquiétude, et la malignité et la confiance la fortifient. Enfin, comme je viens de dire, la libéralité, la bonté, et l'amour dépendent de l'abondance des esprits, et forment en nous cette humeur qui nous rend complaisants et bienfaisants à tout le monde. La curiosité et les autres désirs dépendent de l'agitation de leurs parties ; et ainsi des autres." (AT XI, 166-167; *Le Monde, l'Homme*, Introduction de Annie Bitbol-Hespériès; textes établis et annotés par Annie Bitbol-Hespériès et Jean-Pierre Verdet, Paris: Seuil, 1996, pp. 146-147)

Le 11 juin 1640 Descartes écrit à Mersenne : "J'écrirai à Monsieur de Zuylichem (84) pour lui demander le livre de Monsieur de la Chambre (85) et vous en dirai mon sentiment." (AT III 87; O VIII 1, 383; B 255).

(84) Lettre à Huygens perdue (Huygens était alors en campagne militaire en Flandre).

(85) Marin Cureau de La Chambre [1594 - 1669], *Les Caractères des passions*, 1640 (privilège du 15 décembre 1639) ; il s'agit des *Passions pour le bien*; un second volume, *Les Passions courageuses*, paraîtra en 1645.

Lettre à Mersenne du 28 janvier 1641 : "J'ai reçu, il y a déjà quelques semaines, le livre de Monsieur de la N. (9), et un autre du dixième livre d'Euclide mis en français (10). Mais pour vous avouer la vérité, sur ce que Monsieur de Zuylichem m'avait dit, avant de me les envoyer, qu'ils ne contenaient rien de fort exquis, et que j'avais d'autres occupations, je les ai laissé reposer, après avoir lu deux ou trois heures dans le premier, sans rien y trouver que des paroles."

(9) Peut-être les *Caractères* de Marin Cureau de La Chambre, dont il est déjà question dans à Mersenne, 11 juin 1640 (AT III 87, [O VIII 1, 383] B 255) et 28 octobre 1640 (AT III 207, [O VIII 1, 415-416] B 278).

(10) Le *Traité des quantités* de J.-A. Le Tenneur.

En 1645 Descartes suggère à la princesse Élisabeth de lire le *De vita beata* de Sénèque (lettre du 21 juillet, (AT IV 253; O VIII 2, 208; B511) ; voir aussi les lettre du 4 août 1645 : "Lorsque j'ai choisi le livre de Sénèque *De vita beata*, pour le proposer à Votre Altesse comme un entretien qui lui pourrait être agréable, j'ai eu seulement égard à la réputation de l'auteur et à la dignité de la matière, sans penser à la façon dont il la traite, laquelle ayant depuis considérée, je ne la trouve pas assez exacte pour mériter d'être suivie." (AT IV, 263, [O VIII 2, 209] B 514), et du 18 août 1645 : "J'ai dit ci-devant ce qu'il me semblait que Sénèque eût dû traiter en son livre ; j'examinerai maintenant ce qu'il traite." (AT IV, 271-272; O VIII 2, 224; B 517).

Descartes expose les premières esquisses de sa théorie des passions dans trois lettres à Élisabeth : 1 septembre 1645 (AT IV 281-287; O VIII 2, 219-223; B 524) ; 15 septembre 1645 (AT

IV, 290-296; O VIII 2, 225-2231; B 519) ; 6 octobre 1645 (AT IV, 304-317; O VIII 2, 231-239; B526).

Le commencement du livre est annoncé dans la lettre à la princesse du 3 novembre 1645 : "J'ai pensé ces jours au nombre et à l'ordre de toutes ces passions, afin de pouvoir plus particulièrement examiner leur nature ; mais je n'ai pas encore assez digéré mes opinions, touchant ce sujet, pour les oser écrire à Votre Altesse, et je ne manquerai de m'en acquitter de plus tôt qu'il me sera possible." (AT IV, 331; O VIII 2, 242; B 529).

Un première version du livre est terminée au début de 1646 (lettre d'Élisabeth du 25 avril) : "Cela m'a empêché jusqu'ici de me prévaloir de la permission, que vous m'avez donnée, de vous proposer les obscurités que ma stupidité me fait trouver en votre *Traité des passions* (3), quoiqu'elles sont [sic] en petit nombre, puisqu'il faudrait être impassible, pour ne point comprendre que l'ordre, la définition et les distinctions que vous donnez aux passions, et enfin toute la partie morale du traité, passent tout ce qu'on a jamais dit sur ce sujet." (AT IV 404; O VIII 2, 252; B 554).

(3) Descartes s'était rendu le 7 mars à La Haye (à Chanut, 6 mars 1646, AT IV, 376 l. 11, [O VIII 2, 252] B 545) et avait pu y laisser à la princesse une copie manuscrite de son *Traité des passions de l'âme*.

Voir aussi la lettre à Élisabeth du mai 1646: "Je reconnais, par expérience, que j'ai eu raison de mettre la gloire au nombre des passions (2) ; car je ne puis m'empêcher d'être touché, en voyant le favorable jugement que fait Votre Altesse du petit traité que j'en ai écrit (3) Et je ne suis nullement surpris de ce qu'elle y remarque aussi des défauts, parce que je n'ai point douté qu'il n'y en eût en grand nombre, étant matière que je n'avais jamais ci-devant étudiée, et dont je n'ai fait que tirer le premier crayon (4), sans y ajouter les couleurs et les ornements qui seraient requis pour la faire paraître à yeux moins clairvoyants que ceux de Votre Altesse." (AT IV 407; [O VIII 2, 254] B 556).

(2) *Passions de l'âme* III § 204 (AT XI, 482).

(3) Voir lettre à Élisabeth, 25 avril 1646 (AT IV, 404; [O VIII 2, 252] B 554).

(4) Au sens d' « esquisse ».

Le 20 novembre 1647 Descartes envoie une copie manuscrite de son livre à la Reine Christine de Suède : "J'ai appris de Monsieur Chanut (2) qu'il plaît à Votre Majesté que j'aie l'honneur de lui exposer l'opinion que j'ai touchant le Souverain Bien, considéré au sens que les philosophes anciens en ont parlé ; et je tiens ce commandement pour une si grande faveur, que le désir que j'ai d'y obéir me détourne de toute autre pensée, et fait que, sans excuser mon insuffisance, je mettrai ici, en peu de mots, tout ce que je pourrai savoir sur cette matière." (AT V, 81-82; O VIII 2, 311; B 631).

(...)

"J'omets encore ici beaucoup d'autres choses, parce que, me représentant le nombre des affaires qui se rencontrent en la conduite d'un grand royaume, et dont Votre Majesté prend elle-même les soins, je n'ose lui demander plus long audience. Mais j'envoie à Monsieur Chanut quelques écrits (4), où j'ai mis mes sentiments plus au long touchant la même matière, afin que, s'il plaît à Votre Majesté de les voir, il m'oblige de les lui présenter, et que cela aide à témoigner avec combien de zèle et de dévotion, je suis..." (AT V 87-88; O VIII 2, 314; B 631).

(2) Voir lettre de Chanut, 21 septembre 1647 (AT V, 89-90, B 628; lettre résumée par Descartes à Élisabeth, 20 novembre 1647, AT V 89-92, [O, VIII, 2, 289-290] B633).

(4) Les *Passions de l'âme* et plusieurs lettres envoyées à Élisabeth (21 juillet 1645, AT IV 251-253, [O VIII 2, 207-209] B511 ; 4 août 1645, AT IV 263-268, [O VIII 2, 209-212] B514; 18 août 1645, AT IV 271-278, [O VIII 2, 214-218] B517; 1er septembre 1645, AT IV, 281-287, [O VIII 2, 219-223] B517; 15 septembre 1645, AT IV, 290-296, [O VIII 2, 225-229] B521, et, en partie, 6 octobre 1645, AT IV, 304-317, [O VIII 2, 231-239] B

526); à Élisabeth, 20 novembre 1647 (AT V, 90 l. 25-91 l. 3, [O VIII 2, 289-290] B 633).

Descartes fait ses dernières modifications entre avril et août 1649 : "Pour le traité des *Passions*, je n'espère pas qu'il soit imprimé qu'après que je serai en Suède (3); car j'ai été négligent à le revoir et y ajouter les choses que vous avez jugé y manquer, lesquelles l'augmenteront d'un tiers ; car il contiendra trois parties, dont la première sera des passions en général, et par occasion de la nature de l'âme, etc., la seconde des six passions primitives, et la troisième de toutes les autres." (AT V, 354; O VIII 2, 725; B 697).

"L'accroissement d'environ un tiers n'implique pas nécessairement que le contenu de la troisième partie y ait été ajouté en totalité : les développements sur la générosité, et les conclusions générales du *Traité* n'étaient-ils pas au moins ébauchés dans cette « partie morale » qui satisfaisait si fort Élisabeth (3) ? Mais les observations de détail de la Princesse concernaient essentiellement la seconde partie actuelle (4)." (Genève Rodis-Lewis, *Introduction* à son édition de *Les passions de l'âme*, Paris: Vrin, 2010, p. 26 (première édition 1994).

(3) 25 avril 1646, AT IV, 404 [O VIII 2, 252; B 554].

(4) Ch. Adam avait d'abord rapporté une remarque d'Élisabeth à l'art. 170 (AT IV, 414, note), mais la langueur est déjà évoquée dans les articles 119 à 121 (AT XI, 298). La seconde partie, sous sa forme définitive, amorce plusieurs renvois à la troisième, précisément à propos de la générosité (art. 83, 145).

11. ——. 1649. *La naissance de la paix. Ballet.*

Texte d'un ballet dansé au château royal de Stockholm le jour de la naissance de Christine de Suède le 18 décembre 1649.

AT (nouvelle édition) V 616-627; B op. II, 1412-1435.

La première édition (Stockholm, Jean Janssonius, 1649 disponible à l'adresse : diglib.hab.de/wdb.php?dir=drucke/20-4-quod-2f-6) à été découverte par Johan Nordström dans la *Bibliotheca Carolina Rediviva* de Uppsala et publiée par lui et

Albert Thibaudet avec le titre: *Un Ballet de Descartes. La Naissance de la Paix*, Revue de Genève, pp. 173-185 (avec une introduction de A. Thibaudet (pp. 161-170) et une note de J. Nordström (pp. 171-172).

L'authenticité de cet écrit a été déniée par Richard A. Watson, "René Descartes n'est pas l'auteur de la Naissance de la paix", *Archives de Philosophie*, 53, 1990, pp. 389-401 et *Descartes's Ballet. His Doctrine Of the Will and His Political Philosophy*, St. Augustine's Press, South Bend, 2007 (avec la traduction du texte) et par Matthijs van Otegem, *A Bibliography of the Works of Descartes (1637-1704)*, Utrecht: Proefschrift Universiteit, 2002, vol. II, pp. 731-735.

Geneviève Rodis-Lewis a défendu l'authenticité de l'œuvre (*contra* Watson) dans: "Gli ultimi scritti di Descartes", traduit en italien par Leon Ginzburg, *Discipline Filosofiche*, 1993, pp. 15-42, version française dans : G. Rodis-Lewis, *Le développement de la pensée de Descartes*, (recueil d'articles), Paris: Vrin, 1997, pp. 203-223.

12. ———. 1649. *Projet de comédie (Extraits de Baillet)*.

Baillet II, 407-408 (le texte est perdu); AT XI 661-662; B Op II, 922-923.

"Nous avons pareillement une espèce de Comédie française, qu'il fit en prose mêlée de quelques vers, pendant son séjour à la Cour de Suède. Ce fut l'un des fruits de l'oisiveté où la Reine le retint durant l'absence de l'Ambassadeur de France, dont elle attendait le retour. La pièce est imparfaite, et le quatrième Acte ne paraît pas même achevé. Elle a tout l'air d'une Pastorale ou Fable bocagère. Mais quoiqu'il semble avoir voulu envelopper l'amour de la Sagesse, la recherche de la Vérité, et l'étude de la Philosophie, sous les discours figurez de les personnages ; on peut dire que tous ces mystères seront assez peu importants au Public, tant qu'il jouira des autres écrits, où M. Descartes s'est expliqué sans mystères. » (Baillet II, 407)

13. ———. 1650. *Projet d'une académie à Stockholm (Extraits de Baillet)*.

AT XI 663-665; Baillet II, 411-413; B Op. II, 925-929.

C'est le dernier écrit de Descartes (1 février 1650).

"...La Reine, qui ne songeait à rien moins qu'à l'incommoder, l'obligea, dans le fort de la maladie de M. l'Ambassadeur, de retourner encore au Palais après-midi pendant quelques jours, pour prendre avec elle la communication d'un dessein de Conférence ou d'Assemblée de Savants, qu'elle voulait établir en forme d'Académie, dont elle devait être le chef et la protectrice. Elle regarda M. Descartes comme l'homme du meilleur conseil qu'on put écouter sur cet établissement, et elle le choisit pour en dresser le plan et pour en faire les règlements. Il lui porta le mémoire qu'il en avait fait, le premier jour de Février, qui fut le dernier qu'il eut l'honneur de voir la Reine." (Baillet II, p. 411).

Abréviations

Note sur les éditions de la Correspondance de Descartes:

L'édition Adam-Tannery est devenue obsolète après la publication de nouvelles éditions par G. Belgioioso (texte original latin ou Français et traduction italienne, lettres dans l'ordre chronologique) et par J.-R. Armogathe (lettres en latin publiées en traduction Française, groupées par correspondant), pour un total de 735 lettres; cette édition donne seulement "la correspondance active (les lettres de Descartes), en donnant en note les éléments de correspondance passive (parfois des lettres entières) nécessaires à la bonne compréhension." (O VIII, 1, p. 22)

Je cite les lettres de Descartes après l'édition de Armogathe (O VIII, 1 et 2), mais je donne aussi la référence à l'édition Adam-Tannery (AT I-V, X: *Supplément à la Correspondance*, pp. 538-632) et le numéro de la lettre dans l'édition Belgioioso (B); pour la correspondance passive, je cite le texte de l'édition Belgioioso, avec la référence à l'édition AT.

- CO = Vincent Carraud, Gilles Olivo (éds.), *René Descartes, Étude du bon sens, La recherche de la vérité et autres écrits de jeunesse (1616-1631)*, Paris: Presses Universitaires de France 2013.

"Le présent ouvrage réunit donc l'ensemble des écrits de Descartes, de 1616 à 1631, excepté, bien sûr, les œuvres qui lui ont été attribuées mais dont nous ne connaissons que le titre, ou au contraire celles qui ont déjà fait l'objet d'éditions et de commentaires séparés, mais dont des pages signets marquent simplement l'emplacement: le *Compendium musicae*, le *De solidorum elementis* et les *Regulae ad directionem ingenii*. Portant sur la genèse de la pensée philosophique de Descartes, il n'inclut pas davantage ses essais scientifiques, que d'autres,

plus compétents que nous en la matière, éditeront de leur côté. Il comprend donc les écrits philosophiques du jeune Descartes, précédés, pour des raisons que l'originalité de sa dédicace fera apparaître en son lieu propre, du placard de sa licence en droit, soit:

— un ensemble de notes que l'on peut attribuer ou rattacher aux diverses parties du *Registre de 1619*;

— les *Olympica*, qui font mémoire de la découverte des «fondements de la science admirable»;

— le *Studium bonae mentis*, essai de restitution;

— la *Censura quarumdam Epistolarum Domini Balzacii*, texte latin et traduction Française de Clerselier;

— *La recherche de la vérité par la lumière naturelle*, fragment Français conservé dans les papiers de Leibniz, traduction néerlandaise de 1684, première traduction Française de la traduction néerlandaise, traduction latine de 1701." p. 8.

Biographies anciennes (jusq'au 1950)

1. Beeckman, Isaac. 1939. *Journal tenu par Isaac Beeckman de 1604 à 1634, publié avec une introduction et des notes*. The Hague: Martinus Nijhoff.

Le *Journal tenu par Isaac Beeckman de 1604 à 1634*, a été publié en quatre volumes par Cornelis de Waard, La Haye: Martinus Nijhoff, 1939-1953: Tome I: 1604-1619; (1939) Tome II: 1619-1627 (1942); Tome III: 1627-1634 [1635] (1945); Tome IV: Supplément (1953).

Les passages sur Descartes ont été publiés dans l'édition Adam-Tannery des *Œuvres de Descartes*:

I. Varia: 15 extraits (AT X, 41-66); II. Physico-Mathematica: 1) *Aquae comprimētis in vase ratio reddita à D. Des Cartes* (AT 67-74; 2) *Lapis in vacuo versus terrae centrum cadens quantum singulis momentis motu crescat, ratio Des Cartes* (AT X, 75-78).

Voir aussi dans AT X. *Beeckman et Descartes (1618-1619)*. *Avertissement* (1905), par Adam Tannery, pp. 17-39.

Lettres de Descartes à Beeckman:

1619: I. 24 janvier, II. 26 mars, III. 20 avril, IV. 23 avril, V. 29 avril;

1630: VI. septembre, VII. 17 octobre;

1634: VIII. 22 août.

Lettre de Beeckman à Descartes:

1619: 6 mai.

Édition de la correspondance entre Descartes, Beeckman et Mersenne: Giulia Belgioioso et Jean-Robert Armogathe (éds.), *René Descartes, Isaac Beeckman, Marin Mersenne. Lettere 1619-1648*, édition intégrale avec traduction italienne en face, Milan: Bompiani, 2015.

2. Lipstorp, Daniel. 1653. *Specimina philosophiae cartesianae, quibus accedit eiusdem authoris Copernicus redivivus, seu de vero mundi systemate liber singularis*. Lugduni Batavorum: Elsevier.

Contient la première biographie de Descartes.

"Au défaut d'une Vie parfaite, il s'est trouvé des auteurs qui ont au moins tenté d'en donner des abrégés ou des fragments. Celui qui semble y avoir le moins mal réussi est le sieur Daniel Lipstorijs de Lübeck professeur dans l'université de son pays. Cet auteur, n'ayant pas voulu laisser perdre les particularités de la vie de M. Descartes qu'il avait apprises en Hollande tant de M. Schooten l'ancien que de M. de Raey docteur en médecine, nous a donné en deux feuilles d'impression plus que l'on aurait dû attendre d'un étranger qui n'a travaillé que sur des relations subreptices. Quoique ce soit très peu de chose par rapport à la vie de M. Descartes, on doit lui savoir gré de ce qu'il a dit, sans lui reprocher ses omissions ou ses négligences. Quelque grand que soit le nombre de ses fautes, il est louable de n'en avoir pas fait encore davantage. C'est à M. de Raey qu'il était particulièrement redevable de tout ce qu'il a dit de meilleur; mais parce qu'il a oublié de le reconnaître au moins publiquement, je me crois obligé de suppléer à ce défaut, et de rendre à M. de Raey la justice qui lui était due par M. Lipstorijs. Il est bon que l'on sache que 'a été à l'insu de M. de

Raey et sans sa participation que M. Lipstorpius a publié ce qu'il en avait appris touchant la vie de M. Descartes. M. de Raey avait un disciple nommé M. van Berhel jeune homme de beaucoup d'esprit et de grande capacité, à qui il avait donné divers petits mémoires curieux. M. Lipstorpius, ayant reçu de M. van Berhel quelques-uns de ces mémoires qui regardaient M. Descartes, les avait donnés de bonne foi au public, sans examiner s'il avait besoin du consentement de M. de Raey, ou s'il devait les autoriser de son nom.

Ce fragment de la Vie de M. Descartes fut imprimé à Leyde l'an 1653 parmi les Essais de D. Lipstorpius touchant la philosophie cartésienne."

Adrien Baillet, *La vie de Monsieur Descartes*, (1691), Préface, pp. XIII-XV.

"Au tome I, Lipstorp donne, dans un *Appendix*, une courte biographie de Descartes, p. 69-94; encore les cinq dernières pages sont-elles remplies par le texte des inscriptions ou épitaphes en l'honneur du philosophe, si bien que quinze pages et demie tout au plus sont consacrées au récit de sa vie." (Charles Adam, *Vie et Œuvres de Descartes. Étude historique*, Paris: Léopold Cerf, 1910, p. VI).

"En dehors de la France, Daniel Lipstorpius, professeur à l'Université de Lubeck, a publié en 1653 un fragment sur la vie de Descartes dans ses *Specimina philosophiae* in-4° Ludg.-Batav., et Jean Tepelius a fait paraître à Nuremberg, en 1664, *Historia philosophiae cartesianae*, in-12, qui n'est qu'une brochure et dont un seul chapitre, fort incomplet comme tout le reste, est consacré à la vie de Descartes."

Francisque Bouillier, *Histoire de la Philosophie Cartésienne*, Paris, 1868, p. 31.

"Le volume se divise en trois parties, auxquelles il faut ajouter l'essai conclusif en forme de défense de la théorie copernicienne: le *Copernicus redivivus*. Les trois parties qui composent les *Specimina* contiennent, respectivement, une justification de la méthode mathématique suivie par Descartes,

une exposition des règles du mouvement *more geometrico demonstratas*, et, enfin, un traité sur l'air."

Massimiliano Savini, *Johannes Clauberg. Methodus cartesiana et ontologie*, Paris: Vrin, 2011, p. 281. (voir aussi *Les Specimina philosophiae cartesianae de Daniel Lipstorp*, pp. 281-292.)

3. Borel, Pierre. 1656. *Vitae Renati Cartesii, Summi philosophi compendium*. Paris: Ioannem Billaine et Mathurini Dupuis.

"Mais sur la fin de la même année [1653] l'on vit paraître à Castres en Languedoc une espèce d'abrégé de la même Vie composé par le sieur Pierre Borel médecin du roi, et dédié à M. Péliisson. Il fut réimprimé à Paris trois ans après; puis à Francfort et à Leipzig en 1670 et en 1676. Et enfin inséré parmi les Mémoires du sieur Henning Witte imprimés à Francfort l'an 1677. Il paraît que l'auteur de ce petit Abrégé n'a écrit que sur ce qu'il pouvait avoir appris de son ami M. de Villebressieu qui avait demeuré pendant quelque temps avec M. Descartes. De sorte que si on en excepte quelques faits généraux, comme sont ordinairement ceux qu'on ne retient qu'en gros pour les choses passées dont on ne tient point de registre, il semble qu'il n'y ait point de sûreté dans tout le reste. L'auteur ne s'est pas fort embarrassé des circonstances particulières qui pouvaient servir à vérifier ses faits. Il ne s'est assujetti à aucun ordre ni pour les temps ni pour les espèces. Il n'a donné à son écrit ni style ni forme; et la manière dont il a confondu toutes choses peut nous faire juger qu'il n'y a rien dans son Abrégé qui soit plus remarquable que l'industrie avec laquelle il a su entasser tant de fautes dans un si petit espace.

M. Borel s'est fait la justice de ne regarder son écrit que comme une ébauche imparfaite et comme un simple prélude d'une juste histoire qu'il semblait promettre, au cas qu'il se trouvât suffisamment pourvu de facultés, et du secours nécessaires à un ouvrage de cette nature. Et M. Lipstorp a eu la modestie de s'excuser d'une semblable entreprise sur les difficultés qu'il y trouvait tant de son côté que de celui de M. Descartes.

Mais vingt ans après il s'est rencontré un autre Allemand plus courageux, qui sans s'épouvanter des obstacles qui rebutaient les autres, a voulu enfin donner au public le grand ouvrage

qu'on attendait depuis tant de temps. Il le fit paraître à Nuremberg l'an 1674 sous le titre magnifique de M. Johannis Tepelii *Historia Philosophia Cartesiana*. C'est un ouvrage de quatre petites feuilles d'impression, divisé en six chapitres, dont il n'y a que le premier qui regarde précisément la vie de M. Descartes. Il serait peut-être plus utile s'il était moins superficiel, ou s'il avait pu se garantir des fautes de ceux qu'il a copiés. Mais on ne peut disconvenir que le sieur Gérard de Vries n'ait eu très grande raison de l'estimer très peu, et de regarder ce petit écrit comme une pièce tout à fait indigne de son grand titre. M. Tepelius a cru peut-être en rehausser l'éclat par une pompeuse dédicace, dont le seul titre occupe six pages pour étaler les noms et qualités de cinq officiers de justice à la tête de son épître. Ce qui nous fait regarder tout le corps de l'ouvrage comme un petit monstre plus capable de nous faire rire que de nous effrayer. "

Adrien Baillet, *La vie de Monsieur Descartes*, (1691), Préface, pp. XV-XVII.

"Avant Baillet, un autre Français, Pierre Borel, médecin de Castres, avait écrit une vie de Descartes: *Renati Cartesii summi philosophi Compendium*, publié à Castres en 1653. Mais cette vie est très-courte, incomplète, sans ordre; elle a été rédigée sur oui dire et n'a de remarquable que l'enthousiasme de l'auteur pour Descartes."

Francisque Bouillier, *Histoire de la Philosophie Cartésienne*, Paris, 1868, p. 31

Cette première édition n'est pas citée dans la liste de ses œuvres que Borel a publié dans son *Trésor de recherches et antiquitez gauloises et franoises réduites en ordre alphabétique* (1655); en outre à p. 26 et p. 47 Borel cite l'ouvrage de Lipstorp (1653) et d'autres ouvrages datés de 1654: la première édition est donc très probablement celle de 1656.

Repris dans Roger Ariew, Daniel Garber (eds.), *Descartes in Seventeenth-Century England*, Bristol: Thoemmes, 2002, vol. 3: *Biographies of Descartes: Pierre Borel, A Summary or Compendium, of the Life of the Most Famous Philosopher*

Renatus Descartes (1670); Marcus Zurius Boxhorn, *Epitome of the Life of Descartes*, in: Pierre Borel, *A Summary or Compendium, of the Life of the Most Famous Philosopher Renatus Descartes* (1670); Adrien Baillet, *The Life of Monsieur Des Cartes* (1693).

Le livre contient la première édition de l'inventaire des manuscrits de Descartes retrouvés à Stockholm après sa mort: *Elenchus manuscriptorum Cartesii Stocholmi repertorum post Eius obitum anno 1650* (pp. 16-19).

"Si cette biographie se ressent des lacunes de sa documentation, elle vaut toutefois par sa date même de parution, un an avant les publications de Clerselier, comme par ses annexes, puisque, à côté des épitaphes de la tombe de Descartes à Stockholm, on y trouve la liste des ouvrages imprimés ou manuscrits de Descartes, ainsi qu'une dizaine de lettres au P. Mersenne et deux à l'Électeur Palatin." (Pierre Chabbert, *Pierre Borel (1620 ?-1671)*. In: *Revue d'histoire des sciences et de leurs applications*, tome 21, n°4, 1968. pp. 303-343).

4. Baillet, Adrien. 1691. *La vie de monsieur Des-Cartes*. Paris: D. Horthmels.

Deux volumes.

Réimpression anastatique: Hildesheim: Georg Olms, 1972; Genève: Slatkine Reprints, 2010; nouvelle édition en un volume: *La vie de monsieur Descartes par Adrien Baillet* suivi de *Abrégé de la vie de M. Baillet par Bernard de La Monnoye*, Paris: Les Cinquante / Éditions des Malassis, 2012. [l'auteur de la vie de de Baillet est son neveu, Augustin Frion: cfr. Jean-Pierre Nicéron, *Mémoires pour servir à l'histoire des hommes illustres dans la république des lettres avec un catalogue raisonné des leurs Ouvrages*, Paris: Briasson, 1730, vol X, p. 127]

Sur Baillet voir: Leonard J. Wang, *The Life and Works of Adrien Baillet*, [1649-1706] thèse inédite, Columbia University, 1955, 298 pages (disponible en format PDF chez ProQuest Dissertation Express, ref. n. 0012074).

"Pour moi j'avoue l'intention que j'ai eue de faire tout sérieusement la vie de M. Descartes, et même l'histoire du cartésianisme jusqu'à la mort de son auteur; et je comprends aisément que j'aurais mauvaise raison de vouloir décliner le jugement de ceux qui voudront examiner mon ouvrage sur toutes les règles d'une vraie histoire.

Afin de leur faciliter les voies, je crois devoir leur montrer du doigt les sources où j'ai puisé, et leur indiquer les personnes qui pourraient garantir ce qui m'est venu par leur canal. Je déclare d'abord que je n'ai donné l'exclusion à aucun livre imprimé tel qu'il pût être; et que je me suis servi aussi utilement des écrits composés par les ennemis et les adversaires de M. Descartes, que des ouvrages faits par ses amis et ses sectateurs. Mais on me permettra de dire que rien ne s'est trouvé plus à mon usage que les œuvres même de notre philosophe; et que parmi ces œuvres il n'y en a point eu de plus propres à mon dessein que les trois volumes de ses lettres (*) avec son *Discours de la méthode*. J'ai retiré aussi de grands avantages des manuscrits qu'il avait laissés en mourant entre les mains de l'ambassadeur de France en Suède; et de plusieurs autres papiers qui se sont heureusement conservés chez quelques-uns de ses amis. J'ai tâché de mettre en œuvre les témoignages de tous ceux qui ont eu quelques relations avec M. Descartes, et surtout des personnes de probité, qui ayant vu et connu notre philosophe à Paris, en Hollande, et en Suède, sont encore au monde pour pouvoir prêter leur ministère à la vérité."

Adrien Baillet, *La vie de Monsieur Descartes*, (1691), Préface, pp. XX-XXI.

(*) Claude Clerselier. *Lettres de Mr Descartes*, 3 vols., Paris, Charles Angot, 1657, 1659, 1667 (réimpression anastatique de la troisième édition (1666-1667) de l'exemplaire de l'Institut de France avec les annotations autographes de Jean-Baptiste Legrand et Adrien Baillet, par les soins de Jean-Robert Armogathe et Giulia Belgioioso, Lecce: Conte Editore, 2005).

"Baillet a publié en 1691 une *Vie de Descartes*, en 2 vol. in-4°, dont il a donné l'année suivante un abrégé en 1 vol. in-12.

Baillet est de beaucoup le meilleur et le plus complet de tous les biographes de Descartes.

Il a eu le concours de tous les amis de Descartes; il a puisé aux sources les plus sûres et dans les pièces originales. Aussi son histoire abonde-t-elle en détails intéressants, en renseignements précieux sur la vie, sur la personne et sur les ouvrages de Descartes. Mais malheureusement Baillet, qui est tout à fait dépourvu d'esprit philosophique et de sens critique, mêle à son récit une foule de hors-d'œuvre, de plates réflexions, de minuties, tandis que souvent il omet ce qu'il nous importerait le plus de savoir pour l'histoire de la philosophie de Descartes. Nous ne dirons donc pas avec M. Cousin que l'ouvrage de Baillet est excellent, mais, d'un autre côté, nous ne saurions approuver ce jugement trop sévère qu'en porte Malebranche: « La Vie de M. Descartes par M. Baillet n'est propre qu'à rendre ridicules ce philosophe et sa philosophie. » (Correspondance inédite publiée par l'abbé Blampignon, p. 13.) (**)"

Francisque Bouillier, *Histoire de la Philosophie Cartésienne*, Paris, 1868, p. 31.

(**) Nicolas Malebranche, *Œuvres complètes*, sous la direction d'André Robinet, Paris: Vrin, 1978, vol. XIX, *Correspondance et actes (1690-1715)*, p. 561.

5. ———. 1692. *La vie de mr. Des-Cartes. Réduite en abrégé*. Paris: G. de Luynes.

Deuxième édition révisée, Paris, 1693.

Édition moderne: *Vie de Monsieur Descartes*, Paris, La Table Ronde, 1946, réimpression 1992). Cette édition omit l' *épître à Monseigneur le Chancelier* et l' *Avertissement*, pp. 1-2.

English translation: *Life of Monsieur Descartes, Containing the History of His Philosophy and Works*, London: R. Simpson, 1693.

Traduzione italiana di Lelia Pezzillo: *Vita di Monsieur Descartes*, Milano, Adelphi, 1996.

"Je ne me suis pas contenté de suivre dans cet *Abrégé* l'ordre que je m'étais prescrit dans l'histoire de la vie de M. Descartes, et d'en observer l'économie dans la même division des livres et des chapitres. Je me suis encore assujetti autant que j'ai pu à ne le composer que des mêmes expressions, afin qu'on y puisse retrouver la vie de M. Descartes toute entière, mais en petit, comme une miniature représente un portrait qui se trouve ailleurs dans un grand tableau."

Adrien Baillet, *Avertissement*.

"M. Baillet était déterminé à laisser en repos ses *Auteurs déguisés*, aussi bien que la suite de ses *Jugemens des savants*, en attendant que la Providence lui présentât l'occasion indispensable d'en continuer la publication, lorsque M. l'abbé Legrand l'engagea avec quelques autres intéressés à ranger par ordre les mémoires qu'il avait recueillis sur la vie et la philosophie du célèbre philosophe de nos jours M. Descartes. En bien moins d'un an elle fut mise sous la presse, dès le 19 février 1691 le libraire Hortemels chargé de ce livre trouva fort son compte avec les étrangers, et en trois mois de temps il leur envoya plus de la moitié de l'édition. Si la mort ne l'avait enlevé, il se flattait d'en donner une seconde. Cependant comme on était bien aise d'avoir en France une *Vie de Descartes* qui fut courte et à bon marché, et qu'on menait de réduire en abrégé celle qui y paraissait dans une juste étendue, M. Baillet, docile aux remontrances de ses amis, se mit à renfermer en un petit in-12 les deux in-4° de la vie de son philosophe."

Augustin Frion (neveu de Baillet), *Abrégé de la vie de M. Baillet*, dans le premier volume de Adrien Baillet, *Jugemens des savans sur les principaux ouvrages des auteurs*, revus, corrigés et augmentés par M. [Bernard] de La Monnoye, Paris: C. Moette, 1722, Amsterdam 1726, pp. 19-20.

6. Millet, Joseph. 1867. *Histoire de Descartes avant 1637; suivie de L'analyse du Discours de la méthode et des Essais de philosophie*. Paris: Didier.

"La vie de Descartes, esquissée d'abord d'une manière imparfaite et tout à fait insuffisante par Lipstorprius (1) et Borel

(2), a été écrite ensuite par Baillet (3) d'une manière beaucoup moins incomplète, mais d'un style lourd, prétentieux, emphatique, qui seul justifierait notre tentative.

Cet ouvrage a d'autres défauts: « il renferme beaucoup d'inutilités et de minuties (4), il est rempli d'anachronismes (5), et Huyghens (6) en a relevé quelques-uns. Leibniz (7) a également signalé plusieurs erreurs dans ce travail dont l'auteur « est dépourvu de sens critique et d'esprit philosophique (8).» L'auteur, fort ignorant en toutes choses, est surtout effrayé des épines de l'Algèbre; la Géométrie est pour lui lettre close, et il est incapable de discuter les idées métaphysiques de Descartes, il néglige une chose qui est cependant de la plus haute importance quand on écrit la biographie d'un savant inventeur et d'un philosophe: il oublie de nous donner la filiation des idées et des inventions, de retracer l'histoire psychologique du penseur et du chercheur. Ce travail était donc à faire: la beauté et la grandeur du sujet nous ont tentés, et sans nous laisser décourager par les difficultés et les périls de l'entreprise, nous avons voulu reproduire d'une manière complète et exacte, et replacer sous les yeux de tous, avec sa physionomie vraie, l'une des plus grandes figures du XVIIe siècle et de tous les siècles. Descartes est l'un des pères de la pensée moderne, nul n'a fait plus que lui pour renouveler et transformer nos idées sur le monde et sur Dieu; ce sera donc un spectacle curieux et instructif que d'assister à l'évolution de son génie.

Pour écrire cette histoire rien ne nous a été plus utile que les ouvrages mêmes de Descartes, particulièrement les lettres et les ouvrages de sa jeunesse publiés en 1860 par M. Foucher de Careil (9). Nous mettrons en seconde ligne Baillet lui-même, dont l'ouvrage est une mine où il faut savoir puiser. Nous avons emprunté aussi quelques détails à Lipstorpius et à Borel. Lipstorpius tenait tous ses renseignements de Raey, ami de Descartes, et de Van Berhel, disciple de Raey.

Pierre Borel avait appris ce qu'il nous a donné de M. de Villebressieux, dont nous parlerons plusieurs fois, qui avait connu Descartes à Paris, et avait été demeurer avec lui pendant

plusieurs années en Hollande. Je n'ai pu me procurer l'ouvrage de Tépelius: *Historia Philosophiae cartesianae*, qui n'était du reste, selon Baillet, qu'un ouvrage superficiel et tout à fait indigne de son titre." (XVII-XIX)

Ce deuxième volume a aujourd'hui seulement un intérêt historique.

"Nous touchons au terme de la carrière que nous voulions parcourir. Nous avons fait connaître, autant que cela a dépendu de nous, l'âme et la doctrine de Descartes. Mais comme les détails en toute chose font d'ordinaire perdre la vue de l'ensemble, il nous reste à réunir les traits épars de cette physionomie à la fois énergique et tendre, héroïque et méditative, à rassembler dans un cadre restreint les éléments

essentiels de cette philosophie et à en apprécier la valeur et le rôle historique.

Les deux traits dominants de l'âme de Descartes sont la force de la volonté et l'étendue de la raison. Cette force de volonté enfante les résolutions énergiques et persévérantes, et d'abord la résolution mère et inspiratrice de toutes les autres celle de bâtir en philosophie sur des fondements nouveaux, de refondre complètement et comme d'un seul jet la science tout entière. Cette entreprise, l'une des plus vastes qui aient jamais été tentées, il la poursuit sans relâche depuis sa seizième année jusqu'à sa mort; nul accident ne l'arrête ou ne le fait dévier, nul obstacle ne le rebute, nul mauvais vouloir, nulle persécution n'est capable de l'ébranler, ni seulement d'altérer la calme sérénité de son âme. De là vient la sincérité, parfois un peu rude, et la loyauté absolue de son caractère. Qu'aurait-il à cacher, ne voulant que le vrai et le bien, et le voulant avec résolution? L'âme de Descartes est d'une sincérité parfaite avec les autres et, ce qui est plus rare, avec elle-même. (pp. 355-356).

8. Adam, Charles. 1910. *Vie et Œuvres de Descartes. Étude historique*. Paris: Léopold Cerf.

Supplément à l'édition Adam-Tannery des œuvres de Descartes.

Nouvelle édition, abrégée et révisée, Paris: Boivin & Cie, 1937.

"Comme cette édition est à l'usage de ceux que l'histoire de la philosophie intéresse, nous en avons fait un instrument de travail aussi utile que possible, n'hésitant pas à y prodiguer les renseignements sans compter: chaque lecteur saura bien y choisir ce qui lui convient, et laisser là le reste. Néanmoins, quantité de documents n'ont pu être utilisés de la sorte, qui méritaient d'être publiés aussi; leur place était donc indiquée dans une *Étude sur la vie et les œuvres de Descartes*.

Ce titre a paru préférable à tout autre. C'est, en effet, une étude sur Descartes seulement, que nous avons voulu donner, et non pas sur le Cartésianisme. Aussi n'avions nous que faire de cette longue liste de livres qui se sont succédé depuis plus de deux

siècles et demi, et qui ont pour objet le commentaire ou la critique de la philosophie cartésienne, sans ajouter un document à ceux que possédait déjà le XVII^e siècle sur la personne de Descartes: chacun de ces livres nous expose la pensée, sans doute fort intéressante, de son auteur propre, bien plus que celle du philosophe lui-même, et sous une apparence historique, il a toujours en réalité un caractère plus ou moins dogmatique. (Et nous craignons bien de n'apporter aussi, en dépit de nos efforts, qu'un livre de plus qui ne sera pas exempt de cet inévitable défaut, un livre à prétentions objectives, mais qui sera seulement peut-être un peu moins subjectif que les précédents.) Pourtant nous étudierons, non pas l'œuvre de Descartes, son œuvre de philosophe, ou son influence sur les siècles suivants et qui dure encore aujourd'hui, mais plutôt ses ouvrages, et les conditions et circonstances dans lesquelles chacun a été composé et publié.

Le présent volume n'est pas un livre de philosophie, à proprement parler, mais un livre d'histoire: ajoutons, si l'on veut, d'histoire de la philosophie, et aussi de la science, ou plus simplement une contribution à l'histoire des idées en France et de l'esprit Français au XVII^e siècle.

La seule *Vie de Descartes*, un peu complète, que l'on eût jusqu'alors, était celle d'Adrien Baillet; et elle date de 1691 (1). Lui-même raconte, dans sa *Préface*, que Chanut, bien mieux que personne, eût écrit cette vie, et après Chanut, Clerselier, qui avait aussi connu « intérieurement » le philosophe. Après eux, il nomme un Oratorien, le P. Nicolas Poisson, qui en fut vivement sollicité par la reine Christine et par Clerselier lui-même, et qui se contenta de donner, en 1670, un petit livre de *Commentaires ou Remarques sur la Méthode de René Descartes*. Enfin, il nomme encore l'abbé Jean-Baptiste Legrand, devenu, après la mort de Clerselier en 1684, le dépositaire des papiers du philosophe, et qui préparait une nouvelle édition de ses œuvres; Legrand s'empressa de mettre à la disposition de Baillet tous les documents qu'il avait recueillis déjà. (2)

Nous pouvons dire que les deux tomes publiés par Baillet sont passés presque en entier dans les onze volumes de notre édition et dans ce volume XII. C'était, pour une bonne part, un assemblage de documents, dont les originaux sont maintenant perdus, et que nous ne connaissons que par les extraits qu'il en a imprimés: bien des pages ont été découpées, pour être mises chacune à sa place au cours de la correspondance ou des œuvres, comme il a été dit dans l'Introduction du tome I (3)." (pp. II-IV)

(...)

"La principale différence entre l'œuvre de Baillet et la nôtre sera dans l'esprit général qui anime chacune d'elles.

Mais les grandes lignes restent à peu près les mêmes, et de nombreux détails se trouvent confirmés, avec d'autres qui s'y ajoutent, grâce à une documentation nouvelle.

Celle-ci consiste d'abord dans des pièces d'archives, publiques et privées, notamment sur la famille de Descartes: bon nombre ont été découvertes et publiées, ces cinquante dernières années, par des érudits de Touraine, de Poitou, de Bretagne. Quelques-unes ont été recueillies en Hollande. On les trouvera, chacune à sa place, avec l'indication de leur provenance. Puis nous avons la correspondance complète (ou peu s'en faut) du philosophe, et surtout rétablie dans l'ordre chronologique, ce qui la rend bien plus instructive, et permet de suivre pas à pas la marche de sa pensée. En outre, plusieurs collections de lettres ont été retrouvées et imprimées, que Baillet n'a point connues: lettres de Pollot (publiées en 1869), et de la princesse Elisabeth (en 1879), lettres de Constantin Huygens le père, de Brégy, de Chanut, de Brasset, de Beeckman, la plupart publiées dans cette édition pour la première fois.

Sans doute la physionomie générale de Descartes n'en est point changée du tout au tout; mais elle est mieux éclairée, et bien des particularités curieuses s'y révèlent ou y apparaissent dans un meilleur jour." (pp. IX-X)

9. Cohen, Gustave. 1921. *Écrivains Français en Hollande dans la première moitié du XVIIe siècle*. Paris: Champion.

Reprint Geneva: Slatkine, 1976.

Table des matières: Introduction 7; Livre I: Régiments Français au service des États 14; Livre II: Professeurs et étudiants Français à l'université de Leyde (1575 à 1648) 141; Livre III: La philosophie indépendante. René Descartes en Hollande 357; Pièces justificatives 693; Index 721-756.

Le livre III contient une biographie complète de Descartes, pp. 357-691.

"Que Descartes ait séjourné en Hollande, c'est un fait connu de tous nos écoliers, qu'il n'a pas laissé de surprendre un peu, mais l'étonnement des étudiants hollandais, en l'apprenant, n'était pas moindre, surtout en entendant parler des endroits choisis par le grand philosophe pour les plus longs de ses séjours: Franeker, Endegeest, Egmond, lieux si éloignés des centres de la vie néerlandaise qu'ils n'éveillaient en leur esprit que des souvenirs assez vagues et beaucoup d'entre eux ne les connaissaient souvent même que de nom.

Pourquoi Descartes les avait préférés, ces lieux et d'autres, au cours de sa vie errante, quelle trace il y avait laissée de son passage, voilà ce qu'il importait de rechercher. Partout je me suis efforcé de le suivre; j'ai refait pieusement toute la série des pèlerinages cartésiens: parfois, comme à Egmond ou à Franeker, je n'ai plus même trouvé les pierres de sa maison, mais à Endegeest, je me suis arrêté quelques minutes dans la salle où peut-être il a rêvé. En tout cas, le cadre est resté le même, l'aspect du site n'a point changé, et l'on peut laisser errer ses regards sur les champs où sa pensée flotta.

Certes, bien des faits que l'on trouvera dans ce Livre III ne sont pas une révélation: c'est à l'active et ingénieuse patience de M. Adam, de ses collaborateurs et de ses prédécesseurs qu'on les doit. A lui et à M. Tannery revient l'honneur de nous avoir dotés d'une édition monumentale de Descartes mais, justement parce qu'elle est un monument dans tous les sens du mot, ses treize gros in-4° demeurent inaccessibles au grand public, voire aux lettrés et aux savants qui n'ont pas une bibliothèque à leur disposition. Pourtant, quelle œuvre magistrale que cette biographie de Descartes par M. Ch. Adam, qu'on lit au tome XII.

C'est une étude presque définitive, on n'aura pas la vanité de la recommencer ici, mais, en même temps qu'une biographie, elle est surtout une analyse de l'œuvre et cette œuvre, en tant qu'elle ne traite pas proprement de la Hollande ou qu'elle n'est pas déterminée directement par elle, ne nous concerne point.

C'est d'ailleurs souvent un inconvénient de mêler l'œuvre et la vie. Nous voudrions nous borner uniquement à celle-ci, et dans celle-ci, avant tout, à ses périodes hollandaises, les principales et les décisives il est vrai, ce qui, par conséquent, ne sera peut-être pas sans utilité.

Et d'abord, s'il est infiniment précieux et fécond de repenser les systèmes des philosophes, il ne l'est pas moins, car l'histoire de la philosophie n'est parfois que l'histoire des philosophes, de revivre leur existence, de tâcher de s'ennoblir par elle, surtout quand ils l'ont exclusivement consacrée à la perfection de leur intelligence et à la recherche de la vérité.

Ensuite, à étudier les séjours en Hollande de Descartes, non pas séparément, ce qui les fait prendre pour une fantaisie incompréhensible, mais dans le cadre des présentes études, consacrées à l'attraction qu'a exercée sur tous les Français de la fin du XVIe et du commencement du XVIIe siècles la République des Provinces-Unies, ces séjours semblent tout à fait naturels, presque nécessaires, ces voyages et cet établissement apparaissent comme une marche presque attendue vers le pays de la Liberté.

Le fait que Descartes est et veut rester catholique (nous aurons à y insister encore) souligne la valeur et l'extension de cette liberté: c'est le moment de renouveler cette affirmation que la Hollande n'est pas seulement le Refuge protestant, qu'elle est aussi le refuge catholique, ou, si l'on préfère, le Refuge de la pensée indépendante. Aussi aura-t-elle offert asile à deux des plus grands créateurs de systèmes du XVIIe, un Français : René Descartes, et un juif d'origine espagnole: Baruch d'Espinoza. Ce n'est pas le moindre prestige de cette terre féconde en miracles." (pp. 357-358).

10. Sirven, Jacques. 1928. *Les années d'apprentissage de Descartes (1596-1628)*. Albi: Imprimerie Coopérative du Sud-Ouest.

Reprint: New York, Garland, 1987.

Table des matières: Préface 9; I. Les premières influences 23; II. Les premiers écrits de Descartes 56; III. L'orientation décisive du cartésianisme 114; IV. L'orientation décisive du cartésianisme (suite) 169; V. L'orientation décisive du cartésianisme (suite et fin) 226; VI. Tentatives nouvelles 290; VII. Le *Regulae* 342; Conclusion 443; Bibliographie 463; Table des noms propres 491-496.

"Il est presque de règle, dans l'histoire de la philosophie et dans celle des sciences, d'affirmer que Descartes ne doit rien ou à peu près rien à ses devanciers. Ce « postulat » est admis sans contestation, même par des philosophes très avertis.

(...)

'y a-t-il pas là, comme l'ont déjà remarqué un certain nombre de penseurs, un de ces « préjugés » qu'on accepte d'autorité sur la foi d'une tradition scolaire? N'y a-t-il pas là encore une manifestation de cette tendance intellectuelle vers le moindre effort qui explique la tyrannie rigide que les systèmes font peser sur les individus? Le cas qui nous occupe vaut la peine d'être examiné avec le plus grand soin, en tenant compte de toutes les ressources que les historiens et les penseurs modernes mettent à notre disposition. Mais il n'est pas possible de le faire avec fruit, sans avoir résolu auparavant un ensemble de problèmes historiques dont quelques-uns ont à peine été abordés. C'est pourquoi il nous semble inutile pour l'instant d'examiner les raisons sur lesquelles on a pu se fonder pour faire du cartésianisme une exception aussi considérable dans l'histoire des idées. Il vaut mieux avouer que ces thèses générales méconnaissent beaucoup trop d'aspects d'une réalité infiniment complexe, qui n'est jamais débrouillée qu'en partie.

Au fond, le travail le plus utile consiste à rechercher comment se sont transmises les diverses théories philosophiques ou scientifiques, à suivre les fils d'une trame ininterrompue sur bien des points et à noter les endroits où elle a pu se briser. La tâche qui s'impose à nous de ce point de vue plus modeste et en procédant par ordre, comme l'eût recommandé Descartes, sera donc de bien voir les liens qui unissent le système cartésien à la pensée des auteurs qui l'ont influencé. Nous n'envisagerons même pas l'ensemble de ce système, mais seulement la première forme qu'il a revêtue, jusqu'au moment où notre philosophe s'est retiré en Hollande pour en établir les principes définitifs. Notre sujet ainsi délimité, il nous reste à fixer la marche à suivre pour dégager la véritable originalité de Descartes, durant ces années de méditations fécondes où son esprit conut le dessein d'une science universelle et fit à proprement parler l'apprentissage de ses forces. (pp. 9-10)

(...)

"Dans le cas qui nous occupe, il nous faudra surtout examiner les rapports de Descartes avec les scolastiques, et, lorsque nous parlerons de l'École ou de la scolastique, nous n'entendrons pas

l'ensemble des philosophes qui ont vécu au Moyen-Âge, mais seulement les auteurs que Descartes a connus. C'est pourquoi nous citerons les manuels qui étaient utilisés dans les classes des PP. Jésuites à son époque, plutôt que saint Thomas ou les philosophes antérieurs (3). Il semble bien en effet que Descartes n'ait consulté saint Thomas qu'après 1628, au moment où il voulait achever sa métaphysique, et pour recourir à la source des conceptions qu'on lui avait enseignées durant ses études.

Nous laisserons de côté par suite la question de savoir si ces manuels reproduisent exactement le thomisme: c'est un problème tout à fait en dehors de notre point de vue. Il faut d'ailleurs reconnaître que ces manuels sont plus fidèles qu'on ne le reconnaît d'ordinaire à l'esprit de saint Thomas et que les anathèmes lancés parfois contre « la scolastique décadente des XVe et XVIe siècles » seraient à réviser sur bien des points. Quoi qu'il en soit, il nous reste maintenant à examiner quels textes nous serviront comme sources de notre exposé historique et pourquoi nous avons limité cet exposé à l'année 1628. (pp. 15-16)

(3) A moins que nous n'ayons évidemment à légitimer un emprunt direct à quelqu'un de ces philosophes.

Biographies récentes

1. Gouhier, Henri. 1958. *Les premières pensées de Descartes. Contribution à l'histoire de l'Anti-Renaissance*. Paris: Vrin.

Table des matières: Avant-propos 7; I. Un petit registre en parchemin 11; II. Du Parnasse à l'Olympe 19; III. 10 et 11 novembre 1619; IV. L'hiver 1619-1620 59; V. "En révisant *La Pensée religieuse de Descartes* en vue d'une seconde édition, nous avons été frappé par l'obscurité qui

enveloppe « les années d'apprentissage de Descartes », même après l'intéressant ouvrage de l'abbé J. Sirven. De là l'idée d'écrire une *Jeunesse de Descartes*. Mais, pour mériter ce titre, l'ouvrage devrait comprendre deux gros chapitres pour lesquels le temps et la compétence nous feraient défaut; il faudrait, en effet, reprendre l'étude des enseignements philosophiques et littéraires au Collège de La Flèche, puis celle des milieux scientifiques parisiens pendant le premier tiers du XVII^e siècle. Le présent ouvrage apportera simplement des matériaux à cette *Jeunesse de Descartes* dont nos lacunes mêmes feront sentir la nécessité.

Une exégèse des premiers textes, une critique de quelques sources biographiques, des indications pour situer certains personnages de l'histoire, peut-être trouvera-t-on le livre bien gros pour des questions aussi particulières et pour des réponses aussi hypothétiques. C'est pourtant ainsi que se fait l'histoire des présocratiques ou des anciens stoïciens. Les méthodes qui ont été éprouvées en histoire de la philosophie ancienne doivent être bonnes en histoire de la philosophie moderne, lorsque les textes modernes posent les mêmes questions que les textes anciens: restitution d'ouvrages perdus, établissement de chronologie, critique des traditions et de témoignages qui ne sont pas ceux de témoins.

Une telle étude sera, en un sens, un commentaire des trois premières parties du *Discours de la Méthode*. Il n'est certes pas question de présenter le jeune Descartes tel que le voit, ou le veut faire voir le philosophe de 1637. Bien au contraire, il s'agit de montrer d'où vient l'auteur du *Discours* et des *Méditations*: pour connaître l'homme qui cherche « le chemin de sa vie », on commencera donc par oublier ce qu'il a trouvé au bout du chemin. D'ailleurs, les trois premières parties du *Discours* ne ressemblent ni à des mémoires ni à des confessions: Descartes raconte « l'histoire de son esprit »; il écarte volontairement les anecdotes et les scènes de la vie privée; d'autre part, de « l'histoire de son esprit », il extrait ce qui lui paraît essentiel à la lumière de l'œuvre déjà accomplie, il efface donc les ratures, coupe les longueurs, oublie les hésitations. Ceci admis, il reste pourtant qu'il travaille une matière faite de souvenirs: une

méthode comparative est alors requise pour faire apparaître ce qui vient de la mémoire dans la vision rétrospective et détacher ce que la biographie peut retenir de l'arrangement autobiographique (1).

Il ne suffit d'ailleurs pas de retrouver les faits et les pensées dans leur vérité originelle, pré-cartésienne, avant que la mémoire du philosophe ne les ait organisés: il y a aussi une autre mémoire à considérer, la tradition qui les conduit jusqu'à nous. L'historien commence aujourd'hui sa recherche non pas dans le monde où respirait René Descartes mais dans celui où la bibliographie le conduit et le guide; là le philosophe ne chemine plus au milieu de ses contemporains; il dialogue avec les philosophes qui l'ont interprété, avec les historiens qui l'ont expliqué. Ainsi, les faits ont maintenant pour contexte autant la vie posthume de Descartes que sa vie réelle; les pensées ne sont plus liées à des paroles prononcées pour certains hommes d'une certaine époque, mais leur universalité a en quelque sorte dé-temporalisé leur expression; nous les recevons à travers un langage historiquement usé, que les premiers lecteurs comprenaient à la lumière de leurs souvenirs scolaires et de l'actualité littéraire, religieuse ou sociale, mais que, trois siècles plus tard, les lecteurs comprennent dans la mesure où justement il paraît capable de communiquer des idées sans date. L'histoire de l'histoire sera ici partie importante de la critique historique.

En tête d'un ouvrage qui doit tant à ceux de ses prédécesseurs, est-il besoin de prévenir un contre-sens? Essayer de retrouver en histoire des données aussi immédiates que possible est une chose; faire table rase de tout le travail des interprètes et des chercheurs en est une autre. La première est une exigence méthodologique; la seconde ne serait qu'une absurdité. L'histoire doit simplement tenir compte d'un fait indiscutable: le philosophe ne survit pas dans le monde où il a vécu." (pp. 5-6)

Traduction anglaise: *Descartes. His Life and Thought*, translated by Jane Marie Todd, Ithaca: Cornell University Press, 1998.

Traduction italienne: *Cartesio. Una biografia*, traduzione di Gennaro Auletta e Mathilde Anquetil, Roma: Editori Riuniti, 1997.

"Une biographie du philosophe doit éclairer certains points, proprement historiques et souvent mal connus, mais aussi s'efforcer d'approcher cette personnalité exceptionnelle. Vigoureux et rigoureux, sûr de lui jusqu'à mépriser trop souvent ceux qui refusent ses interprétations, Descartes s'est aussi montré patient, capable de surmonter les différends dès qu'une bonne volonté se manifeste, accueillant aux gens de condition modeste, désirant s'instruire, chaleureux en quelques profondes amitiés, tout en fuyant comme importuns les curieux et les conversations purement mondaines. La « franchise » qu'il fait « profession d'observer en toutes ses actions », « sans aucune dissimulation ni artifice », vient après cet aveu: sa « principale finesse » est de n'en point avoir (a).

Son abondante correspondance, au ton parfois très libre, est la meilleure source pour mieux dévoiler ce caractère complexe, avec ses enthousiasmes et ses violences, sa patience aussi et ses réserves quand il éprouve quelque défiance. Nous en avons multiplié les citations. Leurs références, appelées par des lettres (a, b...') figurent au bas des pages, afin de permettre aux curieux d'en voir éventuellement le contexte, sans que ce soit nécessaire. Et nous avons reporté à la fin du volume des notes (appelées par des chiffres) qui permettront d'approfondir, voire de discuter, certains points: elles sont plutôt destinées aux spécialistes, mais aussi à ceux qu'embarrasserait un détail. Il serait préférable de les réserver pour une seconde lecture, et de suivre d'abord le conseil de Descartes, quand il a préfacé la traduction Française des *Principes de la philosophie*, son ouvrage le plus technique, exposant l'essentiel de sa métaphysique et les principales questions de la physique: le parcourir « d'abord tout entier ainsi qu'un roman, sans forcer beaucoup son attention, ni s'arrêter aux difficultés qu'on y peut rencontrer »; puis, si on a « la curiosité » d'en savoir plus, on peut le reprendre en soulignant les difficultés, dont de nouvelles lectures apporteront sans doute la solution". (pp. 8-9)

Ange Tamburini. Étude et progrès des Sciences mathématiques, de l'Histoire et de la Géographie.

"Nous nous proposons de faire connaître un collège de Jésuites aux XVIIe et au XVIIIe siècles, d'en reproduire la physionomie. Nous dirons comment il se fondait, quelle éducation on y recevait, quels usages et quel règlement on y suivait, ce qu'on y enseignait. Aucun livre de ce genre n'a été composé; les preuves et les documents peu connus ou nouveaux, que nous apportons à l'appui de ce travail, seront lus avec plaisir, croyons-nous, de ceux qui s'intéressent aux questions d'instruction publique. Raconter les faits, éviter, autant que possible, de les discuter et de les apprécier, telle sera notre ligne de conduite; la simple exposition de la vérité historique a plus de force et d'empire sur les esprits pour les éclairer et les convaincre, que l'écrit polémique où la passion s'insinue, presque toujours par quelque endroit." (tome I, p. II.)

"Nous avons vu les conditions d'admission des pensionnaires au collège royal de La Flèche; suivons-les maintenant pas à pas dans leur vie de chaque jour. Le règlement différait sensiblement de celui de nos internats actuels; la journée de l'écolier n'était pas celle d'aujourd'hui.

En arrivant au collège, le pensionnaire, s'il était fils de famille, déposait son épée dans la chambre des armes. A chaque épée on attachait une fiche de bois, portant le nom du propriétaire; le P. Ministre avait dans sa chambre un jeton semblable, et ce jeton servait d'*exeat* les jours de sortie.

Le gentilhomme, en quittant l'épée, faisait oublier sa naissance. Plus de distinction entre le noble, le bourgeois et le roturier, car il y avait là aussi quelques roturiers, dont la pension était payée par des prélats ou de grands seigneurs, et qui se destinaient à l'état ecclésiastique. Pas d'autre supériorité entre ces jeunes gens de toutes les classes sociales que celle du mérite et du succès. Descartes, qui vécut plus de huit ans dans ce milieu, garda toujours le souvenir du remarquable esprit d'égalité qu'il y vit régner, et du fond de la Hollande, trente ans après, il écrivait à un de ses amis : « Il y a à La Flèche quantité de jeunes gens de tous les quartiers de la France. L'égalité que les Jésuites

mettent entre eux, en ne traitant guère d'autre façon les plus relevés que les moindres, est une invention extrêmement bonne pour leur ôter la tendresse et les autres défauts qu'ils peuvent avoir acquis par la coutume d'être chéris dans les maisons de leurs parents (*). » (tome II, pp. 27-28)

Index et Concordances

1. Gilson, Étienne. 1979. *Index scholastico-cartésien*. Paris: Vrin. Seconde édition revue et augmentée, avec un *Supplément* (pp. 337-357) et une *Postface* (1966, pp. 358-370), seule autorisée par l'auteur (Première édition 1913).

"Il convient de remarquer d'abord que cet ouvrage ne porte pas comme titre: L'influence de la scolastique sur Descartes; ni même: Descartes et la scolastique. C'est qu'en effet nous ne nous proposons ni de mesurer cette influence ni de chercher les rapports de la philosophie cartésienne avec celle de l'École. Un travail de ce genre ne pourrait être entrepris que partiellement et, pour dire toute notre pensée sur ce point, il ne conduirait à aucun résultat définitif ni surtout complet. Pour expliquer historiquement la pensée de Descartes il est nécessaire de la considérer à la fois en elle-même, dans ses rapports avec la scolastique, et aussi dans ses rapports avec certaines sources théologiques qui ne sont pas toujours d'origine scolastique. C'est pourquoi un travail qui supposerait comme base unique les rapports de la philosophie cartésienne avec celle de l'École serait nécessairement unilatéral et plus propre à voiler la vérité historique qu'à la découvrir.

(...)

Notre but pourrait donc se définir de la façon suivante: donner un relevé aussi complet que possible des expressions et conceptions qui-sont passées de la philosophie scolastique dans le texte de Descartes.

(...)

Nous ajouterons qu'il voudrait être un instrument de travail utile. A cet égard nous avons eu une double préoccupation: lui assurer une valeur historique, et le rendre pratique.

En ce qui concerne le premier point la voie était toute tracée. On sait que pour la théologie la base de l'enseignement de la Flèche était saint Thomas, et que, d'ailleurs, Descartes n'a jamais cessé de le consulter. C'est donc dans l'enseignement de saint Thomas que nous avons cherché les textes théologiques qu'il convenait de rapprocher de ceux de Descartes [Voir sur ce

point G. de Rochemonteix, *Le collège Henri IV de la Flèche*, tome IV, passim]. En ce qui concerne la philosophie proprement dite nous avons à consulter, outre saint Thomas qui là encore était le maître à peu près incontesté, Suárez. Nous avons rappelé ailleurs que Descartes en a connu quelque chose, et à coup sûr il en a été influencé indirectement. Les *Metaphysicæ disputationes* étaient pour la métaphysique le « livre du maître » des professeurs de Descartes; c'est pourquoi nous avons cru nécessaire d'y recourir [Pour les éditions des ouvrages écrits par des PP. Jésuites nous renvoyons à Sommervogel (*), dont il nous a semblé inutile de transcrire ici les longues colonnes]. Une source plus importante est cependant sans conteste l'ensemble des commentaires ou manuels alors utilisés dans l'enseignement. Descartes en cite un certain nombre qu'il dit avoir connus à la Flèche [AT III, 185, 11-18] : ce sont les *Commentarii collegii conimbricensis*, et les commentaires de Toletus et Ruvio [Voir Sommervogel, aux articles cités]. A ces ouvrages composés par des Pères de la Compagnie il convient de joindre le petit manuel du Feuillant E. de saint Paul que Descartes a connu et qui résume fidèlement, et surtout avec une concision rare pour l'époque, l'enseignement de l'École." (pp. II-V).

(*) Carlos Sommervogel, *Bibliothèque de la Compagnie de Jésus*, (9 volumes), Bruxelles - Paris, 1890-1900.

2. Janowski, Zbigniew. 2000. *Index Augustino-Cartésien. Textes et Commentaire*. Paris: Vrin.

"Notre travail ne consiste pas à restituer les conditions de la réception de la philosophie de Descartes parmi ses contemporains, ni à déterminer la ressemblance conceptuelle entre la métaphysique cartésienne et la théologie augustinienne. Il s'agit plutôt de voir quelle influence réelle et directe la lecture des œuvres de saint Augustin a exercé sur Descartes et sur la formation de sa métaphysique. Aussi notre travail est-il tributaire des études d'Etienne Gilson (22) et d'Alfred Espinas (23) qui ont initié l'enquête sur le rapport entre Descartes et saint Augustin. La thèse de Gilson, qui consistait avant tout à démontrer l'existence d'un lien entre certains thèmes cartésiens et l'augustinisme du Cardinal Pierre

de Bérulle, a été soumise aux critiques d'Henri Gouhier (24) et, plus récemment, à celles de Jean-Luc Marion (25)." (p. 16)

(...)

"C'est précisément cette question d'un emprunt possible que nous allons poser à notre tour afin d'établir jusqu'à quel point l'existence d'une telle relation est avérée. C'est dans ce cadre que s'inscrit l'index que nous avons établi des passages des œuvres de saint Augustin qui trouvent un écho dans la métaphysique de Descartes. Une des principales difficultés de ce travail réside dans la détermination certaine des arguments, concepts ou fragments que Descartes a empruntés aux œuvres de saint Augustin; à ce propos, il est important de souligner que, fréquemment, ce qui, chez ce dernier, occupe quelques dizaines de pages, ne représente chez Descartes qu'un seul paragraphe ou une seule phrase. Et inversement, ce qui, chez saint Augustin, est une phrase ou une remarque faite en passant, prend chez Descartes la forme d'un argument élaboré. Par ailleurs, on ne peut pas négliger le fait que la pensée de Descartes est postérieure de douze siècles à celle de saint Augustin, et qu'entre temps, le méticuleux travail philosophique des penseurs scolastiques a transformé le latin parlé en un langage technique et précis. De plus, saint Augustin n'était pas philosophe, au sens scolastique du terme: son langage est souvent vague et manque de cette précision si caractéristique des penseurs scolastiques et de Descartes lui-même. Il est ainsi difficile de déterminer jusqu'à quel point certaines idées de Descartes ne sont pas la transcription, en un latin cartésien technique, de termes augustiniens. Pour notre part, nous nous en sommes tenus, dans l'index, aux fragments dont nous pouvons affirmer avec certitude que Descartes les connaissait." (p. 17)

(...)

"Nous avons divisé l'index en deux parties: la première correspond aux emprunts incontestables; la seconde, à ceux qui ne le sont pas. La première partie ne comprend quasiment que des citations littérales. En ce qui concerne les emprunts possibles, nous les avons insérés dans la section « Des

additions ». Puisque le plus grand nombre des emprunts de saint Augustin se retrouve presque exclusivement dans les *Méditations*, ou plus exactement dans la Première, Deuxième, Quatrième, et Sixième Méditation, nous avons créé un index qui correspond à l'ordre numérique des *Méditations*, en intégrant la doctrine des vérités éternelles, et à la pagination de ces mêmes *Méditations*. Une telle classification, par opposition à la structure thématique, permet de mesurer, avec le plus de précision possible, l'influence de saint Augustin sur Descartes alors qu'il rédigeait son œuvre principale. Nous avons fait cependant quelques exceptions à cette classification: nous avons, par exemple, inclus quelques fragments des *Principes* (1644) ou des lettres de Descartes, mais uniquement en tant que ces fragments renvoyaient à des arguments déjà présents dans les *Méditations*." (pp. 18-19)

3. Armogathe, Jean-Robert, and Marion, Jean-Luc, eds. 1976. *Index des Regulae ad directionem ingenii de René Descartes*. Roma: Edizioni dell'Ateneo.

Lessico Intellettuale Europeo, vol. 10.

"L'Index des *Regulae ad directionem ingenii* est le premier instrument de travail publié par l'Equipe Descartes (C.N.R.S.), qui poursuit depuis plusieurs années des recherches sur l'œuvre de Descartes.

(...)

La méthode suivie est celle que le Laboratoire d'Analyse Statistique des Langues Anciennes (L.A.S.L.A., Liège, Belgique) a employée, depuis plusieurs années, pour produire de nombreux index d'auteurs classiques, en particulier de textes de Sénèque. Rappelons brièvement qu'à partir d'un enregistrement du texte en lecture continue (mots et ponctuation), l'ordinateur propose pour chaque item un lemme (3) et une analyse grammaticale codée." (p. XI)

(3) Par lemme, nous entendons le mot tel qu'il figure au dictionnaire.

"L'édition critique d'Adam et Tannery, parue en 1908 dans le tome X des *Œuvres de Descartes*, reposait sur deux sources du traité: un manuscrit conservé à la Königliche öffentliche Bibliothek (actuellement Niedersächsische Landesbibliothek) de Hanovre (H), qui avait appartenu à Leibniz, et l' *editio princeps* du traité dans les *Opuscula posthuma physica et mathematica* de Descartes, parus à Amsterdam en 1701 chez P. et J. Blaev. La version hollandaise établie par J. H. Glazemaker publiée en 1684, c'est-à-dire plus de quinze ans avant le texte original latin, dans le tome III des *R. Descartes Brieven* chez J. Rieuwertsz d'Amsterdam, bien que connue des éditeurs des *Œuvres* de Descartes, n'avait jamais été prise en considération.

Nous avons tenté dans le passé de reconstruire les phases du travail préparatoire de Charles Adam pour l'édition de 1908 (5), édition qui est à la base de l' *Index verborum* que nous présentons; cette recherche nous a permis d'une part d'en relever les défauts et les limites, presque inévitables dans une entreprise aussi vaste et complexe que celle d'une édition moderne intégrale des écrits de Descartes, et d'autre part de tirer des indications utiles pour une nouvelle édition critique.

L'édition que nous avons établie (6), parue en 1966 en même temps que la réédition du tome X des *Œuvres* de Descartes (7) repose essentiellement sur une nouvelle collation directe des deux sources H et A, avec la rectification de quelques attributions erronées et la récupération de variantes qui avaient échappé à Adam, sur la distinction entre les leçons originales du manuscrit (H) et les interventions dues à la main de Leibniz, qui corrigeait les formes erronées ou qu'il jugeait telles ou encore essayait de remédier aux omissions et aux lacunes, sans recourir directement à une autre source (L) (Adam note rarement la distinction et n'identifie jamais les interventions comme étant de Leibniz), et sur l'exploitation, jamais faite jusqu'alors, de la version hollandaise de Glazemaker (N), qui d'ailleurs grâce à un examen comparatif avec H et A permet de remonter à l'existence d'un manuscrit différent de H et de celui sur lequel reposait l' *editio princeps*. (G. Crapulli)" (pp. XV-XVI)

(5) G. Crapulli, *Note all'edizione critica di Adam-Tannery delle 'Regulae ad directionem ingenij' di Descartes*, "Rivista critica di storia della filosofia", XIX (1964), I, pp. 54-61.

(6) R. Descartes, *Regulae ad directionem ingenii*, texte critique établi par Giovanni Crapulli avec la version hollandaise du XVII^{ème} siècle ("Archives Internationales d'Histoire des Idées", 12), La Haye 1966.

(7) Le texte et l'apparat critique restent les mêmes que ceux de l'édition de 1908. Dans un Appendice dû à M. Bernard Rochot et au R. P. Pierre Costabel sont rectifiées quelques notes de l'apparat critique et sont présentées quelques modifications au texte d'Adam sur la base de remarques d'Hamelin, Gouhier, Le Roy, Alquié.

4. Cahné, Pierre-Alain, ed. 1977. *Index du Discours de la Méthode de René Descartes*. Roma: Edizioni dell'Ateneo.

Lessico Intellettuale Europeo, vol. 12.

"L'Equipe Descartes (1) poursuit, avec la publication de l'index lemmatisé du *Discours de la Méthode*, le travail d'indexation des œuvres de Descartes commencé avec la publication, dans la

même collection, de l'index des *Regulae ad directionem ingenii*. En raison des difficultés que l'on rencontre lors de l'établissement d'un tel index sur texte Français, une brève présentation s'impose.

1 - Le *Discours de la Méthode* a d'abord fait l'objet d'une indexation automatique des formes, sur les programmes du Centre de lexicologie politique de l'École Normale Supérieure de Saint-Cloud, Equipe de Recherches Associée au C.N.R.S. n° 56 (Pierre Lafon, ingénieur). Le texte retenu était celui publié par Adam et Tannery au tome 6 des *Œuvres* de Descartes (1ère édition 1902; édition revue par B. Rochot: 1973). Le traitement informatique a été fait à la Maison des Sciences de l'Homme (Paris), sur un terminal relié à l'ordinateur IBM 370-168 du centre de calculs d'Orsay.

2 - A partir de cette liste alphabétique des formes, accompagnées du total de leurs occurrences et de leurs références, une lemmatisation manuelle a été pratiquée selon les principes suivants:

a. en raison des variations orthographiques constatées dans les textes du XVIIème siècle, il a été décidé de suivre, pour les lemmes, l'orthographe des entrées du *Dictionnaire alphabétique et analogique de la langue Française* de Paul Robert. Les formes sont pour leur part reproduites dans l'orthographe de l'édition de référence (2).

b. les substantifs sont lemmatisés sous le masculin singulier; les verbes sous l'infinitif; les adjectifs sous le masculin singulier; les comparatifs et superlatifs synthétiques doivent être recherchés sous l'adjectif au -positif; les pronoms personnels déclinés se trouvent sous le cas sujet.

c. nous avons lemmatisé certaines locutions conjonctives dont les éléments sont disjoints. Ainsi on trouvera Si... que, encore ... que ...

d. nous avons établi un glossaire de mots à prédictivité faible ou nulle, pour lesquels nous ne donnons que le nombre total d'occurrences. Ce glossaire a été établi en fonction de la spécificité du texte étudié: nous avons estimé qu'ÊTRE, pour

trois de nos usages, méritait de figurer parmi les mots prédicatifs, donc avec toutes les références. De même les 864 occurrences du pronom personnel de la première personne du singulier ont été données (3).

e. les homographes sont distingués par un indice numérique; ils sont présentés dans l'ordre suivant: substantif, adjectif, adverbe, préposition, conjonction. Ainsi PRATIQUE 1 est le substantif, tandis que PRATIQUE 2 est l'adjectif; BIEN 1 est le substantif, BIEN 2 est l'adverbe, etc. Six homographes parmi les items fonctionnalisés, n'ont pas été désambiguïsés: en, le, ou, que, qui, un.

Cinq emplois d'ÊTRE ont été distingués:

ÊTRE 1: emploi nominal

ÊTRE 2: emploi absolu

ÊTRE 3: emploi locatif

ÊTRE 4: auxiliaire

ÊTRE 5: copule

ÊTRE 4 et ÊTRE 5 figurent dans le glossaire.

Pour SI, nous avons séparé l'emploi de SI, adverbe d'intensité, de celui de SI adverbe engagé dans une relation consécutive:

SI 1: conjonction de subordination introduisant l'interrogation indirecte

SI 2: adverbe d'intensité

SI 3: conjonction introduisant l'hypothèse Les formes sous le lemme sont rangées dans l'ordre alphabétique (4).

f. le texte indexé contient 22.688 formes regroupées en 1630 lemmes." (pp. IX-X)

(1) Equipe associée à l'Equipe de recherches 56 du C.N.R.S. (Histoire des Sciences et des Techniques), directeur: M. le professeur René Taton.

(2) Le lemme, créé par la nécessité de l'indexation, n'appartient pas au texte cartésien: notre solution s'impose donc et sur le plan pratique et sur le plan théorique.

(3) L'Equipe Descartes peut fournir, sur demande, les références pour toutes les occurrences des mots du glossaire.

(4) Les difficultés de la lemmatisation manuelle ont introduit quelques rares exceptions à ce principe.

5. Marion, Jean-Luc, Massonie, J.-Ph., Monat, P., and Ucciani, L., eds. 1996. *Index des Meditations de prima Philosophia de R. Descartes*. Besançon: Annales Littéraires de l'Université de Franche-Comté.

Sommaire: J.-L. Marion: Préface IX-XIII; L. Ucciani: Avant-propos XV-XVII; Texte des Méditations 1-89; Index lemmatisé 91-211; Concordances partielles 213-252; J.-Ph. Massonie: Édition électronique 253-275.

"Puisque Descartes pense qu'il faut faire un index, nous en avons fait un - celui des *Meditationes*. Ce n'est évidemment pas le premier. Sans remonter à *Paraphrasis in Cartesii Meditationes* de Clauberg (Duisbourg, 1657), ni au *Lexicon rationale sive Thesaurus philosophicus* de Chauvin (Rotterdam, 1692), on doit reconnaître un rôle de pionnier à E. Gilson, dont l' *Index scolastico-cartésien* parut au début du siècle (Alcan, Paris, 1913, nouvelle édition J. Vrin, 1979): encore manuel, donc sélectif, il offre pourtant la première esquisse d'une indexation par concepts de l'œuvre entière de Descartes, correspondance comprise; il remplit aujourd'hui encore, en sus des comparaisons qu'il voulait permettre avec les scolastiques, une fonction d'indexation purement cartésienne. Mais les premiers indices automatiques (sauf la lemmatisation, manuelle ou contrôlée manuellement) n'apparurent que récemment. D'abord J.-R. Armogathe et J.-L. Marion, *Index des Regulae ad directionem ingenii* de René Descartes, Lessico Intellettuale Europeo X, Corpus Cartesianum 1, Edizioni dell'Ateneo, Rome, 1976, XXII-163 p., élaboré avec la collaboration du LASLA (Prof. L. Delatte, Université de Liège) et du Prof. G. Crapulli (voir «Bulletin Cartésien VII», Archives de Philosophie, 1997/3, p. 15). Puis P.-A. Cahné, *Index du*

Discours de la Méthode de René Descartes, Lessico Intellettuale Europeo XII, Corpus Cartesianum 2, Edizioni dell'Ateneo, Rome, 1977, X-90 p., qui avait bénéficié du programme d'indexation automatique élaboré par P. Lafon (Centre de lexicologie politique, E.N.S. Saint-Cloud, E.R.A. - C.N.R.S. 56, voir «Bulletin Cartésien VIII», Archives de Philosophie, 1979/4, p.26-27). Dans les deux cas, aucune concordance ni liste de co-occurrences n'accompagnait l'index (1).

On doit à A. Robinet (CNRS/Université Libre de Bruxelles) d'avoir tenté à la fois de dépasser cette limitation et de s'appliquer aux *Meditationes* - ou plutôt, et c'est qui rendait encore insatisfaisant ce travail pourtant précieux, les *Méditations Métaphysiques*. En effet, il ne s'agissait dans «*Cogito 75*». René Descartes. *Méditations Métaphysiques* (Paris, J. Vrin, 1976) que de traiter la traduction du duc de Luynes, parue en 1647, voire sa révision par F. Alquié: malgré le sous-titre, le texte utilisé, à la lettre non cartésien, n'avait donc rien de «définitif»: il ne suivait d'ailleurs même pas la pagination d'AT IX-1 (nouvelle mise en page et numérotation continue des lignes par Méditation). Néanmoins, à condition de remonter au latin de 1641/2 par AT VII et d'y contrôler le Français, ce lexique devenait très utile, augmenté qu'il était d'un choix d'une dizaine de concordances, de cooccurrences et de listes de fréquences. Le traitement du texte latin des *Meditationes*, entrepris dès 1978 par l'Équipe Descartes (essentiellement par J.-R. Armogathe) et par d'autres centres devait longtemps buter sur des difficultés diverses (de lemmatisation surtout). Il vient enfin d'aboutir avec la récente *Concordance to Descartes' Meditationes de Prima Philosophia*. Prepared by Katzuzo Murakami, Meguru Sasaki and Tetsuichi Nishimura. Preface by Takefumi Tokoro, qui vient de paraître chez Olms/Weidmann, Hildesheim, 1995². Seul l'usage montrera les mérites de ce magnifique outil de travail; on notera cependant ses deux options massives: il se borne au support papier, donc se ferme à l'exploration d'un hyper-texte, il privilégie fortement la concordance sur l'index. Deviendront-elles ses deux limites? La tentative de l'Université de Besançon

se caractérise au contraire (comme l'indique L. Ucciani) par 1) le privilège accordé au lexique, exhaustif et lemmatisé, suivant à la fois la pagination et les lignes d'AT VII et une numérotation continue de ces mêmes lignes afin de faciliter le repérage; 2) des co-occurrences, en nombre limité, mais où l'on a privilégié des termes à forte technicité métaphysique; 3) le complément du support-papier par une disquette (consultable avec HyperCard sur Macintosh), ouvrant ainsi des possibilités d'interrogation beaucoup plus nombreuses et souples; 4) l'économie de moyens (donc de coût), qui devrait permettre à un public individuel (et non pas seulement institutionnel) d'utiliser cet outil d'accès privilégié au texte de Descartes. Nous espérons que ces caractéristiques permettront à cet index - qu'il fallait donc faire - de tenir son rôle, parmi ceux qui sont déjà disponibles et surtout ceux, plus nombreux, qui viendront très vite s'y adjoindre." (pp. IX-XI)

(1) Des esquisses de résultats accompagnèrent ces publications: P. Costabel et P.-A. Cahné, «L'étude textuelle automatique appliquée aux œuvres de Descartes: état présent des travaux», «Bulletin Cartésien III», Archives de Philosophie, 1974/3, p. 453-8; J.-L. Marion, «A propos d'une sémantique de la méthode». Revue internationale de Philosophie, 103/5, 1975; P. Costabel et J.-R. Armogathe, «Premiers résultats de l'Équipe Descartes», I^o Colloquio Internazionale del Lessico Intellettuale Europeo. Atti a cura di Marta Fattori e Massimo Bianchi, Rome, 1976; Equipe Descartes, «Sémantèse d'ordre-ordo chez Descartes», II^o Colloquio Internazionale del Lessico Intellettuale Europeo. Atti a cura di Marta Fattori e Massimo Bianchi, Rome, 1979, p. 282 sq.

(2) Un utile travail l'avait d'ailleurs préparée: T. Tokoro, Les textes des «Meditationes», Cuo U.P., Tokyo, 1994, qui collationne non seulement les éditions de 1641, 1642 et les corrections de Descartes (AT V, 36-37), mais celles d'AT 1904, d'AT 1973, de G. Rodis-Lewis 1945 et d'Alquié 1967.

Les Méditations métaphysiques par René Descartes 1;

INDEX I: Index statistique 66; INDEX II: Index des occurrences 68; INDEX III: Index de fréquence décroissante des formes 115; INDEX IV: Index des coefficients de fréquence 117; INDEX V: Extraits des tables de concordance 121; INDEX VI: Tableaux de co-occurrences 133-140.

"Après, MONADO 74, (*) voici une nouvelle opération informatique appliquée aux textes de philosophie: COGITO 75. Nos premiers balisages prenaient pour cible deux textes célèbres de Leibniz: les présents dépouillement concernent les *Méditations métaphysiques* de Descartes.

Nous présentons plusieurs résultats portant sur l'examen lexicographique du texte Français . Nous avons suivi pour ce faire l'édition classique qu'a fait paraître Monsieur Alquié, car elle reconstitue le Français ancien en orthographe moderne. Cependant, nous avons maintenu les majuscules qui figurent dans la reproduction de l'original par Adam-Tannery (Soleil, Géométrie etc...), ainsi que certaines locution qui ne nous paraissaient pas devoir être modernisées (pour ce que...; ou bien des imparfaits mis à la place des passés simples originaux). Cette traduction date de 1647; elle fut l'œuvre du duc de Luynes et reut approbation et correction de la part de Descartes. La référence au texte latin de 1640 reste nécessaire si l'on approfondit les question soulevées dans ces deux écrits, dont les reliefs lexicographiques ne sont pas exactement les mêmes. La frappe de ce texte a été effectuée de manière à permettre la perforation ligne à ligne qui conduit nos index à diriger le consultant vers le repérage précis des termes recherchés." (pp. V-VI)

8. ——. 2001. "Concordances lemmatisées du texte Français ." In *La recherche de la vérité par la lumière naturelle de René Descartes*, édité par Lojaco, Ettore, 66-288. Milano: Franco Angeli.

Textes établis par Erik Jan Bos; lemmatisation et concordances du texte Français par Franco A. Meschini; index et concordances du texte latin et néerlandais par Francesco Saita.

"Le texte Français lemmatisé est celui qu'Erik-Jan Bos a établi pour le présent volume. Cette édition a été la première à prendre en considération, dans la phase de *recensio*, la traduction néerlandaise (Amsterdam, 1684). Elle constitue un précieux instrument pour le spécialiste de Descartes, en tant qu'elle présente en plusieurs endroits une lecture nouvelle par rapport au texte édité par Charles Adam en 1906 (2)."

(...)

"Le présent travail est publié vingt-quatre ans après l'index du *Discours de la méthode* dans la collection *Corpus cartesianum* du *Lessico Intellettuale Europeo* (3); ayant parfois pris des options différentes, nous devons au lecteur quelques explications. Pour être, nous avons distingué seulement trois lemmes (verbe-copule, verbe auxiliaire et substantif). Nous n'avons pas retenu comme lemmes ni les locutions conjonctives ni les locutions prépositives, mais nous les avons décomposées par éléments. À la différence des travaux du *Corpus*

cartesianum qui se limitent à un *index verborum* lemmatisé, nous présentons ici les concordances lemmatisées.

Pour le reste, nous avons suivi les mêmes critères que ceux établis dans les volumes de J.R. Armogathe et J.L. Marion (pour les *Regulae*), P.A. Cahné (pour le *Discours*) et moi-même (pour les *Principia*) dans la même collection (4) l'entrée du lemme (ou lexème, qui est une abstraction par rapport au texte) a été prise dans un dictionnaire de référence, le *Dictionnaire alphabétique et analogique de la langue Française* de Paul Robert (5), les formes étant celles du texte de Descartes (6). Nous donnons la totalité des occurrences pour chaque lemme, ainsi que les formes suivies de leur quantité (nombre d'occurrences) et de leur adresse (page et ligne)."

(...)

"Le texte indexé contient 4943 occurrences, le total des formes est de 1269, réparti entre 796 lemmes."

(...)

"L'intérêt lexical de la *Recherche* est multiple: à commencer par la métaphore du gué pour désigner la méthode, inconnue - me semble-t-il - du reste du corpus, qui peut être une réminiscence de Montaigne (11) et fait penser, plus directement, au *vadum* des *Septimae objectiones et responsiones*, expression comme «la consummation (sic!) des siècles», expression inusitée dans le discours cartésien, qui semble provenir d'un emprunt ou d'une influence, et qui peut fournir un indice de lecture ou de citation, utile éventuellement pour aider à la datation. Autre *hapax* cartésien, enfin, *personne neutre*, qui rappelle le fréquent emploi de *neuter* chez le P. Bourdin. Dans le même contexte des *Objectiones septimae*, rappelons, dans la partie de notre texte traduit du Français en latin, le mot *battologia*.

A un lecteur attentif, le lexique de la *Recherche* donne l'impression d'avoir intégré des matériaux pour ainsi dire étrangers ou hétérogènes. Cela ne doit pas sembler étrange: nous retrouvons le même phénomène dans les *Responsiones*, dont le genre littéraire appelle la contagion avec des termes utilisés par les objecteurs, ou bien encore les *Météores*, où la

présence d' *hapax* cartésiens signale les emprunts opérés par Descartes.

La clé de la *Recherche*, et la *vexata quaestio* de sa datation, semblent devoir être cherchées en dehors de Descartes, mais non pas, comme l'ont proposé d'illustres interprètes, dans les circonstances ou rencontres biographiques de Descartes, mais peut-être dans les pages de ses interlocuteurs."

(2) Dans cette note je ne prends en considération que le texte Français, mais la *collatio* du texte latin et du texte néerlandais a donné des résultats tout aussi intéressants pour la partie parvenue uniquement dans la traduction, pour lesquels cfr. les notes de Bos en bas du texte latin, son introduction dans le présent volume et son article (*La première publication de La Recherche de la Vérité en 1684*), publié dans «Nouvelles de la République des Lettres », 1999, 1, pp. 13-26. Sur un point où je m'écarte de l'interprétation de Bos cfr. *Postilla cartesiana. Note di lessicologia e filologia cartesiana*, dans «Physis», 2000 (1), pp. 151-165: 160-163.

Resources bibliographiques

1. "Bulletin cartésien." 1972. *Archives de Philosophie*.

Fondé en 1972 par l'équipe Descartes dirigée par Pierre Costable, est publié dans la revue *Archives de Philosophie* chaque année et vise à dresser une liste de tous les ouvrages et articles sur Descartes offrant une recension plus ou moins détaillée selon l'importance du texte enregistré.

"Pour la période 1800-1960, les chercheurs disposent de la *Bibliographia Cartesiana* de Gregor Sebba (Nijhoff: La Haye 1964). Ce Bulletin annuel va tenter de remédier à l'absence de bibliographie courante des études sur Descartes. Nous ne pouvons envisager pour l'instant de répertorier systématiquement tous les philosophes « cartésiens »: notre but essentiel étant de rendre service, notre méthode sera plus souple que rigoureuse en dehors des études sur Descartes lui-même. Nous avons renoncé à couvrir la décennie 1960-1969, sans perdre pour autant l'espoir de publier une bibliographie de cette période, avec la collaboration de Gregor Sebba et Wolfgang Rod.

A quelques exceptions près, nous n'avons retenu ici que des études et des textes publiés en 1970; nous avons suivi dans la présentation un ordre thématique, l'ordre alphabétique étant rétabli dans la Table publiée au 4^e cahier des *Archives*." (*Archives de Philosophie* 35, 1972, 263)

2. Guibert, Albert-Jean. 1976. *Bibliographie des œuvres de René Descartes au XVII^e siècle*. Paris: Éditions du CNRS.

Table des matières: Introduction 9; 1637. Discours de la Méthode 11; 1637. Géométrie 23; 1641. Les Méditations Métaphysiques 39; 1643. Lettres de M^r. Descartes 11; 1644. Specimina Philosophiae 101; 1644. Principes de la Philosophie 115; 1648. Notae in programma 143; 1649. Les Passions de l'âme 147; 1649. La Naissance de la Paix 175; 1650. Abrégé de la Musique 179; 1656. Magni Cartesii manes 189; 1662. L'Homme 193; 1664. Le Monde 209; 1668. La Mécanique 215; 1701. Opuscula posthuma 219; 1861. Mathematica de solidorum

"Une Bibliographie est une création continue. A peine l'ouvrage est-il publié qu'apparaissent miraculeusement ici et là des éditions jusqu'alors inconnues que leurs propriétaires signalent à l'attention de l'auteur.

Ces éditions, enfouies dans les bibliothèques privées, peuvent ne jamais voir le jour. Mais, si par suite de circonstances familiales malheureuses, une vente publique vient disperser tout ou partie de ces livres, pourtant jalousement conservés depuis plusieurs générations, on voit alors surgir des éditions du plus haut intérêt.

Il en est de même lorsque, par bonheur, le possesseur est un bibliophile ou un collectionneur lettré. Il se fait alors un devoir de les signaler et souvent même de les communiquer.

C'est exactement ce qui s'est passé pour les Bibliographies de J.B.P. Molière et de Jean Racine. Il en résulte qu'un travail de ce genre n'est presque jamais complet lorsqu'il est publié pour la première fois.

La Bibliographie de Descartes que nous proposons n'échappe pas à la règle. Néanmoins, nous nous sommes efforcé, avec les matériaux que nous possédons ou que nous avons pu consulter, de rassembler en un tout cohérent tous les travaux de Descartes publiés au XVIIe siècle.

(...)

Or, notre ambition, bien que limitée aux ouvrages publiés au XVIIe siècle, était de créer un ensemble ordonné et le plus complet possible de toutes les éditions tant Françaises que latines éditées à cette époque.

Nous nous sommes gardé de céder à la tentation d'empiéter sur le domaine littéraire, scientifique ou philosophique, ce qui n'est pas le rôle d'un bibliographe. Ce domaine immense de synthèse et d'analyse a été admirablement étudié par Messieurs Adam et Tannery dans leur édition monumentale de 1910 rééditée tout récemment par les soins du C.N.R.S. et par d'éminents

philosophes. Il ne nous appartenait pas d'y revenir sinon de nous y reporter pour certaines particularités.

La Bibliographie que nous proposons est en réalité la première des Œuvres de Descartes. Elle s'arrête au début du XVIIIe siècle car nous estimons que les publications ultérieures, dont nous ne méconnaissons pas l'importance et l'efficacité, ne présentent pas aux yeux du bibliophile ou de l'homme de sciences ou de lettres le même intérêt que celles éditées du vivant de l'auteur ou de ses contemporains.

Nous voulons donc croire et espérer que ce travail suscitera d'heureuses vocations et incitera les possesseurs d'éditions inconnues à nous révéler leur existence et à enrichir ainsi notre patrimoine bibliographique." (*Introduction*, pp. 9-10).

3. Armogathe, Jean-Robert, and Carraud, Vincent. 2003. *Bibliographie cartésienne (1960-1996)*. Lecce: Conte Editore.

Avec la collaboration de Michaël Devaux et Massimiliano Savini.

"Le présent ouvrage a pour objet de continuer la présentation bibliographique raisonnée des travaux sur Descartes entreprise par Gregor Sebba pour la période antérieure à 1960 (*Bibliographia cartesiana*, La Haye, 1964). Livres et articles ont été répertoriés et indexés par des mots clés permettant des enquêtes bibliographiques précises.

(...)

La Bibliographie cartésienne est divisée en trois sections: *Opera*, *Thesaurus* et *Corpus*.

La première section: *Opera*

Un souci d'utilité pour l'utilisateur a conduit à retirer du *Corpus*, pour les présenter à part, les écrits de Descartes (éditions et traductions), qui constituent la première section (*Opera*). Nous avons éliminé de cette section les publications à usage scolaire et les morceaux choisis. Pour les traductions, nous avons essayé de présenter une sélection d'ouvrages, ne retenant que ceux qui sont tenus pour "classiques" dans les différentes langues. Par commodité, enfin, nous avons joint à cette section

Opera quelques instruments bibliographiques et lexicologiques (qui ne figurent donc pas dans le *Corpus*). Un Index particulier renvoie aux œuvres publiées ou traduites dans cette section.

La seconde section: *Thesaurus*

Une bibliographie de grande taille peut se révéler totalement inutilisable si des indications sur l'importance relative des items ne sont pas données au lecteur candide. Au fil des quatre mille références, nous avons retenu celles qui nous ont semblé devoir faire l'objet d'une mention particulière. Il ne s'agit pas d'un palmarès; le choix du *Thesaurus* réunit 323 items qu'il nous a semblé utile de signaler. Un critère décisif fut la réception et l'influence des ouvrages ou articles dans la communauté scientifique. Ces items se trouvent donc mentionnés à deux reprises: dans le *Thesaurus*, d'une part, mais aussi, à leur place alphabétique dans le *Corpus*. C'est cependant dans le *Corpus* seul que l'on trouvera, en outre, les discussions auxquelles les items retenus dans le *Thesaurus* ont donné lieu, ainsi que leurs traductions.

Les items retenus dans cette section ont fait l'objet d'un dépouillement plus poussé, avec l'établissement d'un plus grand nombre de mots clefs pour chaque titre analysé. Leur numéro est celui de leur ordre dans le *Corpus*, il est imprimé en chiffres gras dans l'index des mots clés, permettant ainsi de retrouver, pour une recherche rapide, les principales références.

La troisième section: *Corpus*

Cette section réunit par ordre alphabétique (d'auteurs et de titres pour les collectifs) plus de quatre mille items, ouvrages et articles, complétant la *Bibliographia cartesiana* de Gregor Sebba jusqu'à l'année 1996 incluse, la date du quatrième centenaire de la naissance de Descartes représentant un terminus *ad quem* symbolique et bibliographique pertinent. L'année 1996 semble être une date charnière (3): le nombre annuel de publications est resté extrêmement élevé dans les années suivantes.

(3) Une idée de l'importance numérique des publications qui ont suivi l'année 1996 peut être tirée de l'inventaire établi par Michaël Devaux, "Le quatrième centenaire de la naissance de Descartes: présentation des colloques et des communications", *Bulletin cartésien XXVI, Archives de philosophie*, 1998, 1, pp. 1-25.

The Philosophy of Descartes. A List of Bibliographical Tools in English

Introduction

This page gives a list of the main biographies, dictionaries, lexica and bibliographies on Descartes in English; for the resources in French see:

[Descartes: Biographies, Bibliographies, Dictionnaires, Lexiques](#)

Ancient biographies

1. Boxhorn, Marcus Zuerius. 1670. *A Summary or Compendium of the Life of the Most Famous Philosopher Renatus Descartes, written originally in Latin by Peter Borellus ... ; to which is also added an epitome of his life by Marcus Zurius Boxbornius* London: George Palmer.

Translation of Pierre Borel, *Vitae Renati Cartesii, Summi philosophi compendium*, Paris, 1656.

Epitome by Marcus Zuerius Boxhorn (1612-1653) pp. 58-107.

"This Translation, or rather Collection, out of Peter Borellus, Physician to the French King; and Marcus Zurius Boxhornius Historiographer in the University of Leyden, presents you with the Life of the Famous Monsieur Descartes, giving you an account of his Parentage and Education, during his Minority, as well as the Course and Method of his Study, in his Riper Years; together, with an exact Catalogue of all his Manuscripts, which were found at Stockholm in Sweden, after his Death; and the names of all his Books that have been Published, with the Places where they were Printed; as also the several Epitaphs

that were bestowed upon him by his Contemporaries, after his Decease. If this Epitome receive a kind entertainment; 'tis very probable (when the Author, according to promise, exposed a larger Treatise to public View, concerning this Subject) that it may be also taught to speak English, for the satisfaction of those who want the advantage of the Latin, and are only skilled in our Mother-Tongue. This Compendious Discourse of the Life of so Eminent a Person, and great a Light in the Firmament of Learning, is all that we can furnish you with at present, till we meet with an opportunity to gratify you with a more Complete Relation in a larger Volume."(orthography slightly modernized)

Pierre Bayle dedied to Boxhorn the article "Zuerius Borxhonijs" in his *Dictionnaire historique et critique*, fifth edition, Amsterdam, 1740, vol. IV, pp. 560-568.

Reprinted in Roger Ariew, Daniel Garber (eds.), *Descartes in Seventeenth-Century England*, Bristol: Thoemmes, 2002, vol. 3: *Biographies of Descartes: Pierre Borel, A Summary or Compendium, of the Life of the Most Famous Philosopher Renatus Descartes* (1670); Marcus Zurius Boxhorn, *Epitome of the Life of Descartes*, in: Pierre Borel, *A Summary or Compendium, of the Life of the Most Famous Philosopher Renatus Descartes* (1670); Adrien Baillet, *The Life of Monsieur Des Cartes* (1693).

2. Baillet, Adrien. 1693. *The life of Monsieur Des Cartes containing the history of his philosophy and works: as also the most remarkable things that befell him during the whole course of his life*. London: R. Simpson.

English translation of Adrien Baillet, *La vie de mr. Des-Cartes. Réduite en abregé*, Paris, 1692.

3. Sebba, Gregor. 1982. "Adrien Baillet and the Genesis of His *Vie de M. Des-Cartes*." In *Problems of Cartesianism*, edited by Lennon, Thomas M., Nicholas, John M. and Davis, John W., 9-60. Kingston & Montreal: McGill's Queens University Press.

"The story of the *Vie de M. Des-Cartes* begins with the unexpected death of Descartes in Stockholm in 1650, when the French ambassador Chanut his friend and host, took

possession of the philosopher's unpublished manuscripts. He later turned them over to Claude Clerselier who published three volumes of correspondence, with enough manuscript left over to make one more. At his death in 1684 he left his material to Abbé Legrand with a sum of money for publishing this volume. (94) Instead of doing so, Legrand planned a new complete edition of the works and correspondence of Descartes.

A Life was to be added presumably a relatively brief one since it was to be part of this edition, Adam has described Legrand's editorial work in detail, using the information given in Baillet's preface. Legrand made a thorough and quite successful search for missing correspondence and sought out persons who had known Descartes. There is no indication that his biographical work went beyond writing minutes of the information he collected. Legrand seems to have been an excellent, careful editor, but he could never come to an end.

He worked for twenty years, died in 1704, and still nothing had been published.

The biography would have shared the fate of Legrand's edition had it not been lifted out of its status as an introductory piece. The idea of making it an independent work cannot have come from Legrand, judging from his way of working. He had no sense for what was urgently needed at the time, or else he would have published Descartes's *inedita* without delay, following them up with the Life of Descartes. There is no doubt that Cartesians of all types kept abreast of Legrand's plans and work. Unlike Legrand they were not concerned with editorial problems. A new edition including material as yet unknown would be a philosophical event, but the event took its time and the need for action was pressing. Somehow Descartes needed to be disengaged from the theological entanglement he had so carefully avoided in his own lifetime. When, where, and how the answer was found we do not know. But we can say what it was: the germ of an idea, embedded in a technicality. Detach the "Vie de Mr. Descartes" from the "Œuvres de Descartes" and make it a book in its own right, in the language and spirit of the *Discours de la méthode* not of the *Meditationes de prima*

philosophia. Taking the biography out of the context of the "Œuvres" changed the concept and function of the proposed life of Descartes. The change made it necessary to find a swifter writer than Legrand." (pp. 48-49)

(...)

"Thanks to Baillet's hints, the pieces begin to fall into place. We know already from Frion that Baillet did the actual writing in "less than a year" before giving the manuscript to the printer at the end of February 1691; since it had to be submitted to the censor, actual writing would have begun between January and March 1690. He was able to complete the writing in such a short time thanks to his systematic way of putting "un peu d'ordre" into the material he had accumulated, so that the writing task consisted chiefly in producing a continuous narrative. The preparation of the material while waiting for information must have taken much longer than the writing itself." (p. 51)

"Perhaps it is not amiss to close with a word about the auteur *malgré lui*. Baillet preserved invaluable texts and information that would have been lost without him, but he preserved them in his own fashion. A thorough study of his style, his manner of translating and paraphrasing, and his scholarship is needed in attempting to reconstruct lost texts for which he is the only source. This requires following his development from the *Jugemens* to the *Vie*. As to his so-called hagiographic bias, we need to quote only one text. It stands in the second volume of the *Vie de Mr. Des-Cartes*, on p. 381. Speaking of Pascal, he says : "... au lieu de borner ses vues à la recherche de tout ce qui peut contribuer à la félicité temporelle de cette vie, comme avoit fait M. Descartes, il s'éleva ... jusqu'à celle des vérités de notre Religion, où M. Descartes ne s'était jamais jugé capable d'atteindre." It is as simple as that. One cannot rise to the "verities of our Religion" without putting the "temporal felicity of this life" down where it belongs. To the peasant scholar from Beauvais this was an indisputable fact, but he had enough discipline to make his confession of faith where nobody would

look for it, instead of allowing his religious radicalism to distort his portrait of Descartes." (pp. 59-60)

(94) See Adam's summary in AT 1 XLII ff. and Baillet, *Vie de M. Des-Cartes*, I :XXII.

Adam's judgment of the value of Baillet's work is still the best we have (AT, I :XLV).

The mass of detail piled up by Baillet "sans faire grâce aux lecteurs de tant de menus faits" has become invaluable to the modern historian because of "ce souci minutieux du réel qui caractérise Baillet". This is a very different tone from that of Ménage, La Monnoye, and Boschet, but Baillet had learned meticulous scholarship in the hard school of the *Jugemens*. He now knew what to guard against.

Modern biographies

1. Haldane, Elizabeth Sanderson. 1905. *Descartes. His Life and Times*. London: J. Murray.

Reprint Bristol: Thoemmes Press, 1992.

"Any Life of Descartes is, of course, mainly dependent upon his very considerable correspondence, principally written and framed with a view to future publication.

Of Descartes' *Letters* as MM. Adam and Tannery tell us, the first important edition is that of Clerselier, in three volumes, published at Paris by Charles Angot in 1657-67. Clerselier had at his disposal Descartes' manuscripts, copies of many of his letters and notes, taken by him to Sweden and enumerated in a catalogue made just after his death. These had been given to Chanut, the French ambassador in Sweden, and Descartes' great friend, who contemplated publishing them. This task, however, he handed over to Clerselier, his brother-in-law, and likewise the author's friend. The packet was duly dispatched to France, which, after many delays, it reached in 1653. It travelled by Rouen, and was entrusted to a vessel which made its way to Paris by river. Unluckily, near Paris, the boat was wrecked, and for three days the precious manuscripts remained

submerged in water. Wonderful to relate, "by Divine permission," the papers were recovered some distance off, and were duly hung up in various rooms to dry; but since this was done by unintelligent servants, much confusion resulted, as can easily be imagined. (*) In endeavouring to rearrange the manuscripts, the greatest difficulty was experienced; and more especially was this so in reference to the *Letters*. The papers, all of which had not been used, were finally bequeathed by Clerselier, in 1684, to Legrand, who assisted Baillet in writing his *Life of Descartes*. Baillet and Legrand set about their work of writing the Life with the greatest vigour. Legrand, not content with handing over to Baillet Descartes' manuscripts and Clerselier's memoirs, made it his business, Baillet tells us, to go to see everyone in Paris from whom he might receive the slightest help.

He wrote to Brittany, Touraine, Languedoc, Holland, Sweden, and Germany, in order to interest his friends and relations in the project, and recovered certain communications from Regius of Utrecht, and the greater part of those from Descartes to the Abbé Picot, to Clerselier, to Tobie d'André; as also some from Princess Elisabeth of Bohemia, Chanut, etc. Baillet also acknowledges the help received from Descartes' nephews, M. de Kerleau and M. de Chavagne (both Descartes' brothers being dead), and also from his niece, M.lle Catherine Descartes. These provided family papers regarding the philosopher's ancestry and private life, while the sons of Clerselier and Chanut supplied all that they could of what was useful in their fathers' manuscripts. M. le Vasseur, son of Seigneur d'Etioles, the relative, friend, and host of Descartes while in Paris, supplied what material he could, as did many others whose names Baillet gratefully quotes in his Preface." (*Prefatory note*, pp. VIII-IX)

(...)

For a Life of Descartes, besides the Letters and the most interesting bit of autobiography in the "Method," the *Life* of Baillet is naturally the source from which all others have been derived, and its value is largely due to its simplicity and

accuracy. Baillet tells us that he aimed at saying what he had to say simply, telling just what his subject thought, saw, and did without adornment, and this is exactly what he accomplished. He does not aspire to criticise, but tries to tell his tale with exactitude and fidelity, not indulging in over-much laudation nor concealing faults where present. Baillet has no false estimation of his own powers. He regrets deeply that Chanut, who knew Descartes so well, and who was, in his eyes, so well fitted for the work, did not see his way to undertake the writing of Descartes' life. Failing Chanut, Baillet would have liked Clerselier to undertake the task. Clerselier knew Descartes; he had the material and leisure necessary, besides the ability, but he did not do more than collect and preserve his writings. The Queen of Sweden, seeing- that these two refused, endeavoured to procure the services of Père Poisson of the Oratory, who had written on the " Method." Clerselier offered to assist him as far as material was concerned, but the plan fell through." (pp. X-XI)

(...)

"The only English life of Descartes of any importance is the excellent little book by Professor [John Pentland] Mahaffy, [*Descartes*] published as one of Blackwood's Philosophical Classics in 1880. Norman Smith's *Studies in Cartesianism*, 1903, is an acute criticism of his philosophy; and there is, of course, besides, the well-known article on *Cartesianism* in the Encyclopedia Britannica, by the Master of Balliol." (p. XI)

- (*) *Vie de M. Descartes* par Adrien Baillet, 1691, vol. II., p. 428.

Appendix: Chronology of Descartes' life 351; Bibliography 355; index 365-371.

"My goal has been to follow Descartes in his journey, and to provide a comprehensive, but by no means exhaustive, survey of his scientific career from his student days at the Jesuit College of La Flèche to his departure for Sweden where he had been summoned by Queen Christina. I have tried to follow Descartes' injunction to be clear (but not clear at all costs), and I am sanguine enough to hope that the reader will be sufficiently stimulated and intrigued by what he finds in this book to turn to Descartes' own works. I have kept my discussion of mathematics in Chapter Three as simple as possible, but anyone who wishes to skip this section at first reading has not only my sympathy, but the assurance that the gist is summarized in a few pages at the end. A chronology of the main events of Descartes' life will be found in the Appendix.

My work could not have been undertaken without the pioneering efforts of Gaston Milhaud (*Descartes Savant*, 1921), Paul Mouy (*Le Développement de la Physique Cartésienne*, 1934), and J. F. Scott, (*The Scientific Work of René Descartes*, 1952)." (pp. IX-X).

(...)

"We have seen how Descartes called upon God to vouchsafe the reliability of our knowledge of the external world. Likewise he appealed to the simplicity and immutability of God's action to justify his laws of nature. The Second Law, for instance, "only depends on God conserving each thing by his continuous action, hence at the very instant that he conserves it. It so happens that among motions, only straight motion is entirely simple and such that its nature is comprised in an instant." (25) I believe that it is in passages such as these that we gain our best insight into Descartes' deeply entrenched belief in the basic unity of science, metaphysics, and natural theology. Whatever change is brought about in the world, it is caused by

mechanical action, but this does not make it less marvelous. God implants simple and self-evident notions of matter and motion in the human mind at the very instant that he creates it. Likewise God produces and sustains the motion of bodies at each and every instant that they are moving. Without these God-given notions, we would be unable to perceive motion, and without God's direct intervention, there would be no motion to be perceived. The magic of numbers and motion is rooted in the transcendental rationality of the Ultimate Mind." (p. 349)

(25) *The World*, Chap. 7, p. 45.

Contents: Chronological Table XIV; Introduction 1; 1. 'A Learned and Eloquent Piety' 15; 2. An Education in Propriety, 1606-1618 38; 3. The Apprenticeship with Beeckman, 1618-1619 68; 4. The Search for Method , 1619-1625 104; 5. The Paris Years, 1625-1628 135; 6. A New Beginning, 1629-1630 187; 7. A New System of the World 1630-1633 226; 8. The Years of Consolidation , 1634-1640 293; 9. The Defence of Natural Philosophy , 1640-1644 354; 10. Melancholia and the Passions, 1643-1650 384; Notes 418; Biographical Sketches 471; Select Bibliography 481; Index 489-499.

"I have a vivid and happy memory of my first reading of Descartes, for it was with unbounded enthusiasm that I devoured the Discourse on Method, sitting in the shade of a tree in the Borghese Gardens in Rome in the summer of 1970, just before I started studying philosophy at university. But I cannot honestly say that my enthusiasm was fuelled by my subsequent undergraduate courses on Descartes, which simply followed the trade winds, in an obsessive but completely de-contextualized way, through the tired old questions of the cogito and the foundations for knowledge. So it was that my interest in the early seventeenth century came to be stimulated by Galileo rather than Descartes, and it was to Galileo that I devoted my main attention while a research student at Cambridge in the mid-1970s. While there, however, Gerd Buchdahl and John Schuster revealed to me a different

Descartes, a more authentic and vastly more engaging one, whom I only began to explore properly ten years later. It is this Descartes who is the subject of this book, and I warn readers—if ‘warn’ is the right word, as some may breathe a sigh of relief—that it is not the Descartes from whom philosophers have made such a good living for decades that they will find here. But I have not simply set out to write the history of science or cultural history. Descartes is, after all, the figure who stands at the beginning of modern philosophy, just as Plato stands at the beginning of ancient philosophy. While I shall argue that his philosophical achievements are much more intimately linked to his interest in what subsequently have been considered ‘scientific’ questions than is commonly realized, my aim is not thereby to take Descartes out of the realm of philosophy, but rather to throw light on how he did philosophy.

It is with some trepidation that I pursued this goal through the genre of intellectual biography, even though my own early interest in philosophy had been fired by Simone de Beauvoir’s incomparable intellectual autobiography. People read intellectual biographies with different expectations, from the naïve attempt to understand, at a distance as it were, how a ‘great mind’ works, to attempts to model one’s own thought and career on that of someone one admires. Perhaps the most famous example of modelling is Thomas Mann, who evidently tried to mirror in his own intellectual development the stages in Goethe’s intellectual development, although I think there are very many less explicit cases, and that biography generally has played an important role in ‘self-fashioning’ since the nineteenth century. This makes it a rather delicate genre, both from the point of the view of the reader and from that of the writer. Self-fashioning is part of the rationale behind reading, and perhaps behind writing, intellectual biographies, but any self-fashioning will have to be very indirect in the present case. While the thesis of Jacques Le Goff, that modernity did not begin and the Middle Ages did not effectively cease until the French and Industrial Revolutions, is stronger than anything I would wish to argue in this book, I have no doubt that the culture in which Descartes lived and worked is much more

remote from our own than is commonly recognized. This has consequences for biography, because a biography explores the emotional life of its subject, and the more removed from our own culture our subject is, the deeper the problems about how we are to succeed in this exploration. I have tried to be more responsive than my predecessors to the difficulties that these issues raise, with the result that there is much greater concentration on the culture in which Descartes worked than one finds in earlier biographies. But I am also very conscious of the problems of over-contextualization, and I have tried to make sure that neither the subject of my biography, nor his contribution, slips out of focus." (*Preface*, pp. VII-VII)

4. Watson, Richard. 2002. *Cogito, Ergo Sum. The Life of René Descartes*. Boston: Godin.

"There are two main traditions of Descartes biography. In his *La Vie de Monsieur Des-Cartes* (1691), Adrien Baillet started the French Catholic apologetic tradition, the goal of which is to establish that Descartes's life is worthy of the Great Metaphysician. It has been continued most recently by Geneviève Rodis-Lewis in her *Descartes: His Life and Thought* (1998). Baillet was recommended by the fact that he was undertaking a seventeen-volume *Lives of the Saints*. He demurred that he knew little about Descartes, but then he threw himself into the task with the zeal of a full-fledged member of the Saint Descartes Protection Society. The founder of this society (this joke probably goes back at least to Descartes's death in Stockholm in 1650) was the French ambassador to Sweden, Hector-Pierre Chanut, who refused to allow Descartes's remains to be buried in a Lutheran cemetery. Descartes's reputation was then managed for many years by Chanut's brother-in-law, Claude Clerselier.

Clerselier edited Descartes's letters, deleting passages that conflict with church doctrine and adding passages of his own composition where they were most needed to illustrate the faith proper to a pious Catholic philosopher. This can be checked, however, only against a few letters of which there are independent copies, for none of the original manuscripts, papers, notes, and letters that Clerselier and Baillet had are

extant today. They were given to Jean-Baptist Legrand, and after he died, to his mother in 1706. Despite many searches, that is the last we ever hear of them.

The second main line of Descartes biography has most recently been continued by Stephen Gaukroger in his *Descartes: An Intellectual biography* (1995). In this tradition, the stress is on the analysis of Descartes's works to show him as the Great Scientist who founded not only Modern Philosophy but also Modern Science.

The present work belongs to neither the religious nor the scientific apologetic tradition. Given how much paper has been lost since the seventeenth century, I cannot look at original sources for much of the story I tell, but must depend on editors and chroniclers such as Clerselier and Baillet, who are not fully trustworthy. The result is a skeptical biography, as full of doubt about tradition and authority as was Descartes himself.

Here, then, is the life of René Descartes. It is the first biography of Descartes since 1920 that is based on substantial new research, and the only one ever written for general readers. It is the story of the man, not of the monument." (pp. 22-23)

Thoughts of Retirement 366; 14. Death in Sweden 394; Appendix 1: Descartes' Principal Works 419; Appendix 2: Places Where

Descartes Lived 421; Notes 425; Bibliography 489; Index 503-507.

"Descartes died in Sweden in 1650, a few weeks before his fifty-fourth birthday. He had spent most of his adult life in relative seclusion in what is now the Netherlands, while the Thirty Years' War waxed and waned around him. By 1667, when some French Cartesians arranged for the return of his remains to Paris, they had begun to publicize his works, to develop a characteristically Cartesian philosophy, and to be identified by critics as a 'sect'. These early supporters included many philosophers who, apart from Nicolas Malebranche, are probably remembered today only as marginal figures in the history of Western thought. The name of Descartes, however, remains readily recognizable. He has entered the canon of Western philosophy so securely that that there is no longer any dispute about his significance.

Why was he important? Hardly for the phrase by which he is popularly remembered today, both by students of philosophy and by other readers: '*I think, therefore I am*'. This was not an original insight on his part, and it had a relatively minor role in his work. During the past century, Descartes has often been read as a metaphysician or, perhaps as frequently, as a philosopher who took seriously the arguments of sceptics. Alternatively, he is classified as a philosopher of subjectivity, as someone who outlined an internal map of the human mind and defended the irreducibility of conscious experiences. Finally, there are those, especially feminist critics, who think of Descartes as having exaggerated the significance and capacity of reason at the expense of the emotional life. For them, Descartes was a mere 'rationalist'.

Descartes' life reveals a much more complex and interesting character than any of these labels suggests. As an intellectual in the early seventeenth century, he might have directed his energies toward political philosophy (as Hobbes did), to theological disputes (as Pascal did), or to the renewal of humanistic and classical learning for which Erasmus had earlier provided an outstanding model. Alternatively, he might

have channeled his genius exclusively into mathematics (as his contemporaries Fermat and Roberval did); had he done so, he would surely have exceeded by far the novelty and ambition of their achievements. Although all these interests featured to some extent in his life, Descartes' primary focus was elsewhere. He is best characterized as a philosopher of the Scientific Revolution." (pp. 1-2)

6. Nadler, Steven. 2013. *The Philosopher, the Priest, and the Painter: A Portrait of Descartes*. Princeton: Princeton University Press.

Contents: Illustrations IX; Acknowledgments XIII; 1. Prologue: A Tale of Two Paintings 1; 2. The Philosopher [René Descartes] 8; 3. The Priest [Augustijn Alsten Bloemaert, (1585-1659)] 36; 4. The Painter [Frans Hals, (1580-1666)] 55; 5. "Once in a Lifetime" 87; 6. A New Philosophy 111; 7. God in Haarlem 143; 8. The Portrait 174; Notes 199; Bibliography 219; Index 227-230.

"Exploring such art historical and biographical questions about a painting [*] might seem an odd way to frame a book about a philosopher. But Hals's image of Descartes, now the image of Descartes (primarily by way of the Louvre copy), has become quite familiar. Indeed, it has become too familiar. While Descartes's famous phrase "I think, therefore I am" has been transformed by overuse, parody, and misunderstanding into a kind of all purpose slogan easily adapted for a variety of occasions, philosophical and otherwise, Hals's depiction of the philosopher has been devalued almost to the point of anonymity by seemingly endless reproduction and caricature in a wide variety of media: innumerable book covers, works of fine and decorative art, commercial and editorial illustrations, even lowbrow entertainment.

One of the goals of this book is to restore to Hals's portrait of Descartes some of its originality and luster by reconstructing the biographical and historical contexts of its production. At the same time, such a project is a prime opportunity for presenting Descartes and his philosophy to a broad audience. The true story behind Hals's painting, as familiar as that image has

become, can well serve as the scaffolding for an accessible study of Descartes himself. Just as “I think, therefore I am” represents only the starting point of a grand philosophical project that became the dominant intellectual paradigm of the seventeenth century, Hals’s small painting can provide entrée to the life and mind of the ambitious thinker it so effectively portrays.

This is not a biography in the conventional sense. Most of Descartes’s life, including much that happened during the decade on which this book is focused, lies outside the scope of its story. Nor is this book intended to be another detailed analytic study of Descartes’s philosophy. There are many scholarly monographs exploring Descartes’s work in epistemology, metaphysics, natural philosophy, and mathematics; there are also a number of fine general introductions to his thought, as well as several recent biographies. As valuable as such academic studies are, I would rather take my lead from Hals. The Haarlem artist has given us a small, intimate portrait of a great thinker. I want to do the same: a presentation of Descartes and his ideas in the form of a small, intimate portrait, a rendering of those years that culminated in some groundbreaking philosophical doctrines and a modest but intriguing work of art.

Descartes belongs as much to the intellectual culture of the Dutch Golden Age as he does to the grand history of Western philosophy whose development he so strongly influenced. It thus seems perfectly appropriate, if a bit unorthodox, to use a seventeenth-century Dutch painting as a portal into his world." (pp. 6-7)

[*] The portrait of Descartes made by Frans Hals in 1649.

Dictionaries, lexica and concordances

1. Cottingham, John. 1993. *A Descartes Dictionary*. Oxford: Blackwell.

Contents: Preface VII; Note on the use of this book 1; Abbreviations 3; Introduction: Descartes' Life and Works 5;

DICTIONARY ENTRIES A-Z 11; Bibliography 170; Index 175-187.

"The secondary literature on Descartes is gigantic. Since almost all the topics covered in the entries that follow have been the subject of scores of learned articles, if not entire books, any attempt to aim for completeness in discussing the issues involved would be self-defeating. In what follows I have tried to trace out the main outlines of Descartes' thought, attempting as far as possible to let the Cartesian texts speak for themselves (though specialist readers will be well aware of the compression and selectivity that the demands of concision have inevitably required). Although Descartes is an astonishingly lucid writer, that very lucidity can be a pitfall, since terms whose sense at first appears transparent may in fact carry connotations or presuppositions whose import is far from straightforward; in such cases I have tried to show something of the intellectual background which shaped Descartes' ideas, despite his claim to be 'starting afresh'. Apart from citations from such early sources, and some writings from contemporaries or near contemporaries of Descartes, individual entries have been kept clear of references to the works of commentators and critics; a selection of some of the most important of these secondary works will be found in the Bibliography." (p. 1)

2. Ariew, Roger, Des Chene, Dennis, Jesseph, Douglas M., Schmaltz, Tad M., and Verbeek, Theo. 2003. *Historical Dictionary of Descartes and Cartesian Philosophy*. Lanham: Scarecrow Press.

Reprinted in 2010 with the title: *The A to Z of Descartes and Cartesian Philosophy*.

Contents: Jon Woronoff: Editor's Foreword IX; Preface XI; Chronology XIII; Introduction 1; THE DICTIONARY 13; Bibliography: Introduction 261; Texts and Editions: Descartes 265; Texts and Editions: Other Writers 267; Works on Descartes 281; Works on Cartesians and Other 17th-Century Figures 293; About the Authors 303.

"This *Historical Dictionary of Descartes and Cartesian Philosophy*, as befits a dictionary, includes many entries on

Descartes's writings, concepts, and findings. Since it is historical, there are other entries on those who supported him, those who criticized him, those who corrected him, and those who together formed one of the major movements in philosophy: Cartesianism. To better understand the period, there is a brief chronology, and to see how Descartes and Cartesianism fit into the general picture, there is a helpful introduction and a biography. Since everything cannot be summed up in one volume, there is an ample bibliography that directs readers to numerous other sources on issues of particular interest." (p. IX)

3. Smith, Kurt, ed. 2015. *The Descartes Dictionary*. London: Bloomsbury.

Contents: Acknowledgments VI; About this dictionary VII; Introduction 1; A sketch of Descartes's life 1; A sketch of Descartes's philosophical system 5; Descartes in the classroom 24; Terms and names 29; Bibliography 123-131.

"This dictionary has been geared specifically for undergraduate students. The terms and philosophical concepts included are those that have typically proven difficult for students coming to Descartes's writings for the first time.

Descartes's philosophical career spanned almost his entire adult life. He was a living, breathing human being, warts and all. We need to remind ourselves of this because human beings, real human beings, change and grow. This includes what they think about, how they think about those things, and so on. It would be unreasonable, then, when examining the entire span of Descartes's philosophical writings to expect to find a single, unified, perfectly consistent view.

We must allow for the likelihood of a change in mind. It would be equally unreasonable to expect to find just one set of terms whose meanings remained the same over that same span of work. An important aim of this dictionary is to track these sorts of changes if and when they occur.

(...)

When provoked by critics, Descartes (on occasion) admits that he was using certain philosophical terms differently from how they were used in the Schools. Johannes Caterus (1590–1657), for example, author of the First Set of Objections of the *Meditations*, expressed concerns over what he took to be Descartes's odd use of certain terms. He asks Descartes, for instance, to explain what he had meant by the terms "idea," "objective being," and "nothing." Later in the First Set of Objections, he expresses concern over Descartes's use of "real distinction." Caterus complains that Descartes uses these terms very differently from the way the Schools used them.

Descartes's replies to such critics are not always that illuminating, for he will sometimes simply shrug off the concern, or simply admit that he is using a term differently than it had been used by others.

Even so, he usually says enough in other places that allow us to figure out what he meant by the term in question. In light of this, where appropriate, the then-standard usage of a term will be noted in an entry, so as to help the reader better understand the import of Descartes's change in its usage.

Since Descartes wrote almost exclusively in Latin and in French (though he wrote some letters in Dutch), it is sometimes helpful to the English reader to see the actual words he used. To this end, when helpful, this dictionary will include the Latin and French terms that Descartes actually used. They will be provided directly following the term to be defined, and in many cases they will appear in the entry itself. Concerning "definitions," it should be noted that it is rare that a one-liner will suffice. In many cases, if not most, determining what a term means requires some discussion of other texts. Even in cases where Descartes provides an actual definition, simply repeating it will not be enough to understand the full philosophical import of the term defined. So, the reader should think of each entry not so much as a definition proper, but as a discussion of the term in question.

The following entries are based entirely on Descartes's writings—on the actual texts. Even so, the entries have been informed

(and improved!) by looking to the secondary literature. It is worth noting that a careful study of the secondary literature reveals that there is, not surprisingly, no ultimate consensus on Descartes's views. Rather, one finds many interesting interpretations in scholarly competition with one another. With this in mind, and in trying to provide the reader with some sense of the array of interpretations available, the relevant secondary literature has been incorporated into certain entries, these influences provided at the end of each entry. But even here, these references are not definitive. They are only suggestions about where one might begin the next step in one's research." (pp. VII-IX)

4. Nolan, Lawrence, ed. 2016. *The Cambridge Descartes Lexicon*. Cambridge: Cambridge University Press.

Contents: List of Figures XIV; List of Contributors XVII; Abbreviations XXIII; Introduction and Notes on How to Use This Work XXV; Acknowledgments XXIX; Chronology XXXI; Descartes' Life and Works XXXV; Annotated Bibliography LXVII-LXVIII; Entries 1-767; Index 769-778.

"The *Cambridge Descartes Lexicon* is more like an encyclopedia or a compendium than a traditional dictionary, both in its scope and in its content. Many of the entries are fairly lengthy, especially those devoted to important subject terms such as "Cogito Ergo Sum," "Free Will," "God," "Human Being," "Idea," "Law of Nature," and "Representation." Most of the subject entries are also "scholarly" in the sense that they introduce readers to debates in the secondary literature. The authors of these entries sometimes present these debates without defending their own views, but in many cases they take an interpretive stand. Authors of overlapping entries were encouraged to stake out opposing positions (see, e.g., "Body," "Individuation," and "Substance"). The result is that by reading just a few pages, readers can familiarize themselves with almost any given scholarly dispute and get a sense of the arguments and textual evidence for various interpretations.

(...)

In addition to the 149 subject entries – which include articles on Descartes’ individual works such as the *Discourse on Method* and the *Principles of Philosophy* – there are 107 intellectual biographies of various figures, including official objectors to the *Meditations* such as Arnauld, Gassendi, and Hobbes; notable contemporaries and immediate successors such as Leibniz, Locke, Newton, and Spinoza; medieval and Scholastic predecessors such as Augustine, Aquinas, Eustachius, Scotus, and Suárez; important correspondents such as Princess Elisabeth, Constantijn Huygens, and Mersenne; and followers such as Desgabets and Régis. The intellectual biographies briefly sketch each figure’s life and accomplishments and then discuss the relation of that person’s thought to Descartes’. They also trace Descartes’ influences, record the reception of his ideas by critics, and discuss the ways in which his acolytes developed or adapted his views. All of the entries are written in a lucid style and thus accessible to a wide audience, including philosophers generally, those working in related disciplines, and students. Written by the largest and most distinguished team of Cartesian scholars ever assembled for a collaborative research project (ninety-one contributors from ten countries), the *Cambridge Descartes Lexicon* aspires to serve as the definitive and most comprehensive reference source on Descartes and Cartesianism." (pp. XXV-XXVI)

5. Murakami, Katsuzo, Sasaki, Meguro, and Tetsuichi, Nishimura., eds. 1995. *Concordance to Descartes’ Meditationes de Prima Philosophia*. Hildesheim: Olms-Weidmann.

Preface by Takefumi Tokoro.

"The present volume is a Concordance-Index to Descartes’ *Meditationes* (*Meditationes de Prima Philosophia*, in Volume VII of the *Œuvres de Descartes*, published by Charles Adam & Paul Tannery), accompanied by a brief grammatical analysis of its text.

This Concordance-Index, for the main body of its text, relies basically on the standard edition of Descartes’ works, the one just cited above (hereafter abbreviated as AT). Assisted by First Computer, Tokyo (Yoshiaki YOSHIDA), we first translated it

into machine-readable form, and then, using the OCP (Oxford Concordance Program) in operation at the Computer Centre, Tokyo University, made various attempts to obtain a series of outputs. This enabled us to base our further treatment of the text on a version which, while on the whole remaining that of the AT edition, is superior to it in a number of respects. The strategy we adopted might be in need of some explication.

It must be emphasized in the first place that conformity to the AT text does not necessarily mean conformity to the work of Descartes himself. As is well known, a simple comparison of the AT text with several editions of the *Meditationes* published in the seventeenth century suffices for illustrating many points where the former departs from the latter. This is particularly noticeable as regards indentation and punctuation. (The AT creates many new paragraphs of its own and has a tendency to cut Descartes' long sentences into a number of shorter sentences.) And, of course, differences in indentation and punctuation result in differences in the use of capital letters. Furthermore, the use of diacritics even within the AT text falls short of being consequent in itself (for instance, no rule seems to govern the distinction of *multo* and *multò*, both used as adverbs). In the second place, however, we did not consider that these facts should prevent us from choosing the AT text as the basis of our project. On the contrary, in the absence of a rigorous critical edition of the *Meditationes*, upon a thoroughly exhaustive comparison of its First and Second editions, the AT text rightly remains the standard reference for every serious student of Descartes and no other choice could be reasonably conceived. It is thus hoped that the present Concordance-Index will prove itself to be an indispensable tool for the preparation of a future revised edition of the *Meditationes*. These are the considerations behind our strategy.

Almost every inflectional word, as well as every indeclinable word judged to be of some interest to students of Descartes, are presented in context. Indeclinable words judged otherwise are presented in the word index format, i. e., without their contexts. Thus, in refusing to omit any word-forms actually occurring in *Meditationes*, we hope that the present volume

will be useful to students not only of philosophy but also of language. Each word is accompanied by a brief grammatical comment, placed at the context headings of its inflectional variants. It is noted through a system of abbreviation and following an order of rank according to which these variants are arranged. The system of abbreviation and the rules governing the order of rank will be stated in the *Explanatory Notes*.

In the actual process of grammatical analysis, our first concern was to be as rigorous and precise as possible, to distinguish, for instance, the first person singular form of the future indicative from that of the present subjunctive, or the nominative case from the accusative case even when, for some verbs, nouns and adjectives, they happen morphologically to be the same. But after having kept unwaveringly to this principle, we finally decided to temper this rigour in the style of exposition, lest the inevitable subtleties it sometimes leads to should hinder, rather than help the reader, from having easy and natural access to our work. Thus, regarding nouns, adjectives and relatives, we give no indication to the case in which they are put in a given context, retaining the distinction only of number for nouns, and only of gender for adjectives and relatives. The distinction of degree is noted for adverbs only. With verbs, we had to be even more sparing of grammatical distinctions. For each verb entered as a lemma (except for SVM - see below), all of its occurrences are arranged in the simple order of their appearances within the text of *Meditationes*." (pp. I-II)

6. Janowski, Zbigniew. 2004. *Augustinian Cartesian Index. Texts and Commentary*. South Bend: St. Augustine Press.

Expanded English translation of: *Index Augustino-Cartésien. Textes et Commentaire*.

Augmented Augustinian citations, and added indices and commentaries for Saint Thomas Aquinas, John Duns Scotus, Francis Bacon, and Montaigne.

"The present work was intended as a literal translation from the French original. I however, as I was working on it, I realized the considerable impact the Works of Francis Bacon have had on the formation of Cartesian philosophy. Although *The*

Augustinian-Cartesian Index is, as the title suggests, devoted to Augustine's influence on Descartes, it is at the same time a work that is primarily concerned with the study of the sources of Descartes's philosophy. The inclusion of an appendix on Bacon is only consistent with the character of such a work. (In Appendix 4, I have included most of the passages identified by André Laland in his seminal article, "Sur quelques textes de Bacon et de Descartes," in *Revue de Métaphysique et de Morale*, 1911 [19, pp. 296 - 311]. These are marked as XI-XVI.) Likewise, the inclusion of an appendix on Montaigne seemed to me justified. In contradistinction to St. Augustine or Bacon, Montaigne's influence on Descartes has been recognized for a long time. A number of passages have been identified by Cartesian scholars in the past. However, they are dispersed through learned books and journals, and have never been collected in a handy form for comparative purposes.

While working on *The Augustinian-Cartesian Index*, I was finishing my *Cartesian Theodicy: Descartes' Quest for Certitude*, (*) in which I present an Augustinian reading of Descartes's Meditations. Although the topic and scope of the two works are different, I have included a few fragments from *The Cartesian Theodicy* in my commentary to the *Index*." (p. XI).

(*) Dordrecht: Kluwer, 2000.

Bibliographies

1. Sebba, Gregor. 1964. *Bibliographia Cartesiana. A Critical Guide to the Descartes Literature, 1800-1960*. The Hague: Martinus Nijhoff.

Contents: Notes to the User VII; Preface IX; From the Preface to *Descartes and his Philosophy* (1959) XIII; Acknowledgments XV;

PART ONE. INTRODUCTION TO DESCARTES STUDIES [1-562] 1; PART TWO. ALPHABETICAL BIBLIOGRAPHY 1800-1960 [1001-3612] 149; PART THREE. INDICES 419;

Systematic Index 421; Analytical Index 434; Abbreviations 502-510.

"This book offers a new type of working tool for Cartesian studies. It presents the literature of the last 160 years in alphabetical order (Part Two), combined with a systematic analytical survey (Part One) and a detailed topical index to the whole (Part Three). This organization makes it possible to turn bibliography from a repository of references into a workshop of research. The systematic survey of Part One and the topical index of Part Three, together, offer a *mise au point* of Descartes studies over their full historical and topical range.

The results have often been surprising and illuminating to the author, and if his experience is any guide, the reader, too, will begin to wonder about certain seemingly well-settled points, or marvel at the Protean shapes which our elusive philosopher assumes when mighty commentators force him to reveal his true nature.

(...)

Part I (*Introduction to Descartes Studies*) divides the field into eleven broad areas.

It offers critical notices and references to the bulk of significant contributions, covering as much as one-fifth of the whole literature. Other useful items which could not be incorporated in Part I for technical or other reasons will be found annotated in Part II; they are of course fully indexed. Each main title in Part I is annotated; in addition I have listed all reviews I could locate, discussions in books and articles as well as book reviews proper; condensed but detailed tables of content indicate the scope of works that cover a great variety of topics. If I could rewrite Part I in the light of the understanding I gained by making the detailed topical index, selection and emphasis as well as my evaluations of some contributions would be different. But the changes would not be decisive. Part I would still include every undoubtedly indispensable work, and most of the works I did select as being exceptionally useful. I would still add important older works of no great current value because

they give the necessary historical perspective to the picture of Descartes scholarship. And I would still emphasize contributions neglected because they appeared where the Descartes scholar would hardly look for them, because they were written in a minor language, or because they just had bad luck. Nor would I tone down the language of my notices: I do not think that grey is the only color suitable for painting the Cartesian rainbow.

As to my critical evaluations, they are no better than my judgment: *caveat emptor*. The user will form his own better judgment anyway, and to him the literature will look different, if only because there will be even more of it: "majoremque habemus rerum experientiam," as Descartes said when he was a very young man.

Part II (*Alphabetical Bibliography*) is a comprehensive listing of all the literature on Descartes from 1800 to 1960 which I could locate, including the material contained in Part I. The total is close to 3000. I doubt that anything of major significance has been overlooked, but complete coverage cannot be claimed; besides, the limits of this type of compilation cannot be precisely drawn.

Part III contains the indices that serve as key to the material presented in Part I and II. The Systematic Index gives a synopsis of the Analytical Index and draws attention to useful entries that might be overlooked. The Analytical Index is quite detailed. Every topic that appears in a title, notice, or table of contents (but not under reviews) has been indexed, with extremely few exceptions (*minima non curat praetor*). In addition, many books and articles of importance have been indexed from the original, including major works by Alquié, Bouillier, Gilson, Gouhier, Gueroult, Norman Kemp Smith, Thijssen-Schoute and others." (pp. (IX-X))

2. Chappell, Vere, and Doney, Willis, eds. 1987. *Twenty-Five Years of Descartes Scholarship, 1960-1984. A Bibliography*. New York: Garland.

Contents: Introduction VI; Sources XI; Abbreviations XIII; Twenty-Five Years of Descartes Scholarship; Appendix:

Editions and Translations of Descartes's Own Writings 163;
Index 175-183.

"Scholarly interest in the work of René Descartes has burgeoned in the last twenty-five years. Much of the resulting literature has been produced by philosophers, who have approached Descartes not only as historians concerned to understand and interpret the Cartesian texts, but also as metaphysicians and epistemologists preoccupied with the same problems that confronted Descartes. But Descartes was not just a philosopher in the restricted twentieth-century sense of the word. He also made important contributions to the sciences—mathematics, physics, and biology. And his writings have influenced dramatists, poets, and novelists. Thus Cartesian studies have been pursued by recent historians of science and literary scholars as well as by philosophers.

Our aim in this bibliography has been to document the entire scholarly literature on Descartes, from 1960 through 1984, in most of the languages in which it has been produced and in all of the fields in which Descartes is currently a subject of interest. We took 1960 as our starting point because that is the last year covered by Gregor Sebba in his monumental *Bibliographia Cartesiana*. Our reason for stopping with 1984 is simply that we had collected enough items by then to fill a sizeable volume.

The items we have included are written in Danish, Dutch, English, French, German, Italian, Norwegian, Portuguese, Spanish, and Swedish. We have listed a few items in other languages in cases where a published translation into one of the above-mentioned languages exists. In the course of our investigations, we found references to a number of works on Descartes in Polish, Russian, and Japanese; to a few in other Slavic languages; and to one or two each in Hungarian, Romanian, Greek, Hebrew, and Arabic. We have also been told of some recent studies in Chinese. Since we lacked the resources to verify these references, however, we have left them out of our list." (p. VI)

(...)

"It is interesting to note that, during our period, more items of Cartesian scholarship were published in English than in any other language. Of the 2,502 entries in our main list, 1,141 or 46% are in English. The next most prevalent language is French, with 747 entries (29%). Then come German, Italian, and Spanish, with 215, 214, and 116 (9%, 9%, and 4%), respectively.

The work of Descartes had a strong impact on the philosophers, scientists, and writers who succeeded him. A good deal of Cartesian scholarship deals with these later "Cartesians" as well as, or instead of, with Descartes himself. It is impossible to draw a clear line between studies which are primarily devoted to Descartes himself and those in which the primary emphasis is on some other Cartesian thinker or thinkers. But we have sought to include everything that might reasonably be thought to belong in the former category; and we have deliberately excluded some items that we judged to fall in the latter. We have not in any case made a systematic survey of works in which Cartesian writers other than Descartes himself are the main object of concern." (p. VII)

3. Van Otegem, Matthijs. 2002. *A Bibliography of the Works of Descartes (1637-1704)*. Utrecht: Zeno institut for Philosophy.

Two volumes.

"With this thesis a complete bibliography has become available of all works of Descartes published in the seventeenth century, regardless the country or the language the book was published in. Most of the texts are not preserved in manuscript so there was a strong need of a bibliography of the printed works. Half of the seventeenth-century editions of Descartes were published in the Netherlands. Descartes spent most of his philosophical career in the Low Countries and in this period Dutch printers controlled the larger part of the European book trade. Naturally, many of Descartes' works were published in France as well, but also editions were printed in England, Italy and Germany.

In this bibliography not only editions are described as such but also features of individual copies are recorded. By making

detailed descriptions of the copies textual differences are discovered in the texts preserved, which is of interest to the study of Descartes' philosophy. Van Otegem not only visited Dutch libraries, but also libraries in England, France, Germany and Italy. Each text of Descartes' published separately is described in its own chapter, in which all editions are listed and their mutual relationships are determined. Each chapter starts with an introduction dealing with the historical context.

The results of this research are threefold. Firstly, the bibliography offers a complete survey of all editions of Descartes published in the seventeenth century. 15 previously unknown editions were found; 14 published in Latin and 1 in French. Secondly, the historical context is stressed in which all editions came about. New facts are unveiled about the involvement of Descartes and others in the printing of his works and about Descartes efforts to stimulate the reception of his works by distributing presentation copies. Finally, many variants are found between the collated copies, not only offering insight in the printing practices in the seventeenth century but also providing new leads for the study of the texts themselves. It has become clear that new scholarly editions are needed of some of Descartes' works." (From the Summary of the dissertation)

Choix Bibliographique des études en Français sur la philosophie de René Descartes

Introduction

Après une section introductive, cette bibliographie est divisée en deux parties: la première suit la chronologie des œuvres de Descartes, la deuxième un ordre thématique :

- Études d'ensemble sur la philosophie de Descartes ;

Première partie :

- 1616-1619: Premiers écrits : *Licence end Droit, Compendium musicae, Extraits de Baillet* ;
- 1620-1628: *Regulae ad directionem ingenii* : La recherche de la *mathesis universalis* ;
- 1629-1636: *Le Monde, L'Homme* et autres écrits biologiques, *La Recherche de la Vérité* ;
- 1637: *Discours de la méthode* ; le *cogito* ;
- 1637-1639: *Essais de cette méthode* et autres écrits scientifiques ;
- 1640-1643: *Meditationes de prima philosophia* ;
- 1644-1648: *Principia philosophiae* et écrits polémiques ;
- 1649-1650: *Les passions de l'âme* ; derniers écrits.

Deuxième partie :

- La défi su scepticisme ;

- L'argument ontologique ;
- La notion de substance ;
- La vérité ;
- La généalogie du sujet moderne.

Bibliographie

Études d'ensemble sur la philosophie de Descartes

1. *Descartes. Cahiers de Royaumont*. 1957. Paris: Les Éditions de Minuit.

Reprint New York: Garland 1987.

Table des matières: Introduction de MM. Gueroult et Gouhier 7; F. Alquié: Expérience ontologique et déduction systématique dans la constitution de la métaphysique de Descartes 10; Discussion: MM. Gueroult, Alquié, Leslie, Beck, Mme Prenant, Mlle Hersch, MM. Jean Wahl, Brandestein, Goldschmidt et Goldmann 32; Fin de la discussion générale portant sur le cogito: MM. Jean Wahl, Alquié, Gueroult, MMmes Rodis-Lewis, Prenant et M. Gouhier 58; H. Gouhier: L'ordre des raisons selon Descartes 72; Discussion: MM. Gueroult, Gouhier, Mme Prenant, MM. Perelman, Leslie Beck, Alquié, Hyppolite, Lefebvre, Boehm et Mlle Hersch 88; M. Gueroult: La vérité de la science et la vérité de la chose dans les preuves de l'existence de Dieu 108; Discussion: MM. Gouhier, Gueroult, Hyppolite, Jean Wahl, Vuillemin, Mmes Prenant et Rodis-Lewis, MM. Alquié, Mesnard et Goldmann 121; E. W. Beth: Le savoir déductif dans la pensée cartésienne 141; Discussion: MM. Perelman, Beth, Leslie Beck, Mme Prenant, M. Gueroult 154; J. Hyppolite: Du sens de la géométrie de Descartes dans son œuvre 121; Discussion: MM. Perelman, Beth, Leslie Beck, Mme Prenant, M. Gueroult 154; Discussion: MM. Lenoble, Hyppolite, Beaufret, Gouhier, Gueroult, Mme Prenant, M. Lefebvre 178; 492; Mlle G. Dreyfus: Physique et Géométrie chez Descartes et chez Malebranche 187; Discussion: M. Perelman, Mlle Dreyfus, MM. Beaufret et Lenoble 200; G. Rodis-Lewis:

Maîtrise des Passions et Sagesse chez Descartes 208;
 Discussion: M. Mesnard, Mme Rodis-Lewis, M. Guérout 228;
 H. Lefebvre: De la morale provisoire à la générosité 237;
 Discussion : MM. Béra, Goldmann, Lefebvre, Dreyfus, Alquié,
 Mlle Dreyfus, M. Mesnard, Mlle Hersch, MMmes Rodis-Lewis
 et Prenant 257; Th. Spoerri: La puissance métaphorique de
 Descartes 273; Discussion: MM. Perelman, Spoerri, Lefebvre,
 Goldmann, Guerout, Béra, Morel, Beth, Zeraffa, Amrouche,
 Mlle Dreyfus, M. Alquié, Mlle Hersch, M. Boehm 288; R.
 Lenoble : Liberté cartésienne ou liberté sartrienne 302;
 Discussion: Mme Rodis-Lewis, M. Lenoble, Mme Prenant, Mlle
 Dreyfus, MM. Alquié, Guerout, MM. Vuillemin, Mesnard,
 Perelman, Jean Wahl 325; P. Mesnard: L'arbre de la sagesse
 336; Discussion: MM. Lenoble, Guerout, Beth, Mesnard,
 Lefebvre, Perelman, Alquié, Mme Rodis-Lewis, M. Goldmann
 350; J. Wahl: Exemple d'une régie inconnue: le verbe « être »
 chez Descartes; *Deuxième, Troisième et Quatrième*
Méditations 360; A. Banfi : Galilée, Descartes et Vico 376; L.
 Beck: L'unité de la pensée et de la méthode 393; L. Prenant:
 Rôle et limite de la psychologie dans la méthode et la
 philosophie de Descartes 412; M. Roland-Manuel: Descartes et
 le Problème de l'expression musicale 438; Discussion générale:
 MM. Perelman, Spoerri, Alquié, Guerout, Lefebvre, Goldmann,
 Mesnard, Collé, Hyppolite, Mlle Antonelli, MM. Gouhier et
 Jean Wahl 443; (Nous regrettons de ne pouvoir donner ici
 l'exposé de M. Castelli, ni la discussion qui a suivi, la
 transcription des textes ayant été rendue impossible par suite
 d'incidents techniques.).

2. *Descartes et son œuvre aujourd'hui*. 1998. Bruxelles: Pierre Mardaga.

Table des matières: Bernard Bru et Michel Schreiber: Préface 5;
 Jean Frézal: Introduction 11; Chapitre 1. Geneviève Rodis-
 Lewis: Descartes à la recherche de la vérité 17; Chapitre 2.
 Annie Bitbol-Hespériès: Descartes, Harvey et la tradition
 médicale 29; Chapitre 3. Enrico Giusti: La révolution
 cartésienne en géométrie 47; Chapitre 4. Olivier Houdé:
 L'esprit, le cerveau et le corps. Descartes face aux sciences

- cognitives 63; Chapitre 5. Jacques Bouveresse: La mécanique, la physiologie et l'âme 83-120.

En deux sections. La première, traduite de l'italien par Martin Rueff, constitue la version augmentée du livre *Immagini di Descartes nell'Encyclopédie*; la seconde et les scolies sont complètement nouvelles. Martin Rueff a tout révisé en collaboration avec l'auteur.

21. ———. 2015. *Descartes. La règle de la raison*. Paris: Vrin.
22. Suoual, Philippe, and Veto, Miklos, eds. 1997. *Chemins de Descartes. Colloque de Poitiers*. Paris: L'Harmattan.

Table des matières: Mikios Vetö: Introduction 7; G. Rodis-Lewis: Descartes, l'homme et le développement de la pensée 13; A. Tranoy: René Descartes, étudiant à Poitiers 33; M. Kobayashi: Réception et critique de Descartes au Japon - Le cas de Kitarô Nishida 41; D. Garber: Descartes et la physique métaphysique 57; J.-L. Marion: Notes sur les modalités de l'ego 81; D. Kambouchner: Descartes et la perfection de la morale 95; J.-M. Beyssade: Descartes politique? 119; Index 139.

"Ce volume reproduit le plus souvent les communications, en leur laissant dans leur style oral, comme elles ont été prononcées. Ces textes eux-mêmes sont très différents selon la taille et la conception. Ils vont de la courte note sur *René Descartes, étudiant poitevin* jusqu'à des études relativement longues sur la morale ou sur la fondation métaphysique de la physique. Quant à l'apparat d'érudition, *Descartes politique* est une méditation décantée, allégée quasiment de toute référence savante tandis que les *Notes sur les Modalités de l'ego* se livrent à une permanente analyse textuelle. Finalement, quant à l'ordre selon lequel les sept articles se suivent, il ne reproduit pas celui de leur succession effective lors du colloque. Nous avons modifié cet ordre et ce fut d'ailleurs l'unique changement que nous nous sommes permis d'effectuer dans la présentation de ce recueil." (p. 8)

"De tous les élèves de ce collège, René Descartes est le plus célèbre: tentons de préciser comment ces années studieuses ont contribué à orienter sa pensée. Le collège de La Flèche fut ouvert par les Jésuites au début de 1604: Henri IV leur avait donné à cette intention le « Châteauneuf » qui venait de sa grand-mère et où lui-même avait fait plusieurs séjours.

(...)

Contre les erreurs de Baillet et d'Adam (au T. XII des *Œuvres Complètes*, non réimprimé) nous avons bien établi (en faisant vérifier dans les archives des jésuites que le P. Charlet est arrivé à La Flèche seulement en octobre 1606) son entrée à Pâques 1607: à cause de sa santé fragile « on avait attendu la fin de l'hiver et du carême », mais Charles Adam avait d'abord suivi Baillet qui croyait que René avait ainsi suivi de peu son aîné Pierre, entré dès l'ouverture du collège au début de 1604.

Puis dans les additions et corrections, voyant enfin que les dates de Baillet sont contestables, pourquoi Adam retient-il Pâques 1606 à 1614 après avoir mentionné entre parenthèses « (sinon peut-être de Pâques 1607 à 1615) » sans jamais réexaminer ce dernier point ?

Il pouvait savoir par Sommervogel que Charlet avait encore prêché à Paris en 1606, probablement pendant le carême, ce qui exclut qu'il ait pu être à La Flèche pour Pâques. Adam savait aussi (c'est dans une note sans commentaire) que Pierre Descartes, sorti en 1612, avait passé la même semaine à Poitiers en 1613, baccalauréat et licence en droit; il ne se demandait pas alors pourquoi René ne l'y aurait pas suivi; et pour ce dernier, il sait (ce qu'ignorait Baillet) qu'il a passé ces deux examens la même semaine en novembre 1616. Si, comme il le suppose, le jeune homme est resté deux ans à Poitiers, n'aurait-il pas

acquis séparément ces deux grades en 1615 et 1616 ? Adam suggère que durant ces deux années, Descartes aurait pu commencer à étudier la médecine, alors qu'on n'a aucun signe d'intérêt pour cette discipline avant qu'à la fin de 1629 où il commence à étudier l'anatomie, pour construire la science des vivants. Quand il rencontre Beeckman à l'automne de 1618, celui-ci vient d'être reçu Docteur en médecine (à Caen): il n'en est jamais question entre eux... Tout concorde donc pour ne plus remettre en question ces dates.

Ainsi, les trois dernières années étant consacrées, selon l'usage, à la philosophie, les élèves ont eu pour professeur le Père Étienne Noël auquel Descartes envoie dès le 14 juin 1637 le *Discours de la méthode*, avec une lettre personnelle qui le remercie de son enseignement: il lui offre ce « fruit (...) duquel vous avez jeté les premières semences en mon esprit, comme je dois aussi à ceux de votre Ordre tout le peu de connaissance que j'ai des bonnes lettres » (I, 823). Quand ils anticipaient de trois ans sa scolarité, et parce que le nom de Noël, alors recteur de La Flèche, convenait bien au destinataire que l'auteur priait de faire lire ce livre par ceux « qui en avaient le plus de loisir », Adam et Tannery supposaient que Descartes aurait connu Noël comme simple « répétiteur » (en se trompant d'ailleurs sur celui qui aurait enseigné la philosophie en 1609-1612). Une seconde lettre en octobre le remercie de son « souvenir » et de son « affection ». Quand il reporte enfin à 1611-1614 ces trois dernières années à La Flèche, Adam (dans l'édition Adam et Milhaud de la *Correspondance*, avec traduction des lettres latines, revient à l'enseignant qui précédait Noël, le Père Fournet (repris également par F. Alquié). Mais cela fait double emploi avec l'exemplaire que Descartes lui avait fait remettre par Plem (Plem à Descartes, 15 septembre 1637; I, 399) sans avoir eu les mêmes relations personnelles qu'avec son propre professeur, Descartes l'avait connu lors des discussions mensuelles qui réunissaient les élèves des trois classes de philosophie (1)." (p. 27-29)

(1) Tout cela est bien établi par Sirven dès 1928 dans *Les années d'apprentissage de Descartes* et adopté par Gilson dans l'édition de 1930 de son *Commentaire*.

Seconde édition, revue et augmentée (première édition 2002).

English Summary: "Descartes, the awakening of a mathematician.

This paper is devoted to the young Descartes and to the development of his mathematical thought from 1618 to 1629, since the meeting with Beeckman until his departure towards Holland. His period of dreaming, that has been crucial in the development of his personality, is also evoked. One can distinguish various steps in the progressive maturation of the

mathematical thought of Descartes in these earlier Cartesian mathematics, previous to the *Géométrie*. The mathematical features of some Cartesian texts of the time are examined: "the" letter to Beeckman and the *Cogitationes Privatae*, then the Rules for the direction of the mind (*Regulae*), and finally the discovery of the *construction of the solutions* of equations of the third and fourth degree, which has been conclusive for the "awakening" of Descartes as a mathematician. A figure of thought, the so-called "medium term" which is central in young Descartes, as well as three of his mathematical embodiments, proportional means, Cartesian compasses, and "ruler-and-slide", are especially highlighted. The following papers III, IV, V), dealing with three Cartesian discoveries and using modern mathematic symbolism, complete this paper." (p. 43)

"Lorsque je parle ici de Descartes « l'homme », je m'emploierai à approcher sa personne, et non à l'étudier dans le sens de son ouvrage intitulé « L'Homme ». C'est à partir de la biographie que j'ai publiée fin 1995 que je voudrais présenter, de façon beaucoup plus simple que les très belles méditations que vous venez d'écouter, quelques problèmes pour lesquels je présente des hypothèses, (en soulignant que ce ne sont que des hypothèses, ou assez exceptionnellement des rectifications d'erreurs trop souvent répétées par des gens éminents), et ceci malgré certaines corrections de la grande *Vie de Descartes* par Baillet: elle reste irremplaçable par les documents qui ont depuis disparu et qu'il nous a transmis; mais il n'a pas assez distingué ce qui est sûr et ce qui est contestable ou même faux." 30. Vannier, Marie-Anne. 1997. "Les anticipations du cogito chez S. Augustin." *Revista Agustiniana* no. 115-116:665-679.

"Descartes devait connaître les textes où Augustin esquisse les linéaments du Cogito; de manière paradoxale, il a mieux saisi le dynamisme de la pensée d'Augustin que les augustiniens du XVIIe siècle. Descartes a radicalement montré que la pensée est la certitude première et qu'elle implique l'existence. Il a distingué nettement substance pensante et substance étendue et surtout, il a fait du Cogito la clef de voûte, le principe de son système, alors que celui-ci contribuait surtout chez Augustin à l'avènement du sujet en dialogue avec son créateur. Cependant, Augustin reste à l'origine de l'idée de constitution du sujet."

1637-1639: *Essais de cette méthode* et autres écrits scientifiques

1. Allard, Jean-Louis. 1963. *Le Mathématisme de Descartes*. Ottawa: Éditions de l'Université d'Ottawa.

Table des matières: Avant-propos 7; Introduction. Chapitre I: L'évolution intellectuelle de Descartes : des mathématiques au mathématisme 11; Première partie. Le mathématisme méthodologique: La méthode universelle de caractère mathématique. Chapitre II: Conception mathématique de la connaissance scientifique 35; Chapitre III: La méthode de la

science. L'essence de la méthode : l'ordre 65; Deuxième partie: La science universelle de type mathématique: La preuve et l'épreuve de la méthode de Descartes. Chapitre IV: La métaphysique, fondement de la science 91; Chapitre V: Les mathématiques, domaine privilégié de la méthode 141; Chapitre VI: La physique géométrique, épreuve décisive de la méthode cartésienne 163; Conclusion. Chapitre VII: La source première de l'échec de la philosophie de Descartes 201-222.

"Nous nous proposons tout simplement d'offrir au lecteur une synthèse des éléments essentiels du *Mathématisme de Descartes*, c'est-à-dire de la tentative cartésienne de construire une science universelle de caractère mathématique à partir d'une méthode qui se présente comme une généralisation de la méthode mathématique (2).

(...)

