Abstract: "Bernard Bolzano's philosophy of mind is closely related to his metaphysical conceptions of substance, adherence and force. Questions as to how the mind is working are treated in terms of efficient (causal) faculties producing simple and complex representations, conclusive and non-conclusive judgments, and meta-representational attitudes such as believing and knowing. My paper outlines the proximity of Bolzano's account of "mental forces" to contemporary accounts of faculty psychology such as Modularity Theory and Simple Heuristics. While the modularist notions of domain specificity and encapsulated mental faculties align with Bolzano's allotment of domain specific tasks to correspondingly specified psychological forces (e.g. judging to "judgmental force", inferring to "inferential force" etc.), the emphasis of Simple Heuristics on accurate "fast and frugal" processes aligns with Bolzano's views regarding cognitive resources and the importance of epistemic economy. The paper attempts to show how Bolzano's metaphysics of mind supposes a conception of bound rationality that determines his epistemology. Combining the rationalist concern for epistemic agent responsibility in the pursuit of knowledge with a strong confidence in the reliability of causal processes to generate the right beliefs, his epistemology shows close affinities with contemporary Virtue Epistemology. According to Virtue Epistemology, knowledge requires that true beliefs be generated by reliable processes typical of a virtuous character. The thesis that Bolzano anticipates virtue epistemological considerations is corroborated by his discussion of heuristic principles that set the norms for the acquisition of knowledge. The paper explores possible relations between such principles and the presumed low-level heuristics of cognitive processes."

16. ———. 2011. "Bolzanian Knowing: Infallibility, Virtue and Foundational Truth." *Synthese* no. 183:27-45

Abstract: "The paper discusses Bernard Bolzano's epistemological approach to believing and knowing with regard to the epistemic requirements of an axiomatic model of science. It relates Bolzano's notions of believing, knowing and

evaluation to notions of infallibility, immediacy and foundational truth. If axiomatic systems require their foundational truths to be infallibly known, this knowledge involves both evaluation of the infallibility of the asserted truth and evaluation of its being foundational.

The twofold attempt to examine one's assertions and to do so by searching for the objective grounds of the truths asserted lies at the heart of Bolzano's notion of knowledge. However, the explanatory task of searching for grounds requires methods that cannot warrant infallibility. Hence, its constitutive role in a conception of knowledge seems to imply the fallibility of such knowledge. I argue that the explanatory task contained in Bolzanian knowing involves a high degree of epistemic virtues, and that it is only through some salient virtue that the credit of infallibility can distinguish Bolzanian knowing from a high degree of Bolzanian believing."

17. Koren, Ladislav. 2014. "Quantificational Accounts of Logical Consequence I: From Aristotle to Bolzano." *Organon F* no. 21:22-44

Abstract: "So-called quantificational accounts explicate logical consequence or validity as truth-preservation in all cases, cases being construed as admissible substitutional variants or as admissible interpretations with respect to non-logical terms. In the present study, which is the first from three successive studies devoted to quantification accounts, I focus on the beginning of systematic theorizing of consequence in Aristotle's work, which contains the rudiments of both modal and formal accounts of consequence.

I argue, *inter alia*, that there is no evidence for the claim that Aristotle propounded a quantificational account, and that for a full-fledged quantificational approach in a modern style we need to turn to Bolzano's substitutional approach, whose motivation, structure and problems are explained in the second part of this study."

"Bolzano might have been the first to elaborate rigorously on this very idea in his account of logical validity and deducibility. The following passage deserves a full quote:

Among the definitions of [the concept of deducibility] ... one of the best is that of Aristotle: 'a syllogism is a discourse in which, certain things being stated, something other than what is stated follows of necessity from their being so.' Since there can be no doubt that Aristotle assumed that the relation of deducibility can hold between false propositions, the 'follows of necessity' can hardly be interpreted in any other way than this: that the conclusion becomes true whenever the premises are true. Now it is obvious that we cannot say of one and the same class of propositions that one of them becomes true whenever the others are true, unless we envisage some of their parts as variable.

For propositions none of whose parts change are not sometimes true and sometimes false; they are always one or the other. Hence when it was said of certain propositions that one of them becomes true as soon as the others do, the actual reference was not to these propositions themselves, but to a relation which holds between the infinitely many propositions which can be generated from them, if certain of their ideas are replaced by arbitrarily chosen other ideas. (Bolzano 1972, § 155, 219-220)" (p. 33)

18. Krämer, Stephan. 2011. "Bolzano on the Intransparency of Content." *Grazer Philosophische Studien* no. 82:189-208

Summary: "Content, according to Bolzano, is intransparent: our knowledge of certain essential features of the contents of our contentful mental acts (such as their identity and composition) is often severely limited. In this paper, I identify various intransparency theses Bolzano is committed to, and present and evaluate the defence he offers for his view. I argue that while his intransparency theses may be correct, his defence

is unsuccessful. Moreover, I argue that improving on his defence would require substantial modifications to his general epistemology of content."

19. Krause, Andrej. 2006. "Are Bolzano's Substances Simple?" *American Catholic Philosophical Quarterly* no. 80:543-562

Abstract: "This article analyzes one aspect of Bolzano's metaphysics. It discusses the question of whether, according to Bolzano, substances are simple or not. In the opinion of some commentators, he accepts composed substances, that is, substances having substances as proper parts. However, it is easily possible to misinterpret his position. This paper first tries to reconstruct Bolzano's definitions of the concept of substance and suggests that he should be able to agree with the following final definition: x is a substance if and only if x is real and not a property. After this, it is shown that, according to Bolzano, every substance is simple in a fourfold sense: No substance has (1) adherences as parts, (2) substances as proper parts, (3) spatially extended parts, and (4) temporal parts."

20. Kriener, Jönne. 2017. "Bolzano." In *The History of Philosophical and Formal Logic: From Aristotle to Tarski*, edited by Malpass, Alex and Antonutti Marfori, Marianna, 121-142. New York: Bloomsbury Academic

"This chapter presents core elements of the logic developed by the Austrian mathematician and philosopher Bernard Bolzano during the first decades of the nineteenth century. * For Bolzano, logic deals with scientific reasoning quite generally. A science for him is an ordered body of true propositions. Accordingly, I will begin by explaining Bolzano's notion of proposition.

When we engage in science, our reasoning crucially involves the derivation of some propositions from others. Bolzano's most advanced innovation in logic is his theory of deducibility (*Ableitbarkeit*). Famously, it anticipates some aspects of the modern concept of logical consequence.

Finally we deal with a more demanding, and less well understood, way in which Bolzano took scientific truths to be

ordered: his notion of grounding (*Abfolge*). Grounding is central to Bolzano's thinking about science, and thus an important part of Bolzano's logic." (p. 121)

21. Künne, Wolfgang. 1997. "Propositions in Bolzano and Frege." *Grazer Philosophische Studien* no. 53:203-240

Reprinted in W. Künne, *Versuche über Bolzano / Essays on Bolzano*, pp. 157-195 and in Michael Beaney and Erich H. Reck (eds.), *Gottlob Frege. Critical Assessments of Leading Philosophers. Vol. I: Frege's Philosophy in Context*, New York: Routledge, 2005, pp. 124-153.

Abstract: "In the Preface to his book *Frege and Other Philosophers* [New York: Oxford University Press, 1996] Michael Dummett says: "The only nineteenth-century philosopher of whom it would be reasonable to guess, just from the content of his writings and those of Frege, that he had influenced Frege, is Bernhard Bolzano, who died in the year Frege was born; but there is no evidence whatever that Frege ever read Bolzano".(1) Apart from one grave mistake this seems to me to be exactly right. Did you notice the "grave" mistake? Bolzano's first name is spelled with an "h" and thereby deprived of its Italian flavour.(2)

To be sure, there were two mathematically minded philosophers and one philosophically minded mathematician who emphatically appealed to Bolzano in the course of their discussions with Frege. So he was made aware of the fact that Bolzano's work was potentially relevant for his own concerns. But Husserl, Kerry and Korselt were critical of Frege, and Frege in turn was very critical of them. Perhaps that's why he never bothered to read an author they praised, — who knows... (3)

There are many respects in which a comparison between Bolzano and Frege could be philosophically fruitful. But what is most striking for everyone who reads both Frege's *Logische Untersuchungen* and Bolzano's *Wissenschaftslehre* is the close similarity between what Frege calls *Gedanken* and what Bolzano calls *Sätze an sich*. In the literature this resemblance is frequently mentioned, but I have never seen a detailed investigation into this topic.(4) In this paper I shall recall some

of the well-known respects, and point out some less well-known respects, in which F(rege)-Propositions and B(olzano)-Propositions (as I shall call them) resemble each other. But I am at least as keen to underline some philosophically important differences beneath those similarities."

(1) Dummett, vii. The same claim is to be found in Dummett *Ursprünge der analytischen Philosophie*, Frankfurt /M., 1988, 34; *Origins of Analytical Philosophy*, Cambridge/MA, 1993, 24, and *Frege. Philosophy of Mathematics*, London, 1991, 47. I cannot take seriously E.-H. Kluge's contention that there was "a de facto, perhaps even unconscious influence that manifested itself in a similarity of conceptual approach and a parallelism of positions defended" (Kluge "Bolzano and Frege: Some Conceptual Parallels, in: *Grazer Philosophische Studien* 10 (1980), pp. 21-42, 21 ff.). Several extremely careless translations from the *Wissenschaftslehre* in Kluge's article seem to be symptomatic of a rather superficial acquaintance with Bolzano's work. I also disagree with much of his interpretation of Frege.

(2) Bemard(o)'s father was born at the Lago di Como. By the way, the misspelling is endemic. In Vienna it marred even the attempt to name a street after Bolzano.

(3) Cp. Künne "Die Ernte wird erscheinen...' Die Geschichte der Bolzano-Rezeption (1849-1939)", pp. 9-82, esp. 31-50; revised version in this volume: 326-359.

(4) Of course, in Dummett *Ursprünge.../Origins...* ch. 4, it is also duly registered, but the focus is rather on Frege.

22. ———. 1998. "Bolzano, Bernard." In *Routledge Encyclopedia of Philosophy*, edited by Craig, Edward, 824-828. New York: Routledge

Abstract: "Bernard Bolzano was a lone forerunner both of analytical philosophy and phenomenology. Born in Prague in the year when Kant's first *Critique* appeared, he became one of the most acute critics both of Kant and of German Idealism. He died in Prague in the same year in which Frege was born; Frege is philosophically closer to him than any other thinker of the

nineteenth or twentieth century. Bolzano was the only outstanding proponent of utilitarianism among German-speaking philosophers, and was a creative mathematician whose name is duly remembered in the annals of this discipline. His *Wissenschaftslehre* (Theory of Science) of 1837 makes him the greatest logician in the period between Leibniz and Frege. The book was sadly neglected by Bolzano's contemporaries, but rediscovered by Brentano's pupils: Its ontology of propositions and ideas provided Husserl with much of his ammunition in his fight against psychologism and in support of phenomenology, and through Twardowski it also had an impact on the development of logical semantics in the Lwów-Warsaw School."

23. ———. 2001. "Constituents of Concepts: Bolzano vs. Frege." In *Building on Frege. New Essays on Sense, Content, and Concept*, edited by Newen, Albert, Nortmann, Ulrich and Stuhlmann-Laeisz, Rainer, 267-285. Stanford: CLSI Publications

Reprinted in: W. Künne, *Versuche über Bolzano / Essays on Bolzano*, Sankt Augustin: Academia Verlag 2008, pp. 211-232.

"In section 1 of this paper I shall point out that in one respect the grandfather of analytical philosophy was more conservative than its great-grandfather: Frege at least partially endorsed the Canon of Reciprocity which was a prominent ingredient of the post-Cartesian logical tradition, Bolzano rejected it completely. In section 2 I shall try to defend one part of this bipartite principle. In section 3 I shall try to show that this line of defence is open to Frege. This claim is based on a reconsideration of Frege's notion of the marks (*Merkmale*) of a concept, — a notion which is generally treated rather cavalierly in the literature on Frege. In section 4 I shall present a problem that Bolzano and Frege share because they both think of complex senses in part-whole terms. Finally, in part 5, I shall briefly celebrate what I deem to be Bolzano's victorious attack on the other part of the Canon of Reciprocity (CR)." (p. 211)

(...)

Here is Kant's formulation of CR: (4)

(CR) Content and extension of a concept stand in an inverse relation. The more objects fall under a concept, the fewer conceptual components are contained within the concept, and vice versa.

Bolzano attacks CR in § 120 of his monumental *Wissenschaftslehre* (1837; henceforth 'WL' for short). (5)

(4) 'Inhalt und Umfang eines Begriffs stehen gegen einander in umgekehrtem Verhältnisse. Je mehr nämlich ein Begriffunter sich enthält, desto weniger enthält er in sich und umgekehrt' (Kant (10), 148). Bolzano's contention in WL I 294, 570, repeated by many authors, that (CR) is to be found already in the Logic of Port Royal (Arnauld/Nicole) is not tenable (Schmauks 14f.). An early (if not the earliest) formulation of (CR) is given in Wolff (1), 138.

(5) Bolzano quotes (CR) in WL I 292.

[Another definition of CR: "Every concept, as partial concept, is contained in the representation of things; *as ground of cognition, i.e., as mark*, these things are contained under it. In the former respect every concept has a content, in the other an extension.

The content and extension of a concept stand in inverse relation to one another. The more a concept contains under itself, namely, the less it contains in itself, and conversely.

Note. The universality or universal validity of a concept does not rest on the fact that the concept is a partial concept, but rather on the fact that it is a ground of cognition." (I. Kant, *The Jäsche Logic*, § 7, *Content and extension of concepts*, in: *Lecture on Logic*, Cambridge: Cambridge University Press, 1992, p. 96]

24. ——. 2003. "Bernard Bolzano's *Wissenschaftslehre* and Polish Analytical Philosophy Between 1894 and 1935." In *Philosophy and Logic in Search of the Polish Tradition: Essays in Honour of Jan Wolenski on the Occasion of His 60th Birthday*, edited by Kijania-Placek, Katarzyna, 179-192. Dordrecht: Kluwer

"In this paper I want to examine some of the many Polish contributions to a critical discussion of Bolzano 's masterpiece.

Twardowski praised Bolzano for clearly distinguishing, under the headings [1] *subjektive Vorstellung*, [2] *Vorstellung an sich* or *objektive Vorstellung*, and [3] *Gegenstand*, what ought to be distinguished, namely [1] the mental act of representing an object, [2] the content of this act, and [3] its object.

Twardowski's book [Twardowski 1892] voiced a fundamental disagreement with Bolzano, which, some would say, was to become rather fruitful, and it is marred by a fundamental misunderstanding.

The disagreement concerns the question whether all representings are objectual (*gegenständlich*) or whether some representings lack an object. For Bolzano this was a matter of course: The act of representing I give voice to when uttering the definite description 'the present King of Poland' has no object.

Twardowski disagreed: my representation does have an object, but it is a non-existent one,(4) This move paved the way for Meinong (as well as for Routley and Parsons)(5). Meinong's *Theory of Objects* is based upon the 'principle of the independence of being from being-so (*Prinzip der Unabhängigkeit des Soseins vom Sein*)' : an object can be thus-and-so even if it has no being (i.e, even if it neither 'exists' nor 'subsists'). Bolzano was strongly opposed to this: 'as the old canon has it (*wie schon der alte Kanon besagt*) - *nonentis nullae sunt offecciones*.(6) In 1894 another pupil of Brentano's, Edmund Husserl, who had already come across Bolzano as a mathematician, forcefully defended the claim that some representings have no object whatsoever against Twardowski's criticism.(7) (In some respects this controversy foreshadows that between Meinong and post-'On Denoting-Russell.)" (p. 179-180)

Reprinted in: W. Künne, *Versuche über Bolzano / Essays on Bolzano*, Sankt Augustin, Academia Verlag, 2008, pp. 197-210.

"In the Prolegomena to his *Logische Untersuchungen* (LU) Edmund Husserl praised the first two volumes of Bernard Bolzano's *Wissenschaftslehre* (WL) as 'far surpassing everything else world literature has to offer as systematic exposition of logic'. Eleven years later the key is a bit lower: These volumes, he now says, occupy 'the highest rank in the logical world literature of the 19th century'.(2)

To the best of my knowledge, the most extensive and most thorough discussion of a single contention in Bolzano's

philosophy of logic that can be found in any of Husserl's books and articles published during his lifetime is contained in the last chapter of his LU.(3) The topic of this discussion is a courageous if not outrageous Bolzanian contention which, at least on the face of it, flatly contradicts what most philosophers since Aristotle took for granted. *Questions*, Bolzano claims, *are a special kind of propositions and hence truth-evaluable*. Let me call this Bolzano's *Tenet*.

In my little exercise I shall reconstruct and evaluate both Bolzano's *Tenet* and Husserl's criticism thereof. I shall argue that the latter is largely correct, but that in the end Husserl and Bolzano are both wrong. Somebody else got it right: a philosopher and mathematician for whom one would also claim a very high rank indeed in the logical world literature of the 19th, and of any, century. But this is to anticipate.

What exactly is it that Bolzano maintains when he says that questions are a kind of propositions? By 'proposition (Satz an sich)' he means something that is neither mental nor linguistic. Propositions are thinkables and sayables which can be singled out by that-clauses. Such thinkables and sayables are truth-evaluable, hence, assuming bivalence as Bolzano does, they are either true or false. If Bolzano's *Tenet* is to make any sense at all, by 'questions' he cannot mean anything mental or linguistic. Now the term 'question' is multiply ambiguous, and for our inquiry it is most important not to get entangled in this ambiguity. We must distinguish

Questions 1: mental acts of asking oneself a question,

Questions 2: illocutionary acts of asking a question,

Questions 3: interrogative sentences, and

Questions 4: askables.

Wonderings, i. e. sense-1-questions, are voiced by sense-2-questions. Husserl occasionally labels the former '*innerliche Fragen*' and the latter '*Anfragen*'. The second term (which in ordinary German has a far narrower application) is meant to register the fact that sense-2-questions are essentially

addressed to someone. Sense-3-questions are linguistic vehicles of sense-2-questions; unsurprisingly Husserl calls them 'Fragensätze'. Sense-4-questions, finally, are possible contents of sense-1- and of sense-2-questions, and sometimes they coincide with the conventional linguistic meaning of sense-3-questions. (They do so only if the latter are free of context-sensitive elements.) In Husserl's language, an askable is a 'Frageinhalt', and he identifies it with the 'Bedeutung' (meaning) des *Fragensatzes*'. (4) Askables are those thinkables and sayables which can be singled out by indirect sense-3-questions (for example, by the clauses in 'He asked whether the conference had started' or 'She asks when the conference will end'). So let us reformulate Bolzano's Tenet: *Askables are a proper sub-set of propositions.*" (pp. 197-198).

(...)

"At the point we have now reached we can recognize that the following stance has a chance of being coherent: conceding that English yes/no interrogatives are not true or false (sc. in English) any more than any other interrogatives are, while maintaining that yes/no interrogatives, in contradistinction to search interrogatives, express propositions which are true or false (*simpliciter*). This is coherent if we take yes/no interrogatives to be an exception to the right-to-left half of a bridge-principle that is unexceptionable as regards *declarative* sentences: Sentence S is true in language L at context c if and only if what is expressed by S in L at c is true. This move would mitigate the tension between Aristotle's and Bolzano's views about questions, which Husserl emphasized at the outset of his discussion of Bolzano's Tenet." (pp. 209-210).

(2) Husserl (3), I 225; letter to Friedjung, in Husserl (14), VII 97.

(3) In 1920 Husserl emphasized that he had refrained from modifying the text of the 1st edition only because in the meantime his views had changed too drastically (preface to the 2nd edition of Husserl(3), II/2 vii). I shall concentrate exclusively on his 1901 position, more precisely: on those aspects of that position which are relevant for an evaluation of

Bolzano's thesis about questions. (Page references are always to the 2nd edition.)

(4) Husserl (3), II/2 211-212.

26. ———. 2006. "Analyticity and Logical Truth: from Bolzano to Quine." In *The Austrian Contribution to Analytic Philosophy*, edited by Textor, Mark, 184-249. New York: Routledge

Reprinted in: W. Künne, *Versuche über Bolzano / Essays on Bolzano*, Sankt Augustin: Academia Verlag 2008, pp. 233-303.

"Truth-value bearers and the concept of truth

For Bolzano analyticity, like truth and falsity, is a property of propositions (*Sätze an sich*). He takes the concept of a proposition to resist analysis or conceptual decomposition (*Erklärung*), but there are other ways of 'achieving an understanding (*Verständigung*)' of a concept.(3)

Consider a report of the following type: 'Johanna said that copper conducts electricity, Jeanne said the same thing, though in different words, and Joan believes what they said.' Here a that-clause is used to single out something that is [1] said by different speakers, [2] distinct from the linguistic vehicles used for saying it, and [3] believed by somebody. 'Now, this is the sort of thing I mean by *proposition*,' Bolzano would say, 'propositions are sayables and thinkables, possible contents of sayings and thinkings, that can be singled out by that-clauses.'(4)"

(3) 3 Cf. Bolzano, *Wissenschaftslehre* (henceforth: WL, quoted by volume and page number) IV 243–5, 488–90, 542–5, 547. The manuscript of *WL* was published only seven years after Bolzano had begun to search for a publisher (outside the borders of the Austrian Empire). The book was as unsuccessful as can be. It was only several decades after Bolzano's death that some philosophers in Vienna, Halle and Lemberg recognized some of the gold mines it contains. See Künne (2) and (5).

(4) Bolzano's views on propositions are examined, and compared with Frege's, in Künne (3).

"Members of the family of concepts to which the title of this paper alludes play important roles in various areas of theoretical and practical philosophy. I want to throw some light on these concepts and their interrelations, and in doing so I also want to make Bernard Bolzano's analytical work in this area better available. The great-grandfather of analytical philosophy, a contemporary of Hegel's, was a great mathematician, and he held the chair of Philosophy of Religion at Prague University until the Emperor sacked him. It was part of his job to deliver a sermon, a so-called *Erbauungsrede* or exhortation. on each and every Sunday and on church holidays. These sermons contain most of the material I shall exploit in this paper.(1) None of my definitions literally coincides with Bolzano's, but most of them are substantially due to him.

Bolzano never put his accounts of various kinds of *deceiving* and of various kinds of *trying to deceive* together. but if one attempts to arrange them systematically it runs out that for the most part they harmonize very well with each other. Whenever they don't I shall take the liberty of making adjustments that are meant to enhance their plausibility." (p. 106)

Abstract: "The topics of this chapter are (1) the history of a mislabelled antinomy and of a pseudo-paradox and (2) some logico-semantical peculiarities of self-referential sentences that do not give rise to a paradox. My points of departure will be Bernard Bolzano's discussions of a plain fallacy he called The Liar and of an antinomy that we unfortunately got used to calling The Liar. He found a pointer to the fallacy in Aristotle's *Sophistical Refutations*. In a logic manual of the early renaissance, he came across a source of the antinomy in the form of a sentence that declares itself to be false. In Sect. 24.1, I shall praise Bolzano's reaction to the fallacy and discuss his analysis of the concept of lying. I will present some ancient expositions of the antinomy and go on to criticize, along Moorean lines, Russell's rather sloppy account. Finally, I will defend the author of the 'Letter to Titus' against the charge of being paradox-blind when he invoked a Cretan denigrator of all

Cretans. (Some twentieth century logicians and analytic philosophers are the villains of this part of my chapter: I shall criticize their carelessness with respect to a well-entrenched concept, and I shall complain that they keep on alluding to ancient texts without bothering to read them closely.) In Sect. 24.2, I shall reconstruct Girolamo Savonarola's excellent exposition of the antinomy [*], examine Bolzano's criticism of the Florentine diagnosis and reject his own attempt to defuse the paradox. (I shall not try to improve on his attempt.) In this context, Bolzano makes a point concerning self-referential sentences that is not affected by the failure of his alleged dissolution of the antinomy. He rightly takes it to be a matter of course that there are ever so many harmlessly self-referential sentences. But he shows that some care is needed when one wants to formulate their negation. In Sect. 24.3, I will expound this point.

It turns out that similar problems arise when one uses harmlessly self-referential sentences in deductive arguments. Such sentences also enforce a revision of certain intuitively plausible constraints on translation."

"In Sect. 1 of this chapter, I shall discuss Bolzano's attempt to give a definition of the concept of truth, in Sect. 2 I shall ask

whether Frege succeeds in showing that all such endeavours are doomed to failure. In this chapter I shall remain neutral as to the question of definability, but the key premise of his alleged proof of indefinability. The equivalence schema ‘The thought that things are thus and so is true if, and only if, things are that way’ captures an important feature of the concept of truth.

Frege went beyond this *true-iff* principle when he claimed that the two halves of such biconditionals do not only stand and fall together,—they even express one and the same thought. It is doubtful whether Frege has any good argument for this Identity Thesis. In Sect. 3 of this chapter I will give reasons for this doubt. In Sect. 4 I shall show that, and why, Bolzano rejects the Identity Thesis. Bolzano emphasizes an important feature of our concept of truth that is not captured by the equivalence schema. One can hint at this additional feature by saying, ‘If the thought that things are thus and so is true, then it is true because of things’ being that way, and not vice versa’. In Sect. 5 I shall locate this true because-of principle in the theory of grounding (*Abfolge*) that Bolzano outlined in the second volume of his monumental *Wissenschaftslehre* (henceforth: *WL*). In Sect. 6 I shall explore whether the Identity Thesis can be refuted by appealing to (the Bolzanian reformulation of) the true-because-of principle. On the following pages, I shall not try to argue for the true-because-of principle. Like Aristotle and Bolzano I shall accept it as a basic intuition concerning truth.(1) The brief Appendix points to a use of the notion of grounding that has been neglected in recent literature although Bolzano deemed it to be of great importance." (pp. 31-32)

(1) Any attempt at a proof of this principle from a definition of truth presupposes, of course, that pace Frege such a definition is to be had.

33. Lange, Marc. 2022. "Bolzano, the Parallelogram of Forces, and Scientific Explanation." In *Bolzano's Philosophy of Grounding: Translations and Studies*, edited by Roski, Stefan and Schnieder, Benjamin, 394-417. New York: Oxford University Press

"Marc Lange turns to Bolzano's philosophy of physics and discusses his explanatory proof of the parallelogram law for the composition of forces. Lange argues that this proof is neither clearly causal nor clearly non-causal. In order to illuminate its explanatory potential, Lange compares it with Bolzano's explanation of the intermediate value theorem: Bolzano takes the latter to have a unified explanation covering all functions, and in a similar spirit he regards an explanation of the parallelogram law as unifying it with analogous laws regarding various other quantities that are potential causes." (p. 38)

37. ———. 2007. "Bolzano Semantics and His Critique of the Decompositional Conception of Analysis." In *The Analytic Turn*, edited by Beaney, Michael, 219-234. London: Routledge

"When asked to explain what conceptual analysis is, philosophers often resort to the idea of decomposition: to analyse an expression or a concept is to break it down into its (simpler) components. Although the notion of decomposition is a convenient figure of speech, without qualifications it can hardly be said to provide an informative description of what is involved in conceptual analysis. It could be argued, however, that this was not always the case. In Kant's theory, for instance, the conception of analysis is literally decompositional: notions such as *Zergliederung*, *Auflösung*, 'Inhalt' and *enthalten sein*' are meant to provide a relatively straightforward description of the mereological conception of the formal features of and relations between concepts he had inherited from his predecessors, contrary to what influential interpretations such

as Quine (1953: 21) suggest.(2) In what follows, I'll use the expression 'decompositional conception of analysis' to refer to the conception of analysis that underlies Kantian semantics and, most notoriously, the Kantian definition of analyticity. My concern, though, is not primarily with Kant nor with analyticity but with Bernard Bolzano's conception of analysis. A superficial reading of Bolzano's *Theory of Science - Wissenschaftslehre* (Bolzano 1837; hereafter *WL*) - could lead one to think that Bolzano also subscribed to the decompositional conception of analysis. Yet, while Bolzano sanctions Kant's account in his earlier work (cf. Bolzano 1810: §5; 1812: §30) he came explicitly to reject it. Contrary to what is often assumed, Bolzano's understanding of what it means for a concept to be 'included' in another concept or for a given concept to have a particular content is radically different from Kant's and from that of Bolzano's other immediate predecessors. In fact, Bolzano anticipated some of the most important developments of twentieth-century semantics.(3)

I begin the paper with a brief sketch of the decompositional conception of analysis in section 1, and then in section 2 I present Bolzano's criticism of this conception. In section 3, I explain the main lines of Bolzano's reductive programme of analysis. Section 3, I hope, will go some way towards establishing the continued interest of Bolzano's semantic analyses. One of the main consequences of Bolzano's rejection of the decompositional conception of analysis is the need to find a new way to define semantic notions such as analyticity or validity. For that purpose, Bolzano developed a new and ingenious substitutional method. I sketch this method in section 4. I conclude by pointing out some important aspects of Bolzano's historical impact." (pp. 219-220)

(2) I deal in more length with this question in Lapointe *Qu'est-ce que l'analyse?*, Paris, Vrin, 2008.

(3) Superficial knowledge of medieval semantics suffices to convince that similarities are not scarce but this, unfortunately, remains to be studied.

38. ———. 2010. "Bolzano *a priori* Knowledge, and the Classical Model of Science." *Synthese* no. 174:263-281

Abstract: "This paper is aimed at understanding one central aspect of Bolzano's views on deductive knowledge: what it means for a proposition and for a term to be known *a priori*. I argue that, for Bolzano, *a priori* knowledge is knowledge by virtue of meaning and that Bolzano has substantial views about meaning and what it is to know the latter. In particular, Bolzano believes that meaning is determined by implicit definition, i.e. the fundamental propositions in a deductive system. I go into some detail in presenting and discussing Bolzano's views on grounding, *a priori* knowledge and implicit definition. I explain why other aspects of Bolzano's theory and, in particular, his peculiar understanding of analyticity and the related notion of *Ableitbarkeit* might, as it has invariably in the past, mislead one to believe that Bolzano lacks a significant account of *a priori* knowledge. Throughout the paper, I point out to the ways in which, in this respect, Bolzano's antagonistic relationship to Kant directly shaped his own views."

"Bernard Bolzano (1781-1848) occupies a unique place in the history of modern philosophy. Born in the year in which Kant's *Critique of Pure Reason* was published and dying in the year in which Frege was born, his philosophy - like his life - can be seen as offering a bridge between Kant's seminal work and the birth of analytic philosophy. In Bolzano's writings, one finds many of the characteristic themes of analytic philosophy anticipated.

Like Frege and Russell after him, Bolzano was dissatisfied with Kant's account of mathematics and realised that a better conception of logic was required to do justice to mathematics. Bolzano's conception of logic was not Frege's or Russell's, but he did criticise traditional subject-predicate analysis, suggested that there was a fundamental form underlying all types of proposition and was insistent on the need to keep psychology out of logic. Like Frege, Bolzano construed existential statements as being concerned with the non-emptiness of appropriate 'ideas' (*Vorstellungen an sich* in Bolzano's terms) or 'concepts' (*Begriffe* in Frege's terms), and his conception of 'propositions' (*Sätze an sich*) is similar in many respects to Frege's conception of 'thoughts' (*Gedanken*). Like Frege, too, Bolzano emphasised that there is a class of entities, including both 'ideas'/'concepts' and 'propositions'/'thoughts', which are objective but not actual (*wirklich*), in the sense of not existing in the spatio-temporal realm.

Despite these similarities, however, Bolzano had no direct influence on any of the acknowledged founders of analytic philosophy. He had an influence on other German-speaking philosophers such as Franz Brentano, Benno Kerry, Edmund Husserl, Alwin Korselt and Kazimierz Twardowski, who themselves had an influence on the early analytic philosophers, both through correspondence and in their own publications (even if, often, mainly as a target of criticism). Through Twardowski, the founder of the Lvov-Warsaw school, he also had an influence on a whole generation of Polish logicians and philosophers, including Jan Lukasiewicz, Stanislaw Lesniewski and Alfred Tarski, who played an important role in the development of analytic philosophy. So a full account of the history of analytic philosophy must certainly pay attention to Bolzano's work. His significance, however, lies not just in these patterns of influence. The similarities and differences between his views and those of Frege, in particular, reveal much about the nature of analytic philosophy: the conceptions of analysis and logical form involved, for example, and key debates such as those about analyticity and other modal notions. These

influences and connections are explored and elucidated by Sandra Lapointe in this book.

At the heart of Bolzano's logic - logic being understood in the traditional broad sense as including both methodology and theory of science (hence the title of Bolzano's major work, the *Wissenschaftslehre*) - lies his critique of Kant. As Lapointe explains in the first three chapters, Bolzano criticises Kant's theory of intuition and his decompositional conception of analysis. In doing so, Bolzano develops his own positive doctrines, concerning analyticity and logical consequence, in particular, based on a method of substitution, as Lapointe elaborates in Chapters 4-6. In the remaining chapters, further clarifying his semantic theory, she discusses his epistemological and ontological views and his connection with Frege and Husserl." (from the Foreword by Michael Beaney).

40. ———. 2012. "Is Logic Formal? Bolzano, Kant and the Kantian Logicians." *Grazer Philosophische Studien* no. 85:11-32

Abstract: "In the wake of Kant, logicians seemed to have adhered to the idea that what is distinctive of logic is its "formality". In the paper, I discuss the distinction Kant draws between formality and generality of logic and argue that he ultimately conflates the two notions. I argue further that Kant's views on the formality of logic rest on a series of non trivial assumptions concerning the nature of cognition. I document the way in which these assumptions were received in his successors. In the second part of the paper I focus on Bolzano's criticism of the Kantian position and his redefinition of the notion of form. I argue that while what contemporary, post-Tarskian philosophers generally understand as the formality of logic ought to be traced back to Bolzano there are also important differences between the two positions."

42. ———. 2014. "Bolzano, Quine and Logical Truth." In *A Companion to W.V.O. Quine*, edited by Harman, Gilbert and Lepore, Ernie, 296-312. Malden: Wiley Blackwell

"In this paper, I compare Quine's discussion of logical truth to Bolzano's theory of "logical analyticity". It is by now a received view that Bolzano largely anticipated Quine's views on logical truth, a conclusion Quine himself was retroactively prompted to draw:

"[M]y much cited definition of logical truth was meant only as an improved exposition of a long-current idea. So I was not taken aback at Bar-Hillel's finding the idea in Bolzano [...]" (Quine 1960, 65; see also 1966b, 110)."

According to the standard interpretation, the similarity between Bolzano and Quine comes from the fact that they are both "demarcating logic [...] with the help of a set of logical particles which are held constant, while the other non-logical expressions are freely substituted for each other".⁽³⁾ This interpretation assumes that Bolzano and Quine share at least some substantial views about what makes a term a "logical" term. I think that this interpretation is largely mistaken. My paper has four parts. In the first part, I give some background to Bolzano's theory, focusing on his views on syntax and form. In the second part, I show why it is mistaken to assume that Bolzano and Quine mean the same when they speak of logical concepts/words. In the third part of the paper I discuss Bolzano's views on logical truth and sentences that can be turned into logical truth by putting synonyms for synonyms. I conclude by asking whether Bolzano's position allows him to fulfil the epistemic requirement (and answer, with a twist, in the affirmative)." (p.297).

43. ———. 2014. "Bolzano and the Analytical Tradition." *Philosophy Compass* no. 9:96-111

Abstract: "In the course of the last few decades, Bolzano has emerged as an important player in accounts of the history of philosophy. This should be no surprise. Few authors stand at a more central junction in the development of modern thought. Bolzano's contributions to logic and the theory of knowledge alone straddle three of the most important philosophical traditions of the 19th and 20th centuries: the Kantian school, the early phenomenological movement and what has come to be known as analytical philosophy. This paper identifies three Bolzanian theoretical innovations that warrant his inclusion in the analytical tradition: the commitment to 'logical realism', the adoption of a substitutional procedure for the purpose of defining logical properties and a new theory of a priori cognition that presents itself as an alternative to Kant's. All three innovations concur to deliver what counts as the most important development of logic and its philosophy between Aristotle and Frege. In the final part of the paper, I defend Bolzano against a common objection and explain that these theoretical innovations are also supported by views on syntax, which though marginal are both workable and philosophically interesting."

44. ———. 2014. "Bolzano's Logical Realism." In *The Metaphysics of Logic*, edited by Rush, Penelope, 189-208. Cambridge: Cambridge University Press

"Bolzano's *Theory of Science* (1837) presents the first explicit and methodical espousal of internal logical realism. It also contains a formidable number of theoretical innovations. They include (i) the first account of the distinction between "sense" (*Sinn, Bedeutung*) and "reference" (or "objectuality": *Gegenständlichkeit*), (ii) definitions of analyticity and consequence, i.e. "deducibility" (*Ableitbarkeit*) based on a new substitutional procedure that anticipates Quine's and Tarski's,

respectively, and (iii) an account of mathematical knowledge that excludes, *contra* Kant, recourse to extraconceptual inferential steps and that is rooted in one of the earliest systematic reflections on the nature of deductive knowledge. (i)–(iii) all assume the existence of mind - and language-independent entities Bolzano calls “propositions and ideas in themselves” (*Sätze an sich*). Take (i) for instance. Appeal to propositions in themselves in this context serves Bolzano’s antipsychologism in logic: according to Bolzano, the sense (*Sinn*) of a sentence – the proposition it expresses – is to be distinguished from the mental act in which it is grasped. Just like what is the case in Frege, a sentence has the semantic properties it has (e.g. truth) on Bolzano’s account derivatively, by virtue of its relation to mind-independent entities: the primary bearers of semantic properties are the propositions that constitute their *Sinne*.” (p. 195)

45. ——. 2017. "Bernard Bolzano." In *Sourcebook in the History of Philosophy of Language: Primary source texts from the Pre-Socratics to Mill*, edited by Cameron, Margare, Hill, Benjamin and Stainton, Robert J., 1029-1032. Dordrecht: Springer

"The views on language of Bernard Bolzano (1781–1848) overlap with two traditions. On the one hand, Bolzano tries to make sense of the idea that the signs we use designate ideas. On the other hand, Bolzano’s theory is underpinned by a series of semantic and epistemological analyses that yield the first philosophical treatment of linguistic signs as endowed with both meaning and reference, understood in the contemporary sense. The resulting theory is an interesting combination of elements of post-Lockean epistemologies with a clear anticipation of post-Fregean semantics." (p. 1029)

46. ——. 2018. "Bolzano's Philosophy of Mind and Action." In *Philosophy of Mind in the Nineteenth Century*, edited by Lapointe, Sandra, 42-59. New York: Routledge

"In spite of the overwhelmingly sympathetic consensus on the significance of Bolzano’s contribution to theoretical philosophy, little attention has to this date been paid to his views on mind."

(...)

"The present chapter is an attempt to go some way toward such an understanding.

The first part of the chapter offers a brief comparison of Bolzanian and Brentanian views on representation and judgement. A brief survey of Brentano's main positions is informative as a theoretical point of comparison for Bolzano's own views. At the very least, it is helpful to have the Brentanian theory in mind when gauging the impact - however humble - Bolzano effectively had on the theories of mind of some of Brentano's students.(4) The comparison however does not fully do justice to Bolzano's views. This is mainly because Bolzano's approach to the philosophy of mind and action has more to share with contemporary theorists than with any of his predecessors or successors in the 19th century. This claim is likely to arouse perplexity. Bolzano puts forward his views on mind in *Athanasia* (1827), a treatise in which a hefty metaphysics of substance is put to work for the purpose of proving the immortality of the soul, a context which *prima facie* is unlikely to afford much relevance. Those who have discussed Bolzano's views on mind, with few exceptions, have however consistently missed what is most remarkably interesting about them. First, the framework within which Bolzano develops his metaphysics of mind and agency is not dualistic and presents some anticipation of what will later be known as "neutral monism".(5) Second, the conceptual resources that are deployed to make sense of the way in which "body" and "soul" interact in living beings presuppose an understanding of organisms that goes against - or far beyond - much of what Bolzano's contemporaries and successors in the the 19th century wrote on the topic, especially the Idealists. More importantly, Bolzano puts forward an account of rational agency based on a theory of mind that anticipates crucial aspects of contemporary discussions on the role of intentions as "reasons" or "causes" for action. In the second and more substantive part of the paper, I focus on Bolzano's views on the ontology of mind and rational agency." (pp. 42-43)

(4) For a more detailed presentation of Brentano's views on mind, see Rollinger *infra*; see also Kriegel (forthcoming). [2017]

(5) For a discussion of Mach's view on neutral monism, for instance, see Banks, *infra*.

47. ———. 2019. "Bolzano on Logic in Mathematics and Beyond." In *Logic from Kant to Russell: Laying the Foundations for Analytic Philosophy*, edited by Lapointe, Sandra, 101-122. New York: Routledge

"According to standard narratives, the origins of formal logic as we know it are to be found within the push toward logicism, axiomatisation and the foundations of set theory for which Frege's foundational project in mathematics often serves as muster. Frege, however, was by no means the first logician of the 19th century to seek to provide a new logical foundation to mathematical knowledge. At least one other author was driven by concerns, insights, ambitions and philosophical acumen that were as remarkable as Frege's. This author's efforts too resulted in a fullscale logical system whose conceptual resources, while they do not have the elegance and simplicity of Frege's "concept-script", are nonetheless as rich as those of first-order predicate calculus and powerful enough to generate Russell's paradox.(2) This author is Bernard Bolzano." (p. 101)

"Both historically and philosophically Bolzano's contribution to philosophy is to be understood within the context of the reception of Kant's critical philosophy, or so we will argue. This claim is also likely to be controversial. Bolzano's contribution to philosophy, and in particular his contribution to the epistemology of logic and mathematics, is more often than not positioned in stark opposition to Kant's, in the intellectual lineage of Leibniz. What we are proposing is deliberately meant to upset this picture. Bolzano's relationship to critical philosophy is far more complex than what is generally assumed. For one thing, Bolzano's relationship to Kantian philosophy is not exhausted by his relationship to Kant. Bolzano paid close attention to the logical theories of those who followed in Kant's stride, the "new logicians" (Bolzano's term), and he discussed their views in at least as much depth as he did Kant's. What's more, Bolzano sought to determine what is distinctive of the "new logic" and thus offered a philosophical reflexion that is still, even today, enlightening when it comes to understanding this aspect of the reception of Kant's first *Critique*." (pp. 273-274)

(...)

"Of course, there are connections between Bolzano and Leibniz. But Bolzano discusses Leibniz's work in fact comparatively rarely. We find over the some 2400 pages of the *Theory of Science* (1837) a mere 30 references to Leibniz, mostly to the *Nouveaux essais* (1704) – compare this with the some 150

references to Kant, and some 200 to Kiesewetter.[*] It is not only that the number of references is small, but also that many references are in footnotes, even in the sections entirely devoted to discussion of the views of other philosophers." (p. 275)

"A unique philosophical dialogue

The present volume contains an altogether remarkable document in the history of nineteenth-century philosophy: a critical commentary on the most influential systematic work (the *Critique of Pure Reason*) of one major philosopher (Kant), written from the point of view of another major systematic philosopher (Bolzano), just decades after the former's publication. Bolzano, at the height of his powers, and with his mature philosophical views having fully taken shape with the publication of his *Theory of Science* (1837), undertakes the project of engaging, key point by key point, with Kant's masterwork. In collaboration with Bolzano, Frantisek Prihonsky (who would ultimately publish the final record of

this work in 1850, shortly after Bolzano's death) both compiles a comprehensive and thorough summary of the main definitions, theses, and arguments in Kant's book, and then proceeds to bring to light the most important unclarities, confusions, and fallacies that he finds each step along the way. The result, *New Anti-Kant*, is not only an extremely useful and even-handed overview of the entire first *Critique* itself - including parts often neglected by even Kant's most sympathetic readers - but also a catalogue of philosophically insightful and textually well-grounded challenges to signature Kantian doctrines. This work helps us to see anew the overarching contours of Kant's philosophy, and brings a fresh focus onto deep points of tension within Kant's system - all the while serving to introduce us, through instructive contrast, to the powerful alternative perspective that Bolzano develops in his own systematic philosophy." (pp. 3-4).

Selected Bibliography on Bernard Bolzano's Contributions to Logic and Ontology. Fourth Part: M - R

Studies on Bolzano's Logic and Ontology

1. Malink, Marko. 2022. "Aristotle and Bolzano on Grounding." In *Bolzano's Philosophy of Grounding: Translations and Studies*, edited by Roski, Stefan and Schnieder, Benjamin, 221-243. New York: Oxford University Press

"Marko Malink examines Aristotle's conception of scientific proofs as the historical roots of Bolzano's conception of grounding and compares the two philosophers' views on infinite grounding chains, on the role that generality plays in ground-revealing proofs, and on scientific knowledge." (p. 37)

2. Mancosu, Paolo. 1999. "Bolzano and Cournot on Mathematical Explanation." *Revue d'histoire des sciences* no. 52:429-456

Abstract: "Recent discussions on the topic of « mathematical explanation » have focused on the distinction between explanatory and non-explanatory proofs. The former proofs are supposed to differ from the latter in that they not only establish that a result is true but also show why it is true. This opposition is at the core of the philosophies of mathematics of Bolzano and Cournot. The paper analyzes Bolzano's theory of Grund and Folge, and Cournot's opposition between the logical and the rational order, emphasizing their relevance to the issue of mathematical explanation. The final part of the paper investigates the shortcomings of Bolzano's and Cournot's theories as explications of mathematical explanation."

3. Mates, Benson. 1992. "Bolzano and Ancient Pyrrhonism." In *Bolzano's Wissenschaftslehre 1837-1987. International Workshop*, 121-139. Firenze: Leo S. Olschki

"Bolzano's attempt to refute so-called "radical" or "complete" skepticism is carefully described in Professor Berg's introduction to his edition of the *Wissenschaftslehre* (WL). Two forms of such skepticism are there distinguished. The thesis of the *ontological* form is

(1) No propositions (*Satz an sich*) is true and that of the *epistemological* form is

(2) No judgment (*Urteil*) is true.

Bolzano's principle arguments against these are roughly as follows. Against (1) he argues that, for any proposition S, either S is true or the proposition that S is false is true. Therefore, at least one proposition is true. The argument against (2) is less clear. Bolzano (WL 40) takes the problem to be that of convincing a radical skeptic that, after all, he must recognize the truth of at least one proposition. After considering various possibilities, he concludes that the skeptic will have to accept as true at least the proposition that he has ideas (*Vorstellungen*), for obviously he confirms this proposition the moment he doubts or denies it. The point, I suppose, is that, just as one cannot doubt that there are men on the moon if one has no idea of what it is to be a man or to be on the moon, so the skeptic, if he has no ideas, is in no position to doubt anything, not even that he has ideas. Bolzano thinks that while the skeptic might refuse publicly to admit the proposition in question, "nevertheless he will surely feel in his innards that it is true... and if he feels this, we have won".

Whatever one may think of these arguments, in this paper I am not concerned to evaluate them but only to consider whether they refute Pyrrhonism, as Bolzano seems to suppose." (pp. 121-122)

(...)

The root of Bolzano's failure to appreciate the force of Pyrrhonism is, in my opinion, that he does not realize that its self-referential aspect is essential. This aspect is not something that Sextus is reluctant to admit but is rather a feature that he emphasizes over and over again and that he obviously regards as crucial to the consistency of the skeptic's position. Bolzano's failure to understand this is especially evident at WL 40, where he quotes and discusses one of the many passages in which Sextus points out the self-reference of the skeptic's slogans (*phōnai*), i.e., pronouncements like "contrary claims are equal", "no more this than that", "I decide nothing", etc. Bolzano says:

In setting forth the various formulae with which the skeptic is accustomed to express his state of doubt, Sextus Empiricus tries to employ maximal caution so as to protect it from the charge of self-contradiction, but nevertheless he finds himself compelled at the end to admit

"As concerns all the skeptic slogans the following must be understood in advance, namely that we do not maintain their truth in any absolute way, since we say that they themselves are included among the things to which they apply -- just as cathartic drugs do not merely eliminate humor from the body but also expel themselves along with the humors" (*Outlines of Pyrrhonism* I 206).

"This amounts to the reluctant admission", says Bolzano, that the skeptic ceases to be a skeptic as soon as he declares himself to be a skeptic. Only if he keeps silent and makes no judgment, not only in words but also internally, is he a complete doubter; and as long as this condition exists we *others* can say of him truly that he doesn't know a single truth. But as soon as he *himself* says it, the condition ceases and his judgment is therefore false.

But there is no "reluctant admission" here, and the Pyrrhonist doesn't have to be silent if he is to remain a Pyrrhonist. He will say "*It seems to me now that* contrary claims are equal" and "*It seems to me now that* there is no more reason for this than that", and so on. What he refrains from are flat out categorical

statements, whether concerning his own skepticism or anything else.

It will be evident that this form of skepticism is not easily refuted. Since the Pyrrhonist agrees only to propositions expressing what *seems* to him at the moment to be the case, it is even unclear what a refutation would be like. But that is a topic for another day". (pp. 138-139).

4. Morscher, Edgar. 1986. "Was Existence Ever a Predicate?" *Grazer Philosophische Studien* no. 25/26:269-284

Abstract: "The question "Was 'existence' ever a predicate?" in a way already suggests its own answer, that this is really the wrong question to ask, because 'existence' has always been a predicate. Even those, such as Kant, who supposedly opposed this view, in fact held it. They merely denied that 'existence' is a "normal" first-order predicate. Not only Kant, but also Bolzano, Frege and Russell claimed that it is a second-order predicate. There is substantive disagreement between Kant and Bolzano on the one hand and Frege and Russell on the other over two issues: the former claim that this second-order predicate applies to no concept analytically and that it can be properly ascribed to a singular concept, whereas the latter deny both of these claims."

5. ———. 1986. "Propositions and States of Affairs in Austrian Philosophy before Wittgenstein." In *From Bolzano to Wittgenstein. The Tradition of Austrian Philosophy*, edited by Nyiri, Janoc Cristof, 75-85. Vienna: Hölder-Pichler-Tempsky.
6. ———. 1987. "Propositions and All That: Ontological and Epistemological Reflections." In *Logos and Pragma. Essays on the Philosophy of Language in Honour of Professor Gabriël Nuchelmans*, edited by Rijk, Lambertus Marie de and Braakhuis, Henk A.G., 241-257. Nijmegen: Ingenium Publishers

"Bernard Bolzano was one of the first philosophers in modern times to develop explicitly a complete theory for entities like propositions, statements and states of affairs. I will first

describe and clarify the main features of his theory, and then sketch the subsequent development to our day." (p. 243)

(...)

"Let me now complete my historical sketch. Up to now I have only discussed Bolzano's doctrine of propositions. I concentrated on Bolzano's doctrine because I think that he gave the clearest account, the clearest description of propositions available in his time, and that none of the philosophers who followed, including Frege, has made an essential improvement in this respect. Although Bolzano's doctrine, his description of the propositions and the ontological status he ascribes to them, is far from being satisfactory, because it is insufficiently clear, no other philosopher up to our time has done any better. I have therefore explained Bolzano's doctrine in more detail in order to have one representative traditional doctrine to which I can refer in what follows.

What seems very interesting to me and what I have always been very impressed by is the fact that philosophers with completely different backgrounds and from different schools developed, at the same time as Bolzano and afterwards, quite similar views, sometimes using almost the same words as Bolzano, without being familiar with his work. Although this is far from being a proof for the truth of his doctrine, it is nevertheless a fact a philosopher cannot pass by because it indicates that this is not the doctrine of an eccentric outsider. On the contrary, it has attracted many philosophers, including such prominent ones as Frege, Wittgenstein and Russell, Husserl and Meinong, Windelband and Rickert. (I have described the views of some of these philosophers and compared them in another paper: Morscher (1972 [*Von Bolzano zu Meinong: zur Geschichte des logischen Realismus*]))." (p. 248)

7. ——. 1997. "Bolzano's Method of Variation: Three Puzzles." *Grazer Philosophische Studien* no. 53:139-165

Abstract: "Bernard Bolzano's most fruitful invention was his method of variation. He used it in defining such fundamental logical concepts as logical consequence, analyticity and probability. The following three puzzles concerning this method

of variation seem particularly worth considering. (i) How can we define the range of variation of an idea or the categorial conformity of two ideas without already using the concept of variation? This question was raised by Mark Siebel in his M.A. thesis. (ii) Why must we define analyticity by means of (simultaneous or successive) variation of several ideas rather than by means of replacing a single idea? This problem is suggested by an example due to W.V.O. Quine, John R. Myhill and Benson Mates. (iii) Must every 'there is ...' sentence be synthetic for Bolzano, as his pupil Franz Prihonsky claims in his booklet *Neuer Anti-Kant*, or can a 'there is...' sentence be logically analytic?"

8. ———. 2006. "The Great Divide within Austrian Philosophy. The Synthetic a Priori." In *The Austrian Contribution to Analytic Philosophy*, edited by Textor, Mark, 250-263. New York: Routledge

"In this chapter I will try to show that the divergent Austrian ways of being anti-Kantian do not vanish even when we focus on this single topic. To illustrate this view, I will take as my examples Bernard Bolzano and Rudolf Carnap, who both belong – for different reasons – to the so-called Austrian tradition in philosophy.

Both are fully conversant with Kant's work, and both have a critical attitude toward it and are in this sense anti-Kantian. This is also true when it comes to the question of the synthetic a priori: both refute strongly Kant's treatment of the synthetic a priori. However, whereas Carnap denies synthetic sentences a priori altogether, Bolzano does not deny their existence but only the way in which Kant justifies their truth.

What is even more important is that Bolzano not only – contrary to Carnap – accepts Kant's synthetic a priori, but even extends it to the realm of logic. In clear opposition to Kant and Carnap, who take all logical truths to be analytic, there are synthetic truths for Bolzano even in the area of logic. I will try to argue for this claim in the following sections." (p. 250)

"Despite the enormous increase of interest in Bolzano's philosophy during the last decades, an up-to-date monograph on Bolzano's philosophy is still a desideratum. The last book that might be called a monograph on Bolzano's philosophy dates from almost 100 years ago; it is Shmuel Hugo Bergmann's *Das philosophische Werk Bernard Bolzanos* (Halle/S. 1909), written in the spirit of the Brentano school, in particular of Bergmann's teacher Anton Marty.

When I was invited by the Editors of the *Stanford Encyclopedia of Philosophy* to contribute the entry on Bernard Bolzano, I took it as a challenge for starting my long-standing plan to write a monograph on Bolzano's philosophy. The present book is, to be clear, merely the first step toward this end." (from the *Preface*)

(...)

"Bolzano's uncommonly versatile work culminated in three extensive main writings in three different areas of knowledge: 1) in theology his four volume *Textbook of the Science of Religion* (Bolzano 1834b), 2) in philosophy the four volume *Theory of Science* (Bolzano 1837a), which provides a new foundation for logic and is at the same time an extensive manual of logic, and 3) in mathematics the *Theory of*

Quantities, conceived of as a monumental work, but not completed.

Bolzano's teaching was concerned exclusively with fundamental topics of theology, in addition he worked mainly in logic. Nevertheless, his scientific development began in mathematics. It was mathematics that was the starting point for his scientific work and to which he ultimately returned in order to create a new foundation on which mathematics as a whole could be built; he succeeded in doing this, however, only in bits and pieces." (p. 29)

10. ———. 2022. "The Grounds of Moral 'Truths'." In *Bolzano's Philosophy of Grounding: Translations and Studies*, edited by Roski, Stefan and Schnieder, Benjamin, 343-363. New York: Oxford University Press

"Central to Bolzano's ethics is his Supreme Moral Law, i.e. an ethical truth that grounds all other ethical truths. While Bolzano considers this law to be fundamental in the realm of ethics, he also claims that it is not

an ungrounded, basic truth. Edgaqr Morscher discusses this view in the context of a succinct reconstruction of Bolzano's views on grounding, his ethics, and his deontic logic." (p. 38)

11. Morscher, Edgar, and Simons, Peter. 2014. "From Bolzano via Quine to Fine." In *Joint Ventures in Philosophy*, edited by Morscher, Edgar and Simons, Peter, 137-156. Sankt Augustin: Academia Verlag.
 12. Mugnai, Massimo. 1992. "Leibniz and Bolzano on the "Realm of Truths"." In *Bolzano's Wissenschaftslehre 1837-1987. International Workshop*, 207-220. Firenze: Leo S. Olschki
- "In his article *Propositions and Sentences* (1956) Alonzo Church pointed out -- on the basis of a suggestion made by Joseph Maria Bochenski -- that strong analogies exist between Bolzano's theory of *Satz an sich* and Gregory of Rimini's doctrine of *complexe significabile*.' In the same essay, Church also pointed out that Bolzano appealed to Leibniz as to a logician who plainly recognized propositions in the abstract sense. After Church's essay, it became very usual to mention

Gregory of Rimini in reference to Bolzano's ontological conceptions. Nevertheless, we do not have any evidence of a direct influence of Gregory of Rimini's ideas on Bolzano's philosophy of logic. Bolzano seems to have only a limited acquaintance with the logic of the late medieval period: the credit accorded to Savonarola's *Compendium logicae* - a standard work which is absolutely lacking in originality - corroborates, I think, this view.² Yet Bolzano may have benefited by late scholastic inheritance through the intermediation of later works, like those of Campanella, Clauberg, Fonseca, Keckermann, Leibniz and Wolf.' In fact, as already mentioned, Leibniz is the first author whom Bolzano explicitly refers to, in paragraph 21 of the *Wissenschaftslehre*, as a forerunner of the *Satz an sich* theory:

"Thus Leibniz uses as equivalent the expressions *propositio* and *cogitatio possibilis* (*Dial. de Connexion inter Verba a Res* [C. I. Gerhardt, ed. *Philos. Schriften*, vol. VII, p. 190]. This obviously presupposes that by propositions he meant propositions in themselves." (*)

The Leibniz's work on which Bolzano explicitly bases this conviction is the *Dialogus de connexion inter res et verba*, first published by Raspe in 1765 -- a work whose content paradoxically seems to partly disprove Bolzano's interpretation.' Thus Church considers it «

"an exaggeration or a misunderstanding" on Bolzano's part to have attributed to Leibniz's *Dialogus* "the use of the word *propositio* for proposition in the abstract sense" or *Satz an sich*. (6) The same remarks are repeated by Prof. Berg in his monograph on Bolzano's logic: after having identified Bolzano's *Satz an sich* with Frege's *Gedanke*, Prof. Berg writes:

According to Leibniz a proposition (*propositio*) is a possible thought (*cogitatio possibilis*), which is capable of being true or false... But no thought or reasoning is possible without words or some other kind of signs. And under transformation of a proposition into a different language a certain relationship (*proportio*) among the signs and between the signs and the objective reality is transformed into a similar relationship. The

last two conditions fit Aristotle's and Peter of Spain's but not Frege's notion of proposition. Therefore... it must have been a misunderstanding on Bolzano's part to have attributed to Leibniz the use of the word "propositio" for *Satz an sich*.(7)

In what follows, I intend to take up the problem of the correctness of the interpretation given by Bolzano and then to develop a comparison between the positions of Leibniz and those of Bolzano relative to the notions of idea, proposition and truth.

13. Mulligan, Kevin. 2022. "Logic, Logical Norms, and (Normative) Grounding." In *Bolzano's Philosophy of Grounding: Translations and Studies*, edited by Roski, Stefan and

Schnieder, Benjamin, 244-275. New York: Oxford University Press

"While Bolzano's writings were largely ignored by the philosophical community of his time, they later aroused the attention of Franz Brentano and his students, in particular that of Edmund Husserl. Kevin Mulligan examines a range of Husserl's views on grounding and their relation to Bolzano's views. A particular emphasis is laid on Husserl's conception of logic: is logic a normative or a theoretical discipline? Relatedly:

what is the connection between logical norms and logical truths? Husserl argues that logic is a theoretical discipline and that logical truths ground logical norms. In order to understand and evaluate this view, it is compared with Bolzano's account of the grounds of moral truths." (p. 37)

14. Neeman, Ursula. 1970. "Analytic and Synthetic Propositions in Kant and Bolzano." *Ratio* no. 12:1-25

"Whereas Kant regards the structure of being and knowing as identical, Bolzano interprets the Kantian true synthetic propositions as true propositions, in which the predicate is a characteristic of the subject and not a component of the notion of the subject (characteristic =df. a property of the object, which falls under the concept; component =df. ingredient of the concept). These propositions are analytic in a wider sense, because they render possible an analysis of an object, whereas the logico-analytic propositions render possible only an analysis of their concept. Therefore Bolzano also distinguishes between deductibility (*ordo cognoscendi*) and ground-consequence relation (*ordo essendi*) and grounds the latter on the principle of simplicity. A discovery of an objective connection in mathematics is only possible by a strict determination of the basic concepts and by axiomatization, because in opposition to Kant, Bolzano thinks mathematical laws to be discoveries and not creations of the human mind."

15. Otte, Michael. 2008. "Proof and Explanation from a Semiotical Point of View." *Relime*:23-43

Abstract: "A distinction between proofs that prove and proofs that explain has over and over again played an important role within recent discussions in epistemology and mathematics education.

The distinction goes back to scholars who, like Bolzano or Dedekind, have tried to reestablish pure mathematics as a purely conceptual and analytical science. These endeavors did in particular argue in favor of a complete elimination of intuitive or perceptual aspects from mathematical activity, arguing that one has to rigorously distinguish between a concept and its representations. Using a semiotical approach which negates such a separation between idea and symbol, we shall argue that mathematics has no explanations in a foundational sense. To explain amounts to exhibiting the meaning of something.

Mathematics has, however, as we shall try to show, no definite meanings, neither in the structural intra-theoretical sense nor with respect to intuitive objectivity. Signs and meanings are processes, as we shall argue along with Peirce."

"Before we can address the issue of proof and explanation we have to get rid of traditional *Bewusstseinsphilosophie* (philosophy of consciousness), that is, popularly speaking, the belief that "meanings are in the head" and knowledge is some sort of mental experience. After Kant epistemology began to ramify and various new philosophies of mathematics arose in which meaning, rather than mind played the central role. But the view that there exists an epistemologically autarkic or self-sufficient epistemic subject, which serves itself from external sensations and internal experiences or representations (*Vorstellungen*) to thereby constitute true knowledge, is a myth and should also be abandoned.

In Part I of this paper we try to provide some pertinent arguments to this end, based on Peirce's semiotics.

"Consciousness is used to denote the I think, the unity of thought; but the unity of thought is nothing but the unity of symbolization" (Peirce CP 7.585). Part II treats the questions of proof and explanation with respect to the ideas of Bolzano on

the one hand and Peirce on the other. Part III presents some examples and tries to make a connection with current debates about the issue in mathematical education and cognitive psychology." (p. 25)

16. ———. 2009. "The Analytic/Synthetic Distinction in Kant and Bolzano." In *Relatively and Philosophically Ernest. Festschrift in Honor of Paul Ernest's 65 Birthday*, edited by Sriraman, Bharath and Goodchild, Simon, 39-56. Missoula: Information Age Publishing.

17. Parsons, Charles. 2012. "Two Studies in the Reception of Kant's Philosophy of Arithmetic." In *From Kant to Husserl: Selected Essays*, 80-99. Harvard: Harvard University Press

"The present essay takes its point of departure from a thought I have had at various times in thinking about interpretations of Kant's philosophy of mathematics in the literature, in particular that offered by Jaakko Hintikka. That was that if the interpretation is correct, shouldn't one expect that to show in the way that Kant's views were understood by others in the early period after the publication of the first *Critique*? That reflection suggests a research program that might be of some interest, to investigate how Kant's philosophy of mathematics was read in, say, the first generation from 1781. I have not undertaken such a project. However, I will make some comments about two examples of this kind. In doing so I haven't always kept my eye on Kant, because the figures involved are of interest in their own right. The first is Johann Schultz (1739-1805), the disciple of Kant who was professor of mathematics in Königsberg. The second is Bernard Bolzano (1781-1848), who in an early essay of 1810 (*)

offered a highly critical discussion of Kant's theory of construction of concepts in intuition. In one way, I think the result of this little experiment is negative, in that it does little toward settling disputed questions about the interpretation of Kant. On the other hand, I think it brings out some problems of Kant's views that could be seen either at the time he wrote or not long after." (p. 80)

18. Poggiolesi, Francesca. 2022. "Bolzano, (the Appropriate) Relevant Logic, and Grounding Rules for Implication." In *Bolzano's Philosophy of Grounding: Translations and Studies*, edited by Roski, Stefan and Schnieder, Benjamin, 319-342. New York: Oxford University Press

"While Bolzano sharply distinguishes grounding from logical deducibility {in modern terminology: entailment), he also regards the two notions as importantly connected. He sees a particularly close connection

between grounding and exact deducibility (a special case of deducibility). Francesca Poggiolesi examines this latter notion and compares it to notions of relevant entailment. She argues that Neil Tennant's system CR is the best model for Bolzano's ideas, and can in turn also serve as a framework for developing grounding rules for conditionals." (p. 37)

19. Proust, Joëlle. 1981. "Bolzano's Analytic Revisited." *The Monist. An International Quarterly Journal of General Philosophical Inquiry*:214-230

"What I propose is to reconsider the interpretation of Bolzano's concept of analytic propositions which was offered thirty years ago by Bar-Hillel.(1) The claim of Bar-Hillel was that, in a late addition to his book, *The Theory of Science*,(2) Bolzano actually had been radically improving his concept of analyticity, thus creating some inconsistencies with the previous, uncorrected version. This allows us to equate the new Bolzanian definition of analytic with what was to be defined, a century later, as logical truth by W. V. Quine. Bar Hillel's interpretation has been uncritically accepted by commentators, although the historical issue has been rightly challenged by J. Berg. What I want to show is that, in spite of a surface analogy between Bolzano's phrasing of the definition of 'logical analytic' and Quine's definition, certain considerations should lead us to call that parallel into question. Attractive as it may be for a Quinian, such a view of Bolzano's analytic can be shown as incompatible

with the leading ideas of his philosophy of logic. Furthermore, there is enough evidence in other sections of the *Theory of Science* to show that Bolzano's criterion of analyticity is grounded on purely semantical properties and is part of a general account of logical properties in terms of the mapping of propositions to corresponding models." (p. 214)

20. ———. 1989. *Questions of Form: Logic and the Analytic Proposition from Kant to Carnap*. Minneapolis: University of Minnesota Press

Translated by Anastasios Albert Brenner from the original French: *Questions de forme. Logique et proposition analytique de Kant à Carnap* - Paris, Fayard, 1986.

Section Two: *Bolzano's Renovation of Analyticity*, pp. 49-108.

"The specifically Bolzanian concept of analyticity is brought in at an advanced life, as the maturely formulated answer to a problem that never ceased to appear under different aspects. Only in the *Wissenschaftslehre* of 1837 does what we might call a "revolution" in analyticity occur. Earlier texts strive to adapt the Kantian definition so that it satisfies the new requirements of the anticritical mathematicians. But this definition, often revised, gives rise to growing difficulties. There were so many reasons for abandoning it, but also so many constraints working to shape the new definition. "Revolution," we said; but until the *Wissenschaftslehre*, analyticity was a marginal theme. Its main function was, as in Kant, to reveal the problematic existence of the synthetic a priori. From a theme of preliminary exposition, analyticity becomes in the work of 1837 an "integrated" concept: henceforth it is part of a philosophy and becomes inseparable from a method of identifying logical

objects, variation. But this was a “Ptolemaic,” not a “Copernican,” revolution: instead of statically emphasizing the synthetic a priori, it becomes a notable property of certain propositions whose definition now requires a preliminary examination of other properties such as truth and validity. This definition, however, does not have a purely descriptive interest; the theses of Volume 3 must be taken seriously in order to portray with perfect clarity the deep interest that Bolzano had in his new definition of analyticity.” (p. 49)

21. ———. 1999. "Bolzano's Theory of Representation." *Revue d'Histoire des Sciences* no. 52:363-383

Abstract: "Bolzano's theory of representation is one of the most radically intensionalist approaches to representation. It is based on the following three claims: A). A representation is essentially independent of thought and of linguistic expression; B). A representation is structured; C). Such a structure is independent of the objects represented. These claims are both tools and constraints relative to Bolzano's substantive goals. Bolzano ultimately aimed to carry out a deep transformation of mathematical and scientific practice, thanks to a more accurate conception of logic and of the role of logic in scientific exposition. I examine some of the consequences of Bolzano's claims in regard to his conception of mathematical treatises."

22. Roberts, Mark. 1994. "The Bearer of Truth and Falsity." *Southwest Philosophy Review* no. 10:59-67

Abstract: "Until Bolzano nearly all philosophers believed that truth and falsity are predicated of judgments of beliefs. Bolzano and other philosophers after him argue that propositions are the bearers of truth and falsity and that propositions have a timeless ideal existence: a position which seems to discredit completely their view that propositions are the bearers of truth and falsity. Yet, several arguments can be offered which show that propositions are the bearers of truth and falsity without introducing as a premise the timeless existence of propositions."

23. Rohloff, Waldemar. 2012. "From Ordinary Language to Definition in Kant and Bolzano." *Grazer Philosophische*

Studien no. 85:131-149

Abstract: "In this paper I discuss Kant's and Bolzano's differing perspectives on ordinary natural language. I argue that Kant does not see ordinary language as providing semantically organized content and that, as a result, Kant does not believe that ordinary language is sufficiently well-developed to support philosophical analysis and definition. By contrast, for Bolzano, the content given in ordinary language are richly structured entities he calls 'propositions in themselves'. This contrast in views is used to explain Bolzano's criticism of Kant's belief that definition is impossible for philosophical concepts. It is also used to explain Bolzano's criticism of Kant's methods of exposition of philosophical concepts."

24. Rojszczak, Artur. 2005. *From the Act of Judging to the Sentence. The Problem of Truth Bearers from Bolzano to Tarski*. Dordrecht: Springer

Edited by Jan Wolenski.

Chapter 7.1: *Bernard Bolzano (I): Sentences in Themselves*, pp. 111-115.

"I shall not go into the details of the multiplicity of Bolzano's ideas and their particular influence on the history of semantics. I shall, as I have tried to do with respect to every issue in this study, concentrate on his ideas within the theory of science as it is related to the problem of the truth bearer. In the context of the theory of truth, it is worth noting that Bolzano's position during his times, i.e. in the first half of the nineteenth century, was quite unusual. Bolzano's influence on this century was provided by his notion of the objectivity of truth in a way that also remained standard for the next century. Furthermore, the theory which should guarantee the objectivity of truth was, for Bolzano, his theory of sentences in themselves. Only the semantics of the twentieth century sees Bolzano's theory of sentences in themselves as an anticipation of the contemporary notion of proposition. I shall, however, refer to his *Fundamentallehre* [Theory of Fundamentals], i.e. to the first sections of his *Theory of Science*, which deals with the existence of objective truth and with the possibility of its

cognition. I shall omit some elements of this theory that are irrelevant to my purposes; for example, Bolzano's proof of the existence of truth, his proof of the existence of infinitely many truths or the argument for the cognition of truths. In this part of Bolzano's argumentation, he focuses on the problem of skepticism, making an attempt to prove the fundamentalist position in epistemology.(1) I shall take the liberty of presenting Bolzano's ideas as far as truth bearers are concerned as contrasted with the views of Brentano and Twardowski on the objectivity of truth which I shall present in the next sections." (p. 111)

25. Rojszczak, Artur, and Smith, Barry. 2003. "Truthmakers, Truthbearers and the Objectivity of Truth." In *Philosophy and Logic in Search of the Polish Tradition: Essays in Honour of Jan Wolenski on the Occasion of His 60th Birthday*, edited by Kijania-Placek, Katarzyna, 229-268. Dordrecht: Kluwer

"The aim of this paper is to show that the account of objective truth taken for granted by logicians at least since the publication in 1933 of Tarski's 'The Concept of Truth in Formalized Languages' arose out of a tradition of philosophical thinking initiated by Bolzano and Brentano. The paper shows more specifically that certain investigations of states of affairs and other objectual correlates of judging acts, investigations carried out by Austrian and Polish philosophers around the turn of the century, formed part of the background of views that led to standard current accounts of the objectivity of truth. It thus lends support to speculations on the role of Brentano and his heirs in contemporary logical philosophy advanced by Jan Woleński in his masterpiece on the *Logic and Philosophy in the Lvov-Warsaw School* of 1989." Reprinted in: R. D. Rollinger, *Austrian Phenomenology. Brentano, Husserl, Meinong, and Others on Mind and Object*, Frankfurt: Ontos Verlag 2009, pp. 233-262.

"Introduction

In nineteenth century German philosophy it was among the prevailing views that mental phenomena were to be divided into three classes: thinking, feeling, and willing. In Austria, however, two of the towering philosophers, Bernard Bolzano and Franz Brentano, held that presentations (*Vorstellungen*) and judgments (*Urteile*) make up two distinct classes of mental phenomena. Moreover, both of these philosophers saw it as an important task to work out a theory of judgment in particular. It is accordingly no surprise that Brentano's two most outstanding pupils, Alexius Meinong and Edmund Husserl, developed theories of judgment, though their results were markedly different from those of their predecessors and from each other's. In the following the line of Austrian philosophy from Bolzano to Husserl will be traced by presenting an overview of the four theories indicated in the title. The topic under consideration in these theories, though apparently little more than a chapter in descriptive psychology, is of great significance because it gives us an intersection for issues in epistemology, ontology, and philosophy of logic." (p. 257)

27. Rootselaar, Bob van. 1970. "Bernard Bolzano." In *Dictionary of Scientific Biography, Vol. 2*, edited by Gillispie, Charles Coulston, 273-279. New York: Charles Scribner's Sons

"Bolzano planned to elaborate the methodology begun in his *Beyträge* and to develop it into a complete theory of science, of which a treatise on logic was to form the cornerstone. From 1820 on, he worked steadily on it, and his four-volume treatise *Wissenschaftslehre* appeared in 1837. The plan of the *Wissenschaftslehre* appears clearly from the following subdivision (see Kambartel, *Bernard Bolzano's Grundlegung der Logik*, pp. 14-17):

(I) Fundamental theory: proof of the existence of abstract truths and of the human ability to judge.

(2) Elementary theory: theory of abstract ideas, propositions, true propositions, and deductions.

(3) Theory of knowledge: condition of the human faculty of judgment.

(4) Heuristics: rules to be observed in human thought in the search for truths,

(5) Proper theory of science: rules to be observed in the division of the set of truths into separate sciences and in their exposition in truly scientific treatises.

The work did not induce a complete revision of science, as Bolzano hoped, but, on the contrary, remained unnoticed and did not exercise perceptible influence on the development of logic. Some of the

innovations in logic contained in the first two volumes did attract attention, as well as excessive praise notably from Edmund Husserl and Heinrich Scholz (see Berg. op. cit.; Kambanel, op. cit.; and the literature cited in them).

The rise of logical semantics, initiated by Alfred Tarski in the 1930's, has led to a revival of the study of Bolzano's logic in the light of modern logic (see Berg, op. cit.) and of his theory of an ideal language.

The heart of Bolzano's logic is formed by his concepts of (abstract) proposition (*Satz an sich*), abstract idea (*Vorstellung an sich*), truth, and the notions of derivability (*Ableitbarkeit*) and entailment (*Abfolge*)." (pp. 277-278)

28. ———. 1992. "Axiomatics in Bolzano's Logico-Mathematical Research." In *Bolzano's Wissenschaftslehre 1837-1987. International Workshop*, 221-230. Florence: Leo S. Olschki

"A discussion of Bolzano's axiomatical considerations requires some care, because his idea of axiomatization differs considerably from axiomatics as it is currently understood.

His *Wissenschaftslehre* is testimony of his concern for the foundation of science in general and in particular of the

theoretical sciences. Among the theoretical sciences mathematics is of special interest.

According to Bolzano, the mathematics of his time was based on shaky foundations, and one of his activities was directed toward correction of this situation.

On the other hand he certainly had the intention to recapture essentially the entire body of existing mathematics and present it in full accordance with his newly laid foundations. This is the reason why on several occasions he revised existing proofs of known mathematical theorems." (p. 221)

29. Rosenkoetter, Timothy. 2012. "Kant and Bolzano on the Singularity of Intuitions." *Grazer Philosophische Studien* no. 85:89-129

Abstract: "Kant and Bolzano agree that intuitions are non-accidentally singular, but each offers more than one explanation of why this is the case. One model, exemplified by Bolzano's explication of intuitions as "this"-representations, posits a type of representation which is such that it can only have one object. A very different explanation, prominent in Kant's *Transcendental Aesthetic*, has recourse to the fact that certain classes of objects (spaces and times) can have only one instance, and argues on this basis that some representations with those contents are singular. This paper surveys various versions of these two explanations and uses each philosopher's answers to shed light on the other's."

30. Roski, Stefan. 2013. "A priori Knowledge in Bolzano: Conceptual Truths and Judgements." In *Judgement and the Epistemic Foundation of Logic*, edited by Schaar, Maria van der, 101-132. Dordrecht: Springer

"According to Kant, a true judgement can be called a priori in case it can take place absolutely (*schlechterdings*) independent of experience. Propositions that are knowable in this way are called a priori propositions by him (Kant, [*Critique of Pure Reason*], 1787 B, 3–4)." (p. 101)

(...)

"[Bolzano] tried to *give* a satisfactory theoretical account of the notion of synthetic *a priori* proposition. Roughly speaking, he located Kant's mistake in the attempt to introduce a distinction among propositions by means of a distinction among judgements. Bolzano reversed this order and aimed instead to explicate the valid core of what Kant tried to capture in epistemic terms entirely in objective, logical ones." (p. 101)

(...)

"Bolzano's explication has two aspects, a logical and an epistemological one.

The logical aspect consists in drawing a precise and workable distinction in terms of non-epistemic notions. The epistemological aspect concerns the way in which Bolzano's suggestion might work: What is his account of how one can come to know synthetic truths *a priori*?

While there have been investigations of Bolzano's objective explication of the notion of a *a priori* proposition (see Textor 1996, chapter 4), the epistemological details have never been examined in great detail.⁽²⁾ The task of this chapter is thus to tell the epistemological story behind Bolzano's objective explication.

I should note right from the beginning that the aim of the chapter is descriptive and historical. Primarily, I want to make sense of what Bolzano plausibly had in mind, rather than assess its intrinsic plausibility." (p. 102)

(2) An exception is Lapointe (2010).

"Overview of the book

As each of the following chapters will be accompanied by a detailed overview of its content and line of argumentation, I will confine myself here to a brief overview of the main line of argumentation of the book.

At the core of Bolzano's theory of grounding lies a set of general principles that express properties the relation exhibits according to him. An analysis of these principles, their interrelation, and their role in Bolzano's methodology will form the main bulk of the book. It is heuristically useful to divide these principles into two classes. The first class contains principles that hold for every case of grounding, irrespective of any specific properties of the relata. These principles capture, as it were, minimal conditions an explanatory relation has to satisfy according to Bolzano. The second class consists of more specific principles that mostly apply only to truths from deductive or a priori sciences. Adapting a distinction by Kit Fine, I will call the former Bolzano's *pure logic of grounding* and the latter his *impure logic of grounding*.⁽⁵²⁾ Before we can dive into the details of Bolzano's theory, we will have to gain some familiarity with the nuts and bolts of his logical framework. This will be done in Chapter Two. Chapter Three then discusses Bolzano's pure logic of grounding, while Chapter Four is concerned with the impure logic of grounding. Chapter Five wraps up and draws some connections to the recent debate on grounding. In what follows I will sketch the content of each of these chapters in a little more detail." (p. 16)

distinction will be given further below.

32. ———. 2019. "Bolzano and Kim on Grounding and Unification." *Synthese* no. 196:2971-2999

Abstract: "It is sometimes mentioned that Bernard Bolzano's work on grounding anticipates many insights of the current debate on metaphysical grounding. The present paper discusses a certain part of Bolzano's theory of grounding that has thus far not been discussed in the literature. This part does not so much anticipate what are nowadays common assumptions about grounding, but rather goes beyond them. Central to the discussion will be a thesis of Bolzano's by which he tries to establish a connection between grounding and (deductive) unification. The paper spells out this thesis in detail and discusses the assumptions on which it rests. Next to this mainly historical aim, the paper also presents reasons why philosophers who are not interested in the historical Bolzano should find the thesis interesting by relating it to a certain view on unification and explanation that has been put forward by Kim. A final part of the paper provides a critical evaluation of the thesis against the background of current accounts of grounding."

33. ———. 2020. "Bolzano." In *The Routledge Handbook of Metaphysical Grounding*, edited by Raven, Michael J., 76-89. New York: Routledge

"This chapter provides an overview of Bernard Bolzano's views about grounding. On Bolzano's account, grounding is an objective priority relation among true propositions that has certain explanatory features. The chapter briefly highlights historical influences on Bolzano's account of grounding and subsequently provides an overview of the most important aspects of it. As we shall see, Bolzano's account resembles current accounts of metaphysical grounding in many respects and can thus easily be related to many positions in the current

debate. This is going to be a main focus of this chapter. Apart from that, we shall investigate some Bolzanian ideas about grounding that differ from the current orthodoxy but may constitute interesting additions, challenges or inspirations for those working in the current debate." (p. 76)

34. Roski, Stefan, and Rumberg, Antje. 2016. "Simplicity and Economy in Bolzano's Theory of Grounding." *Journal of the History of Philosophy* no. 54:469-496

Abstract: This paper is devoted to Bolzano's theory of grounding (*Abfolge*) in his *Wissenschaftslehre*. Bolzanian grounding is an explanatory consequence relation that is frequently considered an ancestor of the notion of metaphysical grounding. The paper focuses on two principles that concern grounding in the realm of conceptual sciences and relate to traditionally widespread ideas on explanations: the principles, namely, that grounding orders conceptual truths from simple to more complex ones (Simplicity), and that it comes along with a certain theoretical economy among them (Economy). Being spelled out on the basis of Bolzano's notion of deducibility (*Ableitbarkeit*), these principles are revealing for the question to what extent grounding can be considered a formal relation."

35. Roski, Stefan, and Rusnock, Paul. 2014. "Bolzano on Necessary Existence." *Archiv für Geschichte der Philosophie* no. 96:320-359

Abstract: "This paper is devoted to an examination of Bolzano's notion of necessary existence, which has so far received relatively little attention in the literature.

We situate Bolzano's ideas in their historical context and show how he proposed to correct various flaws of his predecessors' definitions. Further, we relate Bolzano's conception to his metaphysical and theological assumptions, arguing that some consequences of his definition which have been deemed counterintuitive by some of his interpreters turn out to be more reasonable given the broadly Leibnizian background of his metaphysics. Finally, we consider some difficulties that arise from Bolzano's evolving views on freedom, which, at least in his early thought, was intimately linked with contingency. In an

appendix, we discuss a recent debate on Bolzano's notion of necessary truth between Textor and Rusnock that has some bearing on our overall line of interpretation of Bolzano's notion of *necessary existence*."

- Abstract: "In this paper, I provide a thorough discussion and reconstruction of Bernard Bolzano's theory of grounding and a detailed investigation into the parallels between his concept of grounding and current notions of normal proofs. Grounding (*Abfolge*) is an objective ground-consequence relation among true propositions that is explanatory in nature. The grounding relation plays a crucial role in Bolzano's proof-theory, and it is essential for his views on the ideal buildup of scientific theories. Occasionally, similarities have been pointed out between

Bolzano's ideas on grounding and cut-free proofs in Gentzen's sequent calculus. My thesis is, however, that they bear an even stronger resemblance to the normal natural deduction proofs employed in proof-theoretic semantics in the tradition of Dummett and Prawitz."

40. Rusnock, Paul. 1997. "Bolzano and the Traditions of Analysis." *Grazer Philosophische Studien* no. 53:61-85

Abstract: "Russell, in his *History of Western Philosophy*, wrote that modern analytical philosophy had its origins in the construction of modern functional analysis by Weierstrass and others. As it turns out, Bolzano, in the first four decades of the nineteenth century, had already made important contributions 'to the creation of "Weierstrassian" analysis, some of which were well known to Weierstrass and his circle. In addition, his mathematical research was guided by a methodology which articulated many of the central principles of modern philosophical analysis. That Russell was able to discover philosophical content within mathematical analysis was thus not surprising, for it had been carefully put there in the first place. Bolzano can and should, accordingly, be viewed as a founder of modern analytical philosophy, and not necessarily as an uninfluential one. This paper considers his work in mathematical and philosophical analysis against some of the relevant historical background."

41. ———. 1997. "Remaking Mathematics: Bolzano reads Lagrange." *Acta Analytica* no. 18:51-72

"With Cauchy, Bolzano was among the most thorough and acute of Lagrange's readers, and it is clear that Bolzano had a good deal of respect for him as a mathematician, going through his treatises pencil in hand as soon as they were published, and occupying himself with many of the same questions. Like Lagrange, Bolzano was dissatisfied with the state of the foundations of analysis; like him he sought to provide an autonomous foundation for this branch of mathematics, one free from appeals to infinitesimals, geometry, and motion. Bolzano also appears to have respected Lagrange's opinion on the contents of analysis.

(...)

This broad agreement on content, however, was accompanied by sharp disagreements concerning method. Indeed, Bolzano chose his early subjects in part precisely in order to accentuate these differences. For Lagrange's entire approach to analysis was out of harmony with Bolzano's philosophy of science. And as Lagrange's work was in many ways the highest expression of analysis around the beginning of the nineteenth century, Bolzano's criticisms applied quite generally to the state of mathematics at the time. The difficulties which he found were not of the kind that one could hope to resolve by small changes of detail. They were, rather, systemic. What was required, according to Bolzano, was no less than a "complete transformation" of mathematics, at least of those parts which are not to be rejected as completely incorrect.⁽³⁾ Not one to make such a statement idly, Bolzano had already been working on the task for over a decade, and would spend a good part of the rest of his life attempting to finish the work, rebuilding mathematics from the ground up in line with his methodology. This led to a detailed confrontation with eighteenth-century and notably Lagrangian mathematics; and it is here, in Bolzano's criticisms, and the alternatives he proposes, that we find the unmistakable imprint of his philosophy." (pp. 2-3)

42. ———. 1999. "Philosophy of Mathematics: Bolzano's Responses to Kant and Lagrange." *Revue d'Histoire des Sciences* no. 52 (3-4):399-428

Summary: "Bolzano's philosophy of mathematics is presented through a consideration of his critical responses to Kant and Lagrange."

"In a late essay, Bolzano describes the philosophy of mathematics as an activity aimed at discovering the objective grounds of propositions which we already know with the

greatest certainty and evidence (1). For him, philosophy of mathematics was simply what we would now call foundational research in the broadest sense - that is, it was not just a matter of « ultimate » foundations (for instance set theory, logic, or the like), but also of the foundations of particular mathematical theories (for instance geometry, the calculus, combinatorics...). Bolzano was certainly committed to dealing with questions of ultimate foundations, with developing a unified system of mathematics from first principles - his detailed investigations of set theory and logic bear ample witness to this. He also understood, however, that foundational inquiries could be, at least provisionally, local. One could, as he explained in the *Contributions to a better-founded presentation of mathematics* of 1810, assume certain propositions as locally primitive, deferring until a later date their proof from more basic principles (2). No sharp line can be drawn to separate such local questions from those of ultimate foundations. Searching for underlying principles, in whatever domain and at whatever level, was an activity he quite plausibly and in line with tradition regarded as philosophical." (pp. 399-400)

43. ———. 2000. *Bolzano's Philosophy and the Emergence of Modern Mathematics*. Amsterdam: Rodopi

"In his own time, Bolzano was known primarily for his highly public life as a social and religious reformer, one of the leading figures of the Bohemian Enlightenment. In mathematics and logic - the concerns of this book - Bolzano was no less a reformer, developing strikingly modern views on logic, and attempting to recast mathematics in line with the methods set out in this new logic. He pursued this project doggedly, attempting to carry it through to the last details. The results, although incomplete, are impressive, and worthy of our attention.

I have tried in this book to give an adequate sketch of Bolzano as a philosopher of mathematics and as a philosophical mathematician.

Within his mathematical work, I have chosen to focus on his research in the foundations of real analysis, as it is here where he had the greatest success, and where the positive imprint of his philosophical views is most apparent. Of his vast writings on logic, I have confined my attention mainly to those parts which bear most directly on mathematical method. Much of Bolzano's mathematics and logic will no doubt appear quite familiar, and it is easy to forget just how new and strange this territory was when Bolzano - often on his own - first moved into it. For this reason, I have attempted also to convey something of the historical context of his work." (pp. 4-5)

44. ——. 2011. "Kant and Bolzano on Logical Form." *Kant-Studien* no. 102

Abstract: "In the works of Kant and his followers, the notion of form plays an important role in explaining the apriority, necessity and certainty of logic. Bernard Bolzano (1781–1848), an important early critic of Kant, found the Kantians' definitions of form imprecise and their explanations of the special status of logic deeply unsatisfying. Proposing his own conception of form, Bolzano developed radically different views on logic, truth in virtue of form, and other matters. This essay presents Bolzano's views in the light of his criticisms of the Kantian logicians."

45. ——. 2012. "Remarks on Bolzano's Conception of Necessary Truth." *British Journal for the History of Philosophy* no. 20:817-837

Abstract: "This essay presents a new interpretation of Bolzano's account of necessary truth as set out in §182 of the *Theory of Science*. According to this interpretation, Bolzano's conception is closely related to that of Leibniz, with some important differences. In the first place, Bolzano's conception of necessary truth embraces not only what Leibniz called metaphysical or brute necessities but also moral necessities (truths grounded in God's choice of the best among all metaphysical possibilities).

Second, in marked contrast to Leibniz, Bolzano maintains that there is still plenty of room for contingency even on this broader conception of necessity."

46. ———. 2013. "On Bolzano's Concept of a Sum." *History and Philosophy of Logic* no. 34:155-169

Abstract: "Alongside his groundbreaking work in logic, Bernard Bolzano (1781–1848) made important contributions to ontology, notably with his theory of collections. Recent work has done much to elucidate Bolzano's conceptions, but his notion of a sum has proved stubbornly resistant to complete understanding. This paper offers a new interpretation of Bolzano's concept of a sum. I argue that, although Bolzano's presentation is defective, his conception is unexceptionable, and has important applications, notably in his work on the foundations of arithmetic."

47. ———. 2013. "Kant and Bolzano on Analyticity." *Archiv für Geschichte der Philosophie* no. 95:298-335

Abstract: "The history of speculation on a notion or notions called analyticity, now usually characterized as truth in virtue of meanings and independently of fact, is often viewed from the perspective of the Quine-Carnap dispute. Previous characterizations, due to Kant, Frege and others, are then seen as being of a piece with Carnap's various definitions of analyticity, and thus open to Quine's objections. Seen from this point of view, Bolzano's claims about analyticity appear downright bizarre: for on his conception, analyticity is not only non-linguistic, but also independent of both apriority and necessity. In this paper, it is argued that the problem lies not with Bolzano, but rather with the received historical account, especially its interpretation of Kant."

48. ———. 2022. "Grounding in Practice: Bolzano's Purely Analytic Proof in Light of the *Contributions*." In *Bolzano's Philosophy of Grounding: Translations and Studies*, edited by Roski, Stefan and Schnieder, Benjamin, 364-393. New York: Oxford University Press

"Bolzano's best-known mathematical work, the *Rein analytischer Beweis* of 1817, promises to deliver a ground-revealing proof of an important theorem from the theory of equations, which Bolzano shows to follow from (a generalization of) the intermediate value theorem. In his paper Paul Rusnock explains and assesses this promise against the background of Bolzano's early account of mathematical method, in which the idea of grounding plays a central role."

49. Rusnock, Paul, and Burke, Mark. 2010. "Etchemendy and Bolzano on Logical Consequence." *History and Philosophy of Logic* no. 31:3-29

Abstract: "In a series of publications beginning in the 1980s, John Etchemendy has argued that the standard semantical account of logical consequence, due in its essentials to Alfred Tarski, is fundamentally mistaken. He argues that, while Tarski's definition requires us to classify the terms of a language as logical or non-logical, no such division is guaranteed to deliver the correct extension of our pre-theoretical or intuitive consequence relation. In addition, and perhaps more importantly, Tarski's account is claimed to be incapable of explaining an essential modal/epistemological feature of consequence, namely, its necessity and apriority.

Bernard Bolzano (1781-1848) is widely recognized as having anticipated Tarski's definition in his *Wissenschaftslehre* (or *Theory of Science*) of 1837. Because of the similarities between his account and Tarski's, Etchemendy's arguments have also been extended to cover Bolzano. The purpose of this article is to consider Bolzano's theory in the light of these criticisms. We argue that, due to important differences between Bolzano's and Tarski's theories, Etchemendy's objections do not apply immediately to Bolzano's account of consequence. Moreover, Bolzano's writings contain the elements of a detailed philosophical response to Etchemendy."

50. Rusnock, Paul, and George, Rolf. 2004. "Bolzano as Logician." In *The Rise of Modern Logic: from Leibniz to Frege*, edited by Gabbay, Dov and Woods, Jean, 177-205. Amsterdam: North-Holland

Handbook of the History of Logic. Vol. 3.

"Bernard Bolzano (1781-1848) stands out with Frege as one of the great logicians of the nineteenth century. His approach to logic, set out in the *Theory of Science* [WL] of 1837, marks a fundamental reorientation of the subject on many fronts, one which is as radical as any in the history of the field. In sharp contrast to many of his contemporaries, Bolzano insisted upon a rigorous separation of logic from psychology. It should be possible, he thought, to characterize propositions, ideas, inferences, and the axiomatic organization of sciences without reference to a thinking subject. Consistently pursuing this approach to logic and methodology, Bolzano developed important accounts of formal semantics and formal axiomatics.

A talented mathematician, Bolzano developed his logic in conjunction with his mathematical research. Among the first to work on the foundations of mathematics in the modern sense of the term, he made a number of key discoveries in analysis, topology, and set theory, and had a significant influence on the development of mathematics in the nineteenth century. In logic, Bolzano is best remembered for his variation logic (section 4.2 below), a surprisingly subtle and rigorous development of formal semantics. In this article, we discuss Bolzano's logic along with some of his work in the foundations of mathematics which has some bearing on logic." (p. 177)

51. Rusnock, Paul, and Šebestik, Jan. 2013. "The *Beyträge* at 200: Bolzano's Quiet Revolution in the Philosophy of Mathematics." *Journal for the History of Analytical Philosophy* no. 1:1-14

Abstract: "This paper surveys Bolzano's *Beyträge zu einer begründeteren Darstellung der Mathematik* (Contributions to a better-grounded presentation of mathematics) on the 200th anniversary of its publication. The first and only published issue presents a definition of mathematics, a classification of its subdisciplines, and an essay on mathematical method, or logic. Though underdeveloped in some areas (including, somewhat surprisingly, in logic), it is nonetheless a radically innovative work, where Bolzano presents a remarkably modern account of axiomatics and the epistemology of the formal sciences. We

also discuss the second, unfinished and unpublished issue, where Bolzano develops his views on universal mathematics. Here we find the beginnings of his theory of collections, for him the most fundamental of the mathematical disciplines. Though not exactly the same as the later Cantorian set theory, Bolzano's theory of collections was used in very similar ways in mathematics, notably in analysis. In retrospect, Bolzano's debut in philosophy was a remarkably successful one, though its fruits would only become generally known much later."

52. ———. 2019. *Bernard Bolzano: His Life and Work*. New York: Oxford University Press

"Yet interest in Bolzano's theoretical work has rarely extended farther than mere curiosity. Where Frege, for instance, has been the subject of many studies, few English-speaking philosophers have felt moved to look into the details of Bolzano's work. This is more than a pity, since Bolzano did not simply anticipate what others later developed, but has original things to say that are of enduring interest. One of the most remarkable philosophers of the nineteenth century, his works are still very much worth studying today, so solid is their foundation, so meticulous their detail. Quine might have done well, for instance, to have considered what Bolzano had to say about the analytic/synthetic distinction, or about the *a priori*, Putnam and Kripke to what Bolzano had to contribute to their discussions of indexicals and natural kind terms. Frege himself, as Alwin Korselt [*] pointed out in a none-too-friendly exchange over the foundations of geometry, might have learned a few things about logical consequence from him.

(...)