Afin de mieux situer le mathématisme cartésien, notre étude sera précédée d'une brève esquisse de la vie intellectuelle de Descartes : 1° son évolution intellectuelle à partir du premier « enchantement de son esprit » lorsqu'il apprenait les mathématiques au Collège de La Flèche jusqu'à l'envoûtement qui s'exprime dans le songe où Descartes prend conscience de sa vocation, à savoir la réalisation d'une science universelle de caractère mathématique pour le bien de l'humanité; 2° les grandes étapes parcourues par Descartes dans la réalisation de ce projet.

L'étude historique sera suivie d'une critique de structure et d'un jugement de valeur qui signaleront les difficultés congénitales du mathématisme cartésien.

Vu l'ampleur d'une telle étude, nous avons dû nous limiter à l'essentiel et passer sous silence plusieurs problèmes importants. Nous avons conscience aussi du caractère quelque peu schématique inhérent à toute synthèse. Nous savons de plus que la pensée de Descartes contient des richesses et des virtualités qui dépassent les cadres du système cartésien comme tel; il n'était pas dans notre propos d'en faire l'inventaire. Seul le mathématisme cartésien, la philosophie de

Descartes considérée comme système, a fait l'objet de notre étude et de notre critique.

En effet, considérée de ce point de vue, la philosophie cartésienne « universellement baignée d'une clarté mathématique (6) » est le premier exemple — et peut-être le plus évident — dans l'histoire de la pensée moderne, de l'insuffisance d'une philosophie qui tente arbitrairement de réduire la pensée humaine à l'une ou l'autre de ses dimensions." (pp. 7-8)

(2) Dans le cinquième chapitre de son ouvrage *The Unity of Philosophical Experience* (New-York, Scribner, 1952, p. 125-151), M. Gilson pose d'une façon précise, quoique succincte, le problème du mathématisme de Descartes. C'est dans le même esprit que celui de cet éminent historien de la philosophie, que nous voulons poursuivre le présent travail.

Préface de Jean-Robert Armogathe, traduction de l'italien par Marilène Raiola.

“Ne concerne directement le cartésianisme que le célèbre article « Dieu trompeur et malin génie » [Chapitre X]. En se référant à des thèses développées par Gabriel Biel et Grégoire de Rimini (mentionnées par Mersenne, AT VII, 125, elles sont aujourd’hui rendues accessibles en Français dans Olivier

Boulnois (éd.), *La Puissance et son Ombre. De Pierre Lombard à Luther*, Paris, Aubier, 1994), l'Auteur donne un contenu précis à la *vetus opinio* mentionnée dans la *Meditatio Ia: Deum esse qui potest omnia*. Ceci permet de repenser à nouveaux frais le rapport entre Dieu trompeur et malin génie, et montre s'il le fallait encore qu'une connaissance précise des traditions médiévales est indispensable à la bonne intelligence de l'*ordo rationum*." (Edouard Mehl, Bulletin Cartésien, XXXI).

"Il ne faut ni surestimer, ni sous-estimer l'importance de la réflexion menée par Mersenne pour élaborer une définition vraiment cohérente du concept de métaphysique. Ne pas la surestimer : Mersenne, nous le verrons, reprend pour l'essentiel des positions traditionnelles, issues de la scolastique thomiste par l'intermédiaire de Suárez, le plus souvent comme des évidences mentionnées sans aucune source ni discussion, tant elles paraissent aller de soi. D'ailleurs ces positions n'ont rien d'original, si l'on les compare, ne fût-ce que rapidement, à celles d'autres contemporains, surtout parmi les *minores*. Mais c'est paradoxalement pour ces mêmes raisons qu'il ne faut pas sous-estimer la contribution de Mersenne. Au double titre d'ancien élève de La Flèche et de correspondant principal, voire presque unique durant les premières années, de Descartes, il apparaît un témoin privilégié pour mesurer à sa juste dimension l'originalité en progrès de l'auteur des *Meditationes*. En offrant un état de la question d'une définition du concept de métaphysique, Mersenne permet d'abord une description équilibrée de l'opinion philosophique dominante au début du siècle et, ensuite, par ses hésitations et ses contradictions, un diagnostic sur la difficulté du problème ainsi désigné. Car il faut bien reconnaître ici une réelle aporie, qui rend seule intelligible l'originalité de la solution cartésienne."

"Descartes présente la doctrine de la 'fausseté matérielle' des idées dans sa *Troisième Méditation* (TM). Dans ses quatrièmes objections Arnauld critiquera cette doctrine, qui va disparaître dans les ouvrages de Descartes. Les interprétations récentes se sont concentrées sur le problème de la cohérence de la théorie et de la compatibilité entre la formulation de la TM et celle des réponses aux objections. Cet article reprend ce sujet à la lumière de la discussion scolastique de la vérité et de la fausseté. La doctrine de Descartes, telle qu'elle est présentée dans la TM, manifeste, sous plusieurs aspects, son incompatibilité avec la formulation des réponses à Arnauld. Ce qui amène à conclure dans le sens d'une incompatibilité des deux formulations de la 'fausseté matérielle'. Et pourtant, il paraît insoutenable qu'il faille rechercher la raison du changement de Descartes dans la force des objections elles-mêmes, étant donné que le cadre conceptuel de la doctrine scolastique de la représentation, dont les objections d'Arnauld s'inspirent, fournissait à Descartes les moyens de défendre sa propre doctrine sans la modifier. D'où l'hypothèse qu'il faut rechercher les raisons de ce changement ailleurs, et notamment dans la volonté de Descartes d'éviter les dangereuses conséquences pour la fondation de la science impliquées dans la formulation de la doctrine de la fausseté matérielle telle qu'elle paraissait dans le texte de la TM."

"Descartes's view of modality is analyzed by contrast to two earlier models: the ancient realist one, defended by Boethius, where possibility and necessity are connected to natural potency, and the modern intensionalist one, which dissociates necessary and possible truths from any ontological foundation, treating them as conceptual, a priori given preconditions for any intellect. The emergence of this view is traced from Gilbert of Poitiers to Duns Scotus, Ockham and Suarez. The Cartesian theory of the creation of eternal truths, it is argued, involves a rejection of this idea of absolute conceivability and can be seen as a constructivist view of intelligibility and rationality."

5. ———. 1992. "Descartes and the Tree of Knowledge." *Synthese* no. 92:101-116.

"Descartes' image of the tree of knowledge from the preface to the French edition of the *Principles of Philosophy* is usually taken to represent Descartes' break with the past and with the fragmentation of knowledge of the schools. But if Descartes' tree of knowledge is analyzed in its proper context, another interpretation emerges. A series of contrasts with other classifications of knowledge from the seventeenth and eighteenth centuries raises some puzzles: claims of originality and radical break from the past do not seem warranted. Further contrasts with Descartes' unpublished writings and with school doctrines lead to the ironic conclusion that, in the famous passage, Descartes is attempting to appeal to conventional wisdom and trying to avoid sounding novel."

11. ———. 2009. "Descartes, Leibniz, and Some Scholastics on The Principle of Individuation." In *Branching Off. The Early Moderns in Quest for the Unity of Knowledge*, edited by Alexandrescu, Vlad, 95-115. Bucarest: Zeta Books.

Abstract: "I discuss the various principles of individuation promulgated by G. W. Leibniz, in his 1663 bachelor's thesis at Leipzig, *Disputatio Metaphysica de Principio Individui*, in his early treatise on transubstantiation, and in his mature work (*Nouveaux Essais*, etc.). I compare these treatments with René Descartes' principle of individuation for ensouled creatures, from the *Letters to Mesland* on transubstantiation, and with the theses of various late scholastics (those of Scipion Dupleix, Antoine Goudin, René de Ceriziers, and Théophraste Bouju, among others). I conclude that whatever might have appeared novel in the proposals of Descartes and Leibniz for the principle of individuation were also traditional options; in this respect, the difference between early modern and medieval philosophy does not seem to have been philosophical at bottom."

12. ———. 2010. "Descartes and Humanism: Historical Method, Anti-Syllogism, and (Neo) Stoic Ethics in the *Discourse On Method*." *Revue Roumaine de Philosophie* no. 54:163-174.

"I discuss René Descartes' relation to some key characteristics of Renaissance Humanism, from the espousal of an historical method to the rejection of scholastic or Aristotelian logic, to the revival of Stoic ethics. Basically, this discussion corresponds with topics treated by Descartes in the first half (or first three parts) of his *Discourse on Method*. I conclude that, in all three cases, Descartes' adoption of Humanistic method is only partial. He flirts with humanistic views in his battles against scholasticism, but does not adopt them fully. "

 20. Ashworth, Earline Jennifer. 1972. "Descartes' Theory of Clear and Distinct Ideas." In *Cartesian Studies*, edited by Butler, Ronald Joseph, 89-105. Oxford: Basil Blackwell.

"It is widely agreed that Descartes took ideas to be the objects of knowledge and that his theory of clear and distinct ideas arose from his attempt to find a way of picking out those ideas whose truth was so certain and self-evident that the thinker could be said to know them with certainty. To say of an idea that it is clear and distinct was, he believed, to say of it both that it was certainly true and that any claim to know it was justified. No other criterion need be appealed to. It is at this point, however, that most of those who set out to expound Descartes' theory of knowledge are brought to a standstill. The part played by clear ideas is obvious enough, but what did Descartes mean by 'clear and distinct'? This paper is an attempt, not to make an original contribution to the study of Descartes, but to elucidate his terms and evaluate his criterion in the light of what both he and others have written." (p. 89)

(...)

"The fact that Descartes adopted the word 'idea' is itself significant. When scholastic philosophers discussed human cognition, they spoke of the mind as containing concepts (*species, intentiones*). They claimed that these concepts originated through our sense perceptions, and hence that they

stood in some relation to external objects. The term 'concept' was contrasted with the term 'idea'. Ideas were the eternal essences or archetypes contemplated by God, and the question of their external reference did not arise. They were an integral part of God's mind. God could create instances of one of his ideas, but his idea was in no way dependent upon the existence of such instances. Descartes took the word 'idea' and applied it to the contents of the human mind because he wanted to escape the suggestion that these contents must be in some sense dependent on the external world as a causal agent. (9) He wished to establish the logical possibility that a mind and the ideas contained within it are unrelated to other existents, and can be discussed in isolation from them.

Descartes saw the term 'idea' as having a very wide extension.

He said “. . . I take the term idea to stand for whatever the mind directly perceives,”(10) where the verb 'perceive' refers to any possible cognitive activity, including sensing, imagining and conceiving.(11) Thus a sense datum, a memory, an image, and a concept can all be called ideas. This, of course, leads to the blurring of distinctions. For Descartes, “I have an idea of red” may mean that I am now sensing something red, or that I have a concept of the colour red, even if I am not now picking out an instance of that concept. Moreover, when Descartes speaks of an idea, he may be taking it as representative of some object or quality in the physical world, as when he says “I have an idea of the sky and stars,” or he may be referring to the meaning he assigns to a word, as when he says “I have an idea of substance.” Nor does he make any distinction between “having an idea” and “entertaining a proposition.” Such statements as “Nothing comes from nothing” and “The three angles of a triangle are equal to two right angles” are categorized as 'common notions',(12) and are included among the contents of the mind. Descartes does remark that in some cases an idea may be expressed by a name, in other cases by a proposition,(13) but he does not bother to pursue this line of inquiry.

One of the characteristics of an idea is 'objective reality', a scholastic phrase which Descartes adopted, but used in a new way. In scholastic writings the terms 'subjective' and 'objective' have meanings which are the reverse of the modern meanings. An object like a table exists subjectively or as a subject if it has spatio-temporal existence, if it is real or actual. In contrast, the concept of a table can be looked at as having two kinds of existence. The concept *qua* concept has formal existence, but the concept as having some specifiable content is said to have objective existence, or existence as an object of thought. The concepts of a table and of a chair are formally similar but objectively different. So far as subjective realities were concerned, the scholastics assigned them different grades of reality according to their perfection and causal power. For instance, a substance is more perfect and causally more efficacious than an accident, hence a man has a higher grade of reality than the colour red.

It was also held that every effect had a cause with either an equal or a higher grade of reality. These doctrines were not seen as having any relevance to concepts. As formally existent, a concept has of course to have some cause, but the content of the concept was not seen as having any independent reality. Descartes, however, felt that the objective reality could be considered independently of its formal reality, and that it must be graded just as subjective reality was graded. The idea of a man, he felt, has more objective reality than the idea of a colour. Moreover, the cause of the idea containing a certain degree of objective reality must have an equal or greater degree of subjective reality. For instance, the idea of God has so high a degree of objective reality that only God himself is perfect enough to be the cause of such an idea.(14)" (pp. 91-93)

(...)

"Although Descartes struggled to defend his criterion, his struggles ended in an impasse. He had made the mistake of trying to prove too much. He had wanted to develop an introspective technique by which he could be sure of recognizing those ideas which were objects of certain

knowledge; but such an enterprise was doomed from the start. He could only escape from the objection that nothing about an idea can justify us in making judgment about its external reference by entering into an uneasy and unjustifiable alliance with God; and by such an alliance he negated his claim that a single criterion for true and knowable ideas could be found." (p. 105)

21. ———. 1975. "Descartes' Theory of Objective Reality." *New Scholasticism* no. 49:331-340.

"In the *Third Meditation* Descartes, who is at the beginning sure only of his own existence, presents a complex proof for the existence of God which is based on the fact that he finds within himself an idea of God. I intend to ignore the supplementary proof which deals with the conservation of his existence, and to focus on his discussion of the properties of ideas, for it is here that Descartes is most difficult to comprehend yet most vulnerable to criticism. With the exception of Gassendi's remarks in the *fifth objection*, I shall concentrate upon what Descartes himself had to say, for a thorough survey of all the secondary sources often serves only to obscure the main issue." (p. 331)

(...)

"Descartes reinforced his arguments with various claims about the nature of predicates and the way in which we come to understand them. He thought, mistakenly, that one could not

only distinguish between negative and positive predicates, but that one could demonstrate the logical priority of such positive predicates as 'infinite' or 'perfect' by showing that one can only understand the finite or imperfect in the light of a prior acquaintance with the infinite or perfect. (29) However, although he seems now to be talking about epistemology rather than ontology, it turns out that his claims rest upon the same assumptions about the content and causation of ideas as are involved in the main proof, so they do not need to be discussed further.

However liberal one is in granting Descartes his desired premises, I think it is fair to conclude that his arguments do not prove what they purport to prove. This seems to be a strong indication that one will lose nothing by being illiberal from the very beginning." (p. 340)

22. ———. 1998. "Antonius Rubius on Objective Being and Analogy: One of the Routes from Early Fourteenth-Century Discussions to Descartes's *Third Meditation*." In *Meetings of the Minds. The Relation between Medieval and Classical Modern European Philosophy*, edited by Brown, Stephen F., 43-62. Turnhout: Brepols.

"In this paper I shall use Rubius's tract on analogy to show how a rich medieval tradition survived into the seventeenth century and to shed some light on the problem of Descartes's sources for the notion of an idea's objective reality. I shall proceed as follows. First, I shall state the problem as it has been set out in recent secondary literature. Second, I shall trace the distinction between formal and objective concepts from the early fourteenth century to the early seventeenth century in the context of the discussion of analogical terms. Third, I shall examine the analogical use of terms as it was presented by Rubius. Fourth, I shall explain why a theory of language use and a theory of concepts came to be linked together. Finally, I shall discuss what Rubius had to say about formal and objective concepts, and I shall suggest a relationship between this

- account and Descartes's own attitude towards mental contents and simple natures."

"The Hyperbolic Way to the Truth from Balzac to Descartes: "Toute Hyperbole tend là, de Nous Amener à la Vérité par l'excès de la Vérité, c'est-à-dire par le Mensonge" " In *Skepticism in the Modern Age: Building on the Work of Richard Popkin*, edited by Maia Neto, José Raimundo; Paganini, Gianni; Lursen, John Christian, 269-294. Leiden: Brill.

"The Latin word "hyperbole" comes from the Greek verb υπερβάλλω, a composite form of hypér (behind) and bállein (throw, throw further, behind and therefore to go further).

The goal of the essay is to clarify the use and the meaning of this concept in the XVIIth century especially considering the figures of René Descartes (1596-1650) and one of his most famous correspondents, the French writer Louis Guez de Balzac (1597-1654). The essay is divided into four parties. In the first one, it focuses on the relationships between Descartes and Balzac and their intellectual formation. In the second part, some relevant examples of definitions given in the XVIIth century of geometrical and rhetorical hyperboles are proposed. The third part of the essay is devoted to the transformation of the figure of the hyperboles achieved by Guez de Balzac. In the fourth part of the essay is analysed the uses of the hyperboles in Descartes; a particular attention is here devoted to the texts of the Third and Fourth Replies to Hobbes and Arnauld, in connection to the final part of the Sixth Meditation."

"The article discusses the decline of Aristotelian physics at the University of Paris in the seventeenth and early eighteenth centuries. A course of physics remained essentially Aristotelian until the final decade of the seventeenth century, when it came under the influence of Descartes. But the history of physics teaching over this period cannot be properly appreciated if it is simply seen in terms of the replacement of one physical philosophy by another. Long before the 1690s, the traditional Aristotelianism of the Schools had been forced to come to terms with the New Science to some degree, while the Cartesianism of the early eighteenth century was always alive to the challenges to Descartes's particular physical theories. Except in the early seventeenth century the physics course at Paris was always in a state of change. The replacement of Aristotelian by Cartesian physics too involved the development of a novel epistemology. Although both Aristotelian and Cartesian professors believed that natural philosophy was a science of causes based upon a

priori principles, the latter had a far more probabilist conception of physics."

"Something very important happened in our knowledge of the physical world in the seventeenth century. A number of very smart people made discoveries about the natural world that fundamentally changed our way of looking at things. But as important as the individual accomplishments of individual seventeenth-century scientists were, an important part of the story lies in the disciplinary and institutional history of that important century. What was new and important was not only Copernicus and Kepler, Descartes and Galileo, Leibniz and Newton, but the changes that happened in the larger framework in which they work. In particular, I think that there was a major change in what might be called the disciplinary geography, the way in which the disciplines that deal with our knowledge of the natural world changed in their relations with respect to one another. This involves not only intellectual changes, but, perhaps as importantly, changes in the institutions that involve the investigation of nature and the dissemination of new knowledge and points of view.

The story is very big and very complex, and I cannot hope to tell it all in a single article. But in this short essay I would like to give a bare outline of what the whole story might look like. I will begin with an overview the state of the disciplines that are concerned with the natural world ca. 1600. I will then trace through the way in which the disciplinary geography changes over the course of the century."

"Contemporary discussions on the literary format of Descartes's *Meditations* typically focus on two issues. The first is whether Descartes's text resembles and is possibly influenced by the genre of religious devotional exercises, and the second is whether the stylistic devices employed by Descartes are philosophically significant. Building upon the efforts of Gary Hatfield, Bradley Rubidge, and Martial Gueroult, I argue that Descartes is influenced by an Augustinian tradition of spiritual exercise and that this influence is philosophically important for how we understand the cogito. I examine, in particular, the relevance of Marin Mersenne's recently rediscovered treatise

L'usage de la raison (1623). This work exhibits features of an Augustinian style of religious meditation, and it is a text that can be easily connected to Descartes."

101. Mori, Gianluca. 2012. "Hobbes, Descartes, and Ideas: A Secret Debate." *Journal of the History of Philosophy* no. 50:197-212.

"The author proposes that the anonymous letter dated May 19, 1641, which Mersenne delivered to Descartes, should be attributed to Thomas Hobbes. Although the text is known, it is usually considered not so much in itself as for Descartes's two replies, which contain important clarifications on the proof of God's existence. Hobbes' hand is revealed by various thematic, conceptual, and lexical analogies and, above all, by the presence of two doctrines characteristic of his thought: 1) the denial of the existence of intellectual ideas; 2) the assertion that the nature of God can only be described by the proposition "God exists". Attribution to Hobbes of the May 19th 1641 letter throws new light on the debate that followed Descartes's *Meditations* as well as on Mersenne's role."

"Although we now dismiss Kant's suggestion that logic was already essentially a completed science, we ourselves embrace its ghost, the idea that the conception of logical inference with which we are most familiar is just the common conception of our illustrious philosophical ancestors. This ghost works

mischief. It causes us to think whiggishly of the history of logic and so lends respectability to the thought that only since 1879 has there been great logic. More concretely, I shall argue here, the idea that were is and always has been a single dominant conception of valid inference (ours) blinds us to part of Descartes's project. By setting that project against its medieval background I hope to revive our sense of both its strangeness and its possibilities."

Abstract. "Like every original and fruitful research programme, that of Richard Popkin has inspired other interpretations that ended up by appearing as rivals to the History of Skepticism. It is certainly not by chance that only after Popkin had rediscovered the importance played by the rebirth of skepticism, an intense debate rose about the differences, the values and the possible superiority of the moderns over the ancients concerning the extent of doubt: a kind of a *querelle des anciens et des modernes* in order to establish whether and how the former or the latter outdid each other in coherence and radicality. One could object that this dispute has already been articulated in our modern philosophical archetypes, going back at least to Hegel and his critic Kierkegaard: the first, as is well known, supported the ancients, claiming in his Lectures on the History of Philosophy that Greek skepticism had been much deeper and all-encompassing than Cartesian doubt, whereas the second, starting with Johannes Climacus's pseudoepigraphic work, backed up the moderns, stressing the break between the era of modern and the astonishment or

immediacy typical of the Greeks. *De omnibus dubitandum est*: by this Cartesian quote Kierkegaard characterized the modern age whose novelty could be summarized for him in three sentences: "1) Philosophy starts in doubt; 2) Doubt is required in order to practice philosophy; 3) Modern philosophy begins in doubt".

"Descartes famously claimed that a human soul is a single substance without any parts. But he also affirmed that the soul has two faculties, namely intellect and will, which act as 'two concurrent causes'. This looks quite puzzling. How can there be two causes in a single and indivisible substance? What is their ontological status? And how do they act? This chapter discusses these questions, paying particular attention to Descartes' scholastic background. It argues that there was no unified scholastic doctrine. Descartes rejected Suárez's theory, which took faculties to be really distinct parts and inner agents of the soul, while defending Ockham's theory, which considered them to be mere ways of acting of a single soul. The two explanatory models gave rise to different accounts of the unity of the soul."

"One of the chief concerns of the young Descartes was with what he, and others, termed "physico-mathematics". This signalled a questioning of the Scholastic Aristotelian view of the mixed mathematical sciences as subordinate to natural philosophy, non explanatory, and merely instrumental. Somehow, the mixed mathematical disciplines were now to become intimately related to natural philosophical issues of matter and cause. That is, they were to become more 'physicalised', more closely intertwined with natural philosophising, regardless of which species of natural philosophy one advocated. A curious, short-lived yet portentous epistemological conceit lay at the core of Descartes' physico-

mathematics—the belief that solid geometrical results in the mixed mathematical sciences literally offered windows into the realm of natural philosophical causation—that in such cases one could literally “see the causes”. Optics took pride of place within Descartes’ physico-mathematics project, because he believed it offered unique possibilities for the successful vision of causes. This paper traces Descartes’ early physico-mathematical program in optics, its origins, pitfalls and its successes, which were crucial in providing Descartes resources for his later work in systematic natural philosophy. It explores how Descartes exploited his discovery of the law of refraction of light—an achievement well within the bounds of traditional mixed mathematical optics—in order to derive—in the manner of physico-mathematics—causal knowledge about light, and indeed insight about the principles of a “dynamics” that would provide the laws of corpuscular motion and tendency to motion in his natural philosophical system."

"In view of some recent research, (1) the stage would seem to be set to make a beginning with a long-standing suggestion of Professor Gilson to compare Descartes' doctrine on distinctions with that of Francis Suarez. (2) Accordingly, one would expect that the immediate point of departure for such a comparison would be their respective interpretations of the formal distinction of Duns Scotus. This would then introduce the more formal discussion of distinctions in each man. A closing consideration should then be devoted to the doctrine of each on essence and existence since this is the context in which Descartes frames a very important statement of his position on distinctions. In short, then, one should confront Descartes on

Scotus, then on distinctions and finally on essence and existence. The same confrontation should then be made with Suarez." (p. 104)

(...)

"In regard to Descartes, the primary focus will be first on his reply to the objections of Caterus to his *Meditations*; (4) then on his *Principles* (5) and finally on one of Descartes' letters. (6)" (p. 105)

Christian Wolff's Ontology: Existence as "Complement of Possibility"

Being and Existence

"Let us open Wolff's *Ontology* and read his *Preface*: "Prime Philosophy (namely, metaphysics) was first laden by the Scholastics with enviable praise, but, ever after the success of Cartesian philosophy, it fell into disrepute and has become a laughing stock to all." (10) What Wolff clearly sees then is that, since the time when Descartes "grew weary of metaphysics," there still may have been metaphysicians, but there has been no metaphysics. As a distinct science, metaphysics has simply ceased to be. And Kant himself was only echoing Wolff when he wrote in his *Preface* to the first edition of the *Critique of Pure Reason*: "There was a time when metaphysics used to be called the queen of sciences ... Now, in our own century, it is quite fashionable to show contempt for it." Our own century here is the eighteenth century, which was the century of both Wolff and Kant.

When he made up his mind to put a stop to that technical decadence in the field of philosophy, Wolff was keenly conscious of carrying on the work of the great Scholastics. What they had done was not perfect, but that was the thing to do, and, since it could be done better, Wolff himself was going to do it all over again. Let us be as precise as possible. Wolff did not wish to be reproached with bringing back a Scholastic philosophy that was dead. In point of fact, that was not what he wanted to do. But he was claiming the right to retain at least Scholastic terminology, for all there was to be done about it was, keeping the same terms, to build up better definitions and more exactly determined propositions. (11)

This is what Wolff set about doing first with the term "being," and it is typical of his attitude that he can reach it only through the notion of possibility. "Being," Wolff says, "is what can exist and, consequently, that with which existence is not incompatible: *Ens dicitur quod existere potest, consequenter cui existentia non repugnat.* (12) In other words, what is possible is a being: *Quod possibile est, ens est.* (13) Besides, Wolff adds, this is a metaphysical notion which is accepted by all, and which exactly tallies with common language. "Being," "something," "possible;" here are so many words that are practically synonymous, and metaphysics does nothing more than bring their implicit meanings out in the open. True enough, what is commonly called a "being" is something that exists, but he who understands that a A is being because it exists will as easily understand that, if A exists, it is because it can exist.(14) Possibility then is the very root of existence, and this is why the possibles are commonly called beings. The proof of it is that we commonly speak of beings past or future, that is, of beings that no longer exist or that do not yet exist. In any case, their being has nothing to do with actual existence; it is, though a merely possible being, yet a being.

In order to probe more deeply into the knowledge of being, what we have to do is to inquire into the causes of its possibility. The first one is, of course, the one we have already mentioned, namely, the absence of inner contradiction; but this is not enough. In order to posit a being, one must ascribe to its notion such constituent parts as are not only compatible among themselves, but are its primary constituent parts. The primary constituents of a being are those which are neither determined by some element foreign to that being, nor determined by any one of the other constituent elements of the same being. If an element supposedly foreign to some being were determining with respect to any one of those elements which enter its constitution, then it would not be foreign to it; it would be one of its constituent elements. On the other hand, if some of the constituent elements of a being determine each other, then we must retain only the determining elements as constituent parts of that being.(15) In short, every being is made up of such elements as are both compatible and prime. Such elements shall be called the "essentials" of being (*essentialia*), because they constitute the very

essence. Hence this conclusion, whose full significance it is superfluous to stress: Essence is what is conceived of being in the first place and, without it, being cannot be.(16) Thus, the essence of the equilateral triangle is made up of the number three and of the equality of its sides; again, the essence of virtue is made up of a habit (*habitus*) of the will and of the conformity with natural law of the acts which follow from that habit. Let any one of those conditions be altered, there is left neither equilateral triangle nor virtue; let them be all posited, then there is equilateral triangle and virtue. The presence of the "essentials" of the thing is therefore both necessary and sufficient to define its essence. Those "essentials" always entail certain properties which are inseparable from them and, since a thing never is without its "essentials," it is also inseparable from the thing. Such properties are called the "attributes" of being. As to its "modes," they are such ulterior determinations which are neither determined by the essence nor contradictory with it. The attributes of a being are always given with it, but not its modes, which are what the Scholastics used to call "accidents."

In a being so conceived, the "essentials" obviously are the very core of reality. Taken as non-contradictory, they ensure the possibility of being. It is through its "essentials" that a being is possible: *Per essentialia ens possibile est*. Now, since the essence of being is one with its possibility, he who acknowledges the intrinsic possibility of a thing knows also its essence. We are saying "acknowledges," and rightly so, for it is possible to account for the attributes of being from the "essentials" of that being, but there is no accounting for the fact that those "essentials" belong to it. Since they are prime, there is nothing above them from which they could be deduced. As to the modes, they cannot be deduced from their essence either. For, what makes up an essence accounts for the fact that such and such a mode may belong to a certain being; it does not account for the fact that such a mode actually does belong to it. The reason for the actual presence of modes in a given being must always be looked for outside that being. We call "external" those beings which constitute the sufficient reason for the actual presence, in a given being, of modes which cannot be sufficiently accounted for by its essence alone. The essence then is for any being the sufficient reason for the actual presence of its attributes and of the possible presence of its

modes(17) Hence its nominal definition: "Essence is that which is conceived of a being in the first place, and in which is to be found the sufficient reason why all the rest either actually belongs to it or else may belong to it: *Essentia definiri potest per id quod primum de ente concipitur et in quo ratio continetur sufficiens, cur caetera vel actu insint, vel finesse possint.*" (18)

The scrupulously exacting method which Wolff was using in his determination of being was entirely his own, but the results achieved by that method had really nothing new. And Wolff himself was clearly aware of it." (pp. 114-116)

Christian Wolff, *Philosophia prima sive Ontologia methodo scientifica pertractata ua omnis cognitionis humanae principia continentur*, edit. nova (Veronae, 1789), [first edition 1730].

From: Etienne Gilson, *Being and Some Philosophers*, Toronto: Pontifical Institute of Mediaeval Studies 1952 (Second edition corrected and enlarged; first edition 1949).

"In Christian Wolff we have a Leibniz purged of poetry, but also purged of some exaggerated conceptions, for example, the drowsy or slumbering monads, and the phenomenal character of space. All is

built into an immense, systematic exposition, magnificent in its formal rigour and clarity, and building on, though also improving, the ontological, cosmological, and theological doctrines of the Aristotelian schoolmen and, in particular, of [Suárez](#). (The improvements are possibly due to Platonizing influences, which modified the ingrained love of the individual instance so characteristic of the Aristotelians.) Christian Wolff expounded his systematization both in a German version (the *Logic, Metaphysics, Ethics, Politics, Natural Theology*, etc.), and also in a Latin version (a *Logic* (1728), an *Ontology* (1730), a *Cosmology* (1731), a *Psychology* (1732 and 1734), a *Natural Theology* (1736-7), and a *Universal Practical Philosophy* (1738-9)). There are also many political writings of interest. To this vast system, with its innumerable Epigonoï -- Bilfinger, Meier, Rüdiger, Baumgarten, Tetens, [Crusius](#), and so on -- Kant made his great emendations, which have been exaggerated into the idealisms, and later the positivisms, by which the thought and even the public policy of Europe has been bemused. What is, however, amazing is the immense volume and solid merit of Wolff's works, and the almost total misunderstanding and neglect that has since enshrouded them, so that copies of Wolffian books are hardly to be found in libraries outside of Germany.

(...)

Wolff's *Ontology* begins (27) with the assertion of the two laws of contradiction and sufficient reason, both fundamental to the assertion that something is, or that it is not. The former requires that what is must be free from inner conflict, the latter that, if it does not, like a necessary being, have a reason for being in its own nature, it must depend on such a reason in something other than itself. The law of causation, as we ordinarily understand it, is for Wolff only a special form of the law of sufficient reason, pertinent to temporal, changeable things and their states (71). From these principles Wolff proceeds to the consideration of the metaphysical modalities, of which the most fundamental is the possible, the negation of the self-contradictory, or logically impossible. Everything actual, he holds, is by the law of contradiction possible, but he here embraces some invalid theorems, for instance, that a possible consequence can only have possible premisses. Obviously, modal logic is still insecure,

though Wolff's treatment of apagogic proof in 98 is of some interest. From Wolffian principles it follows that the notion of an entity not wholly determinate is 'imaginary', and that the indeterminate is only what is for us determinable, and that it will have to be determined by a sufficient reason (111, 117). There is no room in Wolffianism, any more than in Leibnizianism, for radical alternativity: Kant, however, will diverge from this position under the influence of Crusius.

All this leads, however, to Wolff's treatment of what he calls an entity: an entity is defined as any thing which can exist, to which existence is not repugnant. Thus warmth in this stone is a something, an entity, since a stone certainly can be warm or a warm stone can exist. There does not need to be any actual stone-warmth for us to have an entity before us. An entity is, however, rightly called fictitious or imaginary, if it lacks existence, which does not, however, make it less of an entity. These near-Meinongian positions are of great contemporary interest, and form the spring-board for much of Kant's later criticisms of the ontological proof, which is Wolffian enough to treat 100 possible dollars as if they certainly were something. Wolff goes on to draw the distinctions of essential features and attributes, on the one hand, which always must belong to an entity, and its modes, on the other hand, which are merely the characters that it can have and also can not have. Obviously, however, something must be added to possibility to raise it to full existence, and this Wolff is simply content to call the possibility-complement (174). It rather resembles the modal moment of [Meinong](#). He proposes to deal with this possibility-complement separately in his discussions of different spheres, for example, theology, cosmology, and psychology, since the intrinsically sufficient reason which makes God an actual existent is not at all like the extrinsically sufficient reason which underlies existence in the cosmological sphere. It is deeply characteristic, and deeply interesting, that Wolff should make actuality a mere enrichment of the possible, not the latter an impoverished abstraction from the former. The efforts of Wittgenstein, Carnap, Ryle, Quine, and so on have shown the hopelessness of trying to elucidate the possible in terms of the actual: the traditional priority may well prove more successful. Both tendencies are of course manifest in Kant's treatments of possibility, the 'modern' in, for example, the Postulates

of Empirical Thought, and the Wolffian in many 'transcendental' contexts. Individuation does not, for Wolff, represent a going beyond the possible. It merely occurs where we have the complete determination which the logico-ontological laws require, and there are, accordingly, imaginary and fictitious as well as real ones. The latter may be far more determinate than any characters in fiction, but they will still lack a final nuance of determination. There are, likewise, incompletely determinate specific and generic properties of individuals, all of which must rank among imaginary entities, though some, connected with actual instances, will obviously be less imaginary than others. Wolff has here developed points which Meinong was later to develop in his doctrine of complete and incomplete objects, and there are also many anticipations of the modern theory of possible worlds." (pp. 38-41)

From: John Niemeyer Findlay, *Kant and the Transcendental Object. A Hermeneutic Study*, Oxford: Clarendon Press 1981.

"One cannot plunge directly into Wolffian natural theology, however, since it must be viewed within the closely knit context of a certain conception of philosophy and ontology. From Wolff's opening definition of philosophy as 'the science of possibles, in so far as they can be' or have an essential nature, it is evident that his is a system of possibility and essence in which the role of existence is a subordinate one. It is not a totally de-existentialized philosophy; it is one in which knowable and systematically exploitable being primarily means the possible essence and in which existence is admitted only by virtue of some correlation it has with this essence. What does not stand out so clearly is the reason why Wolff settled upon this essentialist viewpoint and yet never totally submerged the distinctive reality of existence.

Part of the explanation comes from Wolff's complex intellectual heritage. He was just as thoroughly familiar with the critical work of the skeptics and empiricists as with the rationalist tradition. The skeptical arguments convinced him of the impossibility of demonstratively defending our knowledge of the existing external world, either through a rationalist deduction or through an empiricist inference. Hence he concluded that it was too risky to base his philosophy upon the thesis of the reality of the material universe;

his fundamental definitions remained deliberately neutral about the independent existence of a world corresponding with our ideas. This skeptically generated neutrality inclined him to focus upon the essential and the possible, without making any primary commitments about sensible existents. Nevertheless, the British scientists and philosophers also convinced him of the danger of entirely ignoring the existential aspect.

As a compromise, Wolff calls for a union in holy matrimony of three kinds of human knowledge: historical, philosophical, and mathematical. Historical knowledge means the empirical assurance, gained mainly through sense experience and experiments, that certain things exist or occur. Wolff hails it as the foundation of all philosophy and the constant guide of all inferential reasoning. Yet he wavers between saying that empirical knowledge assures us indubitably that certain things actually do exist and saying that it merely makes us reflectively aware of having the ideas of things that can exist or come to be. This ambiguity about the import of sense experience stems from his basic epistemological neutrality and leads him to depreciate its certainty. Experiential certainty concerns the bare fact (real or ideal) and does not extend to the sufficient reason for the fact. Hence philosophical certainty must be non-experiential in its own proper form. Every ounce of it (to use Wolff's own emphatic phrase) derives from the use of the mathematical method, which risks nothing on the real existent but concentrates upon the determinate quantity of possible objects and essential relations. This method enables philosophy to determine with perfect certainty the reasons why objects may come to be or why being is possible. Hence philosophy is primarily a study of the internal essentialia, or essential components, and the external reasons, or causes of the possibility of these essential components. Existence is studied properly in philosophy only to the extent that it can be drawn out with certainty from the known essential structure.

Wolff never removes the radical dichotomy between empirical and mathematico-philosophical certainties, between knowledge of fact and of possible essence. Their matrimonial bond is not based upon some unifying doctrinal principle but rests solely upon Wolff's personal awareness of the need for both approaches. His desire to found philosophy on an existential basis in experience is blocked by

the skeptical critique, and he is thereby forced to locate philosophical certainty in the possible essences and their sufficient reasons. And yet he is also unwilling to follow 'Leibniz in overcoming the distinction between truth's of fact and truths of essence by means of the principle of sufficient reason. Leibniz accords the primacy to this principle, since it expresses the dynamic law of quasi-autonomous essences, to which God must give a consent decree governing His creation of the existing world. For Wolff, however,,the essences are unequivocally grounded in the divine intellect and enjoy no quasi-independence. Hence the principle of sufficient reason can give essential connections or reasons for facts, but it cannot furnish any deductive certitude concerning the actual facts themselves or existential productions of the divine will, There is no objectively determining ground which shapes God's existential decisions and closes the gap in man's philosophical system. Hence the principle of sufficient reason must remain subordinate to the principle of contradiction, which provides an indubitable certainty, at least, about the internal consistency and possibility of the essential traits as such.

In conformity with this view of philosophy, Wolff then defines ontology as the science of being, i.e., of that which can exist or that to which existence is not repugnant. In the main, it is the science of essence, namely, "that which is first of all conceived about being, and in which is contained the sufficient reason why other aspects either actually belong to it or can belong to it." Ontology is a strict science precisely because it confines itself to a general study of being as possible or essentially constituted -- the sphere where a mathematically rigorous certitude is obtainable. Existence figures in ontology either obliquely, as the complement of possibility, or negatively, as the furnisher of a norm of non-repugnance. As the directly known act of a thing, it does not come within the scope of ontology, which remains a nonexistential discipline. Because of the nonexistential character of ontology or general metaphysics, Wolff requires three special parts of metaphysics to determine the principles of the possibility of existence in the three main areas of being. Cosmology studies the reasons of being in the contingent, material world; psychology deduces the soul as the sufficient reason for the existence of mental acts; natural theology demonstrates God

as the ground of existence for His own attributes and modes, as well as for the existence of the world. Natural theology presupposes these other sciences. From ontology, it draws its general principles and orientation; from cosmology, a factual basis in the material world; from psychology, a basis in the soul and also some special insight into the spiritual perfections which help us to know God's nature." (pp. 134-136, notes omitted)

An overview of Philosophia prima sive ontologia

"Wolff's *Ontology* is a long, systematic treatise of what had been generally called before him "metaphysics" or "first philosophy." The term 'ontology' to refer to this rather traditional discipline had antecedents before Wolff used it in the title of his book, however. In 1647 Clauvergius [Johannes Clauberg] published a treatise with the title *Elementa philosophiae sive ontosophia* in which he explicitly argued in favor of a more precise name for what was generally called "metaphysics." The primary reason behind the shift of terminology had to do with the object of study of the discipline, which Clauvergius identified with being in general.(10) Wolff, following suit, titled his book *Philosophia prima sive ontologia* (1729), defining the subject of study as the science of being in general, that is, of being insofar as it is being.(11)

The *Ontology*, in comparison with the extensive systematic metaphysical treatises of late Scholastics, is fairly short. It is divided into three sections: a section entitled "Prolegomena" and two parts. The Prolegomena deals with the nature of ontology and of the terms and notions with which it concerns itself. In the first of the two parts into which the rest of the treatise is divided, Wolff discusses the notion of being in general and the properties that follow from it. In the second part, he is concerned with the various species of being. The first part is divided in turn into three subsections, dealing respectively with the principles of ontology, the essence and existence of being, and the general attributes of being. After Wolff discusses identity and similarity in Chapter 1, he then deals with

singular and universal being in Chapter 2. Thus, the discussion of singularity, which for Wolff is equivalent to individuality, precedes the discussion of necessity, contingency, quantity, quality, relation, truth, perfections, and related notions.⁽¹²⁾ It is also worthy of note that in the chapter devoted to individuality and universality, individuality is listed and discussed first.

The relative position that individuality occupies in relation to other fundamental metaphysical notions, including universality, indicates the importance that Wolff attached to it as well as its more fundamental and central role in the *Ontology*. Not that such importance and central role were something new. Throughout the Middle Ages there had been a progressive shift of emphasis from universality to individuality, which is clearly evident as early as the thirteenth century when Duns Scotus discussed universals in the context of individuals in the *Opus oxoniense*, contrary to what had been customary before him. This shift is most evident in Suárez's *Disputationes metaphysicae*, where individuality is given separate, prior, and more extensive treatment than all the other common properties of being.

What is most significant and different structurally speaking about Wolff's *Ontology*, vis-à-vis the later Scholastic tradition, is something else, namely, the epistemic and methodological considerations that are contained in the beginning of the work. They are found in two places. In the Preface Wolff presents some general statements about his *modus operandi*, indicating among other things that his aim is to make clear notions that are only confusedly found in common as well as in previous philosophical discourse, and also pointing out that he intends to follow the rigorous mathematical method popular among other modern philosophers. In Section 1, he begins the discussion with an examination of the methodological principles that guide his investigation. The principles in question are the "principle of contradiction" and the "principle of sufficient reason." The methodological concerns expressed both in the Preface and in Section 1 are certainly an indication of the epistemic bent that Wolff gave to the *Ontology* and that do not seem to have affected the work of many late Scholastics. Suárez's *Disputationes*, for example, go directly from a discussion on the nature of metaphysics to the discussion of the common properties of being and do not contain in

the Preface the kind of procedural comments that characterize the *Ontology*. What distinguishes Wolff's *Ontology*, then, is that between the discussion of the nature of metaphysics and of the common properties of being he adds a section on methodological principles and that he prefaces the whole work with a series of remarks on the same topic.

Thus, although the *Ontology* aims to be a work of metaphysics, from its very beginning we are confronted with epistemic and methodological considerations. Does this mean that its contents suffered from the epistemologism that characterize most other modern metaphysical works? I argue yes at least as far as individuation is concerned." (pp. 222-223)

Notes

(10) Etienne Gilson has discussed at length the implications that Clauvergius's definition of metaphysics and change of terminology had for the discipline in *Being and Some Philosophers* (Toronto: Pontifical Institute of Mediaeval Studies, 1952), pp. 112ff.

(11) *Ontologia*, par. 1, p. 1: "*Ontologia seu Philosophia prima est scientia entis in genere, seu quatenus ens est.*" The emphasis in all Latin texts is that of Wolff.

(12) Not all authors use the terms 'singularity' and 'individuality' interchangeably. As far back as the early Middle Ages, Gilbert of Poitiers and others introduced distinctions in their meaning. See my *Introduction to the Problem of Individuation in the early Middle Ages*, Munich, Philosophia Verlag, 1986, Chapter 3.

From: Jorge J. E. Gracia, "Christian Wolff on Individuation", in: Kenneth F. Barber and Jorge J. E. Gracia (eds.), *Individuation and Identity in Early Modern Philosophy. Descartes to Kant*, Albany: State University of New York Press 1994, pp. 219-243.

Christian Wolff - *Philosophia prima sive Ontologia* (1730)

The Preliminary Discourse on the Philosophy in General (1728)

"The *Preliminary Discourse on Philosophy in General* presents Wolff's master plan for the synthesis of knowledge. Written in 1728, it was intended to serve as the general introduction to his Latin survey of the branches of systematic philosophy, with subsequent volumes on logic, cosmology, empirical psychology, rational psychology, ontology, natural theology, and moral philosophy. Though in writing the *Preliminary Discourse* Wolff used many notions he intended to develop more fully in these later volumes, the book nevertheless is a basically self-contained discussion; in fact, this work contains Wolff's clearest presentation of his theory of the division and method of the sciences, and its main historical interest lies along these lines.

The overall outline of Wolff's theory is presented in Chapter One of the *Preliminary Discourse*. He defines history as knowledge of the facts pertaining to both the material world and the world of consciousness, and as such, history provides the empirical foundation of the sciences. But as Aristotle had pointed out centuries earlier, knowledge of the facts is one thing and knowledge of the

reason of the facts is quite another thing. This latter constitutes the proper province of philosophy. His third major division of natural knowledge, namely, mathematics, which deals with our knowledge of the quantity of things, employs a method of extraordinary power which is applicable to philosophy; insofar as philosophy shares in the values of mathematical method, it attains to complete certitude. Thus Wolff recognizes the importance of both the empirical methods of historical knowledge and the rational methods of the mathematical sciences. And for him, philosophy is the common meeting ground of these two methods.

The definition of philosophy presented in Chapter Two is of considerable interest. As the science of the possibles insofar as they can be, philosophy must concern itself both with the intelligibility of the world of the possibles and also with the reasons why certain of these possibles become actual. The former is governed by the Principle of Contradiction while the latter is controlled by the Principle of Sufficient Reason. What this means in brief is that for something to be possible it must be internally consistent. The criterion for determining this mutual consistency and intelligibility of the component elements of a possible is the Principle of Contradiction. However, this principle alone does not explain the fact that some possibles are actual while others are not; the mere internal consistency of a possible does not confer actuality upon it. A full understanding of the actual must go beyond the Principle of Contradiction to include an explanation of why this possible rather than another is actual. This further explanation is what is demanded by the Principle of Sufficient Reason. Furthermore, existence is understood by Wolff to be the final complement in the order of possibility." As a result, all philosophical problems for Wolff deal with the constitution and ordering of possibilities or essences. The two great principles are adequate to govern all of these essentialistic relationships, and the door is thus opened for the casting of the entire philosophical enterprise into the formal, deductive pattern outlined in Chapter Four.

Both the order of demonstration within each individual science and the proper subordination of the various sciences to each other are determined by the demands of one continuous deductive sequence. Wolff explains these relationships in great detail in Chapters Three

and Four. The individual parts of philosophy are distinguished exclusively on the basis of subject matter or material object divisions, as is clear from the summary on the following page, and each branch of philosophy is carefully located in its proper place of subordination to the more basic disciplines. Further, according to Wolff, the methods of deductive logic apply universally to all these disciplines." (pp. IX-XI)

From: Richard J. Blackwell, "Introduction" to: Christian Wolff, *Preliminary Discourse on Philosophy in General*, Indianapolis, Bobbs-Merrill 1963.

Christian Wolff's Classification of Sciences in the *Preliminary Discourse to Philosophy in General* (1728).

Twin pillars of philosophy: the principles of contradiction and sufficient reason

Wolff's explicit presentation of the Principle of Sufficient Reason occurs at the beginning of his *Ontologia*. (44) His approach to this

Principle and the Principle of Contradiction is not by way of the notion of being and a deduction therefrom, although a cursory glance at the arrangement of his text might lead one to think so, especially after familiarity with later manuals which follow this development. Rather, Wolff makes these "twin pillars of philosophy" more intuitional than deductive; they are the *given* of the rationalistic mind generating its own data and starting points.(45)

Systematically, the Principle of Sufficient Reason is preceded by the Principle of Contradiction, and Wolff places the foundation of this latter in an obvious experience of mental life: *While we are judging something to be, it is impossible at the same time to judge it not to be*(46) From this conscious experience of the nature of our minds, we concede without need of proof the proposition enunciated in general terms as the Principle of Contradiction: *It cannot happen that one and the same thing be and at the same time not be.* Or, another form of the same: *If A is B, it is false that the same A is not B.*(47)

To demonstrate the fecundity of this basic axiom, Wolff explores its logical implications and leaves little doubt that the principle for him is a purely formal one, a kind of *aliquid* to which subsequent concepts in his system may be tied. If it were not a true principle, he argues, then the same predicate could and could not pertain to the same subject under the same determinations, and the same proposition could be both false and true at the same time.(48) Besides "contradiction is simultaneity in affirming and denying,"(49) it is contained in two propositions, of which "one takes away what the other posits."

The important point is that the process of building concepts and working out demonstrations is insured by this principle against logical failure. Negatively, it is important to note that while this treatment is placed under ontology and the subject of being in general, yet with no systematic reference to or involvement of existential judgment or sensation, it is not possible to denote this principle as anything more than logical.

Proceeding next to the Principle of Sufficient Reason, Wolff does not make any detailed reference to the question of its relation to the Principle of Contradiction. To anyone following through within the

system itself, the question of whether it reduces to the Principle of Contradiction is answered by the fact that the latter is the one systematically prior, and this priority makes reduction possible.(50)

Clearly, the dual sovereignty granted these principles by Leibniz no longer holds. Leibniz had located the relation between the Principle of Contradiction and the Principle of Sufficient Reason in the realm of the rational through his distinction between necessary and contingent truths. Wolff unified that realm of the rational around the Principle of Contradiction.(51) Again we can note the lack of existential reference in the fact that this realm remained distinct from that of the singular concrete sensible data of experience. Under the influence of Locke and the rise of empirical science, Wolff and his successors heightened the reality of this latter realm and deepened the realization and the value of its experience. But the systematic failure to incorporate it into an existential union with the realm of the rational will continue to haunt modern philosophy.

Unity in the order of essence, however, is impressively systematic. The possible as the non-contradictory, we shall see, gives to the Principle of Contradiction a primacy which it can share with no other. The *ratio* or reason whereby things are understood is ultimately explicable in terms of the opposition between "nothing" and "something," the latter being the systematic coherence of clear and distinct ideas whose right to, and precise determination of, a place in the system ultimately depends on the Principle of Contradiction. The Non-Contradictory is "something."(52)

This application of the primacy of essence to a theory of method grants priority to the Principle of Contradiction over the Principle of Sufficient Reason, and to the Principle of Sufficient Reason over causality. In other words, when Wolff has defined philosophy in terms of possibles rather than causes, he must use *ratio* instead of *causa* to describe the object of the metaphysical search, and it is one of the inevitabilities of such a system that "reasons grow more rational and logical; causes, more empirical and real."(53) The deductive method of mathematics becomes the unique method of philosophy, and here-and-now existential reference is obtained by "common sense" joined sometimes with a pious use of Sacred Scripture.

By "Sufficient Reason," Wolff meant whatever explains why something is; it is "that whence it is understood why anything is." (54) He gives two examples: The three sides of the triangle, or rather, its three-sidedness is sufficient reason for the three angles because this suffices for us to understand the triangle as having three angles. (55) In the order of motivation and action he further instances the case of a man rising to his feet out of respect for some person who has just entered the room. From the fact of this entry, plus the reverence due the newcomer, it can be understood why the man in the room rises to his feet and hence a sufficient reason for the action is assigned.

In keeping with his methodology of building notions and demonstrations from previously established concepts, it is now necessary to define the meaning of "nothing" and "something" as involved in the notion of "sufficient reason." This is very simply managed in terms of the basic building block itself, the notion or concept. We call that "nothing" to which no notion corresponds. And "something" is that to which some notion can be attributed or corresponds.(56)" (pp. 35-38)

Notes

(44) Wolff, *Philosophia prima*, No. 70 ff.

(45) Part I of the *Ontologia* bears the title, "Concerning Being in General and the Properties Which Flow Therefrom." But this first part immediately divides into two parts: Section 1, "Concerning the Principles of First Philosophy," and Section II, "Concerning Essence and Existence and certain related notions of being." Section I is composed of two chapters devoted to the two Principles, Contradiction and Sufficient Reason. It is only in Section II that he takes up the discussion of being and its notions, a discussion which proceeds by way of the possible and impossible, determined and indetermined, to Chapter III, "Concerning the Notion of Being."

It is within this framework as taken over by the successors of Wolff that we see the Principle of Sufficient Reason migrate back and forth as to relative position in the subject matter. In Bülfinger (*Dilucidationes*), for instance, the Principles come after the treatment of the possible-impossible, necessary and contingent. In

John G. Feder's *Institutiones logicae et metaphysicae* (Editio quarta; Gottingen: J. Dietrich, 1797 preface 1777), No. 63, they appear in the Logic, part II, "Concerning the right use of the intellect in seeking truth," Chapter I, "Concerning the principles of truth and the various modes of knowing them." To this migratory characteristic of the Principle of Sufficient Reason we shall return in Chapter Six.

(46) Wolff, *Philosophia prima, sive ontologia*, No. 27. So also with the Principle of Sufficient Reason, as we shall see below.

(47) "Naturae igitur mentis nostrae nobis conscii ad exempla attendentes sine probatione concedimus propositionem terminis generalibus enunciatem: *Fieri non potest, ut idem simul sit & non sit, seu quod perinde est, si A sit B, falsum est idem A non esse B*, sive A denotet ens absolute consideratum, sive sub data conditione spectatum." Ibid., No. 28. "Propositio haec: *Fieri non potest, ut idem simul sit & non sit, dicitur Principium Contradictionis*, ob rationem mox adducendam. *Principium autem Contradictionis* jam olim adhibuit Aristoteles *eodem usi sunt Scholastici in philosophia prima instar axiomatis generalis*." Ibid., No. 29.

(48) Ibid., Nos. 30, 31.

(49) Ibid., No. 30.

(50) Wilbur Urban, "The History of the Principle of Sufficient Reason: Its Metaphysical and Logical Formulations," *Princeton Contributions to Philosophy*, I, No. 3 April, 1900, p. 27. Urban sees in paragraphs Nos. 66-70 a statement of the Principle of Sufficient Reason as a logical law by means of deduction from the law of contradiction; he finds Wolff, in confusing real grounds with the grounds of knowledge, guilty of a *petitio principii*. Hans Pichler, *Über Christian Wolff's Ontologie* (Leipzig, Durr'schen Buchhandlung, 1910), p. 7, calls Wolff's proof a word-play.

(51) Émile Bréhier, *Histoire de la philosophie* (Paris: Alcan, 1934), Vol. II, part II, 361.

(52) Wolff, *Philosophia prima*, Nos. 59-59.

(53) Norman Wilde, *Friedrich Henrich Jacobi: A Study in the Origin of German Realism* (New York: Columbia College, 1894), p. 27.

(54) Wolff, *Philosophia prima*, No. 56.

(55) The triangle example is reminiscent of Spinoza, and a favorite example with rationalists. Like Leibniz, Wolff was still faced with the threat of Spinozism. With no systematic distinction between the true and the real that is supported by existential reference, his only escape from being pushed into Spinoza's universe-version of "everything that exists has a cause or reason why it exists" was to *assert* as a starting point the reality of the possible. The primacy of *essence* has a way of becoming the *primacy of the logically necessary*, where what is not *impossible* is *necessary*, i.e., *is*.

(56) "Nihilum dicimus, cui nulla respondet notio." Wolff, *Philosophia prima*, No. 57; cf. Nos. 59 and 60.

From: John Edwin Gurr, *The Principle of Sufficient Reason in some Scholastic Systems 1750-1900*, Milwaukee: Marquette University Press 1959.

Existence is a mode of finite beings

"Because the being of Wolff's metaphysics is possible being, existence is not one of its essential determinants. In fact, Wolff defines existence as "... The complement of possibility. And existence is also called Actuality." (44) Because existence is neither an essential of being nor an attribute inseparable from it, existence must be regarded as a mode. Hence it will depend upon a cause outside the being which possesses it. Therefore, as Gilson observes, in the philosophy of Christian Wolff, "the sufficient reason for the actual existence of any finite being is never to be found in that being itself; it always is to be found in another one." (45)

All this is necessary for a proper understanding of Wolff's definition of substance as a subject which is modifiable and perdurable. Because substance in Wolff's ontology is a possible being, it can be readily seen why Wolff calls it a subject which is modifiable rather than modified. The being of Wolff's metaphysics is possible being, not actual or existent being. Modes are characteristics or determinations of existent being, consequently while a substance is conceived as capable of having modes (*capax aliorum*), these

accidental determinations are never actually possessed by it in its ontological or possible existence."

"And this is why, in the philosophy of Christian Wolff, existence is completely excluded from the field of ontology. There are special sciences to deal with all the problems related to existence and none of them is ontology. Are we interested in finding out the sufficient reason for the existence of God or for that of the world? Natural theology will give the answer. Do we want to know how those beings which make up the material world are, though contingent, yet determined? Cosmology will inform us about it. Are we wondering how, in the human mind, the possibles are drawn from potency to act? Psychology holds the key to that problem. When today we make use of the term, 'ontology,' what it means to us is just the same as 'metaphysics.' Not so in the philosophy of Wolff, who needed a new word to designate a new thing. Strictly speaking, an ontology is a metaphysics without natural theology, because it is a metaphysics without existence." (pp. 28-29)

Christian Wolff's Metaphysical Works: An Annotated Bibliography

A selection of Wolff's metaphysical works

A complete bibliography of the works by Christian Wolff can be found in:

École Jean. *La métaphysique de Christian Wolff*. Hildesheim: Georg Olms 1990.

Bibliographie des œuvres de Christian Wolff. In *Jus Naturae*. Edited by Thomann Marcel. Hildesheim: Georg Olms 1972. pp. LXV-LXXXI.

The *Gesammelte Werke* [= GW] by Christian Wolff are published in three series (*German* [22 volumes in 30 tomes, 1965-1983], *Latin* [37 volumes in 42 tomes, 1962-1983] and *Materials* under the direction of Jean École (for the philosophical works) by Georg Olms, Hildesheim; the following is a list of the most important metaphysical works.

1. Wolff, Christian. 1712. *Vernünfftige Gedanken Von Den Kräfte[n] Des Menschlichen Verstandes (Deutsche Logik)*. Halle.

Reprint of the 1754 edition by Hans Werner Arndt (1965).

2. ———. 1719. *Vernünfftige Gedanken Von Gott, Der Welt Und Der Seele Des Menschen, Auch Allen Dingen Überhaupt (Deutsche Metaphysik)*. Frankfurt-Lipsia.

Reprint of the 1751 edition with an introduction by Charles A. Corr (1983).

3. ———. 1724. *Anmerkungen Über Die Vernünfftige Gedanken Von Gott, Der Welt Und Der Seele Des Menschen*. Frankfurt.
Reprint of the 1740 edition with an introduction by Charles A. Corr (1983).
4. ———. 1728. *Philosophia Rationalis Sive Logica (Latin Logic). Praemittitur Discursus Praeliminaris De Philosophia in Genere*. Frankfurt-Lipsia.
Reprint of the 1740 edition with introduction, notes and index by Jean École (1983).
5. ———. 1730. *Philosophia Prima, Sive Ontologia (Latin Metaphysics)*. Frankfurt-Lipsia.
Reprint of the 1736 edition by Jean École (1962).
6. ———. 1731. *Cosmologia Generalis*. Frankfurt-Lipsia.
Reprint of the 1737 edition with an introduction by Jean École (1964).
7. ———. 1732. *Psychologia Empirica*. Frankfurt-Lipsia.
Reprint of the 1738 edition by Jean École (1968).
8. ———. 1734. *Psychologia Rationalis*. Frankfurt-Lipsia.
Reprint of the 1740 edition with introduction, notes and index by Jean École (1972).
9. ———. 1736. *Theologia Naturalis. Pars Prior, Integrum Systema Complectens, Qua Existentia Et Attribute Dei a Posteriori Demonstrantur*. Frankfurt-Lipsia.
Reprint of the 1739 edition with introduction, notes and index by Jean École (1978).
10. ———. 1737. *Theologia Naturalis. Pars Posterior Qua Existentia Et Attribute Dei Ex Notione Entis Perfectissimi Et Natura Animae Demonstrantur, Et Atheismi, Deismi, Fatalismi, Naturalismi, Spinosismi, Aliorumque De Deo Errorum Fundamenta Subvertuntur*. Frankfurt-Lipsia.

Reprint of the 1741 edition with introduction, notes and index by Jean École (1981).

11. ———. 1738. *Philosophia Practica Universalis, Pars Prior*. Frankfurt-Lipsia.

Reprint of the 1738 edition with introduction, notes and index by Jean École (1971).

12. ———. 1739. *Philosophia Practica Universalis, Pars Posterior*. Frankfurt-Lipsia.

With a Postscript by Winfried Lenders (1979).

13. ———. 1750. *Philosophia Moralis, Sive Ethica*. Halle.

Second volume 1753. With a Postscript by Winfried Lenders (two volumes, 1970-1973).

14. ———. 1729. *Horae Subsecivae Marburgenses*. Frankfurt.

Reprint in three volumes of the edition: Frankfurt 1729, Leipzig 1732, Renger 1735, with an introduction (pp. V-CXXXVIII) by Jean École (1983).

15. ———. 1983. *Opuscula Metaphysica. De Differentia Nexus Rerum Sapientis Et Fatalis Necessitatis, Nec Non Systematis Harmoniae Praestabilitae Et Hypothesium Spinosae Luculenta Commentatio, in Qua Simul Genuina Dei Existentiam Demonstrandi Ratio Expenditur Et Multa Religionis Naturalis Capita Illustrantur. - Monitum Ad Commentationem Luculentam De Differentia Nexus Rerum Sapientis Et Fatalis Necessitatis, Quo Nonnulla Sublimia Metaphysicae Ac Theologiae Naturalis Capita Illustrantur*. Hildesheim: Georg Olms.

Critical edition with introduction, notes and index by Jean École.

4. Anderson, R. Lanier. 2008. "The Wolffian paradigm and its discontents: Kant's containment definition of analyticity in historical context." *Archiv für Geschichte der Philosophie* no. 87:22-74.

"I defend Kant's definition of analyticity in terms of concept "containment", which has engendered widespread skepticism. Kant deployed a clear, technical notion of containment based on ideas standard within traditional logic, notably genus/species hierarchies formed via logical division. Kant's analytic/synthetic distinction thereby undermines the logico-metaphysical system of Christian Wolff, showing that the Wolffian paradigm lacks the expressive power even to represent essential knowledge, including elementary mathematics, and so cannot provide an adequate system of philosophy. The results clarify the extent to which analyticity *sensu* Kant can illuminate the problem of a priori knowledge generally."

"The first chapter of the *German Metaphysics* gathers only nine paragraphs and seems to represent but some kind of a preamble. Hence one may feel that metaphysics begins only with paragraph 10 opening the ontological part of the text with the contradiction principle.

Yet Wolff already mentions a few considerations in this first part that are extremely close to the beginning of his philosophy:

he presents from the start something very similar to a cogito. Moreover the assets of this first chapter are recaptured whenever every one of the five following chapters opens. Would there be therein sufficient matter at stake to evidence that the Wolffian Metaphysics is grounded in a psychological experience?

Hence the author tests here such a hypothesis through the successive analysis of the status of Ontology, of Logics and of empirical Psychology, through a joint reading of the *German Metaphysics* and of the *German Logics*."

Contents: Introduction 9; I. Substance 17; II. Bodies 51; III. The elements 83; IV Conclusion 101; Bibliography 111; Index of proper names 115; Subject index 117-122.

"Dynamism is the theory that bodies are composed of inextended points of force. In the manuals of Scholastic philosophy this theory is listed and refuted as a fallacious attempt to account for the constitution of bodies by explaining away matter. The theory of Dynamism "culminates in the system of Leibniz, who reduced corporeal substance to units of a spiritual character (*monads*) analogous to souls. For Leibniz, extension, indeed sensible reality as a whole, is nothing more than an appearance or a symbol, and the corporeal world as such is absorbed in the spiritual.." (1)

In this analysis it is our intention to present a study of Christian Wolff's dynamic theory of substance and in particular his metaphysical foundations of the material universe.

To realize this purpose we intend first to treat Wolff's notion of (a) substance, (b) simple substance and its characteristics, and (c) composed being or compound substance and its characteristics, especially as these are in contrast with the characteristics of simple substance.

The second chapter will deal with bodies and their apparent constituents: matter and motor force, as these are explained by Christian Wolff.

The third chapter will be devoted to the "elements," which Wolff contends are the true and ultimate constituent principles of bodies." p. 17

"Ce recueil est la reprise du numéro spécial que la revue *Il Cannochiale* a consacré à Wolff en 1989 (no 2-3), à l'initiative de deux jeunes chercheurs italiens: Sonia Carboncini et Luigi Cataldi Madonna (...).

Il a trouvé tout naturellement sa place dans la troisième série de notre réédition des *Gesammelte Werke* de Wolff qui, à côté des études les plus importantes publiées de son temps, en contiennent d'autres plus récentes. Car il est composé de douze articles aussi intéressants que variés répartis en trois sections intitulées: Le système et la méthode, La philosophie théorique, La philosophie pratique. Sept ont trait à sa métaphysique, deux à sa morale, les trois autres respectivement à sa méthode, à sa physique et à sa conception de la société. Le tout est précédé d'une introduction dans laquelle Sonia Carboncini et Luigi Cataldi Madonna retracent l'histoire de cette réédition et celle de la partie philosophique de son oeuvre, dont ils présentent de façon claire et précise les grandes lignes dans leurs rapports avec celles de ses prédécesseurs et de ses successeurs.

Ces articles, qui ont pour auteurs sept allemands, trois italiens, un hollandais et un français, appartenant à des horizons philosophiques fort différents, attestent que l'actuel regain d'intérêt pour la pensée de Wolff n'est pas seulement le fait de

quelques rares spécialistes isolés. Et l'on peut voir là le signe qu'après avoir été éclipsée par la philosophie kantienne et postkantienne, celle de Wolff, sans jamais plus connaître l'énorme succès qu'elle eut de son vivant et immédiatement après sa mort, est enfin en train de trouver sa juste place dans l'histoire des idées.

C'est en tous les cas grâce à de tels travaux qu'elle y parviendra pleinement. Et il est à souhaiter qu'ils continuent à se multiplier, afin qu'elle soit de mieux en mieux connue et qu'en particulier, pour ce qui ce du domaine métaphysique, `on cesse d'en parler à partir des critiques de Kant qui ne connaissait guère celui-ci qu'a travers les exposés trop succincts et souvent déformants des Wolfffiens infidèles que sont Baumgarten, Baumeister et Gottsched."

Et c'est dire que le champ des recherches sur Wolff, loin d'être clos, reste largement ouvert, d'autant que son oeuvre est immense et véritablement encyclopédique." (From the Preface by Jean École).

45. Corr, Charles A. 1970. "Certitude and utility in the philosophy of Christian Wolff." *Southwestern Journal of Philosophy* no. 1:133-142.

"Christian Wolff is frequently caricatured as a pedant wholly devoted to rational clarity and certitude. My thesis is that Wolff's obvious interest in mathematical method, the "natural logic" of the human mind, and the rehabilitation of the categorical syllogism is in terms of their service to practical and scientific utility. This contention is supported by the way in which Wolff finds room for probability and the hypothesis in philosophy. The present article sets forth these themes."

46. ———. 1972. "Christian Wolff's treatment of scientific discovery." *Journal of the History of Philosophy* no. 10:323-334.

"Recent interest in a 'logic of discovery' recalls similar themes in the early 18th century. One philosopher who discussed such a problem was Christian Wolff (1679-1754). Wolff sought to formulate an 'ars inveniendi' or art of discovery to supplement his logic. This article describes Wolff's incomplete notion of an art of discovery and suggests that, although he did not achieve his goal, his sensitivity to the many dimensions of the problem may continue to be helpful today."

47. ———. 1973. "The existence of God, natural theology, and Christian Wolff." *International Journal for Philosophy of Religion* no. 4:105-118.

"This article examines some elements of 'natural theology' as conceived by one of its principal proponents, the German philosopher Christian Wolff. Topics considered are Wolff's explicit comments on the character of this discipline and its role in his philosophy, together with his twin a posteriori and a priori proofs of the existence of God. The intention is both historical, in elucidating Wolff's philosophy and some of its implications for the thought of other philosophers of his time,

and problematical, in terms of the adequacy of the natural theology paradigm for a contemporary philosophical approach to the existence of God."

48. ———. 1974. "Did Wolff follow Leibniz?" In *Akten des IV. Internationalen Kant-Kongresses, Mainz, 6-10 April 1974*, edited by Finke, Gerhard, 11-21. Berlin: Walter de Gruyter.

Vol. II Section I.

49. ———. 1975. "Christian Wolff and Leibniz." *Journal of the History of Ideas* no. 36:241-262.

"This article contends that the familiar stereotype of Christian Wolff as little more than a systematizer and popularizer of the doctrines of Leibniz is unsatisfactory both in itself and in the light of the available evidence. This thesis is argued by citing Wolff's own statements concerning his relationship to Leibniz, by noting some historical evidence involving the two men, and by surveying a variety of doctrinal points of difference, largely taken from Wolff's methodology and metaphysics. The effect is not so much to settle the matter but to describe the state of the problem and to call for further study."

"This essay narrates chronologically the life of Christian Wolff (1679-1754), arguably the most eminent German philosopher between Leibniz and Kant, and an important figure in the development of thought about the state and its tasks as well as about the national economy. It is the first longer biographical sketch of Wolff in English, other than skeletal encyclopedia entries, since 1934, and the first original English one since 1910. Special attention is paid to Wolff's formal honors, academic calls, salary questions, and the political, historical, and academic background, and particularly to his ennoblement, as Wolff may well have been the first scholar to receive such a high Imperial recognition on the basis of his scholarly work alone."

Abstract: "How did the traditional doctrine of parts and wholes evolve into contemporary formal mereology? This paper argues that a crucial missing link may lie in the early modern and especially Wolffian transformation of mereology into a systematic sub-discipline of ontology devoted to quantity. After some remarks on the traditional scholastic approach to parts and wholes (Sect. 1), Wolff's mature mereology is reconstructed as an attempt to provide an ontological foundation for mathematics (Sects. 2–3). On the basis of Wolff's earlier mereologies (Sect. 4), the origin of this foundational project is traced back to one of Wolff's private conversations with Leibniz (Sect. 5) and especially to the former's appropriation of the latter's notion of similarity as a means to define quantity (Sect. 6). Despite some hesitancy concerning the ultimate characterization of quantity (Sect. 7), Wolff's contribution was historically significant and influential. By developing a quantitative, extensional account of mereological relations, Wolff departed from the received doctrine and paved the way for the later revival of mereology at the intersection of ontology and mathematics."

"Lo studio offre un esempio di storia comparata dei concetti, esaminando l'origine e l'uso del termine tedesco «Weltweisheit», posto in alternativa al successivo «Philosophie», partendo dalle prime occorrenze in Lutero e, poi, in Wolff, per giungere a Kant, agli idealisti speculativi e, infine, a Bolzano e a Husserl. Una volta che si è affermato il prestito dal greco, quando si incontra «Weltweisheit» è perché è stata compiuta una precisa scelta lessicale: perché ci si vuole riferire (più o meno polemicamente) all'uso linguistico precedente o in particolare alla filosofia wolffiana; oppure perché si vuole porre l'accento sulla filosofia come indagine del mondo, e quindi usa «Weltweisheit» come sinonimo di filosofia (idealista) della natura, per il riferimento alla «Welt» che si perde in «Philosophie»; o ancora perché si intende evidenziare l'aspetto pratico o sapienziale, e a tal fine «Weisheit» risponde allo scopo tanto nella sua valenza prevalente di saggezza, quanto in quella comunque presente di sapienza.

"The scientific method stands at the centre of all Wolff's work. It forms the programme which gives his whole philosophy its decisive characteristics. This monograph offers the first comprehensive analysis of Wolff's method. It enables us to

understand that Wolff's conception of his scientific method was the result of a long process which was still not complete even in his later works. Such a finding contradicts both the prevalent myth of Wolff as a monolithic figure who never underwent any intellectual development and the easy verdict of much scholarship that Wolff's Latin works are simply a repetition of his German ones. At the same time this book emphasises Wolff's importance for the theory of method and broadens our current perspective on the scientific method."

80. ———. 2005. "La traduction de la métaphysique allemande du XVIIIe siècle." *Revue Philosophique de la France et de l'Étranger* no. 195:523-536.

"The major works of XVIIIth century German metaphysics (Wolff, Crusius, Bilfinger, Baumgarten, Meier, Lambert) have not been recently translated into French. The translation of those texts must first take into account the circulation between languages (Latin, German, French) which characterizes them but, above all, should let the proper metaphysical meaning of the notions surge. Thus, one should be led to specify more precisely the meaning of *Deutlichkeit* and *Evidenz*, to distinguish between *Vermögen* and *Kraft*, and to tell whether *Beschaffenheit* means something like *Wesen* or something like *Natur*. One will also have to ponder over *Zusammenhang*, *Erklärung*, *auseinandersetzen*, etc. Such is the price to be paid so as to be able to drag away Wolff and others like him from the unfair disrepute they fell."

"This article is divided into three parts. First, I examine briefly the nature of Wolff's "Ontology", its method, and the place that the discussion of individuality and individuation occupies in the overall structure of the text. Second, I present and characterize Wolff's view of individuation. Finally, I explore the extent to which Wolff's theory of individuation displays the influence of the epistemologism prevalent in modern philosophy. I defend two main theses. First, I claim that Wolff's theory of individuation is a bundle view with a strong accidental component. Second, I argue that the

influence of the epistemologism of modern philosophy is one of the factors that led Wolff to adopt the view of individuation that he did."

The point of departure in Leibniz and Wolff, pp. 11-49.

"In this treatment of Wolff we will consider his use of the Principle of Sufficient Reason under three general headings suggested by his own arrangement of the matter, especially in the *Ontology*. 1. We shall see it presented as one of the twin pillars of philosophy, functioning as an axiom basic to his system, but subordinate to the Principle of Contradiction, and with the ultimate meaning of *ratio* derived from the system itself. 2. This will be followed by a quick glance at Wolff's history of the Principle and his theory of its origin. 3. The

- analysis will conclude with a view of the Principle in the overall context of Wolff's metaphysics and method." (p. 35)

"The background of the paper is the question after the sources of Kantian philosophy in the field of logic. This question refers to a second question whether Kant knew the consequences of the analytic logic of Leibniz directly from Leibniz's writings or indirectly from the logic of Christian Wolff and his adherents. As a result of the investigation it could be demonstrated that there are basic differences between Leibniz and Wolff in the field of logic and that these differences are based in fundamentally different positions of the two philosophers."

- "This paper analyzes how experience, both a priori and a posteriori knowledge, are articulated in Christian Wolff's work. It thus shows that the pattern opposing rationalism to empiricism cannot be applied to the latter. After having studied Tschirnhaus' influence, then Leibniz' on Wolff, the research carries forward on how the latter considers intuitive knowledge. Thus does appear the part played according to Wolff by perception in the building of notions and the status he grants to the latters. Hence the status of both meaning of, and part played by, the "non pure" reason."
115. ———. 2003. "Dieu dans le miroir. Leibniz, Wolff et l'actualisation du monde." *Études Philosophiques* no. 66:371-387.

"This study aims to show how Wolff differs from Leibniz, in the context of *Deutsche Metaphysik* regarding the theme of world actualization. In this new context, the mirror metaphor must be applied more traditionally to all creatures, and the workings of

the best of all possible worlds principle must be reviewed. It is on the basis of these transformations that the theory of universal harmony and the causality problem were transmitted to Kant."

"Wolff's philosophy is often defined by commentators as 'dogmatic Leibnizism'. However, if we try to read the expression in a positive light, we discover what exactly distinguishes Wolff's metaphysics from that of Leibniz, thereby establishing Wolff's real contribution to the history of thought. First of all, the notion of 'dogma' presented in Wolff's philosophy is analyzed. This notion recalls the demonstrative model provided by mathematics and especially, Euclid's *Elements*. According to axiomatic patterns, ontology is thought of as the 'first philosophy'. This aspect cannot be separated from the function of a posteriori knowledge in Wolff's thinking. This permits us to comprehend the function of ontology, Wolff's cosmology, and his invention of the notion of 'teleology'."

 "Was the rejection by Wolff of the classification of the "Leibniz-wolffian philosophy" justified? This article draws attention to the notion of "contingency" in Wolff as distinguishing him from Leibniz. The "possible worlds" of Leibniz are overpopulated with events, those of Wolff are empty. For Leibniz contingent existence is the highest grade of possibility, for Wolff it needs, however, a "complementum possibilitatis." Wolff is not a pure rationalist but he defends the "marriage between ratio and experience"."

"Cosa ha a che fare la logica con l'esperienza umana? Nulla, è la risposta che più ci si aspetta, poiché la logica è una scienza riguardante esclusivamente le proprietà formali della consistenza e dell'implicazione e dunque interamente a priori, mentre l'esperienza umana è contingente e soggettiva e può essere conosciuta solo a posteriori. Voler a tutti i costi legare le due cose porta con sé la costituzione di una prospettiva non solo impervia, ma anche di cattiva fama: lo psicologismo. Eppure, dal punto di vista della psicologia, la logica è una teoria del tutto legittima, una teoria del ragionamento (1). A sua volta, il ragionamento non è altro che l'attività di organismi intelligenti e dei loro strumenti, che sono poi le loro facoltà; e arrivo così all'oggetto che ho indicato dal titolo e al ruolo svolto da Christian Wolff nel proporre una considerazione logica. Il periodo coperto da questo contributo va dal 1690, l'anno di nascita, nello *Essay concerning Human Understanding*, di quella che si suole definire la logica delle facoltà (*facultative logic*), fino al 1800, l'anno di pubblicazione della kantiana *Logik* a cura di Gottlob Benjamin Jäsche. Il primo paragrafo parte dalle definizioni, si potrebbe dire "metafisiche", delle facoltà date da Wolff nella *Psychologia empirica* e nella

Psychologia rationalis, due testi degli anni trenta, il secondo considera Locke e Thomasius come fonti di Wolff, il terzo e il quarto si occupano della "logica" delle facoltà, rispettivamente, nella logica tedesca e nella logica latina; il quinto paragrafo, infine, offre uno sguardo conclusivo sui pensatori dell'illuminismo tedesco più influenzati da Wolff, ovvero Baumgarten, Meier e, appunto, Kant."

"In his late writing, *The Progresses of Metaphysics* (1791) Kant is summarizing all his metaphysics whilst criticizing traditional metaphysics and, above all, the Leibniz-Wolff's system (which is, according to him, its summit). Because *finiteness* of human thinking is occurring, traditional metaphysics -- affair of reason and logic -- is revealed to be *void*. Kant then refunds

metaphysics on that what is *given* (the pure intuitions, the moral law of liberty and, in a certain sense, the empiricism of sensible world) for to hinder its "sinking into the nothing". He distinguishes three states of metaphysics: its "sure progress" in critical transcendental "ontology", its "skeptical stop" in speculative cosmology and its moral practical progress to the supersensible ideas (before all of God and immorality). Metaphysics, elevating so itself to the supersensible and considering from it the sensible world, is then proving itself to be a knowledge which is fundamentally *different* from all ontical empirical knowledge."

159. Senn, Peter. 1997. "What is the place of Christian Wolff in the history of the social sciences?" *European Journal of Law and Economics* no. 4:147-232.

Reprinted in: Jürgen Backhaus (ed.) - *Christian Wolff and Law and Economics. The Heilbronn Symposium* - Hildesheim, Georg Olms, 1998, pp. 37-122.

"This paper explores the place of Christian Wolff in the history of social science in English. The "Introduction" places Wolff in the context of the pre-history of modern social science. Samples are given of the great range of subjects on which he wrote. The importance of the German context is stressed. The second part is devoted to a sample of what the literature contains by and about Wolff. It emphasizes philosophy and science. Part three is a survey of works in the history of the social sciences that mention Wolff. He has a substantial place in political science and psychology, a much smaller place in economics and history, virtually none in anthropology, geography, and sociology. In the applied social sciences, he is found in the history of education. Possible reasons are given. Part four is devoted to the relationships of philosophy and philosophers in the pre-history of the social sciences. They were important in several different ways because they both shaped and reflected how many people thought about science and social problems. The "Summary and Conclusion" describes the present status. His contributions are summarized. He was a pivotal figure in the making of the German conception of social science. This is a preliminary study emphasizing the issues and problems that a

more detailed examination would require. Several conventional judgments are challenged and possibilities for further research suggested."

172. Vitadello, Anna Maria. 1973. "Experience et raison dans la psychologie de Christian Wolff." *Revue Philosophique de Louvain* no. 71:488-511.

"Émile Ravier, auteur de la celebre bibliographie de Leibniz, a laissé un très riche ensemble de manuscrits sur Wolff, ainsi qu'une traduction complete en français de l'ouvrage de Mariano Campo, *Cristiano Wolff e il razionalismo precritico*. On a montré les rapports de Wolff à Leibniz d'après les manuscrits d'Émile Ravier, qui revelent que Wolff ne voulut jamais être le porte-parole de la pensée leibnizienne en Allemagne. Il serait possible à partir de là de detruire le mythe du "leibniziano-wolffisme" dont parle Kant pour le refuter."

"Cet exposé de la psychologie de Christian Wolff adopte un point de vue descriptif et épistémologique. Le but de l'auteur fut de saisir la psychologie wolffienne dans l'intentionnalité de son langage, qui, tout en restant philosophique et même substantialiste, laisse entrevoir une direction assez nette dans l'ensemble. Celle-ci prefigure, d'une façon lointaine mais significative, la psychologie de laboratoire; c'est-a-dire une science qui traite empiriquement de l'expérience psychologique au moyen de l'introspection et sur le modèle des sciences de la nature, en s'appuyant sur un dualisme tranché. Tout en suggerant les apories où s'engage une methode introspective en

psychologie, cette analyse s'est tenue cependant a un propos introductif."

"In this paper the possibility of comparing some speculative positions of Leibniz and Wolff concerning logic and theory of knowledge is considered on the basis of a reading of the *Deutsche Logik* especially as it refers to Leibniz. The affinities and above all the diversities of the conclusion, to which the two philosophers come, emerge from this reading. Theoretical presuppositions, such as the reduction of the critical exigency to Wolff's method or the method of analysis in Leibniz, are to be seen against Cartesian teaching. While undeniably ignoring the most original acquisitions of Leibniz's logic and theory of knowledge, from the symbolic assumption to implicit thoughts, and under the influence of English empiricism, Wolff elaborates a complex notion of experience which aims at its own autonomous validity."

Wolffiana: A mult-volume collection of Essays on Christian Wolff

1. Cataldi Madonna, Luigi, ed. 2005. *Wolffiana I. Macht und Bescheidenheit der Vernunft*. Hildesheim: Georg Olms.

Beiträge zur Philosophie Christian Wolffs. Gedenkband für Hans Werner Arndt, mit acht Rariora.

Vorwort; Hans Werner Arndt: Nachruf; Einleitung; Ehrenpromotion von Jean École; Plenums- und Abendvorträge.

"Christian Wolff to whom Hans Werner Arndt devoted an important part of his life's work provides the thematic frame for this collection of commemorative essays. The articles deal with the role Wolff played in the history of philosophy, and various aspects of his metaphysics, logic, epistemology and practical philosophy. Thus, the collection becomes part of the Wolff revival initiated by Hans Werner Arndt about two decades ago.

The authors, who share Arndt's commitment to the German philosopher, pay tribute to Arndt for the rediscovery of Christian Wolff and his work, which he made available to philosophical research.

The supplement of this volume consists of eight lesser-known essays by Arndt. They are to demonstrate the scope of his interest in philosophy, which went far beyond Christian Wolff."

7. Marcolungo, Ferdinando, ed. 2007. *Wolffiana III. Christian Wolff tra psicologia empirica e psicologia razionale*. Hildesheim: Georg Olms.
- Atti del seminario internazionale di studi, Verona, 13-14 maggio 2005.

"The comparison of *Psychologia empirica* and *Psychologia rationalis* is one of the themes which are of fundamental importance to the understanding of Christian Wolff's philosophy. As is generally known, the terms themselves go back to the two major Latin works first published in 1732 and 1734. Contrary to the prevalent opinion which has viewed the difference between *Psychologia empirica* and *Psychologia rationalis* as purely a matter of tradition, here it is viewed rather as a distinction formulated in a specific way for Wolff and arising from the encounter between modern metaphysics and new scientific methods. Following the celebrations in 2004 to mark the 250th anniversary of Wolff's death, a scholarly conference took place at the University of Verona in 2005 with the aim of reconstructing this theme for the interpretation of a way of thinking which is too easily interpreted as the clearest example of an abstract and dogmatic rationalism. In the essays published here attention is drawn instead to the central role of experience which allows a continual comparison of psychic facts and philosophical considerations. From this comes the importance of the comparison with Locke and Malebranche, as well as analyses of what are known as *ideales sensuales* or typical processes of imagination and of symbolic language, and the possibility of the application of mathematics to psychometrics. Historically-based comparisons (Alsted, Baumgarten, Meier, Kant, Herbart) are also present, illuminating the afterlife of a way of thinking which surely prepared the ground for the development of a new philosophical anthropology."

8. Fabbianelli, Faustino, Goubet, Jean-François, and Rudolph, Oliver-Pierre, eds. 2011. *Wolffiana IV. Zwischen Grundsätzen und Gegenständen. Untersuchungen zur Ontologie Christian Wolffs*. Hildesheim: Georg Olms.

"This volume embodies the new and lively interest in Christian Wolff which has been continuously developing over recent decades. It also bears witness to the rediscovery of ontology, a field of knowledge which has become increasingly visible, especially in recent years, in international philosophical reflection. The volume contains papers in German, French and Italian given at the international conference "Età dei Lumi e filosofia. L'ontologia di Christian Wolff", held in Parma from 19-21 February 2009. It is divided into six sections: "Structure and properties of Wolff's ontology", "'Signs'", "'Designation' and 'Ficta'", "Ontology in Wolff's thought", "Ontological debates", "The fate of Wolff's ontology" and "Wolff's ontology in the 20th century". The essays are complemented by an editors' introduction, an extensive bibliography and an index of names and subjects."

Selected Bibliography of Jan A. Aertsen. Writings in English

Introduction

Jan Adrianus Aertsen (Amsterdam, 1938 - 2016), formerly professor of Medieval Philosophy and Modern Catholic Philosophy at the Free University of Amsterdam (since 1984), was the director of the *Thomas Institute* in Cologne (Germany) until 2003; his areas of interest were the history of transcendentals, the philosophy of Thomas Aquinas and Meister Eckhart.

A complete bibliography of his writings up to 2002 was published by Sabine Folger-Fonfara in:

Martin Pickavé (ed.), *Die Logik des Transzendentalen. Festschrift für Jan A. Aertsen zum 65. Geburtstag*, Berlin: Walter de Gruyter, 2003, (Miscellanea Mediaevalia, 30), pp. XXIII-XXXII.

I give an updated bibliography with the omission of the publications in Dutch and of some minor writings.

Books authored

1. Aertsen, Jan A. 1984. *Medieval Reflections on Truth. Adaequatio rei et intellectus*. Amsterdam: VU Boekhandel.

Inaugural address on the occasion of his taking up the chair of Medieval philosophy of the Free University in Amsterdam on November 9, 1984.

"There are certain basic words which form the undertone of our thinking and of the manner in which we experience things. These basic words are not unchangeable; they often receive a different content . . . One such basic word is 'truth'."

This is the start of the report of the Synod of the Reformed Churches in the Netherlands, issued in 1981, "On the nature of the authority of Scripture".(1) How does it happen that the Bible is read so differently? In searching for an answer to this problem, the report adopts a course remarkable within the Reformed tradition. It poses a truly philosophical question: "What is truth?" That the Bible is read differently is related to the fact that not all people mean the same by what they call "truth".

If I want to raise this same question today, then I am in good company - though I must add at once that it is the matter rather than the company that motivates me. From the outset, that is, as early as with the Greeks, philosophy and truth are seen in an intimate connection. Aristotle, for example, describes philosophy as the "theory" of truth.(2) It is in the Middle Ages, however, that for the first time treatises appear under the title of *De veritate*, where truth itself is explicitly made the object of reflection. I would like to draw your attention to medieval observations on the query about truth.

'*Adaequatio rei et intellectus*' as the medieval formula of truth and the criticism of it.

Is an exposition on this theme worthwhile, though? Do we not already know what truth was in the Middle Ages? Probably there is no formulation in scholastic thought that has become more widely known. Even those who did not enjoy the privilege of a classical education are able to say that truth is *adaequatio rei et intellectus*. What is meant by that seems to be clear. The formula appears to express the "natural" idea of truth, i.e., the correspondence between thought and reality. The determination of truth as *adaequatio* has become so self-evident that, as the *Handbuch philosophischer Grundbegriffe* states, it is the point of depart and reference for all contemporary discussions on truth.(3) It can be added that this occurs mostly in a critical sense. Two examples may suffice.

In the above-mentioned synodal report the first chapter sketches the changes in the concept of truth over the course of time. The so-called subject/object relation underlies the entire

exposition, apparently from the unquestioning presupposition that this relation is fundamental to the phenomenon of truth as such. The changes in the concept of truth, then, are described in three phases. Successively the report speaks of "objective truth", "subjective truth" (in systems of thought like idealism and existentialism), and finally, of a newer conception called the "relational" concept of truth - the objective and the subjective in one. This means that "truth always occurs within a relation, within the 'relatedness' of man to something else." (4) As the report claims, moreover, this relational concept of truth links up with what the Bible calls truth.

The objective concept of truth - the most current idea of truth - is represented by the medieval formula, phrased "truth is the correspondence of the human way of picturing things with the matters themselves." The human way of imagining things, the human consciousness, is like a mirror able to reflect "the objective state of affairs". This conception of truth is not only ascribed to Thomas Aquinas, but to a great variety of people: ". . . Greek philosophers, . . . the classical Reformed theologians, . . . the logician Bertrand Russell, . . . the Marxist Lenin". The drawback of this conception, in the assessment of the report, is that man is very passive. Does knowing the truth not demand man's activity, research; and wrestling? Without a human spirit there is no truth.

An entirely different criticism can be found in Heidegger, who dealt most thoroughly with the western conception of truth. The lectures he delivered at the University of Freiburg during the winter semester of 1942-43 appeared in 1982 in the *Gesamtausgabe* of his works under the title *Parmenides*. (5) Strictly speaking, the title is misleading for actually these lectures deal with the essence of truth, the identical subject that engaged Heidegger in writing *Vom Wesen der Wahrheit*, which dates from the same time. In the lectures, however, there is "a more direct confrontation with the history of western thought". (6) In his view a change in the essence and "locus" of truth has evolved in philosophy. Truth becomes "rightness" (*Richtigkeit*) of knowing and asserting; it is no longer "unconcealedness" (*aletheia*) of being, as it was for the early Greek thinkers. The

medieval formulation fixes this essential transformation. "
`*Veritas est adaequatio intellectus ad rem*' Im Sinne dieser
*Umgrenzung des Wesens der Wahrheit als Richtigkeit denkt
das gesamte abendländische Denken von Platon bis zu
Nietzsche.*" (7) Truth becomes a characteristic of a mental act
within man. Inevitably the problem then arises how a psychical
process in the inner man can be brought into agreement with
things outside. (8) This traditional and current conception of
truth, however, is derivative (*abkünftig*). Parmenides' thought
reveals "the road of truth, far away from the beaten track of
men". (*Fragm. B 1, 27*). It can give us a reminder of the
forgotten "primordial" sense of truth, the unhiddenness of
being, which is the ground of the possibility of rightness.

But when the proper function of philosophy is to "re-*mind*", we
are also allowed to ask of this twofold criticism: do we recall the
meaning of truth as *adaequatio rei et intellectus* at all? Does it
have a merely derivative sense, i.e., the rightness of thought?
On the other hand, does the formula imply that truth is
"reflection" and leave the human mind out of account? These
questions lead, me this afternoon to focus on medieval views of
truth, in which the idea of the *adaequatio* plays a central role."
(pp. 3-5)

Concluding observations.

Looking back over the course of this discussion, we may
conclude that the criticism of the medieval *adaequatio*-
formula, outlined at the beginning, did not grasp its original
meaning. Neither is this conception concerned with truth in a
merely derivative sense, nor does it ignore man's activity. For in
the previous analysis we observed that Thomas's notion of true
includes first, transcendentality, second, relationality, third,
anthropocentrism, fourth, the fulfilment in an act of the
intellect, fifth, the necessity of a norm and measure, sixth the
intrinsic connection with the word, seventh, the relation to the
divine Logos, and finally, the identity with God Himself. These
moments are implicitly or explicitly expressed in the formula
adaequatio rei et intellectus, in which every term is charged
with meaning.

Compared to the breadth of this conception, modern theories appear to be a reduction of the integral process of truth. It is philosophically important to note that in the medieval approach what is fundamental to truth is not the duality of subjective and objective from which then their togetherness has to be conceived. Rather, it is the primordial conformity of being and intellect that is fundamental to truth. Indeed, as we have seen, being and thinking are the same in the Origin.

Another remarkable aspect in this medieval view is the attempt to integrate philosophical and religious truth. This endeavour runs parallel to the philosophical introduction of the synodal report of the Reformed Churches, with which I began this address. Its intention is that the "relational" concept of truth links up with what the Bible calls truth. Thomas's conception lies concretely in the notion of word, a good example of the way in which his understanding of truth is deepened by a theological reflection. But that which fundamentally enables the integration is the basic idea of the transcendental of truth. This conception underlies his entire discussion.

The medieval doctrine of the transcendentals - being, one, true, good, and beautiful - forms "the heart of scholastic ontology and metaphysics." (93) This doctrine will be the subject of my research over the coming years. Today I wanted to present you with a sample of it. (94)

2. ——. 1988. *Nature and Creature. Thomas Aquinas's Way of Thought*. Leiden: Brill.

Translated by Herbert Donald Morton from the Dutch Dissertation *Natura en Creatura. De denkweg van Thomas van Aquino* (Amsterdam, 1982) .

Contents: List of Abbreviations XI; Preface XIII; Introduction 1; 1. From questioning towards knowing 7; 2. By the way of predication (*Per via predicationis*): Definition and participation 54; 3. By the way of causality (*Per viam causalitatis*) 92; 4. The way of truth (*Via veritatis*); 5. By the way of reason (*Per viam rationis*) 191; 6. Hodo-logy 230; 7. Principium 279; 8. Finis 337; Epilogue 391; Bibliography 397; Index Rerum 409-413.

"The study presented here is the revised version of a doctoral dissertation that was submitted to the Central Interfaculty (Faculty of Philosophy) of the Free University in Amsterdam in fulfillment of the requirements of the Doctorate of Philosophy and defended publicly on April 16, 1982. That this dissertation was originally published at a Protestant university may be considered a sign of common responsibility for a Doctor of the still undivided western Christendom." (from the Preface).

"Our aim was to develop an interpretation of the inner coherence and direction of Thomas's philosophizing. This objective was pursued by following his way of thought and by seeking to fathom the motives of his quest for intelligibility. Now that this inquiry has been brought to an end, it turns out that our investigation of Thomas's way of thought has proceeded according to the order of the transcendentals "being," "true," and "good." Their logical order, which Thomas sketches, is that "being" is the first and that "the true" and "good" come after it, in this order. For, so he argues in *S. Th.* I, 16, 4, "knowledge naturally precedes the appetite." "Being" is the first, "good" the ultimate.

From the triad "being"- "true"- " good," their convertibility, and their conceptual nonidentity a number of coherences can be brought to light that were not always signaled or worked out by Thomas himself. They are nonetheless most illuminating for the movement of Thomas's thought, and also for the course of our investigation. These coherences show that in what has preceded, a multiplicity of themes has been traversed according to a definite pattern." (p. 391)

(7) The result of Aristotle's exposition in *Metaph.* II is the thesis: "There is the same disposition of things in being and in truth" (4.3.1.). On the analogy of this thesis Thomas himself frames the statement: "There is the same disposition of things in goodness and in being" (8.1.1.). A hierarchical order can be found in being, the true, and good. Whatever is in any way and is true and is good is to be reduced to the first Being, to the maximally True and to the ultimate Good, namely, God. The causal relation of God to the world is therefore threefold. He is 'causa efficiens', 'exemplaris', and 'finalis'. With this threefold causality Thomas connects the triad of transcendental determinations 'ens (or: unum) - verum - bonum'.

This coherence of the transcendentals with the divine causality makes clear that the "anthropocentrism" in Thomas's doctrine is to be specified: man is marked by a transcendental openness, certainly, is "in a certain sense all things," but not in a constitutive sense. It is typical of the medieval approach to inquire into the origin of being, into the ground of the truth and goodness of things. This origin and ground is conceived as "creation." Every being is true and good because it is thought and willed by the Creator. The relational character of the transcendentals "true" and "good" is ultimately founded in the relation to the divine intellect and will.

The divine foundation of the transcendentals is connected by Thomas with the circulation in God Himself, the eternal coming forth of the Persons. "Being" (or: "one") is attributed by appropriation to the Father, "true" to the Son, and "good" to the Spirit. This connection with the divine Trinity provides the basis for developing a trinitarian interpretation of that which is creaturely. In the conceptual nonidentity of the transcendentals 'ens - verum - bonum' the threefold structure of that which is comes to expression. Viewed in the light of the Triune causality, the different components of that which is concur into a unity.

"Being," "true," and "good" are not only common names but also divine names. The relation of what is common to what is proper to the Transcendent is conceived by Thomas in terms of

"participation." He subscribes to Aristotle's criticism of this Platonic idea by stating that there

are no separate, self-subsisting Forms of natural things. But Thomas, in the prologue to his commentary to pseudo-Dionysius's *De divinis nominibus*, recognizes the legitimacy of this doctrine with regard to what is most common. Only in the case of transcendental forms can a first be posited which is the perfection essentially and as such subsistent. All else must consequently be understood as participation in this perfection. Against this background it becomes understandable that Thomas conceives "creation" preeminently as "participation."

The doctrine of the transcendentals is found to have an important, integrating function in Thomas's way of thought. In man's quest for intelligibility, the transcendentals present a comprehensive perspective on nature and creature. Their circular ways come to an end in the return to the Origin, in which "being," "true," and "good" are perfectly one." (pp. 395-396).

Spanish translation: *La Filosofía medieval y los trascendentales. Un estudio sobre Tomás de Aquino*, Pamplona: Eunsa 2003.

"The title of this book speaks of "Medieval Philosophy" and "the Transcendentals." It can be read as affirming that there is a philosophy in the Middle Ages and that this philosophy

encompasses a doctrine of the transcendentals alongside many others.

But our aims in this work are more ambitious. Our title means to suggest a more intrinsic relation between the terms "Philosophy" and "Transcendentals" than mere juxtaposition. We want to show that philosophy in the Middle Ages expresses itself as a way of thought which can be called "transcendental." The present book may therefore be seen as a contribution to the discussion of the question: what is philosophy in the Middle Ages? A recent review of literature offers a telling example of the relevance of this question: "Unmistakably philosophical research about the Middle Ages has fallen into a crisis (...) It is even impossible to reach agreement on the premise what philosophy means in the Middle Ages.(1) "

(1) A. Speer and J.H.J. Schneider, "Das Mittelalter im Spiegel neuerer Literatur", in: *Theologische Quartalschrift* 172 (1992), p. 235.

(...)

In this introductory chapter I want first to analyze three different answers to the question "Is there a medieval philosophy?" that are (or were) important for the place of the Middle Ages in the history of philosophy. This analysis affords me an opportunity to take stock of the current study of medieval philosophy (0.1.-0.3.), I will then explain how I myself approach the period, indicating what, in my view, is constitutive for the thought of the Medium Aevum (0.4.). This final section will clarify the intention of this book." (pp. 1-2).

(...)

"Is there a medieval philosophy? Thus far I have discussed three significant conceptions, those of Gilson, of the Cambridge History and of De Libera. They have made substantial contributions to the study of medieval philosophy, but I have formulated objections to all three because they do not provide sufficient insight into the philosophical dimension of medieval thought. Now in order to make some progress in this question, I am interested in statements by medieval writers in which they

personally indicate what they consider to be fundamental to their thought or what they regard as decisive for the possibility of philosophy. Such "ego" statements are relatively rare among Scholastic authors, but they are not altogether absent. I mention four examples, all taken from *theologi*. [The authors discussed are Bonaventure, Thomas Aquinas, Duns Scotus and Meister Eckhart.] (p. 17).

"The transcendental way of thought is neglected in the conceptions of medieval philosophy discussed above. Although the doctrine of the transcendentals is the core of medieval metaphysics, the doctrine is not considered at all in Gilson's *The Spirit*. In the *Cambridge History* it receives only one brief reference (p. 493), and it remains outside of consideration in De Libera's determination of the place of medieval philosophy. One of the objectives of the present study is to show not only that the "forgotten" doctrine is important for our understanding of medieval philosophy, but also that the idea of medieval philosophy as a transcendental way of thought does not exclude the other conceptions, but incorporates them.

The conception of medieval philosophy as transcendental thought expresses already in its terminology a moment of continuity with modern philosophy, for the term 'transcendental' is generally reserved for the way of thought inaugurated by Kant.

Kant brings the project of his three Critiques together under the title of "Transcendental Philosophy," but he himself recognizes that this notion has a long tradition. In the *Critique of Pure Reason* (B 113) he points to the 'transcendental Philosophy of the Ancients' and quotes the proposition "so famous among the Schoolmen: quodlibet ens est unum, verum, bonum," At the same moment, however, he distances himself from the traditional conception. "These supposed transcendental predicates of things are nothing else but logical requirements and criteria of all knowledge of things in general" (B 114) . 'Transcendental' in the Kantian sense is concerned with the mode of our cognition of objects, insofar as this mode of cognition is possible a priori.

The Kantian perspective has strongly affected the study of medieval transcendental thought. An example of the connection of medieval thought with "modernity" is to be found in Kurt Flasch's important study on Nicholas of Cusa which contains a chapter, entitled "Metaphysics and Transcendental Thought in the Middle Ages. (56) Flasch does not refer here to the doctrine of the transcendentals, for he wants to take the term 'transcendental' exclusively in a Kantian sense, that is, as transcendental-logical. (57) Every transcendental philosophy, in his view, is based on the idea that the world of objects is constituted by the human mind. Transcendental thought in the Middle Ages is therefore related to those thinkers who acknowledge a constitutive function of the human mind, such as the German Dominican Dietrich of Freiberg (d.

after 1310), They show "a much more modern Middle Ages than it is generally supposed. "(58)

Yet this transcendental-logical approach seems questionable from a historical point of view. It makes the Kantian position the exclusive criterion for determining what transcendental thought is in the Middle Ages. Medieval philosophers, however developed their own concept of transcendentalism, and it is this way of thought that Kant called the 'Transcendental Philosophy of the Ancients'.

It would be more appropriate historically and philosophically to consider the medieval doctrine as a distinctive form within the tradition of transcendental philosophy.

The French scholar S. Breton wrote in 1963 that the doctrine of the Transcendentals is "classic and yet poorly known." (59) His observation still holds. We only possess two general studies on this subject, the first by H. Knittermeyer, the other by G. Schulemann.

Both studies go back to the 1920's and must be regarded as out of date. Their main shortcomings are that they do not pay sufficient attention to the historical and doctrinal background of the formation of the doctrine in the thirteenth century and fail to give an explicit analysis of the notion of

transcendentality. A new history of transcendental thought in the Middle Ages is required.(61)

The focus in this book will be on Thomas Aquinas (1224/5-1274), a representative of medieval thought, whose importance for the transcendental way of thought is often neglected or underestimated. Although libraries have been written on his thought, and although we possess various studies of some aspects of his doctrine of the transcendentals, it is striking that a comprehensive study of Aquinas's doctrine is lacking. This book will fill this lacuna and wants to show that the doctrine of the transcendentals is not, as has been suggested, "a small, rather insignificant part" of his metaphysics," (62) but is of fundamental importance for his thought. By the same token, the study will substantiate in an exemplary way the claims made in this section concerning the conception of medieval philosophy as a transcendental way of thought.

Thomas Aquinas was, however, not the first to formulate the doctrine of the transcendentals. The beginning of the doctrine is to be located in the first half of the thirteenth century; it coincides with the introduction of a voluminous body of new philosophical literature into the Latin West. Not only the entire corpus aristotelicum, but also the writings of Arabic philosophers become available in translation at this time. In the first chapter we will analyze the beginning of the doctrine of the Transcendentals. It is, of course, a requirement of modern scholarship on Thomas to place his philosophy in its proper historical context. The first chapter provides the background for Thomas's transcendental thought and enables us to see its traditional and innovative aspects," (pp. 21-24)

"The present work represents the completion of a research project that has engaged me intensively throughout my scholarly life. Its origins reach back to my inaugural address on the occasion of taking up the Chair of Medieval Philosophy at the Free University of Amsterdam (1984). At the end of this lecture, *Medieval Reflections on Truth, 'Adequatio rei et intellectus'*, I concluded that the idea of the transcendentality of truth underlies these reflections and announced that the medieval doctrine of the transcendentals "will be the subject of my research over the coming years".

This programmatic statement, typical of an ambitious new professor, turned out to be a fortunate choice. The choice had been motivated by a twofold interest. Historically, the doctrine of the transcendentals is an innovative contribution of the Middle Ages to the history of philosophy; the origin of transcendental thought is not to be sought in modern philosophy but is medieval. Systematically, the transcendental terms "being", "one", "true" and "good" concern what is first *in* a cognitive respect and what is fundamental; they express "basic" words of philosophy.

The project resulted in a large number of studies, including the monograph *Medieval Philosophy and the Transcendentals. The Case of Thomas Aquinas* (1996). In the Introduction, I advanced the provocative thesis of an intrinsic connection between medieval philosophy and transcendental thought, already suggested by the main title of the book. My argument was that the theory of the transcendentals is essential for insight into the properly *philosophical* dimension of medieval thought, which is often developed in a theological context; medieval philosophy *can* be regarded as a way of transcendental thought. The thesis provoked critical comments and questions: does it not presuppose an "essentialist" conception of medieval philosophy and ignore its real diversity? In my view, the critique was based on a misunderstanding, which could only be removed by providing a complete history of the doctrine of the transcendentals that shows the multiplicity of transcendental thought in the Middle Ages.

In 2003, on the occasion of my retirement as Director of the Thomas Institute at the University of Cologne, thirty-five colleagues, friends and students offered me an impressive Festschrift with the title *Die Logik des Transzendentalen*. The editor of the volume expressed the hope (p. XXI) that the various contributions would stimulate the realisation of the planned history of the doctrine of the transcendentals in a not too remote future. The Festschrift was indeed both a tribute and a stimulus." (from the Preface)

1. Aertsen, Jan A. 1985. "The Convertibility of Being and Good in St. Thomas Aquinas." *New Scholasticism* no. 59:449-470.

"In many medieval thinkers, e.g. Alexander of Hales, Bonaventure, Albert the Great, Thomas Aquinas, the statement can be found: "being and good are convertible" (*ens et Comm convertuntur*).⁽¹⁾ That is to say, "being" and "good" are interchangeable terms in predication (*converti enim est conversim praedicari*).⁽²⁾ Wherever "being" is predicated of something, the predicate "good" is involved as well.

That must imply that "good" is here not a concept that adds a real content or a new quality to "being", as a result of which "being" is restricted. For in that case there would be no question of convertibility.⁽³⁾ "Good" is an attribute which pertains to every being, it is a property of being as such, a "mode that is common, and consequent upon every being." In other words, "good" is coextensive with "being", it is one of the so-called

transcendentie which, since Suarez, are usually referred to as "transcendentals".

2. ——. 1986. "The Circulation-Motive and Man in the Thought of Thomas Aquinas." In *L'homme et son univers au moyen âge. Actes du septième congrès international de philosophie médiévale, 30 août - 4 septembre 1982, Vol. I*, edited by Wenin, Christian, 432-439. Louvain-la-Neuve: Peeters.

"Little attention is usually paid to this divine circular motion in the interpretation of Thomas' work, even though Thomas himself says in the prologue to the first book of his *Commentary on the Sententiae* that this bringing forth is the «reason» (*ratio*) of every subsequent process. The *circulatio* within God is the archetype of the work of creation. A trinitarian interpretation of Thomas' thought, albeit unusual, finds support in this idea. And his reflections on the originating order of the Trinity could also open up fruitful perspectives for further thought about (the problematics of) his thought.

In his explanation of the Trinity, Thomas gives a new elaboration of the concept of relation. In the divine *circulatio* there are relation of primordiality which are subsistent : «In

God relation and essence do differ in being from each other, but are one and the same» (*S. Th.*, I 28, 2). Relation is not an accidental category of substance; being and relation belong «originally» together.

This idea has remained outside of Thomas' metaphysics of creation. But it is this model of relation, which is philosophically important for a renewed reflection on created being. The relation of the creature to God is not accidental as Thomas claimed (18), but for the creature to be is to be in relation. At precisely this point a more comprehensive notion of finite being can be developed. There is the three-foldness in the creature: of subsistent-being, what-being, and act-being. These components agree in *esse*, which is a being from, through, and to God. In relationship to the Triune-Origin there is unity.

In man the Trinity is represented in a distinctive *way*, viz., according to the identical character of activity (*secundum eandem rationem rationis*, *De potentia*, 9, 9). The processes of intellection and volition are found in man. Man, who is a person, is therefore *imago Trinitatis*. It is in this idea that the «anthropocentrism» of medieval thought most clearly comes to the fore.

The manner, however, in which man's movement to God is worked out by Thomas, formed a second «crux» in his thinking. Here again we find in his elaboration of the idea of relation, possibilities for giving his penetrating intuition of the circular motion of egress and return a more integral meaning.

Man is destined to one purpose, viz., communion with God. His drama consists not so much in the natural inability to close the circle through knowing, as in the aversion from his own essentially relational mode of existence. The circular motion thereby comes to stand in a concrete salvation history. This moreover offers the possibility of doing justice to the internal coherence of the structure of the *Summa Theologiae*. In the prologue to bk. 1, 2, Thomas indicates this design: the first part deals with God, and «the procession of all creatures from Him»; the second with the movement of the rational creature toward Him; and the third with Christ who as man is the way

(*via*) of our tending to God. The second person of the Trinity, the Word, became flesh in order to show mankind the way (back) to its Origin. True *human-being* is possible only by God's grace.

In summary: the new perspective which Thomas' reflection on the faith mystery of the divine process opens up, is philosophizing oriented to the perfection of being-itself in being toward something else." (pp. 438-439)

Reply to the essay by Arvin Vos: *As the Philosopher Says: Thomas Aquinas and the Classical Heritage*, same volume, pp. 69-82.

"Arvin Vos has written an excellent paper on Thomas Aquinas and the classical heritage. His paper shows admiration for and affinity with Aquinas's achievement. I share this admiration; Aquinas is a great thinker. Now it is a mark of great thinkers that the content of their thought is so full and rich that one can put emphasis on different aspects. And this is what I intend to do in my response by making some comments and raising some questions. My reflections, stressing a number of underlying ideas, are primarily meant as a supplement to what has been said.

In order to present my remarks in a systematic and coherent way, I take as a starting point a statement of Aristotle which I will develop in four steps, more or less related to the main parts of Vos's paper: (1) the background of the thirteenth century; (2) Thomas's attitude towards Aristotle; (3) the relationship between faith and reason; and (4) the conclusion concerning the question whether **the** classical heritage can be integrated in the Christian position." (p. 83)

8. ———. 1991. "The Medieval Doctrine of the Transcendentals. The Current State of Research." *Bulletin de Philosophie Médiévale* no. 33:130-147.

"An important, new development in medieval philosophy was the constitution of the doctrine of the transcendentals (DT) in the thirteenth century. The term « transcendental » - the medievals themselves speak of *transcendens* -- suggests a kind of surpassing. What is transcended are the special modes of being that Aristotle called the « categories », in the sense that the transcendentals are not restricted to one determinate category. « Being » and its « concomitant conditions », such as « one », « true » and « good », « go through (*circumeunt*) all the categories » (to use an expression of Thomas Aquinas). DT is thus concerned with those fundamental philosophical concepts which express universal features of reality.

The doctrine played a prominent role in later medieval thought. The study of it is essential for our understanding of philosophy in this period, since, according to J.B. Lotz, [« Zur Konstitution der transzendentalen Bestimmungen des Seins nach Thomas

- von Aquin », in P. Wilpert(ed.), *Die Metaphysik im Mittelalter* (Miscellanea Mediaevalia, Vol. 2). Berlin 1963, pp. 334-340] p. 334), DT is « the core of Scholastic ontology and metaphysics ». Remarkably, however, research on this doctrine has hitherto been rather limited. The observation, made by the French scholar S. Breton [« L'idée de transcendantal et la genèse des transcendants chez Saint Thomas d'Aquin » in *Saint Thomas d'Aquin aujourd'hui*. Paris 1963, pp. 45-74] p. 45) in 1963, that DT is « classic and yet poorly known », still holds. An example of its neglect is the *Cambridge History of Later Medieval Philosophy* (ed. N. Kretzmann, 1982) that contains only one brief reference (p. 493, to Ockham). In this contribution I want to take stock of the current state of research on DT, to assemble and discuss the relevant literature, to indicate certain lacunas, and to make some suggestions for further research." (p. 130).
9. ——. 1991. "Good as Transcendental and the Transcendence of the Good." In *Being and Goodness*, edited by MacDonald, Scott, 56-73. Ithaca: Cornell University Press.

"Conclusion.

In *ST* Ia.6.4 ("Whether all things are good by the divine goodness?") Thomas concludes that the Platonic view appears to be unreasonable in affirming that there are separate forms of natural things subsisting of themselves; still, it is absolutely true that there is something first that is essentially being and essentially good which we call God. Hence, everything can be called 'good' and 'being,' insofar as it participates in the first being, which is essentially good. To this conclusion Thomas still adds, however, an important remark. That every being is good through an external cause by no means excludes each thing being called through a goodness that is formally its own goodness. "And so of all things," Thomas ends, "there is one goodness, and yet many goodnesses."

This text can serve as a summary of our analysis, which is focused on the relation between the good as transcendental and the transcendence of the Good. I want to emphasize four points of philosophical importance in Thomas's reflection on the good.

First, Thomas really understands the good transcendentally by establishing an intrinsic connection between being and goodness. To be is the actuality of everything and thereby a good proper to each thing. Things are called good in virtue of an inner goodness. It is characteristic of finite things that although being and good are convertible, there is in them nonetheless a nonidentity between being absolutely and good absolutely.

Second, because the good is transcendental, Thomas applies to it the predication essentially or by participation. This predication expresses the transcendence of the divine goodness and the creaturely character of the goodness of other things. That which is in any way good must be reduced to what is good by its essence as to its origin. That things are good through an intrinsic goodness is not incompatible with their dependence on that which is the good itself.

Third, from a historical point of view, Thomas effects a kind of synthesis between the Aristotelian way of thought and Aristotle's conception of the good, on the one hand -- the good is something common and the essential forms of things are inherent in them -- and the Platonic way of thought and Plato's conception of the good, on the other hand -- the Form of the Good is "separate" from particular goods.

Fourth, Thomas effects a synthesis in still another respect. Characteristic of Boethius's position, according to MacDonald, (29) is the creation approach to explaining the relation between being and goodness. Aristotle's view, in contrast, exemplifies what might be called the nature approach. This approach explains what it is for a thing to be good by referring to the nature of the thing. "The historical significance of *DH* [Boethius's *De Hebdomadibus*] MacDonald says, "consists largely in its offering an interesting account of the nature of goodness which is possibly incompatible ... with the sort of account medieval philosophers found in Aristotle." Thomas's reflection on the claim *that* all things are good and on question *how* they are good can be regarded as a philosophically original synthesis of the nature approach and the creation approach."

(30) The nature approach explains the intrinsic goodness of things, for 'nature' says what beings are *in themselves*; it always refers to an intrinsic principle. Now, it is Thomas's transcendental claim that everything is good, insofar as it is. Things are good (in a certain respect) in virtue of their own being. So all things owe their being good to their nature. The creation approach explains that everything is called 'good' through an external cause, for 'creature' says *being-related* to the Origin of things. Creation expresses that things received their being and goodness from another. Their goodness consists in their relation to the transcendent good, that is, in their participation in what is goodness itself." (pp. 72-73)

(29) MacDonald "Boethius's Claim That All Substances Are Good." *Archiv für Geschichte der Philosophie* 70:345-79, 1988. (See also the Introduction in this volume.)

(30) The relation between nature and creature in Thomas is the central theme of Aertsen 1988a [*Nature and Creature*]

12. ———. 1992. "Truth as Transcendental in Thomas Aquinas." *Topoi. An International Journal of Philosophy* no. 11:159-171.

"Aquinas presents his most complete exposition of the transcendentals in *De veritate* 1, 1, that deals with the question "What is truth?". The thesis of this paper is that the question of truth is essential for the understanding of his doctrine of the transcendentals.

The first part of the paper (sections 1--4) analyzes Thomas's conception of truth. Two approaches to truth can be found in his work. The first approach, based on Aristotle's claim that

"truth is not in things but in the mind", leads to the idea that the proper place of truth is in the intellect. The second approach is ontological: Thomas also acknowledges that there is truth in every being. The famous definition of truth as "adequation of thing and intellect" enables him to integrate the two approaches. Truth is a relation between two terms, both of which can be called "true" because both are essential for the conformity between thing and intellect.

The second part of the paper (sections 5--7) deals with the manner in which Thomas gives truth a place in the doctrine of the transcendentals, and shows that his conception of truth leads to important innovations in this doctrine: the introduction of relational transcendentals and the correlation between spirit and being. If "truth" is transcendental, it must be convertible with "being". Sect. 6 discusses objections that Thomas advances himself to this convertibility.

Sect. 7 deals with a difficulty in his account of truth as a relational transcendental. Ontological truth expresses a relation to an intellect but the relation to the human intellect is accidental for the truth of things. Essential for their truth can only be a practical intellect that causes things. In this way, Thomas argues, the divine intellect relates to all things." (p. 159)

13. ——. 1992. "Ontology and Henology in Medieval Philosophy (Thomas Aquinas, Master Eckhart and Berthold of Moosburg)." In *On Proclus and His Influence in Medieval Philosophy*, edited by Bos, Egbert Peter and Meijer, Pieter A., 120-140. Leiden: Brill.

"In this contribution I would like to investigate whether and in which way the opposition between ontology and henology took shape in medieval thinkers and was a subject of discussion. I will focus my inquiry on three Dominicans of different generations, namely, Thomas Aquinas, Master Eckhart and Berthold of Moosburg. The last one is the least well known of the three. Yet I want to begin with him, since we find in his work not only a justification but also a philosophical deepening of our question." (p. 122)

(...)

5. Conclusion

In my paper I first presented a medieval version of the question: "Metaphysics of Being or philosophy of the One?" - namely, the interpretation of Berthold of Moosburg. In his commentary on Proclus [*] he traces the opposition between ontology and henology to the different structures of thought associated with Aristotelianism and Platonism, which we have indicated with the keywords "transcendentality" and "transcendence" of the first. I then proceeded to use Berthold's model to elucidate the thought of Thomas Aquinas and Master Eckhart. To this analysis I would add three concluding observations.

First, we can ascertain that for Thomas and Eckhart the transcendental and transcendent approaches do not form an absolute opposition. Thomas posits a causal relation between God and the *maxime communia*. Transcendentals are to be traced to God as their cause. Eckhart identifies God and the *transcendentia*. That which is most general is God.

Secondly, both in Thomas and in Eckhart the doctrine of transcendentals is found to have an integrating function. That is notable, because Berthold regards this doctrine as typical of the Aristotelian position. Now this theory certainly contains anti-Platonic elements, as we observed in Thomas, such as the emphasis on predicative generalness. But transcendentals have yet another aspect, which Berthold does not mention, an aspect which played an essential role in the development of the doctrine. Generally, the *Summa de bono* of Philip the Chancellor, written about 1230, is regarded as the first treatise on transcendentals. In the prologue of this work Philip observes that "being," "one," "true" and "good" are not only that which is most common but are sometimes also "appropriated," that is, treated as "proper" to something. For in Scripture these names are attributed pre-eminently to God, they are also divine names. (90) The attention given this second kind of naming is undoubtedly influenced by pseudo-Dionysius, who functions in Berthold as an eminent witness for the Platonic view. Thus we

see that in the context of the doctrine of *transcendentia* themselves the question must arise concerning the relation between the most general which goes through all categories, and the divine which surpasses all categories.

Thirdly, the medieval doctrine of transcendentals is pluriform. The solutions of Thomas and Eckhart diverge. Philosophically more important, however, is that in which they agree. Characteristic of philosophy is a transcending movement. It surpasses the concrete things of experience in quest of a first, from which reality can be understood. The answer to the question of what this first is can be sought in different directions. Berthold sketches two options: the first is the most general, which is the precondition for man's intellectual knowledge; or the first is the cause of the being of things but is not itself of the nature of the caused. Thomas and Eckhart represent a type of philosophical thought in which the two options in question are connected. That is their contribution to the debate about what philosophy should be: ontology or henology." (pp. 139-140)

15. ———. 1993. "Aquinas's Philosophy in its Historical Setting." In *The Cambridge Companion to Aquinas*, edited by Kretzmann, Norman, 12-37. Cambridge: Cambridge University Press.

"In this chapter Aquinas's attitude towards philosophy, his leading sources, and the aims of his philosophical interest are clarified in two complementary ways. First, his writings, which are very voluminous in spite of his relatively early death, will be placed within the historical context of the thirteenth century. An overview of his work and its philosophical relevance will be provided in connection with the most important intellectual developments in this period -- the rise of the university, the reception of Aristotle, and the conflict between the faculties (sections II-IV). Subsequently, Aquinas's view of philosophy and of its relationship to theology will be elaborated in a more systematic way (sections V-X)." (p. 14)

16. ———. 1995. "The Beginning of the Doctrine of the Transcendentals in Philip the Chancellor (ca. 1230)." In *Quodlibetaria. Miscellanea studiorum in honorem Prof. J. M. da Cruz Pontes Anno Iubilationis suae Conimbrigae MCMXCV*, edited by Santiago de Carvalho, Mario A., 269-286. Porto: Fundação Eng. António de Almeida.

A revised version of this study form the Chapter Three of *Medieval Philosophy as Transcendental Thought. From Philip the Chancellor (ca. 1225) to Francisco Suárez (2012)*, pp. 109-133.

"Our comparative inquiry does not allow any other conclusion than that Philip the Chancellor, in the introductory questions of his *Summa de bono*, really presents something new. His intention of going back into the "ground of thought" by reducing our understanding of questions to the *communissima* results in the earliest systematic formulation of a doctrine of the transcendentals. The doctrine is introduced as the philosophical answer to the dualism of Manichaeism. For the first time, Philip brings together four basic notions, "being", "one", "true", and "good", and investigates their mutual relations. But his account bears the marks of a first draft; it is rather terse and sometimes little explicit.

Viewed from a historical perspective, his doctrine has an atypical aspect, insofar as it is centered in a metaphysics of the good. The context of the doctrine generally is a conception of

metaphysics, in which "being" is the proper subject of this science. Philip recognizes that *ens* is the first concept, but he does not say much about it. His interest concerns "the good", a notion that is richer than (*habundat*) "being". Two elements of Philip's doctrine were especially directive for subsequent discussions of the transcendentals. The first is his view of the twofold relation between the *communissima*: there exists a real identity between them -- they are convertible according to their supposita --, but they differ according to their concepts. The other element concerns the order of the most common notions, which is based on the notion of "indivision". It is somewhat paradoxical that Philip does not deal separately with *unum*, whereas the *ratio* of "one" determines his understanding of *bonum* and *verum*.

The *Summa de bono* was attentively read and frequently used, especially in the Franciscan milieu. The influence of Philip's account of the *communissima* is manifest in two works that were composed about twenty years after his *Summa*, namely, in the Franciscan *Summa theologica* attributed to Alexander of Hales, and in *De bono*, an early writing of the Dominican Albert the Great." (pp. 132-133)

Actes du premier Congrès européen d'Études Médiévales, Spoleto, 27-29 mai 1993*, edited by Hamesse, Jacqueline, 107-128. Louvain-la-Neuve: Fédération internationale des instituts d'études médiévales.
18. ———. 1996. "Transcendental Thought in Henry of Ghent." In *Henry of Ghent. Proceedings of the International Colloquium on the Occasion of the 700th Anniversary of his Death (1293)*, edited by Vanhamel, Willy, 1-18. Leuven: Leuven University Press.

"From the account of the relation between *res* and *ens* it is possible to draw a number of conclusions pertinent to Henry's way of thought and his point of departure.

I. The first conclusion is that it is incorrect to say that in his thought there is an insoluble tension between the primacy of

being and that of thing. Henry describes the relation between the first concept, that of "thing" in the most general sense, and the second concept, that of "being," as a relation of foundation. "Something cannot have the character of being unless it first has the *ratio* of thing in the sense of *reor, reris*, in which the *ratio* of that being is founded (*fundatur*). (46)

2. The firstness of *res* is not an a priori condition of knowledge, that is, a "transcendental form" in the Kantian sense. It can be an idle concept, such as an imaginary thing. The firstness is related, as appeared from the discussion of the seventh *Quodlibet*, to the way in which the human intellect is "moved" by reality. The relation of foundation between *res* and *ens* is worked out by Henry in two respects, from the angle of the theory of science and ontologically.

3. From the angle of the theory of science, the relation is that between the precognition of a quiddity and intellectual knowledge of it. At the first level, *res* in the sense of *reor, reris* is the most general concept, the *communissimum* of the seventh *Quodlibet*. At the second level, "being" is the first and most general concept. Henry's statement that *ens* is the first that is *scientifically* known (*scita*) must be understood in this precise sense.

In ontological respect, the relation between the first and the second concept is the relation between the still undetermined thing and the thing that is determined by its essence. The quidditative being however is not determined to this or that thing, to creator or creature, to substance or accident. It is understood, Henry states, under the aspect of being that is the subject of metaphysics. (47) Not the first mode of "thing" but the second mode is the point of departure of metaphysics.

The level of quidditative being is the level of the transcendentals. Henry's identification of *res, ratitudo* with *ens* is the answer to the question (see section 3, above) why *res* is not named in Henry's account of the transcendentals. It is the concept that lies at the basis of his doctrine of being and of the most general *intentiones*. In comparison to his predecessors, the novelty of Henry's doctrine is the central place he attributes

to Avicenna's notion of "thing." That *res, ratitudo* lies at the basis of Henry's doctrine explains the fact that he, otherwise than in the tradition, understands truth as a real relation to the exemplar.

Another distinctive feature of Henry's doctrine of the transcendentals is its being preceded by a more general concept, the cognition of "thing" in the broadest sense. For the clarification of this relation one may utilize a distinction that emerged in post-medieval philosophy. In a study of the concept of *res*, Ludger Oeing-Hanhoff has called attention to the fact that in the seventeenth century transcendental concepts were opposed to "super-transcendental" concepts, which are said not only of real but also of fictitious beings. Examples of these super-transcendental concepts are *cogitabile* and *opinabile*. (48) Henry's notion of *res* may be regarded as an anticipation of such concepts." (pp. 17-18).

(46) *Summa* 34.2 (ed. R. Macken, p. 175): "Et tamen rationem esse nihil potest habere, nisi prius habendo rationem rei dictae a reor, in qua fundatur ratio esse ilius."

21. ———. 1998. "Being and One: The Doctrine of the Convertible Transcendentals in Duns Scotus." In *John Duns Scotus (1265/6-1308). Renewal of Philosophy. Acts of the Third Symposium organized by the Dutch Society for Medieval Philosophy Medium Aevum (May 23 and 24, 1996)*, edited by Bos, Egbert Peter, 13-26. Amsterdam: Rodopi.

"In the prologue of his commentary on the *Metaphysics*, Duns Scotus explains the name 'metaphysics' as *transcendens scientia*, that is, the science that is concerned with the *transcendentia*.(1) This explanation is indicative of the prominent place Scotus ascribes to the doctrine of the transcendentals, which was formulated for the first time in the *Summa de bono* of Philip the Chancellor that is datable about 1225. The connection between the object of first philosophy and the transcendentals is not in itself new, although the identity posed by Scotus is more radical than in his predecessors.(2) Yet it is no exaggeration to say that Scotus's philosophy marks a new phase in the history of the doctrine of the *transcendentia*.

Scotus understands the concept 'transcendental' differently than his predecessors did. To thinkers of the thirteenth century, transcendental properties are *communissima*. 'Being, 'one,'true' and 'good' 'transcend' the Aristotelian categories because they are not limited to one of them but are common to all things. According to Scotus, however, it is not necessary that a transcendental as transcendental be predicated of every being; it is not essential to the concept *transcendens* that it has many inferiors. In his *Ordinatio* he determines the concept negatively: 'what is not contained under any genus' or 'what remains indifferent to finite and infinite'. (3) This definition makes possible a vast extension of the transcendental domain; the most important innovation is formed by the so-called disjunctive transcendentals, which are convertible with being, not separately but as pairs.

The fact that the transcendental properties are not necessarily identical with the *communissima* is, I suspect, the reason why

the expression *transcendentia*, which occurs only sporadically in thinkers like Albert the Great, Thomas Aquinas and Henry of Ghent, gains the upperhand in Scotism and becomes the usual term.

About Scotus's doctrine of the transcendentals, in contrast to that of other medieval thinkers, we are well informed by Allan B. Wolter's pioneering study, *The Transcendentals and Their Function in the Metaphysics of Duns Scotus* (1946). Yet there are aspects of his doctrine that have thus far received little attention in scholarly literature. One of them is Scotus's treatment of the transcendentals 'one, 'true' and 'good,' which as such are convertible with being. In my contribution I want to show that with respect to the traditional transcendentals, too, Scotus breaks new ground and approaches critically the views of his thirteenth-century predecessors. Because he discusses most extensively the relation between being and one, I foals on this discussion." (pp. 13-14)

"In 1597 Francisco Suarez published his *Disputationes Metaphysicae*, a work that had an incredible influence on seventeenth century philosophy. The most salient feature of his metaphysics is the central position of the *transcendentia* or *transcendentalia* (Suarez uses these terms as synonyms) : Disp. 2-11 deal with being, unity, truth and goodness. In comparison with Aristotle's conception of a science of being, metaphysics had acquired a « transcendental » character. As Suarez knew very well, this transformation had taken place in the Middle Ages.

In the *Bulletin* 33 (1991), pp. 130-147, I analyzed the current state of research on the medieval doctrine of the transcendentals (= DT), which is essential for our understanding of philosophy in this period. In the present article I will assemble and discuss the relevant literature of the last decade, adding some older publications that were not mentioned in the first report." (p. 107)

Actes du Colloque internationale de Louvain-la-Neuve et Leuven 12-14 septembre 1998 organisé par la S.I.E.P.M.*, edited by Hamesse, Jacqueline and Steel, Carlos, 241-255. Turnhout: Brepols.

"In the study of medieval philosophy it is customary to speak of the doctrine of the « transcendentals » (1). We have to realize, however, that this term comes from the vocabulary of modern philosophy. The medieval authors themselves speak of *transcendentia*. What is the significance of this fact ? What is in those names ? By way of introduction, we consider the two terms, « transcendent » and « transcendental », more closely in order to make clear that the interference of the conceptual language of modern philosophy with that of medieval philosophy is not coincidental. The difference in terminology points to a doctrinal evolution. (p. 241)

(...)

"By way of conclusion, let me sum up the main results of our inquiry into the genealogy of the *term transcendentia* (in the sense of transcendentals »).

(i) The first philosophical account of a doctrine of the transcendentals is presented in Philip the Chancellor's *Summa de bono*. This work did not use the term *transcendentia*, but later in the thirteenth century Roland of Cremona, Albert the Great and Thomas Aquinas applied the term to a systematic doctrine of the *communissima*. The origin of the doctrine is not the Platonic-Augustinian idea of « transcensus », but rather the Avicennian tradition of primary notions.

(ii) The term *transcendentia* already existed before the emergence of a systematic doctrine. Albert the Great's commentaries and some texts from the *Logica modernorum* strongly suggest that the term originates in logical discussions,

focussing on the distinctive nature of certain (« transcendental ») terms." (p. 255)

(1) I myself wrote a book with the title *Medieval Philosophy and the Transcendentals. The Case of Thomas Aquinas*, Leiden - New York, 1996.

29. ———. 2002. "'Res' as Transcendental. Its Introduction and Significance." In *Le problème des Transcendants du XIVe au XVIIe siècle*, edited by Federici Vescovini, Graziella, 139-155. Paris: Vrin.

"The history of *res* as a transcendental term is an intriguing one: it could be described in terms of a success-story: from "nothing" to "king". In the first account of a doctrine of the transcendentals, the *Summa de bono* written by Philip the Chancellor ca. 1225-28, *res* is not mentioned at all. In the prologue Philip states that « most common (*communissima*) are these : *ens, unum, verum, bonum* », whose mutual relations he investigates in the next questions (1). *Res* is also absent in the expositions by Alexander of Hales, Bonaventure and Albert the Great: they restrict the number of transcendentals to the four that Philip had listed in his *Summa* (2).

Thirty years after Philip, however, the picture changes. In his account of the transcendentals in *De veritate* q. 1, a. 1 -- the most extensive one in the thirteenth century --, Thomas Aquinas incorporated *res* into the doctrine. He distinguishes six *transcendentia*, in the order *ens, res, unum, aliquid, verum* and *bonum* (3). Yet the role of the new transcendental *res* in Thomas and the Thomistic tradition in general remains somewhat marginal. A good illustration offers a treatise from the 14th century, the *Tractatus de sex transcendentibus*, composed by Franciscus de Prato (who was lector in Perugia from 1343-45). The treatise is an attempt to systematize the doctrine on the basis of Thomas's teachings. Contrary to the order in *De veritate*, *res* holds the last place in this work, and its treatment is substantially briefer than those of the traditional transcendentals (4).

But in the generation after Thomas Aquinas, *res* started, as we shall see a splendid career. A notable reaction against Thomas's

doctrine is Lorenzo Valla's philosophical mainwork *Dialecticae disputationes* (first version 1439) (5) In these disputations, Valla critically inquires into the basic notions of traditional philosophy, starting with the six primordial principles (*primordia*) which the Aristotelians called *transcendentia*. They regarded these principles as the "princes of princes" or the "kings", but according to Valla a plurality of firsts is impossible ; only the monarchy is good. He will therefore investigate which among the six is the true *rex imperator*, that is, the most comprehensive (*capacissima*) notion (6).

Valla's conclusion is that only *res* can claim this title. It is evident *unum* is to be understood as "one *res*", *aliquid* as "another *res*", etc. But how about the notion *ens*, to which the Aristotelians give a place honour? In Valla's view, the term does not have a universal force of its own, but its force is wholly borrowed from another, namely from *res* (7) His arguments are marked by the (humanistic) linguistic turn; they are mainly philological. *Ens* is a participle that is to be resolved into a relative pronoun and a verb : *id quod est*. *Id* is to be resolved into *ea res*, so that finally *ens* can be reduced to *ea res que est* (8). When we say, for instance "the stone is being" (*lapis est ens*), the expression means "the stone is thing (*res*) which is". But does such a formula make any sense, when simpler and clearer to say "the stone is a *res*"? The words "that which is" cannot mean that the stone is "the thing that is", because only God "is" in the proper sense (*Exodus* 3,14). When therefore it is said of something else than God that it is "being" (*ens*), one uses an inappropriate way of expression (9).

The dignity of a transcendental was given only to *res* (10). To illustrate its position, Valla alludes to a story, reported by Herodotus in his *Historiae* (III, 86), a work that Valla translated into Latin. Six Persians contested the empire, but when Darius managed to become the king of the Persians, the other five descended from their horses and rendered homage to the king. Similarly the other five transcendentals descend in order to honor *res* (11).

With respect to the remarkable history of "thing" I want to raise three questions: How did *res* come into philosophy, why did it enter philosophy and what did it bring about in philosophy, for our understanding of "reality" (12)?" (pp. 139-141 notes renumbered)

Ghisalberti (ed.), *Dalla prima alla seconda Scolastica. Paradigmi e percorsi storiografici*, Bologna 2001, p. 167-199.

(6) Lorenzo Valla, *Retractatio* I, cap. 1, n. 9 (ed. Zippel I, p. 11) : « Ea numero sex dicuntur : "ens", "aliquid", "res", "unum", "verum", "bonum". Que quoniam sunt altiora principia et velut principum principes et quasi (ut istis videtur) quidam imperatores et reges (...), de his prius ordine ipso dicendum est o. Cap. 2, n. 1 : « Iam primum non plures esse debere

imperatores ac reges, sed unum (...). Ergo quod ex his vocabulum, sive que vocabuli significatio sit imperator et rex, idest omnium capacissima (...), inquiramus ».

(7) Lorenzo Valla, *Retractatio I*, cap. 2, n. 12 (ed. Zippel I, p. 14) : « Quo palam est, omnem vim non naturalem habere, sed, ut sic dicam, precariam ac mutuo sumptam ». *Repastinatio I*, cap. 2, n. 9 (ed. Zippel II, p. 369) : « Quare quis non videt "ens" non habere suapte natura aliquam universalem vim, sed omnem mutuari ab illo 'res' ? ».

(8) Lorenzo Valla, *Retractatio I*, cap. 2, n. 11 (ed. Zippel I, p. 14) : « Igitur si "ens" ita resolvitur : "id quod est", et "id" resolvitur "ea res", profecto "ens" ita resolvetur : "ea' que est" ».

(9) Lorenzo Valla, *Retractatio I*, cap. 2, n. 12 (ed. Zippel I, p. 14-15) : « Quid enim sibi vult verbi causa "lapis est ens", id est "ea res, quae est' ? Quid faciunt ille voces "ea que est", cum sit et apertius et expeditius et satius, "lapis est res' ? (...) cum presertim absurda videatur oratio: "lapis est ea res que est", sive "lapis est res que est", quasi nihil sit proprie nisi solus lapis, aut quicquid erit illud, de quo dicemus ipsum esse "rem, que est" : que oratio de solo Deo propria est (...). Itaque cum de alia re quam de Deo dicitur quod sit "ens", inepte dicitur ».

(10) Lorenzo Valla, *Repastinatio I*, cap. 2, n. 12 (ed. Zippel II, p. 370) : « Quo fit ut solum sit "res", quod transcendentis dignitate donetur ».

(11) Lorenzo Valla, *Retractatio I*, cap. 2, n. 2 (ed. Zippel I, p. 11-12) : « Apud me autem ex his sex que nunc quasi de regno contendunt, non aliter "res" erit rex, quam Darius Hystaspis filius futurus rex erat ex illis sex Persis, qui regnum sorti permisere ». Cap. 2, n. 16 (ed. Zippel I, p. 15).

(12) There does not exist a comprehensive study on *res* as a philosophical concept. A good overview is offered by J. F. Courtine, *Res, in Historisches Worterbuch der Philosophie*, vol. 8, Basel 1992, p. 892-901. The volume *Res. Atti del III (Colloquio internazionale del Lessico intellettuale europeo*, ed. by M. Fattori and M. Bianchi, Rome 1982 (Lessico intellettuale europeo, 26), contains two interesting contributions : J.

Hamesse, *Res chez les auteurs philosophiques du XIIe et XIIIe siècles ou le passage de la neutralité à la spécificité* (p. 91-104); L. Oeing-Hanhoff, *Res comme concept transcendantal et sur-transcendantal* (p. 285-296). See also R. Darge, "Suarez" Analyse der Transzendentalien "Ding" und "Etwas" im Kontext der scholastischen Metaphysiktradition », *Theologie und Philosophie* 75, 2000, p. 339-358.

30. ———. 2002. "Truth in Thomas Aquinas." In *The Contemporary Debate on the Truth. Proceedings of the II. Plenary Session of the Pontifical Academy of St. Thomas Aquinas, Doctor Communis II, n. s.*, 50-54. Vatican City: Pontifica Academia Snci Thomae Aquinatis.

"When I was invited to comment upon the theme of the section -'Truth in Thomas Aquinas' - I pondered on the best way of meeting the request. I asked myself: What is most important in his conception of truth? The following comments are designed to be an answer to that question and are based on Thomas's remarks in *De veritate*. As such, my answer does not pretend to be definitive, but is based on personal reflections that are indebted to on-going discussions in the German academic world to which I belong. That said, I would hope that my comments possess some general relevance to other students of Thomas. It is my view, that the salience of Thomas's view of truth can be appreciated by means of highlighting four substantive points.

1. First and foremost we should attend to Thomas's approach to the question *quid sit veritas*.

(...)

2. Having considered the transcendentalism of the truth, Thomas then solicits an answer to the question as to what it is.

(...)

3. There is truth in things; 'truth' is also predicated of the intellect.

What, then, is the primary 'locus' of truth: the thing or the intellect?

In his reply to this question (*De veritate* q. 1, a. 2) Thomas advances the idea of the *analogy* of the true; this predicate is said of many things according to an order of priority and posteriority, that is, in relation to one (thing) that possesses the *ratio* of the predicate primarily. The classical application of the doctrine of analogy concerns the term 'being'. The novelty of Thomas's thinking here is to be seen in his application of the analogy to the predicate 'true', in order to determine the relation between the truth of being and the truth of the intellect.

(...)

4. At *De veritate* 1,4 Thomas poses the question that dominates the first systematic account of truth in the history of philosophy, Anselm of Canterbury's work *De veritate*: 'Is there only one truth by which all things are true?' Anselm had answered this question affirmatively; there is only one truth in the proper sense (*proprie*), the divine truth. Thomas's reply is more differentiated: truth is properly found in the human or divine intellect; primarily in the divine intellect; secondarily in the human intellect. A human truth, too, is truth in the proper sense.

The power of truth manifests itself in its claim of having absolute force; it holds without respect of persons. Thomas gives a remarkable example of that in *his Commentary on the Book Job*. He interprets the dispute between Job and God after the model of a medieval disputation. But Thomas wonders whether such a disputation is appropriate, since God is far superior to any human being. Truth does not change because of the difference of persons.

When somebody speaks the truth, he cannot therefore be defeated, irrespective of the person, with whom he disputes (*cum aliquis veritatem loquitur, vinci non potest cum quocumque disputat*). (8)

In summary, four ideas are most important in Thomas's conception of truth: the transcendental character of truth; its relationality (truth as adequation); the primary 'locus' of truth

is the mind; and a human truth also is a truth in the proper sense. Seen together, they reflect the novelty of his philosophical thought and its relevance." (pp. 50-54)

"This essay examines Aquinas's analysis of the human desire to know, which plays a central role in his thought. (I.) This analysis confronts him with the Aristotelian tradition: thus, the desire for knowledge is a "natural" desire. (II.) It also confronts him with the Augustinian tradition, which deplores a non-virtuous desire in human beings that is called "curiosity." (III.) Aquinas connects the natural desire with the Neoplatonic circle motif: principle and end are identical. The final end of the desire to know is the knowledge of God. (IV.) Aquinas also connects the end of the natural desire to know with Christian eschatology, teaching that man's ultimate end is the visio Dei. This end, however, is "supernatural." (V.) Duns Scotus severely criticizes central aspects of Aquinas's account. (VI.) As a rejoinder to Scotus's objections, we finally consider Aquinas's view on the proper object of the human intellect."

"This essay in honour of Carlos Steel examines a fundamental thesis behind the medieval metaphysics of the good, namely the «goodness of being» thesis, according to which everything that is is good. The basic text used is a *Quodlibet* disputed by the Parisian master Gerard of Bologna at the beginning of the fourteenth century, in which he discusses various determinations of the nature (*ratio*) of the good. This discussion reveals the difficulties to which the metaphysics of the good can lead: is it really the case that every being is good?"

44. ———. 2011. "Tino-logia: An alternative for Ontology?" In *Mots médiévaux offerts à Ruedi Imbach*, edited by Atucha, Iñigo, Clama, Dragos, König-Pralong, Catherine and Zattero, Irene, 729-737. Turnhout: Brepols.

"In our contribution to the *Festschrift* in honour of Ruedi Imbach the focus will be on the term « tino-logia ». The notion is not mentioned in the most complete philosophical dictionary of our time, the *Historisches Wörterbuch der Philosophie*, which appeared in 13 volumes from 1971-2007. The vocable was suggested by French scholars two decades ago in their analysis of the genealogy of Western metaphysics and has since then found acceptance. « Tinology » is meant to characterize an alternative for the traditional ontological model of metaphysics. Influential was an observation made by Jean-Francois Courtine at the end of his monumental study on the metaphysics of Francis Suarez : « En rigueur de termes, l'ontologie classique-moderne devrait donc plutôt être caractérisée comme une 'tinologie' »(1). The emergence of this neologism and its historical place is the first thing that calls for attention." (p. 729)

Acts of the Symposium organized by the Dutch Society for Medieval Philosophy Medium Aevum on the occasion of its 10th anniversary (Leiden, 10-12 September 1986)*, edited by Bos, Egbert Peter and Krop, Henri A., 3-13. Nijmegen: Ingenium Publishers.

[*This study is a discussion of three contribution by Gottfried Martin.*]

An outstanding place in the history of the Doctrine of the Transcendentals was attributed to William of Ockham by a study of the German scholar G. Martin (37). His thesis is that Ockham's denial of the reality of the categories except that of

substance and quality must be understood as « transcendental philosophy ». Ockham regarded quantity and relation as general conditions that do not add a distinct reality to things, that is, as « transcendental being ». In Martin's later publications (38 and 39), we encounter again the view that Ockham was a vital link in the tradition of transcendental philosophy from Aristotle's *Metaphysics* to Kant, Martin's Ockham-interpretation has hardly been discussed." (from J. A. Aertsen, *Bulletin de Philosophie Médiévale*, 33 1991, p. 138).

"In still another, more fundamental, respect the introduction of Aristotle's works in the West was of importance. The reception of his *Metaphysics* led to independent reflection on the question of the proper subject of this science. Not without reason, L. Honnefelder, « Der zweite Anfang der Metaphysik. Voraussetzungen, Ansätze und Folgen der Wiederbegründung der Metaphysik im 13./14. Jahrhundert », in J.P. Beckmann e.a. (ed.), *Philosophie im Mittelalter. Entwicklungslinien and Paradigmen*. Hamburg, 1987, pp. 165-186, has characterized this development as « the second beginning of metaphysics ». It is noteworthy that the Middle Ages did not adopt the theological conception of metaphysics that prevailed among the Greek commentators on Aristotle. In the commentaries of Thomas Aquinas and Duns Scotus we find a decidedly « ontological » view. Against the background of this conception of metaphysics, the interest in the transcendentals becomes understandable, for they are the universal properties of being. Metaphysics becomes *scientia transcendens* -- the term

appears for the first time in Scotus' Commentary on the *Metaphysics* (prol., n. 5)." (from J. A. Aertsen, *Bulletin de Philosophie Médiévale*, 33 1991, p. 132).

"A by medieval standards extensive systematics of DT is presented by Thomas Aquinas in *De veritate*, qu. 1, art. 1. This text includes an important new element, namely, the introduction of relational transcendentals. Through this innovation Thomas departs from Philip the Chancellor's version of DT. A transcendental is not necessarily expressed by a negation, an indivision, as Philip meant, but can also be determined by something positive, a relation. Thomas understands the transcendentals « true » and « good » in relation to the two faculties of a spiritual substance, that is, to intellect and will. Although we possess various studies concerning some aspects of Aquinas's DT, the general significance of this doctrine for his philosophy seems to be underestimated." (from J. A. Aertsen, *Bulletin de Philosophie Médiévale*, 33 1991, p. 135).

Annotated Bibliography of John P. Doyle (1966-2016)

Introduction

John Patrick Doyle (September 14, 1930 - July 2, 2016) was Professor Emeritus of philosophy at Saint Louis University and Distinguished Professor of Philosophy at Kenrick-Glennon Seminary in Shrewsbury, Missouri; his main area research was late medieval philosophy; he has published eighth volumes of translations from Latin, two volumes of Collected Studies and over fifty articles, essays, and encyclopedia entries.

Abbreviations:

CSS = John P. Doyle, *Collected Studies on Francisco Suárez S.J. (1548-1617)*. Edited by Victor M. Salas, Leuven: Leuven University Press 2010

BBK = John P. Doyle, *On the Borders of Being and Knowing. Late Scholastic Theory of Supertranscendental Being*. Edited by Victor M. Salas, Leuven: Leuven University Press 2012

Complete bibliography

1. Doyle, John Patrick. 1966. *The Metaphysical Nature of the Proof for God's Existence According to Francis Suárez S.J.*, University of Toronto.

Unpublished Ph.D. Dissertation.

2. ———. 1967. "Suárez on the Reality of the Possibles." *The Modern Schoolman* no. 44:29-48.

Reprinted as Chapter 2 in *CSS*. "The first of twelve essays which follow the introduction ("Suarez on the Reality of the Possibles") agrees with Etienne Gilson's view of Suárez as an heir to the Avicennian doctrine of the possibles, while it adds the refinement that a possible here equates with a not-impossible or with a non-self-contradictory essence. The key to this is provided by the Scotist doctrine that "What is not non-being, is being" (*Quod non est non-ens est ens*). The main distillate from Suárez's teaching is a lowest common denominator concept of being which is found everywhere from mere possibles to the most actual being of God." (*CS* p. XI).

"This article shows that for Francisco Suarez the core reality of possible beings is their non-self-contradiction. Their intrinsic claim to inclusion under the common concept of Being and the Suarezian analogy of Being resides in the fact that as non-repugnant they are not non-being. So understood, they are actually nothing but still more than mere beings of reason. Of themselves, they are eternally true and apt to be known, even if there were no God. Far beyond this, their reality is such that if they were not what they are, there would be no God and, '*a fortiori*', none of the actual creatures which depend upon him."

3. ———. 1969. "Suárez on the Analogy of Being (First part)." *The Modern Schoolman* no. 46:219-249.

Reprinted as Chapter 3 in *CSS*. The next essay ("*Suarez on the Analogy of Being*") presents the ground plan of Suarezian metaphysics and gives a more detailed account of Suárez's thoughts on the formal and objective concepts of being, as well as on being as a participle and being as a noun. Coupled with this is his identification of the subject of metaphysics with the *one common objective concept of being as a noun*. This in turn is identified with what is *apt to exist* - what is non-contradictory of itself and what importantly excludes beings of reason. The basic Suarezian analogy of intrinsic attribution presupposes this common concept and works within it. The essay goes on to show the main program of Suárez's metaphysics, which is to treat the general concept of being and then to follow its internal demand for partition into God and creatures. In this, real being for Suarez is *one*, but neither a

genus nor *simpliciter simplex* in the manner of Scotus. In creatures as well as in God, its common denominator is aptitude for existence in the sense of intrinsic non-contradiction. This marks the difference between possibles and beings of reason and reduces real being in the widest sense to that which is "not nothing." Then despite the gradation in their analogous sharing of being, God and creatures, including mere possibles, are equal in their lack of intrinsic contradiction." (CS p. XII).

4. ———. 1969. "Suárez on the Analogy of Being (Second part)." *The Modern Schoolman* no. 46:323-341.

Reprinted as Chapter 3 in *CSS*.

"Francis Suárez doctrine of the analogy of being requires that one common character of being be found intrinsically but unequally, according to an order of prior and posterior, in those inferiors of which the one, common, objective concept of being as a noun is predicated.

Problems are that the requirement of intrinsicality has forced Suarez to give a shadow reality to merely possible things while the need for inequality has militated against the all important unity of the common character or concept of being."

5. ———. 1972. "Heidegger and Scholastic Metaphysics." *The Modern Schoolman* no. 49:201-220.

Reprinted as Chapter 4 in *CSS*. "The third essay ("Suarezian and Thomistic Metaphysics before the Judgment of Heidegger" - which is a change from the original title, "Heidegger and Scholastic Metaphysics"), contends that Heidegger's criticism of medieval metaphysics is aimed directly at the Avicennian-Scotistic-Suarezian metaphysics rather than at that of St. Thomas Aquinas. While written from a Thomistic viewpoint, for present purposes this essay highlights the difference between the Suarezian science of being as the non-contradictory and the Thomistic metaphysics of *esse*. For the Suarezian metaphysics, the essay notes nuances and raises questions linked with: the Scotistic equation of being and thinkability; the rooting of thinkability in non-contradiction;

using the *passiones disjunctae entis* as the basis of a progression in metaphysics; justifying any progression in a metaphysics of the non-contradictory; and Heidegger's rejection of any speech-governed metaphysics as well as his accusation of "*Seinsvergessenheit*." This essay might be improved by an addendum that would take into account Heidegger's famous Marburg lectures, which were not available at the time I composed my original text." (CSS p. XII).

"Regarding Heidegger's appraisal of Scholastic metaphysics, we have asked: (1) is he right about the sort of metaphysics represented by Scotus and Suarez? and (2) is he correct in equating all medieval metaphysics with this type of Scotistic-Suarezian metaphysics?

We have answered the first question in the affirmative and have replied negatively to the second."

6. ———. 1972. "Person: a Christian Contribution." *Social Justice Review* no. LXV:184-186.
7. ———. 1972. "A Suggested Modification of the Critical Text of the Ordinatio of John Duns Scotus " *Manuscripta. A Journal for Manuscript Research* no. 16:30-32.
8. ———. 1973. "*Ipsum Esse* as God-Surrogate: The Point of Convergence of Faith and Reason for St. Thomas Aquinas." *The Modern Schoolman* no. 50:293-296.

"Since, for St. Thomas Aquinas, "cognita sunt in cognoscente secundum modum cognoscentis," even revealed truths must be phrased in terms which we can naturally understand. But the very best term which we can naturally muster for God-talk is "ipsum esse," a term to which we come across the medium of a demonstration "quia" from the being of creatures. As such, it has obvious limitations.

It does not supply us with an immediate knowledge of the divine reality, but it is, instead, a surrogate for God who remains unknown in himself. This surrogate then is employed in theology not only at the level of "de Deo uno" but also at the very heart of "de Deo trino". As so employed, it is patently the point of convergence of faith and reason for St Thomas."

9. ———. 1974. "Saint Bonaventure and the Ontological Argument." *Medieval Studies* no. 52:27-48.

"For St Bonaventure the self-evident truth of God's existence can be shown forth by 'intellectual exercises' like that of St Anselm.

Such exercises are not simple-minded transits from the ideal to the real order. Rather they are based upon a sophisticated metaphysics; they involve the experience of common intelligibility.

With Plato, they accept the 'really real' character of that intelligibility. Implicitly, they also accept a plurality and a one-way hierarchy of intelligibles leading up to a 'First'. Turning then precisely upon the unprincipiated nature of this 'First', they spread before us its absolute necessity both in reality and for thought."

10. ———. 1979. "Some Thoughts on Duns Scotus and the Ontological Argument." *New Scholasticism* no. 53:234-241.

"Duns Scotus has substituted the notion of a "highest thinkable" for Anselm's "that than which a greater cannot be thought." For Scotus, the touchstone of "thinkability" is non-contradiction. He resumes the non-contradictory and therefore the thinkable character of God. He then shows God's existence in two steps: (1) from thinkability to essential reality, and (2) from essence to existence. The first step involves Scotus in some inconsistency and also comes close to making man's mind the very rule of reality. The second step entails a confusion of internal possibility with total possibility, which ordinarily, beyond internal possibility, includes an external potency."

11. ———. 1982. "The Suarezian Proof for God's Existence." In *History of Philosophy in the Making. A Symposium of Essays to Honor Professor James D. Collins on his 65th Birthday*, edited by Thro, Linus J., 105-117. Washington: University Press of America.

Reprinted as Chapter 5 in *CSS*.

"Essay four after the introduction ("The Suarezian Proof for God's Existence") pursues the entailment of the common concept of being as a noun as it is divided into God and creatures. Fundamentally, the essay argues that Suárez's metaphysical proof for God's existence, which is the pivotal point of his metaphysics and whose Avicennian roots he has expressly embraced, amounts to an ontological argument of the type later criticized by Kant." (CSS p. XII).

12. ———. 1984. "Prolegomena to a Study of Extrinsic Denomination in the Work of Francis Suárez S.J." *Vivarium* no. 22:121-160.

Reprinted as Chapter 6 in *CSS*. In the next essay ("*Prolegomena to a Study of Extrinsic Denomination in the Work of Francis Suarez, S.J.*"), I looked to discover in Suárez's use of *extrinsic denomination* rules which might adumbrate the Kantian *a priori*. While I found that in regard to extrinsic denomination Suarez did observe conventions which I was able to catalog, these did not in any clear way anticipate Kant. Indeed, I may have discovered the opposite. For although, on its face, extrinsic denomination might seem to be simply a matter of names imposed by us on things, my study showed that Suarez thought it to be a feature of things themselves, anterior to any operation of ours. In this, it clearly stood on the side of real being as opposed to being of reason." (CS p. XII-XIII).

"At times, extrinsic denomination for Suarez seems close to, if not synonymous with, a mere naming from the outside. But at other times, it is regarded as a feature of things themselves. In this article, there is some description and some examples of extrinsic denomination according to Suarez. Following this, are some of his reasons for and sources of such denomination. Special attention is paid to his use of extrinsic denomination in connection with the properties and categories of being. Finally, there are listed conventions and other items observed in Suarez's use of extrinsic denomination."