In the English-speaking world, Bolzano is best known for his work in logic and mathematics. There are certainly things of great importance and beauty in these parts of his work. We have already written, each of us, on these matters, and will have more to say about them in this book. But a faithful portrait of Bolzano cannot limit itself to this, for until he was 40 years old, he was only able to pursue these subjects in his spare time. With his considerable gifts in these non-controversial areas, he

certainly might have led a distinguished life of speculation as a mathematician or philosopher. Instead he chose quite deliberately to plunge into the turbulent political life of his homeland, applying his formidable intelligence, energy, and determination to the reform of his society and its institutions. It is here that we shall begin." (pp. 2-3)

Selected Bibliography on Bernard Bolzano's Contributions to Logic and Ontology. Fifth Part: S - Z

Studies on Bolzano's Logic and Ontology

1. Schnieder, Benjamin. 2007. "Mere Possibilities: a Bolzanian Approach to Non-Actual Objects." *Journal of the History of Philosophy* no. 45:525-550

"The paper is a detailed reconstruction of Bernard Bolzano's account of merely possible objects, which is a part of his ontology that has been widely ignored in the literature so far. According to Bolzano, there are some objects which are merely possible. While they are neither denizens of space and time nor members of the causal order, they could have been so. Thus, on Bolzano's view there are, for example, merely possible persons, i.e., objects which are neither actual nor persons but which could have been both. In course of the development of Bolzano's views, they are contrasted with the better known theory of his compatriot Alexius Meinong, and it is shown that they have a modern counterpart in the accounts of merely possible objects that were developed by Bernard Linsky and Ed Zalta, and by Timothy Williamson."

"Here is a brief outline of my paper. The first section is dedicated to the clarification of some basic Bolzanian notions, an understanding of which is needed for what follows. In the second section, I set out to establish that Bolzano in fact had the ontological view I attribute to him. That is, he accepted that there are merely possible objects. The third and final section is

concerned with the exposition and reconstruction of Bolzano's account of mere possibilities." (p. 526)

2. ———. 2014. "Bolzano on Causation and Grounding." *Journal of the History of Philosophy* no. 52:309-337

"This paper is an exploration of Bolzano's views on causation, which have not been thoroughly examined yet. The paper reconstructs Bolzano's position, with a focus on his analysis of the concept of causation, on its ontological presuppositions, and on how he relates causation to his theory of grounding.(1) A comparison with standard positions from the contemporary debate on causation will prove his views to be quite original. Moreover, they are a valuable addition to the more recent debate on metaphysical grounding,(2) in which grounding is sometimes informally described as something like metaphysical causation with the exact connection of the two notions seldom being elaborated. Bolzano's theory explicitly addresses the issue and takes an innovative stance. However, it will also be revealed that his account is beset with problems. But even if his position should ultimately not be tenable, discussing it can deepen our understanding of problems raised in the current debates about causation and grounding and shed new light on them." (p. 309)

(1) The paper concentrates on general conceptual and metaphysical issues of causation. It will not discuss Bolzano's views on the epistemology of causation, nor his views on detailed matters of fact perhaps better to be treated in physics and its philosophy (such as the question of how causal powers are actually distributed in the world, what kind of basic causal powers there are, etc.).

3. ———. 2022. "A Fundamental Being: Bolzano's Cosmological Argument and Its Leibnizian Roots." In *Bolzano's Philosophy of Grounding: Translations and Studies*, edited by Roski, Stefan and Schnieder, Benjamin, 418-443. New York: Oxford University Press

"In his ontology, Bolzano uses the notion of grounding to make claims about the dependent and independent existence of entities. In particular, he argues that there must be a fundamental object (in Bolzano's

terminology: an *unconditioned* object), whose existence is not grounded in the existence of any other object. In his paper, Benjamin Schnieder reconstructs Bolzano's argument, explains its historical context, and puts the argument under scrutiny." (p. 38)

4. Scholz, Heinrich. 1961. *Concise History of Logic*. New York: Philosophical Library

On Bolzano see pp. 44-48.

"Modern logic interprets syllogisms as deduction of judgments from other judgments. Obviously, this interpretation is meaningless so long as we do not know what is meant by deducing one judgment from another. Bolzano did find the relevant interpretation which, it must be owned, *also* does not satisfy us all around but is, nevertheless, epoch-making solely because in pursuing his objective Bolzano turned away from statements and returned to the "forms."(154)

These "forms" now appear for the first time explicitly in formal logic so that with their aid Bolzano was able to obtain the most interesting interpretations not only for the derivation but also for the rest of the logically basic relations of compatibility,

incompatibility, etc.(155) His charming *Philosophische Grammatik*(156) we have already mentioned. A luminous chapter all by itself contains magnificent discussions of earlier treatments of every topic of logic with special reference to Aristotle and Kant.(157) In these discussions there is invaluable material for any *critical history of logic*." (pp. 46-47)

(155) Cf. especially WL, II, paragraph 154 ff., 198ff.; I, paragraph 95 ff.

(156) See above, p. 40.

(157) Cf. the little book of Bolzano's keenly critical pupil which I brought out in 1931 in a new edition together with W. Dubislav and which appeared in the Felix Meiner Verlag in Leipzig. It is F. Prikonsky: *Neuer Anti-Kant oder Prüfung der Kritik der reinen Vernunft nach den in Bolzanos Wissenschaftslehre niedergelegten Begriffen*. Here we also get acquainted with Augustine's anticipation of Bolzano's principles and ideas, a fact hardly commented on to this day.

5. Schubring, Gert. 1993. "Bernard Bolzano -- Not as Unknown to His Contemporaries as Is Commonly Believed?" *Historia Mathematica*:45-53

Abstract: "An unknown review of Bolzano's three important papers from the years 1816 to 1817 written in 1821 by J. J. I. Hoffmann, a mathematician from Southern Germany, is edited and commented."

"According to common historiography, Bolzano's pioneer publications, in particular his contributions to a new rigor in analysis in 1816 to 1817, remained almost unknown to the mathematical community. Only one piece of evidence contradicting the general impression that nobody read Bolzano in his own day is frequently quoted: N. H. Abel's remark in one of his *Paris notebooks*. Having read some of Bolzano's publications during the time he spent in Berlin 1825/1826, he noted enthusiastically "Bolzano is a clever man" (1). Abel's appreciation is taken, however, as an isolated instance, and Hermann Hankel is credited with having been the first to bring

Bolzano to the general attention of the mathematical community in 1871 (see [Grattan--Guinness 1970, 51-52]).

(...)

With regard to this desideratum concerning the history of reception of Bolzano's work in his own time, an essay review of Bolzano's three key papers of 1816/1817 in one of the leading German review journals, the *Jenaische Allgemeine Literatur--Zeitung* (JALZ), is a most welcome find. I came across it when analyzing the JALZ for its numerous mathematical reviews. As a first contribution to the study of Bolzano's contemporary reception, the essay review is examined in order to explore the reviewer's reading and understanding of Bolzano's work. Moreover, the mathematical education and practice of the reviewer is analyzed, and the role of the transmitting journal is briefly discussed. The essay review itself is also presented, or more precisely, those parts of it that are in the reviewer's own words." (pp. 45-46)

6. Šebestik, Jan. 1990. "The Archaeology of the Tractatus: Bolzano and Wittgenstein." In *Wittgenstein, eine Neubewertung / Wittgenstein, Towards a Re-Evaluation. Akten des 14. Internationalen Wittgenstein-Symposiums*, edited by Haller, Rudolf and Brandl, Johannes L., 112-118. Wien: Hölder-Pichler-Tempsky

"In the case of Bolzano, a comparison with Wittgenstein covers not only some specific points, but also the style of their philosophies and the role of logic in the construction of the system. I see three main points of comparison:

1. For Bolzano, formal logic is the central discipline of philosophy: a logical system once set up becomes an instrument for all philosophical analysis.

2. Bolzano refutes Kant's transeendental argument the function of which is assumed by a logico-semantical theory which is developed in two different ways:

a) a theory of meaning or sense based on abstract intensional entities, propositions (*Sätze an sich*) and ideas-in-themselves (*Vorstellungen an sich*). The grammatical forms of ordinary language have to be elucidated and amended in order to comply with canonic forms obtained by the logical analysis of language.

b) a theory of reference or denotation, more precisely the logic of classes and the logic of extensional relations between propositions (extensional because defined solely in terms of the truth values of the propositions considered). Particularly important in this respect is the elucidation of fundamentallogical notions: validity, contravalidity, logical consequence (deducibility) and its link with probability.

3. Bolzano's theory of representation (*Vorstellung*) is not properly speaking a picture theory. According to Bolzano, pictures (*Bilder*) are not ideas; they can at most accompany some ideas. No properly functional relationship, no *Abbildung*, is established between propositions and the world. On the one hand, *Sätze an sich* are not *Sachverhalte*, because no *Sachverhalte* correspond to false propositions. On the other hand, the structure of the propositions, which is derived from the structure of the statements of ordinary language, does not correspond exactly to the structure of objects. The system of all true propositions yields a complete description an sich of the world and of the properties of things within it, but Bolzano refutes the idea of morphism between the propositions and the world. It is nevertheless on the grounds of Bolzanian theories that the first (Polish-)Austrian picture theory was born. In Twardowski's *Zur Lehre vom Inhalt und Gegenstand der Vorstellungen* (1894), where the author attempts a synthesis between Bolzano's logic and Brentano's descriptive psychology, a functional relationship (*Abbildung*) is established between objects and ideas." (p. 113)

7. ———. 1992. "The Construction of Bolzano's Logical System." In *Bolzano's Wissenschaftslehre 1837-1987. International*

Workshop, 163-177. Firenze: Leo S. Olschki

"Several reconstructions of Bolzano's logical system have been proposed until now, some of them at the present workshop. They exploit systematically different aspects of Bolzano's logic and interpret it in terms of different XXth century systems. Such an approach has its own rights, as the full force of Bolzano's logic can be measured only by the standards of our contemporary logic. This is precisely the mark of great authors: each important discovery in their field brings to the light some hitherto unnoticed aspects of their work. That such reinterpretations are possible in the case of Bolzano, that his system can be represented in a quite different conceptual frame and translated into modern symbolic notation simply shows how rich and far reaching are his theories. Another argument favours this approach: a XXth century logician can read Bolzano and other logicians of the past only against the background of modern theories. It is in this way that the body of scientific knowledge is continuously being transmitted: by adapting and translating incessantly old theories into the present language. Moreover, the very meaning of past theories can often be understood only in the light of our systems. Already Husserl noticed that he would not have been able to grasp the significance of Bolzano's logic if he had not previously studied the most advanced contemporary logical theories - which in his case mainly meant the logic of Schroder!

Nevertheless, this modernizing approach does not yield full justice to Bolzano. Even if some of his doctrines are definitively obsolete, they have their function in the construction of his system. Like his mathematics, his philosophy and his theology, Bolzano's logic was conceived in a specific historical context and its complete understanding requires a close attention to the logical and philosophical theories of his time. This is why a complementary approach seems necessary, namely a historical analysis which would trace the links between his system and the logical doctrines of his contemporaries as well as with great logical theories of the past.

My intention is to explain the formation and the structure of his logical system whose core is propositional logic. Bolzano's system of extensional relations between propositions represents one of the decisive innovations in the history of logic. It has no historical antecedents. It is nevertheless connected with logical theories of the late XVIIIth and early XIXth century and my paper tries to elucidate the genesis of Bolzano's system against this historical background. This approach will not only show the originality of Bolzano's achievement in full light, but also give a perhaps unexpected insight into the structure of his logical system.

In my reconstruction, I intend to remain *within* Bolzano's logic, using only conceptual tools which he himself has designed. Therefore, I shall neither attempt to translate his definitions into some XXth century notation, nor confront his logic with our systems. One of the advantages of this approach is to give a presentation of Bolzano's logic which is as simple as possible and has no recourse either to symbolic language (except for elementary set-theoretical notational devices) or to sophisticated semantic framework. Those who have tried to explain Bolzano's logical theories to non-specialists or even to students of modern logic may test the advantage of such an approach." (pp.163-164).

8. ———. 1997. "Bolzano, Exner and the Origins of Analytical Philosophy." *Grazer Philosophische Studien* no. 53:33-59

Abstract: "Analytical philosophy begins with the first mathematical and philosophical works of Bolzano published between 1804 and 1817. There, Bolzano set out a project for the global reform of mathematics by means of the axiomatic method. Having completed the *Wissenschaftslehre*, Bolzano wrote a summary of his logic for the *Grossenlehre*, which he sent to Exner in 1833. The correspondence between Bolzano and Exner covered some of the main subjects treated by analytical philosophy: the status of abstract objects (propositions and objective ideas), intuitions, objectless ideas, the concept of object and many others. While Bolzano argued in favor of abstract entities independent of mind and of language, Exner considered them as abstractions obtained from the

subjective judgments and representations. During the XIXth century, Bolzano's philosophy spread over Bohemia and Austria through manuscripts and through the first edition of Zimmermann's textbook of philosophy. The most important Brentanians, Kerry, Twardowski, Meinong and Husserl, discussed his doctrines which may also have influenced Wittgenstein and the Polish school."

9. ———. 2003. "Husserl Reader of Bolzano." In *Husserl's Logical Investigations Reconsidered*, edited by Fiset, Denis. Dordrecht: Kluwer

"The incredible soundness of Husserl's judgment in the matter of logic is unique among his contemporaries - only Frege's insight is on par with it, if not superior. This is due to the lesson of Bolzano whose logic is the truth itself. Husserl adapted his logical system so that it became the logical basis of phenomenology. He adopted Bolzano's main ideas: the extension of logic to the theory of science, the theory of ideal meanings, the distinction between mental act, linguistic expression, meaning and denoted object, the concept of analyticity. Independently of Bolzano and consonant with later mathematical theories, Husserl developed his formal analytics along two lines, apophantic and formal ontology.

Bolzano, however, had articulated the domain of conceptual truths in the same manner: he constructed his logical system as a theory of meaning and his mathematics as a theory of object in general or *Etwas überhaupt*. Both set theory and mereology have their origin here. By his theory of science, Bolzano gave a new impetus to philosophy and logic. For the first time in modern thought, such questions as the nature of logical objects, the problems of meaning and reference, the relation between logic and language became central issues of philosophy." (p. 80)

10. ———. 2014. "Bolzano's Lehrjahre." In *Mind, Values, and Metaphysics: Philosophical Essays in Honor of Kevin Mulligan. Vol. 1*, edited by Reboul, Anne, 289-293. Dordrecht: Springer

Abstract: "The paper will discuss some changes in Bolzano's definition of mathematics attested in several quotations from the *Beyträge*, *Wissenschaftslehre* and *Grössenlehre*: is mathematics a theory of forms or a theory of quantities? Several issues that are maintained throughout Bolzano's works will be distinguished from others that were accepted in the *Beyträge* and abandoned in the *Grössenlehre*. Changes will be interpreted as a consequence of the new logical theory of truth introduced in the *Wissenschaftslehre*, but also as a consequence of the overcome of Kant's terminology, and of the radicalization of Bolzano's anti-Kantianism. It will be argued that Bolzano's evolution can be understood as a coherent move, if one compares the criticism expressed in the *Beyträge* on the notion of quantity with a different and larger notion of quantity that Bolzano developed already in 1816. This discussion is based on the discovery that two unknown texts mentioned by Bolzano can be identified with works by von Spaun and Vieth respectively. Bolzano's evolution will be interpreted as a radicalization of the criticism of the Kantian definition of mathematics and as an effect of Bolzano's unaltered interest in the Leibnizian notion of *mathesis universalis*. As a conclusion, it will be argued that Bolzano never abandoned his original idea of considering mathematics as a *scientia universalis*, i.e. as the science of quantities in general, and it will be suggested that the question of ideal elements in mathematics, which has been interpreted as a main reason for the development of a new logical theory, can also be considered as a main reason for developing a different definition of quantity. "

11. Shapiro, Stewart. 2011. "Varieties of Pluralism and Relativism for Logic." In *A Companion to Relativism*, edited by Hales, Steven D., 526-552. Malden: Wiley-Blackwell

Abstract: "My purpose is to articulate a number of different senses in which one can be a pluralist and/or a relativist concerning logical consequence. I propose, first, that logical consequence is either polysemous or it denotes a cluster concept. In other words, there are a number of different notions that go by that name, often run together, or else there are several aspects of the notions, with varying weights. The

different notions, or aspects, of consequence, turn on matters of modality, semantics, effectiveness, justification, rationality, and form. Second, most of the articulations of the pre-theoretic notions(s) of logical consequence make essential use of a boundary between logical and non-logical terminology. This suggests a sort of relativism/pluralism explicitly noted by Bernard Bolzano and Alfred Tarski: logical consequence is relative to the logical/non-logical boundary. An argument may be valid on one collection of logical terms, invalid on another. Third, it is possible that at least some aspects of the notion of logical consequence are vague: there may be borderline cases of valid arguments. If so, we have to turn to what the correct account of vagueness is. On some theories of vagueness, consequence ends up as relative to something, such as a sharpening or a conversational context, and on others, we end up with a kind of pluralism. Finally, there are a number of interesting and important mathematical theories that employ a non-classical logic, and are rendered inconsistent if classical logic is imposed. This suggests a fourth kind of relativism/pluralism: relativity to structure." (p. 526)

12. Siebel, Mark. 1997. "Variation, Derivability, and Necessity." *Grazer Philosophische Studien* no. 53:117-137

Abstract: "In Bolzano's view, a proposition is necessarily true iff it is derivable from true propositions that include no intuition (*Anschauung*). This analysis is historically important because it displays close similarities to Quine's and Kripke's ideas. Its systematic significance, however, is reduced by the fact that derivability is defined with recourse to the method of variation, which we are allowed to apply even to propositions containing none of the respective variables. This liberality leads to the result that, according to Bolzano's analysis, every truth is necessarily true. Even by introducing his condition of relevance (shared variables), Bolzano cannot avoid that some propositions come out as necessarily true which are merely contingently true."

13. ———. 2002. "Bolzano's Concept of Consequence." *The Monist. An International Quarterly Journal of General Philosophical Inquiry* no. 85:581-601

"In the second volume of his *Wissenschaftslehre* (2) from 1837, the Bohemian philosopher, theologian, and mathematician Bernard Bolzano (1781-1848) introduced his concept of consequence, named *derivability* (*Ableitbarkeit*), together with a variety of theorems and further considerations. Derivability is an implication relation between *sentences in themselves* (*Sätze an sich*), which are not meant to be linguistic symbols but the *contents* of declarative sentences as well as of certain mental episodes. When Schmidt utters the sentence 'Schnee ist weiss', and Jones judges that snow is white, the sentence in itself expressed by Schmidt is the same as the one to which Jones agrees in thought. This sentence in itself is an abstract entity: in some sense, it exists; but it is unreal insofar as it lacks a position in space and time, does not stand in causal relationships, and is independent of the existence of thinking beings and languages. (3)" (p. 581)

(*) On the whole, this contribution is a summary of my book *Der Begriff der Ableitbarkeit bei Bolzano* (Siebel 1996).

(2) I refer to it by 'WL' plus number of volume, section, and page. It is partly translated by Rolf George: *Theory of Science*, Oxford 1972; but here translations are mine.

(3) Cf. WL I, § 19, pp. 77f.; § 22, p. 90; § 25, p. 112; § 28, p. 121; WL II, § 122, 4.

14. ——. 2011. "It Falls Somewhat Short of Logical Precision." Bolzano on Kant's Definition of Analyticity." *Grazer Philosophische Studien* no. 82:91-127

"Kant's famous definition of analyticity states that a judgement is analytic if its subject contains its predicate. Bolzano objects that (i) Kant's definiens permits an interpretation too wide, (ii) the definiens is too narrow, (iii) the definiendum is too limited, and (iv) the definition does not capture the proper essence of analyticity. Objections (i), (iii) and (iv) can be countered. Objection (ii) remains because, among other things, the Kantian definition has an eye only for an analysis of the subject within a judgement."

15. ———. 2019. "Bolzano's Theory of Judgment." In *The Act and Object of Judgment: Historical and Philosophical Perspectives*, edited by Ball, Brian and Schuringa, Christoph, 110-128. New York: Routledge

"Section 2 presents one of the many places where Bolzano anticipates Frege's anti-psychologistic notion of a third realm, which complements the inner realm of mental appearances and the outer realm of perceivable objects. In particular, Bolzano strictly distinguishes between judgments as mental acts and the contents of such acts. In section 3, it is shown how he tries to draw the line between judgments and acts of merely entertaining a thought. Section 4 focuses on the formation of judgments. Of prime importance is the distinction between mediated and unmediated judgments because it is intimately connected with epistemic issues. Section 5 deals with intrinsic qualities of judgments, such as vividness, degree of confidence, clarity vs obscurity, and distinctness vs confusedness.(1)

The notion of judgment occupies centre stage in Bolzano's analyses of epistemic concepts. It is not only crucial to his explication of belief (*Meinung*) as a disposition to judge but also to his explications of cognition (*Erkenntnis*) as true judgment and conviction (*Überzeugung*) and knowledge (*Wissen*) as attitudes towards judgments. In the interest of brevity, I will not go into this conceptual enterprise. Instead, it will be pointed out that Bolzano's theory of judgment includes ingredients one would hardly expect when being told that he anticipated Frege's antipsychologistic views." (pp. 110-111)

(1) Some of the following considerations may also be found in Siebel (1999) and Siebel (2004).

16. Simons, Peter. 1987. "Bolzano, Tarski, and the Limits of Logic." *Philosophia Naturalis*:378-405

Reprinted in: Peter Simons, *Philosophy and logic in Central Europe from Bolzano to Tarski. Selected Essays*, Dordrecht, Kluwer 1992, pp. 13-40.

Abstract: "Both Bolzano and Tarski were unsure what counts as logic. This means that Bolzano's concept of logical analyticity, like Tarski's of logical consequence, is not completely determinate.

In a posthumously published paper, Tarski offers a proposal for demarcating the logical objects in a type-hierarchy, based on the idea of invariance under arbitrary permutations of the domain of individuals. In this paper I comment on and extend Tarski's proposal and show how to combine it with Bolzano's procedure of variation among concepts, to obtain a definition of logical constants in a logically significant fragment of a purported Bolzanian realm of meanings in themselves. I conclude with doubts about the propriety and utility of such a realm."

17. ——. 1997. "Bolzano on Collections." *Grazer Philosophische Studien* no. 53:87-108

Abstract: "Bolzano's theory of Collections (*Inbegriffe*) has usually been taken as a rudimentary set theory. More recently, Frank Krickel has claimed it is a mereology.[*] I find both interpretations wanting. Bolzano's theory is, as I show, extremely broad in scope; it is in fact a general theory of collective entities, including the concrete wholes of mereology, classes-as-many, and many empirical collections. By extending Bolzano's ideas to embrace the three factors of kind, components and mode of combination, one may develop a coherent general account of collections. But it is most difficult to take Bolzano's view to fit modern set theory. So while Krickel's positive thesis is rejected, his negative thesis is confirmed."

F. Krickel, *Teil und Inbegriff. Bernard Bolzanos Mereologie*, 1995.

18. ———. 1999. "Bolzano, Brentano and Meinong: Three Austrian Realists." In *German Philosophy Since Kant*, edited by O'Hear, Anthony, 109-136. Cambridge: Cambridge University Press

"Bolzano's work will in due course be wholly accessible in print and should present relatively few problems of interpretation. I foresee a steadily growing reputation, but whether he comes to his just recognition will depend on attracting sufficiently many interested and talented commentators. The most promising centre of Bolzano studies is currently Hamburg, where a number of young enthusiasts have gathered around Wolfgang Künne.

Of the three philosophers I have mentioned, Bolzano is without doubt the most considerable. Meinong's theories are in the end unacceptably extreme and Brentano's work is often unclear in its implications, though both say things which are of much value to present-day discussions. On the other hand, whether one agrees with his semantic Platonism or not, Bolzano's views are up to the highest standards of contemporary discussion and in their clarity above much of it. His correspondence with Ferdinand Exner has been called the first text of modern analytical philosophy. Most work has to date concentrated on his logic and semantics, but his ethics, political philosophy, philosophy of religion and philosophy of mathematics all deserve greater exposure. The Complete Edition will serve as a definitive textual basis, but it is very expensive, and we badly need cheap study texts in English and German to complement it, and a good introduction to Bolzano in English. We also need to revise our histories of nineteenth-century philosophy to take adequate account of its greatest representative." (p. 126)

19. ———. 2006. "Austrian Philosophers on Truth." In *The Austrian Contribution to Analytic Philosophy*, edited by Textor, Mark, 159-183. New York: Routledge

"In this chapter, I shall consider what the principal Austrian philosophers from Bolzano to Popper have had to say on the subject of truth. Since I shall cover a fair number of philosophers and theories, my considerations will be mainly confined to two linked questions:

What – according to the philosopher in question – is the nature of truth?

What ontology is required to explicate truth according to their account?

Further questions concerned with our access to and knowledge of the truth will only be considered as necessary, since they lead into a tangle of issues for which I shall not have the space here. Neither shall I justify my selection of this or that philosopher as ‘Austrian’, but simply press on.” (p. 159)

20. ———. 2011. "Bolzano's Logic." 1-19

Available on the website academia.edu

Original translated by Giorgio Volpe and published in Italian as “Bolzano e la logica” in S. Besoli, L. Guidetti and V. Raspa, eds., *Bernard Bolzano e la tradizione filosofica*. Macerata: Quodlibet. = *Discipline filosofiche* XXI, 2, 2011, 321–342.

Abstract: "Bolzano's *Wissenschaftslehre* (1837) is one of the two most important works in logic between Leibniz and Frege. In it, Bolzano revolutionised logic by placing it for the first time on a firm semantic footing, employing the concepts of objective, abstract propositions and ideas. The chief instrument in his account of logic is the variation of ideas, which enabled him to define a wide range of logical concepts, and further allowed him to merge deductive logic with a logical conception of probability. This article summarizes the main points of Bolzano's logic and indicates ways in which they relate to post-Fregean logic."

21. ———. 2015. "Bolzano's Monadology." *British Journal for the History of Philosophy* no. 23:1074-1084

Abstract: "Bernard Bolzano (1781–1848), known in his lifetime as ‘the Bohemian Leibniz’, is best known as a logician and mathematician, but he also developed a monadology in which the monads, which he called

‘atoms’, have spatial location and physical properties. This essay summarizes and assesses his monadology."

22. Smart, Harold R. 1944. "Bolzano's Logic." *The Philosophical Review* no. 53:513-533

"Contemporary advocates of Husserl's phenomenological approach to the problems of philosophy tend, consciously or unconsciously, to convey the impression that there is only slight connection between Bernard Bolzano's logical theories and those of their Master. Unfortunately their attitude on this matter encourages the common belief that Bolzano may be safely ignored by students of logic-that his work in this field is of little consequence at the present time. Yet in Husserl's own estimation Bolzano was one of the greatest logicians of all times, and historians of philosophy have called him a "Leibniz auf b6hmischen Boden".

He was at all events one of the staunchest opponents of the metaphysical logicians following Kant, as well as of Kant himself.

His *Wissenschaftslehre* (1837), a compendious work in four volumes totalling nearly 2500 pages, draws much of its inspiration from Augustinian and Leibnizian sources, and in turn has served as a basis for certain theories of Brentano, Husserl, Meinong, and others. Like Leibniz he zealously occupied himself with both mathematics and philosophy from early youth, and again like Leibniz he is rightly famous for his distinguished work in both fields. Indeed his *Paradoxien der Unendlichen* (posth. 1850) is said to have started the great Cantor on his researches in the realm of the mathematical infinite. And he is another of the few thinkers whose chief philosophical writings are in the field of logic. For the rest, his writings are shot through with references to his predecessors, both ancient and modern, and with critical remarks on their doctrines." (p. 513)

23. Stang, Nicholas F. 2013. "A Kantian Reply to Bolzano's Critique of Kant's Analytic-Synthetic Distinction." *Grazer Philosophische Studien* no. 85:33-61

Summary: "One of Bolzano's objections to Kant's way of drawing the analytic-synthetic distinction is that it only applies

to judgments within a narrow range of syntactic forms, namely, universal affirmative judgments. According to Bolzano, Kant cannot account for judgments of other syntactic forms that, intuitively, are analytic. A recent paper by Ian Proops also attributes to Kant the view that analytic judgments beyond a limited range of syntactic forms are impossible.

I argue that, correctly understood, Kant's conception of analyticity allows for analytic judgments of a wider range of syntactic forms."

24. ———. 2014. "Kant, Bolzano, and the Formality of Logic." In *New Anti-Kant*, edited by Lapointe, Sandra and Tolley, Clinton, 192-234. London: Palgrave Macmillan

"In §12 of his 1837 *magnum opus*, the *Wissenschaftslehre*, Bolzano remarks that "In the new logic textbooks one reads almost constantly that 'in logic one must consider not the material of thought but the mere form of thought, for which reason logic deserves the title of a purely formal science'" (*WL* §12, 46).(1) The sentence Bolzano quotes is his own summary of others' philosophical views; he goes on to cite Jakob, Hoffbauer, Metz, and Krug as examples of thinkers who held that logic abstracts from the matter of thought and considers only its form. Although Bolzano does not mention Kant by name here, Kant does of course hold that "pure general logic", what Bolzano would consider logic in the traditional sense (the theory of propositions, representations, inferences, etc.), is formal.

(...)

In recent work, both John MacFarlane and Sandra Lapointe have argued that this 'formality thesis' is original to Kant; according to them, no one in the pre-Kantian, Leibnizian logical tradition held that logic

is about the form of thinking.(3) As MacFarlane points out, the claim that logic is formal is now so widespread that it is often simply asserted without argument. So in criticizing the formality thesis in these post-Kantian figures (whom Lapointe aptly dubs 'Kantian logicians') Bolzano is really targeting one of

Kant's most influential ideas in the philosophy of logic." (pp. 192-193)

(1) References to the *Wissenschaftslehre* (WL) are to Bolzano (1837); it is cited by section number and page.

"Inferences, that is, acts of passage in which a certain judgement, the conclusion of the inference, is drawn on the basis of certain already made judgements, the premisses of the inference, have yielded their central place at the hard core of logic to relations of logical consequence between propositions that serve as contents of the judgements involved, or even more commonly, between well-formed formulae, that is, between

meta-mathematical objects of an uninterpreted formal language. In the present paper I intend to review some of the steps in the process whereby this came about, as well as mention a couple of philosophical corollaries.

Quine, in 1952, held that 'logic is an old subject and since 1879 it has been a great one'.(1) No one reasonably informed concerning the development of logic could possibly object to the first part of this statement, but I want to take mild exception to the second: logic was great also prior to the appearance of Frege's *Begriffsschrift*.(2) From the perspective I am concerned to develop here, 1837 is as important a year as 1879. In that year Bernhard Bolzano's *Wissenschaftslehre* made its appearance in four mighty tomes.(3)" (pp. 373-374)

27. ———. 1998. "MacColl on Judgement and Inference." *Nordic Journal of Philosophical Logic* no. 3:119-132

"The theme of our conference is that of Hugh MacColl and the logical tradition. From any point of view, surely, judgement and inference are (possibly *the*) central components of the logical tradition. However, they do not occur as such in MacColl's Symbolical reasoning(s).

(...).

Accordingly, I begin with a rational reconstruction of what I see as the pivotal moment in the 19th century logical tradition, namely Bolzano's introduction of a novel form of judgement, which will be used to take the measure of the early MacColl with respect to judgement and inference." (p. 119)

(...)

!Why does this Bohemian priest [Bolzano] deserve pride of place over and above such luminaries as Boole, Peirce and Frege? For more than two thousand years, logic has been concerned with how to effect valid acts of inference from

judgements known to other judgements that become known through the inference in question. Basically, these judgements take the subject/copula/predicate form [S is P]. Bolzano now has the courage to break with this traditional pattern and uses instead the unary form

(1) A is true;

where A is a *Satz an sich*, or a *Gedanke*, in the later alternative terminology of Frege. The latter term was translated into English as *proposition* by Moore and Russell, with an unusually confusing ambiguity as a result: prior to 1900 a “proposition” stood for a judgement (made), whereas later it came to stand for the propositional content of such a judgement." (p. 120)

28. ———. 1999. "When, and Why, did Frege read Bolzano?" In *Logica Yearbook 1999*, 164-174

"Michael Dummett wrote:

The only nineteenth-century philosopher of whom it would be reasonable to guess, just from the content of his writings and those of Frege, that he had influenced Frege, is Bernhard Bolzano, who died in the year Frege was born; but there is no evidence whatever that Frege ever read Bolzano(1)

Subsequently he was taken to task by Wolfgang Künne for having made the 'grave mistake' of misspelling 'Bernard', the first name of Bolzano.

However, in my opinion, this is not the only mistake in the quote from Dummett. In the present note I wish to dispute that 'there is no evidence whatever that Frege ever read Bolzano'. On the contrary, by combining two well-known sets of facts, I shall argue, one obtains strong evidence that Frege did read Bolzano late 1905 or early 1906." (p. 164, a note omitted)

(...)

"On the strength of internal evidence I have argued that Frege did read Bolzano.

Was it in fact possible for him to do so? It certainly was, as Dr. Uwe Dathe, of the Philosophical Institute at Jena University,

has been kind enough to check.(26) The University Library at Jena owns a set of Bolzano's collected works from 1882. The acquisition is not dated, but from the library stamp and binding it is clear that the set must have been obtained shortly after its appearance.

Unfortunately, the library ledgers for the years 1821-1899, which have miraculously been retained, are in too bad a state to allow for any conclusion whether Frege actually borrowed the work during that period.(27)

Finally, if, as I aver, Frege did read Bolzano, why does he not simply say so? The answer here surely lies in his character: throughout his career Frege *never* acknowledges, but always disagrees.(28) His spirit seems to have been essentially adversarial. He is the typical *Gegner* who only attacks, but who cannot be bothered to agree." (p. 172)

(26) Private letter, November 26,1998.

(27) Of course, if I am right, a later loan, in 1905 or 1906, outside the period of the ledgers, would be more likely.

29. ———. 2002. "A Century of Inference: 1837-1936." In *In the Scope of Logic, Methodology and Philosophy of Science. Vol. II*, edited by Gardenfors, Peter, Wolenski, Jan and Kijania-Placek, Katarzyna, 565-580. Dordrecht: Kluwer

"The first serious breach in the traditional logical fortress was broached by one thoroughly steeped in the Scholastic patrimony, namely Bernard Bolzano, in another *Wissenschaftslehre* from 1837. This, however, is no puny pamphlet, but a monumental four-volume tome.(5) Like all good ideas the basic idea behind Bolzano's magisterial change is essentially simple: Bolzano revolutionizes logical theory by

"objectivizing" the middle column of the traditional diagram. This objectivization consists in severing the left - and right-hand links to mind and language, thereby obtaining objective "Platonist" logical notions, for which Bolzano ironically adopts the Kantian 'an sich' idiom.

Thus, the (mental) terms become objective "ideas-in-themselves" (*Vorstellungen an sich*). (6) The judgements made, that is, the mental propositions, become propositions-in-themselves (*Satze an sich*), that is, propositions in the modern, post-Russellian sense.(7) Finally, the mental inferences are replaced by *Ableitbarkeiten*, that is, relations of (logical) consequence between propositions-inthemselves.

The resulting change with respect to the form of judgement is particularly interesting. In place of the traditional bipartite Subject/copula/Predicate form Bolzano uses the unary form

C is true,

where *C* is a *Satz an sich*, that is, a proposition that serves as content of the judgement in question (WL §34). The form of the proposition *C*, on the other hand, stays close to the traditional [*S* is *P*]. Bolzano uses [*A* has *b*], where *A* and *b* are *Vorstellungen an sich*, that is, (what corresponds to) objectivizations of the mental products of simple apprehensions, as canonical form for the objective propositions. Thus, he converts the traditional form of judgement into a form of content:

The proposition that the rose has redness is true

instead of

The rose is red." (pp. 567-568. a note omitted)

(7) Russell ([*Principles of Mathematics*] 1903, Appendix A) might be responsible for sanctioning the unfortunate use of the term Russell (1903, Appendix A) might be responsible for sanctioning the unfortunate use of the term *proposition* for the Fregean *Gedanken*.

30. ——. 2009. "A Century of Judgement and Inference: 1837-1936. Some Strands in the Development of Logic." In *The*

Development of Modern Logic, edited by Haaparanta, Leila, 263-318. New York: Oxford University Press

§ 3. Revolution: Bolzano's *Annus Mirabilis*, pp. 269-273.

"My office in the present chapter is to tell how, within a century, the notions of judgment and inference were driven out of logical theory and replaced by propositions and (logical) consequence. Systematic considerations guide the treatment. My history is unashamedly Whiggish: A current position will be shown as the outcome, or even culmination, of a historical development. No apology is offered, nor, in my opinion, is one needed." (p. 263)

(...)

"Bolzano's revolution with respect to the traditional picture is threefold.

First, the middle ("product") column of the traditional schema is objectified.

The mental links are severed, and thus, in particular, the traditional notions mental term (concept, idea) and mental proposition (judgment) are turned into their ideal, or Platonist, counterparts idea-in-itself (*Vorstellung an sich*) and proposition-in-itself (*Satz an sich*).⁽²³⁾ Second, the pivotal middle square of the diagram is altered: The judgment made no longer takes the traditional (*S is P*) form. Logic is no longer term logic. Instead Bolzano uses the propositional, unary form of judgment that was canvassed above, with his *Sätze an sich* taking the role of judgable contents:

The *Satz an sich* *S* is true.⁽²⁴⁾

Third, Bolzano bases his logical theory, not on inference (from judgments known to judgment made), but on (logical) consequence between propositions.⁽²⁵⁾

Judgment is dethroned and its content now holds pride of place in logical theory." (pp. 269-270)

(23) The English rendering of Bolzano's *Satz an sich* is a matter of some delicacy.

The modern, Moore-Russell notion of proposition, being an English counterpart of the Fregean Thought (German *Gedanke*), really is an *an sich* notion, and, for our purposes, essentially the same as Bolzano's *Satz an sich*. Thus, proposition-in-itself is pleonastic: The in-itself component is already included in the proposition.

Furthermore, the mental propositions and their linguistic signs, that is, written or spoken propositions, as explained, carry assertoric force, whereas Bolzano's *Sätze an sich* manifestly do not, serving, as they do, in the role of judgmental content. (...)

(24) WL, §34.

(25) Occasionally I shall permit myself to drop the "in-itself" idiom in the interest of perspicuity and readability and speak just of "propositions."

31. Świętorzecka, Kordula. 2017. "Bolzano's Argument for the Existence of Substances: a Formalization with Two Types of Predication." *Acta Analytica* no. 32:411-426

Abstract: "The topic of our analysis is the argument for the existence of substances given by Bernard Bolzano in *Athanasia* (1827), where he essentially employs two ontological categories: substance and adherence. Bolzano considers the real and conditioned *Inbegriff* of all adherences, which are *wirklich* and *nicht selbst bestehen*.

He claims that the formed collection is dependent on something external and nonadherential, which therefore is a substance. Bolzano's argumentation turns out to be structurally similar to his argument for the existence of God from *Lehrbuch der Religionswissenschaft* (1834), but in each of these reasonings, we find different plausible interpretations of the key concept "Inbegriff". The latter argumentation refers to the mereological totality of existentially conditioned objects. We propose the explication of the Bolzanian *Inbegriff* of all adherences using two types of predication: we consider its extension as composed of certain intensional counterparts of adherences.

In our approach, we use a fragment of the theory of abstract objects formulated by E. Zalta (1983), describing two different relations between individuals and properties: extensional exemplification and intensional encoding. We put our reconstruction in a wider context of Bolzano's ontology, formulating the needed axioms with two primitive predicates of second order ... is an adherence, ... is conditioned by something real as well as the conditionally introduced first order predicate constant *In* for *Inbegriff* of all adherential ideas. Finally, we sketch a model for our theory."

32. ———. 2019. "Two Formal Interpretations of Bolzano's Theory of Substances and Adherences." *Axiomathes* no. 29:265-284

Abstract: "Our research concerns a formal representation of Bolzano's original concepts of *Substanz* and *Adhärenz*. The formalized intensional theory enables to articulate a question about the consistency of a part of Bolzano's metaphysics and to suggest an answer to it in terms of contemporary model theory. The formalism is built as an extension of Zalta's theory of abstract objects, describing two types of predication, viz. attribution and representation. Bolzano was aware about this distinction.

We focus on the consistency of this formalism and the description of its semantics.

Firstly, we explore the possibility to reconstruct a Russellian antinomy based on the concept of the Bolzano's *Inbegriff* of all adherences. (Bolzano's theory of ideas is often suspected of antinomial consequences.) Our aim is to show limitations of his theory that prevent a contradiction when the *Inbegriff* consists of non-selfreferential adherences. Next, we discuss two competing semantics for the proposed theory: Scott's and Aczel's semantics. The first one yields a problematic result, that there are no models for the considered theory, containing a non-empty collection of all adherences. This is due to the fact

that Scott's structures verify the formula on reloading abstracts in extensional contexts. We show that Aczel's semantics does not contain this difficulty. There are described Aczel's models with a non-empty set of all adherences. The self-referentiality of such a collection becomes irrelevant here.

Finally, we show that there are Aczel's structures verifying the formula on reloading abstracts and we exclude them from the class of models intended for our theory."

33. Tarski, Adam. 2002. "On the Concept of Following Logically." *History and Philosophy of Logic* no. 23:155-196

Translated from the Polish and German by Magda Stroinka and David Hitchcock.

"We provide for the first time an exact translation into English of the Polish version of Alfred Tarski's classic 1936 paper, whose title we translate as 'On the concept of following logically'.

We also provide in footnotes an exact translation of all respects in which the German version, used as the basis of the previously published and rather inexact English translation, differs from the Polish. Although the two versions are basically identical, to an extent that is even uncanny, we note more than 400 differences. Several dozen of these are substantive differences due to revisions by Tarski to the Polish version which he did not incorporate in the German version.

With respect to these revisions the Polish version should be regarded as more authoritative than the German. Hence scholars limited to an English translation should use ours." (p. 1)

"After the original of this paper had appeared in print, H. Scholz in his article 'Die Wissenschaftslehre Bolzanos, Eine Jahrhundert-Betrachtung', *Abhandlungen der Fries'schen Schule*, new series, vol. 6, pp. 399-472 (see in particular p. 472,

footnote 58) pointed out a far-reaching analogy between this definition of consequence and the one suggested by B. Bolzano about a hundred years earlier." [Note added by Tarski in English in Tarski (1956, 1983).] (p. 67).

34. Tatzel, Armin. 2002. "Bolzano's Theory of Ground and Consequence." *Notre Dame Journal of Formal Logic* no. 43:1-25

Abstract: "The aim of the paper is to present and evaluate Bolzano's theory of grounding, that is, his theory of the concept expressed and the relation brought into play by 'because'. In the first part of the paper (Sections 1-4) the concept of grounding is distinguished from and related to three other concepts: the concept of an epistemic reason}, the concept of causality, and the concept of deducibility (i.e., logical consequence). In its second part (Sections 5-7) Bolzano's positive account of grounding is reconstructed in axiomatic form and critically discussed."

35. Textor, Mark. 1997. "Bolzano's Sententialism." *Grazer Philosophische Studien* no. 53:181-202

Abstract: "Bolzano holds that every sentence can be paraphrased into a sentence of the form "A has b". Bolzano's arguments for this claim are reconstructed and discussed. Since they crucially rely on Bolzano's notion of paraphrase, this notion is investigated in detail. Bolzano has usually been taken to require that in a correct paraphrase the sentence to be paraphrased and the paraphrasing sentence express the same proposition. In view of Bolzano's texts and systematical considerations this interpretation is rejected: Bolzano only holds that the sentence to be paraphrased and the paraphrasing sentence must be equipollent ("*gleichgeltend*"). It is shown that even this modest view of paraphrase does not help Bolzano in sustaining his claim that all sentences have the form "A has b"."

36. ———. 2001. "Logically Analytic Propositions *A Posteriori*?" *History of Philosophy Quarterly* no. 18:91-113

"In this paper I will be concerned with Bolzano's explication of logical analyticity or I-analyticity for short. Nowadays Balzano

is often seen as a forerunner of the so-called substitutionalist account (Etchemendy) of I-analyticity for sentences, the property that distinguishes logical truths (falsehoods) from "ordinary" truths (falsehoods). I will argue that Bolzano's explication does not correspond closely to the modern account. My reason for this heterodox view is not that Bolzano tries to define what makes a *proposition*, roughly, the meaning of a sentence, I-analytic. The problem I am interested in will also arise for an account of I-analyticity for sentences that follows Bolzano's lead. My reason is an epistemological one: Bolzano's account does not allow him to say that I-analytic propositions can be known *a priori*. But according to most philosophers' understanding of I-analyticity this epistemological feature is central to the notion of logical truth. Hence, Bolzano's account does not capture an important feature of the concept of a logical truth or the broader concept of an I-analytic proposition." (p. 91)

37. ———. 2003. "'Caius-at-Noon" or Bolzano on Tense and Persistence." *History of Philosophy Quarterly* no. 20:81-102

Translated in French as: "Bolzano sur le temps et la persistence", *Philosophiques*, 30, 2003, pp. 105-125.

"Bolzano's fame among contemporary analytic philosophers is mainly due to his achievements in the philosophy of logic.

(...)

What is less well known is that Bolzano also uses his theory of propositions to define a variety of epistemological and metaphysical notions. Among the metaphysical notions so defined is the notion of time. Crucial for his definition of time is Bolzano's thesis that

a tensed natural language sentence attributing a substantial property to an actual thing expresses only a complete proposition if it contains an expression like "in (at) t" as part of its *subject-term*.

Bolzano consequently rejects the Aristotelian idea that tense attaches to predicables.⁽¹⁾ Bolzano's proposal is of interest for contemporary philosophers, because it bears a striking

resemblance to contemporary theories in which expressions like "Caius at noon" refer to temporal parts. This paper is primarily concerned with a reconstruction and evaluation of the part of Bolzano's doctrine of propositions that is the basis of his definition of time. The definition itself will be a topic for another occasion. First things first. The following sketch of Bolzano's definitional strategy and its rationale shall introduce the reader to Bolzano's general project, which connects tense and time." (pp. 81-82)

(1) Aristotle puts his view forward in *De Interpretatione* 16^b6 and 16^b8.

For recent defenses see P. T. Geach, *Reference and Generality* (Ithaca, N.Y.: Cornell University Press, 1962), §27, and D. Wiggins "Substance," in *Philosophy*, ed. A. C. Grayling (Oxford: Oxford University Press, 1995), p. 232.

38. ———. 2013. "Bolzano on the Source of Necessity: A Reply to Rusnock." *British Journal for the History of Philosophy* no. 21:381-392

Abstract: "According to Bolzano, an object has necessary being if, and only if, there is a conceptual truth that ascribes being to it. I (Textor, 1996, chapter 5) proposed that the notion of conceptual truth bears the explanatory weight in Bolzano's theory of necessity because, ultimately, the truth of such a proposition depends only on the nature of the concepts it contains. Rusnock (2012) argues against this interpretation and proposes, in turn, that for Bolzano necessity and contingency are tied to free choice. In this article I will provide conceptual and historical background for Bolzano's view of necessity and use it to motivate my interpretation as well as to rebut Rusnock's criticism."

39. ———. 2013. "Bolzano's Anti-Kantianism: From a Priori Cognitions to Conceptual Truths." In *The Oxford Handbook of The History of Analytic Philosophy*, edited by Beaney, Michael, 227-250. New York: Oxford University Press

Abstract: "Bernard Bolzano was born in 1781, the year of the publication of the first edition of Kant's *Critique of Pure Reason*; he died in 1848, the year of Gottlob Frege's birth. These dates are symbolic. Bolzano's work is a link between Kant's philosophy and early analytic philosophy of which Frege is a key exponent. In this chapter I will discuss how Bolzano's criticism of Kant shapes Bolzano's theory of propositions. In connection with this I will outline how Bolzano discovered the method of variation and give an overview of his results in employing this method."

40. ———. 2013. "Bolzano on Conceptual and Intuitive Truth: the Point and Purpose of the Distinction." *Canadian Journal of Philosophy* no. 43:13-36

Abstract: "Bolzano incorporated Kant's distinction between intuitions and concepts into the doctrine of propositions by distinguishing between conceptual (*Begriffssätze an sich*) and intuitive propositions (*Anschauungssätze an sich*). An intuitive proposition contains at least one objective intuition, that is, a simple idea that represents exactly one object; a conceptual proposition contains no objective intuition. After Bolzano, philosophers dispensed with the distinction between conceptual and intuitive propositions. So why did Bolzano attach philosophical importance to it? I will argue that, ultimately, the value of the distinction lies in the fact that conceptual and intuitive truths have different objective grounds: if a conceptual truth is grounded at all, its ground is a conceptual truth. The difference in grounds between conceptual and intuitive truths motivates Bolzano's criticism of Kant's view that intuition plays the fundamental role in mathematics, a conceptual science by Bolzano's lights."

41. ———. 2022. "Grounding, Simplicity, and Repetition." In *Bolzano's Philosophy of Grounding: Translations and Studies*, edited by Roski, Stefan and Schnieder, Benjamin, 301-318. New York: Oxford University Press

"For Bolzano, grounding often goes along with a reduction of *propositional complexity*, where he takes the complexity of a proposition to depend not only on *how many* ideas occur in it, but also by how *often* each of them occurs (so that the proposition *that Ann is wise* is less complex than the proposition *that Ann isn't unwise*). But this raises the Repetition Problem, which Mark Textor explores in his paper: how can a whole contain one and the same entity more than once?" (p. 37)

42. Thompson, Paul B. 1981. "Bolzano's Deducibility and Tarski's Logical Consequence." *History and Philosophy of Logic* no. 2:11-20

Abstract: "In this paper I argue that Bolzano's concept of deducibility and Tarski's concept of logical consequence differ with respect to their philosophical intent. I distinguish between epistemic and ontic approaches to logic, and argue that Bolzano's deducibility presupposes an epistemic approach, while Tarski's logical consequence presupposes an ontic approach."

43. Tolley, Clinton. 2012. "Bolzano and Kant on the Place of Subjectivity in a *Wissenschaftslehre*." *Grazer Philosophische Studien* no. 85:63-88

Summary: "Throughout his career, Bolzano presents his account of knowledge and science as an alternative to 'the Critical philosophy' of Kant and his followers. The aim of this essay is to evaluate the success of Bolzano's own account—and especially, its heavy emphasis on the objectivity of cognitive content—in enabling him to escape what he takes to be the chief shortcomings of the 'subjective idealist philosophy'. I argue that, because Bolzano's own position can be seen to be beset by problems that are both recognizably similar to, and possibly even worse than, those that he takes to afflict Kant's

account of the elements of our knowledge, Bolzano's attempt to fully overcome the alleged vices of Kant's idealism by 'extruding' semantic content from the mind must be judged to be less than satisfactory."

44. ———. 2013. "Bolzano and Kant on the Nature of Logic." *History and Philosophy of Logic* no. 33:307-327

Abstract: "Here I revisit Bolzano's criticisms of Kant on the nature of logic. I argue that while Bolzano is correct in taking Kant to conceive of the traditional logic as a science of the activity of thinking rather than the content of thought, he is wrong to charge Kant with a failure to identify and examine this content itself within logic as such. This neglects Kant's own insistence that traditional logic does not exhaust logic as such, since it must be supplemented by a transcendental logic that will in fact study nothing other than thought's content. Once this feature of Kant's views is brought to light, a much deeper accord emerges between the two thinkers than has hitherto been appreciated, on both the nature of the content that is at issue in logic and the sense of logic's generality and formality."

45. ———. 2014. "Bolzano and Kant on Space and Outer Intuition." In *New Anti-Kant*, edited by Lapointe, Sandra and Tolley, Clinton, 157-191. London: Palgrave Macmillan

"Challenges to Kant's account of geometry appear already in some of Bolzano's earliest publications (cf. Bolzano 1810), and are developed more sustainedly in his later discussions of Kant in the 1837 *Wissenschaftslehre* ('WL') and those recorded by Příkladný in the 1850 *New Anti-Kant* ('NAK'). Bolzano argues, against Kant, that it is possible to define the representation of space through mere concepts alone, without this definition including any representations whatsoever drawn from intuition (cf. WL §79.6, I.366; §79 *Anm*, I. 369–370; NAK 74). In this respect, Bolzano thereby puts forward a form of geometrical 'logicism' *avant la lettre*.(4) In fact, Bolzano's criticisms go considerably further, insofar as he argues that the very idea of a pure intuition is essentially incoherent (as we will see below, cf. §§4–5).

Yet while existing treatments of Bolzano's criticism of Kant on space have focused primarily on Bolzano's contrasting account of knowledge in geometry and mathematics more broadly, much less attention has been paid to the consequences that Bolzano's rejection of pure intuition has for Bolzano's own account of our intuitions of external objects – representations that Bolzano himself also calls 'outer intuitions'.⁽⁵⁾ This will be my focus in what follows." (p. 158)

(4) Cf. Coffa 1991, 27f.; Sebestik 2003, 54f.; cf. Palagyi 1902, iii.

(5) An early start on this topic can be found in Palagyi 1902, chapter VI (esp.

§18). Some more recent helpful treatments of related topics can be found in George 2003 and Rosenkoetter 2012. For a discussion of Bolzano's rejection of Kant's doctrine of the pure intuition of time that is in key ways complementary to what follows, see George 1987.

46. Trlifajová, Katerina. 2018. "Bolzano's Infinite Quantities." *Foundations of Science* no. 23:681-704

Abstract: "In his *Foundations of a General Theory of Manifolds*, Georg Cantor praised Bernard Bolzano as a clear defender of actual infinity who had the courage to work with infinite numbers. At the same time, he sharply criticized the way Bolzano dealt with them.

Cantor's concept was based on the existence of a one-to-one correspondence, while Bolzano insisted on Euclid's Axiom of the whole being greater than a part. Cantor's set theory has eventually prevailed, and became a formal basis of contemporary mathematics, while Bolzano's approach is generally considered a step in the wrong direction. In the present paper, we demonstrate that a fragment of Bolzano's theory of infinite quantities retaining the part-whole principle can be extended to a consistent mathematical structure.

It can be interpreted in several possible ways. We obtain either a linearly ordered ring of finite and infinitely great quantities, or a partially ordered ring containing infinitely small, finite and infinitely great quantities. These structures can be used as a basis of the infinitesimal calculus similarly as in non-standard analysis, whether in its full version employing ultrafilters due to Abraham Robinson, or in the recent "cheap version" avoiding ultrafilters due to Terence Tao."

47. van der Schaar, Maria. 2007. "Bolzano on Judgement and Error." In *The Logica Yearbook 2006*, edited by Tomala, O and Honzi, R., 211-221. Prague: Filosofia

"Keeler (1934) ends his history of the problem of error with Kant, and Balduin Schwarz, in his article on 'Irrtum' in the *Historisches Wörterbuch der Philosophie*, only mentions 'the important analysis' of error given by Bolzano. In the less known third part of the *Wissenschaftslehre* (1837), the 'Erkenntnislehre', there are several chapters on judgement, knowledge and truth, with a special section on error. Besides the logical / conceptual question how error is possible, Bolzano

also asks the epistemological / psychological question what the causes of error are, how error arises in us.

With respect to the concept of error, one has to distinguish between act and product. 'Error' and the German term 'Irrtum' stand for the product, resulting from an act of erring ('das Irren'). The distinction is a special case of the distinction between the act of judgement and the judgement product. Both act and product need to be distinguished from the proposition, which Bolzano also calls an error, if it is false but held true.

Because Bolzano explains error primarily as incorrect judgement (WL, I, § 36), the question what judgement is comes first (section 2). To understand the concept of error, one also needs to understand what knowledge is (section 3).

In my analysis of Bolzano's notions of judgement and knowledge I have profited from Mark Siebel's two recent articles on these topics (Siebel, 1999 and 2004). In section 4 Bolzano's concept of error will be dealt with." (p. 212)

48. Waldegg, Guillermina. 2001. "Ontological Convictions and Epistemological Obstacles in Bolzano's Elementary Geometry." *Science and Education* no. 10:409-418

Abstract: "Bernard Bolzano (1781-1848) was a contemporary of the founders of non-Euclidean geometry and of the renovation of projective geometry. However, he did not participate in the movement transforming concepts and methods which crystallized in a new order of geometry at the beginning of the nineteenth century. On the contrary, throughout his life

Bolzano tried to demonstrate Euclid's postulate of parallel lines.

Two ontological convictions played the role of epistemological obstacle for Bolzano and prevented him even from imagining the possibility that non-Euclidean geometries might exist. In the first place, Bolzano thought that Euclidean geometry had an intrinsic structure and thus geometrical space must be intrinsically Euclidean. Secondly, the description of this structure contained the existence of an "objective" connection between geometrical truths; a basic truth was, by its nature, "simple and general".

This article forms part of the body of work aimed at identifying obstacles in the history of mathematics in order to confront them with obstacles to learning and to establish their epistemological character."

49. ———. 2005. "Bolzano's Approach to the Paradoxes of Infinity: Implications for Teaching." *Science & Education* no. 14:559-577

Abstract.: "In this paper we analyze excerpts of *Paradoxes of the Infinite*, the posthumous work of Bernard Bolzano (1781–1848), in order to show that Georg Cantor's (1845–1918) approach to the problem of defining actual mathematical infinity is not the most natural. In fact, Bolzano's approach to the paradoxes of infinity is more intuitive, while remaining internally coherent. Bolzano's approach, however, had limitations. We discuss implications for teaching, which include a better understanding of the responses of students to situations involving actual mathematical infinity, for it is possible to draw a kind of parallel between these responses and Bolzano's reasoning."

"Like Peirce, whom he preceded by roughly half a century, Bernard Bolzano (1781–1848), the brilliant mathematician, logician and semiotician who taught and wrote in Prague, was little recognized in his lifetime. Like Peirce, he endured persecution for his uncompromising attitudes, in his case both in science and political-religious life: also Bolzano's teaching career, like Peirce's, was cut short, in Bolzano's case because of official displeasure of the Vatican and the Vienna court over his resolute and unwavering liberalism in religious, social and political matters and towards the relation of Czechs and Germans in the Bohemian crownlands of the Austro-Hungarian monarchy. Bolzano's principal scientific contribution was, like Peirce's, in the area of mathematics and logic; and Bolzano's logic, like Peirce's, contained major contributions to semiotics, which Bolzano called the theory of signs (*Zeichenlehre*) and *Semiotik*, though Bolzano's *Zeichenlehre* was certainly not as comprehensive and systematic as Peirce's semeiotic. Unlike Peirce, Bolzano is known primarily to logicians and to specialists in Catholic theology, while his semiotics has received relatively little attention." (p. 157)

52. Wrinch, Dorothy Maud. 1917. "Bernard Bolzano (1781-1848)." *The Monist. An International Quarterly Journal of General Philosophical Inquiry* no. 27:83-107

"In Bolzano we find the virtues of human sympathy and insight coupled with the austerer virtues of the metaphysician and logician. He was a man of action as well as a man of ideas. He was well known for his kindly disposition and his broadmindedness. He possessed not only the sympathy with the poor necessary for a social reformer, but the ability to develop his ideas of social reconstruction on practical lines. Not only did he elaborate a theory of an ideal state, but he also introduced numerous reforms in the actual state of which he was a member. He studied theology very earnestly as a young man and later wrote a great deal on the subject. Even though his liberal views brought him into collision with those on whom his livelihood depended, yet he courageously continued his teaching and writing, always making it his aim to seek for truth. He was a metaphysician of some importance and his treatises

on metaphysics are valuable, not only for the original thought which they contain, but also for his important criticisms of Kant. In esthetics his work is by no means without interest, and to the psychology and ethics of his day he made very valuable contributions. But preeminently he was a mathematician and logician." (p. 83)

Bernard Bolzano: bibliography of the English translations

Bibliography

1. Bolzano, Bernard. 1996. "Contributions to a Better-Grounded Presentation of Mathematics (1810)." In *From Kant to Hilbert: a Source Book in the Foundations of Mathematics. Vol. I*, edited by Ewald, William, 174-224. Oxford: Clarendon Press.

Translation by Steve Russ, (abbreviated: *BD*) revised reprint in *The Mathematical Works of Bernard Bolzano*, pp. 87-137.

"The work *BD* must be one of the first books devoted to what we would now call foundations of mathematics, or philosophy of mathematics. (Indeed, this latter phrase was the title given to it by Fels for the second edition.) After a short Preface the first main part is devoted to the nature of mathematics and its proper classification. The second part deals with definitions, axioms, proofs, and theorems. It is here that the ground-consequence relation is introduced:

in the realm of truth . . . a certain objective connection prevails . . . some of these judgements are the grounds of others and the latter are the consequences of the former. (*BD* II § 2)

He goes on to explain that the proper purpose to pursue in a scientific exposition is to arrange the judgements so as to reflect this objective connection. (p. 21-22)

(...)

An important contribution Bolzano makes here is a solution to the problem of how to define, or come to agreement, on the basic or simple concepts of a system. He says we should do so

in the same way as we first learn terms in our mother tongue by considering several propositions containing the term (see *BD* II § 8). This is akin to what we would call implicit definition and, of course, is closely related to axiomatic systems. However, this is hindsight; there is no suggestion that Bolzano did, or could, consider axiom systems with the degree of formality familiar since the work of Hilbert.

Any such book as *BD* could hardly ignore Kant and his thinking about mathematics and accordingly there is an Appendix devoted to a criticism of Kant's theory of the construction of mathematical concepts through pure intuition. The central point of Bolzano's criticism was that the very notion of pure intuition was incoherent containing, he believed, internal contradictions. An excellent account of this, and indeed the whole methodology outlined in *BD*, is contained in Rusnock *Bolzano's Philosophy and the Emergence of Modern Mathematics* (2000), Ch. 2. For a more extended and philosophical discussion of Bolzano's views of proof and their relationship to Kant see Lapointe (forthcoming) [*Bolzano's Semantics and his Criticism of the Decompositional Conception of Analysis*" in *The Analytic Turn*, Michael Beaney (Ed.), London, Routledge, 2007, pp.219-234].

2. ———. 1972. *Theory of Science, Attempt at a Detailed and in the Main Novel Exposition of Logic with Constant Attention to Earlier Authors*. Berkeley: University of California Press.

Translation of selected section of *Wissenschaftslehre* edited by Rolf George.

The Index lists the complete contents of the first three books of the *Wissenschaftslehre*.

Cited as: George 1972.

Contents: Acknowledgments VII; Editor's Introduction XXIII; Bibliography XLVIII; Introduction 1; Book One: Theory of Fundamentals 19; Book Two: Theory of Elements 59; Book Three: Theory of Knowledge 303; Book Four: Heuristic 373;

Book Five: Theory of Science Proper 385; Index of Special Symbols, phrases and Sentence Forms 393; Index of Subjects 393; Index of Persons 396; (*) Names Omitted (list of persons to whom reference had to be omitted in the present edition) 398; Translation of Key Terms 399.

"During the earliest stages of my work on this translation, I enjoyed the co-operation and advice of my teacher, the late Henry S. Leonard. A preliminary draft of the first volume was finished in 1958, but at that time I was still thinking of a complete translation of all four volumes. I was eventually persuaded that early complaints about the unnecessary bulk of the work had their point. Kambartel's very successful attempt at shortening the first two volumes (*Bernard Bolzano's Grundlegung der Logik*, Hamburg, 1963) finally convinced me that an abbreviated version was not only feasible, but desirable." (p. VII).

(*) Bolzano's *Wissenschaftslehre* is an admirable source book for, and commentary upon, the history of logical theory. The following is the list of persons to whom references had to be omitted in the present edition." (p. 398)

3. ———. 1973. *Theory of Science*. Dordrecht: Reidel.

Edited, with an introduction, by Jan Berg. Translated from the German by Burnham Terrell.

Part A: Selections from the *Wissenschaftslehre* pp. 35-367; Part B: Excerpts from Bolzano's Correspondence pp. 371-383; Bibliography pp. 385-389.

Cited as: Berg 1973.

Table of Contents: Preface XV; Editor's Introduction 1; Part A. A selection from the *Wissenschaftslehre* (Sulzbach 1837, Leipzig 1914-31) Volume One 35; Volume Two: 167; Volume Three 305; Volume Four 357; Part B. Excerpts from Bolzano's Correspondence 371; Bibliography 385; Name Index 391; Subject Index 393-398.

"The present selection from the *Wissenschaftslehre* of Bernard Bolzano aims at giving a compact view of his main ideas in

logic, semantics, epistemology and the methodology of science. These ideas are analyzed from a modern point of view in the Introduction. Furthermore, excerpts from Bolzano's correspondence are included which yield important remarks on his own work.

The translation of the sections from the *Wissenschaftslehre* are based on a German text, which I have located in the Manuscript Department of the University Library in Prague (signature: 75 B 459). It was one of Bolzano's own copies of his printed work and contains a vast number of corrections made by Bolzano himself, thus representing the final stage of his thought, which has gone unnoticed in previous editions." (from the Preface).

4. ———. 2014. *Theory of Science*. New York: Oxford University Press.

First complete translation by Rolf George and Paul Rusnock.

Volume One: Theory of Fundamentals and Theory of Elements (part I): Introduction; Book One: Theory Of Fundamentals; Part I: Of The Existence of Truths in Themselves; Part II: Of the Recognizability of Truth; Book Two: Theory of Elements: Part I: Of Ideas in Themselves.

Volume Two: Theory of Elements (part II): Book Two: Theory of Elements (continued); Part II: Of Propositions in Themselves; Part III: Of True Propositions; Part IV: Of Inferences.

Volume Three: Theory of Knowledge and the Art of Discovery; Book Three: Theory of Knowledge; Part I: Of Ideas; Part II: Of Judgements; Part III: Of the Relation Between our Judgements and Truth; Part IV: Of Certainty, Probability, and Confidence in Judgements; Book Four: The Art of Discovery; Part I: General Rules; Part II: Particular Rules.

Volume Four: Theory Of Science Proper; Book Five: Theory Of Science Proper; Part I: General Rules; Part II: On the Determination of the Extensions of the Sciences; Part III: On the Choice of a Class of Readers for a Treatise; Part IV: On the Propositions Which Should Appear in a Treatise; Part V: On the Divisions of a Treatise; Part VI: On the Order to Which the

Propositions Belonging to a Treatise Should Appear; Part VII: Theory of Signs or, On the Signs Used in Or Recommended by a Treatise; Part VIII: How the Author of a Treatise Should Behave; Part IX: On Scientific Books That Are Not Genuine Treatises.

5. ———. 2007. *Selected Writings on Ethics and Politics*. Amsterdam: Rodopi.

Translated by Paul Rusnock and Rolf Georg.

Contents: Introduction 1; I. Selected Exhortations 43; II. On Rights, Civil Disobedience, and Resistance to Authority 141; III. Ethics and Philosophy of Religion 169; IV. Political Philosophy 241; V. Index 359-368.

"In his own day, few appreciated Bolzano's contributions to theoretical philosophy and mathematics: only a small number were *even* aware that he had done this work. He was renowned, rather, for his work as "catechist". professor of religious science (*Religionswissenschaft*) at the Charles University in Prague from 1805 to 1819. In this highly visible position, Bolzano had become one of the most prominent advocates of social justice and reform in his homeland, a national philosopher who was the "social and political conscience of Bohemia" (4)

(4) W. Künne, "Bernard Bolzano über Nationalismus und Rassismus in Böhmen," p. 97-139 in E. Morscher and O. Neumaier ed. *Bolzanos Kampf gegen Nationalismus und Rassismus*. Beiträge zur Bolzano-Forschung 4, Sankt Augustin: Academia Verlag. 1996, p. 97.

6. ———. 2015. "On the Concept of the Beautiful: A Philosophical Essay (§§1–25)." *Estetika: The Central European Journal of Aesthetics* no. 52:229-266.

Partial translation by Adam Bresnahan of *Über den Begriff des Schönen. Eine philosophische Abhandlung* [On the concept of the beautiful. A philosophical treatise] (Prague, 1843).

"Preface

The fact that I have decided to fill so many pages with the analysis of a single concept may for some seem to demand

explanation. I can only reply that this concept seems to me to be of particular importance; and further, that the analysis of concepts is a matter that always demands expansive inquiries if one is to go beyond merely saying that the concept is reducible to its parts and actually convince the reader, thus also taking care to demonstrate that the attempts at explicating the concept that have been made thus far are lacking in one way or another. After I have completed this essay on the fundamental concept of aesthetics, I will not deem it necessary to proceed with such thoroughness in the essays that follow." (p. 229)

7. ———. 2004. *The Mathematical Works of Bernard Bolzano*. Oxford: Oxford University Press.

Contents: Preface XII, Introduction 1; Part I: Geometry and Foundations 11. 1.1: Elementary Geometry (1804) 25; 1.2: Contribution to a Better-Grounded Presentation of Mathematics (1810 83); Part II: Early Analysis 139. 2.1: The Binomial Theorem (1816) 155; 2.2: A Purely Analytic Proof (1817) 255; 2.3: Three Problems of Rectification, Complanation and Cubature (1817) 279; Part III: Later Analysis and the Infinite 345. 3.1: Infinite Quantity Concepts (1830s) 355; 3.2: Theory of Functions (1830s) 429; 3.3: Improvements and Additions to the Theory of Functions (F+) 573; 3.4: Paradoxes of the Infinite (posthumous 1851) 591; Selected Works of Bernard Bolzano 679; Bibliography 685; Name Index 691; Subject Index 693.

"The main goal of this volume is to present a representative selection of the mathematical work and thought of Bolzano to those who read English much better than they could read the original German sources. It is my hope that the publication of these translations may encourage potential research students, and supervisors, to see that there are numerous significant and interesting research problems, issues, and themes in the work of Bolzano and his contemporaries that would reward further study. Such research would be no small undertaking.

Bolzano's thought was all of a piece and to understand his mathematical achievements properly it is necessary to study his work on logic and philosophy, as well as, to some extent, on

theology and ethics. Of course, it would also be necessary to acquire the linguistic, historical, and technical skills fit for the purpose. But the period of Bolzano's work is one of the most exciting periods in the history of Europe, from intellectual, political, and cultural points of view. And with over half of the projected 120 volumes of Bolzano's complete works (*BGA*) available, the resources for such research have never been better. The work on mathematics and logic has been particularly well-served through the volumes already published." (p. XII).

8. Ewald, William. 1996. *From Kant to Hilbert: A Source Book in the Foundations of Mathematics. Vol. I.* Oxford: Clarendon Press.

Contents: 6. Bernard Bolzano (1781-1848): A. Preface to Considerations on some objects of elementary geometry 172 (Bolzano 1804); B. Contributions to a better-grounded presentation of mathematics 174 (Bolzano 1810); C. Purely analytic proof of the theorem that between any two values which give results of opposite sign there lies at least one real root of the equation 225 (Bolzano 1817a); D. From Paradoxes of the infinite 249-292 (Bolzano 1851).

9. Bolzano, Bernard. 1950. *Paradoxes of the Infinite.* London: Routledge & Kegan Paul.

The *Paradoxien* originally appeared in 1851, were reprinted in facsimile in 1889 and edited afresh in 1921 by A. Höfler, with annotations by H. Hahn.

Translated from the German of the posthumous edition by Franz Prihonský and furnished with a historical introduction by Donald A. Steele.

New translation in *The Mathematical Works of Bernard Bolzano*, pp. 591-678.

Contents: Short title key to Bolzano references IX; Donald A. Steele: Historical Introduction 1; Translation 59; Selected bibliography 176; Index of Persons and Place 185; Index of Topics 188-189.

"The *Paradoxien* are the work of Bolzano's old age. Indeed, the modern mathematical reader who takes the text as it stands will be occasionally disappointed, and may misjudge Bolzano if he has not also read his earlier work. The qualification of taking the text 'as it stands' is not otiose. Our received version, here translated from the 1851 Leipzig edition, is a posthumous one by a friend with whom Bolzano discussed the topics in question for the last few years of his life. The competence of Prihosnky, as an editor of mathematical matter and the trustworthiness of the received version of the *Paradoxien* have recently been placed in doubt by Martin Jasek, the discoverer of the counter-example.

The antecedents of the *Paradoxien* go back at least as far as 9 June 1842, when Bolzano read 'that part of his paper on the march of ideas to be followed in a truly scientific exposition of mathematics which deals with the finite and infinite.' The next traces are three instalments of papers read as follows: on 9 January 1845 about 'a solution of sundry paradoxes occurring in the mathematical sciences' ; on to December 1846 about 'calculations with infinite numerical expressions'; and on 24 February 1848 about 'the paradoxes occasioned in mathematics by the idea of the infinite.' The gradual crystallisation of the eventual title is manifest. Between the first and second paper, on 3 February 1845, Bolzano wrote to Prihonsky that he was busy with sundry paradoxes in mathematics; between the second and third, he wrote twice to Fesl: on 26 February 1848 that he now realised more than ever the importance of the topics of the *Paradoxien* for mathematics and its philosophy, and on 24 June 1848 that the matter for the *Paradoxien* is constantly expanding under his pen. Finally, on 30 November 1848, only eighteen days before his death, Bolzano read a final instalment under the final title of *Paradoxien des Unendlichen*.

Unlike the manuscript of the *Funktionenlehre*, that of the *Paradoxien* was never made ready for the press by the author himself. That task fell to his devoted but none too mathematical friend Prihonsky. In fact, Bolzano himself had entertained doubts about the posthumous treatment of his mathematical papers, for he wrote to Fesl as early as 12 June 1842 that he was

convinced 'that his mathematical ideas, in their present form, could not be really well edited by any of his friends.' This premonition on Bolzano's part comes to corroborate the suspicions of Jasek.

Those suspicions were aroused by a palpable contradiction between the *Funktionenlehre* and the *Paradoxien*.

The received text of §37, pages 65-66, as distinguished from the footnote, makes no actual assertion as to the universal existence of derivatives of continuous functions; Bolzano simply intends to choose such as are differentiable for a certain purpose: '*Ich begehre nichts anderes, als dass.*' But a footnote says it can be shown that 'all well defined functions' are bound to be differentiable 'save possibly for a set of arguments which may indeed be infinite, but whose members must be individually isolated.' No proof is attempted. Jasek ('Aus dem handschriften Nachlass Bernhard Bolzanos', *Vestník Kralovské České Společnosti Nau, Trida matematicko-prirodovedeckd* (1923), pp. 29-32) claims to possess evidence that the footnote is interpolated. He suspects Slivka von Slivitz, another pupil and friend of Bolzano, of being Pihonsky necessary but not sufficient mathematical counsellor, and of having timorously desired to shield Bolzano from the appearance of mathematical heresy which his counterexample may well have borne to contemporaries.

A fresh critical study of the manuscript is indicated, and external obstacles stand in the way for the present. The difficulty does not, however, reside solely in the passage noticed by Jasek. It recurs in §45, page 88. Strictly speaking, again, there is even here no actual assertion that all continuous functions are differentiable, and the question is further complicated by the admitted fact that the posthumous editor found the manuscript in places rather illegible, in spite of his acquaintance with Bolzano's peculiar abbreviation practices. The presumption of guilt on the part of von Slivitz is slightly enhanced, in Jasek's eyes, by a study of his marginal annotations to a copy of the *Funktionenlehre*. With baffling contrariety, it is also slightly alleviated by the fact that the

Zusammensetzung der Kräfte, published in 1842 by Bolzano himself -- and embodying with acknowledgement some suggestions by von Slivitz -- proceeds (§52, page 29) to differentiate a function of which only the continuity is known, together with its satisfaction of conditions which are not quoted as if they established the otherwise uncertain differentiability. The hypothesis that Bolzano's mathematical discrimination had become dulled between 1830 and 1848 on this point at least is simple and not to be rejected *a priori*; but neither is it to be accepted easily until renewed and exact archival research compels us to do so." (pp. 53-55).

10. ———. 2004. *On the Mathematical Method and Correspondence with Exner*. Amsterdam: Rodopi.

Translated by Paul Rusnock and Rolf George.

Contents: Acknowledgements 4; Introduction 5; A note on the translation 37; I. On the Mathematical Method 39; II. Selections from the Bolzano-Exner Correspondence 83; III. Bolzano and Exner on Ideas and their objects: an exchange from 1843 175; IV. Indices 185; Index of Names 186; Index of Subjects 188-191.

There are three versions of the essay on mathematical method; the translation is from the latest version (pp. 23-78 of the original edition).

"It is clear that Bolzano was not satisfied with the logic set out in the *Contributions* [1810]. Already in 1812 he had resolved to write another treatise on logic,⁽⁴⁾ a project he worked on for close to a decade following his dismissal. The result was one of the great works of nineteenth-century philosophy, the *Theory of Science*.⁽⁵⁾ The *Theory of Science* was ready for the press by 1830, at which time Bolzano started writing the *Theory of Magnitudes* [*Grossenlehre*], a treatise intended to supply a unified foundation for all of contemporary mathematics.⁽⁶⁾ Although he wrote several hundred pages, many of them all but ready for the press, but died before finishing his work. Some elements of his mathematical system were published after his death in the *Paradoxes of the Infinite*,⁽⁷⁾ edited by his friend and student F. Prihonsky, but the bulk remained all but

unknown until well into the twentieth century. The essay "On the Mathematical Method", translated here, formed part of the introductory matter of the *Theory of Magnitudes*, and was intended to present the essentials of Bolzano's logic to a mathematical audience.

Due in large part to his troubles with the Austrian authorities, the *Theory of Science* remained unpublished for almost a decade (it was finally published outside Austria, in Bavaria, in 1837). This did not mean, however, that Bolzano's logic remained unknown. Long accustomed to an invasive and often arbitrary censorship, Bohemian intellectuals had developed unofficial channels for communicating their ideas, a precursor of the *Samizdat* system which was later to flourish in that land. Bolzano's mature logic received its first airing in this way, when, in 1833, he had a copy made of the essay on mathematical method and sent it to Franz Exner, the newly appointed professor of philosophy in Prague.(8)

Exner (1802-1853) was born and educated in Vienna, where he studied philosophy with Rembold, who like Bolzano (and for similar political reasons) had been removed from his university chair in 1825. In 1830, Exner was put in the uncomfortable position of taking his teacher's place, being called upon to fill the vacant chair on a temporary basis. In 1832 he moved to Prague, where he was named to the chair of philosophy. Outside of his official duties, in good Austrian fashion, he organized a "circle" of intellectuals which met regularly at his house. Although a born and bred Viennese, he was sensitive to the special circumstances of Bohemia, particularly to the disadvantaged situation of the Czech majority. Politically, though not always philosophically, he was very much on Bolzano's side: with the Bohemian enlightenment and opposed to the conservative reaction in both church and state. Exner was a follower of Herbart, who had a substantial following in Austria at the time, and whose doctrines were to become in effect the official philosophy of the Empire, in part due to Exner's influence when he worked for the Ministry of Education from 1845 until his death.(9)

Exner responded to Bolzano in June of 1833, beginning a correspondence that would continue for the rest of Bolzano's life. The most intense philosophical exchanges occurred during 1833 and 1834, when the letters translated here were written. The two continued their discussion in person in 1834, when Bolzano returned to Prague from June to November. There would also be a later exchange of views in a pair of papers read at the Royal Bohemian Academy of Sciences in the early 1840s. We have translated Bolzano's contribution, which contains the relevant passages from Exner's, in this volume." (pp. 6-8)

(4) *Philosophische Tagebücher* 1811-1817, in J. Berg, F. Kambartel, J. Louzil, B. van Rootselaar, and E. Winter ed., *Bernard Bolzano-Gesamtausgabe* (hereafter BBGA) (Stuttgart-Bad Cannstatt 1969-) Series 2B Vol. 16/1, p. 34-36.

(5) *Wissenschaftslehre* (Sulzbach, 1837). New edition by Jan Berg in the BBGA. Hereafter WL.

(6) BBGA IIA, Vols. 7-10; Volumes 7, 8 and 10/1 have already been published.

(7) *Paradoxien des Unendlichen* (Leipzig, 1851), English translation by D. Steele (London: Routledge and Kegan Paul, 1950).

(8) Three versions of the essay on mathematical method survive. Our translation is based upon the latest version. Most likely, however, the version that Exner received differed somewhat from this one. A Czech translation of an earlier work on logic, "O logice" (= "Etwas über Logik" BBGA 2A5, p. 139-168), was actually published somewhat earlier (1831).

(9) Cf. *Biographisches Lexicon des Kaiserthums Oesterreich*, part 4 (Vienna, I 858); *Allgemeine deutsche Biographie*, vol. 6 (Leipzig, 1877).

11. Russ, S. B. 1980. "A translation of Bolzano's paper on the intermediate value theorem." *Historia Mathematica* no. 7:156-185.

Summary: "This is the first English translation of Bolzano's paper, *Rein analytischer Beweis des Lehrsatzes, dass zwischen*

je zwey Werthen, die ein entgegengesetztes Resultat gewahren, wenigstens eine reelle Wurzel der Gleichung liege (Prague 1817). It has already appeared in French, Russian, and Czechoslovakian translations.

The paper represents an important stage in the rigorous foundation of analysis and is one of the earliest occasions when the continuity of a function and the convergence of an infinite series are both defined and used correctly."

Note: The content of the two anthologies from the *Wissenschaftslehre* is different, so the books are complementary.

Excerpts from the Theory of Science

The main work of Bolzano, *Wissenschaftslehre*, (1837) was published in four volumes: *Wissenschaftslehre: Versuch einer ausführlichen und grösstentheils neuen Darstellung der Logik, mit steter Rücksicht auf deren bisherige Bearbeiter*. Herausgegeben von mehreren seiner Freunde. Mit einer Vorrede von Dr. J. Cr. Heinroth. - Sulzbach.

Critical edition edited by Jan Berg: *Gesamtausgabe* - Voll.11-14 (1985-2000).

Vol. I XVI+571 [3], vol. II VIII+568+[2], vol. III VIII+575 and vol. IV XX+683 pages; the work is composed of five books in 718 paragraphs.

Summary (from the translations of Rolf George [George 1972] and Jan Berg [Berg 1973]; the citations by Bolzano are from the *Introduction*, 15):

Introduction (1-16). Logic as a theory of science

Book One: Theory of Fundamentals Truths (17-45) "including the proof that there are truths in themselves and that we humans also have the capacity to know them"

Purpose, Contents and Divisions of this Book (17)

Refutation of some Objections (18)

Part One: Of the Existence of Truths in Themselves (19-33)

Part Two: Of the Recognizability of Truth (34-45)

Book Two: Theory of Elements "or the theory of ideas, propositions, true propositions and inferences in and of themselves"

Purpose, Contents, and Sections of this Book (46)

Part One: Of Ideas in Themselves (47-114)

Appendix: Earlier Treatment of the Subject Matter of this Part (115-120)

Part Two: Of Propositions in Themselves (121-184)

Appendix: Earlier Treatment of the Subject Matter of this Part (185-194)

Part Third: Of True Propositions (195-222)

Part Fourth: Of Arguments (223-253)

Appendix: Earlier Treatment of the Subject Matter of this Part (254-268)

Book Three: Theory of Knowledge "or concerning the conditions underlying the possibility of knowing the truth, particularly among us humans"

Purpose, Content, and Divisions of this Book (269)

Part One: Of Ideas (270-289)

Part Two: Of Judgments (290-306)

Part Third: Of the Relation between Judgments and Truth (307-316)

Part Fourth: Of Certainty, Probability and Confidence in Judgments (317-321)

Book Four: The Art of Invention (322-391) "or rules to be observed in the enterprise of thought when it is aimed at discovering the truth"

Book Five: Theory of Science proper (392-718) "or rules that must be observed in dividing up the domain of truth generally into particular sciences and in presenting those sciences in specialized scholarly treatises."

1. *What the Author Understands by Theory of Science*

Suppose that all truths which are now, or ever were, known to any man were somehow collected together, e.g. compiled in a single book; I would call such an aggregate the sum of all human knowledge. Compared to the immense domain of truths in themselves, most of which are altogether unknown, this sum is very small; but it is large, ever too large a sum for the mental capacity of any man.(...)4. It should be possible through some reflection to find the rules which we must follow in dividing the total domain of truth into individual sciences and which must govern the writing of the respective treatises. There can also be no doubt that the sum of these rules itself deserves to be called a science, since it is clearly worthwhile to collect the most important part of the in a special book, and to order the and provide proofs for them so that everyone can understand and accept them with conviction. I allow myself to call it the theory of science [*Wissenschaftslehre*], since it is the science which teaches us to represent other sciences (actually only their treatises) (...) [Berg 1973]

§ 15. *General Outline of this Treatise*

It is desirable that the theory of science proper should be preceded by a discussion of rules to be followed in the discovery of truths: heurctic. Heurctic seems to require an antecedent discussion of the general conditions of human knowledge: epistemology. Epistemology can be fruitfully developed only if it is preceded by the theory of ideas, propositions and deductions: the theory of elements. The latter will be preceded by a theory of fundamentals in which it is proved that there are truths and propositions in themselves. [George 1972].

§ 19. *What the author Means by a Proposition in Itself*

In order to indicate as clearly as possible to my readers what I mean by a proposition in itself (*Satz an sich*), I shall begin by explaining first what I call as assertion or a proposition expressed in words. I use this term to designate a verbal statement (most often consisting of several, but at times of just a single word) if it is an instrument of asserting or maintaining something, if it is therefore always either true or false, on of the two, in the ordinary sense of these words, if it (as can also say) must be either correct or incorrect (...) But I also call the following sequence of words a proposition: 'Squares are round'.

For through this form of words something is also stated or asserted, although something false and incorrect. On the other hand, I do not call the following expressions propositions: 'The omnipresent God', 'A round square'. For though these expressions something is indeed represented but nothing is stated or asserted. Consequently one can, strictly speaking, neither say that there is anything there, nor that is anything false in them. [Berg 1973].

1. Rychlík, Karel. 1961. "La théorie des nombres réels dans un ouvrage posthume manuscrit de Bernard Bolzano." *Revue d'histoire des sciences et de leurs applications* no. 14:313-327.

"La théorie des nombres réels (T.N.R.) de Bernard Bolzano fait partie de sa *Grössenlehre* (Théorie des quantités), laissée en manuscrit et restée inachevée. C'est principalement au cours des années 1830 à 1835, après avoir terminé son oeuvre importante sur la logique, *Wissenschaftslehre* (Théorie de la science), que Bolzano travaillait à cette vaste oeuvre.

(...)

Dans sa T.N.R., Bolzano tâche tout d'abord d'effectuer l'arithmétisation de la T.N.R., qui fut développée beaucoup plus tard de trois manières différentes par K. Weierstrass (1860), C. Méray (1869), et G. Cantor (1872), et finalement par R. Dedekind (1872). Bolzano peut être considéré à bon droit comme précurseur de ces mathématiciens: l'idée du fondement purement arithmétique des nombres réels se dessine chez lui tout à fait nettement, bien que ses considérations concernant ce sujet ne soient pas tout à fait irréprochables.

Bolzano donne ensuite le « développement de Cantor » des nombres réels; il le prend pour point de départ pour déduire les propositions ultérieures concernant les nombres réels; la trichotomie des relations « plus grand » et « plus petit », le théorème d'Archimède (Eudoxe), le théorème de Cauchy-Bolzano, le théorème de Bolzano-Weierstrass et finalement un

théorème qui rappelle le théorème de Dedekind. Ces considérations pourraient, sans grands changements, être amenées à la précision requise de nos jours. Ce manuscrit de Bolzano publié, même en son état actuel, aurait pu accélérer considérablement le progrès des mathématiques.

La Ire Partie du présent article contient un Abrégé du manuscrit de la T.N.R.

Dans la IIe Partie intitulée « Conclusion », je tâche de corriger et de compléter l'oeuvre de Bolzano.

La IIIe Partie comprend la Bibliographie." (pp. 313-314).

Bibliographies

1. Lapointe, Sandra. 2003. "Bibliographie." *Philosophiques*:235-243.

"Cette bibliographie a pour but de faire le point sur les études bolzaniennes de langue française et d'orienter le lecteur à travers la littérature sur le sujet.

Nous y faisons l'inventaire des articles et monographies francophones portant sur Bolzano — dont le nombre, comme on aura tôt fait de le constater, reste regrettablement marginal. Le lecteur y trouvera également la liste des traductions françaises publiées ou projetées des oeuvres de Bolzano. Nous incluons les monographies et les traductions anglophones les plus importantes et nous fournissons le descriptif du projet d'édition des *OEuvres complètes (Bernard Bolzano-Gesamtausgabe)* de même que la liste des ouvrages parus en allemand et en anglais dans la série *Contributions aux recherches bolzaniennes (Beiträge zur Bolzano-Forschung)*. Pour un complément à cette bibliographie, on consultera Sebestik (1992). Le nombre de publications en allemand et en anglais est plus considérable. On consultera à ce sujet les volumes 2 et 10 des *Beiträge zur Bolzano Forschung*." (p. 235)

4. Benmakhlouf, Ali. 2000. "La proto-sémantique de Bolzano." *Les Études Philosophiques* 489-504.

"Le projet de B. Bolzano, « le Leibniz de la Bohême », est de considérer comme une des tâches de sa vie le fait d'« endiguer l'épouvantable désordre que Kant, sans le présumer lui-même, a occasionné par ses philosophèmes en Allemagne »(2).

Husserl lui rend hommage dans les *Prolégomènes à la logique pure* : « C'est sur l'ouvrage de Bolzano [la *Wissenschaftslehre*], que la logique doit s'édifier comme science »(3), car ce nouveau Leibniz a su mettre la philosophie sur le chemin d'un « savoir théorique analytique universel » sans l'obstruer de « vision du monde ou de sagesse universelle », équivoque préjudiciable au progrès philosophique. Deux perspectives vont retenir ici notre attention :

1 / Dans les *Contributions à une exposition des mathématiques sur de meilleurs fondements*, texte de 1810, Bolzano invalide l'existence de l'intuition pure en nous montrant que c'est là une notion contradictoire. Kant était parti des mathématiques pour élaborer cette notion, c'est des mathématiques que vient aussi la critique. Les propositions arithmétiques n'empruntent rien à l'intuition et sur cette base minent le fondement épistémologique kantien.

2 / Autre chantier ouvert : la distinction entre ordre en soi de la vérité et ordre pour nous ; seul le premier ordre est objet de la science. Il faut rompre avec l'idée d'une connexion étroite entre l'indémontrabilité et l'immédiateté. L'immédiat pour nous, donné par l'intuition ou l'évidence ne relève pas de l'indémontrable, qui est toujours en soi et indépendant de nous. Les critères de l'indémontrable sont la simplicité et la justification, ceux de l'immédiateté sont l'intuition et l'évidence, nous avons là deux régimes totalement différents de la connaissance. Par là même la coïncidence kantienne entre l'acte de conscience et le formel auto fondateur de l'accord de la connaissance avec elle-même est non seulement inutile mais nuisible, comme l'a montré J. Cavaillès (4)." (p. 491)

(2) Testament de Bolzano, cité, in Laz, *Bolzano critique de Kant*, Vrin 1991, p. XIII.

(3) Husserl, *Prolégomènes à la logique pure*, tr. fr., PUF, p. 248-259.

(4) Kant avait souligné le fait que la logique générale faisait abstraction de tout contenu de la connaissance, c'est-à-dire de toute relation de celle-ci à un objet, nous sommes en droit de

nous demander si cette abstraction est possible, si, comme le note J. Cavailles, l' « abstraction qui donne la logique étant radicale », nous ne tombons pas finalement dans le « vide »; « ni du côté matière, puisqu'elle porte sur l'indéfini "tout objet", ni du côté forme, elle ne s'accroche à une qualification positive ». La question de Cavailles à Kant est alors la suivante: « Que tirer de l'exigence d'accord de la pensée avec elle-même sinon l'éternelle répétition » ? (...) « Pour que l'accord revêtît un sens plein, il faudrait qu'il y eût au moins une différenciation à l'intérieur de la pensée, que l'occasion du désaccord possédât déjà un contenu, mais la logique serait alors logique transcendantale ou dialectique » (in *Sur la logique et la théorie de la science*, p. 6, Hermann, 1994).

5. Benoist, Jocelyn. 1997. "De Kant à Bolzano : Husserl et l'analyticité." *Revue de Métaphysique et de Morale*:217-238.

Repris dans : J. Benoist : *Phénoménologie, sémantique, ontologie. Husserl et la tradition logique autrichienne*, Paris: P.U.F., 1997 avec le titre : *L'héritage de Bolzano : l'analytique formel*, pp. 59-81.

"Donner une définition correcte de l'analyticité exige d'abord l'abandon de l'approche « subjective » (1) de ce phénomène induite par les formulations kantienne. Tant qu'on en reste à la question de savoir si le prédicat était ou non « pensé dans le sujet », il est malaisé de séparer le fait et le droit et de donner une détermination précise au problème.

Qu'est-ce en effet qu'être pensé ou non dans un concept? A l'analyse il devient évident que le problème ne peut pas se réduire à celui de savoir si la représentation avancée comme prédicat était ou non contenue dans ma représentation du sujet. L'analyticité, si elle a un sens, est un fait objectif, qui concerne la structure même de ce à quoi je suis confronté dans mon jugement, la vérité de ce jugement, et non le « contenu » de mes représentations. Distinguer l'analytique et le synthétique, c'est départager des conformations de jugement, en tant que celles-ci définissent des formes différentes pour les objets eux-mêmes (des types d'« objectivité » différents). D'une certaine façon, par là même, l'analyticité (ou son contraire) n'est plus à

chercher nulle part ailleurs que dans la proposition elle-même, fût-elle idéalisée - comme c'est le cas chez Bolzano - et non dans les « représentations » (au sens de représentations du sujet) qui y sont associées.

La percée décisive est accomplie par Bolzano lorsqu'il développe au § 148 de la *Wissenschaftslehre* une théorie originale de l'analyticité, fondée sur le concept leibnizien de substituabilité." (pp. 64-65, une note omise)

(1) Comme c'est le reproche général adressé à Kant par Bolzano. Cf. la présentation de Jacques Laz, *Bolzano critique de Kant*, Paris, Vrin, 1993.

6. ——. 1999. *L'a priori conceptuel. Bolzano, Husserl, Schlick*. Paris: Vrin.

"Pour Bolzano, toute proposition est essentiellement composition (*Zusammensetzung*) de représentations(2), qui sont pour elles de véritables parties(3). À partir de là, on peut envisager la variation (*Veränderung*) de certaines de ces parties. Est analytique une proposition qui conserve la même valeur de vérité quelque représentation que l'on substitue à un ou plusieurs éléments représentationnels distingués en elle (*i, j, ...*)(4). Cette définition, qui se rattache aux recherches leibniziennes sur la substituabilité plus qu'à Kant, est extraordinairement souple : il suffit qu'un seul élément représentationnel (sémantique) de la proposition soit librement modulable *salva veritate* pour la proposition pour qu'elle soit tenue pour analytique. De ce point de vue la définition bolzanienne, tout à la fois objective (sémantique) et pragmatique (elle est adossée à la simple possibilité d'une transformation opérée sur la proposition) déborde largement le cas de la seule analyticité logique - celui qui intéressera Husserl aussi bien. Il est vrai que Bolzano admet aussi une analyticité au sens strict, qu'il nomme « analyticité logique »(5) : celle-ci se caractérise par le fait que dans la proposition qui est analytique en ce sens-là, tout peut faire l'objet de substitution, sauf des concepts « qui appartiennent à la logique ». On aboutit alors à une entente de l'analyticité en son sens radical qui est celle où la valeur de vérité de la proposition n'est plus tributaire

que de son armature logique, de ce que Husserl appellera les « concepts formels » (6) qui y interviennent. Cette analyticité bolzaniennne fixe, à quelques réserves près sur lesquelles nous reviendrons, le cadre de l'analyticité husserlienne." (pp. 98-99)

(2) *Wissenschaftslehre*, § 123, Bd. II, p.4 sq. Nous entendons évidemment ici par « représentation » (*Vorstellung*), la « représentation en soi » en son sens d'unité sémantique de base (cf. *Wissenschaftslehre*, § 48, Bd. I, p. 215 sq.).

(3) Sur le sens de cette méréologie, qui constitue une extension de celle constitutive de la représentation elle-même, voir le § 56, Bd. I, p. 243 sq. On notera l'absence de distinction méréologique entre la logique qui gouverne la composition, à base de « représentations simples », des « représentations composées » et celle qui gouverne la composition, à partir d'elles, de « propositions » (qui sont essentiellement constituées de représentations), Elle aura une certaine importance pour notre propos ultérieur.

(4) *Wissenschaftslehre*, § 148, Bd. II, p. 83. Sur ce qui suit, voir notre exposé dans *Phénoménologie, sémantique, ontologie*, chap. II, p. 65 sq.

(5) *Wissenschaftslehre*, § 148, Bd. II, p. 84.

(6) *Recherches logiques* III, § 11, tr. fr. p. 35.

7. ——. 1999. "Bolzano, Husserl et l'idée de grammaire." *Les Études Philosophiques*:521-534.

Repris dans : J. Benoist, *Entre acte et sens. Recherches sur la théorie phénoménologique de la signification*, Paris: Vrin, 2002, avec le titre : *Grammaire ou méréologie des représentations*, pp. 33-48.

"Au paragraphe 56 de la *Wissenschaftslehre*, Bolzano avance un principe de compositionnalité (*Zusammengesetztheit*) des représentations en soi, principe à l'appui duquel il invoque l'expérience phénoménologique de la « représentation pensée », que d'autres textes spécifient comme le corrélat subjectif de la représentation en soi (1): « notre conscience nous enseigne en effet que nous distinguons presque dans chacune des

représentations pensées certaines parties, dans la liaison desquelles elle consiste » (2).

L'articulation du langage en mots porte également témoignage d'une telle composition : la simple pluralité des mots employés pour restituer la signification de telle ou telle expression peut renvoyer à la complexité de la représentation, même s'il n'est pas dit, contrairement à ce que pourraient suggérer certaines analyses de Bolzano, qu'elle la réfléchisse exactement (3).

Bolzano a un mot pour désigner la teneur méréologique de la représentation, c'est-à-dire la « somme » de ses parties : le contenu (*Inhalt*) de la représentation, le mot que Kant utilisait pour désigner son intension (par opposition à son extension). « Somme » (*Summe*) doit ici être entendu en un sens bien particulier: la somme n'est rien d'autre qu'un ensemble dans lequel une sous-partie d'une partie est encore une partie de l'ensemble (4), et nullement une opération. Cette définition ne comprend aucune contrainte d'ordre: on a en quelque sorte ici affaire aux constituants de la représentation « en vrac ». C'est ce qui constitue son « contenu », autant dire son matériau méréologique. On est donc très loin de la teneur intensionnelle de l' *Inhalt* au sens kantien du terme.

Bolzano le souligne lui-même :

Comme, par ce contenu, on n'entend que la somme des constituants dont est constituée la représentation, mais non la façon que ces parties ont d'être liées ensemble, une représentation n'est donc pas encore entièrement déterminée par l'indication de son contenu, mais, à partir d'un contenu univoquement donné, on peut parfois obtenir deux (ou plus) représentations différentes (5)." (pp. 35-36)

(1) Cf. *Wissenschaftslehre*, Sulzbach, 1837, § 48, l'opposition entre la « représentation eue » ou « pensée » et la « représentation en soi ». Le même paragraphe, Bd. I, p. 217, précise qu'à toute représentation subjective correspond une représentation en soi, qui constitue sa matière (*Stoff*) et pour ainsi dire sa teneur sémantique. Le § 52, p. 228 sq., nous met toutefois en garde contre l'idée d'une corrélation nécessaire de

l'une à l'autre, car elle reviendrait à prendre la représentation en soi au piège d'un rapport qui lui demeure extrinsèque.

(2) *Wissenschaftslehre*, § 56, Bd. I, p. 243. En fait, les deux « remarques » jointes à ce paragraphe, p. 244-246, apportent immédiatement des restrictions à cette transposition du plan subjectif de la représentation au plan objectif: il peut y avoir dans la représentation en soi des parties qui ne sont pas représentées distinctement dans la représentation subjective, voire qui n'y sont pas représentées du tout, de même qu'une partie peut très bien être représentée dans la représentation subjective sans que rien lui corresponde dans la représentation en soi. Il n'y a pas d'isomorphie de l'une à l'autre, mais juste extension d'un seul et même principe de compositionnalité.

(3) La bonne articulation de la représentation serait à trouver au niveau du sens de l'expression, dont la forme linguistique apparente ne reproduit pas forcément la structure. Nous renverrons ici aux réflexions de notre amie Sandra Lapointe sur la notion de paraphrase à introduire chez Bolzano.

8. ———. 2000. "Pourquoi il n'y a pas d'ontologie formelle chez Bolzano." *Les Études Philosophiques* 505-518.

Repris dans : J. Benoist, *Entre acte et sens. Recherches sur la théorie phénoménologique de la signification*, Paris: Vrin, 2002, pp. 49-65.

"Pourtant, y a-t-il une véritable « ontologie formelle » chez Bolzano? Cette notion même peut-elle avoir un sens dans le contexte de pensée qui est le sien?

On peut rappeler ici la mise en garde de Husserl dans *Logique formelle et logique transcendantale*. Bolzano n'aurait « pas vu la distinction entre la forme vide du quelque chose en général prise comme genre suprême qui se différencie en tant que forme formelle vide et la région universelle de l'existant (*Daseiendes*) possible (du réel [*des Realen*] au sens le plus large), région qui se différencie en régions particulières »(2).

Dans son livre sur l'ontologie formelle, Frédéric Nef écrit qu'un tel reproche est « plus intéressant pour la conception qu'il trahit de l'ontologie formelle que pour ce qu'il dit de Bolzano »(3). Et il est vrai qu'une telle critique réfléchit certainement la conception que Husserl se fait de l'ontologie formelle. Pour autant est-elle injustifiée, et ne nous dit-elle rien sur Bolzano? Nous n'en sommes pas sûr. Tout à la fois nous ne sommes pas certains, quant à nous, que Husserl ait raison dans le débat qui l'oppose ici à Bolzano: c'est-à-dire sur le point de savoir s'il faut une ontologie formelle, ou en tout cas si celle-ci peut avoir une portée autre que locale (et rendre compte, par exemple, d'autre chose que des seuls *mathematica*). Mais nous pensons qu'en revanche Husserl a raison sur un point historique : le diagnostic de l'absence d'ontologie formelle chez Bolzano précisément, et cela en tout sens - et non seulement au sens de Husserl. Sur ce point, Husserl, fin historien de la philosophie à ses heures, nous apprend plus sur Bolzano que les reconstructions modernes. Tout le problème est alors de ré-appréécier la position de Bolzano, dans son originalité bien détectée par Husserl, avec d'autres yeux que ceux de Husserl." (pp. 505-506).

9. ——. 2000. "Husserl entre Brentano et Bolzano : jugement et proposition." *Manuscrito* no. 23:11-39.

Résumé : "Il est bien connu que, dans la *Ve Recherche Logique*, Husserl critique la théorie brentanienne du jugement. Son problème est de définir le "porteur" de vérité auquel le jugement donne une valeur de vérité. Un tel projet le conduit très près du propositionalisme bolzanien. Alors la théorie phénoménologique du jugement apparaît comme une sorte de compromis entre la psychologie brentanienne de l'acte

et un point de vue purement sémantique hérité de Bolzano. La question demeure de savoir si une telle conciliation est possible sans un tournant transcendantal."

10. ——. 2001. *Représentations sans objet. Aux origines de la phénoménologie et de la philosophie analytique*. Paris: Presses Universitaires de France.

Chapitre 1: *Bolzano et le paradoxe des objets inexistants*, pp. 17-41.

"Il faut rappeler ici brièvement les présupposés qui sont ceux de la *Wissenschaftslehre* en ce qui concerne la notion de « représentation ». Lorsque, dans la *Doctrine des éléments* de la *Wissenschaftslehre*, Bolzano parle de « représentations en soi », il s'agit de ce qu'on pourrait appeler la teneur sémantique de la représentation, et dont le modèle est clairement celui, linguistique, d'unités de sens correspondant aux différents mots, même s'il demeure extrinsèque à ce sens d'être effectivement proféré ou non, et d'apparaître dans un éventuel discours — il lui est en tout cas, si c'est possible, encore plus extrinsèque d'être effectivement représenté ou non (en un sens psychologique) par un sujet. Il s'agit en premier lieu d'une dépsychologisation de la représentation — dont la détermination traditionnelle, mentale, est ravalée au rang de seule représentation « subjective », la « représentation en soi » se voyant aussi, par contraste, qualifiée de « représentation objective ». Toute représentation subjective contient comme son sens (sa « matière » : *Stoff*) une représentation en soi ou objective, qui, en raison même de son statut sémantique, a une dimension d'idéalité, et est indépendante des fluctuations de la subjectivité représentante. Inversement, il n'est pas dit qu'à toute représentation objective doive correspondre une représentation subjective dans laquelle elle viendrait s'incorporer et qui, en quelque sorte, la supporterait. Bolzano dit même très expressément le contraire, et il faut faire droit (ratification ultime de la thèse d'idéalité de la représentation objective) à la possibilité de représentations en soi qui n'auraient pas de manifestation subjective, c'est-à-dire ne seraient représentées ni énoncées par qui que ce soit (1).

Or, parmi les représentations entendues en ce sens-là, sémantique et objectif, il en est qui sont sans objet. C'est l'objet du célèbre § 67 de la *Wissenschaftslehre*." (pp. 17-18)

(1) Cf. la très importante mise au point n° 2 du § 52 de la *Wissenschaftslehre*, Bd. I, p. 228 (contre *Briefwechsel mit Exner*, lettre à Exner du 23 août 1833, p. 86-87: « A chaque représentation objective correspond une représentation subjective qui lui appartient, qui est sa conception (*Auffassung*). »). Là sans doute on trouverait la limite du rapprochement de la doctrine bolzanienne de la représentation subjective et de la représentation objective et de la doctrine husserlienne de la corrélation noético-noématique — ou plus exactement phansio-ontique, sur le terrain de la doctrine de la signification (cf. Husserl, *Sur la théorie de la signification*, § 8 b, p. 62). On notera par ailleurs que l'entendement divin sert toutefois alors à Bolzano, de façon traditionnelle, à supporter dans sa pensée les « représentations en soi »: cf. la réserve de la fin du § 48 de la *Wissenschaftslehre*, Bd. I, p. 218 : « Il peut y avoir des représentations objectives qui ne sont reçues dans la conscience d'aucun être pensant — à l'exception de Dieu » (nous soulignons). Mais Bolzano précisera aussi qu'une telle incarnation est inessentielle à ladite représentation.

11. ———. 2002. *Entre acte et sens : recherches sur la théorie phénoménologique de la signification*. Paris: Vrin.

Première partie : *L'univers du sens: Bolzano*; Chapitre I: *Grammaire, ou méréologie des représentations* 33; Chapitre II: *Pourquoi il n'y a pas d'ontologie formelle chez Bolzano* 49; Chapitre III: *Sens et non-sens* 67-86 [inédit].

"De fait, il y a bien une théorie des *impossibilia* dans la *Wissenschaftslehre* de Bolzano. Et cette théorie témoigne d'intéressantes similarités, aussi bien que des différences, avec la théorie supposée de Wittgenstein.

Du point de vue de Bolzano, ce problème relève de ce cercle de problèmes connu sous le nom de: représentations sans objet (*gegenstandlose Vorstellungen*).

Qu'est-ce qu'une représentation sans objet? Et, en premier lieu, qu'est-ce qu'une représentation?

Sous les termes «représentations en soi » et «propositions en soi », Bolzano vise ce qu'on pourrait appeler des entités

sémantiques, qui relèvent d'une théorie de la signification.

La seconde classe de ces entités, les propositions en soi, est construite sur la première. Les propositions en soi sont des combinaisons de représentations en soi.

Pourtant, jusqu'à un certain point, dans l'œuvre de Bolzano, les représentations en soi sont déterminées exclusivement en référence aux propositions en soi, qui semblent avoir une sorte de priorité logique. La seule caractérisation que Bolzano semble être capable de donner des dites représentations en soi est que ce sont des parties de propositions en soi (les parties de ces entités porteuses de valeur de vérité que sont les propositions qui ne sont pas encore elles-mêmes porteuses de valeur de vérité).

Les propositions en soi étant définies comme des combinaisons de représentations en soi qui, en tant que combinaisons, ont une valeur de vérité, il semble qu'il y ait là comme un cercle vicieux.

Remarquons cependant que Bolzano, au paragraphe 52-1 de la *Wissenschaftslehre*, insiste sur le fait que la caractérisation (il s'agit tout au plus d'une explication elucidatrice, ce que Bolzano appellerait une *Verständigung*, qui aide à cerner le sens d'un terme, et aucunement d'une définition) de la représentation en soi comme partie de la proposition en soi, partie qui n'a pas encore elle-même de valeur de vérité, est seulement extrinsèque, et nullement essentielle. En réalité, le réalisme sémantique strict qui est le sien conduit Bolzano à considérer que les représentations en soi précèdent leur possible combinaison, et sont, dans leur sens (dans le fait d'avoir un sens pour elles, et dans le contenu de celui-ci), indépendantes de celle-ci. Tout comme les combinaisons dont il est question (il est les propositions en soi, dans le cas où ces combinaisons ont une valeur de vérité) consistent également en elles-mêmes, dans une sorte d'objectivité, indépendamment de tout acte subjectif de combiner." (pp. 68-69)

12. ——. 2002. "La réécriture par Bolzano de l'*Esthétique transcendantale*." *Revue de Métaphysique et de Morale*:287-303.

Résumé : "L' *Elementarlehre* de la *Wissenschaftslehre* de Bolzano peut être lue comme une sorte de réécriture de l' *Elementarlehre* de la *Critique de la raison pure*. Bien sûr, on pourrait avoir l'impression que toute Esthétique Transcendantale fait ici défaut. Des déterminations qui sont supposées intuitives chez Kant sont réinterprétées par Bolzano comme purement conceptuelles. Pourtant, en fait, développant sa propre Esthétique Transcendantale du point de vue d'une sémantique objective, Bolzano invente une nouvelle sorte d'a priori pour la sensibilité - précisément un a priori purement conceptuel."

14. ———. 2003. "Propriété et détermination: sémantique et ontologie chez Bernard Bolzano." *Philosophiques* no. 30:137-148.

Résumé : "L'auteur essaie de circonscrire la sphère du « métaphysique » dans la pensée de Bolzano. Il montre comment la métaphysique de la réalité (*Wirklichkeit*), avec ses deux ingrédients: les substances et les propriétés (*Beschaffenheiten*), doit être distinguée de la doctrine du règne « sémantique » (celui des représentations et des propositions en soi). Ces dernières entités n'appartiennent pas à la sphère de l'ontologie, et il est impossible de trouver quelque chose comme une « ontologie formelle » chez Bolzano qui serait en charge de s'occuper d'elles, c'est-à-dire une doctrine qui les traiterait comme des « êtres ». L'auteur s'intéresse, de ce point de vue, à la distinction importante faite par Bolzano, entre les propriétés (*Beschaffenheiten*), qui doivent être prises en un sens ontologique, et les déterminations (*Bestimmungen*) qui, bien que rapportées à des objets et éventuellement des êtres, n'ont pas de sens indépendamment d'un discours tenu sur ces objets, et ne sont pas des entités ontologiques à proprement parler. Ainsi, l'auteur essaie de mettre en lumière la complexité des relations entre le plan sémantique et le plan ontologique chez Bolzano: les deux plans doivent être soigneusement distingués, et pourtant demeurent aussi corrélés en un sens complexe."

15. Bouveresse, Jacques. 2000. "Sur les représentations sans objet." *Les Études Philosophiques* no. 4:519-534.

"Un point crucial de la théorie bolzanienne de la représentation est qu'une représentation doit avoir dans tous les cas un contenu ou plus exactement, pour respecter la terminologie de Bolzano, une matière, mais pas nécessairement un objet. Quand on dit d'une représentation subjective qu'elle a un contenu, on veut dire qu'une représentation objective lui est coordonnée. Une représentation contradictoire ne peut pas avoir d'objet; mais il n'en résulte pas que nous ne puissions pas la penser; et, lorsque nous la pensons, nous appréhendons nécessairement une représentation objective. Nous avons des représentations de cette sorte toutes les fois que nous entendons des représentations verbales comme *un carré rond*, *un pentaèdre régulier*, etc. «Car sans cela, remarque Bolzano, on devrait dire que ce que nous pensons avec des représentations de cette sorte est ou bien rien du tout ou bien pas plus que ce que nous pensons avec le mot entièrement dénué de sens "abracadabra". Mais le fait que nous formulions des propositions comme: "Il ne peut pas y avoir un pentaèdre régulier, un carré négatif" comme des vérités et qu'acquiescer à une compréhension de ces vérités exige que nous considérions en chacune d'elle son propre objet, celui de la première étant entièrement différent de celui de la deuxième, nous démontre déjà qu'il n'en est pas ainsi.» (*Wissenschaftslehre*, § 70)." (p. 519)

17. Candiotti, Maurizio. 2012. "Représentations sans relation : Bolzano et Frege." *Esercizi filosofici* no. 7:20-32.

English abstract: "In comparing Frege's sense (Sinn) with Bolzano's representations in themselves (Vorstellungen an sich) pivotal is the role of variation, a procedure which both philosophers use to define their respective notions of the objective content (or, rather, the direct object) of thought. The uses they make of such procedure, however, are utterly different : for Bolzano resistance to variation is essential to all

representations in themselves, simply as such, while for Frege it is the hallmark of (both the reference and) the sense of unsaturated expressions only, the saturated ones being rather extraneous than resistant to variation. However, the two notions they respectively define by means of variation are not barely incommensurable: there is a matter between them. Moreover, in each of the two philosophers variation – and therefore thought – implies drawing a profile of the entire world. Be it by predicating or even simply by representing, thinking implies outlining nothing less than the entire world. Both in Frege and Bolzano variation can be traced forward to what will be, in the XX century, one of the roots of transcendental philosophy."

18. Cantù, Paola. 2006. "Bolzano et les propositions en soi : une théorie objective des vérités." In *Propositions et états de choses. Entre être et sens*, edited by Benoist, Jocelyn, 51-66. Paris: Vrin.

"Bernard Bolzano présente sa théorie logique des propositions en soi dans les deux premières parties de sa *Wissenschaftslehre*, publiée en 1837, mais quelques aspects sont déjà traités dans un échange épistolaire avec Exner daté de 1834 et dans les *Beyträge zu einer begründeteren Darstellung der Mathematik* de 1810: ce dernier texte montre que l'intérêt de Bolzano à la connaissance scientifique et à l'étude de la logique est étroitement lié à la recherche mathématique (1).

Avant d'exposer les différences entre propositions en soi et états des choses et avant d'expliquer les raisons et les conséquences de cette opposition, j'esquisserai quatre traits fondamentaux de la logique bolzanienne: la définition et la fonction des propositions en soi et des représentations en soi, le propositionalisme, qui dans la théorie de la signification attribue le rôle le plus important aux propositions, la nature des relations entre représentations subjectives, objectives et objets, la conception sémantique de la vérité (2).

Parallèlement je mentionnerai quatre conceptions que Bolzano critique vigoureusement: le psychologisme, l'interprétation intentionnelle des représentations en soi, le concept

traditionnel de *adequatio* entendu comme ressemblance entre concepts et objets, l'idée que tous les concepts doués de sens ont un objet, soit réel soit irréel.

L'analyse des fondements de la théorie logique de Bolzano nous permet de remarquer:

- que la théorie de la vérité n'est pas une théorie de la correspondance en tant que *adequatio* entre idées et objets;
- que les propositions en soi sont ce qui porte la valeur de vérité (*truthbearers*) et donc ne jouent pas le rôle d'état de choses, de quelque façon qu'on l'entende;
- que la logique bolzanienne peut être définie un platonisme logique, seulement dans la mesure où elle refuse une conception épistémique de la vérité, et qu'il est de toute façon préférable qu'elle soit considérée un objectivisme sémantique, car elle ne distingue pas deux niveaux différents de l'être." (pp. 51-52)

19. Cavailles, Jean. 1946. "La théorie de la science selon Bolzano." *Deucalion* no. 1:195-202.

Repris dans : J. Cavailles, *Sur la logique et la théorie de la science*, Paris: Presses universitaires de France, 1947; nouvelle édition avec une postface de Jan Sebestik, Paris: Vrin, 1997 et dans J. Cavailles, *Œuvres complètes de philosophie des sciences*, Paris: Hermann, 1994, pp. 653-658.

"Bolzano considère - et manque résoudre - les mêmes problèmes de la légitimité mathématique : après les difficultés de principes auxquelles'embarrasse le dix-huitième siècle pour le calcul infinitésimal, c'est lui qui, le premier, définit correctement la limite, introduit la notion d'ensemble. D'où philosophiquement un double enrichissement de la veine leibnizienne. D'abord, l'être même de la science est soumis à critique : il s'agit à la fois de déterminer ce qui constitue une science comme telle et le moteur de son développement. Mises à part les imperfections dues à l'époque, l'idée est décisive pour notre problème. Pour la première fois peut-être, la science n'est plus considérée comme simple intermédiaire entre l'esprit humain et l'être en soi, dépendant autant de l'un que de l'autre et n'ayant pas de réalité propre, mais comme un objet *sui generis*, original dans son essence, autonome dans son mouvement." (p. 654)

20. Danek, Jaromir. 1971. "La méthodologie de Bolzano. Un thème dans la genèse de la pensée phénoménologique et de l'humanisme de notre temps." *Dialogue* no. 10:504-516.

"Dans son ensemble, la WL [*Wissenschaftslehre*] s'articule de la manière suivante.

D'abord, la Doctrine fondamentale établit qu'il y a une infinité de vérités en soi, à la suite de quoi s'édifie la construction logique de la *Doctrine élémentaire*. Les parties suivantes, consacrées à la *Théorie de la connaissance*, analysent les facultés qui permettent d'atteindre des vérités dans l'acte de transcendance, acte par lequel on parvient à une compréhension de certaines des vérités en soi, et dont les règles peuvent être clairement définies. C'est ce qui fait l'objet de la quatrième partie : *L'Art d'inventer*. Ce plan, dicté par des préoccupations logiques, suit l'ordre inverse de la genèse réelle de la connaissance, laquelle commence d'abord par l'art d'inventer, dont les règles présupposent d'ailleurs une structure a priori du monde. Mais le système logique doit être compris comme une reproduction des actes de la connaissance, ordonnés de telle sorte qu'ils mènent à une synthèse méthodologique que Bolzano développe dans la *Doctrine de la science proprement dite*. Cette cinquième partie doit, elle-

même, être une science, puisque l'examen de la structure objective de la science est aussi une objectivation rigoureuse, une synthèse de ce qui constitue le développement des diverses parties intégrantes de la connaissance." (pp. 504-505)

21. ———. 1975. *Les projets de Leibniz et de Bolzano. Deux sources de la logique contemporaine*. Québec: Presse de l'Université de Laval.

"L'idéal leibnizien d'unification des sciences commence à se concrétiser dans la *Doctrina de la Science* de Bolzano, théorie conçue comme une logique générale. Cette première tentative, fidèle au contenu éthique et humaniste du projet leibnizien, annonce le système qui l'exprimera d'une façon beaucoup plus large : celui d'une logique transcendantale des vérités, logique dont Husserl élargira la portée.

La critique du panlogisme dialectique de Hegel (ou, plutôt, de ses interprétations unilatérales) souligne l'importance méthodologique de l'anhistorisme apriorique des points de départ de la philosophie bolzanienne.

Décrit dans la « partie fondamentale » de la *Doctrina de la Science*, le monde idéal de l'en soi devient une base objective pour des analyses effectuées avec une précision mathématique. Même s'il est loin d'être achevé, le système de Bolzano apparaît ainsi comme une introduction à la méthode phénoménologique devant permettre de s'élever à une vision la plus objective possible du monde.

Un penseur comme Husserl s'efforcera de dépasser les limites du système bolzanienn, pour mettre davantage à jour les fondements de la connaissance scientifique, d'une science en soi. Or, une telle recherche soulève le problème leibnizien des vérités éternelles. Existe-t-il, comme le soutenait l'auteur de la *Monadologie*, deux mondes radicalement distincts : le domaine des vérités éternelles et celui d'infinie variété des réalités contingentes ? Par ailleurs, la réconciliation de ces deux mondes pourrait-elle permettre de dégager des valeurs applicables à la vie quotidienne ?

La logique n'est qu'une forme de l'effort tendant à découvrir les vérités par une méthode universelle. Les systèmes de Leibniz et de Bolzano ont été établis, thématés et appliqués comme une logique authentique des vérités. L'explicitation contemporaine de cette thématation se trouve dans la *Logique formelle et logique transcendantale* de Husserl. Cet ouvrage marque une nouvelle étape dans le développement de la logique des vérités comme fondement unifié des sciences. Cette étude n'aurait-elle donc pas de fin ? Chaque époque se doit de la reprendre. À des besoins pratiques nouveaux correspondent toujours de nouvelles études théoriques.

Le problème de la logique est donc situé dans un cadre très général.

Le coeur de la logique leibnizienne et bolzanienne nous livre non seulement un contenu qui vise les futurs projets d'une logique transcendantale en tant que *mathesis universalis* de toutes les sciences, mais aussi un contenu pragmatique et éthique qui permettent notamment de nourrir une réflexion particulièrement riche sur un thème se posant avec plus de force que jamais à notre époque troublée : celui de la liberté humaine. (pp. 1-2)

22. Dubucs, Jacques, and Lapointe, Sandra. 2003. "Preuves par excellence." *Philosophiques* no. 30:219-234.

Résumé : "Bolzano fut le premier philosophe à établir une distinction explicite entre les procédés déductifs qui nous permettent de parvenir à la certitude d'une vérité et ceux qui fournissent son fondement objectif. La conception que Bolzano se fait du rapport entre ce que nous appelons ici, d'une part, « conséquence subjective », à savoir la relation de raison à conséquence épistémique et, d'autre part, la « conséquence objective », c'est-à-dire la fondation (*Abfolge*), suggère toutefois que Bolzano défendait une conception « explicativiste » de la preuve : les preuves par excellence sont celles qui reflètent l'ordre de la fondation objective.

Dans cet article nous faisons état des problèmes liés à une telle conception et argumentons en faveur d'une démarcation plus

stricte entre la préoccupation ontologique et la préoccupation épistémologique dans l'élaboration d'une théorie de la preuve."

23. Duhn, Anita von. 2003. "Les remarques de Bolzano sur les couleurs." *Revue de Métaphysique et de Morale*:463-488.

Résumé : "Les remarques de Bolzano sur les couleurs n'ont pas fait l'objet de recherches jusqu'à présent. Le but de cet article est de montrer que ses investigations sur les couleurs constituent une contribution intéressante à la théorie de la connaissance du XIXe siècle. Selon Bolzano, les couleurs sont des qualités secondes ainsi que des propriétés physiques et, par conséquent, elles sont des quantités mesurables. Il soutient que la perception des couleurs est réglée par des lois empiriques et il argumente que les couleurs que nous voyons sont déterminables par des concepts de grandeur."

24. Fréchette, Guillaume. 2011. "De la proposition à l'état de choses : Husserl lecteur de Bolzano." In *Catégories ontologiques et catégories logiques*, edited by Seron, Denis, 45-68. Liège: Presses de l'Université de Liège.
25. ———. 2014. "L'intentionnalité dans la *Théorie de la science* de Bolzano. Éléments d'une reconstruction." *Methodos* no. 14:1-20.

Résumé : "Dans la réception de Bolzano, et probablement depuis les *Prolégomènes* de Husserl, on insiste généralement sur le fait que la *Théorie de la science* (1837) de Bolzano vise à développer une théorie des représentations et des propositions qui fait de celles-ci des entités logiques de plein droit, indépendantes des actes de pensée, et seules porteuses des propriétés dont traite la logique (vérité, fausseté, objectualité, etc.) L'importance accordée à cette position, souvent appelée réalisme logique (Morscher), tend toutefois à masquer d'autres aspects de l'ouvrage de Bolzano qui, sans contredire ce réalisme logique, montrent toutefois que la perspective développée par le philosophe de Prague visait aussi à rendre compte de la relation intentionnelle entre l'agent et ces entités logiques.

Dans le présent article, je me penche sur les moyens mis en branle par Bolzano pour élucider cette relation. Dans un

premier temps, j'examine le cas des représentations sans objet en soulignant le caractère intentionnel de certaines de leurs caractérisations. Dans un deuxième temps, je me penche sur le traitement réservé au jugement en relation à la proposition en soi. Dans la dernière partie de l'article, j'expose les grandes lignes de sa conception des intentions de signification sous-jacente à sa sémiotique. Pris comme un tout, ces trois cas montrent que le thème de l'intentionnalité n'est pas un épiphénomène dans la *Théorie de la science*, comme on pourrait le croire en partant de l'interprétation de Bolzano par Husserl, mais bien une partie constituante de l'entreprise du philosophe de Prague."

26. Gallerand, Alain. 2012. "Les apories du concept de redondance logique chez Bolzano." *Bulletin d'analyse phénoménologique* no. 8:1-27.

Résumé : "Le concept de *redondance logique* chez Bolzano soulève plusieurs difficultés. Il ne s'accorde ni avec la notion de représentation simple qu'il est censé expliquer, puisque Bolzano définit les individus comme des unités composées de plusieurs caractères et décrit les représentations singulières (noms propres et indexicaux) comme l'abréviation de descriptions définies, ni avec la distinction entre jugements synthétiques et analytiques, car il suppose que l'analyse d'un sujet individuel permet d'en dévoiler un à un les prédicats, comme si l'expérience ne jouait aucun rôle dans la connaissance des individus. Pourquoi Bolzano reste-t-il donc attaché à un concept aussi problématique ? Est-ce le seul moyen d'expliquer comment nous nous représentons des individus ? Nous montrerons que les apories de la notion de redondance logique témoignent de l'influence de la théorie leibnizienne du jugement, et qu'une version phénoménologiquement améliorée de la sémantique objective est néanmoins capable de les surmonter et de rétablir la simplicité de la représentation et la synthèse du jugement dans leurs droits."

27. ——. 2013. "Bolzano et le problème du rapport intension/extension : La redondance logique vs. le principe de

proportionnalité inverse." *Bulletin d'analyse phénoménologique* no. 9:1-25.

Résumé : "Cet article, qui fait suite à une publication précédente (« Les apories du concept de redondance logique chez Bolzano »), poursuit un double objectif : (I) démontrer que les apories que nous avons relevées peuvent être surmontées par l'analyse des rapports extensionnels entre représentations ; (II) évaluer la contribution de Bolzano à la question classique des rapports intension/extension telle qu'elle a été posée par Port-Royal. La logique des classes, dont Bolzano pose les fondements (*Théorie de la science*, 2^e partie, 3^e section), permet en effet de dégager les lois de la redondance logique — auxquelles Bolzano ne cesse de faire implicitement référence sans en donner la formule — et de délimiter le champ d'application du principe classique de proportionnalité inverse entre intension et extension auquel déroge précisément la redondance. La critique bolzanienne de la logique de Port-Royal prend alors tout son sens."

28. George, Rolf. 2003. "Intuitions." *Philosophiques* no. 30:19-46.

Résumé : "Kant imposa au public philosophique la distinction entre sensations, intuitions et concepts. Bolzano reprit la terminologie, mais pas la substance de cette dernière. Cet article examine la critique astucieuse et détaillée qu'adresse Bolzano à Kant et présente les grandes lignes de sa théorie. Tandis que ses célèbres propositions « en soi » lui permirent de traiter avec précision des notions de conséquence, d'équivalence, d'analyticité, etc., en évitant le psychologisme logique si commun à l'époque, les intuitions font figure d'exception. Elles sont introduites en rapport direct avec l'activité mentale : les intuitions sont des pensées — les épisodes qui représentent notre conscience empirique directe — et constituent en fait la porte étroite de la philosophie de l'esprit bolzanienne."

29. Granger, Gaston-Gilles. 1969. "Le concept de continu chez Aristote et Bolzano: étude stylistique." *Les Études Philosophiques*:513-523.

"Étude stylistique

La définition topologique d'un << continu >>, telle qu'elle s'est constituée dans le premier tiers du siècle [4], fournit, confrontée à la notion intuitive confuse qu'elle met en forme, un exemple excellent de structuration mathématique. Nous nous proposons seulement ici un commentaire succinct de deux tentatives antérieures de formation du concept, toutes deux insatisfaisantes, quoique profondes, et propres à montrer l'importance, jusque dans une création aussi abstraite, de l'orientation stylistique.

Au § 38 des *Paradoxes de l'infini* [2], Bolzano se propose << d'amener à une conscience claire le concept que nous désignons par l'expression << une extension continue, ou un continu >> (p. 73). Il pose alors comme conditions décisives d'une conceptualisation du continu : 1° Qu'il s'agisse d'un ensemble << d'objets simples >> (points ou << substances >>) ; 2° Qu'aucun de ces éléments ne soit << isolé >>, en un sens précis sur lequel nous aurons à revenir. En réfutant les objections que le sens commun peut invoquer, il rencontre l'idée aristotélicienne de contiguïté : << Tout point d'un continu doit avoir un autre point qu'il touche immédiatement. >> Idée dont il montre naturellement l'inconsistance dès qu'on l'applique à des éléments sans parties. Mais c'est ce qu'Aristote avait déjà vu ([1], VI, 231 a 26), dont l'analyse n'était nullement aussi naïve. Nous comparerons donc le texte de Bolzano et celui de *Physique*, V, 3, 226 b 21 - 227 a 30 - où Aristote analyse le continu, en essayant ainsi de mettre en lumière la mise en place d'une structure dans son double rapport à l'intuition perceptive et au contexte opératoire, insistant sur la différence du choix des traits considérés comme pertinents pour la définition du concept." (p. 513)

30. Gyemant, Maria. 2013. "Bolzano et le psychologisme. Sur la possibilité des représentations sans objet." *Philosophie*:45-66.

"Mon but, dans ce texte, sera de montrer que le débat autour des représentations sans objet est en réalité fondé sur une mécompréhension. Les adeptes d'une psychologie brentanienne (en l'occurrence Franz Exner et Kasimir Twardowski, dont je traiterai ici) utilisent le concept de représentation en un sens qui n'est pas celui de Bolzano. Pour le dire rapidement, ils entendent par représentation essentiellement l'acte psychologique de représenter, alors que ce que Bolzano nomme « représentation en soi » est de l'ordre de la signification. Les présumés psychologues des auteurs mentionnés sont en réalité précisément ceux auxquels Bolzano avait essayé d'échapper par sa théorie des représentations en soi. Ce qui mobilise la démarche tout entière de la *Wissenschaftslehre*, c'est l'idée que les propositions vraies existent en soi, que la vérité ne dépend pas du fait d'être pensée par quelqu'un, c'est-à-dire de ses occurrences psychologiques concrètes.

Ainsi, nous voyons que le problème des représentations sans objet ne peut se poser de façon positive, non critique, que si nous nous plaçons à l'intérieur de la théorie bolzanienne en assumant les thèses qu'elle présuppose." (p. 46)

31. Haller, Rudolf. 1987. "Remarques sur la tradition sémantique." *Archives de Philosophie* no. 50:359-369.

Résumé : "L'auteur exprime son accord avec la thèse d'Alberto Coffa selon laquelle une tradition sémantique, inspirée par l'oeuvre de Bolzano, précède l'apparition de la conception sémantique dans le Cercle de Vienne, et en particulier celle de Carnap. La question principale qui se pose concerne d'une part l'antagonisme entre cette tradition et Kant et d'autre part l'opposition entre les empiristes logiques et Kant. Il semble que Carnap n'a pu se débarrasser de certains présumés kantien et néo-kantien, même une fois sa base ontologique rendue physicaliste. Cette dernière position étant étrangère à

Wittgenstein, on ne peut pas suivre Coffa lorsqu'il soutient que la sémantique de Carnap au milieu des années trente est voisine de la « vision du langage » de Wittgenstein."

32. Künne, Wolfgang. 2009. "Bolzano et (le jeune) Husserl sur l'intentionnalité." *Philosophiques* no. 36:307-354.

Résumé : "Dans les « Prolégomènes à la logique pure » de ses *Recherches logiques* (LU), Husserl rend hommage aux deux premiers volumes de la *Wissenschaftslehre* (WL) de 1837 de Bernard Bolzano comme un « ouvrage qui [...] surpasse de loin tout ce que la littérature mondiale a à offrir en termes de contributions systématiques à la logique ». Cet article porte sur le jeune Husserl comme lecteur du chef-d'oeuvre de Bolzano, visant ainsi à contribuer à une compréhension adéquate de certains aspects des théories de Bolzano et de Husserl et de ce sur quoi portent ces théories. Je me concentrerai sur la question de savoir comment Bolzano en 1837 et Husserl autour de 1900 ont conçu les contenus des actes et états mentaux.

Dans les sections 1 et 2, je fais état de la redécouverte de la WL de Bolzano au sein de l'École de Brentano, et en ce qui concerne le problème des représentations sans objets, j'endosse la défense de Bolzano par Husserl contre Twardowski. Dans les sections 3 et 4, je présente un aperçu de la théorie des propositions (*Sätze an sich*) et des notions (*Vorstellungen an sich*), et montre comment Husserl assimile le cadre conceptuel bolzanien dans ses *RL*. Tandis que Bolzano considère les propositions et les notions comme étant des objets abstraits *sui generis*, le jeune Husserl développe une conception des notions et des propositions en termes d'espèces. J'explique cette conception dans la section 5 et je la défends contre le dernier Husserl. La discussion la plus extensive et la plus détaillée d'une seule et unique thèse de la philosophie de la logique de Bolzano qu'on puisse trouver dans les livres et les articles publiés par Husserl de son vivant se trouve dans le dernier chapitre de ses *RL*. Le sujet de discussion, et la dernière section de cet article, est une affirmation courageuse, pour ne pas dire outrageuse de Bolzano qui, du moins pris au pied de la lettre, contredit tout simplement ce que la plupart des philosophes ont tenu pour acquis depuis Aristote. Les questions, soutient

Bolzano, sont une espèce particulière de propositions, et donc leur vérité est susceptible d'être évaluée."

33. Lapointe, Sandra. 2000. "Analyticité, universalité et quantification chez Bernard Bolzano." *Les Études Philosophiques* 455-470.

"Introduction

Bolzano entretient avec la tradition analytique une relation des plus intéressantes.

Contrairement au cas de Husserl, il n'y a pas de filiation proprement dite. Outre certains passages que l'on peut trouver chez Wittgenstein et Tarski, les points d'incidence de la pensée bolzanienne sur la tradition

anglo-américaine sont rares et sans conséquences considérables (1). Toutefois, la philosophie analytique partage avec Bolzano tant l'idée fondamentale que la logique habite au coeur de l'investigation philosophique, qu'un intérêt marqué pour les problèmes liés à la théorie de la signification et de la vérité.

Il est donc étonnant de constater le peu d'attention qu'a reçu Bolzano jusqu'à aujourd'hui. Cette lacune dans le savoir contemporain s'explique non seulement par le destin tragique de l'oeuvre bolzanienne mais aussi par l'ahistoricisme, ou plus précisément par l'« anti-historicisme » inhérent à la philosophie analytique. Cet anti-historicisme est pourtant problématique et, depuis quelques années, des philosophes cherchent à trouver un compromis entre un philosophe purement « analytique » et un philosophe où l'histoire est la mesure de toute chose, même de la vérité(2). Mon étude qui se situe dans cette perspective se veut une contribution tant à la diffusion de l'oeuvre de Bolzano qu'à l'histoire de la philosophie analytique." (p. 455)

"Selon certains historiens de la philosophie, il y aurait une tradition philosophique distincte de la tradition philosophique allemande qui naîtrait en Autriche au xix^e siècle (1). Quoiqu'il n'y ait pas consensus sur l'ensemble des paramètres qui définissent cette tradition, on s'entend pour dire que tous ses protagonistes nourrissent un anti-kantisme atypique par rapport aux différents courants philosophiques dans le reste du St-Empire-Romain-Germanique. Le but de cette étude est de contribuer à la documentation de la thèse de l'antikantisme autrichien.

Le point de départ se situe dans le paradoxe suivant : Bernard Bolzano (1781-1848) est, de tous les philosophes autrichiens, celui qui a critiqué Kant avec le plus d'acharnement et de rigueur. Néanmoins, en 1806, il fut accusé de défendre des thèses kantiennes, une accusation assez compromettante pour qu'elle risque de lui faire perdre la chaire de sciences religieuses qu'il avait obtenue à l'Université de Prague un an plus tôt. Indépendamment de la question de savoir si cette accusation était justifiée, et selon l'avis de Bolzano lui-même elle ne l'était pas, on voudra faire lumière sur les traits du contexte culturel et politique de l'époque qui peuvent expliquer la signification et la portée de telles accusations." (p. 264)

35. ———. 2003. "Introduction : Bernard Bolzano : Contexte et actualité." *Philosophiques* no. 30:3-17.

"Le présent numéro est consacré principalement aux aspects de l'œuvre de Bolzano qui concernent sa philosophie de la logique et sa théorie de la connaissance. Ce thème a semblé, d'entrée de jeu, être celui le plus susceptible de susciter l'intérêt du lecteur et ce pour plusieurs raisons. Premièrement, Bolzano s'est fait, dans ces domaines, le brillant précurseur de plusieurs découvertes importantes et l'étude de ses théories fournit un prétexte opportun pour faire le point sur les conceptions contemporaines, par exemple, de l'analyticité, de la conséquence, de la preuve, du nombre, etc. Deuxièmement, les liens qui se dessinent entre Bolzano et des auteurs aussi importants que Kant, Husserl et Twardowski, mais aussi Frege, Carnap et Tarski, marquent la nécessité de réévaluer certaines idées reçues en ce qui concerne l'histoire de la philosophie analytique. À cet égard, on se doit de mentionner que l'intérêt suscité depuis quelques années par la connexion historique étroite — connexion dont une certaine phénoménologie a longtemps fait fi — entre Bolzano et le fondateur de la phénoménologie a motivé un renouvellement des études husserliennes et a permis de mieux comprendre les origines communes de la philosophie analytique et de la phénoménologie. Enfin, les thèmes autour desquels gravitent les articles réunis ici témoignent d'un aspect essentiel de la contribution de Bolzano à la philosophie. Notre intention est de fournir au lecteur francophone un moyen de se familiariser avec un aspect incontournable d'une œuvre d'une richesse immense tout en montrant sa saisissante actualité.

Dans le reste de cette introduction, je présente les éléments qui permettront au lecteur de s'initier aux grandes lignes de la philosophie bolzanienne et, en le référant aux articles pertinents, de s'orienter dans ce qui suit." (p. 3)

36. ———. 2003. "Principe de priorité et principe du contexte chez Bolzano et Husserl." In *Aux origines de la phénoménologie. Husserl et le contexte des Recherches logiques*, edited by Fisette, Denis, 93-110. Paris: Vrin.

"La proposition bolzanienne est une entité dont la fonction première est d'être « porteur de vérité ». Elle se distingue, du point de vue ontologique, de l'énoncé et du jugement (conçu comme épisode mental) en ceci que tout en étant quelque chose, elle n'est pas réelle. En d'autres termes, les propositions en soi (*Sätze an sich*) ou, pour adopter la terminologie suggérée par Bolzano, les propositions (*Sätze*) ne sont situables ni dans le temps, ni dans l'espace et, par conséquent, ne font pas partie des chaînes de transactions causales. Elles doivent bien plutôt être conçues comme appartenant à un « troisième monde » (1)" p. 93)

(1) Bolzano ne défend toutefois pas un platonisme naïf, mais bien plutôt ce qu'on pourrait appeler un platonisme instrumental. Il écrit par exemple: «L'utilité de la distinction [entre jugements et propositions] se manifeste de la manière la plus surprenante en ceci qu'elle permet à l'auteur de déterminer objectivement un nombre de concept qui n'avaient jusqu'à maintenant pas été expliqués ou qui l'avaient été incorrectement. Par exemple, les concepts d'expérience, d'apriori, de possible, de nécessaire, de contingen, de probable, etc ... à travers lesquels les disputes philosophiques les plus importantes pourront être menées à terme» (Bolzano 1839, p. 128).

Suivi de Bernard Bolzano, *Sur la doctrine kantienne de la construction des concepts par les intuitions*, (pp. 169-182). [Appendice aux *Beyträge zu einer begründeteren Darstellung der Mathematik*]

"La présente étude poursuit deux objectifs : introduire à l'œuvre philosophique, trop méconnue, de Bolzano et montrer comment cette œuvre s'est constituée en s'opposant à la philosophie de Kant.

Nous avons délibérément limité cette entreprise à l'examen de la prise de position précoce du jeune Bolzano contre Kant, formulée dès 1810 dans l'Appendice des *Contributions*, qui inaugure sa critique de l'intuitionnisme. Après l'analyse des critiques formulées dans ce texte - critiques que Bolzano maintiendra toute sa vie -, nous nous contenterons d'indiquer brièvement les grands principes qui fondent cet antikantisme, maintenu dans l'œuvre magistrale de la maturité : la *Théorie de la Science*(4).

(...)

"L'Appendice des *Contributions*, comme son titre l'indique, n'examine en principe que la théorie kantienne de la « construction des concepts », c'est-à-dire la théorie kantienne des mathématiques. Mais si l'on sait que c'est pour Kant la réflexion sur les mathématiques et sur la géométrie tout particulièrement, qui rendit nécessaire d'affirmer l'existence d'une intuition pure en nous, base de tout l'édifice critique, l'invalidation par Bolzano de cette notion, qu'il juge logiquement contradictoire, entraîne une mise en cause de l'ensemble du kantisme.

Ce texte résume une critique, déjà longuement mûrie, de la philosophie de Kant. Y sont fermement dénoncés les dogmes de l'intuitionnisme kantien : la philosophie des mathématiques requiert des principes que la philosophie de la subjectivité,

inaugurée par le criticisme, ne saurait se concilier. Ce refus de l'idéalisme est d'abord la critique des principes d'une « esthétique » qui prétendrait fonder la science. A l'intuitionnisme aussi bien mathématique que philosophique, Bolzano oppose une philosophie des vérités en soi et de leur connexion, dont il fait le socle de toutes les régions du savoir. Les principes de cette théorie de l'objectivité scientifique - on l'a appelé le platonisme moderne - seront à la base des philosophies du XXe siècle dans leur dialogue avec la science : des penseurs aussi différents que Husserl, les membres du cercle de Vienne, Popper, Wittgenstein ou Gödel, en recevront l'héritage. Ils sont, dès 1837, définitivement exposés dans la *Wissenschaftslehre* de Bolzano." (pp. 10-11)

Bernard Bolzano: Bibliographie des en Français (M - Z)

Études (M - Z)

1. Majolino, Claudio. 2000. "Variation(s) I. Bolzano et l'équivocité de la variation." *Les Études Philosophiques* 471-488.

"D'une certaine façon, la notion de variation représente la clé de voûte de la construction conceptuelle bolzanienne. Mais que faut-il entendre par là ?

Tout d'abord, l'expression « *Veränderung* » ne va pas de soi : d'une part, elle signifie changement, transformation; d'autre part, elle désigne aussi cette opération formelle qui est à l'arrière-plan de la variable, c'est-à-dire de cette place vide que, depuis l'analytique d'Aristote et surtout l'algèbre de Diophante, en logique et en mathématiques on peut remplir par des étants quelconques. Ainsi au sens large du terme à la notion de variation appartiennent à la fois un *sens de modification* et un *sens de multiplicité*.

Mais chez Bolzano, le double sens de la variation relève aussi d'un dédoublement ontologique, de la différence entre le domaine de l'effectivité et celui de l'objectivité. En effet, la thèse du platonisme bolzaniien impliquerait un dédoublement de la variation parallèle à celui des « *Ur-regionen* » de l'« *es gibt* » : non seulement les étants du monde *sont* selon un mode d'être tout à fait différent de celui des objets idéaux, mais à chaque domaine correspond une variation propre et à part entière. Cela veut dire aussi qu'à chaque domaine appartient un sens de variation prescrit par la constitution ontologique des objets de ce domaine même, selon la thèse de la priorité de l'être (l'être

de l'effectivité vs. l'être de l'en soi) sur le devenir (le sens de modification vs. le sens de multiplicité)." (p. 471)

"Cet article est une partie d'un travail plus vaste consacré aux énoncés de la variation dans la philosophie du XIX^e siècle. Il sera suivi par deux autres textes (Variation(s) II et III) consacrés à la variation chez Lotze et chez Husserl." (p. 471)

2. Mansour, Goufrane. 2008. "Bolzano: objectivité sémantique et subjectivité de la perception." *Revue de Métaphysique et de Morale* no. 60:551-569.

Résumé : "De la pensée de Bolzano, l'objectivisme sémantique est certainement l'aspect le plus largement commenté. Mais son œuvre maîtresse, la *Wissenschaftslehre*, comprend aussi bien la version la plus aboutie de cet objectivisme qu'une partie proprement épistémologique, la « Théorie de la Connaissance ». Si l'épistémologie bolzanienne repose sur la désobjectivation des éléments de la connaissance, la théorie de la perception présente dans cette *Wissenschaftslehre* prête au sujet connaissant un rôle actif dans l'élaboration du réel perceptif."

3. Miskiewicz, Wioletta. 2004. "'L'affaire Zimmermann'". À propos des influences bolzaniennes dans l'École de Lvov et de Varsovie." In *Aristote au XIX^e siècle*, edited by Thouard, Denis, 377-394. Lille: Presses Universitaires du Septentrion.

"Nous allons exposer ici le récit de la constitution d'un manuel de philosophie qui a joué un rôle particulièrement intéressant dans l'histoire de la philosophie et de la logique moderne, car c'est probablement par son biais qu'un nouveau style logique, emprunté à Bolzano, à savoir la logique des propositions en place de la logique des termes, fut introduit de façon quasi clandestine dans les gymnases de la monarchie des Habsbourgs. Le livre en question, *Philosophische Propaedeutik für Obergymnasien*(8) de Robert Zimmermann, fut aussi le manuel qu'étudia au Theresianum, prestigieux gymnase viennois, Kazimierz Twardowski, futur professeur à Lvov et père d'une école philosophique qui a donné plusieurs générations de remarquables logiciens et mathématiciens polonais - dont Lukasiewicz (9)." (p. 379)

(8) Zimmermann, Robert, *Philosophische Propaedeutik für Obergymnasien. Erste Abteilung : Empirische Psychologie*, Vienne, 1852. Zimmermann, Robert, *Philosophische Propaedeutik für Obergymnasien. Zweite Abteilung : Formale Logik*, Vienne, 1853 ; désormais cité : *Propaedeutik*.

(9) En procédant ainsi nous nous situons d'une certaine façon dans l'esprit de Bolzano pour qui la question des traités et des manuels scolaires est de toute première importance pour la détermination d'une discipline scientifique. Tout en renouant avec l'idée de l'*Organon* (il s'agit d'indiquer les règles qui permettent le partage du domaine des vérités dans les sciences particulières), Bolzano fait montre d'un grand pragmatisme dans la détermination des disciplines scientifiques : est science une discipline qui mérite d'être exposée dans un traité. Ce qui lui vaudra une critique virulente de la part de Husserl (en 1913) et l'accusation d'« empirisme radical » illustrée par une citation de la *Wissenschaftslehre* : « Nous ne sommes aussi certains de la justesse des règles : *Barbara, Celarent*, etc., que parce que mille sortes d'essais les confirment dans les raisonnements que nous avons établis d'après elles » ; « *Préface aux Recherches Logiques* », dans Husserl, E., *Articles sur la logique* (1890 - 1913), trad. J. English, Paris, PUF, 1975, p. 392.

4. Morscher, Edgar. 2003. "La définition bolzanienne de l'analyticité logique." *Philosophiques* no. 30:149-169.

Traduction de: *Logische Allgemeingültigkeit*, dans: *Beiträge zur Bolzano-Forschung* 11, 1999, pp. 179-206.

Résumé . "D'après Bolzano, une proposition est logiquement analytique si et seulement si elle est soit logiquement valide, soit logiquement non valide. Bolzano dit aussi parfois qu'une proposition est logiquement valide si et seulement si elle est et reste vraie sous toute variation simultanée et uniforme de ses parties non logiques. C'est essentiellement la même définition que donne Quine dans son article «Carnap and Logical Truth » où il attribue à ce dernier (et dans une note également à Bolzano) l'idée qu'un énoncé logiquement vrai est un énoncé au sein duquel seuls les termes logiques sont essentiels. Mais qu'en est-il des propositions et des énoncés vrais qui sont

composés exclusivement de parties logiques ? Selon la définition précédente, elles s'avèreraient toutes logiquement valides ou logiquement vraies. Une proposition telle que « Il y a quelque chose » n'est toutefois manifestement pas logiquement valide selon Bolzano. La définition courante de la validité logique doit être modifiée de manière à répondre aux intuitions bolzaniennes. Dans cet article, je propose une telle modification."

5. Mulligan, Kevin. 1997. "Sur l'histoire de l'approche analytique de l'histoire de la philosophie : de Bolzano et Brentano à Bennett et Barnes." In *Philosophie analytique et histoire de la philosophie*, edited by Vienne, Jean-Michel, 61-103. Paris: Vrin.

"La nature, le but et la méthode de l'histoire de la philosophie sont exposés par Brentano dans ses *Histoires de la philosophie antique et moderne*. Bolzano s'occupe de manière beaucoup moins détaillée de ces questions dans "De la conception de Hegel et de ses partisans de l'histoire en général et de l'histoire de la philosophie en particulier". Sa conception de l'histoire de la philosophie est néanmoins très claire dans ses propres contributions à l'histoire de la philosophie, ainsi que dans celles de ses élèves. On comprendra mieux l'importance pour notre sujet des avis programmatiques de Bolzano et de Brentano quand on aura examiné ce contre quoi ils réagissent au dix-neuvième siècle (§ 2.2) ainsi qu'une thèse substantielle sur l'histoire de la philosophie due à Brentano (§ 3) et finalement le rapport entre ces programmes et l'énorme quantité d'histoire de la philosophie qui en constitue la réalisation plus ou moins fidèle et consciente (§ 4)." (p. 5)

6. Novy, Luboš. 2008. "Les relations entre la logique et la mathématique dans l'oeuvre de Bernard Bolzano." *Archives Internationales d'Histoire des Sciences* no. 58:327-341.

"Le but de cet article consiste à indiquer avec concision comment s'est formée la relation de la logique et de la mathématique dans la pensée de Bernard Bolzano (1781-1848) et quel caractère avaient ces disciplines dans toute sa vie.

La relation de la logique et de la mathématique a joué en général un rôle important dans l'évolution moderne de ces

sciences. Beaucoup de résultats de Bolzano sont appréciés du point de vue du développement subséquent, mais leur conception malgré son originalité évidente restait étroitement liée avec des idées plus anciennes, surtout avec celles du 18^e siècle. Pour cette raison nous ne voulons pas chercher les signes des tendances dans la relation de ces branches chez Bolzano, mais nous allons nous contenter de leur position dans la vie de l'auteur." (p. 325)

7. Pégny, Gaëtan. 2013. "Bolzano et Hegel." *Revue de Métaphysique et de Morale* no. 78:215-243.

Résumé : "L'allergie de Bolzano à l'œuvre de Hegel est un fait souligné dans presque toutes les présentations de sa pensée. Pourtant, conformément à son éthique intellectuelle, il a tenté de se familiariser avec cette philosophie qu'il rejetait plus que toute autre. Il a même, tardivement, reconnu qu'il pouvait s'y trouver des propositions justes. Afin d'affiner la compréhension de la relation de Bolzano à Hegel, on se propose ici de reconstruire la polémique des *Trois essais sur Hegel* en montrant qu'elle recoupe bien des formes d'anti-hégélianisme devenues canoniques (la critique de la philosophie de l'histoire notamment), mais dans un contexte qui lui est propre et la spécifie. Dans un second temps, on reviendra sur les divergences philosophiques à l'origine de la nécessité pour Bolzano de critiquer un auteur et ses disciples, dans lesquels il voit une forme de régression intellectuelle et sociale, divergences qui imposent et orientent une lecture. Ces divergences sur la compréhension du rôle du langage et de la philosophie, du rapport des représentations au réel, ou sur la définition de l'infini, sont sous-jacentes à la polémique des *Trois essais*, mais on doit en chercher la formulation dans le reste du corpus bolzanien."

Chapitre 3 : *La théorie de la proposition analytique de Bolzano*.

9. ——. 1992. "L'intensionnalisme sans le réel: de Bolzano à Katz." *Histoire Épistémologie Langage* no. 14:245-257.

Résumé : "On s'intéresse ici à la perspective sémantique consistant à maintenir strictement disjoints la définition réelle (ayant trait à l'objet et à ses propriétés) et la définition nominale (concernant la représentation ou le sens et ses constituants). Ainsi Bolzano montre-t-il que des paradoxes surgissent quand on donne une interprétation « réelle » de la composition « nominale ».

Cependant Putnam dans une série d'articles célèbres donne des arguments tendant à démontrer qu'il n'existe pas de classes de vérités qui soient d'ordre purement sémantique ou nominal: les usages linguistiques dépendent toujours d'un état du monde. Les arguments de Putnam peuvent toutefois être efficacement combattus en abandonnant certaines exigences propres à la sémantique frégéenne. On montre les affinités entre la stratégie suggérée par Katz dans une série de travaux récents et celle de Bolzano."

"Les rapports ayant existé entre Bolzano et des philosophes tels que Kant furent assez importants. Plus intéressants encore furent, à mon avis, ses rapports avec les mathématiciens - ce que je tenterai d'illustrer par un examen de sa lecture de Lagrange, un des plus éminents analystes des années formatrices de Bolzano. Avec Cauchy, Bolzano était un des lecteurs les plus pénétrants et les plus minutieux des œuvres de Lagrange. Il est évident qu'il avait beaucoup de respect pour ce dernier, parcourant ses traités crayon en main, et s'occupant souvent des mêmes problèmes que lui. Tout comme Lagrange, Bolzano n'était pas satisfait de l'état des fondements de l'analyse ; comme lui il s'efforçait de construire une fondation autonome, sans infinitésimaux et sans appel à la géométrie ou au mouvement. Il est également patent qu'il estimait les opinions de Lagrange concernant le contenu de l'analyse. Ses premiers ouvrages d'analyse sur la série du binôme et le théorème des valeurs intermédiaires abordent des problèmes qui étaient importants pour Lagrange également. Et la *Théorie des fonctions (Functionenlehre)* de Bolzano(1), rédigée dans les années 1830, dont le titre même rappelle les trités de Lagrange, incorpore beaucoup de caractéristiques de l'analyse lagrangienne, notamment la primauté du concept de fonction et l'importance du théorème de Taylor." (pp. 122-123)

(1) Bolzano, *Functionenlehre*, Königliche böhmische Gesellschaft der Wissenschaften, 1930.

11. ———. 2003. "Qu'est-ce que la représentation? Bolzano et la philosophie autrichienne." *Philosophiques* no. 30:67-81.

Résumé . "Largement inconnu en Allemagne au xixe siècle, Bolzano connut un meilleur sort en Autriche, surtout auprès des étudiants de Brentano, qui étudièrent avidement sa *Théorie de la science*. Cependant, un examen attentif de la réception des idées de Bolzano chez les brentaniens nous montrent qu'il fut souvent mal compris. Cet article discute d'un cas particulier de ce phénomène,

la réaction de K. Twardowski à la théorie de la représentation de Bolzano."

12. ——. 2003. "La théorie des intuitions chez Bolzano." In *Aux origines de la phénoménologie. Husserl et le contexte des Recherches logiques*, edited by Fiset, Denis and Lapointe, Sandra, 111-123. Paris: Vrin.

"On sait que Bolzano était l'ennemi acharné de l'intuition en mathématique.

Il est donc surprenant de constater que les «intuitions» jouent néanmoins un rôle fondamental dans sa logique, et que, de surcroît, Bolzano concède qu'en attirant l'attention sur la distinction entre intuition

et concept, *Kant* a fait une contribution de taille à la philosophie.

Ceux qui ignorent ce que Bolzano a écrit à ce sujet seront peut-être encore plus étonnés de découvrir ce que sont les intuitions bolzaniennes(2)."

(2) Bolzano présente sa théorie des intuitions dans la *Théorie de la science* (1837, §§ 72-79), mais les paragraphes §§ 59.3, 133, 182.4, 278, et 303-305 sont tout aussi importants. Il en discute également aux paragraphes §§ 6-7 de *Von der mathematischen Lehrart* et dans un essai qui date des années 1833-1834 et qui constitue l'introduction à la grande oeuvre mathématique de Bolzano, la *Théorie de la quantité* (*Grossenlehre*). Cette dernière resta inédite jusqu'en 1975. En 1833, peu avant la publication de la *Théorie de la science*, Bolzano fit parvenir un exemplaire de son ouvrage (1975) à F. Exner, professeur de philosophie à Prague. Les deux philosophes pragois discutèrent longuement Je problème de

l'intuition, en particulier dans leur correspondance (Cf. Bolzano 1935), dont une nouvelle édition paraîtra sous peu dans la BBGA et dont on prépare présentement les éditions françaises (éd. Sebestik et alii) et anglaises (P. Rusnock/R George). Enfin, le *Nouvel anti-Kant* (Bautzen: Hiecke, 1850) de F. Pnnonsky, un ami et disciple de Bolzano, contient une discussion détaillée des intuitions de même qu'une critique des doctrines kantiennees. On trouve une version préliminaire de cette critique dans l'annexe aux *Beyträge zu einer begründeteren Darstellung der Mathematik* (Bolzano 1810; voir Laz 1993, p. 169-182 pour la traduction française) de même que dans le *Lehrbuch der Religionswissenschaft* (Bolzano, 1834, §§ 61-62).

13. Schmutz, Jacob. 2009. "Quand le langage a-t-il cessé d'être mental? Remarques sur les sources scolastiques de Bolzano." In *Le langage mental du Moyen Âge à l'âge classique*, edited by Biard, Joël, 307-337. Paris: Vrin.

"Jacob Schmutz s'interroge lui aussi sur la fin du langage mental, mais en parcourant une séquence historique différente. Son point de départ est fourni par Bernard Bolzano, connu pour avoir au XIX^e siècle soutenu la thèse de « propositions en soi », dotées d'une subsistance qui n'est ni le mode d'être des qualités de l'intellect ni celui des choses. Si Brentano a pu être rapproché de certains auteurs médiévaux tels que Grégoire de

Rimini ou Gautier Burley, toute transmission proprement historique restait problématique. Jacob Schmutz nous révèle ici une voie inédite de transmission. Les « lumières catholiques » d'Europe centrale, dont les positions sont diffusées par certains manuels du XVIII^e siècle connus de Bolzano, sont elles-mêmes fortement dépendantes de la scolastique espagnole des XVI^e et XVII^e siècles. On peut ainsi suivre l'émergence de l'idée de proposition objective, sur le modèle de la dualité entre concept formel et concept objectif, et conjointement avec la notion de vérité objective.

Le vrai n'est plus vrai par dénomination extrinsèque à partir d'un intellect, fût-ce l'intellect divin. Les débats sur le statut de cette proposition objective conduisent certains auteurs comme Sébastien Izquierdo, au XVII^e siècle, à en faire le premier porteur de la vérité objective. Le dispositif conceptuel qui, du XIV^e au XVI^e siècle, mettait le langage mental au premier plan s'est bien dissout, ainsi qu'on l'a vu, mais un certain nombre de problèmes posés et de concepts qui ont surgi à cette occasion continuent à travailler l'histoire des théories de la proposition et de la vérité." (Joël Biard, *Introduction*, p. XIV)

14. Schnieder, Benjamin. 2003. "Bolzano sur la structure des propositions et le rôle sémantique des propriétés." *Philosophiques* no. 30:83-103.

Résumé : "Bernard Bolzano développe une théorie exhaustive et très élaborée des propositions comme entités structurées et composées de concepts. L'une de ses thèses principales consiste à dire que toutes les propositions ont en commun la même structure : «A – a – (la propriété) b ». Cet article examine le rôle que jouent les propriétés eu égard à cette thèse. Lorsque les propriétés figurent dans les théories sémantiques standards, elles sont généralement conçues comme des entités *partageables*, en d'autres mots, comme des *universaux*. Je montre que (contrairement à ce qui fait consensus dans la littérature) Bolzano croyait que ce sont bien plutôt des *propriétés particularisées* qui tombent sous la représentation-prédictat d'une proposition. De là émerge une sémantique plutôt inhabituelle : une proposition de la forme [A – a – (la

propriété) b] est vraie ssi une des propriétés particularisées qui se tiennent sous la représentation-prédicat [b] inhère au sujet de la proposition, c'est-à-dire l'entité dénotée par la représentation-sujet [A]."

16. Šebestik, Jan. 1964. "Bernard Bolzano et son Mémoire sur le théorème fondamental de l'Analyse." *Revue d'histoire des sciences et de leurs applications* no. 17:129-135.

"L'auteur du mémoire dont nous présentons ici une traduction française n'est pas inconnu aux lecteurs de la *Revue d'Histoire des Sciences*. En 1961, M. Rychlik y exposa les tentatives de Bolzano pour construire une théorie des nombres réels selon les manuscrits de la *Größenlehre* (« Théorie de la Grandeur ») (1). Le nom lui-même de Bolzano est indissociablement lié à un théorème fondamental de l'analyse — l'un de ceux qu'il démontre dans ce mémoire — mais nous voulons profiter de l'occasion pour esquisser un portrait, ou tout au moins une silhouette, d'un grand mathématicien qui fut en même temps un grand logicien et un grand philosophe."

(1) La théorie des nombres réels dans un ouvrage posthume manuscrit de Bernard Bolzano, *Rev. Hist. Sci.*, t. XIV, n°8 3-t (juil.-déc. 1961), pp. 313-27.

17. ———. 1984. "Bolzano et Brentano. Deux sources autrichiennes du Cercle de Vienne." *Fundamenta Scientiae* no. 5:219-235.

18. ———. 1987. "Premiers paradoxes bolzaniens de l'infini avec un texte inédit de B. Bolzano." *Archives de Philosophie* no. 50:403-411.

Résumé : "L'article présente une note inédite de Bolzano, qui recense les principales difficultés de l'infini. Cette note, qui date de 1813-1814, est extraite de son journal, *Miscellanea mathematica*. La question de savoir si de l'existence d'une bijection entre deux ensembles, on peut conclure à leur équipotence, aboutit à une impasse : quelle que soit la réponse donnée, ses conséquences sont absurdes."

19. Sebestik, Jan. 1989. "Bolzano (Bernard)." In *Encyclopaedia Universalis*. Vol. 4, 328-330.

"Théologien, philosophe, surtout logicien et mathématicien, Bolzano a laissé une œuvre très étendue et très importante que ses contemporains ont presque entièrement ignorée. D'une part, la nature de ses préoccupations, toutes centrées sur les questions des fondements, a éloigné de lui les mathématiciens tournés davantage vers les théories avancées et vers les applications. D'autre part, son style archaïque et lourd, plein de détours difficiles à suivre, a découragé les logiciens, dont la plupart étaient incapables de comprendre l'intérêt même de ses recherches qui dépassaient de très loin la syllogistique et tout ce qu'on faisait entrer à l'époque dans la logique.

Dans l'histoire de la logique, Bolzano mérite une place à côté des plus grands, Aristote, Leibniz et Frege. Avec ces deux derniers, il partage le destin ingrat de ceux qui ont voulu reconstruire la logique pour l'assurer dans ses fondements et pour qu'elle puisse servir de base aux mathématiques. En effet, l'histoire de la logique nous montre que les découvertes les plus novatrices n'exercent aucune influence et ne sont vraiment comprises que beaucoup plus tard, lorsque la communauté scientifique dispose d'outils simplifiés et accessibles permettant enfin de comprendre l'œuvre des pionniers. Il en fut ainsi pour l'œuvre de Leibniz et pour celle de Frege ; il en va de même de nos jours pour l'œuvre de Bolzano.

Bolzano a créé un vaste système logique conçu dans une perspective sémantique, qu'il a intégré dans un projet global de théorie de la science. Les innovations les plus importantes concernent la logique des relations propositionnelles, articulée autour du concept de forme propositionnelle et de l'opération de substitution. Il expose sa logique dans une langue naturelle mais technique, avec des particularités parfois très déconcertantes." (p. 328)

20. Šebestik, Jan. 1992. *Logique et mathématique chez Bernard Bolzano*. Paris: Vrin.

"Exposer la logique de Bolzano pose des problèmes plus délicats. Son système est peut-être le plus vaste et le plus complet qui ait jamais été construit; même la logique contemporaine, comparée à la théorie bolzanienne de la science, apparaît comme une élaboration, certes, incomparablement plus fine et plus puissante, mais limitée à une seule province du vaste empire bolzanien.

Je me suis limité à la logique au sens strict qui est exposée dans les deux premiers tomes de la WL et je me suis efforcé d'en analyser les concepts principaux plutôt que de reproduire et encore moins de traduire les théorèmes dans une langue symbolique. En cela, j'ai voulu non seulement m'inspirer de la méthode de Bolzano, qui est une analyse conceptuelle d'une rigueur exemplaire encore aujourd'hui, mais aussi répondre à ses vœux de voir appliquée cette méthode à ses propres concepts. La logique de Bolzano est séparée de la nôtre par la grande coupure que représente la formalisation de la logique, laquelle a radicalement transformé ce champ de recherches et permis de donner aux concepts logiques une précision impossible à atteindre par le moyen de la langue naturelle. De ce fait, les concepts logiques de Bolzano sont marqués par l'imprécision et les ambiguïtés de la langue naturelle : pour la même raison, son système logique reste trop complexe et peu maniable. Néanmoins, l'analyse des mécanismes logiques l'a conduit à définir un certain nombre de concepts fondamentaux, ceux de forme propositionnelle ou de déduction par exemple, que les logiciens du XXe siècle ont mis en évidence par d'autres voies, et même à en formuler d'autres que la logique issue de Frege et de Russell ne s'est pas encore appropriée." (p. 18)

21. ——. 1994. "Twardowski entre Bolzano et Husserl : la théorie de la représentation." *Cahiers de la Philosophie Ancienne et du Langage de l'Université de Paris XII* no. 1:61-85.

"Résumons :

A la triade bolzanienne : représentation subjective, représentation en soi, objet de la représentation, Twardowski répond par la triple distinction entre l'acte, le contenu et l'objet de la représentation, et l'étend aux jugements. Dans les deux

cas, on doit distinguer *l'acte* (acte de représenter ; acte de juger), *l'objet*, indépendant de la pensée, appelé par Brentano également objet primaire (ce qui est représenté par une représentation ou nommé par un nom; ce qui est jugé), et *le contenu*, à savoir l'objet immanent, objet secondaire ou le "signe" de l'objet, dépendant de la pensée (image psychique de l'objet représenté, ce qui est représenté dans la représentation ; ce qui est reconnu ou rejeté par un jugement, à savoir l'existence d'un objet)." (p. 64)

22. ———. 1996. "Études bolzaniennes." *Revue de Métaphysique et de Morale*:437-448.

"Cet aperçu de la littérature bolzanienne récente peut donner l'idée de la vitalité de cette recherche qui a pris, ces dernières années, un nouvel élan. La plupart des ouvrages dont j'ai parlé sont d'une qualité exceptionnelle (je recommande tout particulièrement les ouvrages de Berg, de Laz et l'atelier de Florence[*]) et devraient inciter les philosophes français à étudier celui qui, comme le dit Jacques Bouveresse, doit enfin « être reconnu comme un des plus grands philosophes de langue allemande »(5). Le climat philosophique actuel semble enfin lui être favorable."

(5) Préface à l'ouvrage de J. Laz, *Bolzano critique de Kant*, p. VI.

23. ———. 1999. "Forme, variation et déductibilité dans la logique de Bolzano." *Revue d'Histoire des Sciences* no. 52:479-506.

Résumé - "Les innovations principales de Bolzano en logique résultent de l'introduction et de l'usage systématique de la méthode de la variation qui correspond à la méthode substitutionnelle de la logique contemporaine. Cette méthode fournit les concepts logiques fondamentaux de validité, d'analyticité et de déductibilité. Je propose également une liste des concepts logiques de Bolzano. La comparaison de la déductibilité avec la notion de conséquence logique de Tarski

met en évidence les caractères spécifiques de la logique de Bolzano dont le plus important consiste dans la nature de ses objets : bien que Bolzano

travaille aussi avec les formes propositionnelles, l'objet de sa logique est constitué des propositions en soi et des représentations en soi."

24. ——. 2003. "La dispute de Bolzano avec Kant. Fragment d'un dialogue sur la connaissance mathématique." *Philosophiques* no. 30:47-66.

Résumé : "Ce dialogue confronte deux conceptions qui dominent jusqu'à nos jours la philosophie des mathématiques : d'un côté la conception kantienne qui souligne l'irréductible apport de l'intuition dans la formulation des axiomes, ainsi que l'effectivité des procédés de construction ; de l'autre côté la conception bolzanienne qui s'efforce d'éliminer toute intervention de l'intuition au profit des démonstrations et des procédés purement conceptuels."

25. ——. 2012. "La logique comme théorie de la science selon Bernard Bolzano." *Les Cahiers philosophiques de Strasbourg* no. 32:227-251.

"En écoutant les différentes contributions à ce colloque, je me suis retrouvé sur un terrain familier. Presque tous les noms des auteurs des xvii^e et xviii^e siècles m'étaient bien connus : ceux de La Ramée, de Zabarella, Goclenius, Clauberg, Geulincx, Jungius, Baumgarten, et bien d'autres, sans parler des grands. De même leurs questions : qu'est-ce que la logique ? quel est son objet ? est-elle une doctrine ou un organon, une méthode ? est-elle une méthode de disposition des résultats connus, de démonstration, d'invention ou de purification ? Comme l'a dit Sophie Roux, le brouillage logique-méthode a encore été accentué au cours du xvii^e siècle. quel est l'usage de la logique, à supposer qu'elle soit utile ? est-elle superflue, vide et stérile comme le disent les premiers critiques de l'aristotélisme et ensuite Descartes et Locke ?

Un grand auteur a remis l'ordre dans ce foisonnement d'idées disparates, en intégrant tous ces éléments dans son système de

logique : le théologien, mathématicien et philosophe Bernard Bolzano. Il a commenté et critiqué tous ces auteurs, traité toutes ces questions." (p. 227)

26. Seron, Denis. 2006. "La controverse sur la négation de Bolzano à Windelband." *Philosophie*:58-78.

"Il y a certainement lieu d'évoquer, du point de vue de l'histoire de la philosophie de langue allemande du dix-neuvième et de la première moitié du vingtième siècle, un problème de la négation. Ce problème de la négation se ramène à un petit nombre de questions fondamentales. En particulier : l'affirmation et la négation se situent-elles strictement sur le même plan et sont-elles « coordonnées » ? La négation est-elle une propriété du contenu de l'acte judiciaire, ou une propriété de l'acte judiciaire lui-même ? Si la négation est simplement la qualité de rejet, qu'est-ce qui est rejeté dans le jugement négatif ? Le jugement négatif est-il pour autant un « jugement de valeur » ? Existe-t-il des représentations négatives ? Le jugement négatif est-il synonyme de séparation, ou réclame-t-il encore, comme le jugement affirmatif, une liaison entre des contenus représentatifs ? « S n'est pas p » est-il une forme primitive du jugement au même titre que « S est p », comme le pensait Kant par exemple ? Ou bien est-il, comme le pense Husserl, le résultat d'une modification de la forme primitive de tout jugement « S est p » ? Quel est le lieu de la négation ? Est-ce la copule, le prédicat, ou ni l'un ni l'autre ?

Je me propose ici d'indiquer schématiquement en quels termes ces questions ont été posées et de retracer quelques étapes de ce questionnement depuis Lotze et Bolzano, en m'arrêtant avant Frege et Husserl et en n'évoquant qu'occasionnellement les conceptions de Brentano et des Brentaniens." (p. 58)

27. Siebel, Mark. 2003. "La notion bolzanienne de déductibilité." *Philosophiques* no. 30:171-189.

Résumé : "L'article (i) présente le concept de déductibilité que Bolzano introduit dans sa *Wissenschaftslehre*, (ii) indique quelques traits caractéristiques en vertu desquels ce concept diffère de plusieurs conceptions contemporaines de la conséquence et (iii) examine l'affirmation selon laquelle il

présente une forte similarité avec la conception de Tarski et la logique de la pertinence."

28. Simons, Peter. 2003. "Bolzano sur les nombres." *Philosophiques* no. 30:127-135.

Résumé : "Dans cet article, l'auteur présente la théorie bolzanienne du nombre.

Il établit, sur la base d'une comparaison avec Frege, que la conception bolzanienne rencontre toutes les exigences d'une telle théorie tout en présentant plusieurs traits originaux, comme par exemple le fait qu'elle s'articule sur la base d'une théorie des « collections » (Inbegriffe), qui lui confèrent un intérêt philosophique certain. Tout en indiquant au passage un problème inhérent à la notion bolzanienne de Reihe, l'auteur présente la conception bolzanienne des nombres naturels, reconstruit sa théorie des nombres abstraits et montre comment Bolzano est en mesure d'établir le lien entre ces derniers et leur application aux ensembles concrets d'objets."

29. Sinaceur, Hourya. 1975. "Bolzano est-il le précurseur de Frege?" *Archiv für Geschichte der Philosophie* no. 57:286-303.

"L'histoire des sciences entretient avec la philosophie des rapports privilégiés. En clarifier les problèmes peut constituer, de manière tout à fait spécifique, un travail de critique philosophique, puisqu'il contribue à élucider les situations intellectuelles où viennent à se former certains des concepts fondamentaux de notre savoir, et par suite, des formes et des figures de la rationalité. Mais cela s'accompagne inévitablement d'une révision de l'historiographie usuelle, révision souvent malaisée en ce qu'elle doit assumer le risque d'avoir à nier des évidences historiques, ce qui est bien plus difficile que d'illustrer, inversement, par l'histoire, des thèses affirmatives, positives et peremptoires. En l'espece, s'agissant de vérifier si Bolzano a été le précurseur de Frege, il suffit, semble-t-il, de noter les allusions de Bolzano aux concepts élaborés par Frege pour y lire une étape de cette élaboration. Mais si découvre que cette étape figure davantage les obstacles rencontrés par Frege que la voie qui le mena aux fondements de l'arithmétique, comment établir que Bolzano *n'est pas* le précurseur de Frege ?

C'est à cette question que nous nous attachons pour ce qui est de la définition du nombre entier." (p. 286)

30. ———. 1996. "Bolzano et les mathématiques." In *Les philosophes et les mathématiques*, edited by Barbin, Évelyne and Caveing, Maurice, 150-173. Paris: Ellipses.

31. ———. 1999. "Réalisme mathématique, réalisme logique chez Bolzano." *Revue d'Histoire des Sciences* no. 52:457-477.

Résumé : "La plupart des spécialistes de Bolzano présentent sa doctrine des propositions et représentations en soi, doctrine du sens objectif, comme une pièce maîtresse de son réalisme philosophique. Le but de cet article est de montrer les difficultés d'une interprétation trop monolithique de ce réalisme. La théorie logique de Bolzano est en fait plus nuancée qu'on ne le reconnaît généralement. Certes, les propositions en soi constituent un univers de significations objectives, douées d'une réalité propre, distincte à la fois de la réalité psychique et de la réalité physique. Mais les propositions en soi ne sont pas, à strictement parler, des objets logiques ; elles sont matière, et non objet, de pensée. Quant au réalisme mathématique de notre auteur, il ne laisse pas d'être affecté par un certain empirisme manifeste surtout dans le statut accordé aux nombres entiers."

32. Tatzel, Armin. 2003. "La théorie bolzanienne du fondement et de la conséquence." *Philosophiques* no. 30:191-217.

Résumé : "Le but de cet article est de présenter et d'évaluer la théorie de la fondation de Bernard Bolzano, c'est-à-dire sa théorie du concept exprimé et de la relation mise en jeu par «

parce que ». Dans la première partie (§§1-4), le concept de fondation est distingué et mis en relation avec trois autres concepts: le concept de raison épistémique, le concept de causalité et le concept de déductibilité (c'est-à-dire de conséquence logique). Dans la seconde partie (§§5-7), je reconstruis la théorie bolzanienne de la fondation sous forme axiomatique et j'en offre une discussion critique."

33. Textor, Mark. 2000. "Bolzano et Husserl sur l'analyticité." *Les Études Philosophiques* 435-454.

"Bolzano est connu parmi les philosophes de la logique surtout pour deux définitions de concepts logiques importants.

(A) On parle souvent aujourd'hui de la définition de Bolzano-Tarski de la conséquence logique, suivant laquelle un énoncé X s'ensuit logiquement des énoncés de la classe K si tout modèle de la classe K est aussi un modèle de X.

(...)

Siebel montre dans son livre *Der Begriff der Ableitbarkeit bei Bolzano* que cette image courante doit être révisée.

(B) Tout comme on parle de la définition de Bolzano-Tarski de la conséquence logique, on pourrait parler de la définition de Bolzano-Quine de l'analyticité logique ou de la vérité logique. Quine définit une vérité

logique comme une proposition vraie qui ne contient essentiellement que des mots logiques, et il remarque dans une note de bas de page : « En substance Bar Hillel a retrouvé cette formulation chez Bolzano, il y a plus de 125 ans » (Quirie, 1954, p. 110).

Dans mon exposé, je me concentrerai sur le second point : la définition que Bolzano donne de l'analyticité logique, ou, pour privilégier le sous-groupe des propositions logiquement analytiques qui tient aujourd'hui le devant de la scène, la définition donnée par Bolzano de la vérité logique. Or l'expression « vérité logique » est un terme technique de la philosophie. Que faut-il entendre par là ?" (pp. 435-436)

34. ———. 2003. "Bolzano sur le temps et la persistance." *Philosophiques* no. 30:105-125.

Résumé : "Comment une proposition qui affirme que *a* est fatigué le matin et n'est pas fatigué le midi peut-elle être vraie ? Bolzano soutient que toute proposition portant sur une chose contingente contient, dans la composante-sujet, la représentation d'un temps. Dans cet article, je reconstruis et évalue les arguments de Bolzano en les comparant à ceux de son adversaire principal, le tenant de la position selon laquelle toute proposition portant sur une chose contingente contient une copule renfermant la représentation du temps auquel l'objet représenté par la composante-sujet a la propriété représentée par la composante-prédicat (la conception de la modification de la copule). La conception bolzanienne de la modification du sujet ne peut résoudre le problème logique de la persistance qu'en assumant que des représentations-sujets qui contiennent différentes représentations de temps représentent différents individus dotés de déterminations temporelles. Mais ceci engendre une nouvelle question : comment un objet peut-il avoir différentes déterminations temporelles sans pour autant changer ?"

2. Benoist, Jocelyn. 2009. "Perché non c'è un'ontologia formale in Bolzano." *Giornaledifilosofia.net*:2-14.

"Spesso oggi il pensiero di Bolzano si vede chiamato in causa a fondamento del progetto, propriamente moderno, di

un'ontologia formale(1), al quale lo sviluppo della matematica formale (liberata dal giogo del riferimento alle figure o alle grandezze) e della logica matematizzata ha fornito un nuovo inizio. Il fatto che l'autore non abbia contribuito di poco a questo duplice sviluppo nutre certamente un tale tentativo di avvicinamento. Alcuni dei suoi enunciati sulla matematica e la concezione che Bolzano ha potuto farsene col tempo, nella continuità con Leibniz, a un certo punto del suo pensiero, possono anche confortarlo.

C'è tuttavia una vera "ontologia formale" in Bolzano? Questa stessa nozione può avere un senso nel contesto del suo pensiero?" (p. 2)

(1) Cfr. ad esempio F. Nef, *L'objet quelconque. Recherches sur l'ontologie de l'objet*, Paris, Vrin, 1998.

3. Besoli, Stefano. 2011. "Bolzano e Kant." *Discipline Filosofiche* no. 21:109-152.

"L'autonoma prospettiva dall'anti-kantismo bolzaniano, che si manifesta a partire dai *Beyträge* del 1810 (6) - in un continuo ampliamento di orizzonti tematici che sollecitano un incremento di analisi concettuale in ordine a problemi che, non avendo mai cessato di apparire in maniera diversa, richiedevano soluzioni all'altezza di una loro rinnovata configurazione, culmina in quella sintesi di scuola, largamente autorizzata da Bolzano, che è il *Neuer Anti-Kant* (1850) (7), nel quale si condensano, in un quadro unitario, le novità espresse da un fronte di opposizione al soggettivismo trascendentale, che aspirava a una qualche visibilità in un'epoca in cui si avvertiva che un certo numero di filosofi erano ancora legati a Kant o erano comunque in procinto di volgersi di nuovo a lui, delusi dall'esito inconcludente della più recente speculazione(8). Pur non essendo quindi del tutto inaspettata la fonte da cui proviene questa forma di radicale *Kant-Kritik*, essa non attua una semplice regressione realistica, consona a riproporre i contorni di quel *realismo trascendentale* tanto deprecato da Kant, ma individua nella dottrina dell'*inseità* degli oggetti logici lo strumento più idoneo per rincarare in senso

assolutistico una nozione di a priori che in Kant appariva in fondo ancora largamente «acritica»(9)

(6) Cfr. B. Bolzano, *Beyträge zu einer begründeteren Darstellung der Mathematik. Erste Lieferung*, Widmann, Prag, 1810, neu hrsg. mit Einleitung und Anmerkungen von H. Fels, Schöningh, Paderborn, 1926, Nachdruck hrsg. von H. Wussing, Wissenschaftliche Buchgesellschaft, Darmstadt, 1975.

(7) Sulla rilevanza attribuita all'aggettivazione che compare nel titolo di quest'opera, il cui significato è da un lato indicare la «natura dei fondamenti» con i quali si è inteso contestare Kant per sole esigenze di verità, ma dall'altro distinguere il contenuto di tale critica da quella formulata da B. Stattler in una sua requisitoria peraltro non memorabile (*Anti-Kant*, 2 Bde., Lentner, München, 1788), o forse ad es. anche da quella di A. Bolliger (*Anti-Kant oder Elemente der Logik, der Physik und der Ethik*, Schneider, Basel, 1882), cfr. F. Prihonsky, op. cit., P 19.

(8) Cfr. B. Bolzano, *Was ist Philosophie?*, Braumüller, Wien, 1849, ora in Id., *Bernard Bolzano Gesamtausgabe*, hrsg. von E. Winter, J. Berg, F. Kambartel, J. Louzil, B. van Rootselaar, Frommann-Holzboog, Stuttgart-Bad Cannstatt, 1969 sgg. (d'ora in poi GA), GA 2 A, 12/3 (*Vermischte philosophische und physikalische Schriften 1832-1848*, hrsg. von J. Berg und J. Loužil), p. 13.)"

(9) Cfr. J. Patocka, *Il posto di Bolzano nella storia della filosofia*, supra, p. 40 sg., dove l'autore critica però Bolzano per non essere riuscito a cogliere il «carattere più positivo della dottrina kantiana, richiamandosi a «mitiche verità in sé», invece di avvalersi di una «dottrina critica della conoscenza» di natura processuale.

4. Bucci, Paolo. 1989. "Bernard Bolzano e la logica kantiana." *Rivista di Filosofia* no. 80:241-260.

"La discussione di Bolzano si volge innanzitutto a considerare i termini particolari in cui, all'interno della manualistica kantiana, era stato affermato il carattere formale della logica. Agli studiosi d'impostazione kantiana, autori dei «nuovi

manuali», Bolzano rimprovera in particolare di aver voluto individuare - come condizione della formalità della logica e della sua possibilità di porsi in una dimensione rigorosamente a priori - il fatto che essa debba fare astrazione «da ogni diversità degli oggetti», per limitarsi a una considerazione del modo in cui l'intelletto «pensa e deve pensare gli oggetti» (15)

- Mostrando di tenere presente la concezione kantiana della «logica generale pura», Bolzano rileva che le trattazioni di Krug, Hoffbauer, Kiesewetter avevano in definitiva condotto a un vero e proprio

«frintendimento» del carattere formale della logica, secondo il quale essa non dovrebbe contenere al suo interno «alcuna materia, ossia nessuna proposizione determinata » e di conseguenza, «poiché verità possono essere soltantoproposizioni determinate, neppure verità»." (p. 247)

(15) *Wissenschaftslehre*, vol. I, p. 46. Definizioni di questo tipo sono in effetti rintracciabili ad esempio in J. G. K. Kiesewetter, *Grundriss einer allgemeinen Logik*, Leipzig, Röchly, 1824 , § 2, e in J. Chr. Hoffbauer, *Anfangsgründe der Logik*, Halle, s.i.e., 1794 § 11, e si richiamano direttamente ad analoghe affermazioni kantiane. Cfr. infatti *Kritzk der reinen Vernunft*, Riga, Hartknoch, 1781, pp. 52-54, e 2^a ed. 1787, pp. 76-78, trad. it. a cura di G. Gentile e G. Lombardo-Radice con il titolo *Critica della ragion pura*, Bari, Laterza, 6^a ed. 1977, pp. 94-95; *Logik*, in *Gesammelte Schriften* (a cura della Königlich Akademie der Wissenschaften), Berlin-Leipzig, Reimer-De Gruyter & Co., 1902-23 , voi. IX, pp. 12-13, trad. it. a cura di L. Amoroso con il titolo *Logica*, Roma-Bari, Laterza, 1984, pp. 6-7

5. ——. 1994. "Logica e organizzazione del sapere nella dottrina della scienza di Bernard Bolzano." *Rivista di Filosofia* no. 85:241-259.

"Confrontata con il progetto fichtiano della *Wissenschaftslehre*, l'impostazione bolzaniana presenta differenze spesso rilevanti. Fondamentale tra queste differenze è il fatto che la *Wissenschaftslehre* bolzaniana, nel momento in cui affronta il

problema dell'organizzazione del sapere, non intende porsi al di fuori dell'ambito della logica: la «dottrina della scienza in senso stretto» coincide infatti con una particolare accezione del termine «logica», secondo cui essa si configura appunto come la disciplina che ha il compito di determinare le regole e i criteri del processo di organizzazione delle conoscenze." (pp. 243-244)

6. ——. 1995. "La teoria bolzaniana dello spazio e del tempo." *Rivista di Filosofia* no. 86:217-237.

"A una indagine che si proponga di ricostruirne l'interna articolazione la teoria bolzaniana dello spazio e del tempo si presenta come un insieme di analisi che, per quanto scarsamente sistematizzate, si possono ordinare secondo tre distinti «livelli», in dipendenza dei differenti contesti teorici ai quali appartengono i problemi sollevati da Bolzano nel corso della sua discussione(1). I tre livelli della teoria possono essere denominati rispettivamente *ontologico*, *lektologico-semantico* e *gnoseologico*.

Appartiene all'ambito di una «ontologia» dello spazio e del tempo la questione se ad essi debba essere attribuito lo statuto di oggetto (*Gegenstand*) oppure quello di qualità (*Beschaffenheit*), e se abbiano o no la proprietà di esistere (*Wirklichkeit haben*) (2)." (p. 217)

(1) La presente ricostruzione terrà conto essenzialmente della *Wissenschaftslehre*, che non è tuttavia l'unico fra i testi di Bolzano a documentare il suo interesse per la tematica dello spazio e del tempo. Di essa si trova traccia, ad esempio, nella terza sezione della incompiuta *Grossenlehre*, il progetto di fondazione e di ordinamento delle conoscenze matematiche che Bolzano intraprese a partire dal 1830. Sull'articolazione dell'opera cfr. J. Berg, *Bolzano's Logic*, Stockholm, Almqvist and Wiksell, 1962, pp. 17-25.

Della seconda parte dell'Introduzione alla *Grossenlehre* esiste una traduzione italiana a cura di L. Giotti con il titolo *Del metodo matematico*, Torino, Boringhieri, 1985.

(2) Su queste «nozioni ontologiche» si veda E. Casari, *An Interpretation of Some Ontologica! and Semantica! Notions in Bolzano's Logic*, nel volume *Bolzano's Wissenschaftslehre 1837-1987* (Atti del workshop internazionale), Firenze, Olschki, 1992, pp. 55-56. L'«ontologia» bolzaniana ammette sia «cose» (oggetti o qualità) esistenti, sia «cose» non-esistenti come le entità lektologiche (idee e proposizioni in sé). Si veda in proposito B. Bolzano, *Wissenschaftslehre*, Aalen, Scientia Verlag, 1981, vol. I, pp. 218-20.

9. Cantù, Paola. 2003. "Bernard Bolzano e le rappresentazioni anoggettuali." In *Forma dat esse rei*, edited by Valore, Paolo, 125-166. Milano: LED Edizioni Universitarie.

Abstract: "L'analisi della questione del riferimento e del significato dei termini linguistici è strettamente correlata al rapporto tra le parole con cui descriviamo il mondo e i concetti con cui lo categorizziamo. In che modo le espressioni linguistiche permettono di parlare del mondo? C'è una corrispondenza biunivoca tra parole e cose? E se non c'è, cosa significano i termini vuoti? Denotano concetti? E in che modo potremmo avere un concetto senza un oggetto che corrisponda ad esso? E a che scopo dovremmo servirci di concetti vuoti per descrivere il mondo?"

Nel 1834 Bernard Bolzano elabora una teoria delle rappresentazioni anoggettuali in risposta a simili domande e riconosce in molte pratiche linguistiche l'uso di espressioni prive di riferimento oggettuale ma tuttavia significanti; perfino la congiunzione di termini contraddittori ha per Bolzano un significato, benché non solo non denoti ma neppure possa denotare un oggetto. Per comprendere quale sia il significato di tali espressioni riassumeremo brevemente nell'Introduzione la teoria logica di Bolzano, quindi offriremo una catalogazione degli esempi di rappresentazioni senza oggetto, suddividendole

in negative, contraddittorie, semplicemente vuote e non referenziali; infine vedremo in che senso le rappresentazioni senza oggetto possono essere considerate immaginarie. Mostriamo la funzione logica delle rappresentazioni anoggettuali e scopriremo anche una ragione matematica per l'analisi delle rappresentazioni contraddittorie.

Nell'ultimo paragrafo analizzeremo le implicazioni ontologiche della teoria delle rappresentazioni distinguendo due livelli (esserci e esistere) e argomentando che la concezione di Bolzano è un oggettivismo semantico piuttosto che un platonismo logico. Attraverso il confronto con Frege, Russell, Meinong e Quine tratteremo infine la questione della portata esistenziale delle proposizioni mostrando il rapporto tra due aspetti del problema ontologico: semantico e metafisico."

Quaestio. Annuario di Storia della Metafisica no. 12:153-170.

"Quando si sente parlare di Bernard Bolzano (Praga 1781-1848) si è spesso indotti ad associarne il nome al cosiddetto platonismo logico(1). Il perché è facilmente rintracciabile in quella che è probabilmente la dottrina più nota tra le molte esposte nella sua *Wissenschaftslehre* (1837), ovvero la teoria delle proposizioni in sé (*Sätze an sich*) e delle idee in sé (*Vorstellungen an sich*). L'espressione "essere in sé" è infatti utilizzata proprio per connotare le nozioni logiche basilari come entità non-mentali e non-linguistiche, totalmente indipendenti dall'essere pensate o pronunciate da qualcuno. In tal senso – si potrebbe dire – Bolzano è un realista, poiché pare non contemplare la possibilità di una determinazione della realtà in senso noetico.

(,,)

Ciò che però qui vorrei mostrare è proprio come la legittimità di tali interpretazioni possa essere messa in questione attraverso il chiarimento della nozione bolzaniana di esistenza (*Existenz*) o avere realtà (*Wirklichkeit haben*). Seguendo questa direttrice, il percorso che intendo delineare si articolerà su un duplice binario. Il primo consiste nel mostrare che la realtà propriamente intesa non è un predicato attribuibile agli enti logici, se non nella misura in cui questi diventano l'oggetto di un atto intenzionale del pensiero. Il secondo è l'indagine del ruolo che Bolzano attribuisce alla mente nella logica applicata, che sarà svolta verificando se l'accadere delle verità nella realtà si imponga semplicemente alla mente come un dato oggettivo o se non sia anche condizionata dalle modalità di accesso alle proposizioni da parte degli esseri pensanti." (pp. 153-154)

17. Costantini, Filippo. 2016. *Pensare l'infinito. Filosofia e Matematica dell'Infinito in Bernard Bolzano e Georg Cantor*. Milano - Udine: Mimesis Edizioni.

"Ecco il tema del libro: il transfinito. Ovvero la teoria degli insiemi. Mostreremo la genesi di questa teoria, il suo farsi largo

nelle analisi di uno degli autori più interessanti dell'Ottocento, nonostante sia stato pressoché dimenticato: Bernard Bolzano. La prima parte del libro è dedicata a lui: tenteremo di capire che cosa Bolzano intende con il termine *Menge* (insieme) e il ruolo che tale concetto assume nella sua filosofia. Questo ci permetterà di riflettere sul rapporto tra logica, matematica e filosofia (ontologia e metafisica) e su questioni di alto interesse speculativo: dalla riflessione sull'assoluto alla trattazione matematica dei paradossi di Zenone. La seconda parte è dedicata a Cantor, padre indiscusso dell'insiemistica. Mostreremo come l'idea di trattare con quantità infinite sia sorta da problemi squisitamente tecnici e che però, fin dai primi vagiti della teoria, Cantor abbia sempre considerato di fondamentale importanza l'aspetto filosofico del suo lavoro matematico." (p. 20)

19. Fossati, Lorenzo. 2005. "Bolzano su sapere e credere." In *La misura dell'uomo. Filosofia, teologia, scienza nel dibattito antropologico in Germania (1760-1915)*, edited by Mori, Massimo and Poggi, Stefano, 289-316. Bologna: Il Mulino.

"Bolzano è come un lago, sulla superficie del quale, dopo avervi gettato un sasso, si disegnano i cerchi concentrici delle onde: il discorso si amplia necessariamente e naturalmente, e il singolo argomento acquista la sua portata solo se gli si permette di incresparsi l'intera superficie, se cioè si è disposti a seguire la trama dei rimandi interni ed esterni dell'opera. In un certo senso, addirittura, è possibile partire da un qualsiasi punto per avere una via d'accesso all'intero sistema del pensiero bolzaniano.