13. ———. 1984. "The Unborn as Person." In *Restoring the Right to Life: The Human Life Amendment*, edited by Bopp, James Jr.,

81-88; 218-221. Provo, Utah.

14. ———. 1985. "The Conimbricenses on the Relations Involved in Signs." In *Semiotics 1984*, edited by Deely, John, 567-576. New York: University Press of America.

"*Conimbricenses* is the name of a group of Jesuit professors of philosophy at the University of Coimbra during the latter half of the sixteenth century. It is also the name given to a five volume set of philosophical commentaries on Aristotle which they edited and published between 1592 and 1606. The last volume to appear was a Logic entitled: *Commentarii in universam dialecticam Aristototelis* (Friedrich Stegmüller, *Filosofia e teologia nas universidades de Coimbra e Evora no seculo XVI*, Coimbra, Universidade de Coimbra, 1959 pp. 95-96).

(...)

The particular work, with which I am now concerned, is their commentary on Aristotle's *De Interpretatione*. More precisely, my concern is with the first chapter of that commentary. Entitled *De signo* (On the Sign), it runs over 60 pages in quarto. While some treatment of signs at this place in Aristotelian commentary was common among the Scholastics, these pages of the *Conimbricenses* represent, as far as I know, the first really major treatise on signs as such which we have from the Scholastic period. The table of contents of the chapter gives a pretty fair indication of its character.

Principal issues raised are four: (1) On the nature and conditions common to signs; (2) On the divisions of signs; (3) On the signification of spoken words (*voces*) and of writing; (4) Whether some concepts in our minds are true or false, and others devoid of truth and falsity. Along the way there are sub-questions about the essence of a sign, the possibility of something being a sign of itself, signs as actual or aptitudinal, the relations involved in signs, *et cetera*. Although this commentary is a work of logic, the *Conimbricenses* explicitly aware of further epistemological, psychological, metaphysical, and theological questions which can be raised with regard to signs and signification. At the same time, they also display a

remarkable understanding of the breadth and scope of semiotics itself.

Some of the items which they have touched on different ways are the following: language, syntactical speech, laughing, nodding, coughing, persons talking in sleep, persons lying, persons emitting words without thought. They consider the signification of negative words, of syncategorematic words such as "if", nonsense words like "Blictri", and words like "chimaera" and "goat-stag" to which no real things correspond. They are interested in the signs involved in writing and reading, especially voiceless reading. Coupled with a discussion of the physiological bases of speech and hearing, they treat the relation of deafness and an inability to speak or communicate." pp. 567-568.

15. ———. 1987. "Suárez on Truth and Mind-Dependent Beings: Implications for a Unified Semiotic." In *Semiotics 1983*, edited by Jonathan, Evans and Deely, John, 121-133. New York: University Press of America.
16. ———. 1987. "Suárez on Beings of Reason and Truth (First part)." *Vivarium* no. 25:47-75.

Reprinted as Chapter 7 in *CSS* and as Chapter 2 in *BBK*.

"The sixth essay after the introduction ("Suárez on Beings of Reason and Truth"), against a background view of truth as a function of being, considers Suárez's response to the question of truth where there is no real being independent of the mind. If truth consists in a conformity between the mind and reality, how can there be any truth where there is no independent reality? Most of all, how can there be any truth where something would be impossible of realization? In last analysis, Suárez's reply turns upon the significative cast of the words involved in the expression of beings of reason, especially so called impossible objects. Because, unlike mere nonsense words such as "*Blytiri*" or "*scyndapsus*," words like "*goat-stag*" or "*chimera*" have signification, there is in their regard, and in regard to the beings of reason they express, the possibility of some statements being true even as others are false." (*CSS* p. XIII).

18. ———. 1988. "Suárez on Beings of Reason and Truth (Second part)." *Vivarium* no. 26:51-72.

Reprinted as Chapter 7 in *CSS* and as Chapter 2 in *BBK*.

"From Parmenides on, it has been a commonplace in the Western philosophical tradition that truth is a function of being. One need only remember the general Platonic doctrine of Forms, which are at once 'really real' and the locus of intelligibility of truth. Francis Suarez has passed on the common teaching of the Schoolmen that truth is threefold. (1) There is a truth in words, in writing, and in what he calls 'non-ultimate concepts' which is termed truth 'in signifying'. (2) There is a truth in the intellect knowing things, which is called truth 'in knowing'. And (3) there is a truth in things, which is a truth 'in being'."

"This is the completion of a two-part article which considers Suarez's reply to the question of truth where there is no real being independent of the mind. That reply turns upon the significant cast of the words expressing beings of reason, especially "impossible" beings. Because such words, unlike nonsense syllables, have signification, there is in their regard, and in regard to the beings of reason they express, the possibility of some statements being true even as others are false."

19. ———. 1988. "Thomas Compton Carleton S.J.: On Words Signifying More Than Their Speakers or Makers Know or Intend." *The Modern Schoolman* no. 66:1-28.

"For Carleton (1591-1666) words have power to signify independent of their speakers. Moreover, while first wordmaker may control the extension of his words, he cannot control their intension. Words can signify something more clearly to a hearer than that same thing was understood by the one who first established a word to express it. Carleton clearly demarcates the roles of speakers and wordmakers and

foreshadows current concerns about extension versus intension of words."

20. ———. 1990. "*Extrinsic Cognoscibility: a Seventeenth Century Supertranscendental Notion.*" *The Modern Schoolman* no. 68:57-80.

Reprinted as Chapter 3 in *BBK*.

"This essay explores the area of intentionality in late Scholasticism. For Suarez the subject of metaphysics is 'real being' which is transcendental but exclusive of beings of reason. After Suarez, the Calvinist Clemens Timpler says that the subject of metaphysics is 'the intelligible,' which encompasses both real and unreal, even impossible, beings. Also for 17th century Jesuit logicians what seems common to real beings and beings of reason, including impossible objects, is 'cognoscibility.' More precisely, this is 'extrinsic cognoscibility,' which is labeled 'supertranscendental.' In Timpler and the Jesuits I see anticipations of Meinong's *Gegenstandstheorie* (Theory of objects)."

21. ———. 1991. "Suárez on the Unity of a Scientific Habit." *American Catholic Philosophical Quarterly* no. 65:311-334.

Reprinted as Chapter 8 in *CSS*. The next essay ("Suárez on the Unity of a Scientific Habit") explores Suárez's reply to the question: how is a science such as geometry somehow undivided in itself and divided off from arithmetic, or from other speculative sciences such as physics and metaphysics? Is there a basis in things themselves for such indivision and division? Or is it something entirely or in part supplied by the knower? Connected with this is a question about the growth of a habit of science. Suárez's view is that any collection of conclusions making up a scientific habit will have at best only an artificial unity but nevertheless one which in some way rests on an aptitude in things to be so unified. However, as the essay shows, this view plainly raises as many questions as it answers, and Suárez's admitted perplexity is understandable." (*CS* p. XIII).

22. ———. 1991. "Francisco Suárez: On Preaching Gospel to People Like the American Indians." *Fordham International Law Journal* no. 15:879-951.

Reprinted as Chapter 10 in *CSS*. The ninth essay after the introduction ("Francisco Suarez: On Preaching the Gospel to People like the American Indians") was written in commemoration of the 500th anniversary of the European discovery of America. As its title suggests, the essay considers Suárez's doctrine on evangelization against the background of a new situation, a new opportunity, and new obligations for European Christians. On the basis of related passages and themes in his *Opera omnia* it attempts to fathom some of his deepest thoughts with respect to the personhood and rights of the American Indians in face of Christ's last command that his followers teach all nations. Along the way, it presents a fairly extended study of Suárez's views on the basic equality of all human beings, the character of human society (domestic and especially political), morality and law (Eternal, natural, and civil, including the "law of nations" [*jus gentium*]), sovereignty, jurisdiction, war and conquest, Church and state, as well as a host of other issues." (*CS* p. XIV).

23. Doyle, John Patrick, and Charron, William C. 1993. "On the Self-Refuting Statement 'There is no Truth'. A Medieval Treatment." *Vivarium* no. 31:241-266.

"It is commonly known that 14th and 15th century logicians were deeply interested in the properties of self-referring statements.

Perhaps, however, it could be better known that medieval theologians were also interested in them. In this regard, one important discussion centered around the proposition "There is no truth" ("*Nulla Veritas est*"). Construed as a universal negative about an entire class of items of which it itself is a member, it is partially self-referring. And just because it is self-referring it also seems to be self-refuting: if it is true, then it is false; if it is false, then something is true. Thus, its contradictory is necessarily true, namely "There is some truth".

The history here goes back many centuries through a line of theologians and ultimately to St. Augustine. (1) Following him, St. Anselm, St. Bonaventure, and others claimed to have found in the self-refutation of the denial of truth a foundational premise adequate

to support other claims about God and immortality. But this was not without opposition from theological colleagues and successors, including Aquinas, Scotus, and in the post medieval period, Cajetan, and Toletus. Criticism came at either of two points: the critics

objected(a) that the self-referring character of the denial of truth does not entail the truth of what is claimed, or (b) that the truth which the self-refutation is purported to establish is not itself sufficient to found the metaphysical constructions it is further claimed to found.

An unraveling of this ancient debate -- beginning our story with Augustine in the 4th century and ending it with Toletus in the 16th reveals the appreciation among these theologians of ever more powerful tools of logical analysis, tools that have proven to be of lasting use." (pp. 241-242)

(1) Interest in self-refutation is common among ancient Greek and Hellenistic philosophers. Sextus Empiricus provides a notable statement of the alleged self refutation of the proposition in which we are interested. Sextus Empiricus, *Against the Logicians*, I 398-9, II 55, ed. and tr. R.G. Bury, Loeb Classical Library, Cambridge 1935, II, 213, 265. "Now as to those who assert that all things are false,... they are confuted. For if all things are false, the statement 'All things are false,' being one of the 'all things', will be false. And if the statement 'All things are false' is false, its contradictory, 'Not all things are false,' will be true. Therefore, if all things are false, not all things are false." (p. 265) For the history of the notion of self-refutation, see M. F. Burnyeat, 'Protagoras and Self-Refutation in Later Greek Philosophy', in: *The Philosophical Review*, 85 (1976), 44-69.

24. Doyle, John Patrick. 1994. "Poinset on the Knowability of Beings of Reason." *American Catholic Philosophical Quarterly*

no. 68:337-362.

"John Poinsot (a.k.a. Joannes a sancto Thoma (1589-1644) was heir to a common division of beings into those that are in themselves real and those which are entirely dependent upon human reason. Those division went back to Aristotle's split between being as found in the categories and being as true. In the Middle Ages and thorough the period of the Spanish Revival, it was found, *mutatis mutandis*, in Averroes (d. 1198), St. Thomas Aquinas (1225-1274), Henry of Ghent (1217?-1293), John Duns Scotus (1266-1308), Francisco Suárez (1548-1617), and just about everyone else in the Scholastic tradition.

One of the very few exceptions that I know to this general rule was Francis of Mayronnes, O.F.M. (d. ca. 1325), who denied the existence of beings of reason. Not only an heir, Poinsot himself embraced and transmitted the common view. For him, beings were either real or rational. Real beings (*res extra animam*) were those which exist, or can exist, independently of the human mind and which belong in the Aristotelian categories. Rational beings, or beings of reason, in the sense which contrasts with this, were those which do not belong to the categories, and which cannot exist outside human understanding. That there are such beings of reason was not for Poinsot a matter of doubt."

25. ——. 1995. "Another God, Chimerae, Goat-Stags, and Man-Lions: a Seventeenth Century Debate About Impossible Objects." *The Review of Metaphysics* no. 48:771-808.

Reprinted as Chapter 4 in *BBK* and as Post-Scriptum in: Victor M. Salas (ed.), *Hircocervi & Other Metaphysical Wonders. Essays in Honor of John P. Doyle*, Milwaukee, Marquette University Press, 2013, pp. 329-367.

"This article concerns a 17th Century debate over whether there are self-contradictory impossible objects of understanding or whether there is no intellectual object which is not some actual or possible being. The debate, which has its roots in the Greek and Scholastic traditions, is presented especially between two Jesuits: Thomas Compton Carleton and John Morawski, respectively, a proponent and an opponent of impossible

objects. The article itself does not take sides in the debate, but, inasmuch as he wrote later, Morawski is presented as espousing his own view and answering arguments in support of Carleton's position."

26. Suárez, Francisco. 1995. *On Beings of Reason (De Entibus Rationis). Metaphysical Disputation LIV by Francisco Suárez*. Milwaukee: Marquette University Press.

Translated from the Latin with an introduction and notes by John P. Doyle.

"Suárez's *Disputationes metaphysicae* is to this day the most comprehensive and systematic treatise on metaphysics written from an Aristotelian perspective. It addresses every metaphysical issue raised by medieval and Renaissance scholastics and discusses the views of all important figures who preceded Suárez. As such it is a treasure-trove not only for the metaphysician but also for the historian and has exercised enormous influence on early modern philosophy, particularly in Continental Europe. (...) The Disputation deals with mental entities and, therefore, contains relevant discussions to the philosophy of mind and the ontological status of intensional objects."

Jorge J. E. Gracia - State University of New York at Buffalo.

"In a finely wrought and philosophically intelligible translation of this 54th Disputation of Suárez, John P. Doyle has documented with care the ancient Greek and Medieval sources of Suárez's discussion, its influence upon many hitherto unknown late Scholastic writers and the relevance of Suárez's intentionality theory to such prominent figures in early, middle and late Modern thought as Descartes, Berkeley, Leibniz, Kant, Brentano, Husserl, Meinong, B. Russell, Heidegger and others."

Norman J. Wells, Boston College.

27. Doyle, John Patrick. 1996. "Silvester Mauro, S.J. (1619-1687) on Four Degree of Abstraction." *International Philosophical Quarterly* no. 36.

Reprinted as Chapter 7 in *BBK*.

"Mauro says there are four degrees of abstraction. The lowest is 'physical', abstracting from material singulars. The second is 'mathematical', abstracting not just from singulars, but also from sensible and changeable matter as such. A third is 'metaphysical', abstracting from all matter and opening on to real immaterial being. Peculiar to Mauro and marking a departure from orthodox Aristotelianism is the last and highest degree, which is 'logical'. At this level, we consider intentional being -- which he says is more immaterial than real being, including that studied by metaphysics, in as much as 'being known' is identical with being elevated from matter."

28. ———. 1997. "Between Transcendental and Transcendental: The Missing Link?" *The Review of Metaphysics* no. 50:783-815.

Reprinted as Chapter 8 in *BBK*.

"Medieval transcendentals are on the side of things while Kantian transcendentalism is on the side of the knower. Is there a link between the two in the Seventeenth-Century scholastic understanding of 'supertranscendentals'? In the century before Kant, scholastic supertranscendental being was primarily identified with extrinsic intelligibility and regarded as a contribution of the knower. It was said to be the same as 'the object as such' (*objectum ut tale*). This seems very close to 'der Gegenstand überhaupt' which Kant has called a 'missing concept' above the dichotomy of the possible and the impossible."

30. ———. 1997. "Vitoria on Choosing to Replace a King." In *Hispanic Philosophy in the Age of Discovery*, edited by White, Kevin, 45-58. Washington D. C.: Catholic University of America Press.

"Anyone familiar with the development of Hispanic philosophy in the Age of Discovery must be aware of the importance of Francisco de Vitoria (c. 1492-1546). Perhaps, however, that person will be surprised to hear that Vitoria, the holder of the

Catedra de Prima in theology at the University of Salamanca, never published any of his own works. Instead, it was through his teaching that, during and after Spain's golden century, Vitoria influenced countless disciples, especially in areas of ethical and political thought. There are estimates of up to one thousand auditors attending some of his lectures. He himself in one place comes close to confirming that figure. But more than this, in the decades that followed, almost all the great moralists of the age looked back to Vitoria as their foremost authority. Their names read like the honor roll of Spanish and Counter-Reformation Scholasticism. But also outside Spain and Catholic Scholastic circles, in the dawning age of international jurisprudence, Vitoria exercised patent influence on important figures such as Hugo Grotius (1583-1645) and Alberico Gentili (1552-1608). Looking at all his influence and at the dearth of work published while he lived, it was with perfect truth that Domingo Bañez (1528-1604) could refer to him as "another Socrates".

"A. "Relection."

Literally a "re-lecture," the term "relection" refers to the practice in which professors at Salamanca were required to represent in a formal manner some topic treated in their lecture courses each year. In ways a successor to the medieval *Quaestio quodlibetalis*, a Salamanca relection was open to the whole university community. Unlike its medieval forerunner, however, the relection took the form of a set speech, rather than a question and reply exchange between the master and his students or those in attendance. The custom was for the master to prepare his own manuscript and read from it for the space of two hours, measured by a water clock. At Salamanca the practice went back to 1422 when it was sanctioned by Pope Martin V (pope: 1417-1431}.

After Viroria, it was continued by Domingo Soto (1494-1560) and others." (p. 14, notes omitted)

33. Doyle, John Patrick. 1998. "The 'Conimbricenses' on the Semiotic Character of Mirror Images." *The Modern Schoolman* no. 76:17-31.

"Seneca distinguished two theories about images in a mirror. The first is that we see 'simulachra' and through their mediation we pass to things. The second is that in the mirror we immediately see things. The 'Conimbricenses', Jesuits at the Sixteenth-Century University of Coimbra, regarded mirror images as signs and, aware of Seneca's distinction, they favored the second theory. In so doing, they contrasted formal and instrumental signs and thought mirror images to be formal signs. All of this put them at odds with Thomas Aquinas who apparently favored Seneca's first theory. It also puts them at odds with the present-day semiotician, Umberto Eco, who says that mirror images are not signs."

Translated in Russian by Lada Tsipana as: 'Koimbrskie scholastiki o semioticheskom charaktere zerkalnich otrazhenij', *Verbum* (St. Petersburg Society of Philosophy), 5, pp. 93-109.

34. ———. 1998. "Supertranscendental Nothing: A Philosophical Finisterre." *Medioevo* no. 24:1-30.

Reprinted as Chapter 9 in *BBK*.

"For the innocent of geography, let me first explain that Finisterre is a cape in northern Spain at the westernmost point of the Spanish mainland. It marks an end of Europe; beyond Finisterre there is only the ocean. As readers of this essay may see, 'supertranscendental nothing' is arguably a philosophical Finisterre which was a farthest point of speculation reached by European philosophers in the seventeenth century. But what readers also may see is that this apparently ultimate item of seventeenth-century European philosophy was possibly pushed

even farther out, at what might then to some have seemed beyond Spain and Europe the very end of the earth itself, in Santiago, Chile [by Miguel Viñas, S. J. (1642-1718)]."

35. ———. 1998. "Supertranscendental Being: On the Verge of Modern Philosophy." In *Meeting of the Minds. The Relation between Medieval and Classical Modern European Philosophy*, edited by Brown, Stephen F., 297-315. Turnhout: Brepols.

"As every historian of philosophy knows, Aristotle thought the subject of metaphysics was «being insofar as it is being» and from this subject he excluded «being as true». Centuries after Aristotle, Francisco Suarez, S.J., (1548-1617) designated the subject of metaphysics more explicitly as «being insofar as it is *real* being» (*).

The addition of «real» to Aristotle's formula highlighted the inclusion of all that *can* as well as does exist. Against the backdrop of two already well known distinctions -- (1) between formal and objective concepts, and (2) between being as a participle and being as a noun -- for Suarez the subject so conceived was identical with "the objective concept of being as a noun". Concurrently, while being was said to be analogous with regard to hierarchically ordered objects (God and creatures, substance and accidents) with an intrinsic attribution of the perfection it represented, such analogy presupposed a common, unitary, and all but univocal, concept. But from that concept and from the subject of metaphysics Suarez excluded "beings of reason", which he subsumed under Aristotle's *being as true*, and of which impossible objects, in the sense of those that would be self-contradictory, furnished the paradigm case.

On at least one occasion, Suarez did use the word "supertranscendental" to label a notion wide enough to cover both a transcendental and a predicamental relation (**)-- but not to signify anything common between real beings and beings of reason. Nevertheless, there does seem to be some kind of supertranscendent community here. Real being is transcendent, but real beings and beings of reason are in some

more than transcending way the same inasmuch as they both can be objects of cognition. Yet Suarez will allow only a community of name and not of concept between real being and being of reason. At the same time, he has distinguished between being which is the object of metaphysics and being which is the object of cognition generally." (notes omitted)

(*) Cf. *Disputationes Metaphysicae* (hereafter DM), d. 1, s. 1, n. 26, Opera omnia, ed. C. Berton. Paris, Vivés, 1856-1866, XXV, p. 11.

(**) 11 DM 48, s. 1, n. 5 (XXVI, p. 869).

36. ———. 1999. "Francisco Suárez on the Law of Nations." In *Religion and International Law*, edited by Janis, Mark W. and Evans, Carolyn, 103-120. London.

Reprinted as Chapter 11 in The tenth essay ("Francisco Suarez on the Law of Nations") repeats a great deal of what is found in the ninth essay both in content and even style. Its inclusion in the present volume was considered justified, however, since its focus is much narrower than the ninth essay, not to mention that there are nine years separating the two essays and both were written for different audiences. "Francisco Suarez on the Law of Nations" concerns the law of nations, which for Suarez was a quasi-medium between natural law and the positive human law of individual states. Closely following upon the natural law, the law of nations is not as necessary as that law. In truth, it has the character of positive law. Yet its precepts differ from those of civil law inasmuch as they are unwritten and have been established by the customs not of a single state or province but rather by those of all, or *almost* all, nations. In this way, like the state itself, the *jus gentium* has its origin in human consensus. Along the way here we will see Suárez's general teaching with regard to "*jus*" which in different contexts he translates as "law" or as "right." This will then lead into the next essay." (CS p. XIV).

37. ———. 2000. "Suárez on the Truth of the Proposition: "This is my Body"." *The Modern Schoolman* no. 77:145-163.

Reprinted as Chapter 9 in CSS.

"Essay eight in order ("Suarez on the Truth of the Proposition, 'This is My Body-') treats a problem coming from Suárez's Aristotelian doctrine of truth vis-a-vis the Council of Trent's dogma of Transubstantiation. The model case of truth is offered by a present indicative proposition which correctly affirms the identity of its subject with its predicate. "This is my Body" aims to do that. But the dogma requires in this proposition a basic non-identity between its subject and predicate. So it appears that the subject is bread, while the substantially different predicate is Christ's Body. Suarez considered earlier opinions and then advanced his own solution to the problem, a solution which gives us insight into not only his doctrine respecting truth but also his understanding of objectivity." (CS p. XIII-XIV).

"Best known for his systematic study of metaphysics and his teaching on law, Francisco Suarez was arguably the greatest theologian in the history of the Jesuits. While the particular doctrine that I am now treating was published in 1587 in the wake of his teaching sacramental theology at Alcalá de Henares, there is no indication that he ever changed his mind on it.

My precise present focus is on Suarez's treatise, *De Eucharistia*, Disputation 58, Sections 4 to 9, which cover pages 322-336, in Volume 20 of the Vivès edition (Paris, 1856-78) of his *Opera omnia*. In that place, he is commenting on St. Thomas Aquinas' *Summa Theologiae*, Part III, Question 78, and is raising questions with regard to the formula of Eucharistic consecration: most specifically, the words: "This is my Body." p. 145.

38. ———. 2001. "Francisco Suárez, S.J. on Human Rights." In *Menschenrechte: Rechte und Pflichten in Ost und West*, edited by Wegmann, Konrad, Ommerborn, Wolfgang and Roetz, Heiner, 105-132. Muenster: LIT Verlag.

Reprinted as Chapter 12 in *CSS*. The eleventh study ("Suarez on Human Rights") addresses a controverted matter in Scholastic philosophy - the doctrine of subjective rights which has been generally associated with Suarez. In fact, Suarez here accented something already in the Scholastic tradition, something which

then later came to be termed a "subjective right." Suarez himself called it a "moral faculty" - understanding "moral" as intentional rather than physical and "faculty" as a power, an authority, a claim, a warrant, or a license. Moreover, he did not reject the earlier "objective" notion of rights, with its understanding of "*jus*" as the object of the virtue of justice. Rather, he presupposed a common objective order of justice upon which ultimately all rights would be grounded. But he did emphasize and to a certain extent modify something that existed in the tradition before himself, namely, the thought that individuals can be the bearers of personal rights, not in opposition to but in distinction from the common "right" which is the object of justice. An added nuance here is that subjective rights may be understood not just over against an objective right but also as moral faculties which are possessed by persons who are subject to human authority opposite that authority to which they are subject." (CS p. XIV-XV).

"For most observers, the American Declaration of Independence is a milestone in the history of human rights. From its promulgation in 1776 down to present time it has served as a philosophical base for various democratic systems of government and as a logical, if not an always demonstrably historical, starting point for the expansion of human rights claims in such current-century documents as the United Nations Universal Declaration and the Geneva Conventions. However, it has long been recognized that the Declaration of Independence has its own philosophical antecedents, most notably perhaps in the work of John Locke (1632-1704). Our aim now is to go back before Locke and to show such antecedents in the Scholastic philosophy which Locke himself imbibed as a young student at Oxford where he first enrolled in 1652. More specifically, I will point to their presence in the work of arguably the greatest Jesuit philosopher-theologian of all time, Francisco Suárez (1548-1617). (*)

(*) For a recent overview of Suarez, the man, his work, and his influence, See John P. Doyle, "*Suárez, Francisco*," *Routledge Encyclopedia of Philosophy* (London and New York, 1998), vol. 8; pp. 189-196.

39. ———. 2001. *The Conimbricenses: Some Questions on Signs*. Milwaukee: Marquette University Press.

Translated with introduction and notes by John P. Doyle.

"The *Conimbricenses* were late sixteenth and early seventeenth century Jesuit philosophy professors at the University of Coimbra. Chief among them were Emmanuel de Goes (1542-1597), Cosmas de Magalhães (1551-1624), Balthasar Alvarez (1561-1630), and Sebastian do Couto (1567-1639). Although not usually numbered among the *Conimbricenses*, their confrere in the Society, Pedro da Fonseca (1528-1599), had promoted the novel idea of a philosophical *cursus* authored by the Jesuits of Coimbra.

The treatise *De Signo* (On the Sign) is the commentary to the first chapter of Aristotle's *De Interpretatione*. The work raises five principal questions: (1) On the nature and conditions common to signs; (2) On the division of signs; (3) On the signification of spoken words and of writing; (4) Whether concepts are the same among all and whether spoken words are different; then (5) Whether some concepts in our minds are true or false, and others devoid of truth or falsity."

40. ———. 2001. "On the Pure Intentionality of Pure Intentionality." *The Modern Schoolman* no. 79:57-78.

Reprinted as Chapter 5 in *BBK*.

"With his own intention of instructing novices, Luis de Lossada, S.J. (1681- 1748), has summarized the new, yet old, terminology of the disputed Scholastic doctrine of intellectual intentionality. (*) Although the Scholastics (and I to entitle the present essay) have ambiguously used the term 'intention' -- first in relation to will and then to understanding, in executing his intention Lossada has employed it simply to designate an act of the human intellect. Such an act may be either first or second, depending upon whether it directly represents the physical reality of its object or reflexly represents an object as already known or insofar as it has some being derived from the intellect. From these intellectual acts, the words which signify things as first and directly conceived are called `terms of first

intention,' while those which signify things as secondly and reflexly known are called 'terms of second intention,' that is to say terms corresponding to a second intending by the intellect. Examples of the former terms may be 'man,' 'animal,' or 'sun,' while terms like 'universal,' 'genus,' 'species,' 'subject,' or 'predicate' are examples of the latter. Moreover, since objects are customarily named from the knowledge they terminate, both first and second intentions (whether one looks at acts of understanding or the words which express them) may be either 'formal' or 'objective'."

(*) *Cursus philosophici Logica*. Tr. I disp. 2 c. 4, n.1; ed. Barcinonae: Apud Vid. et Fil. J. Subirana, 1883 [originally: Salamanca, 1724], vol. I, p. 204. (Notes omitted).

"This essay concerns the upper and the lower borders between what is and what is not knowable for human beings, particularly as these borders were variously considered by some seventeenth-century Jesuit thinkers. Expanding, let me say that the boundary above is reached when one confronts the reality of God, who while He may be evidently knowable in Himself is not so, at least in this life, for us. In contrast, the lower boundary seems to run between that which is in itself knowable and that which is totally unknowable either for us or for God.

This lower boundary is reached at the level of what is intrinsically impossible and what to that extent fails of being and of being knowable.

A further refinement is suggested from geography. Take the Alps as a natural boundary between Italy and France. As any tyro knows, this boundary has a double face, inasmuch as we can view it either from the side of Italy or of France, that is from either a cisalpine or a transalpine perspective. Apply this to the borders of knowability. The cisalpine side of the upper border is somehow supplied by our human knowledge groping toward God - especially through negative theology in the wake of Pseudo-Dionysius and through what seventeenth-century Scholastics termed the metaphysical essence of God. The transalpine side is the reality of God in Himself which is beyond the present grasp of a human mind. The lower border will be at the interface of the possible and the impossible. More exactly, its cisalpine side will enclose both the possible and the impossible. Its transalpine side will in some way exclude both the possible and the impossible.

For what follows I will use Jesuit sources in the wake of Francisco Suarez, S. J. (1548-1617), but I will principally focus on one Jesuit, Maximilian Wietrowski (1660-1737), whom I have treated in other places. This will occasion forays into Jesuits between him and Suarez, most singularly: Thomas Compton Carleton (1591 -1666), Sylvester Mauro (1619-1687), and André Semery (1630-1717), as well as one publishing after, Miguel Viñas (1642-1718). At times I will go outside Jesuit writings to clarify or to confirm points and finally I will suggest conclusions against the backdrop of Thomistic theology, which the Jesuits, by their "Constitutions" and "Ratio Studiorum", were obliged wherever possible to follow." 44. Suárez, Francisco. 2004. *The Metaphysical Demonstration of the Existence of God. Metaphysical Disputations 28-29 by Francisco Suárez, S.J.* South Bend: St. Augustine Press.

Translated and edited from the Latin with an introduction and notes by John P. Doyle.

"The two Disputations that are translated in the present work open the second part of the *Disputationes metaphysicae* and mark the turn from being in general to particular beings. Their concern is with, first in Disputation 28, a comprehensive division of being in general, and after in Disputation 29, the existence of the principal member of this division, namely, that being which is God.

Disputation 28 is divided into three Sections, which ask about the legitimacy and the sufficiency of the division, as well as whether the dividend, i.e. being, is univocal or analogous between God and creatures. In the first Section (Vivès: vol. 26, pp. 1-8), the question is whether being is rightly divided into infinite and finite being? Doubts arise from the fact that "infinite" and "finite" on their face do not appear to cover the whole range of being but rather look to be restricted to accidental being in the category of quantity (§ 1). In addition, the terms of the proposed division seem obscure, especially the term "infinite" (§ 2). Suarez's answer is to analyze the terms (§ 3) and then to defend the division as one that is good and necessary (§ 4) as well as first and most evident (§ 5). It is equivalent to other divisions such as being by itself (*ens a se*) and being from another (*ens ab alio*) (§§ 6-7) or, with clarifications, necessary being and contingent being (§§ 8-12). It is also equivalent to: essential being and being by participation (§ 13), created being and uncreated being (§ 14), or being in act and being in potency (§§ 15-16). Suarez next compares the first division with the rest (§ 17), explains the terms of the first division by comparison with quantity (§ 17), and closes the first Section (§ 18) with a reply to objections raised at its beginning." p. XIV.

"Though almost twice as long, Disputation 29 like the one before is again divided into three Sections. Section 1 (vol. 26,

pp. 21-34) begins after two introductory paragraphs (§§ 1-2) in which Suarez gives reasons for the location of the subject matter of the Disputation in this place and remarks how he will leave aside as much as possible items which depend for their understanding on Revelation. The first Section then asks whether and/or by what means the existence of God can be demonstrated. Among the Scholastic Doctors, Peter d'Ailly (1350-1420) has denied the possibility of such a demonstration. To this Suarez makes the brief but revealing reply that already by the various divisions of being that have been presented in the previous *Disputation* the existence of "some being which is uncreated or not produced" has been proven (§ 1). The obvious implication is that by now the existence of God has in effect been proven. But immediately the question arises: by what means, physical or metaphysical, is this properly done? On one side, the opinion of Averroes is that the means is physical, namely the motion of the heavens (§ 2). The contrary opinion, that of Avicenna and later of Duns Scotus among others, holds that the means must be metaphysical (§ 3) -- that is, not motion but being itself. A third and a fourth opinion hold in different ways that the task must belong to both physics, that is natural philosophy, and metaphysics (§§ 4-5). In different ways the means would thus be both physical and metaphysical. In Suarez's judgment the second opinion is certainly the true one but there can be some probability in the fourth position, if it is rightly explained (§ 6).

At this juncture, he examines at length the physical argument that proceeds by the medium of motion and for various reasons he finds it wanting (§§ 7-17). Then he considers another physical argument, from the operations and the essence of the rational soul (§ 18). This too comes up short, unless we first pose a question about the soul's being, which is a metaphysical question (§ 19). Here Suarez gives the metaphysical argument that is based upon a broader and deeper principle than the physical one, "*Whatever is moved is moved by another.*" The metaphysical principle is "*Whatever is made or produced is made by another*" and the argument itself concludes to an unmade Maker (§§ 20-21). An objection of a possibly circular

chain of causes is dismissed as every bit as inadmissible as a thing's causing itself (§ 22). Other objections involve an infinite number of causes that would preclude any arriving at a first uncaused or unmade cause. There are different ways to conceive such an infinity of causes. Suarez explains such ways in detail and shows their insufficiencies (§§ 23-40). The first Section ends (§§ 41-42) with a brief rehearsal of and summary judgment upon the opinions listed at the beginning." pp. XV-XVI.

45. ———. 2004. *A Commentary on Aristotle's Metaphysics (Index locupletissimus in Metaphysicam Aristotelis) - by Francisco Suárez*. Milwaukee: Marquette University Press.

Translated from the Latin with an introduction and notes by John P. Doyle.

"As the reader will see, the following volume is divided into translations and the corresponding Latin texts. The translations are in order:

(1) *Suarez's Plan for his Metaphysical Disputations*. This is his preface to the 1597 edition. It is an address to his reader in which he lays out his intention as a Christian theologian to pursue a Christian philosophy, specifically a metaphysics which will be at the service of his theology. This metaphysics will be in two main parts. The first of these will be what will shortly after be called an "ontology" or a general science of being, in which after establishing "real being insofar as it is being" as the object of metaphysics, he will proceed to study its properties, its principles, and its causes. The second part will then descend from the general concept of being to study those beings, God and creatures, substances and accidents, which are contained under that concept. Finally, it should be noted that in this preface he speaks of the present Index and gives his reader some idea of its purpose.

(2) *The Proemium to the Second Metaphysical Disputation*. This short piece is important. After again indicating the systematic plan of the *Disputationes*, it contrasts that with the disorganized text of Aristotle and commentaries on it. But then he says that, in order to satisfy "students of Aristotle," he has

added the present Index which follows the order of the *Metaphysics* and which gives cross-references to the *Disputations*. It will also, he tells us, comment at times directly on the text of Aristotle and will explore matters which for whatever reasons have not been covered well enough in the *Disputations*.

(3) Next comes the *Most Ample Index* itself. In this Suarez, as he promised, follows the order of the *Metaphysics*, essentially commenting on it as I have said, "by way of question." To appreciate this Index, a modern reader should have some familiarity with Aristotle's text and the main problems interpreters have encountered with it. To facilitate that, I have at the start of most Books added a summary of the remarks of Jules Tricot, the important French translator of the *Metaphysics*. I chose Tricot's remarks for a number of reasons. First, they were succinct. Second, they were the thoughts of an authentic scholar. Third, while Tricot's scholarship may be a few decades old, it is still valuable for understanding the main nineteenth and twentieth-century debates about the composition and the meaning of Aristotle's *Metaphysics*, debates which often bear on problems which Suarez and the medievals encountered. Finally, there is something which will not be evident from the summaries I gave, but which was in the background of my choosing Tricot. This is that he, unlike many contemporary writers, extends his interest out beyond the text of Aristotle to the traditions of his Greek and Latin commentators. In short, Tricot pursues understanding of Aristotle in a way which I am certain Suarez would endorse.

(4) *An Index of Disputations*: This amounts to a Table of Contents for the fifty-four Disputations which comprise the main portion of Suarez's work. To make it easier for readers to find these Disputations I have added volume and page numbers to Suarez's list. A further benefit of this may be that a reader will be able to see at a glance the relative importance which Suarez attached to each Disputation from the number of pages he allotted to it. In passing I did notice minor variations between some of the Section headings in the main text of the *Disputationes* and the Index of Disputations. Generally, in my

notes I ignored such variations and mentioned them only on rare occasions.

Following the translations, the next portion of the current volume is devoted to the Latin texts. Thus I have transcribed in their original language the Preface to the whole work, the Prologue to the Second Disputation, the Most Ample Index itself, and the Index of the Disputations. The most important notes that I added contain the Latin translations mentioned above, i.e., those of Moerbeke, Argyropoulos, Bessarion, and Fonseca. On this score, let me say that I deliberately separated the Greek of Aristotle from the Latin of Suarez and these others. My purpose in this was to allow interested persons to compare the Latin translations without the immediate distraction of the Greek. At the same time, the Greek will be available and matched directly to my English translation of Suarez's Latin. My hope is that this is clear and that it makes some sense to interested readers.

The volume includes a *Dramatis Personae*, that is, a list of and a few facts about persons whom Suarez mentions in the Ample Index. Again, I have added a bibliography of sources in various languages to which readers may go for more in depth understanding of the issues raised in the translated texts."

In *Rechtsdenken: Schnittpunkte West und Ost. Recht in den gesellschafts- und staatstragenden Institutionen Europas und Chinas*, edited by Wegmann, Konrad and Holz, Harald, 253-273. Münster: LIT Verlag.

"I. The Plan of Alonso Sanchez S.J.

II. The Great Plan in Detail: Ten Sections of Preparing, Pursuing, and Safe-Guarding the Conquest of China

III. The Opponent of the Plan: José de Acosta S.J.

IV. Several Reasons, Technico-practical and Moral, against the Plan

V. The Royal Decision: Renunciation of the Plan.

I. The Plan of Alonso Sanchez S. J. of Conquering China

The first of our two Jesuits, Alonso Sâchez (1547-1593), has been called "a Jesuit like no other." (1) Born in the province of Guadalajara in Spain, he entered the Society of Jesus in 1565 at the age of 17. (2) In 1571 he was ordained a priest and in 1579 he was sent by his Order to Mexico and then on to the Philippine Islands, where he disembarked in September of 1581 at the city of Manila, which had been founded ten years earlier by Miguel Lopez de Legazpe (1510-1572). In the years that followed, Sâchez gained prominence in the Philippines and made two trips from there to China.

His first trip, in 1582, was to the Portuguese enclave at Macao. (3) His purpose was to acquaint the Portuguese with, and to gain their acceptance of, the fact that Philip II of Spain had in 1580 also assumed the throne of Portugal and that now the whole Iberian peninsula was united under one rule. In this Sâchez was most successful and upon returning to the Philippines he was acclaimed as a skilled diplomat. Well known for his virtue, his learning, and his zeal for souls, (4) he still became a figure of controversy even within the Jesuits. (5) This last was largely because of his penchant for crossing the line between affairs of church and state and in particular for his view with regard to China. (6)

47. ——. 2006. "Hervaeus Natalis, O.P., (d. 1323) On Intentionality: Its Direction, Context, and Some Aftermath." *The Modern Schoolman* no. 83:85-124.

"It is generally known that Franz Brentano (1828-1917) came through a tradition Aristotelian-Scholasticism to a philosophy which stood in opposition to Kant and to the main stream of German idealism after. It is also often thought that nothing in that tradition was more influential than its intentionality doctrine. Central for Brentano's early development, intentionality was a doctrine whose Scholastic origin he himself indicated, when in 1874, he wrote:

"Every mental phenomenon is characterized by what the scholastics of the Middle Ages referred to as the intentional (and also mental) inexistence of the object, and what we, although with not quite unambiguous expressions, would call relation to a content, direction upon an object (which is not here to be understood as a reality) or immanent objectivity."

Since 1874, for proponents, opponents, and simple observers of Brentano and of intentionality doctrine, whatever else may be at issue the general consensus has been that the term "intentionality" indicates a direction from knower to known. *Mutatis mutandis*, so understood, intentionality continued to be important for various phenomenological philosophies which stemmed from Brentano. In this vein, Brentano's most recognized disciple, Edmund Husserl (1859-1938), who is credited with introducing the term itself into modern philosophy, has described its basic signification as "the property of being conscious of something." This direction from consciousness to the object (which Brentano himself influenced by the problem of non-existent objects later at least in part rejected in his famous *Abkehr vom Nichtrealen* has been regarded as central in Husserl's work even by critics. The same direction appears in the work of others dependent upon Brentano and a glance at secondary sources will confirm its almost universal acceptance as the common view.

In the Middle Ages, from the Latin Avicenna on, the term "intention" (*intentio*) can be found throughout the thirteenth century. However, to my knowledge, somewhat surprisingly, the actual word, "intentionality" (*intentionalitas*), first appears only when we come to the fourteenth-century writing of Hervaeus Natalis. It was a bigger surprise for me to find that Brentano in one place actually mentioned Hervaeus and listed three of his works. But the biggest surprise was to discover that for Hervaeus the direction of *intentionality* as such was not from knower to known but rather opposite wise -- from known to knower! My purpose now is to recount and perhaps to sharpen that discovery as well as to go further and touch on some of its possible *Wirkungsgeschichte*." pp. 85-86 (notes omitted).

48. ———. 2006. "Francisco Suárez, S. J. (1548-1617) on the Interpretation of Laws." *The Modern Schoolman* no. 83:197-222.

Reprinted as Chapter 13 in *CSS*.

"The twelfth and final essay ("Francisco Suarez on the Interpretation of Laws") will serve to bring out some of the breadth and depth of Suarez's great work, *De Legibus*. For that I have picked out just one of its 246 chapters and have given a brief exposition of that chapter against the civil and canon law background before which it was written. In this, I have followed Suarez to speak generally of interpretation of the words of a law, the mind of the lawgiver, and the reason for the law, in the two directions of expanding and of restricting that law. Along the way, I have treated such issues as various types of law which Suarez recognized, the legal codes he had to cope with, the interpreters on whom he relied, the absence of any written constitution, yet, at the same time, some *de facto* practices and principles substituting for that. I have also highlighted his own skills at interpretation in other contexts. Lastly, I have added an Appendix here which using particular laws will show more concretely some of the points made in the essay." (Cs p. XV).

49. ———. 2006. "Mastri and Some Jesuits on Possible and Impossible Objects of God's Knowledge and Power." In *Rem in seipsa cernere: saggi sul pensiero filosofico di Bartolomeo Mastri (1602-1673)*, edited by Forlivesi, Marco, 439-468. Padova: Il Poligrafo.

"Why are some things possible while others are not? Is possibility and/or impossibility ultimately from God Himself? If so, how can this be understood? Is it, as St Thomas Aquinas (1225-1274) thought, stemming from God's intellect in such way that creatures are possible inasmuch as the divine essence is thought by God to be imitable in various ways? Accordingly, God's intellect rather than possible creatures would be the cause of their multiplicity. But further obstacles are posed by the Divine simplicity. St Thomas himself has addressed the question of how can the absolutely simple Divine intellect understand at once many things? Or how can what is simple be imitable in various ways? How can what is perfectly one be the last ground of plurality? This last difficulty was highlighted in the time between Plato and St. Thomas by those to whom it seemed, at best, that from what is simply one, necessarily only one thing could proceed.

Contrasted with this, perhaps the final ground for things being many as well as possible or impossible might be that God has freely willed them so. This seems to have been the view of Henry of Ghent (1217-1293) when he said that the passive potency of creatures and the active power of God are correlative. It was also the thought of William of Ockham (ca. 1290-1349), whose disciple, Gabriel Biel (1410?-95), has gone even more decidedly along this path. Are possibilities themselves, then, creatures of God, depending on His will to make them as they are? If yes, is it in God's power to make other things possible and then to create them - things which are now impossible? Could God make square circles or a second God? Without restraint from what is beforehand possible, could God abrogate the present moral order and substitute another in its place?

(Or can there be a third, on its face more Platonic, position which would find the source of multiplicity, possibility, and impossibility in other beings which are equally independent with God? Other Gods or "Semi-gods"? Like Plato's Demiurge, could the Christian God be bound by a set of antecedent possibilities which are not other Gods and which are not His creatures but which are simply "there", governing His action? We might recoil from such a position, but that won't solve problems.

2. Some sources

The 17th century Conventual Franciscan, Bartolomeo Mastri, (1602-1673), came to such problems chiefly as a continuator and an interpreter of Duns Scotus (1266-1308), for him "the Doctor". (17) But between Mastri and the Subtle Doctor centuries had intervened, during which there were other interpreters and different lines of thought about possibles and impossibles. The present paper is confined to Mastri's views both personal and as an interpreter; and it will try to relate these views to those of some 17th-century Jesuit thinkers whose works were known to him.

Primary sources for Mastri's doctrine will be in his (so posthumously called) *Cursus integer* of philosophy, the first

three volumes of which he co-authored with his friend and fellow Franciscan, Bonaventura Belluto (1601-1678), (18) whereas the last two, which contain his metaphysical disputations, he afterwards produced alone. (19) My emphasis will be on his metaphysical Disputation 8 (On the Essence and Existence of Finite Being) and, from their joint logic, Disputation 3, question 6 (On Beings of Reason). I will also draw on Mastri's later *Disputationes theologicae* which contain his mature doctrine. (20) The remote source for Mastri's views will be the writings of his master, Duns Scotus, especially the *Ordinatio*, most particularly, Book I, distinctions 35, 36, and 43. (21) Someone always present will be the Irish Franciscan, John Punch (Poncius, 1603-1672/3), who was over decades Mastri's principal opponent. (22)". (pp. 440-443, many notes omitted).

(17) On Mastri, see M. Forlivesi, "*Scotistarum princeps*". *Bartolomeo Mastri (1602-1673) e il suo tempo*, Padova: Centro studi antoniani, 2002. In English, cf. B. Crowley, "The Life and Works of Bartholomew Mastrius, O.F.M. Conv. 1602-1673", in *Franciscan Studies*, 8 (1948), pp. 97-152.

(18) I have used the following edition: Mastrius - Bellutus, *Philosophiae ad mentem Scoti cursus integer*, Venetiis: Apud Nicolaum Pezzana, 1727.

(19) Here I have used Mastrius, *Disputationes in XII Aristotelis Stagiritae libros Metaphysicorum*, 2 vols., Venetiis: Typis Marci Ginammi, 1646-1647.

(20) For this I have used: Mastrius, *Disputationes theologicae, I In primum librum Sententiarum*, Venetiis: Apud Ioannem Iacobum Hertz, 1675 (archetypal edition Venetiis: Apud Ioannem Iacobum Hertz, 1655). In addition, I have had access to: Mastrius, *Disputationes theologicae, I In primum librum Sententiarum*, Venetiis: Ex Typographia Balleoniana, 1719. From what I have seen, I would judge the 1675 edition to be better.

(21) In Joannes Duns Scotus, *Opera omnia*, ed. Commissio scotistica, Civitas Vaticana: Typis polyglottis vaticanis, 1950-.

Grajewski, "John Punch, Franciscan Scotist of the Seventeenth Century", in *Franciscan Studies*, 6 (1946), pp. 54-92. For Punch versus Mastri here, see J. Coombs, "The Possibility of Created Entities in Seventeenth-Century Scotism", in *The Philosophical Quarterly*, 43 (1993), pp. 447-459; St. Sousedík, "Der Streit um den wahren Sinn der scotischen Possibilienlehre", in *John Duns Scotus. Metaphysics and Ethics*, eds. L. Honnefelder, R. Wood and M. Dreyer, Leiden - New York - Köln: E. J. Brill, 1996, pp. 191-204; and T. Hoffmann, "Creatura intellecta". *Die Ideen und Possibilien bei Duns Scotus mit Ausblick auf Franz von Mayronis, Poncius und Mastrius*, Münster: Aschendorff Verlag, 2002, especially ch. 7, pp. 263-304.
50. Suárez, Francisco. 2006. *On Real Relation (Disputatio Metaphysica XLVII) by Francisco Suárez*. Milwaukee: Marquette University Press.

Translated from Latin with an introduction and notes by John P. Doyle.

"There are two main places in which Aristotle has dealt with the category of relation. These are: (a) *Categories*, Chapter 7, and (b) *Metaphysics*, Book V, Chapter 15. As will become apparent, these places will be central for Suarez's treatment of relation in *Disputation 47*." p. 19.

"At very least, without pinning the matter down at all points, it is safe to say that relation is central to any overall understanding of Aristotle's doctrine of the categories and even more to any understanding of his wider doctrine beyond.

As I have mentioned, there are two principal places in the *Disputationes metaphysicae* (DM) in which Suarez treats relation. These are the present Disputation 47 and then Disputation 54, Section 6. The obvious dividing line between them is that between real being in the categories and "being as true" which by Suarez's time has come to be identified with being of reason. (77) But even as we say this, it is important once again to note that real relation extends beyond the

category of relation and also that in the Second Section, Paragraph 22, of Disputation 47 Suarez will come exceedingly close to a reduction of real relation to a simple act of the knower, that is, a connotation.

There are other places in the *Disputationes* where in various ways Suarez has touched upon relation. While I have not explored them all in the present work, they do frequently shine added light on this work. For examples, let me mention his treatment of "prior and posterior" in the *Index locupletissimus* at Book Five, Chapter 11; (78) his discussion-in the context of his treatment of distinction -- of relation and its terminus; (79) his discussion of relation in the context of truth; (80) various points he makes about relation in treating transcendental goodness; (81) his contrast of finite created relations and infinite divine relations as regards the essences in which they are found; (82) the divine relations of paternity and filiation as dissimilar; (83) or within a context of his discussion of quantity, a further discussion of the characters of "measure" and "measured," (84) etc.

As may be gathered from some of the examples just mentioned, there are Christian dimension of relation both in Suarez's sources and in his own teaching. These are linked particularly with the doctrines of the Trinity and the Incarnation. On both these themes, besides what he has said in the *Disputationes*, (85) he has written special works, which contain much on the subject of relation." pp. 26-27.

(77) For some of the history of this identification, cf. Theo Kobusch, "Ens in quantum ens und ens rationis: ein aristotelisches Problem in der Philosophie des Duns Scotus und Wilhelm von Ockham," in *Aristotle in Britain during the Middle Ages: Proceedings of the International Conference at Cambridge, 8 -11 April 1994* organized by the Société internationale pour l'Étude de la philosophie médiévale, edited by John Marenbon (Turnhout, Brepols, 1996), pp. 157-175, esp. 158-9.

51. Doyle, John Patrick. 2007. "Hispanic Scholastic Philosophy." In *The Cambridge Companion to Renaissance Philosophy*, edited by Hankins, James, 250-269. Cambridge: Cambridge University Press.

"Hispanic scholastic philosophy in this chapter designates a sixteenth and seventeenth-century stream of philosophy which flowed out of medieval universities, increased to a torrent on the Iberian peninsula, then poured into other regions of Europe, America, Africa, and Asia. Arising in the wake of Spanish and Portuguese explorations and conquests, which at the end of fifteenth and through the sixteenth century brought radically new, and usually bloody, encounters between European and non-European peoples, it was at its core concerned with such encounters. Other background were furnished by the Counter-Reformation, especially the reforms of the Council of Trent (1545-63) and its aftermath; the late Renaissance debates among philosophers, humanists and skeptics; and the revival of Thomistic texts and thought. Two subjects stand out as particularly important and influential: (1) moral and juridical philosophy centering on "the law of nations" (the *jus gentium*) and (2) theoretical philosophy, which included Aristotelian physics but culminated in metaphysics.

For present purposes the birth year of Hispanic philosophy was 1526, when Francisco de Vitoria, OP (1492-1546), was elected to the Cátedra de Prima, in theology at Salamanca and began lectures on the "Second Part of the Second Part" (IIa-IIae) of the Summa theologiae of Thomas Aquinas. This introduced the Summa as the principal textbook in theology and also inaugurated a Thomistic revival in theology and in philosophy at Salamanca, then elsewhere. Choosing a terminal date for Hispanic philosophy here is more arbitrary, but a plausible one is 1718, when Miguel Viñas, SJ (1642-1718) died. It may immediately be noted that while Vitoria taught in Spain and belonged to the older religious order of the Dominicans, Viñas was a Jesuit who taught at Santiago in Chile. In the period under discussion two salient facts are the passage of philosophical leadership from the Dominicans to the Jesuits, and the spread of Hispanic philosophy overseas from the Iberian peninsula, especially to Latin America. The development of that philosophy between 1526 and 1718 occurred within this broader context of a general shift from an old to a new religious order and from the Old World to a New. What follows is a very limited sketch of figures and themes in that development." pp. 250-251.

52. Hervaeus, Natalis. 2008. *A Treatise of Master Hervaeus Natalis (d.1323) The Doctor Perspicacissimus On Second Intentions*. Milwaukee: Marquette University Press.

Volume One - An English translation and Volume Two - A Latin edition by John P. Doyle.

"These volumes present a first critical Latin edition and an English translation of an important, but very difficult to read and understand, medieval treatise. As almost everyone knows, the notion of intentionality comes from the Middle Ages. What is less known is that Hervaeus Natalis, O.P. (d. 1323) was the first one explicitly to consider it as such. Even less known is the fact that he came to it not immediately from the Aristotelian *De Anima*, but rather from the division in Aristotle's *Metaphysics* between "being as being" and "being as true." Least of all known is the fact that Hervaeus, who uses the term "intentionality" in the present work 235 times, regards its

significance as a relation of reason which runs in the direction of known or knowable to knower. Apart from its exceedingly obscure Latin style, what particularly makes this work difficult to understand is its multi-layered reflection on things and non-things, its reflection on Hervaeus thinking itself, and its reflection on his thinking about his thinking about things and non-things."

53. Doyle, John Patrick. 2009. "Hervaeus Natalis On Intentionality: its Direction and Some Aftermath." In *Philosophical Debates at Paris in the Early Fourteenth Century*, edited by Brown, Stephen F., Dewender, Thomas and Kobusch, Theo, 261-283. Leiden: Brill.

A longer version of this article appeared in *The Modern Schoolman*, 83, 2006, pp. 85-124.

54. ———. 2010. *Collected Studies on Francisco Suárez S.J. (1548-1617)*. Leuven: Leuven University Press.

Edited by Victor M. Salas.

Contents: Editor's Foreword VII-IX; Introduction: The Theme of this Collection, its Contents, its Character and Rationale XIII-XVI; 1. Francisco Suárez, His Life, His Works, His Doctrine, and Some of His Influence 1; 2. Suárez on the Reality of the Possibles 21; 3. Suárez on the Analogy of Being 41; 4. Suarezian and Thomistic Metaphysics before the Judgment of Heidegger 89; 5. The Suarezian Proof for God's Existence 109; 6. Prolegomena to a Study of Extrinsic Denomination in the Work of Francis Suárez, S.J. 123; 7. Suárez on Beings of Reason and Truth 161; 8. Suárez on the Unity of a Scientific Habit 209; 9. Suárez on the Truth of the Proposition, "This is My Body" 235; 10. Suárez on Preaching the Gospel to People like the American Indians 257; 11. Francisco Suárez on the Law of Nations 315; 12. Suárez on Human Rights 333; 13. Francisco Suárez on the Interpretation of Laws 357; 14. Postscript and Prospectus 389; Bibliography 393; Index of Names 409; Index of Terms 413-416.

"The main theme in these studies is twofold. The first is theoretical, centering on the Suarezian conception of being and

metaphysics. As Etienne Gilson pointed out in *Being and Some Philosophers*, this conception had its origin in Avicenna's understanding of Aristotelian metaphysics, an understanding which passed through Duns Scotus to Suarez and then on to Suárez's successors, notably Christian Wolff. I still accept Gilson's basic account of Suárez's lineage, which account was also basic for these studies in their original appearance. But now (in 2010) I would modify it along the line suggested by Rolf Darge, who has emphasized the difference of the Suarezian concept of being and its descent to its inferiors versus the Scotistic concept of being as *simpliciter simplex* as this descends to its inferiors by differences outside itself.⁽¹⁾ The second theme takes up the practical side of Suárez's philosophical and theological interests, including his views on human society, law and morality, Church and state, international law, and human rights. The first theme is represented in different metaphysical and epistemological dimensions through eight studies, while the second is the major concern of the last four essays.

The introduction to the collection attempts to give an overview of Suarez the man, his published writings, his philosophical thought, and some of his influence." (p. XI)

55. ———. 2010. "Suárez and some Precursors on *Lex* and *Ius*." In *Politische Philosophie und Rechtstheorie des Mittelalters und der Neuzeit. Abteilung II: Untersuchungen: Lex und Ius. Band I*, edited by Fidora, Alexander, Lutz-Bachmann, Matthias and Wagner, Andreas, 393-427. Stuttgart-Bad Cannstatt: Frommann Holzboog.
56. ———. 2011. "St. Thomas Aquinas On Theological Truth." In *Philosophy and Theology in the Long Middle Ages: A Tribute to Stephen F. Brown*, edited by Emery, Kent, Friedman, Russell L. and Speer, Andreas, 571-590. Leiden: Brill.

"Aquinas (1225-1274) clearly recognized two kinds of theology, namely, that of the philosophers, which is metaphysical, and

that based upon divine revelation, which is "sacred doctrine" (*sacra doctrina*). Each will be in its way a science with its own distinctive subject matter and procedure. At the same time, there will be continuity between the two theologies inasmuch as faith, grace, and supernature presuppose nature. However, both philosophical and sacred theology have different subjects and relate to God in different ways. As it is ostensibly part of metaphysics, philosophical theology has common being (*ens* or *esse commune*) as its subject and relates to God as the extrinsic principle of that subject. Sacred theology has God and divine things as the subject to which it seems immediately to relate. To the degree that both theologies are conceived as scientific, each, in line with the norms of the *Posterior Analytics*, will need to presuppose the existence and essence of its subject and then explore the attributes and/or principles of that subject. In the case of philosophical theology, the subject of metaphysics will be the being that is commonly experienced in this sensible world and God will be established as its extrinsic principle. In the case of sacred theology, God will be the subject of the science, which will then go on with the help of revelation to consider his nature and attributes. In this, God and the articles of faith will be first principles of sacred theology. To prove its principles, sacred theology will not have a way intrinsic to itself, but neither will it reject the common principles of human reasoning itself." (pp. 571-573, notes omitted).

57. ———. 2011. "The Falling Dog and the Numerical Unity of Motion." In *Tolle Lege. Essays on Augustine and on Medieval Philosophy in Honor of Roland J. Teske, SJ*, edited by Taylor, Richard C., Twetten, David and Wreen, Michael, 253-276. Milwaukee: Marquette University Press.

"In his *Physics*, Aristotle tells us that the numerical unity or, in today's talk, the diachronic identity of local motion depends upon three things: something which is in motion, something, such as a place or a quality, within which the motion occurs, and some time in which it occurs (*Physics* 5.4, 227b23–26). Without all of these there is no singular unified motion. And without such singular motion, Plato notwithstanding, there will be no universal motion (*Nicomachean Ethics* 6.12, 1143b4–5)

and a fortiori no science of things in motion (*Metaphysics* 11.1, 1059b26; 11.2, 1060b20–21; *Physics* 3.1, 206b14–15). If then any one of the three requirements of motion is in doubt, the whole of the Aristotelian physics may seem in jeopardy. In what follows, concentration is on the requirement of a continuous unitary subject of motion, on one medieval

objection to this requirement, and on replies to that objection" (p. 255, a note omitted)

58. ———. 2012. *On the Borders of Being and Knowing. Late Scholastic Theory of Supertranscendental Being*. Leuven: Leuven University Press.

Edited by Victor M. Salas.

Table of Contents: Editor's Foreword VII-IX; Introduction XIII-XVI; 1. Sprouts from Greek Gardens: Antisthenes, Plato, Aristotle, and the Stoics (first publication) 1; 2. Suarez on Beings of Reason and Truth 19; 3. Extrinsic Cognoscibility 67; 4. Impossible Objects 95; 5. The Teleology of Impossible Objects 127; 6. Beings of Reason and Imagination 151; 7. Four Degrees of Abstraction 167; 8. From Transcendental to Transcendental 185; 9. Supertranscendental Nothing 215; 10. Wrestling with Wraith 243; 11. The Borders of Knowability 273; 12. Conclusion 293; Bibliography 301; Indices 319-326.

"Sylvester Mauro, S.J. (1619-1687) noted that human intellects can grasp what is, what is not, what can be, and what cannot be. The first principle, 'it is not possible that the same thing simultaneously be and not be,' involves them all.

The present volume begins with Greeks distinguishing 'being' from 'something' and proceeds to the late Scholastic doctrine of 'supertranscendental being,' which embraces both. On the way is Aristotle's distinction between 'being as being' and 'being as true' and his extension of the latter to include impossible objects. The Stoics will see 'something' as the widest object of human cognition and will affirm that, as signifiable, impossible objects are something, more than mere nonsense. In the sixteenth century, Francisco Suárez will identify mind-dependent beings most of all with impossible objects and will

also regard them as signifiable. By this point, two conceptions will stand in opposition. One, adumbrated by Averroes, will explicitly accept the reality and knowability of impossible objects. The other, going back to Alexander of Aphrodisias, will see impossibles as accidental and false conjunctions of possible objects. Seventeenth-century Scholastics will divide on this line, but in one way or another will anticipate the Kantian notion of 'der Gegenstand überhaupt.' Going farther, Scholastics will see the two-sided upper border of being and knowing at God and the negative theology, and will fix the equally double lower border at 'supertranscendental being' and 'supertranscendental nonbeing,' which non-being, remaining intelligible, will negate the actual, the possible, and even the impossible."

The twelve essays contained in this volume are a tribute to the career and scholarship of John Patrick Doyle offered by his former students, colleagues, and friends. Chapter 1, an edition of Peter of Candia's *Commentarium in II librum Sententiarum*, d. 1, q. 1, a. 3, which pertains to the question of the eternity of the world, is Stephen Brown's contribution to this volume. In chapter 2 Rolf Darge discusses Suarez's understanding of the transcendental character of being and takes pains to distinguish it from Scotus's *conceptus entis simpliciter simplex*. In chapter 3 Thomas Dewender offers an examination of a subject near and dear to Doyle, impossible objects, according to the logical and semantic analyses of John Buridan and his followers, Albert of Saxony and Marsilius of Ingham. Marco Forlivesi's contribution, chapter 4, considers the role epistemology plays for John Punch in determining the proper object of metaphysics. Chapter 5 offers Jennifer Hart-Weed's consideration of how Moses Maimonides's account of divine actions informs much of Thomas Aquinas's analogical theory of religious language. Chapter 6 is Daniel Heider's contribution, wherein it is argued that Suárez's ontological theory of universals, even when compared to John Poinsett's theory of universals, proves to be an equivalent — if not stronger — form of moderate realism than that of the Thomists. Ludger Honnefelder's essay, chapter 7, identifies the nature, scope, and peculiar features of Duns Scotus's metaphysics, identifying it as a truly transcendental science. Jack Marler's contribution, chapter 8, on the *De ente et essentia*'s, 'phoenix example' argues that Thomas's intention is to show how even (created) individuals that are one of a kind, like the phoenix, are such that their essence too is really distinct from their *esse*. In chapter 9 Daniel Novotny places Francisco de Araújo's theory of *entia rationis* into opposition with that of Suárez and argues that, while the former is not exactly the philosophical equal of the latter, nonetheless, Araújo improves upon and ultimately holds a more consistent theory than Suárez. Chapter 10, Michael Renemann's contribution, argues that self-consciousness according to Thomas Aquinas is not merely as anemic as those sympathetic to Kant might consider it to be but a truth-revealing power that has significant implications in contemporary experimental science. My own contribution, chapter 11, examines the notion of essential being as a point of convergence between the medieval metaphysics of Henry of Ghent and Duns Scotus, on the

one hand, and, on the other, the phenomenology of Edith Stein. Finally, in chapter 12 Roland Teske, S.J., discusses Henry of Ghent's metaphysical argument for God's existence and finds it problematic because of a faltering effort to synthesize a fundamentally Platonic Augustinian abstraction theory with an Aristotelian analogy of being. The volume concludes with a *post scriptum* featuring a reprint of one of Doyle's own articles on imaginary beings. In this essay Doyle, the consummate historian of philosophy, traces the lineage of beings of reason from a cast off of the Aristotelian metaphysics (i.e., being as true) to the vexing centerpiece of late Scholastic metaphysics. Questions pertaining to the metaphysical status of such "shadowy" beings eventually give rise to that topic which would eventually preoccupy much of Doyle's scholarship, namely, supertranscendental being."

Bibliographie Choisie de Jean École (tous les écrits sur Christian Wolff). Première partie: 1961-1983

Introduction

Jean École (2 mars 1920 - 8 septembre 2015) était professeur de métaphysique à l'Université Catholique d'Angers de 1957 à 1969; il a publié l'édition critique des Œuvres latines de Christian Wolff (1679-1754).

Une bibliographie complète au 1994 est contenue dans: Robert Theis et Claude Weber (eds.) - *De Christian Wolff à Louis Lavelle: métaphysique et histoire de la philosophie: recueil en hommage à Jean École à l'occasion de son 75e anniversaire* - Hildesheim, Georg Olms 1995 (VIII, 313 pages) - (Studien und Materialien zur Geschichte der Philosophie, 39).

Cette page contient tous le livres de Jean École et ses articles sur la philosophie wolffienne; pour la bibliographie de Christian Wolff (de 1791 à 2004) voir: Gerhard Biller (Éditeur / Herausgeber) - *Wolff nach Kant. Eine Bibliographie* - Mit einem Vorwort von Jean École - Hildesheim, Georg Olms, 2004 (IX, 251 pages, 3105 titres).

Essais sur Christian Wolff

1. École, Jean. 1961. "La "Philosophia prima, sive Ontologia" de Christian Wolff. Histoire, doctrine et méthode." *Giornale di Metafisica* no. 16:114-125.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp. 8-19.

"Philosophie première, en ce sens qu'il faut commencer par elle pour avancer ensuite dans les divers domaines de la connaissance, *l'Ontologia* de Wolff serait tout aussi bien dénommée philosophie générale, étant donné son universalité. En tant que science de l'être pris dans toute son extension, elle étudie, en effet, outre les principes qui dirigent la connaissance de l'être, tout ce qui appartient ou peut appartenir à l'être, ainsi que les diverses formes qu'il peut revêtir et les rapports que peuvent avoir entre elles ces diverses formes; et c'est pourquoi, après avoir examiné le principe de contradiction et celui de raison suffisante, elle envisage, tour à tour, la nature de l'être et ses propriétés ou ses affections, à savoir l'identité et la similitude, la singularité et l'universalité, la nécessité et la contingence, la quantité, la qualité, l'ordre, la vérité et la perfection, puis sa différenciation en être composé et en être simple, à laquelle se rattache la considération de l'étendue, de l'espace, du temps et du mouvement, ensuite sa division en être fini et en être infini, enfin les relations de ces divers êtres, notamment sous la forme de la causalité. Car comme tout est soit de l'être, soit propriété de l'être, elle s'intéresse nécessairement à tout ce que l'être est ou peut-être, même s'il est vrai qu'elle se contente souvent de déblayer le terrain pour les autres disciplines du savoir auxquelles elle sert d'introduction.

C'est ainsi, par exemple, que l'analyse des notions d'identité, de similitude, de quantité, d'infiniment grand et d'infiniment petit, est destinée à servir de fondement aux mathématiques. Il faut en dire autant de tout ce qui trait à la singularité et à l'universalité de l'être, par rapport à la logique qui a aussi beaucoup à prendre dans le chapitre consacré à la notion de déterminé. Tout ce qui concerne la qualité, la nature de l'être composé et de l'être simple, l'étendue, le continu, l'espace, le temps et le mouvement, sert de toute évidence de préparation en partie à la psychologie, en partie à la cosmologie et aux sciences physiques, de même que les considérations relatives à l'infini métaphysique défrichent la voie de la théologie naturelle. Mais toutes ces analyses, qui peuvent à première vue, sembler très disparates, font partie intégrante de la théorie

générale de l'être, qui leur sert de cadre en formant l'armature de l'ontologie wolffienne. A vrai dire même, la question de la nature de l'être y commande toutes les autres ou leur est sous-jacente; d'où son importance qui est d'autant moins indéniable qu'elle est non seulement la part centrale, mais aussi la plus originale et la plus inédite de tout l'ouvrage.

Pour Wolff, en effet, l'être s'identifie à l'essence définie par la possibilité conue comme l'absence de contradiction, et l'essence est constituée par les *essentialia* qui ont en eux-mêmes leur raison suffisante, tout en contenant celle des attributs et des modes, lesquels forment, avec les *essentialia*, ce qu'on pourrait appeler les éléments constitutifs de l'être. Car les *essentialia* ne sont pas autre chose que les tout premiers éléments de l'être, du fait qu'ils ne sont pas contradictoires entre eux et ne sont pas déterminés par d'autres, pas plus qu'ils ne se déterminent mutuellement, cependant qu'ils déterminent les attributs qui, comme eux, appartiennent toujours à l'être, en même temps qu'ils contiennent aussi en eux la raison suffisante des modes qui peuvent affecter l'être. Tout être, de ce point de vue, c'est-à-dire ramené à l'essence ou, si l'on veut, aux *essentialia* avec lesquels l'essence s'identifie, a donc en soi sa raison suffisante; mais cela n'implique pas pour autant, qu'il soit nécessaire, tout au moins absolument, puisque, hormis l'être dont l'essence est la raison suffisante de l'existence, tous les autres, dont l'existence est un mode de l'essence, ne le sont qu'hypothétiquement.

Nous sommes donc placés d'emblée en face d'un véritable primat de l'essence. Et c'est ce qui explique tout d'abord, que presque toute la doctrine wolffienne de l'être, qu'il s'agisse, par exemple, de la détermination des genres et des espèces, de l'analyse des qualités ou de la nature de la substance et des accidents, tourne autour de l'agencement des *essentialia* et de leurs déterminations: attributs et modes, si l'on peut ainsi s'exprimer, car, à proprement parler, les modes ne trouvent dans les *essentialia* que la raison de leur possibilité et non celle de leur actualité qui est à chercher, selon les cas, dans les modes antécédents ou dans un autre être, ou encore en partie dans les premiers, en partie dans le second. Cela explique

encore qu'elle soit entièrement fondée sur les deux principes de contradiction et de raison suffisante. Car les essences sont en premier lieu régies par la loi de non-contradiction, en tant qu'elles doivent tout d'abord être possibles, c'est-à-dire non contradictoires. Et si l'on veut ensuite les expliquer, il n'est pas d'autre moyen que d'en chercher la raison suffisante, c'est-à-dire de leur appliquer le principe leibnizien soigneusement distingué du principe de causalité. Car, comme Wolff l'a parfaitement vu et démontré, le principe de causalité concerne l'existence ou, si l'on veut, l'essence actualisée, et ne joue pas dans le domaine de l'essence pure, dont on ne peut rendre compte qu'en recherchant la raison suffisante de ce qu'elle est et de ce qui lui appartient ou peut lui appartenir. Et comme on ne peut remonter au-delà de l'essence considérée en elle-même, on ne peut trouver cette raison suffisante qu'en elle, c'est-à-dire dans les *essentialia* qui la constituent et en lesquels se situe en même temps la raison suffisante des attributs et des modes qui en découlent ou peuvent en découler. D'où la triple affirmation de la nécessité, de l'éternité et de l'immutabilité des essences; car ces trois propriétés ne sont que des conséquences du fait qu'elles ont en elles-mêmes leur raison suffisante.

Ainsi la science de l'être et, par le fait même, toute l'Ontologie de Wolff, est-elle essentiellement et uniquement une science des essences, d'où la considération de l'existence est, en fait, bannie ou presque. Car, lorsqu'il lui arrive de parler de cette dernière, c'est très rapidement et sans s'y arrêter, comme à propos de la contingence et de la causalité, sous le biais du rattachement des êtres contingents à l'être nécessaire et de celui des causes secondes à la cause première, ou d'une manière tout à fait implicite, comme dans la définition du temps et de l'espace, le premier comme ordre des êtres successifs, et le second comme ordre des êtres coexistants. En un mot, Wolff mène toute son *Ontologie*, comme s'il n'était pas de son ressort de traiter de l'existence qui n'est, selon sa définition lapidaire, que le *complementum possibilitatis* (§ 74).

Or c'est par là surtout qu'elle fait date dans l'histoire de la métaphysique, puisque c'est la première fois, semble-t-il, depuis Avicenne qui faisait déjà de l'existence une sorte

d'accident de l'essence, qu'a été poussée aussi loin l'exorcisation de l'existence. Quoi qu'il en soit, d'ailleurs, c'est en tous les cas ce primat exclusif attribué à l'essence qui a permis à Wolff de couper radicalement, comme cela n'avait jamais encore été fait, l'ontologie de la théologie naturelle; car, dans une telle perspective, l'étude des conditions générales de l'être se suffit à elle-même, sans qu'il soit besoin d'y insérer l'examen de sa source, que requiert nécessairement la considération de son existence. Et c'est ce qui permet d'affirmer qu'il a été beaucoup loin que Suárez et les scolastiques post-suaréziens dans l'essentialisation de l'être, dont la philosophie aura tant de mal à se défaire après lui." (pp. 117-120)

2. ——. 1963. "Un essai d'explication rationnelle du monde ou la "Cosmologia generalis" de Wolff." *Giornale di Metafisica* no. 18:622-650.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp. 20-48.

" On ne peut certes contester que la publication de la *Cosmologia Generalis* constitue un évènement d'intérêt pour l'histoire de la philosophie. Car si Wolff n'a pas été, comme on l'affirme souvent à tort, le fondateur de l'Ontologie, qui a été érigée en discipline distincte des autres parties de la philosophie, sans doute au XVI^e siècle, par les auteurs des premiers manuels de philosophie, (*) il a créé le terme *Cosmologia generalis* et a écrit le premier traité paru sous ce titre, ainsi qu'il le revendique hautement." (...) p. 21

"Le propre de la *Cosmologia generalis* n'est d'ailleurs pas seulement de servir de science rectrice par rapport à la physique et à la cosmologie expérimentale, mais aussi de fournir à la théologie naturelle les instruments indispensables pour la démonstration de l'existence de Dieu et l'analyse de ses attributs (p. 11x, 12x, et § 6). L'étude du *nexus rerum*, de l'ordre du monde et de lois qui régissent les changements qui y surviennent, découvre, en effet, la contingence foncière de l'univers, qui appelle un fondement extérieur à lui et nécessaire, dont il appartient à la théologie naturelle d'établir l'existence et d'éclairer la nature. C'est même là, à en croire Wolff, l'

uberrimus fructus de cette nouvelle science (not. § 6), qu'il s'honore d'avoir créée.

Mais tout ceci apparaîtra plus clairement au fur et à mesure que nous avancerons dans l'inventaire des principaux thèmes de cet ouvrage, qu'on peut ramener à cinq : 1) le *nexus rerum*, 2) l'union du mécanisme et du dynamisme, 3) la transposition de l'atomisme et sa combinaison avec la philosophie corpusculaire, 4) l'essai de mécanique a priori, 5) l'ordre de la nature et la possibilité du miracle." (pp. 23-24)

(...)

"Il nous est, en effet, possible de porter un jugement d'ensemble sur elle, maintenant que nous en avons dégagé les thèmes essentiels. L'ouvrage de Wolff porte la marque des grands courants de pensée du XVIIe et du XVIIIe siècles. Tantôt il les combat vigoureusement, comme dans l'analyse du *nexus rerum*, de la contingence des lois du mouvement et de la possibilité du miracle, directement dirigée contre Spinoza. Tantôt il cherche, dans la ligne de Leibniz, à en faire la synthèse, comme dans tout ce qui a trait à l'atomisme à la philosophie corpusculaire, au mécanisme et au dynamisme. A vrai dire même, sur ce dernier point, Wolff prolonge davantage Leibniz qu'il ne le suit à proprement parler, de même que dans son essai de mécanique a priori, dont Leibniz avait certes jeté les fondements, mais sans lui donner d'aussi amples développements. On peut être surpris, voire rebuté, au premier abord, par l'appareil impressionnant de définitions et de démonstrations qui s'enchaînent les unes aux autres, employé par Wolff pour traiter de ces questions. Mais si l'on ne se laisse pas arrêter par cette façon de procéder, qui le rendit célèbre et dont on ne peut contester la rigueur et la précision, on est entraîné, par la lecture de la *Cosmologia generalis* au plus fort de la passionnante mêlée qui a opposés philosophes et savants de cette grande époque. Et l'on ne peut pas être insensible à l'effort courageux tenté par Wolff pour la dominer." (p. 47)

3. ———. 1964. "Cosmologie wolffienne et dynamique leibnizienne. Essai sur les rapports de Wolff avec Leibniz." *Études Philosophiques*:3-9.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 177-183.

"Si paradoxal que cela puisse être, il en est en philosophie comme en bien d'autres domaines, les slogans qui entretiennent les préjugés et les erreurs ont la vie dure et sont presque indestructibles. Le cas de Wolff en offre un exemple typique. Comme le dit très justement M. Gusdorf, Wolff «est une des victimes de l'histoire de la philosophie qui, concentrant toute la lumière sur les personnalités reconnues comme des génies, laisse dans l'ombre tout le reste. (1) ». Certes, tous les traités et manuels d'histoire de la philosophie le mentionnent toujours, mais en le présentant, la plupart du temps, comme le compilateur et le vulgarisateur des thèses de Leibniz. Et, comme on ne le lit plus depuis longtemps, cette opinion se transmet fidèlement, de génération en génération, aux étudiants en philosophie. Il est vrai qu'elle a des racines profondes et déjà deux fois centenaires; car, dès le vivant de Wolff, on prit coutume de parler, comme d'un seul bloc, de la philosophie Leibnizio-Wolffienne (2), et bon nombre de ceux qui le combattirent lui reprochèrent de ne pas faire autre chose que de reprendre les grandes lignes de la philosophie de Leibniz, comme Joachim Lange, par exemple, son ennemi acharné, qui l'accusait, entre autres, de ne pas proposer d'autre conception des éléments que celle de Leibniz. Or Wolff, non seulement n'admit jamais ce reproche global, comme en témoignent maints passages de son œuvre, mais il se défendit encore vigoureusement contre cette accusation précise de Lange, avec une netteté qui rie laisse rien à désirer).

Une telle attitude ne peut qu'inciter à y regarder de plus près, afin de se rendre compte si oui ou non Wolff a fait plus que synthétiser et vulgariser la doctrine de Leibniz. Et c'est ce que nous nous proposons de faire, en limitant notre étude aux données de la Cosmologie wolffienne. Cela nous permettra d'examiner l'accusation de Lange, à l'instant évoquée, et de

nous faire une idée exacte de la position de Wolff par rapport au monadisme leibnizien, ce qui est d'une importance capitale. Car, s'il est démontré que Wolff, comme il le prétend, ne l'admet pas et ne suit pas Leibniz sur ce point fondamental, comment pourra-t-on encore soutenir qu'il est le disciple fidèle de celui qu'il n'aurait cependant pas refusé de reconnaître comme son maître?" (pp. 3-4 notes omises).

4. ———. 1966. "Des rapports de l'expérience et de la raison dans l'analyse de l'âme ou la "Psychologia empirica" de Christian Wolff." *Giornale di Metafisica* no. 21:589-617.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp. 49-77.

"Or il faut dire tout d'abord que c'est Wolff qui a définitivement introduit le terme *Psychologia* pour désigner la science de l'âme, même s'il est vrai qu'il ne l'a pas créé. Rares, en effet, sont ceux qui, avant lui, l'ont employé." (p. 590)

(...)

"Or, avec l'emploi qu'en fait Wolff, et grâce au succès éclatant de son enseignement, le terme *Psychologia*, comme précédemment ceux d' *Ontologia*, et de *Cosmologia*, acquiert droit de cité dans le vocabulaire philosophique et devient très rapidement usuel. Si donc Wolff n'en peut être dit le père, il en peut du moins être considéré comme le parrain.

Mais il n'a pas seulement assuré définitivement l'usage du terme *Psychologia*, il a, en outre, été le premier, semble-t-il, à diviser la psychologie en deux traités distincts: la *Psychologia empirica* et la *Psychologia rationalis* (*)." (p. 592)

(...)

D'une part donc, une analyse de l'âme fondée sur une mise en ordre des données de l'expérience et visant, comme l'explique encore la préface de la *Psychologia empirica* (p. 11x, 13x), à découvrir les lois selon lesquelles s'exercent ses facultés; de l'autre, à partir du concept de l'âme, une détermination *a priori* de ses facultés et de la raison qui fait que leurs lois sont telles que l'expérience nous les révèle. (p. 593)

(...)

"Tel est ramené à l'essentiel, l'ensemble des questions traitées par Wolff dans sa *Psychologia empirica*, qu'il considère non seulement comme un complément apporté à la *Logica*, à propos de opérations de l' *intellectus* (p. 12x, § 9), mais aussi comme l'aide indispensable de la *Theologia naturalis* dans la détermination des attributs divins dont la notion ne peut être éclairée qu'à partir de celle des facultés de l'âme humaine (p. 15x, 16x, § 7 et not.), enfin et surtout comme la base indispensable de toute la philosophie pratique, qui ne peut prétendre régir la vie humaine, qu'en se fondant sur une connaissance nette et précise de ces facultés et tout particulièrement de ce qui est ou non en notre pouvoir (p. 13x-15x, § 8 et not.).

Peut-être trouvera-t-on que, dans l'examen de ces questions, Wolff n'apporte rien qui ne fut déjà connu et exploré avant lui. Mais, si l'on n'en peut disconvenir, il reste que sur plusieurs points, tout en utilisant largement ses devanciers, il les dépasse cependant par son effort d'approfondissement des questions, par exemple dans son étude de la mémoire, dans celle de l'emploi des signes, et dans son analyse de la marche que suit l' *intellectus* vers la découverte de la vérité. Comment ne pas reconnaître encore un effort de renouveau dans sa description des *affectus*, qui mérite de retenir l'attention non seulement en

raison de la clarté de la classification qu'elle en propose, mais aussi à cause des nombreuses notations fines qu'elle contient et dont nous n'avons pu faire ressortir la richesse? Comment enfin ne pas admirer la rigueur avec laquelle il définit les rapports de l'appétit et de l'aversion avec la connaissance du bien et du mal? Mais ce qui fait surtout l'intérêt de la *Psychologia empirica*, c'est le tableau d'ensemble qu'elle présente des facultés de l'âme et qui met si bien en lumière leur unité et leur continuité. Sans doute peut-on regretter que cette synthèse laisse délibérément de côté les conditions et les manifestations somatiques de leur exercice. Mais Wolff garde le mérite d'avoir, le premier, dressé un bilan aussi complet des résultats de l'observation portant sur l'esprit humain.

Or ceci ajouté à sa volonté de séparer la psychologie empirique de la psychologie rationnelle, et au projet, qu'il n'a pas réalisé, mais qui était nouveau à cette époque, de calquer la psychologie empirique sur le type de la physique expérimentale, et d'exprimer *stilo mathematico* (not. § 522) la mesure des phénomènes psychiques, contribue à faire de la *Psychologia empirica* un ouvrage qui marque, dans l'histoire de la psychologie, une étape importante; au point qu'un historien récent (**) des sciences humaines a pu écrire qu'elle est "le premier traité de psychologie digne de ce nom et publié sous ce nom." (p. 617)

(*) Wolff ne revendique pas la paternité des termes: *Psychologia empirica* et *Psychologia rationalis*; mais nous ne les avons pas trouvés chez ses prédécesseurs.

(**) Gusdorf, *Introduction aux sciences humaines*, Paris, 1960, troisième partie, c. 4, p. 181.

5. ——. 1969. "De la nature de l'âme, de la déduction de ses facultés, de ses rapports avec le corps, ou la "Psychologia rationalis" de Christian Wolff." *Giornale di Metafisica* no. 24:499-531.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp. 79-111.

"Dans la *Psychologia empirica*), Wolff s'était donné pour tâche de dresser l'inventaire des facultés de l'âme et des lois auxquelles elles obéissent. Il s'agissait, pour lui, d'y présenter une analyse de l'âme basée sur l'expérience privilégiée que constitue, en ce domaine, la conscience de ce qui se passe en nous, sans toutefois négliger l'observation externe, et en faisant appel aussi au raisonnement pour mettre en lumière comment ces facultés dépendent les unes des autres. La méthode de la *Psychologia empirica* était donc déjà rationnelle en même temps qu'expérimentale; mais la raison n'y avait d'autre rôle que d'établir avec rigueur l'enchaînement des faits observés.

Dans la *Psychologia rationalis*, Wolff entreprend de rendre compte *a priori* de ces faits. Il se sert ici de la raison pour montrer, à partir du concept ou, si l'on veut, de l'essence de l'âme, pourquoi celle-ci possède les facultés décrites dans la *Psychologia empirica*, et pourquoi ces facultés obéissent aux lois énoncées dans ce traité. Mais cette déduction n'est cependant pas l'œuvre de la raison pure, car Wolff y fait perpétuellement appel aux données de l'expérience.

Or, à l'en croire, jamais encore pareille entreprise n'avait été tentée. Et c'est parce qu'il craignait que sa nouveauté ne rebutât ses lecteurs, qu'il se décida à présenter séparément l'analyse empirique des facultés de l'âme et leur déduction *a priori*, afin que les résultats de la première ne fussent pas rejetés en bloc avec les propositions de la seconde. D'où ses deux traités de psychologie qui forment cependant un seul tout indissociable, du fait qu'il n'est possible de rendre compte *a priori* que de ce qui est connu d'abord *a posteriori*.

On ne peut donc attendre de la *Psychologia rationalis* un accroissement de nos connaissances sur l'âme; tout au plus la déduction *a priori* peut-elle permettre de découvrir des détails de notre vie intérieure que par la seule observation nous ne réussirions pas à déceler (§ 8, 9, not. 227). Tout le but de la *Psychologia rationalis* est d'éclairer davantage les données déjà certaines, puisqu'elles sont celles de l'expérience, recueillies dans la *Psychologia empirica*, en cherchant à expliquer pourquoi elles sont telles (§ 7).

Dans ces conditions, le plan de la *Psychologia rationalis* s'impose de lui-même. Il s'agit d'abord d'analyser et de définir avec le plus grand soin possible l'essence et la nature de l'âme (sect. 1, c. 1). Puis il convient de montrer comment chacune de ses facultés, distinguées dans la *Psychologia empirica*, trouve son explication dans cette essence et cette nature: les facultés de connaissance d'abord, c'est-à-dire: la *facultas sentiendi* (c. 2), l'imagination (c. 3, § 178-276), la mémoire (c. 3, § 277-332, 350-356), la *facultas fingendi* (c. 3, § 333-349), l'attention (c. 4, § 357-379), la réflexion (c. 4, § 380-387), *l'intellectus* (c. 4, § 388-479); les facultés d'appétition ensuite, c'est-à-dire: l'appétit et l'aversion sensibles (sect. 2, c. 1), l'appétit et l'aversion rationnels (c. 2).

Dans ces deux premières sections Wolff édifie ce qu'il appelle à diverses reprises sa théorie de l'âme, qu'on peut bien considérer comme la première partie de ce traité, bien qu'il ne le divise pas ainsi, et dans laquelle il met aussi en lumière la correspondance harmonique des opérations de l'âme et des mouvements du corps. Après quoi il examine les différents systèmes qui tentent d'expliquer cette correspondance, puis analyse les principaux attributs de l'âme.

D'où les deux autres sections qui suivent, et qui constituent comme deux autres parties: la première où il étudie ces systèmes, d'une façon générale d'abord (sect. 3, c. 1), puis chacun en particulier: celui de l'influx physique (c. 2), celui des causes occasionnelles (c. 3), celui de l'harmonie préétablie (c. 4); la seconde où il disserte de la nature de l'esprit et de la spiritualité de l'âme (sect. 4, c. 1), de son origine, de son union avec le corps et de son immortalité (c. 2), enfin de l'âme des bêtes (c. 3)." (pp. 500-502 omises nombreuses notes).

6. ———. 1973. "De la démonstration "a posteriori" de l'existence et des attributs de Dieu, ou la "Theologia naturalis, Pars I" de Christian Wolff (Première partie)." *Giornale di Metafisica*:363-388.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp. 113-138.

"Après les prolégomènes, qui servent d'introduction générale à cet ensemble, et dans lesquels Wolff définit sa conception de la théologie naturelle, la première partie, que nous analyserons seule ici, est divisée en sept chapitres où il est traité tour à tour: de l'existence et des attributs de Dieu en général (c. 1); de l'intelligence, des idées et de la science de Dieu (c. 2); de la volonté, de la puissance divines et de la permission du mal (c. 3); de la sagesse de Dieu, de sa bonté et de l'utilisation du mal (c. 4); de la création, de la conservation, du concours de Dieu au mal, de son gouvernement et de la Providence (c. 5); du droit de Dieu sur les créatures (c. 6); de quelques autres attributs de Dieu et de son essence (c. 7). La seconde partie, elle, est subdivisée en deux sections dont la première a pour but de rendre raison *a priori* tant de l'existence (c. 1), que des attributs divins: intelligence (c. 2), volonté (c. 3), création, providence et puissance (c. 4), et dont la seconde contient l'examen critique des différentes erreurs relatives à Dieu: athéisme (c. 1); fatalisme, déisme et naturalisme (c. 2); anthropomorphisme, matérialisme et idéalisme (c. 3); paganisme, manichéisme, spinosisme et épicurisme (c. 4).

Alors qu'on définit communément la théologie naturelle comme la science de Dieu et des choses divines. Wolff en propose cette autre définition: «*scientia eorum, quae per Deum possible sunt, hoc est, eorum, quae ipsi insunt, et per ea, quae ipsi insunt, fieri posse intelliguntur*» (§ 1), tout en faisant remarquer qu'elle ne s'oppose pas à la première, puisqu'il faut entendre par choses divines ce qui est possible du fait que Dieu existe et qu'il a tels attributs. Il précise, en outre, qu'il s'agit d'une discipline philosophique, acquise par les lumières de la raison, et qu'elle se distingue par là, sans confusion possible, de la théologie surnaturelle, qui s'appuie sur la révélation (not. § 1, 9 et not.).

Parce qu'elle est une science rationnelle et aussi parce qu'on ne peut obtenir d'une autre façon la connaissance de ce qui ne tombe pas sous les sens, la théologie naturelle doit démontrer que Dieu existe, quels sont ses attributs, et quelles choses sont possibles par ceux-ci (§ 2, 3 et not. § 4). Or, dans ce but, il lui faut partir d'une définition nominale de Dieu. Car, d'une part,

pour démontrer l'existence de Dieu, encore faut-il connaître la signification de ce terme (§ 5, 9), et, d'autre part, de cette définition, doivent être déduits tous les attributs divins (§ 6); d'où il suit que cette définition ne doit rien contenir de plus que ce qui est nécessaire à cette déduction (§ 7). En plus de cette définition, on ne peut utiliser dans la *Theologia naturalis*, d'autres principes que ceux qui reposent sur une expérience incontestable ou sur d'autres démonstrations (§ 8), comme celles des traités qui l'ont précédée (§ 11 et not., *Discursus praeliminaris*, § 96), et qui tendent vers elle comme vers leur but (p. 25x lignes 11-13). Ainsi faut-il y admettre tout particulièrement: la nécessité des essences définie dans *l'Ontologia*, § 299-303, le *nexus rerum*, la théorie des éléments et la perfection du monde établis dans la *Cosmologia*, sect. 1, c. 1, sect. 2, c. 2-3, sect. 3, c. 2, de même que l'existence des âmes démontrée dans la *Psychologia empirica*, pars I, sect. 1, c. 1 (p. 22x ligne 4 - p. 24x ligne 16).

En ce qui concerne plus spécialement la démonstration de l'existence de Dieu, Wolff souligne qu'un seul argument suffit pour acquérir la certitude en ce domaine, et que point n'est besoin, par conséquent, de les multiplier. Ce qui serait d'ailleurs une complication inutile, car chacun d'eux nécessiterait une définition nominale différente dont il faudrait déduire les attributs divins, à moins de démontrer que c'est le même être dont les divers arguments prouvent l'existence (§ 10 et not.).

Par la preuve que Dieu existe, la théologie naturelle apporte la réfutation de l'athéisme (§ 12). Mais elle doit aussi fournir la notion distincte de ses attributs (§ 13). Et, pour ce faire, elle doit utiliser les termes qui servent à désigner ceux-ci selon leur signification communément admise (§ 14), et notamment selon les sens qu'ils ont dont l'Écriture. Car le but de cette discipline est de convaincre les athées qu'existe l'Être que l'Écriture appelle Dieu; et d'ailleurs, quand on parle de Dieu, note Wolff, c'est toujours dans le sens où l'Écriture emploie ce terme (§ 15-16)." (pp. 465-367)

7. ——. 1973. "De la démonstration "a posteriori" de l'existence et des attributs de Dieu, ou la "Theologia naturalis, Pars I" de

Christian Wolff (Deuxième partie)." *Giornale di Metafisica* no. 28:537-560.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp. 139-162.

"Telle est la face du Dieu de Wolff, dont tout l'exposé précédent montre qu'il ressemble beaucoup à celui de Leibniz, au point que d'aucuns seront peut-être tentés de conclure que Wolff n'a fait ni plus ni moins, dans la *Theologia naturalis, pars I*, que reprendre à son compte l'ensemble des thèmes de la théologie leibnizienne. Cela est indéniable au sujet des deux points qui commandent le reste de la doctrine: la formation des idées des choses dans l'intelligence divine, et le choix du meilleur monde.

Pour Wolff, comme pour Leibniz, l'intelligence divine, étant toujours en acte et même acte pur, ne peut pas ne pas former les idées des choses; ce qui revient à dir que ces idées existent nécessairement en elle, sans éclairer toutefois le comment de leur formation. Mais il faut noter que Wolff, bien avant d'écrire la *Theologia naturalis*, avait proposé de l'expliquer en disant, un peu à la manière des Thomistes (148), que Dieu forme les idées des choses, lorsqu'en contemplant les perfections de son essence, il conoit toutes les faons possibles de les représenter hors de lui, comme en témoigne sa *Lettre à Leibniz* du 2 Décembre 1705 (149). Et il a repris et développé cette explication dans la seconde partie de la *Theologia naturalis*, 102 et not.

Quant à la création du monde, selon Wolff comme selon Leibniz, il ne convient pas à Dieu, en raison de la perfection de son intelligence et de sa volonté, d'en choisir un autre que le plus parfait et le meilleur, bien qu'il aurait pu cependant en créer un autre; ce qui à leurs yeux sauvegarde la liberté de la création. Et lorsqu'il s'agit d'expliquer l'existence du mal dans le monde le meilleur ou, plus exactement lorsqu'il s'agit de concilier la thèse du meilleur des mondes avec le déploiement du mal en son sein, Wolff, pas plus que Leibniz, n'apporte d'argument convaincant en faveur de l'Optimisme.

A noter que, comme Leibniz, Wolff fait siennes beaucoup de thèses de la doctrine scolastique, et notamment thomiste, sur Dieu." (pp. 558-559)

8. ———. 1976. "De quelques difficultés à propos des notions 'd'a posteriori' et 'd'a priori' chez Wolff." *Teoresi* no. 31:23-34.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 132-143.

"Comme l'indique le titre de cet article, nous n'entendons pas exposer ici, de façon exhaustive, la doctrine de Wolff sur les rapports de l'a posteriori et de l'a priori, ce qui reviendrait à développer sa théorie générale de la connaissance, à laquelle nous consacrerons une autre étude, mais seulement signaler les difficultés auxquelles se heurte l'interprétation de certaines de ses affirmations et aussi de certains de ses silences à propos de ces deux notions, tant dans sa classification des différentes sortes de connaissance que dans son exposé des preuves de l'existence de Dieu. Pour ce qui est de la première question, il note que tout ce que nous connaissons, nous l'acquérons soit a posteriori, soit a priori, c'est-à-dire soit par l'expérience, soit par le raisonnement, en précisant que la connaissance a posteriori s'opère par le moyen des sens pour tout ce qui est extérieur à nous, grâce à l'aperception pour ce qui se passe en nous, et que la connaissance a priori est l'oeuvre de l'entendement discursif, c'est-à-dire de la raison.

D'une part donc, l'expérience sensible qui consiste dans l'attention prêtée à nos perceptions tant externes qu'internes et se ramène à l'intuition, sans englober les jugements qui portent directement sur celles-ci; d'autre part, la raison qui, de propositions déjà connues, en déduit d'autres qui ne l'étaient pas. La première porte sur les singuliers, puisque nous ne percevons que ceux-ci; la seconde a pour objet les vérités universelles dont la raison, a pour fonction de découvrir le lien.

A ces deux formes de connaissance, il en ajoute une troisième: la connaissance mixte, acquise en partie a posteriori, en partie a priori, c'est-à-dire à la fois par l'expérience et par la raison, en donnant comme exemple la conclusion du raisonnement qui, à partir des effets du soleil connus a posteriori, et grâce à la

médiation de la notion de feu, permet d'affirmer que le soleil est un feu.

Il distingue par ailleurs deux sortes de raison : la raison pure et la raison non pure. La raison est pure, lorsqu'on n'admet dans le raisonnement que des définitions et des propositions connues *a priori*, c'est-à-dire acquises elles-mêmes par le raisonnement, comme c'est le cas en arithmétique, en géométrie et en algèbre. Elle n'est pas pure, lorsqu'on admet aussi dans le raisonnement des définitions et des propositions connues *a posteriori*, c'est-à-dire par l'expérience, comme en physique et en astronomie par exemple." (pp. 23-25 nombreuses notes omises)

9. ———. 1977. "De la démonstration "a priori" de l'existence et des attributs de Dieu, et des erreurs sur Dieu, ou la "Theologia naturalis, Pars II" de Christian Wolff (Première partie)." *Giornale di Metafisica* no. 32:85-109.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp. 163-187.

"Dans les prolégomènes de la *Theologia naturalis, Pars I*, qui servent d'introduction générale à l'ensemble de sa théologie naturelle, Wolff avait défini avec beaucoup de rigueur sa conception de celle-ci, tant du point de vue de l'objet que de celui de la méthode, en la distinguant nettement de la théologie révélée. Point n'était donc besoin, pour lui, d'y revenir dans la *Theologia naturalis, Pars II*, mais seulement de préciser la raison de cette seconde partie et ce qui la différencie de la première. Il s'en explique dans la préface de ce nouveau traité.

Alors qu'il s'était efforcé, dans la première partie, de démontrer l'existence et les attributs de Dieu à partir de la considération du monde (9), son but, dans la seconde, est d'effectuer cette démonstration à partir de la notion de l'être très parfait et de la nature de l'âme (10); ou, comme il dit encore, de démontrer l'existence de Dieu à partir de la notion de l'être très parfait et de déduire ses attributs de la considération de notre âme (11). Ces formules se complètent plus qu'elles ne s'opposent. Car, souligne-t-il, nous ne pouvons connaître la nature de l'être très parfait qu'à partir de celle de notre âme et il s'ensuit que

démontrer l'existence de Dieu à partir de la notion de l'être très parfait revient à le faire à partir de la connaissance de notre âme (12).

Aussi se croit-il autorisé à conclure que cette preuve, qu'on dénomme *a priori*, parce qu'elle consiste à inférer l'existence nécessaire de Dieu de sa définition comme l'être très parfait (13), est non moins *a posteriori* que celle qui s'appuie sur la considération du monde (14).

Nous aurons à revenir sur cette affirmation qui ne laisse pas de surprendre. Mieux vaut, pour le moment, suivre l'exposé de Wolff. Or il indique qu'il s'agit, malgré tout, d'une autre sorte de preuve qui implique une autre façon de démontrer les attributs divins et commande un autre système de théologie que celui contenu dans la première partie (15). Il précise par exemple (§627 et not.) que, dans celle-ci, on confère à Dieu les attributs qui permettent de rendre compte de l'existence des âmes et du monde, alors que, dans la seconde, on connaît ses perfections, en lui attribuant au degré suprême et *per modum actus*, ce qui appartient à l'âme *per modum facultatis*. Encore faut-il noter que, dans la seconde partie, il ne se borne pas à démontrer autrement ce qui l'a déjà été dans la première, mais y traite de questions qu'il n'a pas abordées dans celle-ci (16) et que nous aurons l'occasion d'indiquer. Toutefois, parce qu'il considère comme complet (17) le système de théologie qui y est exposé et qui s'appuie sur la définition de Dieu comme l'être nécessaire, raison suffisante de tout ce qui est, il n'est pas question, pour lui, d'en développer, dans la seconde partie, un autre aussi complet, fondé sur la notion de l'être très parfait, mais d'en démontrer seulement les thèses principales (18).

Or, s'il a consacré à celles-ci les quatre chapitres de la première section, qui couvrent la moitié de la *Theologia naturalis, Pars II*, bien qu'il ait affirmé, dans la *Theologia naturalis, Pars I* (19), qu'il n'est pas besoin de démontrer l'existence de Dieu de plusieurs façons, c'est à n'en pas douter à cause du succès remporté par la preuve *a priori* après que Descartes l'eût illustrée à la suite de saint Anselme (20), et parce qu'il entendait lui conférer une force qu'à son avis Descartes n'a pas

réussi o)à lui donner (21). Mais une autre raison l'y a sans doute également poussé, qu'il indique lui-même (22) lorsqu'il affirme qu'il est plus facile de déduire les attributs divins de la connaissance de notre âme que de celle du monde.

4. Quoiqu'il en soit, la *Theologia naturalis, Pars II* se divise en deux sections très distinctes: - la première dans laquelle il analyse la notion de l'être très parfait et démontre *a priori* l'existence de Dieu (c. 1), ainsi que ses principaux attributs: entendement (c. 2), volonté (c. 3), création, providence et puissance (c. 4); la seconde dans laquelle il se livre à un examen critique des erreurs fondamentales sur Dieu: Athéisme (c. 1), Fatalisme, Déisme, Naturalisme (c. 2), Anthropomorphisme, Matérialisme, Idéalisme (c. 3), Paganisme, Manichéisme, Spinozisme, Épicurisme (c. 4).

Autant de points que nous allons envisager tour à tour; et, tout d'abord, le problème de la preuve *a priori*." (pp. 87-88)

(9) *Theologia naturalis, Pars I*, praefatio, p. 24*, lignes 8-16, *Theologia naturalis, Pars II*, praefatio, p. 11*, lignes 10-13, § 429, 627.

(10) *Theologia naturalis, Pars II*, page de titre, dedicatio, p. 7*, lignes 3-6, § 429.

10. ——. 1977. "De la démonstration "a priori" de l'existence et des attributs de Dieu, et des erreurs sur Dieu, ou la "Theologia naturalis, Pars II" de Christian Wolff (Deuxième partie)." *Giornale di Metafisica* no. 32:238-272.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp. 187-222.

"Arrivés au terme de notre analyse de la *Theologia naturalis, Pars II*, il nous reste à dresser le bilan de son apport. Wolff a raison d'affirmer qu'elle n'est pas la simple répétition sous une autre forme des thèses qu'il a démontrées dans la *Theologia naturalis, Pars I*.

C'est évident pour toute la seconde section où il procède à l'examen critique des erreurs sur Dieu; les quatre chapitres qu'elle comporte sont absolument neufs. Ils répondent à coup sûr au besoin de se justifier contre les attaques des théologiens piétistes de Halle et notamment de Joachim Lange, son ennemi acharné, qui l'accusait de verser dans les unes et les autres, à l'exception du Manichéisme. Mais, par-delà ce souci apologétique, ils manifestent un indéniable effort de clarté et de rigueur en une matière où régnait à l'époque une grande confusion. On peut certes regretter qu'il n'ait pas cru bon de se référer à des sources précises pour les exposer et les critiquer, sauf en ce qui concerne le Spinozisme, qu'il a tort de taxer d'athéisme, mais au sujet duquel il a dénoncé avec beaucoup de vigueur les difficultés que soulève la thèse de l'unicité de la substance.

Cela est non moins vrai de la première section. On peut le montrer négativement, en énumérant les points de la *Theologia naturalis, Pars I* sur lesquels Wolff ne revient pas, comme la science de simple intelligence et la science de vision, le droit de Dieu sur ses créatures, sa sainteté, sa justice et son essence, ainsi que ceux qu'il ne fait qu'effleurer alors qu'il les avait abondamment développés, comme l'Optimisme et le problème du mal, l'organisation des fins par la sagesse divine, de décret de Dieu et son mode de présence. Mieux vaut le faire positivement en insistant sur ce qui est nouveau dans cette section et qu'on peut ramener à trois points principaux: la preuve *a priori* de l'existence de Dieu, l'origine des idées dans son entendement et la détermination des *affectus* qui peuvent lui être attribués.

Son exposé de la preuve *a priori* vient heureusement compléter la *Theologia naturalis, Pars I* dans laquelle il n'avait fait état que de la preuve *a posteriori* et plus exactement de la preuve par la contingence. Le fait qu'il ait tenu à en traiter à part souligne l'intérêt qu'il lui portait, malgré ses réserves quant à la présentation qu'en a fait Descartes. Celles-ci le situent dans le sillage de Leibniz, mais il a présenté cette preuve de façon plus détaillée et plus didactique que ce dernier." pp. 268-269.

"Dans ces conditions, il est possible malgré tout de conclure que la seconde partie de la *Theologia naturalis* apporte des compléments à la fois importants et intéressants à la première, avec laquelle elle forme un ensemble remarquablement complet des questions relatives à Dieu, envisagées à la lumière de la raison. Dans la préface à cette seconde partie (p. 21 C, lignes 2-5), Wolff se targue d'avoir été plus loin en ce domaine que ses prédécesseurs. Le compliment qu'il s'adresse ainsi n'est pas démerité. Car, dans la foulée de Descartes, il a contribué, plus que quiconque, à l'élaboration d'une théologie naturelle proprement dite, c'est-à-dire d'une métaphysique de Dieu, libérée de la tutelle de la théologie révélée, tant dans sa méthode que dans les questions dont elle traite." (p. 272)

11. ——. 1978. "La conception wolffienne de la philosophie d'après le "Discursus praeliminaris de philosophia in genere". " *Filosofia Oggi* no. 1:403-428.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 163-222.

"Le *Discursus praeliminaris* est composé de 6 chapitres où il est traité tour à tour: -- des trois formes historique, philosophique et mathématique, de la connaissance humaine (c. 1), -- de la définition et des caractéristiques de la philosophie (c. 2), -- de ses différentes parties (c. 3), -- de sa méthode (c. 4), du style qu'il convient d'y employer (c. 5); -- enfin de la "libertas philosophandi", c'est-à-dire des possibilités d'expression qui doivent être reconnues au philosophe (c. 6).

L'ensemble constitue un véritable manifeste, dans lequel Wolff exprime sa conception de la philosophie, dont nous allons tenter de dégager les principaux points, marqués par les titres de ces six chapitres, mais en regroupant leurs paragraphes lorsqu'ils relèvent d'un même thème.

Nous pouvons, selon Wolff, exercer trois sortes de connaissance ou, plus exactement, exercer notre connaissance de trois façons. La première, qu'il dénomme historique, consiste dans la découverte de ce qui existe ou se produit dans le monde matériel et en nous (§ 1-2), c'est-à-dire dans la saisie pure et simple des faits (§ 7, 17). La seconde, dite philosophique, est la

recherche de la raison de ces faits; ce qui revient à dire qu'elle tend à expliquer pourquoi ces faits existent ou se produisent (§ 4-7, 17). La troisième, qu'il appelle mathématique, cherche à déterminer la quantité c'est-à-dire, dans son esprit, le degré en plus ou en moins qui affecte tout ce qui est fini, tant dans le domaine matériel que dans celui de l'âme (§ 13 et not., 14, 17).

Au sujet de la première, il précise qu'elle est acquise par les sens, soit externes, soit internes (§ 1). A propos de la seconde, il est facile d'inférer de ses propos qu'elle est l'oeuvre de l'entendement discursif ou de la raison (§ 9). Quant à la troisième, elle requiert certes la mesure, mais aussi la démonstration (not. § 14, 19). Si bien que ces trois formes de la connaissance humaine pourraient, selon leur origine, c'est-à-dire du point de vue des moyens mis en œuvre, être regroupées en deux catégories: d'une part la connaissance historique ou sensible, d'autre part la connaissance philosophique et la connaissance mathématique qui font appel à la raison, si les développements de Wolff au sujet de la première ne s'y opposaient.

2. Il considère, en effet, comme en faisant partie, ce que nous apprenons par ouï-dire, par exemple que les enfants élevés parmi les animaux ne savent pas exercer leur raison (not. § 1). 11 explique, en outre, comme Descartes (4), qu'il y a une connaissance historique des vérités philosophiques et mathématiques, lorsqu'on les connaît sans pouvoir les démontrer (§ 9, 15-16, 19, 50-53, 156). Il distingue enfin de la connaissance historique, qu'il appelle commune et à laquelle suffit l'attention prêtée aux données des sens, la connaissance historique, qu'il qualifie de secrète ("arcana") et dans laquelle la raison doit suppléer aux sens (§ 20 et not., 21), bien qu'elle puisse être ramenée à la première, grâce aux arts et à l'expérimentation (§ 24, 25).

Autrement dit, il désigne, sous l'appellation générale de connaissance historique, des réalités fort différentes qui ne se laissent pas ramener à la pure activité des sens, à part la connaissance historique commune, laquelle se confond avec la connaissance vulgaire (§ 23) (5) et constitue le plus bas degré

de la connaissance humaine (§ 22). L'exemple de connaissance par ouï-dire qu'il donne relève déjà de l'entendement, non discursif s'entend. A combien plus forte raison cela est-il vrai des vérités philosophiques et mathématiques que nous ne pouvons démontrer, mais que nous comprenons cependant, et c'est pourquoi il emploie le verbe "intelligere" à propos des premières (§ 50, 54). Quant aux faits cachés, sur lesquels porte la connaissance historique secrète, comme la composition de la lumière établie par Newton (6), il faut non seulement les découvrir, mais aussi les démontrer (§ 20 et not.), ce qui requiert l'intervention de la raison" (pp. 404-405)

12. ——. 1979. "De la notion de philosophie expérimentale chez Wolff." *Etudes Philosophiques* (4):397-406.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 53-62.

"Wolff s'est beaucoup intéressé à la philosophie expérimentale, comme le prouve le fait qu'il a publié une vingtaine d'articles' et deux ouvrages' sur des sujets relevant de cette discipline, dont il parle, en outre, très souvent dans ses autres écrits, dans deux desquels il lui consacre tout un chapitre. Dans ces articles, ces deux ouvrages et ces deux chapitres, la philosophie expérimentale ne fait qu'un, pour lui comme pour Newtons, avec la physique expérimentale. Les descriptions d'expériences et d'instruments qu'il y donne, ainsi que les considérations qui accompagnent ces descriptions, ne présentent plus guère d'intérêt aujourd'hui, sinon pour l'historien des sciences; aussi ne nous y arrêterons-nous pas. Par contre, les diverses notations dont il parsème ses autres écrits au sujet de la nature et surtout du domaine de la philosophie expérimentale méritent l'attention; car elles dénotent une conception de celle-ci, pour le moins originale, que nous nous proposons d'examiner.

L'essentiel de cette conception peut se résumer d'un mot : au lieu de cantonner la philosophie expérimentale dans les limites de la physique, comme on l'a fait jusqu'alors, il faut l'étendre à toutes les parties de la philosophie. C'est là un point sur lequel Wolff revient à diverses reprises, en indiquant à et là quelques

autres disciplines susceptibles de faire appel à l'expérience, à savoir, selon l'ordre chronologique des textes : la théologie, la morale, la politique, la psychologie, l'ontologie et la cosmologie générale." pp. 397-398.

"Quoi qu'il en soit, Wolff ne s'explique pas sur ces points pourtant importants. Et ce manque de précision, qui traduit un manque de netteté dans sa conception de la nature de la philosophie expérimentale, est sans doute à l'origine de ses déclarations contradictoires au sujet de la psychologie empirique. En effet, tantôt il affirme qu'elle ne ressortit pas à la connaissance historique, tantôt au contraire il prétend qu'elle est une pure histoire de l'âme, et cela de façon d'autant plus incompréhensible que la première affirmation se rencontre dans le *Discursus praeliminaris* et la seconde dans la *Philosophia rationalis sive Logica*, qui ont été publiés en un seul volume.

Aussi en arrive-t-on à la conclusion que la conception wolffienne de la philosophie expérimentale, si originale et intéressante soit-elle, n'en laisse pas moins d'être imprécise. Et la raison en est à chercher dans le fait que les rôles respectifs de l'expérience et de la raison n'y sont pas suffisamment délimités. Autrement dit, nous retrouvons là le problème des rapports de l'*a posteriori* et de l'*a priori*, que Wolff, nous l'avons montré ailleurs, n'est pas parvenu à éclairer pleinement.

Mais il reste que cette conception s'appuie sur une notion large et souple de l'expérience, sous ses deux formes, qui permet d'étendre son emploi à toutes les parties de la philosophie, en respectant la diversité de la nature de leurs objets. Et c'est là ce qui mérite d'en être retenu et qui est du plus haut intérêt. Car il ne fait pas de doute que l'emploi conjugué de l'expérience et de la raison, comme il le dit fort bien, «*ad certitudinem cognitionis plurimum facit, et progressum in scientiis juvat*». Seulement, afin d'éviter toute ambiguïté, en raison de l'usage, établi avant Wolff et retenu après lui, de considérer le terme de philosophie expérimentale comme synonyme de physique expérimentale, mieux vaudrait parler, pour caractériser ce qui est non seulement l'essentiel de son enseignement sur ce point, mais

aussi la marque spécifique de sa méthode, d'une extension de l'emploi de l'expérience, plutôt que d'une extension de la philosophie expérimentale, à tous ces domaines. N'est-ce pas d'ailleurs ce qui ressort de ce qu'il dit des rapports de la connaissance philosophique et de la connaissance historique qui ne fait qu'un avec l'expérience" ? Il affirme, en effet, que la première ne peut se passer de la seconde, qui lui sert de fondement indispensable, en même temps que parfois de confirmation", et ajoute : «Nobis per omnem philosophiam sanctum est utriusque connubium».

En tous les cas, cet aspect de sa philosophie est d'autant plus digne de remarque qu'il est l'un des représentants les plus authentiques et les plus célèbres du rationalisme, et que l'histoire a surtout retenu l'usage qu'il a fait de la méthode démonstrative, c'est-à-dire *a priori*. C'est au point qu'on a souvent porté contre lui l'accusation d'avoir pratiqué un rationalisme outrancier; ce qui, on le voit, est à la fois faux et injuste. Car, par son souci de faire partout appel à l'expérience pour établir les points de départ de ses démonstrations ou pour confirmer les conclusions de celles-ci, il a tracé, entre le rationalisme pur qui n'attribue de valeur qu'à la déduction *a priori*, et l'empirisme strict qui ne fait fond que sur l'expérience, une voie médiane permettant d'éviter les écueils de l'un et de l'autre". (pp. 397-398)

13. ——. 1979. "En quel sens peut-on dire que Wolff est rationaliste?" *Studia Leibnitiana* no. 11:45-61.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 144-160.

"Objet d'une vogue considérable de son vivant et durant les premières années qui suivirent sa mort, Wolff fut très vite éclipsé par Kant et les Post-Kantiens, dont le succès le relégua, non pas dans l'oubli, car on n'a jamais cessé de parler de lui, mais parmi les auteurs qu'on ne lit plus. Et c'est ce qui explique que tant d'ouvrages d'histoire de la philosophie aient pu colporter et colportent encore sur son compte des contrevérités aussi tenaces que regrettables, par exemple qu'il n'a fait que systématiser et vulgariser la pensée de Leibniz', qu'il ramène

toutes les démonstrations de l'existence de Dieu à la preuve ontologique', ou qu'il a soutenu un rationalisme outrancier et si absolu qu'il ne laisse aucune place à l'expérience dans la constitution du savoir.

C'est ce dernier point que nous nous proposons d'examiner ici, du moins pour une part. Car le rôle qu'il attribue à la raison dans l'acquisition de la connaissance intellectuelle permet de distinguer un autre sens dans lequel on peut dire qu'il est rationaliste. Et c'est pourquoi le titre de cette étude est exprimé au pluriel." (p. 144)

14. ——. 1979. "Les preuves wolffiennes de l'existence de Dieu." *Archives de Philosophie* no. 42:381-396.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 184-199.

"Wolff a exposé trois preuves de l'existence de Dieu, qu'il dénomme respectivement : a posteriori, par l'ordre de la nature, et a priori. Par preuve a posteriori, il entend celle qui part de la démonstration de la contingence de l'existence de l'âme et du monde et en cherche la raison suffisante dans un être nécessaire distinct de l'une et de l'autre. La preuve par l'ordre de la nature est une variante de la précédente, en tant qu'elle procède, de la même façon, à partir de la démonstration de la contingence des lois du mouvement. Quant à la preuve a priori, elle requiert non seulement la démonstration de la possibilité de l'être très parfait, mais aussi celle de l'existence de l'être nécessaire avec lequel il ne fait qu'un, pour conclure qu'il ne peut pas ne pas exister. Ces preuves supposent, en outre, qu'on démontre que conviennent les attributs conférés à Dieu par l'Écriture: dans les deux premiers cas, à l'être nécessaire; dans le troisième, à l'être très parfait." (*Résumé*, p 381)

15. ——. 1981. "Logique formelle et logique de la vérité dans la "Philosophia rationalis sive Logica" de Christian Wolff. Première Partie." *Filosofia Oggi* (4):339-373.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 65-131.

"La *Philosophia rationalis sive Logica* (1) est le premier des grands traités latins de Wolff. Son texte, précédé de celui du *Discursus praeliminaris de philosophia in genere*, comporte deux parties après les "Prolegomena" où il expose sa conception de la nature et de l'objet de la logique. La première, qu'il qualifie de théorique, correspond à ce qu'on a pris coutume d'appeler logique mineure, comme il le fait lui-même (not. 5 1125), ou encore logique formelle, et est divisée en quatre sections dans lesquelles il traite tour à tour des présupposés psychologiques et ontologiques de la logique (sect. 1), des notions (sect. 2), des jugements (sect. 3) et des raisonnements (sect. 4). La seconde, qu'il dénomme pratique, comprend six sections. Les deux premières, consacrées au discernement du vrai et du faux, du certain et de l'incertain (sect. 1), aux moyens de découvrir la vérité (sect. 2), se rapportent à la logique, dite par opposition, majeure ou matérielle (2). Dans les trois suivantes, il fixe les règles de la rédaction, de l'examen, et de la lecture des livres (sect. 3), celles de la communication de la vérité, qu'il s'agisse de convaincre, de réfuter, de se défendre, de mener une dispute ou d'enseigner (sect. 4), et celles de l'estimation des forces nécessaires dans chacun des domaines précédents (sect. 5). Dans la dernière, il éclaire l'usage de la logique dans la pratique de la vie et la façon de l'apprendre (sect. 6). Autrement dit, les deux premières sections de la seconde partie relèvent de ce qu'on peut appeler la logique de la vérité et les quatre dernières de la méthodologie.

De cet ensemble, nous n'analyserons que la logique formelle et la logique de la vérité, après avoir examiné, sous forme de préliminaires, la définition que donne Wolff de la logique, ainsi que les notions psychologiques et métaphysiques qu'il considère comme ses fondements.

Wolff définit la logique: la science qui dirige l'esprit humain dans la connaissance de la vérité (§ 1-2), c'est-à-dire la science des règles qu'il doit suivre pour la découvrir (§ 3)." (pp. 339-340)

(1) *Philosophia rationalis sive Logica, methodo scientifica pertractata et ad usum scientiarum atque vitae aptata*,

Francofurti et Lipsiae, 1728, 1732, 1740.

(2) Alors que les appellations: logique formelle et logique matérielle sont devenues courantes seulement depuis Kant, celles de logique mineure et de logique majeure semblent avoir fait leur apparition chez les Scolastiques du XVIIème siècle, qui se servaient aussi des termes: petite logique et grande logique, cependant que des auteurs comme Jungius et Micraelius utilisaient ceux de logique générale et de logique spéciale.

16. ———. 1982. "Des différentes parties de la métaphysique selon Christian Wolff." In *Christian Wolff 1679-1754. Interpretationen zur seiner Philosophie und deren Wirkung. Mit einer Bibliographie der Wolff-Literatur*, edited by Schneiders, Werner, 121-128. Hamburg: Felix Meiner Verlag.

Repris dans: Nouvelles études et nouveaux documents photographiques sur *Wolff*, pp. 15-22.

"Dans le *Discursus praeliminaris de philosophia in genere*, situé en tête de la *Philosophie rationalis sive Logica*, et où il brosse le programme d'ensemble de la philosophie, Wolff indique, comme il l'avait déjà fait dans la *Ratio praelectionum Wolffianarum in Mathesin et Philosophiam universam*, que la métaphysique comporte quatre parties qui doivent être traitées dans l'ordre suivant: Ontologie, Cosmologie générale, Psychologie, Théologie naturelle. Et il justifie cet ordre en soulignant que, dans la métaphysique comme en tout autre domaine, doivent précéder les parties dont les autres tirent leurs principes; ce qui est le cas de l'Ontologie par rapport à toutes les autres, de la Cosmologie générale par rapport à la Psychologie, ainsi que de ces deux dernières par rapport à la Théologie naturelle.

Or telles sont les quatre disciplines métaphysiques qu'il a développées successivement dans ses traités latins, en scindant la Psychologie en Psychologie empirique et en Psychologie rationnelle, et la Théologie naturelle en deux sous-parties aussi: la première *a posteriori*, la seconde *a priori*; ce qui donne la classification suivante: Ontologie, Cosmologie générale, Psychologie empirique, Psychologie rationnelles, Théologie naturelle *a posteriori* et Théologie naturelle *a priori*.

Mais, dans les *Vernünfftige Gedancken von Gott, der Welt und der Seele des Menschen, auch allen Dingen überhaupt*, qui constituent sa métaphysique allemande, il avait, sans employer ces appellations, adopté un autre ordre, plaçant la Psychologie empirique avant la Cosmologie générale, parce qu'il jugeait celle-là plus facile pour ceux qui débutent dans l'étude de la philosophie, comme il l'explique dans l' *Ausführliche Nachricht von seinen eigenen Schriften* . . . Et ce n'est qu'après que Thümmig, dans ses *Institutiones philosophiae Wolffianae in usus Acatlemicos adornatae*, eût présenté la métaphysique wolffienne en situant la Cosmologie générale avant la Psychologie empirique, et que Bilfinger eût fait de même dans les *Dilucidationes philosophicae de Deo, Anima et Mundo et generalibus rerum affectionibus*, que Wolff fit sienne cette répartition.

Cela ne change rien à vrai dire à sa conception d'ensemble de la métaphysique, que l'on n'est pas dès lors étonné de le voir définir comme la science de l'être, du monde en général et des esprits, c'est-à-dire de l'âme et de Dieu. Mais ce qu'il faut noter, c'est que, ce faisant, il lui attribue un champ d'investigation beaucoup plus vaste qu'Aristote et les Scolastiques d'une part, Descartes d'autre part." p. 121

"Telle est dans toute son ampleur et toute sa richesse la classification wolffienne des différentes parties de la métaphysique. Nouvelle et originale par son insertion de la Cosmologie générale à côté de la Psychologie, déjà introduite par Descartes dans le schéma aristotélico-scolastique réduit à l'Ontologie et à la Théologie naturelle, elle l'est non moins par celle de l'Ontologie expérimentale, de la Cosmologie générale expérimentale, de la Psychologie empirique et de la Théologie naturelle expérimentale à côté des parties dogmatiques correspondantes. Car, par ce double élargissement du domaine de la métaphysique, Wolff a profondément transformé la conception de la nature de celle-ci, nous l'avons dit, et celle de sa méthode, en mettant en plus vive lumière qu'on ne l'avait fait avant lui le rôle que doit jouer l'expérience en union avec la raison dans sa constitution, comme dans celle de tout le reste du savoir. Et, ce faisant, il a rappelé avec un rare bonheur aux

métaphysiciens qu'il n'est pas d'autre voie possible pour eux que ce qu'il dénomme si justement et si joliment le *connubium rationis et experientiae*." (p. 128 notes omises).

17. ———. 1982. "Logique formelle et logique de la vérité dans la "Philosophia rationalis sive Logica" de Christian Wolff. Deuxième Partie." *Filosofia Oggi* no. 5:71-102.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 65-131.

"Il nous reste à porter un jugement sur ces deux parties de la logique de Wolff que nous venons d'analyser.

1. Pour ce qui est de la première, qu'il appelle logique théorique, il va sans dire qu'elle n'est pas formelle au sens où l'on entend aujourd'hui ce terme; car s'il y utilise les variables littérales dans l'énoncé des syllogismes pour désigner les termes concrets, il n'exprime pas les constantes logiques par des symboles, malgré sa formation mathématique et son intérêt pour le projet leibnizien d'une caractéristique universelle. Mais il est possible d'affirmer qu'elle l'est au sens défini par Kant (*), à savoir que les notions, les jugements et les raisonnements y sont étudiés abstraction faite de leur contenu. Et il faut même souligner que, de ce point de vue, elle est plus formelle que beaucoup de traités scolastiques, ainsi que la logique de Jungius et celle de Port-Royal, par son souci de renvoyer à la logique de la vérité le soin d'établir les relations des propositions opposées et des conclusions des syllogismes avec la vérité et la fausseté, de même que l'analyse des démonstrations.

Toutefois Wolff n'expose pas la logique formelle ainsi conçue dans son intégralité, mais seulement ce dont la connaissance est indispensable pour formuler les règles de la logique pratique, ainsi qu'il l'indique à diverses reprises (§ 115 et not., not. § 299, § 397, 408) et conformément à sa définition de la logique comme la science directrice de l'esprit dans la connaissance de la vérité. Et c'est ce qui explique les lacunes de cette partie de son traité et la rapidité avec laquelle il traite certaines questions. (...)

2. Ce qui vient d'être dit de la logique formelle vaut également de la logique de la vérité. On y retrouve l'appel aux mêmes notions ontologiques dans l'analyse des jugements tant intuitifs que discursifs et dans celle des définitions nominales. La définition de la vérité logique comme la possibilité de déterminer le prédicat par la notion du sujet constitue une explicitation et un approfondissement dignes de remarque de celle proposée par Tschirnhaus, et à travers elle de celle de Descartes dont Tschirnhaus s'est inspiré. L'importance du lien établi par Wolff entre la démonstration et la découverte de la vérité ou, plus exactement, la saisie de la raison de la vérité, car la seule observation peut suffire pour découvrir la vérité, n'échappera à personne.

La logique de la vérité présente encore l'avantage de contenir, ainsi d'ailleurs que le chapitre sur les fondements psychologiques de la logique, les linéaments d'une théorie de la connaissance, qu'il serait intéressant d'explicitier, en les complétant à l'aide des notations *a* et *là* éparses dans ses autres traités et ses articles. Pour nous borner à ce qu'il en dit ici, rappelons: - 1) qu'il attribue deux sources à toutes nos connaissances: l'expérience sensible et le raisonnement, qui portent respectivement sur les êtres singuliers et sur les notions universelles; ce qu'il exprime en affirmant que toute connaissance est soit *a posteriori*, soit *a priori*, la seconde étant l'apanage exclusif de l'entendement discursif; - 2) qu'il explique que nous passons de la représentation de l'individuel à celle de l'universel, soit en réfléchissant sur ce qui est perçu, soit en séparant ce qui est commun à plusieurs notions, soit en déterminant ce qui ne l'est pas ou en déterminant autrement ce qui l'est déjà d'une certaine façon dans une notion donnée ou, si l'on veut, soit par la réflexion, soit par l'abstraction, soit par une détermination arbitraire. D'où suit: - 1) que la connaissance *a priori* s'enracine dans la connaissance *a posteriori*; - 2) que l'abstraction n'est qu'un des moyens qui assure le passage de celle-ci à celle-là." (pp. 98-99)

"Ajoutons seulement qu'il résulte de ce qui vient d'être exposé à partir de la *Logica*, que l'objet de la connaissance intellectuelle est entièrement constitué par les notions des genres et des

espèces. Car si l'on ne fait pas appel à l'entendement intuitif, en tant que faculté indépendante de la raison, il est seulement possible d'envisager les idées selon leur extension, puisqu'on obtient dès lors la notion distincte des choses en les rattachant à leur genre et à leur espèce grâce au raisonnement et non en cherchant à avoir une vue compréhensive de leur essence grâce à l'intuition abstractive. Aussi ne peut-on s'étonner de voir Wolff en définitive tenir pour synonymes les deux appellations: notions et notions universelles.

De là ne suit pas pour autant que sa logique formelle, pour en revenir à elle, soit extensiviste. Bien au contraire, elle est plutôt compréhensiviste. Qu'il suffise d'en apporter pour preuve le fait qu'il y traite les propositions comme des attributives et ramène les catégoriques aux hypothétiques d'une part, et d'autre part qu'il y utilise, pour exprimer celles qui sont universelles, les adjectifs: *omnis* ou *omne* et non les adjectifs: *omnes* ou *omnia*." (p. 102)

18. ——. 1983. "Les rapports de la raison et de la foi selon Christian Wolff." *Studia Leibnitiana* no. 15:205-214.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 229-238.

"Lorsqu'on traite du rationalisme de Wolff, on a d'ordinaire en vue la façon dont il conçoit les rapports de la raison et de l'expérience. Mais ce n'est là qu'une des facettes du problème qui ne peut être pleinement élucidé que si l'on envisage aussi comment il comprend ceux de la raison et de la foi. Or c'est là un aspect méconnu de sa pensée, sans doute parce que dans ses traités latins il n'y fait que de brèves allusions et que l'on néglige trop souvent les *Horae subsecivae Marburgenses* où il s'en explique.

Ce point mérite d'autant plus l'attention que les Piétistes, comme Joachim Lange, son collègue de la Faculté de théologie de Marburg, l'ont accusé de détruire la religion révélée et que certains auteurs récents lui reprochent de ne pas reconnaître d'autres vérités que celles qui sont fondées sur l'évidence rationnelle.

Autrement dit, on retrouve à propos de ces seconds rapports la même appréciation négative qu'au sujet des premiers, laquelle repose sur le même préjugé que Wolff est un rationaliste intransigeant ne reconnaissant pas plus des vérités transcendant la raison qu'un concours de l'expérience à l'établissement des vérités rationnelles. Or ce jugement est complètement faux et ne tient pas compte de ses affirmations les plus explicites, ainsi que nous nous proposons de le démontrer en nous appuyant surtout sur les *Horae subsecivae*, mais sans négliger l'apport de ses autres ouvrages.

Une remarque préalable s'impose. Wolff à vrai dire ne traite pas directement et pour eux-mêmes des rapports de la raison et de la foi, mais à travers ceux de la philosophie et de la théologie' avec lesquels il les confond. C'est là une position discutable, mais que nous acceptons telle quelle, nous bornant à dégager de l'examen de ces derniers rapports sa conception de ceux de la raison et de la foi.

A cette fin nous délimiterons d'abord le domaine de la foi, tout en analysant le mode de connaissance dont elle relève, à partir de ce qu'il dit de l'objet de la théologie et de ses différentes parties. Puis nous expliquerons en quoi consiste la méthode qu'il préconise d'appliquer à la théologie, afin de préciser comment elle doit y être utilisée, car c'est surtout cette utilisation qui soulève la question des rapports de la raison et de la foi. Après quoi nous tirerons les conclusions auxquelles conduira notre exposé." (pp. 229-230)

19. ——. 1983. "Les "Opuscula metaphysica" de Christian Wolff." *Filosofia Oggi* no. 6:213-243.

Repris dans: *Introduction à l'Opus Metaphysicum de Christian Wolff*, pp.223-252.

"Sous ce nom d'*Opuscula metaphysica*, nous désignons deux petits écrits de Christian Wolff, intitulés,

-- le premier: *De differentia nexus rerum sapientis et fatalis necessitatis, nec non systematis harmoniae praestabilitae et hypothesium Spinosae luculenta commentatio, in qua simul genuina Dei existentiam demonstrandi ratio expenditur et*

multa religionis naturalis capita illustrantur, Halae Magdeb., 1723, 1737,

-- le second: *Monitum ad commentationem luculentam de differentia nexus rerum sapientis et fatalis necessitatis, quo nonnulla sublimia metaphysicae ac theologiae naturalis capita illustrantur*, Halae Magdeb., 1723, 1737 (1).

Bien qu'il ne les range pas sous cette étiquette, ils appartiennent à la catégorie de ce qu'il appelle ses «Schutzschriften». Car ils contiennent ses réponses à des critiques formulées par Joachim Lange, professeur de théologie à Halle, où il enseignait aussi à l'époque, contre ses thèses métaphysiques exposées dans la *Ratio praelectionum Wolffianarum in Mathesin et Philosophiam universam*, Halae, Magdeb., 1718, et surtout dans les *Vernünfftige Gedancken von Gott, der Welt und der Seele des Menschen, auch allen Dingen überhaupt, den Liebhabern der Wahrheit mitgetheilet*, Franckfurt und Leipzig, 1720." (pp. 213-214)

(...)

"Nous en avons fini avec la présentation de la *Luculenta commentatio* et du *Monitum*. Il faut maintenant dresser le bilan de leur apport.

Pour enchaîner avec ce qui précède, nous commencerons par sa critique du Spinosisme. Elle tourne tout entière autour du fatalisme universel. Mais certaines conséquences qu'il en tire, comme la négation de la perfection des choses, celle de la liberté divine et humaine, la confusion de Dieu avec la nature, appellent des réserves.

Il n'a pas vu que si Spinoza rejette la perfection apparente attribuée aux choses en fonction de leur finalité, il n'en reconnaît pas moins la perfection plus profonde de leur essence, qui tient au fait qu'elles ont été produites avec une souveraine perfection, puisqu'elles suivent nécessairement de l'essence divine qui est absolument parfaite.

Il n'a pas tenu compte que Spinoza, tout en refusant à Dieu et à l'homme la liberté conue comme un libre arbitre, affirme

cependant que Dieu est parfaitement libre du fait qu'il existe et agit en vertu de l'absolue perfection de son être conformément aux lois de sa nature raisonnable, se rapproche de la perfection et se libère de la servitude du corps.

Il n'a pas enfin été sensible au sens pourtant si vif qu'a Spinoza de la distance infinie qui sépare, si l'on peut ainsi s'exprimer, la substance de ses modes ou, si l'on veut, de la différence radicale de nature qui existe entre l'absolument infini et tout ce qui est fini, comme l'atteste la difficulté qu'il éprouve à dériver le second du premier. Faute de quoi, il n'a pas compris que Spinoza était habité par un authentique sens de Dieu qui s'oppose à ce qu'on l'accuse d'avoir confondu Dieu avec la nature.

Il est vrai qu'il était poussé à attaquer Spinoza sur ces trois points par le besoin de se défendre contre les accusations dont il était lui-même l'objet. Il est vrai aussi qu'il s'y trouvait en accord avec la plupart des philosophes et des théologiens de son temps. Il est certain enfin qu'il y déduit des conséquences qui étaient en germe dans les principes posés par Spinoza. Mais il reste que son tempérament dogmatique et logicien lui a fait méconnaître la complexité de la doctrine de celui-ci et l'a empêché de voir qu'elle ne se laisse pas ramener à un schéma unique.

Ceci dit, il faut cependant reconnaître que l'ensemble de sa critique du Spinosisme, outre certains aspects nouveaux, comme le rapprochement entre Spinoza et les partisans des idées arbitraires au sujet du fondement des possibles, ne laisse pas d'être rigoureuse et pertinente, en tant qu'elle se situe au niveau de ce qu'il appelle les raisons métaphysiques." (pp. 240-241 notes omises)

(1) Nous les désignerons désormais comme suit: *Luculenta commentatio* et *Monitum* dans le texte, et: L.C. et M. dans les notes.

20. ———. 1983. "A propos du projet de Wolff d'écrire une "Philosophie des Dames"." *Studia Leibnitiana* no. 15:46-57.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 217-228.

"Quoi qu'il en soit, si l'on se rappelle le but ultime assigné par Manteuffel à la « Philosophie des Dames » (*), à savoir oeuvrer pour le bonheur de l'humanité, en essayant de rendre les femmes raisonnables et par elles les hommes, il apparaît que ce projet de Wolff n'est pas étranger à son dessein de rendre la philosophie utile à la pratique de la vie tant publique que privée.

C'est là un aspect de sa pensée qui n'a pas été assez remarqué. On le considère la plupart du temps comme un théoricien pur, faute d'avoir prêté suffisamment attention au fait que la *Philosophia rationalis sive Logica* n'est pas seulement *ad usum scientiarum*, mais aussi *ad usum vitae aptata*, ainsi que l'indique son titre, et que sa partie pratique est beaucoup plus développée que sa partie théorique, d'une part; d'autre part, que ses traités de métaphysique ouvrent tous la voie à sa philosophie pratique qui, avec les deux tomes de la *Philosophia practica universalis*, les huit du *Jus naturae*, les cinq de la *Philosophia moralis sive Ethicam*, celui du *Jus gentium* et celui de l'*Oeconomica*, constitue la part de son œuvre la plus importante quantitativement. Ce préjugé vient aussi de ce qu'on rèle d'ordinaire au second plan derrière ces traités les *Horae subsecivae Marburgenses*, sans relever la portée pourtant très significative de leur titre: *quibus philosophia ad publicam privatamque utilitatem aptatur*.

Ces *Horae subsecivae* sont destinées à montrer l'aide irremplaçable apportée par la philosophie à la théologie révélée, au droit et à la médecine, c'est-à-dire aux disciplines enseignées dans les Facultés supérieures qui préparent à la vie publique", en leur proposant sa propre méthode dont l'emploi les rendra rigoureuses, ainsi que les notions directrices qui leur permettent d'affiner et de préciser les leurs. Mais elles fourmillent aussi de notations plus pratico-pratiques, si l'on peut ainsi s'exprimer." (pp. 565-566 notes omises)

(*) Lettre du 8 Mai 1739.

21. ———. 1983. "Des rapports de Wolff avec Leibniz dans le domaine de la métaphysique." In *Leibniz, Werk und Wirkung. IV Internationaler Leibniz Kongress, Hannover, 14-19 November 1983. Vorträge.*, 153-163. Hannover: Gottfried-Wilhelm-Leibniz-Gesellschaft.

Repris dans: Beiträge zur Wirkungs- und Rezeptionsgeschichte von Gottfried Wilhelm Leibniz (Studia leibnitiana, Supplementa XXVI). Hannover 1986, pp. 88-96.

"A propos des rapports de Wolff avec Leibniz dans le domaine de la métaphysique, est née de son vivant l'opinion qu'il n'a fait qu'y systématiser les thèses de celui-ci. Quoi qu'il en soit de sa valeur, elle présente l'intérêt d'inviter à tenter une approche d'ensemble du problème, comme d'ailleurs sa propre déclaration en réaction contre elle qu'il s'est très peu inspiré du philosophe de Hannover.

Pour en juger, nous apporterons d'abord quelques précisions sur l'origine de cette opinion. Puis, à partir de la déclaration de Wolff, nous passerons en revue les questions sur lesquelles il s'est écarté de Leibniz. Nous relèverons ensuite celles à propos desquelles il a reconnu explicitement sa dépendance vis-à-vis de lui. Nous examinerons aussi les emprunts qu'il lui a faits, en les taisant, dans la solution de quelques autres. Enfin nous prendrons en considération la façon dont il a utilisé ses sources leibniziennes reconnues ou pas. Le tout, en nous en tenant aux données les plus importantes que fournit son œuvre latine sur ces divers points." (p. 153)

(...)

"Si rapide et partielle soit l'enquête que nous venons de mener, elle a fait apparaître que les rapports de Wolff avec Leibniz dans le domaine de la métaphysique ne se laissent pas enfermer dans l'alternative que nous évoquions au début. S'il s'écarte de l'héritage leibnizien sur beaucoup de points, celui-ci n'en est pas moins présent dans son élucidation de nombreux autres, même et y compris lorsqu'il n'en fait pas état. Aussi ne peut-on souscrire à sa déclaration qu'il y a "paucissima Leibnitii" dans sa métaphysique et doit-on l'interpréter comme l'expression de

son irritation en face des allégations de Lange. Il faut au contraire affirmer, en le paraphrasant, qu'il y a utilisé "-multa Leibnitii", mais de façon si personnelle qu'il est faux de prétendre avec ce dernier qu'elle n'est qu'une systématisation de celle de Leibniz.

Cette wolffianisation, si l'on peut dire, des thèses leibniziennes, est un point important à noter. Il serait facile de le prouver à partir de son illustration du principe de raison suffisante qu'il a tenté de démontrer et dont il a fait le grand principe d'explication sur lequel reposent toutes les parties de sa métaphysique, à partir aussi de sa théorie du *nexus rerum* qu'il a tirée de la définition leibnizienne du monde et qui sert de fondement à sa cosmologie générale, cependant qu'elle aide entre autres à délimiter les contours de la représentation de l'univers dans la connaissance humaine et à illustrer la doctrine des fins voulues par Dieu, partir encore de sa défense de l'Optimisme qu'il s'est efforcé d'établir du double point de vue de la volonté et de la puissance de Dieu, de sa sagesse et de sa bonté.

Dans ces trois cas, et l'on pourrait en citer beaucoup d'autres, il a si bien inséré et fondu dans sa propre métaphysique ses emprunts à Leibniz, qu'ils en font véritablement partie et qu'on peut dire qu'il a construit avec son propre système. Peut-être est-ce parce qu'il en avait conscience qu'il a tu certains d'entre eux.

En terminant nous citerons une autre de ses déclarations qui nous semble bien résumer ses rapports avec Leibniz en métaphysique, comme d'ailleurs dans tout le reste de sa philosophie, car elle met en lumière leur commun dénominateur et montre, du même coup, que leur complexité est plus apparente que réelle, tout en les situant dans l'ensemble de ceux qu'il a entretenus avec les autres philosophes dont il s'est aussi approprié certains thèmes: "Usus sum principiis Leibnitii, quando ceteris erant consona et veritas eorum mihi patebat, quemadmodum scholasticorum et aliorum." (p. 163 notes omises).

22. ——. 1983. "La critique wolffienne du Spinozisme." *Archives de Philosophie* no. 46:553-567.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 200-215.

"Pour l'apprécier équitablement, il faut certes tenir compte de l'état de l'interprétation du Spinozisme au XVIIe siècle et des motifs, sinon des mobiles, qui ont amené Wolff à le combattre. Tout le portait à la sévérité. Mais l'on ne peut s'empêcher de regretter que sa critique soit entièrement négative. Il n'a relevé que les difficultés de cette philosophie qui lui en ont caché la beauté et la grandeur. De plus son tempérament dogmatique et logicien lui a fait méconnaître, à diverses reprises, sa complexité, notamment sur trois points flagrants: la perfection des choses, la liberté divine et humaine, la nature de Dieu et ses rapports avec les autres êtres.

Sur le premier point, il n'a pas vu que si Spinoza rejette la perfection apparente attribuée aux choses en fonction de leur finalité, il n'en reconnaît pas moins la perfection plus profonde de leur essence, qui tient au fait qu'elles ont été produites avec une souveraine perfection, puisqu'elles suivent nécessairement de l'essence divine qui est absolument parfaite".

Sur le second, il n'a pas tenu compte que Spinoza, tout en refusant, à Dieu et à l'homme, la liberté conue comme un libre-arbitre, affirme cependant que Dieu est parfaitement libre, du fait qu'il existe et agit en vertu de la perfection de son essence", et que l'homme, dans la mesure où il tend à persévérer dans son être, conformément aux lois de sa nature raisonnable, se rapproche du même coup de la perfection et se libère de la servitude du corps".

Sur le troisième, obnubilé par l'affirmation que les choses particulières sont des modifications des attributs de Dieu, il n'a pas été sensible au sens pourtant si vif qu'a Spinoza de la distance infinie qui sépare, si l'on peut s'exprimer ainsi, la substance de ses modes ou, si l'on préfère, de la différence radicale de nature qui existe entre l'absolument infini et tout ce qui est fini, comme l'atteste la difficulté qu'il éprouve à dériver

le second du premier". Faute de quoi, Wolff n'a pas compris que Spinoza était habité par un authentique sens de Dieu, qui s'oppose à ce qu'on l'accuse aussi bien d'avoir confondu Dieu avec la nature, que d'être athée.

Mais ces graves réserves exprimées, il faut ajouter que sur beaucoup d'autres points, notamment dans ce qui a trait à la conception du nécessaire, du possible, de la substance et de ses attributs, la critique qu'a faite Wolff de la philosophie de Spinoza ne manque ni de pertinence, ni de rigueur. A vrai dire, il a même dénoncé les difficultés de celle-ci avec plus d'à propos et de sérieux que beaucoup de ceux qui l'ont précédé dans cette voie, en évitant leurs exagérations, même s'il a pu s'inspirer d'eux et, ce, parce que sa propre critique se situe, comme cette philosophie elle-même, en l'y suivant, au niveau de ce qu'il appelle les raisons métaphysiques". Qui plus est, il y fait même preuve parfois de nouveauté, par exemple avec le rapprochement qu'il opère entre Spinoza et les partisans des idées arbitraires au sujet du fondement des possibles. Et c'est pourquoi elle ne mérite pas l'oubli dans lequel elle est tombée." (pp.565-567)

Bibliographie Choisie de Jean École (tous les publications sur Christian Wolff). Deuxième partie: 1984-2008

Essais sur Christian Wolff

1. ———. 1984. "Wolffius redivivus." *Revue de Synthèse* no. 116:483-501.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 5-23.

"La méthode de la philosophie, telle qu'il la conoit, est donc à la fois démonstrative et expérimentale, qu'il s'agisse de la philosophie théorique ou de la philosophie pratique, pour reprendre la grande division proposée par les premiers historiens de sa pensée, comme Ludovici.

De la philosophie pratique, composée de la philosophie pratique universelle, du droit naturel, de la morale, de la politique, du droit des gens et de l'économique, nous ne dirons rien non plus, parce que nous la connaissons mal.

Reste la philosophie théorique, c'est-à-dire la logique, la métaphysique et la physique dans laquelle il fait rentrer, outre la physique expérimentale et dogmatique, la physiologie animale et végétale, et la téléologie.

Si, en ce qui concerne la physique expérimentale et la physiologie, il est parfaitement au courant des recherches de son temps, il va sans dire que l'intérêt de son apport en ces domaines n'est plus aujourd'hui que d'ordre historique aussi.

La logique, qu'il divise en deux parties : la logique théorique et la logique pratique, en contient en fait trois. Car la seconde se subdivise en logique de la vérité et en méthodologie. Dans la première qui correspond à la logique formelle, il prend soin de considérer les notions, les propositions et les raisonnements en faisant strictement abstraction de leur contenu, et il renvoie à la logique de la vérité la tâche d'établir les relations des propositions opposées et des conclusions des raisonnements avec la vérité et la fausseté, de même que l'analyse de la démonstration. Si bien que si la partie théorique de sa logique n'est pas formelle au sens actuel du terme, car il n'exprime pas les constantes logiques par des symboles, malgré son goût pour le projet leibnizien d'une caractéristique universelle, elle l'est au sens encore admis par Kant, et de façon beaucoup plus pure que nombre de manuels scolastiques. Dans la partie méthodologique, il expose en détail les règles de la transmission de la vérité par les écrits et l'enseignement oral, ainsi que de son accueil. L'ensemble contient, en outre, les linéaments d'une théorie de la connaissance qu'il n'a jamais développée explicitement, mais qu'on peut tenter de reconstituer en s'appuyant aussi sur son analyse psychologique des fonctions de connaissance et les multiples notations dont sont parsemés ses ouvrages de métaphysique.

Or la métaphysique constitue la pièce centrale de son système. Elle suit la logique et est tout entière orientée vers la philosophie pratique ; ce qui montre que se sont également trompés ceux qui le tiennent pour un théoricien pur. Cependant, s'il ne cultive pas la théorie pour elle-même, il ne laisse pas d'y exceller. Et l'on peut dire que sa métaphysique est, de ce point de vue, en dépit des longueurs des traités latins, un monument remarquable, d'autant plus digne d'attention qu'elle joue, si l'on peut dire, le rôle de plaque tournante entre la philosophie scolastique, celles de Descartes et de Leibniz, d'une part, la philosophie kantienne et celles qui l'ont suivie, d'autre part.

Elle est composée de l'ontologie, de la cosmologie générale, de la psychologie empirique, de la psychologie rationnelle et de la théologie naturelle. Cette division, reprise par Kant qui l'a

léguee à la postérité, en refusant toutefois d'y maintenir la psychologie empirique, nous semble aujourd'hui toute naturelle. Mais elle ne s'est pas imposée d'emblée. Chez les Aristotélico-Scolastiques, la métaphysique comprenait seulement l'ontologie et la théologie naturelle. Si certains Scolastiques post-suaréziens y faisaient rentrer timidement la psychologie, c'est Descartes qui l'y a définitivement introduite, mais il en supprimait ou presque l'ontologie. En redonnant plein droit de cité à celle-ci, Wolff renoue avec la tradition aristotélico-scolastique, mais il garde l'apport cartésien en ce qui concerne la psychologie, et surtout il lui ajoute la cosmologie générale ; ce que personne n'avait jamais encore tenté.

Or cet élargissement du champ de la métaphysique est lié à une conception de sa nature tout autre que celle de ses prédécesseurs. D'abord science de l'être en tant qu'être et de sa source, puis science des êtres immatériels, si l'on s'en tient, pour résumer, aux grands courants, elle devient avec Wolff la science de l'être en général et des différentes sortes d'êtres que sont le monde, l'âme humaine et Dieu." (pp. 498-500)

2. ——. 1984. "De la méthode universelle selon Christian Wolff." *Filosofia Oggi* no. 7:179-192.

Repris dans: *Études et documents photographiques sur Wolff*, pp. 161-174.

""Le méthode, il n'est pas un seul philosophe du XVIIème siècle qui n'en ait parlé dans le sillage de Descartes, et durant la première moitié du suivant s'est développée la controverse au sujet de l'emploi de la méthode des mathématiques en philosophie (*). Le climat intellectuel de l'époque était tellement marqué par cette question, que Wolff ne pouvait manquer de l'aborder. Il s'en est même beaucoup préoccupé, comme en attestent les nombreux endroits de son œuvre où il en parle. Les plus importants sont sans contredit: le chapitre 4 du *Discursus praeliminaris de philosophia in genere*, les écrits divers: lettres, préfaces à des ouvrages d'autres auteurs, programmes de cours, qui ont été réunis dans les *Meletemata Mathematico-Philosophica*, et beaucoup d'articles des *Horae*

subsecivae Marburgenses. Mais alors qu'il se contente, dans le *Discursus*, de codifier les règles à suivre pour que la philosophie soit claire, rigoureuse et certaine, et dans les écrits des *Meletemata* d'affirmer que l'application des mêmes règles conduit aux mêmes résultats dans toutes les autres disciplines, notamment dans la théologie, le droit et la médecine, dans les *Horae subsecivae*, tout en rappelant les dites règles, il explique pourquoi leur portée est universelle et montre comment à partir d'exemples pris en ces trois domaines. Autrement dit, c'est dans les *Horae subsecivae* que Wolff livre l'ensemble de sa conception de la méthode et c'est donc à cet ouvrage qu'il faut recourir pour l'exposer dans son intégralité, sans toutefois négliger de faire appel aux autres textes qui éclairent certains de ses détails en soulignant l'importance qu'ils revêtaient à ses yeux.

Le plan de cet exposé est imposé par ce qui vient d'être dit. Parce que Wolff s'emploie d'abord à préciser la méthode de la philosophie et montre ensuite l'utilité et la nécessité de son utilisation partout où s'exerce la recherche de la vérité, nous commencerons par examiner la nature de cette méthode, ses réquisits, son fondement et les résultats qu'elle procure, puis nous nous attacherons à éclairer son universalité à partir de l'application qu'il en fait à la théologie, au droit et à la médecine." (pp. 179-180 notes omises)

(*) Sur l'histoire des doctrines concernant la méthode aux XVII^{ème} et XVIII^{ème} siècles, cf.: Hans Werner Arndt, *Methodo scientifica pertractatum. Mos geometricus und Kalküllbegriff in der philosophischen Theorienbildung des 17. und 18. Jahrhunderts*, Berlin, New York, 1971, Walter de Gruyter; et sur la controverse en question: Giorgio Tonelli, *Der Streit über die mathematische Methode in der Philosophie in der ersten Halte des 18. Jahrhunderts und die Entstehung von Kants Schrift über die Deutlichkeit*, in *Archiv für Philosophie*, 1959, Heft 9/1, 2, p. 37-68.

3. ———. 1986. "Du rôle de l'entendement intuitif dans la conception wolffienne de la connaissance." *Archiv für Geschichte der Philosophie* no. 68:280-291.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 55-66.

"Wolff, pas plus qu'aucun autre philosophe avant Kant, n'a élaboré une théorie de la connaissance. Mais cela ne l'a pas empêché de s'intéresser, comme la plupart d'entre eux, aux divers problèmes que pose la connaissance, notamment celui de son origine, c'est-à-dire des facultés qu'elle met en jeu. On trouve de nombreuses notations à ce sujet dans la *Philosophia rationalis sive Logica*, dans la *Psychologia empirica*, dans deux articles intitulés, le premier: *Solutio nonnullarum difficultatum circa mentem humanam obviarum, ubi simul et agitur de origine notionum et facultate ratiocinandi* (1707), le second: *Leges experientiarum fundamentales* (1708), quelques-unes aussi dans ses autres traités latins et dans les *Horae subsecivae Marburgenses*, pour nous borner à son *Corpus latinum*.

Or si nous nous reportons au premier des traités qui viennent d'être indiqués, il y affirme on ne peut plus nettement qu'il y a deux sources, et seulement deux, de toutes nos connaissances: les sens et la raison. (...)

Ainsi assimile-t-il la connaissance acquise par les sens, qu'il dénomme encore expérience, à la connaissance a posteriori, d'une part; la connaissance obtenue en raisonnant, donc grâce à l'entendement discursif, à la connaissance a priori, d'autre part; et semble du même coup exclure toute autre source.

Pour achever de caractériser l'une et l'autre, il précise que la première est intuitive et a pour objet ce qui est singulier, c'est-à-dire les individus; que la seconde, qui est discursive, porte sur les notions universelles. Si bien qu'on en arrive à la double équation: connaissance sensible ou a posteriori, intuitive et singulière; connaissance intellectuelle ou a priori, discursive et universelle.

Il faut signaler encore que, sous le nom de connaissance intuitive, il range à la fois celle acquise par les sens et celle due à l'imagination. Après l'avoir définie de façon générale: « *quae ipso idearum intuitu absolvitur* », et expliqué: « *rem intuitive*

cognoscere dicimur, quatenus ideae ejus, quam habemus, nobis sumus conscii», il en donne comme exemples tant la saisie par les sens d'un arbre qui nous est présent, que la représentation d'un triangle par l'imagination. (...)

L'affirmation de la dépendance de l'imagination par rapport à la *facultas sentiendi* se comprend aisément, puisqu'elle ne fait que reproduire la représentation des choses perues par les sens, en leur absence. D'où le nom commun de perceptions qu'il donne tant aux sensations qu'aux actes de l'imagination, ainsi qu'aux représentations qui en résultent, tout en appelant idées sensuelles celles acquises par les sens et phantasmes celles produites par l'imagination.

Mais les termes dans lesquels il s'exprime ne font que poser avec plus d'acuité le problème de l'existence de l'entendement intuitif, puisqu'il identifie purement et simplement la connaissance intuitive et la connaissance sensible entendue en un sens large, et l'oppose radicalement à celle obtenue par l'entendement discursif, sans faire la moindre place au premier.

Il y a là une difficulté que nous avons signalée dans notre introduction à la réédition de la *Philosophia rationalis sive Logica*, en remettant à plus tard de la résoudre. Et c'est ce que nous nous proposons de faire dans l'étude présente." (pp. 280-281 notes omises)

4. ——. 1986. "Contribution à l'histoire des premiers principes. Exposé de la doctrine wolffienne." *Filosofia Oggi* no. 9:225-239.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 83-97.

"Comme Jean-Baptiste du Hamel, dont il s'est peut-être inspiré, Wolff place en tête de son *Ontologia* l'examen des principes de contradiction et du tiers-exclu, auxquels il ajoute celui de raison suffisante qu'ignorait celui-ci. Et il les appelle «*principia philosophiae primae*».

Il est bien connu que le principe de raison suffisante a été formulé expressément et ainsi dénommé par Leibniz, alors que les deux premiers étaient utilisés depuis toujours. Mais l'on a

peu remarqué que les expressions servant à désigner ceux-ci sont d'origine tardive. On ne les rencontre pas encore, en effet, au XVIème siècle chez Fonseca et Suárez par exemple, ni même au XVIIème chez Descartes, Clauberg et Bayle, pas plus que chez les auteurs de lexiques philosophiques, comme Goclenius, Chauvin et Micraelius. Mais Jungius, dans la *Logica Hamburgensis* qui date de 1638, parle de «duo principia contradictionis», en rangeant sous cette dénomination ce que nous appelons maintenant principe de contradiction et principe du tiers-exclu. Et l'on sait que Leibniz utilise le terme principe de contradiction dans le sens actuel, ainsi que parfois celui de principe d'identité, qu'on lui doit sans doute, en le traitant comme synonyme du premier. Quant à l'appellation principe du tiers-exclu, nous ne l'avons pas rencontrée avant Wolff; mais il l'emploie de faon si naturelle qu'on peut penser qu'elle existait déjà chez des petits scolastiques aujourd'hui oubliés.