Il sasso che vorremmo gettare è quello dell'analisi dei concetti di sapere e di credere, ma, per riuscire nel lancio, dovremo necessariamente anteporre ad essa l'esame delle linee fondamentali della teoria della conoscenza bolzaniana." (p. 289)

20. ———. 2006. *Il concetto della filosofia in Bernard Bolzano*. Milano: I.S.U. Università Cattolica.

Contiene in appendice la traduzione di B. Bolzano, *Was ist Philosophie?* (1838), *Che cos'è la filosofia?*, pp. 175-201.

"Per Bolzano il problema della scarsa diffusione del suo pensiero nel mondo dei dotti era di primaria importanza: da un lato egli era ben consapevole della novità e della profondità dei suoi lavori, dall'altro non poteva non constatare come essi rimanessero ai margini del dibattito filosofico e scientifico del suo tempo. La causa gli pareva che dovesse essere ricercata in aspetti esteriori e contingenti, come la «pesantezza» del suo modo di scrivere e del suo stile, o la sorte toccata ad alcuni dei suoi allievi, che talvolta venivano marginalizzati, talaltra abbandonavano le concezioni del maestro elaborandone di proprie o avvicinandosi ad altre impostazioni.

Ma per cogliere la portata di tali considerazioni è bene interrogarsi se l'isolamento sia stata una caratteristica costante del Bolzano-Kreis e se e quanto sia stata radicale. Dovremo allora innanzitutto ripercorrere la vita del Nostro, cercando di mettere in luce il clima culturale in cui si formò e in cui successivamente operò.

In appendice viene presentata la traduzione di *Was ist Philosophie?*, il saggio che costituirà il filo rosso della nostra ricerca." (p. 7)

21. ———. 2006. "La "Weltweisheit" da Wolff a Bolzano." In *Tradurre e comprendere. Pluralità dei linguaggi e delle culture*, edited by Pititto, Rocco and Venezia, Simona, 201-217. Roma: Aracne.

"Nel saggio *Was ist Philosophie?* del 1849, mirando a una definizione della filosofia e dovendosi districare tra le molte alternative disponibili, Bolzano individua il punto ideale di partenza dell'indagine nella considerazione del significato comunemente attribuito al termine, affermando che

trotz den so mannigfach lautenden Erklärungen, welche die Philosophen bisher den Begriffe ihrer Wissenschaft gegeben,

bloß durch den steten Gebrauch des Wortes allmählich eine Bedeutung desselben gebildet, die, wenn auch nicht scharf begrenzt, doch immer bestimmt genug ist, um es von jedem anderen zu unterscheiden(1).

Infatti,

muß [...] jeder Weltweise, der uns ein philosophisches System darbietet, einen bestimmten Begriff der Philosophie demselben zu Grunde gelegt haben(2).

La parola che qui egli utilizza, “Weltweise”, e che ricorre spesso in Bolzano, è quella su cui vorremmo soffermarci in questo contributo.

Nel tedesco corrente la parola “Weltweisheit” viene usata come sinonimo di “Philosophie” e “Weltweise” di “Philosoph”; Bolzano, però, ritiene di poter giocare sui due termini e attribuisce una grande importanza al modo in cui essi vengono applicati, e quindi ci sembra valer la pena cercare di approfondire il significato della parola più “insolita”, nell’assunzione che dietro ogni sinonimia ci sia qualcosa da scoprire.

Essendo la parola la via d’accesso al concetto per lo stesso Bolzano, una simile questione non dovrebbe essere né troppo peregrina né esclusivamente terminologica." (p. 201)

(1) Bolzano (1849), p. 15: «nonostante le spiegazioni apparentemente così disparate che i filosofi hanno dato finora del concetto della loro scienza, si è formato in modo graduale, semplicemente attraverso l’uso costante della parola, un suo significato che, anche se non nettamente delimitato, è pur sempre abbastanza determinato da distinguerlo da ogni altro».

(2) *Ibid.*: «ogni sapiente che ci presenta un sistema filosofico deve aver posto a suo fondamento un determinato concetto di filosofia». Rendiamo qui “Weltweise” con “sapiente” e “philosophisch” con “filosofico” per rendere il gioco tra i due termini: la ragione di tale scelta emergerà dalle pagine che seguono."

22. ———. 2010. "Il fondazionismo è superato? La versione di Bolzano." In *Mondo Uomo Dio. Le ragioni della metafisica nel dibattito filosofico contemporaneo*, edited by Ghisalberti, Alessandro, 177-196. Milano: Vita e Pensiero.

"L'idea che la conoscenza umana debba essere fondata o giustificata pare oggi il mero retaggio di un'impostazione superata del problema. Tuttavia si tratta di un progetto che è stato perseguito lungamente, e che in quanto tale ha subito torsioni e ripensamenti non secondari nel corso della storia della filosofia, al punto che forse non sarebbe eccessivo considerare il termine fondazione come equivoco. Prima ancora di stabilire se sia possibile o necessario un fondamento della conoscenza, bisogna allora cercare di chiarire che cosa propriamente ci proponiamo di fare ed eventualmente specificare se riteniamo tale tentativo votato in quanto tale al fallimento, o se invece lo siano solo alcune delle sue varianti.

In effetti, almeno secondo un certo modo di intendere la storia della filosofia, si sarebbe tentati di rispondere alla domanda se il fondazionismo sia superato con un secco no, a) perché in generale il concetto di superamento, per cui vi sarebbero problemi e soprattutto soluzioni superati da altri, non avrebbe senso, essendo invece sempre concreti e singoli tanto i primi quanto le seconde(1); b) perché per motivi analoghi sarebbe ugualmente discutibile parlare di fondazionismo al singolare, invece che dei diversi fondamenti escogitati dai singoli filosofi.

Nonostante questo caveat, si cercherà di discutere il fondazionismo dando prima un quadro generale della crisi in cui sembra essere incorso, in tal modo specificando i suoi stessi tratti, per poi presentare il fondazionismo di Bernard Bolzano, interessante per alcuni aspetti che si spera di riuscire a far emergere." (p. 177)

23. ———. 2010. *La tela del sapere. Studi su Bernard Bolzano*. Milano: Educatt.

"Nelle pagine che seguono vorremmo provare allora a gettare tre sassi, saggiando tre diversi punti dei suoi scritti e tentando tre differenti approcci. Nel primo caso verrà considerata la *Fundamentallehre*, la prima parte della *Wissenschaftslehre* (§§ 17-45), che affronta il tema capitale della fondazione della conoscenza, cercando di stabilire un ponte tra l'impostazione bolzaniana e l'approccio più recente al problema, e di valutarne in tale contesto la praticabilità teorica.

Successivamente, si focalizzerà l'attenzione sulla *Erkenntnislehre* (§§ 269-321) e in particolare si tenterà un'analisi approfondita del § 321, in relazione ai concetti di conoscenza, sapere e credere, esplicitando i punti di polemica nei confronti della trattazione kantiana dello stesso tema, secondo un intento più strettamente storico e ricostruttivo.

Infine, si cercherà di fare emergere la concezione generale della filosofia di Bolzano, a partire da un singolo termine, quello di *Weltweisheit*, rintracciando i luoghi dello «scontro» che in tedesco si ebbe tra esso e quello che poi avrebbe prevalso, *Philosophie*.

Si tratta insomma di tentativi di amplificare e assecondare gli stimoli che provengono dalla pagina bolzaniana, e di seguire le tracce che collegano il pensiero di Bolzano al pensiero del suo tempo ed eventualmente del nostro. Evidentemente, non può trattarsi che di piste che conducono lontano, e di cui solo una parte può essere qui percorsa, ma sarebbe già sufficiente per chi scrive riuscire a far emergere la proficuità e l'interesse di tale complessa «tela»." (pp. 6-7)

25. Guidetti, Luca. 2011. "Lo spazio logico dell'espressione. Intorno a B. Bolzano, *Proposizione ed espressione*." *Discipline Filosofiche* no. 21:7-12.

"1. La struttura della Dottrina della scienza

Nella sua Introduzione alla *Dottrina della scienza*, Bolzano sostiene che il fine dell'opera è quello di offrire «l'insieme delle regole secondo cui procedere per suddividere l'intero ambito della verità nelle singole scienze e per la loro esposizione in specifici manuali». Infatti, «dal momento che è possibile esporre adeguatamente una scienza solo quando i suoi confini sono stati adeguatamente determinati [...] la dottrina della scienza è quella scienza che ci mostra come possiamo esporre le scienze in manuali adatti a tale scopo»(1). Com'è stato osservato(2), quest'intento ricognitivo sembra nascondere una ben più ampia e profonda ambizione, ossia quella di battere in breccia tutte le precedenti riflessioni sulla "scienza", in quanto viziate da confusione tra il piano del pensiero (che comprende il concettuale, il conoscitivo, il mentale, il percettivo, in breve tutto ciò che "accade" in un soggetto di conoscenza e in relazione ad esso, quindi anche l'esistenza e ogni esperienza) e quello logico-oggettivo, comprendente tutto ciò che, nella scienza, non appartiene per definizione all'accadimento reale del pensiero, quindi tutto il suo contenuto denotativo." (p. 7)

26. ——. 2011. "Bolzano e gli stoici." *Discipline Filosofiche* no. 21:61-92.

"Com'è noto, uno dei maggiori contributi forniti dagli stoici allo sviluppo della logica è la cosiddetta "semantica delle proposizioni". Nella nostra discussione, volta a un confronto tra Bolzano e gli stoici riguardo alla semantica proposizionale, prescinderemo dalle questioni di fatto o sistematiche -ad esempio che le fonti stoiche siano scarse, spesso incoerenti e

per lo più indirette; che la logica stoica abbia subito un processo di riabilitazione relativamente recente, oppure che Bolzano citi raramente gli stoici e che, dove lo fa, non dia molto peso alle loro nozioni logiche fondamentali, come ai concetti di *lekton* o di *semainon* (3), per concentrarci invece sulle questioni tematiche o *di principio*, il cui scopo è quello di evidenziare i paradigmi e-splicativi, non sempre direttamente verificabili, che sottendono le rispettive posizioni. A tal proposito, adotteremo un procedimento d'indagine circolare-regressivo che va da Bolzano agli stoici e da questi di nuovo a Bolzano, in modo da cogliere adeguatamente il sistema a partire dal tema, così come si addice ad ogni formazione analitica che voglia dirsi paradigmatica." (pp. 61-62, due note omesse)

' Cfr. B. Bolzano, *Wissenschaftslehre. Versuch einer ausführlichen und größtenteils neuen / Erstellung der Logik mit steter Rücksicht auf deren bisherige Bearbeiter*, in der J.E. von Seidelschen Buchhandlung, Sulzbach, 1837 (d'ora in poi: WL), Bd. I, § 23, dove gli stoici vengono menzionati riguardo al problema del valore di verità della proposizione, ma senza accennare all'importanza che in essi assume la semantica proposizionale. Nel medesimo passo, Bolzano fa riferimento a Sesto Empirico, *Contro i logici*, II, 12 (ed. it. a cura di A. Russo, Laterza, Roma/Bari, 1975, p. 140), in cui il filosofo scettico parla del *lekton* stoico; anche in questo caso, tuttavia, egli non dà rilievo a tale concetto, sebbene ciò possa giustificarsi per il fatto che sta introducendo la forma generale della proposizione (cfr. a tal riguardo, W.C. Kneale, M. Kneale, *The Development of Logic*, Clarendon Press, Oxford, 1962, ed. it. a cura di A.G. Conte, *Storia della logica*, Einaudi, Torino, 1972, p. 411).

27. Krause, Andrej. 2011. "Bolzano e Aristotele." *Discipline Filosofiche* no. 21:43-60.

"Nel presente saggio tratteremo aspetti del rapporto tra Bolzano e Aristotele, limitandoci però ad alcune riflessioni di principio dei due autori sulla metafisica. Benché Bolzano non abbia mai composto alcuno scritto sulla metafisica, aveva in progetto di farlo e lo aveva in parte anche già cominciato(1). Inoltre, in molti passi delle sue opere si trovano dettagliate

discussioni di problemi metafisici. Invero, diversamente da Bolzano, Aristotele ha scritto una *Metafisica*, solo che egli non ha né impiegato a tal proposito il termine “metafisica”, né il titolo di quest’opera proviene da lui. Quest’ultimo si deve infatti all’ordinamento dei libri nell’edizione aristotelica di Andronico di Rodi, il quale collocò la *Metafisica* dopo la *Fisica*(2).

Aristotele stesso non chiama metafisica la disciplina praticata in questo scritto, bensì sapienza, filosofia prima o anche teologia. Essa si occupa di temi che anche oggi vengono assegnati alla metafisica, ad esempio del concetto di sostanza, di anima e di Dio. In ciò che segue, metteremo in relazione alcune riflessioni di Bolzano e Aristotele su questi concetti metafisici; a tal proposito verrà anzitutto indicato in breve il posto della metafisica nei rispettivi sistemi delle scienze." (p. 43)

28. Künne, Wolfgang. 2011. "Bolzano e Frege." *Discipline Filosofiche* no. 21:179-202.

"Nella Prefazione al suo libro *Frege and Other Philosophers* Michael Dummett scrive:

[1] L’unico filosofo del diciannovesimo secolo del quale sarebbe ragionevole supporre, solo dal contenuto dei suoi scritti e di quelli di Frege, che abbia influenzato Frege, è Bernard Bolzano, il quale morì l’anno in cui nacque Frege; ma [2] non c’è nessuna evidenza che Frege abbia letto Bolzano(1).

Che nessun filosofo del diciannovesimo secolo sia così vicino a Frege come Bolzano, ho cercato di provarlo quindici anni fa in relazione al concetto bolzaniano di proposizione (*Satz an sich*) (2) e a quello fregeano di pensiero (*Gedanke*)(3). Nella prima

parte di questo saggio, ribadirò nuovamente l'affermazione [1] di Dummett in relazione alle concezioni di dimostrazione e di assioma. Nella seconda parte esaminerò, in relazione all'unica escursione di Frege nella metalogica e alla valutazione sua e di Bolzano della dimostrazione indiretta, se Dummett abbia ragione riguardo all'affermazione [2]." (p. 179)

Reck, ed. by, *Frege's Philosophy in Context*, Routledge, London/New York, 2005, pp. 124-153 (con "Commenti" di Dummett), e in Id., *Versuche über Bolzano/Essays on Bolzano*, Academia, Sankt Augustin, 2008, pp. 157-194.

29. Lapointe, Sandra. 2011. "Bolzano e Husserl." *Discipline Filosofiche* no. 21:227-242.

"Secondo una tradizione ampiamente consolidata, Frege è stato colui che ha spinto il «primo» Husserl a rigettare il suo presunto psicologismo(1). Mentre sono però accertate interazioni dal punto di vista intellettuale tra Husserl e Frege, al tempo in cui Husserl cominciava a venire alle prese con tale questione nei primi anni Novanta dell'Ottocento², non è possibile affermare con certezza se sia stato Frege a suscitare le critiche di Husserl nei confronti dello psicologismo presenti nelle *Ricerche Logiche*, laddove ci sono invece molte prove a sostegno del fatto che la vera spinta dietro la critica di Husserl sia provenuta dalla *Wissenschaftslehre* di Bolzano.

(...)

Mentre la connessione tra Husserl e Bolzano non è più ignorata del tutto dal punto di vista storico, essa tuttavia resta ancora non adeguatamente documentata. In particolare, la maggior parte degli studi si focalizza oggi sul ruolo che Bolzano potrebbe aver giocato nell'adozione in logica, da parte di Husserl, di una posizione simile al realismo semantico. Ma l'influenza di

Bolzano dev'essere cercata nelle *Ricerche Logiche* di Husserl - e specialmente nel primo libro, in maniera molto più sostanziale - e questo è ciò che argomenterò nel prosieguo di questo saggio."

31. Mariani, Mauro. 2011. "Bolzano e Cantor." *Discipline Filosofiche* no. 21:203-226.

Riassunto: "Per molti secoli l'opinione predominante di filosofi e matematici è stata che l'infinito è solo potenziale (nel senso che "potenza" ha in Aristotele) e che l'infinito attuale è, al contrario, intrinsecamente inconsistente. Tra i primi, Bolzano ha "dimostrato" che l'infinito attuale esiste e che nessuna contraddizione sorge se c'è una corrispondenza biunivoca tra un insieme infinito e molti dei suoi sottoinsiemi propri. A dire il vero, i *Paradossi dell'infinito* di Bolzano hanno avuto una potente influenza sulle opinioni di Cantor sull'infinito attuale, ma le loro teorie sono per molti aspetti in contrasto. Infatti, secondo Bolzano, se esiste una corrispondenza biunivoca tra gli insiemi A e B ciò non implica che A sia grande quanto B , quindi non possiamo definire i numeri cardinali attraverso la nozione di corrispondenza biunivoca. Inoltre sostiene che un tutto è maggiore delle sue parti. Bolzano sostiene che gli insiemi infiniti possono essere di dimensioni diverse e che esistono infiniti numeri: ma, secondo il suo punto di vista, li caratterizza in modo per nulla compatibile con quello di Cantor. In conclusione, le intuizioni di Bolzano sull'infinito non

prefigurano le teorie di Cantor, ma costituiscono un approccio alternativo all'infinito a cui prestano attenzione alcuni matematici moderni."

33. Mugnai, Massimo. 2011. "Bolzano e Leibniz." *Discipline Filosofiche* no. 21:93-108.

"Per Bernard Bolzano, la filosofia di Leibniz costituisce un punto di rifeimento costante: se ciò risulta palese da un'opera come *Athanasia*, non lo è meno se leggiamo le pagine della *Wissenschaftslehre* dedicate all'ontologia logica, alla semantica e al calcolo logico in senso proprio (2). Rinviando a un'altra occasione un raffronto più ampio e sistematico tra le posizioni dei due filosofi (soprattutto per quel che riguarda la teoria logica), mi occuperò in questa sede della teoria delle idee e delle proposizioni in sé, che lo stesso Bolzano, com'è noto, considera affine a quanto sostenuto da Leibniz in opere e che, al tempo, gli erano accessibili. Prenderò dapprima in considerazione le posizioni di Leibniz e poi quelle di Bolzano, cercando quindi di sviluppare un confronto, che metta in luce identità di vedute, analogie e differenze tra i due filosofi." (p. 93)

(2) Un raffronto tra la logica di Leibniz e quella di Bolzano è tentato in J. Danek, *Les projets de Leibniz et de Bolzano, deux sources de la logique contemporaine*, Les Presses de l'Université Laval, Quebec, 1975, prima però della pubblicazione di ulteriori testi leibniziani in edizione critica. Per un'analisi puntuale dei rapporti tra Bolzano e Leibniz riguardo alla teoria della conoscenza, si veda: S. Centrone, *Bolzano und Leibniz über Klarheit und Deutlichkeit*, in «Archiv für Geschichte der Philosophie», 92, 2011, pp. 256-289.

35. Patočka, Jan. 2011. "Il posto di Bolzano nella storia della filosofia." *Discipline Filosofiche* no. 21:27-42.

"Ho cercato di trattare il problema della filosofia di Bolzano nei suoi rapporti sia storici sia sistematici, al fine di mostrare che la dottrina delle verità in sé, benché logicamente nasca dalla modalità in cui Bolzano, di fronte alla filosofia della sua epoca, ha compreso il problema della scienza, non è né il senso complessivo, né in ultima analisi il centro della sua filosofia della scienza. Il problema che Bolzano voleva risolvere è la struttura della scienza come realtà *sui generis*. Questo problema, con la sua soluzione, non sta e non cade così come cade ad esempio la teoria kantiana della ragione con la sua concezione della sintesi a priori. Il problema di Bolzano è da sempre legittimato: la filosofia come dimensione della logica è un'idea che non è superata, la teoria della costruzione della scienza sarà un giorno formulata; l'epistemologia moderna e la logica accumulano materiale per la costruzione, di cui Bolzano ha intravisto per primo i tratti; egli lavora così sulle sue parti, sulle sue tracce, e ciò è come un miracolo, quando vediamo come Frege, Whitehead e Russell, Brentano e Husserl, i logici e i semantici polacchi e molti altri scoprono nuovamente, dopo molti anni, particolari aspetti del suo problema, dei suoi singoli concetti e delle sue soluzioni; e tuttavia ciò non è in realtà un miracolo, ma la logica della cosa, la logica del suo grande problema, il quale d'altra parte è rimasto da lui non risolto ma che rimarrà per sempre legato a lui, al suo nome e al suo lavoro." (p. 40)

36. Pégny, Gaëtan 2011. "Bolzano e Hegel." *Discipline Filosofiche* no. 21:153-178.

"Non si discuterà qui della pertinenza di fare di Bolzano un "precursore", né della questione di sapere se il suo desiderio di correzione logica della folta macchia hegeliana basti a fare di Bolzano un "analitico" e un "moderno"; ancor meno si discuterà della questione di accertare se tutta la letteratura analitica si riduca a un rifiuto in blocco, indignato o ironico, dello hegelismo e dei suoi prodotti derivati. Ci si contenterà di mostrare quel che ha permesso di fondare un simile giudizio,

prima di sfumarlo, mostrando che c'è effettivamente stata sia una lettura sia un'argomentazione. C'è sempre qualche paradosso nel tentare di circoscrivere il rapporto di un filosofo nei confronti del suo più acerrimo nemico. Si cercherà qui di mostrare che c'è davvero stata la formulazione di una critica, e non un semplice atteggiamento di rifiuto che semplificherebbe la scrittura di manuali di storia della filosofia divisa in categorie prive di sfumature. Non si tratta tuttavia di negare l'intensità dell'opposizione, ma di comprenderne le ragioni strutturali, e in cosa essa implichi e allo stesso tempo impedisca la lettura. Si comincerà dunque con l'espone l'essenziale dell'argomentazione dei saggi polemici su Hegel, contestualizzando un'argomentazione che, se destoricizzata, è troppo spesso ripiegata sia verso la passione irrazionale sia verso un antihegelismo con il quale si sarà, a seconda dei casi, sempre in accordo, o che si troverà sempre non pertinente. Si esamineranno poi, in maniera più sistematica, le posizioni filosofiche che hanno condizionato la lettura bolzaniana." (p. 154)

37. Preti, Giulio. 1935. "I fondamenti della logica formale pura nella "Wissenschaftslehre" di B. Bolzano e nelle "Logische Untersuchungen" di E. Husserl." *Sophia* no. II-IV:187-194.

Seconda parte: 361-376.

Ristampato in: Giulio Preti, *Saggi filosofici*, Vol. I, Firenze: La Nuova Italia, 1976, pp. 11-31.

"Il Bolzano concepisce la logica come « dottrina della scienza » ; il territorio della verità si divide in territori unitari, le singole scienze. La scienza è definita(11) il complesso di verità di una data specie, da esporsi in un libro di testo.

La dottrina della scienza sarà quindi(12) il complesso di quelle regole secondo le quali dobbiamo procedere nella partizione del territorio della verità in singole scienze e nell'espone in testi acconci, se vogliamo procedere in modo conforme allo scopo.

Per quanto strana possa sembrare la definizione, orientata in senso assolutamente pratico, essa include già la posizione oggettivistica del Bolzano. Infatti il manuale d'una scienza

implica già tutto un complesso di verità d'una data specie ordinate e collegate(13) secondo rapporti che non saranno arbitrari, ma necessariamente regolati da principii, che fanno sì che la scienza sia scienza e non un complesso caotico di proposizioni. La dottrina della scienza non è quindi semplicemente l'arte di fissare per iscritto i teoremi d'unascienza, ma comprende: (a) la teoria della divisione della verità in singoli territori; (b) l'arte di trovare le verità d'un dato territorio; (c) l'arte di disporre queste verità secondo i loro rapporti. È ovvio che le parti più importanti dal punto di vista della logica saranno la prima, cui però Bolzano non dà adeguato sviluppo, e la terza, che si presenta come una teoria dei rapporti logici fra proposizioni; è appunto questa, che Bolzano chiama « dottrina elementare », la vera e propria teoria della scienza in senso husserliano, cioè la ricerca di ciò che fa scienza la scienza(14)" (p 17 della ristampa)

38. Raspa, Venanzio. 1996. "Su ciò che non esiste. Da Bolzano a Meinong: un *excursus* nella filosofia austriaca." *Studi Urbinati.B: Scienze Umane e Sociali* no. 67:115-201

1. Ci sono oggetti che non esistono. - 2. Rappresentazioni in sé e rappresentazioni senza oggetto .in B. Bolzano. - 3. La mediazione storica di R. Zimmermann. - 4. Il capovolgimento delle rappresentazioni senza oggetto in K. Twardowski. - 5. · Oggetti non esistenti nella *Gegenstandstheorie* di A. Meinong. - 6. Aspetti della controversia fra Russell e Meinong.

"L'apparato concettuale di base che, per successivi sviluppi, ci porterà ad una messa a fuoco del nostro discorso, e maturerà nella *Gegenstandstheorie* di Meinong, ci viene offerto da Bernard Bolzano, il primo autore di questa storia. Bolzano assume all'interno del suo universo, in cui si danno anche oggetti non esistenti, una classe di oggetti logici, le cosiddette rappresentazioni senza oggetto [*gegenstandslose*

Vorstellungen], vale a dire - nel suo linguaggio - rappresentazioni in sé [*Vorstellungen an sich*] cui non corrisponde nessun oggetto, in quanto gli attribuiscono proprietà fra loro contraddittorie, oppure che non si ritrovano nell'esperienza. Nell'ambiente filosofico austriaco a cavallo fra la seconda metà del XIX e l'inizio del XX sec., le rappresentazioni senza oggetto non vengono accolte nei termini in cui erano state elaborate da Bolzano, ma vengono, in un certo senso, capovolte; al loro posto compaiono gli oggetti non esistenti contraddittori oppure non fattuali. Dalle rappresentazioni senza oggetto di Bolzano si giunge, attraverso una duplice mediazione, quella di Robert Zimmermann e quella ben più determinante di Kazimierz Twardowski, il vero artefice del capovolgimento, agli oggetti non esistenti di Alexius Meinong. Quel che vorrei cercare di ricostruire è la maniera in cui avviene il capovolgimento e gli sviluppi teorici cui esso dà luogo. Procediamo dunque col chiederci: cosa intende specificamente Bolzano per 'rappresentazione in sé' e, quindi, per 'rappresentazione senza oggetto'? Le rappresentazioni in sé possono anche essere denominate concetti (4); se questo può dare un'idea del tipo di nozione con cui abbiamo a che fare, restano tuttavia ancora da spiegare le due caratteristiche essenziali corrispondenti alle espressioni di 'in sé [*an sich*]' e 'senza oggetto [*gegenstands los*]..' (pp. 118-119)

(4) Sulla scelta del termine 'rappresentazione' preferito a quello di 'concetto', cfr. B. Bolzano, *Wissenschaftslehre. Versuch einer ausführlichen und grossentheils neuen Darstellurg der Logik mit steter Rücksicht auf deren bisherige Bearbeiter*, 4 Bde., Sulzbach, J. E. v. Seidelschen Buchhandlung 1837, Bd. I, § 50, p. 222-223 (d'ora in avanti *WL*). Per le citazioni si è tenuta presente l'edizione critica della *Bernard Bolzano-Gesamtausgabe*, Reihe I: Schriften, Bde. 11-14: *Wissenschaftslehre*, hrsg. von J. Berg, Stuttgart/Bad Cannstatt, Frommann/Holzboog 1985 sgg.

39. Raspa, Venanzio. 2011. "Bolzano e la filosofia austriaca." *Discipline Filosofiche* no. 21:245-285.

"Nel trattare di Bolzano e la filosofia austriaca non si può non parlare di un terzo termine che li lega indissolubilmente: la

censura. L'azione censoria dell'autorità politica interviene in maniera preponderante non solo nel determinare le sorti e i modi della difficoltosa e relativamente tarda diffusione del pensiero bolzaniano all'interno della Monarchia asburgica, ma anche nella definizione di filosofia austriaca quale categoria storiografica. È un fatto che, dal 20 gennaio 1820, Bolzano fu sospeso dall'insegnamento e gli fu proibito sia di predicare, sia di pubblicare entro i confini austriaci, così che la maggior parte dei suoi libri uscirono all'estero e spesso anonimi.

Successivamente, alla condanna viennese si aggiunse quella romana, con la messa all'indice di due suoi libri, le *Erbauungsreden für Akademiker* (nel 1828) e il *Lehrbuch der Religionswissenschaft* (nel 1839). Ed è altresì un fatto che, se si vuole caratterizzare la filosofia austriaca, non si può non farlo attraverso la sua opposizione a Kant e agli idealisti tedeschi, le cui opere furono ugualmente censurate nell'Austria di allora." (p. 245, nota omessa)

40. ———. 2018. "Le vicende del contenuto attraverso Bolzano, Twardowski e Meinong." *Paradigmi* no. 36:31-48.

Abstract: "Distinguishing between mental act and content of representations and propositions in themselves, Bolzano offers a logico-semantical notion of content. Twardowski opposes to it a psychological conception of the content of representations and identifies the content of the judgment, in the case of existential judgments, with the existence of the object, in the case of judgments about a relation, with the subsistence of the relation. In opposition to Twardowski, Meinong does not confound logical and psychological content and shows, by means of the notion of presentation, that a content is present in all experiences, including emotions."

41. Scholz, Heinrich. 1983. *Storia della logica*. Roma-Bari: Laterza. Edizione originale 1931. Traduzione di Enzo Melandri.

Introduzione e aggiornamento bibliografico di Carlo Cellucci.

"Ma a questo punto tutto quanto precede viene talmente messo in ombra dall'opera di Bolzano, che il confronto stesso lo fa scomparire; poiché il grande Bernard Bolzano (1781-1848) nei

primi tre volumi della sua *Dottrina della scienza* (in quattro volumi) del 1837 (ristampa Felix Meiner, Leipzig 1929-1931) ci ha dato un'introduzione alla logica da cui c'è tanto da imparare che non si può fare a meno di esclamare: prendi e leggi! Parliamo di un'introduzione alla logica, a malgrado della vastissima mole, per accennare al fatto che il centro di gravità dell'opera non va ricercato nella teoria della deduzione in quanto tale - al livello cui Bolzano elevò le esigenze che la logica deve soddisfare, una nuova teoria poteva fornirla solo la logistica - ma bensì nelle tante considerazioni particolari così acute e istruttive che conducono dentro i problemi di questa logica in modo più profondo e brillante di tutto ciò che non si trova, nel senso del calcolo logico, sulla linea del grande Leibniz. E in un modo tale da rendere queste illuminanti considerazioni in grandissima parte (parte che andrebbe precisata almeno una volta con esattezza!) indipendenti dalla teoria augustiniana delle verità e idee in sé, su cui Bolzano le imbastì." (p. 58)

42. Šebestik, Jan. 2011. "Bolzano e la matematica." *Discipline Filosofiche* no. 21:287-320.

"Bolzano pratica la matematica con spirito filosofico, concettuale, e benché si trovino nei suoi lavori, e in particolare nella *Functionenlehre*, centinaia di teoremi originali ed essenziali, gli capita spesso di concentrarsi nell'elaborazione di nuove definizioni che vertono su concetti in apparenza ben noti, come quelli di numero naturale, di numero reale, di limite, di dimensione, di retta o di curva o, come dice il titolo di un testo manoscritto, *Geometrische Begriffe, die Jeder kennt und nicht kennt*. Reciprocamente, in logica, la matematica gli serve non solo come serbatoio inesauribile di esempi, ma soprattutto come strumento che permette di provare una tesi essenziale della sua logica, la sussistenza dell'insieme infinito delle verità in sé. La maggior parte delle sue molteplici dimostrazioni si basa in effetti sulle proprietà della serie dei numeri naturali, come afferma Bolzano nel paragrafo 13 dei *Paradoxien des Unendlichen*.

In primo luogo, quattro cose lo interessano in materia di filosofia della matematica: *lo statuto degli oggetti matematici*

in sé, l'ordine dei teoremi, o, come dice lui stesso, la connessione oggettiva delle verità, la scelta o, più esattamente, la ricerca degli assiomi - poiché il matematico non deve sceglierli, ma trovarli - e il concetto di prova." (pp. 287-288)

43. Simons, Peter. 2011. "Bolzano e la logica." *Discipline Filosofiche* no. 21:321-342.

Traduzione di Giorgio Volpe.

La versione originale in inglese *Bolzano's Logic* è disponibile sul sito academia.edu.

"Introduzione

Nel periodo della storia della logica compreso fra la morte di Leibniz (1716) e la pubblicazione della *Begriffsschrift* di Frege (1879) spiccano due date. Una è il 1847, anno in cui la *Mathematical Analysis of Logic* di George Boole introdusse nello studio del ragionamento i metodi algebrici. L'altra, assai meno sbandierata sul momento e per lungo tempo dopo l'evento, fu la pubblicazione nel 1837 della *Wissenschaftslehre* (*Dottrina della scienza*, d'ora in poi WL) di Bolzano. I due tentativi, separati da un solo decennio e indipendenti uno dall'altro, sono complementari. Mentre Boole si applicò a introdurre il rigore e il metodo matematico nel ragionamento logico, Bolzano si sforzò di iniettare il rigore logico nel metodo della matematica, oltre che di altre discipline. La logica algebrica di Boole introdusse un approccio simbolico e algoritmico che condusse infine ai metodi logici dell'informatica, mentre la trattazione bolzaliana dei concetti logici anticipò di un secolo le definizioni semantiche moderne di alcuni concetti logici chiave. Entrambi gli aspetti, quello algoritmico e quello semantico, informano la logica moderna. Ma Bolzano è il padre della semantica logica. Questo articolo espone gli elementi chiave della sua rivoluzione logica." (p. 121, note omesse)

44. van Wierst, Pauline. 2016. "Profili: Bernard Bolzano." *AphEx. Portale Italiano di Filosofia Analitica* no. 14.

Abstract: "Bernard Bolzano (1781-1848) è probabilmente il pensatore più sottovalutato dell'Ottocento.

Ha anticipato di cent'anni la definizione semantica di verità e di conseguenza logica di Tarski, ha dato alla logica e alla matematica una nuova e rigorosa fondazione, e ha fornito la prima analisi dettagliata di spiegazione scientifica. In matematica ha ottenuto risultati che vengono insegnati ancora oggi in ogni classe di matematica delle scuole superiori, come il teorema di Bolzano-Weierstrass e la prima prova rigorosa del teorema dei valori intermedi.

A causa dell'isolamento dalla comunità accademica, del divieto di pubblicare e delle premature anticipazioni, le sue opere (in particolare quelle filosofiche) non ottennero ai suoi tempi l'attenzione che avrebbero invece meritato. In questo profilo ci proponiamo principalmente di presentare i suoi contributi in merito alla metodologia scientifica. Considereremo sia le sue riflessioni in proposito, sia le idee innovative che in tali riflessioni trovarono la loro origine. In particolare, vedremo in che modo tali riflessioni lo hanno portato a sviluppare diverse nozioni di conseguenza logica, una nozione altamente originale della distinzione analitico/sintetico, una caratterizzazione della spiegazione scientifica, nonché una teoria dei numeri fondata su una teoria degli insiemi e delle parti. A tal fine, verrà presentata una selezione delle sue idee metafisiche, logiche e matematiche che, lungi dal potersi considerare esaustiva, risulta tuttavia indispensabile all'esposizione e comprensione di questi contenuti in chiave sistematica."

Bernard Bolzano: Bibliographie philosophische Schriften

Bolzano's Writings

"A comprehensive Bolzano bibliography up to 1999, compiled by Jan Berg, Edgar Morscher, and Anneliese Müller, has recently appeared as Vol. E2/3 of the Bernard Bolzano-Gesamtausgabe (BBGA). Vol. E 2/1, which was prepared by Berg, Morscher, and Marie Pavlíková, contains a bibliography spanning 1824–1970; two supplements to this volume (prepared by Berg and Morscher) extend this to the beginning of 1987. Three further installments by Berg and Morscher entitled *Bolzano-Forschung* (Salzburg, 1989; St Augustin, 1992, 2000) cover the years 1987–98. (...) Bolzano's manuscripts are divided between the National Library in Vienna, the National Museum, and the Museum of National Literature in Prague. For catalogues of these collections, see Vols. E 2/1 and E 2/2 of the BBGA. A considerable part of Bolzano's personal library was incorporated into the collection of the National and University Library in Prague. For details, see P. M. Schenkel. *Bernard Bolzanos Bibliothek*, 2 Vols (St Augustin, 2002). Our bibliography begins with a chronologically ordered list of Bolzano's published works, followed by the plan for the Gesamtausgabe (with facing page English translation), translations of Bolzano's works, and selected secondary literature. We aim to be nearly comprehensive with respect to Bolzano's own writings, in the original and in translation, but not, for reasons of space, with respect to the secondary literature."

Paul Rusnock, Jan Šebestík, "Bernard Bolzano: His Life and Work", New York: Oxford University Press, p. 599.

1. Berg, Jan, Morscher, Edgar, and Pavlíková, Marie, eds. 1972. *Bolzano-Bibliographie und Editionsprinzipien der Gesamtausgabe. Bibliographie - Erste Abteilung*. Stuttgart-Bad Cannstatt: Frommann-Holzboog.

BGA 2.1.

Inhaltverzeichnis: Editionsprinzipien der Bernard Bolzano-Gesamtausgabe 7; Katalog des Bolzano-Nachlasses in der österreichischen Nationalbibliothek von Jan Berg 17; Katalog des Nachlasses 19; Personenverzeichnis 78; Bolzano - Bibliographie von Jan Berg, Edgar Morscher und Marie Pavlíková 81; Bolzanos veröffentlichte Schriften 85; Literatur über Bolzano 98; Chronologisches Register 157; Übersicht nach Sachgebieten 162; Anhang: Gliederung der Bernard Bolzano-Gesamtausgabe 171-180.

"Allgemeine Prinzipien

Die Bernard Bolzano - Gesamtausgabe wird in folgende vier Reihen gegliedert:

I. Schriften

Darunter werden alle zu Lebzeiten Bolzanos veröffentlichten Schriften verstanden.

II. Nachlaß

Die Nachlaßreihe soll alle erst nach dem Tode Bolzanos veröffentlichten Schriften enthalten. Auch vollendete Manuskripte oder Abschriften solcher Manuskripte Bolzanos werden wiedergegeben. Über die Aufnahme fragmentarisch erhaltener oder unvollendeter Werke, sowie von Bolzano regelmäßig gemachter Aufzeichnungen, vereinzelter Notizen und Glossen zu fremden Werken wird von Fall zu Fall entschieden. Glossen zu eigenen Werken werden bei der Wiedergabe berücksichtigt.

Nicht wiedergegeben werden aus Gründen des ungeheuren Umfangs Vorstufen aufgenommenen Letztfassungen sowie im allgemeinen Abschriften, Exzerpte und Übersetzungen Bolzanos von Werken anderer Autoren.

III. Briefwechsel

Es werden alle Briefe Bolzanos mit den entsprechenden Schreiben der Briefpartner aufgenommen. Die Briefe werden zunächst nach Partnern und innerhalb der so entstandenen Gruppen dann chronologisch geordnet. Über die verlorengegangenen Briefe von und an Bolzano wird nach Möglichkeit berichtet.

IV. Dokumente

Als Ergänzung zur Gesamtausgabe bietet diese Reihe ausgewählte Dokumente und Bilder zur Lebensgeschichte Bolzanos." (S. 9)

2. Berg, Jan, and Morscher, Edgar, eds. 1982. *Supplement I: Ergänzungen und Korrekturen zur Bolzano-Bibliographie (Stand: Ende 1981)*. Stuttgart-Bad Cannstatt: Frommann-Holzboog.

BGA 2.1. Supplement I.

"Die Ergänzungen und Korrekturen beziehen sich auf die erste Abteilung des zweiten Einleitungsbandes der Bernard Bolzano-Gesamtausgabe, der vor genau zehn Jahren erschien.

Die mit einem Sternchen (*) versehenen Nummern sind bereits in der ursprünglichen Bibliographie enthalten. Es wird hier nur eine Korrektur vorgenommen oder eine Ergänzung hinzugefügt.

Bei Ergänzung einer Nummer, die aus chronologischen Gründen zwischen zwei Nummern der ursprünglichen Bibliographie einzufügen ist, wird eine Dezimalnumerierung verwendet.

Es kommt hier gegenüber der ursprünglichen Bibliographie ein Abschnitt neu hinzu, in dem die anonymen Schriften verzeichnet sind. In diesem Abschnitt wird auch auf diejenigen anonym erschienenen Schriften verwiesen, deren Verfasser identifiziert werden konnte." (S. 7)

3. ———, eds. 1988. *Supplement II: Ergänzungen zur Bolzano-Bibliographie (Stand: Anfang 1987)*. Stuttgart-Bad Cannstatt: Frommann-Holzboog.

BGA 2.1. Supplement II.

"Bolzanos veröffentlichte Schriften sowie die bisher erschienenen Bände der Gesamtausgabe werden vollständig registriert, während bei der Literatur über Bolzano und bei den anonymen Schriften nur Ergänzungen angeführt werden. Diese Ergänzungen beziehen sich auf die erste Abteilung des zweiten Einleitungsbandes der Bernard-Bolzano-Gesamtausgabe (Bolzano (E2/1)), der vor sechzehn Jahren erschien, und auf das erste Supplement zur Bolzano-Bibliographie (Bolzano (E2/1, Suppl.I)), das vor sechs Jahren erschien.

Die mit einem Sternchen (*) versehenen Nummern sind bereits in der ursprünglichen Bibliographie bzw. im ersten Supplement enthalten. Es wird hier nur eine Korrektur vorgenommen oder eine Ergänzung hinzugefügt.

Bei Ergänzung einer Nummer, die aus chronologischen Gründen zwischen zwei Nummern der ursprünglichen Bibliographie bzw. des ersten Supplements einzufügen ist, wird eine Dezimalnumerierung verwendet." (S. 7)

4. Krivsky, Pavel, and Pavlíková, Marie, eds. 2006. *Katalog des Bolzano-Nachlasses im Literaturarchiv des Museums der Nationalen Literatur in Prag – a. Einleitung – b. Katalog des Nachlasses – c. Personenregister*. Stuttgart-Bad Cannstatt: Frommann-Holzboog.

BGA 2.2.

5. Berg, Jan, Morscher, Edgar, and Müller, Anneliese, eds. 2015. *Bolzano-Gesamtbibliographie 1804–1999*. Stuttgart-Bad Cannstatt: Frommann-Holzboog.

BGA 2.1.3.

English summary: "This bibliography documents all of the works written by Bolzano and published up to December 31, 1999 (some of them anonymously), in chronological order, including all reprints, new editions and translations. In addition all those books and essays published up to this time whose titles establish a connection to Bolzano as well as further books, essays, reviews and articles in lexicons which are relevant for Bolzano research are registered here. Since many of Bolzano's works as well as those of his students and friends and his adversaries were published anonymously, these have been noted and put in chronological order in a section of their own (in many cases it was possible to identify the authors)."

Nebst einen Anhang: *Bolzanos Beiträge zur philosophischen Grundlegung der Mathematik*.

Nachdruck: Hildesheim, Georg Olms 1970.

"Der in Prag geborene Autor [Hugo Bergmann] dieses immer noch sehr lesenswerten Buches war zwölf Jahre lang Klassenkamerad Franz Kafkas; zusammen mit Kafka hörte er Martys Vorlesungen über "Deskriptive und genetische Psychologie", bestand im Unterschied zu seinem Freund die anschließende Prüfung (155) und promovierte bei Marty über "Die Atomtheorie im 19. Jahrhundert" ("ein Beitrag zur

Problemgeschichte der Philosophie"). Im zionistischen Studentenverein Bar-Kochba war er eines der literarisch produktivsten Mitglieder.(156)

Bergmann stellt in der ersten Hälfte seiner Bolzano-Monographie auf 100 Seiten Bolzanos "Logik" dar, dann jeweils sehr komprimiert seine Psychologie, seine Ästhetik, seine praktische Philosophie, seine Metaphysik und schließlich in einem 50-seitigen Anhang seine Philosophie der Mathematik. Anders als Marty verkennt Bergmann nicht, daß von Bolzanos Sätzen an sich manche wahr und manche falsch sind, aber er stimmt der Sache nach mit seinem Lehrer überein, wenn er dann die Annahme falscher Sätze an sich als haltlos darzutun sucht.(157) Bergmann vermißt bei Bolzano eine angemessene Deskription der Beziehung zwischen urteilendem Subjekt und Sätzen an sich, und er kritisiert, wie andere Brentanisten vor ihm, daß Bolzano auch synkategorematischen Satzteilen eine (Vorstellung an sich als) Bedeutung zuspricht.(158)

1911 verhandelte Hugo Bergmann in Halle mit dem Geschäftsführer der Kant-Gesellschaft wegen der Herausgabe der Werke Bolzanos. Was dieses Ziel seiner Deutschland-Reise anging, war Bergmann optimistisch: "Die Ausgabe hängt jetzt wohl nur noch davon ab, ob sie nicht schon von anderer Seite gemacht wird. Ich hätte zunächst die 4 Bde Wissenschaftslehre herauszugeben, jedes Jahr einen Band. Wegen Habilitation ist hier nichts zu machen, wegen der zu auffallenden Konfession". (159) Bergmann lehnte es ab, sich um des Erwerbs der *venia legendi* willen taufen zu lassen (wie Brentano ihm riet) oder aus der Zionistischen Organisation auszutreten (wie Stumpf verlangte).(160) Und auch seine editorischen Pläne scheiterten - Alois Höfler gewann das Rennen." (S. 58-60)

(155) Vgl. Bergmanns "Erinnerungen an Franz Kafka", in: Universitas 27 (1972), S.739-750.

(156) In einem von diesem Verein herausgegebenen Sammelband erschien 1913 in Leipzig Hugo Bergmanns religionsphilosophischer Aufsatz "Die Heiligung des Namens" [wiederabgedruckt in: Kurt Wilhelm (Hrsg.), Jüdischer Glaube, Bremen o.J., S. 396-409], über den Max Brod schreibt: "kaum

jemals hat in der Folgezeit ein Schriftwerk einen so erleuchtenden Eindruck auf mich gemacht" (Brod, S.228).

Hallesches Wolff-Kolloquium 1979 anlässlich der 300. Wiederkehr seines Geburtstages.

16. ———. 1992. "Bolzanos Lehre vom natürlichen Schliessen." In *Bolzano's Wissenschaftslehre 1837-1987. International Workshop*, 141-161. Firenze: Leo S. Olschki.

"In meinem Aufsatz beabsichtige ich zu zeigen, dass Bolzanos' Lehre vom Schluss einen relevanten Beitrag zum natürlichen Schliessen beinhaltet, aus den man eher auf eine positive Einschätzung dieses Bestandteiles seiner Logik schliessen kann. Meine Interpretation will dabei die Schwächen seiner Auffassung, wie sie besonders vom heutigen Standpunkt ersichtlich sind, in keinen Falle verschweigen. Da Bolzano in seiner spezifischen Erweiterung der Syllogistik sowie in seinem Ansatz zum definiten Klassenkalkül die Methode des natürlichen Schliessens nur ganz intuitiv angewendet hat, werde ich in meiner Rekonstruktion keine systematische und streng formale Darstellung anstreben. Ich werde mich deswegen nur auf solche - natürlich nicht alle - Stellen beschränken, in denen diese Methode in einer hinreichenden Weise im Texte dargelegt ist. Ein solcher Zutritt entspricht der historischen Entwicklung der Logik, in der das natürliche Schliessen - obzwar es bereits schon von Aristoteles benutzt wurde - in einer systematischen Art und Weise erst in den dreissiger Jahren unseres Jahrhundert unabhängig von G. Gentzen und St. Jaskowski herausgearbeitet wurde." (S. 142)

17. Beyer, Christian. 1996. *Von Bolzano zu Husserl. Eine Untersuchung über den Ursprung der phänomenologischen Bedeutungslehre*. Dordrecht: Kluwer.

Inhalt: Inhaltsverzeichnis 1; Einleitung 3; Erstes Kapitel. Die Phänomenologie der logischen Erlebnisse 7; Zweites Kapitel. Bolzano pur: Die wesentlichen Unterscheidungen 53; Drittes Kapitel. Bolzano, Lotze, Husserl!: Die Spezies-Konzeption der Bedeutung 131; Literatur 187; Index 193-203.

"Ich werde im zweiten Kapitel zunächst einige zentrale Bestandstücke der in den ersten beiden Bänden der 'Wissenschaftslehre' dargestellten Urteils- und v.a. *Vorstellungslehre*, die für Husserl wichtig geworden sind, in möglichst *unmodifizierter* Form präsentieren. Dieses Kapitel wirft ein ganz neues Licht auf Bolzanos Beitrag zur Philosophie der Sprache und des Geistes. Im dritten Kapitel werde ich dann Husserls Lotze- inspirierte 'Interpretation' dieser Lehre vorstellen, was u.a. ein näheres Eingehen auf Lotzes Erkenntnis- und Ideenlehre (wie sie sich insbesondere im genannten Kapitel über die "Ideenwelt" manifestiert) erfordert. Lotzes Ideenlehre erweist sich dabei als außerordentlich wichtige Inspirationsquelle der Phänomenologie überhaupt. Am Ende dieses Kapitels werden wir, so hoffe ich, Husserls *Platonische Spezies-Konzeption der Bedeutung* vor dem analytisch- phänomenologischen Blick haben. Abschließend gebe ich einen Ausblick auf die weitere Entwicklung von Husserls Bedeutungslehre zwischen 1900-1913. Mein besonderes Augenmerk gilt dabei dem Phänomen der Indexikalität und Husserls auch im Zusammenhang mit der gegenwärtigen 'Internalismus / Externalismus'- Debatte hochinteressanten Konzeption des 'noematischen X'." (S. 6)

18. ———. 2001. "Logik, Semantik und Ontologie: neuere Literatur zu Bolzano." *Philosophische Rundschau* no. 48:231-262.

"Bernard Bolzano (1781-1848) kann mit einigem Recht als der erste moderne sprachanalytische Philosoph bezeichnet werden. Sein Hauptwerk, die 1837 erschienene monumentale *Wissenschaftslehre*, zeichnet sich methodisch durch eine nie zuvor dagewesene Kombination aus Problembewußtsein logischen und begriffsanalytischen Feingefühl argumentativer Klarheit und Stringenz aus. Thematisch behandelt Bolzano darin Hauptgebiete der heutigen analytischen Philosophie:

Logik, Semantik, Ontologie, Philosophie des Geistes,
Erkenntnis- und Wissenschaftstheorie.

Auf vielen dieser Gebiete vollbringt er (wie auch in der Mathematik, Philosophie der Mathematik, Ethik und Religionslehre) bedeutsame wissenschaftlich Perioniertaten. Bolzano ist ein durch und durch systematisch orientierte Denker, der aber gleichwohl wichtige traditionelle Positionen und (zumeist weniger wichtige) Meinungen seiner zeitgenössischen Kollegen ausführlich berücksichtigt (wenngleich er sie nicht immer pünktlich wiedergibt)." English abstract: "In his booklet ‘Contributions to a better founded presentation of mathematics’ of 1810 Bernard Bolzano made his first serious attempt to explain the notion of a rigorous proof. Although the system of logic he employed at that stage is in various respects far below the level of the achievements in his later *Wissenschaftslehre*, there is a striking continuity between his earlier and later work as regards the

methodological constraints on rigorous proofs. This paper tries to give a perspicuous and critical account of the fragmentary logic of *Beyträge*, and it shows that there is a tension between that logic and Bolzano's methodological ban on 'kind crossing'."

27. ———. 2012. "Das Problem der Apagogischen Beweise in Bolzanos *Beyträgen* und seiner *Wissenschaftslehre*." *History and Philosophy of Logic* no. 33:127-157.

English abstract: "This paper analyzes and evaluates Bolzano's remarks on the apagogic method of proof with reference to his juvenile booklet 'Contributions to a better founded presentation of mathematics' of 1810 and to his 'Theory of science' (1837). I shall try to defend the following contentions: (1) Bolzano's vain attempt to transform all indirect proofs into direct proofs becomes comprehensible as soon as one recognizes the following facts: (1.1) his attitude towards indirect proofs with an affirmative conclusion differs from his stance to indirect proofs with a negative conclusion; (1.2) by Bolzano's lights arguments via *consequentia mirabilis* only seem to be indirect. (2) Bolzano does not deny that indirect proofs can be perfect certifications (*Gewissmachungen*) of their conclusion; what he denies is rather that they can provide grounds for their conclusions. (2.1) They cannot do the latter, since they start from false premises and (2.2) since they make an unnecessary detour. (3) The far-reaching agreement between his early and late assessment of apagogical proofs (in the *Beyträge* of 1810 and the *Wissenschaftslehre* of 1837) is partly due to the fact that he develops his own position always against the background of Wolff's and Lambert's views."

"In seinem Aufsatz *The Structure of Logic and Its Relation to Other Systems* (1920) kritisiert der amerikanische Pragmatist und Logiker Clarence Irving Lewis die „traditionelle rationalistische Auffassung“, weil sie logische Gesetze für den

Beweis grundlegender metaphysischer Wahrheiten verwendet. Er schreibt:

[T]he attempt to establish incontrovertible truth by deductive procedures is nugatory.

The traditional rationalistic conception that metaphysical first principles can be shown to be logically necessary, or that what is logically prior is more certain or self-evident, is a conception to which the actual structure of logical systems lends no support.(1)

Strenggenommen schreibt Lewis hier der traditionellen rationalistischen Auffassung zwei Thesen zu. Kann man nicht die logische Notwendigkeit metaphysischer Prinzipien akzeptieren und zugleich (mit Bolzano)(2)

bestreiten, dass sie in jedem Fall unmittelbar einleuchtend sind?" (S. 539)

"Seiner Abhandlung über "Frege's Ontology"(1) schickt Reinhardt Grossmann eine Erörterung voraus von "some features of Bolzano's *Wissenschaftslehre*, for much of what I [i.e., Grossmann] shall have to say about Frege can best be understood against the background of Bolzano's view";(2) und so erfolgen die einleitenden Bemerkungen über Bolzano gerade in der Absicht, "to review some of his [i.e., Frege's] ideas in the light of Bolzano's distinctions."(3) Diese Absicht mag Grossmann dazu veranlasst haben, seine Darstellung der Lehren Bolzanos--im Hinblick auf ihre spätere Brauchbarkeit bei den Ausführungen über Frege---ein wenig zu modifizieren; da jedoch Grossmann sich dabei nicht nur auf Bolzano beruft, sondern das Dargelegte ausdrücklich für Bolzanos Ansichten ausgibt und dies auch durch zahlreiche Hinweise auf die *Wissenschaftslehre* Bolzanos zu belegen versucht, scheint er im guten Glauben gewesen zu sein, Bolzanos Gedanken unverändert und getreu wiederzugeben. Ich möchte nun hier nichts anderes zeigen, als dass die Lehren, welche in diesem Aufsatz von Grossmann Bolzano zugeschrieben werden, in vielen Punkten von dem abweichen, was Bolzano tatsächlich behauptet hat, ja teilweise sogar im Widerspruch dazu stehen." (S. 73)

35. ———. 1970. "Zur Frage der Existenzvoraussetzungen in der Logik." *Notre Dame Journal of Formal Logic* no. 11:89-96.

Nachdruck: E. Morscher (2007), S. 125-134.

"Auf Grund dieser Aristotelischen Existenzvoraussetzung (wenn auch nicht deswegen allein) ist in der Aristotelischen Logik der Schluss von "Alle F sind G" auf "Einige F sind G" gültig(2) und—was gleichbedeutend damit ist—die

Aussageform "*Wenn: Alle F sind G, dann: Einige F sind G*" allgemeingültig. Man könnte nun aber auch ein logisches System ausarbeiten, in dem zwar jene Schlussregel gilt, welche den Übergang von "*Alle F sind G*" auf "*Einige F sind G*" gestattet, in dem also "*Wenn: Alle F sind G, dann: Einige F sind G*" allgemeingültig ist, nicht aber "*Einige F sind F*". Ein System dieser Art haben wir in der Logik Bernard Bolzanos vor uns. Nach Bolzano gibt es nämlich auch gegenstandlose Vorstellungen ansich(3), die wir hier als Korrelat der leeren Klasse auffassen können, mit der sie—bei alien sonstigen Unterschieden—zumindest in dem für uns hier relevanten Punkt übereinstimmen. Wird nun in "*Einige F sind F*" für "*F*" der sprachliche Ausdruck einer solchen gegenstandlosen Vorstellung an sich eingesetzt (und dies ist in der Logik Bolzanos durchaus erlaubt), so entsteht daraus eine falsche Aussage. In der Logik Bolzanos ist also "*Einige F sind F*" nicht allgemeingültig, weil hier im Gegensatz zur Aristotelischen Logik für die Prädikatvariablen "*F*", "*G*", . . . auch leere Prädikate einsetzbar sind. Trotzdem ist aber in Bolzanos Logik ebenso wie in der Aristotelischen der Schluss von "*Alle F sind G*" auf "*Einige F sind G*" gültig, die Aussageform "*Wenn: Alle F sind G, dann: Einige F sind G*" somit allgemeingültig, und zwar deshalb, weil Bolzano von jedem Satz an sich, wenn er wahr sein soll, verlangt, dass seine Subjektvorstellung nicht gegenstandslos bzw. leer sein darf, sondern gegenständlich (d. i. nicht - gegenstandslos bzw. nicht-leer) sein muss(4); demnach kann eine Aussage der Form "*Alle F sind G*" nur dann wahr sein, wenn an Stelle von "*F*" der sprachliche Ausdruck einer gegenständlichen Vorstellung an sich und somit ein nicht-leeres Prädikat steht, wenn es daher mindestens ein *F* gibt, welches dann selbstverständlich auch ein *G* sein muss, weil ja—laut Voraussetzung—jedes *F* ein *G* ist. Immer dann, wenn eine Aussage von der Form "*Alle F sind G*" wahr ist, muss daher auch die entsprechende Aussage "*Einige F sind G*" wahr sein." (. 90-91)

(2) In der traditionellen Logik ist bekanntlich der Schluss von einer universellen Aussage auf die entsprechende partikuläre Aussage gestattet; dadurch wird ja in der Aristotelischen

Syllogistik die Gültigkeit der modi obliqui gewährleistet. Ich habe hier einen Sonderfall davon herausgegriffen, nämlich den Schluss von einem A-Satz (d. i. eine universell affirmative Aussage) auf den dazugehörigen I-Satz (d. i. eine partikulär affirmative Aussage).

"Bolzanos ganze Diskussion von Sätzen und Vorstellungen an sich ist eine Manifestation seines Problembewusstseins: er sah die Probleme des Psychologismus fünfzig Jahre vor Frege und Husserl, er zeigt durch einfache und überzeugende Beispiele die Unhaltbarkeit vieler populärer Ansichten über Vorstellungen und Begriffe, wie etwa die Reziprozität von Umfang und Inhalt, die unkritisch angenommene Korrelation zwischen Teilen einer Vorstellung und *Teilen* ihres Gegenstandes oder zwischen Teilen einer Vorstellung und *Eigenschaften* ihres Gegenstandes. Bolzano ist sich auch des Problems der Identitätskriterien für Begriffe sehr bewusst und schlägt vor, dass Begriffe identisch sind, wenn sie in derselben Weise aus denselben Teilen aufgebaut sind, und dass einfache, nicht-leere Begriffe gleich sind, dann und nur dann wenn sie den gleichen Umfang haben.

Diese Definitionen sind sicherlich nicht ganz ohne Probleme, Bolzanos Versuch ist aber besser als (soweit sie mir bekannt sind) die von anderen Philosophen, die über Begriffe sprechen, und das sind die meisten

Philosophen des zwanzigsten Jahrhunderts." (S. 62)

47. Gieske, Carsten Uwe. 2001. "Bolzano über den Sinn von "Wahrheit". Eine exegetische Untersuchung zu den Paragraphen 24, 25 und 28 der "Wissenschaftslehre"." *Zeitschrift für Philosophische Forschung* no. 55:556-570.

"Einer der wichtigsten Begriffe der Bernard Bolzanos ist der Begriff der Wahrheit an sich. Er ist auch einer der dem Publikum geläufigeren Begriffe Bolzanos - so dass eine exegetische Untersuchung, die die Wahrheitsdefinition der *Wissenschaftslehre* zum Thema hat, überflüssig erscheinen könnte. Doch wie lautet *die* Wahrheitsdefinition der *Wissenschaftslehre*? Allein im ersten Teil der *Wissenschaftslehre*, in der *Fundamentallehre*, finden sich mindestens sechs verschiedene Formulierungen. Die Definition des Paragraphen 28 zum Beispiel, die Bolzano als die „richtige Erklärung“ kennzeichnet (I 124)(1), wird seltener zitiert, während eine andere - sie steht im prominenten, aber hermeneutisch heiklen Paragraphen 25 - zu Recht oder zu Unrecht bevorzugt wird.(2) Sie ist wiederum die einzige, bei der Bolzano auf den Ausdruck „aussagen“ verzichtet; in den anderen Wahrheitsdefinitionen kommt dieser Ausdruck - grammatisch uneinheitlich verwendet - vor. Schon diese Beobachtungen machen deutlich, dass es durchaus von Interesse sein kann, diese Formulierungen einmal im Hinblick auf Unterschiede und Gemeinsamkeiten zu untersuchen. Dabei wird die Frage, wie „aussagen“ jeweils zu verstehen ist, eine Hauptfrage dieses Aufsatzes sein, an dessen Ende *die* Wahrheitsdefinition der *Wissenschaftslehre* präsentiert werden soll." Bernhard Bolzanos Widerlegung des radikalen Zweifels in der „Fundamentallehre“ (Wissenschaftslehre, §§ 17 -45) als Voraussetzung seiner Semiotik." *Semiosis. Internationale Zeitschrift für Semiotik und Ästhetik* no. 83/44:3-13.

"In den Paragraphen der "Fundamentallehre" der *Wissenschaftslehre* kritisiert Bernard Bolzano die Position des radikalen Skeptizismus, nachdem er sie genau definiert hat. Nach dem radikalen Skeptizismus, so wie Bolzano ihn bestimmt, kann es keine Wahrheit geben. Bolzanos Widerlegung des so definierten radikalen Skeptizismus, welche von Heinrich Scholz als "eine völlig originale Gedankenleistung" gewürdigt wird, besteht in der Hauptsache aus zwei Argumentationen, die zwei Sätze beweisen: a) daß es wenigstens eine Wahrheit gibt; b) daß es unendlich viele Wahrheiten gibt.

Die Bolzanosche Widerlegung des Skeptizismus steht im Zentrum der folgenden Ausführungen, allerdings sofern eine solche Widerlegung für Bolzanos Grundlegung der Logik und der Zeichenlehre von Relevanz ist. Daß diese Relevanz basaler oder fundamentaler Art ist, geht aus der Funktion und Stellung

der Paragraphen der "Fundamentallehre" im Gesamtsystem der Bolzanoschen *Wissenschaftslehre* hervor. Die Skeptizismuskritik ist in der Tat ein Unumgängliches für das konstruktive System von Erkenntnis-, Wissens- und Wissenschaftsmöglichkeiten, das die *Wissenschaftslehre* darstellt, im allgemeinen und für die Semiotik Bolzanos (sowohl für die Grundlegung der Zeichenlehre in den Paragraphen 285 und 334 bis 345 als auch für die angewandte „Semiotik“ in den Paragraphen 637 bis 699 des vierten Bandes der *Wissenschaftslehre*) im besonderen." "Mit den jetzt angedeuteten Voraussetzungen an Charakter und Methode und mit seinem scharfen Verstand schreibt Bolzano sein größtes philosophisches Werk: Wissenschaftslehre, das uns in 4 Bänden ein umfassendes Lehrbuch der Logik liefert. Der Hauptteil, die eigentliche Wissenschaftslehre, macht den vierten Band aus. Die drei ersten Bände stellen einen ausführlichen Unterbau zum vierten dar und sind auch heute noch eine ergiebige Fundstelle für die Lehre von den Vorstellungen, Sätzen und Urteilen, für Wahrscheinlichkeitsbetrachtungen u.s.w. Ich werde aus ihnen nur das herausheben, was im Sinne Bolzanos für den vierten Band unbedingt Voraussetzung ist.

. Die drei ersten Bände umfassen vier Hauptteile : die Fundamental-, die Elementar-, die Erkenntnislehre und die Erfindungskunst. Der Begriff der Wissenschaftslehre im engeren Sinne läßt die Notwendigkeit dieser Teile erkennen. Die Wissenschaftslehre im engeren Sinne wird von Bolzano gleichgesetzt einer Methodenlehre, d. h. sie enthält die Regeln, die bei der Zerlegung des gesamten Gebietes der Wahrheit in einzelne Wissenschaften und bei der Darstellung der letzteren in besonderen Lehrbüchern befolgt werden müssen.

Um eine so definierte Wissenschaftslehre sinnvoll aufzubauen, muß das Material sichergestellt sein: das Vorhandensein einer Gesamtheit von wahren Sätzen, die für den menschlichen Verstand erkennbar sind, und die Möglichkeit, die Beziehungen

einzelner Wahrheiten zu anderen festzulegen, zunächst formal und wenn möglich auch material.

Damit ist die Aufgabe der ersten drei Bände umrissen, und zwar in rückwärtiger Reihenfolge, d. h. die Notwendigkeit des vorhergehenden Teiles ist gegeben durch einen Ausspruch des nachfolgenden Teiles." (S. 316)

"II. Bolzanos Ontologie

Die Metaphysik Bolzanos ist eine Wissenschaft, die es mit *wirklichen* Gegenständen zu tun haben soll und nur mit solchen Gegenständen. Im folgenden wird *der* Teil der Metaphysik Bolzanos dargestellt und erörtert, der sich den wirklichen Gegenständen möglichst *allgemein* zuwendet. Ich nenne diesen Teil die *allgemeine Metaphysik* oder auch die *Ontologie* Bolzanos, verwende also den Terminus »Ontologie« in einer engeren Bedeutung als etwa Berg in seiner Abhandlung *Ontology Without Ultrafilters ...* Wenn er dort von »Bolzano's Ontology« spricht, so meint er die Gegenstände Bolzanos im allgemeinen, nicht nur die *wirklichen* Gegenstände.(1)

Im Verlauf der Untersuchung wird sich zeigen, daß Bolzano zufolge jeder wirkliche Gegenstand entweder eine Substanz oder eine Adhärenz oder - nach manchen Texten Bolzanos - ein Inbegriff von Substanzen ist und daß jede Substanz, jede Adhärenz und jeder Inbegriff von Substanzen ein wirklicher Gegenstand ist. Daher kann man auch sagen, daß sich die Ontologie Bolzanos vor jeder weiteren Differenzierung mit Substanzen, insofern sie Substanzen sind, mit Adhärenzen, insofern sie Adhärenzen sind, und mit Inbegriffen von Substanzen, insofern sie Inbegriffe von Substanzen sind, befaßt. Die Besonderheit der einzelnen Substanz, der einzelnen Adhärenz oder des einzelnen Inbegriffs von Substanzen soll hierbei noch keine Rolle spielen. Es interessiert an dieser Stelle also noch nicht, ob die betrachteten Substanzen bedingt oder unbedingt, veränderlich oder unveränderlich, geistig oder materiell, vollkommener oder weniger vollkommen sind usw. oder ob die betrachteten Adhärenzen dieser oder jener Art sind. Alles das wird erst später, für eine speziellere Metaphysik, wichtig werden.

Die Darlegung und Diskussion der Positionen Bolzanos hinsichtlich der Ontologie erfolgt in sieben Kapiteln. In den ersten beiden Kapiteln untersuche ich die Definitionsvorschläge Bolzanos für die Begriffe »Substanz« und

»Adhärenz« und seine Argumente für die Gegenständlichkeit der entsprechenden Vorstellungen an sich. In den darauffolgenden beiden Kapiteln bespreche ich einige wichtige Beschaffenheiten, die jeder Substanz zukommen sollen, nämlich deren Einfachheit und deren Anfangslosigkeit und Unvergänglichkeit. Danach erörtere ich die von Bolzano vorgenommene Unterscheidung zwischen äußeren und inneren Beschaffenheiten und seinen Begriff der Veränderung. Schließlich diskutiere ich den ontologischen Status, den Bolzano den Inbegriffen von Substanzen zuweist. Hierbei wird sich herausstellen, daß sich bei einer entsprechenden Modifikation Bolzanos Konzept vom Verhältnis »Substanz - Inbegriff von Substanzen« in eine ganz bestimmte moderne Substanzontologie gleichsam einbetten läßt." (S. 42-43)

- (1) Vgl. ebd., 32. Dennoch ist diese Arbeit natürlich eine sehr bedeutungsvolle Untersuchung zu Bolzanos Ontologie, denn sie fragt auch nach den *wirklichen* Gegenständen. Für die Ontologie Bolzanos sehr wichtig sind außerdem Künne, *Substanzen und Adhärenzen ...*, u. Schnieder, *Substanz und Adhärenz ...* Man vgl. ferner Berg, *Bolzanos Metaphysik*, ders., Einleitung ... 60. ———. 2013. "Intentionalität: Bolzano und Husserl." In *Versuche über Husserl*, edited by Centrone, Stefania, 97-144. Hamburg: Felix Meiner.

"»Der Problemtitel, der die ganze Phänomenologie umspannt, heißt Intentionalität.« Da es der Vater der Phänomenologie ist, der dies behauptet,¹ können wir uns wohl darauf verlassen. In diesem Aufsatz versuche ich, Edmund Husserls (ursprüngliche) Theorie der Intentionalität vor dem Hintergrund einer ihrer wichtigsten Inspirationsquellen, Bernard Bolzanos Theorie der »Sätze und Vorstellungen an sich«, zu rekonstruieren und in einem Punkt zu korrigieren. Im ersten Teil des Aufsatzes erörtere ich das Problem (zumindest *prima facie*) gegenstandsloser intentionaler Akte und Zustände, das im Zentrum von Husserls Metakritik an Twardowskis Bolzano-

Kritik stand. Thema des zweiten Teils dieses Aufsatzes ist Husserls ursprüngliche Auffassung des ontologischen Status der Gehalte intentionaler Akte und Zustände, mit der er (für eine Weile) auf Distanz zu Bolzano ging." (S. 97)

62. Menne, Albert. 1981. "Extension und comprehension bei Peirce und Bolzano." In *Proceedings of the C. S. Peirce bicentennial International Congress*, edited by Ketner, Kenneth L., 359-361. Lubbock: Texas Tech Press.

"Noch erstaunlicher aber ist es, dass Peirce die einschlagigen Theorien von Bernard Bolzano nicht kennt, die für ihn sicherlich sehr wichtig gewesen waren. Bolzano ist es, der wie Peirce unter dem Umfang des Begriffes bereits die individuellen Objekte versteht, auf die der Begriff zutrifft, und nicht die Unter-Arten, die er umfasst. Ausserdem unterscheidet Bolzano sehr scharf zwischen "Merkrnal" und "Bestandteil":

Merkmale sind Eigenschaften der Dinge, Bestandteile aber sind die Terme, aus denen der Begriff zusammengesetzt ist. Bolzano weist darauf hin, dass zwei bedeutungsverschiedene Begriffe die gleichen Bestandteile haben können; so hatten z.B. die heiden Begriffe "gelehrter Sohn eines ungelehrten Vaters" und "ungelehrter Sohn eines gelehrten Vaters" die gleichen Bestandteile.

Der Inhalt eines Begriffes sollte also nicht nur aus der Summe seiner Bestandteile, sondern auch aus deren strukturellem Gefüge bestehen.

Desgleichen ist Bolzano der erste, der eine sehr gründliche, durch Beispiele belegte Kritik an dem Reziprozitätsgesetz bietet. Zur Zeit der Abfassung seiner Untersuchung "Upon Logical Comprehension and Extension", also im Jahre 1867, scheint Peirce überhaupt nichts von Bolzano gewusst zu haben. Aber auch in dem "Supplement" von 1893 erwähnt er ihn nicht.

Wohl finden sich in zwei anderen Werken von Peirce Hinweise auf Bolzano, seine *Wissenschaftslehre* und seine *Paradoxien des Unendlichen*, die zeigen, daß er Bolzano sehr geschätzt hat, aber auch zugleich verraten, daß er nur aus sekundären Quellen Kenntnisse über seine Bedeutung für die Grundlegung der Mengenlehre und des Begriffes der Mächtigkeit hatte, dass er aber im übrigen nur durch abstruse Gerüchte etwas von Bolzano wusste." Nachdruck: E. Morscher (2007), S. 107-111.

"Das logische System, das Bernard Bolzano in seiner Wissenschaftslehre ausführlich dargestellt hat, ist teilweise noch stark der traditionellen Logik verhaftet, weist aber andererseits auch schon verblüffende Übereinstimmungen mit der modernen Logik auf. In diesem Zusammenhang wird gelegentlich die Frage aufgeworfen (2), ob und inwiefern Bolzanos Logik Existenzvoraussetzungen enthalte.

Die Redeweise, daß ein logisches System eine Existenzvoraussetzung enthält, ist mehrdeutig. Dementsprechend kann man denn auch die Frage, ob Bolzanos Logik eine Existenzvoraussetzung enthalte oder nicht, verschieden verstehen; fünf verschiedene Fragen, die man alle unter den gemeinsamen Titel "Existenzvoraussetzung in Bolzanos Logik" subsumieren könnte, will ich hier kurz besprechen.

(2) Diese Frage wird zwar in der Bolzano-Literatur öfter kurz gestreift, aber — soweit ich sehe — nirgends näher diskutiert." (S. 107)

Nachdruck: E. Morscher (2007), S. 135-147.

"Für eine ganze Reihe von philosophischen Aufsätzen dient die Frage, ob Existenz ein Prädikat ist, oder auch eine bejahende oder verneinende Antwort auf diese Frage als Überschrift. Es wird dabei nicht nur diskutiert, welche der beiden Auffassungen (die Bejahung oder die Verneinung der Frage) richtig ist, sondern es wird auch das Problem aufgeworfen, ob die Frage überhaupt sinnvoll gestellt ist oder doch sinnvoll gestellt werden könnte, wie sie sinnvollerweise formuliert werden müßte und was sie, falls sie sinnvoll gestellt wird, zu bedeuten hat (1).

Die Stellungnahmen großer Philosophen (angefangen von Kant) zu dieser Frage sind zwar — zumindest „oberflächlich“ — weitgehend bekannt, aber mir scheint doch, daß ein wesentlicher Aspekt an diesen Stellungnahmen vielfach

übersehen wurde und unbeachtet geblieben ist; diesen Aspekt möchte ich hier herausarbeiten, weil dadurch die Problemstellung selbst klarer wird und exakter gefaßt werden kann und weil dann auch wesentlich differenziertere Antworten auf diese Frage gegeben werden können. Ich möchte mit einer Analyse jener Antworten beginnen, die Kant und Bolzano auf die im Titel gestellte Frage gegeben haben. Zunächst aber seien noch zur Vereinfachung zwei Abkürzungen eingeführt: Jene Auffassung, welche die im Titel gestellte Frage bejaht, wollen wir mit einem ‚J‘ bezeichnen, während wir den gegenteiligen Standpunkt, der die Titelfrage verneint, mit einem ‚N‘ abkürzen werden. Ein Ziel meiner Ausführungen besteht darin zu zeigen, daß diese Zweiteilung der Standpunkte (in J und N) viel zu undifferenziert ist und nicht einmal dazu ausreicht, den Standpunkt Kants in dieser Frage treffend zu charakterisieren." (S. 135)

69. ———. 1981. "Bolzanos Wissenschaftslehre." In *Bernard Bolzano. Leben und Wirkung*, edited by Christian, Curt, 99-126. Wien: Verlag der Österreichischen Akademie der Wissenschaften.

Nachdruck: E. Morscher (2007), S. 19-46.

"Bolzanos vielseitiges Schaffen auf den verschiedensten Wissensgebieten krönen drei Hauptwerke: Sein unvollendet gebliebenes mathematisches Hauptwerk Größenlehre, sein religionswissenschaftlich-theologisches Hauptwerk Lehrbuch der Religionswissenschaft und sein philosophisches Hauptwerk

Wissenschaftslehre. Trotz der intensiven Bemühungen Bolzanos und seiner Schüler blieb die Wissenschaftslehre aus verschiedenen Gründen lange fast völlig unbekannt, und kaum ein bedeutender Philosoph nahm Notiz von ihr; und auch heute noch, wo die große Bedeutsamkeit dieses Werkes längst erkannt wurde und unter Fachleuten außer Zweifel steht, gibt es nur wenige, die sich mit dem Werk als Ganzem näher befaßt haben. Man begnügt sich meist damit, einzelne Rosinen aus dem Kuchen der Wissenschaftslehre heräuszupicken. Schuld daran ist sicherlich neben dem enormen Umfang des Werkes auch die Tatsache, daß die von Bolzano entwickelte Zusammenstellung der Probleme auf den ersten Blick eher eigenartig und vielleicht in manchen Punkten sogar fast skurril anmutet und auf weitgehendes Unverständnis stößt. Bolzano behandelt nämlich in seiner Wissenschaftslehre nicht nur so tiefgehende philosophische Themen wie etwa die Frage, ob es überhaupt Wahrheit gibt und ob wir sie erkennen können, ob es mehrere oder gar unendlich viele Wahrheiten gibt, was eine Vorstellung und ein Satz an sich ist, wie zwischen analytischen und synthetischen Sätzen unterschieden werden kann, was es heißt, daß ein Satz an sich aus anderen Sätzen ableitbar ist, wie das Verhältnis von Grund und Folge bestimmt werden kann, usw. Er beschäftigt sich vielmehr daneben auch mit so banalen und seichten praktischen Fragen wie etwa den folgenden: Ob der Verfasser eines Lehrbuchs seinen Namen und auch wohl einige seiner Lebensumstände angeben soll (WL IV, § 478); ob es zweckmäßig ist, in einem Lehrbuch, da ja Bücher bekanntlich auch eine Waare sind, den Druckort, den Namen des Verlegers, den Preis u. m. A. zu bemerken (§ 480); Ob in einem Lehrbuche auch Gleichnisse Vorkommen dürfen (§ 497); Wie Beispiele die Aufmerksamkeit befördern können (§ 647); Ob auch der Liebe zum Gewöhnlichen oder zum Neuen zuweilen ein Einfluß auf die Anordnung unserer Sätze gestattet werden dürfe (§ 619); Wiefern uoir in einem, Lehrbuche Kunstwörter meiden sollen (§ 661); Was zu geschehen habe, bevor man noch die Abfassung des Buches anfängt (§ 702); Welche besondere Sorgfalt selbst die sprachliche Darstellung in einem Lehrbuche verdiene (§ 708), usw. Da überrascht es dann wohl gar nicht mehr, daß Bolzano in seiner Wissenschaftslehre

auch noch etwa die Frage mit einschließt, Wie Sittlichkeit auch bei Abfassung eines Lehrbuches zu Statten komme (§ 700). Neben den zuerst genannten Themen wirken solche Fragestellungen fast lächerlich oder peinlich, und Bolzanos mitunter pedantische Abschweifungen in diese Gebiete muten manchmal fast ein wenig schrullenhaft an. Dadurch aber werden gerade die wichtigen philosophischen Leistungen Bolzanos, die sich in der Wissenschaftslehre niedergeschlagen haben,- verdeckt.

Aus diesem Grund möchte ich zunächst (I) Bolzanos Begriff der Wissenschaftslehre und vorher noch die damit zusammenhängenden Begriffe einer Wissenschaft und eines Lehrbuchs erläutern, um Verständnis für Bolzanos doch eher ungewöhnliche Konzeption der Wissenschaftslehre zu wecken; dann werde ich den Inhalt der fünf Hauptteile der Wissenschaftslehre jeweils kurz umreißen (II) und einige wichtige Lehren herausgreifen und rekonstruieren (III)."(S. 19-20)

70. ——. 1987. "Bolzanos Syllogistik." *Philosophia Naturalis* no. 24 (4):447-451.

Nachdruck: E. Morscher (2007), S. 101-105.

"Einordnung der Syllogistik in Bolzanos Logik.

Bolzano hat nicht ein eigenes System für die Syllogistik entwickelt, sondern er hat sie in eine allgemeinere Theorie eingebaut, ähnlich wie auch etwa in der modernen Logik die Syllogistik als Teil des Prädikatenkalküls aufgefaßt werden kann. Zu Bolzanos Syllogistik (BS) vgl. besonders WL II 413-415, 441-443 und 534-565." (S. 102)

71. ——. 1987. "'Hintertürln" für Paradoxien in Bolzanos Logik." *Philosophia Naturalis* no. 24:414-422.

Nachdruck: E. Morscher (2007), S. 159-167.

"Paradoxien können in einem logischen System an verschiedenen Stellen auftreten: Wenn man sie an einem Punkt ausgemerzt hat, bietet dies noch lange keine Gewähr dafür, daß sie sich nicht anderswo einschleichen. Dies umso mehr, wenn

die Grenzen eines Systems nicht streng bewacht, ja nicht einmal klar markiert und genau angebbbar sind, wie dies bei Bolzanos „System“ (und übrigens auch bei den meisten anderen „Systemen“ der traditionellen Logik) der Fall ist.

Ich möchte hier zeigen, daß (zumindest) an drei Stellen in Bolzanos Logik die Gefahr von Paradoxien auftritt. Damit soll gar kein Vorwurf gegen Bolzano erhoben werden (dazu übrigens noch Näheres im dritten Abschnitt), sondern ich möchte nur aus heutiger Sicht (mit unserem heutigen Wissen um Paradoxien) mögliche Gefahrenquellen in Bolzanos Logik aufspüren, denn: nur wer die Gefahr kennt, kommt in ihr nicht um ... Ich werde mich darauf beschränken, drei Paradoxien bzw. Paradoxie-Gefahren herauszuarbeiten, die sich bei Verwendung des elementaren Instrumentariums von Bolzanos Logik ergeben. Danach werde ich zu diesen angeblichen oder echten Gefahren Stellung nehmen.“ (S. 159)

72. ———. 1989. "Zu Bolzanos Lösung der Lügner-Paradoxie." In *Traditionen und Perspektiven der analytischen Philosophie. Festschrift für Rudolf Haller*, edited by Gombocz, Wolfgang L., Rutte, Heiner and Sauer, Werner, 89-96. Wien: Holder-Pichler-Tempsky.

Nachdruck: E. Morscher (2007), S. 149-157.

"In einer kurzen Studie (1) rekonstruiert Bochenski eine Lösung der Lügner-Paradoxie von Paulus Venetus. Ich werde hier zunächst Bochenskis Rekonstruktion wiedergeben und dann mit Hilfe des von ihm entwickelten Instrumentariums Bolzanos Lösungsvorschlag für die Lügner-Paradoxie analysieren." (S. 149)

75. ———. 2004. "Die Geburt der Gegenstandstheorie aus einem Missverständnis?" In *Phenomenology & Analysis: Essays on Central European Philosophy*, edited by Chrudzimski, Arkadiusz and Huemer, Wolfgang, 89-104. Frankfurt: Ontos Verlag.

"Bolzano unterscheidet immer wieder mit aller Schärfe und Deutlichkeit zwischen einer Vorstellung und ihrem Gegenstand: Nicht nur die subjektive Vorstellung, d.i. der psychische Vorstellungsakt, sondern auch deren objektiver Gehalt oder "Stoff", d.i. die Vorstellung an sich, unterscheidet sich wesentlich von ihrem jeweiligen Gegenstand. Das geht schon daraus hervor, dass ein und dieselbe Vorstellung mehrere Gegenstände haben kann (wie z.B. die Vorstellung [weißes Pferd]²) oder auch gar keinen (wie z.B. die Vorstellung [geflügeltes Pferd]) (WL I 218–20). Allerdings geht Bolzano nicht so weit zu behaupten, dass jeder Gegenstand einer Vorstellung von dieser selbst verschieden sein muss, denn es gibt nach ihm auch sogenannte symbolische Vorstellungen oder Vorstellungsvorstellungen (WL I 426–9, §90), von denen einige (wie z.B. die Vorstellungen [Vorstellung], [Nicht-Wirkliches] und [Etwas]) Gegenstände von sich selbst sind." (S. 93)

(2) Für Vorstellungen und Sätze an sich verwende ich die Quinesche Notation mit eckigen Klammern, von der ich schon

- bisher eingeschränkten Gebrauch gemacht habe: [Pferd] ist demnach die Vorstellung an sich von einem Pferd bzw. die durch das Wort 'Pferd' ausgedrückte Vorstellung an sich.

"Zeichen sind nach B. Bolzano wirkliche Gegenstände oder Prozesse, die nicht als etwas Für-sich-selbst-Stehendes, sondern als Hinweise auf ein Anderes verstanden werden. Das durch sprachliche Zeichen Bezeichnete ist das, was den Benutzern einer Sprache als einheitliche semantische Basis dient, was als Bereich von Vorstellungen und Sätzen an sich vorgegeben ist, also das, was unter der Intension von Zeichen verstanden wird. Extensionaler Bezug, also Referenz auf außermentale Objekte, ist nur indirekt auf dem Umweg über die Intensionen möglich. Im weiteren Verlauf der Darstellung wird Bolzanos Gebrauch der Ausdrücke „Sinn“ und „Bedeutung“ erklärt. Ferner werden die mit seiner Betonung des intensionalen Aspekts verbundenen erkenntnistheoretischen Probleme angesprochen und im Vergleich mit den Zeichentheorien von W. von Ockham, von J. H. Lambert und von G. W. Leibniz verdeutlicht. Dabei geht es um die Frage, ob die durch sprachliche Zeichen bezeichneten Inhalte Abbilder der außermentalen Objektwelt sind oder ihre Funktion sich darin erschöpft, auf die Welt des Außermentalen nur zu verweisen, ohne dieser selbst ähnlich zu sein."

den § 8 dieser Arbeit, einen Auszug, der für die mathematische Logik von besonderer

Bedeutung ist."

88. Schmit, Roger. 1994. "Über Bolzanos Begriff der Auslegung." *Grazer Philosophische Studien* no. 47:1-29.

"Die Frage der Beziehungen zwischen Logik und Umgangssprache beschäftigt Bolzano in der 1837 erschienenen *Wissenschaftslehre*.

Von besonderer Wichtigkeit für diese Problematik erweist sich der Begriff der Auslegung sprachlicher Ausdrücke.(8) Unter einer Auslegung versteht Bolzano ganz allgemein einen "Satz endlich, in welchem ausgesagt wird, dass der Sinn gewisser Zeichen dieser oder jener sey", wobei die Auslegung entweder bloss gedacht oder aber durch Zeichen ausgedrückt werden kann. In dem letzteren Falle handelt es sich dann um eine sprachliche Auslegung.(9) So gesehen stellt die Auslegung des Sinnes sprachlicher Zeichen eine ebenso natürliche wie notwendige Leistung dar, ohne die zwischenmenschliche Kommunikation überhaupt nicht denkbar wäre." (S. 4)

(8) Die Umgangssprache bezeichnet Bolzano auch noch als die "Sprache des gemeinen Lebens", dies im Gegensatz zur Sprache der Wissenschaft (Vgl. z.B.: § 169). Bemerkenswerterweise begegnen wir dem Begriff der Sprache des Lebens ebenfalls bei Frege. Vgl. [18]: Vorwort, XI, wo es heisst: "Das Verhältnis meiner Begriffsschrift zu der Sprache des Lebens ... ". Für Bolzano gilt aber, dass nicht nur die Gebrauchssprache, sondern auch die Sprache der Wissenschaft klarungsbedürftige Ausdrücke enthält. Ob diese terminologische Übereinstimmung eine rein zufällige Parallele darstellt oder als Hinweis für eine Beeinflussung

Freges durch Bolzano zu werten ist, bleibt ungeklärt, weil Frege sich nirgends explizit auf Bolzano bezieht. Eine Liste weiterer begrifflicher Parallelen zwischen Frege und Bolzano findet sich in [22]: pp. 21-41. Vgl. auch [23]: pp. 263-280.

"Bernard Bolzanos Definition der Ableitbarkeit (aus seiner *Wissenschaftslehre* von 1837) ist häufig mit Alfred Tarskis Definition der logischen Folgerung verglichen worden. Die Resultate eines solchen Vergleichs sind sehr einhellig ausgefallen: Die meisten der Autoren sehen eine frappierende Übereinstimmung.

Wilfrid Hodges z. B. verwendet im *Handbook of Philosophical Logic* den Terminus „Bolzano-Tarski definition“ - so als ob ihre Definitionen identisch wären. Heinrich Scholz schreibt, daß Tarski Bolzanos Begriff der Implikation „wiederentdeckt“ habe. Tarski selbst stimmt ihm hier zu. In einer Fußnote zu der englischen Übersetzung seines Folgerungs-Textes heißt es, daß Scholz „far-reaching analogies“ zwischen seinem und Bolzanos Ansatz gefunden habe. - In den Worten von Peter Simons und Johan van Benthem: Es ist mittlerweile zu einem philosophischen Allgemeinplatz geworden, daß Bolzano Tarskis Definition antizipiert hat.(1)

Ich möchte im weiteren Verlauf detailliert auflisten, welche Eigenschaften sich die definierten Implikations-Relationen teilen und welche nicht. In den bisherigen Texten findet man zwar verstreute Bemerkungen zu diesem Thema, aber keinen ausführlichen Vergleich, der eine größere Menge von Eigenschaften miteinbezieht, die für Implikations-Relationen relevant sind. Bolzanos Definition soll dabei in einer Weise modifiziert werden, die in Übereinstimmung mit seinen Ideen zur Logik ist. Auf diesem Weg werde ich zu einer Definition kommen, die Tarskis in der Tat sehr nahe kommt. Am Ende werden wir allerdings sehen, daß Unterschiede bleiben, die für

Logiker sehr wichtig sind: nämlich Unterschiede in der Extension." (p. 148)

98. ———. 1999. "Bolzanos Erkenntnistheorie." In *Bernard Bolzanos geistiges Erbe für da 21. Jahrhundert*, edited by Morscher, Edgar, 59-95. Sankt Augustin: Academia Verlag.

"Es geht mir in diesem Beitrag darum, den analytisch-deskriptiven Teil von Bolzanos Erkenntnistheorie darzustellen, indem ich zeige, auf welche Weise er solche Begriffe wie Erkenntnis, Wissen, Meinung und Urteil in der

Wissenschaftslehre erläutert. Mehr praktisch orientierte Fragen, wie die nach den Möglichkeiten oder dem Umfang unserer Erkenntnis, werden nur eine Nebenrolle spielen. Da der Begriff einer Meinung und der eines Urteils auch psychologische Grundbegriffe sind, handelt es sich zugleich um eine Einführung in einen Teilbereich von Bolzanos Philosophie des Geistes. Dabei wird immer wieder auf Parallelen zu heutigen Ansichten und auf Schwierigkeiten hingewiesen, die sich aus Bolzanos Explikationen ergeben. Trotz aller Detailprobleme stehen sie jedoch gegenüber den Erklärungen seiner Vorgänger und Zeitgenossen, mit denen er sich beschäftigt hat, sehr viel besser da." (p. 59)

100. ———. 2004. "Bolzanos Urteilslehre." *Archiv für Geschichte der Philosophie* no. 86:56-87.

"Die 1837 erschienene *Wissenschaftslehre* des böhmischen Philosophen, Theologen und Mathematikers Bernard Bolzano (1781–1848) ist in erster Linie durch ihre Untersuchungen zu (in einem weiten Sinn) logischen Begriffen ins philosophische Bewusstsein gerückt. Bolzano erläutert dort, wann Aussagen auseinander folgen, unter welchen Bedingungen sie analytisch oder synthetisch sind, was sie zu notwendigen oder kontingenten Wahrheiten macht, was Anschauungen und was Begriffe sind ... Weniger bekannt ist, dass dieses Werk eine eigenständige Urteilslehre enthält, die sich insbesondere im zweiten Hauptstück des Bandes III (§§ 290–306) verbirgt. Wie diese aussieht, wird im Folgenden kritisch rekonstruiert." (S. 56)

101. Siitonen, Arto. 2007. "Zu Bolzanos Kritik der Kantischen Antinomien." *Kriterion* no. 21:84-97.

Abstract: "Bernard Bolzano criticised Kant's philosophy so vehemently that his pupil Franz Prihonsky called him "Anti-Kant". One of his criticisms concerns Kant's cosmological antinomies. The context of this critique is the problem of limits of knowledge. Kant wanted to prove that there are such

boundaries, and to show where these are located. In this paper we will (i) schematize Kant's antinomies (to see what Bolzano really criticised on them) and (ii) summarize Bolzano's criticism, which is distributed over his and his student's work. At the beginning we will work out the (more fundamental) theoretical differences between Kant's and Bolzano's philosophy to see what roles these play in the construction of the antinomies."

102. Simons, Peter. 1999. "Bolzano über Wahrheit." In *Bernard Bolzanos geistiges Erbe für da 21. Jahrhundert*, edited by Morscher, Edgar, 13-28. Sankt Augustin: Academia Verlag.

"1. Bolzanos Theorie, kurz gefaßt

Bolzanos Theorie der Wahrheit ist schlicht und einfach. Zuerst unterscheidet er in § 24 der *Wissenschaftslehre* (WL) verschiedene Bedeutungen der Wörter 'wahr' und 'Wahrheit':

(1) Wahrheit als Beschaffenheit von Sätzen an sich, vermöge deren sie etwas so, wie es ist, aussagen.

(2) Wahrheit, verstanden als ein Satz, dem Wahrheit im Sinne von (1) zukommt.

(3) Wahrheit als Urteil, das eine Wahrheit im Sinne von (2) zum Inhalt hat (Bolzano sagt: richtiges Urteil), oder auch als die Beschaffenheit eines solchen Urteils.

(4) Wahrheit als der Inbegriff sämtlicher wahren Sätze an sich.

(5) Wahr im Sinne von echt oder wirklich.

Bolzano zieht die Bedeutungen (1) und (2) vor. Bezüglich (2) sagt er: "ich verstehe also, um es nochmals zu sagen, unter einer Wahrheit an sich jeden beliebigen Satz, der etwas so, wie es ist, aussagt, wobei ich unbestimmt lasse, ob dieser Satz von irgend jemand wirklich gedacht und ausgesprochen worden sei oder nicht". (S. 13).

"Nach dieser Übersicht über die Zielsetzung meiner Arbeit mag man sich fragen, warum ich zwei auf den ersten Blick sehr verschiedene Fragen in einer Arbeit behandle. Meine Antwort lautet: Die beiden Ziele meiner Arbeit sind durch den Begriff der Anschauung an sich bzw. des Anschauungssatzes an sich miteinander verknüpft. Sowohl in Bolzanos Theorie des Inhalts indexikalischer Denkepisoden als auch in seinen Analysen der eben aufgezählten Begriffe spielt dieser Begriff die zentrale Rolle. Meine Arbeit hat also eine Grundfrage, die man wie folgt formulieren könnte: „Welchen philosophischen Nutzen hat Bolzanos Unterscheidung zwischen Anschauungs- und Begriffssätzen an sich?“ (S. 2-3)

Franz Brentano's Ontology and His Immanent Realism

Brentano, philosopher and psychologist

"Brentano was a philosopher and psychologist who taught at the Universities of Würzburg and Vienna. He made significant contributions to almost every branch of philosophy, notably psychology and philosophy of mind, ontology, ethics and the philosophy of language. He also published several books on the history of philosophy, especially Aristotle, and contented that philosophy proceeds in cycles of advance and decline. He is best known for reintroducing the scholastic concept of intentionality into philosophy and proclaiming it as the characteristic mark of the mental. His teachings, especially those on what he called descriptive psychology, influenced the phenomenological movement in the twentieth century, but because of his concern for precise statement and his sensitivity to the dangers of the undisciplined use of philosophical language, his work also bears affinities to analytic philosophy." (p. 12)

From: Roderick M. Chisholm and Peter Simons, "Brentano, Franz Clemens" in: Edward Craig (ed.), *Routledge Encyclopedia of Philosophy*, London: Routledge 1998, vol. 2, pp. 12-17.

"Brentano never presented his philosophy in completed form. Most of his doctrines are known to us from writings published after his death, and these do not contain any rounded out statement of his views. Brentano was not among those who in a moment of intuition sketch the architectonics of a system, leaving the relevant details to be fitted into it later. His research, always problem-oriented, began with individual questions, then went on to seek an absolutely certain,

or if this could not be obtained, at least a probable, solution for the difficulties encountered along the way. Nor did he hesitate to revise his previous conceptions on the basis of advances in knowledge. The 'will to truth' checked the growth of a 'will to construct', and prevented the congealing of earlier ideas.

Brentano's significance for contemporary philosophy is still singularly underestimated. There is a striking disparity between the very great effect he has had on present-day philosophy and the relatively meager attention paid his teachings in current philosophical instruction and research. For Brentano is a center from which threads extend in the most varied directions. In the first place, the entire philosophy of phenomenology would be inconceivable without him. He was the teacher of Husserl (on whom he had an influence that should not be underestimated) and was thus the spiritual grandfather, so to speak, of Max Scheler and Martin Heidegger. Secondly, his work in ontology and metaphysics, notably his analysis of categories and his penetrating studies of Aristotle, decisively influenced the contemporary philosophies of Being (even if very indirectly in part). Finally, his method - especially in the study of the logic of language, which he considers the starting-point in philosophy bears a remarkable resemblance in many respects to the procedure of present day empiricism, and particularly to that of analytic philosophy in Britain and the U.S.A. It is difficult to say how much the investigations conducted in these countries owe to his stimulating ideas." (p. 24)

From: Wolfgang Stegmüller, *Main Currents in Contemporary German, British, and American Philosophy*, Dordrecht: Reidel 1969.

"Franz Brentano did not like to publish books; as he once said, he hated the "secondary work" that was connected with proof-reading, referencing of quotations, etc. He thus left the publication of his literary remains to his disciples. Indeed, after his death (1917) Alfred Kastil and Oskar Kraus undertook the publication of his literary remains and, in the time permitted to them, carried it out with great loyalty and dedication. In the years 1922 through 1934, there appeared in Felix Meiner's Philosophische Bibliothek ten volumes of Brentano's works; the editor's rich annotations are invaluable for understanding Brentano's lectures and the development of his

thoughts. After Kastil's death the work of publication was taken over by Franziska Meyer-Hillebrand, his disciple." (p. 94)

From: Hugo Bergmann, "Brentano on the History of Greek Philosophy", *Philosophy and Phenomenological Research* 27, 1967, pp. 94-99.

The theory of intentionality

"Brentano's first concern in psychology was to find a characteristic which separates psychological from non-psychological or 'physical' phenomena. It was in connection with this attempt that he first developed his celebrated doctrine of intentionality as the decisive constituent of psychological phenomena. The sentence in which he introduces the term 'intentionality' is of such crucial importance that I shall render it here in literal translation: Every psychical phenomenon is characterized by what the Scholastics of the Middle Ages called the intentional (or sometimes the mental) inexistence of an object, and what we should like to call, although not quite unambiguously, the reference (*Beziehung*) to a content, the directedness (*Richtung*) toward an object (which in this context is not to be understood as something real) or the immanent-object quality (*immanente Gegenständlichkeit*). Each contains something as its object, though not each in the same manner. In the representation (*Vorstellung*) something is represented, in the judgment something is acknowledged or rejected, in desiring it is desired, etc. This intentional inexistence is peculiar alone to psychical phenomena. No physical phenomenon shows anything like it. And thus we can define psychical phenomena by saying that they are such phenomena as contain objects in themselves by way of intention (intentional). (1) Actually, this first characterization of the psychological phenomenon makes use of two phrases: 'intentional inexistence' and 'reference to a content.' It is the first of these phrases which has attracted most attention, and it has even given rise to the view, supported by both anti-scholastics and neo-scholastic critics, that this whole doctrine was nothing but a loan from medieval philosophy. While a quick reading of the passage may seem to confirm this view, it is nevertheless misleading. 'Intentional inexistence,' which literally implies the existence of an 'intentio' inside the intending being, as if imbedded in it, is indeed a Thomistic

conception. But it is precisely this conception which Brentano himself did not share, or which in any case he abandoned, to the extent of finally even dropping the very term 'intentionality.' Thus, the second characterization of the psychic phenomenon, 'reference to an object,' is the more important and the only permanent one for Brentano; it is also the one listed exclusively in the Table of Contents, beginning with the first edition. What is more: as far as I can make out, this characterization is completely original with Brentano, except for whatever credit he himself generously extends to Aristotle for its 'first germs' in a rather minor passage of the *Metaphysics* (1021 a 29). It was certainly none of Brentano's doing that this new wholly unscholastic conception came to sail under the old flag of 'intentionality.' Reference to an object is thus the decisive and indispensable feature of anything that we consider psychical: No hearing without something heard, no believing without something believed, no hoping without something hoped, no striving without something striven for, no joy without something we feel joyous about, etc. Physical phenomena are characterized, by contrast, as lacking such references. It also becomes clear at this point that Brentano's psychological phenomena are always acts, taking this term in a very broad sense which comprises experiences of undergoing as well as of doing, states of consciousness as well as merely transitory processes. Here, then, Brentano for the first time uncovered a structure which was to become one of the basic patterns for all phenomenological analysis." (pp. 36-37)

Notes

(1) *Psychologie vom empirischen Standpunkt* I, Buch II, Kapitel I 5 (pp. 125 f.; English translation p. 88).

From: Herbert Spiegelberg, *The Phenomenological Movement. A Historical Introduction*, The Hague: Martinus Nijhoff 1963 (Third Edition).

"Of great importance is Brentano's classification of psychic phenomena. There are three classes: presentations, judgments, and emotive acts. Of the first Brentano claims that all psychic phenomena are either presentations or involve presentations (a statement accepted by Husserl in an interpretation of presentations

as "objectivating acts"). Judgments are conceived by Brentano as acts of affirmation or negation; thus he rejects a propositional theory of judgment. The third class (*Akte der Gemütsbewegung*) contains acts of volition as well as emotions, feelings, etc. These acts are conceived in analogy to judgments; they are either positive or negative (love vs. hate) and they are correct or incorrect (love is correct if its object is intrinsically worthy of being loved). This led Brentano to a conception of ETHICS as a discipline parallel to LOGIC. His basic ideas in ethics were first published as a paper he delivered in Vienna in 1889 (*Vom Ursprung sittlicher Erkenntnis*; an English translation, *Our Knowledge of Right and Wrong*, already appeared in 1902). His ethics had a strong influence on Max Scheler and on G. E. Moore (1873-1958). In his later writings Brentano became more and more interested in developing his own ontology and theory of categories. He developed a position called "reism" according to which the basic category is that of res, which comprehends both concrete things and immaterial souls. This strict objectivistic attitude was initially not influential within the phenomenological movement, but it did become important for logic and ontology in Poland. In recent years these ideas have had great influence on philosophers such as Roderick Chisholm and Barry Smith.

Of great influence on Husserl was Brentano's theory of wholes and parts, which he introduced in his "ontology," the second part of his Würzburg lectures (in the 1870s Brentano inserted a descriptive part that he called "phenomenology" between the abovementioned "transcendental philosophy" and the "ontology"). Ontology has as its basic distinction that between *collectiva* and *divisiva*, which dichotomy is in turn classified as physical, logical, and metaphysical. The influence on Husserl's formal and material ontology as developed in the third of his *Logische Untersuchungen* (1900-1901) is obvious, and it is likely that Husserl knew about these lectures via Stumpf, to whom he refers in this context and who had an extensive copy of these lectures.

The concept of Intentionality is only a problematic link between Brentano and phenomenology. This is already indicated by the fact that Brentano later gave up the term "intentional" because he thought that his views in this connection had been misunderstood. As a matter of fact Brentano does not talk about intention or

intentionality, but rather uses expressions like "intentional inexistence" or "intentionally contain" that he introduced in order to distinguish psychic phenomena from physical phenomena. An isolated quality such as red is a physical phenomenon; red as belonging to consciousness is on the other hand a psychic phenomenon.

Intentional inexistence can be regarded as a mereological concept on two different levels. On the descriptive level, a psychic phenomenon is part of a complex consciousness to which belong, for instance, inner perception, acts of judgment, and emotive acts; on the metaphysical level, which also embraces entities that are not immediately given but inferred, it is conceived as part of a soul. In contexts like "intentional inexistence," the term "intentional" does not determine the related expression "inexistence" (or "containment") but modifies it, i.e., it changes its original meaning. If these words were used in this original meaning, the following conclusions would be valid: if something exists in something else, then both things exist; if something is contained in something other than it, there is a spatial relation between them. In the modified context of "intentional inexistence" and "intentional containment," however, both conclusions are invalid. The intentional relation is thus, as Brentano explains in later writings, only "something relation-like" (*etwas Relativliches*). It is not, as in Husserl's intentional acts, a matter of directedness toward an object transcendent to consciousness but, in contrast, something immanent to consciousness." (pp. 74-75)

The School of Brentano

"The standards of rigour and descriptive adequacy of Scholasticism were re-established above all by Franz Brentano and his school. Brentano, a pupil of Adolf Trendelenburg, one of the few Aristotelians in the 19th century in Germany, created a philosophical system which was a synthesis of Aristotelianism, Cartesianism, and the empiricism of The British School. This system was modified in

different and often highly original ways by his pupils, the most important of whom were Kazimierz Twardowski, Edmund Husserl, Carl Stumpf, Christian von Ehrenfels, Anton Marty, and Alexius Meinong.

In contradistinction to Hegel and his fellow idealists, the Brentano School was very successful in associating its philosophical work in fruitful ways with modern developments in the sciences, above all in psychology and linguistics. Brentano's pupils were responsible for founding not only new philosophical movements such as phenomenology, but also new programmes of scientific research such as the Gestalt theories of the Graz and Berlin Schools. Brentano's pupils contributed in important ways to modern logic, above all through Twardowski and his students in Poland. And they contributed also to ontology, for example through Meinong and the members of The Graz School, who established the so-called theory of objects. Husserl, following in some respects in Meinong's footsteps, founded in turn the discipline of formal ontology and was the first to analyse in formal manner the ontological concepts of dependence, part and whole. Husserl's work in this field was then continued in philosophy above all by Adolf Reinach and Roman Ingarden, and in its application to linguistic parts and wholes by Stanislaw Leśniewski and others in Poland. Husserl's philosophical ideas on formal and material ontology gave rise further to a new understanding of synthetic or material a priori truths. From the perspective of Husserl, Reinach, and Ingarden such truths are not, as for Kant, the products of a forming or shaping activity on the side of the subject. Rather, as for Aristotle, they represent intelligible strictures on the side of the objects of experience, structures which are not invented but discovered, and which serve, again, as a pre-empirical basis for science and philosophy." (pp. XXI-XXII)

Franz Brentano: Editions and translations

Introduction

"An edition of Brentano's literary production in its entirety is not yet available. At present the available works by Brentano divide between the following two types:

1. Works published during his lifetime.
2. Works in his *Nachlass*.

The works which Brentano published during his lifetime, in the form of both books and Essays, represent only a small part of his total output. The books published from the *Nachlass* divide between:

1. Books edited by orthodox pupils, for instance O. Kraus, A. Kastil and F. Mayer-Hillebrand, which afford numerous personal insights.
2. Books published since the 1970s.

(See F. Mayer-Hillebrand, "Franz Brentanos wissenschaftlicher Nachlass", *Zeitschrift für philosophische Forschung* 6, 1951-52, 599-603, and by the same author, "Rückblick auf die bisherigen Bestrebungen zur Erhaltung und Verbreitung von Fr. Brentanos philosophischen Lehre und kurze Darstellung dieser Lehren", *Zeitschrift für philosophische Forschung* 17, 1963, 146-169; also "Remarks Concerning the Interpretation of the Philosophy of Franz Brentano. A Reply to Dr. Szrednicki", *Philosophy and Phenomenological Research* 23, 1962-3, 438-44; see also J.C.M. Brentano, "The Manuscripts of Franz Brentano", *Revue internationale de philosophie* 78, 1966, 477-482).

The books belonging to the first category were compiled according to debatable philological criteria, with additions and collages of writings produced in different periods. The considerable arbitrariness of these constructs and the interpretative interpolations made by the editors have not generally benefited the understanding and diffusion of Brentano's thought. In particular, collections of the posthumously-published Essays and dictations have often adopted the method of interpreting earlier texts as anticipations of later ones.

Moreover, one should read a huge body of correspondence (1400 letters with Marty alone) which has been published only in part, while some of the corpus, including letters from Brentano's period in Italy (1895-1916), is entirely unpublished. Brentano's philosophical correspondence is of great interest, not least because a letter sent to one scholar was then passed on to others, who read it, commented on it, and then sent it back, in a sort of epistolary colloquium. Only a tiny part of Brentano's correspondence has been published from the *Nachlass*.

Apropos the *Nachlass*, its first classification was produced by T. Masaryk, who founded a Brentano Archive in Prague for the purpose of organizing and publishing items. In 1939, at the beginning of the Second World War, the Archive was transferred first to Manchester, then to Oxford (the Bodleian Library), and finally to the United States.

Brentano's unpublished writings and dictations have undergone successive cataloguing by F. Mayer-Hillebrand, W. Baumgartner and T. Binder. They can currently be consulted at diverse universities. In the USA at the University of California (Berkeley), Brown University (Providence, Rhode Island), Cornell University (Ithaca, New York), Harvard University (Cambridge, Mass.), University of Minnesota (Minneapolis); Northwestern University (Evanston, Ill.), and at the Library of Congress, Washington, D.C. In Australia they can be consulted at Melbourne University (Victoria); in Europe at the Bodleian Library of Oxford, the Staatsbibliothek of Munich, the University of Innsbruck, the University of Vienna, and the Goethemuseum of Frankfurt; in France at the Bibliothèque Nationale, Paris; in Latin America at the University of Mexico City (Mexico D.F.) and the University of Buenos Aires, Argentina.

The Brentano Archive originally deposited at Brown University included Brentano's personal library. It can now be consulted at the Forschungsstelle and Dokumentationszentrum für österreichische Philosophie of Graz."

Main publications in German

N.B.: Abstract for some works not translated in English are from Antos B. Rancurello, "A Study of Franz Brentano. His Psychological Standpoint and His Significance in the History of Psychology", New York and London: Academic Press 1968, "Annotated Bibliography", pp. 134-169, abbreviated R. followed by page numbers.

1. Brentano, Franz. 1862. *Von der mannigfachen Bedeutung des Seienden nach Aristoteles*. Freiburg im Breisgau: Herder.

New edition in *Sämtliche veröffentlichte Schriften*, Vol. IV, edited by Thomas Binder and Arkadiusz Chrudzimski, Berlin: Walter de Gruyter, 2014.

2. ———. 1866. *Ad disputationem qua theses gratiosi philosophorum ordinis consensu et auctoritate pro impetranda venia docendi in alma universitate julio-maximiliana defendet*. Auschaffenburg: J. W. Schniper.

Three pages. Reprinted in: *Über die Zukunft der Philosophie* (1929).

"In sequence, deals with methodological questions (1-4), ontological and metaphysical problems (5-11), issues in philosophical psychology (12-15), logical and linguistic inquiries (16-21), ethical investigations (22-23), and aesthetics (24-25). The most important of these theses, the one that became Brentano's theoretical slogan, is the fourth one: *Vera philosophiae methodus nulla alia nisi scientiae naturalis est*. (The titles of these theses, followed by a commentary and critical note for each one of them, was published by Kraus, *Brentano, Über die Zukunft der Philosophie*, 1929.). (R. p. 1379

3. ———. 1867. *Die Psychologie des Aristoteles insbesondere seine Lehre vom nous poietikós. Nebst einer Beilage über das Wirken des Aristotelischen Gottes*. Mainz: F. Kirchheim.

Reprint: Wissenschaftliche Buchgesellschaft, Darmstadt 1967.

4. ———. 1867. "Geschichte der kirchlichen Wissenschaften." In *Kirchengeschichte. Band III, Teil 11*, edited by Mohler, Johann Adam, 103-104. Regensburg: G. J. Manz.

Edited by Pius Bonifacius Gams.

7. ———. 1874. *Psychologie vom empirischen Standpunkt [Erster Band]*. Leipzig: Duncker & Humblot.

"This was the title of the first edition: subsequently the final dative "e" was dropped to give the more commonly cited *Standpunkt*. The 350-page first edition was designated as Volume 1; this too was dropped." (English translation: *Introduction to the Second Edition*, p. XIII).

Second edition with introduction and notes by Oskar Kraus Leipzig, 1924; reprinted Meiner, Hamburg, 1973.

New edition of *Psychologie I & II* (1874/1911) as volume I of the *Sämtliche veröffentlichte Schriften* with the title: *Psychologie vom empirischen Standpunkt. Von der Klassifikation psychischer Phänomene* Frankfurt, Ontos Verlag, 2008.

8. ———. 1874. *Über die Gründe der Entmutigung auf philosophischem Gebiete*. Wien: Braumüller.

"Originally Brentano's inaugural professorial address delivered at the University of Vienna on April 22, 1874 (only slightly over a month after the publication of his *Psychology*). Contains an analysis of the main objections of positivism against philosophy, followed by "a proof of its strength and rightful

claim” for a place and future among the various sciences. Surprisingly enough, however, Brentano here rests his case on behalf of philosophy upon Comte’s positivistic conception of a hierarchy of sciences. Disregarding this inconsistency, later on recognized by Brentano himself, his views on the dependence of “Sociology and all the other branches of philosophy” upon psychology remain in the mainstream of his thinking." (R. p. 138)

10. ———. 1876. *Was für ein Philosoph manchmal Epoche macht*. Wien, Pest, Leipzig: Hartleben.
"Originally an address to a student’s club at the University of Vienna. Contains an exposition and critique of Plotinus’ philosophy, with the specific purpose of showing its striking similarities to certain modern philosophical conceptions (especially Schelling’s conception), all being presented as concrete illustrations of the phase of decline in philosophy which Brentano called mysticism." (R., p. 138)
11. ———. 1879. *Neue Rätsel von Änigmatias*. Wien: C. Gerold's Sohn.
Second expanded edition with the title: *Änigmatias. Neue Rätsel* - Beck, München 1909.
12. ———. 1882. "Über den Creatianismus des Aristoteles." In *Sitzungsberichte der kaiserlichen Akademie der Wissenschaften. Philosophisch-historische Klasse. Band 100*, 95-126. Wien: C. Gerhold's Sohn.
"An exposition and defense of his interpretation of Aristotle, according to which this philosopher would have asserted beyond doubt the divine origin of man’s soul, and hence its spirituality and immortality." (R., p. 138)
13. ———. 1883. *Offener Brief an Herrn Prof. Dr. Eduard Zeller aus Anlass seiner Schrift über die Lehre des Aristoteles von der Ewigkeit des Geistes*. Leipzig: Duncker & Humblot.

14. ———. 1889. *Vom Ursprung sittlicher Erkenntnis*. Leipzig: Duncker & Humblot.

Second expanded edition by Oskar Kraus Meiner, Leipzig, 1921 reprinted 1969.
15. ———. 1892. *Das Genie*. Leipzig: Duncker & Humblot.

"Originally an address delivered to the Vienna Society of Engineers and Architects. Its central and recurring theme is that "genial activity differs from the non-genial always in degree, but never in kind." Proceeding methodologically "from simple to more complex cases," and casting the whole discussion into a fairly adequate historical perspective, Brentano develops this theme as it applies to "geniuses" in the field of "games," the scientific field, and the field of fine arts. Discounting as "at the very least premature" any attempt to explain "genial phenomena" on the basis of "a special physiological constitution of the brain," he advances instead a psychological explanation, viewing them as the "fruit of habit, of practice . . . according to common psychological laws" (such as the laws of "interest," "participation"—including both feeling and will—and "imprinting"). With a genial touch of his own, Brentano concludes: "What was divine in [geniuses] lives also in us, even though it does not burn with such a bright flame, and this is exactly what makes us like them." In essence, this small treatise may be viewed as a chapter in his "genetic" psychology. (Reprinted in *Grundzüge der Ästhetik* [1959].)" (R., p. 139)
16. ———. 1892. *Das Schlechte als Gegenstand dichterischer Darstellung*. Leipzig: Duncker & Humblot.
17. ———. 1892. "Über ein optisches Paradoxon." *Zeitschrift für Psychologie und Physiologie der Sinnesorgane* no. 3:349-358.
18. ———. 1892. "Über ein optisches Paradoxon (Zweiter Artikel)." *Zeitschrift für Psychologie und Physiologie der Sinnesorgane* no. 5:61-82.
19. ———. 1893. *Über die Zukunft der Philosophie*. Wien: Alfred Hölder.

Edited and introduced by Oskar Kraus. New edition edited by Paul Weintgartner Meiner, Hamburg, 1968.

"Originally a lecture delivered to the Philosophical Association of Vienna on March 22, 1892 in refutation of the position taken by Exner, Rector of the University of that city, in his inaugural address the previous year that (1) "philosophy has forfeited its sovereignty without any hope of ever regaining it," and (2) the method of the natural sciences is inapplicable to the *Geisteswissenschaften*. Brentano supplemented the lecture with an introduction and an appendix. " (R., p. 141)

20. ———. 1893. "Das Genie." *Zeitschrift für Psychologie und Physiologie der Sinnesorgane* no. 5:94-96.
21. ———. 1894. "Zur Lehre von den optischen Täuschungen." *Zeitschrift für Psychologie und Physiologie der Sinnesorgane* no. 6:1-7.
22. ———. 1895. *Die vier Phasen der Philosophie und ihr augenblicklicher Stand*. Stuttgart: Cotta.

Reprinted with a new introduction by Oskar Kraus and the addition of essays on Plotinus, Thomas Aquinas, Kant, Schopenhauer and Auguste Comte Meiner, Leipzig, 1926.

New edition edited by Franziska Mayer-Hillebrand, Meiner, Hamburg, 1968.

23. ———. 1895. *Meine letzten Wünsche für Österreich*. Stuttgart: Cotta.

"Reprint of articles published in *Wien Neue Freie Presse* (December 2, 5, 8, 1894), with a preface and two "supplements" (containing the critique of the stand he had taken in those articles by "einer regierungsfreundlicher Presse," and his replies to it). Contains Brentano's critical assessment of (1) Austrian laws on marriage (with special reference to his own case), and (2) the intellectual atmosphere and certain specific policies of the University of Vienna (in general, and in particular as they related to his efforts to insure freedom of thinking and teaching, rejuvenate philosophy, and furnish the young psychology the proper media for growth and development—an

Institute, and a Laboratory), “Accusations,” Brentano tells us, were directed against him on both counts, especially the first; and he did not hesitate to “defend” himself. Ultimately, the claim of this booklet for scientific status seems to rest mainly, if not exclusively, upon Brentano’s views on the value and need for experimentation in psychology, and his distinction between “descriptive” and “genetic psychology.”

Brentano wrote his *Last Wishes* upon resigning his post at the University of Vienna. The reasons leading him to take this step, together with the deep pathos and nostalgia connected with it, are well reflected in the following statements: “It had been twenty years since I came to Austria, to Vienna and its University. I have come with inherited warm sympathy for this land and its people; I have found the most friendly reception; and as one of the noblest daughters of Vienna extended her hand to me as wife, I felt even more closely united in brotherhood with my new people. Now fate has it that this is the very reason why, failing in health, overwhelmed (with sorrow) and fettered in my best views for the common good, today I am thinking of leaving Austria.” (R. pp. 1412-142)

41. ———. 1924. "Anschauung und abstrakte Vorstellung. (Anschaulich einheitliche und attributiv einheitliche Vorstellung.)

(Letztes Diktat Franz Brentanos am 9. März 1917, acht Tage vor seinem Tode)." In *Psychologie vom empirischen Standpunkte*, 204-212. Leipzig: Meiner.
42. ———. 1925. *Versuch über die Erkenntnis*. Leipzig: Meiner.

Edited by Alfred Kastil; Second revised edition edited and introduced by Franziska Mayer-Hillebrand, Meiner, Hamburg, 1970.

"Contains several studies (mostly in the nature of "dictations") written over approximately the last twenty years of Brentano's life. The title may have been chosen by the editor with the conscious intention of putting this volume in direct line of descent from Locke's and Leibniz's epoch-making *Essays*, and from Laplace's less well known, but equally important, *Philosophical essay on probabilities*. Consists of a theory of epistemology, and more specifically a theory of induction, with definite "psychological overtones." Its longest single essay

(dated 1903) is entitled: "Down with Prejudices: a word of exhortation to the present world to free itself, in the spirit of Bacon and Descartes, of all blind a-priori." Supplemented with additional studies, this essay forms the core of a four-part treatise, touching upon: (1) scientific philosophy and the philosophy of prejudice, (2) the logical character of mathematics, (3) the problem of induction, and (4) the universal principle of causality and the impossibility of absolute chance occurrence for anything which is or was or will be. A twenty-page long essay on probability (dated 1916) completes the text of this volume." (R., pp. 144-145)

43. ———. 1926. "Zur Klassifikation der Künste." *Hochschulwissen* no. 3:57-62.

44. ———. 1926. "Über Prophetie." *Jahrbuch der Charakterologie* no. 2:259-264.

45. ———. 1928. *Psychologie vom empirischen Standpunkt. Band III. Vom sinnlichen und noetischen Bewusstsein; Äussere und innere Wahrnehmung, Begriffe*. Leipzig: Felix Meiner.

Edited by Oskar Kraus. .

New edition revised by Franziska Mayer-Hillebrand, 1968.

46. ———. 1928. *Vom sinnlichen und noetischen Bewusstseins*. Leipzig: Meiner.

Edited by Oskar Kraus < reprinted by Mayer/Hillebrand, Hamburg, Meiner, 1968, 1974.

47. ———. 1929. *Vom Dasein Gottes*. Leipzig: Felix Meiner.

Edited by Alfred Kastil; reprinted Meiner, Hamburg, 1980.

48. ———. 1929. "Über die Zukunft der Philosophie, nebst den Vorträgen. Über die Gründe der Entmutigung auf philosophischen Gebiet. Über Schellings System, sowie 25 Habilitationsthesen." In. Hamburg: Meiner.

Second edition with an Introduction by Paul Weingartner, 1968.

49. ———. 1930. *Wahrheit und Evidenz. Erkenntnistheoretische Abhandlungen und Briefe*. Leipzig: Felix Meiner.

Edited by Oskar Kraus; reprinted Meiner, Hamburg, 1974.

50. ———. 1933. *Kategorienlehre*. Leipzig: Felix Meiner.

Edited with introduction and notes by Alfred Kastil; reprint Hamburg: Meiner 1985.

51. ———. 1946. "Briefe Franz Brentanos an Hugo Bergmann." *Philosophy and Phenomenological Research* no. 7:83-158.

Edited by Hugo Bergmann.

52. ———. 1954. *Religion und Philosophie: ihr Verhältnis zueinander und ihre gemeinsamen Aufgaben*. Bern: A. Francke.

Edited, with an Introduction and Commentary by Franziska Mayer-Hillebrand.

"Aims to present Brentano's overall views on "the relationship between philosophy and religion, and their common tasks." As can easily be inferred from the commentary, an almost herculean effort (first by Kastil and then by the present editor) went into "assembling" this volume from very disparate sources (notes, outlines, lecture excerpts, letters, summaries from previous printed works). In spite of this, as the editor indicates, Brentano's views remain fragmentary in a number of instances.

Contains four major sections (each subdivided into several parts), dealing respectively with the following topics: (1) philosophical essay on religion (concept and tasks of religion and philosophy, religion and typical forms of religion, the philosopher's attitude toward "popular" forms of religion), (2) existence and nature of God, and his relation to the world, (3) problems in theodicy (origin of evil and its compatibility with the "ordinances" of an all-powerful and all-good God, optimism versus pessimism), and (4) spirituality and immortality of man's soul.

The last part was edited by Kastil over a ten year period (1933-1943), and was originally intended by him to form the core of a

fourth volume on Brentano's *Psychology* (in addition to the three volumes edited by Kraus). The present editor justifies its inclusion in this volume because, according to Brentano, the most important task of both philosophy and religion is directed to prove the spirituality and immortality of man's soul. As it presently stands, this part contains an exposition and critique of the most important "mind-body" theories, followed by a detailed statement of proofs designed to show that "the psychic subject," i.e., "the subject of our psychic activities," is a "spiritual, nondimensional, nonspatial substance," and as such immortal. Among other things, within this context, Brentano debates the issue of whether any one part of the brain or the brain as a whole could be the substrate of psychic activities. In view of his repeated insistence in previous studies upon the spirituality of Aristotle's "active intellect," it is of interest to notice in passing that in the present volume he argues against the "semimaterialism" of this author." (R., pp. 149-150)

53. ———. 1956. *Die Lehre vom Richtigen Urteil. Nach den Vorlesungen über Logik, mit Benützung anderer Manuskripte aus dem Gebiete der Erkenntnistheorie, aus dem Nachlass.* Bern: A. Francke.

Edited by Franziska Mayer-Hillebrand.

54. ———. 1959. *Grundlegung und Aufbau der Ethik.* Bern: A. Francke.

From the unpublished lessons on "*Praktische Philosophie*".
Edited by Franziska Mayer-Hillebrand.

"Presents Brentano's ideas on Ethics as found in annotations and outlines used by him in his lectures on "Practical Philosophy" at the University of Vienna (1876-1894). In its present form, the text is supplemented with statements taken from Kraus' works and other works of Brentano. This painstaking editorial work was originally undertaken by Kastil, and subsequently, after his death in 1950, was brought to completion by the present editor, one of his pupils.

Contains a brief introduction (covering some general topics to be expected at the beginning of a course in Ethics), and six

parts, touching upon the following broad issues: principles of ethical knowledge, the highest practical good, freedom of the will, morality in general, ethical principles, actualization of ethical principles. The theme underlying all these issues, and throwing light upon Brentano's own answers to them, is his basic conception that ethics is neither "heteronomous" (dependent upon extrinsic norms), nor "autonomous" (in the sense of Protagoras' famous dictum "man is the measure of all things"), but "orthonomous": the true "measure of all things" is not "man as such," but "man, the knower, insofar as he judges with evidence" (einsichtig)". (R., p. 149)

55. ———. 1959. *Grundzüge der Ästhetik. Aus dem Nachlass*. Bern: A. Francke.

Edited, with an Introduction and Commentary by Franziska Mayer-Hillebrand.

"Based upon Brentano's lectures (1885-1886) on "Selected problems from psychology and esthetics," other unpublished material, and some studies previously published by Brentano himself [1892a, 1892b] or by his editors. In essence, presents all that Brentano ever said on the matter (although less complete than his pronouncements on ethics and logic). Contains three parts, dealing respectively with (1) "Selected problems in psychology and esthetics" (concept of psychology and esthetics, including a rather comprehensive "longitudinal" historical perspective, which in turn includes a detailed exposition and sharp critique of the various theories discussed; relationship between psychology and esthetics, with an analysis of "descriptive" and "genetic" psychology; investigations on representation— a forty-five page long "treatise", *Das Genie*), (2) "On the beautiful" (the concept of the beautiful; value relationships of our representations; *Das Schlechte als Gegenstand dichterischer Darstellung*), and (3) "Classification and Assessment of art" (some general considerations and principles, followed by some essays "On music")." (R., p. 151)

56. ———. 1963. *Geschichte der Griechischen Philosophie*. Bern-München: A. Francke.

From the lessons on history of philosophy of the *Nachlass*. Edited, with an introduction and Commentary by Franziska Mayer-Hillebrand.

"Based upon Brentano's lectures on the history of philosophy (Würzburg-Vienna). Even in their available broad outline forms, these lectures show how well Brentano set the stage for his "saga", and how well he knew the part which each actor was playing or which he asked him to play. Of course, the hero in this narrative is Aristotle, taking up, as he does, one-third of Part I, "the ascending phase" (beginning with the Ionian philosophers) and sitting majestically at its apex. As might be expected, Part II, "the phase of decline," is much shorter: only eighty-seven pages, in comparison with three-hundred-and-nine pages, making up Part I." (R., p. 151)

Sämtliche veröffentlichte Schriften, Vol. IX, edited by Thomas Binder und Arkadiusz Chrudzimski, Berlin: Walter de Gruyter, 2019.

Brentano's writings published during his lifetime will be reprinted by Ontos Verlag (now De Gruyter) in ten volumes:

Franz Brentano: *Sämtliche veröffentlichte Schriften in zehn Bänden* (Herausgegeben von Arkadiusz Chrudzimski und Thomas Binder).

I. *Abteilung: Schriften zur Psychologie.*

1. Band: Psychologie vom empirischen Standpunkt (1874/1911): Mit einem Vorwort von Thomas Binder und Arkadiusz Chrudzimski zur Ausgabe der veröffentlichten Schriften, eingeleitet von Mauro Antonelli und Werner Sauer. Herausgegeben von Werner Sauer, 2014.

2. Band: Untersuchungen zur Sinnespsychologie

II. *Abteilung: Schriften zur Ethik und Ästhetik.*

3. Band: Schriften zur Ethik und Ästhetik

III. *Abteilung: Schriften zu Aristoteles.*

4. Band: Von der mannigfachen Bedeutung des Seienden nach Aristoteles (1862) [2014]

5. Band: Die Psychologie des Aristoteles (1867)

6. Band: Aristoteles Lehre vom Ursprung des menschlichen Geistes (1911): Mit einem Vorwort von Mauro Antonelli und Thomas Binder zur Ausgabe der veröffentlichten Schriften und einem einleitenden Essay von Ion Tănăsescu. Herausgegeben von Mauro Antonelli und Thomas Binder, 2023.

7. Band: Aristoteles und seine Weltanschauung (1911): Mit einem Vorwort von Thomas Binder und Arkadiusz Chrudzimski zur Ausgabe der veröffentlichten Schriften, eingeleitet von Guillaume

Fréchette. Herausgegeben von Thomas Binder und Arkadiusz Chrudzimski, 2018.

8. Band: Kleinere Schriften zu Aristoteles

IV. Abteilung: Vermischtes

9. Band: Vermischte Schriften: Mit einer Einleitung von Denis Fisette. Herausgegeben von Thomas Binder und Arkadiusz Chrudzimski, 2019.

V. Abteilung: Nicht-Philosophisches.

10. Band: Nicht-Philosophisches: Theologisches - Juristisches - Schachschriften - Rätsel - Dichtung

English translations

1. Brentano, Franz. 1975. *On the Several Senses of Being in Aristotle*. Berkeley: University of California Press.

Edited and translated by Rolf George.

Contents: Editor's Preface XI; Preface XV; Introduction 1; I. The Fourfold Distinction of Being 3; II. Accidental Being 6; III. Being in the Sense of Being True 15; IV. Potential and Actual Being 27; V. Being According to the Figures of the Categories 49; Notes 149-197.

"Thus the discussion of the several senses of being form the threshold of Aristotle's *Metaphysics*. This makes clear why these considerations must have had great importance for him, and this importance becomes even more obvious if one considers that in this context there is considerable danger of confounding several concepts which have the same name. For, as he remarks in the second book of the *Posterior Analytics* 10, it becomes more and more difficult to recognize equivocation the higher the degree of abstraction and generality of concepts. Thus the possibility of deception must be greatest with being itself since, as we have already seen, it is the most general predicate.

But we have not yet established the fact that, according to Aristotle, being is asserted with several significations, not only

with one (*Categories* 1. 1a1. 6). To begin with we shall establish this through several passages of the *Metaphysics* and show, at the same time, how the various distinctions of the several senses of being can be initially subordinated to four senses of this name; subsequently we shall proceed to a special discussion of each of them." (*Introduction*, p. 2)

(10) *Anal. post.* 11.13. 97b29: "Equivocation is less readily detected in genera than in infimae species."

2. ———. 1977. *The Psychology of Aristotle, in Particular His Doctrine of the Active Intellect. With an Appendix Concerning the Activity of Aristotle's God*. Berkeley: University of California Press.

Edited and translated by Rolf George.

Contents: Editor's Preface IX; Preface XIII; Introduction 1; Book I. Survey of Earlier Explanatory efforts 4; Book II. Development of the Aristotelian Doctrine of the Active Intellect 25; Review; Guidelines for the Investigation 25; Part I. Of the Soul and the Powers of the Soul in General 28; Part II. Of the Parts of the Soul in Particular, and First of the Vegetative Soul 50; Part III. Of the Sensitive Soul 54; Part IV. Of the Intellectual soul 74; Appendix. Of the Activity, Especially the Creative Activity, of Aristotle's God 162; Notes 181; Index 265-266.

"In all, Franz Brentano wrote four books on Aristotle. The first of these is his well-known *Of the Several Senses of Being in Aristotle*. The present book, first published in 1867, is the second. The third, *Aristoteles Lehre vom Ursprung des menschlichen Geistes* is an animadversion upon a theory of Zeller and a development and defense of a point first made in this volume. The last, *Aristoteles und seine Weltanschauung*, written toward the end of Brentano's life, is a general account—a composite photograph, as it were—of Aristotle's metaphysical teaching.

A few comments about the present volume (and a hint concerning the third) are in order. Eduard Zeller had attributed to Aristotle the view that the human intellect is not created with

the individual person, but derives from some preexisting pool of intelligences. Brentano developed his opposition to Zeller in minute detail in *Ursprung*. But at the root of his misgivings lies a general aversion to mysticism and the imputation of mystical teachings to Aristotle. A case of the latter was Averroes' theory that the Active Intellect is a cosmic or divine power, rather than a force that belongs to each individual mind, a force that must be presumed to exist if we want to explain thinking at all. Few contemporary commentators follow Brentano in this. Most of them would, except perhaps for the metaphor, agree with Randall and regard the Active Intellect as a "Platonic wild oat coming home to roost."

Brentano found neither theoretical merit nor personal solace in the thought that one might lose his individuality by being taken up into a larger whole. Similarly, he found repugnant any view that took sensing, thinking, willing, and the like to be in some deep sense events other than occurrences in an individual mind, perhaps a partaking in some divine happening. Brentano found in Aristotle a similar respect for human individuality. Thus this book is not merely an exegesis of an Aristotelian text, but a defense of it against certain mystical misinterpretations, as well as a document of Brentano's own antimystical fervor." (From the Editor's Preface, p. IX)

3. ———. 1995. "*Nous poiētikos*: Survey of Earlier Interpretations." In *Essays on Aristotle's De Anima*, edited by Oksenberg Rorty, Amélie and Nussbaum, Martha C., 313-329. New York: Oxford University Press.

Translated from *The Psychology of Aristotle*, Book I.

Abstract: "This essay explores Aristotle's conception of the active intellect or *nous poiētikos*. The earliest, medieval, and most recent interpretations of this concept are discussed. It is argued that even Aristotle's immediate disciples disagreed in their conception of the active intellect, nor was there any more unanimity in the Middle Ages. According to Trendelenburg, the difficulty of the Aristotelian doctrine lies in the fact that the *nous* is sometimes said to be so intimately connected with the other faculties of the soul that it appears to be incapable of

existing without them. When it is viewed the highest nous, as nous poiētikos, it is separated from the rest of human nature and contrasted with it as something higher and its ruler."

4. ———. 1973. *Psychology from an Empirical Standpoint*. New York: Humanities Press.

Edited with a Preface L. McAlister; translated by Antos C. Rancurello, D.B. Terrell and Linda L. McAlister.

Second edition with a new introduction by Peter Simons, London, New York, Routledge 1995.

Book One: Psychology as a science (translation of *Psychologie vom empirischen Standpunkt* - vol I).

Book Two: Mental phenomena in general (translation of *Psychologie vom empirischen Standpunkt* - vol II).

"Franz Brentano's *Psychologie vom empirischen Standpunkt* was originally published in 1874 by Duncker & Humblot in Leipzig. It was divided into two books, and three additional books were supposed to follow, but never appeared. Another book entitled *Vom sinnlichen und noetischen Bewusstsein* is sometimes referred to as "Psychologie III"; it is not included here, although an English edition is planned.[*] 1911 Book Two of the *Psychologie* was reissued under the title *Von der Klassifikation der psychischen Phänomene* again by Duncker & Humblot. To this edition Brentano added some notes and appended several essays expanding upon and in some cases revising and correcting points made in the original text. In 1924 a second edition of *Psychologie vom empirischen Standpunkt*, edited by Oskar Kraus, was published in Felix Meiner's Philosophische Bibliothek series in Leipzig. In addition to the supplementary essays which had been added in 1911, Kraus appended several more essays from Brentano's *Nachlass*, and provided an Introduction and explanatory notes.

The present edition is a translation of Kraus's 1924 edition although it differs in the following respects. It does not include the essay, "Miklosich on Subjectless Propositions." Kraus had included this essay in the 1924 edition of the *Psychologie* and omitted it from his 1934 edition of *Vom Ursprung sittlicher*

Erkenntnis, the work to which Brentano had originally appended it. Since it has recently been restored to its place in that work in Roderick M. Chisholm's English edition, *The Origin of Our Knowledge of Right and Wrong* (London and New York, 1969), I omit it here. The notes from Kraus's edition, many of which are devoted to giving Kraus's own interpretation of Brentano's views, are included here. They can be distinguished from Brentano's notes by their numerical designations. I have, however, abbreviated some and omitted others. References have been brought up to date and English editions have been cited whenever possible. The few additional notes added by the translators and the editor are identified as such; most of these were contributed by D.B. Terrell." (*Preface to the English Edition*, p. XXI)

[*] *Sensory and Noetic Consciousness* (1981).

5. ———. 1981. *Sensory and Noetic Consciousness. Psychology from an Empirical Standpoint vol. III*. London: Routledge & Kegan Paul.

Edited by Oskar Kraus. English edition edited with a Preface by Linda L. McAlister; translated by Margarete Schättle and Linda L. McAlister.

"When, in 1911, Brentano allowed the second book of the *Psychology* to be re-issued under the title *The Classification of Mental Phenomena*, the text was reprinted in its original form because to do otherwise would have required extensive revisions, but many footnotes and a lengthy appendix were added by Brentano so that his mature thinking on the topics touched upon in the *Psychology* would be revealed.

In 1929; eleven years after Brentano's death, his friend and editor, Oskar Kraus, compiled a collection of essays from *Nachlass* on topics relating to psychology. Kraus chose to call this volume *Psychologie II* as though it were the long-awaited third book of Brentano's *Psychology*. In a way, this is how Kraus viewed it. The positions reflected in this volume, however, are those of Brentano's later philosophical period, so the *Psychologie III* really does not constitute a direct continuation of the first two books of *Psychology From an*

Empirical Standpoint at all. At best, it is a continuation of the *Appendix to The Classification of Mental Phenomena*. Kraus subtitled his collection *Vom sinnlichen und noetischen Bewusstsein* (On Sensory and Noetic Consciousness). In order to avoid the confusing implication of calling this work *Psychologie III*, I have chosen to entitle the English edition *Sensory and Noetic Consciousness* and subtitle it *Psychology III* for purposes of identification.

The present volume is a translation of Oskar Kraus's 1929 collection.

It differs only in that I have edited certain portions of Kraus's introductory remarks, especially those of a somewhat polemical nature in which he responds at length to the criticisms of some of his contemporaries, and which would be of interest largely to specialists in the history of early-twentieth-century German philosophy, but not to the general philosophical and psychological readership today. I have also abbreviated some of Kraus's copious footnotes. In each case in which there is an omission, it is indicated in the text by an ellipsis." (From the *Preface to the English Edition*, p. VII)

6. ———. 1902. *The Origin of the Knowledge of Right and Wrong*. Westminster: A. Constable & Co.

Translated by Cecil Hague (now obsolete: see the new translation by Roderick M. Chisholm and Elizabeth H. Schneewind).

7. ———. 1969. *The Origin of our Knowledge of Right and Wrong*. London: Routledge & Kegan Paul.

Edited by Oskar Kraus; English edition edited by Roderick M. Chisholm.

Translated by Roderick M. Chisholm and Elizabeth H. Schneewind.

Reprint: New York, Routledge, 2009.

"The first edition of Franz Brentano's *Vom Ursprung sittlicher Erkenntnis* was published in 1889 by Duncker & Humblot in Leipzig. This was translated by Cecil Hague and published in

1902 by Archibald Constable & Co., Ltd., in London. A second edition, edited by Oskar Kraus, was published by Felix Meiner in Leipzig in 1921. This edition contained as Appendices nine supplementary essays from Brentano's *Nachlass*, as well as an Introduction and explanatory notes by Kraus. A third revised edition, edited by Kraus, was published by Felix Meiner in 1934.

The present translation is a translation of Kraus's third edition. It differs from Kraus's edition in the following respects. It includes everything that Brentano had included in his first edition (Kraus had omitted the essay, "Miklosich on Subjectless Propositions," since this was included in the second edition of Brentano's *Psychologie vom empirischen Standpunkt*, published by Felix Meiner in 1925). Some of Kraus's notes and parts of the Introduction have been abbreviated, some of the notes have been omitted, and references have been brought up to date. I have added a few brief notes; these have my initials.

Two works that had not appeared when Kraus wrote his Introduction may be brought to the reader's attention. One is Brentano's *Grundlegung und Aufbau der Ethik* (Bern: A. Francke, 1952), edited by Professor Franziska Mayer-Hillebrand of Innsbruck. This book was prepared from Brentano's notes for his lectures on Practical Philosophy, given at the University of Vienna from 1876 to 1894. It is now being translated into English by Elizabeth Schneewind. The other is Kraus's own *Die Werttheorien: Geschichte und Kritik* (Brünn: Richard M. Rohrer, 1937). This is a most useful and informative discussion of the history of the theory of value up to the 1930's, seen from the point of view of the book that is here translated.

The present translation, which is completely new, was prepared by Elizabeth Schneewind and myself. To avoid confusion, we have retained the title that Cecil Hague used for his translation of the first edition. We wish to thank Miss Linda L. McAlister for a number of helpful suggestions and criticisms." (Preface to the English Edition (by R. M. Chisholm))

8. ———. 1998. "The Four Phases of Philosophy and its Current State." In *The Four Phases of Philosophy*, edited by Mezei,

Balasz M. and Smith, Barry. Amsterdam: Rodopi.

"In what follows we shall introduce the English translation of what is perhaps Brentano's most important text on the history of philosophy. In our introduction, we shall analyze Brentano's conception of what he called "the four phases of philosophy"; we shall show the origin of his theory and the problems it was designed to address; and we shall demonstrate that Brentano's theory can be applied to at least one line in the history of philosophy after Brentano's time.

That Brentano developed his own theory of the history of philosophy is not widely known. This theory is summarized in a short essay entitled "The Four Phases of Philosophy", published in 1895 and translated here as an Appendix. Brentano believed that the history of philosophy displays a regularly recurring pattern and can thus be divided into successive periods, each of which can be considered as an organic whole of a precisely determined form.

Such periods are for instance the period of classical Greek philosophy ending with Aristotle, the medieval period up to but not including Descartes, and the period of modern philosophy beginning with Descartes and ending with Hegel and other classical 'German idealist' thinkers. In each such period, Brentano argues, four phases can be distinguished: the first phase is that of intensive philosophical development, of scientific results and scientific interest; the second phase is dominated by practical interest; the third phase is that of increasing scepticism which gives way, in the end, to a last phase, in which philosophy becomes a mere branch of literature which has no scientific relevance at all.

Brentano's theory of the history of philosophy is based on the idea that philosophy is a science, and that the method of philosophy is identical with the method of the other sciences. Philosophy is a science for two reasons. First, it has a determinate subject-matter, which is in Brentano's eyes the structure and function of human cognition; and second, it has a determinate method, which is in no way different from the method of the other sciences, both as concerns its logical

coherence and rigour, and also as concerns the requisite clarity of its formulations." (pp. 1-2)

9. ———. 1978. *Aristotle and His World View*. Berkeley: University of California Press.

Edited and translated by Rolf George and Roderick M. Chisholm.

"In Brentano's scientific *Nachlass* there are more than 150 unpublished manuscripts and dictations pertaining to "*Aristotelica*." He published five books in addition to articles and reviews, on Aristotle's philosophy.

The last of these is the present book, *Aristoteles und seine Weltanschauung* (1911), published six years before his death.

Brentano here sets forth what he takes to be the essential features of Aristotle's philosophy and to present them as a unified whole. He begins with Aristotle's ontology and his theory of the manifold sense of the term being; then he discusses theory of knowledge and in particular Aristotle's conception of what Leibniz was to call "the first truths of fact" and "the first truths of reason"; then he discusses the concepts of substance, matter, and form; and finally he turns to Aristotle's theology and his theory of man. The latter parts of the work are admittedly speculative."

(...)

"Aristotle states explicitly that God is " the first principle or primary thing."(4) In knowing himself, therefore, God knows the ultimate ground of the world. This means, according to Brentano's interpretation, that God has a priori knowledge of the world as a whole and of the necessity of every detail. Brentano defends the view that, according to Aristotle, the world is the best of all possible worlds and was created by God. "Parts of it," Brentano writes, "may seem to be defective when they are considered apart from the whole, but once they are viewed in connection they can be seen to be entirely as they ought to be." Brentano gives a plausible interpretation of those passages in Aristotle that may seem to suggest the contrary. This reconstruction of Aristotle's theology is not accepted by

most contemporary commentators, but it seems to have been shared by Theophrastus, who was Aristotle's successor as head of the Peripatetic school." (R. M. Chisholm, *Preface to the English edition*, pp. VII-VII, a note omitted)

(4) This essay was originally intended for the work *Grosse Denker*, ed. by Dr. von Aster. Hence the attempt to condense everything. In the end the essay was still too long to be included as a whole. Very important sections which have there been omitted have again been added in this separate edition. (Ernst von Aster, ed., *Grosse Denker*, 2 vols. [Leipzig, 1912], 1, 153-208.)

10. ———. 1987. *On the Existence of God. Lectures given at the Universities of Würzburg and Vienna (1868-1891)*. Dordrecht: Martinus Nijhoff.

Edited and translated by Susan F. Krantz.

"Of the works by Franz Brentano (1838-1917) which have appeared in English thus far, perhaps none is better suited to convey a clear idea of the spirit of the man that this volume of his lectures on proving the existence of God. In order to understand his metaphysics, it would be better to read *The Theory of Categories*; in order to master the finer points of his psychology, it would be better to read *Psychology From an Empirical Standpoint*; in order to appreciate his ethical theory, it would be better to read *The Origin of Our Knowledge of Right and Wrong* or, for a more thorough treatment, *The Foundation and Construction of Ethics*. But in order to see what it was that gave Brentano the enthusiasm and dedication to do all that work and much more besides, it is necessary to find out what Brentano believed the philosophical enterprise itself to be; and this comes forth most vividly when he bends his philosophical efforts to the subject he considered most important of all, namely, natural theology. For, like Socrates, Brentano brought a kind of religious fervor to his philosophy precisely because he saw it as dealing much better than religion does with the matters that are closest to our hearts.

The lectures on natural theology which appear here as compiled and edited by Alfred Kastil were delivered over a period that

includes most of Brentano's teaching career, beginning when he was still a Roman Catholic priest lecturing at Würzburg and extending through much of his twenty years at Vienna.(1) That his interest in the subject was an abiding one is evidenced by the short essay included at the end of the book, which he dictated in 1915, just two years before his death. Naturally, the developments in his thinking on other subjects affected his thinking on the subjects of the existence of God and our knowledge of God. Thus in certain places Kastil has altered the text of the earlier lectures to conform to Brentano's later theories. Such passages are identified in the editorial notes which appear at the end of the text." (*Introduction to the English Translation*, by Susan F. Krantz, p. 1)

(1) For details about Brentano's life, see Kraus and Stumpf in *The Philosophy of Brentano*, Ed. Linda McAlister, (Atlantic Highlands, NJ: Humanities Press, 1976).

11. ———. 1966. *The True and the Evident*. London: Routledge & Kegan Paul.

Edited by Oskar Kraus.

English edition edited by Roderick M. Chisholm; translated by Roderick M. Chisholm, Ilse Politzer, and Kurt R. Fischer; Reprint: New York, Routledge, 2009.

"Franz Brentano's *Wahrheit und Evidenz*, edited by Oskar Kraus of the University of Prague, was first published in 1930 by Felix Meiner at Leipzig. Professor Kraus compiled and edited the material and contributed an Introduction as well as extensive explanatory notes. The Introduction and notes are included in the present edition with certain minor alterations. No further introduction is needed, but certain features of the translation require brief comment.

Brentano divides mental phenomena, or states of consciousness, into three fundamental classes: *Vorstellkn*, *Urteilen*, and *Gemütstätigkeiten*, identifying these classes with what Descartes had called "ideas" (*ideae*), "judgements", and "volitions or affections". The most natural translation of "Vorstellung", therefore, is "idea", but "presentation" and

“thought” are sometimes also used. The verb “vorstellen” is more difficult; it is here translated variously as “to think of”, “to contemplate”, and “to have before the mind”.

According to Brentano’s later view, set forth in Parts Three and Four, our states of consciousness take only *realia* as their objects. *Realia* is to be understood in contrast with *irrealia*—the pseudo-objects (according to Brentano) which may seem to be designated by such expressions as “the existence of God”, “the non-being of the round square”, “Socrates being mortal”, “that Socrates is mortal”, “redness”, “the absence of food”, and “nothing”.

A man who is thinking about a unicorn, however, is thinking about *ein Reales*, despite the fact that unicorns do not exist or have any other kind of being or reality. Hence “realities” and “real entities” are to be avoided as translations of *realia* and of the various German words (e.g. *Realitäten*) which Brentano uses as synonyms. “Things” would seem to be the best translation; “concrete things” has been avoided because it is not adequate for the expression of certain parts of Brentano’s theory of categories.

Judgements, then, have only things or *realia* as their objects, and not so-called “propositions” or “states of affairs”. The theist, for example, accepts or affirms *God*, and not the *existence* of God or the proposition *that* God exists. Brentano, therefore, does not use that-clauses or other propositional objects with his two verbs “anerkennen” and “leugnen”; these verbs are here translated by means of the disjunctive expressions, “accept or affirm” and “reject or deny”.

Judgements and feelings, according to Brentano, are either correct (*richtig*) or incorrect. And of those judgements and feelings that are correct, some are also als *richtig charakterisiert*. Since a literal translation of the latter expression would be entirely misleading, “seen to be correct” has been used instead. By reference to those judgements which the subject “sees to be correct”, Brentano constructs his theory of the true and the evident.” (From the *Preface to the English Edition* by R. M. Chisholm), p. XI)

12. ———. 1981. *The Theory of Categories*. The Hague: Martinus Nijhoff.

Translated by Roderick M. Chisholm and Norbert Guterman.

"This book contains the definitive statement of Franz Brentano's views on metaphysics.

It is made up of essays which were dictated by Brentano during the last ten years of his life, between 1907 and 1917. These dictations were assembled and edited by Alfred Kastil and first published by the Felix Meiner Verlag in 1933 under the title *Kategorienlehre*. Kastil added copious notes to Brentano's text.

These notes have been included, with some slight omissions, in the present edition; the bibliographical references have been brought up to date.

Brentano's approach to philosophy is unfamiliar to many contemporary readers. I shall discuss below certain fundamental points which such readers are likely to find the most difficult. I believe that once these points are properly understood, then what Brentano has to say will be seen to be of first importance to philosophy." (From the *Introduction to the Theory of Categories* by Roderick M. Chisholm. p. 1)

13. ———. 1973. *The Foundation and Construction of Ethics*. New York: Humanities Press.

Compiled from His Lectures on Practical Philosophy by Franziska Mayer-Hillebrand.

English Edition edited and translated by Elizabeth Hughes Schneewind.

Reprint: New York, Routledge, 2009.

"Franz Brentano's *Grundlegung und Aufbau der Ethik* was published in 1952 by A. Franke in Bern. The book is based upon the notes which Brentano used for his lectures on practical philosophy at the University of Vienna from 1876 to 1894. The preparation of the book, which was begun by Professor Alfred Kastil, was completed after Kastil's death by Professor Franziska Mayer-Hillebrand. This, the first English translation

of the work, is one of a series of translations supported by the Franz Brentano Foundation under the general editorship of Professor Roderick M. Chisholm of Brown University. As of this writing, three other works have appeared in the series, all published by Routledge & Kegan Paul. They are *The True and the Evident* (trans. Chisholm, Politzer and Fischer; 1966), *The Origin of Our Knowledge of Right and Wrong* (trans. Chisholm and Schneewind; 1969), and *Psychology from an Empirical Standpoint* (trans. Rancurello, Terrell, and McAlister; 1972).

The present book is strictly a translation of the 1952 German edition. Professor Mayer-Hillebrand's Foreword to that edition is included at the end. The numbered footnotes that appear throughout the text are hers; those with asterisks are mine." (From the *Preface to the English Edition*, p. X)

14. ———. 1988. *Philosophical Investigations on Space, Time, and the Continuum*. London: Routledge & Kegan Paul.

Translated by Barry Smith.

Reprint: New York, Routledge, 2009.

"Analysis of the concepts of space and time and of the more general concept of a continuum is an essential part of natural philosophy and descriptive psychology. It was only natural, therefore, that Brentano occupied himself with these questions for the greater part of his life, from the time of his early efforts to set forth the Aristotelian philosophy to the final years of his life when, completely blind, he set forth his final views on what he called 'descriptive psychology.'

The essays in the present volume are a selection from Brentano's works on space, time and the continuum. None of them have previously been published in English translation.

Brentano had entrusted Alfred Kastil and Oskar Kraus with preparing his unpublished works for publication. Kastil had intended to publish selections from the works on space, time and the continuum in a single volume with an analytic table of contents, introduction and notes, but he died before he was able to complete the work.

In selecting the manuscripts for the present volume, we have emphasised those works that are primarily concerned with philosophical problems and that represent Brentano's final views. We have tried to avoid unnecessary repetitions.

The basic features of Brentano's theory may be found in the first selection ('On what is continuous'); further details are added in the second selection ('On the measure of what is continuous'). To understand this theory in its broad outlines, one should compare it both with the doctrine of Aristotle and with the classic mathematical theories of Cantor and Dedekind. The comparison with Aristotle is essential since, as almost always, Brentano begins with the views of Aristotle and then modifies them in far-reaching respects.

Comparison with the mathematical theories is essential in order to exhibit the details of Brentano's view and to remove certain misunderstandings." (From the *Editor's Introduction to the English Edition* by Stephan Körner and Roderick M.Chisholm, p. IX, a note omitted).

15. ———. 1995. *Descriptive Psychology*. London: Routledge.

Edited and translated by Benito Müller.

"In the foreword to *Vom Ursprung sittlicher Erkenntnis* (1889), Brentano said that the ethical views he set forth there belong to the 'domain of thoughts of a "descriptive psychology" which I now dare to hope to be able to disclose to the public in its full extent in the not too distant future'.(27) Unfortunately, he did not publish a work entitled 'Descriptive Psychology', but many of his writings and dictations on the subject have been published in the various post-humous works in the *Philosophische Bibliothek*. And he gave several courses of lectures on the subject at the University of Vienna. Three different lecture manuscripts have been preserved.

The first of these was given in 1887–8 and was entitled *Deskriptive Psychologie*. The second, entitled *Deskriptive Psychologie oder beschreibende Phänomenologie* was given in 1888–9. (Although the term 'Phänomenologie' occurred in the title, it does not seem to have been used in the lectures

themselves.) The third, entitled simply *Psychognosie*, was given in 1890–1. The main text of the present book is taken from the lecture of 1890–1.

The following material is added in the appendices: (1) the description of ‘inner perception’ from the lectures of 1887–8; (2) the general account of ‘descriptive psychology’ from the lectures of 1888–9; (3) ‘Of the Content of Experiences’ from the lectures of 1887–8; (4) ‘Psychognostic Sketch I’, from 1901; (5) ‘Psychognostic Sketch II’, also from 1901; and (6) an undated manuscript from the same general period entitled ‘Perceiving and Apperceiving’.” (From the *Introduction* by Roderick M. Chisholm, Wilhelm Baumgartner and Benito Müller, pp. XV–XVI, two notes omitted)

19. ———. 2021. *The Teaching of Jesus and Its Enduring Significance*. Cham (Switzerland): Springer.

Translated by Richard Schaefer.

Contents: Part I. Richard Schaefer: Introduction: Brentano's The Teaching of Jesus 100 Years Later: An Historical Introduction 1; Part II. Franz Brentano: The Teaching of Jesus and Its Enduring Significance 21; Appendix: Christian Doctrine: A Short Outline of Its Essential Content 111; Index 119-122.

"Whoever reads Brentano's The Teaching of Jesus today will find in it the record of a life devoted to the pursuit of wisdom as a sacred enterprise. This was at the core of Brentano's life from the very beginning to the very end, and it drove both his entry into the priesthood and his departure from it. Simply put, Brentano believed that the noblest thing one could do is to try to understand God and his creation. To be sure, much of what Brentano says in these texts might seem terse and underdeveloped, more like the résumé of conclusions drawn than a concerted effort at laying out all of the relevant facts and considerations requisite to making a full and complete argument. This stems, in part, from the fact that the book was prepared in the very last days of Brentano's life, and culled from texts he had drafted in multiple and different circumstances.(29) It was not the product of a singular sustained effort whose goal was to explicate all of the failings of Christianity in a systematic way, but a guide for those who were already on their way to seriously doubting the truth of Christian teachings. It was not aimed at attacking people of faith, but of reassuring those who had already begun to lose it, reassuring them of the validity of their doubts and recasting their very experience of doubt as pleasing to God.(30) Though Brentano did not put the matter in exactly those terms, he was hopeful that "if providence" had set him on "a rough and thorny path," he might be reconciled to it if he was able to help "others to avoid similar obstacles and suffering." (*Introduction*, pp. 15-16)

(29) It is important to remember too that Brentano was almost entirely blind in the last years of his life, and relied on his second wife to transcribe much of what he wanted to write.

(30) Brentano's genuine desire to be helpful and supportive to those struggling with their religious doubts is evident in his correspondence with Anton Marty and Hermann Schell, to name just a few.

21. Brentano, Franz. 2020. "Ontologische Fragen/Ontological Questions: A Treatise from Franz Brentano's Manuscripts." In *Franz Brentano's Philosophy After One Hundred Years: From History of Philosophy to Reism*, edited by Fiset, Denis, Fréchette, Guillaume and Janoušek, Hynek, 261-340. Cham (Switzerland): Springer.

Edited and Translated by Robin D. Rollinger.

"The treatise that is published here is based on a manuscript that Brentano dictated in 1908 and is kept under the section M 35 in the Houghton Library at Harvard University in Harvard."

(...)

"This particular treatise has been selected because it is the lengthiest and most substantial elaboration of Brentano's ontology (and also to some extent his epistemology) at the end of a long period of gestation during the early twentieth century (from about 1902–1908).(9) The ontology in question has been labeled "reism" (a term that Brentano himself does not use)

because it does not allow for any other entities besides things, i.e. real entities which are either souls or bodies. Brentano had been corresponding extensively for a number of years with his student, Anton Marty, then a professor of the German Charles-Ferdinand University in Prague and teacher of Kastil, as well as with others who came to represent Brentano's philosophy, most notably with Oskar Kraus." (p. 265)

(9) For documentation of this period see the letters and texts that are published in Brentano (1966a: 101–191, 323–267).

Edited by Roderick Chisholm and Michael Corrado.

"The Brentano letters -- with the exception of portions of that dated 24 March 1900 -- have not previously been published (4). The Vailati letters are translated from the Italian text of the *Epistolario*, edited by Giorgio Lanaro (Turin, 1971). Certain passages in Brentano's letters have been put between square brackets. These passages appeared as footnotes in Brentano's

letters. All footnotes in the present edition are by the editors. In addition to the letters we have translated here, there are several brief letters from each writer to which no known reply has been preserved.

We add, as an Appendix, the original versions of Brentano's letters. The original versions of Vailati's letters may be found in the *Scritti di Giovanni Vailati*." (p. 3)

7. Albertazzi, Liliana. 1989. "Brentano and Mauthner's Critique of Language." *Brentano Studien* no. 2:145-157.

Abstract: "Though different in methodological approach to language, Brentano and Mauthner share a similar background: Positivism, Aristotelian studies, empiricist psychology, anti-Kantian stance. The critique of language marks the point of significant convergence: Brentano's emphasis of reism and nominalism goes together with (1) his descriptive-semasiologic critique of language as a logical doctrine of categories, and (2) his critique of language as a genetic semasiology, both bound by the view of the intentional nature of language. It is pointed out at lights that and how the component of genetic semasiology in Brentano allows comparison with the communicative, pragmatic and performative perspective of Mauthner's Sprachkritik due to a shared emphasis on the rhetorical force of language."

8. ———. 1993. "Brentano, Twardowski, and Polish Scientific Philosophy." In *Polish Scientific Philosophy: The Lvov-Warsaw School*, edited by Coniglione, Franco, Poli, Roberto and Wolenski, Jan, 11-40. Amsterdam: Rodopi.

"It is not an easy task to give a clear and brief summary of the thought of Franz Brentano, because of the shifting nature of its development and the complexity of its subject-matter. However, mention should be made of certain themes which constantly recur in his work: first, his Aristotelean inheritance(27) in particular his examination of the doctrine of the categories; second. his Cartesian choice of the evidence of inner perception of psychic phenomena, and his complementary notion of the mediated - and therefore not immediately evident - perception of outer perception, i.e. of physical phenomena. Third, his view of psychology as a discipline of high ontological value(28): a psychology of the act rather than of contents, and at the same a descriptive psychology or psychognosis(29). Brentano defined his descriptive psychology as an exact science and a pure

psychology(30) seeking to analyse the elements of psychic life and the laws that govern it(31). This definition is particularly important because it gave rise to a whole series of taxonomies of psychic behaviour as variously developed in Husserlian phenomenology, Meinong's theory of objects, Marty's linguistic theories, Ehrenfels' and Stumpf's school researches in *Gestaltpsychologie*." (pp. 13-14, notes abbreviated)

(27) Brentano's thought is part of the Aristotelean Renaissance which was the work of the commentaries on Aristotle by Bonitz, Tricot and Schwegler, the *Geschichte der Kategorienlehre* by Trendelenburg, Prantl's history of logic and Steinthal's studies in linguistics, but it was also a result of the influence of Hegel. Brentano saw Aristotle as mediating between predominantly metaphysical interests and problems of theoretical psychology (...)

(28) Note that although Brentano's original interest lay in metaphysics rather than in psychology, his descriptive psychology had considerable ontological valency. At Würzburg Brentano mainly taught metaphysics, history of philosophy and deductive and inductive logic; he only began lecturing in psychology in the summer of 1871. Cf. C. Stumpf, "Erinnerungen an Franz Brentano", in O. Kraus. *Franz Brentano. Zur Kenntnis seines Lebens und seine Lehre, mit Beiträgen von Carl Stumpf und Edmund Husserl*, (Munich: Beck, 1919). (...)

(29) The term 'descriptive' in the psychology and philosophy of this period embraces a variety of conceptions. One of the first to introduce the term 'descriptive' (*beschreibend*) in the sciences (in mathematics) was Kirchhoff. where he used it in contrast with 'explicative' (*erklärend*). In Brentano. 'descriptive' (*deskriptiv*) has the specific meaning of 'morphological' merely classificatory. (...)

(30) F. Brentano, *Deskriptive Psychologie*. (ed.) W. Baumgartner and R.M. Chisholm, (Hamburg: Meiner, 1928).

(31) The fact that Brentano's descriptive psychology is a *reine Psychologie* demonstrates that it is essentially a theoretical

science, entirely distinct from physiology.

9. ———. 1993. "Brentano, Meinong and Husserl on Internal Time." *Brentano Studien* no. 3:89-110.

Abstract: "Brentano's *Descriptive Psychology* marks a breakthrough into clarification of internal time, made possible by using his doctrine of intentionality (and modality) of consciousness. Husserl's version of descriptive psychology, a pure phenomenological psychology, according to its author tries to overcome Brentano's (naturalistic) description of internal experience by explicitly considering the intentional content of mental events, and the different categories of objects as objects of a possible consciousness. Husserl's investigations on internal time are an example of a quite specific sort of genetic inquiry, complementary to the descriptive one. Meinong, when discussing the relation of representation and perception of time, differentiates between the time as given in a representation (act time), in different sorts of (Meinongian) objects (object time), and in contents (content time). These questions of a Brentanist temporality problem are reconsidered and brought to a Husserlian conclusion."

11. ———. 2003. "Franz Brentano's psychology today. A programme of empirical and experimental metaphysics." *Brentano Studien* no. 10:107-118.

Abstract: "In this article I try to emphasise the following three main points:

1. Brentano's metaphysics is not speculative; it is instead a programme for scientific research.
2. Some components of his metaphysics, especially those relating to the problem of perceptive continua -- and many aspects of it developed experimentally by his pupils -- are today discussed not only by philosophy but also by the cognitive sciences, more or less accurately, more or less consciously.
3. Some areas of the cognitive sciences express the need for a scientifically -- even neurophysiologically -- founded theory of intentionality."

12. ———. 2004. "The Psychophysics of the soul. Aristote and Brentano." In *Aristote au XIX siècle*, edited by Thouard, Denis, 249-275. Villeneuve d'Asq Cédex: Presses Universitaires du Septentrion.

"Brentano's studies on Aristotle are of a complexity such that they can be analysed along various dimensions:

1. *Environmental* (specifically, the relationship between Brentano and the exponents of the Aristotelian revival, in particular Zeller, Prantl, Trendelenburg and Bonitz).
2. *Psychological* (the connections between psychology and physiology, the problem of the intensity of the sensations and their measurement, the debate on intensive and extensive magnitudes, etc.).
3. *Metaphysical* (in particular, the theme of being with regard to the categories and the relationship between being-in-potency and being-in-act, between accident and substance, and the problem of the continua).
4. *Logico-ontological* (the theme of being with regard to true or false being, accidental being, etc.).

These various dimensions are interconnected, so that analysis of Brentano's writings furnishes a sort of 'diorama' on the Aristotelian themes addressed by the nineteenth century's Aristotelian Renaissance.

This essay examines a number of aspects relative to psychology and, to some extent, metaphysics which distinguish not only the thought of Brentano but also that of his school - as regards both descriptive psychology and experimental psychology.

Specifically, Brentano's book *The Psychology of Aristotle* marks his shift of interest from metaphysical questions to problems of a gnoseological and psychological nature, although these latter are still presented in the form of commentary on, and interpretation of, Aristotle's theories. The book acts as a prelude to *Psychology from an Empirical Standpoint*(9) Brentano best-known work, and it also marks the point at which Brentano's interest turned to psychophysical questions.

In this paper, after a brief overview of Aristotle's theory of the soul (in particular of the sensitive soul) — which constitutes Brentano's conceptual framework — I shall outline Brentano's psychological theories. I shall then examine his specific conceptions, focusing on the difference between psychic phenomena and physical phenomena, and on the part/whole relation which characterizes the former. The Brentano texts to which I shall refer are *The Psychology of Aristotle*, *Psychology from an Empirical Standpoint*, and *Descriptive Psychology*." (pp. 249-250, notes omitted)

"This 'Introduction to Brentano' is primarily aimed at conceptual interpretation even though it has been written with scrupulous regard to the texts and sets out its topics according to their chronological development."

(...)

"This book is not an introduction to all the themes treated by Brentano, since this would be beyond its scope. Moreover, even less does it claim to be definitive.

The idea of writing this introduction to the thought of Brentano sprang from a theoretical exigency, namely to argue for a more defensible form of realism, and from the conviction that, at the moment, a categorial apparatus able to handle the problems

raised by contemporary science is lacking, in particular in cognitive science. The various forms of direct and indirect realisms are, in my opinion, inadequate to deal with the problems addressed by contemporary cognitive science. I believe, instead, that Brentano's immanentist realism, with its sophisticated architecture, is a framework that can be applied and developed in various areas of scientific inquiry: for example, psychophysics and theory of perception, semantics, aesthetics, and more generally, the theory of consciousness (see L. Albertazzi ed., *Unfolding Perceptual Continua*, Amsterdam, Benjamins Publishing Company 2002). Brentano's realism can oppose both the theory of Cartesian Theatre and the neuroreductionist proposal as well, and it is also a framework able to establish the scientific legitimacy of metaphysics (see L. Albertazzi ed., *The Dawn of Cognitive Science. Early European Contributors*, Dordrecht, Kluwer 2000). The book therefore pays close attention to Brentano's writings on psychology and metaphysics.

No reader of Brentano can fail to be astonished by the multiplicity of the disciplinary references to be found in his thought and writings. Consequently, although this introduction privileges themes of psychology and metaphysics, it also takes account of Brentano's other writings, especially those on language." (pp. 1-2)

14. ———. 2006. "Retrieving intentionality. A Legacy from the Brentano School." In *The Lvov-Warsaw School: The New Generation*, edited by Jadacki, Jacek Juliusz and Pasniczek, Jacek, 291-314. Amsterdam: Rodopi.

"The expression 'actus mentis' then has a metaphysical connotation and as such constituted the basis of Franz Brentano's theory of intentional reference, which became the standard source for subsequent and even contemporary citations on intentionality (Brentano 1874).

Brentano, moreover, despite the widely held belief to the contrary, did not develop a thoroughgoing theory of intentionality, but rather one in only embryonic form, and especially in his unpublished writings. A thoroughgoing theory

of intentionality, in fact, must fulfil a number of conditions, namely:

(1) The moment-now of the intentional presentation must extend through a continuing set of durations which comprise fringes of the past and of the future contents.

(2) Distinctions must be made among the various ways in which the psychic act is directed towards an object.

(3) The relation between psychic act, object and content must be reconstructed, with a precise distinction being drawn between their distinctive parts.

A modern version of a theory of intentionality of this type, which focuses on the relationship between act, object and content, has been developed in Poland by Twardowski, a pupil of Brentano. Twardowski's theory was then resumed by Husserl with some modifications which accentuated the feature of temporal dynamicity.⁽²⁾ Bearing these developments of Brentano's theory in mind, the argument that I wish to develop below is the following:

(1) Reference to a theory of intentionality is much more complex than the currently canonical versions employed by analytic philosophy.

(2) It can serve the purposes of cognitive science and in particular the development of an empirical-experimental theory of cognitive space (see Albertazzi 2002)." (pp. 291-292)

(Note 2) The first outline of a theory of intentionality, in fact, is to be found in an essay written by Husserl in 1894, *Intentionale Gegenstände*, in reply to a question raised by Twardowski in §§ 13 and 14 of his (1894). On this, see Schuhmann (1993), Albertazzi (1993).

15. ———. 2018. "Brentano's Aristotelian Concept of Consciousness." In *The Bloomsbury Companion to the Philosophy of Consciousness*, edited by Jacqueline Dale, 27-56. New York: Bloomsbury.

"Developing a science of consciousness per se as proposed by Brentano (Brentano 1995b, 4–5) is a great endeavour and challenge for current research. In fact, starting from the analysis and description of conscious experience, one should re-define the qualities classically considered to be primary, such as the attributes of physics, like shapes, size, motion and the like, in the qualitative terms of 'voluminousness', 'remoteness', 'solidness', 'squareness' and so on, all of which are relational, distributed qualities of what is perceived. One

has to bracket off the correlated psychophysical and/or neurophysiological inquiries and develop an autonomous science of qualities. For the time being, we still do not know how life emerged from an inanimate being, and we also do not know how consciousness arises from unconscious entities. We nevertheless have evidence of both. Moreover, we know at least some of the relations of dependence among the different levels of reality (Hartmann 1935; Poli 2001, 2012). It seems to be more productive and scientifically honest to recognize the existence of different realms, categorically different phenomena, governed by specific laws, and enjoying equal ontological dignity, instead of reducing all types of reality to the one we presently know better, or are supposed to know better, that is physical being. Future discoveries may allow us to know more about the complete nature of reality. Within this framework, consciousness is part and parcel of nature, and it is given *to us* phenomenologically or, as Brentano would have said, in phenomenal presence." (pp. 47-48)

"The central idea developed by the contributions to this book is that the split between analytic philosophy and phenomenology - perhaps the most important schism in twentieth-century philosophy - resulted from a radicalization of reciprocal partialities. Both schools of thought share, in fact, the same cultural background and their same initial stimulus in the thought of Franz Brentano. And one outcome of the subsequent rift between them was the oblivion into which the figure and thought of Brentano have fallen.

The first step to take in remedying this split is to return to Brentano and to reconstruct the 'map' of Brentanism.

The second task (which has been addressed by this book) is to revive interest in the theoretical complexity of Brentano's thought and of his pupils and to revitalize those aspects that have been neglected by subsequent debate within the various movements of Brentanian inspiration.

We have accordingly decided to organize the book into two introductory essays followed by two sections (Parts 1 and 2) which systematically examine Brentano's thought and that of his followers. The two introductory essays reconstruct the reasons for the 'invisibility', so to speak, of Brentano and set out the essential features of his philosophical doctrine. Part 1 of the

book then examines six of Brentano's most outstanding pupils (Marty, Stumpf, Meinong, Ehrenfels, Husserl and Twardowski). Part 2 contains nine essays concentrating on the principal topics addressed by the Brentanians.

In order to facilitate cross-referencing between the various essays contained in the book, each chapter concludes with a table giving the other points in the book where the same topics are dealt with." (Foreword by the Editors).

17. Alves, Pedor M. S. 2019/20. "The Not Always Conscious Mind. A Reappraisal of Brentano's Theses." *Brentano Studien* no. 16:195-226.

Abstract: "In this article I discuss the three Brentanian theses of intentionality, self-consciousness, and the unity of consciousness. Regarding the first two, I argue that there is a shift in the meaning of consciousness when one passes from the first to the second, and I conclude that the best reading of self-consciousness is an intransitive one, opposing the strong transitive sense of the first thesis. Based on that, I examine whether there are non-conscious psychological acts or states. Disagreeing with Brentano, I present an empirical argument for the establishment of non-conscious psychological acts or states. Based on that, I construe the Brentanian thesis of the secondary object, presented by an *intentio obliqua*, as a process of time-constitution of the actuality of psychological, conscious life. Finally, I address the issue of unity of simultaneity of consciousness, presenting it in light of this new framework. Throughout the paper, especially in the first and last sections, I contrast the Aristotelian psyche-soma distinction with the modern mind-body dualism, trying to account for Brentano's rather complex stance *vis-à-vis* one and the other."

18. Antonelli, Mauro. 2003. "Franz Brentano, the "Grandfather of Phenomenology" and the Spirit of the Times." In *Phenomenology World-Wide: Foundations - Expanding Dynamics - Life-Engagements. A Guide for Research and Study*, edited by Tymieniecka, Anna-Teresa, 11-29. Dordrecht: Kluwer.

"Brentano, teacher of Husserl

In the literature on Husserl there is a marked tendency to interpret the thought of the founder of phenomenology in the light of his later works, particularly focusing on *The Crisis of European Sciences*, which deals with the fundamental concept of *Lebenswelt*, as well on the themes of passive synthesis and intersubjectivity, which were central concerns of this phase. Another dominant approach tends to view phenomenology purely in terms of transcendental phenomenology, a concept systematically developed in *Ideas I* of 1913, the text that most clearly reveals the closeness of Husserl to neo-Kantian movements.

While undoubtedly legitimate, such approaches presuppose the presence of some immanent directive idea driving the development of Husserl's entire work and, in so doing, tend to impose corresponding directive criteria for its comprehension and interpretation. They therefore underplay the slow and complex evolution of the founder of phenomenology, the conceptual work to which he submitted his early ideas, and his continual effort to give them more precise definition and radically greater depth.

This is even more true in considering the initial phase of Husserl's work, which preceded and paved the way for *Logical Investigations*, a phase when the influence of his teacher Franz Brentano was strong and decisive. The fact that it was later dismissed by Husserl himself as being "psychologistic", does not justify its removal or neglect.

On the contrary, it must be evaluated historically in terms of the preparatory stage for the development of a line of thinking that would lead, through the above-mentioned work of conceptual clarification and investigation, to an increasingly precise definition of the sphere of action of phenomenology.

In the light of such remarks, we intend to review some of the crucial points along the philosophical itinerary traveled by Brentano, the man whom Husserl considered "my one and only teacher in philosophy" and from whose lessons the then youthful mathematician "first acquired ... the conviction that philosophy, too, is a field of serious endeavor, and that it too

can-and in fact must-be dealt in rigorous scientific manner".
(Husserl, 1919, 154; translation, 48)

The outstanding feature of Brentano's philosophical propositions, which surfaces in the work of all his pupils, is the attribution of an essentially philosophical value to psychological investigation, which is in turn the basis for the revival and renewal of philosophy as a scientific discipline, whose crisis he imputes to the abandonment of the empirical method of research and the surrender to the speculative temptations typifying idealistic philosophy.

It is in the singular blend of Aristotelian, Cartesian and Empiricist elements permeating this project that we uncover a series of decisive ideas which, critically perceived, were to influence profoundly the work of Husserl." (p. 11)

19. ———. 2015. "Franz Brentano's Intentionality Thesis. A New Objection to the "Nonsense that was Dreamt up and Attributed to him"." *Brentano Studien* no. 13:23-53.

Abstract: "Brentano's thesis of intentionality has been traditionally interpreted as a theory of the "intentional relation", i.e., of the (ordinary binary) relation between the mental act and its intentional or "immanent" object. This object is immanent in the sense that it is in fact contained in the mind, and with an ontological status that is distinct from that of the transcendent, existent or non-existent object. On the basis of Brentano's Aristotelian- Scholastic sources, especially Aristotle's perception theory and his theory of *relativa*, the author rejects the view of the immanent object as a consciousness-immanent, ontologically diminished entity and

- highlights the continuity which exists between Brentano's earlier and later (the so-called reistic) view of intentionality."
20. ———. 2017. "In Search of Lost Substance. Brentano on Aristotle's Doctrine of Categories." *Brentano Studien* no. 15:173-228.

Abstract: "Brentano's doctoral dissertation 'On the Manifold Senses of Being in Aristotle' (1862) takes up Aristotle's ontology and theory of categories in order to show that a realistic ontology requires the interweaving of factual being and its adequate logical expression. The scheme of categories manifests itself on a grammatical-linguistic level – as Trendelenburg pointed out – , but it is grounded in the variety and multiplicity characterising the level of real things – as Aquinas held. The logic-linguistic side of the categories is thus dependent on the ontological and founded by it. Brentano's first book thus has two main interpretative sources, one which is fundamental but hidden, the other more explicit but superficial: the first is Thomas Aquinas – for Brentano as a young catholic seminarian, of course, 'sine Thomas mutus esset Aristoteles' – , the second Adolf Friedrich Trendelenburg, his Berlin teacher and leader of the Aristotelian revival in Protestant Germany. The Thomist influence lead Brentano to propose a univocal reading of the Aristotelian ontology, allowing that deduction of the categories from the general concept of being, that Aquinas had already worked out during the Middle Ages. Considering the Aristotelian ontological framework compatible with a deductive trend, which was aimed at bringing the equivocal nature of being back to an analogical structure, Brentano forced, at least partially, an interpretation that would be particularly appreciated by Heidegger, to the point that according to him it is due to Brentano that "the systematic impact of Aristotelian philosophy begins". This Thomist influence is also analysed through a comparison between the printed version of the dissertation and its preliminary version, dating back to 1861, which is preserved as a manuscript in Brentano's Nachlass (Werkmanuskripte, Frühe Schriften, Ms. 16)"

21. ———. 2022. "Consciousness and Intentionality in Franz Brentano." *Acta Analytica* no. 37:301-322.

Abstract: "The paper argues against the growing tendency to interpret Brentano's conception of inner consciousness in self-representational terms. This trend has received support from the tendency to see Brentano as a forerunner of contemporary same-order theories of consciousness and from the view that Brentano models intransitive consciousness on transitive consciousness, such that a mental state is conscious insofar as it is aware of itself as an object. However, this reading fails to take into account the Brentanian concept of object, which is ultimately derived from ancient and medieval philosophy, as well as the secondary, elusive character that Brentano attributes to inner perception. According to Brentano, we have an aspectual but transparent consciousness of transcendent objects, whereas our awareness of our own mental acts is always complete but incidental, and ultimately opaque. Reversing the relationship between intentionality and consciousness faces difficulties at the textual interpretative level, but also raises theoretical problems, for it risks treating Brentano's theory of mind as a form of subjectivism and idealism."

27. Aquila, Richard. 1974. "Brentano, Descartes, and Hume on Awareness." *Philosophy and Phenomenological Research* no. 35:223-239.

"In an important sense, however, Brentano's real significance - or at least his real historical significance - does not turn upon either of these issues. For suppose that we grant that sensory experiences are mental but nonintentional phenomena, and that linguistic events are intentional but nonmental phenomena. Even if both of these things are so, we would still need to draw a clear distinction between any mental event which is intentional and the object of that event. And we must insist with Brentano that, with the exception of some special cases, the object of any mental event could not *itself* be something mental. The major force, I believe, of Brentano's concern with intentionality does not lie merely in his concern for some general distinction between mental and nonmental phenomena, although such a distinction was naturally of importance to him. Of at least as great an importance is the distinction which Brentano requires that we draw, once we have acknowledged the intentionality of consciousness,

between mental phenomena and, whether they be a "reality" or not, the *objects* of such phenomena. The object of ordinary sensory awareness, for example, is never in any literal sense something which has a merely mental status, not even in cases where that object is the sheerest of illusions or hallucinations. The object is, even in such cases as these, a purely physical phenomenon. The historical force of these points will become clear, I think, once we have set them in contrast with a certain "classical" approach that has been taken to the problem of awareness. This approach is provided by what we may call the "content theory" of awareness. This is a theory which, as I shall point out later, was in fact broadly influential among Brentano's contemporaries in psychology." (pp. 224-225)

28. ——. 1982. "Intentional objects and Kantian appearances." *Philosophical Topics* no. 12:9-37.

"Fairly obviously, Kant's epistemology raises questions concerning the intentionality, or the "object-directed" character, of perception.

It is, as one might therefore expect, fruitful to consider Kant's views in comparison with some of those of Franz Brentano. This, it turns out, is no mere exegetical device, for it is not unreasonable to suggest that precisely the originality of Kant's approach to perceptual awareness lies in his anticipation of a point of view characteristic of the later thinker.

Brentano's thesis, for the purpose of this discussion, does not involve his claim that all psychological states are intrinsically object-directed. Kant in fact appears to reject that claim, for he appears to share with Husserl the view that mere "sensations" constitute an exception to it. The relevant Brentanian thesis may be stated by restricting our attention to those sensory states which, in the opinion of all parties, are object-directed, namely, ordinary perceptions, or Kantian (empirical) intuitions (as opposed to the mere "sensations" ingredient in those intuitions). The thesis concerns a particular sense in which each such state is, in its intrinsic character, an object-directed state. Each, namely, is object-directed in a way that is logically

independent of the ascription of ontological status to any object of that state." (p. 9, notes omitted)

29. Arnaud, Richard B. 1975. "Brentanist Relations." In *Analysis and Metaphysics: Essays in Honor of R. M. Chisholm*, edited by Lehrer, Keith, 189-208. Dordrecht: D. Reidel.

"A single passage from Franz Brentano's *Psychology From an Empirical Standpoint* has, in the century since its publication, spawned more than its share of mythological beasts, mathematical monsters and philosophical treatises. It runs:

... Every mental phenomenon is characterized by what the scholastics of of the Middle Ages called the intentional (and also mental) inexistence (Inexistenz) of an object (*Gegenstand*), and what we could call, although in not entirely unambiguous terms, the reference to a content, a direction upon an object (by which we are not to understand a reality in this case), or an immanent objectivity. Each one includes something as object within itself, although not always in the same way. In presentation something is presented, in judgment something is affirmed or denied, in love [something is] loved, in hate [something] hated, in desire [something] desired, etc.

This intentional inexistence is exclusively characteristic of mental phenomena. No physical phenomenon manifests anything similar. Consequently, we can define mental phenomena by saying that they are such phenomena as include an object intentionally within themselves.(1)

This passage sets forth, or at least strongly intimates, three doctrines that were to preoccupy Brentano and his followers in later years, namely: (I) the doctrine that intentionality, reference to an object, is a distinctive mark of the mental; (II) the doctrine that intentional reference radically differs from other, merely physical, relations primarily in virtue of the fact that mental phenomena may be directed not only upon objects that exist but even upon objects that do not exist; and (III) an obscure and problematic doctrine to the effect that any object of intentional reference thereby has a special ontological status called 'intentional inexistence'. What has come to be called the

intentionality thesis of Brentano is the conjunction of (I) and (II).(…)

In what follows, we shall concentrate on some of the philosophical difficulties that seem to be connected with (II), and very little will be made of (I). Nothing will be said here concerning the unsatisfactory doctrine (III), since the problematic nature of the notion of intentional inexistence has been forcefully demonstrated by Chisholm.(3)" (p. 189), note 2 omitted)

Abstract: "In the last few decades, the interest in Brentano's philosophical psychology, especially in his theory of judgment, has been steadily growing. What, however, has remained relatively unexplored are the modifications that have been introduced over the years into this theory by Brentano himself

and by his student Anton Marty. These amendments constitute the focus of the present paper. As will be argued, only by making such changes can the weaknesses of the first formulation of the theory be overcome.

Moreover, as the final section of the paper attempts to show, these modifications may even trigger further steps towards what we might label a new Brentanian theory of judgment."

31. Bartok, Philip J. 2005. "Brentano's Intentionality Thesis: beyond the analytic and phenomenological readings." *Journal of History of Philosophy* no. 43:437-460.

"The task of this paper is to navigate a route between the excesses of these two influential readings of Brentano's thesis [*the analytical and the phenomenological*]. By attending closely to both the motivating concerns and the distinctive methodological features of Brentano's psychology,

as it is presented in PES [*Psychology from an Empirical Standpoint*] and in the posthumously published lectures on *Descriptive Psychology* (DP), this reading aims to avoid both the methodological insensitivity of the analytic reading and the Whiggishness of the phenomenological reading while preserving what is of value in each. The picture of Brentano that emerges from such an investigation is that of an innovating founder of a new empirical psychology, a psychology that was to serve as the foundation not only for metaphysics, but also for fields like logic, ethics, and aesthetics. While this psychology bears significant methodological and doctrinal similarities to both contemporary analytic philosophy of mind and phenomenology, the attempt to identify its methods and concerns with those of either of these two successors occludes what is truly distinctive about it. An appreciation of the distinctive character of Brentano's psychology permits a fairer reading of his intentionality thesis and thus allows for a more accurate assessment of the complex relationship of Brentano's empirical psychology to the philosophical and psychological works of his twentieth-century successors on both sides of the Atlantic.(...)

I shall proceed as follows: In section 1 I survey the “analytic reading” of Brentano’s thesis, drawing attention to its misunderstandings of the central Brentanian terms ‘phenomena’ and ‘intentional inexistence’ as well as its general insensitivity to Brentano’s psychological method. Section 2 introduces the “phenomenological reading” as an improvement upon the analytic reading, in that it attends to methodological issues, permitting distinctions to be drawn between descriptive psychological, genetic psychological, metascientific, and metaphysical elements in his work. Section 3 criticizes the tendency of phenomenologists to impute their own theoretical motives to Brentano and his psychological project.

Finally, section 4 introduces the elements of a third reading of Brentano’s thesis and of the psychological project of PES and DP as a whole, one that takes seriously his claim to be an empirical psychologist intent upon erecting a new psychology upon solid theoretical foundations." (p. 439, a note omitted)

32. ———. 2005. "Reading Brentano on the Intentionality of the Mental." In *Intentionality: Past and Future*, edited by Forrai, Gabor and Kampis, George, 15-24. Amsterdam: Rodopi.

"Franz Brentano’s attempts to develop a new empirical psychology, as presented in works like *Psychology from an Empirical Standpoint* of 1874 (Brentano, 1955/1995a; hereafter in text as “PES”) and the later lectures posthumously published in *Descriptive Psychology* (Brentano, 1982; 1995b; hereafter in text as “DP”), stand at the historical point of departure of the two dominant traditions in twentieth-century philosophy, the analytic and phenomenological traditions. Prominent thinkers in both of these camps have identified Brentano’s psychological explorations as an inspiration for central aspects of their philosophical views. But thinkers in these two traditions have read Brentano’s psychology and his most important discovery, his intentionality thesis, in quite different ways. As a result, they have arrived at different interpretations of the same theoretical elements. This state of affairs raises puzzling questions: How can the work of a single philosopher have given rise to such variant readings? Do relevant texts equally support both these readings? To what extent did the philosophical

projects of Brentano's readers color their understanding of his thought? Have his readers in either of these traditions recovered anything like Brentano's understanding of his psychological project and his intentionality thesis?

I will argue that while both of these broad strategies for reading Brentano involve significant misrepresentations of his intentionality thesis, phenomenologists have generally read Brentano in a far more methodologically sensitive fashion than have his analytic interpreters. Because of this, the phenomenological reading corrects some of the more serious interpretive errors made by many of his analytic readers. My strategy will be to examine each of these readings in turn, beginning with the analytic reading. A brief concluding section summarizes the results of these examinations." (p. 15)

Annotated bibliography on Franz Brentano: Studies in English, Second Part: Bau - Chr

Bibliography

1. Baumgartner, Wilhelm. 1989. "Objects analysed. Brentano's way toward the identity of objects." *Topoi Supplement* no. 4:20-30.
2. ———. 1996. "Act, Content, and Object." In *The School of Franz Brentano*, edited by Albertazzi, Liliana, Libardi, Massimo and Poli, Roberto, 235-259. Kluwer: Dordrecht.

"In what follows, I will deal with some aspects of Brentano's theory and terminology concerning the nature of the psychical, i.e. his descriptive psychological analysis which is, in fact, an early phenomenological theory about mental states, their structure, their mutual relation, and their intentional correlates (objects and contents). This theory goes along with his ontological theory of mind, which is an application of Aristotelian substance-accident or part-whole ontology, to the realm of mind, or more concretely, to a thinking person.

Taking the teachings of the natural sciences (the world existing outside of us and its physical laws) for granted, Brentano develops a special, individual ontology of mind (facts and motivational interrelations of the psychical). In describing the two aspects of the minds intentional relations to things other than itself and the self-relating character of psychical phenomena, Brentano describes both the inner world of mind and the outer world of inner world (general ontology). The

- analysis of phenomena (phenomenology) serves as link between special and general ontology." (p. 235, a note omitted)
3. ———. 2013. "Franz Brentano's Mereology." In *Themes from Brentano*, edited by Fisette, Denis and Fréchette, Guillaume, 227-245. Amsterdam: Rodopi.

"Introduction

In his search for a scientifically based worldview, and in contrast to "blind a priori" assumptions (Brentano 1925), Brentano aimed at an analysis of parts, down to their last fundamental elements, their properties and interconnections in order to demonstrate "what binds the world from within". He did so from an ontological (and from a broader metaphysical) standpoint on the one hand, and from a psychological perspective on the other.

In what follows, I will examine Brentano's methodological attempts to provide a foundational account of an ontology of things (§ 2) and an ontology of mind (§ 3) on the basis of his mereology, that is, his theory of part-whole-relations. In § 1, I refer to his lectures on the history of philosophy and to his essay on "The Four Phases of Philosophy".

I consider these investigations on scientific history in general, its periods, main themes, and endeavors, as relevant examples which illustrate my thesis that the relations of parts and wholes in Brentano's thought can also be observed beyond his ontology and his psychology." (p. 227)

"Brentano's theory of value, derived from his philosophical psychology, attempts to locate an objective basis for the intrinsic value of both aesthetic and ethical contemplation through the intentional objects of emotions and desires. As theories of intrinsic value, Brentano's aesthetics and ethics are concerned with what is good and bad, beautiful and ugly, pleasurable and displeasurable, in and of themselves, and not merely as a means to an end. As objective theories, Brentano presupposes that our aesthetic and ethical evaluations, like our judgments or beliefs, are either correct or incorrect. In what follows, we will set forth some of the basic principles involved in Brentano's aesthetics and ethics and elucidate how Brentano attempted to provide a foundation for these disciplines using his descriptive psychology." (p. 220)

5. Baumgartner, Wilhelm, and Simons, Peter. 1994. "Brentano's Mereology." *Axiomathes* no. 5:55-76.

"1. Introduction

Many philosophers have considered the fundamental properties of the relational concept part/whole to be self-evident.

Serious investigation of the formal properties of the concept part/whole began only in our century with the work of Whitehead and - especially - Lesniewski.

Brentano employed the concept of part variously as a tool of his philosophy but he also considered the concept for itself. The topic part/whole runs right through his thinking and for good methodological and systematic reasons: he constructs and consolidates his conception of science⁽¹⁾ and his individual theorems in analytic descriptive manner "from below".

Problems that appeared important to him, often the same problem, such as the interpretation of being, were turned around and looked at from different sides; he was always looking to explicate a complex problem step by step via partial solutions, always seeking to systematize the (apparently) disparate, while allowing individual issues their rightful place.

6. Bell, David. 1989. "A Brentanian Philosophy of Arithmetic." *Brentano Studien* no. 2 (139-144).

Abstract: "The aim of this paper is to identify the main respects in which Husserl's early philosophy, and in particular his early writings on the foundation of arithmetic, were influenced by Brentano's thought. It is claimed that the doctrinal, conceptual, and methodological perspective within which Husserl's *Philosophy of Arithmetic* is conceived and executed (but which remains very largely suppressed in Husserl's texts) is that which he inherited, more or less without modification, from Brentano in the period to which *Psychology from an empirical Standpoint*, *The Origin of our Knowledge of Right and Wrong*, and the lectures on *Descriptive Psychology* belong. That influence was extensive and profound enough to warrant calling Husserl's philosophy of arithmetic 'Brentanian'."