Nous exposerons tout à tour sa conception des principes de contradiction et du tiers-exclu d'abord, celle du principe de raison suffisante ensuite, en les situant par rapport aux doctrines antérieures, puis la faon dont il explique les rapports et la portée du premier et du troisième, avant de mettre en lumière sa dépendance et son originalité dans toute cette question." (p. 225)

(...)

"Avant de terminer, nous voudrions tenter de mieux situer la conception de Wolff par rapport à celles qui l'ont précédée, en regroupant les notations dont nous avons émaillé notre exposé.

Tout d'abord, de faon générale, malgré la formule si typique: «*Eam experimur mentis nostrae naturam* », qu'il emploie pour préparer l'énoncé des premiers principes, il n'en fait pas, comme Descartes, de pures lois de la connaissance, mais les tient, à la manière d'Aristote et de Thomas d'Aquin, pour les lois de l'être qui, en tant que telles, dirigent la connaissance.

Pour ce qui est plus particulièrement du principe de raison suffisante, il est à peine besoin de dire qu'il doit beaucoup à Leibniz dont il s'est fait l'écho. Mais il importe de souligner ce

par quoi il en diffère. D'abord, il a très nettement distingué ce principe de celui de causalité dont Leibniz semble parfois le rapprocher. Ensuite, alors que celui-ci n'a fait que le poser, sans tenter d'en donner la moindre preuve, Wolff, tout en reconnaissant qu'on peut l'admettre comme un axiome, s'est efforcé, plus ou moins bien il est vrai, de le démontrer tant *a priori* qu' *a posteriori*. Il l'a de plus formulé de façon plus générale et même absolue. Par ailleurs, il l'a appliqué à Dieu plus explicitement. A quoi il faut ajouter qu'il écrit parfois, par exemple dans la *Cosmologia generalis*, «principium convenientiae sive rationis».

Or Leibniz conoît le principe de convenance, qui régit les choix de la sagesse divine, comme une application du principe de raison suffisante et ne l'identifie pas avec. Enfin Wolff, plus que Leibniz, dans la pratique, a fait de ce principe le fondement et la pierre de touche de toute sa philosophie, notamment des différentes parties de sa métaphysique. Et l'on peut noter qu'à propos de l'usage qu'il en fait dans l'ontologie, mais cela vaut aussi de la cosmologie générale, de la psychologie et de la théologie naturelle, il déclare: « An vero Leibnitius eodem modo usus fuerit hoc principio, ego non dixerim, cum Leibnitianus circa philosophiam primam meditationes huc usque viderim nullas. »

En un mot, Wolff ne s'est pas contenté de répéter Leibniz, ni même de systématiser ce qu'il connaissait de sa pensée. Il a précisé et développé la doctrine du principe de raison suffisante, il a étendu ses applications. Et il a su si bien lui imprimer sa marque personnelle et l'intégrer dans son propre système, que son nom y reste à jamais attaché comme celui de Leibniz. (*)

(*) Cette étude était déjà à l'impression, quand le Professeur Hans Werner Arndt de Mannheim nous a indiqué que Leibniz a lui aussi tenté de donner une démonstration *a priori* du principe de raison suffisante dans un texte inédit publié par Zocher dans *Leibniz Erkenntnislehre, in Leibniz zu seinen 300. Geburtstag*, Berlin, 1952, p. 15. La voici, telle que ce dernier l'a retranscrite: « Propositio: Nihil est sine ratione sufficiente seu

quicquid est habet rationem sufficientem. Def. 1: Ratio sufficiens est qua posita res est. Def. 2: Requisitum est quo non posito res non est. Demonstratio: Quicquid est, habet omnia requisita. Uno enim non posito non est per def. 2. Positis omnibus requisitis res est. Nam si non est, deerit aliquid quo minus sit, id est requisitum. Ergo omnia requisita sunt ratio sufficiens per def. 1. Igitur quicquid est habet rationem sufficientem. q.e.d.»." (pp. 238-239)

5. ——. 1986. "Wolff et la Bible." In *Le siècle des Lumières et la Bible (Bible de tous les temps)*, edited by Belaval, Yvon and Bourel, Dominique, 805-822. Paris: Beauchesne.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 194-211.

"Dans son *Eigene Lebensbeschreibung* (1) Wolff nous apprend que ses parents l'habituèrent à lire la Bible chaque jour dès son enfance. Une telle pratique ne pouvait que lui donner une connaissance remarquable du texte sacré, dont attestent les multiples références et les nombreuses citations qui parsèment ses ouvrages. Nous en dresserons d'abord, la liste (2) de leur importance et de leur variété.

Puis nous nous emploierons à éclairer la faon dont il les utilise. Mais ses rapports avec la Bible ne se réduisent pas à la connaissance qu'il en a et à l'utilisation qu'il en fait. Il a en outre proposé de suivre dans l'interprétation de l'Écriture la méthode qu'il préconise pour parvenir, en tout domaine, à la clarté et à la certitude. Et c'est là un troisième point que nous examinerons, avant de dire quelques mots de son explication de quelques passages du Nouveau Testament à l'aide de cette méthode." (p. 805)

(1) Rédigée en 1743 et publiée seulement en 1841 par Heinrich Wuttke sous le titre *Christian Wolffs eigene Lebensbeschreibung. Herausgegeben mit einer Abhandlung über Wolff*, Leipzig 1841, elle a été rééditée par Hans Werner Arndt avec les deux biographies dues respectivement à Friedrich Christian Baumeister et à Johann Christoph Gottsched dans un recueil intitulé *Biographie in Christian Wolff, Gesammelte Werke*, Abteilung I, Band 10, Hildesheim

1980, où sont respectées les paginations de ces trois ouvrages. Le passage en question se trouve p. 112 de l' *Eigene Lebensbeschreibung*.

(2) Dans notre *Index auctorum et locorum Scripturae sacrae ad quo Wolffius in opere metaphysico et logico remittit*, Hildesheim 1985, pp. 181-196 (*Ges. Werk.*, Abt. III, Band 10), et dans notre Introduction à la réédition des *Horae subsecivae Marburgenses*, Hildesheim 1983, vol. I, pp. CVII-CX (*Ges. Werk.*, Abt. II, Band 34) nous avons indiqué où se trouvent toutes ces références et toutes ces citations dans les ouvrages de Wolff.

6. ———. 1987. "La critique wolffienne des systèmes d'explication des rapports de l'âme et du corps." *Il Cannocchiale* no. 1-2:3-21.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 175-193.

"Le débat autour des systèmes d'explication des rapports de l'âme et du corps était encore très vif au XVIIIème siècle. Après avoir penché, dans sa jeunesse, pour les causes occasionnelles à cause des difficultés de l'influx physique', Wolff l'abandonna rapidement, mais sans prendre parti pour l'harmonie préétablie malgré sa préférence pour celle-ci. C'est surtout dans la *Psychologia rationalis* qu'il examine ces trois systèmes. Il porte sur chacun d'eux un jugement dénué de tout esprit partisan et qui, parce qu'il est basé sur une information fort vaste à défaut d'être toujours solide, offre une vue d'ensemble sur la question. Aussi est-il intéressant de le connaître." (p. 3)

7. ———. 1989. "Note sur la définition wolffienne de la philosophie." *Studia Leibnitiana* no. 21:205-208.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 171-174.

"Il est notable que, de la définition donnée par Wolff de la philosophie en général, on n'a la plupart du temps retenu que son énoncé brut: la science des possibles, de tous les possibles, sans se préoccuper des explications dont il l'accompagne sur ce qu'il entend par possibles et sur la façon dont à son avis la

philosophie doit les envisager. Or, cette façon de faire, surtout si l'on rapproche cette définition, prise telle quelle, du climat indéniablement essentialiste de sa métaphysique de l'être, risque de conduire à lui prêter d'exclure de l'objet de la philosophie tout ce qui est actualisé, et ce serait là une erreur regrettable.

Afin de le montrer, nous commencerons par collationner les différentes formulations qu'il a proposées de cette définition, sans les séparer des éclaircissements susdits.

On trouve la première en 1709 dans la préface des *Aërometriae Elementa* (1): "Philosophiam ego definire soleo (2) per rerum possibilium, qua talium, scientiam." (3) Il explique aussitôt après: "Philosophi igitur est, non solum nosse, quae fieri possint, quae non; sed et rationes perspicere, ob quas aliquid fieri potest, vel esse nequit", en ajoutant: "Quaenam vero dicis possibilia? Nonne, quae vel sunt, vel esse possunt." (4)

La seconde se rencontre en 1712 dans le *Vorbericht von der Welt-Weisheit*, §1, situé en tête de la *Deutsche Logik* (5) : "Die Welt-Weisheit ist eine Wissenschaft aller möglichen Dinge, wie und warum sie möglich sind." A sa suite, § 3, il déclare: "Möglich nenne ich alles, was seyn kan, es mag entweder wurcklich da seyn, oder nicht.", puis, § 4, de ce que: "Alles hat einen Grund, warum es ist.", il conclut, § 5: "Solchergestalt muss ein Welt-Weiser nicht allein wissen, dag etwas möglich sey, sondern auch den Grund anzeigen können, warum es seyn kan." (6) Dans la version latine qu'il a effectuée lui-même de cet ouvrage (7), il traduit ainsi ce qui précède: § 1: "Philosophia est scientia possibilium, quatenus esse possunt.", § 3: "Possibile hic appello, quod contradictionem nullam involvit, seu, quod existere potest, sive acte existat, sive minus.", § 4: "Necessitas rationis sufficientis", § 5: "Ea de causa philosophus non solum nosse debet, esse quid possibile. Sed rationem quoque reddere tenetur, cur quid esse vel fieri possit." (8)

La troisième figure dans *le Discursus praeliminaris de philosophia in genere*, qui précède le texte de la logique latine (9) publiée en 1728, "Philosophia est scientia possibilium, quatenus esse possunt.", au § 29 dans la note duquel il retrace

brièvement l'histoire de cette définition, mais sans faire allusion à la *Deutsche Logik*. A la suite de quoi il explique, § 31: "In philosophia reddenda est ratio, cur possibilia actum consequi possint." (10) et précise, § 32: "Quodsi ergo plura fuerint, quorum unum perinde possibile est ac cetera, philosophia docere debet, cur illud potius fiat aut fieri debeat, quam cetera." (11)." (pp. 171-172)

(1) *Aërometriae Elementa, in quibus aliquot Aëris vires cic proprietates juxta methodum Geometrarum demonstrantur*, Lipsiae, 1709, Hildesheim, 1981, praefatio, p. 13-14 (non paginées).

(2) En ce sens qu'il a proposé cette définition dès 1703 dans ses leçons privées à l'Université de Leipzig, et qu'il en a discuté en 1705 dans une correspondance, malheureusement perdue, avec Caspar Neumann, Inspecteur des églises et des écoles de la Confession d'Augsburg à Breslau; cf.: *Discursus praeliminaris de philosophia in genere*, not. § 29, p. 13.

(3) Il répète deux autres fois cette formule dans cette même préface, p. 14, 15.

8. ———. 1990. "La notion d'être selon Wolff ou la "désexistentialisation de l'essence"." *Il Cannocchiale* no. 2-3:157-173.

Repris dans: Sonia Carboncini & Luigi Cataldi-Madonna (eds.), *Nuovi studi sul pensiero di Christian Wolff*, Hildesheim: Georg Olms, 1992 et dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 98-114.

"La première tâche de la théorie de l'être que se propose de construire Wolff dans la *Philosophia prima sive Ontologia* est de préciser ce qu'il faut entendre par être. Mais, d'après lui, cette notion n'est pas primitive: celle d'impossible la transcende et celle de détermination sert à la déduire. Aussi fait-il précéder son analyse de celle de l'impossible et du possible, de l'indéterminé et du déterminé.

I. Impossible et Possible. Indéterminé et Déterminé.

A) *Définitions de l'impossible et du possible*

1. Il considère la notion d'impossible comme la plus simple de toutes et en donne cette définition: «quicquid contradictionem involvit».

Or cela revient à affirmer que, dans l'impossible, «idem simul esse, et non esse ponitur». Et, comme la nature de notre entendement est telle que nous ne pouvons juger que la même chose en même temps est et n'est pas, il s'ensuit que nous ne pouvons nous représenter l'impossible, donc qu'aucune notion véritable ne lui correspond, et qu'il se confond avec le néant.

2. Le possible, lui, parce qu'il est ce qui n'est pas impossible, n'enveloppe aucune contradiction. Aussi est-il quelque chose et, de ce fait, une notion lui correspond.

Wolff assimile le possible au non-contradictoire, comme les mathématiciens avec lesquels il souligne son accord sur ce point x; il le fera aussi à propos de l'indéterminé et du déterminé. Il n'envisage donc ici que ce que saint Thomas appelait la possibilité absolue qui résulte «ex habitudine terminorum», et que, pour sa part, il dénomme la possibilité

de la chose. Il indique d'ailleurs que sa définition est conforme à celle de l'Aquinat: «possible est, quod si ponatur in esse, non sequitur impossibile».

Mais à cela ne se réduit pas sa doctrine de la possibilité qu'il va compléter bientôt en précisant les rapports de la possibilité ainsi conue avec ce qu'il appelle la possibilité intrinsèque et la possibilité extrinsèque d'exister. Et, dans la *Theologia naturalis*, il l'enrichira encore en distinguant entre les possibles *absolute spectata* et ceux qui le sont *in systemate redacta*, ainsi qu'entre les possibles primitifs premiers et seconds et les possibles dérivatifs.

Pour le moment lui est nécessaire et lui suffit la définition du possible par la non-contradiction, laquelle, nonobstant sa forme négative, est, à son avis, la seule qui permet de reconnaître sans risque d'erreur ce qui est possible, si du moins on prend soin de démontrer qu'il n'y a pas de contradiction, comme il est indispensable d'établir aussi qu'une chose est contradictoire pour pouvoir la déclarer impossible." (pp. 157-158)

(...)

"Les composants de la notion d'Être

A) *L'être et le possible*

Pour éclairer la notion d'être, Wolff se sert d'abord de celles d'impossible et de possible.

Ce qui est impossible étant contradictoire ne peut exister, en vertu du principe de contradiction. C'est un non-être.

Par contre, du fait que le possible n'enveloppe pas la contradiction, il n'y a pas de raison suffisante pour qu'il n'existe pas. Aussi, malgré le rejet de la première définition critiquée ci-dessus, on peut cependant dire que ce qui est possible peut exister, si on ne le rapporte pas à sa cause, car la non-répugnance à exister est une propriété strictement interne.

Or, fait-il remarquer, on appelle être ce à quoi l'existence ne répugne pas, ainsi que cela ressort du langage commun où on

désigne sous ce nom, non seulement les choses qui existent, mais aussi celles qui ont existé et celles qui existeront, et on peut dès lors considérer le possible comme un être.

Mais on ne peut conclure de là, ainsi que l'ont fait certains que Wolff tient l'être et le possible pour une seule et même chose. Car, souligne-t-il y, la notion d'être ajoute à celle du possible, qui ne connote que la possibilité de la chose ou sa non-contradiction, la non-répugnance à exister qui constitue ce qu'il appelle la possibilité intrinsèque d'exister, laquelle suit de la première.

Ainsi donc, et c'est un point très important à noter, la notion d'être en général implique, pour lui, non pas l'existence, mais seulement la possibilité d'exister." (p. 162 notes omises)

9. ———. 1991. "De la connaissance qu'avait Kant de la métaphysique wolffienne, ou Kant avait-il lu les ouvrages métaphysiques de Wolff?" *Archiv für Geschichte der Philosophie* no. 73:261-276.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 152-167.

"Selon l'opinion courante, la philosophie critique s'est formée en réaction contre la métaphysique de Wolff. Mais, parce que Kant attribue à celui-ci des thèses qu'il n'a pas professées, comme l'harmonie préétablie et le monadisme, parce qu'aussi il lui adresse certains reproches injustifiés, par exemple de n'avoir proposé qu'un critère logique de distinction entre la connaissance sensible et la connaissance intellectuelle, et de n'avoir présenté qu'une preuve *a priori* de l'existence de Dieu, force est d'admettre qu'il n'avait pas lu ses textes s'y rapportant. Et, comme il est possible de trouver la source de ces assertions et de la plupart des autres de Kant concernant la métaphysique de Wolff dans les manuels de Baumgarten surtout, mais aussi de Baumeister et de Gottsched, on en arrive à la conclusion qu'il ne devait guère connaître cette métaphysique qu'à travers ceux-ci qui la déforment souvent." (*Sommaire*).

" *Conclusion*

I. Nous voici arrivés au terme de notre enquête et en mesure d'en tirer les conclusions.

Parmi les textes que nous avons collationnés, il en est deux: celui où il est question de la force morte des corps tirés ou poussés, et cet autre où l'existence est qualifiée *d'omnimoda determinatio*, dont nous ne pouvons affirmer qu'ils ne supposent pas la lecture des ouvrages métaphysiques de Wolff.

Il faut aussi reconnaître que ceux qui contiennent des déclarations vagues, de même que celui où Kant fait allusion au « *somnio objective sumto* », ceux encore où il garde le silence sur le « *connubium rationis et experientiae* » et sur l'insertion de la cosmologie générale parmi les disciplines métaphysiques, celui enfin où il a pu parler de la possibilité de Dieu d'après Baumeister, ne peuvent non plus rendre certaine cette conclusion. Mais ils forment avec ceux que nous allons rappeler aussi un ensemble qu'on ne peut dissocier et dont l'analyse conduit vers elle.

En effet, les renvois à Baumgarten en même temps qu'à Wolff à propos de la démonstration du principe de raison suffisante et de la définition de l'existence d'une part, d'autre part la ressemblance de la définition de la raison avec celle qu'en propose Baumeister, donnent à penser que Kant a pu effectuer cette critique à partir de la *Metaphysica* du premier, et emprunter cette définition aux *Institutiones metaphysicae* du second. Parce que la façon dont il présente la preuve de l'unicité du monde actuel et celle de l'existence de Dieu rappelle l'exposé de celle-là par Baumgarten et le résumé de celle-ci par Gottsched, on peut penser encore qu'il en parle d'après eux, en se servant de plus du vocabulaire de Baumgarten pour formuler la seconde. Quant au critère de distinction entre la connaissance sensible et la connaissance intellectuelle, il a dû l'emprunter à Baumgarten qui ne retient qu'une partie, la moins importante, des explications de Wolff. Enfin, au sujet de l'harmonie préétablie et de la monadologie, il n'aurait pas soutenu que celui-ci en est partisan, s'il avait lu ses déclarations dans la *Deutsche Metaphysik* et dans *l'Opus metaphysicum*.

Ce regroupement des textes de Kant met en lumière que l'examen des trois derniers vient seulement renforcer la conviction acquise peu à peu au cours de celui des précédents - à l'exception des deux tout premiers - qu'il n'avait pas une connaissance directe de la métaphysique de Wolff. A cause des deux textes en question et parce que d'autres ont pu nous échapper, nous ne pouvons certes pas prétendre qu'il n'avait strictement rien lu des ouvrages où elle est exposée. Mais, parce que ceux que nous avons retenus ont trait à des thèses aussi variées qu'importantes, il nous semble possible d'affirmer qu'il ne devait guère connaître autre chose de cette métaphysique que ce que lui en avaient appris les manuels dans lesquels on peut trouver la source de ses jugements sur elle." (pp. 274-275 notes omises)

10. ———. 1993. "Les pièces les plus originales de la métaphysique de Christian Wolff (1679-1754), le "Professeur du genre humain"." In *Aufklärung als Mission. La mission des Lumières. Akzeptanzprobleme und Kommunikationsdefizite. Accueil réciproque et difficultés de communication. Actes du Colloque de Luxembourg, 1989*, edited by Schneiders, Werner, 103-114. Marburg: Hitzeroth.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 23-33.

"L'oeuvre de Wolff peut être qualifiée d'encyclopédique, tant il est vrai qu'il a traité «de omni re scibili» à son époque ou peu s'en faut, sans qu'on puisse alléguer là-contre qu'on la divise d'ordinaire en deux parties correspondant à ses ouvrages de mathématiques et à ceux de philosophie. Car, dans les premiers, il n'expose pas seulement l'arithmétique, l'algèbre, la géométrie et la trigonométrie, mais encore, comme c'était la coutume alors, des disciplines aussi diverses que l'astronomie, la mécanique, l'aérométrie, l'hydraulique, l'hydrologie, l'optique, la dioptrique, la chronologie, l'architecture, pour n'en citer que quelques-unes; et, dans les seconds, il aborde les questions relevant de la logique, de la métaphysique, du droit naturel, de la morale, du droit des gens, de l'économique, ainsi que de la physique conue comme comprenant, outre la physique au sens actuel du terme, la physiologie, l'anatomie, la

botanique et la chimie, il fait aussi rentrer dans la philosophie l'étude rationnelle des arts tant manuels que libéraux, celle encore de la jurisprudence, enfin la méthodologie de la théologie révélée dogmatique, morale et scripturaire.

Le tout tient en un corpus énorme de 34 ouvrages en 58 volumes, de 34 opuscules et de 40 articles, les uns en allemand, les autres en latin, sans compter les préfaces, les comptes rendus et les lettres.

(...)

C'est sans contredit la partie philosophique de son œuvre et plus particulièrement sa métaphysique qui l'a rendu célèbre.

(...)

Elle se situe au confluent des doctrines scolastique, cartésienne, leibnizienne et lockienne, dont elle est un essai de synthèse. Mais si cette tentative, beaucoup plus que les 4600 pages de *l'Opus metaphysicum*, en fait un véritable monument et s'inscrit en faux contre l'accusation sans cesse répétée qu'il n'a fait que vulgariser les thèses de Leibniz, l'originalité de Wolff en ce domaine se manifeste davantage par son apport sur certains points particuliers, parmi lesquels nous retiendrons les trois où elle est la plus éclatante: l'introduction de l'étude du monde et des corps dans la métaphysique, la transposition et la synthèse de la Philosophie corpusculaire, de l'Atomisme et du Monadisme dans l'explication des corps, la libération de la théologie naturelle par rapport à la tutelle de la théologie révélée.

Qu'il ait innové dans chacune de ces questions, c'est ce que nous nous proposons de montrer, en nous appuyant sur les traités de l' *Opus metaphysicum*, parce qu'ils expriment l'état définitif de sa pensée et qu'ils sont beaucoup plus élaborés que l'esquisse de la *Deutsche Metaphysik*. Toutefois, en ce qui concerne la première, c'est au *Discursus praeliminaris de philosophia in genere*, situé en tête de la *Philosophia rationalis sive Logica*, que nous ferons appel, car c'est là qu'il s'explique le plus complètement sur l'objet de la métaphysique." (pp. 103-104)

11. ———. 1994. "De la nature de la raison, de ses rapports avec l'expérience et la foi selon Christian Wolff." In *Vernunftbegriffe der Moderne. Stuttgarter Hegel-Kongress 1993*, edited by Fulda, Hans Friedrich and Hortsman, Rolf-Peter, 127-139. Stuttgart.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp. 67-79.

"Il est normal que Christian Wolff, dont Hegel dit, dans ses *Vorlesungen über die Geschichte der Philosophie*, ' dass [er] ... erst das Philosophieren in Deutschland einheimisch gemacht hat', ait sa place dans un Congrès qui porte sur le concept de raison dans la philosophie moderne et dont le premier Colloque est consacré au rationalisme précritique, car il ne fait pas de doute qu'il est l'un des principaux représentants de celui-ci.

La chose est tellement connue qu'il est inutile d'insister. Mais on se contente la plupart du temps de l'enregistrer, sans chercher à approfondir ce qu'il entend exactement par raison, alors qu'il en propose deux conceptions qui, de prime abord, semblent s'opposer, et c'est ce que nous nous proposons de faire en premier lieu. Ensuite on s'est trop longtemps plu - et Kant n'a pas fait exception - à le présenter comme un rationaliste pur ne faisant fond que sur la déduction et s'il est vrai qu'on a pris conscience de nos jours qu'il a beaucoup fait appel aussi à l'expérience, il reste que sa conception d'ensemble des rapports de la raison et de l'expérience a rarement été dégagée, et c'est ce que nous allons tenter dans un second temps. Mais, à ces deux premières questions ne se ramène pas tout le problème de son rationalisme; il y en a une troisième relative à la façon dont il a envisagé les rapports de la raison et de la foi et à laquelle on s'est fort peu intéressé, alors qu'il est indispensable de faire également la lumière sur ce point si l'on veut avoir une vue aussi complète que possible de sa doctrine sur la raison." 13. ——. 1996. "La définition de l'existence comme le complément de la possibilité et les rapports de l'essence et de l'existence selon Christian Wolff." *Etudes Philosophiques*:261-273.

Repris dans: *Nouvelles études et nouveaux documents photographiques sur Wolff*, pp.115-127.

"Mon exposé s'appuiera surtout sur la *Philosophia prima, sive Ontologia*, beaucoup plus complète et plus élaborée que le deuxième chapitre de la *deutsche Metaphysik* qui a trait à l'ontologie. Pour plus de brièveté, j'indiquerai seulement le numéro des paragraphes de ce traité, sans rappeler à chaque fois son titre. Sous le nom de note, je désignerai le texte en petits caractères de ces paragraphes.

Être, possible, essence, existence

1. La définition de l'existence comme le complément de la possibilité se rattache à la question des rapports de l'essence et de l'existence qui, chez Wolff comme chez tous les représentants de la métaphysique de l'être, se situe elle-même au cœur d'une théorie générale de l'être. Aussi est-il indispensable, si l'on veut éclairer ce point de sa doctrine, de présenter d'abord les lignes de faite de cette théorie avec lesquelles cette définition et cette question entretiennent des rapports étroits.

Pour construire cette théorie, il ne part pas de l'expérience qui nous impose sa présence ou, si l'on veut, son existence, mais de l'analyse de sa notion. Et c'est ce qui l'a immanquablement conduit à voir dans l'essence ce qui est d'abord connu dans l'être et à la fois ce qui sert de fondement à toutes ses propriétés (§ 168). Voyons comment.

Se référant au langage commun dans lequel on parle aussi bien, fait-il remarquer, des êtres passés et futurs que des êtres présents ou actuels, il en conclut que l'être peut être défini, de façon générale, ce à quoi l'existence ne répugne pas, c'est-à-dire comme ce qui peut exister (§ 134, 139). Or telle est aussi la

définition générale du possible qu'il rappelle juste auparavant (§ 133). Et c'est ce qui a fait que certains, comme Étienne Gilson (*L'être et l'essence*, Paris, Vrin, 1948, c. 5, p. 170), ont pu penser qu'il tient l'être et le possible pour une seule et même chose. Mais, ainsi qu'il le souligne: «Possible... et ens non prorsus synonyma sunt» (not. § 135) et, pour s'en convaincre, il suffit de passer en revue les différentes sortes de possibilités qu'il distingue.

3. La première d'entre elles est constituée par la propriété de n'être pas contradictoire. Il s'agit là de ce que Thomas d'Aquin, auquel il se réfère dans la *Luculenta commentatio...* (§, 7), appelait la possibilité absolue en indiquant qu'elle résulte « ex habitudine terminorum» (*In duodecim libros Metaphysicorum* lib. 9, lect. 2, n° 1807). Il la dénomme pour sa part : «possibilitas rei» (not. § 99, not. § 103, not. § 135). A ce stade, le possible, c'est donc essentiellement ce qui n'enveloppe pas la contradiction et, par conséquent, comme il le dit encore, ce qui n'est pas impossible (§ 85).

Or, à la notion du possible ainsi connu, celle d'être, du moins celle d'être en général ajoute, poursuit-il, la non-répugnance à exister qui ne se confond pas avec la non-contradiction, mais s'ensuit, en tant que de celle-ci ne découle aucune raison suffisante pour que le possible ne soit pas actualisé ou, si l'on préfère, aucune raison suffisante pour qu'il n'existe pas« (§133). A cette non-répugnance à exister qui est la caractéristique de l'être en général, Wolff donne, dans un premier temps, le nom de « possibilitas existendi» (not. § 134, not. § 135), puis celui plus précis de « possibilitas intrinseca existendi» (not. § 175), lorsqu'il traite de l'être en puissance, c'est-à-dire tel qu'il l'entend, de l'être qui peut avoir la raison suffisante de son existence en d'autres êtres, afin de la distinguer de la possibilité propre à celui-ci, qu'il qualifie de «possibilitas extrinseca existendi».

Entre ces deux dernières sortes de possibilités, il y a toute la différence qui existe entre une, propriété appartenant à l'être envisagé en lui-même, c'est-à-dire, ainsi qu'il, sera précisé ultérieurement, en vertu de son essence, et une autre propriété

qui lui vient de ses rapports avec la ou les causes pouvant le poser dans l'existence.

4. Ainsi apparaît-il que ce n'est pas seulement la, notion de possible, mais aussi celle d'être, qui est plus complexe qu'on pourrait le croire au premier abord, d'autant qu'il distingue de l'être en général, outre l'être en puissance, l'être en acte ou, qui existe, en les considérant l'un et l'autre comme les deux espèces en lesquelles se divise l'être en général considéré comme leur genre (not. § 175).

Quoi qu'il en soit, pour nous en tenir à ce dernier dont nous sommes partis et qui constitue, selon Wolff, l'objet de *l'Ontologia* (§ 1), il est clair que, s'il ne se confond pas avec la «possibilitas rei» définie par la non- contradiction, par, contre, il s'identifie à la « possibilitas intrinseca existendi». Et de là suit que l'existence est exclue de sa notion (not. § 134); ce qui revient à prétendre qu'il n'est qu'essence. Ainsi, faut-il expliciter ce que connote pour lui le terme essence, si l'on veut pénétrer plus avant dans la compréhension de ce qu'il entend par être en général et de ses rapports avec l'existence." (pp. 263-264)

14. ——. 1996. "Contribution à l'histoire des propriétés transcendentales de l'être." *Filosofia Oggi* no. 19:367-394.

Repris dans: *Autour de la philosophie Wolffienne*, pp. 131-158.

"Les propriétés transcendentales de l'être, comment l'énoncé de ce titre n'évoquerait-il pas aussitôt la fameuse formule scolastique: «Ens, unum, verum, bonum convertuntur», à laquelle on ramène trop souvent à tort la doctrine de ces propriétés, qui est beaucoup plus complexe que le donne à penser la dite formule? Je n'entreprendrai pas d'en exposer toutes les composantes, mais seulement un point précis, à savoir l'extension de cette appellation à beaucoup d'autres déterminations que l'unité, la vérité et la bonté, qui s'est fait jour dès le Moyen Age, mais s'est beaucoup accrue à partir de la fin du XVIème siècle.

Dans un premier temps, je m'appliquerai à brosser le tableau des principaux types de conceptions de ces propriétés qui ont

été proposées au cours de l'histoire de la haute scolastique et de la scolastique tardive, et je clôturerai mon enquête avec Christian Wolff qui n'appartient ni à l'une, ni à l'autre, parce que sa propre conception apparaît comme le point extrême auquel ont conduit celles des petits Scolastiques qui ont élargi considérablement le domaine de ces propriétés. Dans un second temps, je tenterai d'éclairer pourquoi et comment s'est produit cet élargissement." (p. 367)

15. ——. 1997. "La doctrine wolffienne de la nécessité et son enracinement dans la tradition." In *Nouvelles études et nouveaux documents photographiques sur Wolff*, 35-53. Hildesheim: Georg Olms.

Conférence donnée au Colloque *Tradition et émancipation*, Vianden, 30 juin - 3 Juillet 1991 (Inédit).

"Notre titre peut pas ne pas faire penser aux critiques du théologien piétiste Joachim Lange contre la métaphysique de Christian Wolff, car il est bien connu qu'il les a centrées sur la question de la nécessité. Mais on a peu remarqué que, ce faisant, il a fortement contribué à mettre en lumière la place importante qu'y tenait cette question et il faut lui en donner acte.

Pourtant nous n'avons pas l'intention de retracer les étapes de cette âpre et longue controverse -- elle dura plus de treize ans -- qui aviva les passions dans les milieux non seulement universitaires, mais aussi politiques et amena Frédéric-Guillaume Ier, circonvenu par Linge, à chasser Wolff de son royaume. Point n'est question pour nous non plus de broser le tableau complet et détaillé des objections inlassablement répétées par Lange et ses partisans dans un nombre considérable de volumes et de libelles, car elles portent à faux en tant qu'elles visent à accréditer l'idée que Wolff n'a fait que professer un spinozisme déguisé n'osant s'afficher ouvertement.

Ce que nous nous proposons, c'est d'exposer la doctrine wolffienne de la nécessité pour elle-même, tant dans ses principes que dans ses applications et d'en éclairer les sources." (p. 35)

16. ——. 1997. "Wolff était-il leibnizien?" In *Nouvelles études et nouveaux documents photographiques sur Wolff*, 131-151. Hildesheim: Georg Olms.

"Vaste question que celle-ci, tant l'oeuvre de Wolff, comme celle de Leibniz, est véritablement encyclopédique; ils ont, en effet, traité, l'un et l'autre, «de omni re scibili» ou presque à leur époque. Et c'est pourquoi je vous propose de la restreindre au domaine de la métaphysique, qui en est la partie la plus intéressante pour les philosophes que nous sommes.

Or très vite, du vivant de Wolff qui est né en 1679 et est mort en 1754, s'est fait jour l'idée, qu'on s'est plu ensuite à colporter, alors qu'on ne le lisait plus, jusqu'à nos jours où on commence à le redécouvrir, qu'il n'a guère fait que vulgariser en les systématisant les grandes thèses de la métaphysique de Leibniz.

Aussi importe-t-il de retracer, au moins dans les grandes lignes, l'origine et l'histoire de cette opinion, avant de faire appel aux textes de Wolff pour essayer de déterminer si elle est ou non justifiée." (p. 131)

(...)

"Nous revenons par là aux réflexions de tout à l'heure sur son éclectisme. Chez Leibniz, comme chez ses autres prédécesseurs, Wolff a choisi ce qui lui semblait conforme à la raison et qu'il pouvait démontrer, pour en faire un ensemble nouveau et cohérent. On peut certes parler à ce sujet de systématisation. Mais cette systématisation, loin d'avoir seulement pour objet les thèses de Leibniz, s'étend aussi à celles des autres auteurs dont il s'est également inspiré et surtout elle consiste davantage dans l'édification de ce nouvel ensemble que dans l'explicitation de la métaphysique leibnizienne. En un mot, Wolff n'est le pur disciple ni de Leibniz, ni de ceux-ci. On ne peut même pas prétendre qu'il avait une plus grande affinité intellectuelle avec Leibniz qu'avec les Scolastiques, par exemple du fait qu'il a développé et approfondi l'enseignement de celui-là, alors qu'il a contracté et résumé les thèses de ceux-ci. Mais on peut voir dans cette faon différente de traiter le premier et les seconds la marque d'une indépendance d'esprit qui est la preuve d'une

indéniable, quoique relative, originalité et d'une réelle vigueur intellectuelle. L'une et l'autre s'affirment d'ailleurs dans cette dernière déclaration de Wolff dans le *Monitum de sua philosophandi ratione...*, qu'on peut citer en guise de conclusion : « *Ego magna Leibnitii in scientiam merita veneror, non tamen instar idoli colo, cum... nihil admitto, nisi quod notionibus meis conforme deprehendo* » (*)." (p. 151)

Repris dans: *Autour de la philosophie Wolffienne*, pp. 172-185.

18. ———. 1999. "La place de la *Metaphysica de ente, quae rectius Ontosophia* dans l'histoire de l'Ontologie et sa réception chez Christian Wolff." In *Johannes Clauberg (1622-1665) and Cartesian Philosophy in the Seventeenth Century*, edited by Verbeek, Theo, 61-74. Dordrecht: Kluwer.

Repris dans: *Autour de la philosophie Wolffienne*, pp. 117-130.

"Que Wolff ait lu la *Metaphysica de ente, quae rectius Ontosophia*, c'est ce que prouve le fait qu'il en parle de façon précise, qu'il indique toujours, sauf une fois, le paragraphe et le plus souvent la page, que de plus il en cite trois fois le texte "expressis verbis". Ajoutons qu'il s'y réfère au moins onze fois, dont dix dans la *Philosophia prima, sive Ontologia ...* publiée en 1730 à Frankfurt et Leipzig où elle fut rééditée en 1736, et une autre dans les *Horae subcesivae Marburgenses ...* de 1731, parues aux mêmes endroits en 1735.

Il notes à son propos que, malgré l'effort qu'y a tenté Clauberg, en 1664, d'améliorer l'ontologie, Leibniz n'en a pas moins appelé en 1693, dans le *De primae philosophiae emendatione ...*, à réformer cette discipline, puis prétendu, dans un propos recueilli par Joachim Friedrich Feller dans l' *Otium Hannoveranum...* qui date de 1718, qu'elle était toujours "inter quaerenda". Et l'on peut penser que c'est parce que Wolff

partageait cette opinion qu'il a écrit sa *Philosophia prima, sive Ontologia*.

Toujours est-il que, outre ce jugement général, il en porte d'autres, pour la plupart critiques aussi, sur quelques-unes des définitions de Clauberg.

Si l'on suit l'ordre dans lequel il s'y réfère, on trouve d'abord celle du possible. À son propos, il fait remarquer qu'en le définissant: ce qui peut être produit par une cause quelconque, du moins par Dieu, Clauberg confond la possibilité absolue constituée par la propriété de n'être pas contradictoire avec la possibilité extrinsèque d'exister, celle de l'être qui peut avoir en un autre la raison de son existence. Il ajoute qu'en affirmant que c'est là ce que notre esprit peut comprendre clairement et distinctement, Clauberg s'en tient certes au critère cartésien de la distinction du vrai et du faux, mais qu'il aurait dû définir le possible: ce dont on peut démontrer qu'il peut être produit par une cause quelconque, du moins par Dieu, car il aurait alors proposé une notion claire et distincte de la possibilité de produire, avec à charge de prouver ensuite que quelque chose peut être ainsi produit.

Il passe ensuite aux définitions de l'essence et de la nature, à propos desquelles il rappelle d'abord que Clauberg déclare que toutes les propriétés qui peuvent être attribuées à une chose, une seule est première, principale, interne et embrasse en quelque sorte les autres ou en est comme la racine et le fondement et que c'est là ce qu'on appelle l'essence, ainsi que nous l'avons déjà vu; cependant qu'on lui donne le nom de nature eu égard aux propriétés et aux opérations qui découlent de cette chose. Puis il lui donne acte d'avoir bien vu qu'essence et nature sont parentes, mais il lui reproche de ne pas avoir suffisamment marqué ce en quoi elles conviennent et ce en quoi elles diffèrent.

(...)

La conclusion qu'on peut tirer des propos de Wolff sur la *Metaphysica de ente*, c'est qu'il ne la tenait pas dans une très grande estime, car il en dit somme toute peu de bien. Il ne s'agit

pourtant pas d'une critique purement négative. Avec Clauberg, comme avec les autres auteurs auxquels il se réfère, il fait preuve d'éclectisme, en ne retenant de sa doctrine que ce qui lui semble conforme à la raison et qu'il peut démontrer. Aussi peut-on cependant affirmer que la lecture de la *Metaphysica de ente* a été pour lui une occasion d'affiner sa pensée.

Rien ne permet de prétendre qu'il a connu les deux premières éditions de l' *Ontosophia*, puisqu'il ne parle que de la troisième et ne donne de références qu'à celle-ci.

Mais on ne peut pas ne pas être frappé par l'étroite parenté qui existe entre cette affirmation de la " *Praefatio ad lectorem*" de la première, à savoir que, dans cette doctrine générale de l'être, "omnis cognitionis et scientiae, naturali lumine partae, fundamenta et semina continentur", et le titre de la *Philosophia prima, sive Ontologia ... qua omnis cognitionis humanae principia continentur*.

Enfin, si l'on note que, parmi les manuels d'ontologie parus après celui de Clauberg, Wolff ne se réfère ni à celui de du Hamel, ni à celui de Budde, qu'il connaissait pourtant à coup sûr, par comparaison avec les dix fois qu'il fait appel à la *Metaphysica de ente*, on peut voir là une preuve de plus qu'il lui reconnaissait malgré tout une certaine importance." (pp. 68-70 notes omises)

19. ———. 2001. "Une étape de l'histoire de la métaphysique: l'apparition de l'Ontologie comme discipline séparée." In *Autour de la philosophie Wolffienne. Textes de Hans Werner Arndt, Sonia Carboncini-Gavanelli, Jean École*, edited by École, Jean, 95-116. Hildesheim: Georg Olms.

"Après avoir connu une certaine éclipse due sans doute au succès de la philosophie kantienne et des doctrines post-kantiennes qui ont pratiquement éliminé la discipline qu'il désigne, le terme ontologie est redevenu un terme courant du vocabulaire philosophique, grâce en partie à Husserl et à Heidegger. On connaît la distinction du premier entre l'ontologie formelle et les ontologies matérielles ou régionales, et la tentative du second' pour constituer la métaphysique du «Dasein» en une ontologie fondamentale. On sait aussi que

Sartre a sous-titré *L'être et le néant*: «Essai d'ontologie phénoménologique», et que Lavelle a publié un petit traité intitulé *Introduction à l'ontologie*. Pour nous limiter à ces quelques exemples, tous ces auteurs ont gardé à ce terme son sens étymologique de science de l'être, tout en concevant cette-ci de faons fort différentes que connaissent leurs lecteurs.

Mais peu d'entre eux ont une idée de l'événement qu'a constitué l'apparition des premières ontologies. Les historiens de la philosophie eux-mêmes y ont prêté peu d'attention parce que les acteurs de cette apparition étaient de petits représentants de la Scolastique tardive qui ont consacré à cette discipline des manuels à l'usage de leurs élèves. Pourtant l'apparition et la multiplication de ces manuels est une étape de l'histoire de la métaphysique qui présente de l'intérêt pas seulement pour les érudits, mais pour tous ceux qui sont soucieux d'obtenir une vue d'ensemble complète des idées en ce domaine. Et c'est ce que nous nous proposons de montrer." (p. 95 notes omises)

20. ——. 2001. "Des rapports de la métaphysique de Wolff avec celle des Scholastiques." In *Autour de la philosophie Wolffienne. Textes de Hans Werner Arndt, Sonia Carboncini-Gavanelli, Jean École*, edited by École, Jean, 55-69. Hildesheim: Georg Olms.

"En faisant de l'ontologie une discipline séparée de la théologie naturelle et qui joue le rôle d'introduction générale aux autres parties de la métaphysique, ainsi qu'aux autres disciplines philosophiques en tant qu'elle affine les notions et établit les principes nécessaires à l'ensemble du savoir d'une part, et d'autre part se présente comme une théorie générale de l'être, Wolff se situe indéniablement dans la lignée des petits Scolastiques qui, dès la fin du XVIème siècle, pendant tout le XVIIème et encore au XVIIIème, ont envahi le devant de la scène philosophique, et qui firent tant et si bien qu'à leur époque elle avait définitivement acquis droit de cité.

Mais, alors que ces auteurs n'avaient publié que des manuels souvent réduits à l'état de lexiques philosophiques, en se bornant à dissenter de faon abstraite sur l'essence et les propriétés de l'être, ainsi qu'il le déplore - et c'est ce qui

explique son rejet par Descartes et l'appel de Leibniz, déjà évoqué, à l'améliorer, -- Wolff, pour sa part, a fait de sa *Philosophia prima sive Ontologia*, un grand traité beaucoup plus élaboré et beaucoup plus complet. En appelant cette discipline «*Ontologia seu Philosophia prima*», il suit certains de ces auteurs comme Jean-Baptiste du Hamel qui expliquait, comme il le fait, qu'elle est appelée «*Ontologia*» en tant qu'elle contient une théorie générale de l'être, et «*Philosophia prima*» en tant qu'elle définit les notions et établit les principes en usage dans le raisonnement.

Tout donne à penser que c'est aussi de Jean-Baptiste du Hamel qu'il s'inspire en ouvrant son traité sur l'étude des premiers principes, même s'il est vrai qu'aux deux seuls retenus par celui-ci: le principe de contradiction et celui du tiers exclu, il ajoute le principe de raison suffisante.

Il ne fait pas de doute non plus qu'il a repris des Scolastiques les divisions de la cause efficiente en: principale et instrumentale, prochaine et éloignée, immédiate et médiata, et celles de la cause finale en: principale et secondaire, prochaine et éloignée, déjà effectuées en totalité par Thomas d'Aquin, en partie par Suarez.

Quant à la distinction entre les signes naturels et artificiels, primitifs et dérivatifs, elle avait déjà été proposée par Thomas d'Aquin entre autres, et Clauberg en avait retenu le premier couple." (p. 63 notes omises)

21. ——. 2007. "Remerciement. "Le professeur du genre humain". Discours sur le Métaphysique de Wolff." In *Wolffiana II. Christian Wolff und die europäische Aufklärung. Teil 1*, edited by Stolzenberg, Jürgen and Rudolph, Oliver-Pierre, 27-37. Hildesheim: Georg Olms.

Akten des 1. Internationalen Christian-Wolff-Kongresses, Halle (Saale), 4-8 April 2004.

"... je voudrais ajouter quelques mots sur Wolff lui-même que des Français , -- dont il parle dans une de ses lettres (2) au Comte Ernst von Manteuffel son protecteur, sans malheureusement préciser de qui il s'agit --, ont dénommé le

"Professeur du genre humain", appellation que Heinrich Wuttke dans l'introduction à son édition de la *Christian Wolffs eigene Lebensbeschreibung*, (3) a latinisé en le qualifiant de "Professor universi generis humani".

"Professeur du genre humain", Wolff pourrait être appelé aussi "Docteur universel", non seulement en raison de son rayonnement extraordinaire dans tout l'Europe du XVIIIème siècle et de l'intérêt qu'il suscite encore aujourd'hui un peu partout dans le monde, comme le révèle ce congrès, mais aussi parce qu'il est le type même de l'esprit encyclopédique qui a en fait, traité "de omni re scibile" ou presque à son époque, qu'il s'agisse -- et ce ne sont là que quelques-uns des domaines du savoir qu'il a investis --, qu'il s'agisse des mathématiques proprement dites, de l'astronomie, de la mécanique, de la physique, de la physiologie, de la médecine, du droit, de la politique, de la théologie surnaturelle, de l'exégèse et de toutes les parties de la philosophie: logique, métaphysique et morale.

Or pour ce qui est de ces dernières, si l'on a unanimement reconnu qu'il fut un grand professeur, très grand même, on lui a la plupart du temps refusé le titre de grand philosophe. Sans doute ne peut-il être mis sur le même pied que Leibniz, Descartes, Spinoza par exemple. Mais, pour ne retenir que le domaine métaphysique, force est de reconnaître qu'il a fait preuve d'ingéniosité et d'innovation dans chacune de ses parties, comme on peut le montrer facilement à l'aide de quelques exemples.

Tout d'abord, c'est à lui, que nous devons leur nombre et leur répartition toujours admise de nos jours: l'Ontologie, la Cosmologie générale, la Psychologie et la Théologie naturelle, et nul avant lui n'avait systématisé avec autant de rigueur l'enseignement de chacune d'elles et l'ordre de succession qui les unit: l'Ontologie servant de propédeutique à toutes les autres en leur fournissant les principes et les notions directrices dont s'édifier, la Cosmologie servant de base, entre autres, à la preuve a posteriori de l'existence de Dieu avec la démonstration de la contingence du monde. et la Psychologie à l'analyse de ses

attributs à partir de celle de nos facultés, l'une et l'autre dans la Théologie naturelle.

Son Ontologie apparaît comme la réalisation du vœu formulé par Leibniz (4) de voir cette discipline réformée, améliorée, tant elle tranche par son ampleur et la profondeur de ses analyses avec les manuels des petits Scolastiques du XVIIIème siècle qui l'ont séparée de la Théologie naturelle à laquelle elle était étroitement liée jusqu'à eux (5) et qui se contentaient le plus souvent d'y donner des définitions en leur ajoutant des notations rapides. Sans doute se situe-t-il dans la lignée de Suarez en y proposant une conception de l'être accordant à l'essence la primauté par rapport à l'existence: mais, en faisant de celle-ci ce qui, dans les êtres contingents, s'ajoute à l'essence pour la faire passer de l'état de possibilité à celui d'actualité, (6) il en vient à poser entre l'une et l'autre, chez ceux-ci, une distinction réelle, alors que Suarez, en les concevant comme les deux éléments constitutifs de ce qu'il appelle l'*essentia realis*, (7) ne reconnaissait entre elles qu'une distinction de raison. Il y différencie aussi beaucoup mieux que Leibniz le principe de raison suffisante de celui de causalité en expliquant que la cause est ce dont dépend l'existence d'une chose, son source directe; la raison suffisante, ce qui permet de comprendre pourquoi cette chose existe (8) et, pour éclairer ceci, il allègue l'exemple des êtres contingents qui ont leur cause dans leur série en tant qu'ils sont déterminés par ceux qui les précèdent, mais dont on ne peut rendre pleinement compte qu'en les rattachant à un être nécessaire extérieur à cette série, qui en est la raison suffisante. (9) Son traité d'Ontologie se singularise encore par l'introduction, en tête de son explication des propriétés des êtres composés, d'un chapitre sur la nature de l'étendue, de l'espace, du lieu, de la position, du temps et du mouvement, (10) d'ordinaire rattaché à la Philosophie de la nature, et cette introduction est d'autant bien venue qu'Il est impossible de comprendre l'être composé sans faire appel à ces notions." (pp. 29-30)

durch Christian August Crusius (1989) 245

Christian August Crusius und die Leibniz-Wolffsche
Philosophie (1986) 263

Der Briefwechsel zwischen Leibniz und Christian Wolff (1988)
279

Hans Werner Arndt

Philosophische Systematik im Anschluss an Leibniz (1995) 287

Christian Wolffs Stellung zur "Ars characteristica
combinatoria" (1965) 299.

Avant-propos de Jean École: "J'ai déjà publié dans cette même
série des Gesammelte Werke de Christian Wolff deux recueils
(a) de mes études sur sa pensée. A la composition de celui-ci se
sont associés Hans Werner Arndt et Sonia Carboncini-
Gavanelli, bien connus par leurs savants travaux sur cet auteur.
D'où la plus grande richesse de ce troisième volume en raison
des intérêts différents de nous trois pour telle ou telle partie de
la philosophie wolffienne. Y sont envisagés tour à tour: la
théorie de la connaissance (Arndt), la métaphysique et plus
spécialement l'ontologie (Carboncini-Gavanelli, École), la
morale expérimentale (Arndt), les rapports de Wolff avec les
Scolastiques (Carboncini-Gavanelli, École), et Leibniz (Arndt,
Carboncini-Gavanelli), les réactions de Reimarus (Arndt),
Crusius (Carboncini-Gavanelli), et des Piétistes, notamment
Thomasius (Arndt, Carboncini-Gavanelli), à ses positions
logiques pour ce qui est du premier, métaphysiques en ce qui
concerne les autres. Toutes ces études (19 en tout, dont 8 de
Hans Werner Arndt, 6 de Sonia Carboncini-Gavanelli, et 5 de
moi) ne portent pas exclusivement sur Wolff, mais s'y
rapportent en tant qu'elles tendent à le situer dans l'histoire

des idées; ce qui explique le titre retenu pour ce recueil: Autour de la philosophie wolffienne. A l'exception de trois d'entre eux, ces textes ont paru dans des revues, des volumes d'hommage ou des actes de congrès indiqués dans la Table des matières. Le premier: Zu Begriff und Funktion der 'moralischen Erfahrung' in Christian Wolffs Ethik de Hans Werner Arndt n'est cependant inédit que quant à la langue, car une traduction italienne en a été publiée sous le titre: Concetto e funzione dell' 'Esperienza morale' nell'Etica di Christian Wolff. (b) Il en est de même du deuxième: Des rapports de la métaphysique de Wolff avec celle des Scolastiques, qui fait partie des miens et a été traduit en allemand sous ce titre: Christian Wolffs Metaphysik und die Scolastik (c). Quant au troisième: Une étape de l'histoire de la métaphysique: l'apparition de l'ontologie comme discipline séparée, il n'est inédit qu'en partie du fait qu'il est une contraction et une synthèse de deux autres de mes écrits: La place de la Metaphysica de ente quae rectius Ontosophia dans l'histoire de l'Ontologie et sa réception chez Wolff, et: Contribution à l'histoire des propriétés transcendentales de l'être. Malgré les répétitions que cela occasionne, j'ai cru bon de ne pas l'éliminer, parce que seul il donne une vue complète de l'état de cette discipline à ses origines et jusqu'à Wolff."

- Reformationszeitalter: Quellen und Ausstrahlungen 121;
Zeichen und Abkürzungen 130; Auswahlbibliographie 131-148.
2. ———. 1988. *European Academic Philosophy in the Late Sixteenth and early Seventeenth centuries. The life, significance, and philosophy of Clemens Timpler (1563/4-1624)*. Hildesheim: Georg Olms.

Table of Contents:

Volume 1.

Foreword I; Preface V-XIX; Chapter 1: Introduction 1; Chapter 2-6: The Life of Clemens Timpler.

Chapter 2: Timpler's Childhood, Education, and Early Activity as a Private Teacher (1563/4-1592) 7

Chapter 3: Timpler at Heidelberg (1592-1595) 24

Chapter 4: Timpler as Professor at the Gymnasium Illustre Arnoldinum in Steinfurt/Westphalia (1595-1624) 34

Chapter 5: The Steinfurt Gymnasium Illustre Arnoldinum From its Beginnings in 1588 Until the Pillaging of the School in 1635 46

Chapter 6: Timpler's Personality and Religious Views 66

Chapter 7-9: Timpler's Historical Significance.

Chapter 7: Timpler's Importance Within Seventeenth Century Europe 86

Chapter 8: Authorities Cited Within Timpler's Writings 125

Chapter 9: Timpler, Aristotle, and "Aristotelianism": Timpler's Philosophy as School Curriculum 162

Chapter 10-20: Timpler's Philosophy.

Chapter 10: A. The Organization of Timpler's Individual Philosophical Writings. B. Timpler's Short Treatise on the Liberal Arts (Technologia). C. The Interrelatedness of Academic Disciplines Within Timpler's Thought: Mathematics and Theology Within Timpler's Writings 187

Chapter 11: Metaphysics 210; Chapter 12: Physics 249; Chapter 13: Logic 278; Chapter 14: Rhetoric 307; Chapter 15: Ethics 326; Chapter 16: Family Life 351; Chapter 17: Politics 363; Chapter 18: Timpler's Practical Philosophy: Some Conclusions 387; Chapter 19: Optics 403; Chapter 20: Signs and Human Physiognomy 412; Chapter 21: Conclusions 427

Volume 2.

Annotated Table of Contents to the Text of Chapters 1-21 b-n

Footnotes to the Preface XX

Footnotes to chapter 1-21 451

Bibliography 737; Contents listed : 737; Part I: Clemens Timpler 738; Part II: General Bibliography 771; Notes to the Bibliography 843; List of Illustrations XXII ; Illustrations XXV; Index of Persons and Places.

"This monograph is a substantially revised version of my Ph.D. dissertation, which was defended at the University of Wisconsin-Madison on September 16, 1982; it bore the title, "The Life, Significance, and Philosophy of Clemens Timpler (1563/4-1624)." It was written and researched while residing in the Federal Republic of Germany for the ten years previous to its completion. In its present revised form, chapter 11, 12, 17, and 20 of the dissertation have been completely rewritten. Chapters 7 and 18 have been rewritten in part. Minor alterations and corrections have been undertaken in all of the remaining chapters. The bibliography has been expanded in order to include the multitude of additional seventeenth century works discussed in chapter 7 as well as to list relevance secondary literature which has appeared since 1982.

(...)

Clemens Timpler (1563/4-1624) has been chosen as the subject matter of this study principally because the quality of his philosophical writings stands out very noticeably in comparison to that of works written by other late sixteenth and early seventeenth century academic philosophers. Indeed, it could be argued that he was one of the most talented philosophers active

in Europe between 1550 and 1650. However, he was less influential than some of his contemporaries (e.g., his own disciple Bartholomaeus Keckermann); one explanation for this shall be ventured in chapter 7 section 16 of this monograph.

Clemens Timpler not only exemplifies the highest standards of late sixteenth and early seventeenth century European academic philosophy, but his works also provide an excellent survey of its scope and content. Timpler published textbooks on metaphysics, physics, logic, rhetoric, ethics, family life (*oeconomica*), politics, optics, and human physiognomy presented well systematized and very detailed presentations of the major philosophical disciplines studied in his day (barring mathematics and grammar). Therefore, the examination of Timpler's philosophy also serves as a very useful vehicle to gain a general understanding of the parameters of and topics discussed within late sixteenth and early seventeenth century European philosophy considered as a whole. For this reason, the specialized as well as the general scope of this monograph is reflected in its title." (From the Foreword)

Six reviews of this monograph (in French, German, and Italian) have appeared.

3. ———. 1999. *Philosophy and the Arts in Central Europe, 1500-1700. Teaching and Texts at Schools and Universities*. Aldershot: Ashgate.

Variorum Collected Studies Series.

"This is a collection of seven of my published articles and an introductory article titled "The Study of Sixteenth- and Seventeenth-Century Writings on Academic Philosophy: Some Methodological Considerations." (pp. 1-40)."

Contents: Preface VII-VIII; Introduction. The Study of Sixteenth- and Seventeenth- Century Writings on Academic Philosophy: Some Methodological Considerations 1-40 (*First Publication*); II. Essays

1. Freedman, Joseph S. 1984. "16th and 17th Century Classifications of Philosophical Disciplines: Leibniz and some of his predecessors." In *Leibniz, Werk und Wirkung. IV. Internationaler Leibniz Kongress. Vorträge*, 193-202. Hannover: Gottfried-Wilhelm-Leibniz Gesellschaft.

"A very large yet currently undetermined number of 16th and 17th century philosophers presented classifications of what they conceived to be the various philosophical disciplines.(1) Leibniz

also presented a number of such classifications; Leibniz's classifications show strong similarity with those devised by many of his 16th and 17th century predecessors." (p. 193)

(...)

"Leibniz's own attempts to classify philosophical disciplines span at least four decades. These classifications are scattered throughout his writings; it is quite possible that one or more such classifications remain undiscovered." (p. 196)

(...)

"Leibniz's classifications (like those of his predecessors) assign a number of different names to philosophical disciplines. At various points Leibniz (a) refers to individual philosophical disciplines as sciences and arts without using the term philosophy itself, (b) includes the sciences within the category of philosophy, (c) includes philosophy within the realm of the sciences, (d) equates philosophy with the sciences while regarding the sciences as well as the arts as part of habitus, and (e) refers to philosophical disciplines simply as such.(33)

Leibniz apparently does not waver in excluding philology from the realm of philosophy. However, he sometimes separates logic from philology and in most cases he regards the former as part of philosophy.(34) Leibniz's classifications generally assign substantial importance to logic yet do so in very different ways. (35)

Like his predecessors, Leibniz lists a large number of disciplines which fall within theoretical philosophy and places relatively few disciplines within the realm of practical philosophy.(36) He usually mentions the discipline of metaphysics.(37) His individual classifications contain many disciplines which are placed within the domain of mathematics and/or physics. Ethics and/or politics are usually considered as part of practical philosophy.(38)

It might be argued that Leibniz's classifications introduce some previously unknown discipline(s) This may or may not be true; too little is known about 16th and 17th century European

philosophy in order to adequately document this hypothesis at the present time. One or more of these disciplines may have been presented by some previous author(s).⁽⁴⁰⁾ Once a large quantity of these classifications originating in the medieval and early modern periods have been discovered, collected, analyzed, and compared it will be possible to place this aspect of Leibniz's thought within its proper historical perspective." (pp. 196-198)

(1) Classifications of philosophical disciplines are found within the writings of hundreds (and perhaps thousands) of 16th, 17th, and 18th century authors (i.e., both philosophers and non-philosophers). I am currently collecting these classifications for the purpose of an extensive study on this subject.

(33) a. Leibniz (1679); b. Leibniz (1676); c. Leibniz (before 1699); d. Leibniz (1667); e. Leibniz (1697); Leibniz (after 1696).

(34) See Leibniz (1667), Leibniz (before 1699), Leibniz (1697) and Leibniz (after 1696).

(35) See tables 3a-3e.

(36) For example, see Leibniz (1679), Leibniz (before 1699), and Leibniz (after 1696).

(37) See tables 3a, 3b, 3d, and 3e; metaphysics is not mentioned in Leibniz (1679) or in Leibniz (after 1696).

(38) *Oeconomica* is part of natural philosophy in Leibniz (before 1699); logic is part of practical philosophy in Leibniz (1676) and in Leibniz (after 1696).

(39) For example, Leibniz (1679) contains what might have been among the first mentions of the term *geopolitica*. "Decima sexta est [Cosmopolitica] Geopolitica, nempe [Status Generis humani] de statu Telluris nostrae ad genus humanum relato, quae Historiam omnem et Geographiam civilem comprehendit." Couturat, *Opuscules inédits de Leibniz*, p. 40.

(40) Many of the medieval, 16th century, and 17th century authors mentioned within Leibniz's own writings may have

themselves given such classifications; most of these authors have been neglected for centuries.

1667: Preussische Akademie der Wissenschaften, ed., Gottfried Wilhelm Leibniz. *Philosophische Schriften*, vols. 1- (Darmstadt: Otto Reichl/ Berlin: Akademie Verlag, 1950-), 1 (Darmstadt: 1930): 259-261, 274, 280-289; this classification has been simplified slightly in order to meet space requirements.

1676: *Leibniz Philosophische Schriften*, 3 (Berlin: 1980): 637.

1679: Couturat, *Opuscules inedits de Leibniz*, pp.30-41; this classification is presented here in slightly modified form.

after 1696: Louis Couturat, *Opuscules et fragments inédits de Leibniz* (Paris: 1903; reprint ed., Hildesheim: Olms, 1961), pp. 524-527.

1697: Ludovicus Dutens, *Gothofredi Leibnitii Opera omnia in sex tomos distributa*, 7 vols. (Genevae: Fratres de Tournes, 1768), 6: 246 (23, Sign.: Li 4860); this classification is dated 1/11 February 1697 and shall be referred to as Leibniz (1697).

before 1699: Joachimus Fridericus Fellerus, *Otium Hanoveranum sive miscellanea ... Godofr. Guilielmi Leibnitii* (Lipsiae: Joannes Christianus Martinus, 1718), pp. 125-138 (23, Sign.: Li 4862). Table 3d has been constructed on the basis of the two classifications (one being a synopsis of the other) given on pp.128-138 of this work. Joachim Friedrich Feller was Leibniz's personal secretary; in 1698 Feller ceased to work for Leibniz yet kept many of the latter's papers. See Kurt Müller and Gisela Krönert, eds., *Leben und Werk von Gottfried Wilhelm Leibniz* (Frankfurt am Main: Vittorio Klostermann, 1969)» pp.140, 148, 155. Therefore, this classification must have been devised by Leibniz before the year 1699 (assuming that Feller did not devise it himself or take it from the writings of some third person); it shall be referred to here as Leibniz (before 1699). Like Possevini (1593), Leibniz (before 1699)

appears to have been conceived as a library classification system.

1593: Antonius Possevinus, *Bibliotheca selecta qua agitur de ratione studiorum* (Romae: Ex typographia Apostolica Vaticana, 1593), 1st pagination, pp .63-64, 2nd pagination, p .61 (la , Sign.: A 4778).

2. ———. 1985. "Philosophy Instruction within the Institutional Framework of Central European Schools and Universities during the Reformation Era." In *History of Universities. Vol. 5* , 117-166. Oxford: Oxford University Press.

Reprinted as Essay II in: *Philosophy and the Arts in Central Europe, 1500-1700* .

"In order to assess the place which philosophy instruction had within the organisational framework of schools and universities in Central Europe during the Reformation era (c.1500-1650), one should first briefly take a closer look at the concept of philosophy. This concept is very frequently discussed in philosophical encyclopedias, in textbooks on metaphysics, physics, mathematics, ethics, politics and logic, and in other kinds of works as well. Within the context of these discussions philosophy is usually divided into various disciplines. Three classifications of philosophical disciplines by Central European authors are presented in tables a , b, and c.

Detailed discussion of such classifications lies beyond the scope of this paper. Only the following points need concern us here. Physics, mathematics, ethics, family life (*oeconomica*), and politics appear in virtually all of these classifications made during the 1500-1650 period. Metaphysics is occasionally omitted, especially in those classifications presented by some sixteenth-century Protestant philosophers. Family life is sometimes considered as a sub-category of politics. The seven liberal arts (i.e. grammar, rhetoric, logic, arithmetic, geometry, music, and astronomy) are usually included within these classifications. Arithmetic, geometry, music, and astronomy normally fall within the realm of mathematics. Increasingly from about the year 1550 onwards some authors argue that philology (i.e. logic, rhetoric, grammar, and sometimes poetry

and/or history) is not properly speaking a part of philosophy, but rather preparation for and an instrument of the same. This latter development -- as we shall see -- was reflected within the philosophy curriculum of Central European academic institutions during the Reformation era." p. 117

"Metaphysics played an important role in the philosophical curriculum of fifteenth-century Central European universities. By the 1520s, however, metaphysics instruction began to be removed from the curriculum.(97) This was especially true at Protestant universities (e.g. Basel, Leipzig, Rostock, Tübingen, and Wittenberg).(98) Yet at some Catholic universities -- e.g. Ingolstadt (1526), Vienna (1537), and Heidelberg (1551) -- metaphysics instruction was also absent. Beginning in the second half of the sixteenth century, metaphysics instruction was strongly emphasised at Jesuit academic institutions (e.g. the University of Dillingen) and at those universities where the Jesuits were able to influence or determine the philosophy curriculum (e.g. Cologne, Ingolstadt). At some Protestant universities metaphysics instruction slowly resurfaced in the course of the late sixteenth and early seventeenth centuries.(99) Sometimes subject matter taken from the discipline of metaphysics was taught as part of physics and/or ethics and/or logic instruction." (pp. 124-125)

(97) No easy explanation can be given for this development; this problem will be discussed in another article.

(98) Metaphysics was taught at the University of Leipzig through the year 1542 but not thereafter; see Leipzig (1502-1558), pp. 667-669.

(99) Max Wundt held to this opinion; see Max Wundt, *Die deutsche Schulmetaphysik des 17. Jahrhunderts* (Tübingen: J. C. B. Mohr/Paul Siebeck, 1939), pp. 5, 12-13, 34-69. To date little evidence has been produced to the contrary. At the Altdorf Academy in 1586 and 1589 and at the University of Giessen in 1607 the professor of logic also taught metaphysics; by 1618 in Altdorf and by 1629 in Giessen there was a professor of logic and metaphysics. See Altdorf (1586), fol. B1 Altdorf (1589), fol. B1r; Altdorf (1618); table 1.

3. ———. 1985. "Classification and Definition within 16th and 17th Century Philosophy." In *Studien zur Klassifikation, Systematik und Terminologie. Theorie und Praxis. Akten der 6. Jahrestagung des Münsteraner Arbeitskreises für Semiotik, Münster 25. und 26. September 1984*, edited by Dutz, Klaus D., 321-354. Münster: Institut für Allgemeine Sprachwissenschaft und MAkS Publikationen.
4. ———. 1986. "Cicero in Sixteenth- and Seventeenth-Century Rhetoric Instruction." *Rhetorica* no. 4 (3):227-254.

Reprinted as Essay III in: *Philosophy and the Arts in Central Europe, 1500-1700* .

"Any systematic attempt to investigate the role of Cicero within rhetoric instruction in 16th- and 17th-century Europe will uncover an overwhelming amount of relevant source material in printed and manuscript form extant in hundreds -- if not thousands -- of European archives and libraries. The assertion that Cicero was used within this rhetoric instruction amounts to little more than the statement of a self-evident fact. Less evident is how and why Cicero's writings were used to teach rhetoric during the period from 1500 to 1700. A variety of source materials will be examined here in order to arrive at tentative answers to these two questions." (p. 227)

(...)

"A thorough investigation of the use of Cicero's writings at European schools and universities during the 16th- and 17th-centuries will require work with printed and manuscript material pertaining to a substantial number of schools and universities within the various regions of Europe. (55) Printed and archival source materials pertaining to individual academic institutions must be located, collected, and carefully evaluated. These sources contain information concerning a wide variety of subject matters, including the use of Cicero's writings. On the basis of the facts presented in tables g through m the following two hypotheses can be ventured at this time. (56)

First, in school instruction Cicero's works on rhetoric were studied alongside with his works on other subject matters. At

most schools rhetoric was taught in connection with other subjects, e.g., logic, grammar, history, ethics, and politics. (57) Cicero's works on subject matters other than rhetoric were often read in this connection. Interdisciplinary collections of commonplaces such as the *Ciceronianus* of Petrus Ramus could also be utilized. (58) At Jesuit schools Cicero's writings were used at all pre-philosophy levels of instruction; at Protestant schools they were normally used in the more advanced grades but not in elementary instruction. (59) At universities and within university-level instruction held at other academic institutions, however, Cicero's works generally were utilized within rhetoric instruction but only infrequently within other parts of the curriculum. (60)

Second, at 16th- and 17th-century schools and universities Cicero was usually not the only author read within the theoretical component of rhetoric instruction. Use was made there of writings by Aristotle, Cicero, Hermogenes, and Quintilian as well as of works by more "modern" rhetoricians such as George of Trebizond (1395-1472/3?), Philipp Melanchthon (1497-1560), and Cyprianus Soarez (1524-1593). (61) At most academic institutions Cicero appears to have been read alongside many other authors within this theoretical instruction. Yet in most cases Cicero was the principal or only author used within the practical component of rhetoric instruction." (pp. 238-239)

(55) A large number of such academic institutions are discussed in Joseph S. Freedman, "Philosophy Instruction within the Institutional Framework of Central European Schools and Universities during the Reformation Era," *History of Universities*, 5 (1986), (forthcoming).

(56) Tables h through m are based upon the following sources: h: Rudolf Kink, ed., *Geschichte der kaiserlichen Universität zu Wien*, vol. 2: *Statutenbuch der Universität* (Wien: 1854; reprint ed., Frankfurt: Minerva, 1969), pp. 376-383; i: *Leges Academiae Genevensis* (Genevae: Oliva Roberti Stephani, (1559)), fol. Clr-C2r, C3v-C4v [Wolfenbüttel HAB: Pd 72]; j: *Verzameting van Stukken, die Betrekking hebben tot*

Overijsselsch Regt en Geschiedenis, Tweede Afdeeling, Zevende Stuk (Deventer: J. De Lange, 1872), pp. 77-83; k: *Catalogus librorum ad quorum explicationem academici professores Collegii Mussi Pontani Societatis Iesu aggredientur ad festum S. Lucae anno domini 1605* (Prostant exemplaria apud Melchiorem Bemardum serenissimi Lotharingiae Ducis, & Universitatis typographum, 1605) (Dillingen/Donau, Studienbibliothek: XV y 13, fol. 244); 1: Hans Georg Gundel, ed.. *Statuta Academiae Marpurgensis deinde Gissensis de anno 1629* (Marburg: Eiwert, 1982), pp. 103, 126-127, 139, 154-167, 213-217 (especially pp. 166, 213-216) [based on the original in Giessen UA: Hs 33b]; Reinhold Vormbaum, ed., *Die evangelischen Schulordnungen des siebenzehnten Jahrhunderts* (Gütersloh: C. Bertelsmann, 1863), pp. 375-383.

(57) For example, one rhetoric textbook by Melchior Junius presents systematically arranged lists of commonplaces taken from the disciplines of ethics, family life, politics, and history. See Melchior Junius, *Methodus eloquentiae comparandae, scholis rhetoricis tradita* (Argentinae: Per Lazarum Zetznerum, 1592), pp. 113-125 [Mainz StB: 1 / w / 859 (1)].

(58) Also see no. 2a in table c.

(59) An outline of instruction held at the Jesuit University of Dillingen (Danube) each year from 1564 until 1614 can be constructed on the basis of extant timetables. Works by Cicero were utilized at every level through the Rhetoric grade but at no level higher than that latter grade. See *Catalogus lectionum, 1564-1614* [Dillingen/ Donau, Studienbibliothek: XV y 134, fol. 192-243].

(60) Occasionally Cicero's writings were also used to teach ethics at the university level; for example, see *Rector et professores Academiae lenensis . . . lectiones theologicae . . . iuridicae . . . medicae . . . philosophicae* (Ienae: 27 Iunii 1564) [Wolfenbüttel HAB: 95.10 Quodl. 2° (245)].

(61) Concerning Trebizond see John Monfasani, *George of Trebizond. A Biography and a Study of his Rhetoric and Logic*

- (Leiden: E. J. Brill, 1976), pp. 4, 234. On Soarez see Lawrence Flynn S.J., "De arte rhetorica of Cyprian Soarez S.J.," *Quarterly Journal of Speech* 42 (1956), 367-74 and 43 (1957), 257-65.
5. ———. 1986. "Signs Within 16th and 17th Century Philosophy: The Case of Clemens Timpler (1563/64-1624)." In *Geschichte und Geschichtsschreibung der Semiotik. Fallstudien. Akten der 8. Arbeitstagung des Münsteraner Arbeitskreises für Semiotik, Münster 2.-3.10.1985*, edited by Dutz, Klaus D. and Schmitter, Peter, 101-118. Münster: MAkS Publikationen.
 6. ———. 1988. "Die Karriere und Bedeutung von Clemens Timpler (1563/4-1624)." In *400 Jahre Arnoldinum 1588-1988. Festschrift*, 69-77. Greven: Eggenkamp.
 7. ———. 1992. "Aristotelianism and Humanism in Late Reformation German Philosophy: The Case of Clemens Timpler, 1563/64-1624." In *The Harvest of German Humanism: Papers in Honor of Lewis W. Spitz*, edited by Fleischer, Manfred, 213-232. St. Louis: Concordia Press.

"Clemens Timpler (1563/64-1624), a German Calvinist philosopher and professor at the Gymnasium illustre Arnoldinum in Steinfurl/West-phalia from 1595 to 1624, is an unknown to most scholars of the Renaissance and the Reformation. Tables 1, 2, and 3 present some basic information concerning him in summary form. In Table 1 (2) Timpler's family ties and career are outlined. Like most other German philosophers of the Late Reformation period—here we shall speak of the period between c.1550 and c.1650—he taught philosophy as his profession." (p. 213)

(...)

"It is Timpler's philosophical writings—and in particular the sources cited therein— which are of primary concern for us here. These sources are summarized in Table 3. (10) As is evident from this table, Aristotle was by far the author most often cited by Timpler. Furthermore, many of the late 16th and early 17th century authors whom Timpler himself cites— e.g., John Case, Bartholomew Keckermann, Francesco Piccolomini, Amandus Polanus, Jacopo Zabarella—do likewise within their

own writings.(11) Aristotle's writings were used in philosophy instruction at all or almost all German academic institutions during the Late-Reformation period (see Tables 7, 8, and 9).

Indeed, those German academic philosophers of the Late-Reformation philosophers of the Late-Reformation era who studied and used Aristotle's writings virtually comprise a universal set Therefore, the term "Aristotelianism"—which itself was not used in this period— only provides us with a very limited amount of information concerning these philosophers. (12) More important and more difficult is the problem of how individual Late-Reformation German philosophers used Aristotle within their own writings." (p. 215)

(...)

"The term *Aristotelianism* , therefore, can be understood so as to refer to almost all of Late-Reformation German philosophy. The same appears to be the case with *humanism* . Like Aristotelianism, the term humanism was not used in the Late-Reformation period. Walter Ruegg has traced the first known use of the German term Humanismus back to the year 1808. (19) Here I shall speak of two basic ways of understanding the terms humanism and Humanismus: 1. that of Jacob Burckhardt and 2. that of Paul Oskar Kristeller.

Among the major characteristics which are attributed by Jacob Burckhardt to "Renaissance humanist" Italian civilization of the 14th, 15th, and 16th centuries are 1. the development of the human individual and 2. the centrality and dignity of man. (20) On the basis of Table 6 (21) it is clear that man has central importance within the philosophy of Clemens Timpler. All that is intelligible to man is the subject matter of metaphysics. (22) Man was created for God's sake; however, all other creatures were created by God for man's sake. Timpler makes a number of statements to the effect that man must preserve him- or herself. " (p. 217)

(...)

"In his article "The Humanist Movement,' ' Paul Oskar Kristeller notes that the term "Renaissance Humanism"

ultimately is derived from the Latin *studia humanitatis* ; in the 15th and 16th centuries, the *studia humanitatis* stood for a concise group of scholarly disciplines (i.e., for grammar, rhetoric, history, poetry, and moral philosophy). (24) According to Kristeller, therefore, the *studia humanitatis* during these two centuries essentially constituted an educational curriculum. Considered in this way, humanism also has an integral place within the curriculum of German schools and universities during die Late-Reformation period." (p. 218)

(2) See Joseph S. Freedman, *European Academic Philosophy in the Late 16th and Early 17th Centuries. The Life, Significance, and Philosophy of Clemens Timpler (1563-1564)* , 2 vols. (Hildesheim et al.; Georg Olms, 1988), chapters 2, 3, 4 (pp. 7-45, 454-88) and pp. 738-39.

(10) See Freedman, *Academic Philosophy / Timpler* , pp. 128-31, 134, 142, 563-68; Table 3 presents this material in abridged form.

(11) Concerning John Case see the following monograph: Charles B. Schmitt, *John Case and Aristotelianism in Renaissance England* (Kingston and Montreal: McGill-Queen's University Press, 1983).

(12) The terms *Aristotelici* and *Peripatetici* are occasionally used in philosophical works during this period, though the precise meaning of these two terms is rarely or never explained. Johann Heinrich Alsted mentions the *Peripatetici* within his classification of the various philosophical schools; see Johannes-Henricus Alstedius, *Philosophia digne restituta* (Herbomae Nassoviorum: 1612), p. 93 [Marburg UB: XIV c 136],

(19) Walter Ruegg, *Cicero und der Humanismus* (Zürich: Rhein-Verlag, 1946), pp. 2-3.

(20) Jacob Burckhardt, *The Civilization of the Renaissance in Italy*, 2 vols., introduction by Benjamin Nelson and Charles Trinkaus, translated by S.G.C. Middlemore (New York: Harper and Row, 1958), 1: 143-50; 2: 351-52.

(21) These statements are summarized in Freedman, *Academic Philosophy* / Timpler, pp. 445-46, 733-34.

(22) For Timpler, All that is Intelligible (omne intelligibile) is all that which man can learn by means of the human intellectual process; see *Ibid.*, pp. 210-12, 412, 604-05, 714.

8. ———. 1993. "Aristotle and the Content of Philosophy Instruction at Central European Schools and Universities during the Reformation Era (1500-1650)." *Proceedings of the American Philosophical Society* no. 137:213-253.

Reprinted as Essay V in: *Philosophy and the Arts in Central Europe, 1500-1700* .

"The philosophy of the late Middle Ages and the Reformation Era, i.e., of the period between 1350 and 1650, has been largely ignored by historians of philosophy. A few philosophers of this period i.e., Nicholas of Cusa (1401-1464) and Francis Suarez (1548-1617) - have frequently been studied by twentieth-century historians of philosophy. However, thousands of philosophers of that three-hundred-year period have been neglected. The writings of those philosophers arose from their academic instruction at schools and universities scattered throughout Europe. One general fact is known concerning a large portion of these writings: they make substantial use of Aristotle's works. How should one proceed in attempting to understand these writings and the manner in which they utilize Aristotle?

Generally, there has been a tendency to place these authors within the framework of the "Aristotelian tradition" or "Aristotelianism." It is the purpose of this article to examine the merits of that tendency. To what extent do these two concepts help us to, or deter us from, understanding European philosophy of the late fourteenth through the early seventeenth centuries?

This article will focus on the manner in which Aristotle's writings were utilized in Central Europe during the second half of this period, i.e., between 1500 and 1650. At individual Central European schools and universities during this period, philosophy instruction included some or all of the following disciplines: metaphysics, physics, mathematics, ethics, family life (*oeconomica*), politics, logic, rhetoric, grammar, poetics, and history. Texts by Aristotle were usually utilized to some extent in the instruction of metaphysics, physics, ethics, family life, politics, logic, rhetoric, and poetics. In concentrating on Central Europe during these one and one-half centuries, extant sources can be utilized in order to answer the following three questions: 1. In what ways are Aristotle's texts utilized at individual academic institutions during the Reformation era? 2. In what manner do individual philosophers use Aristotle's writings during this period? 3. How does a group of sixteenth and seventeenth-century philosophers interpret Aristotle when discussing individual philosophical concepts?" (2)

- (2) The focus of this article is limited to Central Europe during the Reformation Era for the following two reasons: 1. The curriculum of Central European schools and universities during the Reformation Era can be discussed on the basis of primary sources extant both in manuscript and printed form; however, such sources are much harder to find for schools and universities in other parts of Europe. 2. Central European philosophical works of the late Middle Ages are largely in manuscript form. These works are scattered throughout Europe; the vast majority of them have not yet been read or in many cases even been sifted. The following article discusses- and gives primary source bibliography for- a large number of these Central European institutions: Joseph S. Freedman, "Philosophy Instruction within the Institutional Framework of Central European Schools and Universities during the Reformation Era," *History of Universities* vol. 5 (Oxford: Oxford University Press, 1985): 117-166. (some notes omitted)
9. ——. 1993. "The Diffusion of the Writings of Petrus Ramus in Central Europe, c. 1570 - c.1630." *Renaissance Quarterly* no. 56 (1):98-152.

Reprinted as Essay IV in: *Philosophy and the Arts in Central Europe, 1500-1700* .

"For what reasons did Academicians select to use or not to use any given textbook for their own classroom instruction during the Renaissance? To what extent did ideological or pragmatic considerations influence such decisions? In this article these questions are posed to examine the use of the writings of Petrus Ramus (1515- 1572) and Omer Talon (ca. 1510- 1562) at schools and universities in Central Europe during the six decades between 1570 and 1630. Did "Ramist" academicians of this period make use in the classroom of writings by these two authors because of some fundamental agreement with their views? Or were these two authors preferred during these six decades because their writings could be used eclectically and/or they fit well into specific parts of the curriculum at certain academic institutions?

In the period between 1570 and 1630 there were over 30 universities and hundreds of schools in the German-language area of Europe. A large amount of curricular information—largely in the form of annual, semi-annual, or occasional outlines of instruction as well as personal or official correspondence—exists for many of these schools and universities. Textbooks and printed disputations arising from instruction held at these academic institutions are also extant. This assessment of the use of writings by Ramus and Talon in Central European academic institutions is based on the examination of a substantial portion of this evidence. The task of finding and evaluating such evidence pertaining to other parts of Europe must be left for a separate study." (p. 98)

"It was the period between 1570 and 1630, therefore, which saw the most extensive use of the writings of Petrus Ramus and Omer Talon at Central European schools. Among the points made by Walter J. Ong in his monograph on Ramus are the following.¹²⁵ First, opposition to Ramus from university-level academics was strong and often very well articulated. Second, Ramus's works on logic and rhetoric were relatively uncomplicated in their content. And third, Ramus's writings

were best received by, and to a large extent intended for, younger students. Ramus's influence in Central Europe between 1570 and 1630 can be explained within the context of these three points. In Central Europe during these six decades the writings of Ramus found their most extensive use within the realm of the pre-university level curriculum.

On the basis of the evidence presented in this article, it would appear that it was largely for pragmatic reasons that Ramus was used at some individual academic institutions but not at others in Central Europe during the period between 1570 and 1630. It is difficult to use ideology to explain these developments. Ramus's disciples and commentators generally used Ramus's writings eclectically. Some Ramus commentators (e.g., Friedrich Beurhusius, Severinus Sluterus) also published commentaries on Aristotle, Cicero, or some combination of these and/or other authors. The opinions of individual "Ramists" on a given topic -- e. g. , the classifications of philosophical disciplines, the concept of method -- differed markedly. In fact, it is difficult to make any sense at all of the term "Ramist" when discussing the use of Ramus's writings in Central Europe between 1570 and 1630. The extent to which "Ramism" can or cannot be used as a viable category to explain the use of writings by Ramus and Talon at schools and universities beyond Central Europe is a topic which merits further attention." p. 144 (notes omitted)

10. ———. 1994. "Instruction in Philosophy and the Arts in Early Modern Central Europe: Some Thoughts Concerning the Reproduction of Select Primary Source Materials." *Chloe.Beihefte zum Daphnis* no. 25:961-974.

Conference Proceedings, "Editionsdesiderate zur frühen Neuzeit. Beiträge zur Tagung der Kommission für die Edition von Texten der Frühen Neuzeit" held at Wolfenbüttel, Germany, October 4-7, 1994 (Zweiter Teil).

"The bulk of the textbooks used in sixteenth-, seventeenth-, and eighteenth-century Europe which are extant have survived as printed works. This is especially true in the case of editions of works by Aristotle, Cicero, and other ancient as well as modern

authors; the same also applies to most commentaries and independently titled textbooks.

Student lecture notes usually have survived as manuscripts. Disputations did not begin to be commonly published in Central Europe until the latter decades of the sixteenth century. Academic correspondence generally is extant in manuscript form, though some collections of such correspondence were published during the early modern period.

Reference works, official academic orations, and announcements of lecture offerings for the coming semester or year were normally published, while curriculum plans frequently were not. Some printed works contained important handwritten addenda such as owner's marks, autographs, student notes, and corrections; some broadsheets and other short printed works have survived due to the fact that they were inserted between leaves of manuscripts.

All of these various types of sixteenth-, seventeenth-, and eighteenth-century works written on diverse philological and philosophical subject-matters together constitute a very large quantity of extant printed and manuscript material. How can one determine which samples of these materials should be edited and/or reproduced in print or non-print formats? In order to provide an answer to this question, three preliminary questions can be posed here: 1. At which libraries and archives are these materials found and how thoroughly have these materials been catalogued there? 2. Which bibliographies of these early modern philological and philosophical works are available? 3. What works have already been made edited and/or reproduced in some format?

Germany does not have a national library having a role comparable to that of the Bibliothèque Nationale in Paris and of the British Library in London. But Germany does have hundreds of libraries and archives that house sixteenth-, seventeenth-, and eighteenth-century printed works and manuscripts. The Duke August Library in Wolfenbuttel and the Bavarian State Library in Munich are among the most important repositories of philological and philosophical

materials from this time period. The Duke August Library has been especially active in publishing catalogs describing its own sixteenth- and seventeenth-century printed works and in making its own bibliographic records accessible electronically. And its holdings - together with those of the Bavarian State Library - form the core of the multivolume *Verzeichnis der im deutschen Sprachbereich erschienenen Drucke des 16. Jahrhunderts* [VD 16]." (pp. 965-966)

11. ——. 1994. "Classifications of Philosophy, the Arts, and the Sciences in Sixteenth- and Seventeenth-Century Europe." *The Modern Schoolman* no. 72 (1):37-65.

Reprinted as Essay VII in: *Philosophy and the Arts in Central Europe, 1500-1700* .

"One aspect of the history of philosophy which has received relatively little attention is how the philosophy concept itself has been classified into parts and how these classifications have evolved over the centuries. A few studies have focused on the development of these classifications in the ancient and medieval West; several other studies have discussed their development in eighteenth- and nineteenth-century Europe. Classifications of philosophy during the sixteenth and seventeenth centuries have been almost completely neglected; during those two centuries the manner in which philosophy -- and related concepts such as the arts, the liberal arts, the sciences, and encyclopedia -- was divided into parts underwent some significant changes.

Philosophy was taught at universities and schools throughout Europe during the sixteenth and seventeenth centuries and served to prepare students for study of theology, medicine, and jurisprudence.' A large volume of writings -- both in printed and in manuscript form -- was produced in conjunction with this philosophy instruction. Many textbooks on metaphysics, physics, mathematics, ethics, logic, and other subjects written during this period contained a section on the concept of philosophy, while some writings were devoted specifically to that latter topic. When examining the philosophy concept, most authors provided a definition or definitions thereof before

proceeding to classify its parts. Some authors also included discussion of the various schools (sectae) of philosophers.

Despite the fact that many attempts were made to define philosophy during the sixteenth and seventeenth centuries, these definitions generally do not provide us with much information concerning the philosophy concept itself.

This is partially due to sixteenth- and seventeenth-century views with respect to definitions. During those two centuries, definition theory was normally discussed within logic textbooks and within short treatises specifically devoted to the subject matter of both definition and classification or just definition alone." p. 37 (notes omitted)

This article has its origin in a lecture given at the Fourth International Leibniz Congress at Hannover, Germany in November of 1983 [*]; it appears here in expanded and revised form.

[* Published in *Leibniz Werk und Wirkung. IV Internationale Leibniz-Kongress. Vorträge*, Hannover, 14. bis 19. Novembre 1983, Hannover: Gottfried-Wilhelm-Leibniz-Gesellschaft, 1984, pp. 193-202.]

12. ———. 1994. "Encyclopedic Philosophical Writings in Central Europe during the High and Late Renaissance (c. 1500 - c. 1700)." *Archiv für Begriffsgeschichte* no. 37:212-256.

Reprinted as Essay VI in: *Philosophy and the Arts in Central Europe, 1500-1700* .

"The history of encyclopedias begins in the ancient world and extends up to the present day. What is an encyclopedia? What kinds of encyclopedias are there? And to what extent are encyclopedias intended for pupils at schools, for students at universities, or for some other, non-academic groups of people?

This article will attempt to provide answers to these questions within the limited context of Central Europe during the sixteenth and seventeenth centuries.(*). It is important to keep in mind that the Latin term *encyclopaedia* was only one of many terms that were used during that period in order to

denote or describe such works. And a few of these terms -- such as method (*methodus*) and system (*systema*) -- can be regarded as very significant for the development of encyclopedias in Central Europe during these two centuries.

Some sixteenth- and seventeenth-century encyclopedias intended to cover all academic subjects, including theology, jurisprudence, medicine, and philosophy. Other encyclopedias only covered one or several of these areas; still others covered the mechanical arts, occult science, or popular subject matter. This article focuses primarily on the area of philosophy, that is, on encyclopedic writings on philosophy that are "interdisciplinary" insofar as they discuss at least two philosophical disciplines." (pp. 212-213, notes omitted)

"The first years of the seventeenth century saw three concurrent developments in Central Europe. First, the metaphysics emerged as a preeminent philosophical discipline. Second, the term *systema* began to be used in the titles of comprehensive textbooks on many philosophical as well as non-philosophical disciplines. Third, there was a sharp increase in the number of encyclopedic philosophical writings. Shortly before the year 1620, there was a virtual explosion in the number of such writings, which then continued to appear commonly in Central Europe through the seventeenth century and thereafter.

As indicated earlier, the discipline of metaphysics contains concepts relevant to all other philosophical disciplines. Just as works on metaphysics and interdisciplinary philosophical works disappeared together in the early sixteenth century, they began to reappear together at the end of that same century. Systematic textbooks on individual disciplines intended to cover the entire scope of those disciplines. This new emphasis on the comprehensive coverage of individual academic disciplines from the year 1600 onwards went hand-in-hand with the reemergence of encyclopedic philosophical writings which were intended as comprehensive philosophical textbooks." (p. 234)

(*) It is within the context of sixteenth- and seventeenth-century Central Europe that a sufficient diversity and quantity of primary source materials -- including both philosophical texts by individual authors and detailed information concerning the curricula of individual academic institutions -- could be found in order to arrive at conclusions concerning the evolution of encyclopedic philosophical writings.

13. ———. 1997. "The Career and Writings of Bartholomew Keckermann (d. 1609)." *Proceedings of the American Philosophical Society* no. 141:305-364.

Reprinted as Essay VIII in: *Philosophy and the Arts in Central Europe, 1500-1700* .

"In conclusion, the following three questions can be posed with respect to Keckermann and his writings. First, what was Keckermann's contribution to intellectual history? Second, why was Keckermann so famous during the early seventeenth century? And third, which of these first two questions should concern us most, and why?

With regard to the first question, Keckermann can be considered to have made at least three contributions to intellectual history. First, Keckermann was one of the earliest Western thinkers to use the term "system" to describe academic treatises; his detailed discussion of the component parts of systematic textbooks appears to be the first of this kind and may have been without parallel during the entire seventeenth century. Second, Keckermann was exceptional in so far as he stressed that each academic discipline -- barring metaphysics -- has its own history. Keckermann documented the history of individual disciplines by including chronologically and systematically arranged bibliographies within writings on some of those disciplines. In his multi-volume history of logic, Wilhelm Risse refers to Bartholomew Keckermann as the first historian of logic. (81) Keckermann's bibliographies, which are evidence of his broad knowledge of scholarship in his time, can still be used today to identify the names of many important sixteenth-century authors of academic works.

Third, Keckermann was able to integrate discussion of rhetoric, history, collections of aphorisms, dictionaries, emblems, and other "humanist" subject matter within logically arranged and systematically organized treatises. He stressed the relevance of this humanist subject matter to public life. It could be argued that Keckermann made a valuable contribution to early modern European intellectual history insofar as he was successful in incorporating a form of civic humanism within a scholastic framework. (82)

Turning to the second question, at least eight reasons can be given in order to help explain Bartholomew Keckermann's fame during the seventeenth century. First, his academic career and the publication of his many writings began at an opportune time; higher education had been expanding in Central Europe during the late sixteenth century and continued to do so through the first quarter of the following century. (83)

Second, academic encyclopedias and encyclopedic collections of academic writings began to appear in Central Europe in about the year 1600; they were published -- and used within academic instruction -- with increasing frequency during the following decades. (84) The author of the preface to the 1614 edition of Keckermann's collected works pointed to their encyclopedic scope and to their enhanced usefulness as a result of that scope. (85) Keckermann published works on almost all of the academic disciplines taught by his contemporaries.

Third, Keckermann began his career by publishing primarily in the discipline of logic, for which there was a tremendous demand at Central European schools and universities during his time. His many types of logic textbooks were able to be used in logic instruction at various levels. Fourth, the years around 1600 saw the introduction of a number of new textbook formats in Central Europe; with his *Systema* and his *Prolegomena*, Keckermann belonged to that group of scholars at the forefront of these new developments.

Fifth, he used the writings of Aristotle eclectically and the writings of Ramus critically at a time when many other school and university professors chose to do likewise. Sixth, he won

the enthusiastic support of colleagues, friends, and students, who edited and published many of Keckermann's works both before and after his early death. Seventh, published attacks directed against Keckermann's writings -- beginning in the year 1599 -- by a host of enemies helped to make him better known. And eighth, Keckermann's reputation had a snowball effect. Some academic institutions and individual professors chose to use his writings in part because of their reputation and of their relative availability in a period when libraries and the book trade functioned less effectively than they do today.

Turning to the third question, I would like to suggest that the study of Keckermann's contribution to intellectual history deserves less attention than does the study of his career and of his systematically-written works. Thousands of professors and other teachers published their writings during the sixteenth and seventeenth centuries. Most of the writings of these authors have been unread for centuries; many of these writings have yet to be rediscovered, assuming that they are still extant at all. So while Keckermann appears to have made several important contributions to European intellectual life within the context of schools and universities, one cannot completely exclude the possibility that he was at least partially preempted by thinkers whose works are still unread or unknown. And it should also be noted that originality was not valued by Keckermann's contemporaries in the same way as it is by twentieth-century scholars. It was not uncommon in Keckermann's time for the authors of academic writings to defend themselves against -- or to attack others with -- the charge of "unwarranted novelty. (86)

On the other hand, if we pose the question how Keckermann's career was so successful, our answer also provides us with information concerning the academic and intellectual environment of his time. The general parameters affecting Keckermann's academic career also pertained to thousands of other individuals who were pursuing such careers during the sixteenth and seventeenth centuries. Certain paths led to successful careers at academic institutions; as part of this process, a professional scholar such a Keckermann might fail to

receive the offer of a certain academic position but might also decline to accept another position. (87)

In addition, Keckermann's academic writings generally appear to have differed relatively little in content from the content of writings of other sixteenth- and seventeenth-century authors, including the hundreds of sixteenth-century authors whom he cited as well as those seventeenth-century authors who made use of Keckermann's writings within their own. (88) In studying Keckermann's writings on metaphysics, physics, mathematics, ethics, family life, politics, logic, rhetoric, and history, we are looking at a corpus of learned views that -- barring a relatively small number of controversial points of doctrine -- basically represented the curriculum in the arts and the sciences during his time.

To summarize, the value of studying Keckermann's career and writings lies not so much in the fact that he was original in some scientific, or intellectual sense of that word. Instead, while studying Keckermann we are also provided with a wealth of information concerning academic life in his time as well as concerning a large body of knowledge taught to tens of thousands of students at European schools and universities. It could be argued that the study of the career and writings of sixteenth- and seventeenth-century European professional scholars pertains more to social history or cultural history in some broad sense than it does to intellectual history." (pp. 323-325)

Bibliography of Joseph S. Freedman on Philosophy in Central Europe (1500-1700): Second Part

Articles

1. Freedman, Joseph S. 1999. "Philipp Melanchthon's Views Concerning Petrus Ramus as Expressed in a Private Letter Written in 1543: A Brief Assessment." In *Melanchthon und die Marburger Professoren. Vol. II*, edited by Mahlmann-Bauer, Barbara, 841-848. Marburg: Universitätsbibliothek.
2. ———. 1999. "Introduction: The Study of Sixteenth- and Seventeenth- Century Writings on Academic Philosophy: Some Methodological Considerations." In *Philosophy and the Arts in Central Europe, 1500-1700. Teaching and Texts at Schools and Universities*, 1-40. Aldershot: Ashgate.

"Instruction in philosophy and the arts was a normal part of the university-level and secondary education routinely received by students in late medieval and early modern Europe. Yet the study of this instruction has received relatively little attention by modern scholars. The articles in this collection focus on this largely neglected area of research with a primary focus on Central Europe during the sixteenth and seventeenth centuries.

The purpose of article I is to bring together as well as to expand upon many of the topics discussed and conclusions stated in articles II through VIII; in doing so, the concepts of classification and definition as well as some sixteenth- and seventeenth-century views concerning "schools of philosophers" (*sectae*) are discussed. Article II draws a connection between the evolving role of philosophy instruction

within the institutional framework of Central European schools and universities between ca. 1500 and ca. 1650 and the evolution of the philosophy concept during that same period. Article III is devoted to discussion of how and why Cicero's writings were used to teach rhetoric at European schools and universities during the sixteenth and seventeenth centuries. Article IV begins by presenting evidence - published by Walter Ong - that the writings of Petrus Ramus and Omer Talon were printed most often in Central Europe than anywhere else, and mainly between c. 1570 and c. 1630; this article then examines why that was the case, and attributes this not to the influence of ideology, but instead mainly to pragmatic decisions made at individual Central European academic institutions.

Article V focuses on the manner in which Aristotle's writings were utilized in Central Europe during the sixteenth century and the first half of the seventeenth; it is argued that individual philosophers and individual academic institutions elected to utilize Aristotle's writings largely due to practical considerations and not because of any general affinity for "Aristotelianism" or "Aristotelian" views. Article VI examines the evolution of the encyclopedic philosophical writings produced in Central Europe during the sixteenth and seventeenth centuries; in doing so, attention is given to the decline and subsequent rebirth of the discipline of metaphysics, to the concepts of method and system, to the writings of Petrus Ramus and Omer Talon, to the evolution of philosophical curricula at Central European schools and universities, and to the manner in which encyclopedia and related concepts are utilized in writings of this period. Article VII focuses on classifications of philosophy, the sciences, and the arts during the sixteenth and seventeenth centuries; attention is given to definitions of philosophy, mention of individual philosophical disciplines, discussions of the liberal arts, and the evolution of the philosophy concept itself. Article VIII provides new biographical and bibliographical material concerning Bartholomew Keckermann (d. 1609); it also discusses Keckermann's contributions to intellectual history as well as

why and how he became so famous in academic circles during the early seventeenth century." (from the Preface)

"1. Topics discussed within this collection of articles; 2. Definitions and classifications within the context of sixteenth- and seventeenth-century thought and beyond; 3. Sixteenth- and seventeenth-century writings on philosophy normally arose within the context of academic instruction; principal philosophical subject matters (academic disciplines) and genres of philosophical writings during the sixteenth and seventeenth centuries; 4. Academic philosophical writings vs. academic writings on jurisprudence, medicine and theology; 5 . Academic philosophical writings vs. non-academic treatises; 6 . Schools of philosophers (*sectae*) as discussed during the sixteenth and seventeenth centuries; ideological constructs and the study of sixteenth- and seventeenth-century academic philosophy; 7. To what extent was religious confession a major factor within sixteenth- and seventeenth-century academic philosophy? 8 . To what extent were there variations between different regions of Europe with regard to academic philosophy? 9. Complex philosophical concepts (e.g., nature, signs, theory of knowledge) and the parameters of individual academic disciplines in the sixteenth and seventeenth centuries; 10 . Due to the rudimentary state of our knowledge concerning sixteenth- and seventeenth-century philosophy, the conclusions arrived at in this volume are stated in cautious terms; the primary aim of this volume is to further research in this subject area.

1. Articles II through VIII of this collection all pertain to texts on philosophy and the arts as utilized at schools and universities during the sixteenth and seventeenth centuries with an emphasis on Central Europe. These seven articles focus on three kinds of topics: 1. authors of these texts, 2. the academic institutions at which those authors taught and produced texts in published and unpublished form, 3. terms, concepts, and subject areas discussed within texts. The three indices which accompany this collection are devoted to 1., 2., and 3. above.

The authors mentioned in this collection represent a small sampling of the thousands of such authors who taught at Central European schools and universities - or whose writings circulated there - during the sixteenth and seventeenth centuries. An addition, four separate articles (III, IV, V, and VIII) focus on how educators of the High and Late Renaissance discussed two ancient authorities (i.e., Aristotle and Cicero) and two more "recent" ones (i.e., Petrus Ramus and Bartholomew Keckermann). Curriculum plans and texts specifically intended for or used at individual academic institutions in sixteenth-and seventeenth-century Central Europe are the principal sources used in order to discuss those same academic institutions; one article (II) focuses primarily on curriculum plans.⁽¹⁾ The concepts of philosophy (via "classifications of philosophical disciplines") and encyclopedia (via "encyclopedic philosophical writings") are discussed within two separate articles in this collection (VI and VII). The concepts of classification, definition, nature, and sign are discussed within sections 2 and 9 of this introductory article.

(1) Article VIII, however, also makes extensive use of some additional kinds of primary source materials (e.g., academic correspondence, dedications/prefaces to published textbooks, and the minutes of faculty governing bodies at the University of Heidelberg) as sources of biographical information." (pp. 1-2)

3. ———. 2001. "Melanchthon's Opinion of Ramus and the Utilization of their Writings in Central Europe." In *The Influence of Petrus Ramus: Studies in Sixteenth and Seventeenth Century Philosophy and Sciences*, edited by Feingold, Mordechai, Freedman, Joseph S. and Rother, Wolfgang, 68-91. Basel: Schwabe.

"Philipp Melanchthon (1497-1560) and Petrus Ramus (1515-1572) can be considered as two of the sixteenth century's most significant educators. To what extent were the writings of these two authors utilized in Central European schools and universities during the sixteenth and the early seventeenth centuries? Were Melanchthon and Ramus regarded as complementary or as contrary authorities? The search for answers to these two questions requires examination of the

ways in which writings on the arts by Ramus (i.e., logic, rhetoric, grammar, arithmetic, and geometry) and Melanchthon (i.e., logic, rhetoric, grammar, physics, the soul, and ethics) were utilized during that period. This article will attempt to provide such answers through discussion of the following ten points:

1. the demand for Ramus' writings on logic as well as other arts disciplines;
 2. the demand for Melanchthon's writings on logic and the other arts;
 3. adoption of, and commentaries on, Melanchthon's writings on the arts;
 4. adoption of, and commentaries on, Ramus' writings on the arts;
 5. polemical writings against Ramus' writings on the arts;
 6. the lack of extant polemical writings against Melanchthon's writings on the arts;
 7. the frequency with which sixteenth- and seventeenth-century writings on the arts authored by both Lutherans and Calvinists utilized works by Ramus in combination with works by Melanchthon;
 8. the eclectic and independent manner in which Melanchthon, Ramus, Aristotle, and other authors were utilized by late sixteenth- and early seventeenth-century writings on the arts;
 9. revised versions of Ramus' and Melanchthon's writings on the arts;
 10. differences between individual commentaries on Ramus' and Melanchthon's writings on the arts." (pp. 68-69)
4. ——. 2001. "'Professionalization' and 'Confessionalization': The Place of Physics, Philosophy, and Arts Instruction at Central European Academic Institutions During the Reformation Era." *Early Science and Medicine* no. 6:334-352.

Abstract: "During the sixteenth and early seventeenth centuries, physics was regularly taught as part of instruction in philosophy and the arts at Central European schools and universities. However, physics did not have a special or privileged status within that instruction. Three general indicators of this lack of special status are suggested in this article. First, teachers of physics usually were paid less than teachers of most other university-level subject-matters. Second, very few Central European academics during this period appear to have made a career out of teaching physics. And third, Reformation Era schools and universities in Central Europe emphasized language instruction; such instruction not only was instrumental in promoting the confessional-i.e., Calvinist, Lutheran, and Roman Catholic agendas of those same schools and universities, but also helped to prepare students for service in nascent but growing state governments."

"Why did Central European academic institutions place primary emphasis on language - and not physics - within their instruction on philosophy and the arts during the Reformation Era? Two answers to this question will be ventured here. First, the nascent development of state governments - at the local, regional, and supra-regional levels as well as by secular and ecclesiastical authorities - during this period went hand-in-hand with the need for individuals who could use language training (especially the ability to speak and write well) in the service of these governments. Second, it could be argued that competition between Calvinists, Lutherans, and Roman Catholics had a major impact within Central European education during this period, and especially from the mid-sixteenth century onwards. The establishment of new schools by Protestants in the decades after 1550 had its counterpart in the establishment of Jesuit educational institutions beginning in the middle of the sixteenth century.(56) And while Lutherans and Calvinists established (or expanded some already existing Protestant schools into) multi-level, consolidated schools, Jesuits kept pace with that development by gradually adding upper-level grades to some of their own Central European schools. (57) The establishment or expansion of a Calvinist,

Lutheran, or Roman Catholic academic institution at a given locality was sometimes matched by the establishment or expansion of an academic institution representing an opposing confession at a nearby location. (58) One could make the case that this expansion and confessional competition in the realm of Central European education actually increased as the Thirty Years' War approached and began. It appears that this confessional competition gave birth to some pedagogical innovations in the early decades of the seventeenth century; these innovations included the introduction of comprehensive encyclopedic instruction--accompanied by the publication of encyclopedic philosophical writings intended for students--at the school level, by the development of a large number of new academic subject-matters (usually referred to as "disciplines"), by the introduction of the term "system" as a name for methodically ordered textbooks (*), and by what appears to have been the increasing emphasis placed on the development of curricular materials for students at various academic levels. (59) And two of Europe's best known educational innovators from the early modern period - i.e., Wolfgang Ratke (1571-1635) and Johannes Amos Comenius (1592-1670)--were active during this same period.(60)" (pp. 350-351)

(56) Refer to Freedman (1999), I (12-13), II (121-22).

(57) The gradual expansion of the Luzern Jesuit Academy from 1574 onwards can be traced through the extant *Catalogi personarum et officiorum a prima origine Collegii nostri Lucernensis*, 1574 [-1773] [Luzern SA:Cod KK70]; also see the following general study pertaining to this same topic: Karl Hengst, *Jesuiten an Universitäten und Jesuiten universitäten*, Quellen und Forschungen aus dem Gebiet der Geschichte, Neue Folge, 2 (Paderborn, 1981).

(58) The very close proximity of a Protestant Academy in Lauingen (Danube) to the Jesuit University of Dillingen (Danube) is mentioned in Freedman (1999), II (146, 148-49). The *Gymnasium illustre Arnoldinum* in Steinfurt (Westphalia) appears to have been largely intended as a Calvinist counterweight to a Jesuit Academy in nearby Münster

(Westphalia); refer to the discussion given in Freedman (1988), 46-48, 489-90.

(59) Refer to Freedman (1999), VI; concerning the introduction of such new subject-matters see Freedman (1999), VII (46-47). Bartholomew Keckermann's publication of logic textbooks at various academic levels of difficulty is discussed in Freedman (1999), VIII (317-18).

(60) See Freedman (1999), I (13, 39-40).

(*) [On the introduction of the term *systema*, see J. S. Freedman, *The Career and Writings of Bartholomew Keckermann (d. 1609)*, pp. 312-314.]

5. ———. 2002. "Philosophical Writings on the Family in Sixteenth- and Seventeenth-Century Europe." *Journal of Family History* no. 27:292-342.

"Recent research on the early modern European family has largely been based on archival sources that are extant for relatively few localities during this same period. This research can be augmented by examining discussions of the family contained within academic writings on theology, jurisprudence, medicine, and philosophy during the early modern period. This article focuses on philosophical writings that arose in connection with sixteenth- and seventeenth-century academic instruction. These writings routinely discuss the proper relationship between husband and wife, between parents and children, and between masters and servants; also discussed are various categories of domestic possessions and how these possessions should be acquired and administered. Within these philosophical writings, one controversial issue pertaining to family life is sometimes raised: whether servants are more essential to the family than children. These writings uniformly equate the family with the nuclear family; in doing so, they provide collaboration for similar findings by social and demographic historians."

6. ———. 2003. "When the Process is Part of the Product: Searching for Latin-Language Writings on Philosophy and the Arts used at Central European Academic Institutions during

the Sixteenth and Seventeenth Centuries." In *Germania latina Latinitas teutonica. Politik, Wissenschaft, humanistische Kultur vom späten Mittelalter bis in unsere Zeit. (Band II)*, edited by Kessler, Eckhard and Kuhn, Heinrich C., 565-591. München: Wilhelm Fink Verlag.

"While Central Europe witnessed a growing trend towards the use of the vernacular during the 16th century, Latin still remained the dominant language in Central European academic institutions well into the 18th century. This paper will discuss Latin language writings on philosophy and the arts which arose in connection with academic instruction at those academic institutions. More specifically, this paper will focus on the following six questions (1-6): 1. What are the various subject-matters which comprised "philosophy and the arts" at Central European academic institutions during the 16th and 17th centuries? 2. What are the various genres of writings -- and the component parts of these genres -- that comprised philosophy and the arts? 3. How does one find such writings at individual libraries and other information repositories within as well as beyond Germany? 4. What are some of the factors and problems involved in searching for such writings? 5. How does this search process enable us to gain knowledge concerning 16th- and 17th-century writings on philosophy and the arts? 6. Can this search process provide us with additional insights pertaining to yet other areas of inquiry?" (p. 565)

(...)

"Sixteenth- and seventeenth-century writings on philosophy and the arts - which normally arose in connection with academic instruction both in and beyond Central Europe - have generally remained unstudied to up the present day. One principal reason for this can be suggested here: the process involved in finding such writings is quite complex but rarely understood. Yet it would be a mistake to focus only on the published results of such research; when undertaking the study of these writings, the research process usually cannot be clearly separated from the resulting product.(54)

Much of the knowledge one has concerning these writings on philosophy and the arts is derived from one's own research in progress, i.e., from that stage or stages when one is in the process of finding primary source materials, some of which may be used in one or more publications. This knowledge can often be used to assist other researchers, including professional colleagues as well as students. And this process - with its many facets and variations - will have to be revisited as a necessary component of all future research and publication pertaining to this same genre of writings." (p. 591)

(54) The importance of process as a part of product has been recognized by many individuals from the business world and well as by academics in some fields; for example refer to the following serial articles: Edwin E. Bobrow, »Successful New Products ar Product of Process,« *Marketing News* 28, no. 9 (April 25, 1994): E10; Samuel S. Myers, Performance Reading Comprehension - Product or Process,« *Educational Review* 43, no. 3 (1991): 257-272.

7. ———. 2004. "Academic Philosophical and Philological Writings on the Subject-Matter of Women, c. 1670-c. 1700." In *Geschlechterstreit am Beginn der europäischen Moderne. Die Querelle des Femmes*, edited by Engel, Gisela, Hassauer, Friederike, Rang, Brita and Wunder, Heide, 228-244. Königstein/Ts: Verlag Ulrike Helmer.

Kulturwissenschaftliche Gender Studies, Vol. 4.

"Suzanne Hull begins the preface to her exemplary book titled »Women According to Men: The World of Tudor-Stuart Women« with the following paragraph:

The goal of this book is to provide an introduction to the world of English women from 1525 to 1675, using the written words of men of that time. It was an era recorded, in print, almost exclusively by men. More than 99 percent of all publications were by male authors (1).

Hull's point applies aptly to discussions of women and gender in philosophical and philological writings which arose in connection with instruction held at schools and universities in

Europe during the 16th and 17th centuries. In fact, no such writings authored by women are known to have survived (2). And furthermore, it was not until about the year 1670 that men began to publish – in relatively moderate quantities – writings on the subject matter of women; these publications on women appear to have been limited – with no, almost no or very few exceptions – to Central Europe and Scandinavia.

This article addresses the following four questions.

- What kinds of philosophical and philological writings discussed women and gender during the 16th and 17th centuries?
- Which sorts of specific topics pertaining women and gender were discussed within these writings?
- Why did an increased number of academic writings written on the subject-matter of women begin to be published from shortly before the year 1670 onwards?
- Why do such writings have been published only – or overwhelmingly – in Central Europe and in Scandinavia through the year 1700?" (p. 228)

(...)

"Two volumes on family life (*oeconomica*) by Christian Wolff (1679-1754) were published in the years 1754 and 1755, respectively (74). Wolff subordinates the wife to the husband within the household. He states that it is in accordance with order and with the nature of things that the husband occupy himself with tasks which are masculine and more difficult while the wife should concern herself with tasks which are feminine and easier (75).

The four primary qualities – which had been used during the 16th and 17th centuries to justify prejudicial attitudes towards women – appear to have had no presence within Wolff's philosophical writings; did some other philosophical concept(s) stand in for the four primary qualities in this regard? His occasional references to »physical capability« (*habilitas physica*) and »virtue« (*virtus*) may have been meant to serve

in part to serve this purpose (76). But more detailed examination of the views expressed within philological and philosophical writings by Christian Wolff and other 18th century academic authors lies outside the scope of the present study (77)." (p. 236)

(1) Suzanne W. Hull, *Women according to Men. The World of Tudor-Stuart Women*, Altamira Press 1996, 9.

(2) This is not to say that there were no philosophical and philological writings authored by women during these two centuries. For example, refer to the following: Olympia Fulvia Morata, *Omnium eruditissimae latina et graeca, quae haberi potuerunt, monumenta* (Basileae: Apud Petrum Pernam, 1558) [Heidelberg UB: D 8544 Res]; Anna Maria a Schurman, *Opuscula hebraea, graeca, gallica, prosaica & metrica* (Lugduni Batavorum: Ex officina Elsevirorum, 1648) [Hannover LB: Ba-A 1717]; (Margaret) [Cavendish], Duchess of Newcastle, *Grounds of natural philosophy: divided into thirteen parts ...* The second edition, London, (1668). [Berlin SB: 40 N1 144272].

(74) Christianus L. B. de Wolff, *Oeconomica methodo scientifica pertractata. Pars prima in qua agitur de societatibus minoribus, conjugali, paterna, et herili* (Halaë Magdeburgicae: Prostat in officina Libraria Rengeriana, 1754) [Erlangen UB: 40 Phs. I, 47 Qu], (Reprint edition: Hildesheim und New York, Georg Olms, 1972). *Christian Wolff Gesammelte Werke. II. Abteilung. Lateinische Schriften. Band 27. Oeconomica*; Christianus L. B. de Wolff, *Oeconomica methodo scientifica pertractata pars reliqua, in qua agitur de societatibus minoribus, conjugali, paterna, et herili. Post fata beati autoris continuata et absoluta a Michaele Christoph. Hanovio* (Magdeburgicae: Prostat in officina Libraria Rengeriana, 1755) [Erlangen UB: 40 Phs. I, 47 Qu] (Reprint edition: Hildesheim und New York: Georg Olms, 1972) *Christian Wolff Gesammelte Werke . II. Abteilung. Lateinische Schriften. Band 28. Oeconomica .*

(75) »Ordini & naturae rerum nihil est convenientius, quam ut maritus praesit actionis masculinis & difficilioribus, uxor

femininis potissimum facilioribusque ...« Wolff, *Oeconomica ... pars reliqua* (1755) (cf.73), 603 (§767).

(76) Wolff, *Oeconomica ... pars prima* (1754) (cf. 73), 52-53 (§37), 378 (§225).

(77) I am currently preparing to publish an article devoted to Christian Wolff's two treatises on family life (*oeconomica*), (cf. 74).

The following abbreviations are used:

8. ———. 2004. "The Soul (*anima*) according to Clemens Timpler (1563/4-1624) and Some of His Central European Contemporaries." In *Scientiae et artes. Die Vermittlung alten und neuen Wissens in Literatur, Kunst und Musik* , edited by Mahlmann-Bauer, Barbara, 791-830. Wiesbaden: Otto Harrasowitz.

"This paper will focus on the concept of the soul as expounded within the extant writings of Clemens Timpler (1563/4- 1624)" (p. 791)

"Timpler's views on the soul will be placed into the context of some selected views on that same subject-matter presented by sixty of his Central European contemporaries, i. e. by Calvinist, Lutheran, and Roman Catholic authors who taught philosophy and the arts at Central European schools and universities between 1590 and 1625. (4) These views on the soul have survived within published writings (principally disputations, textbooks, and orations) as well as within manuscripts (mainly lecture notes). (5)

Timpler's views on the soul are contained for the most part within his textbooks on metaphysics and animate physics (*Empsychologia*) - first published in the years 1604 and 1607, respectively - as well as within five published disputations - published in the years 1594, 1597, ca. 1597, 1609, and 1611 - over which he presided; some material contained within his textbooks on general physics, inanimate physics (*Apsychologia*), ethics, logic, and human physiognomy as well as within his collection of philosophical exercises also pertain to this subject matter. (6) It is mainly short disputations on the concept of the soul published by Timpler's Central European contemporaries that will be utilised in this article in order to place some of his views on this subject-matter into a broader context. (7)" (pp. 792-793)

(4) In arriving at the sum of sixty authors here I have only counted each praeses of any given disputation as its author. If one was to count the praeses as well as the respondens in the case of each disputation listed in the bibliography, the number of authors would be considerably higher than sixty. General discussions concerning Renaissance notions on the soul have been published by Kessler (1988) and Park (1988); Kennedy (1980), Kuhn (1996), and Spruit (1997) discuss aspects of the concept of the soul as understood by two Italian authors, Bernardino Telesio (1509 - 1588) and Cesare Cremonini (1550 - 1631). See section E of the bibliography in this article.

(5) Here it should be noted that Central European Roman Catholic authors published very few philosophical textbooks during the period between 1590 and 1625. The bulk of textbooks pertaining to philosophy and the arts that were utilized by Roman Catholic academic institutions in Central Europe during this period were written by Italian, Portuguese and Spanish authors. Some lecture notes in manuscript form — written by Central European Roman Catholic professors as well as by their own students - are extant; for example, see Wenk and Zurcher (1623). Yet printed disputations provide us with the bulk of philosophical source material for Roman Catholic philosophy instruction held between the years 1590 and 1625.

(6) See section A of the bibliography for the known publishing history of these writings by Timpler as well as Freedman (1988). Timpler's names for his textbooks on "inanimate" physics (*Apsychologia*) and "animate" physics (*Empysckologia*) may have been his own creations. In the course of the seventeenth century such new names for treatises - as well as sections of treatises- were not uncommon. Refer to the discussion given in Freedman (1999), VII, pp. 37-65 (no. 47). In his textbook on metaphysics (first published in the year 1604) he also refers - in M: L.4C.5Q.9 (pp. 461-462)- to his own *Anthropologia*, which apparently was never published separately; it was published as Book 3 of his textbook on *Animate Physics* in the year 1607. Previous to the year 1607, an *Anthropologia* authored by Timpler possibly circulated at the Steinfurt Academy in manuscript form.

(7) In the case of Timplers Roman Catholic Central European contemporaries, such short disputations serve as our main body of extant source material (refer back to footnote 5 above). And due to the complexity of the anima concept it has been deemed best to place Timpler's views on this subject-matter in context by focusing on a small number of relatively clear issues that appear within short writings as well as within longer ones.

Nonetheless, a few longer writings by Timpiers Lutheran and Calvinist Central European contemporaries devoted in whole or in part to the concept of soul have been utilized here as well; see Alstedius (1620), Casmannus (1594), Ulianus (1598), Caufungerus/ Magirus (1603), Hippus (1603), Hotstius (1607), Keckermannus (1614), Lorhardus (1613), Magirus (1600), Scheiblerus (1614), Strigelius (1590) and Wolfius (1590). Two short orations by Lutheran authors - i. e., Rhesius (1600) and Granus (1608) - have also been used.

9. ———. 2005. "Disputations in Europe in the Early Modern Period." In *Hora Est! On Dissertations* , 30-50. Leiden: Universiteitsbibliotheek Leiden.

Kleine publicaties van de Leidse Universiteitsbibliotheek, Nr. 71.

"During the early modern period, disputations constituted a major component of the curriculum at schools and universities scattered throughout Europe. Disputations and disputation theory are the subject matter of a number of recent publications. (1) A number of recent scholarly writings on university history have also included detailed discussion of this same topic. (2)

The present article intends to highlight some results of this recent research (including my own as Scaliger fellow in Leiden) and place it within the context of the abundant and valuable holdings at the Leiden University Library.

A working definition of disputation can be constructed by looking at the theory as well as the practice of disputations. (3) The disputations were frequently examined within the context of textbooks and other writings on logic. (4) Beginning in about the year 1550, writings devoted specifically to the subject-matter of disputations were published in Europe. (5) Curriculum plans, instructional schedules, and statutes frequently discuss disputations that are to be held, often mentioning genres and categories thereof. (6) And most importantly, one can examine actual extant disputations themselves, though it is possible to become almost overwhelmed by the sheer mass and variety of them which are extant in European and non-European libraries. Within this complex context, disputations during the early modern period can be understood here as logical exercises – held on a very wide range of possible subject-matters – which were held by two or more participants as part of academic instruction at European schools and universities. (7)

These disputations were almost invariably held in Latin and were known by a variety of different names. *Disputatio* and *dissertatio* were especially common; *exercitatio* / *exercitationes* and *thesis* / *theses* were among other terms which was sometimes used. (8) To date, a multi-institutional or multiregional pattern for the use of these various terms has yet to be identified.

At Leiden University, the inaugural disputation in philosophy – i.e., the disputation held in partial fulfillment of requirements for the terminal degree in philosophy and the arts – apparently was known as a *disputatio philosophica inauguralis* until the 1720s, when the name seems to have changed to *dissertatio philosophica inauguralis*. (9)" (p. 30)

(1) Among recent encyclopedia articles, books/monographic treatises, journal articles and bibliographies pertaining to this topic the following can be mentioned here: Hanspeter Marti, 'Dissertation' and 'Dissertation', Gert Ueding, ed., *Historisches Wörterbuch der Rhetorik*, vol. 2 (Tübingen: Max Niemeyer, 1994): pp. 866–884; Margreet J. A. M. Ahsmann, *Collegium und Kolleg. Der juristische Unterricht an der Universität Leiden 1575–1630 unter besonderer Berücksichtigung der Disputationen*, aus dem Niederländischen übersetzt von Irene Sagel-Grande (Frankfurt am Main: Vittorio Klostermann, 2000); Donald Leonard Felipe, *The Post-Medieval Ars Disputandi* Ph.D. Dissertation, University of Texas, Austin (USA): 1991); Hanspeter Marti, 'Die Wissenschaftsgeschichtliche Dokumentationswert alter Dissertationen,' *Nouvelles de la Republique des Lettres* 1 (1981): pp. 117-132; Ferenc Postma and Jacob van Sluis, *Auditorium Academiae Franekerensis: Bibliographie der Reden, Disputationen und Gelegenheitsdruckwerk der Universität und des Athenäums in Franeker 1585-1843* (Leeuwarden: Fryske Akademy, 1995); Hanspeter Marti, *Philosophische Dissertationen deutscher Universitäten* (München et al.: K. G. Saur, 1982). The following older study is still valuable: Ewald Horn, *Die Disputationen und Promotionen an den deutschen Universitäten vornehmlich seit dem 16. Jahrhundert*, Elftes Beiheft zum Centralblatt für Bibliothekswesen (Leipzig: Otto Harrassowitz, 1893; reprint ed.: Nendeln / Liechtenstein: Kraus Reprint / Wiesbaden: Otto Harrossowitz, 1968).

2. Disputations and their place in instruction during the 16th and 17th centuries – primarily in Central Europe – are frequently mentioned within the following collection of articles: Joseph S. Freedman, *Philosophy and the Arts in Central*

Europe, 1500–1700. Teaching and Texts at Schools and Universities, *Variorum Collected Studies Series CS 626* (Aldershot et al.: Ashgate / Variorum, 1999), Index 3.

A very valuable discussion of disputations, together with a detailed list and analysis of philosophy disputations held at the University of Basel during the 17th Century is given in Wolfgang Rother, *Die Philosophie an der Universität Basel im 17. Jahrhundert. Quellen und Analyse* (Dr. phil. Dissertation, Universität Zürich, 1980), pp. 62-66, 97-99, 326-330, 450-451.

3. The concept of definition was itself a subject-matter that was regularly discussed as part of academic instruction on logic during the early modern period; the concept of definition – including various kinds of definitions – was also usually examined in published writings on logic. For example, refer to the following: Cornelius Valerius, *Tabulae, quibus totius dialecticae praecepta maxime ad usum disserendi necessaria breviter & summatim exponuntur, ordine perspicuo digestae* (Antwerpiae: Ex officio Christophori Plantini, 1575), pp. 27-32 [UBL 191 E 26: 2]; Johannes Rudolphus Faber, *Totius logicae Peripateticae corpus ... Nec-non totius organi Aristotelico-Ramei compendium* (Aurelianae: Apud viduam & haeredes Petri de la Roviere, 1623), pp. 537-542 [UBL 546 B 12]; Daniel Wytttenbachius, *Praecepta philosophiae logicae* (Amstelodami: Apud Caesarem Noëlem Guerin, 1781), pp. 142-166 [UBL 652 B 11]. Definition itself was considered by early modern academic authors as a problematic concept. A detailed discussion of the concepts of classification and definition is given in Freedman, *Philosophy and the Arts* (see footnote 2), I: 2-7.

4. Hundreds of examples could be given in this connection, including the following: Bartholomaeus Keckermannus, *Gymnasium logicum, id est, de usu et exercitatione logicae artis absolutiori & pleniori, libri III. Annis ab hinc aliquot in Academia Heidelbergensis privatae praelectionibus traditi* (Hanoviae: Apud Guilielmum Antonium, 1608), pp. 122-152 [UBL 650 D 9: 2]; Faber, *Totius logicae [...] compendium* (see footnote 3), pp. 537-542; P[etrus] van Musschenbroek, *Institutiones logicae praecipue comprehendentes artem*

argumentandi. Conscriptum in usum studiosae juventutis (Lugduni Batavorum: Apud Samuelem Luchtmans et filium academiae typographus, 1748), pp. 197-206 [UBL 652 B 8]; Wyttenbachius, Praecepta (see footnote 3), pp. 235-238. The above-mentioned work by Keckermann was first published in the year 1605; refer to Joseph S. Freedman, 'The Career and Writings of Bartholomew Keckermann (d. 1609)', Proceedings of the American Philosophical Society 141, no. 3 (September 1997): pp. 305-364 (343).

5. These also included disputations held on the subject-matter of disputations themselves; for example, see Joh. Nagelius (praes.) & Leonh. Appoltus (resp.): Specimen academicum [...] de modo disputandi. Altorfii, 1737 [UBL 17 B 68]. The topic of this disputation – the manner in which Jewish teachers in Nuremberg and in Regensburg conduct disputations when teaching their students – is very unusual during the early modern period. The text thereof is written in Latin but contains many passages in Hebrew.

6. The following detailed discussion of disputations within a curriculum description for a school in Duisburg published in the year 1561 can be mentioned here: Henricus C. Geldorpius, De optimo genere interpretandae philosophiae, in quo explicatur simul ratio atque ordo Scholae Dusburgensis (s.l.: 1561) [UBL 20643 F 16]. Numerous curriculum plans in which disputations are discussed and cited within Joseph S. Freedman, 'Philosophy Instruction within the Institutional Framework of Central European Schools and Universities during the Reformation Era,' History of Universities 5 (1985): pp. 117-166.

7. Hanspeter Marti's definitions of disputatio (German: Disputation) and dissertation (German: Dissertation) point to the difficulties involved in any attempt to define each concept. His definitions are given here in full: 'Allgemein versteht man unter D[isputation] ein Streitgespräch oder eine Streitschrift, speziell die seit dem hohen Mittelalter bis zum späten 18. Jh., an Universitäten und anderen Schulen neben der Vorlesung (lectio) verbreitete, institutionell festverankerete Art des

gelehrten Unterrichts. Die Vielfalt der Erscheinungsformen sowohl der mündlichen wie der schriftlichen D[isputation] lässt keine allgemeingültige Beschreibung ihres Ablaufs bzw. ihrer Gattungsmerkmale zu. Typisch für die Bedeutungsvielfalt des Begriffs <D[isputation]> ist, daß damit nicht bloß das Streitgespräch und die schriftliche Thesenbehandlung (Dissertation), sondern auch, obwohl selten, der Gegenstand des mündlichen Disputationsaktes bezeichnet wird.' Marti, 'Disputation' (see footnote 1): 866; 'Unter einer D[issertation] wird heute einzig die Inauguraldissertation, Hauptbedingung für den Erwerb des Doktorgrades an den Universitäten, verstanden.

Deshalb wird hier vor allem auf sie und ihre Geschichte eingegangen. Bis ca. 1800 wurde jede Abhandlung <D[issertation]> genannt, die den Gegenstand einer mündlichen, auch bloß übungshalber veranstalteten Disputation vorstellte und in der Regel dem Streitgespräch als Einladungsschrift zugrundelag. Als D[issertation] konnte damals auch eine akademische Streitschrift bezeichnet werden, über die nicht disputiert wurde oder, seltener, eine Rede sowie der ganze Disputationsakt.'

Marti, 'Dissertation' (see footnote 1): 880.

8. See the various title pages reprinted in this publication.

The online catalog of Leiden University Library provides with extant information concerning this transition of names. An online search conducted on January 12, 2005 provided the following information. An 'any word' search for disputatio philosophica inauguralis produced inaugural disputations held at Leiden University in the years 1642, 1660, 1661, 1662, 1663, 1664, 1665, 1667, 1669, 1670, 1671, 1672, 1676, 1679, 1680, 1681, 1684, 1685, 1688, 1690, 1693, 1698, 1702, 1703, 1707, 1721 and 1728. An 'any word' search for dissertatio philosophica inauguralis resulted in finding inaugural disputations held at Leiden University in the years 1725, 1728, 1730, 1734, 1743, 1745, 1751, 1753, 1764, 1766, 1769, 1774, 1780, 1790, 1808, 1818, 1822 and 1831.

10. ———. 2005. "A Neglected Treatise on Scientific Method (*methodus scientifica*) published by Joannes Bellarinus (1606)." In *Geschichte der Hermeneutik und die Methodik der textinterpretierenden Disziplinen*, edited by Schönert, Jörg and Vollhardt, Friedrich, 43-82. Berlin: de Gruyter.

Historia Hermeneutica. Series Studia Band 1.

"The text consists of an introduction and four 'Books' [libri]. In the introduction, Bellarinus equates scientific method [methodus scientifica] with the practice of the sciences [praxis scientiarum].

In Book 1 [Concerning science and the knowable], Bellarinus defines science [*scientia*] in terms of cognition [cognitio].

In Book 2 [Concerning rules of logic], it is noted that science focuses on universals.

In Book 3 [Concerning the instruments of knowledge], it is stated that ten instruments [instrumenta], through which cognition [cognitio] is made certain [certa] and evident [evidens].

In Book 4 [Concerning method] Bellarinus defines method [methodus] as the correct way to discover, 'be taught' and teach [scientific] knowledge [recta ratio scientiam inveniendi, discendi, atque docendi]; he equates method with scientific method when this knowledge is perfect knowledge."

"As common as discussions of method - and of scientific method in particular - are in recent scholarship and pedagogy, our knowledge of the early evolution of these two concepts is still relatively scant.(1) This article will highlight a neglected treatise on the concept of scientific method - published by Joannes Bellarinus in the year 1606 (*) - which appears to be the first known published treatise bearing this title. This treatise can be placed in the context of late sixteenth- and early seventeenth-century discussions of method, definition theory, classification theory, and the classification of academic disciplines. Such early discussions of scientific method and related concepts can be used to provide useful insights

pertaining to recent scholarly discussions on these same subject-matters.

The history of the concept of method during late middle ages has not yet been studied extensively. And while this concept was mentioned occasionally within some writings during the early sixteenth century, it was not until mid-century that the concept of method begins to be accorded direct and extensive discussion. Such discussions of method are very numerous from the 1550s onward. The bulk of these discussions - contained within treatises on method itself, within treatises on logic, and within treatises on other subject-matters - have yet to be studied; the authors of many treatises containing such discussions on method have been forgotten for centuries.

(...)

A thorough examination of the concept of method during the late sixteenth and early seventeenth centuries would require a separate study extending well beyond the parameters of this article. Here the following summary points can be made concerning discussions of method during this period (I - III): (I) the distinction between method and order was sometimes discussed during this period, as was the distinction between method and reason (ratio); (II) the concept of method was often understood as having various degrees of perfection and/or imperfection; (III) the concept of method was often explained with the aid of the concepts of definition and/or classification and/or demonstration.⁽⁵⁾ As shall be elucidated shortly, all three of these points pertain to the content of Joannes Bellarinus's treatise on scientific method." (pp. 43-45, some notes omitted)

(*) Joannes Bellarinus: *Praxis scientiarum, seu methodus scientifica practice considerata, ex Aristotele potissimum accepta*. Mediolani: Apud haer. Pontij & Joan. Baptistam Piccaleum impressores archiep. 1606.

(1) The books by Henry Batter and Lutz Danneberg cited in this article provide bibliographical information on recent studies pertaining to method and scientific method. Henry H. Bauer:

Scientific Literacy and the Myth of the Scientific Method. Urbana and Chicago 1992; Lutz Danneberg: Methodologien. Struktur, Aufbau und Evaluation. (Erfahrung und Denken 71). Berlin 1989. -- The following older but still very valuable study examines the concept of method as discussed by selected Italian, English, and German authors during the late sixteenth and early seventeenth centuries: Neal W. Gilbert: Renaissance Concepts of Method. New York 1960.

(5) The concept of method as examined by numerous Central European authors during the late sixteenth and early seventeenth centuries is discussed in Joseph S. Freedman: Philosophy and the Arts in Central Europe, 1500-1700. Teaching and Texts at Schools and Universities. (Variorum Collected Studies Series, CS626). Alderhot u.a. 1999 - see here particularly my articles: The Diffusion of the Writings of Petrus Ramus in Central Europe, c.1570-c.1630, pp. 106-111; Encyclopedic Philosophical Writings in Central Europe during the High and Late Renaissance (ca. 1500-ca. 1700), pp. 222-223, p. 232, p. 245 (Table L) and pp. 251-252 (Table R). The concept of method was discussed - from the middle of the sixteenth century onwards - within treatises specifically devoted to method as well as within general treatises on the subject-matter of logic: for example, refer to the following: Hieronymus Borrius: De Peripatetica docendi atque addiscendi methodo. Florentine: Apud Bartholomacum Sermattellium 1584. [Chicago, Illinois. USA, Newberry Library: Case / B / 235 / .1034); Augustinus Hunnius: Dialectica seu generalia logices pracepta (...) consueverunt. Lovanii: Apud Hieronymum Wellaeum 1561 (pp. 165-171: de methodo). [Municipal Library / Stadtbibliothek (StB) Trier: Ao / 80 / 20 (2)¹ Many additional writings from this period pertaining to the concept of method are mentioned in the monograph Renaissance Concepts of Method by Neal Gilbert (fn. 1).

11. ——. 2006. "Ramus and the Use of Ramus at Heidelberg within the Context of Schools and Universities in Central Europe, 1572-1622." In *Späthumanismus und reformierte Konfession. Theologie, Jurisprudenz und Philosophie in Heidelberg an der Wende zum 17. Jahrhundert*, edited by

Strohm, Christoph, Freedman, Joseph S. and Selderhuis, Herman J., 93-126. Tübingen: Mohr/Siebeck.

"The brief residence of Petrus Ramus (1515-1572) in Heidelberg (1569-1570) is a matter of record; detailed examination thereof has also been given by Kees Meerhoff, both in a previous publication as well as in his contribution to this volume (1). Yet very little is known concerning the extent to which Ramus's writings were utilized in Heidelberg during the five decades following his death. In this article, extant evidence concerning the utilization of Ramus's writings in Heidelberg between 1572 and 1622 is evaluated within the context of how Protestant academic institutions in Central Europe made use of those writings in the course these same decades (2)." (p. 93)

(1) Kees Meerhoff, *Ramus et l'Université. De Paris à Heidelberg (1569-1570)*, in: Idem/Michel Magnien (eds.), *Ramus et l'Université*, Paris: Editions Rue d'Ulm, 2004, 89-120.

(2) The year 1572 has been chosen here since it is the year of Ramus's death.

"In an earlier publication I have argued that there does not appear to have been a "Ramist" position with regard to the following two selected points of doctrine: the classification of philosophical disciplines and the concept of method. Tables V-XI will be utilized in order to investigate whether or not one can speak of a "Ramist" and/or a "Non-Ramist" position with regard to a third point of doctrine: the concept of definition. Definition was an important concept that was regularly discussed within writings on logic during the 16th and 17th centuries (56).

Table V provides a synopsis of how Wilhelm Roding discusses the concept of definition within his 1574 edition of the logic of Petrus Ramus; Roding republished this edition in 1576, i.e. while a teacher in the Paedagogium in Heidelberg". At the top of Table V, the manner in which definition - together with conjugate, *notatio* and *distributio* - is subsumed within the subject-matter of logic is evident. *Notatio* is the category

Ramus uses to refer to nominal definition. For Ramus, definition is synonymous with what many other authors referred to as "real definition" (*definitio rei*). Ramus's distinction between perfect and imperfect definition (the latter considered as synonymous with "description") appears to have been adopted by the vast majority of authors who discuss the concept of definition during the late 16th and early 17th centuries.(58) Roding's own commentary pertaining to Ramus's "that which is defined" (definition) is presented in full at the bottom of Table V; this commentary includes a positive comment concerning Aristotle (see Table V: C.)

Tables VI and VII contain dichotomous charts - which outline sub-categories of definition given by Petrus Ramus and Philipp Melanchthon - within a text on logic published in Lemgo by Rupertus Erythropilus in the year 1588. (59) On the basis of these two sub-categories of definition, the following three points can be made. First, Ramus's categories of definition are much simpler than Melanchthon's. Melanchthon's categorization includes a list of laws and conditions as well as a list of rules, all of which serve to regulate the making of good definitions; Ramus's categorization, on the other hand, presents some examples of definitions but no regulations that govern them.

Second, Melanchthon divides definition into *definitio nominis* and *definitio rei*; for Ramus, *definitio* is equivalent to *definitio rei*. And third, both Ramus and Melanchthon distinguish between perfect definition and imperfect definition.

Yet Ramus equates imperfect definition with description while Melanchthon does not." (pp.106-107, some notes omitted)

(56) Refer to the discussion of definition (and the related concept of classification) in the following article: Joseph S. Freedman, *The Study of Sixteenth- and Seventeenth Century Writings on Academic Philosophy: Some Methodological Considerations*, in: IDEM, *Philosophy and the Arts*, I: 1-40, 2-7. 24-28.

12. ———. 2007. "Christian Wolff's Two-Volume Philosophical Treatise on the Family (*Oeconomica*) in Context." In *Christian*

Wolff und die europäische Aufklärung , edited by Stolzenberg, Jürgen and Rudolph, Oliver-Pierre, 217-231. Hildesheim: Georg Olms.

Akten des 1. Internationalen Christian-Wolff-Kongresses, Halle (Saale), 4.-8. April 2004.

Teil 3: Sektion 5: Kosmologie; Sektion 6: Theologie; Sektion 7: Praktische Philosophie.

"The past decades have witnessed a steadily increasing interest in the career and philosophy of Christian Wolff.(1) The focus of the current study is a work which Christian Wolff began to publish shortly before his death: his two-volume philosophical treatise on family life (*oeconomica*). (2) This treatise has not been accorded attention within scholarship pertaining to Wolff nor within the very sparse existing literature pertaining to philosophical writings on the family.(3) Yet this same treatise not only provides discussion and insights concerning a number of points of doctrine extending beyond the subject matter of *oeconomica*, but also presents some hereto neglected biographical information concerning Christian Wolff himself.

Table 1 (p. 229 f. below) presents a section and chapter synopsis of Christian Wolffs two-volume philosophical treatise on family life and also gives full bibliographical references for each volume of this treatise. The treatise as a whole is divided into four sections. Section 1 (consisting of three chapters) and the first two chapters of section 2 were published in 1754 within the first volume of this treatise; chapters 3 through 5 of section 2, section 3 (chapters 1 through 3), and section 4 (chapters 1 through 3) were published in 1755 within the second volume.

Originally published in 1754 and 1755, respectively, these two volumes appear not to be been republished or reissued until 1972 (as part of the scholarly Olms edition of Christian Wolffs writings). The entire text of the treatise consists of a total of 900 axioms, which correspond to the treatise's short introduction (*Prolegomena*) together with the content of sections 1 through 4." (p. 217)

(...)

"Before proceeding to discussion of Wolffs philosophical treatise on family life, brief attention should be given to the first volume - originally published in the year 1728 - of Wolffs three-volume treatise on logic. (4) This first volume actually is devoted to the subject-matter of philosophy considered generally. (5) In this work, Wolff divides that subject-matter into the following general parts: logic, metaphysics, practical philosophy, physics, and what he refers to as "philosophy of the arts" (*philosophia artium*). (6) Metaphysics consists of ontology, general cosmology, empirical psychology, rational psychology, and natural theology; included within philosophy of the arts are grammar, rhetoric, and poetics. (7) Wolff places *oeconomica* - along with universal practical philosophy, natural law (*jus naturae*), ethics, politics, and the "law of nations" (*jus gentium*) - within the category of practical philosophy.

In the introduction to the first volume of his *Oeconomica* Wolff notes the dependence of this same discipline on psychology and ethics; he also notes that ethics itself presupposes ontology, psychology, natural theology, universal practical philosophy, and cosmology.⁸ Wolff states that *Oeconomica* discusses the actual practice of that subject-matter which is demonstrated in theory within his own treatise on natural law. Missing from this list is politics, and Wolff considers *oeconomica* as a separate academic discipline therefrom." (pp. 218-219)

(...)

"Wolffs philosophical treatise on the family contains very frequent citations, however, from some of his other philosophical writings. In the introduction to his *Oeconomica* Wolff names the philosophical disciplines which serve as the foundation for family life. Yet conversely, Wolffs *Oeconomica* provides valuable discussion concerning a number of other philosophical topics; these topics include (1) the concept of scientific method and (2) two ontologically basic categories - *habilitas physica* and (natural) virtue - which rest at the foundation of human generation and subsequent growth, and (3) a number of concepts which fall within the general realm of epistemology. His *Oeconomica* is worthy of examination not

only because it presents a detailed, philosophical, systematic treatment of the family as well as education within a domestic framework, but also - and perhaps more importantly for historians of philosophy - because it provides interesting and valuable discussion of some points of doctrine the significance of which extend beyond the domains of family and domestic life." (pp. 226-227)

(1) 1305 titles are listed within Biller's bibliography on Christian Wolff; title numbers 1050 through 1305 were published between 1998 and 2004 while title numbers 495 through 1049 were published between 1980 and 1997; see Biller, [*Wolff nach Kant. Eine Bibliographie*, Hildesheim: Georg Olms,] 2004.

(2) See Table 1, p. 229 f. below.

(3) Some professional literature on natural law within Wolff's writings touches tangentially on selected topics which also are discussed within Wolff's *Oeconomica*, see Biller, 2004, p. 81 (448), 114 (681-682), 194 (1229), 198 (1250); also refer to footnote 16 below.

(4) *Logica*, 1.

(5) The full title of this general treatise on the subject-matter of philosophy is given within footnote 14 below.

(6) *Logica*, 1, §§ 55-75; in § 39 in this same work Wolff seems to argue that philosophy of law and philosophy of medicine might also be included within the realm of philosophy.

(7) *Logica*, 1, §§ 40, 71. Also included here within philosophy of the arts is a subject-matter referred by Wolff as *Technica*; here (§ 71) Wolff appears to indicate that these subject-matters often are excluded from philosophy.

(8) *Oeconomica*, 1, § 4.

(Some notes omitted)

14. ———. 2008. "An Extraordinary Broadsheet on Natural Philosophy: The *Theatrum universitatis rerum* (1557) by Christophorus Mylaeus." In *Sol et homo. Mensch und Natur in der Renaissance. Festschrift zum 70. Geburtstag für Eckhard Kessler* , edited by Ebbesmeyer, Sabrina, Pirner-Pareschi, Helga and Ricklin, Thomas, 241-315. München: Wilhelm Fink. Humanistische Bibliothek: Texte und Abhandlungen. Reihe I: Abhandlungen. Band 59.

"The present study is devoted to a broadsheet consisting mainly of an extensive series of such dichotomous charts pertaining principally to the subject-matter of natural philosophy. This broadsheet -- bearing the title "Theatre of the Universe of Things" (*Theatrum universitatis rerum*) -- was published in the year 1557 by Christophorus Mylaeus [Christophe Milieu] d. 1570). Only one published copy thereof is known to have survived."(*) (p. 242)

"The very top of the broadsheet presents the title of the work -- *Theatrum universitatis rerum* as well as the division of its subject-matter (*universitas rerum*) into *Natura ipsa* and *Natura altera* . The bulk of the broadsheet consists of dichotomous charts that also include longer and shorter text segments. These dichotomous charts and accompanying texts focus mainly on natural philosophy and include discussion -- contained pages A through O -- of incorporeal things, celestial heavens, stars, the four elements (fire, air, water, and earth), inanimate 'corporeal things (e.g., stones, metals), plants (e.g., roots, herbage, fruits, trees), beasts (e.g., fish, birds, mammals), the human being considered with respect to his/her component parts, and the human being considered as a whole. Captions placed above selected segments of these dichotomous tables briefly summarize the content of those segments; this content is

also supplemented by texts that are placed below -- and linked to -- other segments of these same dichotomous tables.

(...)

Table C (I.-VI.) summarizes the content of the dichotomous tables that together serve to constitute the bulk of his own *Theatrum universitatis rerum*. Its principal subject-matter is *universitas rerum*, which Mylaeus describes as 1. that variety of all things to be found in nature and 2. the unity, harmony, and consensus brought to this diversity and discord (through God). In the *Theatrum universitatis rerum*, Mylaeus notes (I. of Table C) that "the universe of things" (*universitas rerum*) consists of five components without clearly listing what they are. These five components, however, clearly correspond to the titles to the five "Books" (*libri*) contained within the 1551 edition of Mylaeus's treatise on historiography (Table B): 1. *De natura*, 2. *De prudentia*, 3. *De principatu (principatus)*, 4. *De sapientia*, and 5. *De literatura*.

In the *Theatrum universitatis rerum*, these five components are paired with two distinct categories of nature. The first (*natura ipsa*) corresponds directly to *natura*; the second (*natura altera*) comprises *prudentia*, *principatus*, *sapientia*, and *literatura*. The terms "nature" (*natura*) and "natural" (*naturalis*) were used in a multitude of ways within philosophical writings during the sixteenth century; the prominence which Mylaeus gives to these two uses of the term nature in this broadsheet was probably less common. He describes both *natura ipsa* and *natura altera* at some length, and states that the latter is the "imitator, assistant, and vicar" (*imitatrix, adiunatrix, & vicaria*) of the former.' On the basis of Mylaeus's description of *natura altera*, it could be understood as equivalent to -- or: roughly equivalent to -- human nature. Humans are made -- by virtue of the goodness of "that same superior, providing, and ingenious nature" (i.e., God) -- with a body that empowers us to act and a mind that empowers us to contemplate." (pp. 244-245, notes omitted)

(*) Christophorus Mylaeus, *Theatrum universitatis rerum*. Basileae: Ex officina Johannis Oporini, 1557 mense Martio. The

only known extant copy is owned by the Bayerische Staatsbibliothek Munchen and has the call number 20 Enc. 19m / Res [a digital copy is now available at the Münchener Digitalisierungszentrum (MDZ)].

15. ———. 2008. "Die Debatte um Frauen und *Gender* in der Schulphilosophie des 16. und 17. Jahrhunderts. Der Fall Clemens Timpler (1563/4-1624)." In *Heißer Streit und kalte Ordnung. Epochen der "Querelles des femmes" zwischen Mittelalter und Gegenwart*, edited by Hassauer, Friederike, 206-217. Göttingen: Wallstein Verlag.

[The Debate on Women and Gender in Sixteenth and Seventeenth Century Academic Philosophy: The Case of Clemens Timpler (1563/4-1624)].

"Philosophie wurde im 16. und 17. Jahrhundert an Schulen und Universitäten in ganz Europa gelehrt. In den einzelnen akademischen Institutionen verstand man darunter das Studium einiger oder aller der folgenden wissenschaftlichen Disziplinen: Metaphysik, Physik, Mathematik, Ethik, Familienleben (*oeconomica*), Politik, Logik, Rhetorik, Grammatik, Poetik und Geschichte. (1) Im Rahmen jeder dieser Disziplinen wurde ein breites Spektrum an verschiedenen Themen mehr oder minder eingehend erörtert. Die meisten philosophischen Texte, die in diesen zwei Jahrhunderten – sowohl druckschriftlich wie manuskriptschriftlich – zirkulierten, entstanden in Verbindung mit der genannten akademischen Lehre.

Zwei eng miteinander verknüpfte Themen werden in diesem Artikel von besonderem Interesse sein: Frauen und Gender. Sie werden in den veröffentlichten Schriften eines in dieser Epoche tätigen Philosophielehrers erörtert: Clemens Timpler (1663/4-1624). (2)" (p. 205)

(...)

"Es wurde erwähnt, daß einige von Timplers Ansichten über Frauen auch von anderen akademischen Philosophen des 16. und 17. Jahrhunderts vertreten wurden.(53) Timpler scheint zu einer großen Gruppe jener Philosophen gehört zu haben, deren

Ansichten über Frauen vielleicht am genauesten als Mittelgröße zwischen zwei Extremen beschrieben werden können. Timpler hätte sich sicherlich nicht der Meinung angeschlossen, daß Frauen keine Menschen seien (54) – eine Auffassung, die im Zeitraum zwischen 1500-1700 einige Anhänger zu haben schien. Timpler hätte ebensowenig die Meinung akzeptiert, daß Frauen keine moralischen Tugenden hätten. (55) Gleichwohl wäre er wohl kaum so weit gegangen, in seinen Schriften den Frauen ausführliches Lob zu spenden.⁵⁶ Eine eingehendere Untersuchung des Konzepts von ›Frauen und Gender‹ innerhalb einer großen Anzahl philosophischer Werke des 16. und 17. Jahrhunderts werden vonnöten sein, sollen Timplers Ansichten zu diesem Thema präziser in einen größeren Zusammenhang gestellt werden." (p. 216)

Bibliography of Joseph S. Freedman on Philosophy in Central Europe (1500-1700): Third Part

Articles

1. Freedman, Joseph S. 2009. "Necessity, Contingency, Impossibility, Possibility, and Modal Enunciations within the Writings of Clemens Timpler (1563/4-1624)." In *Spätrenaissance-Philosophie in Deutschland 1570-1650. Entwürfe zwischen Humanismus und Konfessionalisierung, okkulten Traditionen und Schulmetaphysik*, edited by Mulsow, Martin, 293-318. Berlin: Walter de Gruyter.

"The four modal concepts of necessity, contingency, possibility, and impossibility are examined within Timpler's textbook on metaphysics. Section 8 of Timpler's collection of philosophical exercises is devoted to discussion of necessity and contingency. Timpler's textbook on logic discusses necessary and contingent formal enunciations and also presents brief treatment of the concept of modality itself.

In discussing modal concepts and modality Timpler cites a variety of sources. Most frequently cited are Aristotle, Sacred Scripture, "scholastics" (*scholastici*), Franciscus Piccolomineus (1520-1604), Francisco Suárez (1548-1617), and Jacob Zabarella (1533-1589). Timpler's discussions of modal concepts also include citations of other authorities, including Cicero, St. Augustine of Hippo, Thomas Aquinas, John Duns Scotus, Averroes, Chrysostomus Javellus, Julius Caesar Scaliger, Benedictus Pererius (c. 1535-1610), Petrus Ramus (1515-1572), and Bartholomew Keckermann (d. 1609). In the

case of some of the questions (*quaestiones*) and problems (*problemata*) contained in Timpler's writings pertaining to modal concepts, however, no sources are cited at all.

With regard to Timpler's citations of sources the following two points should be mentioned. First Timpler may have relied on some authorities more heavily than his infrequent citations of them would suggest. And second, Timpler was usually quite eclectic in his use of such authorities. In many cases for example, when arguing in his textbook on metaphysics that something is possible which nonetheless never was nor will be - Timpler uses Aristotle in order to support his own view. Yet when arguing that absolute necessity does not conflict with free will, Timpler cites several passages from Aristotle to the contrary; yet Timpler concludes that Aristotle's testimony is not sufficient in this case. In his textbook on metaphysics, Timpler argues that Jacob Zabarella incorrectly defines necessary and contingent things; in doing so, Timpler notes that Zabarella misinterprets Aristotle. On the other hand, Timpler agrees with Zabarella's distinction between that which is possible and that which is absolutely necessary.

Timpler appears to have regarded himself primarily as a metaphysician, and he makes metaphysics central to his thought. Most of Timpler's views on modality are elucidated within his textbook on metaphysics. The most basic ontological components of this latter textbook are diagrammed in Table A1." (pp. 295-296).

2. ———. 2009. "The Godfather of Ontology? Clemens Timpler, "All that is Intelligible", Academic Disciplines during the Late 16th and Early 17th Centuries, and Some Possible Ramifications for the Use of Ontology in our Time." *Quaestio. Yearbook of the History of Metaphysics* no. 9:3-40.

Paper read at the International Conference *Origin and Development of Modern Ontology*, held at the Università di Bari (Italy) 15-17 May 2008.

"The first known mention of the term ontology (*ontologia*) occurs in a short encyclopedic treatise – within the section therein that examines metaphysics – first published by Jacob

Lorhard in the year 1606 (1). Lorhard's discussion of metaphysics – which he equates with ontology – is excerpted directly from a textbook on metaphysics first published by Clemens Timpler in the year 1604 (2). What was (and: is) the significance of this new concept, and what part did the metaphysics of Timpler play in its introduction? This article will endeavor to place possible answers to these questions into the following four broader contexts: 1) the scope of academic disciplines taught during the late sixteenth and early seventeenth centuries; 2) concepts that could/should be considered as being ontologically basic/important – and those academic disciplines which discussed them – during the late sixteenth and early seventeenth centuries; 3) the emergence of encyclopedic academic writings and the concept of «All that is Intelligible» (*omne intelligibile*) during the early seventeenth century; 4) ontology as understood in the early seventeenth century as well as some potential applications of ontology in our time. This contextual material includes philosophical texts and curricular information with a primary (but not exclusive) focus on Central Europe." (p. 3)

(1) J. LORHARDUS, *Ogdoas scholastica: continens diagraphen typicam artium: grammatices latinae, grammatices graecae, logices, rhetorices, astronomices, ethices, physices, metaphysices, seu ontologiae*, Apud Georgium Straub, Sangalli 1606 [Halle ULB: Gc 6]. Concerning this work by Jacob Lorhard, refer to the following doctoral dissertation (Department of Philosophy, University of Bari, Italy): M. LAMANNA, *La nascita dell'ontologia. L'opera metafisica di Rudolph Göckel (1547-1628)*, Dipartimento di Filosofia - Università degli Studi di Bari, 2008 [now published: Hildesheim: Georg Olms, 2013]. Also refer to the following web site: www.formalontology.it [now moved to www.ontology.co].

(2) C. TIMPLERUS, *Metaphysicae systema methodicum*, Excudebat Theoph[ilus] Caesar, Steinfurti 1604 [Marburg UB: XIV b 100]. The following additional imprints of this textbook are extant (listed here by place and date of publication): Lich 1604, Hanau 1606, Frankfurt a.M. 1607, Marburg 1607, Hanau 1608, Frankfurt a.M. 1612, Hanau 1612, and Hanau 1616.