7. Bell, John L. 2000. "Continuity and the logic of perception." *Transcendent Philosophy* no. 1:1-7.

"In his *On What is Continuous* of 1914 ([2]), Franz Brentano makes the following observation:

If we imagine a chess-board with alternate blue and red squares, then this is something in which the individual red and

blue areas allow themselves to be distinguished from each other in juxtaposition, and something similar holds also if we imagine each of the squares divided into four smaller squares also alternating between these two colours. If, however, we were to continue with such divisions until we had exceeded the boundary of noticeability for the individual small squares which result, then it would no longer be possible to apprehend the individual red and blue areas in their respective positions. But would we then see nothing at all? Not in the least; rather we would see the whole chessboard as violet, i.e. apprehend it as something that participates simultaneously in red and blue. [p. 6]

In this paper I will describe a simple and natural framework—a logic of perception—in which this “simultaneous participation” or superposition of perceived attributes is accorded a major role. (This framework was originally introduced in [1] for a different purpose.) The central concept of the framework is that of an attribute being manifested over a region or part of a proximity space—an abstract structure embodying key features of perceptual fields. An important property of the manifestation relation is nonpersistence, namely, the fact that a space may manifest an attribute not manifested by some part. This will be shown to be closely related to the idea of superposing attributes.

I will also show how this framework is tied up with the continuity of perceptual fields." (p. 1)

Engagements. A Guide for Research and Study, edited by Tymieniecka, Anna-Teresa, 94-97. Dordrecht: Kluwer.

"The question of grammar is among the most important in Husserl's *Logical Investigations*. Grammar measures the ability of thought to produce sense, thus opening the question of the possibility of objects—even where they cannot exist in any real sense. Grammar is the basic structure of the meaning modality of intentionality which, in *Logical Investigations*, is the fundamental modality.

Brentano's criticism of language may have prepared Husserl to reflect upon grammar. However, this last theme remained foreign to Brentano, who never engaged in any real inquiry into *meaning*, which is the basis of grammar. Brentano cared much more for the problem of the reference or lack of reference of signs within the framework of a "fiction-theory". The decisive stimulus for Husserl's theory in fact came from the Brentanist Anton Marty (Mulligan, 1990; Benoist, 1997a, Ch. 3), who developed a philosophy of language where grammar played a significant role. Marty introduced the basic grammatical categories that characterize Husserl's system." (p. 94)

Book Two: Brentano and Meinong

Part III: Brentano 221; Part IV: Meinong 335;

Bibliographical Note 445; Index 447.

"On the one hand, Brentano's ontology is not easy to understand; nor therefore is it easy to describe accurately. That makes it difficult to achieve that alternation of exposition and criticism, both fluent and lucid, or at least not too crabbed and not obscure, which one ought to aim at when undertaking a task of this sort. On the other hand, Parts I and II have put us into possession of a considerable apparatus, developed at least in part with a view toward this task. In this situation an introductory section, consisting wholly of reflections designed to provide some preliminary orientation about matters both strange and difficult, should do some good. I shall present these reflections as a numbered string of comments or remarks.

The last is about Brentano's metaphilosophy. The one preceding it indicates how the issues I take up are distributed over the several sections. If at that point you will have a first glimpse of the reasons that led me to select just these issues and to discuss them in just this order, the Introduction will have served its purpose. But I do not feel like starting without first making explicit what I just implied. Both exposition and criticism are selective. For I am not, as a historian of the sort I am not, concerned with Brentano's views on all issues nor with how they developed in the course of his career, but, rather, as a philosopher of the sort I am, with what is interesting about them." (p. 222)

10. Bergmann, Hugo. 1945. "Brentano's theory of induction." *Philosophy and Phenomenological Research* no. 5:281-292.

Reprinted in: Linda McAlister (ed.), *The Philosophy of Brentano*, pp. 213-223.

"It is a remarkable fact that Hume's problem of the validity of the incomplete induction did *not* disquiet most of the logicians of the nineteenth century.

They studied the logical mechanism of induction, but the problem as discovered by Hume, that is, as an epistemological issue, was scarcely realised as existent. To quote one example, F.F. Apelt's *Theorie der Induktion* (1854), a book of great merit in many respects, virtually disregards the incomplete induction as such, and treats complete and incomplete induction as being on an equal footing.

The exception, of course, is John Stuart Mill, whatever may be our opinion of the answers he offers to the question. On the European continent, Franz Brentano found himself grappling with the problem from the

beginning of his philosophical thought. His *Versuch über die Erkenntnis*, edited from his literary remains by Alfred Kastil in 1925, is in essence a theory of induction." (p. 281)

11. ———. 1965. "Brentano on the History of Greek Philosophy *." *Philosophy and Phenomenological Research* no. 26:94-99.

* *Geschichte der Griechischen Philosophie*, in conformity with the lectures contained in his literary remains published by Franziska Mayer-Hildebrand. Bern: A. Francke, 1963. Pp. Lxiii, 396.

"Franz Brentano, did not like to publish books; as he once said, he hated the "secondary work" that was connected with proof-reading, referencing of quotations, etc. He thus left the publication of his literary remains to his disciples. Indeed, after his death (1917) Alfred Kastil and Oskar Kraus undertook the publication of his literary remains and, in the time permitted to them, carried it out with great loyalty and dedication.

In the years 1922 through 1934, there appeared in Felix Meiner's *Philosophische Bibliothek* ten volumes of Brentano's works; the editor's rich annotations are invaluable for understanding Brentano's lectures and the development of his thoughts. After Kastil's death the work of publication was taken over by Franziska Meyer-Hillebrand, his disciple. She published the *Grundlegung und Aufbau der Ethik*, *Die Lehre vom richtigen Urteil*, the *Grundzuege der Aesthetik*, and *Religion und Philosophie*; to these are now being added the

lectures on the *Geschichte der Griechischen Philosophie*." (p. 94)

(...)

"The editor calls our attention (p. 371) to "profound changes" in Brentano's comprehension of certain doctrines of Aristotle. Three times as much space in this book is devoted to Aristotle as to Plato. The exposition is divided not into three parts, as is that on Plato, but into seven parts: logic; metaphysics (subdivided into Being in general and the origin and principle of Being); theology ("God is not only efficient cause, but creator of the world, but He is not identical with Plato's idea of the good; discussion of the proofs for the existence of God"); cosmology ("The eternity of the world is unacceptable; from this assumption there could be no progress, no proper evolution, no history"); psychology (in this chapter discussion of the doctrine that the soul does not think without images; weighty objections against this doctrine and its refutation by Aristotle - the psychological efforts of the Wuerzburg school in the early years of our century, which were influenced directly or indirectly by Brentano, are unfortunately not mentioned); and ethics and politics,

in chapters six and seven respectively." (p. 98)

12. Berti, Enrico. 2001. "Brentano and Aristotle's *Metaphysics*." In *Whose Aristotle? Whose Aristotelianism?*, edited by Sharples, Robert W., 135-149. Aldershot: Ashgate.

"Franz Brentano's interpretation of Aristotle's philosophy has attracted the attention of scholars right up to the present day. It has been considered important above all for two reasons: a) because it constituted the origin of the famous theory of intentionality, which was found in his book on *Aristotle's Psychology* (1867); and b) because of the influence that the theory of the several senses of being, developed in his Dissertation of 1862, exercised on the birth of Heidegger's thought. However, Brentano's attempt to attribute to Aristotle the concept of creation and the theory of the immortality of the human soul has been almost completely rejected.

The first point was illustrated particularly by R. George and R. Sorabji, (1) but Brentano's interpretation of Aristotelian psychology was also at the centre of the debate on the "Mind-Body Problem", which involved several important philosophers, such as H. Putnam, the same R. Sorabji, M. Burnyeat, M. C. Nussbaum and others. (2) A part of his book on *Aristotle's Psychology* was included in the recent collection of Essays on Aristotle's "De anima".(3) The second point, to which Heidegger himself drew attention in his famous letter to Father Richardson, (4) was studied first by F. Volpi and afterwards by many others, including myself. (5)

The interpretation of Aristotle's theology expounded by Brentano in an additional essay to *Aristotle's Psychology*, was criticised by Eduard Zeller in the third edition of his monumental history of Greek philosophy (1878). This criticism induced Brentano to write an essay on *Aristotle's Creationism* (1882), followed by a reply from Zeller, a new intervention on the part of Brentano and a further reply by Zeller (1883), which seemed to close the discussion.(6) But Brentano reprinted his essay of 1882, with some additions, in the volume *Aristoteles Lehre vom Ursprung der menschlichen Geistes* (1911) (7) and in the same year he also published a monograph, *Aristoteles and seine Weltanschauung*, where he repeated the main lines of his interpretation. (8) The controversy was definitively resolved, in my opinion, only with W. D. Ross's introduction to his edition of Aristotle's *Metaphysics*, where the famous English Aristotelian refuted any possibility of conceiving Aristotle's God as a creator, explicitly attacking the interpretation proposed by Brentano.(9)

On this occasion I do not wish to return to the theory of intentionality, even if I will make some reference to it. I would like, on the contrary, to see what consequences the interpretation of Aristotle's ontology, developed by Brentano in his dissertation of 1862, and his interpretation of Aristotle's theology, developed in his later writings, had for the modern and contemporary image of Aristotle; that is, how Brentano's Aristotle influenced contemporary philosophers' judgements of Aristotle's metaphysics." Berti, 'Zeller e Aristotele', *Annali della Scuola Normale Superiore di Pisa, cl. di lett. e filos.*, s. III, vol. XIX.3, Pisa 1989, 1233 -1254.

(8) Leipzig: Quelle & Meyer. In preparing this monograph Brentano wrote a series of notes on Aristotle, which remained unpublished until after his death: cf. F. Brentano, *Über Aristoteles. Nachgelassene Aufsätze*, hrsg. v. R. George, Hamburg: Meiner, 1986.

(9) *Aristotle's Metaphysics*, Oxford: Clarendon Press, 1924, I, cxxxiii-cxxxix, cxlix, cliii-cliv. I occupied myself with this discussion in E. Berti, 'Da chi è amato il motore immobile? Su Aristotele, *Metaph.* XII 6-7', *Methexis* 10, 1997, 59-82.

13. Betti, Arianna. 2013. "We owe it to Sigwart! A new look at the content/object distinction in early phenomenological theories of judgment from Brentano to Twardowski." In *Judgement and Truth in Early Analytic Philosophy and Phenomenology*, edited by Textor, Mark, 74-96. Palgrave.

"In a series of articles, Dale Jacquette has offered the following picture of Twardowski's contribution to Brentano's theory of intentionality.

Brentano made no distinction between the content and the object of mental acts: he 'seems to place the real world beyond the reach of thought' (Jacquette 1990: 181, Jacquette 2004: 107; see also Jacquette 2006: 12). By distinguishing sharply between content and object instead, Twardowski went beyond Brentano (although, contrary to what others claim, he was not the first Brentanian to do so).

This picture needs fine-tuning." (p. 74)

(...)

"On the basis of the logic manuscript EL 80 he edited, Robin Rollinger has recently argued that Brentano himself has the distinction in place (Rollinger 2009), and, given Rollinger's dating of EL80, this implies not only that Brentano acknowledged the distinction before Twardowski, but also before Höfler and Meinong's *Logik*.(1)" (p.75)

(...)

"Why did Brentano himself introduce the content/object distinction at a certain point, and at which 'certain point'? Here's the story as I'll tell it in this paper. It is, on the face of Rollinger's dating of EL80, a (possibly) controversial story. Brentano was forced to consider (or consider more seriously) the content/object distinction at a certain point, I'd say not before 1888–89, by attacks against his theory of judgement made by critics such as Sigwart and Windelband." (p. 76)

"Introduction

The recent publication of the lectures given by the University of Vienna Philosophical Society from 1888 to 1922 has apparently stimulated increased interest among many scholars. The primary reason, of course, is that the Vienna background of many of the best-known philosophers of the 20th century has raised the distinct possibility that the Philosophical Society was a significant or even principal incubator for this remarkable development. Mach, Wittgenstein, Boltzmann, Neurath, Popper, von Hayek, and Feyerabend were all Viennese. The first four thinkers were clearly influenced by lectures and discussions given in the Society, the father of Sir Karl Popper was a member,³ Friedrich von Hayek alleges that most philosophical discussion revolved around Mach's ideas at that time, and concerning Feyerabend's attraction to philosophy, one might suspect a source in Boltzmann's *Populäre Schriften*. Some of the groups which appear to have been 'spun off from the Society include Schlick's Circle, Reininger's Circle, and Heinrich Gomperz's Circle.

But in this paper, I would like to explore the relations of Franz Brentano and his students with the Society, which as we shall see were important until the First World War and for a few years afterwards. Brentano gave the first lecture, his students held top positions in the society often until their deaths, his followers actually gave more talks or led more discussions than the numerous adherents of Mach and Boltzmann, and Franz Brentano's most famous students, Meinong and Husserl, were corresponding members of this Vienna Society for some length of time." (p. 73, notes omitted)

15. Bonino, Guido. 2018. "Brentano in America. Three episodes." *Paradigmi* no. 1:49-64.

Abstract: "The article aims to investigate how Gustav Bergmann, Reinhardt Grossmann and Roderick Chisholm used Brentano's notion of intentionality in their own philosophical pursuits, and on how they saw themselves and their works with respect to what they regarded as Brentano's place in the history of philosophy. It is shown how the differences among their interpretations depend mainly on their different philosophical agendas."

16. Brandl, Johannes. 2018. "Brentano's Renewal of Philosophy: A Double-Edged Sword." *Brentano Studien* no. 16:25-52.

Abstract: "This paper discusses Brentano's plan to renew philosophy as consisting of two goals. One goal is to restore the scientific reputation of philosophy by employing the natural methods of descriptive psychology. In contrast to sceptical and critical approaches in 19th-century philosophy, Brentano seeks to renew philosophy by reviving a purely theoretical interest that he associates with the work of Aristotle. The other goal derives from Brentano's theistic worldview. Like scholastic thinkers, Brentano believes that philosophy can provide a rational foundation for theism. His plan is therefore not just to align philosophy with the empirical sciences, but also to arbitrate between scientific knowledge and belief in God. But can one really expect from philosophy to serve as a bridge between science and religion? Since there is good reason to doubt that philosophy can play that role, Brentano's plan for a renewal of philosophy remains a double-edged sword that cuts one way or the other, aligning philosophy with either science or religion, but not both."

17. Brandl, Johannes L. 1996. "Intentionality." In *The School of Franz Brentano*, edited by Albertazzi, Liliana, Libardi, Massimo and Poli, Roberto, 261-284. Kluwer: Dordrecht.

"There is one assumption which all participants in this debate, whether modern or traditional, agree on: they all accept propositional entities. Meinong accepts objectives, Husserl accepts states of affairs, and Fodor and Searle accept propositions.⁽¹²⁾ They accept these entities as the objects of our propositional attitudes. Not so Brentano after 1874. His

account of belief and desire makes do with the same entities as are already involved in his analysis of non-propositional acts. But it is not clear what those entities are to which Brentano is committed from the beginning.

(...)

In what follows I want to explore this idiosyncrasy of Brentano's theory, not as a historical curiosity, but as a source of inspiration for dealing with contemporary issues. I start out from a standard version of the representational theory of mind (section 2). I then consider two possible ways of attributing such a theory to Brentano (sections 3-5). The first approach emphasizes the fundamental role of presentations. The second approach leads to the result that only acts which are neither propositional nor non-propositional can play this fundamental role. In the final section I briefly consider the merits of this latter interpretation." (pp. 263-264)

(12) 12 The difference between these types of entities is explored, both from a modern and a traditional perspective, in Künne 1987.

"The plan of the paper is as follows. I begin with Brentano's definition of mental phenomena (section 2) and his idea that mental phenomena have a distinctive internal structure (section 3). I then consider what inner consciousness contributes to this structure by clarifying two distinctions with which Brentano operates here: the distinction between primary

and secondary objects (section 4), and his distinction between inner perception and inner observation (section 5).

The main step in my interpretation will then consist in pointing out that inner perception and inner observation need not be conceived as two distinct cognitive faculties. Rather we can think of them as one faculty that gives rise to gradually different forms of self-knowledge (section 6). In the remaining part of the paper I will then exploit this interpretation for rebutting two objections that have been raised against Brentano's theory. David Rosenthal has argued that Brentano's model rests on a Cartesian premise and should therefore be replaced by a proper higher-order theory of consciousness (section 7).

Others, including Henrich, Frank and many phenomenologists have questioned Brentano's treatment of the regress-problem and on that basis suggested that Brentano's model of consciousness should be replaced by a strictly one-level theory (section 8). I will argue that both objections miss their target because Brentano's fits neither the mould of a higher-order nor of a one-level theory." (pp. 42-43)

19. ———. 2017. "Was Brentano an Early Deflationist about Truth?" *The Monist* no. 100:1-14.

Abstract: "It is often assumed that deflationist accounts of truth are a product of philosophy of logic and language in the twentieth century. In this paper I show why this assumption is historically short-sighted. An early version of deflationism about truth can already be found in Brentano's 1889 lecture "On the Concept of Truth." That Brentano is a precursor of deflationism has gone largely unnoticed because of a different reception of his lecture: according to most scholars, Brentano proposes in it a revision of the correspondence theory of truth that he later rejected in favour of an epistemic theory. Contrary to this received interpretation, I argue that Brentano actually tried to show how one can minimize an account of truth without thereby sacrificing a robust realist intuition about the objectivity of truth. Brentano held on to this deflationist view in

his later years, when he assigned self-evident judgments a primary role in our understanding of truth."

20. ———. 2017. "Brentano on Truth." In *The Routledge Handbook of Franz Brentano and the Brentano School*, edited by Kriegel, Uriah, 163-168. New York: Routledge.

"How to understand Brentano's account of truth is a question of some controversy.

A number of different views have been put forward as positions that Brentano held at some stage in his career. The received view has it that the early Brentano subscribed to a form of correspondence theory which he later rejected in favor of a definition of truth in terms of correct judging, where the correctness of a judgement is defined in terms of the notion of self-evidence (...)."

(...)

"Section 1 first summarizes the received view and then indicates two problems raised by this interpretation. Section 2 explains in which sense Brentano may have been a deflationist and how this interpretation avoids the problems of the received view." (p. 163)

21. ———. 2023. "The purposes of descriptive psychology." *European Journal of Philosophy*:358-370.

Abstract: "In this paper, I discuss the different views of the founders of descriptive psychology in the 19th century about the meaning and purpose of this discipline and sketch a new plan for connecting descriptive psychology with the language-critical tradition of analytic philosophy. I will show that the goals Hermann Lotze, Franz Brentano, and Wilhelm Dilthey set for descriptive psychology were too lofty for different reasons. The common problem they faced was how to reconcile the ideal of autonomous philosophical knowledge with the empirical relevance that descriptive psychology should have. Faced with this dilemma, I outline a new plan to conceive of descriptive psychology as a critical project aimed at overcoming the obstacles that language places in the way of our knowledge of mental phenomena."

22. Brandl, Johannes L., and Textor, Mark. 2021. "Disentangling Judgement from Its Linguistic Clothing': Brentano's View of Judgement and Its Linguistic Guises." In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 156-178. Leiden: Brill Rodopi.

"What seems clear is that the potential of Brentano's criticism of ordinary language has not yet been fully explored. We found that at least three points deserve further attention: Brentano's view that noun phrases, for example, demonstratives, can express a simple judgment; his idea that assertoric sentences can express non-propositional acknowledgements; and last but not last, Brentano's concept of double judgement. Taking together, these three insights may provide us with a better ground for introducing propositional objects into a theory of judgement. Disentangling our judgements from language also means not to follow the usual procedure of simply taking the meaning of assertoric sentences to constitute the objects that we judge to be true or false." (p. 177)

23. Brentano, J. C. M. 1966. "The Manuscripts of Franz Brentano." *Revue Internationale de Philosophie* no. 20:477-482.

"The philosopher Franz Brentano, my father, left at his death an unusual number of unpublished papers. This is due to two main reasons. One is that true to the principle he had announced in one of his theses when applying for the *venia legendi* at Würzburg university: *Vera philosophiae methodus nulla alia nisi scientiae naturalis est*, which meant that philosophy should proceed by small well consolidated steps and that each step before being accepted should stand the test of not being in conflict with any other part of true philosophy, he wished to withhold his findings from publication until they were checked and rechecked. Apart from his lectures the medium for communicating the results of his investigations was the correspondence with other philosophers, particularly with former pupils. The other reason is that in the later part of his life he was affected by an eye ailment and gradually almost

lost his eyesight. From about 1904 onwards writing and particularly reading became very difficult." (p. 477)

24. Brito, Evandro Oliveira de. 2018. "Franz Brentano's theory of judgment (1889): a critique of Aristotle's correspondence theory of truth." *Trans/Form/Ação* no. 41:39-56.

Abstract: "The purpose of this paper is to discuss the concept of truth formulated by Franz Brentano in 1889. As a textual basis, I take Brentano's communication, presented to the philosophical community of Vienna in March 1889, entitled "On the concept of truth" (*Über den Begriff der Wahrheit*), and I provide a systematic exposition of Brentano's analysis of the problems surrounding the interpretation of the Aristotelian concept of truth as correspondence. My analysis explains how Brentano reinterpreted the Aristotelian concept of truth as correspondence within the conceptual framework of his descriptive psychology."

25. Brown, Deborah. 2000. "Immanence and Individuation: Brentano and the Scholastics on Knowledge of Singulars." *The Monist* no. 83:22-46.

"The primary aim of this paper is to explain the connection between the theory of immanence in its medieval and Brentanian forms and the problem of individuation. The predominant Scholastic solution to the problem will be compared with Brentano's own "Leibnizian" account of singular knowledge. I shall begin in the next section with a discussion of how the problem arose in the Aristotelian-Thomistic tradition of the

middle ages for it is in this metaphysico-epistemological tradition that Brentano's work is best located. In Section III, I outline Brentano's theory of immanence in more detail and discuss his proposed analysis of singular knowledge. I shall argue that there can be found in Brentano's later modifications of the theory of immanent objects nominalist tendencies which should have made the task of explaining singular knowledge easier.

Brentano's general rejection of nominalism and the residual Aristotelian Thomistic ideas in his theory of intentionality, however, prevented a full swing to nominalism. In the fourth Section I consider one medieval nominalist solution to the problem of singular knowledge, William of Ockham's, in the light of Brentano's objections to nominalism. It is my contention that not only does Brentano's reading of medieval nominalism contain a fundamental misunderstanding, but that his own philosophy of mind requires the possibility of direct, non-abstractive epistemic access to individuals.

Thus in the final Section I discuss how an adequate theory of the unity of consciousness requires an adequate account of our knowledge of singulars." (pp. 23-24)

26. Cesalli, Laurent, and Taieb, Hamid. 2018. "Brentano and Medieval Ontology." *Brentano Studien* no. 16:335-362:.

Abstract: "Since the first discussion of Brentano's relation to (and account of) medieval philosophy by Spiegelberg in 1936, a fair amount of studies have been dedicated to the topic. And if those studies focused on some systematic issue at all, the beloved topic of intentionality clearly occupied a hegemonic position in the scholarly landscape. This paper considers the question from the point of view of ontology, and in a twofold perspective: What did Brentano know about medieval ontology and what kind of access did he have to that material (section 1)? What kind of use did Brentano make of medieval material in his own philosophy, and with what kind of results (section 2)?"

27. Chisholm, Roderick M. 1952. "Intentionality and the Theory of Signs." *Philosophical Studies* no. 3:56-63.

"Franz Brentano wrote, in a well-known passage, that intentionality is peculiar to psychical phenomena. No physical

phenomenon, he said, shows anything like it; hence intentionality affords us a criterion of the mental or psychical⁽¹⁾. Let us refer to this view as "Brentano's thesis." Among the phenomena which he would have called "intentional" is the interpretation of signs. One may ask, is it possible to provide an adequate theory of signs which will show Brentano's thesis to be mistaken? In the present paper I shall make certain general points which, I believe, must be considered in any attempt to answer this question, I shall first attempt to state Brentano's thesis somewhat more exactly; then I shall turn to the analysis of the concept *sign*."

"1. " I can look for him when he is not there, but not hang him when he is not there ".(1) The first of these activities, Brentano would have said, is intentional; it may take as its object something which does not exist. But the second activity is "merely physical"; it cannot be performed unless its object is there to work with. " Intentionality ", he thought, provides us with a mark of what is psychological.

I shall try to reformulate Brentano's suggestion by describing one of the ways in which we need to use language when we talk about certain psychological states and events.

I shall refer to this use as the " intentional use " of language.

It is a kind of use we can avoid when we talk about nonpsychological states and events.

In the interests of a philosophy contrary to that of Brentano, many philosophers and psychologists have tried to show, in effect, how we can avoid intentional language when we wish to talk about psychology. I shall discuss some of these attempts in so far as they relate to the sorts of things we wish to be able to say about believing. I believe that these attempts have been so far unsuccessful. And I think that this fact may provide some

reason for saying, with Brentano, that "intentionality" is a mark of what is psychological." (p. 125)

Chapter XI; reprinted in: Linda McAlister (ed.), *The Philosophy of Brentano*, pp. 140-150.

"I have suggested that the locution "There is something that S perceives to be *f*" may be defined as meaning: "There is something such that it is *f*, it appears to S in some way, S takes it to be *f*, and S had adequate evidence for so doing." And I have suggested that "S takes something to be *f*" may be defined by reference to what S assumes, or accepts. I have now said all that I can about the philosophic questions which the concepts of *adequate evidence* and of *appearing* involve. Let us finally turn, then, to the concept of *assuming*, or *accepting*. The principal philosophic questions which this concept involves may be formulated by reference to a thesis proposed by Franz Brentano.

Psychological phenomena, according to Brentano, are characterised 'by what the scholastics of the middle ages referred to as the intentional (also the mental) inexistence of the object, and what we, although with not quite unambiguous expressions, would call relation to a content, direction upon an object, (which is not here to be understood as a reality), or immanent objectivity.'(2) This 'intentional inexistence', Brentano added, is peculiar to what is psychical; things which are merely physical show nothing like it.

Assuming, or *accepting*, is one of the phenomena Brentano would have called intentional. I will first try to formulate Brentano's thesis somewhat more exactly; then I will ask whether it is true of assuming." (p. 168)

31. ———. 1966. "Brentano's Theory of Correct and Incorrect Emotion." *Revue Internationale de Philosophie* no. 20:395-415.

Reprinted in: R. M. Chisholm, *Brentano and Meinong Studies*, pp. 68-79 and in Linda McAlister, *The Philosophy of Brentano*, pp. 160-175.

"Brentano's theory of correct and incorrect emotion is based upon the analogy he believes to hold between what he calls the

sphere of the intellect and the sphere of the emotions. What he has to say about this presumed analogy seems to me to be very important indeed.

Even where his views are controversial, they are extraordinarily suggestive, not only for ethics, but also for the theory of preference and for philosophical psychology.

(...)

Brentano divides judgments into two exclusive classes - those that are affirmative and those that are negative. Affirmative judgments are those that affirm, acknowledge, or accept something. Negative judgments are those that deny or reject something. All judgments are also either correct or incorrect; or, as we usually say, they are either true or false. And finally, there is a very close connection between the correctness and incorrectness of judgments, on the one hand, and existence and non-existence, on the other. For to say of an object that it exists, Brentano suggests, is to say that it is correct to accept that object, and to say of an object that it does not exist is to say that it is correct to reject that object. The latter point may also be put by saying that an object exists if and only if it is worthy of being accepted or affirmed, and that an object does not exist if and only if it is worthy of being rejected or denied.(1)

And now Brentano thinks, we may say much the same thing, *mutatis mutandis*, about emotions - about "love and hate".

Emotions are either positive or negative; they are either proemotions or anti-emotions, love or hate. Love and hate may be correct and they may also be incorrect. There is a very close connection between the correctness and incorrectness of emotions, on the one hand, and goodness and badness on the other. For to say of an object that it is good, Brentano suggests, is to say that it is correct to love that object, and to say of an object that it is bad is to say that it is correct to hate that object. The latter point may also be put by saying that an object is good if and only if it is worthy of being loved, and an object is bad if and only if it is worthy of being hated.

But to put the analogy this way is to oversimplify Brentano's doctrine. And, so he concedes, there are fundamental points of disanalogy that hold between the intellectual and the emotive spheres." (pp. 396-397)

Routledge & Kegan Paul, Ltd., 1966), ed., Roderick M. Chisholm.

32. ———. 1967. "Brentano on descriptive psychology and the intentional." In *Phenomenology and Existentialism*, edited by Lee, Edward and Mandelbaum, Maurice, 1-23. Baltimore: John Hopkins Press.

"Brentano's doctrine of the intentional, as well as much of the rest of what we would now call his philosophy, was a part of what he called "descriptive psychology." Brentano's "descriptive psychology" and Husserl's "phenomenology" are closely related. Husserl had studied with Brentano in Vienna from 1884 to 1886.(3) Brentano had used "beschreibende Phänomenologie" as an alternative name for descriptive psychology but evidently did not use "Phänomenologie" in this way after 1889.

The relation that descriptive psychology bears to genetic or explanatory psychology, Brentano said, is analogous to the relation that anatomy bears to physiology and to the relation that "geognosy" bears to geology (hence "psychognosy" was still another term that Brentano used for descriptive psychology).

(4) Genetic or explanatory psychology is concerned with the causal status of psychological phenomena and hence with the relations that such phenomena bear to physical and chemical processes. It is not an exact science but, like meteorology, must qualify its generalizations with such terms as "on the average" and "for the most part." But descriptive psychology, Brentano thought, was an exact science." (p. 2)

35. ——. 1976. "Brentano's Descriptive Psychology." In *The Philosophy of Brentano*, edited by McAlister, Linda Lopez, 91-100. London: Duckworth.

Revised by the author, who notes, ‘I have profited by certain criticisms made by D.B. Terrell’. The first version of this paper appeared in the Proceedings of the XIVth International Congress of Philosophy, 2-9 September 1968 (Vienna, 1968), volume 2, pp. 164-74.

"It is most fitting that one session of an international congress of philosophers meeting in Vienna should be devoted to the topic, ‘Brentano, philosophical psychology, and the phenomenological movement’. Franz

Brentano’s lectures on descriptive psychology were given at the University of Vienna three-quarters of a century ago. Husserl said that without Brentano’s researches ‘phenomenology could not have come into being at all’.(2) Brentano’s descriptive psychology is doubtless very close to what Husserl originally took phenomenology to be. But in the philosophical problems that are central to it, and in the precise analytic manner with which Brentano dealt with them, his descriptive psychology is also very close to the ‘philosophy of mind’ or ‘philosophical psychology’, that is now of concern to philosophers in the analytic tradition.

Yet it would not be fitting, here in Vienna, to look upon Brentano merely as a precursor of subsequent philosophical

movements. I shall try to say briefly what he took descriptive psychology to be and I shall comment upon what I take to be its philosophical significance." (p. 91)

(2) See Edmund Husserl, 'Author's Preface to the English Edition', *Ideas—General Introduction to Pure Phenomenology* (London, 1931), p. 23; *Phänomenologische Psychologie* (The Hague, 1962), pp. 31-4, 267-9, 353-4.

36. ———. 1978. "Brentano's Conception of Substance and Accident." *Grazer Philosophische Studien* no. 5:197-210.

Abstract: "Brentano uses terms in place of predicates (e.g. "a thinker" in place of "thinks") and characterizes the "is" of predication in terms of the part-whole relation. Taking as his ontological data certain intentional phenomena that are apprehended with certainty, he conceives the substance-accident relation as a define-able type of part-whole relation which we can apprehend in "inner perception". He is then able to distinguish the following types of individual or ens reale: substances; primary individuals which are not substances; accidents; aggregates; and boundaries."

37. ———. 1981. "Brentano's analysis of the consciousness of time." In *Midwest Studies in Philosophy. Volume VI. The Foundations of Analytic Philosophy*, edited by French, Peter A., Uehling Jr., Theodore E. and Wettstein, Howard K., 3-16. Minneapolis: University of Minnesota Press.

"Franz Brentano's conception of philosophical analysis is illustrated by his analysis of our consciousness of time. The analysandum is not a linguistic expression or a concept; it is an experience of a certain sort. Hence the analysis might be called "phenomenological," but Brentano prefers to say it is a matter of "descriptive psychology."

An analysis of our consciousness of time is not, of course, an analysis of time. Hence Brentano's analysis is consistent with a number of different conceptions of time. But it does presuppose that tense is to be taken seriously. In other words, Brentano does not accept the philosophical view, advocated by many contemporary philosophers of science, according to which

distinctions of tense are merely "subjective" or otherwise "illusory." Nor does he believe that all truths can be expressed in untensed sentences.

I shall begin by formulating what Brentano takes to be a fundamental problem of descriptive psychology -- that of accurately describing our awareness of temporal succession. Then I shall set forth the development of his views with respect to this problem." (p. 3)

38. ———. 1982. *Brentano and Meinong Studies*. Amsterdam: Rodopi.

Contents: Foreword 1; 1. Brentano's Theory of Substance and Accident 3; 2. Brentano's Theory of Judgment 17; 3. Homeless Objects 37; 4. Beyond Being and Nonbeing 53; 5. Correct and Incorrect Emotion 68; 6. Objectives and Intrinsic Value 80; 7. The Quality of Pleasure and Displeasure 92; 8. Supererogation and Offence 98; 9. Beginnings and Endings 114-124.

"I present these papers on Brentano and Meinong in the hope that they will lead the reader back to the original sources. Some of the papers are expositions and commentaries. Others are developments of certain suggestions first made by Brentano or by Meinong.

The first two papers are concerned with the basic presuppositions of Brentano's theoretical philosophy.

"Brentano's Theory of Substance and Accident" was presented to the Congress on the Philosophy of Franz Brentano held in Graz in September 1977; it first appeared in the *Grazer Philosophische Studien*, Vol. V (1978). The second paper - "Brentano's Theory of Judgment" - has not been published before; but a preliminary version of part of it, entitled "Brentano's Nonpropositional Theory of Judgment," appeared in the *Midwest Studies in Philosophy*, Vol. I (1976). It should be noted that Brentano's *Kategorienlehre*, to which many references are made in these two papers, has now been translated into English as *The Theory of Categories*, The Hague; Martinus Nijhoff 1981.

(...)

The four papers that follow are concerned with the theory of value, as it had been conceived by Brentano and developed by Meinong. "Correct and Incorrect Emotion" and "The Quality of Pleasure and Displeasure" are both adapted from "Brentano's Theory of Correct and Incorrect Emotion," which first appeared in the Brentano issue of the *Revue Internationale de Philosophie*, Vol. 20 (1966).

(...)

The final paper - "Beginnings and Endings" - is a revision of a paper entitled "Brentano als analytischer Metaphysiker," which first appeared in the special volume of *Conceptus* entitled *Österreichische Philosophie und ihr Einfluss auf die analytische Philosophie der Gegenwart*, Jg. XI (1977), Nr. 28-30, pp. 77-82. A later version appeared in *Time and Cause*, edited by Peter Van Inwagen (Dordrecht: D. Reidel, 1980), pp. 17-25. It has been revised once again for the present volume.

I hope that these essays will be thought of as carrying out the tradition of the Brentano school." (From the *Foreword*).

39. ———. 1982. "Brentano's Theory of Judgment." In *Brentano and Meinong Studies*, 17-36. Amsterdam: Rodopi.

"Introduction. In the final reistic phase of his thought Brentano rejects such *entia irrealia* as propositions, Judgmental contents, and states of affairs, and he develops what may be called a "nonpropositional theory of judgment". It is normally supposed that a nonpropositional theory of judgment cannot possibly be made adequate to so-called compound judgments. I shall attempt to show that this supposition is false.

The two essential features of Brentano's theory of judgment are these: (1) that there are two irreducibly different types of judgment, one affirmative and the other negative; and (2) that the only terms needed in the formulation of such judgments are terms that a reist could countenance as being genuine." (p. 17)

40. ———. 1983. "Boundaries as Dependent Particulars." *Grazer Philosophische Studien* no. 20:87-95.

"Introduction

Stephan Körner has noted that one way of drawing up a theory of categories will divide all particulars "into (a) a class of independent particulars, i.e. particulars which are ontologically fundamental, and (b) a class of dependent particulars, i.e. particulars which are not ontologically fundamental."(1) The dependent particulars might be said to be "parasitical upon" the fundamental particulars.

I shall here discuss the nature of spatial boundaries, viewing them as dependent particulars." (p. 87)

41. ———. 1986. *Brentano and Intrinsic Value*. Cambridge: Cambridge University Press.

Contents: Editors' introduction IX; Acknowledgments XIII; 1. Introduction 1; 2. Thought and its objects 9; 3. The phenomena of love and hate 17; 4. Correct judgment 33; 5. Correct emotion 47; 6. The hierarchy of values 59; 7. Organic unities 69; 8. Evil 91; Index 103.

"The psychological approach to the theory of value.

I have tried to do two things in this book. The first is to set forth Franz Brentano's theory of value within the context of the remarkable philosophical system that he worked out.

And the second is to develop in further detail some of his more suggestive insights about the nature of intrinsic value.

My concern, for the most part, has been with exposition and clarification and not with criticism.

Much of Brentano's philosophy is based upon psychological considerations. The most important of these, as far as the theory of value is concerned, is his conception of the analogies that hold between intellectual and emotive phenomena." (p. 1)

42. ———. 1987. "Brentano and One-Sided Detachability." *Conceptus: Zeitschrift Fur Philosophie* no. 21:153-159.
43. ———. 1987. "Brentano's theory of pleasure and pain." *Topoi* no. 6:59-64.

"In one of their uses, the words "pleasure" and "pain" designate *sense qualities* of a certain sort. When they are used in this way, then "pleasure" may be said to designate one type of sense *content* and "pain" may be said to designate another. But in another of their uses, "pleasure" and "pain" designate certain types of mental act and not sensory contents. I can say "I am pleased that you are well" or "I am displeased about the bad news". In this case my statement may express an intentional attitude comparable to belief and desire.

What is the relation, then, between *sensory* pleasure and pain, on the one hand, and *non-sensory*, or *intentional*, pleasure and pain on the other? Are they simply two different types of phenomena that happen to have the same name? Or is there a sense in which both can be said to be subspecies of more generic types of pleasure and pain? These are among the basic philosophical questions of the theory of pleasure and pain. They present a problem, therefore, for descriptive psychology.
(1)

The descriptive problem was clearly set forth by Stumpf in a lecture that was given in 1906 and published in the following year. Brentano's discussion of pleasure and pain in the *Untersuchungen zur Sinnespsychologie* (1907) is essentially a commentary on Stumpf's lecture.(2)" (p. 59)

44. ——. 1989. "The objects of sensation: a Brentano study." *Topoi* no. 8:3-8.

"Introduction

The objects of sensation -- that is to say, such things as sense-qualities, sense-data, or phenomena -- continue to be what Meinong had called "homeless objects (heimatlose Gegenstände)". (1) Investigators cannot agree as to what kind of things they are and they cannot even agree as to whether there are such things. I will try to show in this paper that Brentano's final view about them tells us just what they are and what kind of a home they have.

To explicate Brentano's view, I will begin, as he did in the *Psychology*, by considering the nature of the psychological.

For I think we can do what he wanted to do -- namely, to find a mark that is peculiar to what is psychological.

I assume, as he did, that we can agree pre-analytically about *what* things are psychological. All of our psychological properties are properties that include the property of *thinking*. Examples of such properties are judging, wishing, hoping and desiring. And the property of sensing -- the property of having a sensation -- is also a psychological property.

Let us first consider the kinds of thing that can have psychological properties." (p. 3)

45. ———. 1991. "The formal structure of the Intentional: A metaphysical Study." *Brentano Studien* no. 3:11-18.

Abstract: "What is the metaphysical significance of what Brentano has shown us about intentionality? It is the fact that intentional phenomena have logical or structural features that are not shared by what is not psychological.

It was typical of British empiricism, particularly that of Hume, to suppose that consciousness is essentially sensible. The objects of consciousness were thought to be primarily such objects as sensations and their imagined or dreamed

counterparts. In the *Psychologie vom empirischen Standpunkt*, Brentano makes clear that intentional phenomena need not be sensible. He is aware that, even if intentional phenomena are always accompanied by sensible or sensational phenomena, they are not themselves sensational or sensible phenomena. And the presence of certain intentional attitudes is at least as certain and indubitable for us as is the presence of our sensations. If I make a certain judgment or ask myself a certain question, then I can know directly and immediately that I make that judgment or ask that question. (This is not to say, of course, that every intentional attitude may be the object of such certainty. Perhaps there is a sense in which you may be said to like or to dislike a certain thing without realizing that you like or dislike that thing.)

If I can know directly and immediately that I am making a certain judgment, then, I can know what it is to make such a judgment. And if I know what it is to make a judgment, then, in making the judgment I can know directly and immediately that there is a certain individual thing - namely, the one who makes the judgment. And I, of course, am the one who makes my judgments and does my thinking. The same is true, obviously, of my other intentional activities - such activities as wondering, fearing, hoping, desiring, considering, liking and disliking."

46. ———. 1993. "Spatial continuity and the theory of part and whole. A Brentano study." *Brentano Studien* no. 4:11-24.

"The concepts of a spatially continuous substance, of spatial dimension and of spatial boundary are here "analyzed out" of the concepts of individual thing, of constituent and of coincidence. The analysis is based upon the theory of spatial coincidence that was developed by Brentano. Its presuppositions are essentially these: (1) if there are spatial objects of any kind, then there are continuous spatial substances. (2) such substances are possibly such that they are not constituents of any individual thing; and (3) they contain constituents (namely, boundaries) which are necessarily such that they are constituents of spatial substances."

47. ———. 1993. "Brentano on "Unconscious Consciousness"." In *Consciousness, Knowledge, and Truth: Essays in Honour of Jan Srzednicki*, edited by Poli, Roberto, 153-160. Dordrecht: Kluwer.

"Introduction

In his *Psychology from an Empirical Standpoint*, Franz Brentano sets forth a theory of consciousness which implies (i) that every mental state includes an awareness of the subject of that state. (ii) that every mental state is itself an object of consciousness and (iii) that there are no unconscious mental states. Brentano's views on these matters, it seems to me, are of first importance. Many of Brentano's critics have felt that they involve insuperable difficulties. In the present essay, I will attempt to put these views as clearly as possible and to suggest how Brentano might deal with some of the criticisms that have been made.

I will discuss three questions: (1) Does Brentano's concept of a "secondary" object lead to a regress? (2) Is every mental act an object of an evident judgement? And (3) are there unconscious mental states?" (p. 153)

48. Chrudzimski, Arkadiusz. 2003. "Brentano's Late Ontology." *Brentano Studien* no. 10:221-236.

Abstract: "In the present paper I want to give an interpretation of Brentano's late, nominalistic ontology. There are two aspects of this theory: the conception of individual properties containing their substances, presented mainly in the fragments collected in Brentano's *Theory of Categories* and the conceptualistic reduction virtually involved in Brentano's definition of truth."

49. ———. 2013. "Brentano and Aristotle on the Ontology of Intentionality." In *Themes from Brentano*, edited by Fisette, Denis and Fr chet te, Guillaume, 121-137. Amsterdam: Rodopi.

"It is often claimed that Brentano's rediscovery of intentionality has been strongly influenced by Aristotle. Brentano himself stressed repeatedly his affinity to Aristotle(1) and this self-

interpretation was by no means restricted to the theory of intentionality. In fact, Brentano seemed to believe that almost all of what he had discovered during his most influential years (1874–1895) has its more or less remote roots in the philosophy of Aristotle.(2) Yet if we carefully compare the picture of intentionality that is to be found in Aristotle's *De Anima* with Brentano's theory of immanent objects, we find more differences than similarities. The truth is that Brentano developed a quite different ontology of intentionality, and his references to Aristotle should be seen as a conventional homage to his master rather than as something of substance that could help us to understand better Brentano's own theory. What Brentano in fact took from Aristotle was rather his way of doing philosophy and certain isolated ideas, but certainly not theories in their entirety.(3)" (p. 121)

50. ———. 2015. "Intentional Objects and Mental Contents." *Brentano Studien* no. 13:81-119.

Abstract: "In this paper I present a sketch of a theory of intentionality introducing special entities called intentional objects. Elaborated theories of this kind can be found in the works of Franz Brentano and Roman Ingarden. Nowadays those philosophers who are sympathetic to intentional objects are accused of planting an ontological jungle. All the problems of the theory of intentionality, it is claimed, can be resolved within the framework of a theory assuming a much more parsimonious ontology, like the theory of mental content proposed by the early Husserl or the so-called "adverbial" theory of intentionality. However, I show that the competitors of the theory of intentional objects face serious difficulties, the most important being that within their framework the relation between the representing entity (mental content or "adverbially specified" mental property of the subject) and the external target object has to be construed as primitive, while in the theory of intentional objects it can be easily defined. The consequence is that the partisans of mental contents and adverbialists are forced to require a distinguished kind of epistemic access not only to the representing entity but also to this "representing relation". This consequence, which is very seldom made explicit, seems indeed to be fatal. Intentional objects appear in this light not as products of an ontological extravagance but instead as entities that are indispensable, if we are to be able to explain the phenomenon of intentionality at all. Moreover, it turns out that we gain nothing if we introduce mental contents in addition to intentional objects. The approach to intentionality that I finally advocate postulates an external relation between a conscious subject and an intentional object, and is thus at bottom Brentanian."

"It is often claimed that the beginnings of Brentano's ontology were Aristotelian in nature; but this claim is only partially true. Certainly the young Brentano adopted many elements of Aristotle's metaphysics, and he was deeply influenced by the Aristotelian way of doing philosophy. But he always interpreted Aristotle's ideas in his own fashion. He accepted them selectively, and he used them in the service of ends that would not have been welcomed by Aristotle himself. The present paper is an exposition of the development of Brentano's ontology, beginning with the *Lectures on Metaphysics* first delivered by Brentano in Würzburg in 1867 and concluding with his late work from 1904-17." Annotated bibliography on Franz Brentano: Studies in English, Third Part: Cos - Gau

Bibliography

1. Cosci, Matteo. 2023. "Brentano and Hillebrand on Syllogism: Development and Reception of the 'Idiogenetic' Theory." In *Aristotle's Syllogism and the Creation of Modern Logic: Between Tradition and Innovation, 1820s–1930s*, edited by Verburgt, Lukas M. and Cosci, Matteo, 129-163. New York: Bloomsbury Academic.

"The seventh chapter presents Franz Brentano and Franz Hillebrand's 'idiogenetic theory', a post-scholastic type of syllogistic theory involving acts of judging which were regarded as belonging as such to a special genus (*idios genos*) of psychical phenomena. The logical traits of the theory were first put forward by Brentano in his *Psychologie vom empirischen Standpunkt* (1874, first ed.) and then formally presented in Hillebrand's *Die neuen Theorien der kategorischen Schlüsse* (1891). The most novel aspect of the theory was that all judgements were restated in existential form as single-membered assertions, or rejections, whose subject and predicate could be simpliciter converted. The proposal provoked numerous reactions. Particularly the last part of Hillebrand's system, namely the extension about 'double judgments' (existential and predicative judgments bound together), was criticized by Husserl and Meinong, among others. But it also received active support from Brentano's student Anton Marty. In his chapter, Matteo Cosci recalls the Leibnizian antecedent that showed the character of supposition

of the existential import holding in the traditional square of oppositions. That assumption was a matter of concern for Brentano, who may have been aware of its formulation (possibly via Leibniz's *Difficultates Quaedam Logicae*) in the process of developing his own reform of syllogistic on new, intentionalistic grounds. Aside from its intrinsic merits and originality, Brentano and Hillebrand's 'idiogenetic theory' had a considerable impact in the fields of descriptive psychology, analytic philosophy and early phenomenology towards the end of the century – not to mention its relevance for the great current in logic inaugurated by Kazimierz Twardowski, prominent student of Brentano and the standard-bearer of his reform in Poland at the beginning of the twentieth century." (*Introduction*, p. 7)

2. Crane, Tim. 2006. "Brentano's Concept of Intentional Inexistence." In *The Austrian Contribution to Analytic Philosophy*, edited by Textor, Mark, 20-35. New York: Routledge.

Reprinted in: T. Crane, *Aspects of Psychologism*, Harvard: Harvard University Press, 2013, pp. 25-39.

"First I will attempt to expound Brentano's concept of intentional inexistence in its original 1874 context. This will enable us to eliminate some of the relatively superficial misunderstandings alluded to above.

Then I will outline Brentano's change of mind when he later came to write the appendices to his 1874 *Psychology*. Although any reasonably careful reading of the text will show that Brentano did in fact change his mind, it is not always clearly recognised in the discussions of Brentano's thesis what it is that he changed it from. Third I will show how the tension between his earlier view and the later view of the appendices is in fact the tension which is responsible for the problem of intentionality as we have it today." (p. 20)

3. Curvello, Flávio Vieira. 2016. "Franz Brentano's Mereology and the Principles of Descriptive Psychology." *Dialogue and Universalism* no. 26:109-123.

Abstract: I analyse Brentano's argumentative strategy from his lectures in the *Deskriptive Psychologie* and how he introduces and reframes his fundamental psychological theses. His approach provides us with

the reasons why psychology can be distinguished into different domains of investigation and how the tasks of one of these domains the descriptive-psychological one imply a specific understanding about the structure of consciousness. Thereby a mereology of consciousness is developed, which offers the theoretical background to the aforementioned reframing of the Brentanian theses."

4. ———. 2021. "Brentano on scientific philosophy and positivism." *Kriterion: Journal of Philosophy* no. 62:657-679.

Abstract: "In this paper, I analyze Brentano's fourth habilitation thesis, according to which the philosophical method should be none other than the natural scientific one.

The meaning of this thesis can be initially assessed through an examination of Brentano's views on the relationship between natural and human sciences. His arguments for methodological unity in this debate show that he actually argues for an overarching idea of scientific knowledge, which is not restricted to the fields already recognized as scientific, but which can also be applied to philosophical domain. A fuller comprehension of that idea is provided by Brentano's writings on Comte's positivism."

5. Dainton, Barry. 2017. "Brentano on Phenomenal Unity and Holism." *Revue Philosophique de la France Et de l'Etranger* no. 142:513-528.

"To provide anything approaching a complete picture of what Brentano is offering us here would mean engaging with some of the most distinctive (and inevitably) controversial aspects of his philosophy: the nature of "real unities" and "inner perception", for example.

I shall be touching on some aspects of these issues, albeit briefly, later on. For now I want to focus on just one important and distinctive element of his position. Returning to our total

experience E, according to Brentano its constituents parts, e1, e2, e3 and e4 are phenomenally unified if and only if they are experienced by us as occurring together (or “inwardly perceived as existing together” as he puts it). Whereas Descartes appealed to co-instantiation within a substance to explain the unity of consciousness, Brentano appeals to a phenomenal relationship: contents or objects are unified in consciousness if they are experienced as existing together. Let us say (for obvious reasons) that experiences related in this way are *co-conscious*."

6. de Boer, Theodorus. 1976. "The Descriptive Method of Franz Brentano: Its Two Functions and Their Significance for Phenomenology." In *The Philosophy of Brentano*, edited by McAlister, Linda Lopez, 101-107. London: Duckworth.

Translated from the German by Linda L. McAlister and Margarete Schättele.

Reprinted from the *Proceedings of the XIVth International Congress of Philosophy*, 2—9 September 1968 (Vienna, 1968), vol. 2, pp. 191-9.

"When Brentano published his lecture *The Origin of our Knowledge of Right and Wrong*(2) in 1889, he wrote in the foreword that ‘this work will develop some of the views that there set forth in my *Psychology from an Empirical Standpoint* and will differ in fundamental respects from everything that has previously been said upon the subject. My readers will then be able to see, I hope, that I have not been idle during the long period of my literary retirement.’ There had, in fact, taken place an important change in Brentano’s thought during the period between 1874 and 1889. We would like to take this opportunity to direct attention to this and to ask in how far it signifies a further elaboration, a correction, or perhaps even a renunciation of his earlier views. This change in his views is reflected in the position that is now assigned to descriptive psychology. In 1874 it had only a subordinate function: it served as a preliminary for genetic psychology. All this is in line with the natural scientific character of Brentano’s philosophy. In 1866 he had defended the well-known thesis,

‘The true method of philosophy is none other than that of the natural sciences’." (p. 101)

(...)

"But by 1889 descriptive psychology had become an independent, autonomous science. The reason for this is the new function that it had acquired in the meantime - that of providing the foundations for the universally valid laws of the normative sciences: logic, aesthetics, and ethics. This is not psychologism, as Chisholm rightly points out, for Brentano strongly opposes the very attempt to make empirical generalisations the basis of apodictic laws for these sciences." (p. 102)

(2). Trans. Roderick M. Chisholm (London and New York, 1969).

7. Dewalque, Arnaud. 2013. "Brentano and the parts of the mental: a mereological approach to phenomenal intentionality." *Phenomenology and the Cognitive Sciences* no. 12:447-464.

Abstract: "In this paper, I explore one particular dimension of Brentano's legacy, namely, his theory of mental analysis. This theory has received much less attention in recent literature than the intentionality thesis or the theory of inner perception. However, I argue that it provides us with substantive resources in order to conceptualize the unity of intentionality and phenomenality. My proposal is to think of the connection between intentionality and phenomenality as a certain combination of part/whole relations rather than as a supervenience or identity relation. To begin, I discuss some reasons for being a (neo-)Brentanian about the mind and briefly introduce the main characteristics of Brentano's internalist description program. Then, I turn to the current "inseparatist" way of dealing with intentionality and phenomenality, focusing on the demand for unity coming from advocates of phenomenal intentionality. I suggest that the unity of the mind may be put in a new light if we put aside metaphysical–epistemological questions, go back to Brentano's description program, and endorse his thesis that the mental is

something unified in which various parts must be distinguished. In the last section, I draw some lessons from this approach, holding that, for any representational content R , R is (in Brentano's terms) an abstractive or "distinctional" part of the relevant state and that, for any qualitative aspect Q , Q is an abstractive or "distinctional" part of the relevant representational content R ."

8. ———. 2013. "Schema of the Brentano School intellectual progeny." *Phenomenology and the Cognitive Sciences* no. 12:445.

Abstract: "This schema gives an overview of the main branches and key members of the school of the German philosopher Franz Brentano (1838–1917)."

9. ———. 2018. "Natural Classes in Brentano's Psychology." *Brentano Studien* no. 16:111-142.

Abstract: "This article argues that Brentano's classification of mental phenomena is best understood against the background of the theories of natural classification held by Auguste Comte and John Stuart Mill. Section 1 offers a reconstruction of Brentano's two-premise argument for his tripartite classification. Section 2 gives a brief overview of the reception and historical background of the classification project. Section 3 addresses the question as to why a classification of mental phenomena is needed at all and traces the answer back to Mill's view that psychological laws are class-specific.

Sections 4 and 5 connect the second premise of Brentano's argument to Comte's principle of comparative likeness and Mill's insistence that class membership is determined by the possession of common characteristics. And section 6 briefly discusses the evidence Brentano provides for the first premise."

10. ———. 2019. "Brentano's Case for Optimism." *Rivista di Filosofia Neo-Scolastica* no. 111:835-847.

Abstract: "Call *metaphysical optimism* the view that this world is the best of all possible worlds.

This article addresses Franz Brentano's case for metaphysical optimism. I argue that, although Brentano does not offer any conclusive argument in favour of the latter, he disentangles many related issues which are interesting in their own right. The article has five sections corresponding to five claims, which I argue are central to Brentano's view, namely: (§1) metaphysical optimism is best spelled out as the view that this world is the only good among all possible worlds; (§2) the notion of "correct"—or "fitting"—love offers a criterion of the good and the *test of inverted love* offers a means to identify that which is good; (§3) pessimism has to be distinguished from *pejorism*, viz. the view that the non-existence of this world is preferable to its existence; (§4) there is something good involved in every "bad" thing, to the effect that pejorism is false; (§5) it is wrong to consider the value of something in isolation."

11. ———. 2020. "The Phenomenology of Mentality." In *Franz Brentano's Philosophy after Hundred Years: From History of Philosophy to Reism*, edited by Fissette, Denis, Frechette, Guillaume and Janoušek, Hynek, 23-40. Cham (Switzerland): Springer.

Abstract: "This paper offers a phenomenological interpretation of Brentano's view of mentality. The key idea is that mental phenomena are not only characterized by intentionality; they also exhibit a distinctive way of appearing or being experienced.

In short, they also have a distinctive phenomenology. I argue this view may be traced back to Brentano's theory of inner perception (henceforth, IP). Challenging the self-representational reading of IP, I maintain the latter is best understood as a way of appearing, that is, in phenomenological terms. Section 2 addresses Brentano's claim that IP is one mark of the mental alongside intentionality. Sections 3 and 4 present support for a phenomenological interpretation of IP. And Section 5 briefly discusses two objections."

12. ———. 2021. "Misleading Expressions: The Brentano-Ryle Connection." In *Philosophy of Language in the Brentano School: Reassessing the Brentanian Legacy*, edited by

Dewalque, Arnaud, Gauvry, Charlotte and Sébastien, Richard, 95-118. Cham (Switzerland): Palgrave Macmillan.

"Some linguistic expressions are misleading in the sense that they look as if they are about something while they actually are about something else.

In this chapter I argue that Gilbert Ryle's account of misleading expressions, which is rightly considered a milestone in the history of analytic philosophy, is continuous with Brentano's critique of language. Not only did they identify roughly the same classes of misleading expressions, but their analyses are driven by a form of ontological parsimony which sharply contrasts with rival views in the Brentano School, like those of Meinong and Husserl. It is true that Brentano's account, unlike Ryle's, is put in terms of underlying mental phenomena. However, this difference, I submit, is mainly terminological and does not reflect any substantial disagreement.

The chapter has four sections. Section 1 ('Analysis') suggests that Ryle and Brentano share a similar notion of analysis as paraphrase of misleading expressions. Section 2 ('Two Senses of "About"') spells out the notion of misleading expression by means of the surface-grammar/truth-conditions distinction, which I argue is implicit in their accounts.

Section 3 ('*Ficta*') zooms in on a specific class of misleading expressions, namely expressions about *ficta*. Finally, Sect. 4 ('A Moral About the Meaning of "Meaning"') draws the consequences of what precedes for a correct understanding of the notion of meaning." (pp. 95-96)

13. ———. 2021. "The Occamization of 'Meaning': Ryle and Brentano." *Logique & Analyse* no. 256:511-532.

Abstract: "To Occamize a nominal expression *N* is to show that, despite grammatical appearances, *N* does not name, or denote, an entity. This article argues that the Occamization of 'meaning,' which was central to Gilbert Ryle's meta-philosophy, had already been advanced by Franz Brentano. The core thesis of the article is that Brentano's notion of 'content,' albeit different from that of linguistic rules, does a similar job of

eliminating expendable entities. If the meaning of a linguistic expression is not an entity at all, then the question as to what kind of entity it is—what I shall call *the Locke-Frege problem*—turns out to be a pseudo-problem and is better dispensed with."

14. ———. 2023. "On noticing transparent states: A compatibilist approach to transparency." *European Journal of Philosophy*:398-412.

Abstract: "According to the transparency thesis, some conscious states are transparent or "diaphanous". This thesis is often believed to be incompatible with an inner-awareness account of phenomenal consciousness. In this article, I reject this incompatibility. Instead, I defend a compatibilist approach to transparency. To date, most attempts to do so require a rejection of *strong transparency* in favor of *weak transparency*. In this view, transparent states can be attended to by attending (in the right way) to the presented world: that is, they are merely *translucent*. Here, I first argue that this understanding of transparency is too weak to qualify as a compatibilist view. Drawing on insights from Franz Brentano, I then describe a middle road between strong and weak transparency. The crucial idea is that, although transparent states cannot be attended to, they can be noticed (under suitable conditions). This view, I submit, allows supporters of inner awareness to commit themselves to a more interesting understanding of transparency—*moderate transparency*—that preserves the initial intuition underlying the transparency metaphor."

18. Eaton, Howard Ormsby. 1930. *The Austrian Philosophy of Values*. Norman: University of Oklahoma Pres.

Chapter One: *Brentano's Empirical Psychology*, pp. 15-39.

"The concept of values had long been regarded as being rather incidental to metaphysics, or else to economics, ethics, aesthetics or some other of the many social sciences which made use of it. It had been rather taken for granted, and had

been, consequently, almost completely neglected as a field of speculative or scientific investigation. The present study is an attempt to analyze in considerable detail the value theories of a small group of men in Austria who did their best to remedy that state of affairs. We designate this group as the Second Austrian School, hinting at their intimate relations with the first Austrian School of economic theory. The founders of this school were Franz Brentano, Alexius von Meinong, and Professor Christian von Ehrenfels, to whom we shall devote the major share of our attention.

This school is of significance because of its attempt to rescue the abstract concept of values as such from its Cinderella-like subordination in the households of the various social sciences and establish it in its rightful place as an independent and coordinate department of philosophic thought. Of course it is not possible to study values quite independently of the particular value sciences; a value which is neither economic, ethic, esthetic, nor any other of the specific types of value seems to be unthinkable. This does not mean that the study of values is open only to economists, or ethicists, or students of aesthetics.

It is becoming a matter of pressing concern to discover if there are any respects in which one can generalize concerning values simply quod values, regardless of metaphysical theory or connection with a social science." (p. 16)

19. Fano, Vincenzo. 1993. "The categories of consciousness: Brentano's epistemology." *Brentano Studien* no. 4:101-130.

Abstract: "The present investigation reformulates a few Brentanian ideas concerning what is mental. In particular, an attempt to define the categorial structure implicit in the notion of consciousness and in that of inner perception, keeping in mind their connections with external perception and with unconscious, is outlined. Within the mental field is observed a formal violation of some elementary rules of ontology and mereology, and such violation can be interpreted in terms of an infinite multiplicity of the mental field itself."

20. Farrell Krell, David. 1975. "On the Manifold Meaning of Aletheia: Brentano, Aristotle, Heidegger." *Research in Phenomenology* no. 5:77-94.

"In 1964 Heidegger cited as the persistent task of his thought the meaning of ἀλήθεια -no longer to be translated as "truth" but to be pondered as unconcealment or "the clearing that first grants Being and thinking and their presencing to and for each other."(4) Now one of the four senses ascribed to "being" in Brentano's dissertation on Aristotle is ὄν ὡς ἀληθῆς "being in the sense of the true." Does Brentano's account of "being in the sense of the true" have significant bearing on Heidegger's response to the matter of his thinking, i.e. Aletheia as the unconcealment of beings in presence? This brief study tries to answer that question by offering (I) a general account of Brentano's thesis, (II) a detailed resume of its third chapter, concerning ὄν ὡς ἀληθῆς, (III) a condensed treatment of Heidegger's aletheological notion of Being, and (IV) a summary of results and response to the question." (p. 79)

21. Fischer, Kurt Rudolf, and Miller, Leon R. 1976. "Notes on Terrell's "Brentano's logical innovations"." *Midwest Studies in Philosophy* no. 1:95-97.

"The purpose of Professor Terrell's paper[*] is to bring to light some of the genuinely distinctive features of Brentano's logical innovations through the development of a 'Brentano-style' notation and formal system. This method enables him to achieve a standard of explicitness that is not to be found in the work of Brentano himself. The dangers inherent in such an approach are formidable; as many recent studies in the history of logic have amply demonstrated, the desire for formal clarity may easily result in a number of major distortions.

Some inkling of the difficulty may be gleaned from Brentano's claim that existents are individuals, but that reflection about individuals is always general. In Professor Terrell's treatment, 'thinking' becomes 'reference,' and the terms of a Brentanist formal logic are, accordingly, general terms. These general terms are not functions constructed out of more primitive

expressions, predicates and one or more individual expressions; they are primitives.

As a result, the notion of substituting an individual constant for the variable in an expression such as 'Fx' is meaningless.

Therefore, as Professor Terrell is well aware, any attempt to formalize Brentano's logical theory in the familiar notation of the first-order predicate calculus is doomed to failure.

However, Professor Terrell's suggestions for surmounting these difficulties do not seem entirely successful." (pp. 95-96)

22. Fiset, Denis. 2015. "Franz Brentano and higher-order theories of consciousness." *Argumentos* no. 7:9-39.

Abstract: "This article addresses the recent reception of Franz Brentano's writings on consciousness. I am particularly interested in the connection established between Brentano's theory of consciousness and higher-order theories of consciousness and, more specifically, the theory proposed by David Rosenthal. My working hypothesis is that despite the many similarities that can be established with Rosenthal's philosophy of mind, Brentano's theory of consciousness differs in many respects from higher-order theories of consciousness and avoids most of the criticisms generally directed to them. This article is divided into eight parts. The first two sections expound the basic outline of Rosenthal's theory, and the third summarizes the principal objections that Rosenthal addresses to Brentano, which I, then, examine in sections 4 and 5. In sections 6 and 7, I discuss Brentano's principle of the unity of consciousness, and in section 8, I consider the scope of the changes that Brentano brings to his theory of consciousness in his later writings, which follow the 1874 publication of *Psychology*. I then draw the conclusion that Brentano's theory rests on a view of intransitive and intrinsic self-consciousness."

23. ———. 2018. "Franz Brentano and Auguste Comte's Positive Philosophy." *Brentano Studien* no. 16:73-110.

Abstract: "My aim in this study is to show that the philosophical program elaborated by Brentano in his

Psychology is largely indebted to the research conducted by Brentano on British empiricism and Comte's positive philosophy during the Würzburg period (1866-1873). This research represents the starting point of, and backdrop to, the project for philosophy as science, which is at the heart of his *Psychology*, and sheds new light on the philosophical stakes of many debates he leads in that work. Furthermore, Brentano's research informs us about his philosophical preoccupations during the Würzburg period, and simultaneously provide us with a new perspective on the evolution of his thought from his habilitation at Würzburg in 1866 to his arrival in Vienna in 1874. In this study, I propose to examine some of the factors that motivated Brentano's interest in Comte's philosophy and to evaluate the influence that the latter exerted on Brentano's thought during the Würzburg period and beyond."

24. ———. 2019. "Brentano's Lectures on Positivism and His Relationship to Ernst Mach." In *Ernst Mach – Life, Work, Influence*, edited by Stadler, Friedrich, 39-50. Cham (Switzerland): Springer.

Abstract: "Franz Brentano's criticism of Mach in his lectures on Positivism (1893–1894)

This paper is mainly about Brentano's commentaries on Ernst Mach in his lectures "Contemporary philosophical questions" which he held one year before he left Austria. I will first identify the main sources of Brentano's early interests in positivism during his Würzburg period. The second section provides a short overview of Brentano's 1893–1894 lectures and his criticism of Comte, Kirchhoff, and Mill. The next sections bear on Brentano's criticism of Mach's monism and Brentano's argument, based on his theory of intentionality, against the identification of mental to physical phenomena. The last section is about Brentano's proposal to replace the identity relation in Mach's theory of elements by that of intentional correlation. I conclude with a remark on the history of philosophy in Austria."

25. ———. 2020. "Brentano and J. Stuart Mill on Phenomenalism and Mental Monism." In *Franz Brentano and Austrian*

Philosophy, edited by Fisette, Denis, Fréchette, Guillaume and Stadler, Friedrich, 251-267. Cham (Switzerland): Springer.

Abstract: "This study is about Brentano's criticism of a version of phenomenalism that he calls "mental monism" and which he attributes to positivist philosophers such as Ernst Mach and John Stuart Mill. I am interested in Brentano's criticism of Mill's version of mental monism based on the idea of "permanent possibilities of sensation." Brentano claims that this form of monism is characterized by the identification

of the class of physical phenomena with that of mental phenomena, and it commits itself to a form of idealism. Brentano argues instead for a form of indirect or hypothetical realism based on intentional correlations."

26. ———. 2020. "Introduction: Franz Brentano in Vienna." In *Franz Brentano and Austrian Philosophy*, edited by Fisette, Denis, Fréchette, Guillaume and Stadler, Friedrich, 3-21. Cham (Switzerland): Springer.

"But all this recent interest in Brentano's philosophy cannot develop as much as many would like because, contrary to the writings of several of his students, including Husserl's, only a fraction of Brentano's writings is currently accessible to Brentano's actual and potential readers. And many of his writings that are accessible through the editions of O. Kraus, A. Kastil, and F. Mayer-Hillebrand present major problems because of the editorial policies that prevailed in their editions. This editorial work has to be done all over again because Brentano's writings have been systematically manipulated in order to promote Brentano's late philosophical views.(17)

Since 2008, the reedition of Brentano's works published during his lifetime has been undertaken by Ontos Verlag (now de Gruyter),(18) supplemented by original introductions. Needless to say, the publication of numerous manuscripts, dictations, seminars, lecture notes, or Brentano's abundant correspondence would greatly contribute to enhancing the contemporary interest in Brentano's work." 27. ———. 2021. "Remarks on the Architecture of Brentano's Philosophical Program." In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 28-49. Leiden: Brill Rodopi.

"This paper is about Brentano's philosophical program in Vienna and the overall architecture that holds together the main parts of his philosophy. My point of departure is the recent literature on the unity of Brentano's philosophy, which has sometimes been understood as a "system" in the spirit of Kant and his successors, for example. I am particularly interested in the research program that he began to develop during his stay in Würzburg and that he exhibited upon his arrival in Vienna, namely in his inaugural address at the University of Vienna (Brentano, 1929a) and in his *Psychology from an Empirical Standpoint*.

(...)

The aim of this study is to investigate, from a bird's eye view, the main articulations of Brentano's philosophical program." (p. 28, a note omitted)

Reprinted in: Hubert Dreyfus (ed.), *Husserl, Intentionality and Cognitive Science*, Cambridge: MIT Press, 1982, pp. 31-41.

"In order to shed some light upon the relationship between Brentano and Husserl, I shall discuss briefly their views on intentional objects and on perception. I have chosen to focus my comments on these two themes partly because they were central to their relationship and partly because they are also interconnected in a certain way that we shall look at. I will begin by saying a little about Brentano's views on intentionality. These views have been mentioned several times in the earlier papers of this meeting, and they will probably be brought up again in many of the later papers. I will then explain how Husserl tried to solve these problems. Afterwards I will go on to discuss some features of Brentano's view on perception, and I will finally show how Husserl here too starts out from Brentano, but modifies Brentano's ideas in such a way as to create a really quite different theory." (p. 83)

32. ———. 2020. "Brentano and Husserl on Intentionality." In *Franz Brentano and Austrian Philosophy*, edited by Fissette,

Denis, Frechette, Guillaume and Stadler, Friedrich, 23-48.
Cham (Switzerland): Springer.

Abstract: "Brentano's lectures attracted a large number of very gifted students who became fascinated with the idea of intentionality and developed it further in several different directions. Brentano followed up Aristotle's view on our mind taking on the form of the object and he was particularly influenced by Thomas Aquinas' approach. His students struggled with how to deal with acts without objects, for example hallucinations, and proposed different solutions. Husserl tried to agree with his teacher as far as he could. He even regarded agreement with one's teacher as a duty, which could only be forsaken for very good reasons. But he thought he had such reasons. These led him to phenomenology, which is briefly presented in this paper. In a short appendix I use the connection between Aristotle and Husserl to examine the controversy between two prominent Aristotle scholars, Myles Burnyeat (1992) and Richard Sorabji (1974, 1992), and their many followers on both sides concerning the interpretation of Aristotle's theory of perception. The appendix was presented in lectures at conferences in 1995 and 1996, but never sent off for publication.

It was published in Greek translation in 1997. In the following years, Burnyeat, who died on September 20, 2019, modified his view, probably without knowing about my criticism. As far as I know, Sorabji stands by his view."

"Whereas Leibniz is often seen as defending a traditional HOT-theory[*], Brentano is often believed to be offering a viable alternative, within the framework of HOT-theories, to the assumption that first-order and second order acts are distinct existences without compromising the core idea of HOT-theories, namely that the explanation of phenomenal consciousness to be reached rests on the cognitive level and not on

the sensory level of our experience.

One might, however, wonder how one single strategy concerning the explanation of consciousness relies on two philosophers who are in disagreement regarding consciousness.

Brentano and Leibniz have indeed different views concerning the nature of perception as well as different views concerning the nature of consciousness and the possibility of unconscious perceptions. In this paper, I will address some of the difficulties of both these strategies by comparing Leibniz's and Brentano's concepts of apperception (*Bewußtsein* or *inneres Bewußtsein* in Brentano's language). The view adopted here is quite wide. Due to shortage of space, I will have to put aside the numerous debates in the contemporary literature on Leibniz concerning the various meanings of apperception in his writings. In my view, both Leibniz's and Brentano's accounts of apperception are, as they stand, unsatisfactory regarding their contribution to a HOT-theory. In order to show this in more details, I will first start by contrasting their views of the nature of perception and apperception. It will soon become clear that their respective views lead to distinct HOT-theories. In the conclusion, I will propose an interpretation of their theories in which they would both be able to contribute to one model of HOT-theories." (pp. 351-352)

"In all the criticisms made by Franz Brentano against nineteenth-century philosophy, be it in the *Psychology from an Empirical Standpoint* or in his later writings, Kant undoubtedly occupies the place of honor. In Brentano's view, Kant not only postulated without any justification synthetic a priori judgments, but he also instigated the phase of decadence that characterized German philosophy in the first half of the nineteenth century.

Beyond these polemic affirmations that often attract attention, it is important to put things in perspective and investigate how such criticisms are construed and what their origins are. In the present paper, I focus more specifically on the reception of Kantian psychology by Brentano and his students. Certainly, Brentano's rejection of Kantian psychology goes along with his total rejection of the synthetic a priori judgments.

What I want to suggest here is that in the specific case of psychology, the hostile reception of Kantian philosophy in the school of Brentano is mainly due to a combination of two factors. The first is Kant's rejection of psychology in the theory of knowledge. The second, which is correlative to the first factor, is the Brentanian rejection of Kant's thesis on the impossibility of psychology becoming a science. In what follows, I investigate these two factors in detail, using as a case study the position advocated by Carl Stumpf in "Psychology and Theory of Knowledge".(2) This work fully deserves to be discussed: Stumpf (1848–1936) was not only one of the most brilliant and influent students of Brentano, but his essay also played an important role in the school of Brentano, offering one of the rare printed confrontations with the Kantian and Neokantian positions on psychology." (pp. 727-728, a note omitted)

"In the following paper, I will first discuss a presupposition in Chisholm's understanding of intentional sentences. This presupposition – namely, that intentional sentences are about intentional objects and that these objects possess a diminished form of existence – supports of course his reading of Brentano's thesis, but there are good reasons, as I will try to show, to question this presupposition. As I will argue, Brentano was not in the first place arguing against reductionism, although he certainly would have disputed it: rather, he took the reality of the mental as it is given in experience, but wanted to identify a common ground shared by all mental phenomena which would still take into account the intrinsic diversity of mental phenomena. In this respect, intentionality was introduced as a feature that comes in different varieties and that still provides a golden thread to the unity of sensations, presentations, judgments, strivings, willings, desirings, etc., which constitute every man's mental life." (pp. 92-93)

36. ———. 2014. "Austrian Logical Realism? Brentano on States of Affairs." In *Defending Realism: Ontological and Epistemological Investigations*, edited by Cumpa, Javier, Jesson, Greg and Bonino, Guido, 379-400. Berlin: de Gruyter.

Abstract: "In the following paper, I will discuss the motives behind Franz Brentano's judgment contents and the strategies offered by him to support them, suggesting that most of these strategies—based on his treatment of true negative existential judgments—are not clearly compatible with the logical realism he often professed.

More generally, I would like to suggest that although there definitely is a realist concern in Austrian philosophy introducing them to support states of affairs, reducing their

introduction to a realist concern is misguided. As shown in the case of Brentano, states of affairs were not always introduced in order to answer the question of what makes our assertions true, but rather to provide a psychological account of judgments that would help distinguish between the two basic classes of acts: presentations and judgments. I argue that Brentano's way of dealing with states of affairs shares some similarities with nominalists' motivations and strategies for introducing states of affairs."

37. ———. 2015. "Brentano's soul and the unity of consciousness." *Argumentos* no. 7:65-76.

Abstract: "In the following paper, I discuss Fisette's reconstruction of Brentano's view, according to which Brentano's conception of consciousness and of its unity is based on the presupposition that consciousness has a bearer, i.e. the soul.

First, I identify Fisette's real target (sect.1) and challenge his conception of the mental agent as central to Brentano's account (sect. 2 and 3). In section 4, I formulate some doubts about the sources used by Fisette, and, in section 5, I propose another reading of the relation between the unity of consciousness and the mental agent in the late Brentano."

38. ———. 2015. "Brentano's Conception of Intentionality: New Facts and Unsettled Issues." *Brentano Studien* no. 13.

"1. The unsettled issues in Brentano's Thesis

While Brentano's thesis on intentionality definitely is his most important contribution to the philosophy of the 19th, 20th, and 21st centuries, it is remarkable that it has been understood in so many different ways. It is well known that Chisholm (1955-56) saw in Brentano's thesis a thesis about intentional sentences, and Quine a thesis "of a piece with the thesis of indeterminacy of translation" (Quine 1960, 221), two readings

which were decisive in the philosophy of mind between the 1960s and the 1980s, where Brentano's intentionality thesis was often considered to be the target par excellence of naturalism. Things changed between the 1980s and 1990s, when consciousness and intentionality regained some philosophical dignity, thanks most notably to the works of Searle. Building upon this, more recent works proposed another approach of the thesis, moving its focus from an anti-reductionist view of the relation between the mental and the physical to a more general view on the nature of mind. Among many interesting and stimulating reappraisals of Brentano's thesis in this context, it is worth mentioning Tim Crane (1998), who developed Brentano's thesis of intentionality as the mark of the mental into an intentionalist account of the mind, and Uriah Kriegel (2003a, 2003b, 2013), who suggested that the intentionality thesis comes together with a thesis on the self-representational nature of mental acts, akin to Brentano's account of consciousness.

From a historical and interpretive perspective however, the question of the true meaning of Brentano's intentionality thesis seems to remain unsettled, even today. Three main issues, involved directly or indirectly in the interpretation of Brentano's thesis on intentionality, remain particularly sensitive:" (p. 9)

39. ———. 2017. "Content and Object in Brentano." *The IfCoLog Journal of Logics and their Applications* no. 4:3609-3628.

"It has usually been maintained that Brentano's theory of intentionality never actually distinguished between the content of an act and its object, and that the distinction was introduced by Meinong and Höfler (1890), then more systematically by Twardowski (1894), and later by Husserl (1900/1)."

(...)

"Recent research on Brentano's lecture manuscripts from the 1870s and 1880s, however, has shown that Brentano discussed the distinction between content and object at length in the very lectures that were attended by Meinong, Höfler, and Twardowski.(4)"

(...)

"These limitations on Brentano's concept of intentionality are particularly difficult to maintain when one considers his lectures on logic from the late 1860s and early 1870s, in which he clearly states and develops the distinction between content and object; moreover, his lecture notes on descriptive psychology from the mid- and late-1880s also basically follow the same concern, as did his logic lecture notes from the Vienna period.(5) One finds in these documents an explicit concern with the distinction itself and its application in a more general theory of intentionality.

I will discuss these lectures and the quotes themselves in section 3. Before that, in section 2, I would like to suggest that Brentano's own conception of philosophy speaks in favour of a more general reading of the intentionality thesis than the one suggested by Dale Jacquette's "immanent intentionality" and by the sympathizers of the Chisholmian reconstruction of Brentano." (pp. 3609-3610)

(4) 4This is for instance the case with the numerous lectures delivered by Brentano in Vienna between 1874 and 1891, most notably on logic, descriptive psychology, and ethics.

(5) Some of this material will be published soon in Brentano (forthcoming).

40. ———. 2018. "Brentano on Perception." *Hungarian Philosophical Review* no. 62:13-33.

"However, the standard reading of Brentano – according to which he believes that intentionality is a relation to an immanent object, and perception is a special case of intentionality – has a grain of truth, at least insofar as there are many passages from the *Psychology from an Empirical Standpoint* that seem to support this reading. But as mentioned above, there are obvious problems with this reading when it comes to Brentano's supposition of an external world directly responsible for what we see, hear, etc. Furthermore, Brentano's criticism of phenomenalism(7) makes it difficult to champion a reading on which he appears to defend a variety of this same phenomenalism.

In short, the common reading of Brentano's thesis on intentionality attributes to him a suboptimal account of perception which does not fit with his critique of phenomenalism. Furthermore, it suggests that Brentano should be seen as a defender of the argument from illusion. But if causality is a relation that, according to him, operates between

the external world and physical phenomena, and if the external world is not a simple theoretical posit but something of which perceiving agents are parts, then there must be a way in which, as perceiving agents, we are after all related with the external world." (p. 16)

(7) See for example Brentano against Mach (Brentano 1988), but also Brentano's lectures on positivism from 1894–95 (Brentano 1894–95), where he defends the view of a correlation between the seeing and the seen (against the identification proposed by Mach), advocating at the same time for the irreducibility of causality.

42. ———. 2019. "From Brentano to Mach. Carving Austrian Philosophy at its Joints." In *Ernst Mach – Life, Work,*

Influence, edited by Stadler, Friedrich. Cham (Switzerland): Springer.

Abstract: "In many respects, Mach's arrival in Vienna in 1895 marks the beginning of a new era in Austrian philosophy, paving the way for young philosophers and scientists like Hahn and Neurath and preparing the soil for the Vienna Circle.

While this understanding of Mach's contribution to the development of Viennese philosophy seems correct to an important extent, it leaves aside the role of Brentano and his school in this development. I argue that the Brentanian and Machian moments of Austrian philosophy are jointed. I propose a description of the nature of these joints based on institutional, methodological, and philosophical aspects of these phases, and suggest a diagnosis that supports what I take to be the right carving between these two moments."

43. Frechette, Guillaume. 2019. "Brentano on Perception and Illusion." In *The Philosophy of Perception: Proceedings of the 40th International Wittgenstein Symposium*, edited by Limbeck-Lilienau, Christoph and Stadler, Friedrich, 119-134. Berlin: De Gruyter.

Abstract: "Brentano's philosophy of perception has often been understood as a special chapter of his theory of intentionality. If all and only mental phenomena are constitutively intentional, and if perceptual experience is mental by definition, then all perceptual experiences are intentional experiences. I refer to this conception as the "standard view" of Brentano's account of perception. Different options are available to support the standard view: a sense-data theory of perception; an adverbialist account; representationalism. I argue that none of them are real options for the standard view. I suggest that Brentano's conception of optical illusions introduces a presupposition that not only challenges the standard view – the distinction between the subjectively and objectively given – but that also makes his account more palatable for a naïve understanding of perception as openness to and awareness of the world."

44. ———. 2019. "The Origins of Phenomenology in Austro-German Philosophy. Brentano, Husserl." In *A Companion to Nineteenth-Century Philosophy*, edited by Shand, John, 418-453. Hoboken, NJ: Wiley-Blackwell.

"Brentano is the backbone of Austro-German philosophy for many reasons. He came to Austria in 1874, which he considered to be a favorable context to found a philosophical school;(2) he was instrumental in reintroducing Bolzano, the grandfather of Austro-German philosophy, to Austrian philosophers; he trained or contributed to the training of many generations of Austro-German philosophers, ranging from Carl Stumpf and Anton Marty to Alexius Meinong, Thomas Masaryk, Christian von Ehrenfels, Alois Höfler, Edmund Husserl, Kazimierz Twardowski, Oskar Kraus and Schmuel Hugo Bergman; and he was an acknowledged influence on many philosophers ranging from Stout, Moore, and Heidegger to the Vienna Circle (the authors of the Manifesto) and many other late twentieth- and early twenty-first-century philosophers, on both sides of the analytic vs. continental divide. As the "grandfather of phenomenology"(3) resp. the "disgusted grandfather of phenomenology,"(4) but also as the key figure on the "Anglo-Austrian Analytic Axis" (Simons 1986; Dummett 1988, p. 7), Brentano is at the source of the two main philosophical traditions in twentieth-century philosophy. In this article, I will focus mainly on his place in nineteenth-century European philosophy and on the central themes and concepts in his philosophy that were determinant in the development of the philosophy of his most gifted student: Edmund Husserl." (pp. 418-419)

45. Fréchette, Guillaume. 2020. "Descriptive Psychology: Brentano and Dilthey." *Hopos: The Journal of the International Society for the History of Philosophy of Science* no. 10:290-307.

Abstract "Although Wilhelm Dilthey and Franz Brentano apparently were pursuing roughly the same objective—to offer a description of our mental functions and of their relations to objects—and both called their respective research programs ‘descriptive psychology’, they seem to have used the term to refer to two different methods of psychological research.

In this article, I compare analyses of these differences. Against the reading of Orth but also against a possible application of recent relativist accounts of the epistemology of peer disagreement to this case, I argue that their apparent shared objective is not enough to support an understanding of their views as two alternatives within a given historical or scientific context, or as a mutual peer disagreement. I show that the impression of a shared objective can be explained away as stemming from the influence of their teacher Adolf Trendelenburg, and I stress that the case of introspection strongly suggests

that an account in terms of peer disagreement is not plausible. Finally, I conclude that the opposition between two traditions, Austrian philosophy and historicism, might be better suited to account for the dispute and its apparent common historical context."

46. ———. 2020. "Brentano on Phenomenology and Philosophy as a Science." In *Franz Brentano and Austrian Philosophy*, edited by Fiset, Denis, Frechette, Guillaume and Stadler, Friedrich, 101-115. Cham (Switzerland): Springer.

Abstract: "I argue in this paper that Brentano's grand project of philosophy as a science remained constant throughout his lifetime, from his habilitation thesis of 1866 to his last published writings. I suggest that this project has two main domains of application, namely, metaphysics and psychology. I focus on the application of the programme to psychology. According to my account, the project is based not only on the 1866 thesis that the method of philosophy is nothing other than the method of natural science (Thesis 4), as the standard reading of Brentano's project suggests, but also on the thesis that philosophy should reject the distinction between speculative science and exact science (Thesis 1). I argue that the interplay between these two theses is present not only in Brentano's early works, but also in his later lectures on descriptive psychology given in Vienna at the end of the 1880s. Not only does this explain why the grand project of philosophy remained constant, it also offers a more faithful account of the kind of investigation actually conducted by Brentano in the late 1880s – and later under the label of 'phenomenology', or descriptive psychology – than the one offered by the standard reading."

47. ———. 2023. "Why does it matter to individuate the senses: A Brentanian approach." *European Journal of Philosophy*:413-430.

Abstract: "How do we individuate the senses, what exactly do we do when we do so, and why does it matter? In the following article, I propose a general answer to these related questions based on Franz Brentano's views on the senses. After a short survey of various answers offered in the recent literature on the senses, I distinguish between two major ways of answering this question, causally and descriptively, arguing that only answers giving priority to description and to the classification involved in it are on the right track for a general answer to the related

questions. In the second part of the article, I argue that Brentano's descriptive psychology is an attractive candidate for such an answer. His descriptive psychology provides a plausible account of the classification involved in description, in particular regarding the classification of sensory qualities. I close the article by briefly explaining how Brentano spells out the priority of descriptive answers over causal ones."

48. Fugali, Edoardo. 2008. "Toward the Rebirth of Aristotelian Psychology: Trendelenburg and Brentano." In *Psychology and Philosophy: Inquiries into the Soul from Late Scholasticism to Contemporary Philosophy*, edited by Heinämaa, Sara and Reuter, Martina, 179-202. Dordrecht: Springer.

Abstract: "The chapter studies the concepts of the self, the soul and the subject as they were developed around the first half of the nineteenth century in German philosophy presiding over the birth of psychology as a science. The topic is addressed by examining particularly the leading roles that Friedrich Adolf Trendelenburg and Franz Brentano played in this development. Both thinkers worked out an original conception of the soul through recourse to Aristotle's theories of the soul, combining them with insight stemming from the modern tradition of the philosophy of subjectivity, particularly Kantianism. The first part of the chapter explicates Friedrich Trendelenburg's argument, that psychology constitutes an independent discipline, and show how his arguments contributed to the general discussion about the status of psychology. The second part consists of an explication of Franz Brentano's reinterpretation of the Aristotelian tradition and provides a critical comparison between his position and that of Trendelenburg. The main argument of the chapter is that Trendelenburg had an important mediating role in the post-Aristotelian tradition, which developed further and culminated in idealistic theories of subjectivity and self-consciousness."

49. ———. 2018. "Sensus Communis and Imagination as Precursors of Inner Perception in Brentano." *Brentano Studien* no. 16:305-334.

Abstract: "Aim of this contribution is an inquiry about the double bind between both key notions of *sensus communis* (koiné aísthesis) and imagination in Brentano's interpretation of Aristotelian psychology and in his later work. I will try to show how the treatment of these concepts prefigures Brentano's theory of inner perception in its full-grown formulation. Strictly knit together with sensible imagination, as far as it allows for the coordination of the cognitive operations carried out by the proper senses and for establishing a level of metareflective awareness about them, *sensus communis* is defined as a modality of self-consciousness directly rooted in sense perception. Yet, at the same time, it provides for the genesis of a higher-order form of self-consciousness and of a structure of self-reference of all cognitive acts to their bearer. The theoretical issue at stake here consists in verifying if Brentano does really succeed in providing the adequate conceptual tools for the task of developing an unitary account of self-consciousness. This should be able to overcome the Cartesian-Kantian divide between the blind automatism of sense perception and the empty certitude of a merely intellectual awareness."

50. Gabriel, Susan. 2013. "Brentano at the Intersection of Psychology, Ontology, and the Good." In *Themes from Brentano*, edited by Fisette, D. and Frechette, G. Amsterdam: Rodopi.

"In what follows I shall be painting with a broad brush, not without some trepidation, but with the end in view of showing an aspect of Brentano's thought that can only be uncovered by connecting three large areas, namely, psychology, ontology, and ethics. Specifically I shall be considering these areas as they relate to Brentano's natural theology, and in particular his theodicy or defense of God's justice. Brentano took the optimistic view, that is, he thought it reasonable to believe, even though it could not be fully proved, that the evils in this world are or will be defeated by the good, and he thought it provable with an exceedingly high degree of probability that there is an infinitely perfect necessary being, i.e., God. But I do not intend to present or examine the proofs for God's existence

here, much less to solve the problem of evil per se; rather, I hope simply to show how certain features of Brentano's psychology, ontology, and ethics come together to allow Brentano to raise, and perhaps partially answer, the question of evil in a unique and thought-provoking way." (pp. 247-248, notes omitted)

51. Gauvry, Charlotte. 2020. "Brentano on *entia rationis* and Linguistic Fictions." In *Franz Brentano's Philosophy after Hundred Years: From History of Philosophy to Reism*, edited by Fisette, Denis, Frechette, Guillaume and Janoušek, Hynek. Cham (Switzerland): Springer.

Abstract: "In line with a rich and long tradition revived by Suárez, Brentano maintains that all non-determined entities have to be considered as non-beings. In this respect, he makes use of the concept of *entia rationis*. Interestingly, he suggests, at least since his 1901 letter to Marty[*], that these entities have to be considered not things or beings at all but "fictions," more precisely, as linguistic fictions. The purpose

of my text is twofold. First, I intend to clarify the status of linguistic fictions in Brentano. In particular, I will consider the extent to which they are connected or not with medieval theories of *entia irrationalia* and *entia rationis* (Suárez). Secondly, I will emphasize the linguistic nature of those fictions and sketch some remarks on Brentano's view on language and concepts."

[*] in F. Brentano, *Die Abkehr vom Nichtrealen*, ed. F. Mayer-Hillebrand. Hamburg: Felix Meiner Verlag 1977.

52. ———. 2021. "A Context Principle in Brentano?" In *Philosophy of Language in the Brentano School. Reassessing the Brentanian Legacy*, edited by Dewalque, Arnaud, Gauvry, C. and Richard, Sebastian, 57-75. Cham, Switzerland): Palgrave.

"The (historical) purpose of my chapter is to show that we are facing a paradox. Although considering Brentano as a 'philosopher of language' in the Frege-Wittgenstein sense is questionable—for reasons that I will dwell on below –, his dense and little-known manuscripts on language are full of

‘pragmatic’ insights, even fuller than Frege’s, Russell’s or the early Wittgenstein’s own works. Brentano actually anticipates some of the main claims of the later philosophers of ordinary language. The (systematic) purpose of this chapter is then to explore Brentano’s analyses on ordinary language in order to ask whether it makes sense to consider him a ‘contextualist’.” (p. 58)

(...)

"Throughout this article, I will essentially focus on Brentano’s Logic manuscripts, which include the 1869–1871 Würzburg Lesson “Deduktive und Induktive Logik” (Ms. EL 80)—which was also taught in Vienna in 1875 and 1877 –, and the 1878–1885 Vienna Lesson “Die elementare Logik und die in ihr nötigen Reformen” (Ms. EL 72). Although still unpublished, these manuscripts are precious and provide a reliable source on Brentano’s work, contrary to the often quoted Franziska Mayer-Hillebrand’s compilation (see Brentano 1956), which includes numerous and not clearly identified fragments which are not from Brentano.

Besides, although they cover almost twenty years, these lessons were all taught before Brentano’s so-called ‘reist’ turn and are thus rather homogeneous.” (p. 59)

Annotated bibliography on Franz Brentano: Studies in English, Fourth Part: Gea - Kra

Bibliography

1. Geach, Peter. 1978. "Intentionality of Thought versus Intentionality of Desire." *Grazer Philosophische Studien* no. 5:131-138.

Abstract: "The work of Brentano's English contemporary J.E. McTaggart is in several ways profitable for Brentano scholars to study: I here consider his views on the nature and classification of mental states. In McTaggart's account the characteristic of being a 'cognition', one that some but not all 'cogitations' have, corresponds to Brentano's notion of *Anerkennen*; quite unlike Brentano, he holds that contrariety obtains only between the contents of judgments, not between contrary acts of affirming and denying; like Brentano however he recognizes contrariety in the realm of emotion and feeling, e.g. between love and hate, pleasure and pain. He regards feelings and emotions as mere colourings of cogitations, and thinks that their relation to an object (intentionality, as Brentano would say) comes about merely from their cogitative aspect. This view is attractively simple; but by considering McTaggart's own view of emotions' being *in respect of* characteristics of their objects, we can find serious ground to reject it."

2. Geniusas, Saulius. 2014. "The origins of the phenomenology of pain: Brentano, Stumpf and Husserl." *Continental Philosophy Review* no. 47:1-17.

Abstract: "The following investigation aims to determine the historical origins of the phenomenology of pain. According to my central thesis, these origins can be traced back to an enthralling discussion between Husserl and two of his most important teachers, Brentano and Stumpf. According to my reconstruction of this discussion, while Brentano defended the view that all feelings, including pain, are *intentional experiences*, and while Stumpf argued that pain is a *non-intentional feeling-sensation*, Husserl of the *Logical Investigations* provides compelling resources to resolve the polemic between his teachers by showing how pain can be conceived as a *pre-intentional experience*. According to my argument, this largely forgotten discussion is of significance not only because it enriches our understanding of pain, but also because it modifies the phenomenological conception of consciousness. Thus in the concluding section, I show why the Husserlian resolution of the controversy between Brentano and Stumpf is of importance for our understanding of the central phenomenological theme—*intentionality*."

3. George, Rolf. 1978. "Brentano's Relation to Aristotle." *Grazer Philosophische Studien* no. 5:249-266.

Abstract: "The paper tries to illustrate the influence of Aristotle's thought upon Brentano by arguing that the view that all psychological phenomena have objects was probably derived from the Aristotelian conception that the mind can know itself only *en parergo*, and that this knowledge presupposes that some other thing be in the mind "objectively". Brentano's contribution to Aristotle scholarship is illustrated by reviewing some of his arguments against Zeller's claim that Aristotle's God, contemplating only himself, is ignorant of the world. The paper concludes with an attempt to explain the relative neglect into which Brentano's exegetical efforts have fallen."

4. George, Rolf, and Kohen, Glen. 2001. "Brentano's relation to Aristotle." In *The Cambridge Companion to Brentano*, edited by Jacques, Dale, 20-44. Cambridge: Cambridge University Press.

"To conclude: Brentano's way of philosophizing and treating the history of the subject really does represent a renewal of style and substance, a more scientific attitude, a profound change from the obscurities of German Idealism.

There are few writers for whom Aristotle was more alive. And even if his interpretations are often speculative and daring, his manner of arguing for them is always challenging, demanding a kind of active involvement that cautious historical accounts seldom manage to produce." (pp. 41-42)

5. Gilson, Étienne. 1939. "Franz Brentano's interpretation of mediaeval philosophy." *Mediaeval Studies* no. 1:1-10.

Reprinted in: Linda McAlister (ed.), *The Philosophy of Brentano*, pp. 56-67.

"The section of J.A. Möhler's *History of the Church* that deals with the history of the ecclesiastical sciences during the Middle Ages, has been compiled from the posthumous notes of Möhler, by Franz Brentano, then a Catholic priest and a professor at the German University of Wurzburg.(2) As is usually the case in general histories, Brentano's chapter is a rather short one, but it gives a clear account of what was then known on the subject. Its main interest however does not lie in its remarkable clarity and general accuracy, but rather in the philosophical interpretation of the evolution of medieval thought which it propounds. As will be seen later, there are good reasons to think that the responsible author for that interpretation was not Möhler, but Brentano." (p. 1)

(2) The *History of the Church* of J.-A. Möhler will be quoted from the French translation: J.-A. Möhler, *Histoire de l'Eglise*, trans. P. Belet and published by Gams (3 vols, Paris 1868—9). Interesting details on the history of the book will be found in the Preface of Gams. The chapter on the History of ecclesiastical sciences is in vol. 2, pp. 467-520. In the German edition of Möhler's *Kirchengeschichte*, the chapter written by Brentano will be found in vol. 2, pp. 526-84.

6. Gilson, Lucie. 1976. "Franz Brentano on Science and Philosophy." In *The Philosophy of Brentano*, edited by

McAlister, Linda Lopez, 68-79. London: Duckworth.

Translated from the French by Linda L. McAlister and Margarete Schättle. Reprinted from *Revue Internationale de Philosophie*, vol. 20, no. 78 (1966), pp. 416-33.

"Can philosophy be saved, and, if so, how? A consideration of these questions marks the starting point of Brentano's work, and the desire to bring about the salvation of philosophy is his principal motivation. It is this desire that inspired the first and fourth of his habilitation theses which he defended in a public disputation at the University of Wurzburg one hundred years ago. In the first thesis he stated: 'Philosophy must protest against the distinction between speculative and exact sciences; and the justification for this protest is philosophy's very right to existence.'(2) His urth thesis read: 'The true method of philosophy is none other than that of the natural sciences.'"

7. Girard, Charles. 2021. "Reflexivity Without Noticing: Durand of Saint-Pourçain, Walter Chatton, Brentano." *Topoi* no. 41:111-121.

Abstract: "According to Franz Brentano, every mental act includes a representation of itself. Hence, Brentano can be described as maintaining that: (T1) reflexivity, when it occurs, is included as a part in mental acts; and (T2) reflexivity always occurs.

Brentano's way of understanding the inclusion of reflexivity in mental acts (T1) entails double intentionality in mental acts. The aim of this paper is to show that the conjunction of (T1) and (T2) is not uncommon in the history of philosophy.

To that end, the theories of two medieval thinkers, namely, Walter Chatton and Durand of Saint-Pourçain, are presented.

The repeated conjunction of (T1) and (T2) paves the way for a more general distinction than that between subjectivist and objectivist theories of reflexivity, namely, one between automatic theories of reflexivity (where noticing is not required

for reflexivity) and apperceptive theories of reflexivity (where noticing is required for reflexivity)."

8. Giustina, Anna. 2017. "Conscious Unity from the Top Down: A Brentanian Approach." *The Monist* no. 100:15-36.

Abstract: "Many contemporary views on unity of consciousness adopt a bottom-up approach: a subject has several conscious experiences at a time, which are unified in virtue of a special relationship. In this paper I explore an alternative, top-down approach, according to which (to a first approximation) a subject has one single conscious experience at a time. I present three top-down approaches: Priority unity monism, Existence unity monism, and Brentanian unity monism.

The first two are defined in analogy with the homonymous metaphysical theories of object composition. Brentanian monism retraces Franz Brentano's view on unity of consciousness, and is defined by appeal to some of his mereological ideas. I argue that the latter is the best top-down approach to unity of consciousness."

9. ———. 2023. "Introspective acquaintance: An integration account." *European Journal of Philosophy*:380-397.

Abstract: "In this paper, I develop a new version of the acquaintance view of the nature of introspection of phenomenal states. On the acquaintance view, when one introspects a current phenomenal state of one's, one bears to it the relation of introspective acquaintance. Extant versions of the acquaintance view neglect what I call the phenomenal modification problem. The problem, articulated by Franz Brentano in his *Psychology from an Empirical Standpoint*, is that drawing introspective attention to one's current conscious experience may modify its phenomenology. Failing to take phenomenal modification into account affects the adequacy of extant versions of the acquaintance view. The purpose of this paper is to develop a better version, the integration account, that meets the phenomenal modification challenge while preserving the merits of other versions."

10. Gonzáles Porta, Mario Ariel. 2019/20. "Brentano and his School on the Psychological Method." *Brentano Studien* no. 16:37-68.

Abstract: "The standard expositions of Brentano's philosophical antecedents went no further than to recall his Aristotelian background and, against this backdrop, to indicate his assimilation of English empiricism, including John Stuart Mill, and of French positivism, primarily Comte. In recent times, this perspective has begun to be reappraised. In what follows, I propose to contribute to this reappraisal process by concentrating on the relations existing between the Brentanian program and the Germanic tradition of the "psychological method"."

11. Grossmann, Reinhardt. 1960. "Acts and Relations in Brentano." *Analysis* no. 21:1-5.

"When I think of John as thinking of Paris, there is therefore still only one mental substance which is now modified in two ways, and not, as one may perhaps think, two arrows pointing at John and Paris, respectively: one, if I may so put it, pointing from myself to John thinking of Paris, the other, from John's self to Paris. The only difference between thinking of a relational property and thinking of a non-relational property consists in the fact that in the former case the thinker's self is modified in two ways, while in the latter there is only one. But whether acts are relational or not in the usual sense, does not at all depend on how we think of them. Brentano, it seems, confuses a philosophical question, namely, the nature of relations, with a psychological one, namely, how we think about them; or, if not, then he answers two different questions. He asserts, first, that there are no relations and that acts in particular are properties. He asserts, second, that, psychologically speaking, one thinks of act-properties in a certain way, namely, the way in which one thinks of all his so-called relational properties. Hence he has not been able to show that one can deny the existence of relational acts and at the same time solve the problem of how selves are connected with other selves and independent material things." (p. 5)

12. ———. 1962. "Brentano's Ontology: A Reply to Mr. Kamitz." *Analysis* no. 23:20-24.

"In a recent article, Mr. Kamitz claims that I misrepresented the views of Brentano.(1) He then goes on to correct my alleged errors. Before I examine his corrections, a general remark may be appropriate. It was not my intention to expound Brentano's views in detail. This is of course impossible in five pages. Nor did I use or even mention Brentano's own terminology. Rather, I tried to offer an analysis of some of Brentano's crucial ideas in my own words." (p. 20)

(...)

"(4) Finally, Mr. Kamitz claims that I am unjustified in saying that Brentano confused the two questions "What is a relation?" and " How do we think about relations ? ", because Brentano proved that there are no relations. But I did not just say that Brentano confused the two questions. What I said was that either he confused the questions or, if he didn't, he answered two different questions. Brentano asserted, first, that there are no relations. He asserted, second, that, psychologically speaking, one thinks of all his so called " relational properties " in a certain way. Hence I stated a disjunction. And Mr. Kamitz' statement that Brentano proved that there are no relations shows that this disjunction is true." (pp. 23-24)

13. ———. 1969. "Non-existent objects: recent work on Brentano and Meinong." *American Philosophical Quarterly* no. 6:17-32.

"There are two problems which must be faced.

First, what are ideas as contrasted with senseimpressions?

Secondly, how are they related to their objects? Brentano's school, I submit, gave the correct answer to the first question, but did not find a satisfactory answer to the second. More accurately, it was a student of Brentano's, K. Twardowski, who had the right idea. Every mental act, he held, has two sides: it is an act of a certain kind, say, a judgment or a representation (*Vorstellung*), and it also has a so-called content, say, the content expressed by the sentence "This is red."(11)

The sharp distinction between a mental act, its kind, and its content is one of the most outstanding achievements of Brentano's school.(12) Bergmann, in his book [*Realism: A Critique of Brentano and Meinong* (Madison, The University of Wisconsin Press, 1967)], says everything that needs to be said about this distinction and its importance.(13)

But this leaves us with the second and more formidable problem: How are contents of mental acts related to what they intend? We need not worry about the general problem of the existence of relations; the shackles of Aristotelian ontology do not hamper us. But not all mental acts-and hence not all contents-intend existents. We see things that are not there and we believe things that are not so. How can such mental acts intend anything?

There is nothing there for them to be related to or connected with. On the other hand, the mind is not just blank, if I may put it so, when one has an hallucination or clings to a mistaken belief. Even non-veridical mental acts seem to intend something; and we can tell what they intend. Actually, we know what our mental acts intend before we know whether or not their intentions exist. I am convinced that if there is a key-issue of the realism-idealism controversy, it is the issue raised by these and similar considerations. Bergmann agrees with this assessment. He shows in painstaking detail that and how Brentano's school contributed to the discussion of the problem of non-existent objects.

And we also agree that no one from that school found the right solution." (p. 20)

(11) See K. Twardowski, *Zur Lehre vom Inhalt und Gegenstand der Vorstellungen* (Wien, 1894) .

(12) It can be found, for example, both in Meinong and in Husserl.

(13) Bergmann's exposition is flawed by a small but persistent mistake in his own ontology. He says that a mental act is a state of affairs. In general, he thinks of ordinary things like chairs and tables as states of affairs. This, I believe, is wrong. A mental

act or a chair is not a state of affairs, but rather what Bergmann calls a particular and what I would prefer to call an individual thing. Such individual things must be distinguished from properties, states of affairs, and other categorial kinds. Bergmann's mistake, though, is slight because he acknowledges all the relevant ontological kinds, if I may put it so. He merely "identifies" ordinary things with the wrong kind, namely, states of affairs rather than with the right kind, namely, individual things (particulars).

14. Gyemant, Maria. 2017. "Contrasting Two Ways of Making Psychology: Brentano and Freud." *Axiomathes* no. 27:491-501.

Abstract: "Brentano's views on psychology influenced the way philosophy was made at the beginning of the 20th century. But did this influence spread as far as to give place to Freud's revolutionary discovery of the psychoanalytical unconscious?"

There are reasons to believe that Brentano had a profound influence on Freud. An attentive analysis of Freud's vocabulary as well as his arguments against "philosophical" objections supports this point rather convincingly. However, Freud was not a philosopher and Brentano's historical influence does not suffice to transform the Freudian unconscious in a philosophical concept. It is the purpose of this paper to sketch a way to make a philosophical use of Freud's unconscious by reconstructing the dialogue between Brentano and Freud on a conceptual level. Despite the explicit critique of the unconscious that we find in Brentano's *Psychology from an Empirical Standpoint*, I show that Freud never truly opposed Brentano. He rather took Brentano's descriptive psychology a step further: he introduced a dynamic component to the analysis of the psyche that is complementary to Brentano's descriptive psychology and could be considered a type of genetic psychology."

15. Haldane, John. 1989. "Brentano's Problem." *Grazer Philosophische Studien* no. 35:1-32.

Abstract: "Contemporary writers often refer to 'Brentano's Problem' meaning by this the issue of whether all intentional phenomena can be accounted for in terms of a materialist

ontology. This, however, was not the problem of intentionality which concerned Brentano himself. Rather, the difficulty which he identified is that of how to explain the very contentfulness of mental states, and in particular their apparently relational character. This essay explores something of Brentano's own views on this issue and considers various other recent approaches. It then examines the scholastic doctrine of 'intentional inexistence' in the version associated with Aquinas, according to which content is explained by reference to the occurrence in *esse intentionale* of the very same features (forms) as contribute to the constitution of extra-mental reality. Various interpretations and aspects of this view are considered and a version of it is commended as providing a plausible solution to Brentano's problem."

16. Hao, Liu. 2019/20. "Brentano's Two Stages of Intentionality in the Psychology from an Empirical Standpoint." *Brentano Studien* no. 16.

Abstract: "This paper deals with Brentano's notion of intentionality, aiming to elaborate on the puzzles surrounding it: the distinction between mental and physical phenomena, how to interpret intentional inexistence, the non-existent object, and the implication of "in" in "in-existence". Meanwhile, Brentano's notion of intentionality varies in his two stages of PES. The change Brentano made in the second stage, I think, results from the confusion between content and object in the first stage. Based on these, this paper provides a comprehensive and dynamic picture of Brentano's topic of intentionality."

17. Hart, James G. 2012. "Individuality of the "I": Brentano and Today." *Journal of Speculative Philosophy* no. 26:232-246.

"Introduction

The Society for Phenomenology and Existential Philosophy (SPEP), as a fifty-year-old movement of both phenomenologically and existentially disposed philosophers, may regard Franz Brentano (1838–1917) as at least a grandfather. For many SPEP members, including myself until very recently, Brentano has been known in a rather vague and

inauthentic empty intention merely as the teacher of Husserl, foremost in regard to some aspects of the doctrine of intentionality. Upon closer inspection this is pitifully shortsighted, and I have come to believe that the phenomenologist's lineage to the grandfather is not to be forgotten and that retrieving it may bring out not only differences but surprising enrichments that will emerge through wrestling with the differences. As merely one example, I want to discuss Brentanian propositions regarding the individuality of the I." (p. 232, a note omitted)

18. Hedwig, Klaus. 1979. "Intention: Outlines for the History of a Phenomenological Concept." *Philosophy and Phenomenological Research* no. 39:326-340.

"Brentano made only short reference to the scholastic concept of *intentio*.⁽¹⁾ In its philosophical implications, however, this reference rendered possible a new interpretation of reality which has subsequently become one of the main themes of phenomenological philosophy. On the other hand, the terminological parallels with the scholastic use of the concept of intention and its partial dependence on an Aristotelian problem generally conceal that Brentano referred to a very limited version of the late medieval discussion on intentionality a limitation which is at least partially responsible for the radical reformulation of this concept in Brentano's later writings." (p. 326)

19. ———. 1987. "Brentano's Hermeneutics." *Topoi* no. 6:3-10.

"It is surprising and often even puzzling to see that Brentano, who in his own scientific work strictly insisted on the return to "experience", to the "empirical standpoint" and the "exact method" of natural science, was for the whole of his life occupied with historical texts - from the young student who wrote numerous notes on Aristotle⁽¹⁾ to the old man, who was no longer able to read but who listened to texts read to him, who was no longer able to write but who dictated his extremely

subtle philosophical reflections, which are interwoven with numerous historical quotations.(2) While considering any of these texts, one is surprised by the actual relevance of historical references. It seems as if Brentano did not understand history in a historical sense, nor the past as past, but as "now" relevant. History is obviously preceded by a theory of history or, as Brentano says, by a "philosophy of the history of philosophy". (3) Historical hermeneutics is part of philosophy itself." (p. 3)

(1) The *Nachlass* contains 159 Mss on Aristotle. Brentano developed his hermeneutical theories mainly in contrast to E. Zeller (cf. Note 52), but also in the context of his own studies on Aristotle; cf. Ms. A20: *Aristoteles' Terminologie*; Ms. A2: *Grundzüge für die Interpretation grosser philosophischer Denker, insbesondere des Aristoteles*; Ms. A154: *Zur Methode Aristotelischer Studien und zur Methodik geschichtlicher Forschung auf philosophischem Gebiet überhaupt*. -- The quotations follow the Meiner editions of Brentano's works and the *Catalogue of Manuscripts* established by F. Mayer-Hillebrand and revised by W. Baumgartner.

(2) In his last dictation (9 March 1917) on *Anschauung und abstrakte Vorstellung* Brentano refers to Aristotle, Leibniz, Berkeley, Newton, Clarke, Kant, Euler, and Schopenhauer.

(3) This is the title of several *Seminarübungen* held at Vienna (SS 1878; SS 1880; SS 1883). A fragment of this text is included in Ms. H45: *Gesch. d. Phil.* (25248-25252).

20. Heller Britto, Arthur. 2019/20. "Brentanian Continua and their Boundaries." *Brentano Studien* no. 16:157-194.

Abstract: "Just as mathematicians were constructing the set-theoretical topological conceptions that permeate contemporary mathematical and scientific thinking, Brentano was also thinking about the subject but from a more traditional Aristotelian perspective that could not be fully harmonized with the mathematical approach. In this paper, we attempt to reconstruct Brentano's account of continua and their boundaries, which is his response to the set-theoretical topology of his time, as well as comment on other such attempts by previous authors."

21. Henry, Desmond Paul. 1993. "Brentano and Some Medieval Mereologists." *Brentano Studien* no. 4:25-34.

"Discussion of what Brentano calls the 'strange arithmetic' involved in the connumeration of overlapping objects is also to be found in Abelard, John Wyclif, and in Leibniz. Brentano's divergence from the commonly-held medieval distinction between X-part and part-of-X may be partially explained by his adherence to a theory of body resembling that which occurs in a twelfth-century compendium of Porretan logic."

22. Hickerson, Ryan. 2007. *The History of Intentionality: Theories of Consciousness from Brentano to Husserl*. London: Continuum International Publishing Group.

Chapter 1: What was Brentano's Problem? Physical phenomena in *Psychology from Empirical Standpoint*, pp. 21-44.

"In order to understand that claim, what has come to be known as 'Brentano's Thesis' (also sometimes called the 'Intentional Thesis' or the 'Intentionalist Thesis'), we need only three basic concepts: the mental, the physical, and intentionality. Everything mental is intentional, and nothing physical is intentional, says the Brentanian.

(...)

"The task of this chapter will be a direct interpretation of the most neglected of these three basic concepts, proper accounting for which upsets now-standard readings of the other two. I argue below that Brentanian physical phenomena are not merely phenomenal qualities or mental entities, but are instead robustly physical, i.e. we should take Brentano at his word when he labelled them 'physical'. The upshot is attributing to Brentano a somewhat older understanding of the physical, one that he inherited from the positivism of Auguste Comte, and that will return him to the fold of *fin-de-siècle* phenomenalisms. But I will also argue that this does not vitiate Brentano's basic commitment to a kind of physicalism, because Brentano did not treat these physical facts as mind dependent. In addition to treating physical phenomena as mental contents, Brentano treated them as psychophysical

causes. This pairing of theses, part and parcel of Brentano's 'empirical standpoints', results in a rather severe theoretical problem: integrating sensible contents with judgeable contents. But this problem, Brentano's (actual) problem is quite different from what has come to be known as 'Brentano's Problem'.

I will deny a ubiquitous misreading of Brentano as an immanentist, i.e. someone who treated physical phenomena as existing only within the mind. I do so not to rehabilitate Brentano's reputation, so much as try to set the record straight." (p. 22)

23. Hossack, Keith. 2006. "Reid and Brentano on consciousness." In *The Austrian Contribution to Analytic Philosophy*, edited by Textor, Mark, 36-63. New York: Routledge.

"Among the principal philosophical problems that any satisfactory account of consciousness has to address are the following three. First, the problem of qualitative character: do experiences have intrinsic nonrepresentational properties, namely *qualia*, which determine what the experience is like for the subject of the experience? Second, the problem of the necessity of co-occurrence: why is it that, necessarily, an experience and the consciousness of it co-occur, i.e. necessarily either both are present together, or both are absent together? Third, the problem of introspection: what account should be given of the introspective knowledge one has of one's own current experiences?"

In this chapter I discuss the contributions of Thomas Reid and Franz Brentano to these three problems. There is a fundamental similarity between their accounts of consciousness, for they both endorsed an 'Identity Theory', according to which an experience, and the consciousness of the experience, involve only a single mental event. But although they both subscribed to the Identity Theory, they meant different things by it. For the Scottish philosopher of common sense, consciousness was a species of knowledge; but for the Austrian founder of phenomenology, consciousness was the same thing as appearance.

This is a fundamental difference between their two approaches: taking knowledge as the central concept in the philosophy of mind tends to promote philosophical realism; taking appearance as the central concept risks anti-realism and idealism. I shall be suggesting that Reid's more realist approach is to be preferred to Brentano's, since it does a better job of solving the three problems of consciousness." (p. 36)

24. Huemer, Wolfgang. 2018. "“Vera philosophiae methodus nulla alia nisi scientiae naturalis est” Brentano's conception of philosophy as rigorous science." *Brentano Studien* no. 16:53-72.

Abstract: "Brentano's conception of scientific philosophy had a strong influence on his students and on the intellectual atmosphere of Vienna in the late nineteenth century. The aim of this article is to expose Brentano's conception and to contrast his views with that of two traditions he is said to have considerably influenced: phenomenology and analytic philosophy. I will shed light on the question of how and to what extent Brentano's conception of philosophy as a rigorous science has had an impact on these two traditions. The discussion will show that both took their liberties in the interpretation of the thesis, a move that allowed them to liberate themselves from Brentano's inheritance and to fully develop their own philosophical positions."

25. ———. 2019. "Is Brentano's Method a Unifying Element of the Brentano School?" *Rivista di Filosofia Neo-Scolastica*:897-910.

Abstract: "Among historians of philosophy it is often taken for granted that the «Brentano school» was one of the influential philosophical movements at the end of the nineteenth and the beginning of the twentieth century – but Brentano's own contributions are often eclipsed by that of his direct students. This invites to reflect on the nature of and the unity within the school. Since Brentano's conception of a rigorous, scientific philosophy had a strong impact on his students, it has been argued that this conception constitutes a unifying element in an otherwise heterogeneous group. The scope of this article is to shed light on this thesis and to show its limits. I argue for a

differentiated view: the Brentano school is best seen not as a compact movement, but as a heterogeneous group of scholars who approached, in a given historical and geographical period, similar topics in very similar ways."

26. ———. 2021. "Was Brentano a Systematic Philosopher?" In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 11-27. Leiden: Brill Rodopi.

"In the following, I will discuss whether this qualifies Brentano's philosophical position as a "grand system" from which one could deduce a profound and informative answer to any serious philosophical problem.(1) I will pay particular attention to two aspects: Brentano's view that philosophy should be done in a rigorous, scientific manner and the fragmentary character of Brentano's work. I will argue that both aspects stand in contrast to the very idea of system-philosophy: the maxim that philosophy should adopt the method of the natural sciences was intended by Brentano as a way of distancing himself from system-philosophy; while the fragmentary character of Brentano's work does not fulfill the aspiration of system-philosophy to provide an answer to everything. Yet, the incompleteness of his work is not an arbitrary or contingent aspect; it is rather a necessary side-effect of his methodological views." (pp. 11-12)

(1) The modification "profound and informative" seems necessary, or else Wittgenstein's early position would qualify as a philosophical system, as the picture theory of the *Tractatus* provides a unified account of the true, the good, and the beautiful, which, however, is not (and does even not intend to be) very profound or informative, at least not with regard to the latter two concepts, as it merely consists in the thesis that statements in ethics and aesthetics are meaningless.

27. Huemer, Wolfgang, and Landerer, Christoph. 2010. "Mathematics, experience and laboratories: Herbart's and Brentano's role in the rise of scientific psychology." *History of the Human Science* no. 23:72-94.

Abstract: "In this article we present and compare two early attempts to establish psychology as an independent scientific discipline that had considerable influence in central Europe: the theories of Johann Friedrich Herbart (1776–1841) and Franz Brentano (1838–1917).

While both of them emphasize that psychology ought to be conceived as an empirical science, their conceptions show revealing differences. Herbart starts with metaphysical principles and aims at mathematizing psychology, whereas Brentano rejects all metaphysics and bases his method on a conception of inner perception (as opposed to inner observation) as a secondary consciousness, by means of which one gets to be aware of all of one's own conscious phenomena. Brentano's focus on inner perception brings him to deny the claim that there could be unconscious mental phenomena – a view that stands in sharp contrast to Herbart's emphasis on unconscious, 'repressed' presentations as a core element of his mechanics of mind.

Herbart, on the other hand, denies any role for psychological experiments, while Brentano encouraged laboratory work, thus paving the road for the more experimental work of his students like Stumpf and Meinong. By briefly tracing the fate of the schools of Herbart and Brentano, respectively, we aim to illustrate their impact on the development of psychological research, mainly in central Europe."

28. Ierna, Carlo. 2014. "Making the Humanities Scientific: Brentano's Project of Philosophy as Science." In *The Making of the Humanities: Volume III: The Modern Humanities*, edited by Bod, Rens, Maat, Jaap and Weststeijn, Thijs, 543-554. Amsterdam: Amsterdam University Press.

"On July 14, 1866, Brentano stepped up to the pulpit to defend his thesis that 'the true method of philosophy is none other than that of the natural sciences'.(21)

This thesis became the north star of his school, rallying his first students to his flag,(22) and remained a central and lasting concern for many of them.(23) This thesis is part of a greater whole and actually follows from another thesis, namely that:

‘Philosophy must deny that the sciences can be divided into the speculative and the exact; because if this is not correctly denied, then philosophy itself would have no right to exist’.(24) Here a more general claim is made about the nature of science and philosophy: there is just one kind of science and philosophy is part of it. Philosophy is not done by speculative construction, but by humble, detailed investigation.(25) As Brentano told his students some years later: ‘We are taking the first steps toward the renewal of philosophy as science’, not by conjuring up ‘proud systems’ out of thin air, but by humbly ‘cultivating fallow scientific ground’.(26) Thus Brentano instilled in his students a strong sense of scientific rigor and his students did not consider themselves to practice ‘armchair philosophies’, but to do science." (p. 545)

(22) The expression comes from a letter of Carl Stumpf to Brentano from 1892, quoted in Oskar Kraus, *Franz Brentano. Zur Kenntnis seines Lebens und seiner Lehre* (Munich: Beck, 1919), 19. Also see Carl Stumpf, ‘Erinnerungen an Franz Brentano’, in Kraus, *Franz Brentano*, 88.

29. ———. 2015. "Improper Intentions of Ambiguous Objects: Sketching a New Approach to Brentano's Intentionality." *Brentano Studien*:55–80.

"In this article I will begin by discussing recent criticism, by Mauro Antonelli and Werner Sauer of the ontological interpretation of Franz Brentano's concept of intentionality, as formulated by i.a. Roderick Chisholm. I will then outline some apparent inconsistencies of the positions advocated by Antonelli and Sauer with Brentano's formulations of his theory in several works and lectures. This new evaluation of (unpublished) sources will then lead to a sketch of a new approach to Brentano's theory of intentionality. Specifically, it will be argued that the notion of "intentional object" is inherently and unavoidably ambiguous in every act of external perception, due to the fact that we can only have improper intentions directed at the external world." (p. 55)

30. ———. 2021. "Brentano as a Logician." In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 301-311. Leiden: Brill Rodopi.

"In the present contribution I would like to make three related claims: 1) There was an original and shared philosophy of mathematics in the School of Brentano; 2) In the School of Brentano mathematics was considered as the paradigmatic and foundational science, and more specifically as deductive, analytic, and a priori; 3) Brentano founds the concept of number on elementary logical operations, i.e. Brentano was a logician. I will concentrate mainly on the third claim, using the other two as background and support." (p. 301)

31. Jacquette, Dale. 1990/1991. "The Origins of *Gegenstandstheorie*: Immanent and Transcendent Intentional Objects in Brentano, Twardowski, and Meinong." *Brentano Studien* no. 3:177-202.

"The origins of object theory in the philosophical psychology and semantics of Alexius Meinong and the Graz school can be

traced both to the insight and failure of Franz Brentano's immanent objectivity or intentional in-existence thesis. The immanence thesis is documented, together with its critical reception in Alois Höfler's *Logik*, Twardowski's *Zur Lehre vom Inhalt und Gegenstand der Vorstellungen*, and Meinong's mature *Gegenstandstheorie*, in which immanent thought content and transcendent intentional object are distinguished, and Brentano's thesis of immanent intentionality as the mark of the mental is reinterpreted to imply that only content is the immanently intentional component of presentations.

Brentano's thought from the early immanence thesis through the so-called *Immanenzkrise* and his later reism is explored against the background of his students' reactions to the original 1874 intentionality thesis and its idealist implications, in the emergence of Meinong's object theory and Edmund Husserl's transcendental phenomenology. Finally, Brentano's reism in the later ontology is critically examined, as his solution to ontic problems of immanent intentionality, limiting intentional objects to transcendent concrete particulars."

32. ———. 2001. "Brentano's concept of intentionality." In *The Cambridge Companion to Brentano*, edited by Jacqueline Dale, 98-130. Cambridge: Cambridge University Press.

"Among Brentano's most important and philosophically influential achievements is his thesis of the intentionality of mind. To say that thought is intentional is to say that it intends or is about something, that it aims at or is directed upon an intended object. Intentionality is thus the aboutness of thought, the relation whereby a psychological state intends or refers to an intended object." (p. 98)

(...)

"The intentionality thesis holds out the prospect of understanding the essential nature of thought. If Brentano is right, then an intentionalist metaphysics of mind distinguishes psychological from nonpsychological or extrapsychological phenomena. This, unsurprisingly, is precisely how Brentano proposes to apply the concept of intentionality, which he significantly describes as "the mark of the mental.(2)" (p. 99)

33. ———. 2001. "Introduction: Brentano's philosophy." In *The Cambridge Companion to Brentano*, edited by Jacquette, Dale, 1-19. Cambridge: Cambridge University Press.

"Brentano is among the most important yet under-appreciated philosophers of the late nineteenth and early twentieth centuries. He led an intellectual revolution that sought to reverse what was then the prevalent post-Kantian trend of German-Austrian philosophy in the direction of an Aristotelian scientific methodology. At the same time, he made valuable contributions to philosophical psychology, metaphysics, ontology, value theory, epistemology, the reform of syllogistic logic, philosophical theology and theodicy, and the history of philosophy and philosophical methodology." (p. 1)

34. ———. 2002. "Brentano's Scientific Revolution in Philosophy." *The Southern Journal of Philosophy* no. 40:193-221.

"The standard, and by now almost cliché, description of Brentano as an Aristotelian empiricist doing battle with post-Kantian transcendentalism ignores what I find genuinely philosophically revolutionary-and, in the same measure, philosophically risky-about Brentano's philosophy.

The truly revolutionary aspect of Brentano's thought is its attempt to make individual internal first-person a posteriori phenomenological experience the empirical basis for inductive reasoning in support of universal a priori propositions in philosophical psychology. In turn, these are supposed to uphold all of metaphysics and ontology, as well as logic, epistemology, value theory, and the social sciences. The idea that a scientific psychology must be both empirical and a priori is a requirement Brentano consistently makes, beginning with the foreword to the 1874 edition of *Psychologie vom empirischen Standpunkt*, where he writes: "My psychological standpoint is empirical; experience alone is my teacher. Yet I share with other thinkers the conviction that this is entirely compatible with a certain ideal point of view.(6)"

36. ———. 2012. "Brentano on Aristotle's Categories: First Philosophy and the Manifold Senses of Being." In *Franz Brentano's Metaphysics and Psychology*, edited by Tănăsescu, Ion, 53-94. Bucharest: Zeta Books.

"Brentano's 1862 dissertation, *Von der mannigfachen Bedeutung des Seienden nach Aristoteles*, is a scholarly historical study and philosophical consideration of Aristotle's theory of categories.(1)

The categories in Aristotle's first philosophy, as Brentano interprets them, are the mutually independent predicates of being at the highest levels of generality, in the variety of ways in which we speak about being. If correctly identified, the

categories should correspond exactly to the multiple modes of existence or ways of being that are available to primary substances in the actual world as Aristotle conceptualizes them. As such, they are the categories not only of our predicative thoughts, but of the real existence of primary substances.

Aristotle's categories accordingly constitute the rock bottom of his first philosophy. They are his *ontology*, built on the Greek word "*ontos*" for "being"; or, better, melding "*ousia*" as Aristotle's Greek term for 'substance', they are the fundamental concepts of his *ousiology*." (pp. 53-54)

37. ———. 2016. "Brentano's Signature Contributions to Scientific Philosophy." *Brentano Studien* no. 14:127-157.

Abstract: "Brentano's agreement with the discovery of inner sensation or perception and the faculty of active intellect in Aristotle reflects the exact meaning by which both thinkers regard philosophy and philosophical psychology or philosophy of mind as (externally and internally) empirical and by extension (externally and internally) scientific. Brentano's psychology is scientific in an Aristotelian sense directly inspired by the arguments of *De Anima*. It recognizes and builds its explanations on inner as well as outer sense and perception in establishing empirical experiential foundations for knowledge. Aristotelian-Brentanian philosophical psychology avails itself of the mind's active as well as passive cognitive capabilities in taking the first steps toward a scientific proto-phenomenology. It is in his combined expansively outer and inner empirical psychology of passive and active intellect that Brentano's signature contributions to an Aristotelian sense of scientific philosophy are most instructively ascertained."

38. ———. 2019. "Brentano on Aristotle's Psychology of the Active Intellect." In *Aristotelian Studies in 19th Century Philosophy*,

edited by Hartung, Gerald, King, Colin Guthrie and Rapp, Christof, 149-177. Berlin: de Gruyter.

Abstract: "One of the battlefields of Aristotelian studies in the 19th century is Aristotle's theory of the intellect. Franz Brentano's famous *Habilitationsschrift* on this topic became very much contested among Aristotle scholars of this time.

In this chapter Dale Jacquette argues that by this treatise Brentano provides a lasting systematic contribution to a precise problem in the theory of mind: the problem of how the mind generates abstractions from subjectively experienced sense impression and perceptions. One of the surprising results of studying Brentano's work in this connection is the manner in which his interpretation of Aristotle engages mind-theoretical themes and assumptions from British Empiricism, all while defending Aristotelian metaphysics against such a tradition."

39. Janoušek, Hynek. 2017. "Consciousness of Judging: Katkov's Critique of Marty's State of Affairs and Brentano's Description of Judgement." In *Mind and Language – on the Philosophy of Anton Marty*, edited by Taieb, Hamid and Fréchette, Guillaume, 241-260. Berlin: De Gruyter.

Abstract: "This study presents Katkov's critique of Marty's theory of meaning and Brentano's description of judgemental consciousness. Katkov, a student of Oskar Kraus in Prague, developed an interesting account of a reistic reduction of states of affairs. This reduction is based on Katkov's transformation of Marty's theory of the secondary intention of statements (linguistically expressed judgements) and on a further development of Brentano's theory of judgements. According to Katkov's theory, all linguistically expressed judgements have to manifest two independent judgements if they are to fulfil the communicative goal of a speaker. The first judgement is a basic acceptance or negation of an object. The second is a higher-order belief in the correctness of the acceptance or negation. Katkov then reduces states of affairs to the consciousness of objective validity, which consists in such a belief in correctness. In this article I first present some features of Katkov's critique of Marty's theory of linguistic communication of statements.

I then offer my own short reply to Katkov's questions.

The study concludes by presenting Katkov's reduction of states of affairs to a complex of beliefs and by questioning Katkov's description concerning the difference between sensory perception and rational judgement. This difference motivates Katkov's separation of a basic acceptance or negation on the one side and a separate belief in the correctness of the acceptance or negation on the other."

40. Kamitz, Reinhard. 1962. "Acts and Relations in Brentano: A Reply to Prof. Grossmann." *Analysis* no. 22:73 - 78.

"In the very interesting article by Prof. Reinhardt Grossmann about Brentano's theory of relations(1) there are, in my opinion, some serious errors concerning Brentano's theory which, I feel, ought to be rectified.

Such a correction first of all calls for a short summary of Brentano's semiotic ideas." (p. 73)

(...)

"Recapitulating what I said about Mr. Grossmann's argument in regard to Brentano's confusion of two different questions, one can finally put it shortly thus; Mr. Grossmann would be quite right, if words such as 'relation', etc., were autosemantica, i.e. words with a meaning-function of their own, so that one could legitimately demand a definition of the term 'relation'. This, however, is, according to Brentano, not the case. Therefore Mr. Grossmann's argument fails to convince." (p. 78)

(1) 'Acts and Relations in Brentano', *Analysis* 21.1, 1960.

41. ———. 1963. "Acts and Relations in Brentano: A Second Reply to Professor Grossmann." *Analysis* no. 24:36-41.

"In a recent article "Brentano's Ontology: A Reply to Mr. Kamitz" (*Analysis* 23.1, October 1962) Prof. Grossmann tries to prove that my arguments, expressed in *Analysis* 22.4, are for the most part not only based on a misrepresentation of his own criticism of Brentano, but also on a erroneous representation of Brentano's teaching itself.(2) I now wish to consider Prof. Grossmann's new arguments.

(...)

"Brentano never denied the existence of relational acts, but only—as a result of critical linguistic researches—the existence of *Koexistenzrelationen*. Prof. Grossmann has overlooked this distinction (as well as the ambiguity of the word 'object') and has therefore been led to false conclusions regarding Brentano's theory of acts and relations." (p. 40, a note omitted)

(3) For this reason I especially appreciate Prof. Mayer-Hillebrand's willingness to join the discussion in a last word to this article.

Prof. Franziska Mayer-Hillebrand, of the University of Innsbruck, writes:

"I cannot here discuss Prof. Grossmann's misinterpretations, nor is it necessary, because Dr. Kamitz has already done so.

It is because of the great importance of this point that I was ready to add a postscript to this article by Dr. Kamitz, whose opinions on this matter I fully share." (p. 41)

42. Katkov, George. 1978. "The World in Which Brentano Believed He Lived." *Grazer Philosophische Studien* no. 5:11-27.

Abstract: "The first part of this paper gives a summary of some philosophical discoveries of Brentano which affected his outlook on the world in which he lived. The other, lesser part, contains reminiscences of how the philosophical thinking of the man affected his behaviour to the world around him."

43. Kavanaugh, Leslie. 2008. "Brentano on Space." *Footprint* no. 3:39-50.

"At the end of the nineteenth century, Franz Brentano developed a philosophical method that would be a sort of middle way between the idealism inherited from Kant, the ontological gap inherited from Descartes, and a brute materialism advocated primarily by the emerging hegemony of scientific procedure. The question was (and is): What is my relation to the world? Is the world completely 'out there' and then a matter of discovery? If this is the case, then a philosophical account needs to be constructed that explains how we can know the world. Is the world, on the other hand, completely 'in here', in my mind – the world being a mere representation of sense data? If this is the case, then a philosophical account would still need to explain how the world is constituted in my mind. Both accounts had failed historically. Furthermore, both accounts could not explain the relationship between my 'mind' and other 'minds'. This impasse, this aporia, was the birthplace of phenomenology. (pp. 40-41)

44. Körner, Stephan. 1987. "On Brentano's Objections to Kant's Theory of Knowledge." *Topoi* no. 6:11-17.

Abstract: "The main purpose of this essay is to examine Brentano's rejection of Kant's theory of a priori concepts and synthetic a priori judgments. The essay begins by recalling the views of Descartes and Locke about the acquisition of knowledge, since Brentano regards them as on the whole correct or, at least, as pointing in the right direction and since he regards Kant's epistemology as obscurantist and reactionary (Section 1). There follows a brief characterization of Brentano's conception of knowledge as based on self-evident inner perception and analytic propositions, i.e. propositions which are true *ex terminis* (Section 2). Next some aspects of Kant's epistemology are compared with corresponding features of Brentano's doctrine (Section 3). In the light of this comparison the validity of Brentano's criticisms is examined (Section 4). In conclusion an independent view of the function of concepts and

of their relation to perception is briefly outlined and contrasted with the views of Kant and Brentano (Section 5)."

45. Kotarbinski, Tadeusz. 1976. "Franz Brentano as Reist." In *The Philosophy of Brentano*, edited by McAlister, Linda L., 194-203. London: Duckworth.

Translated from the French by Linda L. McAlister and Margarete Schättle.

Reprinted from the *Revue Internationale de Philosophie* vol. 20, no. 78 (1966), pp. 459-76.

"The term 'reism' was coined when I wrote my book on formal logic and the methodology of science entitled *Gnosiology*, which first appeared in 1929.(2)" (p. 194)

(...)

"At the time I wrote this I was unaware that the scope and substance of this reism had already been formulated and put forth earlier by Franz Brentano, especially in the appendices to the supplement to his major work *Psychology From an Empirical Standpoint*. This supplement, entitled *The Classification of Mental Phenomena* appeared in 1911 together with the above-mentioned appendices. In 1924 (Vol. I) and 1925 (Vol. II), after the death of the author the second edition of the complete work appeared, supplemented by new additions, notably by a number of dictations by the author between 1915 and 1917, after he had lost his sight.

How is it possible that I did not know of Brentano's thought when I wrote my *Gnosiology*? I was, after all, a student of Professor Kazimierz Twardowski, who was himself a student of Brentano's. There is a very simple explanation of this puzzle. Brentano was not a very faithful follower of his own doctrines; on the contrary, in his later years he completely changed his whole point of view. Therefore his followers went in two different directions: one group continued to work on the typology and the structural analysis of so-called intentional entities which are intangible objects perceived only through the act of thinking; the other group (by adopting the essential sense of the word 'exist') was converted to the belief that things are

the only existing objects and, at the same time, are the only things that can be the objects of thought. The second group, Brentano's reist followers, consisted, among others, of Oskar Kraus, editor and annotater of the above-mentioned second edition of the *Psychology*, and also the editor and annotator of numerous posthumous writings of the master. The first group consisted of Meinong, Husserl and many others, among them Twardowski; his treatise on 'acts and products' shows, above all, that Twardowski firmly maintained a nonreist point of view in the controversy between logic and ontology." (p. 195)

46. Krantz Gabriel, Susan. 2004. "Brentano on religion and natural theology." In *The Cambridge Companion to Brentano*, edited by Jacqueline Dale, 237-254. Cambridge: Cambridge University Press.

"Although Brentano broke with organized religion in the late 1870s, he remained a traditional theist all his life and was still writing (by dictation) on subjects in natural theology in 1917."

(...)

"The best way to understand Brentano's natural theology is to see it in the context of Aristotelian empiricism as modified by the somewhat Cartesian outlook of Brentano's philosophical psychology." (p. 237)

47. ———. 2006/2009. "Brentano on Albert the Great's *Summa de creaturis*, Concerning the Substantiality of the Soul." *Brentano Studien* no. 12:357-367.

Abstract: "Though Brentano's lectures on medieval philosophy belong to his early period (1864-1873), it is possible to find evidence in them of abiding interests that later developed into his mature thought. The thesis that the soul is a substance, which Brentano noted in the philosophy of Albert the Great,

clearly forms the core of Brentano's later reism. I show how both Brentano's presentation of the topic, and his interpretation of Albert, as well as his reliance on 19th century historians of philosophy, lead to this conclusion."

48. ———. 2017. "Brentano on Darwin I: Teleology." *Brentano Studien* no. 16:361-372.

Abstract: "In his *On the existence of God: Lectures given at the Universities of Würzburg and Vienna (1868–1891)*, Brentano's version of the teleological proof of God's existence receives more attention than his three other proofs do, and within its presentation an analysis of the Darwinian theory of evolution is the main focus. Brentano objected, not to the fact of the evolution of species, but rather to the Darwinian explanation of evolution in terms of random mutation and natural selection. In analyzing Brentano's objection to Darwin's explanation of evolution, this article examines his distinction between apparent teleology and real teleology, his commentary on the theory of random chance, and, apart from the question of God's existence, the difficulty in general of accounting for biological phenomena without recourse to some concept of purpose."

49. ———. 2018. "Brentano on Darwin II: Science." *Brentano Studien* no. 16:143-156.

Abstract: "In his *On the existence of God: Lectures given at the Universities of Würzburg and Vienna (1868-1891)*, Brentano offers several proofs of God's existence, of which the teleological proof gets more attention than any other, and within this presentation an analysis of the Darwinian theory of evolution is decidedly prominent. Although Brentano was critical of certain aspects of Darwinism, in particular the apparent denial of purposes in nature, it would be a mistake to conclude that he rejected the science behind the theory of evolution. Rather, in this, as in other areas of scientific research, Brentano was an interested and well-informed student, conversant in and respectful of the scientific developments of his era. This article examines Brentano's views on the science of evolution, including some of the specific scientific discoveries with which he was familiar, and some of

the contemporary scientists whose views he discussed, as these are to be found in his lectures on the existence of God."

50. ———. 2021. "Brentano on Kant's Transcendental Idealism." In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 50-70. Leiden: Brill Rodopi.

"Franz Brentano did not admire Kant's philosophy. In fact, it would not be overstating the case to say that he held transcendental idealism in contempt. At the same time, it can be persuasively argued that Brentano was indebted to Kant, namely, that some of his views involve or lead to a kind of phenomenological realism. In what follows I shall first examine Brentano's critique of Kant as it is to be found in his lectures on the existence of God (Brentano, 1987). Then I shall address the question of Brentano's fairness to Kant. Finally, I shall venture a resulting account of Brentano's realism." (p. 50, notes omitted)

51. Krantz, Susan. 1988. "Brentano's argument against Aristotle for the immateriality of the soul." *Brentano Studien* no. 1:63-74.

Abstract: "The Aristotelian conception of the soul as Brentano understood it is examined, with respect to the nature of the soul and mainly to what Aristotle called the sensitive soul, since this is where the issue of the soul's corporeity becomes important. Secondly the difficulties are discussed which Brentano saw in the Aristotelian semimaterialistic conception concerning the intellectual, as distinct from the sensitive soul from Brentano's reistic point of view which claimed that the entire human soul is a substance in its own right and that it is an immaterial substance. Finally there follows a presentation of what is taken to be Brentano's conception of the soul as it appears from a reistic interpretation of his analyses of the act of sensation and

of the subject of sensation in order to shed some light on the reistic ontology that may be taken to underlie Brentano's sychology."

52. ———. 1993. "Brentano's Revision of the Correspondence Theory." *Brentano Studien* no. 3:79-88.

Abstract: "Franz Brentano took exception to the classic statement of the correspondence theory of truth, the thesis: *veritas est adaequatio rei et intellectus*. His reasons for objecting to it, and his proposed revision of the thesis, are interesting considered in themselves as well as for the light they shed on Brentano's view of the relation between the thinker and the world. With regard to the former, it is shown how Brentano analyzes the *adaequatio* thesis word by word in order to demonstrate what he takes to be its fundamental incoherence. With regard to the latter, it becomes apparent, by contrast with the Thomistic understanding of the *adaequatio* thesis, that Brentano's revision of it in the direction of a phenomenological theory of truth also involves a revised understanding of the nature of the thinker or knower."

53. ———. 1993. "Brentanian unity of consciousness." *Brentano Studien* no. 4:89-100.

Abstract: "Brentano's thoughts on unity of consciousness are of central importance to an understanding of his psychology and of his ontology. By means of a reistic interpretation of his views on unity of consciousness, and in contrast with the Aristotelian approach to unity of consciousness, one begins to see the paradoxically objective and realistic spirit of Brentano's subjectivism in psychology."

Bibliography

1. Kriegel, Uriah. 2013. "Brentano's Most Striking Thesis: No Representation Without Self-Representation." In *Themes from Brentano*, edited by Fissette, Denis and Fréchette, Guillaume, 23-40. Amsterdam: Rodopi.

"Section 8 of Chapter 2 of Part II of the *Psychology* reads: "A Presentation and the Presentation of that Presentation are Given in One Mental Act." Thus Brentano appears fully committed, in a considered way, to the idea that there could be no representation without self-representation. To my mind, this is Brentano's most striking thesis: that the very possibility of representing an apple, say, depends on the possibility of self-representing to represent an apple.

In what follows, I want to argue that this claim, which sounds odd to our modern sensibilities, is actually deeply insightful.

(...)

"The plan for the rest of the paper is as follows. In §2, I will argue that there could be no representation-of without representation-to.

There can be token representations-of that are not representations-to, but they must betoken a type of representation some tokens of which are both representations-of and representations-to. In §3, I will offer an analysis of "x represents y to z" according to which it means (more or less)

that z has a representation of x representing y. In §4, I will note that this generates a regress of representations which can only end with self-representing representations. If my thought of the Sydney Opera House represents both the Opera House and itself, then it is both a representation-of and a representation-to without requiring the postulation of any further representation. The upshot is that there could be no representation without self-representation: in a world without self-representing representations there would be no representation at all. Brentano's most striking thesis is true." (pp. 24-25)

2. ———. 2015. "How to Speak of Existence: A Brentanian Approach to (Linguistic and Mental) Ontological Commitment." In *Themes from Ontology, Mind, and Logic: Essays in Honor of Peter Simons*, edited by Lapointe, Sandra, 81-106. Leiden: Brill.

Summary "To a first approximation, ontology is concerned with what exists, metaontology with what it means to say that something exists. So understood, metaontology has been dominated by three views: (i) existence as a substantive first-order property that some things have and some do not, (ii) existence as a formal first-order property that everything has, and (iii) existence as a second-order property of existents' distinctive properties. Each of these faces well-documented difficulties.

In this chapter, I want to expound a fourth theoretical option, which unfortunately has remained 'under the radar.' This is Franz Brentano's view, according to which to say that X exists is not to attribute a property at all (first- or second-order), but to say that the correct attitude to take toward X is that of accepting or believing in it."

3. ———. 2015. "Thought and Thing: Brentano's Reism as Truthmaker Nominalism." *Philosophy and Phenomenological Research* no. 90:153-180.

"Introduction

The ontological theory of the later Franz Brentano is often referred to as 'reism.'

But what exactly is reism, and how is it related to modern-day nominalism?

In this paper, I offer an interpretation of Brentano's reism as a specific variety of nominalism. This variety, although motivated by distinctly modern concerns about truthmakers, adopts a strategy for providing such truthmakers that is completely foreign to modern nominalism. The strategy rests on proliferation of coincident concrete particulars. For example, 'Socrates is wise' and 'Socrates is Greek' are made true, respectively, by wise-Socrates and Greek-Socrates, where wise-Socrates and Greek-Socrates are two coinciding but numerically distinct concrete particulars (which also coincide with Socrates)." (p. 153)

4. ———. 2016. "Brentano's Latter-day Monism." *Brentano Studien* no. 14:69-77.

Abstract: "The recent literature on the metaphysics of material objects has featured extensive discussion of monism, the thesis that the world as a whole – the cosmos – is the only material object, or at least the only fundamental material object. A notable byproduct of the growing interest in monism has been a rather energetic reexamination of historical forms of monism. Philosophers whose monist metaphysics has earned serious reconsideration include Parmenides (Rea 2001), Spinoza (Goff 2012, Guigon 2012), the British idealists (Schaffer 2010b) and some of the latter's American counterparts (Zimmerman forthcoming). One philosopher whose monistic musings have not yet been excavated as part of this general movement, however, is Franz Brentano. In a single known document – a dictation from 30 January 1915 (when he was 77 and completely blind) – Brentano develops what appears to be a version of monism about the material world. This brief note offers a presentation of Brentano's specific version of monism, and of his master argument for it."

5. ———. 2016. "Brentano's Mature Theory of Intentionality." *Journal for the History of Analytical Philosophy* no. 4:1-15.

Abstract: "The notion of intentionality is what Franz Brentano is best known for. But disagreements and misunderstandings

still surround his account of its nature. In this paper, I argue that Brentano's mature account of the nature of intentionality construes

it, not as a two-place relation between a subject and an object, nor as a three-place relation between a subject's act, its object, and a 'content,' but as an altogether non-relational, intrinsic property of subjects. I will argue that the view is more defensible than might initially appear."

7. ———. 2017. "Brentano's Philosophical Program." In *The Routledge Handbook of Franz Brentano and the Brentano School*, edited by Kriegel, Uriah, 21-32. New York: Routledge.

"Franz Brentano was not a systematic writer, but he was very much a systematic *thinker*.

Through his manuscripts, lecture notes, letters, dictations, and occasional published writings, one can discern a systematic,

unified approach to the true, the good, and the beautiful. My goal here is to articulate explicitly this approach, and the philosophical program it reflects. The exercise requires going over big stretches of terrain with some efficiency; I will go just as deep into Brentano's approaches to the true, the good, and the beautiful as is required to make explicit their structural unity.

The basic idea behind Brentano's program is that there are three distinctive types of mental act that proprietarily target the true, the good, and the beautiful. To understand the true, the good, and the beautiful, we must obtain a clear grasp (i) of the distinctive mental acts targeting them and (ii) of success in such targeting. According to Brentano, the true is that which it is correct, or fitting, or appropriate to believe; the good is that which it is correct/fitting to love or like or approve of; and the beautiful is that with which it is correct/fitting to be delighted. (1) The next three sections develop and (do the minimum to) motivate each of these claims." (p. 21)

(1) The term Brentano prefers in this context is *Richtig*, most naturally translated as "correct" or "fitting." But in one place he offers a number of synonyms—*konvenient*, *passend*, and *entsprechend* (Brentano 1969: 74)—which are more or less interchangeably translatable as "appropriate," "suitable," "fitting," and "adequate."

"In Chapter 3 of Book I of *Psychology from an Empirical Standpoint*, Brentano articulates what he takes to be the four most basic and central tasks of psychology. One of them is to discover the "fundamental classification" of mental

phenomena. Brentano attends to this task in Chapters 5–9 of Book II of the *Psychology*, reprinted (with appendices) in 1911 as a standalone book (Brentano 1911a). The classification is further developed in an essay entitled “A Survey of So-Called Sensory and Noetic Objects of Inner Perception,” published posthumously in Brentano 1928/1981b, as well as in a 1907 dictation entitled “Loving and Hating,” reprinted in Brentano 1969.” (p. 97)

9. ———. 2017. “Brentano on Judgment.” In *The Routledge Handbook of Franz Brentano and the Brentano School*, edited by Kriegel, Uriah, 103-109. New York: Routledge.

“Judgment” is Brentano’s term for any mental state liable to be true or false. This includes not only the products of conceptual thought, such as belief, but also perceptual experiences, such as seeing that the window was left open. “Every perception counts as a judgment,” writes Brentano (1874: II, 50/1973a: 209). Accordingly, his theory of judgment is not exactly a theory of the same phenomenon we today call “judgment” but of a larger class of phenomena, one (perhaps the main) species of which is what we call “judgment”. Even if we keep this in mind, though, the profound heterodoxy of Brentano’s theory of judgment is still striking.

(...)

Here I present this unified core of this highly original theory of judgment, which can be captured in terms of three main theses. The first is that, contrary to appearances, all judgments are

existential judgments (§1). The second is that the existential force of judgment is indeed a force, or mode, or attitude— it does not come from the judgment's content (§2). The third is that judgment is not a propositional attitude but an "objectual" attitude (§3)."

"1 Introduction

Perhaps the philosophical thesis most commonly associated with Brentano is that intentionality is the mark of the mental. But in fact Brentano often and centrally uses also what he calls 'inner perception' to demarcate the mental. In this chapter, I offer a new interpretation of Brentano's conception of the interrelations among mentality, intentionality, and inner perception. According to this interpretation, Brentano took the concept of mind to be a natural-kind concept, with intentionality constituting the underlying nature of the mental and inner-perceivability serving as the concept's reference-fixer." (p. 197)

11. ———. 2017. "Brentano's Evaluative-Attitudinal Account of Will and Emotion." *Revue Philosophique de la France Et de l'Etranger* no. 142:529-558.

"Brentano's theory of will and emotion is less widely discussed, even within the circles of Brentano scholarship. In this paper, I want to show that this is a missed opportunity, certainly for Brentano scholars but also for contemporary philosophy of mind.

Brentano's accounts of the will and of emotion are, I will argue, both insightful and creative, on the one hand, and strikingly

plausible, upon reflection, on the other.

The contemporary literature on emotion is considerably larger and more contentious than that on the will. Accordingly, I will start with Brentano's theory of the will, and demonstrate its plausibility against the more peaceful background of current-day discussions of desire (§1). Importantly, however, Brentano offers a somewhat unified account of will and emotion, so I will attempt to leverage the apparent plausibility of his account of will to argue for a similar plausibility in his account of emotion (§2). This will lead to the question of how will and emotion should be distinguished within the unified account – something Brentano has very interesting things to say about (§3)." (p. 529)

12. ———. 2018. *Brentano's Philosophical System: Mind, Being, Value*. New York: Oxford University Press.

"This is a book about the late-nineteenth-century/early-twentieth-century Austro-German philosopher Franz Brentano. It attempts to present Brentano's philosophical system, especially as it pertains to the connection between mind and reality, in terms that would be natural to contemporary analytic philosophers; to develop Brentano's central ideas where they are overly programmatic or do not take into account philosophical developments that have taken place since Brentano's death a century ago; and to offer a partial defense of Brentano's system as quite plausible and in any case extraordinarily creative and thought-provoking.

Why write a book about Brentano? For me personally, the primary motivation to study Brentano in detail has been the combination of creativity and plausibility I have found in his work. It seems to me filled with gems that are not so much under-appreciated as virtually unknown by contemporary analytic philosophers. To convince the reader of this is the mandate of the bulk of this book." (p. 1)

13. ———. 2018. "Belief-that and Belief-in: Which Reductive Analysis?" In *Non-Propositional Intentionality*, edited by Gzrankowski, Alex and Montague, Michelle, 192-213. New York: Oxford University Press.

"On the face of it, some of our psychological attitudes are propositional and some are objectual.

(...)

Very few philosophers have held that in fact no attitudes are propositional—that all are objectual. Perhaps Hume held this view. One philosopher who certainly did is Franz Brentano. Brentano explicitly writes that ‘All mental references refer to things’ (Brentano 1911, 291), where a ‘thing’ is an individual object or concrete particular.

His argument for this cannot be appreciated without a detailed account of his entire philosophy of mind. Short on space, here I will restrict myself to his case for the thesis that judgment is an objectual attitude. This thesis would already be of first importance, since judgment and belief are customarily taken to be the paradigmatic propositional attitudes. This seems antecedently very plausible: you can love Jane, but

you cannot judge Jane (in the relevant sense) or judge that Jane. And yet, I will argue, Brentano’s case for an objectualist account of judgment is surprisingly compelling.

Although the case has some local holes in it, I will argue that they can be filled reasonably satisfactorily.

I start, in section 2, with some background on Brentano’s notion of judgment, as it emerges from his classification of mental states. In section 3, I offer an initial exposition of his objectualist account of judgment for analytic philosophers. In section 4, I reconstruct and tighten Brentano’s case for the objectualist account. In section 5, I consider some key objections." (pp. 192-193)

14. ———. 2018. "Brentano's Dual-Framing Theory of Consciousness." *Philosophy and Phenomenological Research* no. 97:79-98.

Abstract: "Brentano's theory of consciousness has garnered a surprising amount of attention in recent philosophy of mind (Thomasson 2000, Caston 2002, Hossack 2002, 2006, Kriegel 2003a, 2003b, 2009, Thomas 2003, Smith 2004, Zahavi 2004, Drummond 2006, Textor 2006, 2013). Here I argue for a novel interpretation of Brentano's theory that casts it as more original than previously appreciated and yet quite plausible upon inspection. According to Brentano's theory, as interpreted here, a conscious experience of a tree is a mental state that can be simultaneously thought of, or framed, equally accurately as (i) an awareness of a tree or (ii) an awareness of an awareness of a tree."

Available for download at PhiArchive:

<https://philpapers.org/rec/KRIFBC>

"The article is written to be understood without any background in philosophy, and in fact may double as an introduction to the various branches philosophy itself. Each section covers Brentano's core ideas in one branch of philosophy, starting with the briefest exposition of the branch itself. This exposition occurs before the subsections of each sections begin, and may be skipped by more advanced readers. Note also that the sections are fairly modular, so the article need not be read in its entirety to make sense. For instance, sections 2-5 constitute something of a self-standing text, as do sections 5-8." (p. 4)

16. ———. 2022. "The Epistemology of Intentionality: Notional Constituents vs. Direct Grasp." *Inquiry: An Interdisciplinary Journal of Philosophy*.

Published online: 07 May 2021.

Abstract: "Franz Brentano is well known for highlighting the importance of intentionality, but he said curiously little about

the nature of intentionality. According to Mark Textor, there is a deep reason for this: Brentano took intentionality to be a conceptual primitive the nature of which is revealed only in direct grasp. Although there is certainly textual support for this interpretation, it appears in tension with Brentano's repeated attempts to analyze intentionality in terms of 'notional constituents' – aspects of intentionality which cannot come apart in reality but which can be conceptually distinguished. After bringing out this tension, I explore some options for resolving it, ultimately offering my own favored interpretation."

17. ———. 2023. "Précis of Brentano's Philosophical System." *European Journal of Philosophy*:455-457.

"The purpose of my book *Brentano's Philosophical System: Mind, Being, Value* (henceforth, BPS) is to reconstruct Brentano's attempt to answer his question, present a partial defense of the answer, offer some potential improvements on it, and also point to persistent difficulties it faces.

Below, I (a) speed-explain Brentano's self-imposed constraint and its motivation, (b) reconstruct Brentano's account of the real in light of it, and (c) reconstruct Brentano's corresponding account of the valuable. These three tasks correspond roughly to BPS's three parts: 'Mind,' 'Being,' and 'Value.'" (p. 455)

18. Kroon, Frederick. 2013. "Intentional Objects, Pretence, and the Quasi-Relational Nature of Mental Phenomena: A New Look at Brentano on Intentionality." *International Journal of Philosophical Studies* no. 21:377-393.

Abstract: "Brentano famously changed his mind about intentionality between the 1874 and 1911 editions of *Psychology from an Empirical Standpoint* (PES).

The 1911 edition repudiates the 1874 view that to think about something is to stand in a relation to something that is within in the mind, and holds instead that intentionality is only like a relation (it is 'quasi-relational').

Despite this, Brentano still insists that mental activity involves 'the reference to something as an object', much as he did in the 1874 edition of PES. The question is what Brentano might have

meant by this, given that he rejects a relational account of intentionality. The present paper suggests an answer. It draws on recent work on pretence theory to provide a model of Brentano's notion of the quasi-relational nature of mental phenomena, as well as of the notion of mental reference to an object, and argues that the model helps to explain why Brentano might have been able to discern a clear continuity between the views of the 1874 and 1911 editions of PES, despite the differences."

19. Kujundzic, Neb. 2012. "The Power of Abstraction: Brentano, Husserl and the Göttingen Students." *Symposium: Canadian Journal of Continental Philosophy/Revue canadienne de philosophie continentale* no. 16:191-200.

Abstract: "A quick look into the index of Brentano's *Psychology from an Empirical Standpoint* reveals that all references to "abstract terms" occur only in the appendix (taken from Brentano's "Nachlass" essays).

What should we make of this? Was it the case that the inquiry into abstract, as well as non-existent, objects came as an afterthought to Brentano? Or was he all too aware of the consequences of such investigations?

Furthermore, was it largely the absence of such inquiry that prompted Husserl and his early students in Göttingen, such as Daubert and Reinach, to develop a deep ontological commitment to entities he refers to as "abstract" or "ideal"?"

20. Küng, Guido. 1986. "Brentano and Ingarden on the Experience and Cognition of Values." *Reports on Philosophy (Jagiellonian University)* no. 10:57-67.
21. Land, J. P. N. 1876. "Brentano's Logical Innovations." *Mind* no. 1:289-292.

"It will hardly be necessary to mark the passages of Mill's writings which may have led the Austrian Professor to his starting-point.

Let me observe at once that the main feature of his reconstruction of logical doctrine consists in reducing all

categorical propositions to what he calls existential propositions, doing away with the familiar distinction between subject and predicate terms. Where we say *Some man is sick*, he gives as a substitute, *There is a sick man*.

Instead of *No stone is alive*, he puts *There is not a live stone*. On the other hand, he proposes to improve on the statement *Some man is not learned* by welding together the negative and the predicate term, and asserting *There is an unlearned man*. Finally, *All men are mortal* is to be expressed in his system *There is not an immortal man*. That is to say, he simply affirms or denies the existence of some object having either two positive qualifications, or one positive together with one negative." (p. 289)

22. Leclercq, Bruno. 2020. "Foundational Mereology as a Logical Tool for Descriptive Psychology." In *Franz Brentano's Philosophy after Hundred Years: From History of Philosophy to Reism*, edited by Fiset, Denis, Frechette, Guillaume and Janoušek, Hynek, 125-148. Cham (Switzerland): Springer.

Abstract: "Franz Brentano maintains that consciousness is experienced as a whole and can only be analyzed into "components" through theoretical distinctions. And he claims that some mereology provides the conceptual tools required by such a holistic conception of mind. But of course, this cannot be classical extensional mereology, for which wholes are nothing but the sum of their parts. Brentano's conception of mind requires some "foundational mereology" like the one Husserl sketched in his third *Logical investigation*. In the present paper, we use Gilbert Null's formalization of this foundational mereology in order to investigate the possible relations between what Brentano names the "primary" and "secondary" acts and distinguish thereby several theoretical stands that can be taken on this point, some of them being close to Brentano's own views and some of them challenging it."

23. Leung, Ka-Wing. 2021. "Intra-mental or intra-cranial? On Brentano's concept of immanent object." *European Journal of Philosophy* no. 29:1039-1059.

Abstract: "The aim of this paper is to elucidate Franz Brentano's concept of immanent object through his own words and from his own perspective. The prevalent account of Brentano's revival of intentionality, his initial failure to distinguish between object and content, and his wrong-headed immanentism, is largely derived from his students. Brentano's objection to it, although well known, is seldom heeded. In fact, plenty of guidelines have been provided by Brentano himself in his writings on how his concept of immanent object is to be understood. I begin with his distinction between two senses of "object," which, I argue, must be clearly set apart from distinction between two modes of object. I then examine three different interpretations of the term "in-existence": the locative, the inherentist, and the objective interpretation. In the end, after dismissing the first two interpretations, I argue that Brentano is best understood as maintaining an objective and deflationary account of mental in-existence."

24. Libardi, Massimo. 1996. "Franz Brentano (1838-1917)." In *The School of Franz Brentano*, edited by Albertazzi, Liliana, Libardi, Massimo and Poli, Roberto, 25-79. Dordrecht: Kluwer.

"Still today, reconstruction of Brentano's thought is haphazard and incomplete.

A first difficulty arises because so little of his work has found its way into print; a lack of source material exacerbated by the fact that much of his vast *Nachlaß* has never been published. (14)

One reason for the comparative neglect of Brentano's thought is that he concentrated on questions which the text-books on nineteenth-century philosophy dismiss as minor, focusing their attention instead on theories and thinkers who drew their inspiration from the dissolution of the idealist systems or from the intricacies of neo-Kantianism. Brentano stands at the

confluence of currents of thought - such as the Aristotelian Renaissance or, at least in certain respects, Italian pragmatism - which have been pushed into the background by the current interpretation of the history of philosophy.

When Brentano was engaged in writing the two volumes of *Psychologie*, his intention was to follow it with four further books giving more detailed treatment to the properties of and the laws pertaining to the three fundamental classes of psychic phenomena, and to the relationships between psychic and physical phenomena. His project never came to fruition, however, and today commentators use *Psychologie 1* to denote Oskar Kraus's 1924 edition of *Psychologie vom empirischen Standpunkt*, which includes volume 1 and chapters 1-4 of volume 2 of the 1874 *Psychologie*. *Psychologie 2* denotes *Von der Klassifikation der psychischen Phänomene*, the second edition by Oskar Kraus, which contains published and unpublished essays from *Von der Klassifikation der psychischen Phänomene* of 1911 and chapters 5-9 from the second volume of the 1874 *Psychologie* plus some appendixes. *Psychologie 3* is used to denote *Vom sinnlichen und noetischen Bewusstsein* (taken from the *Nachlass*) in its 1968 edition by Mayer-Hillebrand." (p. 29)

25. Łukasiewicz, Dariusz. 2007. "Brentano's theory of judgment and the Lvov-Warsaw School." *Ruch Filozoficzny* no. 1:33-47.

"I will discuss the reception of Franz Brentano's philosophy in Poland, in particular, the reception of Brentano's ideas among representatives of the Lvov - Warsaw School. However, I would like to confine myself to some Brentano's ideas: his conception of judgment and its philosophical consequences. I will do this, firstly, because it might be perhaps interesting to find in Brentano's heritage one idea which is on the one hand the most characteristic to Brentano and, on the other hand, exerted wide and essential influence on the Polish philosophy. Secondly, the conception of judgment in itself assumes, or implies, theories of truth, values, knowledge, theories of objects, and it also has importance for philosophical foundations of logic." (p. 33, a note omitted)

26. Macnamara, John. 1993. "Cognitive psychology and the rejection of Brentano." *Journal for the Theory of Social Behaviour* no. 23:117-137.

"In *Psychology from an empirical standpoint* Franz Brentano presented a concept of cognitive psychology that contrasts sharply with present day concepts of the subject. It is my theme that Brentano came much closer than modern psychologists to a true understanding of cognition. The psychological community turned its back on Brentano partly because it failed to comprehend him and partly because Brentano's cognitive psychology did not fit in with strong positivist currents that swept psychologists in a different direction. Besides there was a concerted effort by the next generation of psychologists to make psychological research fit the model of biological research. As a result much of what has passed and still passes as cognition misses the heart of the matter. One way forward is to re-examine Brentano's ideas and contrast them with those which at present hold sway. This will, I believe, not only lead to a juster appreciation of the situation but it will also indicate how cognitive psychology ought to be studied. Here I will concentrate on the first part of this task, on an examination of Brentano's thought, and only adumbrate the implications for the study of cognition." (p. 117)

27. Marchesi, Andrea. 2019. "Brentanian Inner Consciousness and the Infinite Regress Problem." *Dialectica* no. 73:129-147.

Abstract: "By "Brentanian inner consciousness" I mean the conception of inner consciousness developed by Franz Brentano. The aim of this paper is threefold: first, to present Brentano's account of inner consciousness; second, to discuss this account in light of the mereology outlined by Brentano himself; and third, to decide whether this account incurs an infinite regress. In this regard, I distinguish two kinds of infinite regress: external infinite regress and internal infinite regress. I contend that the most plausible reading of Brentano's account is the so-called fusion thesis, and I argue that internal infinite regress turns out to be inherent to Brentanian inner consciousness."

28. ———. 2022. "A Systematic Reconstruction of Brentano's Theory of Consciousness." *Topoi* no. 41:123-132.

Abstract: "In recent years, Brentano's theory of consciousness has been systematically reassessed. The reconstruction that has received the most attention is the so-called identity reconstruction. It says that secondary consciousness and the mental phenomenon it is about are one and the same. Crucially, it has been claimed that this thesis is the only one which can make Brentano's theory immune to what he considers the main threat to it, namely, the duplication of the primary object. In this paper, I argue that the identity reconstruction is untenable, and I defend an alternative, which I name the unity reconstruction. According to the unity reconstruction, secondary consciousness is a real part of the mental phenomenon it is about, and hence is distinct from it. I contend that this thesis does not in itself lead to the duplication of the primary object, and that what should be blamed is rather a controversial thesis about the intentional structure of secondary consciousness—a thesis which Brentano ultimately abandoned."

29. Margolis, Joseph. 2001. "Reflections on intentionality." In *The Cambridge Companion to Brentano*, edited by Jacqueline Dale, 131-148. Cambridge: Cambridge University Press.

"In fact, Brentano provides a masterly clarification of his account of intentional "activities" in the Appendix to *The Classification of Mental Phenomena* (in effect, the new title for Book Two of the *Psychology*), which was prepared for inclusion in the 1911 edition (and is included in the English translation of the *Psychology*). This was the principal source, for instance, on which Tadeusz Kotarbinski was led to affirm (in his generous way) that "Brentano was the first to develop a reistic philosophy, more than a decade before the system had a name." (7) Kotarbinski was right in what he says here: the matter is quite important, as we shall see, in simplifying Brentano's general account in the best sense, as well as in distinguishing Brentano's best view (by my own persuasion) from the views of a bewilderingly diffuse army of subsequent

discussants who have taken the notion into extravagant conceptual thickets." (pp. 132-133).

(7) Tadeusz Kotarbinski, "Franz Brentano as Reist," in, ed., Linda L. McAlister, *The Philosophy of Brentano* (Atlantic Highlands, NJ: Humanities Press, 1976), p. 200.

30. Marques de Carvalho, Joelma. 2015. "Franz Brentano's higher-order theories of consciousness." *Argumentos* no. 7:77-84.

Abstract: "This article aims at giving a brief comment on Denis Fisette's interpretation of Higher-Order Theories of Consciousness by Franz Brentano, where consciousness has been seen as a form of intransitive self-consciousness being intrinsic to the agent. In agreement with that interpretation, I want to present a few more basic arguments in order to support that assumption such as, for example, some epistemic thoughts by Brentano given in his books *Psychologie vom empirischen Standpunkte* (1874) and *Die Deskriptive Psychologie* (1982). The present paper has been divided into five sections. The first section deals with the initial understanding of psychology in Brentano. Section two deals with the concepts of consciousness and intentionality. In the third section, the classification of mental phenomena will be presented. Section four refers to the concept of descriptive psychology or phenomenology and finally, I will show the consequences of Brentano's epistemic and ontological arguments related to his concept of consciousness."

31. Marras, Ausonio. 1974. "The Scholastic roots of Brentano's conception of intentionality." *Rassegna di Scienze Filosofiche* no. 1:213-226.

Reprinted in: Linda McAlister (ed.), *The Philosophy of Brentano*, pp. 128-139.

"The aim of this paper is to show, contrary to Spiegelberg's contention, that there is in fact a very intimate connection between the two conceptions of psychological phenomena contained in Brentano's previously quoted passage[*], although no attempt shall be made here to determine the extent to which Brentano was actually aware of this connection. I shall hold,

essentially, that the idea of reference to an object not only is not incompatible with the scholastic idea of intentional inexistence, but is in fact constitutive of that very idea. I shall also attempt to discredit an assumption which I believe underlies Spiegelberg's comments in the quotation before the last quotation, and that is that the doctrine of intentional inexistence commits scholastic thought to some form of immanentistic epistemology (opposed, at least in spirit, to Brentano's 'realistic' epistemology), in that it fails, allegedly, to give a coherent account of the independent existence of the object known." (pp. 129-130)

32. Martin, Wayne M. 2008. *Theories of Judgment: Psychology, Logic, Phenomenology*. Cambridge: Cambridge University Press.

Chapter 3 § 5: *Thetic logic*, pp. 63-73.

"We shall return below to consider the contribution of the phenomenological tradition to the problems of judgment, but our interest here is rather in Brentano's work as a logician. Brentano's logical doctrines have not been widely discussed, and the neglect is in retrospect explicable. His most detailed logical writings were published only posthumously in 1956, and his influence and accomplishment in this area, though significant, were doubly eclipsed: first by his role in the emergence of a distinctively phenomenological school, and then by the broader logical revolution to which Brentano had contributed but which ultimately overswept him.

(Brentano's main logical doctrines were first set out in 1874, and his calculus was elaborated in detail by 1877; Frege's *Begriffsschrift* was published in 1879.) Nonetheless, Brentano's logical accomplishments merit our attention. Why? Because in Brentano's logic the dispute over the logical representation of existential judgments turns subversive, directly challenging the longstanding characterization of judgment as synthesis.

Brentano and his collaborators formulated the first modern system of inference that systematically eschewed any appeal to judgment as a synthesis of representational content." (p. 63, a note omitted)

(34) For some exceptions to the general neglect of Brentano's logic, see Chisholm 1982, and important discussions by Simons 1984 and 1987, and the Italian logician Roberto Poli 1993, 1998. By contrast, important studies of the reform of logic in this period leave Brentano entirely out of account (Dummett 1993, Willard 1984), and Barry Smith's account of Brentano's contributions to the tradition he calls "Austrian Philosophy" (1994) skims over Brentano's logical contributions. Two essays by Burnham Terrell (1976, 1978) deal with Brentano's treatment of quantification; for replies see Fischer and Miller 1976 and Chisholm 1976. Perhaps the most intriguing appropriation of Brentano's logical proposals is Kuroda 1972, which uses Brentanian logic in the analysis of Japanese syntax, and is still regularly cited in linguistics research. See, e.g., Sasse 1987, Ladusaw 1994, McNally 1997, 1998.

33. ———. 2010. "Fichte's Logical Legacy: Thetic Judgment from the *Wissenschaftslehre* to Brentano." In *Fichte and the Phenomenological Tradition*, edited by Waibel, Violetta L., Breazeale, Daniel and Rockmore, Tom, 379-406. Berlin: de Gruyter.

"It is not usual to think of Fichte as a logician, nor indeed to think of him as leaving a legacy that shaped the subsequent history of symbolic logic. But I argue here that there is such a legacy, and that Fichte formulated an agenda in formal logic

that his students (and their students in turn) used to spark a logical revolution. That revolution arguably reached its culmination in the logical writings of Franz Brentano, better known as a founding figure of the phenomenological movement. In logical writings that were published only posthumously, but that were fully elaborated in the decade prior to the publication of Frege's *Begriffsschrift*, Brentano (together with his collaborator Anton Marty) developed a radically innovative logical calculus that was explicitly designed to overthrow the orthodox logical analysis of judgment and inference. At the center of this revolution was the notion ofthetic judgment [thetische Urteil], a form of judgment upon which Fichte had insisted in the first published version of the *Wissenschaftslehre*, and which his students subsequently set out to accommodate within the framework provided by Kant's general logic. But thetic judgment proved resistant to such assimilation, and it was left to Brentano to use the analysis ofthetic judgment in his attempt to topple a long-standing logical tradition.

In what follows I reconstruct the main episodes in this century-long drama in the logical theory of judgment. My discussion is divided into four sections. I begin with a review of Fichte's most explicit call for logical revolution, together with his introduction of the notion ofthetic judgment, set against the backdrop of an anomaly within Kant's logical commitments. In the second section I trace the logical treatment of this anomaly among Fichte's philosophical progeny, in particular Johann Friedrich Herbart and Moritz Drobisch. The third section explores Brentano's position, and his more radical solution to the anomaly bequeathed by Kant. In the final section I return to Fichte, to consider to what degree these subsequent developments remained faithful to the logical agenda Fichte had projected." (pp. 379-380)

34. Massin, Olivier. 2018. "Brentanian Continua." *Brentano Studien* no. 16:229-276.

Abstract: "The paper presents, criticizes and proposes some fixes to Brentano's theory of continuity (that is, absence of gaps). Brentano's key idea is that continua consists of

boundaries (and not of points) and that their continuity is guaranteed by the coincidence of these boundaries. After having presented Brentano's account, I argue that it is beset by two main problems. First, if continua consist only of coinciding boundaries, continua can never be extended. Second, if continua involve coinciding boundaries, there must be some underlying continua in which such a coincidence takes place. But then the continuity of such underlying continua remains unaccounted for.

To fix these two problems, I argue that we should distinguish the question of the continuity of what is in space and time, from the question of the continuity of space and time themselves. While the continuity of what is in space and time is correctly explained by boundary-coincidence (along Brentano's lines), I suggest that the continuity of space and time themselves is explained not by boundary-coincidence but by a primitive relation of continuity (at which Brentano appears to hint in more neglected places)."

35. Massin, Olivier, and Hämmerli, Marion. 2017. "Is Purple a Red and Blue Chessboard? Brentano on Colour Mixtures." *The Monist* no. 100:37-63.

Abstract: "Can we maintain that purple seems composed of red and blue without giving up the impenetrability of the red and blue parts that compose it? Brentano thinks we can. Purple, according to him, is a chessboard of red and blue tiles which, although individually too small to be perceived, are together indistinctly perceived within the purple. After a presentation of Brentano's solution, we raise two objections to it. First, Brentano's solution commits him to unperceivable intentional objects (the chessboard's tiles). Second, his chessboard account fails in the end to explain the phenomenal spatial continuity of compound colours. We finally sketch an alternative account of compound colours, which, while holding fast to their phenomenal compoundedness and to the impenetrability of colours, avoids introducing inaccessible intentional objects and compromising on the continuity of the purple. According to our proposal, instead of being indistinctly perceived spatial parts of

the purple, red and blue are distinctly perceived nonspatial parts of it."

36. Mayer-Hillebrand, Franziska. 1963. "Remarks Concerning the Interpretation of the Philosophy of Franz Brentano: A Reply to Dr. Srzednicki." *Philosophy and Phenomenological Research* no. 23:438-444.

"I feel it necessary to comment upon Dr. J. T. Srzednicki's article in the March, 1962, issue of *Philosophy and Phenomenological Research*, in which he sets forth his interpretation of the correct way of editing Franz Brentano's scientific manuscripts and of making the philosopher's teachings known in wider areas. Srzednicki criticizes in particular the way in which A. Kastil and I have attempted to reproduce Brentano's trains of thought; he refers to Kastil's *Die Philosophie Franz Brentanos* (Francke-Verlag, Bern 1951) and to my edition of Brentano's *Die Lehre vom Richtigen Urteil* (Francke-Verlag, Bern 1956)."

(...)

"As editor of the Brentano manuscripts since Kastil's death in 1950, I believe it to be my duty to place the merits of my revered teacher, A. Kastil, into the proper light, as well as to explain the method which I, in referring to Brentano's explicit wish, used in *Lehre vom Richtigen Urteil*, and to reject Srzednicki's criticisms." (p. 438)

37. McAlister, Linda Lopez. 1970. "Franz Brentano and intentional inexistence." *Journal of History of Philosophy* no. 8:423-430.

"Franz Brentano, in his important early work *Psychologie vom empirischen Standpunkt* (1874), maintains that all human experience is divided into two classes: mental phenomena and physical phenomena,(1) It is then incumbent upon him to show how these two classes of phenomena are to be distinguished one from another.

In Book II, Chapter 1, of the *Psychologie*, he devotes himself to this task, and in the course of the chapter he surveys several different ways of making out the distinction.

After enumerating examples of mental phenomena and of physical phenomena, he searches for defining characteristics of mental phenomena. He finds several characteristics which he thinks all mental phenomena have and all physical phenomena lack or vice versa, but far and away the most important of these, in Brentano's estimation, and the one which has aroused the most interest on the part of later philosophers, is what he calls "intentional inexistence," (2) (or merely "intentional existence"; the prefix "in-" does not indicate negation but rather location, indicating existence in the mind)." 38. ——. 1975. "Chisholm and Brentano on intentionality." *The Review of Metaphysics* no. 28:328-338.

Reprinted in: Linda McAlister (ed.), *The Philosophy of Brentano*, pp. 151-159.

"I believe, however, that Chisholm's interpretation of Brentano's intentionality doctrine is not wholly accurate, and that while the doctrine he sets forth as Brentano's is an interesting and provocative one, it gives a

misleading impression of what Brentano's views actually were, by obscuring almost entirely the specific nature of the question Brentano was trying to solve, and by misreading the answer Brentano gave. If only for the sake of historical accuracy a corrective should be given, but of course, taking another look at Brentano's particular way of construing the mind/body problem and the solution he put forth may also prove to be suggestive in its own right.

In this paper I will first show that there is no textual basis for the interpretation of Brentano's intentionality doctrine that Chisholm gives, and I will discuss briefly how, in light of that fact, Chisholm might have thought that there was. Then I will point out instances in which the version of intentionality that Chisholm attributes to Brentano conflicts with other views that Brentano held at the time. Out of these discussions emerges a

- different interpretation of Brentano's intentionality thesis, and, I hope, a more accurate one." (p. 152)

40. ———. 1979. "A Quasi-Brentanian Theory of Objects." *The Journal of Philosophy* no. 76:662-663.

"Recently there has been renewed interest in developing theories of nonexistent objects from such people as the Routleys and Terence Parsons. They often say they are reviving or reconstructing Meinong's Theory of Objects. What they then

proceed to do is to reconstruct only a small fragment of his theory.

Parsons, for example, calls his a "quasi-Meinongian" theory, but then says, "The theory I want to discuss here is expressly limited to *concrete* objects, some of which exist and some of which do not" (655)."

(...)

"Parsons offers no justification for this limitation. If he did, he might want to argue that concrete objects are the only possible objects of mental acts. Such arguments were developed by Brentano in reaction against Meinong's theory of objects in the early part of the century. In fact, Parsons' theory seems to me more accurately described as a "quasi-Brentanian theory" than as a "quasi-Meinongian" one. That is because Brentano's later philosophy, which is called Reism, can be viewed, like Parsons', as a theory of objects which is limited to concrete objects, both existent and nonexistent." (p. 662)

41. ———. 1982. *The Development of Franz Brentano's Ethics*. Amsterdam: Rodopi.

"There are two major periods in the philosophical thought of Franz Brentano (1838-1917).

(...)

Similarly, there are two distinct discernible periods in Brentano's thought concerning ethical theory. Unfortunately, Brentano's ethical writings have never been presented in such a way that this development from the earlier to the later period would be apparent. On the contrary, the manner in which Brentano's ethical works have been edited serves to obscure the fact that there was such a development rather than exhibit this fact. Only one work on ethics was published during Brentano's lifetime, his lecture *Vom Ursprung sittlicher Erkenntnis*,⁽²⁾

wherein he expounds what I shall call his earlier ethical theory. His later moral philosophy, which began to evolve around the turn of the century, and which reflects the changes taking place in his philosophical thought generally, was not set out by Brentano in any published or polished form. It can, however, be pieced together from references in letters and in papers from his extensive *Nachlass*.(3) It is also reflected in a work published posthumously under the title *Grundlegung und Aufbau der Ethik*. (4) It is the form of editing adopted for this book which does so much to obscure the development of Brentano's ethics. The text is basically that of Brentano's lectures on ethics delivered at the University of Vienna between 1876 and 1894, and so it represents in a more detailed form than does *Ursprung* Brentano's early ethical philosophy. But Professor Mayer-Hillebrand and Professor Alfred Kastil, who worked on this material before her, have chosen to incorporate into this early text Brentano's later ethical views as well, and they have apparently tried to edit out all those sections of the early text which do not agree with these later views. In short they have tried to turn an early text into a later one by virtually rewriting it in places. The resulting book is, needless to say, somewhat misleading, for it gives the impression that Brentano had expounded the same ethical theory throughout his life.

In this dissertation I shall try to erase this impression by tracing the development of Brentano's ethics from the earlier to the later period. For the early period my main sources are *Ursprung* and microfilms of the early ethics lectures. I have used *Grundlegung* when its text has not been altered significantly by the editors to conform to Brentano's later views. This entailed checking the entire text against the microfilms of the original lecture notes.(5)

When the text had been altered in *Grundlegung*, I relied on the original texts. For Brentano's later ethical theory I relied mostly on the materials from the *Nachlass* especially upon a recently published selection of later letters and essays entitled *Die Abkehr vom Nichtrealen*, edited by Professor Mayer-Hillebrand.(6)

In addition to tracing the development of Brentano's ethics and trying to analyze the reasons behind this development, I have tried to present background information concerning his methodology, psychology, epistemology, etc. sufficient for an understanding of his philosophy. I give interpretations of those passages which seem to me to call for further elucidation and I include critical commentary on the major ethical positions Brentano espouses and on some other points as well." (pp. 1-3)

42. ———. 2004. "Brentano's epistemology." In *The Cambridge Companion to Brentano*, edited by Jacques, Dale, 149-167. Cambridge: Cambridge University Press.

"In this chapter, I will set out what I take to be the basic tenets of Franz Brentano's epistemology. This seemingly simple task is a crucial one because virtually every other aspect of Brentano's philosophy uses his epistemology as a starting point and is structured in the same way. As the title of his major published work, *Psychology from an Empirical Standpoint*, suggests, Brentano saw himself as an empiricist; his account of knowledge, belief and other epistemological concepts is

therefore constructed from the building blocks, so to speak, of the phenomena of experience." (p. 149)

43. McDonnell, Cyril. 2006. "Brentano's Revaluation of the Scholastic Concept of Intentionality into a Root-Concept of Descriptive Psychology." *Yearbook of the Irish Philosophical Society*:124-171.

Abstract: "It is generally acknowledged that it is principally due to Brentano and his students, in particular Husserl, that the medieval-scholastic terminology of 'intentional act' and 'intentional object' re-gained widespread currency in philosophical circles in the late-nineteenth and early-twentieth centuries. This paper examines Brentano's original re-introduction and revaluation of the Scholastic concept of intentionality into a root-concept of descriptive psychology. It concentrates on (1) Brentano's modification of the Scholastic concept of object-relatedness of the will to depict the object-relatedness of all psychical-act experiences in consciousness, (2) Brentano's modification of the Scholastic concept of the abstracted form of sense residing intentionally in the soul of the knower to depict the directly intended object of

consciousness, and (3) the significance of these modifications for understanding what commentators now call 'Brentano's thesis'. It notes that Brentano develops not one but two descriptive-psychological theses of intentionality both of which are entirely unScholastic. It also notes, however, that part of the original meaning of the metaphysical distinction that the Scholastics drew between 'intentional indwelling' (*inesse intentionale*) and 'real being' (*esse naturale*) continues to play a critical role in Brentano's revision of the concept of intentionality in *Psychology from an Empirical Standpoint* (1874) and in his lecture courses delivered at Vienna University on *Descriptive Psychology* (1887-91), and that this part of the original meaning of the Scholastic concept of intentionality remains both alive and intact in Brentano's 1874 study and in Husserl's (in)famous transcendental reduction of *Ideas I* (1913). Thus the paper argues that identifying what Brentano accepts, rejects, and adds to the original Scholastic concepts of 'intentional act' and 'the intentional indwelling of an object'

cannot be evaded in the proper elucidation and evaluation of 'Brentano's thesis'."

44. ———. 2006. "Brentano's Modification of the Medieval-Scholastic Concept of 'Intentional Inexistence' in *Psychology from an Empirical Standpoint* (1874)." *Maynooth Philosophical Papers* no. 3:55-74.

Abstract: "Brentano is perhaps most famously renowned for his re-deployment of Scholastic terminology of 'intentional act' and 'intentional object' in the elaboration of his novel science of 'descriptive psychology' in the mid-1870s and 1880s. In this re-deployment, however, Brentano adapted the original Scholastic meanings of both of these terms. Thus Brentano advanced not one but two descriptive-psychological theses of intentionality. (1) These theses, however, are often not properly distinguished, and consequently they are more often confused. Nevertheless, once the two theses are distinguished, Brentano's basic descriptive-psychological tenet of the intentionality of consciousness is more readily understandable on its own terms. Whether Brentano's descriptive-psychological tenet is entirely acceptable philosophically, or not, of course, is another matter but this presupposes understanding in a straightforward sense what Brentano's doctrine is. In this article, I will be concerned mainly with Brentano's re-introduction of 'what the Scholastics of the Middle Ages called the intentional (or mental) inexistence of an object' in *Psychology from an Empirical Standpoint* (1874),(2) even though it is Brentano's (second) thesis on 'intentional act', one that he developed after his 1874 publication, that is more generally well known and examined. While acknowledging that many versions of 'Brentano's thesis', as it is usually (and loosely) referred to by commentators today, have been re-worked in modern philosophy of mind, this article focuses attention on some of the main points of convergence and deviance between the original Scholastic concept and Brentano's 'new' concept of intentionality in *Psychology from an Empirical Standpoint*."

(1) According to Herbert Spiegelberg: 'It is true that when he [Brentano] uses the adjective "intentional" [in his 1874 *Psychology from an Empirical Standpoint*, qualifying the kind

of existence characteristic of the objects of consciousness, as is evident from the context] he still betrays traces of the scholastic doctrine about the immanence of the object known within the soul. But it was this very doctrine about the immanence of the object of knowledge in the soul which Brentano came to reject during what Brentano scholars call the crisis of immanence (“Immanenzkrise”) of 1905.’ *The Phenomenological Movement: a Historical Introduction* (3rd revised and enlarged edition, with the collaboration of Karl Schuhman, Dordrecht: Kluwer Academic Publishers, 1994), p. 48, note 19. Thus it is possible for Brentano, whilst rejecting the immanent object theory of intentionality, to still defend the ‘intentional acts’ of consciousness after 1905, though ‘as far as I [Spiegelberg] can make out, even the term “intentional” disappears from Brentano’s psychological vocabulary (*ibid.*).’

45. ———. 2015. "Understanding and Assessing “Brentano’s Thesis” in Light of His Modification of the Scholastic Concept of Intentionality." *Brentano Studien* no. 13:153-181.

Abstract: "This paper investigates Brentano’s modification of the Scholastic concept of intentionality in his elaboration of his thesis on the intentionality of consciousness. It argues that though ‘Brentano’s thesis’ cannot be fully understood without reference to the original Scholastic concept, Brentano also gives this concept new meaning in his elaboration of not one but two descriptive-psychological theses of intentionality, one concerning the intentional indwelling of an object in consciousness and another concerning the relatedness of psychical-act experiences to their objects, both of which are entirely unscholastic."

46. ———. 2017. "Brentano’s New Understanding of Psychology in Light of His Reading of English Empiricists." *Brentano Studien* no. 15:263-290.

"In this article, I wish to examine some of the main ideas that Brentano borrowed in part or in full from those 'most eminent English psychologists of the empiricist school'(8) that are of most relevance to an understanding and evaluation of Brentano's new view of 'psychology' 'from an empirical standpoint'. Of pivotal importance to the 'investigations' which Brentano unfurls in PES [*Psychology from an Empirical Standpoint*] is a distinction which he draws between the 'inner perception of physical phenomena' and 'outer perception of physical phenomena', a distinction, as we shall see, he found in the 'English empiricists' whom he read. This has an important bearing on understanding Brentano's famous re-introduction and appeal to 'what the Scholastics of the Middle-ages called the intentional (or mental) in-existence of an object' as the mark of 'our own psychical phenomena' in Book II 'Psychical Phenomena In General' of PES because, as Brentano explicitly remarks, 'no physical phenomenon [by comparison to our own psychical phenomena] exhibits anything like it'.(9) In this article, therefore, I will first address the main reasons for Brentano's general change of views about the science of psychology and then assess the significance of the 'English empiricists' in understanding and evaluating his use of the concept of intentionality to distinguish 'psychical phenomena' from 'physical phenomena'." 47. Melandri, Enzo. 1987. "The 'Analogia Entis' according to Franz Brentano: A Speculative-Grammatical Analysis of Aristotle's '*Metaphysics*'." *Topoi* no. 6:51-58.

"It is to Brentano's credit that he, developing a well-known thesis of Trendelenburg, radicalized the indirect way in which Aristotle addresses the ontological problem, to repropose it in terms which it is not abusive to define of speculative grammar. Trendelenburg(4) would have been the first one to notice, among the moderns, that in Aristotle if one thing is essentially predicated of another so that name and concept of the predicate applies to it, then this occurs in a grammatically different form

than if the predicate merely gives its name to the subject without being of the essence of the subject. (5)

And it is Brentano himself who speaks of Trendelenburg's peculiar ability to exploit the "speculative content" of the ancient thinkers by starting with the affinity that such content often has with the grammatical peculiarities of "linguistic forms". (6)" (p. 52)

48. Mendelovici, Angela. 2021. "Brentano on Phenomenal and Transitive Consciousness, Unconscious Consciousness, and Phenomenal Intentionality." *European Journal of Philosophy* no. 1:1-10.

Abstract: "In *Brentano's Philosophical System: Mind, Being, Value*, Uriah Kriegel argues that Brentano's work forms a "live philosophical program" (p. 14, italics omitted) that contemporary philosophy has much to learn from and that is promising and largely correct. To this end, Kriegel argues that Brentano's notion of consciousness is the contemporary notion of phenomenal consciousness, that Brentano's rejection of unconscious mentality is a grave mistake that can be fairly neatly excised from his overall view, and that Brentano's notion of intentionality is the contemporary notion of phenomenal intentionality. This paper raises some doubts about these claims, suggesting that Brentano's notion of consciousness might more closely align with the contemporary notion of transitive consciousness than with that of phenomenal consciousness, that Brentano's rejection of unconscious mentality cannot be so easily excised from his overall view but

that it is not such a grave mistake, and that Brentano's notion of intentionality may not be that of phenomenal intentionality but rather that of generic aboutness. I wrap up by considering the extent to which we might agree with Kriegel that Brentano's work forms a live philosophical program that contemporary philosophy has much to learn from."

49. Méndez-Martínez, Jorge Luis. 2020. "Sound Ontology and the Brentano-Husserl Analysis of the Consciousness of Time." *Horizon. Studies in Phenomenology* no. 9:184-215.

Abstract: "Both Franz Brentano and Edmund Husserl addressed sound while trying to explain the inner consciousness of time and gave to it the status of a supporting example. Although their inquiries were not aimed at clarifying in detail the nature of the auditory experience or sounds themselves, they made some interesting observations that can contribute to the current philosophical discussion on sounds.

On the other hand, in analytic philosophy, while inquiring the nature of sounds, their location, auditory experience or the audible qualities and so on, the representatives of that trend of thought have remained silent about the depiction of sound and the auditory phenomena in the phenomenological tradition. The paper's intention is to relate both endeavours, yet the perspective carried out is that of analytic philosophy and, thus, I pay special attention to conceptual analysis as a methodological framework.

In this sense, I first explain what sound ontology is in the context of analytic philosophy and the views that it encompasses—namely, the Property View (PV), the Wave View (WV) and the Event View (EV)—. Secondly, I address the problems it entails, emphasising that of sound individuation. In a third section, I propose the possibly controversial conjunction of a "Brentano-Husserl Analysis of the Consciousness of Time" (for short "Brentano-Husserl analysis") and outline the commonalities of both authors, without ignoring its discrepancies. My main focus is Husserl's 1905 *Vorlesungen zur Phänomenologie des Inneren Zeitbewusstseins*. While addressing the Brentano-Husserl analysis, I elaborate on the

problem of temporal and spatial extension (*Raumlichkeit* and *Zeitlichkeit*, respectively) of both consciousness and sound. Such comparison is a key one, since after these two developments, one can notice some theoretical movements concerning the shift of attention from sounds to the unity of consciousness, and how they mirror each other. After examining the controversial claims concerning the temporal and spatial extension of both consciousness and sound, I argue in the concluding paragraphs that while considering the accounts of sound ontology, the Brentano-Husserl analysis would probably endorse a Property View and that this could have interesting consequences for the issue of Sound Individuation."