Timpler's short treatise on the liberal arts (*Technologia*) was included with all of these extant imprints from the year 1606 onwards. In this article, the

1616 imprint will be cited: C. TIMPLERUS, *Metaphysicae systema methodicum [...] in principio accessit eius technologia; hoc est tractatus generalis et utilissimus de natura et differentiis artium liberalium*, Apud Petrum Antonium, Hanoviae 1616 [Freiburg/Br. UB: B 2272 bi]. A full bibliography of all of the imprints of all of Timpler's extant published writings is given in J.S. FREEDMAN, *European Academic Philosophy in the Late Sixteenth and Early Seventeenth Centuries: The Life, Significance, and Philosophy of Clemens Timpler, 1563/64-1624*, 2 vols., Olms, Hildesheim-Zürich-New York 1988 («Studien und Materialien zur Geschichte der Philosophie», 27), vol. 2, pp. 740-768.

3. ———. 2009. "A Complex and Largely Unstudied Concept: The History of "Scientific Method" during the Early Modern Period and its Relevance for K-12 Education Today." In *2006 -2007 Proceedings of the Society for the Philosophical Study of Education*, edited by Helfer, Jason, 111-126. Bloomington: AuthorHouse.

"Scientific method appears to have evolved as a sub-category of the concept of method. Method (*methodus*) began to be discussed as an independent concept -- mostly in writings by Protestant authors -- from about the year 1550 onwards.(3)

Jacobus Zabarella (1533-1589), a professor at the University of Padua, uses the term scientific method (*methodus scientifica*) within his treatise *De methodis*, which appeared in print by no later than the year 1578; it is possible that other sixteenth-century authors mentioned this term as well.(4)

The first known work published specifically on the subject-matter of scientific method appeared in the year 1606.(5) Its author, Joannes Bellarinus, was an Italian, Roman Catholic cleric whose writings -- first published during the late sixteenth and early seventeenth-centuries -- were largely theological in content.(6)" (pp. 111-112)

(2) Tens of thousands of academic writings from the sixteenth, seventeenth, and eighteenth centuries (most of which were written in Latin) are extant -- in published and in manuscript form -- at libraries in and beyond Europe. Most of these writings have not been used beyond the eighteenth century. Rare book holdings in European libraries are not completely accessible via online catalogs. Research done in connection with this article included extensive searches for writings on the subject-matter of scientific method; it is possible, however, that additional extant writings on this same subject-matter will be located at some later date.

(3) The first published work -- or one of the first published works -- devoted specifically to the concept of method is Jodocus Willichius, *De methodo omnium artium et disciplinarum informanda opusculum, una cum muftis utilibus et necessarijs exemplis* (Francofordii ad Viadrum: Johannes Eichorn, 1550); I have used the copy owned by the Berlin (Germany) Prussian State Library with the call number A 1573 (nr. 1); the best general survey concerning the concept of method during this period remains Neal Ward Gilbert, *Renaissance Concepts of Method* (New York: Columbia University Press, 1960). Also refer to the following two discussions of method: Joseph S. Freedman, "The Diffusion of the Writings of Petrus Ramus in Central Europe, c.1570-c.1630," *Renaissance Quarterly* 46, no. 1 (Spring 1993): 98-152 (107-111); Joseph S. Freedman, "Encyclopedic Philosophical Writings in Central Europe during the High and Late Renaissance (c. 1500 - c. 1700)," *Archiv for Begriffsgeschichte* 37 (1994): 212-256 (221-223, 245-246). These two articles have been reprinted in Joseph S. Freedman, *Philosophy and the Arts in Central Europe, 1500-1700* (Aldershot et al.: Ashgate/Variorum, 1999), IV and V, respectively. Also see Joseph S. Freedman, "A Neglected Treatise on Scientific Method (methodus scientifica) published by Joannes Bellarinus (1606)," Jorg Schonert und Friedrich Vollhardt, eds., *Geschichte der Hermeneutik und die Methodik der textinterpretierenden Disziplinen*, *Historia Hermeneutica*.

Series Studia 1 (Berlin, New York: de Gruyter, 2005): 43-82 (43-45, 65-66).

(4)... duae igitur scientificae methodi oriuntur, non plures, nec pauciores, altera per excellentiam demonstrativa methodus dicitur ... altera ... resolutiva nominatur ... , " Jacobus Zabarella, *Opera logica ... affixa praefatio Joannis Ludovici Hawenreuteri ... editio tertia* (Coloniae: Sumptibus Lazari Zetzneri, 1597), reprinted with an edition by Wilhelm Risse (Hildesheim, Georg Olms, 1966), cols. 133-334 (*De methodis libri quatuor*): 230E, The earliest edition of this work that I have been able to locate is Jacobus Zabarella, *Opera logica* (Venetiis: Apud P. Meietum, 1578); I have used the copy owned by the Duke August Library in Wolfenbiittel (Germany) with the call number H: 0 28. 20 Helmst. Concerning the career and writings of Jacobus Zabarella refer to Charles H. Lohr, "Renaissance Latin Aristotle Commentaries: Authors So-Z," *Renaissance Quarterly* 35, no. 2 (Summer 1982): 164-256 (233-242). Concerning the possibility of finding additional discussions of scientific method by sixteenth-century authors refer to footnote 2 above.

(5) This work is cited in footnote 8 below.

(6) Concerning Joannes Bellarinus and his theological writings refer to the writings listed in Freedman, "Bellarinus" (see footnote 3), p. 47.

(8) 8 Joannes Bellarinus, *Praxis scientiarum, seu methodus scientifica practice considerata, ex Aristotele potissimum accepta* (Mediolani: Apud haer. Pontij & Joan. Baptistam Piccaleum impressores archiep., 1606); I have used the copy owned by Saint Louis University (Missouri) Library with the call number 1606.2 Bellarinus.

4. ——. 2010. "Published academic disputations in the context of other information formats utilized primarily in Central Europe (c. 1550-c. 1700)." In *Disputatio 1200-1800. Form, Funktion und Wirkung eines Leitmediums universitärer Wissenskultur*, edited by Gindhart, Marion and Kundert, Ursula, 89-128. Dordrecht: Springer.

"What is – or: what can be understood to fall under the umbrella of – an academic disputation? An answer to this question can be approached by placing such disputations within the context of other information formats – which could also be referred to in this context as instructional media – that were utilized in academic instruction (held primarily in the German language area of Europe) during the period between 1550 and 1700. (1)

When comparing disputations to other information formats / instructional media the following two general questions arise: 1. What is meant by – and what is included within the context of – information formats / instructional media? 2. To what extent can and/or should disputations be considered to include (a) published disputations as well as (b) disputations that were held orally but concerning the content of which we have relatively little – or no – written information?

The constituent parts of academic instruction during this period can be placed within two broad categories: 1. the presentation of accepted knowledge and doctrines falling within subject-matters belonging to the academic curriculum and 2. academic exercises intended to provide students with basic skills pertaining to that curriculum. Accepted knowledge and doctrines normally were orally delivered to students in the form of lectures. Many of these lectures have survived in written form, either as unpublished manuscripts (as lecture manuscripts and as notes taken by students) or in published form (usually as textbooks). (2) Also extant – both in published and unpublished form – are collections of commonplaces, encyclopaedias, lexicons and other book-length writings generally intended to supplement lectures and published textbooks. (3)" (pp. 89-90)

(1) (...) 1547 is the earliest publication date of any disputation that could be located in the course of research done for this study (and previous studies by this author). Manuscript records of such disputations from the early sixteenth century do exist; two such manuscript collections can be mentioned. Disputations held at the University of Leipzig in partial

fulfilment of the Master of Arts degree from 1512 through 1553 are extant at Leipzig UA: Urkundliche Quellen B 066 (1512–1527), B 067 (1527–1539), B 068 (1540–1553). A collection of public and private disputations held at the University of Heidelberg Faculty of Arts during the years 1537 and 1538 is extant in manuscript form: Bibliotheca Apostolica Vaticana (Vatican Library, Vatican City) Pat. Lat. 201; a film of this collection is available at Saint Louis (Missouri / USA), Vatican Film Library: Film Roll 3638.

One may ask why there do not appear to be any (or: hardly any) published disputations prior to this date. It could be argued that opposition to intricately organized (i.e., »scholastic«) disputations by some (»humanist«) authors active in the late fifteenth and early sixteenth centuries (e.g., Desiderius Erasmus, Juan Luis Vives) served as a factor here, cf. the relevant discussion given in Ku-ming (Kevin) Chang, *From Oral Disputation to Written Text. The Transformation of the Dissertation in Early Modern Europe*, in: *History of Universities* 19 (2004), pp. 129–187 (159–161, 184). The earliest examples of published disputations found here were published in connection with instruction at the University of Königsberg in the late 1540s (see the first title cited within fn. 36 as well as A. in Table 13). It could also be argued that Jesuit academic institutions played a leading role holding published disputations during the second half of the sixteenth century, cf. the following publications: Ulrich G. Leinsle, *Dilinganae disputationes. Der Lehrinhalt der gedruckten Disputationen an der Philosophischen Fakultät der Universität Dillingen 1555–1648*, Regensburg 2006; Gerhard Stalla, *Bibliographie der Ingolstädter Drucker des 16. Jahrhunderts*, Baden-Baden 1977.

(2) Refer to the following article: Ann Blair, *Note-Taking as an Art of Transmission*, in: *Critical Inquiry* 31 (2004), pp. 85–107.

(3) Refer to the following publications (monograph, article, and bibliography): Ann Moss, *Printed Commonplace-Books and the Structuring of Renaissance Thought*, Oxford 1996;

reviewed by Joseph S. Freedman in *Scientia poetica* 2 (1998), pp. 222–242; Joseph S. Freedman, *Encyclopedic Philosophical Writings in Central Europe during the High and Late Renaissance (c. 1500 – c. 1700)*, in: *Archiv für Begriffsgeschichte* 37 (1994), pp. 212–256 as reprinted in Joseph S. Freedman, *Philosophy and the Arts in Central Europe, 1500–1700*. Teaching and Texts at European Schools and Universities during the High and Late Renaissance, Aldershot / Brookfield 1999, VI; Giorgio Tonelli, *A short-title list of subject dictionaries of the sixteenth, seventeenth, and eighteenth centuries as aids to the history of ideas*, London 1971, exp. ed., rev. and annot. by Eugenio Canone, Firenze 2006.

5. ———. 2011. "Religious Confession and Philosophy as Taught at Central European Academic Institutions During the Late 16th and Early 17th Centuries." In *Universität, Religion und Kirchen*, edited by Schwinges, Rainer Christoph, 375-430. Basel: Schwabe.

Veröffentlichungen der Gesellschaft für Universitäts- und Wissenschaftsgeschichte 11.

"To what extent was there a correlation between religious confession and academic (or: <scholastic>) philosophy - that is, philosophy as taught at academic institutions - in Central Europe during the late 16th and early 17th centuries? (1) The meaning of philosophy during this period will be discussed shortly; the term (religious) confession will be examined later. Here <religious confession> is used to refer to the adherents of those religions generally considered dominant in Central Europe during this period, that is, to Reformed Protestants/Calvinists, Lutherans, and Roman Catholics.(2) (p. 375)

(...)

"While metaphysics appears to have had a distinct place within Roman Catholic philosophical curricula (both Jesuit and non-Jesuit) in Central Europe from the mid-sixteenth century onwards, this seems not to have been the case at Protestant schools until near the end of that century (22). Metaphysics is

not mentioned in the 1589 curricular document for the Altdorf Academy summarized in Table D-3 (23). In contradistinction to Ingolstadt and Dillingen curricula (D-1 and D-2), in Altdorf logic and rhetoric were taught within the faculty of philosophy and the arts (α .) as well as within the preparatory grade-levels (classes) 1 and 2 thereto (β .) (24).

The philosophy (arts) curriculum published for the University of Freiburg im Breisgau in the year 1593 (D-4) shows some similarities with Protestant as well as with Jesuit philosophy curricula. As in Jesuit curricula, 1. logic, physics, and metaphysics are emphasized within the philosophy curriculum and 2. rhetoric, poetics (often referred to as *humanitas* in Jesuit curricula), and grammar are emphasized - with grammar at the lower level progressing up to rhetoric - at the elementary level. As in many Protestant curricula, logic appeared both within the philosophy curriculum as well as within the lower level curriculum (a. and y. in D-4) (25)." (pp. 381-382)

(1) The term <scholastic philosophy> is not used here because it can be taken to refer to a relatively small number of academic disciplines (e.g., metaphysics and logic) but not to others (e.g., ethics, poetics, rhetoric, and history). For this reason, the term <academic philosophy> - which is intended to have a broader focus - is utilized in its stead.

(2) Here reference can be made also to general surveys of church history such as Karl Heussi, *Kompendium der Kirchengeschichte*, 12th ed. Tübingen 1960, pp. 268-381 (Reformation und Gegenreformation, 1517-1689) as well as Karl B. Bihlmeyer and Hermann Tüchle, *Church History*, translated from the 17th German edition, Vol. 3, *Modern and Recent Times*, Westminster 1966, pp. 1-206 (First-Period, 1517-1648).

(22) In the case of the Jesuit University of Dillingen, however, Ulrich Leinsle questions the importance of metaphysics in the curriculum there: «Die Metaphysik, oft als «Gipfel und Höhepunkt» der gesamten Philosophie gepriesen, fällt durch eine eher bescheidene und nach außen hin fragmentarisch wirkende Behandlung auf». Ulrich G. Leinsle, *Dilingae*

disputationes. Der Lehrinhalt der gedruckten Disputationen an der philosophischen Fakultät der Universität Dillingen 1555-1648, Regensburg 2006, p. 530.

(23) Ordo sive brevis descriptio praelectionum et exercitationum academiae Altorphinae (Altorphii: Apud Christophorum Lochnerum et Johannem Hofmannum typographos academicos, 1589), fol. A4v-B2v, (Philosophicae et artium facultatis), B3v-B4r [Wolfenbüttel HAB: 202 Quodl. (7)]. In this Altdorf Academy curriculum, the philosophy faculty is synonymous with the arts faculty; concerning the gradual renaming of Central European arts faculties as philosophy faculties refer to back to footnote 19. Some authors placed selected arts disciplines at a lower level than selected philosophical disciplines but considered other arts disciplines as part of philosophy; for example, refer to Matthias Flacius, *Opus logicum in organon Aristotelis Stagiritae ... constans libris XIII* (Francoforti: Ex officina typo-graphica Nicolai Bassaei, 1593), pp. 1 and 4 [Wolfenbüttel HAB: O 75a 8° Helmst.]; also refer to the classifications of philosophy and the arts given - in 1610 and 1611, respectively - by Georgius Clainerus SJ as outlined in Joseph S. Freedman, *Aristotle and the Content of Philosophy Instruction at Central European Schools and Universities during the Reformation Era (1500-1650)*, pp. 215, 237.

(24) In the 1589 Altdorf curriculum, the Professor of Latin also taught rhetoric and history, while the Professor of Greek also taught poetics; see Ordo... Altorphinae (footnote 23), fol. B1r.

(25) Refer to Tables D-3, D-6, and D-7 as well as the following article: Joseph S. Freedman, The Diffusion of the Writings of Petrus Ramus in Central Europe, c. 1570-C.1630, in: *Renaissance Quarterly* 46/1 (1993), pp. 98-152; this article has been reprinted in Freedman, *Philosophy and the Arts* (footnote 3): IV. As mentioned earlier (when discussing Tables B-1 through B-4), <philosophy> is understood in the context of this article to include all academic disciplines falling within the domains of theoretical philosophy, practical philosophy, and philology, comprising all of the subject-matters at all levels of

the Freiburg Arts Faculty curriculum as summarized in Table D-4.

6. ———. 2012. "Johann Kahl's Collection of Writings on Practical Philosophy (1595) in Context." In *Philosophie der Reformierten*, edited by Frank, Günther and Selderhuis, Herman J., 241-298. Stuttgart-Bad Cannstat: Frommann-Holzboog.

PP = Johann Kahl, *Propaideia Practica* (1595).

"Johann Kahl (Joannes Calvinus or Calvus) is best known as an author of legal treatises. (1) His Law Dictionary – first published in 1600 with the title »Lexicon juridicum« – continued to be republished into the second half of the 17th century. (2)

He also authored two treatises and two orations pertaining largely to practical philosophy, all of which were published in the year 1595. (3) These two treatises and two orations – as well as their relevance for jurisprudence and to Kahl's own commitment to Christianity – serve as the focus of this study." (p. 241)

(...)

"In commenting Kahl's writings on practical philosophy, the following five general Conclusions can be ventured. First, logic and Christianity are both given substantial emphasis – and also are closely interrelated – within Kahl's writings. (111) Kahl

specifically emphasizes the importance of logic for all academic disciplines, and notes its particular importance for jurisprudence.(112) Kahl uses logic – as evident of his use of »method« (methodus), »logical analysis« (analysis logica), and other logical

concepts (e.g., causality) – throughout his writings.(113) And Kahl refers to prudence, the arts, intelligence, science, and wisdom as »logical« virtues(s) (virtus logica). (114)"

(...)

"Second, it has already been noted that Clemens Timpler utilized – and may have been the first person to introduce (in

the year 1604) – the concept of »morality« (*honestas*); for Timpler, *honestas* is goodness that is normative »in and through itself« (*in se et per se*) within a specific social environment – as opposed to moral (i.e., universally valid) goodness. (122) Kahl did not make this distinction, yet it would appear that some components thereof can be ascertained within several statements found within his writings. In his discussion of the virtue of beneficence (when considered as a sub-category of virtue), Kahl notes the nothing is more pleasant and more unifying than the »similarity of good morals« (*morum similitudo bonorum*) among family members, citizens, and people (generally speaking). (123)

(...)

Third, Kahl appears to place substantial emphasis on the subject-matter of war. (125)

He regards it to be of the highest priority for a commonwealth (*respublica*) to keep intact the right to wage war. (126) In the synopsis (*Synopsis politices brevissima*) that precedes the text of Kahl's Commentary on Aristotle's »Politics« war and peace is mentioned within one of his three definitions of the commonwealth. (127)"

(...)

"Fourth, one can ascertain an independent outlook within Kahl's philosophical writings. Kahl's use of logical analysis provides him with a mechanism that (for example) he can use to organize commentary on Aristotle and Cicero in an independent manner; this also provides contexts for independent statements and judgments. "

(...)

"And fifth, a number of topics discussed – and positions taken – within Kahl's philosophical writings serve as indications not only of his interest in jurisprudence, but also of the importance of the former for the latter. (132)" (pp. 262-267)

(1) Recent literature that mentions Johann Kahl includes the following [Bibliography, G.]: STROHM: *Calvinismus and Recht* [Calvinismus und Recht. Weltanschaulich-konfessionelle Aspekte im Werk reformierter Juristen in der Frühen Neuzeit, Tübingen 2008 (Spätmittelalter, Humanismus, Reformation. Studies in the Late Middle Ages, Humanism, and the Reformation 42).] as well as the articles authored by MAHLMANN/STROHM and ZWIERLEIN within STROHM/FREEDMAN/SELDERHUIS (Eds.): *Späthumanismus [und reformierte Konfession. Theologie, Jurisprudenz und Philosophie in Heidelberg an der Wende zum 17. Jh . Spätmittelalter und Reformation, Vol. 31, Tübingen 2006.]*

(2) Refer to the editions [Bibliography, D.] published in 1600, 1610, 1611, 1619, 1664, 1665, 1670, 1683, 1734, and 1759.

(3) Refer to the citations of these philosophical writings in Table C; in Bibliography [D.] these writings are also cited along with three philosophical disputations – published in 1599, 1600, and 1602 – in which Kahl is listed as the presider thereof.

(111) Kahl sometimes appears to use the terms »theology/theological« and »religion« as synonymous

with Christianity; for example, see PP 71; 77 (and V. in Table E.) as well as PP, 111 (and IV. in Table F). The importance of both logic and Christianity in Kahl's »Themis Hebraeo-Romana [...] Iurisprudencia Mosaica [...] methodice digesta« (1595) is discussed – with the aid of extensive quotations from that legal treatise – in STROHM: *Calvinismus und Recht* [Bibliography, G.] 136 – 139.

(112) »Dialectica tam necessaria est [...] nedum in Iurisprudencia, inter omnes satis vaga & dispersa, evaserit, nisi forte peculiare ab ipsa natura lumen atque acumen logicum singulari Dei benedictione sortitus fuerit. Atque hinc plures Topica legalia, in usum Iuris studiosorum iam pridem exhibuerunt.« PP, 5. One additional indication of Kahl's emphasis on the importance of logic for jurisprudence is evident from the title of his »Jurisprudentiae Romanae [...]

synopsis methodica« (1595) [Bibliography, G.] as well as from the title of his treatise cited in footnote 111 above.

(113) For example, see PP, 2 – 73; 77; 97; 104 ff; 107 f (as quoted in III. C. of Table F); 128; 131(– 147);

168 and II. in Table G; also see PP3, fol.*5 r, lines 1 ff; fol.*5 v, lines 2 – 24, 44 f.

(114) See PP, 111 (and IV. in Table F)

(122) Refer to footnotes 109 and 110, to the corresponding passages in the text of this article, and to Table P.

(123) PP, 136 f. Also see footnote 56 and the corresponding passage in the text of this article.

(125) Kahl, of course, was not alone in discussing war within academic writings during this period; for example, two editions of a treatise on war by Albericus GENTILIS (Alberico Gentili) are cited in E. of the Bibliography. Philosophical writings devoted to – or containing sections on politics normally devoted some attention to the subject-matter of war; refer to the following writings (cited in E. of the Bibliography): FREIGIUS: *Quaestiones oeconomicae et politicae*, 151; HOCKENHAFFEN: *Axiomata disciplinae moralis*, 150 – 153 (nos. 38 – 63); KIRCHNERUS/VELBRUGGEN: *Philosophiae practicae synopsis*, fol. D2 v – D4 r (nos. 160 – 175); TIMPLERUS: *Philosophiae practicae [...] politicam*, 454 – 506.

(126) In this context, Kahl also notes that war should be waged in accordance with the following guide lines: »In respublica autem maxime quoque conservanda sunt iura belli (quod suscipiendum est eam solum ob causam, ut sine iniuria in pace vivatur) nec post victoriam crudeliter tractandi devicti, verum tuendi, ait.« PP, 135 f.

(127) »Respublica vero seu politia est ad populi legitime consociati salutem iuste facta ordinatio: quicumque demum casus, seu pacis, seu belli, inciderit.« PP3, fol.*6 r. All three of Kahl's definitions of *respublica* are quoted within footnote 74.

(132) It has already been noted that (i.) Kahl's interest in jurisprudence probably began prior to his return to Heidelberg in 1586 and (ii.) he began to teach jurisprudence and publish legal writings well before he became a professor of jurisprudence in 1605; refer back to footnotes 16 and 17 as well as to the corresponding passages in the text of this article. An introductory section in one of Kahl's treatises on jurisprudence discusses the importance of philosophy (including logic and rhetoric) for the study of jurisprudence: CALVINUS, *De jurisprudentiae Romanae studio recte conformando* (1600) [Bibliography, D.] 1 – 48.

7. ———. 2012. "Johann Heinrich Alsted's, 'Philosophia digne restituta' (1612). Ein kurzer Überblick über Inhalt und Bedeutung des Werkes." *Nassauische Annalen* no. 123.

Johann Heinrich Alsted's *Philosophia digne restituta* (1612): A Brief Overview at Its Contents and Significance.

8. ———. 2012. "Georg Liebler's Textbook on Physics (1561) in the Context of His Academic Career." In *Die Universität Tübingen zwischen Scholastik und Humanismus*, edited by Lorenz, Sönke, Köpf, Ulrich, Freedman, Joseph S. and Bauer, Dieter R., 249-296. Ostfildern: Thorbecke.

Tübingen Bausteine zur Landesgeschichte 20.

"Instruction in the academic discipline of physics during the sixteenth century has received relatively little attention. (1) The textbook on physics first published by Georg Liebler in 1561 – and subsequently republished in expanded form in the year 1573 – appears to have been widely disseminated during the last four decades of the sixteenth century. (2)

The 1561 edition of Liebler's textbook – in the context of his own career and of writings published by his own contemporaries – serves as the focus of the current study." (p. 249)

(...)

"Among the most difficult concepts mentioned within academic writings on physics – and also within other philosophical subject matters – during the sixteenth and early seventeenth centuries is the concept of nature. The terms “nature” (*natura*) and “natural” (*naturalis*) had a wide range of different meanings within individual academic writings during this period; individual authors sometimes did not explain all, some, or any of the ways in which they used these two terms.

In a broadsheet largely devoted to natural philosophy that was published in the year 1557 by Christophorus Mylaeus (Table I), a central distinction is made between “nature itself” (*natura ipsa*) and *natura altera*. (46) The latter is apparently equivalent (or: roughly equivalent) to human nature; the former – which is not directly defined or described – serves as the subject matter of his broadsheet. However, the terms nature and natural appear to have been utilized in (at least) eleven additional ways by Mylaeus in this broadsheet (C in Table I). (47)"

(...)

"The following general comments concerning the 1561 edition of Liebler’s textbook on physics can be ventured here. First, Liebler appears to adopt a rather rigid disciplinary approach in his textbook on physics; he appears to avoid discussion of issues and questions that are interdisciplinary in scope.¹²³ Second, he seems constrained by – or at least conscious of – the need to avoid too much discussion of detailed subject matter in his textbook.¹²⁴ And third, it would appear that he sometimes struggles with the task of writing his textbook, which – as mentioned earlier – could be described as not being particularly well organized. (125)

Any real or perceived problems with Liebler’s textbook on physics notwithstanding, his textbook was republished – in its original or expanded version – at least ten times following its initial publication in the year 1561. (126) And the expanded version of this textbook – published for the first time in 1573 – may have been the only extant textbook containing extensive commentary on the physics of Petrus Ramus. (127) An

examination of this expanded, 1573 version of Liebler's textbook on physics, however, falls beyond the scope of the present study."

(1) The 1561 edition of Liebler's textbook on physics (*Epitome philosophiae naturalis*) will be referred to here as Liebler (1561).

This edition of Liebler's textbook on physics contains two separate paginations. The first pagination comprises the title page, the dedication, and a page of verse; the second pagination (pages 1 through 301) contains the actual text. In citing the text, the appropriate page numbers (without reference to the fact that they are contained within the second pagination) are given.

A copy of this 1561 edition owned by the Bayerische Staatsbibliothek München has been used to prepare the text, footnotes, and tables of this article; a copy hereof owned by the Universitätsbibliothek Tübingen is the source of the four pages from that same work that have been reproduced as illustrations in this article.

Refer to the following literature (cited in full in G of the Bibliography): Des Chene [Dennis. *Physiologia: Natural Philosophy in late Aristotelian and Cartesian Thought*. Ithaca, New York [et alia]: Cornell Univ. Press,] (1996); Freedman, "Professionalization" (2001); Freedman, "Mylaeus" (2008); Grafton and Siriasi [eds., *Natural particulars : nature and the disciplines in Renaissance Europe*. Dibner Institute studies in the history of science and technology. Cambridge, Mass.: MIT Press,] (1999); Leinsle [Ulrich G. *Dilinganae disputationes. Der Lehrinhalt der gedruckten Disputationen an der Philosophischen Fakultät der Universität Dillingen, 1555–1648*. Jesuitica. Vol. 11. Regensburg: Schnell und Steiner,] (2006).

(2) Refer to a. A.-B. in Table B as well as A. 1.–2. in the Bibliography.

(46) Mylaeus, *Theatrum universitatis rerum* (1557) [Bibliography, F] as cited fully in Freedman, "Mylaeus" [Bibliography, G], p. 245, footnote 29; the relevant texts from this broadsheet are quoted there on pages 302–312. The 1551

edition of Christophorus Mylaeus's treatise on historiography consists of five "Books" (libri); Book 1 is devoted to *natura ipsa* (which also is the subject matter of his *Theatrum universitatis rerum*). *Natura altera* is the focus of the remaining four Books; Books 2, 3, 4, and 5 discuss *prudentia, principatus, sapientia, and literatura*, respectively. See Mylaeus, *De scribenda universitatis scribendae* (1551) [Bibliography, F]. Concerning *natura altera* also refer to relevant texts as discussed, cited, and quoted in Freedman, "Mylaeus" [Bibliography, G], pp. 245, 282 (Table B), 312 (Table L, nos. 48–51).

(47) Mylaeus, *Theatrum universitatis rerum* (1557) [Bibliography, F] as cited fully in Freedman, "Mylaeus" [Bibliography, G], pp. 268–269, footnote 182.

(125) The following passage would appear to suggest that Liebler felt overwhelmed when attempting to discuss simple natural bodies: "Hactenus de primis et simplicibus naturae corporibus disservimus: nunc ad ea quae ex illis componuntur, nostra sese convertet oratio: ... Quorum omnium causas brevissime, sequentes vestigia Aristotelis, explicare conabimur." Liebler (1561), p. 253. A very brief, single-page table of contents was included in the 1563 imprint (and all subsequent extant imprints) of Liebler's textbook on physics; a (longer) subject-index accompanied all extant imprints thereof from 1586 onwards; refer to a. in Table B as well as to A. 1.–2. in the Bibliography.

(126) See a. in Table B as well as A. 1.–2. in the Bibliography.

(127) The writings – mainly on logic, rhetoric, grammar, geometry, and arithmetic – of Petrus Ramus and Omer Talon appear to have spread most widely in Central Europe from 1570 onwards; refer to the documentation and discussion given in the following article: Freedman, "The Diffusion of the Writings of Petrus Ramus" [Bibliography, G].

9. ———. 2012. "Philosophy Instruction, the Philosophy Concept, and Philosophy Disputations Published at the University of Ingolstadt, c. 1550 - c. 1650." In *Dichtung - Gelehrsamkeit - Disputationskultur. Festschrift für Hanspeter Marti zum 65.*

Geburtstag , edited by Sdzuj, Reimund B., Seidel, Robert and Zegowitz, Bernd. Köln, Wien, und Weimar: Böhlau.

"In the year 1981, Hanspeter Marti published an article on the value of published philosophical disputations (that is, disputations published in connection with philosophy instruction at academic institutions) for research on topics pertaining to Early Modern European studies. (2) The following year, this article was followed by his publication of an extensive bibliography of philosophical disputations published in Central Europe between the years 1660 and 1750. (3) His bibliography has been widely utilized in the three decades following its publication; in part due to the publication thereof, increased attention has also been accorded to disputations as an important academic genre. (4)

The present study is focused on philosophical disputations published in Ingolstadt – in connection with academic instruction held at the University there – during the hundred-year period between c. 1550 and c. 1650. Here, provisional answers will be given to the following five questions. First, what was the scope of philosophy instruction at the University of Ingolstadt during the period between c. 1550 and c. 1650? Second, how did this scope evolve during that same period? Third, what were those subject-matters falling within the parameters of philosophy, the sciences, and the arts at the University of Ingolstadt during the period? Fourth, what can be said concerning the content of this Ingolstadt philosophy instruction? And fifth, to what extent can published philosophical disputations help provide answers to these first four questions?

One additional, more general question must also be posed here. During the 16th and 17th centuries, which academic subject-matters were generally understood to fall within the parameters of European academic philosophy? An answer can be ventured here on the basis of discussions of this same matter found in literally hundreds of philosophical writings published during these two centuries. (5)" (pp. 316-317)

(2) Marti: *Der wissenschaftsgeschichtliche Dokumentationswert* (1981) as cited in full in the Bibliography [In: *Nouvelles de la République des Lettres* 1 (1981): 117–132.]. „Philosophical Disputations“ here refer to philosophical disputations and dissertations published in connection with academic instruction. No attempt will be made here to distinguish between disputations and dissertations; refer to Hanspeter Marti’s articles on the same in: *Historisches Wörterbuch der Rhetorik* (1994) as cited in the Bibliography. [Tübingen: Niemeyer]

(3) Marti: *Philosophische Dissertationen* (1982) as cited in the Bibliography. [*Philosophische Dissertationen deutscher Universitäten 1660–1750. Eine Auswahlbibliographie*, unter Mitarbeit von Karin Marti. München: K.G. Saur, 1982.]

(4) Refer to Freedman: *Published academic disputations in the context of other information formats used primarily in Central Europe (c. 1550–c.1700)* (2010) and Freedman: *Disputations in Europe in the Early Modern Period* (2005); these two articles were published in volumes (cited here in the Bibliography) that are devoted to the subject-matter of disputations (and dissertations).

(5) Freedman: *Classifications* (1994) discusses classifications of philosophy, the sciences, and the arts during the 16th and the 17th centuries.

10. ———. 2012. "Central European Academic Text on Preaching and Sermons during the Final Quarter of the Seventeenth Century: In the Service of Pietist Preaching?" 11. ———. 2014. "The History of ‘Scientific Method’ (methodus scientifica) in the Early Modern Period and its Relevance for School-Level and University-Level Instruction in Our Time." In

Renaissance Now! The Value of the Renaissance Past in Contemporary Culture , edited by Dooley, Brendan. Bern: Peter Lang.

"Francis Bacon (1561-1626) is often associated with the concept of scientific method (*methodus scientifica*); however, it cannot be documented that he directly refers to it within his writings. (1) Yet it does appear that this concept began to be mentioned and discussed no later than during Bacon's lifetime. (2)

Scientific method was discussed by what appears to have been a relatively small number of authors during the sixteenth, seventeenth, and eighteenth centuries. (3) Yet these early discussions of this concept are relevant to present day debates concerning the utilization of the scientific method when placed in the context of academic instruction at the school - and university - levels.

Scientific method appears to have its origin as a sub-category of the concept of method. Method [*methodus*] apparently began to be discussed as an independent concept from about the year 1550 onwards. (4) Textbooks on logic frequently (if not usually) contained a chapter or a section on method; monographic treatises and disputations devoted to this same concept are also extant. Method was often considered to have (at least) the two basic sub-categories of synthetic method and analytic method.

The concept of scientific method itself is mentioned no later than in the year 1578, when Jacob Zabarella briefly discusses it within his published treatise on method [*De methodis*]. (7) According to Zabarella, scientific method has two component parts, one of which is 'synthetic' [*demonstrativa*] and the other 'analytic' [*resolutiva*]. It is possible that other sixteenth-century authors - prior to, in, or after the year 1578 - utilized this concept as well. (9)

The first known work published specifically on the subject-matter of scientific method appeared in the year 1606. Its author, Joannes Bellarinus, was an Italian, Roman Catholic cleric whose writings - first published during the late sixteenth and early seventeenth centuries - were largely theological in

content. (10) He published a large work which included a compilation of Tridentine doctrine and Roman Catholic catechism; that work apparently was first published in 1607 and went through at least twelve editions, including one from the year 1877. His treatise on scientific method, on the other hand, appears to only have been republished once (in 1630); very few copies of the 1606 edition of this treatise appear to have survived. (11)

Bellarinus's treatise on scientific method, which was first published in Milan in 1606, has the following title: *Praxis scientiarum, seu methodus scientifica practicae considerata. Ex Aristotele potissimum accepta* . It consists of a dedication, a detailed table of contents, a short index, and the text. The text consists of an introduction and four 'Books' [*libri*]. In the introduction, Bellarinus equates scientific method [*methodus scientifica*] with the practice of the sciences [*praxis scientiarum*]. (13)" (pp. 287-292?

(...)

"One can conclude by making the following two general points. First, the scientific method can be utilized in elementary level instruction in order to teach logical ways of solving problems, analytical / critical thinking, and deductive reasoning, that is, general skills that transcend (natural) science instruction proper. Analogously late 16th-, 17th- and 18th-century discussions of scientific method are closely linked to the domain of logic.

They also focus on 'science' [*scientia*] insofar as science is understood to comprise a wide range of academic disciplines beyond [natural] science. (101)

One could make the case that the manner in which scientific method has often been utilized in instruction at the elementary school level over the past twenty-five years has its historical precedents dating back to the earliest known published discussions of this concept.

And second, while one might argue that logical thinking and deductive reasoning - both of which can be linked to the

scientific method - do not themselves directly result in discovery; they also are not without relevance thereto.

Louis Pasteur's assertion, 'Chance only Favours the Prepared Mind' summarizes this point. Many of our simple, routine tasks - which we sometimes do so regularly that we are no longer conscious of them - are actions informed in great part by logic, thereby providing basic parameters for our more complex undertakings. We generally utilize methods - some of which we may or may not regard (or label) as scientific - in order to increase our chances of making discoveries and/or reaching other goals.

In the context of research, we endeavour to employ rational strategies for what we might refer to when we use constructs such as 'the systematic search for chance finds'." (pp. 314-316; some notes omitted)

(1) While Chapter 2. of Book 6 of Bacon's *De dignitate & augmentis scientiarum* is devoted to the subject-matter of method, he does not mention scientific method as such; see Francis Bacon, *Opera Francisci Baronis de Verulamio [... tomus primus: qui continet de dignitate & augmentis scientiarum libros IX .* (Londini [London]: In officina Joannis Haviland, 1623) [hereafter Bacon (1623)], 284-92.

(...)

At the beginning (135) of Book 3 Chapter 1 of that same work, Bacon divides 'science' [*scientia*] into theology and philosophy; the latter is divided into natural theology [*numen*], natural philosophy [*natura*], and the study of man [*homo*], which includes a range of additional subject-matters beyond theology and natural philosophy; also see pages 141, 144, 145, and 181-2 with regard to Bacon's classification of the subject matters falling within the (broad) scope of science.

(2) Scientific method is apparently not mentioned in any of the three works by Francis Bacon - *The Two Books of Francis Bacon. On the proficence and advancement of learning, divine and humane* (London: Printed [by Thomas Purfott and Thomas Creede] for Henrie Tomes, 1605.) [hereafter Bacon (1605)],

Francis Bacon [=Franciscus de Verulamio], *Instauratio magna*. (Pars secunda, Novum organum.) Apud Joannem Billium typographum regium, 1620. [Oxford, Bodleian Library: Arch. A. c. 5] [hereafter Bacon (1620)], and Bacon (1623) - cited in fn. 1. But here the following point must be noted. The subject-matter of the present study limits itself to those writings where 'scientific method' - and its Latin-language equivalent, *methodus scientifica* - are specifically mentioned. One could argue that a discussion of the history of the scientific method should not be so limited. In that case, however, one would need to find a viable and defensible way of deciding what does and does not fall within the framework of scientific method over a given extended period of time.

(3) This assertion is to be understood with respect to the tens of thousands of academic writings from the sixteenth, seventeenth, and eighteenth centuries (almost all of which were written in Latin) that are extant - in published and in manuscript form - at libraries in and beyond Europe. The overwhelming majority of these writings have not been utilized beyond the eighteenth century (or earlier).

(4) The first published work - or one of the first published works - devoted specifically to the concept of method is Jodocus Willichius, *De methodo omnium artium et disciplinarum informanda opusculum, una cum multis utilibus et necessarijs exemplis*. Francofordii ad Viadrum [Frankfurt/Oder]: Johannes Eichorn, 1550. Berlin SB: A 1573 (nr. 1) [hereafter Willichius, *De methodo* (1550)]. The best general survey concerning the concept of method during this period remains Neal Ward Gilbert, *Renaissance Concepts of Method* (New York: Columbia University Press, 1960). Also refer to the following two discussions of method: Joseph S. Freedman, 'The Diffusion of the Writings of Petrus Ramus in Central Europe, c.1570 - c.1630' *Renaissance Quarterly* 46, no. I (Spring 1993), 98-152: 107-11; Joseph S. Freedman, 'Encyclopedic Philosophical Writings in Central Europe during the High and Late Renaissance (c. 1500-c.1700)', *Archiv für Begriffsgeschichte* 37 (1994), 212-56, 221-3, 245-6. These two articles have been reprinted in Joseph S. Freedman, *Philosophy*

and the Arts in Central Europe, 1500-1700 Variorum Collected Studies Series, CS626 (Aldershot, UK and Brookfield, VT: Ashgate Variorum, 1999), IV and V, respectively.

(7) See Jacobus Zabarella, *Opera logica* . (Venetiis [Venice]: Apud P. Meietum, 1578) [hereafter Zabarella (1578)]; here the 1597 edition of Zabarella's *Opera Logica* (as reprinted in 1966) has been used; see id., *Opera logica [...] affixa praefatio Joannis Ludovici Hawenreuteri [...] editio tertia* . (Coloniae [Cologne]: Sumptibus Lazari Zetzneri, 1597; reprinted with an edition by Wilhelm Risse. Hildesheim: Georg Olms, 1966), [hereafter Zabarella (1597)]. It is possible that Zabarella utilized this term elsewhere in a work (in printed or manuscript form) prior to the year 1578.

(9) Refer to the point made in footnote 3.

(10) Joannes Bellarinus's treatise on scientific method is discussed in detail - together with brief discussion of his theological writings - in the following article: Joseph S. Freedman, 'A Neglected Treatise on Scientific Method (methodus scientifica) published by Joannes Bellarinus (1606)' Jorg Schönert und Friedrich Vollhardt, eds., *Geschichte der Hermeneutik und die Methodik der textinterpretieren den Disziplinen* , *Historia Hermeneutica. Series Studia 1* (Berlin, New York: de Gruyter, 2005), 43-82: 43-5, 65-6.

(11) The only copy of Bellarinus published in 1630 that I have located to date is Joannes Bellarinus, *Speculum humanae atque divinae sapientiae, seu Praxis scientiarum et methodus scientifica* . (Mediolani [Milan]: Apud haeredes P. Pontii, 1630) [Paris, Bibliothèque Nationale: Z 11253]. Concerning extant copies of the 1606 edition, refer to Freedman, 'Bellarinus' (fn. 10), 43.

(13) Bellarinus (1606), 3 (Num. 4).

(101) Bellarinus uses the term *scientia* to mean 'knowledge' as well as to mean 'science': In the latter sense, *scientia* is not identified with what would be referred to as natural science in the United States today. During the sixteenth, seventeenth, and eighteenth centuries, *scientia* usually denotes a wider or

narrower range of academic disciplines (or is understood more broadly to mean 'knowledge'); refer to the following: Freedman, 'Bellarinus' (fn. 10), 46 (fn. 8), 48, 69; Joseph S. Freedman, 'Classifications of Philosophy, the Arts, and the Sciences in Sixteenth- and Seventeenth-Century Europe' *The Modern Schoolman*, vol. 72, no. 1 (November 1994), 37-65 and reprinted in Freedman, *Philosophy and the Arts* (fn. 4), VII; Giorgio Tonelli, 'The Problem of the Classification of the Sciences in Kant's Time' *Rivista critica di storia della filosofia* 30 (1975), 243-95. Concerning Francis Bacon's use of the term *scientia* refer to footnote 2 in this article.

12. ———. 2016. "The Three Operations of the Mind (tres operationes mentis) and the *Compendium logicae* by Erhard Weigel, Bonde Humerus, and Albertus Wahler (1691/1706) - An Overview, Discussion, Some Contextual Information, and a Brief Assessment." In *Erhard Weigel (1625–1699) und seine Schüler. Beiträge des 7. Erhard-Weigel-Kolloquiums 2014*, edited by Habermann, Katharina and Herbst, Klaus-Dieter, 143-171. Göttingen: Universitätsverlag Göttingen.

"In the year 1691, a treatise – ostensibly on arithmetic (*logistica*) – was published by Erhard Weigel and two of his students: Bonde Humerus and Albertus Wahler.(2)

But it also contains a lengthy “preface” (prooemium) devoted to discussion of the three operations of the mind. This preface – together with related content added elsewhere in this treatise – places arithmetic (and mathematics generally) in broader contexts that are worthy of examination." (p. 143)

(...)

"In the Preface to the *Compendium logicae*, this discussion of the three operations of the mind in the realm of *logica* is followed by discussion – summarized in [A] of Table E (cf. page 159) – of these same three operations within the framework of *logistica*.¹⁶ The first operation (*simpliciter*) is either (α) a “unity” (*unum*) that is complete by virtue of itself (*totum pro se*) or (β) a unity that is linked with “another” (*altero*) or “others” (*alteris*) while nonetheless remaining whole.(17)

The second operation (*combinare*) corresponds to the subject matter – including addition, subtraction, multiplication, and division – of arithmetic; the latter falls within the parameters of *logistica*.(18)

The third operation (*Combinatio combinata seu proportionaliter*) applies *logistica* to much broader contexts: to [a] physics, [b] civil society and government, and [c] poetry and orations.(19) Considered within the realm of *logistica*, these three operations are also regarded as applicable not only to arithmetic and algebra, but also to geometry, to the remaining mathematics disciplines, to theoretical philosophy, to practical philosophy, and – generally speaking – to the world at large.(20)" (p. 145)

(2) While research focusing specifically on Bonde Humerus and Albertus Wahler has not been undertaken, the following publication can be cited here: *Humerus and Jacobi, Stemma Sueonum in Coelo Heraldico* (1691).

(17) *Compendium logisticae*, pp.11–12. It would appear here that (within the realm of *logistica*) propositions can be included within the parameters of the first operation. But this also appears to be the case in at least some late 17th-century publications on logic; refer to fn. 73.

(18) This is clear from the definition of *logistica* – *Ars computandi numeros* – given at the beginning of the preface (on page 1) of this treatise and in [E] in Table A.

(19) Refer to [A] 3. [a], [b], and [c] in Table E as well as to *Compendium logisticae*, p.14.

(20) *Compendium logisticae*, p.15. *Logistica* is also directly applicable to ethics, which is referred to, cf. [C] of Table E and *Compendium logisticae*, p.19, as *aretologica*, a term that clearly links the two. A discussion by Erhard Weigel of individual mathematical disciplines is presented in *Weigelius: Idea matheseos universae*. (1669), pp. 33–68 (Caput VII–XXI), 69–84 (Mathematische Kunst="Übungen). That Weigel applies arithmetic broadly to practical philosophy and civil life is can also be deduced from the full titles of Weigel: *Methodi*

novantiquae . . . collegio . . . arithmetico-morali . . . (1673) and Weigel: *Arithmetische Beschreibung der Moral=Weißheit*. (1674).

(73) During the second half of the 17th century, the first operation of the mind, as discussed in (at least some) writings on logic devoted to one or more of the three operations – was understood in such a manner that propositions could be included within the scope of simple apprehension.

If so, then *cogito, ergo sum*, a proposition, could be said to fall within the scope of the first operation of the mind. (...)"

16. ———. 2018. "All You Need is Love? Emotion (Gefühl) and Norm in the Synopsis (*Tabulae synopticae* : 1728) of Philosophical Writings by Johann Franz Buddeus (1667–1729)." *Pietismus und Neuzeit* no. 44:13-30.

"Johann Franz Buddeus (1667-1729) was Professor of Practical Philosophy and Morals at the University of Halle (1693-1705), where he taught not only Practical Philosophy but also (beginning no later than the 1698-1699 academic year) a much broader range of philosophy subject-matters. Among his writings published during the year 1703 in connection with his academic instruction was a three-volume series on philosophy (Instrumental Philosophy, Theoretical Philosophy, and

Practical Philosophy) intended to provide a comprehensive survey of philosophy as a whole.(1) A detailed and very useful Synopsis thereof in outline format - containing a supporting preface by Buddeus - was published by Johannes Jacobus Schatzius in the year 1728 (2). Here the concepts of emotion (*Gefühl*) and norm as presented by Schatzius within is Synopsis of Buddeus's philosophy will be examined." (p. 13)

(1) The Practical Philosophy of Buddeus was first published in 1697: *Joh[annes] Franciscus Buddeus : Elementa philosophiae practicae quibus ethica, jurisprudentis naturalis, jurisprudentia gentium, et politica, tum generalis, tum specialis succincte traduntur, in usum praelectionum academicarum edita*. Halle Magdeburgicae: Sumptibus Johann. Frid. Zeidleri, 1697. [Berlin, Staatsbibliothek: Np 3252]. Buddeus's *Philosophia Instrumentalis* and his *Philosophia theoretica* were first published in 1703 and are cited (together with the 1703 edition of the Practical Philosophy which serves as the third volume of that three-volume series) in note 6.

(2) *Tabulae Synopticae Philosophiae D. Johannis Francisci Buddei eclecticae in usum studiosae juventutis adornatae et cum praefatione ipsius celeberrimi auctoris editae a M. Johanne Jacobo Schatzio Argentinensi & p. t. illustris gymnasii Isenachensis Directore & Bibliothecario*. Budingae: Typis & impensis Job. Frider. Regelin, 1728. [Dresden, Staats-, Landes-, und Universitätsbibliothek: Phil.A.93.s] Buddeus's supportive preface is found on fol. a2r-a2v. Concerning the life and career of Johann Jakob Schatz (1691–1760), who was Rector at a Gymnasium illustre in Eisenach from 1728 until 1738, refer to CERL (www.dat.cerl.org / last accessed on 22 March 2019). No additional biographical research concerning him has been undertaken. Here this Synopsis by Schatz will be referred to in subsequent notes as Buddeus-Schatzius (1728). Here the use of italics in the Synopsis is reflected each time that italics are used within individual notes.

17. ———. 2020. "Footnotes (as Annotations) in Historical Context and Their Relevance for Digital Humanities in Our Time." In *Annotations in Scholarly Editions and Research* , edited by Nantke, Julia and Schlupkothen, Frederik, 109-129. Berlin: de Gruyter.

Abstract: "This chapter focuses on early uses of footnotes (as one category of annotations) in Central Europe during the second half of the seventeenth century.

Attention is also accorded to what can be regarded as an institutional context for these early footnotes: the precursors of the Humanities (mainly: Ancient Languages and Literatures) as well as the roles of academic disciplines and interdisciplinarity at Central European academic institutions during the sixteenth and seventeenth centuries. That institutional context is used to call attention to issues pertaining to (inter-)disciplinarity in our time and the relevance of these issues to collaboration between colleagues in the Humanities and the Digital Humanities. Mentioned is the possibility that innovative uses of footnotes (often along with other forms of annotations) during the late seventeenth century by little known authors might serve as a catalyst for innovation in the Digital Humanities."

18. ———. 2020. "The literary production of philosophy professors 16th- and 17th- century Central Europe: a brief overview." *Acta Universitatis Carolinae* no. 40:209-217.

Abstract: "The submitted study deals with various types of works written by 16th- and 17th-century Central European philosophy professors. Their intensive production is examined

with the use of the following nine categories: 1. lectures, 2. disputations, 3. academic exercises, 4. polemical writings, 5. translations, 6. editions of ancient and post-ancient writings, 7. monographs, including commentaries, 8. auxiliary writings, and 9. other kinds of writings. These categories form the basis of further content analysis."

19. ———. 2021. "The Origin and Evolution of the *ius archivi* concept in Early Modern Central Europe." *Archivalische Zeitschrift* no. 97:15-52.

"One can venture to assume that individuals responsible for the management of archival information from ancient times onwards have theorized concerning issues pertaining thereto. However, our historical knowledge of archival theory – theorizing about archives and/or information that is found in archives – is best based on extant written records. Archival theory during the ancient and medieval periods is not accorded direct discussion here.² However, relevant in the present context are the following two points. First, some medieval European jurists discussed the legal validity of documents located in archives. And second, many of those medieval discussions are cited or mentioned within legal writings published in Central Europe – regarded here as roughly corresponding to Holy Roman Empire – during the 16th century and thereafter. Here the principal focus is on discussions concerning archives – archival theory – within Central European writings published from the year 1597 up to the end of the Holy Roman Empire in the year 1806.

From the 16th through the first half of the 18th centuries discussions and mentions of archives were found in Latin-language, Central European publications on jurisprudence. This includes (usually brief) entries on

archives in published lexicons on jurisprudence; archives are mentioned there using a variety of terms, including *archivum*, *chartophylacium*, *grammatophylacium*, *scrinium*, *tabularia*, and *tablina*. Archives are also

mentioned in 16th-, 17th-, and early 18th century Latin language editions of the Justinian civil law corpus." (pp. 15-16,

notes omitted)

20. ———. 2021. "The Good Arts, the Bad Arts, and Nature According to Georg Stengel (1584-1651)." In *Early Modern Disputations and Dissertations in an Interdisciplinary and European Context*, edited by Friedenthal, Meelis, Marti, Hanspeter and Seidel, Robert, 397-422. Leiden: Brill.

Summary: "Georg Stengel (1584–1651) is best known for his work as a theologian and a dramatist.

But worthy of attention here are the contents of disputations over which he presided as a professor of philosophy at the University of Dillingen from 1614 to 1617. Stengel's biography is briefly presented along with some additional documentation (mostly through the year 1617) in large part on the basis of manuscript sources. While at the University of Dillingen he presided over nine disputations containing seven distinct texts. The first of these nine disputations, *On Good or Bad Syllogisms* (1616) was republished in greatly expanded form (as two volumes) in 1618, 1623, 1649, and 1662. Each of the remaining disputations focus on the arts (*ars*), on nature (*natura*), or on both. And in all of these individual disputations, the arts, the effects of nature, and syllogisms all are either good or bad. In these disputations, however, that which is "bad" might best be described as that which is not good in a number of different ways.

Here special attention is accorded to the disputation *On the Good Arts in General* (1616), which focuses on nature as well as on the arts. The distinction is made there between 1. the liberal arts and 2. those arts that pertain to the use of the body. But the numerous examples of individual arts presented within this disputation all can be referred to as corporeal arts. Nature is understood there to have two meanings: (1) The ordinary course of nature and (2) physical causality (physics). It is noted that physics results in knowledge (*scientia*) while the arts do not. But is emphasized that while the arts require nature, they also perfect nature. Discussed here – as well as in the disputations *On the Good Arts in Particular* and *On the Bad Arts* – are ways in which the arts can be misused. But in *On the*

Good Arts in General it is also noted is that the (good) arts, with their focus on experience, induction, and singulars, connect to occult forces and can also participate in divinity. In the concluding phrase to this disputation, God (while not directly mentioned) is said to be “the first and highest artisan” (*primus et summus artifex*).”

21. ———. 2022. "Keckermann, Bartholomaeus." In *Encyclopedia of Renaissance Philosophy* , edited by Sgarbi, Marco, 1784-1787. Cham, Switzerland: Springer.

Abstract: "Bartholomaeus Keckermann (d. 1609) was a Reformed Protestant who taught at the University of Heidelberg and thereafter at the Gymnasium Athenaeum in Danzig (Gdańsk).

Innovative was the publication of his writings on logic in multiple formats and his use of the concept of the systematic textbook (*systema*).

Although he did not publish an encyclopedia, his publications cover a very wide range of subject matters; most of his monograph-length publications are included within two separate two-volume collections (1613 and 1614) of his publications as well as a separate collection (1617) of his publications falling within the parameters of mathematics. Keckermann’s writings were widely read for many decades after his death."

22. ———. 2022. "Timpler, Clemens." In *Encyclopedia of Renaissance Philosophy* , edited by Sgarbi, Marco, 3263-3266. Cham, Switzerland: Springer.

Abstract: "Clemens Timpler (1563/4–1624) was a Reformed Protestant and professor of philosophy at the Gymnasium illustre Arnoldinum in Steinfurt (Westphalia). He was an independent and innovative thinker. His textbook on metaphysics, first published in 1604 and reprinted at least eight times by 1616, was his most influential work. He was best known for his view that All that is Intelligible (*omne intelligibile*) – and not an entity (*ens*) – is the subject matter of metaphysics. His influence was hampered in part because

virtually none of his contemporaries agreed with his views concerning All that is Intelligible. His writings were cited – both critically and uncritically – during his lifetime and for many decades following his death."

23. Freedman, Joseph S. 2022. "All that is Intelligible, Ontology, and Charts: A Brief Assessment of the Birth of Ontology." *Journal of Knowledge Structures & Systems* no. 3:57-60.

Abstract: "In this commentary motivated by Øhrstrøm & Uckelman (2022; this issue), I provide important remarks concerning All that is Intelligible and Ontology - "and how both concepts evolved."

"In a departure from prior common consensus, Clemens Timpler asserted - in his treatise on metaphysics (1604) - that All that is Intelligible (and not entity) was the subject-matter of metaphysics. With very few exceptions, his contemporaries {including Rudolph Goclenius the Elder - continued to regard entity as the subject-matter of metaphysics. One exception was Jacob Lorhard, who in 1606 also referred to metaphysics as ontology. Evidence documenting a connection (if any) between Lorhard and Goclenius needs to be presented. It would be best not to closely link Lorhard to Petrus Ramus or to "Ramists." As initially conceived, Timpler's All that is Intelligible as well as Lorhard's adoption thereof as the subject-matter of ontology both appear to have been short lived. In what follows, I draw on Freedman (1988, 1993, 2001, 2009)." (p. 57)

Édouard Jeauneau sur la Philosophie Médiévale. Bibliographie Choisie

Introduction

Édouard Jeauneau (1924 - 2019) ancien Professeur de Philosophie au séminaire de Chartres et au Pontifical Institute of Mediaeval Studies à Toronto, directeur de recherches au CNRS, a publié des éditions critiques de Guillaume de Conches, Jean Scot Érigène et Maxim le Confesseur.

Je donne une bibliographie de ses écrits sur la philosophie médiévale.

Pour une bibliographie complète voir:

- Paul Edward Dutton, *Publications par / by Édouard Jeauneau*, dans: Haijo Jan Westra (ed.), *From Athens to Chartres. Studies in Honour of Édouard Jeauneau*, Leiden: Brill 1992, pp. XVII - XXVII (132 titres).

Contents: Acknowledgements 9; Table of Figures 11; Chapter I: A History of the Question 13-33; Chapter II: A Description of the Manuscripts pp. 35-46; Chapter III: A Palaeographical Approach 47-82; Chapter IV: A Philological Approach 83-104; Chapter V: The Hand of Eriugena 105-116; Table of Plates 117-123; Plates pp. 125-223.

"Writing chapters I and IV was primarily the responsibility of E.J. whereas chapters II and III were in the first instance that of P.D.; we both participated actively in writing the Conclusion, Chapter V. Each of us counts himself responsible for the work in its entirety." (p. 9)

"In short, the conclusion of Rand's article [*] was twofold : 1. that there were two Irish hands (i^1 and i^2) entering corrections, additions, and enlargements in Eriugena's manuscripts; 2. that neither i^1 nor i^2 is Eriugena's hand. The first conclusion is now commonly accepted by all scholars who study these manuscripts. If this conclusion is a solid one, that is, that two Irish hands worked to enlarge and correct Eriugena's writings, then four hypotheses are theoretically possible concerning the relation of these two hands to the author:

Hypothesis I : neither i^1 nor i^2 is Eriugena's hand.

Hypothesis II : both i^1 and i^2 are Eriugena's hand.

Hypothesis III : i^2 is Eriugena's hand.

Hypothesis IV : i^1 is Eriugena's hand.

These seem to be the only possible hypotheses regarding the Irish handwriting associated with Eriugena." (p. 20)

(...)

"Terence Alan Martyn Bishop, after studying carefully the Irish script contained in the manuscripts of Eriugena's works, concluded that, of the two Irish hands distinguished by Rand, i^2 could not be Eriugena's autograph, while i^1 had the better claim to be so. (51)" (p. 26)

"C'est sur l'ordre de Charles le Chauve qui encourageait l'étude des Pères que Jean Scot s'est mis à traduire et cette cour était un milieu propice. C'est par le Ps.-Denys qu'il a été introduit à la patristique grecque. Il est passé ensuite naturellement à Maxime le Confesseur et à Grégoire de Nysse. Il n'eut sans doute entre les mains aucune œuvre profane. Il a fait œuvre de philosophe en même temps que de traducteur."

"Je me contenterai d'étudier le rôle joué par le douzième siècle dans la transmission des textes érigéniens. Pour ce faire, il me paraît indispensable d'examiner individuellement chacune des oeuvres de l'Érigène. Chacune d'elles, en effet, a eu son destin propre, sa fortune particulière, qui ne coïncident pas toujours - ou plutôt, qui coïncident rarement - avec la fortune et le destin des autres oeuvres.

Je ne dirai rien des 'Annotationes in Martianum' dont la fortune est riche certes, mais qui soulèvent des problèmes d'authenticité quasiment insolubles(4). Du 'De praedestinatione', il n'y a rien à dire. En effet, comme le remarque son récent éditeur, "il n'en est fait aucune mention ... dans la littérature théologique du Moyen Age", et il ne sera "exhumé qu'au XVIIe siècle, lors de la controverse janséniste" (5).

Des traductions érigéniennes, au contraire, il y aurait beaucoup à dire, moins en ce qui concerne Grégoire de Nysse et Maxime le Confesseur, qu'en ce qui concerne le pseudo-Denys. Mais, exception faite de la 'Hiérarchie céleste', nous n'avons pas d'édition critique de la traduction de Denys par Jean Scot; et si l'histoire de la tradition dionysienne en Occident a déjà été explorée par d'excellents pionniers, il s'en faut, et de beaucoup, qu'elle nous soit en tout point connue. Pour ces raisons, je vous prie de m'excuser si je passe sous silence cet important aspect de l'influence érigénienne au douzième siècle. Enfin, j'écarte de mon propos les 'Carmina'.

(,,)

Mon champ d'investigation se limitera à cette partie de l'oeuvre érigénienne que Dom Cappuyns aimait se représenter sous la forme d'un triptyque: sur le panneau central le 'Periphyseon', sur l'un des volets l'homélie 'Vox spiritualis' et le commentaire sur l'évangile de Jean, sur l'autre volet les 'Expositiones in Hierarchiam caelestem'(8).

47. ———. 1988. "Jean Scot traducteur de Maxime le Confesseur." In *The Sacred Nectar of the Greeks: The Study of Greek in the West in the Early Middle Ages*, edited by Herren, Michael W. and Brown, Ann Shirley, 257-276. London: King's College.

"Jean Scot, surnommé l'Erigène, s'est distingué, au IXe siècle, non seulement comme penseur, mais comme traducteur. Les principaux textes grecs traduits par lui sont: les oeuvres complétées de Denys l'Aréopagite, une oeuvre de Grégoire de Nysse, le *De imagine* (vulgairement appelé *De opificio hominis*), et deux oeuvres de Maxime le Confesseur, les *Quaestiones ad Thalassium* et les *Ambigua ad Iohannem*. L'art de traduire, tel que Jean Scot l'a pratiqué, a fait l'objet de plusieurs études. A l'exception d'un article, qui porte sur la traduction de Grégoire de Nysse,(1) ces études s'appuient sur la traduction de Denys.(2) La raison en est simple: les seules

traductions érigeniennes qui aient été éditées jusqu'ici sont précisément celles de Grégoire de Nysse et du pseudo-Denys. (3) La version érigenienne des *Quaestiones ad Thalassium*, en partie publiée,(4) et celle des *Ambigua ad Iohannem*, qui doit être publiée prochainement,(5) devraient permettre d'élargir l'enquête. Ayant consacré une bonne dizaine d'années à préparer l'édition de la version érigenienne des *Ambigua*, j'ai pu, en marge de mon travail d'éditeur, faire certaines observations sur la traduction de Jean Scot, ses mérites et ses déficiences. Les remarques qui suivent sont le résultat de ces observations. Il ne faut pas y chercher un exposé systématique des problèmes relatifs à Jean Scot traducteur. Ce sont des notes de lecture, rien de plus." (p. 257)

(...)

"En bref, la traduction érigenienne des *Ambigua ad Iohannem* n'intéresse pas seulement le philologue; elle intéresse aussi - j'allais dire surtout - l'historien des idées. Car la découverte de Maxime a joué un rôle prépondérant dans la formation de la pensée philosophique de Jean Scot. Or, c'est en le traduisant, que Jean Scot a découvert Maxime. Ne voir dans les traductions érigeniennes que les non-sens, les contresens et les a-peu-près, c'est regarder les choses par le petit bout de la lorgnette, et oublier l'essentiel: un homme est là, aux prises avec une pensée entièrement nouvelle pour lui, luttant contre la gangue du langage qui la dérobe à ses yeux. De ce combat inégal, lutte de Jacob contre l'Ange, l'Érigène, en dépit de quelques erreurs de tactique, est finalement sorti avec honneur." (p. 272)

"Parmi les disciplines que les penseurs antiques et médiévaux ont pratiquées avec ferveur, celles qui déroutent le plus le lecteur moderne sont probablement l'étymologie et l'arithmologie. Il est tenté de voir en elles des tics ou des manies, excusables chez des gens qui ont eu la malchance de naître en des temps moins éclairés que le sien: dans le meilleur des cas il les excuse, il a de la peine à les prendre au sérieux. Nos ancêtres, cependant, voyaient différemment les choses. Ni l'étymologie ni l'arithmologie n'étaient pour eux jeux puérils. A leurs yeux, l'une et l'autre étaient des voies privilégiées pour accéder à la connaissance du réel.

(...)

On pourrait dire que, pour toute une famille d'esprits, tant dans l'antiquité tardive que dans le Moyen Age, l'étymologie était la métaphysique des noms, cependant que l'arithmologie était la métaphysique des nombres⁶. Comment Jean Scot a-t-il pratiqué cette dernière? C'est ce que je me propose d'examiner ici." (p. 126)

(...)

"J'ai promis de revenir sur la division quadripartite de la nature. Le nombre quatre, avons-nous dit, est le nombre de l'univers, d'un univers ordonné. Ce nombre, selon les Pythagoriciens, "contient les racines de la nature éternelle"(127). Il convient donc parfaitement à une division de la nature. Mais pourquoi précisément la division de la nature telle que Jean Scot l'a formulée au début du *Periphyseon*? Les quatre membres de cette division sont: I. Nature qui crée et n'est pas créée II. Nature qui est créée et qui crée III. Nature qui est créée et qui ne crée pas IV. Nature qui ne crée pas et qui n'est pas créée(128). Inglis Patrick Sheldon-Williams n'avait pas manqué d'observer que cette division de la nature n'est pas sans analogie avec une division quadripartite des nombres, que l'on trouve chez Philon d'Alexandrie(129). Si l'on examine les nombres qui sont contenus dans les limites de la décade, on constate que ces nombres se répartissent en quatre catégories:

I. Nombres qui engendrent et ne sont pas engendrés II. Nombres qui sont engendrés et qui engendrent III. Nombres qui sont engendrés et qui n'engendrent pas IV. Nombres qui n'engendrent pas et ne sont pas engendrés(130). Il va sans dire que Jean Scot n'a pas lu Philon d'Alexandrie. Mais la division quadripartie des nombres a pu lui arriver par d'autres intermédiaires. Sheldon-Williams proposait Macrobe et saint Augustin. Sans exclure entièrement ces derniers, il me semble que Martianus Capella est un meilleur candidat(131). La seule différence remarquable entre les deux divisions concerne le verbe: creare chez Jean Scot, generare (γεννάν) chez Philon. En fait, la différence est moins importante qu'on pourrait croire. Martianus Capella considère les verbes gignere et procreare comme pratiquement interchangeable; et, parlant de la tétrade (quatre), il écrit: "Tétraras autem et créât et creatur"(132). Faut-il conclure que les spéculations pythagoriciennes sur les nombres ont pu donner à Jean Scot l'idée de sa division quadripartite de la nature? Ce n'est là qu'une hypothèse. Si elle était démontrée, elle confirmerait l'opinion que j'ai essayé de formuler dans ce petit essai, à savoir que la "métaphysique des nombres" peut déboucher parfois sur la métaphysique tout court." (p. 141)

52. ———. 1991. "The Neoplatonic Themes of *Processio* and *Reditus* in Eriugena." *Dionysius* no. 15:3-29.

Repris dans: *Tendenda vela*, pp. 511-539.

"Needless to say my purpose is not to draw up an inventory of all the Neoplatonic elements which Eriugena could cull from the works of Pseudo-Dionysius. As I have said before, I shall concentrate on two themes, those of *Processio* (Procession) and *Reditus* (Return), and examine how - successfully or not - these Neoplatonic themes have been integrated into the Eriugenian synthesis." (p. 8)

(...)

"In fact, these two notions constitute the leitmotiv of Eriugena's major work, the *Periphyseon*. According to him, they are also among the most important themes developed by Maximus the Confessor in his *Ambigua ad Iohannem*, for in this book, the reader may discover

what the Procession is, namely the multiplication of divine Goodness through all beings, from the supreme to the lowest, beginning with the general Essence of all things first, descending then to the most general genera, then to the less general of them, then from the less special species to the most special of them through differences and properties; again what is the Return - i.e., unification - of divine Goodness, through the same steps, from the infinitely various multiplicity of all beings up to the supreme unity of all things, that is in God and is God. And so God is all things, and all things are God. (30)" (p. 10)

(...)

"*Periphyseon* is not only a discourse about the division (or Procession), but also, and at the same time, a discourse about unification (or Return).

And if the two themes, Procession and Return, cannot be considered independently from each other, it is because neither can be understood separately from the third member of the triad, i.e., Immanence. Books III and IV of *Periphyseon* belong to the literary

genre called *Hexaemeron*, meaning a treatise on creation, in which the author follows the narrative of the six days of Genesis. The purpose of Eriugena, however, is not to show the temporal unfolding of the created multiplicity from the creating Unity. If it were that, his *Periphyseon* would be a Biblical commentary, not a philosophical dialogue. The purpose of Eriugena is not to give an historical account of creation, but rather to establish firmly its rational foundations." (p. 11)

53. ———. 1991. "Vox spiritualis Aquilae. Quelques épis oubliés." In *From Augustine to Eriugena. Essays on Neoplatonism and Christianity in honor of John O'Meara*, edited by Martin, Francis X. and Richmond, John A., 107-116. Washington: Catholic University of America Press.

Repris dans: *Tendenda vela*, pp. 499-510.

"Lorsque, en 1969, j'éditai l'homélie érigénienne *Vox spiritualis Aquilae*, je la fis précéder d'une introduction dans laquelle, entre autres choses, j'esquissais à grands traits la fortune de ce texte.(1) Depuis, de nouveaux témoignages de cette fortune sont venus à ma connaissance. Ce sont eux que je voudrais présenter ici. Avant toute autre chose, je tiens à dire que la plupart de ces témoignages m'ont été signalés par des collègues ou des amis. La glane que j'en ai faite n'a pu être rassemblée que grâce à leur concours. Elle est un des fruits du mouvement d'intérêt pour la pensée érigénienne que le professeur John J. O'Meara a su capter et auquel il a réussi à communiquer une nouvelle et vigoureuse impulsion; il est juste de lui en faire hommage.

La preuve la plus évidente de la fortune de la *Vox spiritualis* est le grand nombre des manuscrits qui nous en ont conservé le texte. On en comptait cinquante-quatre en 1969. Depuis lors, seize témoins nouveaux ont été découverts, ce qui porte à soixante-dix le nombre des manuscrits qui, en tout ou en partie, contiennent l'homélie érigénienne.² A cela s'ajoutent les bréviaires, dans lesquels cette homélie, réduite à quelques lignes il est vrai, est cependant représentée." (p. 107)

"Un autre témoin de l'influence de la *Vox spiritualis* à l'époque carolingienne est un commentaire sur les *Opuscula sacra* de Boèce qu'Edward K. Rand a publié sous le nom de Jean Scot.⁽⁹⁾ En réalité, ce commentaire, le plus ancien que nous possédions sur les opuscules théologiques de Boèce, n'est pas de Jean Scot, mais d'un auteur anonyme, incontestablement influencé par lui.⁽¹⁰⁾" (pp. 108-109)

Repris dans: *Tendenda vela*, pp. 479-498.

"Bien des facteurs interviennent dans la formation d'un grand écrivain ou d'un grand penseur. Le moindre d'entre eux n'est pas le génie, condition sine qua non à laquelle aucune école, aucune technique ne sauraient suppléer. Cependant, ni l'art d'écrire ni l'art de penser ne sont donnés au berceau. Ils se cultivent, ils se développent, si le terrain est propice : c'est à quoi servent les écoles et les maîtres. Le talent littéraire d'Heiric d'Auxerre force l'admiration. Comment s'est-il formé, et sous l'influence de quels maîtres ? Nous pouvons sans crainte d'erreur en citer trois : Haymon d'Auxerre, Servat Loup, et Jean Scot surnommé l'Erigène. Heiric a lui-même reconnu sa dette envers les deux premiers dans la préface à ses *Collectanea* : à Loup il se dit redevable de sa culture profane, à Haymon de sa culture théologique(1). Il ne mentionne pas le troisième, auquel il est redevable de ce que, non sans anachronisme, nous appelons sa culture philosophique. D'après la « Généalogie des lettrés » (*Grammaticorum Διαδοχή*) de Gautbert, c'est l'Irlandais Hélie, devenu par la suite évêque d'Angoulême, qui aurait initié Heiric à la pensée de Jean Scot(2). Le Frère Quadri a fait justement remarquer qu'un tel intermédiaire n'est pas indispensable. On a tout lieu de croire en effet qu'Heiric a connu Jean Scot personnellement au cours d'un séjour à Saint-Médard de Soissons(3). Si l'Erigène n'est pas nommé dans la préface des *Collectanea*, c'est sans doute parce que cette œuvre ne lui doit rien." (p. 353)

(...)

"L'influence érigénienne est particulièrement évidente en trois passages de la *Vita sancti Germani* : l'*Inuocatio*, la préface du livre VI, les vers 536-566 du livre VI. Hâtons-nous de dire que le caractère érigénien de ces passages est connu depuis longtemps. Ludwig Traube, en rééditant en 1896 dans les *Monumenta Germaniae Historica*, [M.G.H.] *Poetae Latini Aevi Carolini*, III, la *Vita sancti Germani* (éditée une première fois par les Bollandistes et reproduite par la Patrologie latine, tome 124, colonnes 1131-1208), eut la bonne idée de publier les scholies qui accompagnent les vers d'Heiric dans le manuscrit latin 13757 de la Bibliothèque Nationale. Or, plusieurs de ces scholies ne sont rien d'autre que des extraits du *Periphyseon*.

Hauréau fut sans doute le premier à identifier les citations érigéniennes véhiculées par les scholies de la *Vita sancti Germani*(24). Mais c'est à Traube que revient le mérite de l'avoir fait de façon systématique. Les notes de son édition contiennent les références au *Periphyseon* (édité par Floss dans le tome 122 de la Patrologie latine). Il suffit donc, pour étudier l'érigénisme de la *Vita sancti Germani*, d'utiliser les références données par Traube, en les complétant, et en les corrigeant à l'occasion. C'est ce que j'ai essayé de faire, en comparant l'édition des Monumenta Germaniae Mysterica avec le manuscrit qui a servi à l'établir." (356)

Repris dans: *Tendenda vela*, pp. 559-568.

Résumé: "Lorsqu'il aborde le thème des fins dernières, Érigène dénonce sans ménagement, parfois avec sarcasme, les représentations sensibles qui en sont proposées dans la prédication courante, voire dans les homélies des Pères. Aurait-il condamné, s'il avait pu les connaître, les grandioses compositions qui ornent les porches de nos cathédrales ? Ne le concluons pas trop vite. En effet, on trouve chez cet auteur les linéaments d'une esthétique sacrée. Cette esthétique pourrait se résumer en un mot, emprunté à Denys l'Aréopagite et à Maxime le Confesseur : mystagogie (introduction aux mystères). Loin d'exclure l'art, Érigène lui assigne un rôle primordial, celui de frayer la voie à la contemplation théologique. L'erreur qu'il dénonce consiste à s'arrêter en chemin, à prendre le vestibule pour le sanctuaire."

59. ———. 1995. "Le 'Cogito' érigénien." *Traditio* no. 50:95-110.

Repris dans: *Tendenda vela*, pp. 541-558.

"Qu'il y ait un Cogito érigénien, personne, je pense, n'y contredira. Que la source ultime en soit saint Augustin, personne non plus ne le contestera. Mais ce Cogito est-il vraiment une anticipation, une première ébauche du Cogito cartésien? Cela est beaucoup moins sûr. Pour en décider, le mieux est de relire les textes dans lesquels Érigène a formulé son Cogito. Assurément, cela a déjà été entrepris par d'excellents chercheurs, notamment par celui auquel je dédie amicalement ces lignes.(7) Mon excuse pour rouvrir le dossier est la suivante. Je viens de préparer une édition du livre 4 du *Periphyseon*.(8) A cette occasion j'ai dû relire le passage dans lequel a été formulé le Cogito érigénien. Or, pour des raisons

que j'exposerai dans un instant, l'établissement du texte ne va pas sans difficulté. Avant de discuter du Cogito lui-même, il importe de s'assurer de la fiabilité du texte qui le contient. Je me propose de procéder en deux temps: 1) La formulation du Cogito érigénien; 2) Sa portée philosophique. (p. 96)

"Le Cogito érigénien se trouve formulé au livre 4 du *Periphyseon*, 776 BC.

Dans le manuscrit le plus ancien (Reims, Bibliothèque municipale MS 875, fol. 291r), exemplaire de travail, chargé, voire surchargé de grattages, de ratures, de corrections, et d'additions de toute sorte, le passage qui nous intéresse a été remanié. La plupart de ces remaniements sont dus à l'une des deux mains irlandaises que l'on rencontre dans les manuscrits érigéniens, très précisément la main que l'on appelle "i¹" et qu'à juste titre on considère comme étant celle d'Érigène lui-même. Je considérerai ce point comme acquis et parlerai de "la main d'Érigène" là où de plus prudents que moi parleraient de "la main i1."

Disons tout de suite que les remaniements apportés par Érigène à la formulation de son Cogito sont d'ordre plus littéraire que doctrinal. Ils n'en ont pas moins dérouté les lecteurs et les éditeurs du *Periphyseon*. Il n'est donc pas superflu de les examiner. Je reproduirai d'abord le texte tel qu'on le lit dans le manuscrit de Reims; je rappellerai ensuite comment les différents éditeurs du *Periphyseon* l'ont compris; enfin je dirai comment, à mon avis, on doit le lire." (p. 96)

"En bref, la triade *essentia, uirtus, operatio* (οὐσία, δύναμις, ἐνέργεια) n'est introduite que pour acheminer vers une autre triade, *mens, ratio, sensus interior* (νοῦς, λόγος, διάνοια), qui est, en l'homme, l'image de la Trinité créatrice.(74)

Sur ce point comme sur plusieurs autres, Érigène se plaît à souligner l'accord de Denys l'Aréopagite et d'Augustin d'Hippone.

(...)

Ce recours aux autorités patristiques montre bien que nous sommes sortis du champ philosophique du Cogito et entrés dans le champ de la réflexion théologique, celui de la Fides quaerens intellectum. Mais cela ne remet pas en question ce que le Cogito érigénien a établi: "L'âme humaine sait qu'elle est une nature douée de raison et d'intellect; elle ne connaît l'essence ni de l'intellect ni de la raison". (78)" (p. 110)

"Que les traductions érigéniennes de Denys l'Aréopagite et de Maxime le Confesseur aient pu influencer le vocabulaire philosophico-théologique du Moyen Âge latin, tout le monde, je

pense, est disposé à l'admettre. Quant à juger cette influence, dire précisément dans quelle mesure et avec quel succès les néologismes créés par Érigène au neuvième siècle pour le besoin de ses traductions sont entrés dans le langage philosophique des siècles suivants, c'est là une entreprise qui demanderait un long examen. Disons tout de suite que je n'ai eu ni le temps ni la force de m'y livrer. Dans ces conditions, il me faut confesser que, ne pouvant traiter à fond le sujet que je m'étais imprudemment proposé, je me limiterai à quelques remarques, que je distribuerai en deux catégories, suivant qu'Érigène, pour ses traductions, a dû recourir à des néologismes ou qu'il s'est contenté d'adapter, en leur insufflant un sens nouveau, des mots latins qui existaient déjà. Commençons par la partie la plus visible de l'iceberg, les néologismes." (p. 157)

"Il est au moins un mot du vocabulaire philosophico-théologique créé par Érigène qui a survécu, et même a connu un franc succès, à savoir *supernaturalis*. Le P. de Lubac, qui a consacré un livre entier à la notion de « surnaturel » et à son développement historique, écrit : « C'est bien en tout cas au IXe siècle, par les traductions carolingiennes du pseudo-Denys, celle d'Hilduin et celle de Jean Scot Érigène, que *supernaturalis* fait sa véritable entrée dans la théologie. Encore au XIIe siècle, les divers Sententiaires l'ignorent, comme l'ignorait saint Anselme, comme l'ignorent saint Bernard et beaucoup d'autres »(48). Bien entendu, le sens donné par les théologiens modernes au mot *supernaturalis* diffère notablement de celui que lui donnait Érigène. Mais s'il s'agit du mot lui-même, il semble bien que Jean Scot — et accessoirement Hilduin, dont la traduction eut une diffusion limitée(49)—soit responsable de l'introduction de *supernaturalis* dans le vocabulaire théologique latin."

(48) H. de Lubac, *Surnaturel. Études historiques*, Paris, 1946, p. 327.

(49) La traduction d'Hilduin [*des traités du Pseudo-Denys l'Aréopagite*] fut utilisée par Guillaume de Lucques et par quelques porrétois.

"Dans la courte monographie que Paul Dutton et moi-même avons consacrée aux autographes érigéniens, nous nous sommes efforcés de démontrer que l'écriture de i² n'est pas celle d'Érigène.(5) Ce point semble bien établi désormais. Il s'ensuit que la Version III, contenue dans le manuscrit B (Bamberg, Staatsbibliothek, Ms. Phil. 2,1) et dont i² est responsable, n'a probablement pas reçu le 'Bon à tirer' de l'auteur. Le manuscrit B a été exécuté par d'excellents copistes carolingiens, qui avaient pour tâche de recopier, sous la surveillance de i², le manuscrit R (Reims, Bibliothèque municipale, Ms. 875), exemplaire de travail de l'auteur. Le rôle de i² dans la confection de B a été celui d'un 'éditeur' : il a ajouté des titres et des gloses dans les marges, et, là où l'auteur avait renvoyé de façon vague au *Periphyseon*, il a pris soin de préciser de quel livre il s'agit.(6) C'est lui aussi, sans doute, qui a décidé d'intégrer les notes marginales au texte principal.(7) Mais ses interventions ne s'arrêtent pas là : il a pris avec le texte d'Érigène des libertés qu'un auteur moderne ne serait certainement pas disposé à accorder à son éditeur.(8)

Nous voilà avertis. La Version III, celle du manuscrit B, a été 'arrangée' par i² : nous ne pouvons pas lui faire entière confiance. La Version IV, 'édition revue et corrigée' de la Version III, est encore moins fiable." (p. 114)

(...)

"Le rôle joué par i² dans la transmission du texte du *Periphyseon* est si important, ses interventions si fréquentes qu'on se sent mal à l'aise de ne pouvoir désigner le personnage autrement que par un sigle : i² (l'Irlandais numéro 2). À défaut d'un nom, ne pourrait-on lui donner un surnom ? J'ai pensé à *Nisifortinus*, sobriquet qui évoque la manière par laquelle cet

Irlandais introduit certaines de ses remarques personnelles concernant la pensée de son compatriote Jean Scot Érigène." (p. 120)

75. ——. 2002. "Érigène entre l'Ancienne et la Nouvelle Rome. Le *Filioque*." In *Chemins de la pensée médiévale. Études offertes à Zénon Kaluza*, edited by Bakker, Paul J.J.M., Faye, Emmanuel and Grellard, Christophe, 289-321. Turnhout: Brepols.

Repris dans: *Tendenda vela*, pp. 605-639.

"Le neuvième siècle est une période d'affrontement entre l'Ancienne et la Nouvelle Rome (Constantinople). Les relations entre les deux parties de l'empire, toujours difficiles, se détériorent alors de façon spectaculaire. Les causes en sont multiples. Les Byzantins s'inquiètent de la montée en puissance de la dynastie carolingienne ; les interventions fréquentes des monarques francs en Italie les indisposent; le couronnement impérial de Charlemagne par le pape, le 25 décembre 800, met un comble à leur irritation. A cela s'ajoutent les querelles théologiques, en premier lieu la querelle des images.

(...)

L'autre querelle théologique entre l'Ancienne Rome et la Nouvelle est celle du « Filioque ». Le Symbole de la foi chrétienne dit « Symbole de Nicée-Constantinople » (381) s'exprime ainsi à propos de la troisième personne de la sainte Trinité: «(Je crois) aussi à l'Esprit-Saint, Seigneur et vivifiant, qui procède du Père». Or, en Espagne, depuis la fin du sixième siècle au moins, on avait pris l'habitude d'ajouter: «et du Fils» («Filioque»). Cette habitude s'était progressivement étendue à

d'autres parties du monde latin, non point à Rome toutefois, où l'on était resté fidèle au texte authentique, non contaminé, du Symbole de la foi. Cependant, la cour franque avait adopté le « Filioque » : on le chantait à Aix dans la chapelle impériale. Avec le temps, les clercs latins en étaient arrivés à considérer le « Filioque » comme partie intégrante du Symbole de Nicée-Constantinople." (pp. 289-290)

"Sur la question débattue de la procession du Saint-Esprit Erigène est allé dans la direction des Grecs aussi loin qu'un Latin de son temps et de son milieu pouvait le faire, peut-être plus loin même qu'aucun Latin ne le fera par la suite. Cela signifiait pour lui naviguer à contre-courant, aller à l'encontre des idées reçues, au risque de déplaire au prince qui l'honorait de son estime et de sa protection. Cependant, il s'est efforcé de concilier les points de vue divergents. C'est là un trait de son caractère. Bien que sa carrière ait commencé par une controverse sur la prédestination - controverse où on l'avait poussé plus qu'il ne s'y était engagé vraiment -, il est un homme de conciliation. Là réside, me semble-t-il, l'intérêt de sa position par rapport aux nombreux controversistes, grecs ou latins, qui ont traité de la procession du Saint-Esprit et du « Filioque ». Pour conciliante qu'elle fût, cependant, sa solution avait peu de chance d'aboutir à un accord : les adversaires n'avaient pas envie de se réconcilier." (p. 320=

Repris dans: *Tendenda vela*, pp. 641-656.

"Among the many triads dear to Neoplatonists, one of the best known is probably that which they use to explain how the universe is regulated by harmonious relations between the cause and its effects. These relations are formulated by Proclus (d. 485) in proposition 35 of his *Elements of Theology*: "Every effect remains in its cause, proceeds from it, and reverts upon it" Hence, in Greek the three parts of the triad are: *monê* (immanence in the cause, rest), *proodos* (procession from the cause), *epistrophê* (return to the cause, conversion). This famous triad, with many other Neoplatonic teachings, found its way into Christian thought, thanks to a skillful writer who claimed to be Dionysius the Areopagite. But the man in question could not have been the same one who had converted to Christianity upon hearing the discourse of Saint Paul before the Areopagus of Athens in the year 51 A.D. In fact, an analysis of writing style and vocabulary demonstrates that the text attributed to Dionysius the Areopagite could not have been written before the end of the fifth century. The "forgery," however, was clever, for to attribute writings strongly and deeply influenced by the "pagan" philosophy of Proclus to Dionysius the Areopagite, the first bishop of Athens, was the surest way to protect them against any suspicion of heresy. Who could contradict the convert of Paul, depositary of an esoteric teaching which complemented the exoteric teaching delivered by the Apostle to the Gentiles in his Epistles? Translated from Greek into Latin, first by Hilduin in the second quarter of the ninth century, then by John Scottus Eriugena in the third quarter of the same century, the works of Dionysius the Areopagite were increasingly made available to Latin readers through the centuries. Certainly, important elements of Neoplatonic philosophy borrowed by the Latin Fathers, notably by Saint Augustine, had already entered the Latin world. However, thanks to Eriugena's Latin rendering of the works of Dionysius, a new stream of Neoplatonic philosophy penetrated the Western part of the Christian world. While the Augustinian stream was mostly indebted to Plotinus and Porphyry, the Dionysian one owed much to Proclus.

Yet Eriugena's importance is not exhausted by his role as translator from Greek to Latin. The inventive nature of his thought created, for the first time in history, an original synthesis of the two main streams of Neoplatonism, the one originating in Plotinus and the other in Proclus. The work in which this synthesis is presented is a philosophical dialogue between a Master and his Disciple, which the author entitled *Periphyseon*. The general framework of this dialogue is the famous triad of which we spoke above, or, more precisely, the last two parts of it Procession (procession and Return (*reditus, reuersio*)). The Procession, which is also multiplication (*multiplicatio*) and division (*divisio*), is the movement by which all things descend from Divine Goodness. The Return, which is also unification (*congregatio, adunatio*), is the movement by which all things return to the supreme unity, God. The plan itself of the *Periphyseon* faithfully follows this twofold movement. Books I, II, III and IV correspond to the movement of Procession: From "Nature which creates and is not created" (Book I), we descend to "Nature which is created and also creates" (Book II), and then to "Nature which is created and does not create" (Books III and IV). Book V is entirely dedicated to the movement of return, a return whose end is "Nature which neither creates nor is created."

Procession and Return are the warp and the woof from which this marvellous tapestry, the *Periphyseon*, is woven." (pp. 1-2, notes omitted)

Giorgio Tonelli: Writings on Kant and the Philosophy of the Eighteenth Century (1961-1974)

Bibliography

1. Tonelli, Giorgio. 1961. "Critiques of the Notion of Substance Prior to Kant." *Tijdschrift voor Filosofie* no. 23:285-301.

"The Ages of Reason and Enlightenment aimed not only to advance knowledge but also tried to distinguish carefully between things which can and cannot be known. Characteristic of those ages is the manner in which metaphysical speculation was reduced by the sciences or brushed aside by the leading philosophical schools.

The general problem of the *limits of human understanding* became one of the leading philosophical themes of the seventeenth and eighteenth centuries. Doubts about the possible scope of human reasoning concerned not only God, the spirits, and the nature of the human soul, (1) but also went to the very core of that reality which man was then trying to subdue intellectually; several conceptual elements were discovered whose nature many thinkers found mysterious and inaccessible to the mind. In fact, beside a clear awareness of the limits of human understanding in general, the notions of *mathematical infinity*, (2) *force*, (3) and *substance* were considered by many philosophers to be above man's reason. The purpose of the present paper is to study the criticisms which were directed against the last of these notions, criticisms which played a rather important role in the famous "Copernican revolution" of 1769 at the start of Kant's critical

period. (4) We shall consider not only criticisms of the notion of substance itself, but also those of the closely related notions of *essence* and *materia prima* ; these often include the notion of substance, or serve as a foundation for." (pp. 285-286)

(1) For opinions about the human soul in that period see: G. Tonelli, *Elementi metodologici e metafisici in Kant precritico* (1745-1768), Cap. VII, § 30 and foll. About God's unintelligibility, *Ibid.*, Cap. VII, § 17 (In the II Vol., to be published in short. Vol. I, Torino 1959).

(2) See G. Tonelli, *Le problème des bornes de l'entendement humain au XVIIIe siècle et la genèse du criticisme kantien particulièrement par rapport à la question de l'infini* , "Revue de Métaphysique et de Morale", 1959.

(3) See Tonelli, *Elementi*, Cap. VII, § 21 and foll.

(4) A not very thorough history of the notion of substance is in K. Heidmann, *Der Substanz-Begriff von Abälard bis Spinoza*, Berlin 1889, (Dissertation).

2. ———. 1963. "The Law of Continuity in the Eighteenth Century." *Studies on Voltaire and the Eighteenth Century* no. 24-27:1619-1638.

"Some excellent research has been made into the eighteenth-century attitude towards the assumption that nature's ways are essentially simple, and towards the principle of least action (1). But another methodologically fundamental principle, upon which the learned men of the time concentrated their attention, and which caused them much bitter argument, namely the law of continuity, has not yet been studied with a more systematic and modern approach. The only historical survey of the question is G. Ploucquet's old dissertation, published in 1761, which one very rarely meets nowadays, for it is almost completely forgotten*.

The purpose of the present paper is to fill this gap. We shall first summarise the question as it stood in the seventeenth century, and we shall try to expound in greater detail the vicissitudes the problem suffered during the period in which we are chiefly interested.

The topics treated by A. O. Lovejoy in his well-known work *The Great chain of being* (1933; the Cambridge, Mass. 1957 edition is quoted), show some important similarities to the question we propose to study. Our problem is in fact much more precise and limited, but this will not prevent us from recalling from time to time some pertinent elements from Lovejoy's book." (p. 1619)

(1) for a bibliography of these works, and an original contribution to the history of that problem, see G. Tonelli, *Elementi metafisici e metodologici in Kant dal 1745 al 1768*, Torino 1959, i. cap.1, nota (80) and cap.u, nota (3).

(...)

"Conclusion.

The case of the principle of continuity in the eighteenth century is very interesting indeed in the history of ideas. It is a good example of a badly defined and exceedingly general principle, whose multifarious applications extended the dispute to widely different fields. One has the feeling that its acceptance or rejection was never based on an independent discussion of its purely theoretical side—whose very imprecision led to a very elastic interpretation, making any abstract examination practically useless; no, they were rather motivated by the more or less welcome consequences which could be drawn from the principle in a specific case, about which an author usually had preconceived ideas, in case, that is, he was not motivated merely by personal hostility towards its real or pretended supporters or detractors. Many of the people partaking in the discussion seemed, wittingly or unwittingly, to ignore at least some of the opinions previously expressed in the dispute, and attacked positions which nobody had thought of defending, and which really only represented a rough vulgarisation of the principle.

The climax of the dispute (the Berlin Academy against Wolff) seems to have been brought about for merely personal motives. In fact at both earlier and later periods the principle played a

fairly important rôle in some fields of science more or less independently of theoretical discussions about it, and after the waning of those discussions." (p. 1638)

3. ———. 1966. "Kant's Early Theory of Genius (1770-1779): Part I." *Journal of the History of Philosophy* no. 4:109-131.

Italian translation in: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 183-203.

"The importance of the theory of genius in Kant's philosophy was realized comparatively early in the history of *Kantforschung*, and several works have been devoted to this subject (1) But nobody has, until now, tried to reconstruct the development of Kant's ideas on genius utilizing the materials contained in his *Nachlass*, published by Adickes. (2) This is what I shall attempt in the present paper, limiting the study to the period from 1770 to 1779, coinciding with Kant's preliminary works for the elaboration of the *Critique of Pure Reason* .

First I shall try to establish Kant's opinions on genius in the aforesaid span of time, second, to trace the sources of such opinions in Kant's cultural background." (p. 109)

(1) See especially: K. Hoffman, *Die Umbildung der Kantischen Lehre vom Genie* in Schellings System des transscendentalen Idealismus (Bern: 1907, Berner Studien zur Philos. u. ihrer Geschichte, LIII); R. Schlapp, *Kants Lehre vom Genie und die Entstehung der "Kritik der Urteilskraft"* (Göttingen: 1901); O. Schöndörffer, "Kant's Definition vom Genie," *Altpreussische Monatsschrift*, 1893, xxx; O. Wichmann, "Kant's Begriff vom Genie und seine Bedeutung" *Deutsche Akademische Rundschau*, Jhg. II, 12 Sem., Folge N. 2; 7, 15 Jan. 1925.

Schlapp's work, utilizing Kant's *Kolleghefte* (or notes taken from his lectures), is peculiarly important.

(2) In Kants *Gesammelte Schriften*, published by the Preussische Akademie der Wissenschaften. This is the edition we refer to in our quotations. We give only the number of the volume and the page for the printed works of Kant, and the number of the volume and that of the *Reflexion* for the

Nachlass . We refer to the last issue of the Preussische Akademie Ausgabe edition. We intend to utilize Kant's *Nachlass* following the same criteria as in: G. Tonelli, *Kant, dall'estetica metafisica all'estetica psicoempirica. Studi sulla genesi del criticismo (1754-1771) e sulle sue fonti* (Torino: 1955), Memorie della Accademia delle Scienze di Torino, Serie 35 Tomo 3, Parte III. See pp. 7-10, 192, 253-255.

4. ———. 1966. "Kant's Early Theory of Genius (1770-1779): Part II." *Journal of the History of Philosophy* no. 4:209-224.

Italian translation in: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 203-234.

5. ———. 1969. "Divinae Particula Aurae; Genial Ideas, Organism, and Freedom: A Note on Kant's *Reflection N. 938* ." *Journal of the History of Philosophy* no. 7:192-198.

Italian translation in: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 237-245.

"In § 21 of my article "Kant's Early Theory of Genius (1770-1779)," published in this journal (1) two years ago, I quote from Kant's *Reflection N. 938*, of which the complete text is as follows:

Spirit is referred to the universal, because it is a kind of *divinae particula aurae*, and it draws from the Universal Spirit. Therefore, Spirit [in itself] has no particular characters; but it vivifies in different ways, following the different talents and sensitivities [of men] it meets, and, as these are so multifarious, every [human] Spirit has something peculiar. One should not say: geniuses. [But: there is only one genius.] It is the unity of the Soul of the World. (2)

Kant refers to this Spirit as the source of both genial or "original" ideas in the human mind and of organic life in the outside world (KETG, §§ 22, 23). This theory derives of course from the ancient Platonic-Stoic-Hermetic-etc. doctrine of the Soul of the World, which had a tremendous diffusion not only in the Middle Ages (School of Chartres, etc.) but also from the Renaissance to the eighteenth century and even later, especially among Stoic, Cabbalistic, Hermetic, Pansophic, and Mosaic

philosophers, both in psychology (where the human soul was taken as a part of the soul of the World) and in natural philosophy among the opponents of mechanism (either in general or in connection with living organisms only) (3)."

(1) IV (1966), 209; the article is printed in two parts, pp. 109-131 and 209-224 (cited hereafter as KETG).

(2) "Weil der Geist aufs allgemeine geht, so ist er so zu sagen *divinae particula aerae* und aus dem allgemeinen Geist geschöpft. Daher hat der Geist nicht besondere Eigenschaften, sondern nach den verschiedenen Talenten und Empfindsamkeiten, worauf er fällt, belebt er verschiedentlich und, weil diese so mannigfaltig seyn, so hat ieder Geist was eigenthtimliches. Man muss nicht sagen: Die genie's. Es ist die Einheit der Weltseele" (Immanuel Kant, *Gesammelte Schriften* [Berlin: Preussische Akademie der Wissenschaften], XV [1923], part 1, 416). This *Reflection* is a note on Baumgarten's *Metaphysica*. According to Adickes, it was probably written between 1776 and 1778, less probably in 1772. See "World Soul" (with bibliographical references, by T. Gregory and G. Tonelli) in the 1967 ed. of the *New Catholic Encyclopedia*. A still useful, although very partial, historical account of this doctrine is given by A. Rechenberg (praeses) and J. D. Gilttner (Auctor & Respondens), *De mundi anima dissertatio* (Lipsiae, 1678). See also KETG, note 153.

6. ———. 1971. "The "Weakness" of Reason in the Age of Enlightenment." *Diderot-Studies* no. 14:217-244.

Reprinted in *Scepticism in the Enlightenment* (1997), pp. 35-50.

Italian translation in: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 21-41.

"Among the different aspects of the problem of limits I have been surveying, hardly one may be found where eighteenth-century thought had not been heralded in some aspects at least by thinkers of the proceeding century. This happens, of course, in all ages and for all problems. In some cases, as for the critique of the notions of substance and of that of infinity,

eighteenth-century philosophers were, in the main, repeating old arguments. But on the whole, the Anglo-French Enlightenment gave to these attitudes an importance and a diffusion previously unknown: opposition to ontology, and partially to logic, agnosticism in respect of transcendent subjects in general, claimed ignorance of the inner texture and properties of bodies and of the first causes. Opposition to hypotheses and to general systems not founded on experience are, both in their extension and in their stress, a basic novelty in modern philosophy. For this, seventeenth-century philosophy was much more an Age of Reason than was the Enlightenment; and this "reason" was unmasked by the Enlightenment as a specious and obnoxious pretension of the human mind. The Enlightenment's reason sometimes merely paid lip service to Revelation; however this outer limit of reason was replaced by an inner and more effective one, which could also be reconciled with Revelation, with the advantage, perhaps, of a clearer "separation of powers".

The German Enlightenment was, as it were, more "traditionalist", especially in Wolff's case: only a few of the limiting attitudes were accepted by Wolff. On the other hand, the school of Thomasiaus and Crusius represented, for very special reasons, a kind of *via media*, and was the catalyzer of a creative synthesis between the Anglo-French and the German approach. In this way, positions which could appear "Traditional" as sponsored by Wolff became the foundation of future German philosophy; "traditionalism" and "modernism" in the history of thought are nothing but relative terms.

If we may still speak of "traditionalism" then, the Enlightenment was on the whole much less revolutionary than it has sometimes been represented; this has already become clear concerning its political theory, but should also be extended to other aspects of the century's thought.

The Anglo-French Enlightenment, with its intellectual modesty and respect for its heralds in the preceding century, shows one side of this attitude, an attitude matched in the practice of a very real quest for discovery, but exalted, at the same time, by

an equal respect for science. Philosophy, certainly, is no longer the servant of theology, but it partially becomes the servant of science. And this is shown, among other things, by the basic impact of Newtonianism on the problem of limits, an impact which has not been as yet sufficiently clarified. In fact, it is a commonplace in our day to talk about Newton's role in the development of philosophy, but as soon as this role is clearly defined, an escape is found in some vague and frequently erroneous statement.

The German Enlightenment, less humble in its intentions, showed its modesty by facts: it refrained from relegating to the scrap-heap many basic attitudes of eighteenth-century thought, and reshaped them into formulas pregnant with future developments.

In contrast to romantic philosophy's frenzy for originality at any cost, the Enlightenment philosophy was not haunted by a quest for novelty for novelty's sake. In fact it gave full regard to its predecessors while simultaneously opening up numerous new directions for science to follow in the ensuing centuries." (pp. 243-244)

7. ———. 1971. *A Short-Title List of Subject Dictionaries of the Xvith, Xviith, and Xviiiith Centuries as Aids to the History of Ideas*. London: Warburg Institute.

Second extended edition revised and annotated by Eugenio Canone and Margherita Palumbo, Firenze: Leo S. Olschki, 2006.

Contents: Introduction 1; Symbols for names of libraries 5; List I: Sixteenth, seventeenth and eighteenth century dictionaries as aids to the history of ideas 7; Chronological-systematic index of dictionaries included in List I 37; List II: Pseudo-dictionaries, dictionaries not ordered alphabetically, or of minor importance 43; List III: Dictionaries not located 53; Index of names 57; Index of anonyma 64.

"Introduction.

Historians of sixteenth, seventeenth and eighteenth century ideas are realizing increasingly that dictionaries contemporary

with the period under consideration are in many cases a basic aid to their work. Some of these reference books are well-known, and are currently used by scholars in all fields. Nevertheless, a more careful inquiry into this kind of source discloses an unsuspected number of works which are mostly unknown or difficult to locate.

The aim of this bibliography is to provide for the first time an extensive list of these dictionaries and their basic locations in Europe, together with some information concerning their doctrinal affiliations, diffusion and present usefulness. I have been collecting and examining these materials in the major European libraries during the past fifteen years. I acknowledge my debt of gratitude to Professor Enrico de Angelis, Professor Alberto Martino, Dr. P. F. Mugnai (who received a grant from the Consiglio Nazionale delle Ricerche in Rome for this purpose), and my wife, Dr. Grazia Tonelli, all of whom helped me during the final stage of work on this bibliography by research in several libraries; to Miss Pamela Sargent, for revising and typing the manuscript, and to Miss Susan Cabral for typing the indexes.

I hope that my work may stimulate interest in the history of lexicography. Studying the development of the criteria and methods of lexicography, the connexion of dictionaries with doctrinal trends contemporary to them, and their influence on the evolution and diffusion of thought should be a basic field in the history of ideas, as well as a further contribution towards a more adequate use of this kind of source in general research.

(a)

This Bibliography is divided into three lists.

The FIRST LIST includes those dictionaries which, first, meet the basic criteria of selection, and second, have been located and examined.

(I) *Criteria of selection:*

(a) Only dictionaries disposed in alphabetical order have been included. In fact, many encyclopaedias are ordered systematically, and cannot be used as dictionaries any more

than any general treatise can. Since the only basic criterion which has proved to be generally effective in making a distinction is that of alphabetical order, some works which are strictly related to dictionaries but which do not fulfil this condition have been excluded from the first list (but included in the second).

(b) Only subject dictionaries have been included. Onomastic dictionaries (historical, geographical, etc. which do not list terms, but only names of persons and/or places) have been excluded.

(c) Subject indexes to works, compiled either by authors or by editors, have been excluded, with the exception of a few of major importance, which are traditionally known or frequently referred to as dictionaries.

(d) Works bearing the name of dictionaries, or usually referred to as such, although they are not dictionaries but treatises, have been excluded from the first list (but included in the second).

(e) Dictionaries prior to 1500 or posterior to 1800 have been excluded in general, with the following exceptions: first, of a few dictionaries prior to 1500 which were still influential (and eventually reprinted) after that date; secondly, of a few dictionaries immediately posterior to 1800 which echo ideas of the preceding century.

(f) *Ana*, which are collections of memorabilia or excerpts from the works of a single author (many of which are alphabetically ordered) have been excluded, because they are listed in already existing extensive bibliographies. (b)

(g) Dictionaries answering to the previously listed criteria, but which are of minor importance, such as bi-lingual dictionaries and compendious dictionaries and encyclopaedias for practical use only, dictionaries of merely linguistic interest, and purely technical dictionaries (e.g., of legal cases, chemical formularies, collections of medical prescriptions, etc.) have been excluded from the first list. Some of them have been included in the second list, because their notoriety or their title might mislead one into considering them useful to the history of ideas.

Comprehensive lists of these dictionaries may be found in existing bibliographies of dictionaries. (3)

(II) *Location*. All items included in the first list have been checked as to their presence (1) in the major Roman libraries (as listed below in the list of library symbols); (2) in the Bibliothèque Nationale, Paris (N.P.) ; (3) in the British Museum (B.M.) ; and (d) in the Niedersächsische Staats- und Universitätsbibliothek, Göttingen (G.). Normally, locations in other libraries are given only for items which are not to be found in any of the above-mentioned libraries.

N.B. All editions of the same work are listed which have either been examined or identified through library catalogues or general and special bibliographical works and studies. Differences among titles or contents of different editions have been referred to in so far as they could be established in the above ways.

A chronological-systematic index, attached to the first list, and referring to it-only, allows a general view of all items as ordered (1) by centuries, (2) by categories of dictionaries within a century, (3) by the date of the first edition within a category. It is followed by a list of dictionaries devoted to a single author.

The SECOND LIST includes items which have been located and seen, but which do not answer to the criteria of selection listed above. The purpose of this second list is: (a) to give an account of items which were seen, but excluded from the first list, in order to establish that they have not been overlooked; (b) to point out that some of them may nevertheless be used as dictionaries. In this case, the location is given.

The THIRD LIST includes items which could not be located, although they are listed in bibliographies, or referred to elsewhere. Therefore, their character and utility could not be established. This third list is intended as an aid to further research.

It may be interesting to know that microfilms of dictionaries included in the first list, and not present in Roman libraries, are being collected at the Istituto di Filosofia of Rome University.

Hulbert, *Dictionaries: British and American*, London 1955; W. Zaunmüller, *Bibliographisches Handbuch der Sprachwörterbücher*, New York, London, Stuttgart 1958; G. A. Zischka, *Index lexicorum*, Wien 1959. Many of the items listed in my bibliography are unknown to all these authors.

8. ———. 1972. "Early Reactions to the Publication of Leibniz's "Nouveaux Essais"." In *Proceedings of the Third International Kant Congress* 561-567. Dordrecht: Reidel.

Revised version as: *Leibniz on Innate Ideas and the Early Reactions to the Publication of the "Nouveaux Essais" (1765)* .

"Leibniz' *Nouveaux Essais*, written in 1703-05 (cited in the following as: N E), were posthumously published by Raspein 1765, at the beginning of a moderately significant Leibniz revival. Now, as the great upheaval in Kant's thought took place in 1769, and as one of the main characteristics of this upheaval was the rejection of sensibility as the sole source of knowledge, it is easy to infer that Kant's reading of the N E may have been one of the elements which prompted him to adopt his new solution.

It is not my ambition to answer this difficult question at this time but I will try to clear the ground for an answer to it by inquiring into the early reactions of philosophical circles, especially German, to the appearance of the N E. If the peculiarity of the doctrines of the N E concerning the origin of knowledge was widely noticed, and if the picture of Leibniz' philosophy was modified accordingly, Kant could have been stimulated by such a widespread reaction to pay special attention to the problem." (p. 561)

9. ———. 1972. "A Contribution Towards a Bibliography on the Methodology of the History of Philosophy." *Journal of the History of Philosophy* no. 10:456-458.

"A recent issue of the *Monist* (53, 4, October, 1969) was devoted to the "Philosophy of the History of Philosophy." The articles were prefaced by an "Introduction and Bibliography" by Lewis White Beck. The following list is an addition to that bibliography, omitting those contributions not contained in it but quoted in other places in the same issue of the *Monist* ." (p. 456)

(...)

I also wish to point out that, obviously, the methodology of the history of philosophy would greatly profit from taking into consideration methodological research in other branches of history. This includes not only general history, history of science, and the sociology of knowledge (which are rather easy

to reach bibliographically), but also those branches of history less obviously connected with our interest or less well-known in English-speaking scholarship:

(1) Hermeneutic. This ancient approach, employed again by Joachim Wach (*Das Verstehen*, Tübingen, 1926. Reprinted, Hildesheim, 1966), was revived with major changes by Emilio Betti (*Teoria generale dell'interpretazione*, 2 vols., Milano, 1955). It evoked a tremendous response in Germany, culminating in the famous work by Hans-Georg Gadamer, *Wahrheit und Methode*, Tübingen, 1960. The ensuing debate about this work brought forth a very large number of subsequent contributions.

(2) Special attention should be paid to the methodology of etymology, onomasiology and semasiology -- branches of philology closely related to the history of ideas. The most important contributors to this field are Kurt Baldinger and Helmut Gipper. The point of view of the latter was summed up by H. Gipper and H. Schwarz in the "Introduction" to their *Bibliographisches Handbuch zur Sprachinhaltsforschung* (Kön und Opladen, 1962). The *Handbuch* itself, an indispensable tool for all historians of ideas, has not yet been completely published.

(...)

(3) Also to be kept in mind is the methodology of the history of art, especially useful in connection with the problem of periodization. In this respect, after the well-known W. Pinder's *Das Problem der Generation* (reprinted, Munich, 1961), it is necessary to mention E. H. Gombrich's *Norma e forma: Critica valutativa e morfologia stilistica nella storia dell'arte* (Torino, 1963. Quaderni della "Biblioteca filosofica di Torino," No. 6), and the discussion on "Criteria of Periodization in the History of European Art," in *New Literary History* 1 (1970)." (pp. 457-458)

10. ———. 1973. "A Contribution to the Bibliography of General Subject Indexes." *Studi internazionali di filosofia* no. 5:211-214.

"Professor Archer Taylor, the famous bibliographer and historian of bibliography, published a history of the *General Subject-Indexes Since 1548*, Philadelphia, University of Pennsylvania Press, 1966, 335 p.

This work is a new pioneering enterprise of its author: in fact it is the first in its field. It is a detailed study of the development of general bibliographical subject-indexes of books since the Renaissance, i.e., it lists and discusses all those bibliographies: (a) which are ordered by subjects, alphabetically or systematically; (b) but which are general, i.e., not limited to a particular held (e.g., Theology only, Medicine only, etc.). General subject-indexes limited to a single nation and/or language are included, as well as a few specialized general indexes, e.g., subject-indexes to journals. The subject catalogs of some libraries are included, as they are practically identical with general subject-indexes. Some of the works considered are manuscripts. The author also studies some plans for subject-indexes which never were actualized at all, some subject-indexes which never were completed, and some theoretical discussions on the methodology of the indexes in question. I do not understand why the author does not also take into consideration the basic works on bibliotheconomy, in as far as they concern theoretical discussions on the classification of books, or provide classified lists of books to be used as a blueprint for organizing a library; in fact, the problems and the lists in question are identical to those belonging to a general subject-index, as one can see e.g., in the well-known writings on the subject by E. Edwards (1859), J. Petzhold (1866), A. Maire (1896), E. C. Richardson (1901), Berwick-Sayers (1954), etc.

This is an important contribution to the history of ideas from three points of view: first, because as a history of a branch of bibliography it studies a significant aspect of the development of the organization of learning; second, because it is in many cases a study of an aspect of the history of the systematization of knowledge, i.e., of the classification of the sciences and of their sections; third, because many of the works described are still very useful as bibliographical instruments for the scholars

of our time. In fact, many of these works have not been superseded by more recent compilations, and are still basic sources of reference for some periods and areas. Professor Taylor's descriptions are frequently very helpful in determining their present utility although this is not the major aim of this book, the scope of which is first and foremost historical.

I am listing here some titles which should be added to Professor Taylor's study, but I must warn the reader that as the index of names (*Compilers of Subject-Indexes and Kindred Works*) at the end of Professor Taylor's book only lists a few of the names actually mentioned in his work, it is possible that some of the titles in question are mentioned, but escaped my attention. All the works listed below, if they are not described as plans or theoretical discussions of a classification, are general subject-indexes ordered systematically, i.e., in none of them the basic organization is alphabetical, although their sub-sections may occasionally be ordered alphabetically. In many of them the classification merely consists in a few general headings, and under each heading the entries are listed alphabetically by the names of the authors." (p. 211)

11. ———. 1974. "Leibniz on Innate Ideas and the Early Reactions to the Publication of the "Nouveaux Essais" (1765)." *Journal of the History of Philosophy* no. 12:437-454.

Revised version of *Early Reactions to the Publication of Leibniz's "Nouveaux Essais"* (1972).

Italian translation in: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 111-136.

"Leibniz' *Nouveaux Essais*, written in 1703-1705 (cited hereafter as NE), were posthumously published by Raspe (1) in 1765, at the beginning of a Leibniz revival which was also marked by the large Dutens edition of 1768. As the great upheaval in Kant's thought took place in 1769, and as this upheaval had as one of its main characteristics the rejection of sensibility as the sole source of knowledge, (2) it is easy to infer that Kant's reading of the NE may have been one of the elements prompting him to adopt his new solution. It is not the ambition of this paper to answer that difficult question: rather

it is an attempt towards clearing the ground for an answer to it, by inquiring into the early reactions of philosophical circles, especially German, to the appearance of the NE. To what extent was the significance of the particular doctrines expounded in the NE noticed? To what extent did contemporary philosophers realize that these were to profoundly modify the picture of Leibniz' psychological tenets? And, therefore, to what extent could Kant have been stimulated by a widespread reaction to pay special attention to the peculiarities of that work? In conformity with this purpose, I shall focus my research on the question of the origin of knowledge. As it is my task to reconstruct a general philosophical atmosphere, I will not confine my research to philosophic reactions prior to 1769, but will also take into consideration some attitudes of the following decade. As frequently happens in the history of ideas, the impact of a certain event may be noticed almost immediately after its occurrence, but the documentation of its effects may be available only after a certain delay. But they are nevertheless indicative of that prior impact. Before starting this enquiry, I shall: (1) point out the difference between the doctrine in question as it is expounded in the NE and as it appeared in the previously published works of Leibniz; (2) examine the interpretations of Leibniz' psychology prior to 1765, especially as represented in the version which was accepted by Wolff and incorporated into his system." (p. 437)

12. ———. 1974. "Kant's Ethics as Part of Metaphysics: A Possible Newtonian Suggestion? With Some Comments on Kant's "Dream of a Seer" " In *Philosophy and the Civilizing Arts. Essays Presented to Herbert W. Schneider*, edited by Walton, Craig and Anton, John P., 236-263. Athens: Ohio University Press.

Italian translation in: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 259-282.

"One of the most remarkable traits of Kant's system of philosophy is the fact that Ethics is classified as a part of Metaphysics, as it appears in the titles of two of Kant's major works: *The Foundation of the Metaphysics of Morals* and *Metaphysics of Morals* . It is just too bad that no commentator, as far as I know, ever stressed the importance of this fact, and of the underlying problems; the fact was taken for granted, the problem ignored. It is high time to call some attention to it.

Actually, this is one of the most dramatic changes Kant introduced into the structure of philosophy as a whole; before him, a subordination of Ethics to Metaphysics was, as far as I know, totally unheard of. Metaphysics had been subordinated to Ethics by Spinoza, probably under the influence of the later developments of Stoicism, but the opposite had never been attempted.

This of course does not mean that before Kant Ethics never had been founded on Metaphysics; on the contrary, this foundation of Ethics is certainly one of the most generally accepted positions. Nevertheless, Ethics had been considered all the same as an independent science, and not as a part of Metaphysics.

On the other hand, if Kant considers Ethics as a part of Metaphysics, this does not mean that in his thought the dependency of Ethics on Metaphysics is increased; on the contrary, Ethics becomes systematically totally independent of Metaphysics *stricto sensu* ; but, as we shall see, it becomes a part of Metaphysics because it is transformed into a foundation of it, and this is quite new.

The expression "Metaphysics of Morals" (*Metaphysik der Sitten*) appears, as far as I know, for the first time in Kant's letter to Herder of May 9, 1768, where Kant states that he is working on a Metaphysics of Morals which should be completed within that year. But, in a letter to Lambert of December 31, 1765, Kant had already announced a work on the

“Metaphysical Foundations of Practical Philosophy.” The expression “Metaphysics of Morals” is repeated in Kant’s letter to Lambert of September 2, 1770, (1)¹ where our author states that he is busy right then writing a treatise (which never was published) on that subject, without adding any further comments.

In the *Logik Blomberg* (1771) and in the *Logik Philippi* (1772), moral philosophy is not subordinated to the general heading of metaphysics.⁽²⁾ In the *Metaphysik L1* (1775-1780), Metaphysics and Moral philosophy are said to be the two pure philosophical sciences, ⁽³⁾ and in the *Lectures on Ethics* of 1780-1781, philosophy is divided into theoretical and practical philosophy, ⁽⁴⁾ but a Metaphysics of Morals is not mentioned. In his lectures Kant frequently takes a more conservative stand than in his private correspondence, in his personal notes or in his published works.

In a letter to Herz, written towards the end of 1773, Kant announces a detailed plan for his own work: he intends to write a treatise on “transcendental philosophy,” which would be a *Critique of Pure Reason* ; afterwards, he intends to publish a *Metaphysics*, which would be divided into a *Metaphysics of Nature* and a *Metaphysics of Morals* . The last one would appear first. ⁽⁵⁾

Towards the end of the decade, in his lectures on *Philosophical Encyclopaedia* (1777-1780), ⁽⁶⁾ Kant expounds his new notion of ethics even in class. Practical philosophy should be divided, in his saying, into: (1) *transcendental practical philosophy*, dealing with the use of freedom in general; (2) *practical rational philosophy viz. Metaphysics of Morals*, dealing with the good use of freedom; (3) *practical anthropology* . ⁽⁷⁾ We need not consider (3) here, because this section clearly does not belong to pure philosophy. ⁽⁸⁾ As for (1), it is easy to identify it with that section or aspect of a *Critique of Pure Reason* which deals with the transcendental foundations of morality. ⁽⁹⁾ Therefore (2) corresponds to the *Metaphysics of Morals* properly.

It is well known that in the section on *Architectonic* of the *Critique of Pure Reason* metaphysics is divided into *Metaphysics of Nature* and *Metaphysics of Morals*. But Kant felt the need of adding a few words of explanation for a denomination so unusual:

The term ‘metaphysics,’ in its strict sense, is commonly reserved for the metaphysics of speculative reason. But as pure moral philosophy really forms part of this special branch of human and philosophical knowledge derived from pure reason, we shall retain for it the title ‘metaphysics’. (10)

Still, in the *Prolegomena* (1783), *Metaphysics and Morals* are mentioned separately. (11) But in a *Reflection* dated by Adickes in 1783-84, *Metaphysics* is divided again into *Metaphysics of Nature* and of *Morals*. (12) In the *Metaphysik Volckmann* (1784-85), Kant expands on this distinction. (13)

In 1785, the publication of the *Foundation of the Metaphysics of Morals* lends a final official character to this denomination, referring to a science belonging to pure philosophy in as far as this is limited to particular objects of the understanding. (14) The need for a special *Critique of Pure Practical Reason* is also acknowledged. (15)

The question, in fact, is settled from now on. In the later years, only after 1790, *Morals* is distinguished from *Metaphysics* in the division of the parts of a certain conception of philosophy in general, called “cosmopolitan,” which conception seems to have been unknown before, and which seems not to replace, but to flank, the older conception and division. (16) In fact, the established denomination reappears in the *Metaphysics of Morals* published in 1797. (pp. 236-240)

(1) I. Kant, *Gesammelte Schriften*, Akademie-Ausgabe (Berlin und Leipzig), X (2nd edition), pp. 74, 56 and 97. Professor Norbert Hinske called my attention to the letter of 1768, and to another letter from Hamann to Herder of February 16, 1767, where Hamann states: “Kant arbeitet an einer Metaphysik der Moral” (J. G. Hamann, *Briefwechsel*, Wiesbaden 1956, Vol. II, p. 390); in another letter to Herder of August 28, 1768,

Hamann writes: “Kantens Metaphysik der Moral hält mich in Erwartung” (ibid., p. 421).

(2) *Op. cit.* , XXIV, 1,1 pp. 31, 314.

(3) *Op. cit.* , XXVIII, 5,1, p. 173.

(4) I. Kant, *Eine Vorlesung Kants über Ethik*, hrsg. v. P. Menzer (Berlin, 1924), p. 1.

(5) Kant, *Ges. Schr.*, X, p. 145.

(6) For the correct datation, see my review of its edition, *Filosofia*, XIII (1962), pp. 511-514.

(7) I. Kant, *Vorlesungen über Enzyklopädie und Logik*, Bd. I, *Vorlesungen über Philosophische Enzyklopädie* (Berlin, 1961), p. 38. (This edition of Kant’s lectures, although published by the Berlin Academy, is not a part of the *Gesammelte Schriften* . This edition was discontinued after Vol. 1.) Nevertheless, on p. 67, *Moral* and *Metaphysik* seem to be distinguished.

(8) See ibid., p. 68.

(9) It is well known that Kant realized the need to write a *Critique of Practical Reason* only after 1781. The *Critique of Pure Reason* was supposed, at least until 1785, to take care of the transcendental foundation of both the *Metaphysics of Nature* and the *Metaphysics of Morals*.

(10) B. 870. I quote the *Critique of Pure Reason* using the pagination of the second edition (B). Where the second edition (1787) does not conform to the first, that will be pointed out. For translation into English, I follow N. Kemp Smith.

(11) Kant, *Ges. Schr.* , IV, p. 363 (§60).

(12) *Op. cit.* , XVIII, pp. 284-85 (Refl. #5644).

(13) *Op. cit.*, XXVIII, 5,1, p. 364. On p. 362 a justification of sorts is given for the presence of metaphysics in ethics; but it cannot serve our purpose because, according to this justification, metaphysics is present in *all* rational sciences, including mathematics (p. 363).

(14) *Op. cit.* , IV, p. 388. Kant adds: “Auf solche Weise entspringt die Idee einer zweifachen Metaphysik, einer *Metaphysik der Natur* und einer *Metaphysik der Sitten* ” (*ibid.*). But what precedes hardly can be considered a clear explanation of this conclusion.

(15) *Loc. cit.* , p. 391.

(16) The first appearance of this doctrine which can be dated with certitude is that in the *Metaphysik L2* of 1790-91 (*op. cit.*, XXVIII, 5, 2,1, pp. 532-33). The same notion of “cosmopolitan” philosophy reappears in the *Wiener Logik* of 1794-96 (*op. cit.*, XXIV, I, 2, pp. 798-99), but there is no division. This leads me to think that the section of the *Logik J'dsche* expounding the same doctrine, and giving the same division (*op. cit.*, IX, pp. 24-25), derives from the *Kollegheft* of 1790 which, along with another from 1782, was used by Jäsche to compile his text.

13. ——. 1974. "Pierre-Jacques Changeux and Scepticism in the French Enlightenment." *Studia leibnitiana* no. 55:106-126.

Reprinted in *Scepticism in the Enlightenment* (1997), pp. 51-68.

"In the year 1767 Pierre-Jacques Changeux published a work entitled *Traité des Extremes, ou des éléments de la science de la réalité* (Amsterdam, 2 vol.). In the “Avertissement” the author states that his work had been undertaken at first as an article commissioned by the *Encyclopédie*, but that it had expanded so much that it had not been finished in time (I, p. V). In fact, the volume of the *Encyclopédie* with the letter R had been published in 1765, and included an article “Réalité” which was completely insignificant, which had nothing to do with Changeux’s ideas.

A summary of Changeux’s books by Vallet was published in the *Encyclopédie d’Yverdon*, (1) under the heading of “Extrêmes” (vol. XVIII, 1772). At the end of the article more about Changeux’s work was promised in an article “Réalité”, but this article never was published (it should have appeared in vol. XXXVI, 1774). We do not know the reason for this omission, but it is quite possible that the dangerous character of

Changeux's work had been noticed in the meanwhile, and that timid de Felice had preferred to suppress that article.

Vallet's article was reproduced in the *Supplément* of Diderot's *Encyclopédie* (Paris-Amsterdam 1776-77), and incorporated in the later editions of the *Encyclopédie* ; but the new article "Réalité", still promised in Vallet's article did not appear." (pp. 106-107).

(...)

"In my opinion, Changeux's main work deserves some attention for two reasons. The first, and the most peculiar, is his notion of the " *Ex trêmes* "; the second is the fact that he is a rather typical (and comparatively late) representative of that major sceptical trend in French XVIIIth Century philosophy whose importance has been hitherto almost entirely ignored.

Changeux's most peculiar thesis is that everything man is, or man can know, lies in the middle of two extremes, which are an infinity of magnitude and an infinity of smallness. All things, or their qualities, are extremes, in as far as they are extended or diminished as much as the imagination allows it (I, 1). The extremes are nothing but words expressing relationships (I, vi). In the present constitution of man, the extremes meet each other, without merging: and reality lies in the middle (I, vi, 8). The extremes are not only terms connected with relationships: they are relative to the different minds thinking them. They also correspond to infinity as applied to all kinds of knowledge - but infinity is conceived differently by the different men (I, vi, viii). The extremes do not contradict each other (I, 3-4): in fact, the universe subsists through an opposition of contraries (I, 9). The middle point (*milieu*) is the highest degree of reality (I, 14), although this middle point is not the same for all men (I, 17); there are infinite middle points which are only apparent (I, 18)." (p. 108)

(...)

"I will consider now the second basic aspect of Changeux's work, i.e., its scepticism, whose importance can be assessed only in connection with the general development of this school

of thought in XVIIIth Century France. The only survey of Enlightenment scepticism we have is a well known article by R. H. Popkin (12), which provides a broad frame of reference, but which neglects many details. Using some research recently produced by other scholars, and adding some elements of my own, I will try to draw a very summary picture of XVIIIth Century French scepticism prior to Changeux. It will appear that scepticism was much more largely diffused in France in that time than it has been hitherto realized: so much, that it is probably justified to consider it as the methodological trend by far dominating in that area. In comparison, German contemporary scepticism was an extremely limited phenomenon (13); as for British scepticism, although it was represented by high ranking personalities such as Hume and Bolingbroke, it does not seem to have mastered many other adepts (14)." (pp. 110-111)

(1) B. De Felice, *Encyclopédie, ou Dictionnaire universal raisonné des connaissances humaines*, 42 vol. Yverdon 1770-1775.

(12) R. H. Popkin, *Scepticism in the Enlightenment*, in: *Studies on Voltaire and the Eighteenth Century*, XXVI, 1963, pp. 1321 ff.

(13) See my essay, *Kant und die antiken Skeptiker*, in: *Studien zu Kant's philosophischer Entwicklung*, hrsg. v. H. Heimsoeth, Hildesheim 1967, p. 109 (and footnotes referred to it).

(14) I must remark for the sake of objectivity that my search of the British philosophy of that time was not as extensive by far as that of French and German philosophy, and so this side of the picture is not yet quite clear in my mind. But I suspect that a further inquiry would not significantly change the present perspective.

14. ——. 1974. "Lumières - Aufklärung: A Note on Semantics." *Studi internazionali di filosofia* no. 6:166-169.

"There are few periods in the intellectual history of the western world which were hypostatized more than the one called « Enlightenment ». Considering this era as a whole determined in

time (1700 to 1800?) and in space (Central and Western Europe?) is an historical device whose use certainly was expedient in E. Cassirer's and P. Hazard's time, but which is quite inadequate now (1). It is very encouraging to notice that some of the best research workers are moving towards a more intensive, and less extensive inquiry in this field: such are for example Norbert Hinske and Frieder Löttsch (2).

But, to begin with, it is necessary to establish when the terms of « Lumières », « Aufklärung » (and their synonyms) appeared, and what they meant at that time. The general historical problems connected with « light » as a metaphor for « knowledge » were pointed at e.g., by H. Blumenberg almost two decades ago (3). But it is only recently that some precise answers to this question were given, not in general, but exactly in connection with the period in question: F. Schalk and R. Mortier provided the outline of a solid background for the French « Lumières » (4). Schalk's and Mortier's papers are extremely interesting and instructive: still, I think that another dimension of the problem should be explored (both for « Lumières » and « Aufklärung »): the connection between « light of nature » and « right reason », « universal reason », « good sense » and « common sense », expressions which were synonyms for centuries. Inquiring into this side of the question could possibly clarify the need for a further inquiry into the connection between what is traditionally called « Enlightenment » and what is called « Common Sense Philosophy »; a connection which would probably prove not to be entirely accidental (5).

Another obvious direction of expansion of the problem is the exploration of the connections between « lumières », « Aufklärung », and « The Age of Reason », « le siècle philosophique », « das kritische Jahrhundert », and other denominations of that era, in order to establish in how far they simply overlap, and in how far they reveal different aspects of that very complex phenomenon.

As for the German « Aufklärung », apart from the data offered also on this theme by Schalk in the paper mentioned above,

some interesting elements are provided by Th. Mahlmann (6), and an even more thorough and important investigation was produced by Horst Stuke, in his article « Aufklärung », in *Geschichtliche Grundbegriffe* (7).

It is my intention to list here a few elements which might tentatively prove to be useful for gaining a more detailed view of the problems involved." (p. 166)

(1) I present the reason for my misgivings about the protracted use of this approach in my article: « The Weakness of Reason in the Age of Enlightenment », *Diderot Studies*, 1971, and in: « La philosophie allemande de Leibniz a Kant », in *Histoire de la Philosophie*, vol. II, ed. by Y. Belaval, Paris 1973.

Giorgio Tonelli: Writings on Kant and the Philosophy of the Eighteenth Century (1975-1995)

Bibliography (1975-1995)

1. Tonelli, Giorgio, 1975. "The Problem of the Classification of the Sciences in Kant's Time." *Rivista Critica di Storia della Filosofia* no. 30:243-294.

"In order to understand the meaning and the originality of Kant's classification of the parts of philosophy in the *Critique of Pure Reason*, and the status of the *Critique* itself within Kant's system, it is necessary to survey briefly the history of this problem, at least in the years immediately preceding the formation of Kant's doctrines.

It would be impossible here to inquire farther back into the history of this question, which would require not one but several volumes in order to be adequately expounded. So that I shall begin a detailed examination of the developments of this problem after the well known classification of the *Encyclopédie*, prefixing only a few precedents indispensable for understanding the further course of the dispute. As the history of this problem is only one of the prerequisites needed for understanding Kant's classification, and the status of the first *Critique*, I shall refrain on this occasion from drawing conclusions in connection with Kant.

The problem of the classification of the parts of philosophy is frequently conceived as an aspect of the more general question of the classification of the sciences at large: therefore I shall

have in many cases to enlarge accordingly the field of my inquiry." (p. 243)

[The works discussed are:

§ 1. Christian Wolff (1679-1754), *Philosophia rationalis sive Logica*, Francofurti et Lipsiae 1728. (The basic discussion is to be found in the *Discursus praeliminaris de philosophia in genere* preceding the work).

§ 2. Samuel Christian Hollmann (1696-1787), *Dissertatio philosophica de vera Philosophiae Notione: ... pars prior*, Vitebergae 1731; *... pars posterior*, Vitebergae 1733; *Dissertatio philosophica de definiendis justis scientiarum philosophicarum limitibus prior*, Gottingae 1736.

§ 3. Joachim Georg Darjes (1714-1791), *Introductio in artem seu Logicam theoretico-practicam*, Jeane 1742.

§ 4. Christian August Crusius (1715-1775), *Weg zur Gewissheit und Zuverlässigkeit der menschlichen Erkenntnis* (1747), in *Die philosophischen Hauptwerke*, hrsg. v. G. Tonelli, Vol. III, Hildesheim 1965.

§ 5. David Hume (1711-1776), *Enquiries Concerning the Human Understanding and Concerning the Principles of Morals* (1748) ed. L. A. Selby-Bigge, Oxford 1951, §§ 131-132.

§ 6. *The diffusion of the classification of the "Encyclopédie"*.

§ 7. *German classifications, 1753-1779*.

§ 8. *Condillac (1775), D'Alembert and the new "metaphysics"*.

Étienne Bonnot de Condillac (1714-1780), *Cours d'études* (1775) dans *Oeuvres philosophiques* (3 voll.), Paris 1947-1951: A regular division of the sciences is expounded at the beginning of the *Art of Reasoning* (I, pp. 617-620); Jean le Rond D'Alembert (1717-1783), *Discours préliminaire de l'Encyclopédie* (1751) ed. Ducros, Paris 1930.]

2. ———. 1975. "Kant's Critique of Pure Reason within the Tradition of Modern Logic." In *Akten des 4. Internationalen Kant-Kongresses (6-10 April 1974)*, 186-191. Berlin: Walter de Gruyter.

Reprinted in: Giorgio Tonelli, *Kant's Critique of Pure Reason Within the Tradition of Modern Logic. A Commentary on Its History*, edited by David H. Chandler, Hildesheim: Georg Olms, 1994, pp. 1-10.

Italian translation in: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp.285-291.

"It is obviously impossible to understand a book correctly, if it is not clear what that book is about. It may seem strange, considering how much work has been done on Kant's *Critique of Pure Reason*, that it has not yet been finally established what the subject matter of this treatise is. According to an earlier interpretation, dating from the beginning of the nineteenth century, and still accepted in the English-speaking countries, it is a treatise on the theory of knowledge. According to an interpretation dating from the twenties of our century, and originating from Nicolai Hartmann, Max Wundt and Heinz Heimsoeth, it is a treatise on metaphysics. It is my contention that the subject matter of the *Critique of Pure Reason* cannot be properly defined as theory of knowledge (gnosiology, epistemology), and that defining it as metaphysics is correct, but only partially: in fact it is, in my opinion, a treatise on logic as much as on metaphysics.

I. The *Critique of Pure Reason* is not a treatise on the theory of knowledge for the simple reason that a particular science called theory of knowledge neither existed in Kant's time, nor existed before as an independent discipline; and Kant certainly did not introduce it, since it does not exist in his vocabulary. I do not know when this new philosophical science was established, but I suspect that it was brought about in the early nineteenth century within the Kantian school, by some philosophers who tried, misunderstanding Kant's teaching, to establish a status for their own interpretation of his doctrines, according to which logic was identified with what Kant calls general logic: thus, the methodological parts of logic had to be given a status of a new science, and the *Critique of Pure Reason* was wrenched from its original context and made into a theory of knowledge. This had, among other baneful consequences, that of leading students to

consider the Critique as a gnosiology in general, and not only, as expressly stated by Kant, as a methodology of pure knowledge. Kant certainly had to refer in his Critique to mixed knowledge as well, but this happened only incidentally in connection with the proper theme of the inquiry." (pp. 1-2)

(...)

II. In fact, the *Critique* is a work on methodology, and, more exactly, on the methodology of metaphysics. It has been argued that the statement: "it is a treatise on method," appears only in the Preface to the second edition (1787). But, for those who are familiar with seventeenth- and eighteenth-century terminology, this fact is spelled out very clearly on many occasions in the first edition, when Kant compares the *Critique* to the "King's road" or "high-road" of metaphysics (*Weg, Königlicher Weg, Heeresstraße, Heeres-Weg*, sometimes *Fußsteig*): the terms way, road, high road, et cetera traditionally and unequivocally referred, for obvious etymological reasons, to method. And the study of method belonged to logic.

A careful reading of the *Critique* shows that this work is one of the "special logics" for the particular sciences, which Kant opposes, as methodologies, to "general logic." These special logics are assigned to the sciences in question as part and parcels of them: ;)ut still, they are the special logics (or methodologies) of those sciences. That Kant did not make this more clear, can be explained by the fact, in the first place, that it seemed to him that he had made it clear enough to those who understand the philosophical language of his time; and, in the second place, that he usually cared very little to explain what seemed very clear to him.

But conclusive evidence for this view is given by Kant's Reflection 5644 (*AK.-Ausg.* XVIII, pp. 285-286), dated by Adickes in 1784-1785. There we read:

Transcendental philosophy precedes metaphysics, which, like logic, does not deal with objects, but with the possibility, the content and limits of all knowledge of pure reason. It is the

logic of pure rational knowledge (...). Critique is what inquires into the possibility of the object of metaphysics.

The dating and the status of this statement are confirmed by a passage in a course on metaphysics offered by Kant in 1784-1785, the so-called *Metaphysik Volckmann* (op. cit., p. 363), where Kant dictated in class, in the introductory part of the course:

Transcendental philosophy is in connection with metaphysics what logic is in connection with philosophy as a whole (...).

In connection with the pure use of reason, a special logic will be necessary, which is called transcendental philosophy; here no objects are considered, but rather our reason itself, as it happens in general logic. Transcendental philosophy could also be called transcendental logic.

Here it should be noticed that transcendental philosophy (or ontology) is identified with the *Critique*: it is well known that Kant identified them in the nineties, but actually this identification occurred much earlier—in fact, it is also in some Reflections prior to 1781. I shall add that the two statements quoted are by no means isolated: only, they are those where the fact under consideration is stated most clearly." (pp. 4-5)

3. ———. 1975. "Conditions in Königsberg and the Making of Kant's Philosophy." In *Bewusst sein. Gerhard Funke zu eigen*, edited by Bucher, Alexius J., Druë, Hermann and Seebohm, Thomas M., 126-144. Bonn: Bouvier Verlag H. Grundmann.

Italian translation in: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 149-168.

"Obviously, general political and religious conditions in Prussia strongly influenced Kant's political and religious thought, and this also needs some further study. But I want to consider here is the intellectual situation in Königsberg in the years of the early development of Kant's philosophy, beginning with those precedent that are necessary in order to understand it. In fact Königsberg and his university in particular, the Albertina, were the scene of some acrimonious struggles of religious-philosophical parties, which cannot have left no trace in Kant's

philosophical perspective, nurtured in that environment. The fact in question have been ignored as a significant pattern by Kant's biographers, inclusive of Vorländer, who did not realize their importance, and was attitude was not conducive to understanding it, as the predominantly hagiographic inspiration of their works did not incline them to look into some unpleasant intrigues, ot to attach them any importance in connection wirh Kant." (p. 127)

4. ——. 1976. "Analysis and Synthesis in XVIIIth Century Philosophy Prior to Kant." *Archiv für Begriffsgeschichte* no. 20:178-213.

"I can not inquire here into the history of these notions, as prior to the XVIIIth Century, although the knowledge of that history is essential in order to fully understand its XVIIIth Century developments. Fortunately, I can refer to some studies on the subjects which, at least, partially describe the precedents of the issues in question (1). It is noteworthy, that XVIIth Century philosophy had already very much simplified these issues, in comparison, e. g., with their treatment during the Renaissance (2). The XVIIIth Century introduces, comparatively, a further simplification, although this problem is still amply debated and connected with many basic questions.

However, after Kant loaded these terms with multifarious and mostly new meanings, they underwent a revival which has lasted until our days. But, in order to understand these developments, it is essential to reconstruct their immediate historical premises, which only can make them adequately intelligible.

It can be said in general that, according to an ancient tradition, the analysis or *resolutio* (*Auflösung*) is that cognitive procedure which, beginning from sensible and/or complex representations, aims at establishing their constituent parts, and, furthermore, the constituent parts of these parts, until some "simple" or "irresoluble" elements, or the "causes" of the "effects", are reached, which are the "elementary notions" or the "first principles".

The synthesis or *compositio* (*Zusammensetzung*), on the contrary, begins with those elementary notions and first principles, and, combining them and deducing from them, elaborates more complex notions and propositions, viz. derives the “effects” from the “causes”, until it reaches, if it can complete its procedure, at least a part of those representations which were at the foundation of the analytical process, and, also, new representations not offered by experience. Thus, both processes coincide at least partially in their results, as the basic two scientific methods proceeding in opposite directions, which are called to perform different tasks, but also to confirm each other.

Their nature and function raise, of course, many controversies. The basic problems are the following: 1) What is the nature of the elementary ideas and of the first principles which the analytical method aims to reach, and which lie at the foundation of the synthetic process; 2) What are the proper aim and use of the two methods in philosophy. The answer given to these questions shall fundamentally affect the conception of both methods as understood by the different philosophers.

It is also necessary to keep in mind that the terms in question are not only used in philosophy. They are also currently part and parcel of the chemical terminology, and mathematicians used the term “analysis” since the Greek antiquity. These different meanings sometimes interfere with the philosophical ones: therefore I shall occasionally refer to them, in particular when this interference occurs." (pp. 178-179)

New York, 1960; J. H. Randall jr., *The School of Padua and the Emergence of Modern Science*, Padova 1961; E. de Angelis, *Il metodo geometrico nella filosofia del Seicento*, Pisa 1964 (p. 59 ff. in particular); A. Crescini, *Le origini del metodo analitico. Il Cinquecento*, Udine 1965; H. Schüling, *Die Geschichte der axiomatischen Methode im 16. und beginnenden 17. Jahrhundert*, Hildesheim—New York 1969; W. Röd, *Geometrischer Geist und Naturrecht. Methodengeschichtliche Untersuchungen zur Staatsphilosophie im 17. und 18. Jahrhundert*, München 1970 (*Bayerische Akademie der Wissenschaften, Philosophisch-Historische Klasse, Abhandlungen, Neue Folge*, H. 70.); H. W. Arndt, *Methodo scientifica pertractatum*, Berlin—New York 1971; *Historisches Wörterbuch der Philosophie*, ed. by J. Ritter, Vol. 1, Basel—Stuttgart 1971, s. v. "Analyse/Synthese", by L. Oeing-Hanhoff; C. B. Boyer, "Analysis: Notes on the Evolution of a Subject and a Name", *The Mathematics Teacher*, XLVII, n. 7, Nov. 1954; A. Crescini, *Il problema metodologico alle origini della scienza moderna*, Roma 1972.

The most comprehensive XVIIth century treatise devoted to the subject is M. Eifler, *Methodologia particularis*, Regiomonti 1639. It is also essential to realize that there were many discussions about the methods in question in Protestant theology: the so-called Lutheran orthodoxy was committed to the analytic method, although it conceived it in a different way from that of the philosophers. See E. Weber, *Die analytische Methode der lutherischen Orthodoxie*, Habil.-Schr. Halle, Naumburg a. S. 1970; id., *Der Einfluß der Protestantischen Schulphilosophie auf die orthodox-lutherische Dogmatik*, Leipzig 1908, I Hpt.

 5. ———. 1976. "The Philosophy of d'Alembert. A Sceptic beyond Scepticism." *Kant Studien* no. 67:353-371.

"D'Alembert's philosophical work is studied very little in our time, with the sole exception of his *Discours préliminaire* which, for obvious reasons, cannot be so easily ignored (1). We are now provided with an excellent modern biography of our author (2),

whose scientific work has also been studied recently (3), but as for his philosophy we still have to rely on Muller's monograph, on a little known, onesided but penetrating study by Misch, and on a few more recent contributions (4).

D'Alembert originally expounded his philosophical views in his *Eléments de Philosophie* (1759; *Eclaircissements*, 1767) (5), which I consider the most authentic expression of his thought, whereas, as it could be expected, his philosophical articles in the *Encyclopédie* (6) evaded many dangerous questions. However, also in the *Eléments* our author did not speak his mind entirely (7). More daring views are expressed in some posthumous *Eclaircissements* to the *Eléments*, and in some letters to Frederick II. Obviously, d'Alembert's *Discours préliminaire* of 1751 is also a document of basic importance.

What I contend is (1°) that d'Alembert's philosophy is a radical form of scepticism, in the spirit of what is in my opinion the main trend in French Enlightenment philosophy, as represented by Quesnay, Condillac, Maupertuis, Buffon, etc. (8). And (2°) that d'Alembert simultaneously strove towards a kind of rationalistic phenomenism which, potentially at least, tended to overcome scepticism in its traditional form.

D'Alembert's scepticism, as that of most French philosophers of his age, had not been hitherto adequately evaluated. Grimsley, Casini, Hankins, and others prior to them, had been aware of it, but they failed to put this view in the correct perspective — simply because this perspective had not yet been introduced. As for G. Klaus, this is his main contention against Ley's materialistic interpretation, but his perspective is strictly Marxistic, and is limited to some general statements.

But I do think that this is the key for understanding d'Alembert's individuality as a philosopher, and for finding a solution for what has recently been called "the problem d'Alembert". From this standpoint, I think that I can show that d'Alembert as a philosopher was not an alter ego either of Voltaire, or of Diderot, or of Condillac: Voltaire and Diderot merely underwent temporary sceptical crises, and Condillac was nothing more than a half-sceptic (9), whereas d'Alembert

was in fact much closer to Maupertuis. Still, d'Alembert's views can not be reduced to those of Maupertuis for plenty of good reasons: among which, I want to stress, is his attempt towards overcoming that scepticism which, most probably, has originally been his basic philosophical motivation; this attempt probably corresponds to what some scholars call d'Alembert's "rationalism", but this could not be correctly interpreted as long as it was not located into the perspective of d'Alembert's scepticism.

I certainly do not mean that this perspective, and in particular the account I shall give of it in this paper, could exhaustively describe d'Alembert's personality as a philosopher: there is obviously much more to it. But this view, if further developed, could provide an hitherto missing individualized nucleus for an adequate foundation of a -renewed exploration of d'Alembert's contribution to philosophy."

Casini, *Il problema d'Alembert*, *Rivista di Filosofia*, LXI, 1970; *id.*, *Introduzione all'Illuminismo*, Bari 1973.

(5) I refer as *EPh* to the edition of the *Eléments* published in d'Alembert's *Œuvres*, vol. II, Paris 1805. This edition was reprinted by Olms, Hildesheim 1965, with the title *Essai sur les Eléments de Philosophie*, with introduction, notes and index by R. N. Schwab, who in his notes lists the variants of the original edition, and refers to the analogous passages in the articles of the *Encyclopédie* and in other works by d'Alembert. (*Ecl.* refers to the *Eclaircissements* (1767) contained in *EPh.*) I refer as *DP* to the *Discours Préliminaire* from the edition by L. Ducros, Paris 1930, as *E* to the first edition (1751–1765) of the *Encyclopédie*, for d'Alembert's articles and Preface to vol. III, and, for his other works, as *OE* to the edition of the *Œuvres* published by A. Belin, Paris 1821 f., 5 vol., and as *OF* for the *Lettres et correspondences inédites*, ed. Ch. Henry, Paris 1789. *TD* refers to the *Traité de Dynamique*, Paris 1743.

(6) The most important are: *Corps, Cosmologie, Démonstration, Dictionnaire, Egoisme, Élément des sciences, Expérimental, Genève, Géomètre, Géométrie, Système.*

(7) Frédéric II, *Œuvres*, Berlin 1846—1849, vol. XXIV, p. 457 (letter to Frederick of Dec. 12, 1766).

(8) For a survey of this trend see my article *J.-P. Changeux and French Enlightenment Scepticism*, *Studia Leibnitiana*, LV, 1974, where I also discuss the question of a definition of XVIIIth Century scepticism. I discuss another general aspect of this question, *viz.* its connection with the problem of the limits of the human mind, in *The Weakness of Reason in the Age of Enlightenment*, *Diderot Studies*, XIV, 1971.

(9) See my article quoted in Note 8.

6. ———. 1978. "'Critique" and Related Terms Prior to Kant: A Historical Survey." *Kant Studien* no. 69:119-148.

"Incredible as it may seem, the boundless secondary literature about Kant does not offer one single account of the history of the term "Critique" prior to its appearance in his works. This neglect probably stems from the feeling that the meaning of the term in question can be taken as a matter of course, and that, after all, this term is so widely used that it has not much of a specific meaning left, — albeit in its derivation "Criticism", as one of the denominations of Kant's school of thought, i. e. as a synonym of "Transcendental Idealism" or of "Kantianism".

This feeling is only partially justified. In fact, in European languages, during the XVIIIth Century the terms "Critique" (and "Criticism"), with the related "critic" (formerly "critick"), "critical" and "to criticize" were extremely fashionable ones, lavishly and promiscuously used. The same happened, e. g. with "reasonable" (*vernünftig*) during the first half of the XVIIIth Century, and "pragmatical" (*pragmatisch*) during the second half of that Century, which were in Germany most popular catch words among intellectuals. However, in the first place, "Critique" etc. were at that time loaded with a greater significance than in ours, as symbols of a general intellectual and social change which partially had taken place, and partially

was more or less utopically called for: Kant himself claimed, in the Preface to the first edition of his *Critique of Pure Reason*, that "Our age is specifically the age of Criticism (*Kritik*), to which everything must submit" (2); and he was by no means the only one who held this opinion. Now, this has to be taken into account, if we do not want to miss some important rational and emotional connotations implied by these terms in the XVIIIth Century, while in our time they became anodyne words of the common language, having lost their prior charge of sophisticated intellectual belligerency. In the second place, the XVIIIth Century was still close to a time when the meaning of these terms had been much more specific, and occasionally they still retained, or at least echoed this heritage of the past. In the third place, they were developing in the XVIIIth Century a few new specific meanings, to which, as it will appear, Kant's use of "Critique" was significantly related; thus, "Critique" etc. were used by Kant not just casually, as obvious fashionable terms of his time, but also, and, I think, primarily, in a hitherto unsuspected meaningful way which will offer important indications for a better understanding of Kant's work.

Still, the field in question has been partially explored. E. Gudemann (s.v. "*Kritikos*" in A. F. Pauly, G. Wissowa, W. Kroll, *Real-Enzyklopädie der klassischen Altertumswissenschaft*, vol. XI, Stuttgart 1921) and J. E. Sandys (*A History of Classical Scholarship*, 3 vols., New York 1958, I, p. 6-11) gave some account of the grammatical and literary uses of this terminological complex in Antiquity; R. Wellek ("The Term and Concept of Literary Criticism", in: R. Wellek, *Concepts of Criticism*, New Haven and London 1953) offered an excellent outline of its development as "literary criticism", and R. Kosellek (*Kritik und Krise. Ein Beitrag zur Pathogenese der bürgerlichen Welt*, Freiburg-München 1959, p. 87 ff.) briefly examined some aspects (chiefly the scriptural and the political) of its role in the XVIIth and XVIIIth centuries. I will not duplicate Gudemann's, Sandys' and Wellek's research, which I shall briefly summarize, while basically considering different aspects of the problem." (pp. 120-121)

(...)

"Thus, it can be assumed that if Kant selected the title of "Critique" for his major work, this not only reflected the prestige of a term very fashionable in that time, and the generical meaning of that term in philosophy: but, in accordance with the spirit of his enterprise, he selected it as a qualification of his work as a work primarily on Logic, and in particular on a Logic centered on verification and correction (226). And this is perhaps the sole probably direct influence of Catholic thought of that time on Kant's major work." (p. 147)

(226) See G. Tonelli, *Kant's "Critique of pure Reason" within the Tradition of Modern Logic*, Part II, Ch. IV, in preparation [1994], on the term "Critique" in Kant.

7. ———. 1978. "Themiseul de Saint Hyacinthe (H. Cordonnier, 1684-1746). A Smiling Sceptic." *International Studies in Philosophy* no. 10:163-166.

"Although he is completely unknown from this viewpoint, Saint Hyacinthe is not only interesting, but surprising. Humorous and embattled, this journalist and erudite had to emigrate to Holland where he died (2). In 1743 he published his *Recherches Philosophiques* (3), a quite remarkable work, particularly for the considerable knowledge of ancient philosophy it shows, as well as of the philosophy of the XVIIth Century: a knowledge which at least in part undoubtedly is direct.

St. Hyacinthe, for example, certainly read Descartes very carefully. This stock of knowledge, with their finesse and rigour, are set to work, as we shall see, with the art of a great juggler.

S1. Hyacinthe belongs to that sceptical trend which was one of the major features of the French Enlightenment, echoes and adapts to his own ends preceding doctrines, and opens the path for future developments (2).

The *Recherches* bear a dedication to the King of Prussia, Frederik III (*sic*), who already had made a reputation as a protector of the unbelievers, and this may have fostered some hopes on the part of the author. But either our author was not

very informed of the genealogy of the King, or this is one more joke, perhaps a revenge for help denied.

The work begins with a detailed discussion of the different philosophical systems, all of them rejected for whatever reasons. But in saying, that he intends to establish a philosophy as solid as mathematics, in going out of his way in order to stress the need for an exact terminology, and in discussing the problems arising from this view, our author is especially hard on the sceptics. When we see later how solid he considers mathematics to be, and what sleights-of-hand he performs with the terms he uses, we will have some good reason to believe that these initial protestations are a manifestation of the author's sense of humor rather than of his speculative preoccupations." (p.163)

(...)

"What does all this mean? It is clearly empty talk: if we establish that we do not know the « ground of the existence » of all things « as they are in themselves », because all we know are the properties of these things, coming thereupon to the conclusion that, *therefore*, these properties are « the thing itself as much », and they « allow to know » the ground of its existence, we run into a patent *non sequitur*: all is saved, with the exception of logic.

In so doing, our author revives a similar theses supported by Brunet, transforming it into a caricature (5).

On this shaky foundation, St. Hyacinthe triumphantly proceeds to prove God's existence (pp. 323-355) and that of the finite beings; we also learn that the soul is different from matter (p. 487), and some more edifying truths.

The pleasurable reading of this book, which is of a remarkable intellectual standing, is only limited by the afterthought that the author could have developed (if it is licit to say « could have » while dealing with history), on the foundation of his scepticism, a revolutionary subjective phenomenism, instead of intrenching himself into the caricature of traditional metaphysics. Perhaps he was prevented from doing this either

by the conditions of his time, or by his own stand as a radical sceptic. However, St. Hyacinthe's philosophy represents an extreme case which can not be ignored if we want to understand the atmosphere of his time, and the presuppositions for the rise of a much more solid kind of scepticism: that of Maupertuis and D'Alembert, although we can not be assured that they knew St. Hyacinthe's work, and, if so, whether they profited from it." (p. 166)

8. ———. 1979. "The Scepticism of François Quesnay." *International Studies in Philosophy* no. 11:77-89.

"François Quesnay (1694-1774), professionally a surgeon and physician, is famous for his works on Economics, as one of the major figures of the Physiocratic school; also his medical work has been given some attention, but his philosophical stand has been entirely neglected, although it seems to me to be very remarkable. The ideas Quesnay deals with certainly exerted an important influence on Quesnay's friends Diderot, d'Alembert, Helvetius, Buffon, Turgot, etc., and certainly did not escape Maupertuis' attention.

A first statement of Quesnay's philosophical views can be found in his *Essai physique sur l'économie animale*, first published in 1736 in one volume; we will study it in the much enlarged three-volume edition of 1747. This work is sometimes quoted by XVIIIth Century experts, but its basic meaning and its importance have not been recognized. "Animal economy" meant, in the language of that time, "physiology" in a very wide sense; but only vol. II of this work deals with physiology proper,

while vol. I provides a general philosophical foundation, and vol. III examines the psychical powers of man." (p. 77)

(...)

"In conclusion, Quesnay does not question the metaphysical notion of "cause," but he asserts that we can not know causes as they are in themselves; however, this does not prevent us from establishing them phenomenally in order to give a foundation to empirical knowledge." (p. 81)

(...)

"Volume VI of the *Encyclopédie* (1756) contains an article "Evidence (*métaphysique*)" by Quesnay, (6) which in fact is a short survey of the basic points of philosophy in general. Here, our author tries to convey his scepticism in a more subtle way than in the *Traité*, and several times pretends to fight against Pyrrhonism (p. 765, 779, 785). Besides other differences, he seems to lean toward Malebranchism much more than in the *Traité*, and this is easy to understand if we realize that Malebranche's thought provided excellent

ammunition for the sceptics, as the examples of Foucher, Lanion, etc., prove.

This attitude is certainly explained by the fact that this article appeared in a collective and already very famous work: a more open stand could have compromised other people and the entire enterprise which, as facts would show very soon, already contained sufficient grounds for scandal." (p. 83)

(...)

"Comparing the doctrines of the article "Evidence," with those of the *Traité*, we can notice some interesting particular differences, besides the peculiar general tone described at the beginning of this section. The activity of the mind, still accepted in the *Traité*, is reduced in the article to almost complete passivity. The more daring tone of the *Traité* finds its expression in the doubt cast on the difference between dream and reality and on the hypothesis of the vision in God, in the possibility of the inherence of motion to matter, of the

materiality of the soul, and in the foundation of the immortality of the soul in divine justice only - all these points are abandoned in the article of the *Encyclopédie*.

A few more interesting philosophical doctrines can be found in the *Recherches philosophiques sur l'evidence des vérités géométriques* (Paris 1773).

To this late work Quesnay prefixed an introduction entitled *Examen des avantages de la géométrie sur la métaphysique*. Here our author introduces a distinction between demonstrative geometry, which is evident because its propositions are founded on sensation, and the geometry "of the imperceptibles" (p. V) or "indeterminables" (p. XXIV), (10) also called "metaphysical geometry" (p. 111): no metaphysical ideas can be demonstrated (p. IX; cf. p. XLIII). The senses can find the truths of demonstrative geometry because

geometrical points are sensible, and not merely ideal as mathematical points (p. XIII); although they are not physical points, because they are not divisible (p. XIV), they are extended (p. XXXI). The finite, not the infinite, is the object of geometry (p. XXXIV-XXXV). Obviously, this view of geometry is similar to that of Hume, and could have been suggested by him." (p. 88)

Editor's note: The author completed a first draft of this paper on the day before his death. Mrs. Grazia Tonelli and the editors have made minimal stylistic corrections, but otherwise publish it as he left it.

9. ———. 1994. *Kant's Critique of Pure Reason within the Tradition of Modern Logic. A Commentary on its History*. Hildesheim: Georg Olms.

Edited from the Unpublished Works of Giorgio Tonelli by David Chandler.

"The world of Kant scholarship was electrified in 1974, when Giorgio Tonelli presented a brief summary of his life's work. His was a meticulous study: the plethora of sources shaping Kant's world, particularly the nature and scope of logic. Tonelli found widely held interpretations of Kant to be inadequate, even wrong.

At the end of that brief summary, given at the Fourth International Kant Congress in Mainz, Tonelli promised to publish a book with the detailed justification for this rethinking of Kant. Here is that book.

Tragically Tonelli's life was cut short. Though he had hoped to include more chapters, the evidence Tonelli provides is ample in the three he was able to complete. Kant scholars will find it necessary to reconsider received interpretations and assumptions in light of this ground-breaking work.

The richness, complexity and development of Kant's thought can never be exhausted. New paradigms are indispensable in order to deepen our understanding. This is perhaps the central significance of Giorgio Tonelli's life-long scholarly endeavors. Providing the historical and conceptual details that suggest new interpretations and approaches, it becomes possible to question some widely accepted assumptions and interpretations. What is undoubtedly most valuable for English-speaking Kant scholarship is that this brings us ever closer to understanding ideas and their development in Kant and his predecessors in their original historical context. Such a hermeneutical principle is crucial in approaching any text. Very specific studies in the original sources must be the foundation of scholarship. On the other hand, the critical scholar must distinguish carefully a source of an idea from merely the historical background for an idea. This distinction was perhaps occasionally blurred in Tonelli's corpus." (pp. XII-XIII)

(...)

"At virtually every mention of the Jäsche *Logic* Tonelli includes the dates 1782 and 1790. Referring to two notebooks from these years shows that Tonelli does not seem to understand the source of the Jäsche Logic. The work of Terry Boswell provides the most current estimate vis-a-vis the sources of this work. They likely include students' notes, Kant's reflections, editorial additions by Jäsche and material from Meier's compendium on logic, which text Kant used in his logic courses for some forty years. See Boswell's "On the Textual Authenticity of Kant's Logic," *History and Philosophy of Logic* 9 (1988), pp. 193-203; and his *Quellenkritische Untersuchungen zum Kantischen Logikhandbuch* (Frankfurt am Main, Bern, New York, Paris: Peter Lang, 1991; in the series *Studien zur Philosophie des 18. Jahrhunderts*, vol. 3).

At the time Tonelli wrote, the widely accepted date for the *Wiener Logik* and the *Logik Pölitz* was 1790. Thanks to subsequent computer analysis of word usage and frequency, the best estimate today is that they were written in the early 1780s. The most helpful resource on this issue is Norbert Hinske's "Einleitung" in *Kant-Index*, vol. 14: Personenindex zum Logikcorpus, ed. Norbert Hinske, et al. (Stuttgart-Bad Cannstatt: Friedrich Frommann Verlag, Günther Holzboog, 1991; in the series *Forschungen und Materialien zur deutschen Aufklärung*, Abteilung III: Indices, vol. 18), pp. ix-cv. Consequently, all Tonelli's references to the dates of these works have been dropped." (pp. XV-XVI)

10. Popkin, Richard H., De Olaso, Ezequiel, and Tonelli, Giorgio, eds. 1997. *Scepticism in the Enlightenment*. Dordrecht: Kluwer.

Ezequiel de Olaso: The Two Scepticisms of the Savoyard Vicar 131; 8. Ezequiel de Olaso:

Scepticism, Old and New 147; 9. Richard H. Popkin: New Views on the Role of Scepticism in the Enlightenment 157; 10. Richard H. Popkin: Popkin: Berkeley in the History of Scepticism 173; Index of Names 187-192.

"This volume contains a discussion between three scholars in the history of philosophy, myself [R. H. Popkin], the late Giorgio Tonelli and the late Ezequiel Olaso. What started the discussion was a brash paper I gave on "Scepticism in the Enlightenment" at the first international congress on the Enlightenment, held in Geneva in the summer of 1963. Soon thereafter two brilliant younger scholars, Giorgio Tonelli and Ezequiel de Olaso, started publishing studies leading from what I had said, and showing areas that I had not probed, and offering interpretations that went much further than what I had originally presented.

Tonelli, in one of the essays published here, said, "The only survey of Enlightenment scepticism we have is a well known article by R.H. Popkin, which provides a broad frame of reference, but which neglects many details". Olaso called my study a pioneering one, "the first all-embracing survey of [scepticism] of the period". But both of these scholars pointed out right away that there was much more to said on the subject than what I had presented.

"Scepticism" is a loose term that has been used to apply to any kind of doubts, and particularly, doubts about certain aspects of the Judeo-Christian religion. It also applies to a rigorous epistemological doubt about the possibility of attaining knowledge that cannot be questioned. It is this latter sense that we were concerned with, the legacy of the Greek sceptical traditions of the Pyrrhonists and the Academics during the eighteenth century. We had many discussions in person and in writing on this subject. For a decade I continued my original view, that eighteenth century scepticism was primarily and almost exclusively the view of David Hume and those he influenced. However, over time I was overwhelmed by the strength of the arguments and new materials and interpretations that Tonelli and Olaso offered, showing a much

richer canvas of epistemological sceptical discussions than I had considered."

(...)

"Giorgio Tonelli was born in 1928 in Italy. He did his undergraduate and graduate studies at the University of Pisa, where he received his doctorate in 1947. He supplemented his studies at the Sorbonne, Basel, Naples and many German institutions. He became professor of German literature at Pisa, and later moved to the United States in 1969 where he became a professor of the history of philosophy at the State University of New York at Binghamton. He published extensively on Kant and on the background of his philosophy, on the German intellectual world of the eighteenth century, and on the philosophical views of many of the philosophes. He sometimes published in French, German, Italian or English. He was also a great initiator of projects to further the study of the history of philosophy. He founded the journal, now called, *International Studies in Philosophy*; he founded the important series *Studien und Materialien zur Geschichte der Philosophie*. He was very active in committees and conferences in America and Europe on topics in the history of philosophy and the history of the Enlightenment. He played a most significant role in opening up new topics and outlooks in the history of ideas, and he encouraged many budding scholars in America and Europe." (pp. IX-XI)

11. Tonelli, Giorgio. 1997. "Kant and the Ancient Sceptics." In *Scepticism in the Enlightenment*, edited by Popkin, Richard H., De Olaso, Ezequiel and Tonelli, Giorgio, 69-98. Dordrecht: Kluwer.

English translation by John C. Laursen of *Kant und die antiken Skeptiker* in: H. Heimsoeth, D. Henrich, and G. Tonelli (eds.), *Studien zu Kants philosophischer Entwicklung*, Hildesheim: Georg Olms, 1967, pp. 93-123.

"The historical problematic of the sceptical tradition since the Renaissance has been raised again recently in a splendid book by Richard Popkin. (1) The author traces the relationships between the revival of ancient scepticism and the new sceptical

attitudes from Erasmus to Descartes, and promises a future continuation of his work that will reach down to Kierkegaard. Our investigation here is intended as a contribution to the penultimate steps of that continuation. We shall not be raising the general problem of Kant's relationship to scepticism: a decision about this far-reaching question will first be possible when its presuppositions (namely, the progress of the sceptical tradition up to Kant) have been clarified. We will therefore mainly limit ourselves to one part of the problem: Kant's relationship with the ancient sceptics, with special attention to terminological questions.

It goes without saying that one should not believe that this part of the problem can be considered wholly in isolation. One reason for this is that in all likelihood Kant's knowledge of ancient scepticism was not based on a firsthand study of the ancient Greek texts, (2) but rather on the received image of the Greek sceptics, mainly as it was to be found in the modern sceptics, their opponents, and the historians of philosophy of the times. It will therefore be necessary to allude to some aspects of the history of modern scepticism; especially to Pierre Bayle and his followers in the eighteenth century.

An evaluation of the attitude of Kant toward the ancient sceptics naturally also presupposes an assessment of his relationship with scepticism in general, and especially to the scepticism of his times. But in respect to this question, as in the case of the previous one, we will limit ourselves to generally accepted features and certain special indications and particulars, in order not to go too far out of the range of our problem." (p. 69)

(...)

"What, then, is the state of the case with Kant's "scepticism"? First, one must distinguish between the pre-Critical and the Critical periods. At the end of the first, and indeed between 1765 and 1768, the "zetetic" attitude of 1765 and many places in the *Dreams of a Spirit-Seer* signal a certain approximation to scepticism, with respect to which Hume probably played a certain role, although not one which can be ascertained any

more exactly. (138) But Kant should still not be considered as a follower of mitigated (and even less of radical) scepticism in this period according to the traditional meaning of this characterization, just as little as he should be considered an empiricist at that time. Kant had indeed excluded from the realm of human knowledge many areas of metaphysics and established that other areas were knowable only empirically. He had also rejected all abstract and purely a priori grounded metaphysics through his grounding “in concreto” of philosophy. But through his proofs “in concreto” he thought he could reach some metaphysical truths of absolute and not purely of empirically universal validity. His position thus belonged to the problematic of the limits of human understanding, and not to the classical problematic of scepticism. His undeniable bent toward scepticism of this period was thus only selective and partial (in that in connection with some problems concerning supersensible objects he was a radical sceptic; in connection with other objects that are knowable purely empirically he was a mitigated sceptic; and in connection with further problems concerning metaphysically knowable objects, he was not sceptical at all). That is, his doubts should be understood as preliminary (Cartesian) doubts. Kant’s position thus should not be considered sceptical in the true sense.

In the Critical period, Kant’s rejection of ancient scepticism and of every “radical” scepticism stands as a final result. It is true that he sharply defined the limits of our knowledge, and everything beyond the empirical was excluded. But significant chief indicators distinguish his position from “mitigated” scepticism. He was convinced that he had constructed a firmly founded system.

He maintained that men were capable of universal and necessary knowledge within the realm that was left to them, although this may not correspond to the most basic being of things.

Apart from all the other recognized differences that separate Kant from mitigated scepticism, these two above-mentioned

chief indicators should be sufficient to demonstrate that his expressed personal attitude should not be considered a palingenesis of the scepticism of his times, and that Kant's protestations that he fought scepticism by using the sceptical method should be taken as earnest, and not only with respect to radical but also with respect to mitigated scepticism. Thus, Kant not only broke a middle way (as Bacon, Gassendi, Bayle (139) and many others, especially in Kant's time, had tried to do), but broke a new way between dogmatism and scepticism, in which the old opposition between the two positions was for the first time set up on a fully new plane, even if it was not finally transcended.

Also with reference to its sources, Kant's philosophy ought not to be considered as a development or even a fundamental renovation of the empirical scepticism of his age. The Critique of Pure Reason owes too many of its basic concepts to the German scholastic tradition, especially as it had been developed in the 1760's and 1770's by the students of Crusius, Hollmann, and Darjes (as we hope to show in another place), for it to be considered simply as a product of "modern forces". It is rather a creative synthesis of the "old" and the "new", where "old" and "new" are concepts that are purely relative and subject to easy reversal." (pp. 85-86)

(1) Richard H. Popkin, *The History of Scepticism from Erasmus to Descartes*, Assen 1960; see the review by G. Tonelli, *Filosofia* XV, 2, 1964, [pp. 327-332] (also appearing separately under the title *Un libro sullo scetticismo da Erasmo a Descartes*, Torino 1964) for a detailed discussion of the special methodological problems of this theme. Further: M.L. Wiley, *The Subtle Knot. Creative Scepticism in XVIIth Century England*, London 1952; H.G. Van Leeuwen, *The Problem of Certainty in English Thought 1630-1690*, The Hague 1963; R.A. Watson, *The Downfall of Cartesianism, 1673-1712*, The Hague 1966; R.H. Popkin, "Scepticism and Counter-Reformation in France", *Archiv für Reformationsgeschichte*, LI, 1960; R.H. Popkin, "The High Road to Pyrrhonism", *American Philosophical Quarterly*, II, 1965; R.H. Popkin, "The Traditionalism, Modernism, and Scepticism of René Rapin",

Filosofia, XV, 1964; and especially R.H. Popkin, “Scepticism in the Enlightenment”, *Studies on Voltaire and the XVIII Century*, XXVI, 1963, where the author simplifies the perspective set forth in his book, taking into account only “absolute scepticism” and the reactions against it.

(2) We have indeed found no grounds for assuming that Kant had even read Sextus Empiricus. See, in general: A. Samson, *Kants kennis der Grieksche filosofie*, Alphen a. d. Rijn, 1927 (Utrecht Dissertation).

Giorgio Tonelli, Kant's Critique of Pure Reason within the Tradition of Modern Logic (1994)

Detailed Table of Contents

Chapter I. Organon, Canon, Discipline, Doctrine in Kant

I. INTRODUCTION 37

1. Importance of the four terms. — 2. The Announcement of 1765: logic as critique and logic as organon; discipline and doctrine. Kant's letter to Mendelssohn of 1766: the reform of metaphysics through a catharticon; practical method. — 3. The Dissertation of 1770: a propaedeutic or method for metaphysics, as *ars docimastica* or negative criterion. Metaphysics and mathematics as organons for knowledge.

II. KANT'S LECTURES 1770-1780 41

4. Preliminary considerations. The *Logik* Blomberg of 1771: logic as dogmatic and as critical. Theoretical logic; doctrine and discipline. — 5. The *Logik* Philippi of 1772. Natural and artificial logic. Natural logic as critique and catharticon; artificial logic as doctrine and organon. The distinction between natural and artificial logic abandoned. - 6. Transition between them. Theory. Logic as

catharticon of common sense and as an organon. — 7. Critique: amateurish, expert, masterly. Theoretical logic, and practical (empirical) logic (discipline). Epicurus and Locke. - 8. The Metaphysik L1 1775-1780. Metaphysics as the logic of the pure use of reason, as organon of pure rational concepts. Ontology and transcendental philosophy. — 9. The Lectures on Philosophical Encyclopaedia of 1777-1780 (?). Philology as the organon of the historical sciences. [General] logic is not an organon, but contains a canon. Analytic and dialectic. Particular organons. The critique of pure reason, analytic and dialectic. Metaphysics as an organon. The Ethik Menzer, 1780-1781: discipline and doctrine.

III. KANT'S REFLECTIONS 1769-1778 49 10. In 1769. Critique of pure reason, metaphysics, ontology versus logic (doctrine). — 11. In 1772. Critique of pure reason or transcendental philosophy. General logic as an organon; the sciences as organons. Metaphysics as organon of wisdom and as critique of science; metaphysics not an organon. — 12. From 1773-1775. General logic as a canon for doctrine; not an organon (dialectic). No practical logic. Transcendental philosophy as a canon for transcendental logic. — 13. From 1775-1778. Transcendental philosophy and its subdivisions. Critique of pure reason, ontology, metaphysics, organon, discipline, canon, architectonic. -- 14. Transcendental analytic and dialectic, logic of truth (as a doctrine) and of illusion (as a critique). The criterion. — 15. Doctrine, discipline, canon. -- 16. Organon, canon, architectonic.

IV. THE CRITIQUE OF PURE REASON: GENERAL VERSUS TRANSCENDENTAL LOGIC 59 17. Critique. General and particular logic. Organon. Pure and applied catharticon. The general form of knowledge versus its content. - 18. General form versus content of knowledge. General logic as a canon versus organon. Analytic and dialectic. - 19. Transcendental logic. Transcendental form versus matter of knowledge. Organon and transcendental dialectic. Transcendental analytic as a canon for the understanding and for Judgment, not for reason. General logic is a canon for the understanding and for reason, not for Judgment. Reason in transcendental logic. Definition of canon. — 20. Transcendental analysis as a canon for the understanding and for Judgment. Mathematics needs no canon.

V. A COMMENTARY ON A 10-16 66 21. The difficulties of A 10-16. Vaihinger's interpretation. Cautions about Kant's procedure. — 22. Critique, organon, the system of pure reason, propaedeutic. — 23. Kant's options. — 24. Elimination of some options. Transcendental philosophy and its relationship to the critique. — 25. Its relationship to the system of pure reason. — 26. Possible confusion between critique and transcendental philosophy. — 27. The subject matter of these sciences. Analysis and synthesis. - 28. Critique, canon and organon. One-sided definition of the critique as merely negative. More on its relationship to the organon and to transcendental philosophy. 29. Definition of organon. Transcendental aesthetic as an organon.

VI. THE CRITIQUE AS A SPECIAL LOGIC 80 30. General versus transcendental logic. Misinterpretation of their relationship. Transcendental logic as a special logic. Grounds for this interpretation. — 31. More on the notion of organon. Meanings of this term after 1781. Other similarities between special and transcendental logic. — 32. Later statements on the Critique of Pure Reason as a special logic. 33. What are the other kinds of special logic? Philology as an organon for the historical sciences. Mathematics as an organon and the theory of method in the Jasche Logic. Each science contains its particular logic. A two-tier conception of organon. Some organons do not belong to logic. - 34 Practical and special logic. Dictionary and methodology.

VII. THE CANON IN THE CRITIQUE 92 General logic as a canon. Critique and canon. Definition of canon. The canon in the Theory of the Elements. — The Theory of Method. General form of knowledge versus content; transcendental form versus matter; materials and formal conditions within the transcendental form. — 37. The canons in the Critique. The Critique as the methodology of metaphysics. Elemental factors. -- 38. More about the relationship between critique and transcendental philosophy. Structural versus procedural factors in the Critique. Logic and ontology: their eventual merger.

VIII. DISCIPLINE AND DOCTRINE IN THE CRITIQUE 98 39. Definitions of discipline: a discipline for reason. — 40. Discipline in the Theory of Method. — 41. Transcendental logic as a discipline. Discipline versus organon. — 42. Censure and discipline. — 43.

Discipline versus canon. More about the function of a canon. — 44. Discipline versus doctrine. Doctrine versus critique. The Analytic of Principles as a doctrine.

IX. TERMINOLOGICAL SURVEY 105 45. Organon 1765 to 1776. — 46. Organon 1775 to 1780. -- 47. Organon in the Critique (1781) and later. — 48. Survey of results. -- 49. Canon in 1773-1781. -- 50. Canon after 1781. — 51. Epicurus' Canonica, 1772-1796. Conclusion. — 52. Discipline and doctrine until the Critique. - 53. Discipline, doctrine, censure, critique, in the Critique. Discipline from 1781 to the Opus postumum. — 54. Doctrine in the Critique. The Analytic of Principles as a doctrine. — 55. Doctrine to 1790. — 56. Doctrine from 1789-1790 to the Opus postumum.

CONCLUSION TO PART ONE 123 57. Origin of the meanings of organon: Kant, Lambert and Bacon. — 58. Kant, Lambert and special logics; the three- tier conception of organon. — 59. Philology and mathematics as organons: various historical premises. Ontology as a dictionary. The tradition of Christian Thomasius. The relationship between metaphysics and logic, a problem never solved by Kant. — 60. Precedents in modern Aristotelian- ism. Kant's Critique basically constructed as a treatise on special logic, although profoundly molded by metaphysical elements. — 61. Canon. — 62. Criterion, discipline, doctrine.

CHAPTER II Terminological and Conceptual Precedents to Kant's Use of the Terms Organon and Canon

[I. ORGANON IN THE ARISTOTELIAN AND BACONIAN TRADITIONS] 133 1. Introduction. - 2. The Aristotelian tradition of organon. — 3. Bacon's Novum Organum within his methodology. — 4. Bacon's Novum Organum in particular. Bacon's influence. — 5. Other works entitled Organon. Some meanings of the term in German philosophy.

[II. LOGIC GROUPED IN THREE WAYS] 145 6. Reusch and his grouping of logic, mathematics and philology as instrumental sciences. Convergence of three different traditions. — 7. The connection between logic and philology. The seventeenth century: Bacon, the System- atics, the Pansophists. — 8. Ramists, Aristotelians, Eclectics. — 9. The eighteenth century. — 10. The

connection between logic and mathematics. --11. The connection between logic, mathematics and philology.

[III. ORGANON IN LAMBERT] 158 12. Lambert's New Organon: its four parts and its general approach. -- 13. Different meanings of organon for Lambert. The organon as methodology. -- 14. Kant's special logics and Lambert's Architectonic. — 15. D'Alembert and special metaphysics. British and French philosophical problems and their influence on Lambert and Kant. — 16. Disputed ground between logic and metaphysics in the Aristotelian tradition. — 17. Noology and gnostology. — 18. The Architectonic, ontology and logic. -- 19. Relationship with the New Organon. The two-tier or three-tier organon. — 20. Ontology as a dictionary in Lambert, in Thomasius and his school. — 21. Meaning of this doctrine. -- 22. Origin of this doctrine. Kant's Analytic as a dictionary. The methodology of Kant's general logic as a dictionary. Ontology and mathematics for Tetens.

[IV. THE HISTORY OF THE TERM CANON] 178 23-24. Canon in Antiquity. — 25-26. Canon and criterion in ancient philosophy in the tradition of the history of philosophy: Diogenes Laertius, Justus Lipsius, Gassendi, Stanley, Walch, Brucker, Daijes. — 27. The different meanings of canon in modern times. Canon in seventeenth-century philosophy: it belongs to logic and ethics. — 28. Other uses of canon. Canon in the eighteenth century.

[V. CRITERION, DOCTRINE AND DISCIPLINE] 188 29. Criterion. — 30. Doctrine and discipline.

Canon in the Seventeenth Century. Canon in the Eighteenth Century. Criterion. Doctrine. Discipline.

VI. APPENDICES]

APPENDIX A: Canon in the Seventeenth Century.

APPENDIX B: Canon in the Eighteenth Century.

APPENDIX C: Criterion

APPENDIX D: Doctrine

APPENDIX E: Discipline

CHAPTER III The Evolution of Kant's Plan for a System of Philosophy and the Institutional Situation of the Critique of Pure Reason

I. THE PLAN UNTIL 1780 225 Introduction. — 2. The classification of the sciences 1769 to 1771. -- 3. In 1772. -- 4. Kant's letter to Herz of February 21, 1772. -- 5. Interpretation. — 6-7. Kant's letter to Herz at the end of 1773. The Reflections of 1775-1778. - - 8. The Metaphysik L, (1775-1780). — 9. The Lectures on Philosophical Encyclopaedia (1777-1780?).

II. A COMMENTARY TO THE ARCHITECTONIC OF THE CRITIQUE OF PURE REASON 241 10. Introductory remarks. Survey of the Architectonic. - Meaning of an architectonic; system, idea, whole; construction work and biological metaphor. — 12. The problem of generation in Kant's time. — 13. Kant's solution; Pre-formism and Architectonic. — 14. The term architectonic in the philosophical tradition since Descartes. — 15. Conclusion. God as an architect. — 16. System, whole, end (internal and external; essential and ultimate), idea. - 17. Schema; the architectonical procedure in philosophy, and the Architectonic. — 18, Terminological precedents of schema, schematism. — 19. Casual versus providential development of a schema. -- 20. The tree of science. Rational and historical knowledge. — 21. Philosophical and mathematical knowledge. Learning philosophy and learning to philosophize. The true philosophy. — 22. The scholastic and the cosmic concept of philosophy; the ideal of a philosopher. -- The mathematician, the naturalist and the logician versus the philosopher; the essential ends of human reason. — The ultimate end in philosophy. Philosophy of nature and of morals. Empirical philosophy and philosophy of pure reason. Critique and metaphysics. -- 25. Metaphysics of nature and of morals. Ethics as a part of metaphysics. — 26. Kant's attack against the "traditional definition" of metaphysics. -- 27. Kant mistakenly takes Baumgarten's definition as a traditional definition of metaphysics. — 28. Further subdivision of philosophy. - 29. The term physiology. -- 30. Hyperphysic, immanent. -31. Transcendental, transcendent. - 32. Precedents and originality of Kant's classification. — 33. Comparison with earlier classifications by Kant. The place of logic. -- 34. The place of rational psychology, cosmology and

theology. Cosmology and rational physics. — 35. Applied philosophy, empirical physics, and empirical psychology.

III. THE PLAN AFTER 1781 300 36. Reflection 5644. The Prolegomena (1783). The Metaphysik Volckmann (1784-1785). — 37. The Foundation of the Metaphysics of Morals (1785): the tripartition of the Greeks, and Kant's new classification. — 38. Comparison with the Architectonic; the place of the critique of pure reason. — 39. Other differences. The critique of practical reason. Later references to the tripartition of the Greeks. — 40. The Metaphysical Principles of Natural Science (1786) and the classification of the knowledge of nature. - 41. The Metaphysik von Schön (1785-1790?). The Jäsche Logic', the new cosmic concept of philosophy. - 42. The Metaphysik L2 (1790-1791): cosmopolitan classification, and recurrence of the classification of the Architectonic -- 43-44. The First Introduction to the Critique of Judgment (1790); the system of the critique of pure reason. The evolution of the place of aesthetics in Kant's classification of the parts of philosophy. — 45. Practical versus technical: there is a practical psychology. — 46. The Second Introduction (1790). Comparison with the First. The critique of pure reason as a system of its own. — 47. Difficulties arising from the place of logic in the First Introduction. — 48. The Logik Dohna (1792). - 49. The Metaphysik Dohna (1792-1793), and the Metaphysik K2 (after 1793). - 50. The Metaphysik K3 (1794-1795?), and the Prize Essay on the Progresses of Metaphysics (1791- 1795).

Giorgio Tonelli: Bibliografia degli Scritti su Kant e la Filosofia del Settecento (1954-1987)

Bibliografia

Giorgio Tonelli è stato uno dei maggiori studiosi della storia della filosofia nel Settecento; i suoi scritti, pubblicati in italiano, inglese, francese e tedesco sono apparsi in volumi e riviste e solo in piccola parte raccolti in volume.

Questo passo della Prefazione al suo primo libro contiene una sintesi della sua metodologia di ricerca: "Una monografia storica è veramente degna di tale nome allorché non soltanto vi si muta il quadro del soggetto trattato, ma allorché essa anche contribuisce in qualche modo a cambiare la mentalità con cui è opportuno scrivere monografie storiche concernenti un cerchio di soggetti assai più vasto del proprio. Se non ci illudiamo di avere con questo libro introdotto delle notevoli innovazioni in materia, speriamo però che esso valga almeno a dimostrare la necessità e la fruttuosità di un metodo storiografico che dovrebbe essere noto ma che, in storia della filosofia, viene applicato solo in una trascurabile minoranza di casi. Un atteggiamento fondamentale della nostra ricerca, e che implica tutta una particolare messa in valore del materiale a disposizione, consiste nel non considerare lo sviluppo nel tempo dei vari motivi, come interessante solo agli effetti dei chiarimenti che esso possa gettare su una qualche opera maggiore che essi preparano, considerando quest'ultima come un tutto concluso. È senza dubbio significativo che un Autore abbia voluto redigere ad un certo punto una certa parte delle proprie idee in un'opera di notevole importanza, ed è opportuno esaminare le ragioni per cui ciò avviene, e lo spirito di sistema secondo cui ciò avviene; spirito di sistema in

generale ben diverso dai motivi reali che hanno portato l'Autore a quelle tali idee. Ma è ugualmente importante cercare di comprendere come siano nate tali idee, interessandosi alla dinamica del pensiero dell'Autore di per sé, indipendentemente dall'interesse per le sistemazioni occasionali, la cui giustificazione storica dipende proprio dallo studio di quella dinamica. Perché la dinamica del pensiero di un Autore ci rivela dei fatti psicologici e culturali importanti, indipendentemente dai risultati «definitivi» raggiunti due o venti anni dopo dall'Autore stesso." *Kant, dall'estetica metafisica all'estetica psicoempirica* (1955), p. 9.

Una Bibliografia completa (fino al 1979) è stata pubblicata da Claudio Cesa nel *Giornale critico della filosofia italiana*, 1980, pp. 40-46 ed in una versione aggiornata al 1987 nel volume a cura di Claudio Cesa e Norbert Hinske in collaborazione con Sonia Carboncini, *Kant und sein Jahrhundert. Gedenkschrift für Giorgio Tonelli* Berna: Peter Lang, 1993, pp. 187-204.

In questa versione ho ommesso le numerose recensioni ed alcuni scritti minori, ma ho aggiunto quelli apparsi dopo il 1987; la Bibliografia è suddivisa in quattro sezioni in base alla lingua: scritti in italiano, francese, inglese e tedesco.

1. Tonelli, Giorgio. 1954. "La formazione del testo della *Kritik der Urteilskraft* ." *Revue Internationale de Philosophie* :423-448.

"La *Kritik der Urteilskraft* è nota per essere una delle più oscure opere di Kant; quantunque esista una notevole quantità di studi sull'argomento, ben pochi di essi valgono a gettare qualche raggio di luce su tale amalgama di materiale almeno in apparenza eterogeneo e contraddittorio. — La ragione di ciò è la stessa, per cui la maggioranza degli scritti di storia della filosofia è di scarso aiuto alla comprensione dei testi che essi riguardano: e cioè che si tratta il più sovente di divagazioni speculative sull'argomento, da un preteso punto di vista teorico, piuttosto che di una paziente ricostruzione delle idee dell'autore nel loro esatto significato storico in rapporto al loro tempo, nelle loro origini e nel loro sviluppo. E la situazione resterà invariata fino a che non sarà chiaro a tutti che un testo, filosofico non è uno scritto esoterico da affrontarsi con un presunto dono di illuminazione interiore, ma è nè più nè meno

che uno speciale tipo di documento delle idee di una persona e di un'epoca, che deve essere esaminato secondo la mentalità ed il metodo filologici e storici propri di ogni ricerca di storia delle idee.

La mancanza di un simile tipo di considerazione si fa particolarmente sentire a proposito della *Kritik der Urteilskraft*. Di essa, come di tutti gli altri scritti di Kant, esistono ottime edizioni critiche, ma la questione della formazione e della cronologia interna del testo è stata quasi completamente negletta. Tale problema è tanto più importante in quanto principalmente da indicazioni ottenute per questa via possiamo sperare di comprendere qualcosa della connessione del vario e discordante materiale che essa contiene. Quasi tutti gli interpreti se ne sono accorti, ma essi hanno in generale fornito giustificazioni teoretiche non documentate e in generale del tutto immaginarie per la volta a volta affermata o negata coerenza fondamentale dell'opera. Ricordiamo che i testi di Kant presentano tutti molto chiaramente segni ben conservati di una stratificazione successiva non eliminata da una rielaborazione finale; i più chiari esempi di ciò sono la *Kritik der reinen Vernunft*, la *Grundlegung zur Metaphysik der Sitten*, e la *Kritik der praktischen Vernunft*, la cronologia interna delle quali è stata più o meno studiata.

La possibilità di un tale tipo di ricerca in Kant è data dal suo modo di redigere, dipendente sia dal suo carattere che dalla sua epoca. Egli stesso ce ne ha lasciato una testimonianza, conservata nella *Anthropologie Brauer* (Collegium Antropologicum [sic]... gesammelt von Th. Fr. Brauer... 13 Oct. incept. 1779) proveniente dal 1779-1780. — Se si vuole scrivere un'opera, egli dice, è necessario lasciar libero corso alla immaginazione. Bisogna anzitutto fissare bene in testa l'idea principale, poi frequentare la società, o leggere libri divertenti su soggetti del tutto diversi — l'immaginazione ne è così eccitata, e parecchie idee nascono." (pp. 423-424)

(...)

"La base di tale analisi è, abbiamo detto, filologica, e cerca di evitare per quanto è possibile l'appello ai molto dubbi « inneren

Gründe ». Ma bisogna onestamente precisare che non ci si può fondare qui sul fatto lingua in senso stretto, cioè su di una semplice statistica dell'uso dei vocaboli e delle forme grammaticali e sintattiche; la quale ricerca non darebbe nel caso nostro, come è evidente dato il breve periodo esaminato (dal 1787 al 1790), alcun frutto. Si tratta invece di isolare una serie di termini tecnici caratteristici, mediante una analisi molto elementare che ciascun lettore attento può agevolmente ripetere, ed osservarne l'impiego nelle diverse parti della *Kritik der Urteilskraft*, supponendo che, data appunto la loro importanza concettuale, la loro assenza o presenza sia indizio abbastanza sicuro per definire le diverse fasi dello sviluppo del pensiero di Kant.

Premesso questo, appare quanto sia vano cercare di creare artificialmente in molte opere di Kant una inesistente congruenza assoluta di tutti i particolari, e insieme come sia ingiustificato il trasformare le evoluzioni e le oscillazioni in inconseguenze e contraddizioni." (p

p. 426-427).

2. ——. 1955. "Kant, dall'estetica metafisica all'estetica psicoempirica. Studi sulla genesi del Criticismo (1754-1771) e sulle sue fonti." *Memorie dell'Accademia delle Scienze di Torino*.

"Le ricerche, dei cui risultati in questo volume non esponiamo che una prima parte, nacquero, diversi anni or sono, da un problema di cui non potevamo prevedere, allora, la vasta portata. Il nostro interesse verteva sull'esatto significato della terza Critica kantiana. Cioè principalmente sulla questione del rapporto dei diversi e, apparentemente almeno, eterogenei motivi contenuti in essa, e del rapporto tra essa e gli altri scritti di Kant. Il che equivale, in breve, a domandarsi perché Kant abbia scritto una Critica del Giudizio, e perché l'abbia scritta proprio in quel modo.

La nostra intenzione era ed è, si è già capito, puramente ed esclusivamente storica. Ove con questo s'intenda però anche ed eminentemente la storia di quell'aspetto della cultura che è il pensiero speculativo, nella sua viva connessione con gli altri

aspetti delle idee e degli eventi della persona e del tempo studiati.

Un simile atteggiamento ci ha, come è ovvio, portato a cercare una soluzione del nostro problema in una ricostruzione dello sviluppo delle idee, e principalmente delle idee estetiche, di Kant, anteriormente al 1790.

Questo ci ha avviato a considerare la personalità di Kant filosofo principalmente da un punto di vista lasciato finora quasi completamente in ombra: quello da cui egli appare il depositario e il rielaboratore della tradizione della *Psychologia empirica* fondata da Wolff e dai suoi seguaci e avversari, con le sue implicazioni e corrispondenze in sede, tra l'altro, di logica.

Tra i risultati delle nostre ricerche, uno dei più rilevanti è forse che il considerare il nostro Autore da una tale quinta prospettiva, opportunamente combinata a quelle tradizionali, ci avrebbe permesso di superare il dilemma esegetico, ormai inveterato nella *Kantforschung*, tra *Kant als Erkenntnistheoretiker* e *Kant als Metaphysiker*, permettendoci di rintracciare un importante motivo unitario nella complessa personalità kantiana, che congiunga i suoi interessi metodologici da un lato e ontologico-metafisici dall'altro, traducendoli sul piano comune dell'epistemologia.

Non vogliamo affermare di avere così rintracciato il centro della personalità teoretica di Kant, ma un centro non meno importante degli altri, trascurato in generale sinora dagli storici, che hanno avuto il torto di prendere troppo alla lettera la polemica del Kant critico contro la psicologia, negligendo così di considerare quanto egli di fatto dovesse a tale scienza.

Siamo stati dunque condotti a ricercare i rapporti tra lo sviluppo delle idee estetico-psicologiche di Kant, e quello delle sue idee gnoseologiche, logiche, metafisiche, e morali. Andavamo incontro a dei risultati di cui noi stessi eravamo i primi ad essere sorpresi: venivamo portati ad un riesame di buona parte delle principali questioni della filosofia kantiana, che apparivano spesso rischiarate da una luce totalmente diversa da quella tradizionale. Venivamo così condotti ad una

revisione e ad una riformulazione di molte delle idee correnti sulla carriera filosofica di Kant, che, integrate alle altre prospettive più tradizionali, vogliono ormai essere un elemento indispensabile alla comprensione globale della genesi del criticismo.

Esponiamo così nel presente volume un primo segmento temporale dei filoni studiati. Incontriamo in Kant, intorno al 1754, i primi sparsi accenni di estetica, la cui importanza è, in tale momento, puramente subalterna. Assistiamo quindi ad un graduale spostamento di contenuti e di visuali che porta il motivo estetico-psicologico, nell'ambito della evoluzione generale della personalità kantiana, a divenire sempre più importante e, almeno ad un certo momento, assolutamente dominante. Ed è un momento di non scarso rilievo, perché si tratta nientemeno che della rivoluzione dell'anno 1769, il cui interrogativo ci pare finalmente di aver chiarito. Con l'esame della parte avuta da una tale problematica nella elaborazione della *Dissertatio* del 1770, la cui interpretazione ne esce più o meno capovolta, concludiamo questa sezione delle nostre ricerche. Speriamo di poter dare presto alle stampe il resto dei nostri risultati." (*Prefazione* , pp. 1-2).

(...)

"IV. I nostri risultati. — Vogliamo ora richiamare brevemente l'attenzione sui principali punti a proposito dei quali il nostro lavoro presume apportare un contributo originale.

In generale, saranno utili agli studiosi di letteratura comparata e di filosofia settecentesca le indagini particolari ambientali che abbiamo dedicato a molti concetti caratteristici. Basti ricordare quelli di bellezza intellettuale, di grazia, di individuo, di subordinazione, di giuoco e molti altri. Ci è inoltre occorso di mettere in luce diverse importanti personalità della storia dell'estetica, ingiustamente trascurate dagli studiosi contemporanei. Ricordiamo solo Leone Ebreo, [Antoine Gombaud, Chevalier de] Mère, [François] Cartaud de la Vilate.

In particolare e rispetto a Kant, abbiamo tentato nel *primo capitolo* di mostrare l'interesse di certe sue dottrine estetiche

giovanili, normalmente trascurate, come contenenti degli interessanti germi di sviluppi posteriori.

Nel *secondo capitolo* abbiamo fornito la più ampia analisi e ricostruzione culturale esistente dei motivi fondamentali delle *Beobachtungen* [*Considerazioni sul sentimento del bello e del sublime*], compiendo un passo decisivo verso una valutazione globale dell'operetta giovanile di Kant. Abbiamo dedicato speciale cura alla delimitazione degli influssi, particolarmente inglesi e tedeschi, ossia del ruolo giocato principalmente da Shaftesbury, Hutcheson, Mendelssohn, Cartaud de la Vilate, oltre che Rousseau e forse anche Burke.

Abbiamo inoltre analizzato le *Bemerkungen* [alle *Considerazioni sul sentimento del bello e del sublime*] nel modo più ampio che sia stato sinora fatto: ne sono emersi dei motivi, specialmente morali, sinora trascurati.

Nel *terzo capitolo* siamo venuti anzitutto rivedendo e precisando, mediante una più precisa aderenza alle *Riflessioni* e una più ampia ricostruzione dell'ambiente, le teorie del Baeumler sui rapporti tra estetica e logica in Kant e sulla questione dell'individuo e del passaggio tra universale e singolo. Il nostro apporto è stato principalmente caratterizzato da un approfondimento del rapporto tra Kant, Baumgarten e Lambert. Abbiamo mostrato, contro il Baeumler (1), l'influenza della *Aesthetica* del primo sull'evoluzione della mentalità kantiana. Abbiamo poi messo in luce l'importanza capitale della *Logica* del Crusius, di cui non era stato studiato che l'influsso su Kant rispetto alla metafisica (Max Wundt, *Kant als Metaphysiker. Ein Beitrag zur Geschichte der deutschen Philosophie im 18. Jahrhundert* , Stuttgart, 1924, Heimsoeth, *Metaphysik und Kritik bei Chr. A. Crusius*, Berlin 1926).

Abbiamo quindi ricostruito una fase transizionale sinora ignorata della estetica kantiana, quella '65-'69 e analizzato più a fondo sin nei più sottili motivi la fase '69-'71, trovando spiegazioni nuove per diversi suoi atteggiamenti.

Questo ci ha portato a ricostruire una fase totalmente trascurata ed assai interessante della morale di Kant, quella

'69-'70; il cui legame con l'estetica dello stesso periodo è uno dei grandi motivi unitari del pensiero kantiano che ci è stato dato di mettere in luce. E abbiamo rintracciato in Crusius e Mendelssohn l'ispirazione di tali dottrine.

Finalmente, nel *quarto capitolo* abbiamo aumentato il corredo di fonti delle dottrine gnoseologiche precritiche; anche qui è emersa preponderante l'influenza del Crusius logico. Abbiamo proceduto ad una reinterpretazione, nei rapporti dell'estetica, di diverse operette di Kant. Abbiamo posto l'accento sulla spesso trascurata *Nachricht* (2), restituendole la sua originalità e il suo valore programmatico; modificato l'inquadramento e proposto nuove istanze esegetiche per lo scritto sulle *Gegenden* (3); ricostruito la totalmente ignorata e fondamentale fase gnoseologica del '69, avanzando una ipotesi esatta per spiegare la grande rivoluzione intercorsa nel pensiero di Kant; studiate le egualmente trascurate *Riflessioni* della fase '69-'70; capovolto la interpretazione tradizionale della *Dissertatio*, che da scritto d'avanguardia viene ad essere considerato fondamentalmente come un ripiegamento su posizioni più prudenziali nei confronti della rivoluzione del '69; chiarito e reinterpretato, alla luce del materiale precedentemente raccolto, una serie dei concetti e degli atteggiamenti fondamentali della *Dissertatio* stessa; e finalmente rintracciato un altro grande motivo unitario del pensiero kantiano, nelle risposdenze tra gnoseologia ed estetica (nonché morale), quale agente degli avvenimenti del '69 e del '70. Una delle più importanti manifestazioni di tale motivo unitario si riscontra nella assodata derivazione della teoria della sensibilità della *Dissertatio* dall'estetica come critica del gusto. Questo ci mette sulla via di una reinterpretazione, che tenteremo in altra sede, della Estetica Trascendentale della *Kritik der reinen Vernunft*, rintracciandone i nessi con la contemporanea e successiva Critica del Gusto di Kant.

Il quadro del più nevralgico periodo del Kant precritico ne esce così profondamente mutato.

In generale, i motivi che veniamo perseguendo ci scoprono un caso assai caratteristico ed interessante nella storia delle idee:

cioè il caso di un motivo, quello estetico, che mantenendo immutato il proprio oggetto esteriore (cioè il bello naturale e d'arte), muta profondamente il proprio apparato concettuale e terminologico, la propria importanza, il proprio posto e la propria funzione nella struttura concettuale speculativa di Kant, e nella sua dinamica, e sinanco il suo valore nell'ambito della personalità di Kant uomo. Nata marginalmente dalla tradizione metafisico-psicoempirica, l'estetica ha all'inizio un posto secondario. Per venire poi subitamente distaccata, sulle orme degli inglesi, dalla tradizione precedente, ed essere inserita in quella antropologica e morale; perdendo così quasi completamente contatto col mondo speculativo di Kant, per occupare invece la ribalta di Kant *Philosoph für die Welt* e delle razionalizzazioni semiletterarie dei suoi pratici atteggiamenti sociali.

Riassorbita poco dopo nel mondo speculativo della evoluzione ulteriore di Kant teoretico, e da essa inserita in senso nuovo nella tradizione psicoempirica, l'estetica è improvvisamente investita, in tale connubio, da una impressionante dinamica interna, che conduce, nel '69, ad una brusca ristrutturazione di tutto il mondo speculativo di Kant, ad una esplosione da cui poco esce che non sia transvalutato o modificato nel breve giro di alcuni mesi.

Dopo di ciò, il focus dell'interesse di Kant, e il centro evolutivo del suo pensiero, si spostano ad altri argomenti che evolvono indipendentemente, e l'estetica entra in una fase nettamente conservatrice che durerà fino al '75-'76, mostrando appena i germi delle grandi rivoluzioni successive.

Assistiamo del pari a diverse fasi di integrazione della personalità speculativa di Kant. Fino al '69 i vari filoni del suo pensiero si sviluppano in relativa indipendenza tra loro, o tutt'al più a coppie: metafisica e morale, estetica e metafisica, morale ed estetica, gnoseologia ed estetica. Ma nel '69 un motivo unitario, non sappiamo fin dove chiaramente formulato, e fin dove invece puramente riducibile ad un atteggiamento del background o forma mentis (non ci pare che l'aggettivo « subconscio », con le sue gravi implicazioni, sia qui appropriato,

o che almeno sia imprudente usarlo), viene a dominare ed a produrre uno sviluppo contemporaneo, coerente e interconnesso di estetica, gnoseologia, e morale; quindi il potenziale dinamico si concentra nell'indagine gnoseologica, e gli altri due motivi passano, per un certo periodo, all'immobilità di un secondo piano. Abbiamo tentato, per quanto ci è stato possibile in base al materiale a disposizione, alle ricerche collaterali, e agli strumenti mentali che possediamo, di fornire alcune spiegazioni di tali eventi.

Di passaggio, ci è avvenuto di smontare, o almeno di intaccare, il mito di un Kant fanatico ammiratore della natura, luogo comune della *Kantforschung*. Le sue espressioni in proposito sono state mostrate quali derivazioni di puro riflesso di una moda letteraria in gran voga nell'ambiente.

Al contrario, abbiamo notato che un reale interesse personale e sociale di Kant, quello per la «bella conoscenza» o per la popolarità, veicolo di educazione per un più largo strato della popolazione, e di una maggior comprensione tra gli uomini, ha certo contribuito a spingerlo ad affermare l'universale validità delle rappresentazioni umane come fondata su fattori estetici." (pp. 11-14)

3. ———. 1956. "L'origine della tavola dei giudizi e del problema della deduzione delle categorie in Kant." *Filosofia* no. 7:129-138.

Tradotto in tedesco come: *Die Voraussetzungen zur Kantischen Urteilstafel in der Logik des 18. Jahrhunderts* in: Friedrich Kaulbach, Joachim Ritter (Hrsg.), *Kritik und*

Metaphysik. Studien. Heinz Heimsoeth zum 80. Geburtstag, Berlin: Walter de Gruyter, 1966, S. 134-158.

"È noto come il problema della formazione delle tavole dei giudizi e delle categorie di Kant sia uno dei più delicati e discussi della *Kantforschung*. Il de Vleeschauwer (1) ha riassunto egregiamente le controversie in proposito, tentando una soluzione personale del problema. Secondo quanto egli viene a concludere, la tabella delle categorie kantiana deriverebbe in parte da Aristotele, in parte da Hume, in parte da Newton (op. cit., pp. 219-20) (2). Kant non avrebbe semplicemente tratto la tavola delle categorie da quella dei giudizi, ma avrebbe sviluppato contemporaneamente entrambe (p. 232). La tavola dei giudizi, poi, è tratta, come Kant stesso dichiara, dalla tradizione logica (p. 244). Kant avrebbe modificato le tavole di giudizi allora correnti, aggiungendo a ciascuno dei tipi generali di giudizio una terza forma speciale (ibidem). Il de Vleeschauwer presenta quindi in un quadro sinottico le tabelle di giudizi elaborate da diversi predecessori e contemporanei di Kant, da Melantone a Wolff, sulle quali i precedenti *Kantforscher* avevano già richiamato l'attenzione. Un esame di tale quadro sinottico mena il de Vleeschauwer alla evidente conclusione, che Kant non seguì in particolare nessuna delle tabelle che aveva a disposizione, ma che operò una specie di sintesi tra esse. Ciò che resta perfettamente misterioso è il principio, mediante il quale Kant avrebbe operato tale sintesi selettiva, ovvero la ragione che lo spinse ad elaborare la sua particolare tabella di categorie.

Chiedendoci quale potrebbe essere la soluzione di simile problema, ci siamo immediatamente resi conto della non completezza del quadro sinottico presentato dal de Vleeschauwer. Anzitutto citare Melantone come unico precedente della filosofia del '700 tedesco è fare un torto a quella legione di aristotelici del XVII secolo, la cui importanza, ancora lungi dall'essere riconosciuta appieno, consiste principalmente nell'aver mantenuto in vita e sviluppato, al di fuori e contro gli attacchi del cartesianesimo e dell'empirismo e platonismo inglesi, una tradizione metafisica, senza tener conto

della quale è impossibile comprendere sia Leibniz, che il grande idealismo tedesco dei secoli XVIII e XIX.

Ora, gli aristotelici tedeschi del '600 avevano ampiamente sviluppato sia una logica (e una teoria del giudizio), che una metafisica (con relativa discussione dei concetti, ontologici fondamentali). Vogliamo solo rammentare uno dei padri della filosofia tedesca, il Göckel, il quale, discutendo l'Organo di Aristotele (3), discetta « de Quantitate », « de Qualitate », « de Relatis » (p. es. « Maritas euim non potest esse, nisi & uxor eius fit, et altero intereunte alterum relativum nomine pristino excidit »), « de Alicubi », e « de Aliquando », « de Situ » (« stare, pendere, supra et infra »).

Un'ampia ricostruzione delle categorie e delle forme di giudizio nel '600 tedesco sarebbe senz'altro un compito interessante, per quanto non privo di difficoltà. Ma dubitiamo molto della sua utilità nei riguardi della ricostruzione del pensiero di Kant, tenendo conto del fatto che Kant stesso ignorava quasi certamente la filosofia tedesca anteriore all'era del Thomasius, e che è persino difficile rintracciare in Kant qualche eco del pensiero dei primi thomasiani, cioè di quelli che precedettero il sorgere della scuola wolffiana. Per quanto sia interessante notare come in tempi già vicinissimi a Kant, tale tradizione perdurasse ancora. Il gesuita tedesco Mayr (4), ad esempio, continua la tradizione aristotelica e tomistica, e menziona illustrandole ampiamente, nella sua Logica, le categorie aristoteliche: substantia, quantitas, relativ, qualitas, actio, passio, ubicatio, duratio, situs, habitus.

Ma a noi basterà, come stiamo per mostrare, completare il quadro sinottico per quello che concerne il XVIII secolo tedesco, per fare un decisivo passo innanzi verso la soluzione del nostro problema. E non intendiamo neppure citare tutti i logici del '700 tedesco che il de Vleeschauwer trascura, ma solo quelli, da noi selezionati, che presentano uno speciale interesse riguardo a Kant." (pp. 129-130)

"Ci sembra quindi di aver fornito una spiegazione sufficiente — salvo i chiarimenti complementari che ci proponiamo di dare in altra sede, riguardo al sorgere del *Duisburgischer Nachlass* [(1755) traduzione italiana: *Fondo Duisburg*, Pisa: Istituti editoriali e poligrafici internazionali, 2000] — della via seguita da Kant per elaborare la sua tavola di giudizi; e ci risulta che egli non fece che operare una semplificazione della tavola di Crusius, sia eliminandone alcuni elementi che corrispondevano a strutture diverse del suo sistema, sia epurandone il portato metafisico di alcuni titoli (che pur non poteva abbandonare in quanto strettamente corrispondenti a concetti metafisici che gli erano assai cari) col renderne il significato più strettamente logico (17).

Con ciò ci sembra anche di avere compiuto un passo avanti nella spiegazione della genesi della tavola delle categorie.

Evidentemente, solo uno studio approfondito del *Duisburgischer Nachlass* potrà portarci a giustificare i correlati categoriali dei giudizi di quantità e di qualità, e l'importanza assunta per Kant dalle categorie di relazione e modalità. Ma crediamo, intanto, di avere anche addotto elementi atti a chiarire l'apporto alla formazione della tavola delle categorie della scoperta dell'analogia tra concetti puri e giudizi, per quanto cioè le categorie si siano disposte e plasmate secondo uno schema quaternario e tricotomico ispirato a Crusius, e la cui correlazione con alcuni gruppi categoriali già organati da Kant nel *Duisburgischer Nachlass* è stata certo una ragione, se non la ragione, della costruzione dell'analogia stessa tra categorie e giudizi." (pp. 134-136)

(17) Il problema, come lo abbiamo ricevuto, è molto chiaramente riassunto dal de Vleeschauwer nei termini seguenti: « Kant n'a pas posé en révolutionnaire; il a bien pu avoir l'impression qu'il s'appuyait sur un travail collectif et, quant à l'essentiel, définitif. Il a inventé la relation comme rubrique de jugements, vraisemblablement par analogie avec la table des catégories; il a rompu avec l'habitude (purement formale) de mettre la qualité avant la quantité, mais il n'a inventé aucune forme spéciale de jugement. Toutes les formes dont il parle étaient présentes dans les manuels de l'époque qu'il avait sous la main, mais aucun manuel, par contre, ne renferme le schème, qui est donc une construction personnelle de Kant. Il faut l'attribuer à un schème de catégories antérieurement construit, dont il fallut faire usage pour les jugements afin de faire éclater la parfaite correspondance entre eux. L'étude de notre tableau comparatif indique, d'autre part, combien il est malaisé de dire où s'est adressé Kant pour compléter les lacunes qu'il avait pu remarquer dans la tradition des écoles » (p. 248). Dalla nostra ricerca risulterebbe una maggiore influenza della tavola dei giudizi sulla tavola delle categorie, e sarebbe chiaro che il modello che Kant ha seguito per « colmare le lacune » non è che quello di Crusius. Questa soluzione avvierebbe ad una più piana e storicamente più sicura comprensione del sorgere della tavola dei giudizi, senza dover ricorrere, come ad esempio K. Reich (*Die Vollständigkeit der*

kantischen Urteilstafel, Diss., Rostock.-Berlin, 1932), ad una complicata giustificazione speculativa completamente priva di conferma documentaria.

4. ——. 1957. "Lo scritto kantiano sulla "Vera valutazione delle forze vive" (1747)." *Filosofia* :621-662.

Ristampato in *Elementi ...* (1959) pp. 1-42.

"Il proposito principale di Kant nei *Gedanken von der wahren Schätzung der lebendigen Kräfte*. .. (1747), quello di risolvere una particolare, per quanto importante, diatriba concernente i principi della meccanica, non ci interessa in questa sede. Ci sembra plausibile il suggerimento di [Mariano] Campo, che Kant abbia scelto tale tema di laurea — uno dei più controversi della fisica del suo tempo, e pel quale erano stati versati veri fiumi d'inchiostro — su suggerimento del suo maestro Knutzen (1). Quello che è significativo dal nostro punto di vista, è di notare alcune posizioni metafisiche che Kant assume nel corso della discussione, nonché alcune distinzioni metodologiche che Kant viene via via facendo, e dalle quali dipende fino ad un certo punto la soluzione stessa, che egli dà del problema centrale.

L'operetta presenta un bell'esempio di esposizione caotica e involuta, soprattutto nella prima delle sue tre parti; i cambiamenti di argomento e le digressioni sono all'ordine del giorno. Comunque, le prime pagine contengono una serie di premesse o fondamenti metafisici della susseguente trattazione, che ci rivelano i primi atteggiamenti di Kant in materia (2).

Il filo del ragionamento, come abbiamo detto, è piuttosto imbrogliato. Kant espone *pêle-mêle* una serie di concetti metafisici tradizionali, tentando di dar loro una fisionomia personale, ma senza seguire un rigoroso ordine espositivo. Il discorso vaga rimbalzando tra diversi scogli, indulgendo in discontinuità e ripetizioni. Piuttosto che seguirlo passo per passo sarà quindi opportuno tentare di sintetizzare i punti di arrivo." (p. 1)

(...)

"La formazione filosofica di Kant risulta da un fondo aristotelico-leibniziano, cui si vengono combinando degli apporti dei newtoniani e degli avversari di Wolff. Con Wolff stesso la posizione di Kant presenta certo delle analogie, ma si tratta in generale di elementi aristotelici o leibniziani comuni a Wolff e ad altre personalità non wolffiane; se qualche apporto specifico di Wolff ha luogo, Kant pare non rendersene conto; comunque egli mostra contro Wolff una notevole animosità specifica, oltre a difendere più o meno implicitamente delle posizioni nettamente anti-wolffiane, quali l'influsso fisico e la forza di attrazione, nonché la critica al metodo matematico in filosofia e allo spirito di sistema.

La posizione del giovane pensatore è quindi largamente autonoma: è impossibile farlo rientrare in alcuna delle scuole del suo tempo. Da tutti egli attinge liberamente ciò che gli accomoda, respingendo ciò che non lo soddisfa.

Terminiamo ricordando come una recensione alle *Forze Vive* sia apparsa sui *Nova Acta Eruditorum* del 1752. Si tratta di un violento attacco; dato il trattamento inflitto da Kant a Wolff nel suo scritto, non c'era invero nulla di meglio da attendersi dai giornalisti lipsiensi.

La recensione si occupa esclusivamente dell'aspetto metafisico dell'operetta: e i due punti messi in discussione sono la natura della forza, e l'arbitrarietà della tridimensionalità dello spazio. Quel misto di influsso fisico e di attrazione newtoniana, da Kant patrocinato, non poteva non destare scandalo; e scandalo ancor maggiore destava la relativizzazione della geometria. I giornalisti lipsiensi pare non si rendano conto che se Kant, nella sua giovanile avventatezza, aveva assunto senza troppa riflessione delle posizioni di punta, non gli mancavano però alcune buone ragioni ed alcuni autorevoli precedenti." (p. 32)

(2) Questo tipo di redazione involuta ed erratica, che antepone nel testo dottrine cronologicamente posteriori a dottrine che rappresentano una fase speculativa anteriore, senza modificare

queste ultime; e che procede esponendo verità parziali per giungere poi a verità definitive, senza modificare in base a queste ultime la struttura delle prime, è una caratteristica di molte opere kantiane, il cui significato storico illustrammo in un nostro articolo: cfr. G. Tonelli, *La formazione del testo della « Kritik der Urteilskraft », « Revue Internationale de Philosophie », XXX (1954).*

5. ——. 1958. "La tradizione della categorie aristoteliche nella filosofia moderna sino a Kant." *Studi Urbinati di Storia Filosofia e Letteratura (Serie B)* no. 32:121-143.

"Introduzione.

L'attenzione di coloro che si interessano alla filosofia di Kant si è spesso concentrata sul problema dell'origine storica della tavola delle categorie, che si incontra nella *Kritik der reinen Vernunft*. Come è noto, la natura delle singole categorie e la loro distribuzione nella tabella si spiega in buona parte attraverso il parallelismo con la tavola dei giudizi, la origine della quale abbiamo avuto occasione di studiare in altra sede (1). Ma restano con ciò ancora aperte altre questioni non prive d'importanza, cioè: da dove siano derivate l'idea che si diano in metafisica alcuni concetti fondamentali irriducibili gli uni dagli altri, e l'esigenza di dedurre rigorosamente tali concetti riducendoli ad una precisa tabella, nonché, per qual via sia giunto a Kant il termine aristotelico "categoria", raramente usato nel XVIII secolo.

Alcuni importanti lavori sono stati già dedicati a questo tema: Trendelenburg (2) e Ragnisco (3) scrivevano delle storie della dottrina delle categorie dall'antichità greca sino a Kant ed oltre, Rosmini (4) tornava, più superficialmente, sullo stesso tema, e Heimsoeth (5) concentrava recentemente la sua attenzione sui rapporti tra le categorie di Kant e i termini ontologici di Wolff.

Ciò che ci spinge a tornare sull'argomento è il fatto, che le ricerche di Trendelenburg e Ragnisco diventano molto sbrigative a partire dal XVI secolo, cioè proprio dall'epoca che prelude al pensiero kantiano. Ci proponiamo quindi di riassumere brevissimamente quanto è stato stabilito da tali Autori a proposito dell'antichità e del medio evo, e di allargare

la ricerca a partire dal tardo Rinascimento, per renderla vieppiù particolareggiata coll'avvicinarsi al tempo di Kant, e specialmente per quel che riguarda la Germania. Non ci proponiamo che di esaminare alcuni autori più importanti, e di considerare solo alcuni aspetti generali del problema: addentrarsi nella discussione della evoluzione di ogni singola categoria renderebbe il nostro compito enorme, e sarebbe per di più inutile allo scopo che stabilimmo rispetto a Kant. Solo per quel che riguarda la prima metà del XVIII secolo la nostra ricerca aspira ad una certa completezza." (pp. 121-122)

(...)

"Ci sembra quindi di poter affermare, in conclusione, che è estremamente probabile che Kant abbia elaborato la propria dottrina delle categorie riferendosi per diversi rispetti alla dottrina degli aristotelici in materia; dottrina ancora viva in certe tradizioni tedesche ai tempi di Kant, attraverso le quali egli poteva agevolmente risalire ai più importanti testi del secolo precedente concernenti tale soggetto. Simile riferimento ci aiuta sia a comprendere meglio la genesi della teoria kantiana, sia ad apprezzarne alcuni particolari aspetti." (p. 143)

6. ———. 1958. "La polemica kantiana contro la teleologia cosmologica (1754-1756)." *Filosofia* :633-569.

Ristampato in *Elementi...* (1959) pp. 43-126.

"Dopo avere evidentemente abbandonato il proposito di continuare lo scritto sulle *Forze Vive* (1), Kant pubblicava nel 1755 una ponderosa opera cosmologica che ci apprestiamo ora a considerare secondo i nostri speciali interessi: la *Allgemeine Naturgeschichte und Theorie des Himmels*.

Il proposito generale dello scritto è né più né meno quanto Kant aveva, di passaggio, annunciato qualche anno prima (2): spiegare tutti gli eventi naturali mediante poche leggi universali semplici e comprensibili, riducendo al minimo indispensabile l'intervento divino nella struttura e nel corso del mondo. Principio, di per sé, molto chiaro; ma la cui dimostrazione dà luogo, come c'è da aspettarsi, a parecchi grossi e complicati problemi.

L'opera, infatti, copre, direttamente o indirettamente, i più svariati argomenti di metafisica e di cosmologia. La cosmologia sembra però (come la fisica nelle *Forze Vive*) avere, nella determinazione delle soluzioni particolari, una parte dominante.

L'origine del proposito generale sopra enunciato quale lo si incontra già nelle *Forze Vive* (3) non è di per sé chiara: è dubbio cioè se esso sia emerso dalle riflessioni sul problema delle forze vive, o se esso risponda, già nel 1747, a un preannunciarsi della problematica della *Naturgeschichte*. Bisogna però riconoscere che la formulazione datagli nel 1747 (quantunque perfettamente applicabile alla posizione del 1755) è così generica, da ammettere le precisazioni più svariate, e eventualmente più discordanti da quelle della *Naturgeschichte*. Inoltre bisogna riconoscere che l'impostazione di molti problemi è, nella *Naturgeschichte*, così diversa che nelle *Forze Vive*, che se nel 1747 un corrispondente dei problemi

cosmologici particolari del 1755 già esisteva, esso doveva essere in veste ben diversa da quella ricevuta otto anni dopo." (p. 43)

(1) Proposito espresso nella lettera ad Haller (?) del 23 Ag. 1749 (X, 2).

(2) Cfr. il mio precedente studio *Lo scritto kantiano sulla « Vera valutazione delle forze vive »* (1747), § 49.

(3) Cfr. *Lo scritto kantiano cit.*, §§ 49 e 55. Tale proposito generale si può scindere in due aspetti fondamentali di significato ben distinto: il primo corrisponde alla vecchia massima « principia sine necessitate non sunt multiplicanda », il secondo corrisponde al principio della semplicità delle vie, o della via più breve, nato in una occasione ben precisa, la polemica sulle leggi dell'ottica tra Fermat e Clerselier (cfr. *Lo scritto kantiano cit.*, nota 80). Il primo aspetto implica anzitutto che la natura è basata su pochi e semplici principi, i quali sono molto fecondi, dai quali cioè è possibile dedurre l'immensa varietà dei fenomeni naturali; in secondo luogo, che tale immensa varietà di fenomeni è ordinabile in tipi, ovvero in un sistema di leggi, e non è una infinita varietà caotica; perché la natura, sebbene presenti un grandissimo numero di tipi di fenomeni differenti, si comporta rispetto ad ogni tipo di fenomeni sempre nello stesso modo, in maniera semplice e costante (dando luogo cioè a leggi naturali e non a una sequela di eventi singoli in cui non è possibile generalizzare nulla). Il secondo aspetto, particolarmente sottolineato da Leibniz e Malebranche, implica che la natura, in ciascuno dei suoi fenomeni, si comporterà sempre nella maniera più semplice, ovvero sceglierà la via più breve per raggiungere un certo effetto (*lex parsimoniae*): da ciò Maupertuis svilupperà poi il principio della minima quantità d'azione. In effetti, il secondo aspetto non è probabilmente che uno sviluppo del primo, il quale viene in generale insieme sostenuto da coloro che sostengono il secondo, p. es. Fermat, Leibniz, Malebranche, onde di fatto la distinzione dei due aspetti talora è assai difficile. In Kant, nella *Forze Vive*, sono presenti entrambi gli aspetti; nella *Naturgeschichte* invece Kant si fonderà principalmente sul primo aspetto. Ci chiedemmo altrove quale

fosse stata l'origine della posizione kantiana in proposito nella *Forze Vive*, posizione che poi divenne d'importanza centrale nella *Naturgeschichte* sotto l'influenza di certi testi di Maupertuis, che sostenevano entrambi gli aspetti del principio (cfr. § 15 e *Lo scritto kantiano ecc.*, note 80 e 87); testi che però erano apparsi posteriormente alla *Forze Vive*.

Sarà quindi opportuno accennare a qualche altro precedente di tali dottrine, per comprendere più esattamente la posizione di Kant. R. Boyle, in *A free inquiry into the vulgarly received Notion of Nature* (*Works*, London 1744, IV, p. 404) accoglie il principio «Natura semper agit per vias brevissimas», ma limitandolo; più in là il principio sembra acquistare un significato anche più ampio (p. 417): « And it seems very suitable to the Divine Wisdom, that is so excellently displayed in the fabrick and conduct of the universe, to imploy in the world, already framed and compleated, the fewest and most simple means, by which the phaenomena, designed to be exhibited in the world, could be produced ». Newton stesso, come vedemmo (*Lo scritto kantiano ecc.*, nota 80) raccomandava di non moltiplicare inutilmente le cause dei fenomeni naturali, e assicurava (cfr. nota 54 del presente studio) che i fenomeni naturali derivano da due o tre leggi universali, e che il corso della natura è semplice e uniforme. Wolff e Crusius accettavano la *lex parsimoniae* (cfr. Joh. G. H. Feder, *Institutiones Logicae et Metaphysicae*, Göttingen 1781, § 60; *Logik und Metaphysik*, Göttingen 1786, p. 319). Castel affermava la semplicità della natura (*Traité de Physique*, Paris 1724, I, p. 380); Privat de Molières sosteneva che non bisogna moltiplicare i principi senza necessità, e che bisogna dedurre gli effetti naturali dalle supposizioni più semplici (*Leçons de Physique*, Paris 1734, I, p. 3); Joh. Bernoulli ribadiva il principio della semplicità: la natura non fa nulla invano (*Opera omnia*, Lausannae & Genevae 1742, IV, p. 24).

Si può giungere quindi alla conclusione che il principio, quale fu da Kant enunciato nella *Forze Vive*, rispondeva ad una opinione generica molto diffusa, e che egli lo impiegò solo estrinsecamente in funzione antiwolffiana, poiché Wolff stesso in certo modo lo accettava, soprattutto come *lex parsimoniae*.

Il contenuto intrinsecamente antiwolffiano del principio derivò quindi poi dall'influsso di Maupertuis. È curioso però notare come Mairan e più tardi D'Alembert (cfr. note 38 e 41 del presente studio) accusassero (e forse non senza fondamento) il principio della via più semplice e più breve di introdurre le cause finali in fisica, mentre tale principio era invece sostenuto da antiteleologisti dichiarati, quali Malebranche, Maupertuis e Kant. Giacché siamo in argomento, vogliamo accennare a qualche sviluppo della questione. Notissima è la polemica tra Maupertuis e König sulla questione della paternità del principio della minima azione, e le discussioni a cui presero parte D'Arcy, D'Alembert e Euler (cfr. P. Brunet, *Étude historique sur le principe de la moindre action*, Paris 1938, soprattutto pp. 26 sgg.). Il *Gesetz der Sparsamkeit* si ritrova in H. S. Reimarus (*Abhandlungen von den vornehmsten Wahrheiten der natürlichen Religion*, Hamburg [1754] 1781, p. 288 sgg.); J. B. Scarella enuncia il *principium brevissimae viae (Physicae generalis methodo mathematica tractatae. .. Tomus III, 1757, p. 420)*, che anche G. Ploucquet riprende (*Fundamenta philosophiae speculativae*, Tubingae 1759, § 812), che ricorre in Lambert e Buffon (cfr. Feder, loc. cit.), ed al quale J. N. Tetens dedica un apposito saggio (*Commentatio de principio minimi, Buezzovii et Vismariae 1769*). Vedere inoltre, in generale, J. F. Montucla, *Histoire des Mathématiques*, III, Paris 1802, p. 643 sgg., e A. Kneser, *Das Prinzip der kleinsten Wirkung von Leibniz bis zur Gegenwart*, Leipzig 1929; su Leibniz, L. Couturat, *La logique de Leibniz*, Paris 1901, p. 229; su Malebranche, M. Guérout, *Malebranche*, T. II, 1, Cap. VII, § 10 (di prossima pubblicaz. [1958]); su Maupertuis, P. E. B. Jourdain, *Maupertuis and the Principle of least action*, «Monist», XXII (1912); M. Guérout, *Dynamique et Métaphysique leibnitiennes*, Paris 1934, pp. 215 sgg.; R. Dugas, *Le principe de la moindre action dans l'oeuvre de Maupertuis*, «La Revue Scientifique», LXXX (1942); su Kant, J. Vuillemin, *Physique et métaphysique kantienne*, Paris 1955, p. 100 (nota). Per l'aspetto del principio che si riferisce alla costanza e uniformità (semplicità) delle leggi della natura, vederne l'ampia trattazione in G. Tonelli, *Kant, dall'estetica metafisica all'estetica psicoempirica*, Torino 1955 («Memorie della

Accademia delle Scienze di Torino », Serie 3, Tomo 3, P. 1), § 87.

"Presentiamo in questo libro il frutto di una nuova serie di ricerche sulla formazione della filosofia kantiana. Queste ricerche sono in un certo senso parallele e complementari a quelle da noi precedentemente pubblicate sotto il titolo: *Kant, dall'estetica metafisica all'estetica psicoempirica - Studi sulla genesi del criticismo* (1754-1771) e sulle sue fonti, Torino 1955 (Memorie della Accademia delle Scienze di Torino, Serie 3°, Tomo 3°, Parte II). Ciò non toglie che il presente libro costituisca un tutto perfettamente autonomo.

L'impossibilità di procedere verso lo studio del Kant più maturo senza avere ben chiari i termini del suo sviluppo giovanile è stata da lungo tempo compresa dalla *Kantforschung*. L'ultimo, e il miglior risultato come monografia d'insieme, in questo senso, è dato dal recente lavoro di M. Campo, *La genesi del criticismo kantiano*, I-II, Varese 1953, che copre il periodo fino al 1768.

Nel nostro lavoro sopra citato abbiamo approfondito lo studio soprattutto dei motivi estetici e psicologici (e in parte

antropologici) di Kant precritico, che non ci parevano essere stati adeguatamente trattati nelle numerose precedenti ricerche. L'ultimo capitolo di tale lavoro conteneva anzitutto un rapido sguardo sulla metafisica e metodologia kantiana sino al 1768 ispirato alle monografie esistenti sull'argomento, quindi il primo tentativo di una ricostruzione della rivoluzione del 1769 fondata su materiali sinora mai studiati, e una reinterpretazione della *Dissertatio* da tale punto di vista.

Procedendo ulteriormente nello studio del pensiero kantiano, ci sentimmo tosto insoddisfatti del quadro offertoci dalle precedenti monografie, per quanto importanti e valide esse fossero, della metafisica e della metodologia kantiana fino al 1768, e ci decidemmo a rivedere a fondo per nostro conto tali questioni. Il presente libro contiene una esposizione completa dello sviluppo del pensiero di Kant dagli inizi al 1768, per quanto concerne la metafisica e la metodologia (che comprende anche la logica), eccetto il problema metodologico dei rapporti tra universale e singolo, che ci sembra essere stato adeguatamente trattato nel nostro precedente lavoro. In effetti, buona parte del presente libro concerne problemi di filosofia naturale se non addirittura di storia della scienza: abbiamo dovuto infatti studiare a fondo anche molti aspetti di Kant *Naturforscher*, che sono in qualche modo collegati col suo pensiero metafisico; mentre abbiamo tralasciato lo studio di quelle sue dottrine fisiche e cosmologiche che non interessano che la storia delle scienze naturali.

La completezza della nostra monografia non esigea che ripetessimo per disteso certi risultati delle ricerche precedenti; spesso li abbiamo riassunti rapidamente, rinviando in proposito soprattutto al volume di Campo, che li espone e completa sempre con eccellente perspicuità; ma questo concerne in generale dei particolari estrinseci, o dei riferimenti ad aspetti di Kant precritico esorbitanti dai limiti precisi della nostra ricerca." (pp. V-VI)

8. ——. 1959. "Il primo tentativo ontologico di Kant (1755)." *Filosofia* :241-274.

Ristampato in *Elementi...* (1959) pp. 127-171.

La *Nova Dilucidatio* veniva redatta, come il *De Igne*, per scopi accademici; ma la prova da superare era più importante, e l'argomento scelto più impegnativo. Per la prima volta Kant si allontana dai consueti argomenti di filosofia naturale, per affrontare di petto i più ardui problemi ontologici. Ci è impossibile dire se questo nuovo orientamento non abbia avuto come ragione contingente il consiglio di qualche suo patrono accademico: ma sta di fatto che tale interesse più puramente metafisico, comunque esso sia stato suscitato, doveva ormai diventare profondo e stabile accanto agli altri, vecchi e nuovi, naturalistici ed estetico-antropologici; e affermarsi, nel decennio successivo, assieme al motivo psicoempirico, come il centro della personalità scientifica di Kant.

Bisogna però notare che l'urgenza di certi problemi metafisici era stata sentita da Kant sin dall'inizio, e che la discussione di essi aveva serpeggiato attraverso le maggiori questioni degli scritti di filosofia naturale. Il fatto che ora l'ontologia si imponga in primo piano può dunque in parte derivare da un bisogno, finalmente sentito da Kant, di discutere a fondo certe premesse, dalla esatta determinazione delle quali egli aveva visto così strettamente discendere l'interpretazione cosmologica del mondo.

Sarebbe però un errore considerare la *Nova Dilucidatio* come un semplice approfondimento dei problemi metafisici che abbiamo sin qui incontrati. Se la mentalità generale che regge quei problemi e la *Nova Dilucidatio*, è fondamentalmente la stessa, o se per lo meno (come mostreremo più oltre) nello sviluppo di tale mentalità non vi è frattura, non bisogna dimenticare che i problemi metafisici precedenti saranno, invero, discussi nella nuova sede, ma solo in una parte di essa; e che si affermeranno invece ivi molti problemi ontologici, nuovi per la penna di Kant. Sarà ora nostro compito cercare di chiarirne la derivazione.

Vogliamo aggiungere qualche parola sulla forma letteraria dell'operetta: come quattro delle cinque dissertazioni preparate da Kant per necessità accademiche, essa è redatta in latino, a onor del vero irsuto e claudicante oltre ogni dire. Essa è, come

le tre sorelle, divisa in brevi paragrafi, e, come le due più prossime nel tempo, ordinata in proposizioni e dimostrazioni *more geometrico*, nel più arcigno stile scolastico. Non è certamente un caso che Kant abbia redatto in tedesco, e in una più sciolta forma saggistica, tutte le opere e operette non destinate ad essere presentate *amplissimae facultati philosophicae* (1). La forma scolastica sapeva troppo del passato, mentre l'*essay* era la moda d'avanguardia dell'ambiente di Kant giovanile, sulle tracce dei francesi e degli inglesi. (Vedere anche § 27). Non è dunque per libera scelta che Kant stese la *Nova Dilucidatio* in questo modo; né sappiamo poi addirittura se in generale avrebbe scritto tale opera se fosse stato libero di scegliere (2)." (pp. 127-128)

(1) Unica eccezione saranno i *Metaphysische Anfangsgründe der Naturwissenschaft*, scritti *more geometrico*, trattandosi di un'opera di filosofia naturale. Si noti però che l'opera sulle *Forze Vive*, dissertazione di dottorato, era stata redatta in tedesco, ma secondo l'ordinamento per brevi paragrafi accompagnati da una indicazione di contenuto marginale proprio dei trattati scolastici tradizionali tedeschi.

(2) Cfr. K. Vorländer, *I. Kant, der Mann und das Werk*, Leipzig 1924, I, p. 94.

9. ——. 1959. "Eclettismo di Kant precritico." *Filosofia* :560-573.

Ripreso ed ampliato in *Elementi...* (1959) pp. 173-192.

"Pochi mesi dopo la conclusione della *Nova Dilucidatio*, Kant presentava alla Facoltà Filosofica della Università Albertina una nuova dissertazione, intitolata *Metaphysicae cum geometria iunctae usus in philosophia naturali, cuius specimen I continet monadologiam physicam*, necessaria per permettergli di ottenere un insegnamento effettivo come *Magister* o libero docente al posto del defunto M. Knutzen (cfr. I, 579).

L'atteggiamento metodologico enunciato nella prefazione dell'opuscolo (I, 475-76) è assai chiaro: la filosofia naturale deve, per non perdersi in vane elucubrazioni, fondarsi sull'aiuto dell'esperienza ed aiutarsi mediante la geometria; questo tutti

lo riconoscono, ma alcuni si rifiutano di ammettere altre cose che quelle che *experientiae testimonio immediate innotescunt* ; in questo modo è invero possibile *exponere* le leggi della natura, ma non l'origine e la causa di tali leggi.

Kant allude qui evidentemente al dichiarato agnosticismo metafisico di Newton (1).

Per quest'ultimo scopo, è necessario giovare della metafisica, che sola può far conoscere le cause prime e la natura vera e propria dei corpi, che stanno alla base dei fenomeni esperibili.

Una simile presa di posizione è, dopo quanto abbiamo visto precedentemente, comprensibile senza fatica. Se, infatti, nelle *Forze Vive* Kant proclamava la superfluità dell'esperienza, egli sosteneva al tempo stesso quella distinzione tra geometria e metafisica, che qui è chiaramente mantenuta.

La *Naturgeschichte* implicitamente, e il *De Igne* esplicitamente, facevano invece valere energicamente, in senso newtoniano, la necessità di affiancare alla geometria l'aiuto dell'esperienza, sembrando lasciar da parte la metafisica, che però di fatto non mancava di ispirare numerose considerazioni fondamentali. Abbiamo giustificato altrove un simile cambiamento di prospettiva (2)." (p. 173)

10. ——. 1959. "Bibliografia degli appunti dei corsi universitari tenuti da Kant, sinora pubblicati e della letteratura pertinente." *Giornale critico della filosofia italiana* no. 38:492-499.

"A. *Corsi di lezioni pubblicati integralmente o per estratti* (1).

N.B. I seguenti Corsi di lezioni sono citati nell'ordine cronologico stabilito dalla critica. Accanto ad ogni indicazione si troveranno i rinvii alle monografie e studi che stabiliscono la datazione, e che si occupano in generale delle altre questioni del testo o di esegesi. Qualora le datazioni proposte siano

parecchie, è stata scelta la più attendibile, tenendo conto dei risultati degli studi più recenti, ma vengono addotte anche le altre. Una discussione, caso per caso, sulla datazione prescelta è qui impossibile, sia in quanto esorbita dai compiti di questa bibliografia, sia perché sarebbe utile solo se fondata su di un contatto diretto coi manoscritti, ora purtroppo inaccessibili.

Tale datazione è quindi qui proposta a puro titolo indicativo in base agli argomenti addotti dalla critica, raggiungibili sempre mediante i rimandi di cui sopra.

I titoli dei Corsi non sono quelli originali, ma rispondono alla denominazione corrente ormai divenuta tradizionale. Segue il titolo originale, ove esista. Da questa lista sono escluse le lezioni stampate o fatte stampare da Kant stesso e comprese nella *Preußische Akademie Ausgabe*.

[segue un elenco di 34 testi]

B. Studi principalmente filologici e riguardanti la storia del testo, sulle "Vorlesungen" edite inedite.

[segue un elenco di 67 studi]

(1) La maggior parte degli originali o delle sole trascrizioni esistenti di tali Corsi è andata perduta durante la seconda guerra mondiale. Quelli ancora in possesso della *Deutsche Akademie der Wissenschaften* verranno editi a cura del valente kantista Dr. G. Lehmann. [cfr. volume XXIV dell'edizione]

11. ———. 1960. "Bibliografia dei corsi universitari tenuti da Kant. Addenda." *Giornale critico della filosofia italiana* no. 39:160.

[7 studi, da aggiungere ai 67 citati nel precedente articolo].

12. ———. 1975. "Kant e i caratteri delle nazioni." *Filosofia* :129-138.

"È noto che Kant fu animato, durante il corso dell'intera sua carriera intellettuale, da un vivo interesse per la psicologia empirica o, come allora veniva anche chiamata, per l'antropologia. Questo interesse riguardò anche il campo più specifico di quella che nei nostri giorni è detta psicologia

differenziale delle nazioni, cioè lo studio comparato delle caratteristiche psicologiche dei diversi popoli.

Con questo Kant non faceva che continuare una millenaria tradizione culturale, i cui primi documenti conservatici risalgono all'antica Grecia, e i cui cultori furono sia viaggiatori e geografi, sia storici, filosofi e poligrafi. Basti ricordare Erodoto, lo pseudo Polemo, Teofrasto, i fisionomi greci, Plinio il Vecchio, Plutarco, Stefano di Bisanzio. L'enciclopedismo medievale raccolse questa tradizione, che fu sviluppata più tardi da Cusano, Montaigne, Hall, Overbury, Deserpz, de Bruyn, Charron e molti altri, fino a quel classico del genere che è l'*Icon animorum* di John Barclay (Londra 1614), ove si incontra la tipica affermazione generale: « Saecula pene singula genium habere, diversumque a ceteris. Esse praeterea cuilibet regioni proprium spiritum, qui animas indigenarum, in certa studia et mores quodammodo adiget » (Cap. II) (1).

La tradizione in questione è affiancata da un'altra, ad essa relata: quella del « primitivismo », o della esaltazione del carattere e dei costumi talora della umanità primeva, talaltra di alcuni popoli « selvaggi », in contrasto con la « corruzione » dei popoli civilizzati: anche in questa corrente si definisce, o si esplora, lo spirito di una certa età del genere umano (l'« età dell'oro », il « paradiso terrestre », lo « stato di natura ») o di certe determinate popolazioni (i Germani, gli Indiani d'America, i montanari Svizzeri, ecc.) (p. 129)

(...)

"Uno studio complessivo delle caratteristiche nazionali secondo Kant (6) sarà possibile solo allorché tutti quelli che ci sono rimasti tra i quaderni di appunti presi alle sue lezioni di antropologia saranno stati pubblicati nell'ambito dell'edizione generale degli scritti kantiani. Per il momento dobbiamo accontentarci di qualche sondaggio preliminare, cercando di paragonare le sue primissime opinioni in proposito, tramandateci nelle *Beobachtungen über das Gefühl des Schönen und Erhabenen* (1764), con le più tarde, espresse nella *Anthropologie Dohna* (1791) e nella *Anthropologie in pragmatischer Hinsicht* (scritta nel 1796-1797). Il lungo tratto

di tempo, e i molti avvenimenti intercorsi, ci permetteranno di mettere in evidenza una certa evoluzione del pensiero kantiano. (p. 133)

(...)

"Scorrendo queste pagine, il lettore non avrà potuto resistere alla tentazione di paragonare le descrizioni settecentesche, e particolarmente kantiane, del carattere dei diversi popoli, con le immagini di tali popoli che sono diffuse ai nostri giorni, e con quanto gli ultimi due secoli di storia ci hanno insegnato su di essi; e si sarà talora stupito di certe coincidenze, e talaltra avrà sorriso di certe radicali divergenze di giudizio o da qualche errata previsione. E si sarà forse convinto che, se una conclusione non solamente storica può trarsi da quanto precede, questa è che tali immagini, nel modo in cui esse venivano e vengono ancora elaborate, non sono che il frutto di un fenomeno o di fabulazione, o di percezione sociale altamente relativo e arbitrario, cristallizzato in molti casi dal successo di una tradizione pubblicitica che lo diffonde e lo perpetua — per cui la « prova dei fatti » conferma tali immagini non pili di quanto confermi i pronostici dell'astrologia." (p. 138)

(1) Non esiste alcuna storia generale di questa tradizione. Utili elementi possono essere ricavati da: J. C. Spener, *Historia doctrinae de temperamentis hominum*, Halle 1704; H. Kohn, *The Idea of Nationalism. A Study in its Origin and Background*, New York 1948; M. T. Hodgen, *Early Anthropology in the Sixteenth and the Seventeenth Centuries*, Philadelphia 1964; G. "I saggi qui presentati, come del resto gli altri lavori di Tonelli, sono densi di richiami alle tradizioni, ed ai contesti (le dispute teologiche, filosofiche, scientifiche, e magari anche le beghe universitarie) che hanno influito, o che possono aver influito, nell'orientare un pensatore in una direzione piuttosto che in un'altra. Ma il lettore si accorgerà agevolmente che non viene proposto né un livellamento né un determinismo: c'è, anzi, una cura minuziosa a delineare i tratti distintivi dei personaggi, anche di terz'ordine, che vengono evocati, ed è proprio la estrema ricchezza delle combinazioni a rendere impensabile ogni forma di determinismo. Tanto più che, come egli notò proprio a proposito di Kant, « la storia della filosofia si trova spesso nella necessità di prendere in considerazione vari elementi esplicativi di carattere irrazionale o semi-irrazionale », situati fuori, insomma, da quella « consequenzialità » che il pensatore riconosceva, ed alla quale si era magari richiamato nelle sue proprie argomentazioni.

Sulla metodologia della storia della filosofia Tonelli rifletté a lungo; l'articolo presentato in chiusura di questo volume è il compendio di un lavoro molto più vasto, rimasto inedito.

Rispetto alle metodologie filosoficamente motivate, egli proponeva una metodologia « storica », e, come puntigliosamente precisava, relativa « ad uno solo dei numerosi punti di approccio complementari (o livelli di lavoro) »: gli elementi, cioè, che occorre possedere per mettersi in grado di comprendere correttamente un testo filosofico. Sarebbe qui fuori luogo riassumere; basterà dire che l'articolo di Tonelli è articolato sulla distinzione tra l'ordine genetico delle dottrine, l'ordine sistematico (cioè l'organizzazione di un nucleo teorico sulla base di certi principi costruttivi o fondanti) e l'ordine espositivo volta ripartito in specifici momenti). Se il dichiarato proposito è di indicare le condizioni di una adeguata comprensione di un testo particolare, questa è in realtà soltanto il punto di arrivo di una ricerca che investe primariamente l'autore e l'epoca. Ma non è da perdere di vista, inoltre, che quel che si vuol raggiungere è una conoscenza completa del sistema concettuale, nella quale dovrebbero trovare spiegazione anche quelle che al lettore sembrano aporie (o che l'autore stesso considerò, in altra fase del suo pensiero, aporie); per le quali non basta appellarsi a motivi « psicologici » o « sociologici », perché questi illustrano soltanto « alcuni » dei caratteri di un pensiero, e in « certi » momenti del suo svolgimento.

Quando tutti questi elementi saranno stati vagliati, occorrerà tirar le somme studiando la struttura del testo. E, a questo proposito, ho l'impressione che la procedura di Tonelli, in tanti dei suoi scritti, sia stata più attenta alle strutture sistematiche di quanto egli non abbia dichiarato nel suo articolo metodico. Non credo comunque si tratti di una contraddizione. Era ovvio che, in via di principio, Tonelli dichiarasse che nessun sistema concettuale abbia una « validità universale », e che nessun passaggio da una idea all'altra vada considerato come « una deduzione consequenziale in senso stretto ». Ma, chiarito questo, l'argomentare del filosofo (quando è un filosofo serio) merita attenta considerazione: la genesi, insomma, avvia alla comprensione del testo, non la sostituisce. E l'attenzione che Tonelli ha sempre dedicato alla struttura sistematica delle opere di Kant (ma esempi analoghi si potrebbero moltiplicare) mostra come vivo in lui fosse il senso per le « ragioni » della

- filosofia. È anche per questo, credo, che lo si debba a buon diritto dire storico delle idee filosofiche, e non semplicemente storico delle idee." (dalla Prefazione di Claudio Cesa, pp. 16-17)
14. ——. 1987. "La «debolezza» della Ragione nell'età dell'Illuminismo." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 19-41. Napoli: Prismi Editrice.

Traduzione di *The "Weakness" of Reason in the Age of Enlightenment*, in *Diderot-Studies*, XIV, 1971, pp. 217-244.

"La concezione tradizionale dell'Illuminismo è stata già messa in questione; essa è stata criticata nel suo complesso, ad esempio da Funke, ed in senso parziale, relativamente ad uno specifico ambito, da Vyverberg (1). Assai significativo qui è soprattutto l'approccio di R. H. Popkin al problema dello scetticismo settecentesco (2); quella dello scetticismo fu infatti una delle questioni principali dibattute in quell'epoca, e Hume non costituì affatto un caso isolato. Benché, tuttavia, io personalmente propenda a riconoscere allo scetticismo settecentesco una diffusione ancora più larga di quanto non faccia lo stesso professor Popkin (3), quello scettico non può venir considerato un orientamento comune (e tanto meno tipico) del XVIII secolo; anche la corrente anti-scettica fu, è evidente, di capitale importanza, raggiungendo il suo momento culminante in Inghilterra con la scuola del senso comune e, in Germania, con Kant. Viceversa, l'accentuazione dei limiti dell'intelletto umano può considerarsi (con poche, ma importanti eccezioni) un'attitudine diffusa e, in certa misura, persino tipica, del XVIII secolo.

Vorrei ora esporre brevemente l'ovvia differenza di fondo tra la posizione scettica e la posizione volta a stabilire i confini dell'intelletto umano, anche se ciò può comportare alcune eccessive semplificazioni.

Lo scetticismo mette in dubbio la possibilità, per la ragione umana, di raggiungere una qualsivoglia verità assoluta con certezza dimostrativa (e, in alcuni casi, anche con certezza morale: il pirronismo « storico »); per lo scetticismo, l'essenziale è la « qualità » della conoscenza, il genere di certezza possibile per l'uomo.

La posizione volta a stabilire i limiti della ragione umana, al contrario, si interessa dell'estensione della conoscenza razionale (di qualsiasi genere).

Entrambe le posizioni, naturalmente, possono essere complementari. Per uno scettico assoluto il problema dei limiti non esiste neppure, ma uno scettico moderato, che ammetta la possibilità della conoscenza probabile, è in genere interessato a determinare i limiti di questa conoscenza. Molti pensatori, tuttavia, pur orientandosi verso la determinazione dei confini dell'intelletto, non sono affatto scettici; essi possono ritenere la certezza dimostrativa possibile entro i limiti dell'intelletto umano (o, per meglio dire, possono di fatto fissare dei confini diversi per la conoscenza, uno per la conoscenza certa, l'altro per quella probabile), e possono in tal modo pensare che la verità assoluta (o perlomeno la conoscenza necessaria ed universale) sia, in parte, alla portata dell'uomo." (pp. 21-22)

(...)

" Questa rassegna, in verità assai incompleta, delle posizioni filosofiche del XVIII secolo volte a determinare i limiti dell'intelletto umano, necessita almeno di un'aggiunta finale, che funga da esempio di un tipo di limitazione che non deriva, come negli esempi precedenti, dai confini imposti alla ragione dalla autorità dell'esperienza, ma dalla intrinseca debolezza della ragione stessa per quanto concerne le sue capacità concettuali. Si tratta del concetto di infinito. L'infinito, da questo punto di vista, non implica direttamente l'idea di esistenza — ed è perciò in qualche misura indipendente dalle leggi dell'esperienza.

Esistono due tipi radicalmente diversi di infinito: l'infinito qualitativo degli attributi di Dio, e l'infinito quantitativo della creazione. L'esistenza del primo tipo di infinito non può essere considerata un problema particolare a sé stante, poiché essa è già implicita nell'esistenza di Dio; il secondo tipo di infinito è considerato esistente non attualmente, ma solo potenzialmente. Bisogna fare un'eccezione per alcuni pensatori, d'estrazione per lo più spinoziana, come Raphson o Terrasson, i quali consideravano il mondo infinito in atto.

Il problema essenziale è tuttavia se questo infinito — sia esso esistente in Dio o in potenza nel mondo — possa o meno venir concepito dalla ragione umana. È quasi superfluo ricordare che questo rappresenta uno tra i tanti problemi che l'Illuminismo aveva ereditato dalla tradizione plurimillennaria della filosofia occidentale. Nell'Età della Ragione predomina, nell'affermazione di un'intrinseca debolezza della ragione, un atteggiamento negativo. L'uomo, in quanto è un essere finito, può avere solo un'idea negativa o imperfetta dell'infinito, benché questa idea sia utile ed indispensabile in molti ambiti, dalla teologia alla matematica, e benché la sua verità debba essere rivendicata anche se non può venire direttamente compresa. In Gran Bretagna Raphson, Clarke, Collier, Berkeley, Hume e Madaurin concordavano su questo punto; in Francia, Crousaz, Buffon, d'Alembert, Robinet. In Germania Wolff, l'apostolo della potenza della ragione, tentò di imporre una soluzione di compromesso, ma venne contestato da Crusius, Reimarus, Lambert e Kant." (p. 38)

15. ———. 1987. "La discussione sui limiti dell'intelletto umano nel Settecento e la genesi del criticismo kantiano, con particolare riferimento al problema dell'infinito." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 43-78. Napoli: Prismi Editrice.

Traduzione di *La question des bornes de l'entendement humain au XVIIe siècle et la genèse du criticisme kantien, particulièrement par rapport au Problème de l'infini*, in « Revue de Métaph ysique et de Morale », LXV, 1959, pp. 396-427.

"Hume e Kant non sono stati i primi a proclamare la necessità di ammettere che lo spirito umano non può conoscere tutto, e ad imporre il rispetto dei suoi limiti: troppo spesso lo si dimentica, quando si cerca di ricostruire le origini della filosofia kantiana. Per questo ci proponiamo di delineare qui un quadro molto sintetico del problema all'epoca della formazione filosofica di Kant.

Se dovessimo trattare in maniera esaustiva il tema da noi affrontato ci troveremmo dinanzi ad un compito smisurato, il cui assolvimento andrebbe ben al di là di ciò ch'è necessario per una comprensione migliore della personalità di Kant. In effetti si tratterebbe in primo luogo di scrivere nientemeno che la storia dello scetticismo, su cui d'altronde sono state pubblicate diverse opere (1) ma non saremmo che all'inizio, poiché è evidente che numerosi pensatori i quali non possono essere considerati in nessun modo degli scettici hanno riconosciuto che la capacità umana di conoscere non è illimitata. Occorrerebbe infine parlare di tutti quei mistici che tendevano a sminuire o a negare il valore della conoscenza razionale al solo scopo di far posto alla fede o all'illuminazione interiore.

Ciò che ci proponiamo qui dunque è soltanto la descrizione dell'aspetto del problema nei suoi tratti più generali nel corso della prima metà del Settecento, il che ci costringe ad occuparci anzitutto rapidamente di quei grandi pensatori del Seicento che esercitavano ancora un influsso importante nel secolo successivo. Rinunciamo dunque a studiare certi pirroniani veramente caratteristici del Seicento, come La Mothe Le Vayer, Huet, Glanville, ecc. (2), la cui importanza non va oltre i confini della loro epoca.

Il problema che ci accingiamo a trattare presenta naturalmente parecchi aspetti differenti: in effetti si può cercare di stabilire l'estensione delle conoscenze possibili nelle direzioni più divergenti e si possono concepire in maniera molto diversa i limiti di queste conoscenze.

Ci accontenteremo pertanto di dividere il nostro tema in due parti principali: nella prima ci occuperemo del problema dei limiti in generale; nella seconda esporremo più in particolare il

problema specifico dei limiti dello spirito umano in rapporto all'infinito, problema che assorbiva all'epoca la parte maggiore delle discussioni dedicate al nostro tema. Trascureremo dunque consapevolmente diversi aspetti più specifici della questione, come il dubbio dei cartesiani circa la validità della conoscenza sensibile e le crisi delle nozioni di sostanza e di forza; si trattava, per questi ultimi, di problemi riconosciuti nel Settecento tra quelli di più difficile soluzione per l'uomo (3). In particolare i newtoniani moderati ammettevano che la forza d'attrazione era qualcosa di misterioso e d'inesplicabile dal punto di vista della filosofia meccanica (4). Allo stesso modo in teodicea gli avversari dell'ideologismo dichiaravano ch'era impossibile penetrare i disegni della saggezza divina e ch'era meglio spiegare i fenomeni mediante le cause efficienti (5); per non parlare poi delle incertezze riguardo al problema della libertà.

Eviteremo così pure di discutere certe forme d'idealismo che, più che i limiti dell'intelletto umano, presuppongono che non si possa conoscere nulla del mondo sensibile perché, in realtà, il mondo sensibile non esiste." (pp. 45-46)

(...)

"Kant ha cominciato abbastanza presto ad occuparsi della questione dei limiti dell'intelletto umano. Nella *Allgemeine Naturgeschichte und Theorie des Himmels* [Storia naturale universale e teoria del cielo] del 1765 esprime i suoi dubbi sulle capacità conoscitive dell'uomo per le ragioni seguenti: anzitutto i sensi s'ingannano; in secondo luogo è impossibile per l'uomo cogliere ciò ch'è smisurato (189). Tuttavia la possibilità d'applicare le matematiche alla cosmologia conferisce a questa scienza un valore di certezza che compensa la debolezza dei nostri sensi (190). È vero però che la branca della cosmologia di cui Kant in modo particolare si occupa, cioè la cosmogonia, può essere matematizzata solo fino ad un certo punto, essendo fondata piuttosto su un ragionamento analogico (191). E questo perché tale branca è fondata su principi metafisici, principi che non sono suscettibili di certezza, in quanto hanno a che fare con nozioni implicanti l'infinità sia quantitativa, sia metafisica: e

solo Dio può concepire l'infinito (192). Esiste d'altra parte un altro oggetto che presenta almeno pari difficoltà dell'infinito alla conoscenza: l'organismo vivente (193).

È evidente che il dubbio concernente la conoscenza sensibile, dubbio superato mediante la conoscenza matematica, dipende più o meno direttamente dalla ben nota formulazione cartesiana. Il dubbio riguardante le conoscenze fondate su nozioni infinite dev'essere attribuito in parte ad un atteggiamento antiwolffiano ispirato dai pietisti, e da Crusius in particolare; in parte all'influsso metodologico di un ispiratore della *Naturgeschichte*, Wright of Durham (194). D'altra parte, in generale, il fatto che si avanzino delle riserve riguardo ai limiti delle conoscenze umane è un atteggiamento polemico nei confronti dell'ortodossia wolffiana. La difficoltà di conoscere l'organismo vivente è un tema molto diffuso nel Settecento. Appunto perché si riconosce l'impossibilità della spiegazione meccanica degli esseri viventi (dottrina anch'essa antiwolffiana), si proclama misteriosa la natura di questi ultimi, rifiutando la teleologia come spiegazione razionale soddisfacente (195).

Il tema dell'incomprensibilità dell'infinito metafisico ritorna nella *Nova Dilucidatio* del 1755 (196); ma è nel *Beweisgrund* [L'unico argomento possibile per una dimostrazione dell'esistenza di Dio] del 1762 che si annuncia un tema nuovo: vi sono delle nozioni composte ch'è impossibile (per l'uomo) analizzare (197); questo tema riappare nel saggio sulla *Deutlichkeit* [Ricerca sull'evidenza dei primi principi della teologia naturale e della morale] del medesimo anno (198). Abbiamo visto che tale dottrina è di derivazione crusiana.

I *Träume eines Geistersehers* [Sogni di un visionario spiegati coi sogni della metafisica] del 1776 recano delle novità importanti: Kant fa rilevare che vi sono nozioni le quali non sono fondate, direttamente « indirettamente, su nessun dato, e che possono essere pensate solo negativamente: queste nozioni, che appartengono in generale alla pneumatologia, sono puramente immaginarie (199). Anche la nozione della natura spirituale di Dio è soltanto negativa (200). In realtà tutto ciò

che riguarda la natura spirituale, la libertà e la predestinazione rientra in questa categoria (201). In più, vi sono dei rapporti fondamentali inerenti a ciò ch'è dato che non si possono concepire (*einsehen*), poiché la loro natura non è fondata sull'identità; per esempio, la forza di attrazione. Questi rapporti possono essere conosciuti soltanto sulla base dell'esperienza (202). La nozione kantiana dei limiti è dunque, nel 1766, molto complessa e molto differenziata. L'importanza attribuita da Kant all'esperienza dipende certamente dall'atteggiamento di Newton e Locke al riguardo, atteggiamento sottolineato da alcune tendenze filosofiche del tempo, rappresentate soprattutto da Baumgarten e da Lambert; tendenze che avevano portato Kant ad esigere dalla metafisica un procedimento in concreto, vale a dire un controllo sperimentale continuo mediante esempi reali (203). La diffidenza riguardo alle teorie pneumatiche è ispirata forse più precisamente da Locke. Quanto all'insufficienza dell'identità per spiegare certi rapporti reali, si tratta di una teoria che Kant aveva tratto da Crusius nel suo scritto sulle *Negative Grössen* [Saggio per introdurre in matematica il concetto delle grandezze negative]; Crusius tuttavia non ne faceva un motivo di dubbio, o di limitazione dell'intelletto: questo sviluppo è in Kant originale. Bisogna comunque notare che ai tempi di Kant l'attrazione era in genere considerata una forza misteriosa.

Rinunciamo a discutere lo sviluppo ulteriore del problema dei limiti dell'intelletto in Kant: ci basta aver raccolto qui la documentazione necessaria per affrontare questo problema; il suo esame approfondito ci condurrebbe troppo lontano e richiederebbe l'analisi di un numero ben maggiore di fattori che qui non abbiamo potuto prendere in considerazione, in altra sede (204) abbiamo parlato dei cambiamenti di prospettiva nella questione dei limiti al tempo della rivoluzione copernicana del 1769 ed abbiamo mostrato l'interesse che questo problema destava nello stesso periodo in Lambert." Giorgio Tonelli: Bibliografia degli Scritti su Kant e la Filosofia del Settecento (1987-1995)

Bibliografia

1. Tonelli, Giorgio. 1987. "La disputa sul metodo matematico nella filosofia della prima metà del Settecento e la genesi dello scritto kantiano sull' 'evidenza' " In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 81-107. Napoli: Prismi Editrice.

Traduzione di *Der Streit über die mathematische Methode in der Philosophie in der ersten Hälfte des 18. Jahrhunderts und die Entstehung von Kants Schrift über die 'Deutlichkeit'*, in « Archiv für Philosophie », IX, 1959, pp. 37-66.

"Nel presente articolo viene proposta un'indagine sulle premesse storiche e sullo spunto della dottrina kantiana sul metodo matematico del 1762. A questo scopo ci sembra necessario considerare brevemente la problematica del Settecento, con la speranza che il nostro tentativo di trattare in poche pagine un problema tanto vasto non appaia troppo arrischiato: un'indagine approfondita di tale questione importante richiederebbe uno spazio ben maggiore, ma qui ci limiteremo a richiamare ciò ch'è indispensabile per la comprensione della trattazione kantiana del problema. A tal fine ricorreremo anche alle opinioni di diversi filosofi di grandezza minore, che sotto questo riguardo solitamente vengono trascurati ma che tuttavia sono molto interessanti nell'insieme: e ciò per ricreare l'atmosfera in cui il problema è stato affrontato da Kant.

L'applicabilità e la sufficienza del metodo matematico in filosofia divengono già nel Seicento una delle questioni più dibattute della filosofia europea. (1) Già all'inizio del secolo Morin aveva cercato di dimostrare con un procedimento di tipo matematico l'esistenza di Dio (2), ed è noto come Descartes abbia introdotto nella filosofia in generale il metodo matematico (3). Naturalmente questa impostazione incontrò una vivace opposizione da parte degli aristotelici. Come esponente caratteristico della reazione anticartesiana sotto questo aspetto può essere forse considerato J. B. Du Hamel, il quale sosteneva che i concetti della geometria avevano un mero carattere immaginario e che pertanto era sbagliato introdurli nella fisica (4). Il problema del carattere immaginario o reale dei concetti geometrici era naturalmente vivo fin dall'antichità. In Suarez, ad esempio, si trova un'ampia esposizione delle diverse opinioni scolastiche in proposito, le quali discutono la questione in maniera molto più approfondita e complessa di quanto non sia avvenuto in epoca posteriore (5). Anche nel Seicento venne sottolineata la differenza tra i concetti di estensione geometrica e fisica, ad esempio da Sennert e da Gassendi (6); Ledere richiamò pure con vigore la differenza tra matematica e filosofia (7).

Il più importante fautore dell'introduzione nella metafisica del metodo e del modo d'esposizione euclideo è stato, com'è noto, Spinoza, in quanto prosecutore e innovatore della tradizione cartesiana. Nonostante il sospetto di ateismo che per tal motivo accompagnava il matematismo metafisico, il metodo matematico fu accolto proprio dagli avversari di Spinoza specialmente in Francia, dove fu impiegato per respingere le dottrine dell'ebreo olandese. Il primo della serie di questi avversari (1679) è stato Huet (8), seguito da Fénelon, Silléry, Lamy, Régis, Langehart, Bayle e Mairan (9)." (pp. 81-82)

(...)

"Già nel suo primo scritto sulle 'forze vive' Kant aveva sottolineato la differenza tra il concetto fisico e quello matematico di corpo (138), una differenza che — ovviamente — non può essere considerata originale. Egli sosteneva che la sua metafisica

avrebbe raggiunto la medesima evidenza e rigore dimostrativo della matematica. Nel' *Allgemeine Naturgeschichte und Theorie des Himmels* [Storia naturale universale e teoria del cielo] e nella dissertazione *De Igne* Kant aveva impiegato la matematica nella filosofia della natura secondo il modello newtoniano. Lo stesso discorso va fatto per la posteriore *Monadologia physica* e per il saggio sul movimento e la quiete: si tratta di scritti di filosofia della natura, ma anche nella contemporanea *Nova Dilucidatio* di contenuto ontologico e metafisico Kant applica almeno esteriormente il metodo matematico (139).

La situazione invece è diversa nell' *Einzig möglicher Beweisgrund zu einer Demonstration des Daseins Gottes* [Unico argomento possibile per una dimostrazione dell'esistenza di Dio] del 1763, in cui Kant afferma essere attualmente impossibile servirsi del metodo matematico in filosofia: ciò provocherebbe solo una sorta di 'mania del metodo' suscettibile delle peggiori conseguenze. A suo avviso questa impossibilità dipende dal fatto che i concetti metafisici non sono stati ancora analizzati esaurientemente: non si sa perciò con precisione il loro contenuto e di conseguenza non si può procedere con essi col metodo matematico. La « certezza matematica » in metafisica è ciononostante pur sempre una meta ideale della metodologia kantiana: se un giorno si riuscirà ad analizzare compiutamente i concetti metafisici, cioè a renderli del tutto chiari e distinti, allora si potrà Cominciare finalmente a costruire la vera metafisica, ch'è capace di certezza matematica (140). Il contrasto col metodo wolffiano è ora chiaro: una metafisica secondo il modello matematico è da considerarsi al presente impossibile ed inutile.

Tuttavia una chiarificazione metodologica fondamentale di questi problemi compare appena nello scritto *Über die Deutlichkeit der Grundsätze der natürlichen Theologie und der Moral* [Ricerca sull'evidenza dei primi principi della teologia naturale e della morale] del 1762. Kant è impegnato ad approfondire lo iato tra metafisica e matematica: i concetti matematici vengono definiti mediante una composizione arbitraria (sinteticamente); la definizione dei concetti metafisici

può avvenire invece soltanto per via analitica, dal momento che qui si ha a che fare con enti reali, che bisogna assumere così come sono e considerare poi attraverso la risoluzione o analisi più accurata nei loro elementi semplici. Inoltre i segni matematici (simboli o figure) sono idonei a ridare l'essenza dei concetti matematici; in questi segni ci si può rappresentare in maniera sensibile tali concetti ed è dunque possibile procedere in matematica in concreto, vale a dire sensibilmente (mediante esempi chiari e dimostrazioni evidenti, accessibili e comprensibili a tutti).

I segni o termini metafisici non sono invece idonei ad un simile trattamento, poiché non li si può risolvere nei loro elementi semplici: i segni metafisici non possono essere combinati secondo regole semplici e chiare, e dunque una combinatoria metafisica è impossibile. La metafisica può procedere solo in abstracto, cioè in maniera intellettuale.

Ancora: la matematica è costruita sopra un numero determinato di concetti fondamentali: i concetti-base metafisici sono invece senza numero, e lo stesso vale per gli assiomi o principi indimostrabili. La matematica dunque è facile, semplice, comprensibile; la metafisica invece difficile e confusa. La metafisica deve allo stato presente limitarsi all'analisi dei concetti: solo quando questa analisi sarà giunta a compimento la metafisica potrà procedere per via sintetica, secondo il modello matematico (141).

Kant non intendeva però dire con questo che la matematica per il momento è indifferente per la metafisica in generale. Di fatto egli impiega all'occasione concetti e dimostrazioni matematiche nello scritto cronologicamente contiguo sulle grandezze negative (142), e ciò non va considerato in contraddizione con le teorie dello scritto sull'evidenza. In realtà lo schema delle grandezze negative non è di tipo matematico: gli elementi matematici degli esempi e delle dimostrazioni occasionali costituiscono un'aggiunta esteriore.

Le dottrine dello scritto sull'evidenza hanno certamente avuto la loro origine nelle prese di posizione dell'Accademia prussiana, tuttavia anche l'influsso di Crusius è stato

sicuramente determinante: Kant cita esplicitamente di preferenza Crusius piuttosto che altri pensatori. La polemica contro la combinatoria è certamente affiorata già nella *Nova Dilucidatio*, tuttavia la tesi dell'infinità numerica dei principi metafisici fondamentali proviene da Tonnies e da Tetens (143).

Kant dunque non ha rifiutato totalmente il metodo matematico in filosofia: vi si rinuncia per il momento, ma rimane pur sempre come obbiettivo per il futuro. La venerazione per Newton impedì verosimilmente il rigetto completo della matematica. Alla presa di posizione sul problema presente nell'Unico argomento e nello scritto sull'evidenza è probabile che Kant sia stato spinto unicamente perché i suoi due padrini sul piano filosofico, Crusius e Maupertuis, s'erano espressi positivamente al riguardo. Ciò può spiegare perché Kant solo relativamente tardi abbracciò questa tesi, cioè dopo che anche l'ambiente dell'Accademia berlinese s'era espresso in tal senso. La sua precedente considerazione per la matematica non può essere in alcun modo ricondotta ad un riguardo per Wolff, giacché la polemica nei suoi confronti fu in Kant fin dagli inizi ben decisa. Basta solo pensare a quale considerazione aveva acquistato un uso moderato del metodo matematico grazie ad uomini come Leibniz e Newton e si comprenderà facilmente perché Kant appena così tardi e con simili riserve si è distaccato dal metodo geometrico." 2. ——. 1987. "La concezione leibniziana delle idee innate e le prime reazioni alla pubblicazione dei *Nouveaux Essais* (1765)."

In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 111-136. Napoli: Prismi Editrice.

Traduzione di *Leibniz on Innate Ideas and the Early Reactions to the Publication of the « Nouveaux Essais » (1765)*, in «*Journal of the History of Philosophy* », 1974, pp. 437-454.

"I *Nouveaux Essais* di Leibniz, scritti nel periodo 1703-1705 (e d'ora in poi citati come *NE*), furono pubblicati postumi da Raspe (1) nel 1765, all'inizio di una rinascita di interesse per Leibniz di cui è segno anche la grande edizione Dutens del 1768. Poiché la grande svolta nel pensiero di Kant si produsse nel 1769, e fu contrassegnata in particolare dal rifiuto della sensibilità quale fonte unica della conoscenza (2), è facile concludere che proprio la lettura dei *NE* possa essere stata uno tra gli elementi determinanti che spinsero Kant ad adottare la sua nuova soluzione.

Non è pretesa di questo studio rispondere a tale difficile questione: Il nostro tentativo è piuttosto quello di preparare il terreno per un'eventuale risposta al problema, muovendo dall'analisi delle prime reazioni che si ebbero nei circoli filosofici, in special modo tedeschi, alla comparsa dei *NE*. In che misura vennero afferrati l'importanza ed il significato delle particolari dottrine esposte nei *NE*? Fino a che punto i filosofi contemporanei si resero conto che esse avrebbero profondamente modificato il quadro complessivo dei principi della psicologia di Leibniz? E, per conseguenza, fino a che punto avrebbe potuto Kant venir spinto da una reazione generalizzata a prestare particolare attenzione alla peculiarità di quell'opera? Per rispondere a questi interrogativi, focalizzerò la mia ricerca sul *problema della origine della conoscenza*.

Poiché il mio intento è quello di ricostruire un'atmosfera filosofica nel suo complesso, non limiterò la mia indagine alle reazioni filosofiche precedenti al 1769, ma prenderò in considerazione anche alcune posizioni del decennio successivo. Come frequentemente accade nella storia delle idee, mentre la forza d'urto di un certo evento può venir riconosciuta già nei momenti immediatamente successivi al suo accadimento, la documentazione dei suoi effetti nel tempo può rivelarsi

accessibile solo dopo un certo periodo. Tali effetti sono da considerarsi nondimeno indicativi di quella forza d'urto che li ha preceduti.

Prima però di dare inizio a quest'indagine, desidero chiarire due punti preliminari: intendo infatti, in primo luogo, mettere in luce le diverse modalità di trattamento della dottrina in questione nei *NE* e nelle opere di Leibniz pubblicate in precedenza in cui essa compare; passerò poi, in secondo luogo, ad esaminare le interpretazioni della psicologia di Leibniz precedenti al 1765, e, in particolar modo, la versione che di essa venne accolta da Wolff e incorporata nel suo sistema." (pp. 111-112)

(...)

"Se dunque un'eventuale lettura dei *NE* ha realmente inciso sulla rivoluzione filosofica di Kant del 1769, questo non è stato per effetto di una reazione positiva collettiva seguita alla comparsa dei *NE*, poiché per lungo tempo ancora dopo il 1769 questa reazione non ebbe, semplicemente, luogo. L'influsso dei *NE* su Kant può spiegarsi dunque soltanto in base a ragioni d'ordine personale, a differenza di molte altre posizioni filosofiche assunte da Kant tra il 1769 e il 1780. Esso può però, almeno parzialmente, spiegarsi anche grazie all'influenza esercitata da Crusius su Kant. Sebbene infatti Kant in principio non accettasse il moderato innatismo di Crusius, la conoscenza della teoria di Crusius può aver richiamato la sua attenzione sull'analogia dottrina di Leibniz, e l'influenza congiunta di entrambe le concezioni può aver costituito un importante elemento nella celebre svolta del 1769.

Non credo che la forma ormai antiquata d'innatismo difesa da pochi filosofi cattolici tedeschi (93) possa aver svolto alcun ruolo. E questo vale anche per alcuni fattori non sensibili presenti nella teoria dell'Ideale di Winckelmann e di Wieland (94): questa teoria si riferiva specificamente all'estetica, ed influenzò certamente Kant, ma più tardi, ed in un'area del tutto differente (95)." (pp. 126-127)

(93) Qualche forma di innatismo è presente specialmente tra i Benedettini, come I. Graw (1749. Vedi W. A. Mühl, *Die Aufklärung an der Universität Fulda mit besonderer Berücksichtigung der philosophischen und juristischen Fakultäten* [Fulda, 1961], p. 41) e G. Cartier (vedi B. Jansen, *Philosophen katholischen Bekenntnisses in ihrer Stellung zur Philosophie der Aufklärung*, in «Scholastik», XI [1936], p. 10). Ma anche il gesuita Redhammer era sostenitore della dottrina delle idee innate (vedi C. Werner, *Der Heilige Thomas von Aquin*, III [Regensburg, 1889], p. 637).

(94) Questa teoria compare in un'opera postuma (scritta nel 1759) di Winckelmann, e, nel 1764, nella sua *Geschichte der Kunst des Altertums*. Wieland espone la stessa concezione in un saggio del 1777. Si veda, per entrambi, G. Tonelli, « Ideal », voce in *Dictionary of the History of Ideas*, ed. Philip Wiener [New York, 1973].

(95) Vedi G. Tonelli, *Kant's Early Theory of Genius, 1770-1779*, in « Journal of the History of Philosophy », IV (1966). [Ora tradotto in italiano e raccolto nel presente volume. N. d. T.].

3. ——. 1987. "Zabarella ispiratore di Baumgarten o l'origine della connessione tra estetica e logica." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 139-146. Napoli: Prismi Editrice.

Traduzione di *Zabarella inspireur de Baumgarten ou l'origine de la connexion entre esthétique et logique*, in « Revue d'Esthétique », IX, 1956, pp. 182-192.

"Non occorre ricordare il posto che occupa, nella storia dell'estetica, Alexander Gottlieb Baumgarten (1714-1762): tutti sanno che l'estetica gli deve il proprio nome. E noi abbiamo avuto l'occasione di richiamare altrove (1), recentemente, il suo influsso su Kant, in quel periodo molto delicato della storia del criticismo che va dal 1765 al 1770. Uno dei punti importanti di questa dottrina è il rapporto tra teoria del bello e logica."

(p.139)

(...)

"Queste idee di Baumgarten hanno, ci pare valga la pena di rilevarlo, dei precedenti molto interessanti in un pensatore italiano del Cinquecento: Zabarella (1553-1589), l'autore del *De rebus naturalibus* e di commenti importanti su Aristotele, che professò a Padova un tomismo molto evoluto in direzione dell'umanesimo rinascimentale (3). Zabarella infatti pretende di essere il primo a dimostrare la connessione tra logica e 'poetica', e non abbiamo degli elementi che ci spingano a dubitare del suo diritto di priorità. Retorica e poetica sono, secondo Zabarella, *partes logicae et philosophiae instrumenta*; ciò che nessuno fino ad allora aveva sostenuto (*nomο hactenus declaravit*: l. II, cap. XIII, p. 78). Retorica e poetica, a dire il vero, non fanno parte né della filosofia 'contemplativa' né della morale (cap. XIV, p. 78). Esse sono anzitutto, come la grammatica, facoltà strumentali e più precisamente *instrumenta civilis disciplinae*, ossia sono utili all'azione (ibid. e cap. XV, p. 82); si direbbe, con linguaggio odierno, che non hanno né un valore speculativo né un valore etico, bensì un valore pragmatico. In effetti la retorica contribuisce a inculcare la moralità (p. 83), la poetica a correggere i costumi (p. 84). Inoltre esse fanno parte della logica che, a sua volta, non è né scienza né morale, ma *disciplina instrumentalis* come la grammatica (l. I, cap. X, p. 22) (4). Ora retorica e poetica non fanno parte della logica generale, che « insegna la forma stessa del ragionamento » (*docet ipsam ratiocinandis formam*): fanno parte invece della logica particolare che permette che, « volendo usare il discorso per questo o quel fine, sappiamo a quale materia, cioè a quali proposizioni occorre applicare tale forma; e che troviamo le proposizioni stesse, quando occorra, e le abbiamo a disposizione » (5)." (pp. 140-141)

(...)

"In conclusione, anche se la teoria baumgarteniana (che si trova nella *Metaphysica*) dell'estetica o scienza del bello, come scienza della facoltà inferiore o della conoscenza sensibile in generale, può essere agevolmente spiegata prescindendo da una dipendenza diretta dal testo di Zabarella (15), l'influenza del filosofo padovano ci sembra estremamente probabile riguardo alla dottrina specifica (che s'incontra nell'*Aesthetica* di

Baumgarten) dell'induzione estetica e dell'esempio, come complemento di un ragionamento razionale insufficiente. Baumgarten avrebbe notato una certa analogia tra la propria posizione e quella dell'italiano ed avrebbe utilizzato alcuni suoi suggerimenti ben precisi, conferendo loro una funzione indubbiamente originale nell'insieme di un sistema ben diverso. Questo intreccio di tradizione cartesiano-leibniziana e di tradizione averroista avrebbe costituito una nuova piattaforma di cui Kant, sensibile anche ad altre suggestioni e problemi, doveva in seguito far rilevare la debolezza: il suo tentativo di chiarificazione del problema doveva condurre alla rivoluzione del 1769.

È interessante altresì notare che il discepolo più importante di Baumgarten, G. F. Meier, in un'opera di estetica (16) comparsa dopo la *Metaphysica* di Baumgarten, ma prima dell'*Aesthetica* di questi, sviluppa, muovendo dalle posizioni speculative della *Metaphysica* del suo maestro, una teoria del sillogismo estetico e dell'induzione estetica che non è molto lontana dalle dottrine esposte in seguito da Baumgarten stesso nella sua *Aesthetica*, benché meno vicina alla dottrina zabarelliana di Baumgarten." (p. 144)

(1) G. Tonelli, *Kant dall'estetica metafisica all'estetica psicoempirica*, Torino, 1955, spec. cap. IV.

(3) *Lo citeremo qui da J. Zabarella, Opera Logica, ed. postrema, Francofurti, 1626: De Natura Logicae, libri duo.* [di quest'opera è disponibile una nuova edizione a cura di Dominique Bouillon con testo latino e traduzione francese a fronte: Jacques Zabarella, *La nature de la logique*, Parigi: Vrin, 2009]

(4) Una *disciplina instrumentis* dev'essere distinta anche dall'arte. Infatti è « quidem habitus animi; non tamen effectivus alicujus operis extra animum, sed ipsomet animo: adeo ejus operatio est immanens » (l. I, cap. VII, pp. 16-17); diversamente sarebbe un'arte.

(5) Ut ad alium et allumi scopum discursum uri volentes, sciamus cui materiae, id est, quibus propositionibus ea forma

applicanda sit, ipsasque propositiones, quando opus fuerit, inveniamus, et in promptu habeamus (l. II, cap. IX, p. 85).

(15) Infatti, come abbiamo mostrato altrove, l'ambiente offriva molteplici stimoli in questa direzione: più di una volta, e specialmente in Leibniz, si riscontra una identificazione della bellezza con una conoscenza chiara ma confusa (non distinta). Ed alcuni pensatori tedeschi del Settecento ripresero prima di Baumgarten, per la verità molto superficialmente, la connessione tra scienza del bello e logica, probabilmente sotto l'influsso di Zabarella. Su tutti questi punti cfr. G. Tonelli, op. cit., cap. IV.

4. ——. 1987. "L'ambiente storico-culturale di Königsberg e la formazione della filosofia kantiana." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 149-168. Napoli: Prismi Editrice.

Traduzione di *Conditions in Königsberg and the Making of Kant's Philosophy*, in « *Bewusstsein. Gerhard Funke zu eigen* », Bonn: Bouvier, 1975, pp. 126-144.

"Circa vent'anni fa (1) Gerhard Lehmann faceva notare che, per quanto strano potesse sembrare, c'era un numero davvero limitato di studi sulla vita di Kant, e quelli esistenti avevano per di più il difetto di non prendere nella dovuta considerazione alcuni aspetti fondamentali del problema, primo fra tutti quello dei possibili rapporti rinvenibili tra la vita di Kant come semplice essere umano e ciò che egli, come filosofo, aveva prodotto. A quel tempo questo corrispondeva al vero, se si eccettuano quel tanto di attenzione solitamente riservata, nella maggior parte delle biografie di Kant, ai suoi insegnanti e alla sua educazione, e qualche studio dedicato ai suoi gusti letterari e alle sue esperienze del bello nella natura e nell'arte, fattori, questi, che avrebbero condizionato le sue idee in materia di estetica (2). Quell'osservazione risulta tuttavia oggi ancor più pertinente, poiché da quando, nel 1954, vennero avanzate dallo stesso Lehmann alcune proposte di ricerca in quella direzione, non è stato fatto in realtà alcun passo avanti.

Con la sua esortazione Lehmann intendeva suggerire la opportunità di indagare in modo più approfondito lo sviluppo della personalità kantiana in quanto strettamente connesso alla sua evoluzione filosofica; personalmente, però, ritengo ci sia anche qualcosa in più da dire a proposito del generale ambiente intellettuale di Königsberg, e dell'eventuale influenza che esso esercitò su alcuni aspetti del pensiero di Kant; bisogna, in altri termini, favorire un accostamento al problema che non muova soltanto da una prospettiva psicologica, ma utilizzi anche quella della sociologia della conoscenza. Questo non significa ovviamente che la filosofia di Kant possa venire, in tal modo, « spiegata »; significa soltanto che un'indagine di questo tipo può fornire qualche chiarimento per quanto riguarda alcuni caratteri più o meno generali di quella filosofia, relativi a certi momenti della sua evoluzione.

Ovviamente, le generali condizioni politiche e religiose della Prussia esercitarono senza dubbio un forte influsso sul pensiero politico e religioso di Kant, ed anche questo aspetto richiederebbe uno studio approfondito (3). Ciò che in questo contesto desidero tuttavia prendere in considerazione, è la situazione intellettuale a Königsberg negli anni che videro i primi sviluppi della filosofia kantiana, muovendo da un esame preliminare di quei presupposti storici che sono indispensabili per comprendere una tale situazione. Königsberg e in particolare la sua università, l'Albertina, costituirono infatti lo scenario di alcune aspre lotte tra fazioni filosofico-religiose, che non possono non aver lasciato traccia sulla iniziale prospettiva filosofica di Kant, formatasi in quell'ambiente. I fatti in questione non sono stati ritenuti significativi dai biografi di Kant, Vorländer incluso: essi non hanno afferrato la loro importanza, né hanno favorito la loro comprensione; l'ispirazione a carattere prevalentemente agiografico dei loro lavori ha inoltre impedito loro di andare a fondo di certe intricate e controverse questioni, o ha fatto sì che essi non vi annettessero alcuna importanza in relazione a Kant." (pp. 149-150)

(1) G. Lehmann, *Kant's Lebenskrise*, in « Neue deutsche Hefte », 1954, p. 510 sgg. (Rist. in G. Lehmann, *Beiträge zur*

Geschichte und Interpretation der Philosophie Kants, Berlin, 1969).

[N.B. Gli argomenti trattati in questo saggio sono stati ripresi ed approfonditi da Marco Sgarbi, *Logica e metafisica nel Kant precritico. L'ambiente intellettuale di Königsberg e la formazione della filosofia kantiana*, Bern: Peter Lang, 2010.

Riassunto del volume a cura dell'autore:

"Nel suo pionieristico lavoro *Conditions in Königsberg and the Making of Kant's Philosophy* (1975), Giorgio Tonelli lamentava l'assenza di un'indagine approfondita sull'ambiente intellettuale di Königsberg e dell'eventuale influenza che esso esercitò su alcuni aspetti del pensiero di Kant, al di là di lavori biografici di evidente carattere agiografico che hanno spesso impedito agli studiosi di andare a fondo di controverse questioni dalle quali la filosofia kantiana avrebbe tratto origine. La presente ricerca mira a colmare questa lacuna esaminando la situazione intellettuale di Königsberg negli anni che videro emergere i primi tentativi filosofici kantiani, partendo dall'assunto che Königsberg con la sua università costituirono lo scenario privilegiato di riferimento dal quale Kant di fatto attinse fondamentali idee e problemi. In particolare l'attenzione è posta sulla tradizione aristotelica, sulla *Schulphilosophie*, e sulla corrente dell'elettismo, le quali dominarono l'ambiente regionmontano sino all'avvento della filosofia critica kantiana.

La metodologia seguita è quella elaborata da Norbert Hinske della *Begriffsgeschichte* e della *Quellengeschichte* come anche quella dell'*intellectual history* e della storia dei problemi. Il lavoro è fondato su documenti nuovi, originali, inediti o ritrovati, come i *Vorlesungsverzeichnisse 1703-1719*, le *Einladungsschriften*, e i manuali aristotelico-scolastici adottati ufficialmente all'Albertina.

Nell'introduzione si cerca di giustificare l'importanza di un lavoro sull'impatto dell'ambiente intellettuale regionmontano sul Kant precritico rispetto soprattutto ai risultati già ottenuti dalla ricerca, mentre nel primo capitolo è esaminata la storia della cattedra di logica e metafisica a Königsberg dagli inizi del XVIII

secolo sino a Kant. Il secondo capitolo tratta il problema della logica delle facoltà in Kant rispetto alla tradizione aristotelica di Königsberg, in particolare in relazione alle discipline della noologia e della gnostologia. Il terzo e il quarto capitolo esaminano i primi interessi kantiani per la metafisica e il passaggio dall'ontologia alla logica alla luce della tradizione della *Schulphilosophie* di Königsberg. Il quinto e il sesto capitolo trattano delle prime riflessioni logico-metodologiche di Kant con particolare riferimento alla tradizione metodologica regiomontana e ai problemi legati alla sillogistica e all'ars combinatoria.

Il risultato del lavoro mostra come dai fallimenti dei progetti logici e metafisici precritici legati alle influenze ricevute dall'ambiente intellettuale di Königsberg, Kant abbia tratto le idee e gli spunti per la stesura della *Kritik der reinen Vernunft*." (p. 11)]

5. ———. 1987. "La ricomparsa della terminologia dell'aristotelismo tedesco durante la genesi della *Critica della ragion pura*." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento, 171-180*. Napoli: Prismi Editrice.

Traduzione di *Das Wiederaufleben der deutsch-aristotelischen Terminologie bei Kant während der Entstehung der 'Kritik der reinen Vernunft'*, in « Archiv für Begriffsgeschichte », IX, 1964, pp. 233-242.

"In questa relazione presenterò alcuni risultati cui sono pervenuto nell'ambito delle mie ricerche sulla genesi della *Critica della ragion pura*. Poiché tali ricerche non sono ancora concluse, quanto è qui esposto va considerato come provvisorio (1).

Le mie ricerche si riferiscono agli anni tra il 1769 e il 1781, cioè al periodo che intercorre tra la 'gran luce' del 1769 e la *Critica della ragion pura*. Sono stati usati come fonti le *Reflexionen* dal *Nachlass* e gli appunti delle lezioni di quegli anni, unitamente alle opere a stampa ed alle lettere. La datazione delle *Reflexionen* proposta dall'Adickes s'è confermata finora nel complesso attendibile, anche in rapporto alle altre fonti.

In relazione a questo convegno il mio interesse è principalmente terminologico. Non è mia intenzione perciò in questa sede di esaminare il vero e proprio sviluppo del pensiero kantiano dal punto di vista della problematica (sto preparando a tal riguardo una monografia apposita); mi limiterò invece a cercar di chiarire l'origine dei nuovi termini che Kant assume in questo periodo. Per 'nuovi termini' intendo termini che Kant in precedenza non ha affatto usato, oppure usato solo occasionalmente e in maniera non sistematica (2).

Fino al 1768 Kant ha fatto uso, in metafisica e nella metodologia, della terminologia abituale nelle scuole tedesche della prima metà del Settecento. Ma già nel 1769 compaiono importanti innovazioni, senza dubbio in corrispondenza con la grande svolta nel pensiero avvenuta in quell'anno; e nel periodo successivo continuano ad apparire nuovi termini, sicché alla fine il vocabolario della *Critica della ragion pura* presenta un quadro profondamente mutato rispetto al periodo precritico.

Kant non amava introdurre propri neologismi, preferendo piuttosto accogliere spesso termini da altre lingue.

Le fonti per i nuovi termini kantiani posteriori al 1769 sono affatto eterogenee. È tuttavia possibile delimitare in certo qual modo due grandi gruppi: al primo appartengono i termini provenienti dall'*Essay* di Locke e dai *Nouveaux Essais* di Leibniz, al secondo quelli derivanti dalla tradizione dell'aristotelismo tedesco. I termini del primo gruppo s'incontrano soprattutto negli anni 1769-1770, quelli del secondo nel periodo successivo.

Ritengo causa determinante della svolta del 1769 la pubblicazione nel 1765 dei *Nouveaux Essais* leibniziani. Essi fecero indubbiamente un'impressione profonda su Kant e lo indussero, forse per la prima volta, ad uno studio accurato dell'*Essay* lockiano. Le dottrine di Locke e di Leibniz, unitamente ad alcuni saggi di Hume, diedero a Kant la possibilità di trovare una nuova soluzione ad una problematica molto complessa che già da anni lo vedeva impegnato (3)." (pp. 171-172)

"Le categorie di Kant (che peraltro non sono affatto *genera summa*) non sono certo riconducibili alle categorie aristoteliche, ma ai *Grundbegriffe* [concetti elementari] o *unauflösliche Begriffe* [concetti non risolvibili] che compaiono in Crusius, Tönnies, Tetens, Lambert e altri (14).

Probabilmente Kant ha deciso dopo il 1770-1771 di chiamare categorie i suoi concetti elementari seguendo uno spunto di Crusius, il quale in una sua lunga nota afferma che le proprie categorie hanno il medesimo significato di quelle aristoteliche, purché queste ultime vengano rettamente intese, anzitutto come illimitate quanto al numero, che può essere addirittura infinito (15). Certo Kant, a questo riguardo, ha di mira piuttosto la costruzione di una tavola delle categorie conclusa (deduzione delle categorie): quest'esigenza, che non compare in lui prima almeno del 1770-1771, deriva a sua volta indubbiamente dalla tesi che Lambert, nella sua *Architektonik* del 1771, sosteneva con grande energia, e cioè che la *Grundlehre* [Dottrina elementare] o metodologia deve contenere un elenco completo dei 'concetti elementari semplici' (*einfache Grundbegriffe*) (16). A far accogliere comunque quest'esigenza nell'*Architektonik* (che negli anni Settanta ha esercitato su Kant un influsso durevole e profondo, senz'altro ben più dell'*Organon* di Lambert, che a questo proposito è molto più noto e viene più spesso citato) può avere concorso in Kant anche il ricordo delle critiche che a partire dal Rinascimento erano state indirizzate alle categorie aristoteliche, il cui nome egli ha trasferito ai suoi concetti elementari." (pp. 173-174)

(...)

"Si può comunque affermare che la maggior parte dei termini nuovi che Kant adotta dal 1769 fino alla *Critica della ragion pura* appartengono più alla tradizione della scolastica tedesca del Seicento che alla filosofia dell'epoca immediatamente precedente Kant. Si tratta di termini che, molto in uso nel Seicento, erano stati poi trascurati dalle scuole antiaristoteliche del Settecento, oppure di termini che, noti ma non molto diffusi nel Seicento, nel secolo successivo erano pressoché caduti in

dimenticanza. L'attenzione di Kant è stata attirata su alcuni di questi termini dai suoi contemporanei, ma il fatto stesso ch'egli abbia accolto con particolare predilezione simili rimandi al linguaggio scolastico degli aristotelici, e che poi abbia attinto anche da sé nuovi termini dalla medesima fonte, ha sicuramente un significato storico che trascende il mero aspetto linguistico.

In effetti Kant, dopo il 1769, era perfettamente consapevole che le sue tesi metodologiche erano del tutto nuove e comportavano una rottura col passato. Per sottolineare la sua originalità, e per evitare nello stesso tempo confusioni tra i propri concetti e quelli dei contemporanei, Kant si è sentito costretto in molti casi ad introdurre per i suoi nuovi concetti dei termini anch'essi nuovi. Forse vocaboli o trasposizioni originali sarebbero stati la soluzione migliore, ma sarebbero potuti apparire un segno di presunzione agli occhi dei contemporanei, o almeno avrebbero potuto suscitare diffidenza e disagio. Kant ha preferito perciò richiamarsi a quell'antica e rispettabile tradizione ch'era l'aristotelismo, la cui terminologia non era certo più in voga, ma nell'ambiente accademico era pur sempre ancora comprensibile — e ciò specialmente a Königsberg, dove l'aristotelismo s'era mantenuto vivo ben dentro il Settecento (21).

In tal modo era evitato il pericolo di una confusione con le dottrine dei contemporanei ed anche i termini, pur riempiti di un contenuto interamente nuovo, non avevano un suono estraneo alle orecchie del lettore.

Nella scelta e nella formulazione del suo vocabolario Kant si è comportato in maniera completamente diversa rispetto ai filosofi dell'inizio del Settecento, che seguendo il modello wolffiano nelle loro opere in lingua tedesca avevano sostituito o tradotto i termini greci e latini con composti, all'occorrenza appositamente coniat, di origine germanica: Kant preferisce trasportare semplicemente in una forma soltanto esteriormente tedesca termini greci e latini, come usavano fare alcuni dei suoi immediati contemporanei.

È bensì vero che i concetti di Kant sono, sul piano del contenuto, molto lontani dai loro omonimi aristotelici; tuttavia in alcuni casi è possibile affermare che i riferimenti terminologici esteriori stabiliti da Kant hanno sviluppato un certo influsso intrinseco. A questo proposito abbiamo già accennato al problema della deduzione delle categorie; inoltre si può supporre, ad esempio, che l'adozione dei termini analitica e dialettica per designare due gruppi di problemi della metodologia ha provocato anche una separazione di questi problemi, che d'allora in poi, secondo il modello della *Introductio in artem inveniendi* [1742] di Darjes, dovettero essere trattati in due sezioni diverse (mentre nella *Dissertatio* [del 1770] erano apparsi ancora in connessione reciproca): ciò ha comportato indubbiamente importanti trasformazioni strutturali." (pp. 179-180)

(1) La forma espositiva comporta l'impossibilità di presentare la documentazione in tutta la sua ampiezza. Alcuni problemi sono già stati da me trattati in articoli appositi e spero di poter presto pubblicare in altra forma ulteriori ricerche.

6. ———. 1987. "Primi sviluppi della teoria del genio in Kant (1770-1779)." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 183-234. Napoli: Prismi Editrice.

Traduzione di *Kant's Early Theory of Genius (1770-1779)*, in « *Journal of the History of Philosophy* », IV, 1966, diviso in due parti, rispettivamente alle pp. 109-131 e pp. 209-224 della rivista.

Prima parte:

"L'importanza della teoria del genio nella filosofia di Kant venne riconosciuta relativamente presto nella storia della *Kantforschung*, e all'argomento sono stati dedicati diversi lavori (1). Nessuno ha tuttavia, fino ad oggi, tentato di ricostruire lo sviluppo delle idee di Kant sul genio utilizzando il materiale contenuto nel suo *Nachlass*, pubblicato da Adickes (2). Questo è appunto quanto io tenterò di fare nel presente lavoro, limitando la mia analisi agli anni a cavallo tra il 1770 e il 1779, durante i quali Kant venne svolgendo gli studi preliminari alla elaborazione della *Critica della ragion pura*.

Cercherò dapprima di definire quali fossero le idee di Kant sul genio nel suddetto arco di tempo, ed in secondo luogo tenterò di rintracciarne le origini nel retroterra culturale di Kant." (p. 183)

(...)

"Se tentiamo ora di trarre qualche conclusione circa la funzione dello spirito, possiamo dire che esiste un senso più generale del termine, in base al quale lo spirito viene definito principio vivificante dell'animo (intelletto più sensibilità) per mezzo di un'idea (concetto *a priori*, regola universale). Il termine spirito viene poi usato in due sensi più ristretti. In un primo senso lo

spirito, in quanto elemento pertinente al talento (e nella misura in cui il talento viene distinto dal genio), vivifica un oggetto mediante un'idea *precedentemente data*; in questo senso esso è vivificante e può essere, in certa misura, nuovo, dal momento che il talento è una facoltà produttiva di qualcosa di *nuovo* (o di un nuovo espediente) conformemente però a regole *conosciute* (vedi sopra parr. 3 e 4). Lo spirito non è però, in questo senso, originale. Questa prima accezione più ristretta del termine è illustrata in modo sommario e per lo più poco chiaro nel materiale in esame, e i caratteri più precisi della sua fisionomia vengono soltanto desunti, per necessità di chiarezza, da altri elementi del tipo di quelli analizzati nei parr. 3, 4 e 7.

In un secondo senso particolare, illustrato in modo assai più ampio da Kant, lo spirito, inteso non più soltanto come spirito spontaneo, ma anche come spirito *originale*, viene considerato sinonimo di genio, o un elemento di esso. Uno spirito originale di questo tipo è creatore di nuove idee. Tuttavia, nei contesti pertinenti, il significato dello spirito come elemento del genio viene per lo più generalmente circoscritto alla sua funzione vivificante, mentre l'elemento propriamente creativo viene più spesso chiamato genio (nel senso di costellazione di facoltà), e non spirito. Solo in poche *Riflessioni* lo spirito viene totalmente identificato col genio." (pp. 188-189)

rinviano le nostre citazioni. Indichiamo solo il numero del volume e la pagina per le opere pubblicate di Kant, e il numero del volume e quello della *Riflessione* per quel che riguarda il *Nachlass*. Facciamo riferimento all'ultima edizione degli scritti nella *Preussische Akademie Ausgabe*. Intendiamo utilizzare il *Nachlass* di Kant secondo gli stessi criteri definiti in G. Tonelli, *Kant, dall'estetica metafisica all'estetica psicoempirica. Studi sulla genesi del criticismo (1754-1771) e sulle sue fonti*, (Torino, 1955), Memorie della Accademia delle Scienze di Torino, Serie 3*, Tomo 3, Parte III. Vedi pp. 7-10, 192, 253-255.

Seconda parte:

"In sostanza, il genio (o spirito) rappresenta una facoltà spirituale davvero straordinaria. Esso è una forza creativa, i cui prodotti possono trovarsi nell'esperienza, e neppure dedursi razionalmente leggi universali della mente; il genio è spontaneo, è libero, è quale di cui non si può render ragione (si potrebbe dire, *spiritus fiat ubi vult*) è una facoltà che rende l'uomo capace di arrivare a certe nozioni, diversamente inattingibili, che sono analoghe alle idee di Dio, analoghe cioè alle strutture trascendentali del mondo quale dovrebbe propriamente essere. « L'uomo stesso non conosce questo spirito peculiare, e non i moti di esso in proprio potere », scrive in un passo Kant (*Rifl.* 93 XV). Altrove tuttavia egli sembra offrire qualche elemento ulteriore di chiarificazione di questa forza misteriosa contrapponendola all'arte (non geniale). L'arte (107), come già sappiamo, è come un giardino, in cui tutto è disposto metodicamente secondo regole: il genio è invece come un bosco in cui la natura libera e feconda sparge i propri doni (*Rifl.* 734 XV). Nel genio, la natura rende superflua l'arte (*Rifl.* 922, XV); il genio è fecondato dalla natura plastica (= creativa) (*Rifl.* 936, XV); lo spirito non è soggetto alla volontà dell'uomo, ma i suoi moti provengono dalla natura (*Rifl.* 831, XV). Come si è visto in precedenza (par. 4), lo spirito non è una facoltà singola, ma è l'universale vivificazione di tutte le facoltà. Nella *Rifl.* 938, XV, Kant tenta una spiegazione metafisica di questo carattere psicoempirico dello spirito: « Lo spirito, essendo rivolto all'universale, è, per così dire, *divinae particula aerae*, e

viene attinto dallo spirito universale. C'è un solo genio: è l'unità dell'anima del mondo (*die Einheit der Weltseele*) » (108).

È noto che, a partire dal 1770, il mondo costituisce per Kant un *phaenamenon* la materia del quale è data dai sensi, mentre i diversi tipi di forme e strutture intellettuali che gli ineriscono derivano dal soggetto. La « natura » tende inoltre a venir riguardata come una sorta di livello più profondo del soggetto stesso; la « natura umana » di quest'ultimo è solo un concetto empirico, contrapposto come tale ad un altro concetto empirico, quello di « mondo esterno »: all'origine tanto della natura umana che del mondo esterno sembra esserci una « natura » genericamente indifferenziata, effetto diretto della potenza creatrice di Dio. Ora, per spiegare il mondo fenomenico nella sua interezza e, a maggior ragione, per soddisfare bisogni morali trascendenti, nulla di quanto nel mondo fenomenico è suscettibile di spiegazione dal punto di vista del soggetto empirico è, di per sé, sufficiente.

I concetti empirici e le regole dell'arte hanno infatti un raggio d'azione limitato. Al di là di essi, le strutture della realtà e del dovere morale possono venir colte soltanto se il livello più profondo del soggetto (quello che rappresenta al tempo stesso l'origine del soggetto e del mondo, vale a dire l'anima del mondo) riesce ad emergere aprendosi un varco entro l'intelaiatura costituita dalle forme pure e dalle strutture intellettuali, suscitando in tal modo una nuova consapevolezza che deriva direttamente dallo spirito di Dio; è la Natura *in personam*, nella sua veste più segreta e solenne e nel suo giusto anelito verso la perfezione, che si rivela nell'uomo e viene da esso realizzata.

Questo retroterra metafisico è da raccomandare particolarmente, come esempio istruttivo, all'attenzione di coloro che sono soliti considerare Kant un pensatore di freddo raziocinio, alieno da qualsivoglia divagazione di natura trascendente." (pp. 204-205)

(...)

"In conclusione, si può osservare che quasi nessuna delle idee di Kant sul genio può definirsi originale per quel che riguarda la sua fisionomia culturale di superficie. Persino alcune divergenze di opinione che caratterizzavano il suo ambiente, come ad esempio l'ambiguità della posizione che dichiarava il genio libero dalle regole e, ciò malgrado, rispettoso di esse, o, ancora, il rapporto mai del tutto definito tra spirito e genio, vengono rispecchiate dalle corrispondenti oscillazioni del pensiero di Kant.

E tuttavia, il modo particolare in cui Kant selezionò e rimodellò alcuni di quei tratti del genio, spesso tra loro contrastanti, che avevano trovato espressione nelle teorie elaborate dai suoi contemporanei, deve essere compreso solo sulla base della sua personale evoluzione, e non può spiegarsi tramite la semplice rilevazione statistica di quelle caratteristiche che venivano prevalentemente attribuite al genio nel suo ambiente. Inoltre, la struttura sistematica che Kant diede all'insieme di questi tratti, e ad ognuno di essi singolarmente, si colloca, per la sua profondità, molto al di sopra del livello di quella che seppero elaborare i suoi contemporanei, ed è sostanzialmente originale. Non è possibile a questo punto investigare la genesi di questa selezione e di questa sistematizzazione; essa dipende in larga misura dallo sviluppo della teoria dell'idea (tanto nel campo estetico, che in quello della metodologia della metafisica) che si determinò negli anni compresi tra il 1770 e il 1780, e che verrà preso altrove in esame; dobbiamo quindi, per il momento, contentarci di esporre semplicemente i risultati cui pervenne Kant, visti sullo sfondo dell'ambiente che gli era proprio." (p. 216)

(107) Bisogna ricordare che il termine « arte » privo di attributi sta ad indicare un concetto molto ampio che comprende tanto le arti meccaniche, o mestieri, che l'aspetto tecnico dell'arte del bello.

(108) Come si è visto nella nota 36, Kant aveva fatto riferimento molti anni prima, ma in un diverso senso, ad un *Weltgeist* [spirito del mondo].

7. ——. 1987. "*Divinae particula auras*. Idee geniali, organismo e libertà. Una nota sulla *Riflessione 938* di Kant." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 237-245. Napoli: Prismi Editrice.

Traduzione di *Divinae Partícula Auras*; Genial Ideas, Organisation and Freedom: A Note on Kant's Reflection N. 938, in « *Journal of the History of Philosophy* », 1969, pp. 192-198.

"1. Nel par. 21 del mio articolo « Kant's Early Theory of Genius (1770-1779) » (1), cito dalla *Riflessione 938* di Kant, il cui testo completo è il seguente:

Lo spirito, essendo rivolto all'universale, è, per così dire, , e viene attinto dallo spirito universale. Pertanto lo spirito [in se stesso] non ha proprietà particolari, ma, a seconda dei diversi talenti e delle sensibilità [dell'uomo] cui viene attribuito, vivifica nei modi più diversi; e dato che questi sono del più vario genere, ogni spirito ha qualche cosa di peculiare. Non si deve dire: i geni [c'è, invece, un solo genio], È l'unità dell'anima del mondo (2).

Kant si riferisce a questo spirito come alla fonte tanto delle idee geniali o « originali » nella mente umana, quanto della vita organica nel mondo esterno (PSGK, parr. 22, 23).

Questa teoria deriva naturalmente dall'antica dottrina platonico-stoico-ermetica dell'Anima del Mondo, che ebbe un'enorme diffusione non soltanto nel Medioevo (Scuola di Chartres etc.), ma anche dal Rinascimento fino al diciottesimo secolo e perfino più tardi, specialmente tra filosofi stoici, cabbalisti, ermetici, pansofici e mosaici, tanto in psicologia (dove l'anima umana veniva intesa come una parte dell'anima del Mondo) che nella filosofia naturale tra gli oppositori del meccanicismo (inteso o in generale, o in relazione soltanto agli organismi viventi) (3).

Nella Germania all'inizio del diciottesimo secolo, questa dottrina era ancora sostenuta, nel campo della filosofia naturale, da Christian Thomasius (4), e da alcuni dei suoi allievi, quali Lange e Rüdiger; essa ricopriva anche un ruolo importante in generale nella teoria di Swedenborg della vita e

dell'anima, e Swedenborg era, naturalmente, molto noto a Kant (e nella Germania in genere, dove Oetinger era uno dei suoi più ferventi apostoli). Non è dunque sorprendente che Kant faccia riferimento ad una tradizione tanto diffusa, impiegandone la terminologia in un modo che non può essere considerato interamente metaforico, quantunque all'interno del sistema di Kant i concetti corrispondenti subissero molti mutamenti fondamentali, fino al momento in cui riapparvero, in una forma in verità irriconoscibile, nella *Critica del giudizio*.

Nondimeno, la formula « divinae particula aerae » non era stata frequentemente impiegata nella sterminata letteratura sull'Anima del Mondo, e può essere ai qualche interesse chiarire la sua origine (soprattutto poiché questo ci consentirà di esaminare il retroterra della dottrina kantiana dello spirito). Quando Kant inseriva del latino nel contesto tedesco delle sue *Reflexionen*, ciò avveniva o perché stava citando qualche testo latino o perché (caso assai più frequente) aveva la sensazione che la terminologia filosofica latina corrente al suo tempo si prestasse ad un miglior uso di quella tedesca. In quest'ultimo caso, Kant soleva ricombinare liberamente i vecchi termini in nuove frasi (o latine, o per metà tedesche e per metà latine).

Entrambe le ipotesi possono venire considerate per la formula in questione. Cominciando dalla seconda, è piuttosto facile ritrovare espressioni simili, quantunque non identiche, all'interno della letteratura sulla Anima del Mondo. Soprattutto nella corrente stoica di questa tradizione, era piuttosto usuale definire l'anima (intesa o specificamente come anima umana, o, in generale, come il principio della vita) una particella o ima scintilla dello spirito di Dio (5). J. C. Sturm, ad esempio, sebbene non fosse uno stoico, chiamava l'anima « efficaciae divinae quasi particula » (6), e Christian Wolff osteggiava l'opinione di alcuni filosofi antichi, e di Spinoza, secondo la quale l'anima è una « particula mentis divinae » (7)." (pp. 237-238)

(1) G. Tonelli, *Kant's Early Theory of Genius (1770-1779)*, in «Journal of the History of Philosophy», IV (1966), p. 209; l'articolo è pubblicato in due parti, pp. 109-131 e pp. 209-224.

[Ora tradotto in italiano e riportato in questo stesso volume sotto il titolo *Primi sviluppi della teoria del genio in Kant (1770-1779)*. A tale articolo si farà d'ora innanzi riferimento nel testo con la sigla PSGK. N. d.T.].

(2) « Weil der Geist aufs allgemeine geht, so ist er so zu sagen divinae particula aerae und aus dem allgemeinen Geist geschöpft. Daher hat der Geist nicht besondere Eigenschaften, sondern nach den verschiedenen Talenten und Empfindsamkeiten, worauf er fällt, belebt er verschiedentlich und, weil diese so mannigfaltig seyn, so hat jeder Geist was eigenthümliches. Man muss nicht sagen: Die genie's. Es ist die Einheit der Weltseele » (Immanuel Kant, *Gesammelte Schriften* [Berlin, Preussische Akademie der Wissenschaften, XV (1923), parte 1, p. 416]. Questa *Riflessione* è una nota sulla *Metaphysica* di Baumgarten. Secondo Adickes, venne probabilmente scritta tra il 1776 e il 1778, meno probabilmente nel 1772.

(3) Vedi la voce « World Soul » (con riferimenti bibliografici, a cura di T. Gregory e G. Tonelli), nell'ed. del 1967 della *New Catholic Encyclopedia*. Un resoconto storico ancora utile, quantunque molto parziale, di questa dottrina è dato da A. Rechenberg (*praeses*) e J.D. Güttner (*Auctor & Respondens*), *De mundi anima dissertatio* (Lipsiae, 1678). Vedi anche PSGK, nota 153.

(4) Si vedano i miei *Elementi metodologici e metafisici in Kant dal 1745 al 1768* (Torino, 1959), I, pp. 97-98. Christian Thomasius era stato influenzato, sotto questo aspetto, tanto dall'interesse di suo padre (Jakob Thomasius) per la filosofia stoica (v. sotto), quanto dalla tradizione tedesca comeniana e pansofica del diciassettesimo secolo — una tradizione collegata in vari modi con il pietismo. Christian Thomasius aveva avuto rapporti con il pietismo nel corso di un'importante fase della sua evoluzione, ed i suoi allievi erano pietisti.

(5) Lo spirito di Dio è l'Anima del Mondo e non, beninteso, lo Spirito Santo della Trinità, perlomeno per la tradizione cristiana occidentale, fatta eccezione per alcuni eretici. Indubbiamente in diversi casi (come per Sturm, v. sotto) autori

dell'Occidente cristiano usarono simili espressioni in riferimento a Dio stesso, e non all'Anima del Mondo, perché generalmente, a loro modo di vedere, l'anima umana e la vita organica sono prodotte direttamente da Dio (e non dalla Natura meccanica); questi autori, ovviamente, non credevano nell'esistenza di un'Anima del Mondo.

(6) *Physica electiva* (Norimbergae, 1697), I, p. 193: «gloriati insuper & laeta mente nobis subinde gratulati, quod qui sumus, vivimus & movemur, in ipso (Deo) vivamus, moveamur, & simus, h. e. per illam ipsam efficaciam divinae quasi particulam, quam corpori nostri fabricae specificae, & sic aliorum admirabiliter variantibus structuris singulis, applicatam... ».

(7) *Theologia naturalis* (Francofurti et Lipsiae, 1737), II, par. 708: « Corpora & animae non sunt in Deo tanquam partes in toto, nec dici possunt particulae Dei... *Schol.* Fuere inter philosophos veteres, qui animam dixere particulam mentis divinae... ».

8. ——. 1987. "Due fonti inglesi dimenticate della morale kantiana." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 249-256. Napoli: Prismi Editrice.

Traduzione di *Deux sources britanniques oubliées de la morale kantienne*, in *Mélanges A. Koyré, publiés à l'occasion de son soixante-dixième anniversaire*, Paris: Hermann 1964, vol. II, pp. 469-505.

"Parecchi studi sono stati dedicati all'esame delle dottrine morali di Kant nel loro sviluppo (1), ma il quadro generale che ne risulta presenta ancora delle lacune molto gravi: (2) Wolff, Crusius, Baumgarten, Shaftesbury, Hutcheson, Rousseau e diversi altri moralisti sono stati studiati in una maniera più o meno soddisfacente nel loro rapporto con la morale kantiana, ma restano ancora da compiere molte esplorazioni di nuove fonti e molte indagini precise sulle fonti rintracciate fino ad ora.

Intendiamo qui portare un piccolo contributo a questo compito che appare ancora immenso, richiamando alcune dottrine di due moralisti inglesi, David Fordyce e Richard Price, che hanno

avuto probabilmente un certo influsso sullo sviluppo della morale kantiana tra il 1762 e il 1775.

L'opera di Fordyce, *Elements of Moral Philosophy*, uscì a Londra nel 1754; una traduzione francese di Jancourt fu pubblicata all'Aia nel 1756 col titolo *Éléments de philosophie morale*, e una traduzione tedesca, *Anfangsgründe der Sittenlehre*, comparve a Berlino nel 1757. Quel che c'interessa in Fordyce è l'importanza da lui attribuita alla nozione d'obbligo, che acquista una struttura razionale precedente il piacere morale. Esiste in verità un « senso morale », una sorta d'« istinto » che impone delle valutazioni necessarie (3) che costituiscono l'obbligo; l'obbligo morale è per così dire « l'impronta della mano di Dio » su di noi (4) (beninteso, in quanto imposizione interiore e spontanea); si tratta perciò di una « voce distinta e ben forte della natura » (5). Ma quest'obbligo non nasce « da un semplice legame tra certe passioni » (6); d'altronde il piacere morale è posteriore all'idea di obbligo (7); la virtù, in definitiva, non è che la ragione, in quanto « percepisce la simmetria che esiste in una simile economia di facoltà e di passioni » (8)." (p. 249)

(...)

"L'opera di Fordyce c'interessa in ultima analisi soprattutto come veicolo probabile di diffusione del pensiero di [John] Balguy in Germania.

Nessuna traduzione è stata fatta, in francese o in tedesco, dell'opera di Richard Price *A Review of the Principal Questions and Difficulties in Morals* [Esame delle questioni e difficoltà principali in morale] (London, 1758), ma il suo rapporto con certe dottrine di Kant è così stretto ch'è indispensabile studiarla in relazione al filosofo di Königsberg (21). Si può affermare che Kant abbia conosciuto direttamente l'opera di Price? Le analogie che vedremo lo lasciano sospettare. È vero che il problema di sapere se Kant era capace di leggere, sia pure con difficoltà, la letteratura filosofica in inglese, non è stato ancora risolto; ma anche nel caso si neghi questa possibilità è un fatto ben noto che tra i suoi migliori amici Kant contava dei commercianti scozzesi residenti a Königsberg, persone molto

colte con cui intratteneva dei rapporti intellettuali su un piano molto elevato (22). Per esempio uno di questi amici, J. Green, era stato incaricato da Kant, in occasione di un viaggio a Stoccolma, di fare una specie di intervista a Swedenborg: quest'ultimo eccitava in quel momento la curiosità di Kant, che pubblicherà ben presto i *Träume eines Geistersehers* [Sogni di un visionario] (usciti nel 1765) (23). Si può dunque concludere che nell'epoca che ci interessa esisteva una sorta di collaborazione intellettuale tra Kant e almeno un amico scozzese, che avrebbe potuto assai facilmente tradurgli o riassumergli le novità letterarie inglesi.

La posizione di Richard Price in morale deriva certamente in parte da quella di Balguy; ma Price aggiunge altri elementi di grande interesse.

Il fattore razionalista è indubbiamente importante in lui, ma se l'intelletto è la fonte delle idee del giusto e dell'ingiusto (24), a differenza di S. Clarke e dei moralisti della perfezione, la percezione di queste idee è da lui considerata immediata e indipendente da ogni ragionamento (25)" (p. 251)

(25) p. 59: « Il giusto e l'ingiusto denotano idee semplici e devono essere perciò attribuiti ad una facoltà di percezione immediata dell'intelletto umano ».

9. ——. 1987. "L'etica kantiana parte della metafisica: una possibile ispirazione newtoniana? Con alcune osservazioni su «I sogni di un visionario» " In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 259-282. Napoli: Prismi Editrice.

Traduzione di *Kant's Ethics as a part of Metaphysics: a possible newtonian Suggestion? with Some Comments on Kant's « Dream of a Seer »*, in « Philosophy and the Civilizing Arts. Essays Presented to Herbert W. Schneider », ed. by C. Walton and J. P. Anton, Athens: Ohio University Press, 1974, pp. 236-263.

"Uno degli aspetti più notevoli del sistema filosofico kantiano è rappresentato dal fatto che l'etica viene in esso classificata come parte della metafisica, come si vede dai titoli di due tra le opere più importanti di Kant, la *Fondazione della metafisica dei costumi* e la *Metafisica dei costumi*. È davvero un peccato che nessun commentatore abbia mai, per quanto almeno mi risulta, sottolineato l'importanza di questo fatto e dei problemi ad esso sottesi; il fatto è stato dato per scontato, il problema ignorato. È tempo dunque di richiamare l'attenzione su di esso.

Si tratta in realtà di uno dei mutamenti più radicali apportati da Kant alla struttura della filosofia nel suo complesso; prima di lui, per quanto io ne sappia, non si era sentito mai parlare di una subordinazione dell'etica alla metafisica. La metafisica era stata subordinata all'etica da Spinoza, probabilmente sotto l'influsso dei tardi sviluppi dello stoicismo, ma il tentativo opposto non era mai stato compiuto.

Questo non significa ovviamente che prima di Kant l'etica non fosse mai stata *fondata* sulla metafisica; al contrario, questa fondazione dell'etica rappresentava senza dubbio una delle posizioni più comunemente adottate. Malgrado ciò però, l'etica era stata sempre considerata una scienza indipendente, e non una parte della metafisica.

Non si deve d'altro canto pensare che per Kant considerare l'etica parte della metafisica equivalga ad ammettere una maggiore dipendenza dell'etica dalla metafisica stessa: l'etica diviene, al contrario, totalmente e sistematicamente indipendente dalla metafisica *strictu sensu*; ma, come vedremo, diviene parte della metafisica in quanto si trasforma appunto in fondazione di essa: è questo che rappresenta dunque la vera novità.

L'espressione « metafisica dei costumi » (*Metaphysik der Sitten*) compare, per quanto mi risulta, per la prima volta nella lettera di Kant a Herder del 9 maggio 1768, in cui Kant afferma di stare lavorando ad una metafisica dei costumi che dovrebbe esser finita entro l'anno. Ma in una lettera a Lambert del 31 dicembre 1765, Kant aveva già preannunziato un lavoro sui « fondamenti metafisici della filosofia pratica ». L'espressione «

metafisica dei costumi » viene ripetuta nella lettera di Kant a Lambert del 2 settembre 1770 (1), in cui il nostro autore dichiara di essere al momento occupato nella stesura di un trattato (che non venne mai pubblicato) su quell'argomento, senza fornire però ulteriori indicazioni in proposito.

Nella *Logik Blomberg* (1771) e nella *Logik Philippi* (1772), la filosofia morale non è ricondotta sotto il titolo generale di metafisica (2). Nella *Metaphysik L1* (1775-1780), la metafisica e la filosofia morale vengono chiamate le due scienze filosofiche pure (3), e nelle *Lezioni di etica* del 1780-1781, la filosofia viene suddivisa in filosofia teoretica e filosofia pratica (4), ma non viene fatta alcuna menzione di una metafisica dei costumi. Nelle sue lezioni Kant adotta spesso posizioni più conservatrici di quelle espresse nella sua corrispondenza privata, nelle sue osservazioni personali o nei lavori dati alle stampe.

In una lettera a Herz, scritta verso la fine del 1773, Kant annuncia un piano dettagliato del proprio lavoro: egli ha in mente di scrivere un trattato di « filosofia trascendentale », che costituirebbe una *Critica della ragion pura*, e intende in seguito pubblicare una *Metafisica*, che verrebbe suddivisa in una *Metafisica della natura* e in una *Metafisica dei costumi*. Quest'ultima parte sarebbe la prima a vedere la luce (5).

Verso la fine degli anni '70, nelle sue lezioni sull'*Enciclopedia filosofica* (1777-1780) (6), Kant espone la sua nuova concezione dell'etica anche in classe. La filosofia pratica dovrà suddividersi, a suo parere, in: 1) *filosofia pratica trascendentale*, che tratta dell'uso della libertà in generale; 2) *filosofia razionale pratica*, ovvero *Metafisica dei costumi*, che tratta del buon uso della libertà; 3) *antropologia pratica* (7). Non è necessario, in questa sede, prendere in esame il punto 3), dal momento che esso chiaramente non fa parte della filosofia pura (8). Quanto al punto 1), esso è facilmente identificabile con quella sezione, o aspetto, della *Critica della ragion pura* che tratta dei fondamenti trascendentali della moralità (9). Per conseguenza, il punto 2) corrisponde propriamente alla *Metafisica dei costumi*.

È noto che nella sezione della *Critica della ragion pura* dedicata all'*Architettonica* la metafisica è suddivisa in *metafisica della natura* e *metafisica dei costumi*. Kant sentì tuttavia il bisogno di aggiungere qualche parola di spiegazione ad una denominazione tanto inconsueta:

La metafisica della ragione speculativa, è ciò che si vuol dire in *sensu stretto* metafisica; ma in quanto la morale pura appartiene a un ramo a parte della conoscenza umana e filosofica derivante dalla ragion pura, noi le vogliamo mantenere quella denominazione (10).

Nei Prolegomeni (1783), tuttavia, metafisica e morale vengono menzionate separatamente (11). In una *Riflessione* datata da Adickes agli anni 1783-1784, la metafisica viene però suddivisa nuovamente in metafisica della natura e metafisica dei costumi (12). Nella *Metaphysik Volckmann* (1784-1785), Kant tratta ampiamente di questa distinzione (13).

Nel 1785, la pubblicazione della *Fondazione della metafisica dei costumi* conferisce un definitivo carattere di ufficialità a questa denominazione, riferendosi con questo titolo ad una scienza che appartiene alla filosofia pura nella misura in cui questa è circoscritta a determinati oggetti dell'intelletto (14). Viene inoltre riconosciuta la necessità di una speciale *Critica della ragion pura pratica* (15).

La questione è dunque, d'ora in avanti, definita. Negli anni successivi, solo dopo il 1790 la morale verrà nuovamente distinta dalla metafisica, allorché si tratterà di procedere alla suddivisione in parti di un certo concetto della filosofia in generale, chiamato « cosmo-politico » [weltbürgerlich], che sembra fosse sconosciuto in precedenza, e che non pare sostituirsi, ma piuttosto affiancarsi al vecchio concetto e alla vecchia suddivisione (16). L'unificazione ormai consolidata ricompare infatti nel titolo della *Metafisica dei costumi*, pubblicata nel 1797." (pp. 259-261)

(1) I. Kant, *Gesammelte Schriften*, Akademie-Ausgabe (Berlin und Leipzig), X (2ed.), pp. 74, 56 e 97. Il prof. Norbert Hinske ha richiamato la mia attenzione sulla lettera del 1768, e su di

un'altra lettera di Hamann a Herder, datata 16 febbraio 1767, in cui Hamann dichiara: « Kant sta lavorando ad una metafisica della morale » (J. G. Hamann, *Briefwechsel*, Wiesbaden, 1956, voi. II, p. 390); in un'altra lettera a Herder, del 28 agosto 1768, Hamann scrive: « La metafisica della morale di Kant mi tiene in attesa » (*ibid.*, p. 421).

(2) *Op. cit.*, XXIV, 1, 1, pp. 31, 314.

(3) *Op. cit.*, XXVIII, 5, 1, p. 173.

(5) Kant, *Ges. Schr.*, X, p. 145.

(6) Per l'esatta datazione, si veda la mia recensione dell'edizione delle lezioni in «Filosofia», XIII, (1962), pp. 511-514.

(7) I. Kant, *Vorlesungen über Enzyklopädie und Logik*, Bd. 1, *Vorlesungen über Philosophische Enzyklopädie* (Berlin, 1961), p. 38. (Quest'edizione delle lezioni di Kant, benché pubblicata dall'Accademia di Berlino, non fa parte delle *Gesammelte Schriften*. La pubblicazione di quest'edizione è cessata dopo il vol. I). Ciò nonostante, a p. 67, morale e metafisica sembrano venir distinte.

(8) Vedi *ibid.*, p. 68.

(9) È noto che Kant riconobbe la necessità di scrivere una *Critica della ragion pratica* solo dopo il 1781. Fino almeno al 1785, Kant riteneva che dovesse essere la *Critica della ragion pura* ad occuparsi della fondazione trascendentale tanto della metafisica della natura che della metafisica dei costumi.

(10) B. 870. Cito dalla *Kritik der reinen Vernunft* seguendo la paginatura della seconda edizione (B) dell'opera (cfr. I. Kant, *Ges. Schr.*, voi. III, Berlin und Leipzig, 1911). Verranno indicati gli eventuali punti in cui la seconda edizione (1787) si differenzia dalla prima (1781). [Per la trad. it. dei passi kantiani citati, rinviamo a I. Kant, *Crítica della ragion pura*, trad. it. di

G. Gentile e G. Lombardo Radice, ed. riveduta e con glossario a cura di V. Mathieu, Bari, 1972. Nel caso presente, la citazione rinvia al voi. II, p. 636. N.d.T.].

(11) Kant, *Ges. Schr.*, IV, p. 363, par. 60 [cfr. I. Kant, *Prolegomeni ad ogni futura metafisica*, trad. it. di P. Carabellese, ed. riveduta a cura di R. Assunto, Bari, 1979, pp. 132-133. N.d.T.].

(12) *Op. cit.*, XVIII, pp. 284-285 (Riflessione 5644).

(13) *Op. cit.*, XXVIII, 5, 1, p. 364. A p. 362 viene presentata una sorta di giustificazione per la presenza della metafisica nell'ambito dell'etica; tale giustificazione non può tuttavia servire ai nostri scopi, giacché in base ad essa risulterebbe che la metafisica è presente in tutte le scienze razionali, compresa la matematica (p. 363).

(14) *Op. cit.*, IV, p. 388. [Cfr. I. Kant, *Fondazione della metafisica dei costumi*, trad. it. a cura di P. Chiodi in I. Kant, *Scritti morali*, Torino, 1970, p. 44. N.d.T.] Kant aggiunge: « Sorge così l'idea di una duplice metafisica, della natura e dei costumi » (trad. it., *op. cit.*, *ibid.*). Difficilmente però quanto precede può considerarsi una chiara dimostrazione di questa conclusione.

(15) *Loc. cit.*, p. 391 [I. Kant, *Fondazione della metafisica dei costumi*, *op. cit.*, trad. it., p. 47].

(16) Nella *Metaphysik L 2* del 1790-1791 (Kant, *op. cit.*, XXVIII, 5, 2, 1, pp. 532-533) si ha la prima comparsa — databile con sicurezza — di questa dottrina. La stessa idea di una filosofia « cosmo-politica » si ritrova nella *Wiener Logik* del 1794-1796 (*op. cit.*, XXIV, 1, 2, pp. 798-799), ma non c'è, in questo caso, alcuna suddivisione. Questo fatto mi fa pensare che quella sezione della *Logik Jäsche* che espone la medesima dottrina e presenta la medesima partizione (*op. cit.*, IX, pp. 24-25 [trad. it. parziale in I. Kant, *Che cosa significa orientarsi nel pensare*, trad. e introduzione di M. Giorgiantonio, Lanciano, 1930 (1975, 2* ed.), pp. 91-93. N.d.T.], derivi dal *Kollegheft* del 1790, che venne usato da Jäsche, assieme ad un altro *Kollegheft* del 1782, per stendere il suo testo.

10. ——. 1987. "La *Critica della ragion pura* di Kant nel contesto della tradizione della logica moderna." In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 285-291. Napoli: Prismi Editrice.

Traduzione di *Kant's Critique of Pure Reason Within the Tradition of Modern Logic*, in « Akten des 4. Internationalen Kant-Kongresses. Mainz, 6-10 April 1974 », G. Funke, J. Kopper (Hrsg.). Kant-Studien 65, 1975, Sonderheft.

"È evidentemente impossibile comprendere un testo correttamente, se non è chiaro ciò di cui esso parla. Se si pensa a quanto lavoro è stato sinora dedicato all'analisi della *Critica della ragion pura* di Kant, potrà dunque sembrare strano che non si sia ancora giunti a stabilire quale sia in definitiva l'argomento di quest'opera. Secondo una prima e più antica interpretazione, che risale all'inizio del XIX secolo e viene tuttora accettata nei paesi di lingua inglese, la *Critica* sarebbe un trattato di teoria della conoscenza. Secondo un'interpretazione che risale agli anni venti del nostro secolo, e deriva da Nicolai Hartmann, Max Wundt e Heinz Heimsoeth, la *Critica* sarebbe invece un trattato di metafisica. Secondo il mio punto di vista, l'argomento della *Critica della ragion pura* non può propriamente definirsi in termini di teoria della conoscenza (gnoseologia, epistemologia), e definirlo in termini di metafisica può essere corretto, ma soltanto in parte: in effetti la *Critica* è, a mio giudizio, un trattato tanto di logica che di metafisica." (p. 285)

(...)

"La *Critica* è in realtà un'opera di metodologia e, più esattamente, di metodologia della metafisica. È stato fatto notare che l'affermazione kantiana secondo cui « essa è un trattato del metodo » compare in effetti solo nella Prefazione alla seconda edizione (1787). Per coloro tuttavia che hanno una qualche familiarità con la terminologia del XVII e del XVIII secolo, quest'idea è già chiaramente rinvenibile in più d'un passo della prima edizione dell'opera, laddove Kant paragona la *Critica* alla « via regia » o alla « strada maestra » della metafisica [*Weg* (via), *Königlicher Weg*, (via regia),

Heeresstrasse, Heeres-Weg (strada militare, via strategica), talvolta *Fussteig* (sentiero, cammino pedonale)]: i termini « via », « strada », « strada maestra », etc. venivano tradizionalmente ed inequivocabilmente riferiti al « metodo », per evidenti ragioni etimologiche. E lo studio del metodo faceva parte della logica.

Un'attenta lettura della Critica rivela che quest'opera costituisce una di quelle « logiche speciali » proprie delle scienze particolari che Kant contrappone, come metodologie, alla « logica generale ». Queste « logiche speciali » sono ascritte alle scienze in questione come loro parti integranti: ma nondimeno esse costituiscono le logiche speciali (o metodologie) di quelle scienze. Che Kant non chiarisse meglio questo punto può spiegarsi, da una parte, col fatto che poteva sembrargli di averlo già sufficientemente chiarito per coloro che erano in grado di comprendere il linguaggio filosofico del tempo; e, dall'altra, col fatto che egli era solito preoccuparsi ben poco di spiegare ciò che a lui sembrava essere tanto evidente. Una testimonianza decisiva in tal senso è offerta tuttavia dalla *Riflessione* 5644 (Akademie-Ausgabe XVIII, pp. 285-286), datata da Adickes agli anni 1784-1785, in cui si legge: « La filosofia trascendentale precede la metafisica, la quale, come la logica, non si occupa di oggetti, ma della possibilità, del contenuto e dei limiti di ogni conoscenza della ragion pura. Essa è la logica della conoscenza razionale pura [...]. La critica è quella che indaga la possibilità dell'oggetto della metafisica ». La datazione ed il carattere di questa affermazione trovano conferma in un passo di un corso di metafisica tenuto da Kant nel 1784-1785, la cosiddetta *Metaphysik Volkmann*, dove Kant dettò in classe, nella sezione introduttiva del corso: « La filosofia trascendentale è, in rapporto alla metafisica, ciò che la logica è in rapporto alla filosofia nel suo insieme. In relazione all'uso puro della ragione, sarà necessaria una logica speciale, che è chiamata filosofia trascendentale; in essa non si prende in considerazione alcun oggetto, ma piuttosto la nostra stessa ragione, così come avviene nella logica generale. La filosofia trascendentale potrebbe chiamarsi anche logica trascendentale ». Si dovrebbe osservare come, in questo passo, la filosofia

trascendentale (o ontologia) venga identificata con la critica: è noto che Kant le identificò negli anni '90, ma in realtà questa identificazione aveva avuto luogo assai prima — ricorrendo, in effetti, anche in qualche *Riflessione* anteriore al 1781.

Aggiungerò che le due affermazioni sopra citate non sono in alcun modo affermazioni isolate: esse sono soltanto quelle in cui l'argomento in esame è formulato nel modo più chiaro." (pp. 287-288)

11. ——. 1987. "Cos'è la storia della filosofia?" In *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, 295-309. Napoli: Prismi Editrice.

Traduzione di *Qu'est-ce que l'histoire de la Philosophie?*, in « *Revue philosophique de la France et de l'étranger* », CLII, 1962, pp. 289-306.

"Quel settore fondamentale della storia della filosofia che ha per oggetto lo studio monografico di un testo particolare sembra non tener debito conto, in generale, di alcune premesse metodologiche essenziali per la posizione dei problemi storici che ogni studioso in possesso della *forma mentis* dello storico dovrebbe porsi.

È nostro intento qui esporre in modo molto succinto alcune prospettive fondamentali che dovrebbero guidare ogni analisi in questo settore. Ci limitiamo qui — vogliamo sottolinearlo — a descrivere le categorie principali di uno solo dei numerosi punti d'approccio complementari (o livelli di lavoro) seguendo i quali si potrebbe organizzare una ricerca storica di questo tipo." (p. 295)

(...)

(Abbiamo rilevato l'utilità e l'urgenza di elaborare una storia dell'evoluzione dello spirito consequenziale nel pensiero filosofico. Allo stesso modo bisognerebbe porsi più chiaramente il problema dell'evoluzione dello spirito letterario, dello spirito sistematico e dello spirito di comunicazione e probatorio nel pensiero filosofico. Nei filosofi i mutamenti della forma letteraria, di quella sistematica e della forma di comunicazione e di prova sono strettamente legati ai mutamenti dottrinali,

cosicché non si può immaginare una storia della filosofia scientificamente concepita che non tenga conto di questi fattori. Sarebbe dunque importante elaborare delle storie speciali in cui questi elementi siano specificamente studiati in un modo più adeguato, il che permetterebbe d'avere a propria disposizione delle prospettive generali a partire dalle quali lo studio specifico dei testi verrebbe reso più facile." (p. 308)

12. ——. 1995. "Organo, canone, disciplina, dottrina in Kant (1765-1780)." *Studi Kantiani* no. 8:11-30.

"Quando Kant cerca di spiegare che cosa vuol essere la sua *Critica della ragion pura*, egli di solito usa due coppie di termini opposti, «canone» opposto a «organo» e «disciplina» a «dottrina»: la *Critica* è un canone, non un organo; è una disciplina, non una dottrina.

Lo scopo principale di questo lavoro è di chiarire il significato di questi termini per Kant, nel suo sviluppo fino alla prima edizione della *Critica della ragion pura* nel 1781.

Agli inizi degli anni Sessanta, Kant definisce ancora la logica come uno «strumento» (1) e, di essa, ha una concezione tradizionale. Nell'Annuncio dei suoi corsi, pubblicato nel 1765, Kant distingue due tipi di logica. Il primo è una critica ed una prescrizione (*Vorschrift*) del senso comune (*gesunden Verstandes*), come una introduzione alla scienza (*logica naturalis*, nella terminologia delle scuole). Il secondo è una critica ed una prescrizione per la scienza vera e propria (*logica artificialis*), di cui costituisce l'organo, al fine di rendere regolare il procedimento (*Verfahren*) della scienza e di comprendere la natura della disciplina, unitamente ai mezzi usati per il suo sviluppo. L'esposizione della metafisica sarà seguita da alcune considerazioni sul metodo particolare di questa scienza, come suo organo. Questo dovrà seguire e non precedere l'esposizione della metafisica in un corso di filosofia, perché sarebbe impossibile spiegare questo organo se prima non sono stati offerti esempi della sua applicazione. Altrimenti Kant, in questo corso, esporrà soltanto il primo tipo di logica (2). I termini «disciplina» e «dottrina» vengono usati come sinonimi di «scienza» (3).

In una lettera a Mendelssohn dell'8 aprile 1766, Kant scrive che egli considera la metafisica come una disciplina (*disciplin*) molto importante, ma che trova necessario toglierle le sue dogmatiche vesti, trattando le sue sedicenti dottrine in maniera scettica. Questo procedimento negativo è una preparazione per un progresso positivo in questa scienza. Un senso comune incorrotto ed ingenuo ha bisogno di un organo; ma le false dottrine di un talento pervertito (come sono quelle della metafisica) richiedono un catartico (4). Egli pensa di aver sviluppato importanti vedute volte a fissare il metodo (*Verfahren*) di questa disciplina della metafisica, vedute che sono non soltanto prospettive (*Aussichten*) generali, ma che possono essere usate praticamente (*in der Anwendung*) come modelli adeguati di valutazione (*Richtmaas*) delle dottrine metafisiche (5).

Il significato di queste prese di posizione è chiaro per coloro che hanno familiarità con la terminologia filosofica del Settecento. Affrontare lo studio del metodo scientifico, appartiene in linea di principio alla scienza della logica, che include la metodologia. I precetti metodologici, che possono essere messi in pratica, appartengono a quella sezione della logica che si chiama «logica pratica», una sezione che viene spesso identificata con la metodologia, sicché Kant qui sottolinea semplicemente il fatto che i precetti che ha in mente costituiscono una metodologia genuina per il semplice fatto che possono essere messi in pratica. Inoltre questa metodologia non sarà un «organo», uno strumento di invenzione, volto all'acquisto di una conoscenza positiva, ma un modello di verità mirante a purificare la metafisica (come un catartico) dalle sue dottrine erronee. Essa quindi ha una funzione negativa, preliminare alla elaborazione di una metafisica genuina. In altri termini, essa è principalmente un criterio di valutazione, o, come vedremo in seguito, un «canone».

In realtà, per alcuni anni Kant sarà indeciso nel giudicare quale sia il modo migliore per classificare questa metodologia. Come tale, essa appartiene alla logica, e sarà alla fine definita come logica. Ma, nella misura in cui è una metodologia speciale per la metafisica, può anche essere considerata come appartenente

alla metafisica in quanto preparazione ad essa. Questa definizione della logica come parte della metafisica può anche essere giustificata con il significato attribuito alla metafisica da Condillac e da d'Alembert, che la identificavano con lo studio delle facoltà conoscitive della mente umana, o con la metodologia (6)."

(1) *Logik Herder*, 1762-1764, *AK.-Auszg.* XXIV.1, p. 3.

(2) *AK.-Auszg.*, II, pp. 310-311.

(3) *AK.-Auszg.*, II, pp. 307-310, 312. «Disciplina» è già stata usata col significato di «scienza» nel 1762 (pp. 280-281), e ritornerà con lo stesso significato nel 1768 e nel 1770 (pp. 377, 410). «Dottrina» è già stata usata come «scienza» nel 1755 (I, p. 416). Vedi anche la *Riflessione* 1575 (XVI, p. 15, 1766-1769?) e la *Riflessione* 1579 (XVI, p. 19, 1. 1-2, 1760-1770?). Una distinzione tra una «dottrina», una «disciplina» ed una «scienza» è introdotta nella *Metaphysik Herder* (1762-1764), XXVIII. 1, p. 156, ma non viene data nessuna spiegazione su di essa. Un'altra distinzione tra 1° critica, 2° disciplina come dottrina o istruzione (*Unterweisung*) e 3° scienza è presente nella *Riflessione* 626 (XV, pp. 271-272), ma la datazione di questa *Riflessione* è molto incerta (1762-1772?). La logica come organo è menzionata nella *Riflessione* 1567 (XVI, p. 7). Nella *Riflessione* 1579 (XVI, p. 18, 1. 28 - p. 19, 1. 4), la logica del senso comune (= logica naturale) viene definita come una critica, mentre la logica come scienza (= logica artificiale) è una dottrina. La prima è un catartico del senso comune, come la grammatica, la seconda è un organo. Ulteriori aggiunte alla stessa *Riflessione*, che contengono una distinzione tra dottrina e disciplina, hanno una datazione molto incerta. Esse suggeriscono che la logica intesa come disciplina è una critica, intesa come dottrina è un organo.

(4) La nozione psicologica platonica e aristotelica di catartico sembra che sia stata poco usata nella filosofia del diciassettesimo e diciottesimo secolo. Vedi anche il mio articolo '*Critique' and Related Terms Prior to Kant: A Historical Survey*, in «Kant-Studien», LXIX, 2, 1978, § 2. Kant talvolta

usava l'ortografia «catharcticon», che io trascriverò con «catharticon».

(5) *AK.-Auszg.*, X, pp. 70-71.

(6) Vedi il mio articolo *The Problem of the Classification of the Sciences in Kant's Time*, in «Rivista critica di storia della filosofia», XXX, 3, 1975.

Giorgio Tonelli (1928-1978): Bibliographie des écrits sur Kant e la Philosophie du XVIIIe Siècle

Bibliographie

1. Tonelli, Giorgio. 1956. "Zabarella inspirateur de Baumgarten ou l'origine de la connexion entre esthétique et logique." *Revue d'Esthétique*:182-192.

Traduction italienne dans: G. Tonelli, *Da Leibniz a Kant. Studi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 139-146.

2. ———. 1959. "La nécessité des lois de la nature au XVIIIe siècle et chez Kant en 1762." *Revue d'histoire des sciences et de leurs applications* no. 12:225-241.

"Il n'est pas besoin de souligner l'importance de la question des lois du mouvement aux XVIIe et XVIIIe siècles. Il ne manque d'ailleurs pas d'exposés détaillés des théories diverses qui se sont suivies, à savoir des différentes lois et « mesures » élaborées par Galilée, Descartes, Huygens, Leibniz, etc. (1). Mais ce qui manque c'est une recherche particulière sur un caractère spécial de ces différentes lois: le degré de nécessité qui leur était attribué. Cette question acquiert une importance particulière dans l'étude de la philosophie kantienne, car, on le verra, on rencontre chez Kant, dans la période précritique, un revirement soudain à propos de ce problème, revirement qui ne peut être compris en ignorant les précédents historiques de ce dernier.

Nous nous proposons donc d'ébaucher ici rapidement les positions des principaux philosophes du XVIIe siècle sur ce

point, et de décrire avec plus d'exactitude l'état de la question au XVIIIe siècle, en particulier dans le cas de l'Allemagne.

Les termes du problème (que nous énonçons maintenant dans la formulation qu'ils ont eue dans les écoles allemandes du XVIIe siècle) sont les suivants: quel est le degré de nécessité qu'il faut attribuer aux lois du mouvement, lois qui s'identifient d'ailleurs avec les lois générales de la nature (2) ? Tout le monde était d'accord sur le fait que ces lois étaient nécessaires par rapport à la nature: en fait, des lois contingentes ne sont pas des lois, car rien ne garantirait alors l'uniformité des opérations de la nature, ou, plus exactement, il n'y aurait pas d'uniformité de ces opérations, donc il n'y aurait pas de lois et, à proprement parler, il n'y aurait même pas de nature : le monde ne serait qu'un miracle perpétuel.

Ces lois doivent donc être nécessaires par rapport à la nature; si Dieu veut les interrompre, il s'agit d'une intervention extraordinaire, à savoir d'un miracle." (p. 225)

(1) Le meilleur exposé est peut-être encore celui qu'on rencontre chez J. K. Fischer, *Geschichte der Physik....* (8 vol., 1801-1808), surtout t. II, pp. 316 sq. ; t. IV, pp. 88 sq.

(2) Voir par exemple, J. M. Verdries, *Conspectus philosophiae naturalis*, Gissae, 1720, pp. 8-9 : « Leges naturae sunt rationes resistantiae et motus, quibus corpora se invicem afficiunt, et quas constanter, necessitate naturae, pro essentiali dispositione et inseparabilibus proprietatibus observant. »

3. ———. 1959. "La question des bornes de l'entendement humain au XVIIIe siècle et la genèse du criticisme kantien, particulièrement par rapport au problème de l'infini." *Revue de Métaphysique et de Morale* no. 65:396-427.

Traduction italienne dans: G. Tonelli, *Da Leibniz a Kant. Studi sul pensiero del Settecento*, Napoli: Prismi, 1987, pp. 45-78.

"Hume et Kant n'ont pas été les premiers à proclamer la nécessité d'admettre que l'esprit humain ne peut pas tout connaître, et d'imposer le respect de ses bornes: voilà ce qu'on oublie trop souvent, lorsqu'on tâche de reconstruire les origines de la philosophie kantienne. C'est bien pour cela que nous nous

proposons d'ébaucher ici un tableau très sommaire de la question au temps de la formation philosophique de Kant. Si nous devons traiter à fond le thème que nous affrontons, nous nous trouverions en présence d'une tâche énorme, dont l'exécution dépasserait largement ce qui est nécessaire à une compréhension meilleure de la personnalité de Kant. En fait, il s'agirait d'abord de n'écrire rien moins que l'histoire du scepticisme, sur laquelle plusieurs ouvrages ont d'ailleurs été publiés (*); mais ceci ne serait que le commencement, car il est évident que de nombreux penseurs, qu'on ne peut d'aucune façon considérer comme des sceptiques, ont reconnu que la capacité humaine de connaître n'est pas illimitée. Il faudrait enfin parler de tous ces mystiques, qui ne tendaient à affaiblir ou à nier la valeur de la connaissance rationnelle que pour faire place à la foi ou à l'illumination intérieure. Ce que nous proposons de faire ici n'est donc que de décrire l'état de la question dans ses aspects les plus généraux au cours de la première moitié du XVIIIe siècle ; ce qui nous force à nous occuper d'abord rapidement de ceux, parmi les grands penseurs du XVIIe siècle, qui exerçaient encore une influence importante au siècle suivant. Nous renonçons donc à étudier certains pyrrhoniens très typiques du XVIIe siècle, tels que La Mothe Le Vayer, Huet, Glanville, etc. dont l'importance ne dépasse pas les bornes de leur époque. La question que nous allons traiter a naturellement plusieurs aspects différents: en fait, on peut chercher à établir l'extension des connaissances possibles dans les directions les plus divergentes, et on peut concevoir les bornes de ces connaissances d'une façon très variée. Nous nous limiterons pourtant à diviser notre thème en deux parties principales : dans la première, nous nous occuperons du problème des bornes en général ; dans la deuxième, nous exposerons plus particulièrement la question spéciale des bornes de l'esprit humain par rapport à l'infini, question qui absorbait à l'époque la plus grande partie des discussions consacrées à notre thème. Nous négligerons donc consciemment plusieurs aspects plus particuliers de la question, tels que le doute des cartésiens quant à la validité de la connaissance sensible, et les crises des notions de substance et de force; ces dernières étaient parmi les problèmes qu'on

reconnaissait, au XVIIIe siècle, être les plus difficiles à résoudre pour l'homme (2). En particulier, les newtoniens modérés reconnaissaient que la force d'attraction était quelque chose de mystérieux et d'inexplicable du point de vue de la philosophie mécanique (3). De même, en théodicée, les adversaires du téléologisme déclaraient qu'il était impossible de pénétrer les desseins de la sagesse divine, et qu'il valait mieux expliquer les phénomènes au moyen des causes efficientes (4); pour ne pas mentionner les incertitudes en ce qui concerne le problème de la liberté. Nous éviterons, de même, de discuter certaines formes d'idéalisme qui présupposent, plutôt que des bornes de l'esprit humain, le fait qu'on ne peut rien connaître du monde sensible, car, en vérité, il n'y a pas de monde sensible." (pp. 396-397)

(...)

"La polémique sur les bornes des connaissances acquit en Allemagne une importance particulière du fait qu'elle devînt un des grands thèmes des disputes entre wolffiens et antiwolffiens. L'origine culturelle de l'opposition contre Wolff était sans doute théologique; mais la querelle se transposa aussitôt en métaphysique, en gardant peu de traces apparentes de son origine religieuse. Il faut d'ailleurs reconnaître que les limitations des connaissances demandées par les antiwolffiens n'eurent comme effet direct que la renonciation à discuter certains mystères religieux; pour le reste, il y avait peu de domaines où les antiwolffiens fussent résignés à l' « ignoramus »; en vérité, ils n'étaient pas beaucoup plus prudents que leurs adversaires. Cependant, l'affirmation des bornes de l'entendement entraîna une série de conséquences vis-à-vis des principes ontologiques et de la conception méthodologique de la connaissance, qui exercèrent les influences les plus remarquables sur la formation philosophique de Kant. Kant lui-même ne venait à s'intéresser que peu à peu au problème des bornes de l'entendement; évidemment il avait absorbé celui-ci parmi les autres éléments de sa polémique antiwolffienne; mais la mise en termes initiale qu'il donne au problème est plutôt éclectique, pour ainsi dire cosmopolite, plutôt que typiquement antiwolffienne. Pour la suite, son attitude ne change pas: il

continue à s'approprier soit des éléments tirés de l'antiwolffisme allemand, soit des éléments plus ou moins analogues aux premiers, qui lui étaient offerts par l'Angleterre et par la France. Ce n'est que plus tard que, surtout sous l'influence de Locke et de Hume, le thème des bornes acquiert chez Kant l'importance centrale qu'on lui connaît, et que ce thème n'avait eu jusqu'alors que chez les empiristes anglais; mais il ne faut jamais oublier les polémiques locales de l'Allemagne du XVIIIe siècle, qui ont éveillé chez Kant un intérêt pour un monde différent, et des sympathies pour ce qu'il trouvait dans ce monde d'analogie à ces polémiques; cela devait contribuer si puissamment à former sa personnalité philosophique, en pleine réaction contre le dogmatisme et le rationalisme wolffiens." (pp. 426-427)

"Il semble que ce secteur fondamentale l'histoire de la philosophie, qui a pour objet *l'étude monographique d'un texte en particulier* ne tient pas assez compte, en général, de certaines prémisses méthodologiques essentielles à la position des problèmes historiques que tout chercheur doué de *la forma mentis* de l'historien devrait se poser.

Nous nous proposons d'exposer ici d'une façon très succincte quelques perspectives fondamentales qui devraient diriger toute analyse en ce domaine. On ne vise ici, nous tenons à le faire remarquer, qu'à décrire les catégories principales d'un seul parmi les nombreux points d'approche complémentaires (ou niveaux de travail), suivant lesquels on pourrait organiser une recherche historique de ce genre." "La période que nous allons étudier est d'habitude définie comme l'« âge des Lumières » (*Aufklärung*), mais nous tâcherons d'employer ce terme aussi peu que possible: il donne lieu à trop de controverses. L'*Aufklärung*, quand commence-t-elle? Avec Thomasius, avec Wolff, ou plus tard? Et quand finit-elle? Est-ce que Kant en marque le couronnement ou la fin? Et comment séparer nettement l'*Aufklärung* de certaines tendances qui, tout en s'opposant manifestement à elle, appartiennent quand même à l'esprit du temps et la pénètrent parfois profondément?

Il ne nous reste qu'à nous réfugier dans des critères chronologiques: nous nous occuperons d'abord de la philosophie thomasienne-piétiste (jusqu'en 1725-1730), ensuite du wolffisme (jusqu'en 1750-1755), enfin de la philosophie populaire, avec sa floraison d'intérêts nouveaux, et de la néologie (jusqu'à 1780), sans pourtant négliger les groupes d'opposition, ou les isolés de marque. Nous ne pourrons toutefois étudier le *Sturm und Drang* (1770-1780), car son

épanouissement, aussi violent qu'éphémère, ne trouve son sens et ne pénètre en profondeur qu'à l'époque suivante; de même, il nous faudra négliger, complètement ou en partie, des personnalités remarquables, telles que Platner, Lichtenberg, Jacobi, Herder, Pestalozzi, qui ne donneront que plus tard le meilleur de leur œuvre." (p. 728)

"La période précritique de Kant.

Si Immanuel Kant était mort avant 1781, nous ne devrions consacrer ici que quelques lignes à son œuvre philosophique. Mais sa grandeur future demande un examen sommaire des ouvrages de sa période précritique, indispensable pour comprendre la formation du criticisme.

Fils d'un artisan, Kant ne put continuer ses études que grâce à des bourses gagnées par ses mérites, et par des sacrifices assez durs. Issu d'une famille piétiste, Kant fut éduqué au lycée Fridericianum, imbu de l'esprit piétiste. Cela a suggéré aux historiens beaucoup de spéculations sur des composantes « piétistes » de la pensée kantienne; en fait, on n'en trouve trace ni dans sa morale, ni dans sa philosophie de la religion; nous verrons plus loin ce que cela peut signifier.

Il est essentiel de se rendre compte de l'état de l'université de Königsberg à cette époque. Les piétistes étaient parvenus à dominer les universités de l'Allemagne protestante autour de 1710; mais les aristotéliens avaient résisté à Königsberg, à Wittenberg et à Rostock. À Königsberg, piétistes et wolffiens représentaient une sorte d'opposition extra-universitaire: ce n'est qu'en réunissant leurs forces, et avec l'aide de Frédéric-Guillaume Ier, qu'ils purent s'emparer, en 1725, du pouvoir académique. Mais leur alliance fut éphémère. Les piétistes avaient à peine gagné la partie qu'ils se retournèrent contre leurs alliés wolffiens: aucun wolffien orthodoxe ne fut toléré dans l'université, aucun wolffien, même modéré, ne reut jamais un poste de titulaire. Toutefois le roi, voulant maintenir la paix entre les deux partis, encore menacés par les vieux aristotéliens, envoya à Königsberg le théologien Fr. Alb. Schultz, piétiste qui avait reçu une formation wolffienne: nommé d'abord directeur du Fridericianum, Schultz devint, en

1732, recteur de l'université, qu'il domina presque sans interruption jusqu'à sa mort. Mais ses sympathies pour les wolffiens étaient en fait assez tièdes: il les toléra sans les aider.

Donc la situation de l'université de Königsberg pendant les études de Kant, et par la suite, est assez claire: elle était dominée par des piétistes, qui avaient abandonné la philosophie thomasienne piétiste au cours de leur alliance avec les wolffiens; le wolffisme orthodoxe était officiellement condamné; des wolffiens non orthodoxes, tel M. Knutzen, n'étaient que tolérés. L'influence de Knutzen sur Kant, d'ailleurs, a été exagérée; elle a laissé bien peu de traces; Knutzen lui-même n'était certainement qu'un philosophe médiocre.

Le milieu de Königsberg suggérait donc surtout un éclectisme antiwolffien indéterminé, nécessairement ouvert à la possibilité d'influences nouvelles: et voilà, autour de 1745, l'épanouissement de l'Académie de Berlin, avec son newtonianisme, et l'affirmation de la philosophie de Crusius, l'antidote par excellence contre le wolffisme. C'est de Maupertuis et de Crusius que Kant va se nourrir dès ses débuts: son « wolffisme » de jeunesse est un mythe qu'il est temps de détruire. Et son « piétisme » se réduit au fond à ses sympathies pour la philosophie crusienne, dernière expression importante de l'école de Thomasius.

Kant s'intéressa d'abord à des problèmes de philosophie naturelle, mais son approche révèle des intérêts métaphysiques très prononcés. Son livre *Sur la véritable estimation des forces vives* (1747) est l'une des premières démarches pour introduire l'attractionnisme newtonien en Allemagne, et la première tentative de lui donner une fondation métaphysique d'origine leibnizienne. L'esprit antiwolffien de cet ouvrage n'est que trop clair: les éléments leibniziens qu'il contient étaient assez largement acceptés à l'époque, et n'étaient nullement une marque de wolffianisme. Il en sera de même des autres éléments « wolffiens » que nous trouverons chez Kant.

L' Histoire naturelle et théorie générale de l'univers de 1755, avec les travaux mineurs publiés dans le même temps, sont

surtout un plaidoyer pour la conception mécanique de l'univers matériel, à la suite de Maupertuis, et contre cette physicothéologie que Wolff avait dû accepter. L'attractionnisme est accentué davantage; mais il est accompagné d'une cosmogonie qui reste fidèle au mécanisme cartésien, que Newton n'aurait jamais acceptée.

La *Nova Dilucidatio* (1755), dissertation peu originale, révèle une influence crusienne très remarquable. Dans sa *Monadologia physica* (1756), Kant adopte des positions assez analogues à celles de Boscovich: une fois de plus, c'est une conciliation entre Newton et Leibniz. Dans ses *Considérations sur l'optimisme* (1759) Kant défend — en éclectique — une position wolffienne, acceptée d'ailleurs par plusieurs non-wolffiens, et qu'il abandonnera bientôt.

Dans sa *Démonstration de l'existence de Dieu* (1762), Kant nous donne pour la première fois une contribution assez intéressante à l'ontologie, contribution qui ne restera pas sans suite dans son développement ultérieur. Nous ne voulons que mentionner une thèse capitale de cet ouvrage : la nécessité absolue des lois du mouvement. C'est, au fond, du spinozisme: mais Bernoulli et d'Alembert avaient soutenu la même position.

Kant a montré jusqu'ici un intérêt particulier pour la métaphysique ou pour la philosophie naturelle. L'année 1762 marque un tournant capital: l'ouvrage sur les *Fondements de la théologie naturelle et de la morale* est surtout méthodologique; et l'influence de Crusius est plus forte que jamais.

Les *Observations sur le sentiment du beau et du sublime* (1764) et le *Programme* (1765) vont encore plus loin: Kant, en dépit de toute méfiance souvent exprimée contre elle, est bien proche de la « philosophie populaire »: descriptions anthropologiques, démonstrations in concreto; c'est par ce moyen qu'il espère réformer la métaphysique traditionnelle. C'est un programme déclaré, d'ailleurs, depuis 1762: mais les moyens méthodologiques de la réforme sont maintenant plus à la page; la rupture avec la forme d'esprit dominante est définitive. De plus, l'influence des Anglais et de Rousseau

deviennent capitales: elle sera désormais à la base de la morale et de l'esthétique de Kant.

Voilà l'esprit qui dicte, en 1766, les *Rêves d'un voyant*, dirigés contre Swedenborg aussi bien que contre Wolff: les rêves d'un voyant (Swedenborg) ne valent guère plus que les rêves d'un métaphysicien (Wolff): c'est la crise de la notion de causalité, et de la métaphysique classique en général.

L'article sur les *Régions de l'espace*, de 1768, ne doit pas nous tromper: c'est une autre application, bien qu'éphémère, de la méthode *in concreto*.

La *Dissertatio* de 1770 (avec les *Réflexions* qui la précèdent et qui la suivent) marquera la fin de cet état d'esprit, tout en étant sa conséquence: mais nous voilà au seuil de la philosophie « critique ». Kant revient aux spéculations abstraites, mais elles seront dictées en grande partie par les expériences des années précédentes." (pp. 772-775)

Repris dans *La pensée philosophique de Maupertuis. Son milieu et ses sources* (1987), pp. 8-16.

"Maupertuis est, d'abord, un philosophe de la nature: nous voulons donc commencer par l'examen de sa conception métaphysique de ce monde extérieur, a l'étude duquel il a consacré la plus grande partie de sa vie. Cela nous réserve quelques surprises: ce naturaliste est, en fait, un ultraphénoméniste. La réduction des qualités primaires aux qualités secondaires est complète. La dureté, l'étendue, n'appartiennent pas aux objets pas plus que l'odeur, le son et le goût. L'étendue n'a que la prérogative d'être perue par deux sens différents, le toucher et la vue; prérogative illusoire: "L'étendue, comme ces autres, n'est qu'une perception de mon âme transportée à un objet extérieur, sans qu'il y ait dans

l'objet rien qui puisse rassembler à ce que mon âme apperoit". D'ailleurs, les idées de la durée et de l'étendue ne sont pas "plus distinctes" que celles des autres qualités, et elles sont perdues de la même faon; elles n'ont donc pas plus de "réalité" que celles-ci: dans le monde extérieur, tous les "objets ne sont que de simples phénomènes" (1). Maupertuis se réfère explicitement à Berkeley sur ce point. En admettant cela, on "anéantit toute distinction qu'on voudroit faire entre deux manières d'exister, l'une dans l'esprit, l'autre au dehors" (2). Mais procédons par degrés, et considérons d'abord que "des êtres inconnus excitent dans notre âme tous les sentiments, toutes les perceptions qu'elle éprouve; & sans ressembler à aucune des choses que nous appercevons, nous les représentent toutes" (3). Les objets extérieurs nous sont donc complètement inconnus en eux-mêmes; pourtant, il y a peut-être des objets extérieurs. Lesquels? On peut supposer tout au plus que "Le choc de quelques corps peut bien en être la cause ou l'occasion [des sentiments]" (qu'on remarque l'expression "occasion"); mais le choc est un mouvement: et "comment une perception rassembleroit-elle à un mouvement?" (4)." (pp. 8-9)

"Au moment de sa mort (28. 4. 1978) Giorgio Tonelli ne travaillait plus depuis quatre ans au volume sur Maupertuis. Cela ne signifiait pas qu'il avait abandonné définitivement l'espoir de le terminer ou qu'il ne s'intéressait plus au sujet. Au contraire il revenait souvent à l'idée d'écrire une histoire du scepticisme au XVIIIème siècle. Il en avait du reste donné d'avance deux chapitres sous forme d'articles consacrés à P.-J. Changeux (1974) et à D'Alembert (1976).

Il avait été attiré par Maupertuis une dizaine d'années auparavant, à l'occasion d'une réimpression anastatique — due à ses soins — des œuvres dans l'édition de Lyon 1768 (G. Olms Verlag, Hildesheim— New York, 4 tomes, 1964—1975). Il avait songé d'abord à écrire une introduction philosophique comme celle qu'il avait rédigée pour *Die philosophischen Hauptwerke* de Ch. A. Crusius; mais son texte finit par prendre les dimensions d'un volume. Il décida alors de se borner pour l'Introduction du premier tome des œuvres à une histoire du texte et à une bibliographie, en se réservant d'achever son ouvrage sur la pensée philosophique de Maupertuis en des temps meilleurs. Ces temps meilleurs n'arrivèrent jamais. Il fit lui-même publier seulement quelques dizaines de pages de son manuscrit sous forme d'articles: *Maupertuis et la critique de la métaphysique*, dans *Actes de la journée Maupertuis — Créteil* 1. XII. 1973 (Paris, Vrin, 1975, pp. 79—90); *Themiseul de Saint Hyacinthe. A smiling sceptic* et *The scepticism of Francois Quesnay*, dans "International Studies in Philosophy", 1978 (X), pp. 163-166 et 1979 (XI), pp. 77-89 respectivement (le dernier en partie remanié et augmenté par rapport à l'état du manuscrit que nous publions).

Le volume que nous présentons maintenant au public n'est pas terminé. Il manque au dernier chapitre la conclusion, qui, d'après une note manuscrite, aurait dû traiter des réflexions de Maupertuis sur l'innéisme. Un autre chapitre, qui aurait dû

traiter des polémiques de Maupertuis avec Wolff et son école, manque complètement. Le reste était prêt, avec son apparat de notes complet, mis à jour pour l'année 1970 à peu près.

L'auteur avait fait dactylographier la première partie, qui correspond aux chapitres 1—8; la deuxième partie, plus étendue, est restée manuscrite et je l'ai dactylographiée moi-même. Je prends sur moi toute la responsabilité des erreurs et malentendus éventuels. Une mise à jour bibliographique serait tombée tout à fait mal à propos, à cause, entre autre, de la manière très personnelle de travailler de Giorgio Tonelli.

Je remercie Madame Grazia Olivieri Tonelli, qui, en me confiant le manuscrit, a bien voulu honorer une amitié de plus de trente ans, née entre Giorgio et moi dès les années de l'université; je remercie Pierre Quillet, vieil ami de Giorgio, qui a bien voulu relire les épreuves; et je remercie aussi l'éditeur Georg Olms, qui a accueilli le volume dans une collection que Giorgio Tonelli avait fondée et dirigée pendant plusieurs années." (Préface de Claudio Cesa, p. 1)

"En 1752 Maupertuis recueillait pour la première fois une partie de ses ouvrages dans un volume intitulé œuvres. En 1753 paraissaient ses œuvres en deux volumes, et en 1756 en quatre volumes. Cette édition était réimprimée en 1768, après la mort de l'auteur. Maupertuis mourut de la tuberculose à l'âge de 60 ans et dix mois, en 1759; en 1756 sa santé était précaire, telle qu'elle l'avait été depuis longtemps, mais rien ne nous fait penser qu'il considérât sa fin comme imminente. Ses intérêts philosophiques étaient encore bien vivants: en 1756 il avait écrit un Mémoire sur la preuve de l'existence de Dieu (qui parut en 1758, et qui ne fut donc inclus ni dans l'édition des œuvres de 1756, ni dans sa réimpression de 1768); encore en 1756, il avait fait annoncer par l'Académie de Berlin un concours pour l'année 1758, dont le thème était philosophique. Notre auteur avait sans doute l'intention de développer dans d'autres ouvrages ses idées philosophiques, biologiques, etc., et il aurait réuni par la suite ces ouvrages dans des éditions ultérieurement élargies des œuvres, y incluant le Mémoire de 1756. La mort l'en a empêché. Nous devons donc considérer l'édition de 1756

(avec l'addition du Mémoire de 1756) comme définitive, par rapport à l'état de la pensée de Maupertuis à la fin de sa vie.

Cette édition n'est certainement pas complète. Elle représente surtout le tableau que Maupertuis, en ce moment là, voulait donner de son œuvre: un tableau décidément influencé par des événements qui avaient modifié assez profondément son attitude dans une direction bien facile à établir.

Ayant débuté comme "géomètre", Maupertuis fut nommé en 1746 président de l'Académie des Sciences et Belles Lettres de Berlin, la seule qui eut, en ce temps-là, une classe de philosophie. Cette classe avait été établie au cours de la réorganisation de l'Académie, voulue par Frédéric II de concert avec Maupertuis, qui entre 1740 et 1746 séjourna fréquemment à Berlin.

Maupertuis se trouva donc à la tête d'une Académie particulièrement "philosophique" - soit qu'il ait désiré lui-même de lui donner ce caractère, soit qu'il ait cédé au désir du monarque. Le président d'une telle Académie devait donc être un philosophe lui-même. Maupertuis se trouva dès lors obligé de développer ses talents philosophiques. A cela il faut ajouter le fait que, se trouvant alors dans un pays, l'Allemagne, profondément consacré à la philosophie spéculative, surtout wolffienne, notre auteur dut élargir le domaine de sa mission intellectuelle en élaborant des doctrines d'une importance plus générale, dans le but d'éclairer une nation qui, de son point de vue, était encore plongée dans une sorte de barbarie métaphysique.

Nous ne devons donc pas nous étonner si, dans ses œuvres, Maupertuis renonça à réimprimer quelques travaux purement scientifiques qui, tout en étant bien importants, auraient alourdi le recueil, et dilué sa signification "philosophique". Ce n'est pas que Maupertuis ait renié son illustre passé de savant, qui est d'ailleurs assez représenté dans les œuvres: mais son but est surtout de donner une image de lui-même qui soit conforme à sa fonction de président de l'Académie de Berlin.

Eh bien, en dépit de ce que ses contemporains — et surtout Voltaire — en ont dit, Maupertuis, en tant que philosophe, a une valeur incontestable: soit par rapport à l'Age des Lumières en France, soit — et surtout - par rapport à son influence en Allemagne. Entre autres choses, il exera sur la période précritique de Kant une influence qui, à notre avis n'a pas été assez remarquée.

Sa personnalité philosophique, si contestée, ne manque point de traits saillants: nous en étudierons plusieurs par la suite. Pour l'instant, nous insisterons sur un élément qui nous paraît fondamental. Maupertuis philosophe a été surtout accusé d'ambigüités, d'incertitudes, bref, d'un développement trop dynamique, et trop désordonné, pour être cohérent. Mais nous ne sommes pas de cet avis. Au contraire, nous croyons, et nous nous efforcerons de démontrer, que sa pensée, en général, présente des caractères systématiques constants, qui dominant tout a fait sur une évolution qui, tout en étant incontestable, ne représente qu'un facteur secondaire. L'illusion d'un Maupertuis philosophe "incohérent" dépend surtout, à notre avis, de sa personnalité de savant; celle-ci impose à ses doctrines philosophiques une méthodologie qui donne lieu à des malentendus. En fait, Maupertuis échelonne une hiérarchie d'hypothèses qu'il ne faut pas hypostasier en tant que doctrines métaphysiques arrêtées. ' Il part dans une certaine direction possible (tout en tenant compte des autres possibilités), en épuisé les développements, et se replie souvent, par un processus familier aux savants, sur un autre direction qui lui paraît promettre des meilleurs résultats. Tout en ne-reniant-pas la possibilité abstraite des directions écartées, aussitôt qu'il s'est rendu compte qu'elles ne sont que des culs-de sac, ou qu'elles ne sont pas suffisamment établies, il poursuit une voie différente. Il ne s'agit donc pas tellement de revirements et de révisions, il s'agit plutôt de l'esprit méthodologique d'un homme de science, qui croit de son devoir d'explorer à fond les voies différentes, avant de se décider à en poursuivre une. Voilà, croyons — nous le secret des "repentirs" de sa pensée, qui au fond n'en sont pas. D'après un plan assez précisément arrêté, probablement à partir du début, il développe des thèses

différentes, pour parvenir à la fin à des conclusions qui, tout en n'étant que probables, constituent pourtant un système harmonique qui mérite une place d'honneur dans son époque.

Mais parfois Maupertuis ne croit pas pouvoir se décider entre plusieurs alternatives hypothétiques: en ce cas il poursuit l'une ou l'autre, d'après ce que les circonstances lui suggèrent; souvent, il en poursuit plusieurs en même temps. Les contrastes qui en résultent ne sont en général qu'apparents: comme chacune des alternatives n'est qu'une conjecture, il est parfaitement licite de développer des conjectures inconciliables entre elles, pour en déceler les implications, dans le but d'en évaluer la probabilité relative. Ceci est, encore une fois, un processus qui est familier aux savants.

Par dessus le marché, nous nous rendrons bientôt compte du fait que Maupertuis, en tant que philosophe, est un "sceptique académique" parfait; et la stratégie philosophique que nous venons de décrire est bien typique de l'école sceptique.

Il serait bien difficile de décider si le scepticisme de Maupertuis n'est qu'une conséquence de son esprit scientifique, ou si les deux se sont développés ensemble. Du point de vue de la chronologie des œuvres, Maupertuis philosophe est sans doute postérieur à Maupertuis savant. Mais il nous reste à considérer l'influence des philosophes sceptiques de l'époque sur la formation de la méthodologie scientifique maupertuisienne: notre auteur connaissait sans doute l'œuvre de Bayle, et nous verrons que les doctrines de Quesnay présentent des analogies profondes et frappantes avec celles de Maupertuis. Il se peut donc que l'origine de l'esprit de la philosophie maupertuisienne soit pour le moins autant philosophique que scientifique. Malheureusement, nous n'avons aucun élément qui nous permette d'établir l'époque, et la portée, de ces influences. Par dessus le marché, le fait que Maupertuis ait connu — à quelque époque que ce soit — l'œuvre de Quesnay n'est qu'une conjecture très probable.

A la rigueur, dans une perspective historique plus vaste, ce problème devient si compliqué, qu'il serait absurde de vouloir le résoudre d'une façon tranchante. Au cours des dernières

décennies on s'est de plus en plus rendu compte du fait que l'école sceptique, dès le début du XVII^e siècle, a contribué puissamment à la naissance de l'esprit scientifique "moderne", et qu'en même temps les succès tangibles remportés dans les sciences naturelles par ceux qui étaient animés par cette formation ont joué un rôle important dans l'affermissement ultérieur de la philosophie sceptique. Nous sommes donc en présence d'un phénomène d'interaction, si non d'identification, de deux méthodes, l'une philosophique, l'autre scientifique: il sera probablement impossible d'évaluer exactement la contribution respective des deux facteurs à l'évolution des idées en question, prises dans leur ensemble. Cette incertitude ne fait que compliquer ultérieurement le problème par rapport à Maupertuis: et il n'est pas raisonnable de se poser des problèmes que l'on doit considérer comme insolubles. Nous voulons nous consacrer ici, nous le répétons, à l'étude de la pensée-philosophique de Maupertuis, si intéressante et si négligée. Maupertuis savant a été largement étudié dans la monographie classique de Brunet, et les recherches successives ont ajouté bien peu au tableau qu'il en a donné sauf pour ce qui concerne les études de Guérout sur les lois du mouvement, et de Roger pour la biologie. Nous ne sommes d'ailleurs pas compétents pour approfondir ces problèmes. Mais Brunet s'est contenté de traiter d'une façon sommaire, parfois bien superficielle et naïve, la pensée philosophique de son auteur: et Guérout et Roger n'ont approfondi que des problèmes particuliers. Notre contribution sera donc centrée sur cet aspect de la pensée maupertuisienne." (*Introduction*, pp. 3-5)

Giorgio Tonelli (1928-1978): Bibliographie der Schriften von Kant und die Philosophie des XVIII. Jahrhunderts

Bibliographie

1. Tonelli, Giorgio. 1957. "Von den verschiedenen Bedeutungen des Wortes *Zweckmäßigkeit* in der *Kritik der Urteilskraft*." *Kant-Studien* no. 49:154-166.

"Vorwort. Der Begriff „Zweckmäßigkeit“ ist bekanntlich unter den wichtigsten, aber auch den schwersten der *Kritik der Urteilskraft* (1), da seine verschiedenen speziellen Bedeutungen im Laufe des Vortrages nicht beständig gehalten werden. Verschiedene Versuche sind in der Vergangenheit gemacht worden, um ihren Gebrauch zu einem kohärenten allgemeinen Schema zurückzuführen. Aber auch der letzte und ernstere, der Versuch Marc-Wogaus (2), gerät aus der Abstraktheit seiner historischen Einstellung in manche Ungereimtheiten und Dunkelheiten. Es ist von uns schon anderswo dargestellt worden (3), wie der Text der *Kritik der Urteilskraft* eine schwierige und kontrastreiche Entstehung gehabt habe, wie die verschiedenen Änderungen des allgemeinen Entwurfes im Laufe der Redaktion es zeigen —; Änderungen, deren tiefe Spuren in der Terminologie und in der eigentlichen Struktur des Werkes geblieben sind. Es ist also ein nicht nur unhistorischer, sondern auch nutzloser Versuch, eine künstliche Zusammenstimmung zu schaffen, wo wir es mit Lehren, die in verschiedenen Zeiten und unter verschiedenen Standpunkten entstanden sind, zu tun haben; Die einzige

annehmbare Weise, die Frage anzugehen, ist eine Geschichte der Entwicklung der verschiedenen Begriffe und der Termini, in denen sie ausgedrückt werden, zu entwerfen, wobei das Hauptproblem nicht die Zusammenstimmung, sondern die Entwicklung ist.

Wir werden diesen Versuch für den Terminus Zweckmäßigkeit unternehmen, und zwar mit Beschränkung auf die rein terminologische Fragestellung. Anderswo hoffen wir eine historische Interpretation dieser philologisch bestimmten data anbieten zu können (4).

Die Reihenfolge der Redaktion der verschiedenen Teile der Kritik der Urteilskraft ist, wie wir früher dargelegt haben (5), die folgende gewesen: 1) Analytik des Schönen; 2) Deduktion der reinen ästhetischen Urteile; 3) Dialektik der ästhetischen Urteilskraft; 4) Erste Einleitung; 5) Analytik des Erhabenen; 6) Kritik der teleologischen Urteilskraft; 7) [Zweite] Einleitung und Vorrede. Wir werden also in unserer Analyse dieser Ordnung folgen." (ss. 154-155)

(..)

"IX. Schlußwort. Versuchen wir jetzt, die entstandenen Schemata kurz zu vergleichen, um besser die einzelnen Änderungen zu bemerken. Im I. und II. Schema findet man die subjektive, formale Zweckmäßigkeit ohne Zweck nur im Sinne der Schönheit; im III. Schema erscheint neu die Zweckmäßigkeit der empirischen Naturgesetze, formale, logische Zweckmäßigkeit genannt, während die Naturschönheit zur realen, absoluten Zweckmäßigkeit zu gehören scheint. Im IV., V. und VI. Schema ist die Schönheit subjektive, formale Zweckmäßigkeit-, als solche wird, sie im V. mit der Zweckmäßigkeit der empirischen Gesetze zusammengelegt, nur wird sie im VI. als innere Zweckmäßigkeit von der äußeren des neuentstandenen Erhabenen unterschieden; und beide werden als a priori im betreffenden Urteile von der anderen subjektiven Zweckmäßigkeit, der Annehmlichkeit, unterschieden. Die letztere ist gegenüber der ersteren als nicht bloß formal im VII. Schema bestimmt, das übrigens mit dem VI. übereinstimmt, von der beigefügten Benennung

„ästhetische Zweckmäßigkeit“ und von der Auslassung der Termini innere und äußere zur Unterscheidung von Schönheit und Erhabenheit abgesehen. Das Erhabene wird in den Schemata VIII und IX noch nicht berücksichtigt, wo die Schönheit als subjektive Zweckmäßigkeit sich noch mit der Zweckmäßigkeit der empirischen Gesetze zusammenfindet.

Die objektive Zweckmäßigkeit (auch „Materie des nexus finalis“) ist im I. Schema etwas ziemlich Unbestimmtes. Tatsächlich vermag ihre Dichotomie als Nützlichkeit und Vollkommenheit solche Termini nicht völlig klarzumachen. Nur aus den Zusammenhängen, die uns Kant in seiner Schrift über den Gebrauch ... darbietet, können wir annehmen, daß Vollkommenheit dort schon mit dem Organismus zu tun hatte; der Text aber erwähnt nur die Produkte der menschlichen Kunst (in der anhängenden Schönheit), und früher, in der Analytik des Schönen, war der Terminus Vollkommenheit nur auf die moralische Güte eines Gegenstandes bezogen. Auch das Wort Nützlichkeit wird nicht klar entweder auf das menschliche Tun und Lassen oder möglicherweise auf eine äußere Naturzweckmäßigkeit bezogen. Das Schema II nennt entschieden solche Zweckmäßigkeit material, aber nur die anhängende Schönheit betreffend. Im III. Schema scheint der Organismus mit der Naturschönheit als reale, absolute Zweckmäßigkeit zusammengestellt zu werden, und real wird er auch im V. genannt. Vom IV. Schema ab betrifft die objektive Zweckmäßigkeit grundsätzlich den Organismus, aber im VI. und VIII. wird sie als innere bzw. Vollkommenheit von der äußeren bzw. Nützlichkeit (im VI. relativ genannt) unterschieden. Im VIII. Schema wird sie als material von der empirischen der menschlichen Kunst wie von dem neuen Begriff der intellektuellen bloß formalen Zweckmäßigkeit der geometrischen Figuren unterschieden. In dem IV. und IX. Schema kommt sie als Zweckmäßigkeit der Form eines Gegenstandes vor, und material wird sie in den Schemata [I], II und VIII genannt. Im VIII. und IX. Schema erscheint die Moralität als eine besondere Art Zweckmäßigkeit bzw. als innere Bestimmung des Menschen.

Wenn wir nun unsere Ergebnisse mit den A- und B-Schemata, die von Marc-Wogau (S. 71 des zitierten Buches) angegeben werden, vergleichen, so -erhell, daß beide aus einer artifiziiellen Verallgemeinerung entstanden sind, die keiner wirklichen Stufe des Kantischen Denkens entspricht. (Man konnte vielleicht das Schema B als eine unpräzise Vereinfachung unseres VI. Schemas betrachten.) Was das Schema A betrifft, ist zu bemerken, 1. daß die Zweckmäßigkeit der geometrischen Figuren vor allem ob-jektiv ist, als der subjektiven Zweckmäßigkeit entgegengesetzt; 2. daß die Annehmlichkeit vor allem subjektiv oder ästhetisch ist, als der objektiven Zweckmäßigkeit entgegengesetzt; 3. daß das moralisch Gute als absichtlich, bzw. als innere Bestimmung des Menschen gar keine objek-tive, reale Zweckmäßigkeit ist, da es nicht, auch nicht hypothetisch, em-pirisch verifizierbar ist; daß das relativ Gute, nämlich das Nützliche des menschlichen Wirkens, nicht praktisch, sondern bloß technisch ist

Trotzdem können einige der von Marc-Wogau klargestellten Unter-scheidungen als eine nützliche Vervollständigung unserer Ergebnisse be-trachtet werden. Schließlich wollen wir noch einmal empfehlen, keine willkürlichen allgemeinen Schemata zu bilden, sondern jede Stelle aus dem näheren Zusammenhang zu interpretieren. Künstliche allgemeine Schemata entsprechen nur einer ungerechtfertigten Rationalisierung -und nicht den Absichten Kants; sie ändern die wirkliche Ordnung der Begriffe, sie in einen einzigen Zusammenhang zwingend und schwere Verwirrungen in den Beziehungen zwischen Allgemeinerem und Besonderem verursachend; und wenn man solche Schemata zur Interpretation des Textes anwendet, so wird der Sinn dadurch verstellt, daß man schon anfangs einige Be-ziehungen zu Begriffen setzt, die wirklich erst später in der Entwicklung des Textes entstehen; und vice versa.“ (ss. 165-166)

3. ———. 1962. "Der historische Ursprung der kantischen Termini "Analytik" und "Dialektik"." *Archiv für Begriffsgeschichte* no. 7:120-139.

"Bekanntlich sind zwei Hauptteile der „Kritik der reinen Vernunft“ mit „transzendente Analytik“ und „transzendente Dialektik“ überschrieben. Die Termini Analytik und Dialektik sind selbstverständlich keine Neologismen. Jedoch hat noch niemand bisher untersucht, aus welcher Tradition Kant hier geschöpft hat, und immerhin könnte man annehmen, daß er diese Ausdrücke willkürlich der älteren Philosophie entnommen und ihnen eine neue Bedeutung beigelegt hätte. Im folgenden werden wir dagegen zeigen, daß beide Termini und ihr spezifischer Gebrauch bei Kant aus der deutschen Tradition des 17. und 18. Jahrhunderts stammen. Kant hat sie freilich mit einer neuen Bedeutung erfüllt, blieb dabei aber ganz im Rahmen einer heimischen Überlieferung.

Eine zusammenfassende Übersicht über die Entwicklung der beiden fraglichen Termini wird unsere kurze Untersuchung einleiten (1)." (s. 120)

(...)

“III. Die Einteilung der Kritik der reinen Vernunft in Transzendente Analytik und Transzendente Dialektik ist zweifellos nach dem Vorgang von Darjes vorgenommen worden. Kant kannte die Darjes'sche Philosophie sehr gut, er hatte sich mit ihr mehrfach auseinandergesetzt und stand in einigen Einzelheiten unter dem Einfluß von Darjes und seiner Schule (104).

Der Inhalt der kantischen transzendentalen Analytik und Dialektik ist deutlich ein ganz anderer als der der gleichnamigen Teile der aristotelischen Handbücher; doch der hypothetische und antithetische Charakter der transzendentalen Dialektik entspricht wohl dem Begriffe der logica probabilium bzw. disputatrix. Diese Analogie dürfte Kant bewogen haben, den aristotelischen Terminus zu übernehmen. Der Stand der Philosophie-geschichtsschreibung zu seiner Zeit läßt uns mit Gewißheit annehmen, daß Kant dabei den Terminus Dialektik völlig bewußt der aristotelischen Tradition gemäß verwendet und nicht im Sinn der platonisch-ramistischen. — Mit dem Terminus Analytik konnte er schon deshalb direkt an Aristoteles anknüpfen; da dieser Ausdruck ohnehin allein im aristotelischen Sinn im Gebrauch war.

Kant hat in seinem Streben, für seine neuen philosophischen Begriffe passende Termini zu finden, die geeignet wären, diese von den wolffischen und anderen zu seiner Zeit geläufigen scharf zu differenzieren, auch in anderen Fällen mehrmals auf die ältere aristotelische Tradition in Deutschland zurückgegriffen: seine Übernahme des Terminus Kategorie bietet ein weiteres Beispiel dafür (105). Diese seine Terminologie vereinigt in sich die Vorteile, zu Kants Zeit nicht allzu gewöhnlich zu sein und dabei doch durch eine glänzende Vergangenheit zugleich geadelt und allgemeinverständlich geworden zu sein. Der Unterschied der kantischen Begriffe von ihren aristotelischen Entsprechungen war dabei auffallend genug, daß eine Gefahr der Verwechslung nicht bestand.“ (s. 139)

4. ———. 1963. "Die Umwälzung von 1769 bei Kant." *Kant Studien* no. 54:369-375.

"Es ist hier unsere Absicht, die von uns schon einmal vorgetragene Erklärungshypothese zur Umwälzung der Kantischen Philosophie im Jahre 1769 weiterzubilden und zu berichtigen. Diese Hypothese wurde in ihrer ersten Form in unserem Band *Kant dall'estetica metafisica all'estetica psicoempirica* (Torino, 1955, „Memorie della Accademia delle Scienze di Torino, Serie 3a, Tomo 3, Parte II“) dargestellt; sie soll in einem weiteren und fast vollendeten Werk über die Entstehung der *Kritik der reinen Vernunft* ihre endgültige Gestalt erreichen. Diese historische Erklärung und Interpretation gründet sich sowohl auf Kants Druckschriften wie auf die Nachlaßreflexionen. Nur das Wesentliche, von dem, was wir, dem gegenwärtigen Stand unserer Untersuchungen entsprechend, feststellen zu können glauben, sei hier angedeutet.

Das bedeutendste Merkmal der Umwälzung vom Jahre 1769 ist, unserer Ansicht nach, die damals völlig zur Geltung gekommene *Trennung der Sinnlichkeit vom Verstande*. Die Deutung von Raum und Zeit als reine Formen der Anschauung, von einigen metaphysischen Grundbegriffen als synthetische Begriffe des Verstandes, dürfte nur eine Folge der erwähnten Trennung sein. Die Voraussetzungen für diese Trennung treten

schon seit der Schrift über die *Negativen Größen* (1763) allmählich in Erscheinung. Kant hatte in seiner Dissertation über die *Deutlichkeit* (1762) behauptet (in Übereinstimmung mit der Meinung der deutschen philosophischen Schulen seiner Zeit), daß es möglich sei, das Mannigfaltige der Empfindung (das Reale) in seine Elemente zu analysieren, und diese Elemente wieder aufzulösen, bis die ihnen zugrunde liegenden einfachen Grundbegriffe erreicht werden: und zwar so, daß die Erkenntnis der empfundenen Dinge durch diese Analyse ihre Deutlichkeit gewinnt, wogegen die nicht weiter auflösbaren Grundbegriffe ihre Deutlichkeit durch den entgegengesetzten Prozeß erreichen, nämlich durch die Synthese, indem sie, miteinander zusammengesetzt, nochmals zur Mannigfaltigkeit des ' Wirklichen kommen, die man als Ausgangspunkt genommen hatte. Kant) behauptete jedoch, und dieses gegen die Meinung der Schulen, daß man in Wahrheit immer noch weit entfernt davon war, die besprochenen Grundbegriffe analytisch festgestellt zu haben.

Die Welt war also damals für Kant, der Terminologie der Schulen gemäß, ein System von Gattungen und Arten, die nach dem Satz der Identität einander subordiniert sind. Dieser Satz, obwohl zur Begründung des Realen unzureichend (denn dazu war auch der Satz des zureichenden Grundes notwendig, welcher, den Ansichten von Crusius gemäß, vom Satze der Identität grundverschieden war — wie Kant in der *Nova Dilucidatio* behauptet hatte), fand doch in dieser Welt nichts, das seiner Form fremd war." (ss. 369-370)

5. ———. 1964. "Das Wiederaufleben der deutsch-aristotelischen Terminologie bei Kant während der Entstehung der "Kritik der reinen Vernunft"." *Archiv für Begriffsgeschichte* no. 9:233-242.

Italienisch Übersetzung: G. Tonelli, *Da Leibniz a Kant. Saggi sul pensiero del Settecento*, Napoli: Prismi, 1987, ss. 171-180.

"In diesem Bericht sollen einige Einzelergebnisse dargestellt werden, zu denen ich im Rahmen meiner Untersuchungen über die Entstehung der *Kritik der reinen Vernunft* gekommen bin. Da diese Untersuchungen noch nicht abgeschlossen sind, ist

das hier Vorgetragene als vorläufig anzu sehen(1). Meine Untersuchungen beziehen sich auf die Jahre von 1769 bis 1781, nämlich auf die Periode zwischen dem „großen Licht“ von 1769 bis zur *Kritik der reinen Vernunft*. Die Reflexionen aus Kants Nachlaß und die Kolleghefte aus diesen Jahren wurden mit den Druckschriften und Briefen zusammen als Quellen benutzt. Die Datierung der Reflexionen, wie Adickes sie vorgeschlagen hat, hat sich bisher, auch im Vergleich zu den anderen Quellen, als im Großen und Ganzen zuverlässig erwiesen. Im Zusammenhang mit dieser Tagung ist mein Interesse in der Hauptsache terminologisch. Ich beabsichtige also nicht, hier die eigentliche problematische Entwicklung des kantischen Gedankenganges zu verfolgen (hierzu bereite ich eine besondere Monographie vor), sondern ich werde ausschließlich den Ursprung der *neuen Termini*, die Kant in dieser Zeit aufnimmt, klarzulegen versuchen. Als „neue Termini“ bezeichne ich solche, die Kant vorher entweder gar nicht oder nur gelegentlich und unsystematisch gebraucht hat(2). In der Zeit bis 1768 hat Kant in der Metaphysik und in der Methodologie die Terminologie benutzt, die in den deutschen Schulen der ersten Hälfte des 18. Jahrhunderts üblich war. Aber schon 1769 treten wichtige Veränderungen ein, die zweifellos der großen begrifflichen Wende entsprechen, die in diesem Jahre stattgefunden hat; und in der folgenden Zeit erscheinen immer weiter neue Termini, so daß sich am Ende im Wortschatz der „Kritik der Reinen Vernunft“ ein Bild ergibt, das der vor kritischen Zeit gegenüber tief verändert erscheint. Kant liebte es nicht, Neologismen selber einzuführen; geläufig war ihm demgegenüber die Übernahme von Termini aus anderen Sprachen. Die Quellen für die neuen kantischen Termini nach 1769 sind durchaus verschieden. Jedoch lassen sich zwei Hauptgruppen einigermaßen abgrenzen: Erstens die Termini, die aus Lockes *Essay* und aus Leibnizens *Nouveaux Essais* stammen, und zweitens die Termini, die aus der deutsch aristotelischen Überlieferung übernommen sind. Den ersteren begegnet man hauptsächlich in den Jahren 1769-1770, den letzteren in der Folgezeit. Als auslösende Ursache der Wende von 1769 sehe ich die Veröffentlichung der *Nouveaux Essais* von Leibniz im Jahre 1765 an. Die *Essais* machten auf Kant

zweifellos einen tiefen Eindruck und riefen, vielleicht zum ersten Mal, ein eingehendes Studium von Lockes *Essay* hervor. Die Lehren von Locke und Leibniz, zusammen mit einigen Beiträgen von Hume, boten Kant die Möglichkeit, eine neue Lösung für eine sehr komplizierte Problematik zu finden, die ihn schon jahrelang beschäftigt hatte(3)." (ss. 171-172)

(1) Die Vortragsform bringt es mit sich, daß das Belegmaterial nicht in vollem Umfang ausgebreitet werden kann. Einige Fragen sind auch bereits in besonderen Aufsätzen von mir behandelt, weitere Untersuchungen werden hoffentlich bald in anderer Form erscheinen.

(2) Zur Terminologie Kants in der Zeit vor 1769 cf. G. Tonelli, *Kant, dall'estetica metafisica all'estetica psicoempirica, studi sulla genesi del criticismo (1754-1771) e sulle sue fonti*. In: Memorie della Accademia delle Scienze di Torino, Serie 3, Tomo 3, Parte II. Torino 1955, und: G. Tonelli, *Elementi metodologici e metafisici in Kant dal 1745 al 1768*. Vol. I. Torino 1959.

(3) Für den Versuch einer Erklärung der „Kopernikanischen Revolution“ vom Jahre 1769 cf. G. Tonelli, *Kant, dall'estetica ...*, §§ 149-164, wo wir allerdings den Einfluß von Locke und Leibniz nicht behandeln sondern nur die vorhergehende Problematik untersuchen, die Kant für die Einflüsse Lockes und Leibnizens empfänglich gemacht hat; und G. Tonelli, *Die Umwälzung von 1769 bei Kant*, „Kant-Studien“, LN, 1963.

Deutsch Übersetzung von *L'origine della tavola dei giudizi e del problema della deduzione delle categorie in Kant*, *Filosofia*, 7, 1956, ss. 129-138.

7. ———. 1966. "Die Anfänge von Kants Kritik der Kausalbeziehungen und ihre Voraussetzungen im 18. Jahrhundert." *Kant Studien* no. 57:419-456.

"Dem gegenwärtigen Zustand der Kantforschung gemäß darf man sowohl sagen, daß die Anfänge von Kants Kritik der Kausalität den Kern des Problems der Beziehungen zwischen Kant und Hume, wie daß die Beziehungen Kant/Hume den Kern des Problems von den Anfängen von Kants Kausalitätskritik bilden. Das Ziel dieser Untersuchung wird hauptsächlich eine Umgestaltung einer solchen Sachlage sein: und zwar dadurch, daß wir zeigen werden, wie Kants Kritik der Kausalbeziehungen aus einer Problematik entsprang, die in der ersten Hälfte des 18. Jahrhunderts so verbreitet war (und die wiederum mit der Gesamtlage der philosophischen Entwicklung jener Zeit in Verbindung war), daß sowohl eine ausschließliche wie eine vorzügliche Beziehung auf Hume in diesem Bezug kaum noch einen Sinn hat. Dadurch werden auch die Grenzen unserer Untersuchung bestimmt: es ist hier nicht unsere Ansicht, die Frage zu erörtern, welche Rolle das Kausalitätsproblem in der Entstehung von Kants Kritizismus gespielt habe; eine Frage, die wir schon bei anderen Gelegenheiten besprochen haben (1), Die bisherigen Behandlungen der Geschichte des Kausalitätsproblems (2) beleuchten nur die Hauptepisoden seiner Entwicklung und bieten daher keinen Anhalt für unsere Besprechung; zumal da wir diese Entwicklung aus der besonderen Perspektive der Krise des Kausalbegriffes studieren sollen. Man darf zwischen dem Ende des 17. und dem Anfang des 18. Jahrhunderts vier verschiedene kritische Einstellungen zum Kausalitätsproblem als typisch betrachten. Wir werden erstens den Okkasionalismus Malebranches und die vorherbestimmte Harmonie Leibnizens, ihren weitreichenden Unterschieden zum Trotz, zusammennennen. Als zweite typische Einstellung betrachten wir die Methodologie der Naturwissenschaft, wie Newton sie verstanden hat. Als dritte den relativen metaphysischen Skeptizismus der thomasisch-pietistischen Philosophenschule, in Beziehung auf die Kausalitätslehre Rüdigers und besonders Aug. Fried. Müllers. Als vierte und letzte die Erkenntnislehre Burthogges. Wir wollen nun diese verschiedenen Fragestellungen einzeln betrachten." (ss. 419-420)

Definitions of *Ontology*. From Christian Wolff to Edmund Husserl

Defining "Ontology"

a) *One of the best available dictionaries gives the following definition of Ontology:*

"1. A science or study of being: specifically, a branch of metaphysics relating to the nature and relations of being; a particular system according to which problems of the nature of being are investigated; first philosophy.

2. a theory concerning the kinds of entities and specifically the kinds of abstract entities that are to be admitted to a language system."

Webster's Third New International Dictionary, s.v. "ontology".

b) *The first sense is commonly used in the philosophical tradition:*

"In contemporary philosophy, formal ontology has been developed in two principal ways. The first approach has been to study formal ontology as a part of ontology, and to analyse it using the tools and approach of formal logic: from this point of view formal ontology examines the logical features of predication and of the various theories of universals. The use of the specific paradigm of the set theory applied to predication, moreover, conditions its interpretation."

The second line of development returns to its Husserlian origins and analyses the fundamental categories of object, state of affairs, part, whole, and so forth, as well as the relations between parts and the whole and their laws of dependence - once all material concepts have been replaced by their correlative form concepts relative to the pure

'something'. This kind of analysis does not deal with the problem of the relationship between formal ontology and material ontology." (p. 199)

Liliana Albertazzi, "Formal and Material Ontology" in: Roberto Poli and Peter Simons (eds.), *Formal Ontology*, Dordrecht: Kluwer 1996, pp. 199-232.

c) *The second sense is used in research on Artificial Intelligence and Knowledge Representation; one of the best known definitions is Tom Gruber's:*

"An *ontology* is an explicit specification of a conceptualization.

The term is borrowed from philosophy, where an ontology is a systematic account of Existence. For knowledge-based systems, what "exists" is exactly that which can be represented. When the knowledge of a domain is represented in a declarative formalism, the set of objects that can be represented is called the universe of discourse. This set of objects, and the describable relationships among them, are reflected in the representational *vocabulary* with which a knowledge-based program represents knowledge. Thus, we can describe the ontology of a program by defining a set of representational terms. In such an ontology, definitions associate the names of entities in the universe of discourse (e.g., classes, relations, functions, or other objects) with human-readable text describing what the names are meant to denote, and formal axioms that constrain the interpretation and well-formed use of these terms." (pp. 199)

Tom Gruber, "A Translation Approach to Portable Ontology Specifications" in: *Knowledge Acquisition*, 5, 1993, pp. 199-220.

This definition has been criticized by Guarino and Giaretta that, after examining seven possible interpretations of ontology, (1) write:

"A starting point in this clarification effort will be the careful analysis of the interpretation adopted by Gruber. The main problem with such an interpretation is that it is based on a notion of conceptualization (introduced in: Genesereth, Michael R. and

Nilsson, L. "Logical Foundation of Artificial Intelligence" Morgan Kaufmann, Los Altos: California, 1987) which doesn't fit our intuitions, (...): according to Genesereth and Nilsson, a conceptualization is a set of extensional relations describing a particular state of affairs, while the notion we have in mind is an intensional one, namely something like a conceptual grid which we superimpose to various possible state of affairs. We propose in this paper a revised definition of a conceptualization which captures this intensional aspect, while allowing us to give a satisfactory interpretation to Gruber's definition." (p.26)

Notes

The definitions are:

1. 1. Ontology as a philosophical discipline
2. 2. Ontology as a an informal conceptual system
3. 3. Ontology as a formal semantic account
4. 4. Ontology as a specification of a conceptualization
5. 5. Ontology as a representation of a conceptual system via a logical theory
6. 5.1 characterized by specific formal properties
7. 5.2 characterized only by its specific purposes
8. 6. Ontology as the vocabulary used by a logical theory
9. 7. Ontology as a (meta-level) specification of a logical theory

Nicola Guarino, Pierdaniele Giaretta, "Ontologies and Knowledge Bases. Towards a Terminological Clarification", in: N.J.I. Mars (ed.), *Towards Very Large Knowledge Bases*, Amsterdam: IOS Press 1995, pp. 25-32.

Guarino gives this definition: "Since this paper is deliberately addressed to an interdisciplinary audience, it is advisable to pay attention to some preliminary terminological clarifications, especially because some crucial terms appear to be used with different senses in different communities (4). Let us first consider the distinction between "Ontology" (with the capital "o"), as in the

statement "Ontology is a fascinating discipline" and "ontology" (with the lowercase "o"), as in the expressions "Aristotle's ontology" or "CYC's ontology". The same term has an uncountable reading in the former case, and a countable reading in the latter. While the former reading seems to be reasonably clear (as referring to a particular philosophical discipline), two different senses are assumed by the philosophical community and the Artificial Intelligence community (and, in general, the whole computer science community) for the latter term.

In the philosophical sense, we may refer to an ontology as a particular system of categories accounting for a certain vision of the world. As such, this system does not depend on a particular language: Aristotle's ontology is always the same, independently of the language used to describe it. On the other hand, in its most prevalent use in AI, an ontology refers to an engineering artifact, constituted by a specific vocabulary used to describe a certain reality, plus a set of explicit assumptions regarding the intended meaning of the vocabulary words. This set of assumptions has usually the form of a first-order logical theory (5), where vocabulary words appear as unary or binary predicate names, respectively called concepts and relations. In the simplest case, an ontology describes a hierarchy of concepts related by subsumption relationships; in more sophisticated cases, suitable axioms are added in order to express other relationships between concepts and to constrain their intended interpretation.

The two readings of ontology described above are indeed related each other, but in order to solve the terminological impasse we need to choose one of them, inventing a new name for the other: we shall adopt the AI reading, using the word conceptualization to refer to the philosophical reading. So two ontologies can be different in the vocabulary used (using English or Italian words, for instance) while sharing the same conceptualization." (p. 4)

Notes

(4) I elaborate here on some material already published in Guarino, N. and Giaretta, P. 1995. "Ontologies and Knowledge Bases: Towards a Terminological Clarification". In N. Mars (ed.) *Towards Very*

Large Knowledge Bases: Knowledge Building and Knowledge Sharing 1995. IOS Press, Amsterdam: 25-32.

(5) In this case, an ontology is sometimes called a formal ontology, although we shall use the expression "formal ontology" only to refer to a philosophical research field.

From: Nicola Guarino "*Formal Ontology and Information Systems*", in: N. Guarino (ed.), *Formal Ontology in Information Systems. Proceedings of the First International Conference, Trento, Italy, 6-8 June 1998* Amsterdam: IOS Press 1998, pp. 3-15.

Descriptive, formal and formalized ontology

"I shall distinguish descriptive, formal and formalized ontology. Each of these ontologies comes in two guises: domain-dependent and domain-independent. Domain-dependent ontologies concern categorically closed regions of being; on the other hand, a domain independent ontology may be properly called general ontology. (...) Descriptive ontology concerns the collection of such prima facie information either in some specific domain of analysis or in general.

Formal ontology distills, filters, codifies and organizes the results of descriptive ontology (in either its local or global setting). According to this interpretation, formal ontology is formal in the sense used by Husserl in his *Logical Investigations*. Being 'formal' in such a sense therefore means dealing with categories like thing, process, matter, whole, part, and number. These are pure categories that characterize aspects or types of reality and still have nothing to do with the use of any specific formalism.

Formal codification in the strict sense is undertaken at the third level of theory construction: namely that of formalized ontology. The task here is to find the proper formal codification for the constructs descriptively acquired and formally purified in the way just indicated. The level of formalized constructions also relates to evaluation of the adequacy (expressive, computational, cognitive) of the various formalisms, and to the problem of their reciprocal translations.

The close similarity between the terms 'formal' and 'formalized' is somewhat unfortunate. One way to avoid the clash is to use

'categorical' instead of 'formal'.

Most contemporary theory recognizes only two levels of work and often merges the level of the formal categories either with that of descriptive or with that of formalized analysis. As a consequence, the specific relevance of categorical analyses is too often neglected.

The three levels of ontology are different but not separate. In many respects they affect each other. Descriptive findings may bear on formal categories; formalized outcomes may bear on their twin levels, etc. To set out the differences and the connections between the various ontological facets precisely is a most delicate task." (p. 183)

From: Roberto Poli, "Descriptive, Formal and Formalized Ontologies", in: Denis Fisette (ed.), *Husserl's Logical Investigations Reconsidered*, Dordrecht: Kluwer 2003, pp. 183-210.

"The idea of a formal ontology arose around the turn of the present century in the work of Edmund Husserl. It coincides in many respects with what is nowadays sometimes called 'analytic metaphysics' or with attempts to use formal methods to solve classical philosophical problems relating to the notions of being, object, state of affairs, existence, property, relation, universal, particular, substance, accident, part, boundary, measure, causality, and so on. Formal ontology thus includes several sub-disciplines, of which the most developed is the theory of part and whole, as sketched by Husserl in the third of his Logical Investigations and later worked out as a formal theory by Leśniewski. Formal-ontological ideas are present also in much contemporary work on naïve physics and in the formal theories of the common-sense world canvassed by workers in the field of artificial intelligence research.

The idea of a formal ontology is placed in a network of conceptual oppositions: it admits of different senses according to which of its two constituent elements is given priority. If the emphasis is placed on 'ontology' then the principal distinction is between 'formal' and 'material' (that is between 'formal ontology' and 'material ontology'); if instead the emphasis falls on 'formal', the contrast is between 'ontology' and 'logic' ('formal ontology' vs. 'formal logic'). This situation raises some important questions: When one speaks of

'ontology', how can its formal aspects be distinguished from its material ones? When we talk about the 'formal', how can we distinguish between logic and ontology?" (*Foreword by the Editors*, p. VII)

From: Roberto Poli and Peter Simons (eds.), *Formal Ontology*, Dordrecht: Kluwer 1996.

"One hundred years ago, Edmund Husserl was perhaps the first philosopher to pay any interest to the formal treatment of some of the most fundamental questions of ontology. Powerful tools of logic were developed in those days, and this new development inspired in a natural way various attempts to use these techniques within this prestigious area of philosophical inquiry. Through Husserl's younger colleague, Roman Ingarden, and in the light of related ideas of Leśniewski and other members of Lwow-Warsaw School, these ideas spread rapidly, particularly in the Polish scientific community.

Philosophical inquiries into ontology in an advanced formal setting were put forward first by Stanislaw Leśniewski. Inspired by the contemporary discussion on the foundations of mathematics, Leśniewski was interested in finding a formal framework appropriate for the ontological grounding of both mathematics and logic. The basic system was Mereology, i.e. the general theory of collective sets. Ontology itself arises from Protothetic. All his axiomatic systems came about in an elegant yet somewhat exotic notation. (1) Leśniewski's mereology was intended to play the part of an alternative to set theory. Later -- as an axiomatic 'calculus of individuals' -- it appears to be a proper extension of set theory rather than a competitive calculus. Thomas Mormann's article 'Topological Representations of Mereological Systems' (2) can be seen as a recent example of that line of research. He shows that nothing is lost when a reasonable mereological system is substituted by its topological model. That brings mereology into contact with well developed mathematical theories and may help mereology, as Mormann concludes, "to leave its present state of theoretical immaturity". In any case, mereology can be treated as a contribution to formal ontology only if it carries a meaningful theory of (the construction of) universes. The same holds for (pure) set theory itself, which is sometimes taken to be the most usable and convenient base for any

formal ontological system (cf. Quine's discussion of this topic in various places, and for several other approaches see e.g. Poli and Simons (eds.), *Formal Ontology* Dordrecht: Kluwer, 1996; Scheffler and Urchs, "Ontologic. Essays on Formal Ontology", *Logic and Logical Philosophy*, Torun, Copernicus University Press, vol. 2, 1995)." (p. 11)

Notes

(1) Tadeusz Kotarbinski served as a faithful translator of Leśniewski's rather esoteric writings for the broader public. Most of Leśniewski's successors both within and outside the Lwow-Warsaw School set out their own considerations on formal ontology in the spirit of his systems. They often, however, use Kotarbinski's explication of these ideas.

Definitions by somea leading philosophers

Gottfried Wilhelm Leibniz (1646-1716)

There are three occurrences of the term *ontologia* in Leibniz:

"Ontologiam seu scientiam de Aliquo et Nihilo, Ente et Non ente, Re et modo rei, Substantia et Accidente" ("Ontology or the science of something and of nothing, of being and not-being, of the thing and the mode of the thing, of substance and accident."

From: Louis Couturat, *Opuscules et fragments inédits de Leibniz*, Paris: Alcan 1903. Reprinted Hildesheim: Georg Olms 1961, p. 512 (*Introductio ad Encyclopaediam Arcanam*) (Now in: G. W. Leibniz *Sämtliche Schriften und Briefe*, VI Sektion: Philosophische Schriften, Band IV, Text n. 126 p. 527.)

In a fragment titled by the Editors *De duobus systematis scientiarum* (1693?) on the classification of books in a library Leibniz in a deleted paragraph wrote: "Philosophici *doppelt unterstr.* (aaaa)

Dida (bbbb) Logicam, Mnem (cccc) Didacticam, (aaaaa) Mnemonicam, (bbbbb) Logicam (aaaaaa) Rhet (bbbbbb) oratoriam seu (aaaaaaa) Persuasoriam (bbbbbbb) partem Rhetoricae persuasoriam, Mnemonicam; (aaaaaaaa) Metaphysicam, (bbbbbbbb) Ontologiam". (*Sämtliche Schriften und Briefe*, Akademie Verlag, Berlin 2004, Reihe IV, Bd. V, p. 592, ad. l. 25.

The third occurrence was published by Nicholas Jolley, "An Unpublished Leibniz MS on Metaphysics", *Studia Leibnitiana*, 7 (1975), 2, p. 179, l. 81 and var. ad l. 81: "Scientiam autem genera lis quam vulgo Ontolog...", but he later altered his text to read: "Scientia autem generalis quam dicam Metaphysicam vocant".

(See: Michaël Devaux, Marco Lamanna, "The Rise and Early History of the Term Ontology (1606-1730)", *Quaestio. Yearbook of the History of the Metaphysics*, 9, 2009, pp. 173-208 (on Leibniz see pp. 197-198).

[Christian Wolff \(1679-1754\)](#)

"If you wish to study philosophy fruitfully, then logic must be given the very first place. Logic treats the rules which direct the cognitive faculty to the knowledge of truth. Now we should study philosophy in such a way as to acquire complete certitude. Hence, he who studies philosophy should know how to proceed in the knowledge of truth. Consequently, he should be acquainted with logic. Hence, logic must be given the very first place.

It might also be mentioned that those who are beginning in philosophy overcome their inexperience by studying logic. We have already given the reason for this. He who is unacquainted with logic does not know how to examine definitions and demonstrations with rigor. Therefore, he easily admits as certain things which greatly disagree with evidence. And he often thinks he understands things which he has not examined.

However, if everything in logic is to be demonstrated, then principles must be borrowed from ontology and psychology. Logic treats of the rules which direct the intellect in the knowledge of all being, for the definition of logic does not restrict it to any species of being; therefore, it ought to teach us what to look for in order to know

things. Now that which pertains to the general knowledge of being is derived from ontology. Hence it is clear that, in order to demonstrate the rules of logic, principles must be taken from ontology.

Furthermore, since logic explains how to direct the intellect in the knowledge of truth, it ought to teach how the operations of the intellect are used in knowing truth. Now we must learn from psychology what the cognitive faculty is and what its operations are. Hence it is also clear that, in order to demonstrate the rules of logic, principles must be taken from psychology.

This will be clearer when you have learned logic and have compared it with ontology and psychology. We have experienced this many times while carefully investigating the rules of logic and their reasons.

If all things in logic are to be rigorously demonstrated with genuine proofs, then logic must come after ontology and psychology. Logic derives its principles from ontology and psychology. Now the parts of philosophy should be ordered in such a way that those parts come first which provide principles for other parts. Therefore, ontology and psychology should precede logic if everything in logic is to be rigorously demonstrated and if its rules are to be genuinely proven.

Demonstrative method requires that logic be treated after ontology and psychology. However, the process of learning requires that logic precede all the other parts of philosophy, including ontology and psychology. Both methods cannot be observed. Weighing this more carefully, we should realize that he who does not know logic cannot be usefully acquainted with ontology and psychology. However, the principles of ontology and psychology which pertain to logic can be easily explained in logic. Therefore, we choose the method of learning in preference to the method of demonstration.

Another reason why this approach is preferable is that ontological principles are definitions and psychological principles are established from experience. Consequently, ontological principles can be understood and admitted as true, even though the other things which are treated in ontology have not yet been examined. And the presuppositions of logic which can be demonstrated in psychology can be grasped a posteriori." (p. 17)

"Philosophy is the science of the possibles insofar as they can be."
(*ibid.*, pp. 39-40)

"There are some things which are common to all beings and which are predicated both of souls and of natural and artificial bodies. That part of philosophy which treats of being in general and of the general affections of being is called ontology, or first philosophy. Thus, ontology, or first philosophy, is defined as the science of being in general, or insofar as it is being.

Such general notions are the notions of essence, existence, attributes, modes, necessity, contingency, place, time, perfection, order, simplicity, composition, etc. These things are not explained properly in either psychology or physics because both of these sciences, as well as the other parts of philosophy, use these general notions and the principles derived from them. Hence, it is quite necessary that a special part of philosophy be designated to explain these notions and general principles, which are continually used in every science and art, and even in life itself, if it is to be rightly organized. Indeed, without ontology, philosophy cannot be developed according to the demonstrative method. Even the art of discovery takes its principles from ontology." (*ibid.*, pp. 45-46)

From: Christian Wolff, *Preliminary Discourse on Philosophy in General* (1728), translated, with an introduction and notes, by Richard J. Blackwell, Indianapolis: The Bobbs-Merrill Company, Inc. 1963.

Alexander Baumgarten (1714-1762)

"Prolegomena to Metaphysics [1-3]

1. METAPHYSICS is the science of first principles in human cognition.
2. Ontology, cosmology, psychology, and natural theology belong to metaphysics.
3. NATURAL METAPHYSICS is the cognition of matters treated in metaphysics that are attained through the mere use of these matters. If artificial [metaphysics] explained in 1 is also added to it, then it is useful (1) for the development of its concepts, (2) for the

determination and conception of its first principles, and (3) for the continuation and certainty of its proofs, etc.

PART ONE: ONTOLOGY [4-35c]

Prolegomena [4-6]

4. ONTOLOGY (ontosophy, metaphysics, cf. 1, universal metaphysics, architectonic, first philosophy) is the science of the general predicates of a thing.

5. The predicates of a thing that are more general are the first principles of human cognition, thus ontology belongs (2), with reason, to metaphysics (1, 4).

6. Ontology contains the predicates of a thing (4), (I) [that are] internal, (I) universal, which are in each thing, (2) disjunctive, one of which is in each thing; (II) relative.” (p. 89)

Translated from Alexander Baumgarten, *Metaphysica* (Frankfurt, 1757, 4th ed., 1739 1st ed.), reprinted at 15:4-54 and 17:23-226 of Immanuel Kant's *Gesammelte Schriften* (Berlin: Königlich-Preussischen Akademie der Wissenschaften zu Berlin, 1902-).

From: Eric Watkins, *Kant's Critique of Pure Reason. Background Sources Materials*, Cambridge: Cambridge University Press 2009.

Immanuel Kant (1724-1804)

"In the course of the present semester which has just begun, I propose to hold private lectures on the following science, which I intend to handle in an exhaustive fashion.

1. Metaphysics. (...) I hope that I shall be able in the near future to present a complete account of what may serve as the foundation of my lectures in the aforementioned science. Until that time, however, I can easily, by applying gentle pressure, induce A. G. Baumgarten, the author of the text book on which this course will be based [the *Metaphysica* (1739)] -- and that book has been chosen chiefly for the richness of its contents and the precision of its method -- to follow the same path. Accordingly, after a brief introduction, I shall begin with empirical psychology, which is really the metaphysical science of man based on experience. (...)The second part of the course will

discuss corporeal nature in general. (...) Since everything in the world can be subsumed under these two classes [organic and inorganic], I shall then proceed to ontology, the science, namely, which is concerned with the more general properties of all things." (pp. 294-295)

From: *M. Immanuel Kant's Announcement of the Programme of His Lectures for the Winter Semester 1765-1766*, translated and edited by David Walford in collaboration with Ralf Meerbote in: Immanuel Kant, *Theoretical Philosophy 1755-1770*, Cambridge: Cambridge University Press 1992.

"The Transcendental Analytic accordingly has this important result: That the understanding can never accomplish *a priori* anything more than to anticipate the form of a possible experience in general, and, since that which is not appearance cannot be an object of experience, it can never overstep the limits of sensibility, within which alone objects are given to us. Its principles are merely principles of the exposition of appearances, and the proud name of an ontology, which presumes to offer synthetic *a priori* cognitions of things in general in a systematic doctrine (e.g., the principle of causality), must give way to the modest one of a mere analytic of the pure understanding. (A 247 / B 303)" (p. 345)

From: Immanuel Kant, *Critique of Pure Reason*, translated and edited by Paul Guyer and Allen W. Wood, Cambridge: Cambridge University Press 1998.

"Thus all pure *a priori* cognition, by means of the special faculty of cognition in which alone it can have its seat, constitutes a special unity, and metaphysics is that philosophy which is to present that cognition in this systematic unity. Its speculative part, to which this name has been especially appropriated, namely that which we call metaphysics of nature and which considers everything insofar as it is (not that which ought to be) on the basis of *a priori* concepts, is divided in the following way. (a)

Metaphysics in this narrower sense consists of transcendental philosophy and the physiology of pure reason. The former considers only the understanding and reason itself in a system of all concepts

and principles that are related to objects in general, without assuming objects that would be given (*Ontologia*); the latter considers nature, i.e., the sum total of given objects (whether they are given by the senses or, if one will, by another kind of intuition), and is therefore physiology (though only *rationalis*). (A 845 / B 873)"

(a) Inserted in Kant's copy of the first edition:

"I would divide it in accordance with the classes of the categories, so that in the third category, which contains the other two, yields the idea of the science:

"1. General ontology [*Allgemeine Wesenlehre*]; 2. Theory of nature; 3. Cosmology [*Weltwissenschaft*]; 4. Theology." (E CLXXXIII, p. 54; 23:43). This is the last emendation Kant made in his copy of the first edition.

"Accordingly, the entire system of metaphysics consists of four main parts. 1. Ontology. 2. Rational Physiology. 3. Rational Cosmology. 4. Rational Theology. The second part, namely the doctrine of nature of pure reason, contains two divisions, *physica rationalis* and *psychologia rationalis*. (A 847 / B 875)" (pp. 698-699)

From: Immanuel Kant, *Critique of Pure Reason* (1781), translated and edited by Paul Guyer and Allen W. Wood, Cambridge: Cambridge University Press 1998.

"We now begin the science of the properties of all things in general, which is called ontology. (...) One easily comprehends that it will contain nothing but all basic concepts and basic propositions of our a priori cognition in general: for if it is to consider the properties of all things, then it has as an object nothing but a thing in general, i.e., every object of thought, thus no determinate object. Thus nothing remains for me other than the cognizing, which I consider. (The science that deals with objects in general, will deal with nothing but those concepts through which the understanding thinks, thus of the nature of the understanding and of reason, insofar as it cognizes something a priori. - That is transcendental philosophy, which does not say something a priori of objects, but rather investigates the faculty of the understanding or of reason for cognizing something a

priori; thus with regard to content it is a self-cognition of the understanding or of reason, just as logic is a self-cognition of the understanding and of reason with regard to form; the critique of pure reason belongs necessarily to transcendental philosophy. But since one used to treat ontology without a critique - what was ontology then? An ontology that was not a transcendental philosophy. Thus one philosophized back and forth without asking: can one do that? Transcendental philosophy is the result of critique, for if I can represent the extent and the sources in a connection then the connected representation of the a priori principles is transcendental philosophy, and if I take all the consequences that flow from that, then that is metaphysics; without critique I do not know whether the concepts of pure reason and pure understanding are all there or whether some are still missing - because I have no principles. One set no boundaries to reason, and thereby went as far as one was able. They indeed comprehend that in matters of experience they cannot mix everything together, but a priori they can comprehend everything, and that because no one can refute them)." (pp. 140-141)

From: Immanuel Kant, *Lectures on Metaphysics*, Part III *Metaphysik Mrongovius* (1782-1783), translated and edited by Karl Ameriks and Steve Naragon, Cambridge: Cambridge University Press 1997.

"Philosophy, like mathematics as well, can be divided into two parts, namely into the *pure* and into the *applied*. - *Metaphysics* is the system of pure philosophy. The word metaphysics means a science which goes beyond the boundaries of nature. (Nature is the summation of all objects of experience.)

A principle *principium* is a general rule, which again contains other rules under it. If we take together all pure concepts which can be entirely separated from the empirical ones, then we attain thereby a science.

Philosophical cognition consists of mere concepts *a priori*.

Physics is the philosophy of nature insofar as it depends on principles from experience; but *metaphysics* is the philosophy of nature insofar as it depends on *a priori* principles. *Moral philosophy*

teaches us the practical principles of reason. The concepts *toward which everything seems to be aimed* is the concept of a *highest being and of another world*.

Metaphysics is *necessary*. Its ground is reason, which is never to be satisfied by empirical concepts. Reason finds satisfaction neither in the consideration of things, nor in the field of experience, i.e, in the sensible world. The concepts of God and of the immortality of the soul, these are the two great incentives on whose account reason went out beyond the field of experience.

A major question is: *how are a priori cognitions possible?* The whole pure mathematics is a science which contains only *a priori* concepts, without its supporting their ground on empirical concepts. That there are thus actual *a priori* cognitions is already proved; indeed, there is a whole science of sheer pure concepts of the understanding. But the question arises: how are the *a priori* cognitions possible? The science that answers this question is called critique of pure reason. Transcendental philosophy is the system of all our pure a priori cognitions; customarily it is called *ontology*. Ontology thus deals with things in general, it abstracts from everything particular. It embraces all pure concepts of the understanding and all principles of the understanding or of reason.

The main sciences that belong in metaphysics are: *ontology*, *cosmology*, and *theology*.

(...)

Ontology is a pure doctrine of elements of all our a priori cognitions, or: it contains the summation of all our pure concepts that we can have *a priori* of things." (pp. 307-308)

From: Immanuel Kant, *Lectures on Metaphysics*, Part V. *Metaphysik L2* (1790-1791?), translated and edited by Karl Ameriks and Steve Naragon, Cambridge: Cambridge University Press 1997.

"Ontology is the first part that actually belongs to metaphysics. The word itself comes from the Greek, and just means the *science of beings*, or properly according to the sense of the words, the *general doctrine of being*.

Ontology is the doctrine of elements of all my concepts that my understanding can have only *a priori*.

ON THE POSSIBLE AND THE IMPOSSIBLE. The first and most important question in ontology is: how are a priori cognitions possible? This question must be solved first, for the whole of ontology is based on the solution of this question. Aristotle decided the proposition in that he rejected all a priori cognitions, and said that all cognitions were empirical, or that they were based on the first principles of experience. For his main proposition was: nothing is in the intellect that was not first in the senses . Through this he overturned all a priori cognitions. But Plato said that all our a priori cognitions arose from an original intuition.

We have no innate concepts at all, but rather we attain them all, or we receive acquired concepts. The understanding acquires concepts by its paying attention to its own use. All that can be said of that is this: that there are certain a priori cognitions, even when it seems that they are taken from experience, or that they are used beyond the boundaries of experience. There is in our reason a certain dialectic, that is: a certain art of illusion, which shows me either something true or false. A good dialectician must maintain at the same time and with the same facility thesis and antithesis of a matter, or he must at the same time prove the truth and falsity of a matter, or be able to say yes or no. Dialectic contains a conflict which indicates that it is impossible to proceed dogmatically here in metaphysics." (p. 309)

From: Immanuel Kant, *Lectures on Metaphysics* - Part V.
Metaphysik L2 (1790-1791?), translated and edited by Karl Ameriks and Steve Naragon, Cambridge: Cambridge University Press 1997.

"Ontology is that science (as part of metaphysics) which consists in a system of all concepts of the understanding, and principles, but only so far as they refer to objects that can be given to the senses, and thus confirmed by experience. It makes no allusion to the super-sensible, which is nevertheless the final aim of metaphysics, and thus belongs to the latter only as a propaedeutic, as the hallway or vestibule of metaphysics proper, and is called transcendental philosophy, because it contains the conditions and first elements of all our knowledge a priori.

In this field there has not been much progress since the days of Aristotle. For as grammar is the resolution of a speech-form into its elementary rules, and logic a resolution of the form of thought, so ontology is a resolution of knowledge into the concepts that lie *a priori* in the understanding, and have their use in experience; a system whose troublesome elaboration we may very well be spared, if only we bear in mind the rules for the right use of these concepts and principles, for purposes of empirical knowledge; for experience always confirms or corrects it, which does not happen if our design is to progress from the sensible to the super-sensible, for which purpose an assessment of the powers of understanding and its principles must indeed be carried out with thoroughness and care, in order to know from whence, and with what props and crutches, reason can venture upon its transition from the objects of experience to those that are not of this kind.

Now the celebrated Wolf has rendered an incontestable service to ontology, by his clarity and precision in analysing these powers; but not by any addition to our knowledge in that area, since the subject matter was exhausted.

However, the above definition, which merely indicates what is *wanted* of metaphysics, not what there needs to be done *in it*, would simply mark it out from other doctrines as a discipline belonging to philosophy in the specific meaning of the term, to the doctrine of wisdom, and prescribe its principles to the absolutely necessary practical use of reason; though that has only an indirect relation to metaphysics considered as a scholastic science and system of certain theoretical cognitions *a priori*, which are made the immediate topic of concern. Hence the explanation of metaphysics according to the notion of the schools will be that it is the system of all principles of purely theoretical rational knowledge through concepts; or in brief, that it is the system of pure theoretical philosophy." (p. 354)

From: Immanuel Kant, *What Real Progress Has Metaphysics Made in Germany Since the Time of Leibniz and Wolff?* (1793/1804) - in: *Theoretical Philosophy After 1781*, edited by Henry Allison and Peter Heath, Cambridge: Cambridge University Press 2002.

"The first stage of metaphysics can be called that of ontology, since it does not teach us to investigate the essence of our concepts of things by a resolution into their elements, which is the business of logic; it tells us, rather, what concepts of things we frame to ourselves *a priori*, and how, in order to subsume thereunder whatever may be given to us in intuition generally; which in turn could not happen save insofar as the form of *a priori* intuition in space and time makes these objects knowable to us merely as appearances, not as things-in-themselves. In this stage, reason sees itself obliged, in a series of conditions, subordinated one to another and each in turn conditioned without end, to progress incessantly towards the unconditioned, since every space and every time can never be represented as anything but part of a still larger given space or time, in which the conditions for what is given to us in each intuition must still be sought, in order to attain to the unconditioned." (p. 376)

From: Immanuel Kant, *What Real Progress Has Metaphysics Made in Germany Since the Time of Leibniz and Wolff?* (1793/1804), in: *Theoretical Philosophy After 1781*, edited by Henry Allison and Peter Heath, Cambridge: Cambridge University Press 2002.

Salomon Maimon (1753-1800)

"After what has already been said, it is easy to think that I associate a quite different concept with the word ontology than the concept usually associated with it. That is to say, for me ontology is not a science that is applicable to the thing in itself, but only to appearances. It cannot have a wider domain. Here I will deal specifically with those points where I differ from the Wolffians, and hence also from Kant; for to say what others have already said would be superfluous, My exposition follows Baumgarten's paragraph ordering, so that the reader may more easily grasp the difference between our approaches). (1)

Ontology is the science of the most general properties of things; that is to say, not the properties of a thing in general (of a thing determined through no condition), but the properties of every *a priori* determined thing. As a part of metaphysics., it differs from logic as much as from the doctrine of nature as follows: logic relates merely to the form of thinking., without relation to any determined

object whether determined a priori or a posteriori), while the doctrine of nature relates itself only to an object determined a posteriori. For example, the form of hypothetical propositions in logic is expressed like this: if one thing is supposed then another thing must necessarily be supposed. Here the subject (thing) is determined only by the predicate (relation of antecedent to consequent). In physics the form is expressed like this; 'heat expands air.': here the subject of the relation ([between] heat and air) is determined by means of a posteriori conditions, In metaphysics, on the other hand, it is expressed like this: if A comes first, and B follows it according to a I rule, then the supposition of A makes it necessary to suppose B. In this case the subject of the relation of cause and effect) is determined by means of a time-determination (succession according to a rule) that is a priori. So the concept or principle of cause belongs to metaphysics. The objects of logic can be compared to transcendental magnitudes (which are not determined in relation to one another by any algebraic equation), while the objects of metaphysics can be compared to variable magnitudes (which are determined only by means of their relation to one another), and the objects of physics to continuous magnitudes." (pp. 126-127)

Notes

" I therefore think that mathematics could best be defined as a science which deals with the general laws (forms) to which things must conform in their existence. By the word 'things', I understand here not merely those which possess an objective existence independent of our awareness, but also those which simply exist among our ideas, either as individuals i.e. intuitions, or simply as

general concepts, in other words, everything at all which can be an object of our perception. Furthermore, if I say that mathematics deals with the laws to which these things conform in their existence, this indicates that our science is concerned not with the proof of the existence of these things, but only with the conditions of their possibility. When I call these laws general, I mean it to be understood that mathematics never deals with a single thing as an individual, but always with whole genera. These genera can of course be higher or lower, and on this will be based the classification of mathematics into individual disciplines.

The definition given here will certainly not be found too narrow, for it clearly covers everything that has previously been counted in the domain of mathematics. But I am more afraid that it might be found rather too wide, and the objection might be made that it leaves too little for philosophy (metaphysics), as the latter will be limited by my definition to the single concern of proving, from *a priori* concepts, the real existence of certain objects. Mathematics and metaphysics, the two main parts of our *a priori* knowledge, would, by this definition, be contrasted with each other so that the first deals with the general conditions under which existence of things is possible; the latter, on the other hand, seeks to prove *a priori* the reality of certain objects (such as the freedom of God and the immortality of the soul). Or, in other words, the former concerns itself with the question, how must things be made in order that they should be possible? The latter raises the question, which things are real -- and indeed (because it is to answered *a priori*) -- necessarily real? Or still more briefly, mathematics would deal with hypothetical (1) necessity, metaphysics with absolute necessity." (p. 183)

Notes

(1) However, not all its propositions have this hypothetical form, because the condition, especially in chronometry and geometry, where it is the same for all propositions, is tacitly assumed.

[Franz Brentano \(1838-1917\)](#)

"*The Fourfold Distinction of Being.* Being is a homonym. Its several senses fit into the fourfold distinction of accidental being: being in the sense of being true, being of the categories, and potential and actual being.

'Being is said in various ways' [*to de on legetai men pollachos*], says Aristotle in the beginning of the fourth book of his *Metaphysics* (Met. IV. 2 1003a33). He repeats this in Books VI and VII and several more times in other places. In these passages he enumerates a number of concepts, each of which, in different ways, is called a being. In Met. IV. 2 1003b6 he says "one thing is said to be because it is substance, another because it is an attribute of substance, still another because it is a process toward substance, or corruption of substance, or privation of substantial forms or quality of substance, or because it produces or generates substance or that which is predicated of substance, or because it is a negation of such a thing or of substance itself. For this reason we also say that non-being is non-being." The various sorts of being which are here enumerated can be reduced to four kinds: (1) Being which has no existence whatever outside the understanding (privation, negation; *stereseis, apophaseis*); (2) The being of movement and of generation and corruption (process toward substance, destruction; *hodos'eis ousian, pthora*); for though these are outside the mind, they do not have complete and perfect existence (cf. Physics III.1.201a9); (3) Being which has complete but dependent existence (affections of substance, qualities, things productive and generative; *pathe ousias, poietika, genetika*); (4) The being of the substances (*ousia*). Another enumeration of concepts to which the appellation "being" is attached in different ways is given in Met. VI. 2 1026a33. In that passage, one kind of being is said to be accidental being, another being in the sense of being true, whose opposite is non-being in the sense of being false. Besides, there is said to be another kind of being which divides into the categories, and, in addition to all of them, potential and actual being. It will be noted that this division, too is fourfold, but does not consistently correspond to that in Book IV.

Thus the distinction of being given in Book VI will provide the organization of our investigation. We shall deal, first of all, with the

accidental being, then with the being in the sense of being true and non-being in the sense of being false, then with potential and actual being and finally with the categories. In his *Metaphysics* Aristotle dealt with the last two in opposite order. He first had to acquaint us with substance [ousia] and with its form and matter (Met. VIII) in order to be able to speak afterwards of potential and actual being. Since our essay is not intended to become a complete ontology, the first order is more suitable to our purposes, and the subsequent development itself will justify its adoption." (pp. 3-5)

From: Franz Brentano, *On the Several Senses of Being in Aristotle* (1862), translated by Rolf George, Berkeley: University of California Press 1975.

"A metaphysical theory may begin with the following explication of words: By that which is, when the expression is used in the strict sense, we understand a thing; for example, a body, a mind, or a topoid of more or fewer than 3 dimensions. A part of a body or of a topoid may also be called a thing. And so a number of things taken together may also be called a thing. But it would be wrong to suppose that the two parts of a thing taken together constitute an additional third thing. For where we have an addition the things that are added must have no parts in common. Thus we may say, for example, that a triangle has three angles, but not that it has three pairs of angles: angles A and B form a pair, as do B and C, and also C and A, but each of these pairs has a part in common with each of the others.

(...)

The expression '*that which is*' is also used in various extended senses:* (a) The resources of language enable us to form an abstractum for every concretum. For the concretum, that which is, there is the abstractum, being; for body, there is the abstractum corporeality, for mind, there is spirituality or mentality, for lover, there is love; for which knows, there is knowledge; for that which is formed, there is form; and so on. What do these abstracta denote? Obviously not the same things as do the corresponding concreta; this would be a pointless duplication of names. Sometimes the relation between the concrete and abstract terms is explained by saying: "That which is formed is formed in virtue of its form. For example,

that which is round is round in virtue of its roundness; and whatever is a body is a body in virtue of its corporeality or its corporeal nature." It has also been said that the roundness is in that which is round and that the corporeal nature is in the body. This seems to suggest that the concretum is related to the abstractum as part to whole. Indeed, the abstractum has been called the formal part of the concretum; the concretum is then said to be that which is denoted by the concrete term because it contains the abstractum as part.

(a) If abstracta were in fact thus parts of concreta there would be no objection to including abstracta among those things which are in the proper sense. But actually they are not parts. A division of the concretum into two parts one of which is the form corresponding to the abstractum is plainly impossible. This division is purely fictive: it amounts to saying that a thing has as many parts as there are predicates that apply to it. Using abstracta in this way, one says that a thing is round because roundness is included among its parts just as one says that an animal is hairy because hair is included among its parts. But whereas an animal's hair is a real thing which can be separated from the animal both in fact and in thought, the contrary is true of the so-called roundness, which can neither exist by itself nor be thought of by itself. Fictions of this sort are often harmless, and they may even be useful, as when mathematicians treat circle as a regular polygon with an infinite number of sides or assume that parallel lines meet in infinity. If such fictions served no purpose whatever, they would hardly have come into use. But what has been expressed by abstract terms can always be expressed by concrete ones, without recourse to fictions. Leibniz pointed out that by such rephrasing a number of difficulties that baffled the Scholastic philosophers are easily disposed of. So far as linguistic usage is concerned, we can say, not only that there is something round, but also that there is such a thing as roundness; but we must bear in mind that the "is" in the latter statement is used in an extended sense, and that the only thing that can properly be said to be here is the thing which is round.

(b) Instead of saying that a thinker is thinking of something, one can also say that there is something which is thought about by him. Here, again, we are not dealing with what may be said to be in the proper sense - indeed, the person in question may himself deny that what he

is thinking about is something that there is. Even a contradiction in terms, something that is plainly impossible. can be something that is thought about. We have just said that not roundness but that which is round is in the strict sense; similarly, not the contemplated round thing, but the person contemplating it is what is in the strict sense. This fiction, that there is something which exists as a contemplated thing, may also prove harmless, but unless one realizes that it is a fiction, one may be led into the most glaring absurdities. Things which exist as objects of thought do not constitute a subspecies of genuine being, as some philosophers have assumed. Once we have translated statements about such fictive objects into other terms, it becomes clear that the only thing the statement is concerned with is the person who is thinking about the object. What I have said here with general reference to that which is contemplated or thought about also applies, of course, to that which is affirmed.

(c) If one says, something is past or something is future, one is making an affirmation. But one is not thereby affirming or accepting something as being. One is making an affirmation in the temporal mode of the past or the future instead of the temporal mode of the present. If one were to say "The past Caesar is," instead of saying "Caesar is past" he would be using is in an extended sense. The case would be analogous to that in which, instead of saying that there can be no such thing as a round square, one says that a round square is an impossibility. Once again, a different phrasing would be a suitable way of showing that we are not dealing with a strict interpretation of being.

(d) Many other examples of improper use of the - is - could be cited. Consider, for example, the statement that there is a time that has neither beginning nor end or the statement that there is a three-dimensional space indefinitely in all directions. It is easy to see on the basis of what has been said already that such statements do not refer to anything than can be in the strict sense. Time and space seem to belong to the abstracta. This means that what is in the strict sense, is not space or time, but rather that which is spatial and that which is temporal. Instead of speaking of space and time, we should speak of "things that are spatial, "things that are spatially different," "things that are temporal," "things that are simultaneous," and so on. Those philosophers who say that there is an infinite space as

precondition of everything spatial conceive of this space as a thing. But this doctrine has no basis; indeed it is demonstrably false and absurd. Similarly, what philosophers have called time would be a thing if it actually existed. But time, thus considered as a thing, is a philosophical aberration. And this is so even if it is true that there is a thing that had no beginning and will always be, a thing that is continuously undergoing changes and producing changes in everything outside itself, thus making indirectly necessary the uniformity of the temporal process in things. Such an entity would not correspond to the thing that philosophers have thought of as being time." (pp. 16-19 notes omitted)

[Alexius Meinong \(1853-1920\)](#)

"We must turn, in the first place, to a philosophical discipline which is not as yet part of the tradition, which is therefore in a certain sense new, and about which I have said some things which were intended to be of a fundamental nature. To begin with, it is impossible to give a regular definition of entity [Gegenstand]; for genus and differentia are lacking, since everything is an entity. However, the etymology of the word '*gegenstehen*' yields at least an indirect characteristic, since it points to the experiences which apprehend entities; but these experiences must not be thought of as somehow constituting the entities. Every inner experience, at least every sufficiently elementary one, has such an entity; and insofar as the experience finds an expression - hence first of all in the words and sentences of language - this expression has a meaning [Bedeutung], and this meaning is always an entity. All knowledge, too, deals therefore with entities.

But large and important groups of entities have found no home in the traditional sciences; these sciences, moreover, are for the most part exclusively concerned with a knowledge of reality [*Wirklichen*], while even unreal things with being, things without being, possibilities, and even impossibilities can be objects of knowledge, namely, of a knowledge which is of interest to the as yet theoretically naive person only, as it were, when it promises to serve as a means

for knowledge of reality. In contrast to such a preference for reality, which, in fact, has been overcome so far in no science, there exists the obvious need for a science which deals with entities without any restriction, especially without restriction to the special case of existence, so that it can be called existence-free [*daseinsfrei*]. This science about entities as such, or about pure entities, I have called the theory of entities.

Much of what belongs to this theory has already been studied under the title 'Logic' (especially: 'Pure Logic'); and that modern mathematical logic belongs completely to the realm of the theory of entities is only concealed by its goal of being a calculus, which seems to favor an extensive externalization [*Veräusserlichung*] in the sense of the logic of extensions, while it is just a complete internalization [*Verinnerlichung*] which the theory of entities strives for and makes possible. People have dealt with topics from the theory of entities since antiquity under the heading of 'Metaphysics,' and, especially, under the heading of 'Ontology' as a part of metaphysics; and they have not always failed to recognize the characteristic feature of freedom from existence. But as a goal in itself, the concept of a theory of what is free from existence has, so far as I can see, never been espoused. According to this concept, there belongs to the theory of entities everything that can be made out about entities irrespective of their existence (for example, whatever it is that holds for the class of all colors which make up the 'color space,' as distinguished from the 'color body' which is restricted to the psychologically given); hence, everything that is a matter of a priori knowledge, so that the a priori can be treated as a defining characteristic of the kind of knowledge of which the theory of entities consists.

What belongs to the theory of entities is thus what is rational. Insofar [as it is that], it is therefore anything but a newly discovered country, but rather, in regard to one of its most important parts, mathematics, the justly admired standard of scientific precision. What is new is, perhaps, an insight into the peculiarity of this country and into the nature of its boundaries - unless one should rather speak of its boundlessness. In this respect, it is a kind of companion piece to metaphysics which tries to comprehend the totality of reality, while the theory of entities, because of its freedom from existence, tries to encompass also everything that is not real. Naturally, this freedom

from existence does not mean that entities as such cannot have existence in the true sense. The fact that the kind of consideration and knowledge peculiar to the theory of entities therefore also appears where it can be applied to existents, constitutes one of the main values of the postulation of the new science.

Just as the concept of an entity in general is to be determined, at least *cum grano salis*, with an eye on apprehension, so are the main groups of entities characterized in regard to the main groups of apprehending experiences; and apprehensions are, as mentioned, all elementary experiences. Corresponding to the four main groups of the latter - to presentation [*Vorstellen*], thought [*Denken*], emotion [*FühIen*], and desire [*Begehren*] - there are, therefore, four main groups of entities: objects [*Objekte*], objectives [*Objektive*], dignitatives [*Dignitative*], and desideratives [*Desiderative*]. However, the characteristics of the latter are not derived from the characteristics of the apprehending experiences. For this reason, nothing stands in the way of assigning to the immeasurable realm of objects, for example, also the inner experiences, even though these inner experiences cannot be given through presentations, but can only be apprehended through self-presentation or with the help of imagination." (Appendix I, pp. 224-225)

From: Alexius Meinong, "Self-Presentation" (1921), translated in: Reinhardt Grossmann, *Meinong*, London: Routledge & Kegan Paul 1974.

Kazimierz Twardowski (1886-1938)

"In order to explain the meaning of the word 'object' further, one can also - as we have done already - point to the linguistic designation and assert that everything which is designated is an object. Such designation uses either nomina understood in a grammatical sense, or it uses phrases consisting of nomina and other expressions, or, finally, it uses other parts of speech, assuming that they have been converted into nouns. One can, therefore, say that everything which is designated by a noun or by an expression which is used as a noun is an object in the sense here adopted.

Now, since everything can be object - object of presentation - the subject of the presentation itself not excluded, those who conceive of

the object as the summum genus are justified. Everything which is, is an object of a possible presentation; everything which is, is something. And here, therefore, is the point where the psychological discussion of the difference between content and object of presentations turns into metaphysics.

The objects of presentations have indeed been viewed from a metaphysical point of view up to the present time. In calling them *onta* [in Greek], *entia* [in Latin], one revealed the way which led to them. However, that the Aristotelian *on* - like the *ens* of medieval philosophy - is nothing else but the object of presentations is shown by the fact that all doctrines about the *ens*, as far as they are correct, hold for the object of presentations. We shall confine ourselves here to the most famous of these doctrines.

1. The object is something different from the existent; some objects have existence in addition to their objecthood [*Gegenständlichkeit*], that is, in addition to their property of being presented (which is the real sense of the word 'essentia'); others do not. What exists is an object (*ens habens actualem existentiam*), as is also what merely could exist (*ens possibile*); even what never can exist but what can only be conceived of (*ens rationis*) is an object; in short, everything which is not nothing, but which in some sense is "something," is an object. (1). In fact, the majority of scholastics maintain that "aliquid" is synonymous with "ens," in contrast to those who conceive of the former as an attribute of the latter.
2. Object is summum genus. Scholastics express this by the statement that the concept of *ens* is not a generic concept, but is a transcendental concept, because it "*omnia genera transcendit*."
3. Every object of a presentation can be object of a judgment and object of an emotion. This is the meaning of the scholastic doctrine that every object of a presentation is "true" and "good." The (metaphysical) truth of an object does not consist in being judged in a (logically) true judgment; as little as its "goodness" depends on whether the feeling concerning it is good in the ethical sense or not. Rather, an object is called true inasmuch as it is object of a judgment, and it is called good inasmuch as it is related to an emotion. (...)

4. An object is called true with regard to its ability to be judged; it is called good with regard to its ability to be the object of an emotion. The question could be raised whether the object has, in an analogical manner, an attribute which expresses its conceivability and which, therefore, would be a name of the object inasmuch as it is presented. Now, medieval philosophy knows of a third attribute of the object; every ens, according to this philosophy, is not only verum and bonum, but also unum. We shall investigate in a different context - since this question will arise there quite naturally - what this unity means for the presentation of an object, especially whether we may see in it the analogue in the sphere of presentations to truth in the sphere of judgments and goodness in the sphere of emotions.

5. If the object of presentations, judgments, and feelings is nothing else but the Aristotelian-scholastic ens, then metaphysics must be definable as the science of objects in general, taking this word in the sense here proposed. And this is indeed the case. The particular sciences, too, deal with nothing else but the objects of our presentations, their changes, their properties, as well as the laws according to which objects affect each other. Only, the particular sciences always deal with a more or less limited group of objects, a group which is formed by the natural context or a certain purpose. The natural sciences, in the widest sense of the word, for example, are concerned with the peculiarities of those objects which one calls inorganic and organic bodies; psychology investigates the properties and laws characteristic of mental phenomena, of mental objects. Metaphysics is a science which considers all objects, physical - organic and inorganic - as well as mental, real as well as non-real, existing objects as well as non-existing objects; investigates those laws which objects in general obey, not just a certain group of objects. What we here mean is expressed by the venerable definition of metaphysics as the science of being [*Seienden*] as such.(2) The backward glance at some of the points of the scholastic doctrine of ens is supposed to characterize as precisely as possible the meaning which we connect, in the present investigation, with the word 'object'. Summarizing what was said, we can describe the object in the following way. Everything that is presented through a presentation, that is affirmed or denied through a judgment, that is desired or detested through an emotion, we call an object. Objects

are either real or not real; they are either possible or impossible objects; they exist or do not exist. What is common to them all is that they are or that they can be the object (not the intentional one!) of mental acts, that their linguistic designation is the name, (...) and that considered as genus, they form the summum genus which finds its usual linguistic expression in the word 'something.' Everything which is in the widest sense "something" is called "object," first of all in regard to a subject, but then also regardless of this relationship." (pp. 34-37)

Notes

(1) Some philosophers, like Suárez, withhold the name ens from what has merely a "ficta" or "chimaerica essentia" and give it only to the "essentia realis." However, this restriction seems to involve an inconsistency. Suárez, *Disputationes metaphysicae* II, sect. 4.

(2) Compare Brentano, *On the Several Senses of Being in Aristotle* vol. I, chapter 1, par. 1.

Edmund Husserl (1859-1938)

"Section 5. The concept of Pure logic as MATHESIS UNIVERSALIS (the unity of the "analytic doctrine of forms for that which can be an object on the one hand with the categories of meaning on the other). The "Positivity" of logic and the philosophical Problem of its phenomenological elucidation. - Positive science in general and phenomenology.

I turn now to the misinterpretations having to do with my idea of a "pure logic:" which present themselves in various ways depending on the standpoint from which the philosophical reader approaches the *Logical Investigations*. It might be best here if I meet these misinterpretations by pointing out positively what is essential to my position with special emphasis upon the points which have not received enough attention.

"Pure logic," in its most comprehensive extension characterizes itself by an essential distinction as "*mathesis universalis*." It develops through a step-by-step extension of that particular concept of formal logic which remains as a residue of pure ideal doctrines dealing with "propositions" and validity after the removal from traditional logic of all the psychological misinterpretations and the normative-practical goal positings [*Zielgebungen*]. In its thoroughly proper extension it includes all of the pure "analytical" doctrines of mathematics (arithmetic, number theory, algebra, etc.) and the entire area of formal theories, or rather, speaking in correlative terms, the theory of manifolds [*M annigfaltigkeitslehre*] in the broadest sense. The newest development of mathematics brings with it that ever new groups of formal-ontological laws are constantly being formulated and mathematically treated which earlier had remained unnoticed. "*Mathesis universalis*" as an idea includes the sum total of this formal *a priori*. It is, in the sense of the "Prolegomena," directed toward the entirety of the "categories of meaning" [*Bedeutungskategorien*] and toward the formal categories for objects correlated to them or, alternatively, the *a priori* laws based upon them. It thus includes the entire *a priori* of what is in the most fundamental sense the "analytic" or "formal" sphere - a sense which receives a strict specification and clarification in the third and sixth investigations." (pp. 28-29)

From: *Introduction to the Logical Investigations. A Draft of a Preface to the Logical Investigations* (1913), edited by Eugen Fink, translated with introductions by Philip J. Bossert and Curtis H. Peters, The Hague: Martinus Nijhoff 1975.

"Region and Category. The Analytic Region and its Categories

(...)

Let us start from formal ontology (always as pure logic in its full extent as *mathesis universalis*) which, as we know, is the eidetic science of any object whatever. Anything and everything is an object in the sense proper to formal ontology, and an infinity of various truths, distributed among the many disciplines of *mathesis*, can be established for it. But they all lead back to a small stock of immediate or "fundamental" truths which function as "*axioms*" in the

disciplines of pure logic. We define now as *logical categories or categories of the logical region, any object whatever: the fundamental concepts of pure logic* which occur in those axioms - the concepts by means of which, in the total set of axioms, the logical essence of any object whatever becomes determined, or the concepts which express the unconditionally necessary, and constituent determinations of an object as object, of anything whatever in so far as it can be something at all. Because the purely logical, in the sense delimited by us with absolute exactness, determines that concept of the "*analytic*" (25) as contrasted with the "*synthetic*," which alone is important (but which is important fundamentally) to philosophy, we may also designate these categories as *>analytic*." (pp. 21-22)

(...) "*apophantic logic*," although it makes statements exclusively about significations, is nevertheless part of formal ontology in the fully comprehensive sense. Still one must set the signification-categories apart as a group by themselves and contrast them with the others as the formal objective categories in the pregnant sense. (26)" (p. 22)

Notes

(25) AUTHOR FOOTNOTE: cf. *Logische Untersuchungen*, Vol. II, "Third Investigation," §§ 11 ff.

(26) AUTHOR FOOTNOTE: On the division of logical categories into signification-categories and formal-ontological categories, cf. *Logische Untersuchungen* vol. I 67 [*Logical Investigations* pp. 236f.] The entire "Third Investigation" specifically concerns the categories of whole and part. At that time I did not venture to take over expression "ontology" which was objectionable on historical grounds; rather I designated this investigation (p. 222 of the first edition) as part of an "*apriorische Theorie der Gegenstände als solcher*" ["apriori theory of objects as objects"] a phrase contracted by Alexius Meinong to make the word "*Gegenstandstheorie*" ["object-theory"]. Now that times have changed, however, I consider it more correct to rehabilitate the old expression, "ontology".

Introduction to a Pure Phenomenology (1913), translated by F. Kersten, The Hague: Martinus Nijhoff 1982.

[Theory and History of Ontology](#)

Raul Corazzon || rc@ontology.co || [Info](#)

Definitions of *Ontology*. From Nicolai Hartmann to the Present Time

[Nicolai Hartmann \(1882-1950\)](#)

"All ontology has to do with fundamental assertions about being as such. Assertions of this sort are precisely what we call categories of being. Like the Kantian categories - which, as far as content is concerned, are also precisely this: fundamental assertions about being - they have the character of universal constitutive principles comprising all more specialized ontological assertions. Hence, the new ontology might be expected to provide a transcendental deduction also of these ontological assertions. Otherwise, it is argued, it could not guarantee their objective validity. That, however, would mean that this ontology in its turn was in need of an epistemological foundation which would have to provide the justification of a priori principles of an even wider scope.

Thereby a way for ontology is traced, and this way once more follows the scheme of the old deductivity. But it is here that the roads of the old and the new ontology part. Just as in regard to the problem, of being it is today no longer a question of substantial forms and of the teleological determination of actual processes by these forms, so also the problem at issue is no longer that of a post factum justification of a priori principles. The categories with which the new ontology deals are won neither by a definition of the universal nor through derivation from a formal table of judgments. They are rather gleaned step by step from an observation of existing realities. And since, of course, this method of their discovery does not allow for an absolute criterion of truth, here no more than in any other field of knowledge, it must be added that the procedure of finding and rechecking is a

laborious and cumbersome one. Under the limited conditions of human research it requires manifold detours, demands constant corrections, and, like all genuine scholarly work, never comes to an end.

Here one may truly and literally speak of new ways of ontology. The basic thesis can possibly be formulated like this: The categories of being are not a priori principles. Only such things as insights, cognitions, and judgments can be a priori. In fact the whole contrast between a priori and a posteriori is only an epistemological one. But ontology is not concerned with knowledge, much less with mere judgments, but with the object of knowledge in so far as this object is at the same time "transobjective," that is, independent of whether or to what extent being is actually transformed into an object of knowledge. The principles of the object in its very being are in no way eo ipso also cognitive principles. In some fields they can be quite heterogeneous, as the manifold admixtures of the unknowable in nearly all basic problems of philosophy amply prove. From this alone it follows that the principles of being cannot be a priori principles of our intellect, that they, as a matter of fact, are just as indifferent to the dividing line between the knowable and the unknowable as the being whose principles they are." (pp. 13-14)

From: Nicolai Hartmann, *New Ways of Ontology* (1949), translated by Reinhard C. Kuhn, Chicago: Henry Regnery Company 1953.

"The true characteristics of reality do not depend on the categories of space and matter but on those of time and individuality. Ontologically considered, time and space are not categories of equal worth: Time is by far more fundamental than space. Only material things and living beings, including the processes through which their existence flows, are spatial. But spiritual and psychic processes, as well as material processes, are temporal. For everything real is in time and only a part of it in space --we might say, only one half of the real world, its lower forms.

Inseparably joined with temporality is individuality. This consists in nothing but singleness and uniqueness. The real is perishable and thereby also unrepeatable. The same sort of thing recurs, never the same identical thing. This holds true of historical events as well as of

cosmic motions, of persons as well as of things. Only the universal recurs, for, considered by itself, it is timeless, always existing, eternal. This timelessness was once considered in the old ontology to be a being of a higher order, indeed, even the only true being. But, in truth, it is rather a dependent, a merely ideal being, and the universal has reality nowhere else but in the real particulars which are both temporal and individual. What once was considered a kingdom of perfection, the kingdom of essences, whose faint copies things were supposed to be, has proved itself to be a kingdom of incomplete being which becomes independent only through abstraction. In the recognition of this lies perhaps the most striking contrast of the new ontology to the old.

That is why the new ontology can very well grapple with the deep problems of German idealism, why it can deal with the spirit and freedom, social life and history, just as well as with the cosmos and the organism. Hence new light may be expected to be shed by it on the characteristic situation and activity of man as a spiritual being within a non-spiritual, law-determined world.

These reflections are but a small section from a chapter on categorial analysis. Here they are only sketched. They justly demand a much more exact discussion of space, time, process, psychic act, reality, and so forth. Particularly reality, the pure mode of being of the structures and processes which form the world, is a very difficult subject for analysis. In order to understand reality the philosopher must start with an examination of the relationship of possibility and actuality -- for centuries the fundamental problem of ontology. And the revolution in the whole problem of being extends even to these very foundations of being. For what the old ontology teaches about potency and act -- a relationship according to which everything real is a realization of a pre-existing disposition and all being is destined to become what it is by disposition -- proves to be far from adequate in view of the broadened problem of reality. It is incumbent upon us to introduce a new concept of 'real possibility' (Realmöglichkeit) which no longer coincides with essential possibility but which signifies the totality of conditions present at a given time within the real context. To this must correspond just as novel a concept of 'actual reality' (Realwirklichkeit) which is no longer thought of as the goal of an anthropomorphically conceived tendency, as if the

processes in the cosmos were tied to the activity of an intelligence. Rather such actual reality must in every case be considered to be the complex result of a far-flung context of determinants. A whole science concerns itself with these inner relationships of reality considered as a mode of being. It forms the core of the new ontology, and, in contrast to an analysis of categories directed toward the structural content, it may be called modal analysis." (pp. 25-27)

Stanislaw Leśniewski (1886-1939)

"Leśniewski's system of logic consists of two theories, which he called Protothetic and Ontology. Of these the former is perhaps the most comprehensive Logic of Propositions which has ever been devised. It goes beyond the classical Calculus of Propositions in several respects. It allows for instance for functorial variables for which constant functors of the Calculus of Propositions can be substituted.' It provides for the use of the universal quantifier to bind both the propositional and the functorial variables. It has a rule of definitions, which enables us to extend at will the variety of semantical categories within the field of the Logic of Propositions, and, in addition, it has a rule of extensionality; but the most significant point about Protothetic is that with its aid we can derive theses which enable us to dispose of the usual rules for operating with the universal quantifier in any deductive theory of lesser generality. In the edifice of the possible deductive theories Protothetic forms the very base. It requires no more fundamental theory than itself whereas other deductive theories, not included in it, have to be built on it or on a part of it. This is the case with Ontology.

If Protothetic is the most comprehensive Logic of Propositions then Ontology is the most comprehensive Logic of Names. Roughly speaking, it comprises the traditional logic in its modernized form and has counterparts of the Calculus of Predicates, the Calculus of Classes, and the Calculus of Relations including the Theory of Identity.

(...) At first sight Leśniewski's use of the term Ontology may seem curious and daring, but it should become clearer as we proceed that

he was eminently justified. In fact his whole conception of logic was ontological through and through in a truly classical sense. (...)Contrary to the widely accepted practice Leśniewski intended his logic to be an interpreted system. He attached definite meanings to his constants and regarded the theses of his deductive theories as true propositions in the sense in which propositions of empirical sciences are accepted as true. It is with this in mind that we should approach his theories. Ontology has been described as the most comprehensive Logic of Names because its most characteristic expressions belong to the semantical category of names, just as the most characteristic expressions of Protothetic belong to the semantical category of propositions. If, however, we take into account the contents of Ontology then it would be more appropriate to describe it as a theory of what there is. Just as astronomy tells us something about heavenly bodies, the theses of Ontology tell us something about things, or objects if one prefers, or individuals. Since in accordance with Leśniewski's intentions theses of Ontology are to be regarded not as mere 'well formed formulae' but as meaningful propositions which can be examined for their truth or falsity, it is essential that we should understand as clearly as possible the ontological vocabulary. Only when we have mastered this vocabulary can a further step be made, namely the one which consists of a critical study of those ontological theses which are already at our disposal. Finally, we may try to discover new truths, which we can formulate in terms of the ontological vocabulary, and assign them their proper places in the theory by deducing them from the axiom or establishing their independence." (pp. 124-126 of the reprint, note omitted)

From: Czeslaw Lejewski, *On Leśniewski's Ontology*, in: *Ratio* vol. I, n. 2, 1958, pp. 150-176 (Reprinted in: Jan T. J. Szrednicki, V. F. Rickey (eds.), *Leśniewski' Systems. Ontology and Mereology*, The Hague: Martinus Nijhoff 1984, pp. 123-148.

[Roman Ingarden \(1893-1970\)](#)

"The ontological analyses of works of art affected Ingarden's entire ontology. Its best elaboration is contained in *Spór o istnienie swiata* (The controversy over the existence of the world, 1947-48). A being, i.e., an object, can be considered in three different respects: (1) the

material one, (2) the formal one, and (3) the existential one (modes of being). Ingarden understands ontology as based on eidetic insight and intuitive analyses of the contents of ideas, i.e., upon the EIDETIC METHOD, which enables one to discover the necessary and purely possible relations between the pure ideal qualities. Ontology is for him the most general theory of objects. He distinguishes it from metaphysics, which fulfills the role of an applied theory of objects and which, being based on ontology, considers the nature and essence of factual beings. The eidetic character distinguishes metaphysics from the so-called real sciences.

Ontology aims at obtaining a general spectrum of eidetic possibilities and necessities with reference to any objects whatever. In the frame of an existential ontology, which has nothing to do with Martin Heidegger's FUNDAMENTAL ONTOLOGY, Ingarden distinguishes and clearly defines four mutually exclusive pairs of moments of being: something can be (1) existentially autonomous or heteronomous, (2) existentially original or derivative, (3) existentially separate or not separate, and (4) existentially self-dependent or contingent. Considerations connected with the analysis of the second pair has led Ingarden to an original interpretation of the relation of causality. His analysis of time has brought some additional pairs of existential moments, such as actuality and non-actuality; persistence and fragility; and fissuration and non-fissuration. These differentiations enables him to distinguish and describe four basic modes of being (consisting of non-contradictory combinations of existential moments). These are: (1) absolute being (autonomous, original, separate, self-dependent); (2) temporal (real) being; (3) ideal (extra-temporal) being; and (4) purely intentional (quasi-temporal) being. We cannot experience any existing object without its mode of being.

In epistemology Ingarden distinguishes: (1) the pure theory of knowledge, which is actually a part of ontology, because he describes it as an a priori analysis of the general idea "knowledge"; (2) criteriology, which researches such epistemic values as objectivity and adequacy; and (3) the critique of knowledge, which evaluates factually obtained results of scientific and philosophical cognition." (pp. 348-349)

Mario Bunge (1919-2020)

"ONTOLOGY The serious secular version of metaphysics. The branch of philosophy that studies the most pervasive features of reality, such as real existence, change, time, chance, mind, and life. Ontology does not study constructs, i.e., ideas in themselves. These are studied by the formal sciences and epistemology. Hence the expression 'ontology of mathematics' makes sense only in the context of objective idealism (such as Pythagoras's and Plato's). By contrast, the question 'What is the ontological status of mathematical objects?' is meaningful in all contexts, and in a fictionist philosophy of mathematics it has a simple answer: None. (...) Ontology can be classed into general and special (or regional). General ontology studies all existents, whereas each special Ontology studies one genus of thing or process-physical, chemical, biological, social, etc. Thus, whereas general ontology studies the concepts of space, time, and event, the ontology of the social investigates such general sociological concepts as those of social system, social structure, and social change. Whether general or special, ontology can be cultivated in either of two manners: speculative or scientific. The ontologies of Leibniz, Wolff, Schelling, Hegel, Lotze, Engels, Mach, W. James, H. Bergson, A. N. Whitehead, S. Alexander, L. Wittgenstein, M. Heidegger, R. Carnap, and N. Goodman are typically speculative and remote from science. So is the contemporary possible worlds metaphysics. Warning: the expression 'the ontology of a theory' is sometimes misleadingly employed to designate the reference class or universe of discourse of a theory. The expression is misleading because ontologies are theories, not classes." (pp. 200-201)

From: Mario Bunge, *Dictionary of Philosophy*, Amherst: Prometheus Books 1999.

Fred Sommers (1923-2014)

"The main object of the ensuing analysis is to tie together several seemingly disparate topics. These include: (a) a theory of types (that

is, a theory describing the way terms are conjoined to form category correct statements in a natural language); (b) a formal theory of ontological categories and ontological features; (c) a theory of predication (that is, a theory accounting for the subject-predicate distinction and one which provides certain formal characteristics of the binary relation 'is predicable of'); (d) a procedure for enforcing ambiguity.

The results of the analysis support the main features of the Russell program. I take these to be that (a) clarification of natural language is ontologically revealing and discriminatory of the sorts of things there are; (b) linguistic structures and ontological structures are isomorphic. The meaning of 'ontology' in what immediately follows is 'the science of categories.'(...)

The ontologist is interested in categories; he is, qua ontologist, not interested in whether a thing is red or whether it is green but in whether it is colored. Even this is not altogether accurate: he is interested in its character of being colored or colorless. For the ontologist 'colored' means | red | which is the same thing as colored or colorless. A toothache is neither, but water can be either red or not red or colored or colorless.

We speak as ontologists when, for example, we say that points belong to the category of extension even though they belong to the class of extensionless things. The category of extension is defined by the predicate | extended | and points belong to it. Concepts do not belong to it since they are neither extended nor extensionless. Space (spatial) is another category word since it has no complement which is not categorial. And if the word 'color' is taken to include that 'color' we call 'colorless,' it too is a category word. (pp. 351-352).

From: Fred Sommers, "Types and Ontology" *The Philosophical Review*, 72, 1963, pp. 327-363.

Sommers defines 'ontology' as the 'science of categories' ('Types and Ontology,' p. 351). More specifically, it is the systematic attempt to say what categories are, how they are determined, and how they are related to one another. Ontology is, of course, nothing new. Plato's theory of forms, Aristotle's Categories, Russell's theory of types are three quite obvious examples of attempts at a science of categories.

But it is Sommers' own theory which comes closest to a complete, workable theory of categories.

So what is a category? It is a group of things, a class--but a special kind of class. We saw above that a class consists of all those things of which some given term is true. The notion true of is the source of one of the problems with classes. Consider how we negate. Modern logicians take all the kinds of negation which can occur in a natural language sentence as amounting to the negation of the entire sentence.

(...)

Let us make a distinction between what a term is true of and what it spans ('Types and Ontology,' p. 329). A term spans whatever either it or its negation could be used to sensibly characterize. And all the things spanned by a given term constitute the category with respect to that term. Thus, while the lowest prime is in the counter-class of 'married,' it is not in the category determined by 'married.' While a term and its negation exclusively and exhaustively divide the world, a term and its negation both determine the same category, which need not exhaust the world. This is because whatever can be sensibly characterized by a term can be sensibly characterized by its negation. Spanning is not defined in terms of truth. While a term and its negation are never true of the same things, they both span the same things. For example, whatever can be sensibly characterized as married can equally well be characterized (though perhaps falsely) as unmarried. It would be false, but nonetheless sensible, to characterize Queen Elizabeth as unmarried. On the other hand, neither 'married' nor 'unmarried' can be used to characterize the lowest prime number. To characterize it in either way would be senseless, nonsense, category mistaken.

While classes are defined in terms of truth, categories are defined in terms of spanning (which in turn is defined in terms of sense). A category with respect to a term 'X' will include the class of X things and some (usually not all) of the counter-class of X things. The class of married things has in it me, the Queen, my wife, etc. The counter-class has my son, the Pope, the Moon, Mars, etc. (viz. anything of which 'married' is not true). The category with respect to 'married' has me, the Queen, my wife, my son, the Pope, etc., but not the

Moon, Mars, etc. For, while 'married' is false of, say, both my son and Mars, it spans only the former and not the latter." (pp. 4-5)

Ernst Tugendhat (1930-2023)

"Lecture 3. Ontology and semantics.

It is at the beginning of Book IV of his *Metaphysics* that Aristotle first introduces his new conception of philosophy. 'There is a science which studies being as being.' Indeed the special character of this science vis-à-vis the other sciences is supposed to consist in the fact that whereas the latter investigate a particular sphere of being philosophy investigates being as being. (1) What distinguishes the concept of being, for Aristotle, is that it is the most general concept. (2) For of everything and anything one can say that it is. Everything and anything, therefore, can be called being.

Clearly Aristotle arrives at his new conception of philosophy by dropping the aspect of justification from the preliminary conception developed at the beginning and settling exclusively for the aspect of highest generality. The highest, pre-eminent science, called philosophy, is universal, but does not have a justificatory role in relation to the particular sciences. This conception, since it is orientated towards the concept of being (on), leads to the conception of philosophy as ontology. (..)An explicitly semantic enquiry was, however, unknown to Aristotle. This is why he called predicative determinations both *onta* (beings) and *legomena* (something said). (3) In the Middle Ages this undecidedness became the starting-point of the nominalism controversy. Aristotle refused to follow Plato in treating the meaning of predicates as an independent object. However, because he failed to perceive the semantic dimension he inevitably objectified their meaning. The result is a peculiar extension of the concept of being (on). It is - together with the concepts of the one and of something - more comprehensive than that of an object (*tode ti*).

The title 'ontology' now begins to iridesce. It would have an unequivocal sense if one were to define it, as I initially did, and as is usual in analytical philosophy, in terms of the concept of an object, or, which amounts to the same thing, in terms of the concept of being in the sense of existence; 'ontology' would then mean 'theory of objects'. In contrast to this the introduction of ontology by Aristotle, which became standard in the tradition, contains a tension which was not resolved in the tradition. This tension is a consequence of Aristotle's dual orientation: on the one hand, to the - objectual - formula 'being as being'; on the other hand, to the verbal form 'is'. He lets himself be guided by this verbal form even where it does not connote being in the sense of existence, i.e. where the 'is' is not the 'is' of a being; and since the formula 'being as being' nonetheless remains the guiding principle, the formalizing approach, which in itself would have led away from the restriction to the problem of objects, is again being cast into an objectual terminology. Aristotelian ontology transcends the formal theory of objects in the direction of a formal semantics, but in such a way that what emerges is misinterpreted in terms of an object-oriented perspective, owing to the lack of awareness of the semantic dimension.

Thus if one views the traditional elaboration, essentially determined by Aristotle, of the idea of a philosophical fundamental discipline as ontology from a language-analytical perspective (one of reflection on the meaning of words) it turns out to be unsatisfactory in regard to both of the aspects in Aristotle's preliminary conception of philosophy. Firstly, in regard to its justification: the object-orientated Aristotelian formal discipline lacks a foundation in a method of reflection; such a foundation would be provided by a formal semantics (though whether this is the only possible foundation we do not yet know). Secondly, in regard to its scope: its claim to universality could only seem convincing so long as one remained orientated to objects. But the orientation to everything (and that means: to all objects) appears itself restricted as soon as one focusses on the realm of the formal itself. The perspective on objects then corresponds to just one semantic form among others." (p. 21)

Reinhardt Grossmann (1931-2010)

"Ontology asks and tries to answer two related questions. What are the categories of the world? And what are the laws that govern these categories? In chemistry, by comparison, we search for chemical elements and the laws which they obey; and in physics we try to discover the elementary particles and their laws. But ontology is not a science among sciences. Its scope is larger; its viewpoint, fundamentally different.

When Anaximander speculated that everything is made up from the four elements -- fire, earth, air, and water -- he proposed, in effect, a rudimentary theory of chemistry. And so did Anaximenes when he maintained that everything consists of various densities of air. Ontology was born when someone realized that any view of this sort implies a distinction between individual things, on the one hand, and their properties, on the other. Ontology was born when someone realized that there are, not only different kinds of individual thing, but also different kinds of entity. This realization must have led almost immediately to a number of distinctly ontological questions. How, precisely, do individuals and properties differ? How are they related to each other? Are there perhaps any other kinds of entity? And so on. Plato's theory of forms deals with just these sorts of questions, and we think of it, therefore, as one of the first ontological inquiries. (...) But properties are not the only kind of abstract entity, as we shall see. There are numbers and, hence, there is arithmetic. There are sets and, hence, there is set theory. There are several kinds of abstract entity and, hence, several further kinds of inquiry, distinct both from the natural sciences and from ontology. And this fact raises a number of new questions for ontology. How do these kinds of abstract entity differ from each other? How are they connected

with each other? And how are they related to individual things? What looks at the beginning of the ontological enterprise like the fundamental dichotomy, namely, the distinction between individuals and properties, turns out to be just one of many equally basic distinctions.

A particular ontological theory must of course strive to accommodate all of these differences and connections. It must attempt to present us with a complete list of categories. Everything there is must find a place in the system. The theory is unsatisfactory if it is incomplete, that is, if there are entities which are not categorized. It may be argued, for example, that classes have no place within the Aristotelian framework of substance and modification of substance. But it is not enough that everything should find a category in the theory. Everything must be fitted to the proper category. An ontological theory is also faulty if it assigns entities to the wrong categories. For example, a Cartesian would contend that Aristotelians misplace the mind: A mind is a substance in its own right and not, as Aristotelians claim, a mere modification of a substance. Or it might be argued, to turn to the present, that natural numbers are, not classes of classes, but quantifiers of a certain kind. Nor, finally, must the ontology contain distinctions that make no differences. Categorical distinctions must not be made capriciously. Categories are not to be multiplied arbitrarily. Aristotelian ontology may be accused of introducing a spurious distinction by separating so-called essential from accidental properties.

Hand in hand with the discovery of categories goes the discovery and formulation of categorial laws. To discern the former is, in a sense, to find the latter; for these laws specify how the categories differ from each other and resemble each other. There is again a similarity to the natural sciences. In physics, the fundamental laws describe the behavior of elementary particles. In ontology, similarly, the fundamental laws describe the behavior of categories. For example, individuals are subject to change, while properties are not. Individuals, furthermore, even though they exemplify properties, are never exemplified by anything. Laws of this nature distinguish between different categories; and the second law mentioned also shows how they establish connections between categories. Properties are connected with entities by means of what I shall call "the nexus of

exemplification." Classes, on the other hand, are connected with entities by the membership relation. And it may be thought, mistakenly as we shall see, that properties and classes determine each other mutually." (pp. 3-5)

From: Reinhardt Grossmann, *The Categorical Structure of the World*, Bloomington: Indiana University Press 1983.

Nino Cocchiarella (1933-)

"Metaphysics consists of the separate disciplines of ontology and cosmology, each with their respective methodologies.

Formal ontology connects logical categories -- especially the categories involved in predication -- with ontological categories.

The goal of a formal ontology is the construction of a *lingua philosophica*, or *characteristica universalis*, as explicated in terms of an *ars combinatoria* and a *calculus ratiocinator* as part of a formal theory of predication.

A formal ontology should serve as the framework of a *characteristica realis*, and hence as the basis of a formal approach to science and cosmology. It should also serve as a framework for our commonsense understanding of the world." (p. 23)

From: Nino Cocchiarella, *Formal Ontology and Conceptual Realism*, New York: Springer 2007.

"Comparative formal ontology is the study of how different informal ontologies can be formalized and compared with one another in their overall adequacy as explanatory frameworks. One important criterion of adequacy of course is consistency, a condition that can be satisfied only by formalization. Formalization also makes explicit the commitments of an ontology.

There are other important criteria of adequacy as well, however, in addition to consistency and transparency of ontological commitment. One major such criterion is that a formal ontology must explain and provide an ontological ground for the distinction between being and existence, or, if the distinction is rejected, an adequate account of why it is rejected. Put simply, the problem is:

Can there be things that do not exist? Or is being the same as existence? Different formal ontologies will answer these questions in different ways.

The simplest account of the distinction between being and existence is that between actualism and possibilism, where by existence we mean physical existence, i.e., existence as some type of physical object; and by being we mean possible physical existence, i.e., physical existence in some possible world. According to possibilism, there are objects that do not now exist but could exist in the physical universe, and hence being is not the same as existence. In actualism being is the same as existence.

Possibilism: There are objects (i.e., objects that have being or) that possibly exist but that do not in fact exist.

Therefore: Existence = Being.

Actualism: Everything that is (has being) exists.

Therefore: Existence = Being.

Now the implicit understanding in formal ontology of both possibilism and actualism is that the objects that the quantifier phrases in these statements range over are values of the variables bound by the first-order quantifiers \forall and \exists (for the universal and existential quantifiers, respectively), and hence that what has being (on the level of objects) is a value of the (object) variables bound by these quantifiers. In other words, to be (an object, or thing) in both actualism and possibilism is to be a value of the bound object variables of first-order logic. This means that in possibilism, where being is not the same as existence, existence must be represented either by different quantifiers or by a predicate, e.g., $E!$, which is the predicate usually chosen for this purpose.

Another criterion of adequacy for a formal ontology is that it must explain the ontological grounds, or nature, of modality, i.e., of such modal notions as necessity and possibility, and in particular the meaning of possible physical existence. If the modalities in question are strictly formal, on the other hand, as is the case with logical necessity and possibility, then it must explain the basis of that formality.

This criterion cannot be satisfied by a set-theoretic semantics alone, especially one that allows for arbitrary sets of possible worlds (models) and so-called accessibility relations between those worlds. Such a semantics may be useful for showing the consistency of a modal logic, or perhaps even as a guide to our intuitions in showing its completeness; but it does not of itself provide an ontological ground for modality, or, in the case of logical modalities, explain why those modalities are strictly formal.

We restrict our considerations here to how physical existence, both actual and possible, is represented in a formal ontology. This does not mean that the formal ontologies considered here cannot be extended so as to include an account of how abstract objects might be represented as well, if allowed at all." (pp. 105-106)

Nino Cocchiarella, *Actualism versus Possibilism in Formal Ontology*, in: Roberto Poli, Johanna Seibt (eds.), *Theory and Applications of Ontology. Vol 1: Philosophical Perspectives.*, Dordrecht: Springer 2010, pp. 105-118.

[Jerzy Perzanowski \(1943-2009\)](#)

"2. Ontology and its parts.

Ontology is the theory of what there is, the theory of being. It considers the full ontological universe, all items that are possible, describing and classifying them and searching for the principles of this universe, principles of taking together the plurality of ontic objects, particular beings, into one -- the Being.

Thus two questions govern ontological investigations: what is possible and why? The second question, concerning the being's principles, may be strengthened to the deepest -- last in logical order -- question: how that which is given, or rather what there is, is possible? The question about principles of being, i.e. general laws of nature, plus the question that makes possible what there is and renders impossible what there isn't? Because of its matter and problematic ontology is the most general discursive discipline. It is the general theory of possibility. By the nature of its questions it is also very modal.

3. Ontology has two sides: descriptive -- phenomenological, and theoretical -- formal.

Hence, it is divided into three parts: onto-ontics (In brief: ontics), ontomethodology and ontologic.

4. Ontics is devoted to the selection of ontological problems and notions, their differentiation, classification and analysis. Doing ontics we construe the conceptual net of a given ontological theory, i.e. its categories. It is also one of the tasks of ontics to state ontological hypotheses, based on the previous analysis of concepts.

Ontics, being a part of ontology, is itself complex. Its further description depends on the general idea of ontology, on accepted classification of ontological concepts. For example, Ingarden has distinguished three parts of ontology: the material ontics, the formal ontics and the existential one. Notice that his ontology is, in our terms, ontics!5. Ontomethodology concerns ways of doing ontology, methods and types of ontological constructions as well as principles of choice between ontological statements and theories. Examples of such ontomethodic principles are: the principle of non-contradiction, the principle of sufficient reason, and Ockham's razor.

Indication and discussion of the appropriate principles is necessary for sure for any critique of ontological theories, particularly the critique of the logical means used in ontology.

6. Ontologic is a logic of the ontic realm, It is an investigation of ontological connections, concerning particularly logical relations between pieces of ontic information. Also, it is a theory of the fundament of ontic relations.

Ontologic considers the organization of the ontological universe, trying to describe its mechanism. It describes the complexity of the Being, looking for its laws and base - the Logos.

7. Ontics is a purely descriptive and analytical discipline, ontologic is speculative and formal. They are, however, closely connected and interrelated disciplines, affecting one another. The product of ontics is a description, usually complex, of the ontological universe, whereas ontologic supplies different theories of this universe.

Certainly, at present ontic considerations are more common. In ontology we have many descriptions and claims, but not as many theories.

Among Polish ontologists, for instance, Ingarden may be regarded as a typical ontics reasoner, while Leśniewski should be treated as a typical ontologist." (pp. 23-24)

From: Jerzy Perzanowski, *Ontologies and Ontologies* in: Ewa Zarnecka-Bialy (ed.), *Logic Counts*, Dordrecht: Kluwer 1990, pp. 23-42.

"2. Beings, the Being and Being.

2.1 Ontology is the discipline of being. It is the theory of what there is, why and how.

As the tradition makes clear, the verb 'to be' used here is ambiguous. It refers either to the domain of existing objects, depending therefore on an appropriate theory of existence, or to what really exists (in a metaphysical sense) - to logos which is behind existing items and behind the facts. The latter realm emerges when emphasis is placed on the second part of the above definition, i.e., on the questions: why and how? The answer we are looking for is of the form: there is x because x is possible and in addition for existing objects x satisfies certain specific conditions of existence. Possibility is frequently explained as a matter of consistency or coherence, whereas existence conditions are specified in terms of stability, homeostasis, actualization, etc.

2.2 Ontology is distinguished by its extreme generality and by the richness and fertility of its basic notions.

The most basic ontological notions are notions of a particular being and the being. Both notions can be approached in at least three ways: possibilistically, connectionally (or qualitatively), and through what we shall call verb-type-ontologies.

2.3 In the verb-type-approach both notions - of a being and the being - are obtained from the verb 'to be' by transformations and nominalizations.

The theory behind the latter is quite complicated, much more than is the grammar of the verb 'to be' itself, and this is complicated enough. In most Indo-European languages we must distinguish at least eleven variants of the verb 'to be', which leads to a rather rich variety of verb-type-ontologies.

A being here is defined as any item which is in a sense specified according to an appropriate variant of the verb 'to be'.

The verb 'to be' has its basic form in the context 'S is P', where it denotes a binary relation. The most general verb-type-ontology is therefore the general theory of relations. By specification of variants of the verb 'to be' we obtain variants of the verb-type-ontology, for example the ontology of things and properties and the set-theoretic ontology.

2.4 In the possibilistic approach a being is defined as any possible object, hence the ontological universe is understood as the space of all possibilities. Its ontology is therefore the general theory of possibility.

2.5 The qualitative or connectional approach deals with the most traditional concept of a being, defined as any item having some quality (or as a subject of qualities).

Here at least three topics need further elaboration: the ontological connection itself and the items connected: qualities and subjects. In consequence, there are four variants of this type of ontology: the qualitative one, stressing qualities, the subjective one, putting emphasis on subjects (individuals); the connectional one, stressing the formal side of the ontological connection, and the eclectic one, which tries to develop all three factors in unison.

In the present essay I shall consider several fundamental topics of connectional ontology." (pp. 64-65)

Jorge J. E. Gracia (1942-2021)

"I must now make a few brief comments about the principal parts of metaphysics. This is necessary because often particular authors confuse metaphysics with some of its parts, thus unnecessarily restricting the scope of the discipline. The discussion of such a taxonomy, then, prevents confusions which may obscure the nature of metaphysics.

Some of the parts of metaphysics with which it is most frequently confused are ontology, etiology, philosophical anthropology, theology, and philosophy of language. There are many others, but for the sake of brevity I shall use only these as examples.

Consider those philosophers who identify metaphysics with ontology. Ontology is concerned with the study of the most fundamental categories of being and with the relations among them. This naturally explains the use of the term "ontology" and suggests that the discipline deals with being, a traditional description of the object of metaphysics. The use of the term "ontology" to refer to metaphysics appears in early modern philosophy and is still with us. Indeed many contemporary metaphysicians speak of their discipline as ontology.

Yet, if ontology involves only the subject matter mentioned, it is clear that it excludes much that metaphysicians discuss. For example, much of what is discussed in the philosophy of mind falls outside ontology, for it does not concern the development of the fundamental categories of being and the exploration of the relations among them. It concerns rather the categorization of the mind and the description of its relations to various categories, and this does not seem to be a part of ontology." (pp. 147-148, notes omitted)

From: Jorge J. E. Gracia, *Metaphysics and Its Task. The Search for the Categorical Foundation of Knowledge*, Albany: State University of New York Press 1999.

[Kit Fine \(1946-\)](#)

"An ontology consists of all those items which are, in an appropriate sense, accepted. There are different views as to what it is for an item to be accepted into an ontology. For some, it is merely a matter of existence or being; for others, it is a matter of real existence or being,

where this is something which stands in contrast to ordinary existence or being. This is an issue which, important as it is, will not concern me here; for most of what I have to say will remain correct under any reasonable understanding of the term. However, it is perhaps worth pointing out that I do not require the term to have any psychological connotations. An item is accepted into an ontology because it should be there, not necessarily because someone puts it there. It is, if you like, the ontology which accepts the item and not the person who endorses the ontology.

An ontology is total; it includes everything that is accepted. By contrast, we may talk of a partial ontology or of a subontology, which includes some, but perhaps not all, of what is accepted.

An ontology is actual; it includes everything that it is correct to accept. By contrast, we may talk of a possible ontology, which consists of everything that might be accepted (as the total ontology).

One might take a sceptical stand on either of these two distinctions. One might hold that there is no such thing as a total, as opposed to a partial, ontology; for any ontology there is always a larger ontology within which it is contained. (The paradoxes have led some to hold such a view for the ontology of sets). And one might also hold that there is no such thing as an actual, as opposed to a possible, ontology. There is nothing which counts as the correct ontological stand; there are merely different, equally legitimate, stands.

I shall not engage with the first form of scepticism, though what I have to say can, to some extent, be made to accommodate it. However, I shall engage with the second form. I shall attempt to see how absolutist notions might be eschewed in the description of an ontology.

This is not because I endorse the second form of scepticism. It is more that I am interested in the distinction on which the position rests rather than with the position itself. The sceptic draws a line. But one may be interested in the line without accepting it as a boundary." (p. 265)

From: Kit Fine, "A Study of Ontology", *Noûs* 25, 1991, pp. 263-294.

Dale Jacquette (1953-2016)

"The word ontology has four established meanings in philosophy.

There are two intersecting sets of distinctions. Pure philosophical ontology is different from applied scientific ontology, and ontology in the applied scientific sense can be understood either as a discipline or a domain.

Ontology as discipline is a method or activity of enquiry into philosophical problems about the concept or facts of existence.

Ontology as a domain is the outcome or subject matter of ontology as a discipline. Applied scientific ontology construed as an existence domain can be further subdivided as the theoretical commitment to a preferred choice of existent entities, or to the real existent entities themselves, including the actual world considered as a whole, also known as the extant domain. Ontology as a theoretical domain is thus a description or inventory of the things that are supposed to exist according to a particular theory, which might but need not be true. Ontology as the extant domain, in contrast, is the actual world of all real existent entities, whatever these turn out to be, identified by a true complete applied ontological theory. As a result, we must be careful in reading philosophical works on ontology, when an author speaks of "ontology" without qualification, not to confuse the intended sense of the word with any of the alternatives." (pp. 2-3)

From: Dale Jacquette, *Ontology*, Montreal: McGill-Queen's University Press 2002.

Roberto Poli (1955-)

"Ontology is the theory of objects. And it is so of every type of object, concrete and abstract, existent and non-existent, real and ideal, independent and dependent. Whatever objects we are or might be dealing with, ontology is their theory. *Object* is used in this sense as synonymous with the traditional term *Being*."

"THESIS 1. An ontology is not a catalogue of the world, a taxonomy, a terminology or a list of objects, things or whatever else. If anything, an ontology is the general framework (= structure) within which catalogues, taxonomies, terminologies may be given suitable organization. This means that somewhere a boundary must be drawn between ontology and taxonomy.

THESIS 2. An ontology is not reducible to pure cognitive analysis (in philosophical terms, it is not an epistemology or a theory of knowledge). Ontology represents the 'objective' side (= on the side of the object), and the theory of knowledge the subjective side (= on the side of the knowing subject) of reality. The two sides are obviously interdependent, but this is not to imply that they are the same (exactly like the front and rear of a coin). In order to conduct ontological analysis, it is necessary to 'neutralize', so to speak, the cognitive dimension, that is, to reduce it to the default state. I assume that the default state is the descriptive one, where the dimensions of attention, of interest, etc., are as neutral as possible (= natural attitude). It is of course possible to modify the default state and construct ontologies of the other cognitive states as well, but this involves modifications of the central structure.

THESIS 3. There is nothing to prevent the existence of several ontologies, in the plural. In this case too, ontological study is useful because, at the very least, it renders the top categories explicit and therefore enables verification of whether there are reasonable translation strategies and of which categorization can serve best to achieve certain objectives." (p. 313)

Key Terms in Ontology. Introductory Remarks

Introduction

The following pages are an attempt to give a synthetic panorama of the current research on some main concepts of ontology, both from an historical and from a theoretical point of view.

The main authors who contribute to the philosophical refinement of the concepts will be cited, with special attention paid to the relevant contributions from linguistics, when appropriate, and bibliographical references for further study; attention will be given to the linguistic relativity hypothesis: i.e. what influence (if any) the structure and lexicon of language had on the thought.

The "question of being" initially evolved in Greece and India (1), (Greek and Sanskrit are both Indo-European languages), but not in China or Islam (the difficulties of translating the concept of "being" in Arabic are illustrated by the well-known Al-Farabi's chapter in his "*Kitab-al-huruf*" - *The book of Letters*) (2).

Philosophers, with few exceptions (e.g. Wilhelm von Humboldt, or Adolf Trendelenburg's work on the grammatical origin of Aristotelian *Categories*) have generally neglected this problem, or have spoken of the excellence of Greek language to explain the historical origins of metaphysics (e.g. Martin Heidegger: "For along with the German language, Greek (in regard to the possibilities of thinking) is at once the most powerful and the most spiritual of languages") (3). I think that a consideration of the recent results of linguistic research would provide a better evaluation of the question.

In some cases an attempt will be made to give a brief information about the equivalent concepts of Arabic, Chinese and Indian

philosophy to offer a comparative vision of the problems.

I will made these additions only with much hesitation; I am not an Orientalist and my only justification is the lack of relevant information available on the Internet about this important subject; perhaps experienced scholars will supply more advanced contributions to complete, and if necessary to correct, my job.

I hope to add other items in future; suggestions and criticism are equally welcome.

Notes

(1) "There is no equivalent to the Aristotelian project of a 'science of being qua being' in the Indian philosophical tradition, nor the Platonic perplexity about being and nonbeing; nor is there an explicit counterpart to Wolff's conception of 'ontology'. Yet being is one of the central and pervasive themes of Indian thought. It is the object of intense reflection, discussion, and disagreement, and a catalyst of debate among the competing schools of Hinduism, Buddhism, and Jainism. Key Terms in Ontology: *Being*

The concept of being in linguistics

"Any linguistic study of the Greek verb *be* is essentially conditioned, and perhaps ultimately motivated, by the philosophic career of this word. We know what an extraordinary career it has been. It seems fair to say, with Benveniste, that the systematic development of a concept of Being in Greek philosophy from Parmenides to Aristotle, and then in a more mechanical way from the Stoics to Plotinus, relies upon the pre-existing disposition of the language to make a very general and diversified use of the verb *einai*. Furthermore, insofar as the notions expressed by *on*, *einai*, and *ousia* in Greek underlie the doctrines of Being, substance, essence, and existence in Latin, in Arabic, and in modern philosophy from Descartes to Heidegger and perhaps to Quine, we may say that the usage of the Greek verb *be* studied here forms the historical basis for the ontological tradition of the West, as the very term "ontology" suggests.

At the same time it is generally recognized that this wide range of uses for the single verb *eimi* in Greek reflects a state of affairs which is "peculiar to Indo-European languages, and by no means a universal situation or a necessary condition." (1) The present monograph series on "the verb 'be' and its synonyms" shows just how far the languages of the earth may differ from one another in their expression for existence, for predication with nouns or with adjectives, for locative predication, and so forth. The topic of *be* can itself scarcely be defined except by reference to Indo-European verbs representing the root **es-*. The question naturally arises whether an historical peculiarity of this kind can be of any fundamental importance for general linguistics and, even more pressing, whether a concept reflecting the Indo-European use of **es-* can be of any general significance in philosophy." (p. 1)

The concept of being in Western philosophy before Heidegger

"The great intellectual adventure that is Greek philosophy may be regarded, on a somewhat simplistic view, as structured around three basic questions, occurring historically in the following order: What is the world made of? or What is there?; What should we do?; How can we know? These may be seen as lying behind what were later distinguished (perhaps first, in a formal way, I. Plato's pupil Xenocrates as the three main divisions of Greek philosophy, physics, ethics, and logic.

I am here concerned only with the first and most basic question, since that constitutes the inquiry about being. Before beginning a historical survey, it would be well to attempt a definition of the concept with which we are concerned. In the context of Greek thought, then, "being" (often characterized by the additional qualification "real" or "true") denotes a single, permanent, unchanging, fundamental reality, to which is habitually opposed the inconstant flux and variety of visible things. This reality is initially seen simply as a sort of substratum out of which the multiplicity of appearances may evolve, but progressively there come to be added to it other features, such as absolute unity (or, conversely, infinite multiplicity), eternity (ultimately timelessness), incorporeality (or, conversely, basic corporeality), and rationality (or, conversely, blind necessity). In short, "being" (*on*, or *ousia*) becomes in Greek philosophy the repository of all the concepts that can be thought up to characterize the idealized opposite of what we see around us -- its counterpart, which comprises all aspects of the everyday physical world, being termed "becoming" (*genesis*)." (p. 51)

From: John Dillon, *The Question of Being*, in: Jacques Brunschwig, Geoffrey E. R. Lloyd (eds.), Harvard: Harvard University Press 2000 pp. 51-71.

In a first acceptation, the word being is a noun. As such, it signifies either d being (that is, the substance, nature, and essence of anything existent), or being itself, a property common to all that which can rightly be said to be. In a second acceptation, the same word is the present participle of the verb 'to be.' As a verb, it no longer signifies something that is, nor even existence in general, but rather the very act whereby any given reality actually is, or exists. Let us call this act a 'to be,' in contradistinction to what is commonly called 'a being.' It appears at once that, at least to the mind, the relation of 'to be' to 'being' is not a reciprocal one. 'Being' is conceivable, 'to be' is not. We cannot possibly conceive an 'is' except as belonging to some thing that is, or exists. But the reverse is not true. Being is quite conceivable apart from actual existence; so much so that the very first and the most universal of all the distinctions in the realm of being is that which divides it into two classes, that of the real and that of the possible. Now what is it to conceive a being as merely possible, if not to conceive it apart from actual existence? A 'possible' is a being which has not yet received, or which has already lost, its own to be. Since being is thinkable apart from actual existence, whereas actual existence is not thinkable apart from being, philosophers will simply yield to one of the fundamental facilities of the human mind by positing being minus actual existence as the first principle of metaphysics." (pp. 2-3)

From: Étienne Gilson, *Being and Some Philosophers*, Toronto: Pontifical Institute of Mediaeval Studies, Second edition, 1952.

"When the early Greek thinkers initiated philosophical speculation, the very first question they asked themselves was: What stuff is reality made of? Taken in itself, this question was strikingly indicative of the most fundamental need of the human mind. To understand something is for us to conceive it as identical in nature with something else that we already know. To know the nature of reality at large is therefore for us to understand that each and every one of the innumerable things which make up the universe is, at

bottom, identical in nature with each and every other thing. Prompted by this unshakable conviction, unshakable because rooted in the very essence of human understanding, the early Greek thinkers successively attempted to reduce nature in general to water, then to air, then to fire, until one of them at last hit upon the right answer to the question, by saying that the primary stuff which reality is made of is being.

The answer was obviously correct, for it is not at once evident that, in the last analysis, air and fire are nothing else than water, or that, conversely, water itself is nothing else than either air or fire; but it cannot be doubted that, whatever else they may be, water, air and fire have in common at least this property, that they are. Each of them is a being, and, since the same can be said of everything else, we cannot avoid the conclusion that being is the only property certainly shared in common by all that which is. Being, then, is the fundamental and ultimate element of reality.

When he made this discovery, Parmenides of Elea at once carried metaphysical speculation to what was always to remain one of its ultimate limits; but, at the same time, he entangled himself in what still is for us one of the worst metaphysical difficulties. It had been possible for Parmenides' predecessors to identify nature with water, fire or air, without going to the trouble of defining the meaning of those terms. If I say that everything is water, everybody will understand what I mean, but if I say that everything is being, I can safely expect to be asked: what is being? For indeed we all know many beings, but what being itself is, or what it is to be, is an extremely obscure and intricate question. Parmenides could hardly avoid telling us what sort of reality being itself is. In point of fact, he was bold enough to raise the problem and clear-sighted enough to give it an answer which still deserves to hold our attention." (pp. 6-7)

From: Étienne Gilson, *Being and some philosophers* Toronto: Pontifical Institute of Mediaeval Studies, Second edition, 1952.

The concept of being according to Heidegger

"If for us Being is just an empty word and an evanescent meaning, then we must at least try to grasp fully this last remnant of a connection. So we ask, to begin with: 1. What sort of word is this

anyway -- Being -- as regards its formal character as a word? 2. What does linguistics tell us about the originary meaning of this word? To put this in scholarly terms, we are asking 1) about the grammar and 2) about the etymology of the word Being.

The grammatical analysis of words is neither exclusively nor primarily concerned with their written or spoken form. It takes these formal elements as clues to definite directions and differences in direction in the possible meanings of words; these directions dictate how the words can be used within a sentence or within a larger discursive structure. (...) We can easily see that in the formation of the word Being, the decisive precursor is the infinitive 'to be.' This form of the verb is transformed into a substantive. The character of our word Being, as a word, is determined, accordingly, by three grammatical forms: verb, infinitive, and substantive. Thus our first task is to understand the meaning of these grammatical forms. Of the three we have named, verb and substantive are among those that were first recognized at the start of Western grammar and that even today are taken as the fundamental forms of words and of language in general. And so, with the question about the essence of the substantive and of the verb, we find ourselves in the midst of the question about the essence of language. For the question of whether the primordial form of the word is the noun (substantive) or the verb coincides with the question of the originary character of speech and speaking. In turn, this question entails the question of the origin of language. We cannot start by immediately going into this question. We are forced onto a detour. We will restrict ourselves in what follows to that grammatical form which provides the transitional phase in the development of the verbal substantive: the infinitive (to go, to come, to fall, to sing, to hope, to be, etc.).

What does "infinitive" mean? This term is an abbreviation of the complete one: *modus infinitivus*, the mode of unboundedness, of indeterminateness, regarding the manner in which a verb exercises and indicates the function and direction of its meaning. (...).

Above all we must consider the fact that the definitive differentiation of the fundamental forms of words (noun and verb) in the Greek form of *onoma* and *rhema* was worked out and first established in the most immediate and intimate connection with the conception

and interpretation of Being that has been definitive for the entire West. This inner bond between these two happenings is accessible to us unimpaired and is carried out in full clarity in Plato's *Sophist*. The terms *onoma* and *rhema* were already known before Plato, of course. But at that time, and still in Plato, they were understood as terms denoting the use of words as a whole. *Onoma* means the linguistic name as distinguished from the named person or thing, and it also means the speaking of a word, which was later conceived grammatically as *rhema*. And *rhema* in turn means the spoken word, speech; the rhetor is the speaker, the orator, who uses not only verbs but also *onomata* in the narrower meaning of the substantive.

The fact that both terms originally governed an equally wide domain is important for our later point that the much-discussed question in linguistics of whether the noun or the verb represents the primordial form of the word is not a genuine question. This pseudo-question first arose in the context of a developed grammar rather than from a vision of the essence of language, an essence not yet dissected by grammar." (pp. 55-60, notes omitted)

From: Martin Heidegger, *Introduction to Metaphysics* New translation by Gregory Fried and Richard Polt, New Haven: Yale University Press 2000.

The history of the verb "Be" in Ancient Greek

"On the other hand, by means of the so-called noun clause the Hebrew language is much better able to express the 'static' or 'that which is' in its logical sense than the Greek and our modern languages permit with their copula and their verbs of inaction. We shall define the noun clause in agreement with Gesenius-Kautzsch, in order to be able to understand the 'being' expressed in it. Every sentence, the subject as well as the predicate of which is a noun or noun equivalent is called a noun clause, while in a verbal clause the predicate is a finite verb. This distinction is indispensable for more subtle understanding of Hebrew syntax (as of Semitics in general) because it is not merely a matter of an external, formal distinction in meaning but of one that goes to the depths of the language. The noun clause, the predicate of which is a substantive, offers something fixed, not active, in short, a 'being'; the verbal clause on the other

hand asserts something moving and in flux, an event and an action. The noun clause with a participial predicate can also assert something moving and in flux, except that here the event and action is fixed as something not active and enduring, as opposed to the verbal clause. For our purpose, it is not necessary to discuss all the various kinds of noun classes, and in particular not those with participial predicates which should logically be considered as verbal clauses." (pp. 35-36, some notes omitted)

(1) Friedrich Heinrich Wilhelm Gesenius (1786-1842) and Emil Friedrich Kautzsch (1841-1910), *Gesenius' Hebrew Grammar*. Edited and enlarged by E. Kautzsch Translated and revised from the German 28th edition by Arthur Ernest Cowley. 2nd edition, Oxford: Clarendon Press, 1910. [Reprinted by Oxford University Press in 1995].

From: Thorleif Boman, *Hebrew Thought Compared with Greek*, English updated translation by Jules Moreau, Philadelphia: Westminster Press, 1960; reprinted by W. W. Norton & Company, 2002. Original edition: *Das hebräische Denken im Vergleich mit dem griechischen*, Göttingen, Vandenhoeck & Ruprecht, 1952 (second revised edition 1954).

"What is the basic fact of 'being' for the Israelites will result from the analysis of the verb *hayah* that follows.

A) The verb *hayah*: We must devote special attention to this verb not only because it occurs most frequently but also because the verbal problems discussed above are concentrated in this verb and appear in it in their most difficult form. (...) The most important meanings and uses of our verb 'to be' (and its equivalents in other Indo-European languages) are: (1) to express being or existence; (2) to serve as a copula. Now, as we have shown above, Hebrew and the other Semitic languages do not need a copula because of the noun clause. As a general rule, therefore, it may be said that *hayah* is not used as a copula; real or supposed exceptions to this rule will be cited later. The characteristic mark of *hayah*, in distinction from our verb 'to be', is that it is a true verb with full verbal force. The majority of

formal considerations as well as the actual ones lead to this conclusion:

I. The peculiarity of emphasizing the verbal idea by use of the infinitive absolute before finite verbs;

II. the occurrence of the passive form *Niph'al*;

III. its frequent occurrence in parallel with other verbs whose verbal force is beyond doubt; this is so frequent an occurrence that a few examples will suffice: Jahveh hurled a great wind, and a mighty tempest was (Jonah 1.4); God created (made, spoke) and the corresponding thing was (Gen. 1.3, 9, 11); its parallel use with *qûm* = 'be realized' (Isa. 7.7; 14.24); the messengers of the king command the prophet Micaiah to prophesy safety and victory, 'Let thy word be as the word of one of them (i.e. the prophets of good fortune)', (I Kings 22.13).

The meaning of *hayah* is apparently manifold; *hayah* has thus been considered to some extent a general word which can mean everything possible and therefore designates nothing characteristic. Closer examination reveals, however, that this is not the case. It is therefore necessary to establish the many meanings and shades of meaning of *hayah* and to find their inner connexion. We shall use first the results of Ratschow (1) who has examined the occurrences of *hayah* in the Old Testament with a thoroughness hardly to be excelled and in whose work is to be found extensive evidence. He found three principal meanings: 'to become', 'to be', and 'to effect'; but these are related internally and form a unity. In the main this will be right, and it agrees with our understanding of Hebrew thought; we must object, however, to details." (pp. 38-39, notes omitted).

Notes

(1) Carl H. Ratschow, *Werden und Wirken, Eine Untersuchung des wortes hajah als Beitrag zur Wirklichkeitserfassung des Alten Testaments* ("Beihefte zur Zeitschrift für die alttestamentliche Wissenschaft", 70), Berlin: A. Töpelmann, 1941.

2002. Original edition: *Das hebräische Denken im Vergleich mit dem griechischen*, Göttingen: Vandenhoeck & Ruprecht, 1952 (second revised edition 1954).

"In modern biblical theology it is commonly held that the Israelites were not interested in 'existence' as distinct from active existence, action or life; and correspondingly that the language has no means of expressing mere existence. The same seems to be the opinion of Boman, who several times says that a static being is a nothing to the Israelites.

It was mentioned earlier that 'the verb 'to be' as copula or existential was one of the subjects of the questionnaire circulated by Basson and O'Connor and reported on in their article. On this question they got an answer, and they report as follows: 'Semitic languages have in general no copula, but Hebrew and Assyrian both have a special word for "exists" '.¹ Does this contradict the opinion I have just described? There are at least three linguistic phenomena which are relevant to the discussion of 'to be' in Hebrew: (a) The ordinary type of sentence where the copula 'is' is used in English, such as 'David is the king', 'he is the man', has no verb as copula in Hebrew. Hebrew uses the nominal sentence, which is a mere juxtaposition of the two elements 'David' and 'the king'. The nominal sentence is a very well-established feature of Semitic syntax. A common addition is the pronoun 'he' or 'she' introduced after the subject, giving the sentence 'David-he-the-king'. Since this pronoun is not indispensable and is indeed very frequently not so inserted, I think it can be neglected in a discussion of the copula.

(b) The verb *hayah* 'to be'. This is discussed at length by Boman, and I shall later make some remarks about his treatment of it. For the present we have to make clear only the most important fact for the co-ordination of *hayah* with other terms corresponding to English 'to be': it is only at certain points that this verb coincides in function with 'to be as copula or existential'. In a very large number of its occurrences it will be well translated by 'come to be' or 'come to pass'. Or, conversely, English sentences using 'is' in the present tense either as copula or as existential will seldom be rendered into Hebrew with *hayah*; they will much more normally use the nominal sentence, or the particle *yel* 'there is'. We are not on the other hand

justified in removing *hayah* altogether from the sphere of what is relevant to English 'is' and making it equivalent (say) to English 'become'. For example, a statement like 'the earth is waste' will have the nominal sentence, and no verb; but if we put it in the past and say 'the earth was waste (and is no longer so)', then the verb *hayah* is used, as in Gen. I: 2. It would be quite perverse to insist on the meaning 'became' here, and so a certain overlap with 'be' has to be observed. In fact the sense of 'come to be' or 'come to pass' is not to be explained by going over to 'become' as the basic sense, but by noticing that very frequent uses have an ingressive element which with a verb meaning 'be' will lead to a sense roughly of 'come to be' or 'come to pass'.

(c) The word *yeš*; 'there is' and the opposite '*ayin* or '*en* 'there is not'. This is of course the 'special word for exists' mentioned in the report above. Boman in his discussion of 'being' does not mention this frequent and important word at all. Moreover, a considerable complication is introduced into the discussion by this word. Basson and O'Connor (1) are right in saying that it is a 'special word for 'exists', in the sense that it is not normally used as a copula in sentences like 'David is the king'. You use it in sentences like 'There is a dish on the table' or 'There is a God in heaven'.

The complication to which I refer is that this word, which we might describe rather vaguely as a particle, is certainly not a verb, has some of the characteristics of the noun and may be translated 'being, existence' in a rather over-literal rendering.

(...)

"Now another point of some importance can be illustrated from this word. The point I wish to make is that the question whether the Israelites laid any emphasis on 'mere' existence as distinct from active existence of some kind is a different one from the question whether their language had words that could express 'mere' existence. The word *yeš*; can be well translated by 'there is', and as in English 'there is' we press too far if we try to find in it the expression of 'mere' existence. In fact many cases which use it have also some locality indicated: 'There is bread in my house', 'There is Yahweh in this place'. This is no doubt the 'existential' sense of 'is' as against the 'copula' type. Nevertheless 'exists' would not be a good translation in

these sentences, since we would not normally say 'Bread exists in my house' or 'There exists a dish on the table'. In other words, the 'existential' use of the word 'is' does not coincide semantically with 'exists' and does not raise the problem of 'mere' existence, especially when a locality is indicated."(pp. 58-61, some notes omitted)

The meaning of "εἶναι" AND "τοῦ ὄν" in Ancient Greek

"BEING. The closest equivalent to the word "being" in ancient Greek is *to on*, the present participle of *einai*, to be (*ON*, *ONTA*). The first part of Parmenides' poem has as its focus *esti*, the third person singular of *einai*, and *to eon*, the equivalent of *to on* in Parmenides' dialect. For Parmenides, "being" (*to on*) is one, timeless and changeless, and this, he says, is "the truth"; all talk about plurality and change is "opinion" (*doxa*), and not the truth about "being."

Since *to on* and *to onta* are, in ordinary Greek, often used as stand-ins for names of one or more individual things, other Greek philosophers looked for other locutions to talk about "being" in ontologically loaded contexts. One of Plato's favorite locutions to refer to the forms (*eide*) is *to ontos on*, using the adverb made from the participle to intensify its meaning, literally, "the beingly being," but typically translated into English as "the really real." *Ontos* was in common use to mean, roughly, "really" or "actually" or "in fact" but combining it with the participle seems to be Plato's coinage.

Plato also adopts the abstract noun built on the same participle, *ousia*, the stem *ont* -- plus the abstract noun ending -- *sia*. In ordinary Greek, this word must have some of the resonance that "existence" has in ordinary English, but it is most often used, outside of philosophical contexts, to talk about property or wealth or about important personal characteristics. In English translations of Plato's

dialogues, the word *ousia* is sometimes rendered "Reality" and sometimes "being," while in English translations of Aristotle the word "being" fairly reliably translates "*to on*," and *ousia* is typically translated "substance" or "entity" (see *OUSIA*).

Thus, in those of Plato's dialogues where the forms play a role the distinction between being and becoming is equivalent to the distinction between forms and phenomena (*phainomena*), or between Object of knowledge (*epistemē*) and object of opinion (*doxa*).

Aristotle does not use the locution *to ontos on*; apart from his exceedingly widespread use of the word *ousia*. We may note the locution *to on he on*, typically translated "being qua being," and *to on haplos* (that which simply is). More generally, Aristotle frequently talks of the many senses of "being": in one way, "being" (*to einai*, the infinitive, or *to on*) has as many senses as the categories (i.e., 10), but there is also a distinction between potential and actual being, between essential and accidental, and an equation of being and truth.

The Stoics tend to use the word *hyparchein* for both existence and predication." (pp. 67-68)

From: Anthony Preus, *Historical Dictionary of Ancient Greek Philosophy*, Lanham: Scarecrow Press, 2007.

"*einai*: to be, to exist; *to on*: that which is, the real; *ousia*: being, essence. This verb caused great philosophical difficulty to the Greeks and consequential difficulties for us. Much of the trouble arises from the fact that one can say *Platôn esti* - Plato exists - or *Platôn esti philosophos* -- Plato is a philosopher - making use of the same verb, whereas in English 'Plato is' is at best an unidiomatic way of saying that he exists. This double use led some earlier Greek philosophers to think that a sentence beginning *Platôn ouk esti...* must deny the existence of Plato even if the next word is *barbaros*. This leads to translation difficulties for us, as for instance with the sentence *ei ti phaneiê hoion hama on to kai mê on, to toiouton metaxu keisthai tou eilikrinôs ontos kai tou pantôs mê ontos* (Plato Rep. 478d), which might be translated either as 'if something should appear such as both to have and not to have a certain predicate [we said that] such a thing would lie between being clearly of that sort and not being so at

all' or as 'if something should appear such that it simultaneously exists and does not exist [we said that] such a thing would lie between clearly existing and not existing at all'. It was presumably these difficulties that led Parmenides to say such things as *khê to legein to noein t'eon emmenai esti gar einai, mêden d'ouk estin* - that of which one can speak and think must be: for it is possible for it, but not for nothing, to be (Parmenides in Simplicius, *Physics* 117.4). In an impersonal use *esti* frequently means 'it is possible' as in *estin adikounta mêpô adikon einai* - it is possible to do what is unjust without being an unjust person (Aristotle *N.E.* 1134a 17), and in the quotation from Parmenides above. There are also adverbial expressions such as *estin hote*, sometimes, and *estin hôs*, in some ways."

"*on*: to *on*, in the widest sense, is everything that is and, as such, is contrasted with to *mê on*, that which is not; in a narrower use to *on*, sometimes called for clarity to *ontôs on*, the really real, is unchanging and imperishable and eternal, and is contrasted with the *gignomenon* that is changing and perishable. In the dispute between Parmenides and the atomists it is hard to doubt that to *mê on* as the non-existent is confused with empty space: *oute gar an gnoiês to ge mê on: ou gar anuston* -- you cannot know that which is not; it is impossible (Parmenides, fr. 2); *ouden gar estin ê estai allo parex tou eontos* -- nothing other than what is either is or will be (Parmenides, fr. 8). But Simplicius reports Leucippus as saying *ouden mallon to on ê to mê on huparkhein* -- there is that which is no more than that which is not (Simplicius, *Physics* 28.12); here to *mê on* seems to be the *kenon*, void; cf. the *den* of Democritus. In the narrower use, to *men pantelôs on pantelôs gnôston* -- the completely real is completely knowable (Plato *Rep.* 477a); *ei gar panta to onta tou agathou ephietai, dêlon hoti to prôtôs agathon epekeina esti tôn ontôn* -- for if everything that is aims at the good, it is clear that the primary good transcends things that are (Proclus, *Elements of Theology* 8); *to gar houtôs on proteron têi phusei tou gignomenou esti* - that which is in this [narrow] way is prior in its nature to the becoming. (Simplicius, *Physics* 1337.4)." (pp. 49-50)

London: Duckworth 1990.

"*on ónta* (pl.): being, beings.

1. The question of the nature of being first arose in the context of Parmenides' series of logical dichotomies between being and nonbeing (me on): that which is, cannot not be; that which is not, cannot be, i.e., a denial of passage from being to nonbeing or genesis (q.v.; fr. 2), and its corollary, a denial of change and motion (fr. 8, lines 26-33, 42-50; for the theological correlatives of this, see nous 2). Secondly, being is one and not many (fr. 8, lines 22-25) . And finally, the epistemological premiss: only being can be known or named; nonbeing cannot (fr. 3; fr. 8, line 34); see doxa. Being, in short, is a sphere (fr. 8, lines 42-4g) . Most of the later pre-Socratics denied this latter premiss (cf. stoicheion and atomon), as did Plato for whom the really real (to ontos on) were the plural eide, and who directed the latter half of the Parmenides (137b-166c) against it.

2. The solution to the nonbeing dilemma (for its epistemological solution, see doxa and heteron) and the key to the analysis of genesis began with Plato's positing of space (see hypodochē) in which genesis takes place, and which stands midway between true being and nonbeing (Tim. 52a-c). For Plato, as for Parmenides, absolute nonbeing is nonsense (Sophist 238c), but there is a relative grade illustrated not only by the Receptacle cited above, but by sensible things (aistheta) as well (Sophist 240b; Timaeus. 35a, 52c). Among the Platonic hierarchy of Forms, there is aneidōs of being; indeed it is one of the most important Forms that pervade all the rest (Sophist 254b-d; compare this with the peculiar nature of on in Aristotle, Metaphysics 1003a) . Further, Plato distinguishes real beings (ontos onta) from those that have genesis, and in Timaeus 28a he works out an epistemological-ontological correlation: onta are known by thought (noesis) accompanied by a rational account (logos); generated beings are grasped by opinion (or judgment, see doxa) based on sensation (aisthesis).

3. Since being is the object of the science of metaphysics (Metaphysics 1031a) Aristotle's treatment of on is much more elaborate. The first distinction is between "being qua being" (to on he on), which is the object of metaphysics, and individual beings (onta), which are the objects of the other sciences. This is the view in Metaphysics 1003a, but Aristotle is not consistent on the point:

elsewhere (see Metaphysics 1026a; Physics 192a, 194b; De an. 403b) he states that metaphysics studies being that is separate and unmoving (see theologia). Again, 'being' is peculiar in that it is defined not univocally or generically, but analogously through all the categories (Metaphysics 1003a), and in this it is like 'one' (hen) (Metaphysics 1053b) and 'good' (agathon) (ibid. Nichomachean Ethics I, 1096b); see katholou. There follows a basic distinction (ibid. 1017a-b): something 'is' either accidentally, or essentially, or epistemologically, or in the dichotomy act (energeia) / potency (dynamis). The epistemological 'being' (see doxa) is dealt with elsewhere (see Metaphysics 1027b-1028a, 1051a-1152a), as is potency/act (see Metaphysics Theta passim), so Aristotle here concentrates his attention on what 'is' essentially. It is something that falls within the ten kategoriai (Metaphysics 1017a) and is, primarily, substance (ousia; ibid. 1028a-b). A somewhat different point of view emerges from Aristotle's breakdown of the various senses of nonbeing (me on) in Metaphysics 1069b and 1089a: something is not either as a negative proposition, i.e., a denial of one of the predicates, or as a false proposition, or finally, kata dynamin, i.e., by being something else only potentially but not actually. It is from this latter that genesis comes about (see also dynamis, energeia, steresis).

4. In the Plotinian universe the One (hen) is beyond being (Enneads V, 9, 3; compare Plato's description of the Good beyond Being in Republic 509b and see hyperousia). The realm of being begins on the level of nous since both being and nous are contained in nous (ibid. V, 5, 2; V, 9, 7). Nonbeing is treated in much the Platonic and Aristotelian fashion: matter (hyle) that is only a replica (eikon) of being is only quasi-being (Enneads I, 8, 3). Philo, with his strongly developed feeling of divine transcendence (see hyperousia), restricts true being to God alone (Quod deterius potiori insidiari soleat. 44., 160), and introduces into the discussion the metaphysical interpretation of the famous phrase in Exodus 3, 14: 'I am who am'; see hypodochē, hyle, genesis." (pp. 141-142)

From: Francis Edwards Peters, *Greek Philosophical Terms. A Historical Lexicon* New York: New York University Press, 1967.

"There can be no doubt that Parmenides' Goddess's philosophy course is concerned with 'being.' But saying this is not saying anything. In Greek, as in Spanish [or English], 'to be' is a verb and, like any verb it can be used as a noun, and then we can speak of 'being' (used as a noun). But this verbal noun is essentially different in Greek than it is in other languages, and so we cannot ignore the problem. This specificity is one of the results of the flexibility of the Greek language, which permits all kinds of juggling. E. Benveniste wrote that "the linguistic structure of Greek created the predisposition for the notion 'to be' to have a philosophical vocation." (1) Indeed, the use of the verb 'to be' as a noun absolutely does not mean what Philosophers call 'being' (the noun). To use an infinitive as a noun in Spanish it must be preceded by an article, in this case 'el' ['the']. Then the infinitive 'ser' ['to be'] becomes 'el ser' ['the being'] used as a noun, in Greek 'τὸ εἶναι.' However, this formula never figured among the concerns of the Greek philosophers. No Greek philosopher who inquired into what today we might call 'the being of things,' or even 'certain types of beings,' including the supreme being, ever asked 'what is τὸ εἶναι?' literally 'what is being?' As we know, especially since the Aristotelian systemization, the formula used by all Greek philosophers to ask the question of being is τί ἐστὶ τὸ ὄν (to eon in Parmenides), 'What is being?' 'Τὸ eon' is the present participle of the verb to be, used as a noun. The difficulty of grasping the scope of this neuter present participle (since there is also a masculine and a feminine present participle) has always given rise to all kinds of misunderstandings, since its use as a noun, represented by the neuter article 'τό,' is deceptive, and so Parmenides avoids it whenever he can. Indeed, just as verbal-noun infinitives always have a dynamic character, something similar occurs with the participle τὸ ὄν, which as a present participle means that which is being, that which engages in the act of being now. In all that I have said up till now, philosophy is absent: I have only summarized, perhaps too superficially, what Benveniste calls 'un fait de langue,' (2) a fact about Greek simply as a language.

It is upon this linguistic fact that Parmenides reflects. In Greek the word for 'things' is ὄντα. Even in current everyday language, things are 'beings,' 'something(s) that is (are),' 'that which is being.'

Philosophy has not yet come into it: that's the way the Greek language is. But why do we call something that is a 'being'? Because the fact of being manifests itself in that which is; if there is that which is, then the fact of being is assumed. Without the fact of being, there would not be things that are. This sort of platitude will constitute the nucleus of Parmenides' philosophy. And that is the reason why his thinking starts from an analysis of the notion of the fact of being, arrived at from the evidence that 'is' is occurring. If there is something undeniable for anyone who is, it is 'is.' If Greek syntax allowed the formula, we could say, with R. Regvald, that the basic question would be 'τί ἐστί ἐστί,' 'What is 'is'?" (pp. 59-60, some notes omitted)

From: Néstor-Luis Cordero, *By Being, It Is. The Thesis of Parmenides* Las Vegas: Parmenides Publishing, 2004.

"It is an understatement to claim that 'being' is one of the central concepts of ancient Greek metaphysics. Unfortunately, there is a split between contemporary commentators as to what is under discussion when being is the topic. On one side are those who think that these discussions are basically about existence; what exists, the various sorts of existence, what can be inferred from the fact that something exists, etc. On the other side are those who believe that these discussions are investigations into the nature of predication; of being something or other, the various ways a thing can be what it is, what can be inferred from the fact that a thing is something or other, etc. Obviously these are two quite different topics. For example, on the existence interpretation, as I shall call it, one of Parmenides' main points is that we cannot (meaningfully) speak of what does not exist. His mistake is to think that words and phrases which purport to refer but which do not refer are meaningless. On the predication approach, Parmenides is correctly pointing out that we cannot speak about nothing (what is not anything at all) and still be speaking. His mistake is to confuse not being something or other with not being

anything at all. (1) On the existence interpretation, it is perhaps fair to say that Plato's distinction between real being and a lesser sort is a distinction between kinds of existence. On the predication approach, it is a distinction between really being this or that and being in a way or qualifiedly this or that. One's view of Greek metaphysics is going to be strongly influenced by which approach one takes. A little can be said about the relative strengths and weaknesses of the two approaches without getting into the details where, as we all know, the devil dwells. In philosophical discussions of being we frequently find the Greek, 'èsti', occurring without a completion. On the predication approach, sentences of the form, 'x is', are understood as meaning much the same as, 'x is something or other', in the way that, 'x sees', means much the same as, 'x sees something or other'. Furthermore, 'x is something or other', is understood as different in meaning from, 'x exists'. For example, Centaurs do not exist but they are mythical creatures, discussed, thought of and sometimes believed in. Thus, they are something or other though they do not exist. The problem for the predication approach is that there is no unambiguous use of, 'x is', to mean, 'x is something or other', in ordinary Greek. Such sentences can, however, mean, 'x exists'. This is a significant point in favor of the existence reading. This would probably be the end of the story were it not for the fact that in the metaphysical texts in question examples are given or inferences are drawn which make it clear that predication is in some way involved. For example, in the Theaetetus, 152 a ff., Socrates introduces Protagoras' relativism as follows: "Man is the measure of all things - of the things that are that they are and of the things that are not that they are not." Though an existential reading is perfectly natural, it is all but contradicted by what follows. Socrates illustrates the quoted dictum by pointing out that a wind may be chilly to one person and not chilly to another, i. e., that a thing may be thus and so to one person and not be that to another. Existence seems not to be in question. The strength of the predication approach stems from the fact that frequently the philosophical texts in question require us to somehow understand the verb, 'ἔστι', as the copula."

"Mohan Matthen, "Greek Ontology and the 'Is' of Truth", presents and defends what is perhaps the most detailed and well worked out existence approach in the literature.(2) After pointing out that Greek

philosophers sometimes use the verb, 'einai', in such a way that it seems to express both existence and predication, he presents an interesting account of this phenomenon which allows us to read absolute occurrences of the verb as neither the copula nor as (con)fused but as meaning simply, 'exists'. The assimilation of these occurrences to the copula is achieved by arguing that speakers of ancient Greek were committed to the existence of a type of entity which is unfamiliar to us and which he calls a 'predicative complex'. (3) These are entities which exist as long as, and only as long as, a corresponding predicative sentence is true." (pp. 321-322)

Notes

(2) "Greek Ontology and the 'Is' of Truth", *Phronesis*, 28/2 (1983), 113-135.

(3) Matthen sometimes writes as if his thesis is restricted to philosophical Ancient Greek as opposed to Ancient Greek generally. For example, the task he sets for himself is to explain why Greek Ontologists accepted some principles which he in turn uses to account for the apparent ambiguity (p. 116). I shall assume here, however, that this thesis is intended to cover Ancient Greek generally. Greek ontologists other than Aristotle were at least sometimes writing for the general public. If the principles in question were accepted only by the ontologists, the various uses of 'shat' would have been as confusing to the ancient Greek as they are to us. If we restricted the thesis to ontologists, we would also need some explanation as to why the ontologists assumed principles of which the ordinary Greek was unaware."

From Greek to Latin: Seneca's Epistle 58

"Today more than ever I understood how impoverished, indeed destitute, our vocabulary is. When we happened to be discussing Plato, a thousand things came up which needed names but lacked

them; but there were some which, though they used to have names, had lost them owing to our fussiness. But who would tolerate fussiness in the midst of destitution?

(...)

6. You're asking, 'What is the point of this introduction? What's the purpose?' I won't hide it from you. I want, if possible, to use the term 'essentia' with your approval; but if that is not possible I will use the term even if it annoys you. I can cite Cicero as an authority for this word, an abundantly influential one in my view. If you are looking for someone more up-to-date, I can cite Fabianus, who is learned and sophisticated, with a style polished enough even for our contemporary fussiness. For what will happen, Lucilius [if we don't allow essentia]? How will [the Greek term] *ousia* be referred to, an indispensable thing, by its nature containing the foundation of all things? So I beg you to permit me to use this word. Still, I shall take care to use the permission you grant very sparingly. Maybe I'll be content just to have the permission

7. What good will your indulgence do when I can find no way to express in Latin the very notion which provoked my criticism of our language? Your condemnation of our Roman limitations will be more intense if you find out that there is a one-syllable word for which I cannot find a substitute. What syllable is this, you ask? *To on*. You think I am dull-witted -- it is obvious that the word can be translated as 'what is'. But I see a big difference between the terms. I am forced to replace a noun with a verb. But if I must, I will use 'what is'

8. Our friend, a very learned person, was saying today that this term has six senses in Plato. I will be able to explain all of them to you, if I first point out that there is such a thing as a genus and so too a species. But we are now looking for that primary genus on which other species depend and which is the source of every division and in which all things are included. It will be found if we start to pick things out, one by one, starting in reverse order. We will thus be brought to the primary [genus]." (pp. 3-4)

Selected bibliography in English on the definition of "Being"

Theory

1. Benardete, José A. 1954. "On Being and Nothing." *The Review of Metaphysics* no. 7:363 - 367.

"We are launching in this essay an inquiry into first principles, in an endeavor to answer, if only in part, the presiding question of all metaphysics: What is it to be? Metaphysics is here projected as a demonstrative science, demonstrative in the strictest of senses, quite as Aristotle and Spinoza, to name but two philosophers, envisaged the discipline." (p. 363)

(...)

"For us the decisive question is not, Why is there Being at all? Why not far rather Nothing? Our question is: Since some (but not all) possibles must be enacted, why this possible and not that one? The answer to our question cannot be found in the schedule of possibles itself where all the entries are equally indifferent to enactment. The agency of coercion must be sought outside of the mere possibles, in a necessary ground of all being and of all non-being." (p. 367)

4. Cann, Ronnie. 2008. "Towards a Dynamic Account of BE in English." In *Existence: Semantics and Syntax*, edited by Comorovski, Ileana and von Heuseinger, Klaus, 13-48. Berlin: Springer Science.

Abstract: "This paper presents an analysis of the *there be* construction in English in which these words are taken to project a radically underspecified propositional structure which is updated by postcopular material. The analysis takes as its point of departure the hypothesis that the copular verb itself projects a semantically underspecified one-place predicate and shows how this hypothesis can be used to provides straightforward analyses of elliptical, predicative and existential focus constructions involving *be*, using the framework of Dynamic Syntax. It is argued that different interpretations of *there be* constructions depends on the interaction of pragmatic and syntactic processes mediated by the properties of the expressions with which the string is collocated."

9. Francis, Diana-Abasi Ibanga. 2016. "Being And Non-Being: Implication For Conflict Resolution." *IOSR Journal of Humanities And Social Science* no. 21:1-6.

Abstract: "Traditional philosophical problem arises from the distinction between being and non-being, something and nothing, what is and what is not. The objective of this paper is about proving that the distinction can be a framework for conflict resolution, by showing the problem to be a result of misunderstanding of the logical relations of the units. Two study questions are developed to guide the research: (i) what is the nature/structure of the logical relation between being and non-being, and (ii) how does an understanding of that relation feed into conflict and peace discourse. The two research questions are contextualized or articulated under the following conceptual frameworks: (i) Parmenidian disjunctive ontology, and (ii) Heideggerian conjunctive ontology. In conclusion, the paper proves Heideggerian conjunctive ontology to be adequate framework for negotiation of conflict, by showing conflict to be a result of the Parmenidian error of misunderstanding the logical relation of being and non-being as disjunctive rather than conjunctive."

12. ———. 1965. "'Being' in Linguistics and Philosophy: a Preliminary Inquiry." *Foundations of Language* no. 1:223-231.
"Although the first language of Western philosophy was Greek, its main stream passed through Semitic languages (Syriac, Arabic, Hebrew) before returning to Indo-European languages (scholastic Latin, French,

English, German). It was in Arabic, which sharply separates the existential and copulative functions, that the distinction between existence and essence emerged.(4)

An adequate account of the development of the Western concept of Being in its linguistic context would require the co-operation of specialists in many disciplines. But it may be useful to offer a preliminary sketch, as a focus for future criticism and inquiry. I shall therefore cover much ground in a little space, and intrude into several fields within which I am not an authority." (p. 223)

(...)

"A philosopher therefore cannot adapt his use of 'Being' to the functions of 'to be' in English grammar; he must either stick bravely to the conviction that there is a single concept of Being behind the different functions of *einai*, which is hidden by the grammars of non-Indo-European languages, and which even among the languages of Western philosophy is perfectly displayed only in Greek and Latin, or he must discard the verbal noun 'being' as incurably ambiguous. However difficult he may find it to choose the second alternative while he is thinking in the living language with its deep roots in the past, the artificial language of symbolic logic enables him to make the choice without even noticing what he is doing. In symbolic logic the verb 'to be' dissolves into the sign of existence (\exists), which is not a predicate but a quantifier, and

three separate copulae, the signs of identity ($=$), class membership (\in) and class inclusion (\subseteq)." (p. 231)

Abstract: "In this paper I seek to consider the project of analytical Thomism with particular regard to Aquinas's metaphysics of *esse* . My overall conclusion is that Thomas's thought on *esse* is part and parcel of a way of philosophizing that is alien to analytical philosophy and is such that analytical philosophy is constitutionally unable to come to terms with it. In order to argue for such a conclusion, I begin with a presentation of Aquinas's metaphysics of *esse* . I then respond to the objection that arguably some analytical philosophers have already arrived at the same thought at which Aquinas arrived, thereby blocking the way to my denial of the possibility of an encounter between analytical philosophy and Thomist *esse* . Having removed that obstacle, I argue that analytical philosophy is constitutionally unable to come to terms with Thomist *esse* ."

"The present volume is the first of a series of studies analysing the verb 'to be' and/or synonyms in a number of languages. It is expected that these studies will provide some of the necessary foundational material for research in logic, the theory of knowledge, and ontology; and possibly in other philosophical disciplines. The concluding volume of the series will attempt to assess the linguistic and philosophical impact of all the contributions.

There is no definite principle of arrangement of the contributions, which are published in the order in which they reached the editor's desk." (FEditorial Preface by John W. M. Verhaar)

Two projected volumes were never published in this series: a study on 'to be' in biblical Hebrew and biblical Greek by James Barr (*) and a concluding volume with an attempt to assess the linguistic and philosophical impact of all the contributions).

(*) On the subject see: James Barr, *The Semantics of Biblical Language* , Oxford: Oxford University Press, 1961, Chapter 4. *Verbs, action and time - (d) - The Verb 'To Be'* , pp. 58-71.

Abstract: "In this essay, I argue that for sentences of form "A is B" there is a distinction between identity and "mere" predication to be made, and that Leśniewski's Ontology puts us in a better position to make this distinction than first-order predicate logic. I also gesture at how Ontology could help us to decide questions of identity. The nub of the matter seems to be a "primordial" sense of the copula that Ontology has at its basis."

History

1. Adamson, Peter. 2002. "Before Essence and Existence: al-Kindī's Conception of Being." *Journal of History of Philosophy* no. 40:297-312.

"It would appear that al-Kindī considered the study of metaphysics to be primary in his endeavor to reconstruct Greek thought. His most significant remaining work, *On First Philosophy*, assimilates metaphysics or "first philosophy" to theology, the study of "the First Truth Who is the Cause of every truth." His survey of the works of Aristotle likewise confirms that the Metaphysics studies God, His names and His status as the First Cause.

(...)

We might suspect, then, that al-Kindī took Aristotle's aim in the *Metaphysics* of studying "being qua being" as central to his own undertaking, and indeed as central to an adequate philosophical understanding of God.

In this paper I shall try to confirm this suspicion through a study of al-Kindī's corpus, focusing specifically on his conception of being, or, rather, on his conceptions of being; for as we shall see there are two competing treatments of being in al-Kindī. First, in common with the Arabic Plotinus and the *Liber de Causis*, he has a conception that emphasizes the simplicity of being, and opposes being to predication.

Second, he has a complex conception of being indebted to Aristotle. These two conceptions can be reconciled: simple being, I will argue, is prior to and underlies complex being. Finally, I will suggest that al-Kindī's simple conception of being anticipates Avicenna's distinction between existence and essence, but only to a limited extent." (pp. 298-299 Notes omitted)

2. Aertsen, Jan A. 1985. "The Convertibility of Being and Good in St. Thomas Aquinas." *The New Scholasticism* no. 59:449-470.

"In many medieval thinkers, e.g. Alexander of Hales, Bonaventure, Albert the Great, Thomas Aquinas, the statement can be found: "being and good are convertible" (*ens et Comm convertuntur*).⁽¹⁾ That is to say, "being" and "good" are interchangeable terms in predication (*converti enim est conversim praedicari*).⁽²⁾ Wherever "being" is predicated of something, the predicate "good" is involved as well.

That must imply that " good " is here not a concept that adds a real content or a new quality to " being ", as a result of which " being " is restricted. For in that case there would be no question of convertibility.(3) " Good " is an attribute which pertains to every being, it is a property of being as such, a "mode that is common, and consequent upon every being." In other words, " good " is coextensive with " being ", it is one of the so-called *transcendentie* which, since Suarez, are usually referred to as " transcendentals ".

3. ———. 1998. "Being and One: The Doctrine of the Convertible Transcendentals in Duns Scotus." In *John Duns Scotus (1265/6-1308). Renewal of Philosophy. Acts of the Third Symposium organized by the Dutch Society for Medieval Philosophy Medium Aevum (May 23 and 24, 1996)*, edited by Bos, Egbert Peter, 13-26. Amsterdam: Rodopi.

"In the prologue of his commentary on the *Metaphysics*, Duns Scotus explains the name 'metaphysics' as *transcendens scientia*, that is, the science that is concerned with the *transcendentia*.(1) This explanation is indicative of the prominent place Scotus ascribes to the doctrine of the transcendentals, which was formulated for the first time in the

Summa de bono of Philip the Chancellor that is datable about 1225. The connection between the object of first philosophy and the transcendentals is not in itself new, although the identity posed by Scotus is more radical than in his predecessors.(2) Yet it is no exaggeration to say that Scotus's philosophy marks a new phase in the history of the doctrine of the *transcendentia*.

Scotus understands the concept 'transcendental' differently than his predecessors did. To thinkers of the thirteenth century, transcendental properties are *communissima*. 'Being, 'one,'true' and 'good' 'transcend' the Aristotelian categories because they are not limited to one of them but are common to all things. According to Scotus, however, it is not necessary that a transcendental as transcendental be predicated of every being; it is not essential to the concept *transcendens* that it has many inferiors. In his *Ordinatio* he determines the concept negatively: 'what is not contained under any genus' or 'what remains indifferent to finite and infinite'. (3) This definition makes possible a vast extension of the transcendental domain; the most important innovation is formed by the so-called disjunctive transcendentals, which are convertible with being, not separately but as pairs.

The fact that the transcendental properties are not necessarily identical with the *communissima* is, I suspect, the reason why the expression *transcendentia*, which occurs only sporadically in thinkers like Albert the Great, Thomas Aquinas and Henry of Ghent, gains the upperhand in Scotism and becomes the usual term.

About Scotus's doctrine of the transcendentals, in contrast to that of other medieval thinkers, we are well informed by Allan B. Wolter's pioneering study, *The Transcendentals and Their Function in the Metaphysics of Duns Scotus* (1946). Yet there are aspects of his doctrine that have thus far received little attention in scholarly literature. One of them is Scotus's treatment of the transcendentals 'one, 'true' and 'good,' which as such are convertible with being. In my contribution I want to show that with respect to the traditional transcendentals, too, Scotus breaks new ground and approaches critically the views

of his thirteenth-century predecessors. Because he discusses most extensively the relation between being and one, I focus on this discussion." (pp. 13-14)

7. Bechtle, Gerald. 2000. "The Question of Being and the Dating of the Anonymous *Parmenides* Commentary." *Ancient Philosophy* no. 20:393-414.

"This article was originally intended to precede the publication of my book (Bechtle 1999a) devoted to the extant fragments of the anonymous commentary on Plato's *Parmenides*, also known as Anonymus Taurinensis.' The aim of this article was then-and it still is now-to make the scholarly world acquainted with some of the main reasons, i.e., my view of 'the question of

being', for my novel thesis of a pre-Plotinian date for this *Commentary* which has almost unanimously been ascribed to Porphyry. Since the thesis of the Porphyrian authorship goes back to the great French scholar P. Hadot (see in particular Hadot 1961, 1965, 1968a, and 1968b), one can say that his thesis has been generally accepted for some thirty years or, at least, it has not been seriously challenged. This fact is easily explained since neither before nor after Hadot has there been a thorough and critical examination of the evidence. Hadot's thesis concerning the identity of the author being the only serious one in more than a century since research on the *Commentary* first started, my idea was that probably a lot of questions had not been answered. Reconsidering all of Hadot's evidence and adding some new elements, I determined that the *Commentary* is very likely of pre-Plotinian date. Additional work on Iamblichus and post-Plotinian Platonism negatively confirms this thesis since one can virtually exclude Iamblichus and any of the major Platonists following him as possible authors of the *Commentary*." Abstract: "I. In analytic philosophy, so-called 'univocalism' is the prevailing interpretation of the meaning of terms such as 'being' or 'existence', i.e. the thesis that these terms have only one meaning (see Russell, White, Quine, van Inwagen). But some analytical philosophers, inspired by Aristotle, maintain that 'being' has many senses (Austin, Ryle). II. Aristotle develops an argument in favour of this last thesis, observing that 'being' and 'one' cannot be a single genus, because they are

predicated of their differences (*Metaph.* B 3). III. But 'being' for Aristotle has also a unity, i.e. 'focal meaning', which coincides with substance (*Metaph.* F 2), and substance has not only an ontological priority, but also a logical priority, in respect to the other beings, as was shown by G. E. L. Owen. IV. This 'focal meaning' cannot be identified with primary substance, i.e. with the unmovable mover, as some interpreters pretend, because this latter has only an ontological, not a logical, priority in respect to the world. V. The impossibility of this interpretation results from Aristotle's rejection of an essence and a substance of being (*Metaph.* B 4), i.e. the rejection of what the Christian philosophers called *esse ipsum subsistens*."

 "Plato's *Sophist* presents a tantalizing challenge to the modern student of philosophy. In its central section we find a Plato whose interests and methods seem at once close to and yet remote from our own. John Ackrill's seminal papers on the *Sophist*, (1) published in the fifties, emphasized the closeness, and in optimistic vein credited Plato with several successes in conceptual analysis. These articles combine boldness of argument with exceptional clarity and economy of expression, and though subsequent writers have cast doubt on some of Ackrill's claims for the *Sophist* the articles remain essential

reading for all students of the dialogue. I am happy to contribute an essay on the Sophist to this volume dedicated to John Ackrill.

Among the most disputed questions in the interpretation of the Sophist is that of whether Plato therein marks off different uses of the verb *einai*, 'to be'. This paper addresses one issue under that heading, that of the distinction between the 'complete' and 'incomplete' uses of 'to be', which has usually been associated with the distinction between the 'is' that means 'exists' and the 'is' of predication, that is, the copula."

(1) *Symploke Eidon* (1955) and *Plato and the Copula: Sophist 251-59* (1957), both reprinted in *Plato I*, ed G. Vlastos (New York, 1971), 201-9 and 210-22.

23. ———. 1994. "The Verb 'To Be' in Greek Philosophy: Some Remarks." In *Companions to Ancient Thought: Language*, edited by Everson, Stephen, 212-236. Cambridge: Cambridge University Press.

"The existence of at least these three distinct uses of 'is' was taken for granted by commentators and assumed to apply, by and large, to ancient Greek, though with some salient differences. These include the fact that Greek can and regularly does omit *esti* in the present tense, though not in other tenses, and that the complete 'is' is still very much a going concern, though more or less defunct in modern English. The fact that the *esti* of the copula can be omitted means that a predicative use of *esti* can convey a nuance over and above that of the mere copula (for instance connoting what really is F rather than merely appearing F, or what is enduringly F).

And the fact that current English has more or less abandoned the use of the complete 'is' to mean 'exist' (as in Hamlet's 'To be or not to be), while in Greek it is very much a going concern, may lead us to question whether the complete *esti* really shares the features of the 'is' which means (or used to mean) 'exist'."
(p. 215)

(...)

"I cannot offer here a full account of what I take to be the results of the *Sophist*, far less a defence of such an account, but confine myself to a few points. To the question whether the dialogue distinguishes an 'is' of identity from an 'is' of predication, I have indicated my answer: that it does not, but it does draw an important distinction between identity-sentences and predications (see section I and n. 2 above). Here I focus on the question whether and if so how it distinguishes complete from incomplete uses. I shall suggest that Plato developed a better theory about the negative 'is not' than his argumentation in the *Republic* suggests, while continuing to treat the relation between the complete use (X is) and the incomplete (X is F) in the way I have described in section IV, that is, by analogy with the relation between 'X teaches' and 'X teaches singing'." (p. 229)

(...)

"Conclusion

In our attempts to understand and evaluate the claims and arguments of ancient philosophers we have to use conceptual tools, including ones not available to the philosophers themselves. Indisputably the analytical investigations in this century of the metaphysics of, say, Parmenides, Plato and Aristotle have yielded invaluable insights. But where these have involved enquiries concerning the verb 'to be' they have tended to use what may be an inappropriate framework - that of certain modern distinctions in the verb 'to be'. In particular, commentators have been misled by the English word 'exist', which now has the role of the more-or less defunct complete 'is' (as in 'To be or not to be'); they have assumed that Greek *esti*, when complete, like 'exist', does not allow a completion, and has a role sharply distinct from the *esti* in a predication. I have argued that a different picture emerges from Plato and Aristotle, both from their usage of *esti* and from their explicit discussions. Even where they do draw attention to the two syntactic uses (complete and incomplete), as Plato perhaps does at *Sophist* 2 5 5c12-d 7, and Aristotle in the passages cited in section V, they should not be described as elucidating a

difference between the 'is' of existence and that of predication, or indeed as noting a difference of any great philosophical importance. When we try to understand the arguments which seem to depend crucially on the verb 'to be' we should beware of

seeking to impose or to discern our currently favoured distinctions, for in ancient Greek the conceptual web was woven differently, and in the case of the verb 'to be' it was, comparatively speaking, a seamless one." (p. 236)

28. ———. 1996. "The Distinction between Being and Essence according to Boethius, Avicenna, and William of Auvergne." *The Modern Schoolman* no. 73:309-332.

"A close analysis of William of Auvergne's metaphysics reveals a distinction between being and essence that more closely approximates the celebrated real distinction of St. Thomas than has generally been recognized. Like St. Thomas, William maintained both a real distinction and a real composition between being and essence in the metaphysical structure of the concrete thing. Since William's position thus represented a marked development in the history of philosophy with respect to this topic, it is obviously valuable to look at William's sources, namely, Boethius and Avicenna. Of course, I am in no sense suggesting that the study of Boethius and Avicenna is valuable only for the insights it might lend to one's perspective

of William's position. On the contrary, such study is eminently valuable in itself.

1. Boethius's Contribution to the Doctrine of the Real Distinction

In his *Opuscula Sacra*, Boethius distinguishes between being (*esse*) and that which is (*id quod est*). Because William, who borrowed Boethius's terminology for his own position, was especially influenced by the *De hebdomadibus*, one needs to look at this work in order to reach a more complete understanding of William. While the scholarly opinion on Boethius's distinction is quite divergent, Pierre Hadot's work — in my opinion — represents the best of the scholarly interpretations regarding this topic. Hadot not only seems best to capture Boethius's doctrine, but his perspective of Boethius also highlights what William seemed to find in him.

In "La distinction de l'être *et de l'étant dans le De Hebdomadibus de Boèce*," Hadot summarizes the differences between being (*esse*) and that which is (*id quod est*) as they appear in the axioms found in the *De hebdomadibus*. The characteristics of being (*esse*) and that which is (*id quod est*) may be translated as follows. Being: 1) "is not yet," 2) "in no way participates in anything," and 3) "has nothing besides itself added on." That which is: 1) "has received the form of being," 2) "has received being," 3) "participates in that which is being," 4) "is and exists," 5) "is able to participate in something," and 6) "is able to have something besides the fact that it is." Abstract: "This study has two goals: first, to show that Avicenna's account of *being* and *thing* significantly influenced Aquinas's doctrine of the primary notions; second, to establish the value of adopting a mereological construal of these primary notions in the metaphysics of Avicenna and Aquinas. I begin with an explication of the mereological construal of the primary notions that casts these notions in terms of wholes and parts. *Being* and *thing* refer to the same entitative whole and have the same extension, but they are distinct in intension according to the different entitative parts they signify. Existence and essence constitute the two most fundamental entitative parts of every entitative whole. *Being* is taken to mean that which has existence, and *thing* signifies that which has essence. I then show how this mereological construal of the primary notions clarifies a number of texts in Avicenna and Aquinas. Finally, I address a few arguments against employing this mereological interpretation of the primary notions."

The names of the categories 89-92; Index locorum 93-96.

From the Introduction: "It seems to be the fatal mistake of philology that it always failed to get rid of Kantian influences as to the question of the relation of logic and ontology. Many modern mathematical logicians have shown that the logical and the ontological aspect not only are inseparable but also that in many cases it either lacks good sense or is even impossible to distinguish them. Accordingly, the distinction of logical and ontological truth (especially of propositional truth and term-truth), that of logical and ontological accident and that of logical and ontological categories, has not the same meaning for modern logic as it seems to have for 'traditional' logic (for instance the logic of most Schoolmen).

I hope to show in this study that the distinction of a logical and an ontological aspect (especially that of logical and ontological categories) can be applied to the Aristotelian doctrine only with the greatest reserve. A sharp distinction carried through rigorously turns out to be unsuitable when being applied to Aristotelian logic. For both aspects are, for Aristotle, not only mutually connected but even interwoven, and this in such a way that the ontological aspect seems to prevail, the logical being only an aspect emerging more or less in Aristotle's generally ontological way of thinking." (pp. 6-7)

36. ——. 1988. "On Boethius' Notion of Being. A Chapter of Boethian Semantics." In *Meaning and Inference in Medieval Philosophy. Studies in Memory of Jan Pinborg*, edited by Kretzmann, Norman, 1-29. Dordrecht: Kluwer.

Reprinted as chapter I in: L. M. de Rijk, *Through Language to Reality. Studies in Medieval Semantics and Metaphysics*,

edited by E. P. Bos, Northampton: Variourum Reprints, 1989.

"From Parmenides onwards, ancient and medieval thought had a special liking for metaphysical speculation. No doubt, speculative thought was most influentially outlined by Plato and Aristotle. However, what the Christian thinkers achieved in metaphysics was definitely more than just applying and adapting what was handed down to them. No student of medieval speculative thought can help being struck by the peculiar fact that whenever fundamental progress was made, it was theological problems which initiated the development. This applies to St Augustine and Boethius, and to the great medieval masters as well (such as Anselm, Thomas Aquinas, Duns Scotus). Their speculation was, time and again, focused on how the notion of being and the whole range of our linguistic tools can be applied to God's Nature (Being).

It is no wonder, then, that an inquiry into Boethius's notion of being should be concerned, first and foremost, with his theological treatises, especially *De hebdomadibus*.

(...)

My final section aims at showing how Boethius's notion of being is clearly articulated in accordance with his semantic distinctions. This is most clearly seen in the main argument of *De hebdomadibus* where they may be actually seen at work.

As is well known, the proper aim of *De hebdomadibus* is to point out the formal difference between *esse* and *esse bonum*, or in Boethius's words: 'the manner in which substances *are good* in virtue of their *being*, while not yet being substantially good' (38.2-4). Its method consists in a careful application of certain formal distinctions, viz.:

(a) The distinction between an object 'when taken as a subsistent whole and *id quod est* = the constitutive element which causes the object's actually' being; it is made in Axiom II and used in Axiom IV.

(b) The distinction (closely related to the preceding one) obtaining between the constitutive element effecting the

object's actual being (*forma essendi*, or *ipsum esse*) and the object's actuality as such (*id quod est* or *ipsum est*); it is made in Axioms VII and VIII.

(c) The distinction between *esse* as 'pure being' (= *nihil aliud praeter se habens admixtum*), which belongs to any form, whether substantial or incidental, and *id quod est* admitting of some admixture (lit. 'something besides what it is itself'); it is made in Axiom IV and in fact implies the distinction between *esse simpliciter* and *esse aliquid*.

(d) The distinction between 'just being some thing', *tantum esse aliquid*, and 'being something qua mode of being'. It is made in Axiom V and used in Axiom VI and is in fact concerned with a further distinction made within the notion of *id quod est*. It points out the differences between the effect caused by some form as constitutive of being *some* thing and that caused by the main constituent (*forma essendi*) which causes an object's *being simpliciter*.

(e) The distinction between two different modes of participation, one effecting an object's *being subsistent*, the other its being *some* thing, where the 'some thing' (*aliquid*) refers to some (non-subsistent) quality such as 'being white', 'being wise', 'being good', etc.

The application of these distinctions enables Boethius to present a solution to the main problem: although the objects (*ea quae sunt*, plural of *id quod est*) *are* (*are good*) through their own constitutive element, *being* (*being good*), nevertheless they are not identical with their constitutive element nor (*a fortiori*) with the IPSUM ESSE (BONUM ESSE) of which their constituent is only a participation." (pp. 1 and 22-23).

"Jaakko Hintikka is a radical and wildly ambitious philosopher. Over the course of more than forty years he has attempted to refashion the whole of logic and philosophy in his own image, urging the overthrow of most everything analytic philosophy inherited from Frege and Russell. He argues that the correct philosophical Logic (with a capital "L" to designate "the real Logic") is his "independence-friendly" logic, wedded to his construals of modal and epistemic logic in the context of game-theoretic semantics, and he calls for a reappraisal of every philosophical problem in light of this conception. Hintikka thereby rejects what became for philosophers (after Hilbert, Gödel, and Quine) the standard answer to the question, What is Logic?, viz., first-order logic, unmoved by its commonly supposed advantages: topic-neutrality, wide curricular, mathematical, and philosophical acceptance, general (if not universal) applicability, recursively axiomatizable completeness with respect to deductive validity, and classical syntax and

semantics for negation. He is not swayed either by the expressive power of second-order logic. He wants a system that is, expressively speaking, somewhere in between. To understand him as a philosopher is to be able to fathom why.

It is not the aim of this essay to come fully to grips with Hintikka's persistent campaign to overthrow the present order of things. Instead, I shall try to characterize his self-conception in broad brushstrokes. Section 1 of the essay aims to situate Hintikka's thought within the context of recent analytic philosophy. Section 2 canvasses his criticisms of Frege's and Russell's fundamental logical notions. Section 3 assesses his treatment of the classical Ontological Argument for God's existence in light of these criticisms. First, I contrast his treatment of the argument with that of Michael Dummett. Next, I consider what Hintikka has left out of philosophical account in his particular reconstruction of the argument, suggesting that it is precisely this which is most telling with respect to his own philosophy. In section 4 I delve into a more detailed analysis of Hintikka's treatment of Kant's philosophy of logic, with the aim of showing how his own philosophical preconceptions shape his historical readings." "This paper takes its point of departure from a recent article by Joseph Owens: "The content of existence," (*) which argues that being is unknowable in terms of concepts since it either has all cognitive (when contrasted with not-being) or none at all (when contrasted with beings). These dilemmas can be resolved by means of Aristotle's categories as the intrinsic formal structure of being, and as constituting the cognitive content of being "qua" being. In terms of this cognitive content, being is conceptualized, becomes knowable, and can be meaningfully contrasted with both not-being and beings. Beyond the resolution of Owens' dilemmas, the paper goes on to examine the need for meaningful contrasts in all knowledge as well as the adequacy and relevance of Aristotle's categories in relation to modern science."

60. Jacobi, Klaus. 1985. "Peter Abelard's Investigations into the Meaning and Functions of the Speech Sign *Est*." In *The Logic of Being*, edited by Knuuttila, Simo and Hintikka, Jaakko, 1-15. Dordrecht: Reidel.

"Although Peter Abelard was the most distinguished teacher of logic of his time, a logic understood to be the science of argumentative discourse, he was not destined to found a new philosophical tradition. The historical situation offers at least a partial explanation -- the pace of philosophical and theological research was so brisk in the twelfth century that many of the established schools enjoyed life spans of at most two or three generations of teachers. The restlessness of the times is embodied to a special degree in Abelard.(1) His writings include commentaries, in many cases several to a work, on the logical works of Aristotle and Porphyry then available, handed down in the form of Boethius' translations, and on Boethius' own logical works. Abelard has to take a number of positions into consideration here: several commentaries on Aristotle by ancient scholars, by Boethius, and by Abelard's own predecessors and teachers, and furthermore the grammatical theories of Priscian and those deriving from Abelard's

contemporaries. He discovers with distinctive acumen that the tradition he is examining is disunited and full of tensions on basic questions. It is in the analysis and discussion of these tensions that he finds the field of his own philosophical research. He expects to reach solutions by intensifying the controversies, not by seeking harmony. Thus he traces argument and counter-argument in great thoroughness of detail and from a dizzying succession of points of view, abandoning theses and offering countertheses. What his students could learn from him was not so much a particular theory as his method of formulating and discussing problems.

The situation is much the same for us. If we turn to Abelard in our inquiry into the logic and semantics of the speech sign 'est', we must discover anew the questions which concerned him. In the first Part of this Paper, I will sketch some of the discussions conducted by Abelard in order to make clear in what contexts he found himself confronting questions on the variations of meaning, function, or use of the expression 'est'. In the second part, I will group various theses which Abelard deals with appropriately. It is my intention to plot out the full range of the theories discussed and to mark points of conflict. In the third and final part, I will make some cautious comments on the deeper current of unity to be observed in Abelard's reflections, a current perhaps more easily discernible to the modern eye than it was to Abelard himself." (pp. 145-146)

(1) Cf. Jolivet (1969), Chapter IV; de Rijk (1980). Also compare Häring (1975), who explains the meager transmission of Abelard's works as at least partially attributable to Abelard's style of thinking and writing. His philosophical "works" were not written as books intended to be recopied and handed down but as records of his own thinking to be used in teaching. A thesis which he adheres to with conviction at one point in his writings may reappear later or even in a reworking of the first source as being subject to doubt or in need of revision.

Reprinted in C. H. Kahn, *Essays on Being*, New York: Oxford University Press 2009, pp. 16-40.
63. ———. 1973. *The Verb 'Be' in Ancient Greek*. Dordrecht: Reidel.
Volume 6 of: John W. M. Verhaar (ed.), *The Verb 'Be' and Its Synonyms. Philosophical and Grammatical Studies*, Dordrecht: Reidel.

Reprinted by Hackett Publishing, 2003 with new introduction and discussion of relation between predicative and existential uses of the verb *einai*.

"This book began unintentionally in 1964, when I tried to put together a brief description of the pre-philosophical uses of the Greek verb be in order to lay the groundwork for an interpretation of the more technical use of the verb by the philosophers beginning with Parmenides. But the task was harder and longer than I thought, and it gradually became clear that no adequate description of the Greek data could be given without confronting a number of major issues in linguistic theory and in the philosophy of language.

As often happens in so-called empirical research, the terms in which the problem is posed and the recognition of what might count as a solution turn out to depend upon certain theoretical assumptions about the nature of the subject matter and the appropriate form for description, analysis, and explanation. In this case there was the preliminary question of an appropriate method for describing and classifying the different uses of the verb, and the closely connected question of the relationship between a syntactic or formal analysis of these uses and a semantic account in terms of difference of meaning. Similar questions would arise in the study of any verb. But the verb be poses specific philosophic problems of its own: how are we to define or clarify the concepts of subject, predicate, copula, and verb of existence? And there is the problem of the verb be itself: in what sense is this system of distinct uses a unity? Is the possession of a single verb be with such a diversity of uses only

a historical accident of Indo-European? And does it follow that the concept of Being is only a philosophic illusion?" (*Preface* (1973), XLV)

"Thus the argument of my book reaches two conclusions, one linguistic and one philosophical. The philosophical conclusion, my defense of Greek ontology, rests on my account of the system of *einai* but does not follow from it.

Greek ontology might be defended on different grounds, and a reader might accept my account of the system of *einai* but doubt its value as a defense of ontology. Furthermore, I have not tried to demonstrate the fruitfulness of my linguistic analysis for the interpretation of Greek philosophy. That could be done only by a detailed analysis of Platonic and Aristotelian texts.(1) The current study remains, after all, essentially a grammatical prolegomenon to the history of Greek ontology." (*Introduction* (200), p. VIII)

(1) For the application of my account of *einai* to Parmenides, see Kahn (2002) ["Parmenides and Plato," in V. Caston and D. W. Graham (eds.), *Presocratic Philosophy: Essays in honour of Alexander Mourelatos*. Burlington, Vermont: Ashgate, pp. 81-93] with references there to earlier publications.

[In the *Appendix* to the *Introduction* (2003) Kahn replies to four important critical reviews of the first edition of his book:]

Ernst Tugendhat, "Die Seinsfrage und ihre sprachliche Grundlage," *Philosophische Rundschau* 24 (1977), pp. 161-176: "Tugendhat's review contains a number of penetrating criticisms, some of which I am inclined to regard as justified." (p. XXXIII)

"The recent reprinting of my book *The Verb 'Be' in Ancient Greek* by Hackett Publishing, thirty years after its appearance in 1973, gave me the opportunity to rethink and reformulate the theoretical framework for my description of the Greek verb. Since the audience for the reprinted book will inevitably be restricted, I present here a more accessible, slightly revised version of the new (2003) *Introduction*. In the original 1973 book, the theoretical discussion was far too long and not always consistent. What follows is a more concise and, I hope, more coherent version of my theoretical account of *einai*."

"The papers reprinted here, published over a stretch of forty years, reflect my continuing concern with two distinct but intimately related problems, one linguistic and one historical and philosophical. The linguistic problem concerns the theory of the Greek verb *to be*: how to replace the conventional but misleading distinction between copula and existential verb with a more adequate theoretical account. The philosophical problem is in principle quite distinct: to understand how the concept of Being became the central topic in Greek philosophy

from Parmenides to Aristotle. But these two problems converge on what I have called the veridical use of *einai*. In my earlier papers I took that connection between the verb and the concept of truth to be the key to the central role of Being in Greek philosophy. I think that clue pointed in the right direction, but I would now interpret the veridical in terms of a more general function of the verb that I call 'semantic', which comprises the notions of existence and instantiation as well as truth."

"The philosophy of being is as old as philosophy itself; in fact, depending upon your understanding of philosophy, it may even be older. Thus, as long as there will be philosophy, there will always be the philosophy of being. However, books on the philosophy of being have tended to be written from the point of view of, or privileging, just one tradition from the history of Western philosophy.

So, on the one hand, the three of us thought it would be a valuable contribution to the literature regarding the philosophy of being, if we were to write a book that would specifically speak from the different points of view of three major philosophical traditions.(1) On the other hand, we thought an initial introductory section regarding the philosophy of being in general would help orient readers to the context of our book.
(2)"

(1) It is our belief that readers will become familiar with different philosophical traditions by exploring how each tradition approaches the philosophy of being. On the one hand, we recognize that these traditions may be incommensurable. On the other hand, it is our hope that this project will contribute to a renewed sense of philosophical "pluralism" and "ecumenism."

(2) Whereas this section was constructed through a collaborative effort on our parts, the remaining portions of the book were constructed by each of us independently. That is to say, each of us bears the responsibility for representing our respective traditions: Joseph P. Li Vecchi for the Thomistic, Frank Scalambrino for the Continental, and David Kovacs for the Analytic.

110. Nasr, Seyyed Hossein. 1977. "Post-Avicennan Islamic Philosophy and the study of Being." *International Philosophical Quarterly* no. 17:265-271.

"In this article, after a brief discussion of the position of Ibn Sina concerning the distinction between existence and essence, a survey is made of the views of later Islamic thinkers of various schools including "Kalam", "Ishraqi" theosophy and theoretical sufism of the school of Ibn Arabi concerning ontology. The study culminates with Mulla Sadra who brought the discussion of being among Muslim thinkers to full fruition. After this chronological survey, the distinction between the study of being in later Schools of Islamic thought and those of the West is made clear and it is shown how despite a similar background, Islamic and Western thought part ways on this basic issue. Later Islamic students of ontology emphasized that the subject of philosophy is the study of the act of existence, the "actus essendi", while Western thought became ever more concerned with the existent or "ens". In conclusion the relation between the theoretical study of being and practical and operative spiritual methods for the realization of being in the Islamic world is indicated." (p. 265)

"The title of the present paper appears provocative as it brings together one of the most prominent fighters of metaphysics, R. Carnap, a famous metaphysician and a very difficult metaphysical problem. In fact, Leibniz, whose stance on that very issue we have chosen to relate to that of Carnap's, has not written about the problem of being explicitly either. We will thus ask the reader for some patience as we will try to demonstrate that they both do so implicitly.

Our task is perhaps even more complex with respect to Carnap for aside of being an extraordinarily consistent and systematic thinker, he has also been very self-conscious methodologically. It is remarkable that the system of *Aufbau*, to which we will restrict our attention, was supposed to be a mere illustration of some methodological principles developed in the so-called construction theory. Accordingly, almost none of the moves in his system lacks a justification. As a result, there are not too many degrees of interpreter's freedom." (p. 163)

123. Prior, William. 1980. "Plato's Analysis of Being and Not-Being in the *Sophist*." *Southern Journal of Philosophy* no. 18:199-211.

"In this paper I argue that Plato does not, as most scholars believe, distinguish different senses or uses of the verb 'to be' in the *Sophist*". He succeeds in differentiating existential statements from statements of identity and predications, but with the aid of a verb 'to be' which he takes to be univocal and to be equivalent to 'to participate in'. I offer an analysis of "Sophist" 251a-257c, and focus in particular on 255e-256e. This passage displays numerous parallels with the middle dialogues, and it is misleading to treat it as indicative of a change in Plato's metaphysics."

"If, in what follows under the general title of 'Being', we are to give an outline of the rebirth of metaphysics as ontology, we cannot avoid giving an account in detail of the various ontological projects of that time. What is to be clarified can be described as a rehabilitation of the 'problem of being' as a genuinely philosophical problem. This 'problem of being' must obviously be posed in such a way that it cannot be solved by any of the procedures of the empirical sciences; otherwise, any philosophical theory of being would be superfluous. On the other hand, the 'problem of being' should also not be reducible to the problem of knowledge, as the whole of Criticism had taught, since then the attempt to break out of the epistemological ghetto would fail. A third general condition, accepted by all the new ontologists, is that modern ontology should not proceed in a dogmatic fashion in Kant's sense; this also rules out simple reference back to pre-Kantian traditions. The rehabilitation of philosophy as theory of knowledge also remains decisive for the new ontology, to the extent that it regards an epistemological self-justification as absolutely indispensable. The priority of the question of being over that of knowledge, which is the general characteristic of the new

ontology, should itself be seen as the result of epistemological reflection: since the time of Lotze, the argument that the subject is himself an existent and the knowledge-relation a relation of, being had played a central role in that connexion. In Hegel's words, the new ontology saw itself as an immanent critique of epistemology, not as its simple opposite. The success of this critique was then felt as the great liberation 'to things themselves'." (pp. 194-195)

135. Thom, Paul. 2002. "The pervasiveness of Being." In *Presocratic Philosophy. Essays in Honour of Alexander Mourelatos*, edited by Caston, Victor and Graham, Daniel W., 293-302. Aldershot: Ashgate.

"The pervasiveness of Being is the doctrine that everything is. This doctrine would be false if something was not. That being is pervasive is not a trivial claim. An ontology might be motivated by the desire to quantify over non-beings in such a way that we can say that *something* is a flying man without implying that some *being* is a flying man. If such a distinction is allowed, then it might be thought that something is not, even though no *being* is not. Pervasiveness then would be true for beings but not for 'somethings.'

This chapter explores the different positions that philosophers from Parmenides to Aristotle take on the question of the pervasiveness of Being, and traces some of the relations linking those positions to one another." (p. 293)

138. Ventimiglia, Giovanni. 2018. "Aquinas on Being: One, Two or Three Senses of Being?" *Quaestio. Journal of the History of Metaphysics* no. 18:509-538.

Abstract: "In this article I point out that rather than two, as is commonly thought, or indeed one, which is an old idea recently revived by some scholars, Aquinas in fact presents three main senses of being: (A1) being as *actus essendi* or *esse* or 'present actuality'; (A2) being as (real) form or essence; (B) being as the reply to the *an sit?* (is there...?) question or *anitas* or 'there is'

sense. Regarding the relations among these three senses of being I show that: (i) the same logical treatment holds for the form (B) and (A2), since both can and need to be re-written in the form: something is so-and-so (whereas the same process cannot be applied to the A1 sense of being); (ii) the relation between the A1 and A2 senses of being is not a mere relation between distinct elements, but rather a relation among different stages of a single process, namely that between first and second actuality; (iii) the relation between the A (1 and 2) and B senses of being seems to be one of grounding, since the 'there is' sense seems to Aquinas to be grounded on the present actuality sense of being as an effect to its cause."

141. ———. 2012. "Being." In *The Oxford Handbook of Aquinas*, edited by Davies, Brian and Stump, Eleonore, 77-84. New York: Oxford University Press.

"According to Aquinas the word "being" (*ens*) signifies "that which is" or "that which exists." This complexity within the notion of being implies that one does not grasp it by the process of abstraction alone—the intellect's first operation whereby it understands what something is without affirming or denying anything of it. While he acknowledges that this intellectual operation suffices for one to grasp the quidditative aspect of being ("that which"), Aquinas appeals to the intellect's second operation

(whereby one affirms or denies by composing or dividing), often referred to as judgment, to account for one's grasp of the existential aspect of being and thus to complete one's understanding of being as that which is. As he explains, while the intellect's first operation is directed to the nature (essence) of a thing, its second operation is directed to a thing's existence (*esse*)." (p. 77, notes omitted)

Key Terms in Ontology: *Existence*. Definitions by Major Philosophers

Introduction

"I think an almost unbelievable amount of false philosophy has arisen through not realizing what 'existence' means." (p. 234)

From: Bertrand Russell, *Logic and Knowledge. Essays 1901-1950*, New York: Macmillan 1956.

"Philosophical discussion of the notion of existence, or being, has centered on two main problems which have not always been very clearly distinguished. First, there is the problem of what we are to say about the existence of fictitious objects, such as centaurs, dragons, and Pegasus; second, there is the problem of what we are to say about the existence of abstract objects, such as qualities, relations, and numbers. Both problems have tempted philosophers to say that there are inferior sorts of existence as well as the ordinary straightforward sort, and they therefore often suggest that we use the word "being" to cover both kinds but restrict "existence" to "being" of the common, non-fictitious, non-abstract sort. (Sometimes the term "reality" is proposed for "existence" or for "being.") The problems of fiction and abstraction are different, however, for there are both real and fictitious abstractions. For example, the integer between two and four is real, but the integer between two and three is fictitious. On the other hand, there are both concrete and abstract fictions; for example, the winged horse of Bellerophon and the integer between two and three. Accordingly, philosophers have often dealt with the two problems in quite different ways and perhaps ought to do so.

While these are the two main problems, there are others, for example, that of what we are to say of the being of objects which have

not yet begun, or have now ceased, to exist. The history of this subject, moreover, has been tangled with theological issues, to which it will be necessary to refer at certain points." (p. 493)

From: Paul Edwards (ed.), *Encyclopedia of Philosophy*, New York: Macmillan 1967, entry *Existence*, by Arthur Norman Prior; Second edition: Donald M. Borchert (ed.), New York: Thomson Gale 2006, vol. 3, pp. 493-500.

"The Indo-European languages in which all the philosophers from Parmenides to Sartre have written have a verb represented in English by 'be', which some of the time at least does the same work as is done by 'exist'. Everything that can be called philosophy of existence that was written by the Greek philosophers of antiquity was expressed with the help of 'einai', the Greek equivalent of 'be'; and it is impossible to reach any clear understanding of their doctrines without examining how they used this word, and how its synonyms in other languages are used." (Preface, p. VIII-IX) "German and French idioms, which most frequently use 'Es gibt' and 'Il y a' in place of 'There is', seem to show a stronger awareness than English of the difference between existential propositions and propositions ascribing properties to objects. Nevertheless even these languages have forms 'Es ist' and 'Il est', which make use of equivalents of the verb 'be', as English uses 'be' in 'There is' and 'There are', and one would have to look further a field to find languages where there was no possibility of construing an existential judgement as predicating being of an object or objects in the same way as dwelling in Transylvania or coming down the road can be predicated of an object or objects. Latin, as we have seen, has the simple unadorned use of 'est' and 'sunt' as a possible substitution for the verbs 'existit' and 'existunt'. Classical Greek, which lacks any word obviously equivalent to 'exist', is forced to use parts of 'einai', its synonym for 'be', much more widely than the languages we have mentioned, for the expression of existential judgements. Thereby hangs a philosophical story of epic dimensions, a Great Chain of Philosophies of Being." (p. 3)

From: Christopher John Fards Williams, *What is Existence?*, Oxford: Clarendon Press 1981.

"In the extended discussion of the concept (or concepts) of Being in Greek philosophy from Parmenides to Aristotle, the theme of existence does not figure as a distinct topic for philosophical reflection. My aim here is to defend and illustrate this claim, and at the same time to suggest some of the reasons why it is that the concept of existence does not get singled out as a topic in its own right. Finally, I shall raise in a tentative way the question whether or not the neglect of this topic was necessarily a philosophical disadvantage.

Let me make clear that my thesis is limited to the classical period of Greek philosophy, down to Aristotle. The situation is more complicated in Hellenistic and Neoplatonic thought, (...) I suspect that a careful study of these Greek terms would reveal that even in their usage we find no real equivalent of our concept of existence. In any case, this later terminology (...) plays no part in the formulation of Plato's and Aristotle's ontology, and I shall ignore it here. My general view of the historical development is that existence in the modern sense becomes a central concept in philosophy only in the period when Greek ontology is radically revised in the light of a metaphysics of creation: that is to say, under the influence of Biblical religion. As far as I can see, this development did not take place with Augustine or with the Greek Church Fathers, who remained under the sway of classical ontology. The new metaphysics seems to have taken shape in Islamic philosophy, in the form of a radical distinction between necessary and contingent existence: between the existence of God, on the one hand, and that of the created world, on the other." (p. 7)

(...)

To return now to the question with which we began: Why does existence not emerge as a distinct concept in Greek philosophy? In principle the answer is clear. My explanation is that in Greek ontology in its early stages, in Plato and Parmenides, the veridical concept was primary, and the question of Being was the question of "reality" as determined by the concept of truth. Since this conception of reality is articulated in Plato by copula sentences of the form "X is Y," it turns out that even the concept of existence gets expressed in this predicative form: as we have seen, Platonic Greek for "X exists"

is "X is something" . In the scheme of categories which Aristotle takes as the starting point for his own investigation of being, this same predicative pattern serves as the primary device for analyzing what there is, and for showing how the various kinds of being are related to one another. So it is naturally the theory of predication, and not the concept of existence, which becomes the central and explicit theme of Aristotle's metaphysics, as it was the implicit theme of Plato's discussion of Being in the *Sophist*. (p. 15).

From: Charles H. Kahn, *Why Existence does not Emerge as a Distinct Concept in Greek Philosophy*, in: Parviz Morewedge (ed.), *Philosophies of Existence. Ancient and Medieval*, New York: Fordham University Press 1982, pp. 7-17. (Reprinted in C. H. Kahn. *Essays on Being*, New York: Oxford University Press 2009, pp. 62-74.)

Origins of the term "existence"

"The terminology for existence is much more complicated, and I can only give a rough sketch of the problem. We have first to consider how ὑπάρχειν (hyparkein) comes to be used as a synonym for εἶναι (einai) in its "existential" use, and then to follow the history of *existere* as the Latin rendering of ὑπάρχειν in this sense. Either topic could supply a separate monograph.

ὑπάρχειν originally means "to make a beginning", "to take the initiative", "to take the first step (in doing so-and-so)", e.g. to begin a guest-friendship (in the earliest occurrence of the verb, *Odyssey* 24.286) or to initiate hostilities (...)

Thus before ὑπάρχειν becomes specialized as a verb of "existence" we find it used in a predicative construction as an expressive equivalent for εἶναι as copula verb.

It is, however, not this copula use but the more frequent construction with the dative that accounts for the first technical use of the verb in philosophy: the use in which it expresses in logical terms the attributive relation which is normally expressed in grammatical form by the copula. Instead of "A is B" Aristotle prefers to say τὸ β τοῦ ἀ ὑπάρχειν B belongs to A" (Prior Analytics 25a,5 and throughout). Hence τα ὑπάρχοντα attributes (of a subject) " e.g. at De

Interpretatione 16b 10. (And see Bonitz, Index Aristotelicum 789a29-b2; compare the more non-technical use *ibid.* a12-28.) Since "what belongs to a thing" includes not only its accidents but also essential or substantial attributes in the first category, ὑπάρχειν is said in as many ways as εἶναι, i.e. in as many ways as there are categories or combinations of categories (Pr. An. 48b2-4, 49a6-9). (...)

Apart from this technical use in logic and grammar, the most common meaning of ὑπάρχειν in later Greek seems to be that which we render as 'to exist' or "'to be real'. (This occasionally leads to rather ludicrous confusion, when a late commentator can no longer distinguish between Aristotle's technical sense and his own ordinary use of ὑπάρχειν. (...).

It should be pointed out that although this use of ὑπάρχειν for real existence (in contrast to a mere word or an imaginary object) seems to be the dominant use in late Greek philosophy, the corresponding verb may still be construed both with paralogative and nominal predicates, as we can see from Sextus' discussion of the existence of the gods, e.g. IX-I43 (...).

And the same predicative construction is normal for the corresponding verb *existere* in classical Latin (as will be seen in a moment). In neither case, then, would our familiar contrast between an existential and a copulative verb naturally arise.(...)

I have neither space nor skill to follow the history of *existere*, *existentia* in Latin. I note, however, that like other derivatives of *stare*, *existere* serves in Varro, Lucretius, and later authors as a stylistic variant for *esse*, often with the nuance (suggested by *ex-*) of 'emerge' come into being' 'be produced'. As in the case of ὑπάρχειν this quasi-existential sense of *existere* is fully compatible with the copulative construction: (*pecora*) *quae post tempus nascuntur, fere vitiosa atque inutilia existunt*. (Varro *Rerum rust.* II.1.7)

The noun *existentia* seems not be attested before Marius Victorinus and Candidus in the 4th century A.D. It is a learned invention, designed to render ὑπάρχειν; in metaphysical texts where the latter term is distinguished from οὐσία (*substantia*) as the more general

concept, sheer being without categorial determination, while οὐσία presents some determinate form of being, like 'substance' in the first Aristotelian category: *Id est existentia vel subsistentia vel, si ... dicas ... vel existentialitatem vel substantialitatem vel essentialitatem* (*Adversus Arium* III.7.9, cited in Pierre Hadot, Porphyre et Victorinus (Paris, 1968), II p. 29 text 40).

But this terminology was not taken up by Boethius, who apparently preferred *esse* to *existere* as a rendering of the technical use of ὑπάρχειν for pure, indeterminate being. (1)

As we have seen, Priscian in the 6th century A.D. renders ὑπάρχειν as substantivum. Thus neglected by Boethius and Priscian, the technical use of *existentia* as contrasted with *substantia* in late Neo-Platonism had no direct impact on early medieval terminology.

Abelard's usage is mixed. He often employs *existere*, *existens* for 'to exist', 'existing (thing)', but rarely uses the abstract noun and then in a rather surprising way: *existentiae rerum* seems to mean '(actual) states of affairs' in contrast to *res*, the existing thing, whose existence may be expressed by *esse*. (*Dialectica*, 154, 11 and 156, 29. Compare Kneale and Kneale, *The Development of Logic*, p. 206).

Aquinas' usage is even more Boethian: his normal expression for what we call 'existence' is *esse* or *actus essendi*. Only with the *esse existentiae* of Duns Scotus at the end of the thirteenth century do we find *existentia* firmly established as a technical term contrasted with *essentia*. Thus the modern terminology of 'existence' seems to derive from Scotus.

What connections (if any) can be traced between Scotus' use of *existentia* and the technical terminology of Victorinus nearly a millennium earlier, I do not know. In his translations of Proclus, William of Moerbeke renewed the ancient practice of rendering ὑπάρχειν by *existentia*, (P. O. Kristeller, *Journal of Philosophy*, 1962, p. 77) and these translations must have had some influence on the shaping of the medieval terminology. But ὑπάρχειν for Proclus is not quite the same either as *existentia* for Victorinus or *existentia* for Scotus. What role was played here by the concepts and terminology of Islamic philosophy I can only guess. The history of

'existence' seems to consist largely of still unanswered questions.(2)" (pp. 151-155)

Notes

(1) Compare the key passage of Boethius' *De Hebdomadibus* with the corresponding citation from Damascius in P. Hadot "La distinction de l'être et de l'étant dans le 'De Hebdomadibus' de Boèce", *Miscellanea Medievalia*, 2, (1963), pp. 147 and 151, n. 25. Boethius shows no trace of the existentiā-substantiā distinction we find in Victorinus and Candidus. It has been pointed out (by Graham, below) that Boethius normally renders the substantival τὸ ὄν by the artificial form *ens*, but sometimes resorts to the more natural Latin form *existens* for the verbal-adjectival use of the Greek participle as predicate or attribute.

(2) For some remarks on the contrast between Arabic and Greek terminology for "being", see A. C. Graham "'Being' in Linguistics and Philosophy", *Foundations of Language*, 1 (1965), 223 ff. For doctrinal contacts between Avicenna and Duns Scotus on the question of existence, see E. Gilson, *L'être et l'essence*, pp. 128-131.

From: Charles H. Kahn, *On the Terminology for Copula and Existence*, in: S. M. Stern, Albert Hourani and Vivian Brown (eds.), *Islamic Philosophy and the Classical Tradition. Essays Presented by His Friends and Pupils to Richard Walzer on His Seventieth Birthday*, London: Bruno Cassirer 1972, pp. 141-158. (Reprinted in C. H. Kahn. *Essays on Being*, New York: Oxford University Press 2009, pp. 41-61.)

Logic and Existence

"The contemporary attempts to determine in a purely logical way the nature of existence, by constructing a logic of existence(1) or a free logic which makes "no assumptions about the existence of the purported designata of its terms, general or singular,"(2) seems to be still premature as long as the problem of existence in its philosophical implications is not adequately resolved. Historically, there are three main problems in logic involving a conception of existence, which clearly show that the logical problem of existence

has a philosophical background influencing the "logic of existence" in its technical sense.

The first problem arose in the period of the algebra of logic, when G. Boole (implicitly) and E. Schroeder (explicitly) introduced the concept of the empty class. This innovation resulted in a criticism of the traditional square of opposites and Aristotelian syllogistics, and the conception of the existential import of categorical statements. A further consequence, already recognized in the period of G. Frege and B. Russell, was the interpretation of particular statements as existential statements and of universal statements as hypothetical ones. It was maintained that "all general propositions deny the existence of something or other,"(3) and for these reasons no valid inference of a statement with existential import from a statement without existential import was admitted.

The second problem comprises the "fanciful Russellian analyses of proper names in existential contexts,"(4) with its special theory of descriptions, directed against Meinong's conception that a grammatically correct denoting phrase stands for an object, even if it does not subsist, and a similar view of H. MacColl who assumed two sorts of individuals -- real and unreal.(5) Russell's theory of descriptions is evidently a philosophical reflection of his views concerning the nature of existence as the fundamental problem of ontology, a technical term introduced for the first time by Chr. Wolff in his *Philosophia prima sive Ontologia* . . . (1730). For philosophical reasons, Russell attempts to refute the ontological argument of Anselm of Canterbury. In the course of his argument, he adopts both conclusions of Kant's refutation in his Critique of Pure Reason (B 620ff), namely that (1) "all existential propositions are synthetic" and that (2) "Being is obviously not a real predicate; that is, it is not a concept of something which could be added to the concept of a thing." His conviction that "existence is quite definitely not a predicate" is another reason for his introduction of the concept of the existential qualifier.

The third problem, introduced recently by W. V. Quine in his famous dictum, "To be is, purely and simply, to be the value of a variable,"(6) is connected with the contemporary discussion on universals and the

attempts to reformulate the language of logic and mathematics in a nominalistic sense.(7)" (pp. 157-158)

Definition of "existence": [Avicenna \(Ibn Sina\) \(980-1037\)](#)

[*First distinction between essence and existence*]

"The primary analysis of the nature of being, its application to numerous things, and an introduction to the exposition of substance.

Being is recognized by reason itself without the aid of definition or description. Since it has no definition it has neither genus nor differenzia because nothing is more general than it.(1) Being does not

have a description since nothing is better known than it. It is possible that one can recognize its name in one language by means of another language. Thus, by some means, it is possible to acquaint someone with what is meant by a term like being. For example, if being appears in Arabic, it can be explained in Persian, and one can indicate that it is that from which other things are derived.

In its first division, being is *prima facie* of two kinds: the one is called substance and the other accident. Accident is that whose being subsists in something else, so that that being which is complete without it is either active by itself or due to something else. An example of this condition is the whiteness of a cloth. We note that the cloth exists either by itself due to itself, or by means of those things which bring about its being. Whiteness subsists in a dependent manner in it. Whiteness and whatever is analogous to it are called accidents. In this context, the receptacle of whiteness is called a subject, although in another context something else is meant by 'subject'. Thus, a substance is that which is not an accident, whose being, moreover, is not in a subject, but is a reality such that the being of that reality that essence are not receptive to another thing having the aforesaid characteristics. One may regard the substance as a receptacle which lacks this character. But to be active, this substance needs to be accepted by this receptacle whose reality we establish later when we clarify its nature. One may regard the substance neither as a receptacle nor as being in a receptacle, as we shall also establish subsequently when we explain its being. This, then, is called a 'substance'." (pp. 15-16).

(1) "The term used by ibn Sina to designate 'being' is *hasti*, a Persian term for which no equivalent appears in his Arabic texts. To be sure, in *Shifa'* he points out the term *wujud* (existence) has several meanings: (1) *haqiqa* (the essence, reality of something, the fact that it exists), and (2) the particular existence of something, and by making these distinctions, he confirms his awareness of the various senses of 'existence', but even in view of these different senses of 'existence', there is still no term in his Arabic works which could render *hasti* adequately. Although one could attempt to find a Greek equivalent for this term translating it perhaps as *tò òn hê òn* by which 'being-qua-being' is commonly rendered, one should nevertheless be cautious not to equate this term with *ousía* for the

reason that *ousía* is sometimes defined as 'substance'. Ibn Sina, however, holds 'being' in the sense of *basti* to be the most determinable concept. Hence, if we choose to accept the translation of *ousía* for being, then ibn Sina's views will definitely be at odds with those of many Neo-Platonists, such as Proclus, who states that the One and the Gods are to be regarded as 'supra being' (hyperoûsios) (Elements, p. 105), or Plotinus, who proclaims that the One generates gennetés (being) (*Enneads* V [1]). In view of the preceding discussion in this chapter, it is evident that ibn Sina's doctrine disagrees with that of these Greek philosophers, for he asserts that nothing is above being, and whatever exists is a determination of being. However, Aristotle's notion of being-qua-being as τὸ ὄν ἡ ἐν ὄν (*Metaphysica*, book IV, ch. 1) corresponds to ibn Sina's notion of *hasti*. Aristotle's position becomes clear in subsequent sections of the *Metaphysica* when he indicates that mathematics 'cuts off' a part of being, whereas metaphysics investigates being as being, ignoring those elements of being which are related to it in an accidental manner (i.e. are a determination of being). For a detailed account of this topic, see J. Owens, *The Doctrine of Being in the Aristotelian Metaphysics*, Toronto, 1953, esp. ch. 7 and 8. In order to achieve greater clarity on this issue and circumvent various ambiguous usages of the term *ousía*, Owens suggests the use of the term 'entity' as a better translation of it." (pp. 112-113)

From: Parviz Morewedge, *The Metaphysica of Avicenna (ibn Sina). A critical translation-commentary and analysis of the fundamental arguments in Avicenna's Metaphysica in the Danish Nama-i-ala i (The Book of Scientific Knowledge)*, London: Routledge & Kegan Paul 1973.

Francisco Suárez (1548-1617)

[*Essence and existence according to Suárez*]

"To avoid an equivocation in terms and to make it unnecessary later to make distinctions about an essential being, an existential being or a subsistential being or a being of truth in a proposition, I suppose by being we understand the actual existence of things. For essential being, if it is truly distinguished from existence, adds nothing real to

the essence itself, but only differs from it in the way it is conceived or signified. Hence, just as the essence of a creature as such, in virtue of its concept, does not say that it would be something actually real with being outside its causes, so the essential being as by standing precisely in this, does not express an actual being by which an essence outside it causes would be constituted in act. For if to be actual in this latter way is not of the essence of the creature, neither will it be able to pertain to its essential being. Hence, being of a creature as such will prescind of itself from actual being outside its causes by which a created thing comes to be beyond nothing, by which name we designate actual existential being. But subsistential being is also more contracted than existential being, for the latter is common to substance and accidents. The former is proper to substance. Besides, subsistential being (as I suppose from what is to be proved below) is something distinct from the existential being of a substantial created nature and separable from it, because it does not constitute a nature in the order of actual entity, which pertains to existence. Now the being of truth in a pro position of itself is not a real and intrinsic being, but it is an objective being in the intellect as it is composing; hence it belongs also to privations. For we say, accordingly: Blindness is or A man is blind, as Aristotle discusses at greater length in book 5 of Metaphysics, chapter seven. Hence, the discussion is about created existence concerning which, furthermore, we suppose that it is something real and intrinsic to an existing thing; this seems self-evident. For through existence a thing is understood to be something in the nature of things. Therefore, it is necessary that existence be both something real and intrinsic, that is, within the existing thing itself. For a thing cannot be existing by some extrinsic denomination or some being (ens) of reason. Otherwise, how would existence constitute a real being (ens) in act and beyond nothing?" (p. 45).

"I say thirdly: that being by which the essence of a creature is formally constituted in essential actuality is the true existential being. (...) Now this statement is proved in a variety of ways. First, because this being, understood precisely, is sufficient for the truth of this statement with a second adjacent: essence is. Hence, that being is true existence. The consequence is clear, for according to the common meaning and human conception, the is of a second

adjacent, is not divorced from time. But it signifies being in act in the realm of things, which all of us understand by the name existence or by existential being. You will say that the "is" is always said truly of an actual essence, yet not formally because of the actuality of an essence, nor on account of that being by which it is formally constituted in such actuality, but because it never has this being without existence, although distinct from such an essential being or actuality. But against this retort the antecedent of the argument given is proved. For, by this actual essential being, taken formally and precisely, such an essence is a being (*ens*) in act and distinguished from a being (*ens*) in potency. Hence, by virtue of that being, such an essence is, for the inference is correct: it is a being (*ens*) in act; therefore it is. For to be a being (*ens*) in act does not reduce the character of being (*ens*) which includes the verb "is". So, even if we grant that this actual essential being depends on a further limit or act, as on a necessary condition or something of this sort, still that very being will formally constitute a being (*ens*) in act and will distinguish the latter from a being (*ens*) in potency. Thus, by virtue of that being a thing is truly and absolutely said to be, just as an accident by virtue of its being is said to be a being (*ens*) in act and to be absolutely, even though that being requires an inherence in a subject so that, without it, it could not exist naturally." (p. 74).

From: Francisco Suárez, *De essentia entis finiti ut tale est et de illius esse eorumque distinctione. (Disputatio XXXI)* - (Translated as: *On the Essence of Finite Being as Such, on the Existence of that Essence and Their Distinction*, by Norman J. Wells, Milwaukee: Marquette University Press 1983).

René Descartes (1596-1650)

"To know what existence is, all we have to do is to understand the meaning of the word, for it tells us at once what the thing is which the word stands, for, in so far as we can know it. There is no need here for a definition, which would confuse rather than clarify the issue" (AT X, 525; CSM II, 418).

From: René Descartes, *Recherche de la Verité*, in: Charles Adam, Paul Tannery (eds.), *Oeuvres de Descartes*, Paris: Vrin, 1964-1976 (12 volumes; referred as 'AT'); translated as: *The Search of Truth*, in:

J. Cottingham, R. Stoothoff, D. Murdoch (eds.) *The Philosophical Writings of Descartes*, Cambridge: Cambridge University Press 1985 (referred as 'CSM').

[*According to Descartes, existence is a property*]

"Here I do not see what sort of thing you want existence to be, nor why it cannot be said to be a property just like omnipotence - provided, of course, that we take the word 'property' to stand for any attribute, or for whatever can be predicated of a thing; and this is exactly how it should be taken in this context." (AT VII, 382; CSM II 262)"

From: René Descartes, *Replies to the Objections [by Gassendi] to the Fifth Meditation*.

Baruch Spinoza (1632-1677)

"I call a thing impossible whose nature implies that it would be contradictory for it to exist; necessary whose nature implies that it would be contradictory for it not to exist; and possible whose existence be contradictory for it to exist; necessary whose nature implies that it would be contradictory for it not to exist; and possible whose existence, (*) by its very nature, does not imply a contradiction -- either for it to exist or for it not to exist -- but whose necessity or impossibility of existence depends on causes unknown to us, so long as we feign its existence. So if its necessity or impossibility, which depends on external causes, were known to us, we would have been able to feign nothing concerning it.

[54] From this it follows that, if there is a God, or something omniscient, he can feign nothing at all. For as far as We are concerned, after I know that I exist, (s) I cannot feign either that I exist or that I do not exist; nor can I feign an elephant which passes through the eye of a needle; nor, after I know the nature of God, can I feign either that he exists or that he does not exist. (t) The same must be understood of the Chimera, whose nature implies that it would be contradictory for it to exist. From this what I have said is evident: that the fiction of which we are speaking here does not occur concerning eternal truths. (u) I shall also show immediately that no fiction is concerned with eternal truths.

[55] But before proceeding further, I must note here in passing that the same difference that exists between the essence of one thing and the essence of another also exists between the actuality or existence of the one thing and the actuality or existence of the other. So if we wished to conceive the existence of Adam, for example, through existence in general, it would be the same as if, to conceive his essence, we attended to the nature of being, so that in the end we defined him by saying that Adam is a being. Therefore, the more generally existence is conceived, the more confusedly also it is conceived, and the more easily it can be ascribed fictitiously to anything. Conversely, the more particularly it is conceived, then the more clearly it is understood, and the more difficult it is for us, [even] when we do not attend to the order of Nature, to ascribe it fictitiously to anything other than the thing itself This is worth noting." (pp. 24-25) [56] Now we must consider those things that are commonly said to be feigned, although we understood clearly that the thing is not really as we feign it. E.g., although I know that the earth is round, nothing prevents me from saying to someone that the earth is a hemisphere and like half an orange on a plate, or that the sun moves around the earth, and the like. If we attend to these things, we shall see nothing that is not compatible with what we have already said, provided we note first that we have sometimes been able to err, and now are conscious of our errors; and then, we can feign, or at least allow, that other men are in the same error, or can fall into it, as we did previously.

We can feign this, I say, so long as we see no impossibility and no necessity. Therefore, when I say to someone that the earth is not round, etc., I am doing nothing but recalling the error which I, perhaps, made, or into which I could have fallen, and afterwards feigning, or allowing, that he to whom I say this is still in the same error, or can fall into it. As I have said, I feign this so long as I see no impossibility and no necessity.

Notes

(s) Because the thing makes itself evident, provided it is understood, we require only an example, without other proof. The same is true of its contradictory -- it need only be examined for its falsity to be clear.

This will be plain immediately, when we speak of fictions concerning essence.

(t) Note. Although many say that they doubt whether God exists, nevertheless they have nothing but the name, or they feign something which they call God; this does not agree with the nature of God, as I shall show later in the proper place.

(u) By an eternal truth I mean one, which, if it is affirmative, will never be able to be negative. Thus it is a first and eternal truth that God is; but that Adam thinks is not an eternal truth. That there is no Chimera is an eternal truth; but not that Adam does not think." (II, 20)"

(*) Joachim (*Spinoza's Tractatus de Intellectus Emendatione*, Oxford: Clarendon Press, 1940) suggests reading *essentia*, though the *Opera Posthuma's 'existentia'* is supported by the Nagelate Schriften. If it were not for the immediately following phrase (*ipsa sua natura*), I would think this almost certainly correct. I have translated the Latin as it stands, but (with Eisenberg) I feel certain that what Spinoza means is that the essence of the thing by itself does not entail either that the thing cannot, or that it must, exist. [Note by Edward Curley]

Gottfried Wilhelm Leibniz (1646-1716)

[According to Leibniz, existence is not a property]

"Existence. It can be doubted very much whether existence is a perfection or degree of reality; for it can be doubted whether existence is one of those things that can be conceived -- that is, one of the parts of essence; or whether it is only a certain imaginary concept, such as that of heat and cold, which is a denomination only of our perception, not of the nature of things. Yet if we consider more accurately, [we shall see] that we conceive something more when we think that a thing A exists, than when we think that it is possible. Therefore it seems to be true that existence is a certain degree of reality; or certainly that it is some relation to degrees of reality.

Existence is not a degree of reality, however; for of every degree of reality it is possible to understand the existence as well as the possibility. Existence will therefore be the superiority of the degrees of reality of one thing over the degrees of reality of an opposed thing. That is, that which is more perfect than all things mutually incompatibles exists, and conversely what exists is more perfect than the non-existent, but it is not true that existence itself is a perfection, since it is only a certain comparative relation [comparatio] of perfections among themselves." (p. 165)

From: Robert Merrihew Adams, *Leibniz. Determinist, Theist, Idealist*, Oxford: Oxford University Press 1994 (undated memorandum by Leibniz).

Christian Wolff (1679-1754)

"Christian Wolff was a rationalistic school philosopher in the German Enlightenment. During the period between the death of Leibniz (1714) and the publication of Kant's critical writings (1780s), Wolff was perhaps the most influential philosopher in Germany.

(...) Wolff thought of philosophy as that discipline which provides reasons to explain why things exist or occur and why they are even possible. Thus, he included within philosophy a much broader range of subjects than might now be recognized as 'philosophical'. Indeed for Wolff all human knowledge consists of only three disciplines: history, mathematics and philosophy.

(...) For Wolff, the immediate objective of philosophical method is to achieve certitude by establishing an order of truths within each discipline and a system within human knowledge as a whole. The ultimate goal is to establish a reliable foundation for the conduct of human affairs and the enlargement of knowledge." (pp. 776-777)

From: Charles A. Corr, "Wolff, Christian", in: Edward Craig (ed.), *The Routledge Encyclopedia of Philosophy*, New York: Routledge 1998.

"Wolff's Ontology begins (27) with the assertion of the two laws of contradiction and sufficient reason, both fundamental to the assertion that something is, or that it is not. The former requires that

what is must be free from inner conflict, the latter that, if it does not, like a necessary being, have a reason for being in its own nature, it must depend on such a reason in something other than itself. The law of causation, as we ordinarily understand it, is for Wolff only a special form of the law of sufficient reason, pertinent to temporal, changeable things and their states (71). From these principles Wolff proceeds to the consideration of the metaphysical modalities, of which the most fundamental is the possible, the negation of the self-contradictory, or logically impossible. Everything actual, he holds, is by the law of contradiction possible, but he here embraces some invalid theorems, for instance, that a possible consequence can only have possible premisses. Obviously, modal logic is still insecure, though Wolff's treatment of apagogic proof in 98 is of some interest. From Wolffian principles it follows that the notion of an entity not wholly determinate is 'imaginary', and that the indeterminate is only what is for us determinate, and that it will have to be determined by a sufficient reason (111, 117). There is no room in Wolffianism, any more than in Leibnizianism, for radical alternativity: Kant, however, will diverge from this position under the influence of Crusius.

All this leads, however, to Wolff's treatment of what he calls an entity: an entity is defined as any thing which can exist, to which existence is not repugnant. Thus warmth in this stone is a something, an entity, since a stone certainly can be warm or a warm stone can exist. There does not need to be any actual stone-warmth for us to have an entity before us. An entity is, however, rightly called fictitious or imaginary, if it lacks existence, which does not, however, make it less of an entity. These near-Meinongian positions are of great contemporary interest, and form the spring-board for much of Kant's later criticisms of the ontological proof, which is Wolffian enough to treat 100 possible dollars as if they certainly were something. Wolff goes on to draw the distinctions of essential features and attributes, on the one hand, which always must belong to an entity, and its modes, on the other hand, which are merely the characters that it can have and also can not have. Obviously, however, something must be added to possibility to raise it to full existence, and this Wolff is simply content to call the possibility-complement (174)." (pp. 39-40).

"Being is what can exist and, consequently, that with which existence is not incompatible" (§ 134)

"Hinc existentiam definitio per complementum possibilitatis" (Existence is defined as the complement of possibility)." (§ 174)

From: Christian Wolff, *Philosophia prima sive Ontologia* (1730), (First Philosophy, or Ontology).

Christian Augustus Crusius (1715-1775)

"Crusius was a pivotal figure in the middle period of the German Enlightenment, linking Pufendorf and Thomasius with Kant. Though sometimes wrongly characterized (for example by Hegel) as a Wolffian, he was instead an important critic of that position. His system reflected a new alliance between Pietism and Lutheran orthodoxy, offering a comprehensive antirationalist, realist, and voluntarist alternative to the neoscholastic tradition as renovated by Leibniz. Crusius was important in Kant's development and helps us understand the latter's philosophical Protestantism." (p. 736)

From: Michael J. Seidler, "Crusius, Christian August", in: Edward Craig (ed.), *The Routledge Encyclopedia of Philosophy*, New York: Routledge 1998.

"Crusius' influence on Kant. Recent historical scholarship has stressed Crusius' importance in Kant's development, and the view that Kant's philosophy was rooted in Wolff's system has been more and more questioned. Recent research has shown that Kant, educated in the Pietistic, eclectic, and anti-Wolffian milieu of Königsberg University, was mainly trying in his precritical development (1745-1768) -- despite the nonorthodox Wolffian influence of his teacher, Martin Knutzen -- to counteract Wolffian philosophy in an increasingly original way. He therefore appealed both to recent anti-Wolffian trends -- to Maupertuis and his Berlin circle and through Maupertuis to Newton -- and to Crusius, the new leader of Pietist philosophy and only nine years his senior, whose

reputation grew tremendously from 1744 on. Crusius' influence on Kant consists in six main points, some of which were also held by other Pietist philosophers or by Maupertuis. Crusius stressed the limits of human understanding, a theme that recurs in Kant's writings under different forms from 1755 on. He rejected the Ontological Argument, as did Kant after 1755, and he later rejected all theoretical proofs of God's existence. He assumed a multiplicity of independent first principles; Kant did so after 1755. He denied the importance of formal logic, and simplified it. He rejected the possibility of defining existence, and accepted a multiplicity of simple notions. He rejected the mathematical method as applied to philosophy. Kant adopted these last three positions in 1762.

Kant's Crusianism reached its climax in his *Untersuchung über die Deutlichkeit der Grundsätze der natürlichen Theologie und der Moral* ("Investigations Concerning the Distinctness of the Fundamental Principles of Natural Theology and Morals," Berlin, 1764), written in 1762. By 1763 Kant's enthusiasm for Crusius' philosophy was waning, but he did not reject the six tenets above and was still influenced by Crusius on individual points as late as the 1770s. Bohatec has claimed that Crusius' doctrines in revealed theology exerted some influence on Kant's late works in religion." (p. 270).

[First definition of existence as a predicate]

Existence is "that predicate of a thing by virtue of which the thing is to be encountered somewhere and at some time outside thought."
(section 46)

From: Christian August Crusius, *Entwurf der notwendigen Vernunftwahrheiten*, (1745), (Sketch of Necessary Truths of Reason).

Immanuel Kant (1724-1804)

(under construction)

Bertrand Russell (1872-1970)

"Being is that which belongs to every conceivable term, to every possible object, of thought-in short to everything that can possibly occur in any proposition, true or false, and to all such propositions themselves. Being belongs to whatever can be counted. If A be any term that can be counted as one, it is plain that A is something, and therefore that A is. 'A is not' must always be either false or meaningless. For if A were nothing, it could not be said not to be ; 'A is not' implies that there is a term A whose being is denied, and hence that A is. Thus unless 'A is not' be an empty sound, it must be false. Whatever A may be, it certainly is. Numbers, the Homeric gods, relations, chimeras and four-dimensional spaces all have being, for if they were not entities of a kind, we could make no propositions about them. Thus being is a general attribute of everything, and to mention anything is to show that it is.

Existence, on the contrary, is the prerogative of some only amongst beings. To exist is to have a specific relation to existence-a relation, by the way, which existence itself does not have. This shows, incidentally, the weakness of the existential theory of judgment-the theory, that is, that every proposition is concerned with something that exist, For if this theory were true, it would still be true that existence itself is an entity, and it must be admitted that existence does not exist, Thus the consideration of existence itself leads to non-existential propositions, and so contradicts the theory. The theory seems, in fact, to have arisen from neglect of the distinction between existence and being Yet this distinction is essential, if we are ever to deny the existence of anything. For what does not exist must be something, or it would be meaningless to deny its existence ; and hence we need the concept of being, as that which belongs even to the non-existent." (pp. 449-450)

2. Bacigalupo, Giuliano. 2016. "Whose Existence? A Deflationist Compromise to the Fregean/Neo-Meinongian Divide." *Argumenta* no. 2:5-24.

Abstract: "The dispute between the Fregean and the Neo-Meinongian approach to existence has become entrenched: it seems that nothing but intuitions may be relied upon to decide the issue. And since contemporary analytic philosophers clearly are inclined

towards the intuitions that support Frege's approach, it looks as if Fregeanism has won the day. In this paper, however, I try to develop a compromise solution. This compromise consists in abandoning the assumption shared by both Fregeanism and Neo-Meinongianism, namely that the notion of existence adds something to the content of a statement. To the contrary, we should think of existence as a redundant notion. In other words, I will argue that we should be deflationist about existence. Moreover, the kind of deflationism I propose relies

on what I call the existence equivalence schema, a schema which follows the blueprint of the well-known truth equivalence schema. From such a perspective, we can say that Fregean philosophers rightly deny the status of a discriminating property to existence; and, conversely, Neo-Meinongians, too, rightly reject the view that existence is captured by quantification or expresses a universal property of objects. Finally, the argument that we should take a deflationist approach to

existence builds upon an analysis of natural language (general) existential statements and their intuitive entailment-relations."

"The paper is concerned with the standard distinction between the 'is' of identity and the 'is' of predication. It deals, in particular with attempts by Fred Sommers ("Journal of Philosophy", 1969) and Michael Lockwood ("Philosophical Review", 1975) to show that the distinction is ill-founded since identity statements are predications of singular terms. This proposal is criticized mainly on the grounds that the notion of a singular term depends upon identity and thus can't be used in a

- program to eliminate identity. An alternative means of removing the distinction between the 'is' of identity and the 'is' of predication, by eliminating predication in favour of relative identities using Geach's suggestion that "x" is "F" is equivalent to "x" is the same "F" as something, is briefly sketched."

"I have given my essay this title because it roughly indicates the boundaries of the topic to be discussed and at the same time hints at the method that will be adopted in my analysis. The problem of existence will interest me only to the extent to which it enters the province of logical enquiry and I shall try to disentangle it a little by departing from the generally accepted interpretation of the quantifiers and by bringing in other concepts related to that of existence." (p. 104)

(...)

"I wish to conclude with a brief summary of the results. The aim of the paper was to analyse rather than criticize. I started by examining two inferences which appeared to disprove the validity of the rules of universal instantiation and existential

generalization in application to reasoning with empty noun-expressions. Then I distinguished two different interpretations of the quantifiers and argued that under what I called the unrestricted interpretation the two inferences were correct. Further arguments in favour of the unrestricted interpretation of the quantifiers were brought in, and in particular it was found that by adopting the unrestricted interpretation it was possible to separate the notion of existence from the idea of quantification. With the aid of the functor of inclusion two functors were defined of which one expressed the notion of existence as underlying the theory of restricted quantification while the other approximated the term exist(s) as used in ordinary language.

It may be useful to supplement this summary by indicating some aspects of the problem of existence which have not been included in the discussion. I analyzed the theory of quantification so far as it was applied in connection with variables for which noun-expressions could be substituted and my enquiry into the meaning of exist (s) ' was limited to cases where this functor was used with noun-expressions designating concrete objects or with noun-expressions that were empty. It remains to explore, among other things, in what sense the quantifiers can be used to bind predicate variables and what we mean when we say that colours exist or that numbers exist. These are far more difficult problems, which may call for a separate paper or rather for a number of separate papers." (p. 119)

31. Lockwood, Michael. 1975. "On Predicating Proper Names." *The Philosophical Review* no. 84:471-498.

"Mill's *System of Logic* is not often turned to by contemporary philosophers as a source of insights regarding the philosophy of language. To be sure, the terms "connotation" and "denotation," which Mill coined, have passed into quite general circulation; and Mill's doctrine of proper names has recently

regained a certain popularity—largely as a result of the writings of Kripke. But the notions of connotation and denotation seem generally to be understood in the context of a Fregean or Carnapian scheme of thought which is, to a large extent, alien to Mill's own way of conceiving language; and Mill's views on proper names are usually discussed entirely without reference to what, for Mill, constitutes their theoretical rationale.

To some, it may come as a surprise to learn that Mill actually had anything amounting to a *theory* of language. In fact, however, there is to be gleaned from Mill's *Logic* a theory of quite considerable sophistication -- which I shall attempt, in part, to reconstruct and defend. What will emerge from our discussion is a conception of proper names which combines elements that might seem, at first blush, incompatible with one another. I shall argue that the Kripke-Donnellian conception of proper names as "rigid designators" or purely referential devices is anticipated by Mill to an even greater degree than is generally recognized; but that, curiously, this conception does not prevent Mill from allowing that proper names can function as genuine predicates. We shall find that, even for Mill, there is, after all, *a* sense in which proper names might be said to connote."

"Ajdukiewicz noted that singular existentials were regarded as meaningful in the Lesniewskian -- existentials as copula claims -- tradition but as meaningless within the Frege-Russell -- existentials as quantifier claims -- tradition. By utilizing identity ("=") in the Frege-Russell tradition and noting that it shares features with the Lesniewskian copula (both are sentence forming functors that take nouns as arguments), one can criticize the arguments for meaningfulness that were originally given. Nowadays it is quite common to use identity to express singular existentials. The paper's conclusion is that neither identity nor the copula provide the right basis for understanding existentials, but some feature they share in common."

52. Pappas, George. 2002. "Abstraction and Existence." *History of Philosophy Quarterly* no. 19:43-63.

"The concept of existence has been of great importance in many different philosophical systems. One well-known discussion of existence comes in Kant's attack on the ontological argument. Kant argued that existence is not a defining predicate or, as is more commonly said, a property. However, as he also noted, the ontological argument seems to depend for its cogency on the assumption that existence is a property of things. Kant does seem right about this, at least for some versions of the ontological argument. For instance, Anselm held that a really existing supreme being is greater than a supreme being that exists solely in the understanding. Existence thus seems to be a great-making property for Anselm, and thus it surely qualifies as a property. Kant is usually credited with being the first to notice that existence is not a property, and for seeing the connection that this point has to the ontological argument.

Kant's insights here, as elsewhere, seem to me to be of fundamental importance. However, I think as well that Berkeley had something like the same insight concerning existence as we find in Kant, though of course Berkeley made no further allusion to the ontological argument. That is, Berkeley sees well before Kant that existence is not a property, or what Berkeley would have called a quality. Indeed, in a sense to be explained below, it is this insight that lies behind

Berkeley's attempt to show that for all non-perceivers, to be is to be perceived.

Berkeley says in the Commentaries that his great discovery, something he thinks is really new, is how to understand the notion of existence. He means, no doubt, how we are to understand existence itself. This new way of thinking of existence, in turn, leads him to his famous principle of *esse is percipi* (EIP). A natural reading, then, would be that what Berkeley holds regarding existence and what he takes as genuinely new is just the EIP principle itself. The great discovery about existence would be that it is intimately linked to perception.

This way of thinking of the matter, I argue, is not correct. One aim of this paper is to show that the EIP principle is not Berkeley's great discovery about existence. That principle, rather, is something that flows out of his discovery about existence. In fact, I think Berkeley has two fundamental discoveries about existence, each of which in its own way is more basic than the EIP principle. The first discovery is that Locke's way of thinking of existence is deeply flawed, something that commits Locke to holding that there is an abstract idea of existence. Further, this Lockean conception of existence is closely related to a certain way of understanding the EIP principle. A second equally important discovery about existence, is that we do not have any idea of existence, and this is because there is nothing to have an idea of. Berkeley sees clearly, well ahead of both Hume and Kant, that existence is not a property or quality of things; this is his own most profound discovery about existence. This fact leads to a way of understanding the EIP principle, though one that is quite different from that associated with the Lockean conception of existence.

A second aim of the paper will turn out to be directly linked to these two ways of thinking of existence. This aim is that of explaining a certain vacillation in Berkeley's texts when he is commenting on the status of the EIP principle. In some passages he says that the EIP principle is a necessary truth, one

whose denial is a “manifest repugnancy” or a contradiction. Elsewhere, Berkeley says that the denial of the EIP principle is meaningless, a contention that would result in the EIP principle being at best a contingent truth. In yet other passages Berkeley states his point disjunctively: either the denial of the EIP principle is a contradiction, or it is meaningless. My claim is that this vacillation is not indicative of a certain hesitancy on Berkeley’s part, or anything that shows that he was unsure of what to say about the EIP principle. On the contrary, Berkeley knows exactly what is at issue. The denial of the EIP principle is contradictory, I argue, when we think of existence along Lockean lines. Thus, a mistaken conception of existence yields that the EIP principle is a necessary truth. On the other hand, the denial of the EIP principle is meaningless, when existence is understood along Berkeleyan lines. That is, on the correct account of what existence is, the EIP principle is a contingent truth. Berkeley’s two great discoveries about existence produce two distinct versions of the EIP principle.

I do not deny the fundamental role of the EIP principle in Berkeley’s positive metaphysics. Indeed, I follow Tipton in regarding the principle as the dominant, basic principle in the metaphysical scheme worked out in the *Principles* and the *Three Dialogues*.^{*} My claim is, rather, that the EIP principle is not Berkeley’s basic discovery about existence, and in that sense it is not his fundamental insight. It is, instead, this fundamental insight from which the EIP principle derives." (pp. 43-45)

57. Rescher, Nicholas. 1978. "The Equivocality of Existence." *American Philosophical Quarterly* no. 12:57-66.

"1. *Is Existence a Univocal or an Equivocal Conception?*

There is no denying that many different sorts of things exist.

And there is also no denying that they exist in many different sorts of ways. But is the *existence* at issue in these different contexts always the same? Is *the same idea* operative when we say different sorts of things 'exist' do they 'exist' in the same *sense* of this philosophically crucial terms?

The issue comes down to this: Can one give a strictly *uniform* account in explicating wherein the existence of different sorts of things lies? Or does the meaning-analysis of the notion of existence lead to different destinations in different settings? Is existence a univocal conception or is it equivocal, so that the different uses of 'exists' are unified only by a 'family resemblance'? These questions define the problem-area of the present discussion." p. 57

(...)

"8. Consequences. Our analysis thus indicates the lack of any workable uniform conception to provide a covering umbrella for all these modes of existence. The philosophical study of existence -- ontology -- emerges from these considerations as a complex and internally diversified issue. No simple synoptic formula--such as Quine's well-known thesis 'to be is to be the value of a variable' -- is adequate to this ramified and variegated issue.

Despite this diversity, the logical analysis of the modes and modalities of existence is nevertheless a useful undertaking. For unless one becomes clear as to the composition of the

concepts at issue, it is not possible to explore profitably their philosophical ramifications and interrelationships. Insofar as philosophy is a matter of the cost-benefit analysis of the pros and cons of various theoretical positions—as indeed it is, in large measure—the exploration of logico-conceptual distinctions of the sort we have dealt with here can play a useful role in the philosophical enterprise.

Nominalism is a particularly straightforward case in point. For the nominalist (or at any rate the most prominent sort of nominalist), universals are no more than collection-principles for the assembling of suitably resembling *actualia*. Now the present deliberations have made it clear both what the commitments of this position are and what difficulties they encounter. For if universals are no more than points of resemblance among actually existing things, then it follows at once that the only properties that exist (really and genuinely exist -- in the solely here -- appropriate sense of the term) are those properties which are actually exemplified by reals. The consequences of the position abolish the line of distinction between property *existence* and property *exemplification*. An analysis of the consequences of the position make it easy to see what difficulties it encounters. Think again of such examples as Hume's missing shade of blue, the toothy smile of the Cheshire cat, or the unrealized values of parametrized properties (like height, weight, or temperature). All these now disappear as real (i.e., existing) properties. An analytical scrutiny of existence concepts shows that such a nominalism proposes on philosophico-ideological grounds (e.g., "'economy' or 'simplicity,' etc.) to legislate a narrower range of alternatives than 'the logic of the case' strictly requires. The present considerations suggest that this doctrine enjoins upon us an ontological posture that is in fact *smaller* than life." p. 65-66).

"1. *Nominalism and Necessity*. The differences between medieval nominalists and realists, which foreshadowed current philosophical disagreements, concerned existence. But the issues were not simple: realists postulated essences or real natures in order to explain the regularities in the actual world. Thus the nominalists, abhorring the existence of such abstract entities, found themselves also in a dispute over necessities: whether some things must, and others could happen, and whether these modal facts do, or are needed to, explain what actually happens.

The firm standpoint taken by the nominalists, as I understand them, was the one that became characteristic of the British empiricists later: the only necessities are those which derive from the connections among terms. As Nicholas of Autrecourt formulated it: there can be no inference from the existence or non-existence of one thing to that of another. In that case, realists held, there is no explanation to be had of the regularities in nature—they are one and all coincidences. This realist criticism was later sharply formulated by Peirce, especially in his remarks on Mill. (1)

The appearances are certainly all against the nominalists. For we do say that some things must, and others could happen, and in this way explain what does happen. Scientists, far from having a Quinean canonical idiom, speak just that way. The nominalists' first and basic move in this game is to say that all natural necessities are elliptic for conditional verbal necessities. This sheet on which I write must burn if heated, because it is paper—yes. But the only necessity that is *really* there is that all paper must burn when heated. This is so, but means only that we would not call something 'paper' if it behaved differently. (This is a naive formulation, but I shall not here present the process of sophisticating it.) There are technical difficulties for logicians in making sense of this move; but when sufficiently refined, the position that all non-verbal necessities are ellipses for conditional necessities *ex vi terminorum* can be held. (2)

There is however, a special problem, as Quine pointed out very early on, about necessities *de re*. In the above example, the

nominalist really *denied* that this sheet must burn if heated. He replaced the necessity of the consequent by the necessity of the consequence, to use their inimitably concise jargon. What is true only, he asserted, is that this sheet is paper, a contingent fact, and that any paper must burn if heated, a necessary universal conditional which is not peculiarly about this sheet at all. So he denies the necessity *de re* asserted.

But we are very accustomed to assert necessities and possibilities *de re*, and are a bit suspicious of any philosophical position that accuses everyone of habitual and systematic logical error. Could we ever follow the nominalist on this issue and really feel comfortable-at home in the world of Antoine Roquentin, protagonist of *La Nausée*, who perceives every natural fact and connection as radically contingent?

In the remainder of this essay I shall examine what I believe to be the main philosophical and logical puzzles in the history of this problem." pp. 1-2.

74. Witherall, Arthur. 2016. *The Problem of Existence*. New York: Routledge.

"In this book I shall investigate the question: 'Why is there something instead of nothing?' It is an extraordinary question, rarely asked and rarely answered. It does not easily arise in conversation, for it cannot be openly and cheerfully debated. Instead it appears as a kind of phantom, shrouded in mist and darkness. The question itself, even in the context of a philosophy classroom, has a strange and disquieting atmosphere. It seems to come from the void, and it depends upon the dreadful contrast between being and nothingness, raising the possibility of knowing both. In asking us to reflect upon this contrast, this question lies at the extreme end of philosophical inquiry, and it deserves to be recognized as such. Transcending all of the normal conceptual structures and standards, asking for an explanation beyond any explanatory framework, it seems both inescapable and incalculable.

Yet I will provide an answer to it of a certain kind, through a gradual process involving an investigation of many possible responses. The final result of this process will be represented not as a simple proposition with a distinct information content, but as a general schema which may be instantiated by a variety of explanatory propositions. As such, my answer will not entirely form a closure of the inquiry that is opened up, but I believe that it forms a coherent and complete response, in at least the sense that the investigation has a distinct conclusion."

"Kant argues that existential judgments cannot be understood as attributing existence, as a predicate, to those things whose existence is asserted. (1) This seems correct, but it gives rise to a serious problem. For as I point out in section I, it seems to imply that existential judgments do not involve any predication

whatsoever, and thus that they are not really judgments. One might hope to avoid this paradoxical conclusion by arguing that existential judgments are predicative in form but that they do not attribute existence, as a predicate, to anything; as I point out in Section II, various philosophers have maintained just this. I argue in section III that this view, though not without value, is finally untenable. In section IV, I then point out what I take to be the source of the difficulties that have been discussed and suggest how they are to be resolved. In section V, I point out the implications of this suggestion for the judgment that God exists, and indicate a possible line for further thought on this topic."

2. Angelelli, Ignacio. 2004. "Predication Theory: Classical vs Modern." In *Relations and Predicates*, edited by Hochberg, Herbert and Mulligan, Kevin, 55-80. Frankfurt: Ontos Verlag.

"This essay aims, first, at describing the conflict between the theory of predication (classical, Aristotelian) prevailing in philosophy until the end of the 19th century, and the theory arisen with the new logic (modern, Fregean). Three features characterize the pre-Fregean period: 1) conflation of predication and subordination (extensionally: membership and class-inclusion), 2) conflation of identity and predication, 3) the view of quantificational phrases (e.g. "some men") as denoting phrases. A possible fourth feature is suggested by the consideration of the so-called Locke's "general triangle". Most of the paper is devoted to the first feature, also called the "principal" one, stated by Aristotle. Frege seems to be the first, in 1884, to reject the first feature; he also rejected, not less vehemently, the second and the third features. Fregean predication theory became standard, and just taken for granted in the subsequent developments of logic as well as in the mainstream of philosophy. The second aim of this paper is to evaluate - relative to the notion of predication submitted in

section I - the conflict between the two traditions, and to determine if both are somehow right, or one is right and the other wrong. The main result is that the Fregean revolution in predication theory is, at least with regard to the first and second features of the classical view, a clarification that would probably be welcomed by the classical authors themselves (*pace* Hintikka's "Logic of Being")."

3. Bäck, Allan. 1987. "Avicenna on Existence." *Journal of History of Philosophy* no. 25:351-367.

"In Islamic philosophy, in particular, with Ibn Sina (Avicenna), there appears, in quite explicit form, a view of predication at odds with many current interpretations of Aristotle and views of predication. That view is that the simple affirmative categorical proposition 'S is p' is to be read as 'S is (existent) as a p', and that for its truth it is required both that S be existent and that S be p. This paper sketches out the development of that view. It then shows how this view resolves such vexing problems in interpreting Aristotle's logic and ontology as the existential import assumption and his view of First philosophy."

6. Burnyeat, Myles. 2003. "Apology 30b 2-4: Socrates, Money, and the Grammar of "gígnesthai"." *Journal of Hellenic Studies* no. 123:1-25.

Abstract: "The framework of this paper is a defense of Burnet's construal of Apology 30b 2-4. Socrates does not claim, as he is standardly translated, that virtue makes you rich, but that virtue makes money and everything else good for you. This view of the relation between virtue and wealth is paralleled in dialogues of every period, and a sophisticated development of it appears in Aristotle. My philological defense of the philosophically preferable translation extends recent scholarly work on *eínai* in Plato and Aristotle to *gígnesthai*, which is the

main verb in the disputed sentence. When attached to a subject, both verbs make a complete statement on their own, but a statement that is further completable by adding a complement. The important point is that the addition of a complement does not change the meaning of the verb from existence to the copula. Proving this is a lengthy task which takes me into some of the deeper reaches of Platonic and Aristotelian ontology, and into discussion of whether Greek ever acquired a verb that corresponds to modern verbs of existence. I conclude that even when later authors such as Philo Judaeus, Sextus Empiricus and Plotinus debate what we naturally translate as issues of existence, none of the verbs they use (*eínai*, *úpárkhein*, *úphestekénaí*) can be said to have existential meaning."

16. Forgie, William. 1975. "Kant and the Question: "Is Existence a Predicate?"" *Canadian Journal of Philosophy* no. 5:563-582.

"Kant gave a two-fold answer to the question, 'Is existence a predicate?'. His view that existence is not a first-level predicate, i.e., a predicate of objects like horses, stones, and you and me, is widely known. What is not so well-known, however, is his claim that existence is a second-level predicate, a predicate of concepts or of a collection of predicates. In this paper I hope to show why his arguments for both claims are unsuccessful." (p. 563)

17. ———. 2000. "Kant and Frege: Existence as a Second Level Property." *Kant Studien* no. 91:165-177.

Abstract: "Both Kant and Frege maintained that existence is a second-level predicate or property. And, broadly speaking, each tried to establish this conclusion in the same way. However, their arguments differ at crucial places. I believe that a close look at these differences will uncover major obstacles to the success of the project itself."

18. ———. 2007. "Gassendi and Kant on Existence." *Journal of the History of Philosophy* no. 45:511-523.

Abstract: "In rejecting Descartes's ontological proof for the existence of God, Gassendi maintained that existence is not a property and Kant said that it is not a "real predicate". It is commonly supposed that both are making the same claim. Some have even thought that they advance essentially the same argument for that same claim. I believe none of this is correct. Gassendi and Kant offer different arguments. And they are arguing for different conclusions. These differences stem from a more fundamental one: they mean different things by existence."

19. Frege, Gottlob. 1979. "Dialogue with Pünjer on Existence." In *Posthumous Writings*, edited by Hermes, Hans, Kambartel, Friedrich and Kaulbach, Friedrich, 53-67. Oxford: Blackwell.

20. Geach, Peter Thomas. 1955. "Form and Existence." *Proceedings of the Aristotelian Society* no. 55:251-272.

Reprinted in P. T. Geach, *God and the Soul*, London: Routledge & Kegan Paul 1969, pp. 42-64.

"In this paper I shall discuss what Aquinas meant by his term *esse*, or *actus essendi*, "act of existing". Another synonym that he uses — *quo aliquid est*, "that by which a thing is (or: exists)" — suggests a convenient division of the subject: we can first discuss Aquinas's philosophical use of *quo*, "that by which", and then consider which sense of *est*, which sort of existential statements, may be relevant to Aquinas's doctrine of *esse*. But we shall see that, having got thus far, we cannot arrive at the meaning of the whole phrase *quo aliquid est*, or the reasons for the way Aquinas uses it, simply by combining our separate considerations about *quo* and *est*." (p. 251)

21. Haaparanta, Leila. 1986. "Frege Synthesized: Essays on the Philosophical and Foundational Work of Gottlob Frege." In *Frege Synthesized*, edited by Haaparanta, Leila and Hintikka, Jaakko, 155-174. Dordrecht: Reidel.

From the General Introduction by Leila Haaparanta and Jaakko Hintikka: "In her article 'Frege on Existence' Leila Haaparanta emphasizes that Frege's greatest insight was the idea of first-order language, which, to a large extent, motivated the rest of his innovations. Haaparanta focuses her attention on Frege's concept of existence, which receives special attention in Frege's thought in connection with the thesis concerning the ambiguity of such words for being as the English 'is'. The ambiguity thesis was an important part of the Fregean paradigm of first-order logic. Haaparanta argues that Frege does not only assume the word 'is' to be ambiguous but that he considers 'exists', or the 'is' of existence, to be an equivocal word. She suggests that the equivocity view has a metaphysical and epistemological background in Frege's thought. Her paper thus pushes a great deal further the suggestions of Jaakko Hintikka mentioned earlier in this Introduction." (p. 6)

22. Harari, Orna. 2003. "The Concept of Existence and the Role of Constructions in Euclid's *Elements*." *Archive for History of Exact Sciences* no. 57:1-23.

"This paper examines the widely accepted contention that geometrical constructions serve in Greek mathematics as proofs of the existence of the constructed figures. In particular, I consider the following two questions: first, whether the evidence taken from Aristotle's philosophy does support the modern existential interpretation of geometrical constructions; and second, whether Euclid's *Elements* presupposes Aristotle's concept of being. With regard to the first question, I argue that Aristotle's ontology cannot serve as evidence to support the existential interpretation, since Aristotle's ontological discussions address the question of the relation between the whole and its parts, while the modern discussions of mathematical existence consider the question of the validity of a concept. In considering the second question, I analyze two syllogistic reformulations of Euclidean proofs. This analysis leads to two conclusions: first, it discloses the discrepancy between Aristotle's view of mathematical objects and Euclid's practice, whereby it will cast doubt on the historical and theoretical adequacy of the existential interpretation. Second, it

- sets the conceptual background for an alternative interpretation of geometrical constructions. I argue, on the basis of this analysis that geometrical constructions do not serve in the *Elements* as a means of ascertaining the existence of geometrical objects, but rather as a means of exhibiting spatial relations between geometrical figures." - Reprinted in: Simo Knuuttila and J. Hintikka (eds.), *The Logic of Being*, Dordrecht: Reidel 1986 pp. 249-268.
- "The ontological argument fails because of an operator order switch between (1) "necessarily there is an (existentially) perfect being" and (2) "there is a being which necessarily is (existentially) perfect". Here (1) is trivially true logically but (2) is problematic. Since Kant's criticisms were directed at the notion of existence, not at the step from (1) to (2), they are misplaced. They are also wrong, because existence can be a predicate. Moreover, Kant did not anticipate Frege's claim that "is" ("ist") is ambiguous between existence, predication, identity, and class-inclusion. To restore the ontological argument, an extra premise is needed to the effect (roughly) that it is known who the existentially perfect being is. The question is raised whether Kant could have meant the failure of this extra premise by his thesis that existence is not a "real" predicate."

"Aristotle did not consider the Frege-Russell distinction between the "is"s of identity, existence and predication as an ambiguity. On each occasion, any of these component senses of "einai" might or might not be present. The existential sense (existential force) was in a Barbara-type syllogism conveyed from the major term to the minor term by the middle term. For this reason the middle term was the proximate cause of the minor one: it is what lent the minor one its existence. Likewise Aristotle had to assume existential force only for the widest (generic) term of each science."

Abstract: "In the course of his philosophy, in various contexts, Kant comes to reject three theses about existence: (i) that the thoroughgoing determination of a thing implies its existence, (ii) that existence is a real predicate or determination of a thing, and (iii) that existence is the complement of inner possibility or essence.

Kant's target here is Baumgarten, who advocates these theses as the criterion, classification, and definition of existence. In this article I seek to clarify Kant's elusive theory of existence through its opposition to Baumgarten. I will show that Kant's refutation of (i)–(iii) does not stand alone but is grounded on his own definition of existence as (absolute) positing. Thus contrary to common practice, Kant's negative claims about what existence is not cannot be understood in isolation but must be taken as jointly dependent on Kant's positive claim about what existence is. I will show that theses (i)–(iii) fail because they presuppose that existence contributes to the intension or content of a concept, whereas according to Kant existence in fact posits a (non-empty) extension of the concept."

Summary. "(I) The notion of an *is* of identity in English. Some passages from Plato suggesting the existence of the comparable notion of a special *estin* of identity in Greek. (II) What in particular would lead Plato to recognize such a special sense of *estin*? Forms, participation, and predication. In the account of ordinary singular predications, a predicate 'Y' is true of a subject X just in case X participates in the form the Y associated with. (III) Self-participation. If nothing can participate in itself, then for any forms X and Y, X participates in Y and so is Y only if X is not Y. Even if self-participation is allowed, still in the majority of cases a subject is not what it participates in. The difficulty for all theories of predication which wish to explain how a thing can *be* something which it also *is not*. (IV) The *is* of identity re-examined. Some fallacies which might support the notion, and some arguments against it. (V) *Sophist* 255e11-256d10. Plato does not explicitly recognize an *estin* of identity. Four competing, "equally best" accounts of the grammatical theory he may implicitly be invoking: (i) the *estin* of identity; (ii) relational terms; (iii) the definite article; (iv) the *not* of nonidentity. (VI) Conclusion. The notion of a special *estin* of identity has little basis in Plato's text."

"Lesley Brown suggests that Parmenides and Plato were not guilty of an oft-alleged existence/predication confusion since the relevant Greek verb, when used as a copula, had a built-in existential connotation, just as the same use of "teaches" can be understood both completely and incompletely. I challenge this approach on the grounds that it implies that the ancient Greeks

were in the impossible position of not being able unproblematically to attribute properties to subjects recognized not to exist. I attempt to show that the evidence Brown presents for her thesis from Parmenides, Plato and Aristotle is inconclusive."

Reprinted in: S. Knuuttila and J. Hintikka, *The Logic of Being*, Dordrecht: Reidel 1986 pp. 29-47.

"In coming to terms with the well-known difficulties concerning such Platonic assertions as "beauty is beautiful," "justice is just," "beauty is more beautiful than anything else," etc., modern commentators have frequently invoked the received notion that the verb "to be" has two or more senses, including in particular the so-called identity and predicative senses. The present paper argues in detail that this verb can be consistently understood as having a single sense throughout Plato's texts, and that such an interpretation does less violence to his doctrines than do the more usual accounts."

"This is an essay about the ontological presuppositions of a certain use of 'is' in Greek philosophy -- I shall describe it in the first part and present a hypothesis about its semantics in the second.