50. Mezei, Balasz. 2000. "Brentano and Husserl on the History of Philosophy." *Brentano Studien* no. 8:81-94.

Abstract: "A particular subject-matter in Franz Brentano's philosophy is his approach to the history of philosophy. I shall consider the evolution of his concept of the history of philosophy, the sources of this concept, and, finally, its relationship to Edmund Husserl's understanding of the history of philosophy. Brentano's scheme of the four phases of the history of philosophy can serve as a principle of evaluation of what comes after Brentano's era in the history of philosophy."

51. Mezei, Balasz, and Smith, Barry. 1998. *The Four Phases of Philosophy*. Amsterdam: Rodopi.

With an Appendix: *The Four Phases of Philosophy and Its Current State* by Franz Brentano, pp. 81-111.

"In what follows we shall introduce the English translation of what is perhaps Brentano's most important text on the history of philosophy. In our introduction, we shall analyze Brentano's conception of what he called "the four phases of philosophy"; we shall show the origin of his theory and the problems it was designed to address; and we shall demonstrate that Brentano's theory can be applied to at least one line in the history of philosophy *after* Brentano's time.

That Brentano developed his own theory of the history of philosophy is not widely known. This theory is summarized in a short essay entitled "The Four Phases of Philosophy", published in 1895 and translated here as an Appendix. Brentano believed that the history of philosophy displays a regularly recurring pattern and can thus be divided into successive periods, each of which can be considered as an organic whole of a precisely determined form.

Such periods are for instance the period of classical Greek philosophy ending with Aristotle, the medieval period up to but not including Descartes, and the period of modern philosophy beginning with Descartes and ending with Hegel and other classical 'German idealist' thinkers. In each such period, Brentano argues, four phases can be distinguished: the first phase is that of intensive philosophical development, of scientific results and scientific interest; the second phase is dominated by practical interest; the third phase is that of increasing scepticism which gives way, in the end, to a last phase, in which philosophy becomes a mere branch of literature which has no scientific relevance at all." (pp.1-2)

52. Milkov, Nikolay. 2023. *Hermann Lotze's Influence on Twentieth Century Philosophy*. Berlin: de Gruyter.

Chapter 4: *Lotze and Brentano*, p. 77-91.

"That the roots of Brentano's "revolution in philosophy" are deeper than has commonly been recognized is further evidenced by what he took for granted in his writings. This is most notably seen when spelling out the ways his positions on various topics related to the views of leading 19th-century German philosophers whose doctrines were so widely familiar in the literature of the time that he felt it unnecessary to identify them by name. A telling example is Jakob Friedrich Fries, who anticipated Brentano's—and, actually, also Lotze's—rejection of the widely held notion that perception consists in a combination of ideas. Fries also anticipated Brentano by identifying "assertions" with perception, a consequential epistemological move that Alfred Kastil first pointed out over a century ago (1912, pp. 52 f.), and one we shall take up in due

course (in § 3.1 below). It was evidently Lotze again, who was the medium of Fries' influence on Brentano on this count.

Such shared thought-determinations and theoretical outlooks attest to the interrelations among the various currents in 19th-century German philosophy. Multiple lines of influence enabled Kastil, who edited three volumes of Brentano's writings (1921, 1925, and 1933), to trace a variety of similarities between Fries and Brentano, findings which he presented in a book of 352 pages published in the neo-Friesian journal *Abhandlungen der Fries'schen Schule*, New Series (1912)."

53. Moder, Gregor. 2019. "Ontology of touch: from Aristotle to Brentano." In *The Language of Touch: Philosophical Examinations in Linguistics and Haptic Studies*, edited by Komel, Mirt. New York: Bloomsbury.

"Before presenting an attempt at an ontology of touch, I want to point out that ontology has always been closely related to the study of language. This is not simply the claim that any ontological consideration must necessarily be expressed by some language and within some language, and is therefore inevitably limited by that particular language. That would define the relationship between language and being only by way of negation. On the contrary, metaphysics, both ancient and modern, has consistently acknowledged that language determines being in an affirmative, productive, or constructive manner."

(...)

"Within Aristotle's body of work, the relation between language and ontology is perhaps even more clear in his logical work, *Categories*, which is preoccupied to an extent with categorizing things that are (*ta onta*). In concordance with *Metaphysics*, the central category of being is substance; it is the only independent one, and all other categories—like quality and quantity—are relative to substance." (pp. 55-56, a note omitted)

(...)

"At this point, we shall depart from Aristotle's ontology. In order to explain movement, he had to give up the mathematical concept of a point, which seems a very high price to pay. Instead, we will look to Aristotle scholars, particularly to Franz Brentano, who revisited the problem and proposed a solution that bridges the gap between a plenist ontology and the mathematical representation of movement in dimensionless points. In effect, what Brentano suggests is nothing short of a miracle: a concept of a point-in-movement, of a continuous point, and therefore of a point capable of touch." (p. 67)

54. Mohanty, Jitendra Nath. 1972. *The Concept of Intentionality*. St. Louis: Warren H. Green.

Part One, Chapter 1. *Brentano's Concept of Intentionality*, 3; 2. *Chisholm and the Brentano Thesis* 25-35.

"Whatever might have been the history of the concept of intentionality before Brentano(1), there is no doubt that modern philosophy owes it to him to have both drawn attention to the centrality of this concept for philosophy of mind and given it a formulation which is essentially original. However, since Brentano gave his historic formulation, philosophy has moved ahead; and his concept has been criticised, refined and amended, sometimes beyond recognition, by those who profess allegiance to him. The history of this concept after Brentano is a fascinating story, and forms part of the theme of this book: though the main purpose of this study is not historical survey but systematic understanding. I begin, in this chapter, by taking a close look at the first chapter of the second Book of

Brentano's *Psychologie vom empirischen Standpunkt* (2)." (p. 3)

55. Montague, Michelle. 2017. "A Contemporary View of Brentano's Theory of Emotion." *The Monist* no. 100:64-87.

Abstract: "In this paper I consider Franz Brentano's theory of emotion. I focus on three of its central claims: (i) emotions are sui generis intentional phenomena; (ii) emotions are essentially evaluative phenomena; (iii) emotions provide the basis of an epistemology of objective value. I argue that all three claims are correct, and I weave together Brentano's arguments with some of my own to support them. In the course of defending these claims, Brentano argues that 'feeling and will' are united into the same fundamental class. I summarize two of his arguments for this claim, what I call 'the nature of desire' argument and 'the transition' argument. I show how a central plank of these arguments relies crucially on Brentano's epistemology of value."

56. ———. 2023. "Brentano's theory of intentionality." *European Journal of Philosophy*:445-454.

Abstract: "Chapters Five through Nine of Book Two of Brentano's 1874 *Psychology From an Empirical Standpoint* were republished in 1911 with a substantive Appendix of Brentano's remarks. In the Appendix Brentano makes a significant addition to his theory of intentionality. In particular, he introduces new modes within the mode of presentation itself. These new modes are needed to account for our thinking about anything in a relational structure (in recto and in obliquo modes) and for our thoughts about time (the temporal mode). I

want to suggest that in the end Brentano simply takes relations to be different kinds of modes."

Annotated bibliography on Franz Brentano: Studies in English, Sixth Part: Mon - Rut

Bibliography

1. Moore, George Edward. 1903. "The Origin of the Knowledge of Right and Wrong." *International Journal of Ethics* no. 14:115-123.

Reprinted in: Linda McAlister (ed.), *The philosophy of Brentano*, pp. 176-181.

"This is a far better discussion of the most fundamental principles of ethics than any others with which I am acquainted. Brentano himself is fully conscious that he has made a very great advance in the theory of ethics. 'No one', he says, 'has determined the principles of ethics as, on the basis of new analysis, I have found it necessary to determine them' (p. X); and his confidence both in the originality and in the value of his own work is completely justified. In almost all points in which he differs from any of the great historical systems, he is in the right; and he differs with regard to the most fundamental points of moral philosophy. Of all previous moralists, Sidgwick alone is in any respect superior to him; and Sidgwick was never clearly aware of the wide and important bearings of his discovery in this one respect. Brentano is both clearer and more profound; and he avoids Sidgwick's two fundamental errors. It would be difficult to exaggerate the importance of his work.

His main proposition is that what we know, when we know that a thing is good in itself, is that the feeling of *love towards* that thing (or *pleasure* in that thing) is '*right*' (*nchtig*). Similarly,

that a thing is bad, is merely another way of saying that *hatred* of that thing would be 'right'." (p. 176 of the reprint)

2. Moran, Dermot. 1996. "Brentano's Thesis." *Proceedings of the Aristotelian Society, Supplementary Volumes* no. 70:1-27.

"It seems appropriate in an Address to the Joint Session of the Aristotelian Society and Mind Association to revisit Franz Brentano's much-quoted and oft-misunderstood account of intentionality, particularly since Brentano himself refers to Aristotle as his source and since intentionality is now a cornerstone of much contemporary philosophy of mind.(1)" (p. 1)

(...)

"Since I believe there is philosophical value in getting things right historically, it is worthwhile returning to Brentano's own conception in its original setting with a view to unpacking its key elements. We shall see that Brentano's version of intentionality is deeply embedded in a complex of broadly Cartesian, internalist and-though one must be very careful-introspectionalist assumptions. He did accept the reality of psychological states and their evident nature, they are as they appear to be, psychology does reveal our mental natural kinds. But, I shall argue, Brentano never held that mental events were ontologically irreducible to the physical; or that materialism was false; or that intentionality related people to propositions. Nor did he claim to have 'discovered' intentionality. For him, intentionality merely served as the most satisfactory criterion (among several other candidates, such as non-spatiality and inwardness) for initially identifying the domain of the mental, indeed a criterion to which, in his view, traditional philosophy (i.e., Aristotle-Aquinas-Descartes) subscribed.

Brentano did claim that all and -less emphatically- only mental states were intentional. He did see intentionality as the best 'mark of the mental', but it is not at all clear, as we shall see, just what is being marked off from what. In particular, his definition of the physical refers only to a certain phenomenal properties of our conscious states, and his understanding of the

psychical is precisely that which is grasped reflexively in inner perception." (pp. 2-3)

(1) Brentano refers to Aristotle's *De Anima*: 'Aristotle himself spoke of this mental in-existence', *Psychology from an Empirical Standpoint*, ed Oskar Kaus, English ed. Linda L. McAlister, trans. A.C. Rancurello, D.B. Terrell and L.L. McAlister (London: Routledge, 1973; 2nd English Edition with introduction by Peter Simons, 1995), p. 88 note †. [Hereafter PES]. Elsewhere he cites *Metaphysics* Book 5, ch. 15, 1021a29, which speaks of certain things whose nature includes a reference to something else, see F. Brentano, *The Origin of Our Knowledge of Right and Wrong*, trans. R. Chisholm and Elizabeth Schneewind (London: Routledge and Kegan Paul, 1969), p. 14. [Hereafter RW].(...)

3. ———. 2000. "Heidegger's critique of Husserl's and Brentano's accounts of intentionality." *Inquiry* no. 43:39-65.

"Inspired by Aristotle, Franz Brentano revived the concept of intentionality to characterize the domain of mental phenomena studied by descriptive psychology. Edmund Husserl, while discarding much of Brentano's conceptual framework and presuppositions, located intentionality at the core of his science of pure consciousness (phenomenology). Martin Heidegger, Husserl's assistant from 1919 to 1923, dropped all reference to intentionality and consciousness in *Being and Time* (1927), and so appeared to break sharply with his avowed mentors, Brentano and Husserl. Some recent commentators have sided with Heidegger and have endorsed his critique of Husserl and Brentano as still caught up in epistemological, representationalist approaches to intentionality. I argue that Heidegger is *developing* Husserl, focusing in particular on the ontological dimension of intentionality, *not reversing or abandoning* his account. Heidegger's criticisms of representationalism merely repeat Husserl's. Furthermore, I argue that Husserl's account of cognitive intentionality, which recognizes the importance of the disinterested theoretical attitude for scientific knowledge, has been underestimated and misunderstood by Heidegger, who treats scientific cognition as

- a deficient form of practice. In short, Heidegger is more dependent on Husserl than he ever publicly acknowledged."
4. ———. 2000. *Introduction to Phenomenology*. New York: Routledge.

Chapter 1: *Franz Brentano: descriptive psychology and intentionality*, pp. 23-59.

"In his initial phase of expressing this relation, Brentano emphasised it was possible to be intentionally related to all kinds of objects, imagined, possible, impossible, and so on. Roughly from 1874 to 1904, Brentano frequently expresses intentionality in terms of the intentional inexistence of the object. 'Inexistence' (*Inexistenz*) is, in fact, Brentano's translation of the Latin term *in-esse*, the verb meaning 'to be in', which was used by the Scholastics to characterise the manner in which an accident is said to be in a substance (e.g. knowledge is *in* a man), and specifically with regard to epistemology, the manner in which a form is in the mind. By 'inexistence' Brentano does seem to intend that the object of an act of consciousness is something *immanent* in consciousness, whether or not there is also a real object or 'reality' (*Realität*) outside of consciousness."

(...)

"Later, in his 1911 *Classification of Mental Phenomena*, the revised edition of Book Two of *Psychology from an Empirical Standpoint*, reissued at the request of his students, Brentano admitted his use of the phrase 'intentional inexistence' (*PES* 180 n.) had been misunderstood and he would have been better to have avoided it altogether. He says he even considered replacing the term 'intentional' with another Scholastic term 'objective', but this would have given rise to more misunderstandings by those who did not appreciate the Scholastic meaning of *esse objectivum*, the manner in which things are 'objectively' in the mind.(84) Brentano is referring to the Cartesian distinction between 'formal' and 'objective reality' in the Third Meditation, where Descartes distinguished the meaning-content (*realitas objectiva*) which belongs to the idea of God from the 'formal reality' (*realitas formalis*) of the cause

of the idea, namely the actual being, God. According to Brentano's employment of this distinction, when I believe something actively, or when I am actually making an error, the belief or error is *formally* in me; when I *remember* believing something or making an error, then that belief or error is *objectively* in me (*The True*, 15–16). These distinctions between the 'presented object' and the 'mode of presentation', the formal and the objective, are efforts by Brentano to accommodate a conceptual distinction which his students were forcing on him, namely the distinction between the content and the object of the act." (pp. 48-49)

5. ———. 2013. "Intentionality: Some Lessons from the History of the Problem from Brentano to the Present." *International Journal of Philosophical Studies* no. 21:317-358.

Abstract: "Intentionality ('directedness', 'aboutness') is both a central topic in contemporary philosophy of mind, phenomenology and the cognitive sciences, and one of the themes with which both analytic and Continental philosophers have separately engaged starting from Brentano and Edmund Husserl's ground-breaking *Logical Investigations* (1901) through Roderick M. Chisholm, Daniel C. Dennett's *The Intentional Stance*, John Searle's *Intentionality*, to the recent work of Tim Crane, Robert Brandom, Shaun Gallagher and Dan Zahavi, among many others. In this paper, I shall review recent discussions of intentionality, including some recent explorations of the history of the concept (paying particular attention to Anselm), and suggest some ways the phenomenological approach of Husserl and Heidegger can still offer insights for contemporary philosophy of mind and consciousness."

6. ———. 2020. "Brentano's Concept of Descriptive Psychology." In *Franz Brentano and Austrian Philosophy*, edited by Fisette, Denis, Frechette, Guillaume and Stadler, Friedrich, 73-100. Cham (Switzerland): Springer.

Abstract: "In this paper, I begin by outlining Franz Brentano's connections with John Henry Newman (on issues of faith) and then explore in detail Brentano's evolving conception of

descriptive psychology from *Psychology from an Empirical Standpoint* (1874) to his *Descriptive Psychology* lectures (1887–1891). Brentano was developing a descriptive, “empirical” science of mental phenomena (in opposition to Wundt’s physiological psychology and to Fechner’s psychophysics), and his focus was on a priori necessary laws that are given directly to intuition. Brentano developed his psychology from Aristotle and from the then contemporary psychology (especially British psychologists, such as Alexander Bain, John Stuart Mill, Henry Maudsley, and others). Husserl’s descriptive phenomenology was deeply influenced by Brentano’s descriptive psychology, although, in his mature works, Husserl abandoned all of Brentano’s main distinctions and developed a new intentional analysis that identified consciousness as a self-enclosed domain governed by a priori eidetic laws. In this paper I will explore Brentano’s and Husserl’s conceptions of descriptive psychology but I shall also examine Wilhelm Dilthey’s account of descriptive psychology that was based on ‘motivation’, a concept adopted by Husserl. Husserl’s mature phenomenology advanced far beyond Brentano’s descriptive psychology. But, despite their differences, I shall show that both Brentano and Husserl were committed to a non-reductive sui generis exploration of the ‘life of consciousness’ (*Bewusstseinsleben*) understood as a dynamic complex of essential features that can be apprehended by reflective analysis.”

7. Morrison, James C. 1971. "Husserl and Brentano on Intentionality." *Philosophy and Phenomenological Research* no. 31:27-46.

"It is the purpose of this essay to attempt to show that Husserl's phenomenological views are very different from and far more developed than Brentano's, and that he even rejects (wholly or in part) many of the latter's most important doctrines.

In order to clarify this problem I propose to discuss Brentano's well known attempt to distinguish mental and physical phenomena in which he introduces the notion of "Intentional Inexistence." I will then take up Husserl's views on both the general problem of mental vs. physical phenomena and on the

more specific one of Intentionality. No attempt will be made to give a complete account of Husserl's own views on Intentionality, since to do so adequately would imply a discussion of his whole philosophy. Also, I will concentrate almost exclusively on material from the *Logische Untersuchungen*, since it is here that he makes most explicit and detailed reference to Brentano." (p. 27)

8. Morscher, Edgar. 1978. "Brentano and His Place in Austrian Philosophy." *Grazer Philosophische Studien* no. 5:1-10.

"The first part of this paper summarizes what I take to be the most important doctrines of Brentano's philosophy. The second part investigates the possible meanings of the term 'Austrian philosophy'. The third part attempts to say something about Brentano's place in Austrian philosophy -- whatever that may be --, while the fourth part focuses on a problem in which I am especially interested. The paper closes with a proposal for what the expression 'Austrian philosophy' could mean."

9. Mulligan, Kevin. 2004. "Brentano on the mind." In *The Cambridge Companion to Brentano*, edited by Jacquette, Dale. Cambridge University Press.

"After a survey of the main claims and distinctions made by Brentano in his account of the mind, I consider in some detail what he says about what he takes to be the groundfloor and the top floor of the mind – time-consciousness and the emotions. I then set out his accounts of the self. In view of the difficulties involved in navigating amongst Brentano's texts, changing views, and opinionated editors, I indicate the main developments of Brentano's views about the mind. In spite of the fact that, in 1889, he seems to have thought that descriptive psychology was almost complete (KRW, p. ix, USE, p. 3), these developments ended only with his death." (p. 69)

10. ———. 2017. "Brentano's Knowledge, Austrian Verificationisms, and Epistemic Accounts of Truth and Value." *The Monist* no. 100:88-105.

"What can we know? What is it to know? What roles does knowledge play? Brentano gives answers to each of these questions. The objects of knowledge, Brentano thinks, are of two kinds. I have knowledge of my own mental states and acts and I may have knowledge of noncontingent truths. To know is to judge correctly and with evidence.

Three central roles for knowledge, according to Brentano, are that truth, existence, and value must be understood in epistemic terms.

His answers to the first two questions come near the end of a long and venerable tradition. His answer to the third question marks the beginning of a family of theories which were to play an important role in twentieth-century philosophy. For Brentano's epistemic account of truth was the first of many Austrian verificationisms about truth and meaning.⁽¹⁾ And his epistemic account of value led to the development of a variety of alternatives to naive realism à la Moore and Scheler about value.

Brentano's answers to all three questions led to substantial modifications of his framework by some of his students. His answers also provoked a violent rejection of the framework itself by some of his heirs and other philosophers which culminated in the defence of the view that to know is not to judge or to believe with evidence because it is not to judge or believe.

In what follows, I have three goals. First, to expound and understand Brentano's views about knowledge and his epistemic accounts of truth and value. Secondly, since a hundred years have now passed since Brentano's death, it seems appropriate to try and show just what roles his epistemology has played over the last hundred years; I shall therefore concentrate on six major developments of his epistemology ranging from substantial modifications and

developments to outright rejection, as well as a number of minor developments. Finally, I hope that the panorama of developments I present will help to illuminate the details of Brentano's own ideas. In §§2–4, I concentrate on Brentano's account of theoretical knowledge and its developments. Not until §5 do I turn to the details of his account of axiological knowledge and its fate." (pp. 88-89)

(1) Kastil (1934) refers to Brentano's "gnoseological" conception of truth.

Kastil, A. 1934. "Ontologischer und gnoseologischer Wahrheitsbegriff," in O. Engländer et al., eds. *Zur Philosophie der Gegenwart*, Prague: Calve, 23–34.

11. ———. 2017. "Incorrect emotions in ancient, austrian & contemporary philosophy." *Revue Philosophique de la France Et de l'Etranger* no. 142:491-512.

"Brentano often refers to ancient predecessors of his distinction between correct and incorrect non-intellectual states or acts. In 1907, he ascribes to Meinong the view that it is nonsense to say of anything but judgments that they are correct or "characterised as correct" and says that the view rejected by Meinong is that of "the greatest thinkers of the distant past" and Brentano's own view.

Unsurprisingly, some of Brentano's pupils, followers and heirs, such as Kastil and Kraus, devoted a lot of attention to the roles of non-intellectual correctness in Aristotle. (...). In contrast, the enormous secondary literature on intellectual correctness and right reason in ancient philosophy and later seems to have paid little attention to non-intellectual correctness. In what follows, I first look briefly at what Plato and Aristotle say about what I have called non-intellectual correctness. I then consider a series of questions about non-intellectual correctness and outline and evaluate some ancient, Austrian and contemporary answers." (pp. 491-492 notes omitted)

12. Mulligan, Kevin, and Smith, Barry. 1985. "Franz Brentano on the Ontology of Mind." *Philosophy and Phenomenological*

Research no. 45:627-644.

"Franz Brentano's 'philosophy of mind' still means, as far as most philosophers are concerned, no more than a peculiarly influential account of intentionality. In fact, in his *Psychology from an Empirical Standpoint*, Brentano has provided an account of mental phenomena which ranks with any to be found in the literature of philosophy. It differs as much from the concept-centered Kantian approaches to 'reason' or 'understanding' as from more recent approaches, centred on the language used to report or to express 'propositional attitudes', in being an ontology of mind, concerned with the description of the entities which are involved in mental experience and of the relations between them.

With the posthumous publication of a series of lectures given in Vienna in 1890-911 we now possess a clear account of the ontology, and of the methods, underlying Brentano's numerous and subtle descriptions of mental phenomena, at least at one highly fruitful stage in his career. What follows is a detailed exposition of this work, together with a brief critical coda." (p. 627)

13. Münch, Dieter. 1989. "Brentano and Comte." *Grazer Philosophische Studien* no. 36:33-54.

"In his *Psychology from an Empirical Standpoint* (PES, 1874) Brentano seeks to lay the foundation of psychology as a science. Surprisingly, he rejects the obvious idea that psychology is the science of the 'mind' or 'soul', and he agrees instead with Lange's claim that we need a "psychology without a soul" (PES I, p. 16; Engl., p. 11)." (p. 33)

(...)

"But why, then, does Brentano not follow Aristotle in stating that there is a soul, and that it is this which is the subject of psychology?"

To answer this question I want to show that it is not only Aristotle who is centrally relevant for an understanding of Brentano's *Psychology*. We have to keep in mind that Brentano here is trying to solve a specific problem, namely to lay the

foundation of psychology as a science. The study of Aristotle made Brentano accustomed to a philosophy in a scientific spirit and prepared him therefore for an understanding of the contemporary empirical philosophy and especially the so-called 'positive philosophy' as developed by Auguste Comte. It is the influence of this positive philosophy, I want to claim, which makes it understandable why we miss the soul in the published volumes of Brentano's *Psychology*. For Brentano's theory of psychical phenomena is in fact an answer to the question: how can we deal with psychical phenomena in the framework of positive philosophy?

This will mean that the influence of Comte - in contrast to that of Aristotle (and Descartes) -, concerns not so much the content as the methodology of the theses put forward in the *Psychology*." (p. 36)

14. Nathan, N. M. L. 1971. "Brentano's Necessitarianism." *Ratio* no. 13:44-55.

"Brentano held that there is a sense of 'necessary', on which whatever exists, exists necessarily, i.e. it is necessary that it should come into existence when it does so, and that it should remain in existence as long as it does so."

(...)

"But in what follows I shall presuppose rather than defend the intelligibility of Brentano's claim.

Brentano supports his claim with a variety of arguments, some designed to show that it is infinitely improbable that whatever exists does not exist necessarily, others to show that the claim that anything that exists does not exist necessarily is self-contradictory; some starting from the temporal character of existing things others from their spatial character.(6)" (pp. 44-45)

(6) For arguments from the spatial character of existing things see *Versuch über die Erkenntnis*, ed. A. Kastil (Leipzig, 1925), pt. IV, Anhang D, pp. 154-6; *Vom Dasein Gottes* ed. A. Kastil (Leipzig, 1929), pp. 451-3.

Brentano's earliest arguments for necessitarianism from the temporal character of existing things were meant to show only that it was infinitely probable that all changing things existed necessarily. Later he tried to show that it was logically necessary that all existing things whatsoever existed necessarily. (See Kastil's remarks in *Versuch*, pp. 196-7.) Part IV of the *Versuch* (pp. 108-57) contains various versions of both kinds of arguments from temporality.

Particularly clear versions of the temporal argument for Brentano's stronger claim can be found in *Vom Dasein Gottes*, pp. 414-16; 446-8. For other versions of both kinds of arguments from temporality see *Grundlegung und Aufbau der Ethik*, ed. F. Mayer-Hillebrand (Bern, 1952), pp. 281-9; *Religion und Philosophie*, ed. F. Mayer-Hillebrand (Bern, 1956), pp. 120-6; *Die Lehre vom Richtigen Urteil*, ed. F. Mayer-Hillebrand (Bern, 1956), pp. 299-309.(...).

15. Niel, Luis. 2019/20. "Brentano and Intentionality: or How to Break Immanence from Within." *Brentano Studien* no. 16:69-98.

Abstract: "The article focuses on Brentano's conceptions of intentionality as developed throughout the different periods of his thought: first, in his early works on Aristotle and its operating notion of 'intentional' as something objective in sensations; second, in his 'intentionality passage', which, based on a psychological approach, presents an immanentist account (likely Cartesian) of intentionality as a two-term relation between the mind and the immanent (or intentional) object; third, in his late 'reistic phase', where, due to the ontological flaws of the psychological approach, a strong ontological commitment to the 'real thing' is presented which leads to a new conception of intentionality as a one-term relation (as something 'relativlich') or as the directedness of the mind towards real things. I will first argue that Brentano's early theory supports a form of intentional immanentism, which his later reistic account vainly attempts to break by introducing the 'real thing' into the intentional equation; this leads to many unsolved problems and flaws, expressed by the conceptual tension of an unclear differentiation of the concepts of thing,

real, existence, and object. I will also argue that his first psychological-descriptive conception, which methodologically leaves aside existent things by inner perception, presents a more consist account of intentionality which, based on the concept of an in-existing object in the mind, breaks its immanence as it understands this object as something different from the mind itself."

16. Niemeck, Maik. 2020. "Current Accounts of Subjective Character and Brentano's Concept of Secondary Consciousness." In *Franz Brentano's Philosophy after Hundred Years: From History of Philosophy to Reism*, edited by Fissette, Denis, Frechette, Guillaume and Janoušek, Hynek, 55-71. Cham (Switzerland): Springer.

Abstract: "There is widespread agreement among many contemporary philosophers of mind that, in addition to their qualitative character, phenomenally conscious states contain some kind of subjective character. The subjective character of experience is most commonly characterized as a subject's awareness that it is currently undergoing a specific experience. This idea is nothing new, of course, and something similar has been proposed quite some time ago by Franz Brentano, among others, under the name of "secondary consciousness". That fact hasn't remained unnoticed.

Indeed, a number of competing contemporary accounts of subjective character refer to Brentano as an early proponent of their particular view. This article pursues two objectives. First, it argues that the so-called self-mode account of subjective character is, for systematical reasons, superior to self-representational and pre-reflective accounts. Second, the article briefly suggests a novel interpretation of Brentano's concept of secondary consciousness that sets it in relation to the previously introduced self-mode account and bears some similarities with Thomasson's adverbial interpretation of Brentano's concept of secondary consciousness."

17. Nuñez Erices, Gonzalo. 2019. "Boundaries and Things. A Metaphysical Study of the Brentano-Chisholm Theory." *Kriterion - Journal of Philosophy* no. 33:15-48.

Abstract: "The fact that boundaries are ontologically dependent entities is agreed by Franz Brentano and Roderick Chisholm. This article studies both authors as a single metaphysical account about boundaries. The Brentano-Chisholm theory understands that boundaries and the objects to which they belong hold a mutual relationship of ontological dependence: the existence of a boundary depends upon a continuum of higher spatial dimensionality, but also is a *conditio sine qua non* for the existence of a continuum. Although the view that ordinary material objects and their boundaries (or surfaces) ontologically depend on each other is correct, it does not grasp their asymmetric relationship: while the existence of a surface rigidly depends upon the existence of the very object it belongs to, the existence of a physical object generically depends upon having some surface. In modal terms, both are two kinds of *de re* ontological dependence that this article tries to distinguish."

18. Olivier, Massin. 2017. "Brentano on Sensations and Sensory Qualities." In *The Routledge Handbook of Franz Brentano and the Brentano School*, edited by Kriegel, Uriah, 87-96. New York: Routledge.

"The term "sensation" (*Empfindung*) famously displays an act/object ambiguity. It might be used to refer

1. To our sensing of something: a sensory act (e.g. a hearing);
2. To what we sense: a sensory object (e.g. a sound);
3. To some mental episode of ours having no object distinct from itself. Pain is sometimes said to be such a "subjectively subjective" mental episode, some sensing which is its own *sensa.(1)*" (p. 87)

(...)

"Sensations have two kinds of features. Some, such as their intentional mode or their temporal features, cannot be explained away by looking at their object. Others, such as their intensity or the difference between senses, are features that sensations inherit from their objects.

Accordingly, this chapter has three sections. The first introduces Brentano's view of sensations by presenting the intentional features of sensations irreducible to features of the sensory objects. The second presents Brentano's view of sensory objects—which include sensory qualities—and the features of sensations that such objects allow to explain, such as their intensity. The third section presents Brentano's approach to sensory pleasures and pains, which combines both appeals to specific modes of reference and to specific sensory qualities." (p. 88)

19. Olson, Jonas. 2017. "Two Kinds of Ethical Intuitionism: Brentano's and Reid's." *The Monist* no. 100:106-119.

Abstract: "This paper explores Franz Brentano's metaethics by comparing it to Thomas Reid's.

Brentano and Reid share a commitment to moral realism and they are both aptly classified as intuitionists concerning moral knowledge and the nature of moral judgment. However, their respective versions of intuitionism are importantly different, in ways that reflect more general differences between their respective epistemological views. Sections III and IV of the paper focus more exclusively on Brentano's metaethics and some of its unorthodox features. These features tie in with notorious difficulties for moral realism concerning the nature of moral truth and the relation between moral judgment and motivation to act."

20. Parsons, Charles. 2004. "Brentano on judgement and truth." In *The Cambridge Companion to Brentano*, edited by Jacqueline Dale, 168-196. Cambridge: Cambridge University Press.

"In its original form, Brentano's view of judgment implies that in a sense all judgments are existential judgments or negations of existential judgments. This peculiarity of his view of judgment influenced his thought on truth at an early point and led to a particular line of questioning of the traditional idea of truth as *adaequatio rei et intellectus*, the root of what has come to be called the correspondence theory of truth, already adumbrated in the 1889 lecture that is the opening essay in the compilation *Wahrheit und Evidenz*. Brentano was not the only

or even the most influential philosopher to question the correspondence theory at the time, but his criticisms had distinctive features. In late writings he sketched as a positive view an epistemic conception. The discussion below of Brentano's views on truth will concentrate on these aspects." (p. 171)

21. Pasquerella, Lynn. 1985. "Brentano and Organic Unities." In *From Bolzano to Wittgenstein*, edited by Nyiri, J. C., 128-131. Wien: Holder/Pichier/Tempusky.
22. ———. 1987. "Intensional logic and Brentano's non-propositional theory of judgment." *Grazer Philosophische Studien* no. 29:117-119.

"The reism Brentano adopted in the later stages of his philosophy led him to reject such entia irrealia as properties, judgmental contents (or states of affairs) and to advocate a non-propositional theory of judgment. While non-propositional theorists may, through certain linguistic maneuvers, eliminate reference and to some extent avoid commitment to propositions, many philosophers believe the nonpropositional theorist cannot escape the use of propositions altogether.

George Bealer levels such an attack in his book *Quality and Concept*.(1)" (p. 117)

(...)

"Bealer contends that "on the non-relational non-propositional theory of judgment there is no credible way even to express the above intuitively valid arguments ... ". (2) Thus, Bealer rejects Brentano's approach because, as he sees it, the theory "falters at the earliest possible stage: it collides with logic itself".(3)

I will show that Bealer is mistaken when he claims that Brentano's non-propositional theory cannot offer an adequate rendering of the first two arguments. While I grant that Brentano cannot provide an adequate translation of the third argument, I do not grant its intuitive validity." (p. 60)

23. ———. 1988. "Brentano and the Direct Attribution Theory." *Brentano Studien* no. 1:189-197.

Abstract: "According to Brentano, what is characteristic of every mental act is the reference to something as an object. The exact nature of an object of our mental acts has, however, been first the subject of steady discussion in Brentano's writings and consecutively gave rise to controversy for contemporary philosophers of mind; e.g. Chisholm, Castañeda. What follows is an elucidation of the relationship between Brentano's final theory of sensation and its interpretation in Chisholm's Direct Attribution theory as a consideration of a recent challenge by Castañeda: that while the Brentanian-Chisholmian account is exemplary in dealing with tacit self-reference at the level of unreflective consciousness, this theory needs to be developed even further to be adequate to those cases of self-reference involved in reflective consciousness."

25. ———. 1993. "Brentano and aesthetic intentions." *Brentano Studien* no. 4:235-249.

"Introduction. Brentano's philosophy of art, contained primarily in his book, *Grundzuge der Ästhetik*, is the result of an original theory of intrinsic value that was derived from Brentano's philosophical psychology. In his aesthetics, Brentano endeavored to find an objective ground for the value of aesthetic contemplation through his theory of the intentional objects of emotions and desires. The lack of attention Brentano's aesthetics has received is surprising, given that two of the many students Brentano influenced, Husserl (through the development of the phenomenological movement) and Ehrenfels (through the development of Gestalt psychology) have had an extraordinary influence on twentieth century perceptions of art. In this paper I will attempt to redress some of this neglect by outlining Brentano's analysis of aesthetic

intentions and the relationship his aesthetics bears to his overall philosophical system." (p. 235)

26. ———. 2002. "Phenomenology and Intentional Acts of Sensing in Brentano." *Southern Journal of Philosophy* no. 40 (Supplement):269-279.

"In his paper "Intentionality of Phenomenology in Brentano," Matjaž Potrč endeavors to provide a Brentanian analysis of how it is possible for phenomenal objects to become the contents of intentional acts of sensing.' Potrč contends that while Brentano stands as an "origins philosopher" at the crossroads of analytic and continental philosophy, subsequent philosophers from both traditions have failed to adequately address the nature of phenomenological experiences. He speculates that their explanatory insufficiency results alternatively from attempts to account for intentionality without phenomenology or from efforts to provide an analysis of phenomenology without intentionality. Potrč seeks to redress this oversight by highlighting the intimate relationship Brentano proposes between intentionality and phenomenology. In the process, he exposes a variety of contemporary metaphysical and epistemological controversies related to intentionality, reference, and phenomenology. Responding to these controversies, Potrč reinforces Brentano's thesis of the irreducibility of intentionality to the referential and the necessary distinction between what he terms "physical and experiential space."

Potrč's analysis embodies a broad range of intriguing philosophical questions. Too many, in fact, to be addressed in a single response. The focus of my commentary, therefore, will be to provide an outline of Brentano's theory of sensation as background to Potrč's important project and to evaluate and develop his thesis of Brentano as an "origins philosopher" (p. 269)

27. Pavlik, Jan. 1991. "Brentano's theory of intentionality."
Brentano Studien no. 3:63-70.

Abstract: "Brentano's intentional psychology is an attempt at overcoming the Humean tradition characterized by probabilistic empirism, subjectivism and psychologism. Intentional psychology enables restoration of the autonomy of human psyche with reference to natural laws as well as overcoming the reduction of specific subject-object relations to object-object relations realized in associationist psychology. In contrast with speculative approaches of German classical philosophy, Brentano's theory enables empirical, non-metaphysical inquiry of subject-object relations."

28. Pietersma, Henry. 1978. "Brentano's Concept of the Evident."
Analecta Husserliana no. 7:235-244.

Abstract: "It is well known how much E. Husserl's original project of phenomenology has been inspired by Brentano's epistemology, which may be characterized as a search for firm foundations. At the foundation of all that we know, or think we know, there must be matters which we know with unshakable certainty. Such a certainty is not merely a characteristic attitude adopted by an epistemic subject who may none the less be in the dark as to what his status is and where he stands in the whole of reality, so that his certainty might quite conceivably be shaken. On the contrary this subject, now that he has dug down to the foundations, need not fear that somewhere an evil genius might still be hiding and frustrate even his very best epistemic efforts. For there is now no longer any darkness or mystery shrouding his place in reality and his capacities to know. Husserl has developed this objective ground for certitude to the point that Brantano himself could no longer understand him."

29. Płotka, Witold. 2020. "From psychology to phenomenology (and back again): A controversy over the method in the school of Twardowski." *Phenomenology and the Cognitive Sciences* no. 19:141-167.

Abstract: "This paper seeks to define the main trends, arguments and problems regarding the question of method

formulated by Twardowski and his students. In this regard, the aim of the paper is twofold. First, I situate Brentano's project of descriptive psychology within the context of disputes in the school of Twardowski concerning the method of both psychology and phenomenology, arguing that descriptive-psychological analysis was dominant in this respect.

Second, the study explores the notion of eidetic phenomenology, as founded on a methodological procedure, which supposed to guarantee infallibility of its descriptions. To show this, I first reconstruct Brentano's concept of descriptive psychology, its object, its method and aims. Second, I track the changes and reinterpretations provided by Twardowski in his view of descriptive psychological analysis. Third, I explore Witwicki's and Bandrowski's—both early students of Twardowski—discussions of the descriptive approach. I try to show that the former accepted psychologism, while the latter overcame it by means of logical analysis. Fourth, I suggest that the only student of Twardowski who renounced the Brentanian method was Ingarden, who developed eidetic phenomenology. Finally, I present Blaustein's—one of the last students of Twardowski—reappraisal of descriptive psychology and his critique of Ingarden's method. This controversy over the method of descriptive psychology reveals how one can situate Twardowski's legacy within early phenomenology in Poland."

"I wish now to propose a possible embedding of the reist theses by drawing on certain elements in the thought of Franz Brentano.

Brentano's philosophical opus falls, as is well known, into two distinct phases. Here I wish to explore the doctrine that he developed during his last years, a doctrine that can properly be defined as reist(18). To do so, I shall use Chisholm's reconstruction of Brentano's position on the problem of substance and accident.(19)

The two main presuppositions of Brentano's reism are the thesis of the primacy of inner perception and the theory of concrete predication.

For Brentano, the primary use of the copula occurs in phenomena of inner perception. Strictly speaking, we can only paradigmatically comprehend the being of things when they are apprehended by inner perception. By contrast, we can understand things that are not apprehended by inner perception only by analogy - by relating them to our experience as thinking beings. In terms of our discussion here, this dimension of Brentano's theory does not seem to be immediately relevant, however fundamental it may be to his ontology. Entirely relevant, instead, is his theory of concrete predication. with its requirement that all the predicates of the language should be transformed into concrete terms. In this sense, one cannot say, for example 'roses are red' but 'roses are red-things'. All the predicates of the language, and in particular all its abstract terms, must undergo a similar translation process. From such a perspective, the traditional position that a judgement attributes properties to things is replaced by one where a judgement connects things with things(20)." (p. 348)

"The papers collected in this volume arise from the conference "The Brentano Puzzle," organized in Bolzano / Bozen, Italy, on the 14th and 15th of November 1996 by the Central European Institute of Culture.

The conference's aim was to analyse the following puzzle. Even if the width and the depth of Brentano's intellectual legacy are now well known, those asked to list the principal philosophers of the nineteenth century very rarely mention his name. We may call this puzzle the problem of Brentano's 'invisibility.'

It is obvious that Brentano's invisibility has serious consequences on assessment of his philosophical theory. The reconstruction of Brentano's thought is still flawed and incomplete. Moreover, Brentano's emphasis on oral teaching, and the meagreness of his published work, compared with the enormous quantity of his manuscripts and correspondence, are also of theoretical importance because they are rooted in Brentano's method of 'doing' philosophy. We know that the distinguishing feature of his philosophy was its empirical bias, its insistence on rigorous and partial answers rather than on the construction of systems. Given these features, it comes as no surprise that the same problem should be examined on

several separate occasions and that different solutions should be proposed for it.

This procedure has a certain amount of inner coherence. Although Brentano always began his analysis with specific topics and problems, he proposed solutions which then reverberated through the entire edifice of his philosophy. This is a manner of philosophising which takes the natural sciences as its model. These factors also account for the different solutions that Brentano proposed for the problems he addressed. His thought, in fact, displays a continuity of method and a permanence of problems, but not a univocity of solutions. It is this aspect that allows one to talk of a school of Brentano among his pupils, to detect a 'family resemblance' among philosophers and scholars belonging to different disciplines. That is to say, the school is defined more by problems and the method used in their analysis than by their solutions in the strict sense. Accordingly, his heterodox followers, such as Carl Stumpf, Anton Marty, Alexius Meinong, Christian von Ehrenfels, Edmund Husserl and Kazimierz Twardowski, were more faithful to their master's thought than the orthodox Brentanians like Oskar Kraus, Alfred Kastil and Franziska Mayer-Hillebrand.

One further component of the Brentano puzzle is that a number of Brentano's outstanding pupils achieved their own success and founded their own schools. Suffice it to mention Husserl's phenomenology, Twardowski's Lvov-Warsaw school and Meinong's Graz school. The personal success and academic recognition attained by these exponents of Brentano's school (in the broad sense) have come to obscure their common thematic origins. The subsequent split between analytic philosophy and phenomenology generated, as a side-effect, the oblivion into which Franz Brentano's thought then fell.

Nevertheless, Brentano and his school display surprising affinities with Frege and the tradition that he inspired. Perhaps the most interesting reconstruction of these connections is that accomplished by a number of works in German by Paul Linke. It was thought that a survey of Linke's thought might prove

useful to English readers. For this reason the book also contains the English translation of his 'Gottlob Frege als Philosoph,' published in 1947, with an introduction by Claire Ortiz Hill.

Last but not least, analyses of the relevance of Brentano's and his followers' theses for contemporary philosophical and scientific debate are also considered." (Foreword by Roberto Poli)

33. ———. 2004. "Approaching Brentano's Theory of Categories." In *Phenomenology and Analysis: Essays on Central European Philosophy*, edited by Chrudzimski, Arkadiusz and Huemer, Wolfgang, 285-322. Frankfurt: Ontos Verlag.

"In this paper I shall begin with analysis of the core of Brentano's ontology, namely his theory of categories." (p. 288)

(...)

"Brentano's theory of "what exists" can only be properly understood if we recall that, for him, everything that exists is an individual: "And we also say, of things that exist in the strict sense, that they are individuals"(TC, 26 – 1916). We will see in the section devoted to wholes and parts that "individual" does not mean "one". Brentano rejected the Aristotelian identification between individual and one as the source of numerous errors.

He retained the concept of "individual", but with the meaning of "determined". This is a major departure from the mainstream understanding of the concept of an individual. If 'individual' means determined, then both collectives and parts can be taken as real individuals. As far as I know, Brentano does not explicitly address the entities referred to by mass terms, but obviously nothing precludes their inclusion in the set of individuals, understood as (fully) determinate reality. On the other hand, what in itself is fully determined can be thought by us without all its determinations." (p. 295)

(...)

"Summing up, one main conclusion is apparent. Brentano used the theory of wholes and parts as the main component of his conceptual framework. This choice runs counter to deeply ingrained beliefs of the mainstream twentieth-century scientific ideology. To provide but one example: a theory of wholes and parts grounds the thesis that wholes govern parts. This entails acknowledging the ontological difference between the relations of part to whole and those going the other way round from the whole to its parts. These relations are not symmetric. Moreover, the latter family of relations may proceed not only from wholes to parts, but from whole to "something else" (e.g. boundaries) as well. All this amounts to paving the way for systems and levels of reality.

It is fair to conclude by saying that Brentano performed an enormous amount of preparatory work, recovering and furthering the best philosophical theories, and lighting many blind allies. It is our task to take a step forward." (p. 320)

34. ———. 2012. "Modes and Boundaries." In *Franz Brentano's Metaphysics and Psychology*, edited by Tănăsescu, Ion, 397-418. Bucharest: Zeta Books.

"Brentano's ontology is sophisticated and difficult to assess.

An obvious problem is the unfinished state of the different versions of his theory of categories (to wit, the three drafts of the theory of category). Perhaps less obvious but no less important are the tensions arising from the continuous dialogue that Brentano develops with Aristotle and his conclusive departure from the theories of the Stagirite. Finally, a major difficulty is the originality and mutual interdependences of the many theories that Brentano developed in the last decades of his life, including the theories of parts and wholes, categories, modes, continua and boundaries.

(...)

The paper is organized as follows. Section 2 summarizes the main aspects of the Aristotelian theory of parts and wholes; Section 3 distinguishes things in the proper sense from things in an extended sense; Sections 4 introduces time and space; Section 5 substance and accident. Section 6 discusses boundaries and Section 7 continua. Finally, Section 8 presents Brentano's theory of parts and wholes and Section 9 his theory of categories." (pp. 397-398)

35. Potrč, Matjaž. 1993. "Grades of intentionality." *Brentano Studien* no. 3:71-78.

Abstract: "Intentional inexistence is to be understood via directedness to an internal object which may but needs not exist. As far as the relation to the object exists, it is infallible - contrary to the fallible directedness at an external object. Brentanian intentionality is based on the evidence, and does not allow for degrees. Brentano has been careful to delimit his project of 'Psychognosie' from the physical and from the physiological. The thesis of intentional gradation is discussed, which allows for three degrees. The first form of intentionality involves simple tropisms. The second grade of intentionality is the one of generality, as opposed to specificity and particularity. The third intentional grade would enable directness to the singular.

As human organisms only are able to entertain directness to the singular, Brentanian intentionality would fall under the second kind of directedness, the one involving generality. Supposition that this thesis is right might lead to the question whether Brentano really described intentionality specific for human organisms. "

36. ——. 2002. "Intentionality of Phenomenology in Brentano." *The Southern Journal of Philosophy* no. 40:231-267.

Abstract: "Phenomenology is intrinsically intentional for Brentano. Qualitative conscious experiences are individuated by their phenomenal space. Phenomenal space does not include just an experiential space. Physical phenomenal space is also

needed. This invites the kinds of examples concerning the phenomenal that take account of both spaces. Physical space is analyzed because it assures the intentionality of phenomenology.

The thesis concerning intentionality of phenomenology is compared to the overall project of grounding intentionality or directedness at a content or at an object. Besides being directed at an object, an intentional act is also reflexively directed at itself. This reflexive directedness includes qualitative phenomenal experience. As directedness at an object and reflexive directedness of the act at itself become interwoven, there is the intrinsic phenomenology of intentionality. Both intentionality of phenomenology and phenomenology of intentionality present the wholes with mutually pervading and only logically distinguishable parts.

In the above theses, balance is established between phenomenology and intentionality. It is conjectured that this balance was disrupted in both analytical and continental traditions, to which Brentano was a precursor and an origins figure."

37. Puglisi, Mario. 1924. "Franz Brentano: A Biographical Sketch." *The American Journal of Psychology* no. 35:414-419.

"In the preface to one of his posthumous works, recently published, -*Die Lehre Jesu und ihre bleibende Bedeutung*, - Brentano alludes to his religious crisis; it is the first and only time that he refers to it. "Born of a Catholic family," he writes, "I was led to accept the ecclesiastical life; but later I was obliged to separate myself from the church. My sole reason for taking this step was my wish to serve the higher interests of

mankind; and my mature convictions made me realise that such service would be impossible if I followed the path upon which I had originally entered. For me, research has always been a vital necessity; and from the very first I tried, again and again, to resolve, in a satisfactory way, certain apparent contradictions of reason and what is called supernatural revelation. The failure of every effort to resolve these contradictions gave rise, little by little, to grave doubts

regarding the truth of religious dogmas. But religious belief had been presented to me as a sacred duty, whose disregard meant eternal punishment; and a doubt regarding the obligation of belief thus appeared to me as a temptation to evil.... All this struggle was repeated over and over; and I should never have come to a decision if it had not been for a certain extraordinary event,-the assembling of the Vatican Council to discuss the infallibility of the Pope. Here a doctrine was at issue which I could still doubt without thereby falling into sin, and over against which I therefore was still free from any bondage that might disturb my conscience and prevent an impartial examination of the subject. I studied it, and the result of my study was the firmest possible persuasion of the untenability of that dogma." (p. 416)

38. Rancurello, Antos C. 1968. *A Study of Franz Brentano: His Psychological Standpoint and His Significance in the History of Psychology*. New York: Academic Press.

Foreword by Edwin G. Boring.

"In justification of the claim that Brentano "had the rightness of the obvious on his side," Boring very appropriately called attention to his doctrine that "mind is intentional." The present study aims to show that this doctrine acquires an even deeper meaning and significance when it is viewed within the context of Brentano's broader conception of man himself as an intentional being. Brentano was very well aware that in many respects man is "reactive" — the product of hereditary and environmental influences. At the same time, he insisted that, as a "psychically active subject," man is "pro-active," self-actualizing, self-enhancing, and self-transcending. The student of psychology will easily see reflected in these descriptive terms the orientation of many leading authors throughout the history of psychology as a science, and especially the orientation of the "third force" movement in American psychology.

Another goal of the present study is to show that many other views of Brentano bearing upon more specific theoretical, methodological, and applied issues in psychology have gained increasing acceptance in the history of this science since the

1880's and again parallel closely the overall stand of (he "third force" movement. Although the evidence that will be provided in support of these claims is selective rather than comprehensive, it should be sufficient to bring out both the essential elements and the historical significance of Brentano's standpoint in psychology.

In terms of general organization, the present study comprises three closely interrelated sections. The first section offers a portrait, as against a mere composite picture, of Brentano's life, personality, and works, and as such paves the way, in the second section, for a synopsis of his orientation on psychological issues. There logically follows, in the third section, a general appraisal of Brentano's significance in the history of psychology.

An annotated bibliography of Brentano's writings and of works bearing upon his thought is included in this study both as a supplement to the text proper and as an independent contribution." (pp. XI-XII)

39. Raspa, Venanzio. 2020. "Brentano on Aristotle's Categories." In *Franz Brentano's Philosophy after Hundred Years: From History of Philosophy to Reism*, edited by Fisette, Denis, Frechette, Guillaume and Janoušek, Hynek, 185-203. Cham (Switzerland): Springer.

Abstract: "Brentano's dissertation *Von der mannigfachen Bedeutung des Seienden nach Aristoteles (On the Several Senses of Being in Aristotle)* (1862) is examined in the light of the nineteenth-century debate on the Aristotelian categories. After providing an exposition of the conceptions of the main representatives of this debate, Adolf Trendelenburg and Hermann Bonitz, this paper assesses Brentano's point of view on the meaning and origin of the Aristotelian categories. It shows (i) that Brentano assumes non-Aristotelian elements in his reading of the Aristotelian categories, (ii) that this depends on the fact that he shares Bonitz's thesis, and (iii) that his reading is incomplete in the light of certain Aristotelian statements about non-being."

40. Rauch, Leo. 1968. "Brentano's Psychology and the Problem of Existential Import." *Philosophical Studies (Dublin)* no. 17:121-131.

Abstract: "Frasn Brentano has often been considered guilty of the 'psychologism' which Edmund Husserl, his pupil, attacked. The charge is justified in only a limited sense: Brentano is dealing not with intentional acts but rather with intentional objects. His concern is directed, among other things, to certain logical and ontological problems such as those raised by a Meinong, even if Brentano makes use of psychological insight in order to shed light on them."

41. Richardson, Robert. 1983. "Brentano on intentional inexistence and the distinction between mental and physical phenomena." *Archiv für Geschichte der Philosophie* no. 65:250-282.

"Aquila, Chisholm, McAlister, and Szrednicki have made marked strides in furthering our understanding of Brentano. There is no doubt that any interpretation must incorporate their insights. Relying on the work already done in elaborating and defending their respective interpretations of the doctrine of intentional inexistence, or intentionality, we are now in a position to reach a definitive resolution of their differences.

After first providing a fuller statement of the two available alternatives we will proceed to provide a critique of each in turn, isolating their weaknesses as well as their strengths. This will enable us to reach a synthesis capable of explaining intentional inexistence and its place in Brentano's psychology; moreover, we can do it in a way which combines the attractions of both the orthodox and reformed interpretations while shedding the inadequacies of each." (p. 251)

42. Röck, Tina. 2017. "Brentano's Methodology as a Path through the Divide: On Combining Phenomenological Descriptions and Logical Analysis." *Axiomathes* no. 27:475-489.

Abstract: "In this paper, I will describe how Brentano was able to integrate descriptive philosophy and logical analysis fruitfully by pointing out Brentano's concept of philosophy as a rigorous science. First I will clarify how Brentano attempted to

turn philosophy into a rigorous descriptive science by applying scientific methods to philosophical questions. After spelling out the implications of such a descriptive understanding of philosophy, I will contrast this descriptive view of philosophy with a semantic-analytic understanding of philosophy as proposed by Frege. After having thus set the stage I will argue that (1) the current separation of philosophy into the seemingly antithetical strands of (continental) phenomenology and analytic philosophy may be seen as a consequence of how the term 'rigorous science' in 'philosophy as a rigorous science' is interpreted: Does a rigorous science grasp its object with as much exactitude as possible? Or is a science rigorous when its theories are expressed unambiguously, and their implications are drawn with precision? In the course of this investigation I will also point out (2) how Brentano's integrative use of descriptive philosophy (a precursor to phenomenology) and analysis can provide a suitable starting point for an equally successful integration of these methods in contemporary philosophy."

43. Rojczczack, Artur. 2005. *From the Act of Judging to the Sentence: The Problem of Truth Bearers from Bolzano to Tarski*. Dordrecht: Springer.

Edited by Jan Wolenski.

Chapter 3. Descriptive psychology: the theory of judgement as the theory of cognition and knowledge: 1. Franz Brentano (I): The Act of Judging as the Truth Bearer 33-41;

Chapter 4. Judgment, psychology, and language: 1. Franz Brentano (II): Linguistic Analysis 57-65;

Chapter 6. Reism: 1. Franz Brentano (III): The Judger as the Truth Bearer 103-106;

Chapter 7. The objectivity of truth: 2. Franz Brentano (IV): Identity and Evidence 116-121.

"Artur left behind an English translation of his PhD dissertation. This work is the culmination of Artur's thinking on topics already dealt with, both historically and systematically, in his earlier writings, and it reflects his philosophical interests

in Austrian philosophy from Bolzano to the present day and in particular in the Polish wing of the Austrian tradition established by Kazimierz Twardowski. The present book is the first monograph in the literature of philosophy entirely devoted to the problem of truth-bearers. It focuses primarily on ontological, rather than on semantic and logical, problems, and perhaps its main virtue lies in its careful and detailed investigation of the issue of whether a physicalist conception of truth-bearers is possible." (From the *Preface: In memoriam of Artur Rojczack*, by Barry Smith and Ja Wolesnki, p. XV)

44. Rojczack, Artur, and Smith, Barry. 2003. "Theories of Judgment." In *The Cambridge History of Philosophy 1870-1945*, edited by Baldwin, Thomas, 157-173. Cambridge: Cambridge University Press.

"It was Franz Brentano who was responsible for the first major break with the combination theory of judgement through the doctrine of intentionality set forth in his *Psychologie vom empirischen Standpunkt* (Brentano 1874/1924 [1973: 77–100, esp. 88–9]). Knowledge, for Brentano, is a matter of special types of judgement. The psychological description and classification of judgements in all their modes of occurrence is thus in his eyes a necessary precursor to the theory of knowledge as a branch of philosophy. First, however, it is necessary to find a firm foundation for the science of psychology itself, and this requires a coherent demarcation of the proper object of psychological research. For this we need some unique property which would distinguish mental from other types of phenomena. Hence Brentano's much-mooted principle of the intentionality of the mental, which states that each and every mental process is of or about something.

Brentano distinguishes three basic types of mental or intentional phenomena: presenting, judging, and phenomena of love and hate. Each of these three types of mental phenomenon is determined by its own characteristic intentional relation or intentional directedness. A presentation is any act in which the subject is conscious of some content or object without taking up any position with regard to it. Such an act may be either intuitive or conceptual. That is, we can have

an object before our mind either in sensory experience (and in variant forms thereof in imagination), or through concepts – for example when we think of

the concepts of colour or pain in general. Presentations may be either (relatively) simple or (relatively) complex, a distinction inspired by the British empiricists' doctrine of simple and complex ideas. A simple presentation is for example that of a red sensum; a complex presentation that of an array of differently coloured squares (Brentano 1874/1924 [1973: 79f., 88f.])." (pp. 159-160)

In *Philosophy and Logic in Search of the Polish Tradition: Essays in Honour of Jan Wolenski on the Occasion of his 60th Birthday*, edited by Hintikka, Jaako, Czarnecki, Tadeusz, Kijania-Placek, Katarzyna, Placek, Tomasz and Rojszczak, Artur, 229-268. Dordrecht: Kluwer.

"The aim of this paper is to show that the account of objective truth taken for granted by logicians at least since the publication in 1933 of Tarski's 'The Concept of Truth in Formalized Languages' arose out of a tradition of philosophical thinking initiated by Bolzano and Brentano. The paper shows more specifically that certain investigations of states of affairs and other objectual correlates of judging acts, investigations carried out by Austrian and Polish philosophers around the turn of the century, formed part of the background of views that led to standard current accounts of the objectivity of truth! It thus lends support to speculations on the role of Brentano and his heirs in contemporary logical philosophy advanced by Jan Woleński in his masterpiece on the *Logic and Philosophy in the Lvov-Warsaw School* of 1989."

"4. Conclusion

The differences between Husserl and Brentano on imagination may briefly be summarized as follows. While Brentano is willing to characterize the contents of perceptual presentations as more intense than those of phantasy presentations, Husserl has misgivings about this characterization. Even if the various distinctions which he makes in his theory of presentations are kept in mind, the ascription of more intense contents (sensations) to perceptual presentations inadequately differentiates such presentations from imagining. For however intense the contents of a presentation may be, this presentation cannot be an instance of perceiving, on Husserl's view, unless a unique form of apprehension is present. Nor does it appear to him that the concept of intensity applies to all contents without difficulty. Moreover, Brentano's claim that phantasy presentations are improper ones which merely approximate proper presentations is subject to further doubt from Husserl. As long as "proper presentations" is a term that refers to intuitive presentations, he regards both phantasy presentations and perceptual presentations as proper. Finally, while Brentano characterizes the presentation of temporally extended objects such as melodies and motions in terms of phantasy presentation and attributes a further impropriety (i.e. modification) to presentation of this kind, Husserl rejects such a characterization and adheres to the view that temporally extended objects can actually be perceived and that the "primary memory" involved in such perception in no way involves modification." "3. Brentano

The notion of judgment is already present early in Brentano's *Psychology from an Empirical Standpoint* [1874]. In his attempt to identify a criterion for distinguishing between physical phenomena (such as tones and colors) and psychical ones, the first suggestion he considers is that the latter are "presentations as well as those phenomena for which presentations are the foundations".(1) "As we use the word 'present'", he elaborates, "being presented' is the same appearing".(2) While physical phenomena certainly appear and are thus presented, they are certainly neither acts of presentations nor phenomena which have such acts as their foundation.

Judgments and certain other phenomena, however, are identified as phenomena founded on presentations. "Nothing can be judged, nor can anything be desired, hoped, or feared unless it is presented".(3) The thesis that a judgment is based on a presentation remains a principle throughout Brentano theory of judgment." "In the present chapter the relationship between Brentano and Husserl will be discussed as follows. Brentano's philosophical orientation will be explicated only insofar as this was familiar to Husserl.

This is not to say that only Brentano's views during the period from 1884 to 1886 will be taken into account here. Husserl was indeed an enthusiastic collector of notes from Brentano's lectures. Moreover, Husserl took special interest in his mentor's "psychognostic investigations," as Brentano indicates in a letter to Husserl (circa May 1891).⁽⁴⁾ Developments that occur in Brentano's thought in the later 1890s and especially his reism of the last couple of decades of his life, however, fall outside Husserl's sphere of familiarity." Revised version with the title "Brentano and Meinong" in R. D. Rollinger, *Austrian Phenomenology: Brentano, Husserl, Meinong, and Others on Mind and Object*, Frankfurt: Ontos Verlag 2008, pp. 157-187

Summary: "Meinong, like other noteworthy philosophers from central Europe, began his career in philosophy under the guidance of Franz Brentano. Though Meinong's philosophical investigations from early on were very Brentanian in character, he came to develop views that diverged from certain doctrines of his mentor. In epistemology Meinong introduced the notion of immediate evidence of surmise in his views on memory and perception, whereas Brentano found this notion unacceptable. In descriptive psychology Meinong regarded feelings and desires as two distinct classes and introduced an additional class of mental phenomena called "assumptions". Thus he opposed Brentano's classification of mental phenomena into presentations, judgments, and acts of love and hate. In ontology Meinong allowed for non-real objects. In value theory he even introduced the notion of special irrealia corresponding to feelings and desires. Brentano, however, came to reject irrealia altogether. Such differences are discussed here, but attention is also given to the underlying and enduring philosophical affinity between Meinong and Brentano, namely their commitment to the ideal of scientific philosophy as attainable through descriptive psychology (what might be

called "descriptive phenomenology"), which is concerned with intentionally directed consciousness as its subject matter and does not in any way differ methodologically from natural science."

"1. Introduction

It is widely known that Kasimir Twardowski was a student of Franz Brentano. In view of the fact that Brentano generally had great impact through his lectures, especially during his Vienna period (1874-1895),(2) and consequently became one of the towering figures of Austrian philosophy,(3) it is a matter of no small interest to determine how he influenced Twardowski. There are, however, difficulties in examining the relationship of Twardowski to his teacher, as there are in the case of the relationships between Brentano and his students generally. The main obstacle to this endeavor lies in the fact that Brentano published very little during his lifetime. Moreover, what has been published posthumously is far from adequate in terms of both the quantity of texts and the quality of editing. For this reason it is highly desirable to discuss Brentano in relation to his students by drawing upon his hitherto unpublished manuscripts. This is the strategy that I will pursue in the following analysis of Brentano and Twardowski on the topic of presentations (*Vorstellungen*)." (p.1, some notes omitted)

"Scholarly and philosophical literature on Brentano is of course hampered by a restriction to published and often poorly edited materials. Here I shall attempt to provide the means for circumventing the danger just mentioned and thus for gaining an appreciation for the *Psychology* as it was originally planned in its entirety. This appreciation may, to be sure, be primarily philological in nature at this stage of Brentano scholarship. It can, however, be the basis for further explorations which may in the future be more properly philosophical. Before we philosophize with Brentano, we must trouble ourselves with what he actually wrote, especially what he wrote in unpublished manuscripts." (p. 263, a note omitted)

(...)

"Conclusion

Brentano's *Psychology* was thus meant to be a work which was to meet both of Aristotle's requirements for an inquiry into the soul. It was to be both exact and concerned with important and remarkable objects. The published part exhibits great exactness in the treatment of seemingly rather small issues, such as the unconscious consciousness, the classification of psychical phenomena, and the unity of consciousness. From this basis, however, Brentano had plans to proceed – in a strictly scientific fashion – to a treatment of a most important and remarkable issue, namely immortality. Along the way, the applications of psychology to the practical branches of philosophy, at least logic and ethics, were to receive attention. At the same time concepts from metaphysics were to come into play as well. His abandonment of this ambitious project was by no means motivated by a loss of his earlier convictions or a growing indifference to the issues (large or small) as conceived of in his original plan, but rather by a deeply felt need to revise his views concerning both the method as well as the subject matter of psychology.

If we understand “psychology from an empirical standpoint” as an ongoing project rather than merely the title of a work consisting of the published volume and even including the projected second one (in outline or in draft), this title may be taken as applicable to almost all of Brentano’s philosophical efforts from start to finish. While his conception of psychology underwent revision, he retained the conviction that psychology was the core of philosophy and therefore destined to prove the most interesting and most important truths. From a practical point of view, it is to give us the means for treating the good, the true, and the beautiful as the highest human goals. From a theoretical point of view, it encompasses within its range of topics: freedom, immortality, and even the existence of God. The truths about such matters were in essence to remain constant in spite of all revisions and reformulations. They are indeed the motivation that lies behind Brentano’s statement that psychology is the science of the future.(116) Until the unpublished materials pertaining to this statement are examined, Brentano’s significance in the history of psychology and philosophy cannot be properly assessed." (p.303-304)

53. ———. 2020. *Concept and Judgment in Brentano's Logic Lectures: Analysis and Materials*. Amsterdam: Rodopi.

"The first part of the present volume is an analysis of Franz Brentano’s lectures on logic, primarily on the basis of the notes contained under the signature EL 80 (among his manuscripts as these are preserved in the Houghton Library at Harvard University). Brentano repeatedly used and revised these notes, at first in Würzburg (as early as 1870) and then in Vienna (probably as late as 1877 or later), though they were superceded by another, very different set of notes on logic (EL 72), some of which he used for the winter semester 1878/79, but with considerable revisions and additions for 1884/85 and for an (unannounced) continuation into the summer semester 1885. While EL 80 provides us with an alternative term-logic of his own making, the latter notes are much more remote from what we ordinarily call “logic” in either traditional or contemporary terminology. The former include such staples of logic as a

treatment of both deductive and inductive inference. (Brentano's views on induction and the closely related theory of probability are topics that would better receive treatment in a separate study and are accordingly not subjected to analysis in the present volume.)

The second part of the present volume includes a German edition and English translation of notes that Franz Hillebrand took from Brentano's lectures on logic in 1884/85, though not from the summer semester 1885. I shall give further details regarding Hillebrand's notes below. Belonging also to the second part of the present volume is an English translation of Hillebrand's *Die neuen Theorien der kategorischen Schlüsse*, in which he elaborates on Brentano's syllogistic logic in connection with the theory of judgment, as he also defends this logic against contemporaneous rivals regarding the same issues.

This short work by Hillebrand involves elaborations on some points that are not made focal in the first part of the present volume and vice-versa." (Preface, p. VII)

54. ———. 2021. "Brentano and von Ehrenfels on Emotion, Desire, and Absolute Value: An Extreme Contrast in Austrian Phenomenology." In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 312-327. Leiden: Brill Rodopi.

"Conclusion.

Thus we find in Austrian phenomenology a most outstanding contrast in ethics: Brentano's view that desire and emotion belong to a single class, love and hate, which includes acts of consciousness which can be characterized as correct (or incorrect), and von Ehrenfels' view that only emotions belong to the class designated by "love" and "hate", which arise through dispositional desires, and that neither acts of this kind nor the desires that naturally go with them absolutely guarantee values. This is of course not the only important contrast among the Austrian phenomenologists with respect to value theory and ethics, for Alexius Meinong, Edmund Husserl,

and Anton Marty also have something to say on this matter. However, all of these three ultimately shared in Brentano's cognitivist position, whereas von Ehrenfels (at least in his great ethical work of the nineteenth century) does not. Moreover, they complicate the picture by objectifying value, whereas Brentano and von Ehrenfels stay on the psychological plane in their ethical inquiries. The extreme contrast that results from them is well worth noting, for extreme contrasts are often quite helpful as a starting point for investigations. Hopefully the one I have elaborated on here will provide a renewed starting point for further research on this extremely important topic." (pp. 325-326)

55. Runggaldier, Edmund. 1989. "On the Scholastic or Aristotelian roots of 'Intentionality' in Brentano." *Topoi* no. 8:97-103.

Abstract: "The early Brentano identifies intentionality with "intentional inexistence", i.e., with a kind of indwelling of the intentional object in the mind. The latter concept cannot be grasped apart from its scholastic background and the Aristotelian—Thomistic doctrine of the multiple use of 'being' (to on legetai pollachos). The fact that Brentano abandoned the theory of the intentional inexistence in the course of time does not contradict the thesis that it is intentional inexistence and not the modern conception of reference or directedness to something other which comprises the essence of intentionality for the early Brentano."

56. Russo, Antonio. 2014. "Franz Brentano and Cornelio Fabro: A Forgotten Chapter of the Brentanian Reception." *Axiomathes* no. 24:157-165.

Abstract: "In celebration of the centenary of the Italian philosopher Cornelio Fabro's birth (1911–1995), this paper investigates the essential theoretical traits that undergird the framework of Fabro's 1941 texts, by comparing them with Franz Brentano's (1838–1817) project of renewing Thomism through a new understanding of Aristotle. The secondary literature concerning the comparison of both these authors is almost nonexistent. Our goal is to clarify some of the central issues regarding the relation between Fabro and Brentano through

direct textual analysis of unpublished letters exchanged between Fabro and Agostino Gemelli about Brentano and his pupil Carl Stumpf."

57. Rutte, Heiner. 1986. "On the Problem of Inner Perception." *Topoi* no. 6:19-23.

"The assumption that there are processes of 'inner perception' is something which comes quite naturally to the epistemologist: consciousness not only consists in intentional acts referring to or directed upon an object, it is not only consciousness of certain contents or objects, but it also consists in a consciousness of these acts themselves -- there is no consciousness which could be ignorant of its acts."

(...)

"In his 'Psychologic vom empirischen Standpunkt', Brentano provides us with a thorough discussion of the problem of this regress, coming to the unequivocal conclusion: there are no specific acts (= activities) of inner perception; rather, inner perception resembles a permanent accompanying phenomenon (Brentano here invokes Aristotle: "Das Wissen und die Empfindung und die Meinung und das Nachdenken scheinen immer auf etwas anderes zu gehen, auf sich selbst aber nebenbei"). (2) Inner perception is a secondary consciousness of something; hence, a primary consciousness of something always has to be presupposed. When somebody hears a sound, this sound will be a primary object for him, and he himself, as somebody hearing the sound, will be a secondary object for himself; that is, he perceives himself as hearing a sound. This does not mean for Brentano that we are dealing with two acts; rather, we are confronted with one act having two "things" for its object: the sound (as the primary object) and the act of hearing itself (as the secondary object).

These two aspects of the act cannot be separated, not even in thought: there can be no secondary consciousness without primary consciousness.(3)" (p. 19)

Annotated bibliography on Franz Brentano: Studies in English, Seventh Part: San - Srz

Bibliography

1. Sánchez-Migallón, Sergio, and Martí-Sánchez, Miguel. 2019/20. "The Originality of Franz Brentano's Description of 'Correct Love' and its Aristotelian Nexus." *Brentano Studien* no. 16:117-136.

Abstract: "One of Brentano's most original and influential theses is his description of the knowledge of the good in the immediate experience of correct love, encompassing voluntary acts as well as feelings. In that union of will and feelings in a more fundamental class of psychological experiences, Brentano sees a coincidence with Aristotle's doctrine of *órexis*. Yet, on Brentano's account, while Aristotle accurately perceived correct love or desire, he did not correctly set out the knowledge of the good on this basis. The paper discusses this discrepancy and shows that the concurrence is more than merely assumed. Indeed, it is demonstrated that for both thinkers, moral knowledge is deeply rooted in the virtuous or good person."

2. Sanford, David. 1997. "Chisholm on Brentano's thesis." In *The Philosophy of Roderick M. Chisholm*, edited by Hahn, Lewis. Chicago: Open-Court.

"My purpose in this paper is neither to defend nor to refute Brentano's thesis. Nor shall I address the importance and implications of Brentano's thesis, except to comment that its incompatibility with physicalism depends on what you mean by "physicalism." Brentano's thesis does not imply dualism.(3) It

does seem to imply that intentional psychology is conceptually autonomous from pure physics. In this paper I attempt the following: to distinguish proposals about intentionality that are often confused, both by those who support and those who oppose Chisholm's project; to generalize the notion of logical independence; and, based on this notion of independence, to revise some of Chisholm's criteria of intentionality." (p. 202)

(3) See Chisholm 1955-56, where he denies that the linguistic thesis about intentionality indicates "that there is a ghost in the machine" (p. 50).

"Anyone who wants to understand what I have been up to in trying to formulate criteria of intentionality, should read Sanford's paper." R. M. Chsiholm, "Reply to David H. Sanford", p. 215.

3. Sauer, Werner. 2013. "Being as the True: From Aristotle to Brentano." In *Themes from Brentano*, edited by Fisette, Denis and Fréchette, Guillaume, 193-226. Amsterdam: Rodopi.

"Attentive readers of Brentano's interpretation of Aristotle's being as the true, *on hōs alēthes*, in his dissertation of 1862, *Von der mannigfachen Bedeutung des Seienden nach Aristoteles*, will not fail to notice therein rather peculiar, if not perplexing features. The central aim of this paper is to show that to understand what Brentano's account of being as the true

is actually concerned with in its overall intention, it must be read in light of Thomas Aquinas' views on the topic. This paper consists of six sections. In section 1, the stage is set.

Section 2 presents in brief outline an exposition of Aristotle's own account of being as the true in *Metaphysics* Δ .7. In section 3, we consider Alexander of Aphrodisias' commentary on the Δ .7 passage regarding being as the true insofar as it provides Brentano with an important premise for his own interpretation of that passage. Section 4 turns to Aquinas, and focuses in particular on his reading of the Δ .7 passage in his commentary on the *Metaphysics*. Then in section 5, Brentano himself comes into the picture, and it will be shown that what in his interpretation of Aristotle's being as the true strikes the reader as rather peculiar is due to his attempt to defend Aquinas' account in the context of contemporary Aristotle scholarship. Finally, section 6 attempts to show that the conception of being as the true in Brentano's dissertation already prefigures, so to speak, the doctrine of judgments which he then presents in the *Psychologie vom empirischen Standpunkt* of 1874." (p. 193, a note omitted)

4. Schaar, Maria van der. 1999. "Evidence and the Law of Excluded Middle: Brentano on Truth." In *The Logica Yearbook 1998*, 110-120. Prague: Filosofia.

"Introduction

The central question of my paper is whether there is a coherent logical theory in which truth is construed in epistemic terms and in which also some version of the law of excluded middle is defended. Brentano in his later writings has such a theory.(2) My first question is whether his theory is consistent. I also make a comparison between Brentano's view and that of an intuitionist at the present day, namely Per Martin-Löf. Such a comparison might provide some insight into what is essential to a theory that understands truth in epistemic terms." (p. 110)

(2) It is inevitable to elaborate strongly on what is published of Brentano's later ideas. On the one hand, because these ideas were in progress, and not formulated in any definitive and authorized publication. On the other hand, what is published of

Brentano's later writings is very unreliable. Therefore I have checked the passages which are central for my paper by comparing them with the typoscripts of Brentano's manuscripts at the Husserl Archives at Leuven. I wish to thank the Archives for this possibility. In these passages I found no important deviations from the typoscripts.

5. ———. 2003. "Brentano on Logic, Truth and Evidence." *Brentano Studien* no. 10:119-150.

Abstract: "Does the criticism raised against the use of judgemental evidence in logic and epistemology still stand, or is the notion crucial in our understanding of truth? First, Brentano's account of truth and evidence is expounded. Then, the different kinds of criticism that may be raised against Brentano's account of truth and evidence are presented. Finally, it is argued that, although there is a serious problem with this account of truth and evidence, a modification of the theory can be of importance for philosophy today. In Brentano's account of truth and evidence, a first-person perspective plays a crucial role, and it is precisely this aspect we need in epistemology and in logic today."

6. ———. 2016. Brentano, Twardowski and Stout: From Psychology to Ontology.

Available at <https://academic.oup.com/edited-volume/42642/chapter/358145298>

Abstract: "This article was commissioned as a supplement to the *Oxford Handbook of the History of Analytic Philosophy*, edited by Michael Beaney. It focuses on the psychological origins of analytic philosophy. Analytic psychology influenced the emergence of a new method in philosophy and the crucial changes to the notions of judgement and intentionality at the end of the nineteenth century. In particular, G. F. Stout's analytic psychology played an important role in the formation of Moore's and Russell's early analytic philosophy.

Through Stout, the account of judgement and intentionality given by Brentano and Twardowski also had a significant influence on the development of early analytic philosophy."

7. ———. 2018. "Brentano on Truth and Evidence. Understanding Truth from a First-Person Point of View." *Brentano Studien* no. 16:187-206.

Abstract: "Does the criticism raised against the use of judgemental evidence in logic and epistemology still stand, or is the notion crucial in our understanding of truth? First, Brentano's account of truth and evidence is expounded.

Then, the different kinds of criticism that may be raised against Brentano's account of truth and evidence are presented. Finally, it is argued that, although there is a serious problem with this account of truth and evidence, a modification of the theory can be of importance for philosophy today. In Brentano's account of truth and evidence, a first-person perspective plays a crucial role, and it is precisely this aspect we need in epistemology and in logic today."

8. ———. 2023. "Judgement and intentionality in early Brentano." *Grazer Philosophische Studien* no. 100:151-172.

Abstract: "There are two notions of intentionality: the first contains the thesis that our acts of thinking, judging and loving have a content; the second that our mental acts are about something external to the act. Brentano uses the term 'intentionality' only in relation to the first notion; for him, intentionality does not function as a bridge between the mind and the external world. Is it possible for a phenomenologist like Brentano to give an account of the second notion of intentionality? It is argued that this is possible, but not without introducing the notion of judgement. A comparison with Mill's distinction between connotation and denotation, and with Frege's distinction between sense and reference shows how original Brentano's theory is."

9. Schaefer, Richard. 2013. "The Madness of Franz Brentano: Religion, Secularisation and the History of Philosophy." *History of European Ideas* no. 39:541-560.

Summary. "In recent decades, scholars have shown a distinct new willingness to concede the important place of religion in the life and thought of the philosopher Franz Brentano.

However, these studies are still dominated by the presumption that Brentano's life and thought are best understood according to a model of secularisation as a progressive waning of religion. This essay asks whether such a presumption is the best way of understanding the complex interconnections between various elements of his philosophical and religious ideas. It posits that a better appreciation of his position entails a confrontation with Brentano's historical imagination, and especially the structuring role of his approach to the history of philosophy as one manifesting regular cycles of decline and regeneration.

Brentano's theory of the four phases of philosophy, though not the final word on how he viewed history, was nevertheless an exercise in thinking about the ways history accommodates various forms of progress and repetition. It was therefore a salutary means for thinking about the evolution of religion in ways that challenge any simple understanding of secularisation."

10. ———. 2018. "Hopes and Dreams in *Fin-de-Siècle* Vienna: Brentano, History and the Jews." *Brentano Studien* no. 16:157-185.

Abstract: "This essay attempts a fresh interpretation of Franz Brentano's life and career in Vienna between 1874 and 1895. But rather than ask how Vienna was significant to the evolution of his philosophy or assess his influence in the Austrian capital and beyond, this essay explores some of the circumstances surrounding controversial *Meine letzten Wünsche für Österreich*, which recounts his battle with the Austrian government to have him reinstated as a full professor of philosophy. The failure to regain his professorship was more than a career setback that embittered Brentano. It was the occasion for him to publicly declare the backwardness of Catholic Austria. I will try to show how this condemnation was shaped by Brentano's specific experience as an apostate priest at the intersection of Catholic and Jewish segments of Viennese society, and nourished by his views on the course of history. In this way, this essay seeks to enrich our understanding of the interplay between Brentano's life and thought, and add another chapter to our understanding of the Viennese fin-de-siècle."

11. Schnieder, Benjamin. 2006. "Particularised attributes: an Austrian tale." In *The Austrian Contribution to Analytic Philosophy*, edited by Textor, M., 130-158. New York: Routledge.

"For philosophers interested in ontological issues, the writings of the important figures of Austrian philosophy in the nineteenth and early twentieth centuries contain many buried treasures to rediscover.

Bernard Bolzano, Franz Brentano, Alexius Meinong and Edmund Husserl, to give just four grand names of that period, were highly aware of the importance of a feasible ontology for many of the philosophical questions they addressed throughout their works.

In this chapter, I will discuss some ideas that these philosophers had with respect to the ontological category of *particularised attributes*; the discussion is intended to be a contribution both to the history of ontology, and to ontology itself. In the first part of the chapter I will review three arguments to the effect that we should allow particularised attributes into our ontology. In the second part, I will discuss certain problems for the idea that particularised attributes have a *unique bearer* and present two alternative solutions to them." (p. 130)

12. Schuhmann, Karl. 2004. "Brentano's impact on twentieth-century philosophy." In *The Cambridge Companion to Brentano*, edited by Jacquette, Dale, 277-297. Cambridge: Cambridge University Press.

"A detailed and complete picture of Brentano's courses can emerge only from the comprehensive shorthand notes taken by his students on the spot.

This too, however, is problematic. The most extensive notes were taken by Brentano's immediate pupils Anton Marty, Carl Stumpf, and Edmund Husserl, who donated their treasures to the Brentano Archives in Prague.⁽¹⁾ All these materials were, however, lost in 1939 when the Archives were hastily evacuated to England. As a result, it is very difficult – and I will not

attempt it here – to describe in detail the role Brentano's ideas played among his immediate followers and heirs. This is why people have spoken of a certain "invisibility" that Brentano has had in twentieth-century philosophy(2) Since his impact on this philosophy, for the reasons just mentioned, was often channeled through that of his direct disciples, it is worth looking at them first. Brentano's problems and questions went through many metamorphoses and to a large extent determined the agenda of twentieth century philosophy, but philosophers are often unaware of the fact that they do indeed originate with him." (pp. 277-278)

(1) Husserl in 1935 gave the Archives no less than 28 notebooks. Cf. Oskar Kraus, "Brentano-Gesellschaft in Prag," *Philosophia*, 2, 1937, pp. 402–5.

13. Seron, Denis. 2014. "Brentano's "Descriptive" Realism." *Bulletin d'Analyse Phénoménologique* no. 10:1-14.

Abstract" "Brentano's metaphysical position in *Psychology from an Empirical Standpoint* is usually assumed to be metaphysical realism. I propose an alternative interpretation, according to which Brentano was at that time, as well as later, a full-fledged phenomenalist. However, his phenomenism is markedly different from standard phenomenism in that it does not deny that the physicist's judgments are really about the objective world. The aim of the theory of intentionality, I argue, is to allow for extra-phenomenal aboutness within a phenomenalist framework."

14. ———. 2018. "Intentionality and Epistemological Relativity." *Brentano Studien* no. 16:207-228.

Abstract: "I will adopt two assumptions without further discussion. First, I take for granted that Brentano's epistemology, in 1874, was not only empiricist, but also phenomenalist. This view is controversial, but it has some support in the literature (Tolman 1987; Bell 1990: 8–9;

Pacherie 1993: 13; Simons 1995; Crane 2006; Seron 2014; Seron forthcoming). Secondly, I assume that Brentano's aim in the *Psychology* was to make phenomenalism less problematic by distinguishing two things which standard phenomenalism does not distinguish, namely reference and intentional aboutness. Now, there are good reasons to think that this distinction is the cornerstone of his theory of intentionality (Cayla 1993; Sauer 2006; Fréchette 2012: 330).

Therefore, it is plausible to say that Brentano's theory of intentionality has as its heart an epistemological concern.

In the first three sections, I examine Brentano's rejection of epistemological realism and its phenomenalist implications. In sections 4 to 6, I argue that Brentano's theory of intentionality is better seen as a more sophisticated variant of William Hamilton's "theory of the relativity of knowledge". My underlying hypothesis is that the notion of intentionality — the distinction between real and intentional existence, direct and oblique modes — functions primarily as a means for overcoming some of the inherent limitations of standard phenomenalism."

15. ———. 2020. "Franz Brentano's Critique of Free Will." In *The Routledge Handbook of Phenomenology of Agency*, edited by Keiling, Tobias and Erhard, Christopher, 7-14. New York: Routledge.

"Brentano intended to investigate free will in the fifth of the six planned books of the *Psychology from an Empirical Standpoint*, devoted to emotion and will (Brentano 1924: 1, engl. trans.: xxvii, 1925: 110, ftn., engl. trans.: 254) – a book which, unfortunately, he never wrote. Most of Brentano's reflections on this topic are found in Part 3 of his 1876–1894 Vienna lectures on practical philosophy that were posthumously published as *The Foundation and Construction of Ethics* by Franziska Mayer-Hillebrand. Other relevant sources include the second volume of the *Psychology* and the 1889 lecture *The Origin of Our Knowledge of Right and Wrong*." (p. 7)

(...)

"Concluding remarks

To conclude with, Brentano presents his determinism as fully compatible with both the law of causality and the view that we are morally perfectible and responsible for our actions. In fact,

his claim is even stronger, since he maintains that determinism is the only way to make sense of our moral perfectibility and responsibility. Brentano proposes an interesting variant of virtue ethics based on the idea of self-improvement. Opposing the view that moral life consists in resisting inclinations that would otherwise cause the agent to act badly, he asks us to conceive of the will as being necessarily determined by inclinations and having to strive actively to improve them through self-discipline." Abstract: "In this chapter, the author raises new objections to the self-representational reading of Brentano. This reading, he argues, is untenable simply because Brentano regards a representational perception as conceptually impossible. He then provides a new construal of Brentano's theory of intentionality, based on a phenomenological approach to intentionality and consciousness. In his view, the main purpose of

Brentano's theory of intentionality is to account for mental acts that are not (inner) perceptions, that is, for acts in which something appears without existing."

17. ———. 2021. "Psychology first!" In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 141-155. Leiden: Brill Rodopi.

"Franz Brentano's aim in his masterpiece, *Psychology from an Empirical Standpoint*, as is clearly indicated in the title, was to develop an epistemology of psychology (Seron, 2017a). It is the contention of this chapter, however, that this book is much more than this. In my view, it is not merely about psychology, but about scientific knowledge in general. In his *Psychology*, Brentano seeks to create not merely an epistemology of

psychology, but a general epistemology which assigns the first role to psychology.

Psychology is accorded a preeminent place in the epistemology of Brentano and his pupils—with some notable exceptions like the transcendental Husserl.

My purpose in this chapter is to show that Brentano's privileging of psychology over the natural sciences is a consequence of his empiricism. Brentano's version of empiricism involves a certain view of what experience is, and this view of experience entails that psychological knowledge enjoys some sort of priority." (p. 141)

18. ———. 2021. "Brentano and the ideality of time." *Revista de Filosofia Moderna e Contemporânea* no. 9:35-49.

Abstract: "How is it possible to have present memory experiences of things that, being past, are no longer presently experienced? A possible answer to this long-standing philosophical question is what I call the "ideality of time view," namely the view that temporal succession is unreal. In this paper I outline the basic idea behind Brentano's version of the ideality of time view. Additionally, I contrast it with Hume's version, suggesting that, despite significant differences, it can nonetheless be construed as broadly Humean."

19. ———. 2021. "Brentano and Mauthner on Grammatical Illusions." In *Philosophy of Language in the Brentano School. Reassessing the Brentanian Legacy*, edited by Dewalque, Arnaud, Gauvry, C. and Richard, Sebastian, 77-94. Cham, Switzerland): Palgrave.

"In the current literature Brentano's name is usually associated with British empiricism, the Aristotelian tradition, and the so-called 'Austrian semantic turn'. This paper seeks to suggest a

convergence with another tradition within Austrian philosophy —namely the critique of language developed, among others, by Mach, Mauthner, Karl Kraus, the German Vaihinger, and Wittgenstein. My starting hypothesis is that, despite significant differences, the late Brentano's approach to grammatical illusions has a great deal in common with Fritz Mauthner's critique of language." (p. 77)

20. ———. 2023. "Experiencing the a priori." *European Journal of Philosophy*:371-379.

Abstract: "Brentano clearly asserts, in his Vienna lectures of 1887–1888, that his descriptive psychology is an a priori or "exact" science. Since he rejects Kant's idea of a synthetic a priori, this means that the descriptive psychologist's laws are analytic. My aim in this paper is to clarify and discuss this view. I examine Brentano's epistemology in the *Psychology* from an Empirical Standpoint and then its later developments. I conclude with a difficulty inherent in Brentano's psychological approach to a priori knowledge."

21. Sheredos, Ben. 2016. "Brentano's Act Psychology was not Aristotelian (or at least, not empirical)." *Brentano Studien* no. 14:157-189.

Abstract: "Brentano's *Psychology* constantly refers to mental phenomena as "mental acts," yet there has been surprisingly little effort devoted to discerning the significance of the term "act" in this context. A widespread implicit view is (1) that it is merely a technical term, and does not literally invoke any connotations of action at all. But since many regard the *Psychology* as riddled with Aristotelian assumptions, some also suggest (2) that Brentano's talk of "mental acts" is a significant holdover from his Aristotelian pedigree. Here I argue, negatively, that both claims are deeply problematic. First, traditional readings of Brentano (by, e.g., Oskar Kraus) in terms of (1) are incapable of supporting some of Brentano's most central commitments regarding inner perception and the method of psychology. Second, Brentano's own conception of Aristotelianism is such that if (2) were true, (1) would be false. Finally, if (2) were true in any significant sense, then Brentano

would simply fail to do what he sets out to do in his empirical psychology. I thus call for renewed attention to Brentano's conception of "mental acts." ."

22. Siewert, Charles. 2023. "Why we need descriptive psychology." *European Journal of Philosophy*:341-357.

Abstract: "This article defends the thesis that in theorizing about the mind we need to accord first-person ("introspective" or "reflective") judgments about experience a "selective provisional trust." Such an approach can form part of a descriptive psychology. It is here so employed to evaluate some influential interpretations of research on attention to conclude that—despite what conventional wisdom suggests—an "introspection-positive" policy actually offers us a better critical perspective than its contrary. What supposedly teaches us the worthlessness of introspection actually shows us why we need to take it seriously."

23. Simons, Peter M. 1984. "A Brentanian basis for Lesniewskian logic." *Logique & Analyse* no. 27:297-308.

"Brentano can effectively handle, if not the singular terms of natural languages, then at least something *very like* them, the singular names of a logical language which boasts a form of singular copula and is closer to traditional and Brentanian logic than is Frege-Russell predicate logic, namely the language of Lesniewski's Ontology.(4) What we show is that it is possible to base Ontology jointly on two primitives employed by Brentano in his reduction: an expression for existence and nominal conjunction. This not only provides (yet) another basis for Ontology: it shows that Brentano's claims for the existential form are considerably stronger than orthodox predicate logic is able to admit. We then sketch how a system of Ontology with extensionality allows even existence to be defined using conjunction, making this the sole undefined notion." (p. 300)

(4) Cf. my "On Understanding Leśniewski", *History and Philosophy of Logic* 3 (1982), 165-191.

24. ———. 1986. "Brentano's Reform of Logic." *Topoi* no. 6:25-38.

Reprinted in: Peter Simons, *Philosophy and Logic in Central Europe from Bolzano to Tarski. Selected Essays*, Dordrecht: Kluwer, 1992, pp. 41-69.

"This forgotten reform of the logic of terms is based on Brentano's theory of judgement, according to which the basic form of judgement is an affirmation or denial of existence.

Brentano uses term-conjunction and -negation, and recognizes several logical relations among concepts (terms). While, like Boole, Brentano abolishes the requirement of existential import, the reform extends beyond this to the rules of inference, which allow syllogisms and other inferences to be elegantly derived. By treating propositions as fictions, following a suggestion of Brentano, and employing Brentano's rules with minor extensions, it is possible to develop a propositional logic within the term logic. The algebra of Brentano's logic, which interestingly mixes intensional and extensional components, is reconstructed.

While the algebra of extensions of concepts is of course Boolean, concepts themselves form a quasi-Boolean algebra.

1. Introductory.

In his Würzburg logic lectures of 1870/1 Brentano proposed a reform of logic which he believed was an essential improvement on the traditional view. His ideas were mentioned in the *Psychologie* of 1874, where they became known to a wider public. The basic idea of his theory of judgment was that the logical form of simple judgments is that of an assertion or denial of existence, rather than the subject-predicate form of the tradition.

His reform consists in part of drawing the consequences of this theory of judgment. Detailed presentation of the reform was confined to his lectures on logic, which were continued and modified throughout the period (1874-95) when he was teaching in Vienna, where they influenced a number of notable thinkers, notably Twardowski, who took Brentano's ideas to Poland and introduced them to the first generation of Polish analytic philosophers and logicians. The material of the lectures

themselves was not published until 1956 under the title *Die Lehre vom richtigen Urteil* (hereafter LrU), although more of Brentano's views were made accessible through the work of Hillebrand (1891)." (p. 41 of the reprint)

25. ———. 1986. "Tractatus Mereologico-Philosophicus? A Brentanian look at Wittgenstein, and a moral." *Grazer Philosophische Studien* no. 28:165-186.

Reprinted in P. M. Simons, *Philosophy and Logic in Central Europe from Bolzano to Tarski*, Dordrecht: Martinus Nijhoff 1992, pp. 339-359.

"The philosophies of late Brentano and early Wittgenstein can be brought closer in two ways. One way discovers a surprising amount of part-whole theory in the *Tractatus* if we see states of affairs (not wholly wilfully) as thing-like rather than fact-like. This throws up a modal analogue to Chisholm's *entia successiva* in the form of situations. The other way sees all propositions as truth-functions of existential propositions, supporting Brentano's view that existentials are primary, and incidentally yielding a reistic semantics for the *Tractatus*. I draw a quick moral, that we should beware of excessive simplicity in metaphysics, and apply it to Chisholm's views on part and whole." (p. 339 of the reprint)

26. ———. 1988. "Brentano's Theory of Categories: a Critical Reappraisal." *Brentano Studien* no. 1:47-61.

Abstract: "In his doctoral dissertation *Von der mannigfaltigen Bedeutung des Seienden nach Anstoteles*, Brentano tried to show that (against criticism of this) one could indeed give a principle defense of Aristotle's table of categories as a coherent system. In later texts, Brentano appears sharply critical of Aristotle, mainly in respect to Aristotle's mereology, or theory of part and whole, and to his theory of substance and accident.

It is argued that Brentano hadn't observed that Aristotle's belief that there are as many predicative senses of 'be' as there are categories of being is based not on his mereology but on his theory of definition. Overlooking this, Brentano was led to far reaching inadequate ontological consequences."

27. ———. 1989. "Tree Proofs for Syllogistic." *Studia Logica* no. 48:539-554.

Abstract: "This paper presents a tree method for testing the validity of inferences, including syllogisms, in a simple term logic. The method is given in the form of an algorithm and is shown to be sound and complete with respect to the obvious denotational semantics. The primitive logical constants of the system, which is indebted to the logical works of Jevons, Brentano and Lewis Carroll, are term negation, polyadic term conjunction, and functors affirming and denying existence, and use is also made of a metalinguistic concept of formal synonymy. It is indicated briefly how the method may be extended to other systems."

28. ———. 1996. "Logic in the Brentano School." In *The School of Franz Brentano*, edited by Albertazzi, Liliana, Libardi, Massimo and Poli, Roberto, 305-321. Kluwer Academic Publishers.

"The term 'the Brentano School' will here be understood to comprise Brentano and his immediate students, that is, those who studied with him either in Würzburg or in Vienna. In practice, those whose contributions to logic I shall consider in any depth number precisely three: Brentano himself, Meinong, and Husserl. I shall not consider students of students of Brentano, for although some of these, in particular Ernst Mally and Jan Łukasiewicz, contributed to logic, they cannot be reckoned among the Brentano School: Mally belongs to Meinong and Graz, Łukasiewicz to Twardowski and Lvov (later to Warsaw).

However, I shall briefly survey the influence of the Brentano School at the end.

I shall consider contributions to deductive logic, the methodology of logic, and the philosophy of logic. I shall not consider inductive logic, the logical structure of scientific theories or the theory of probability, except where they are germane to deductive logic (in the work of Meinong).

The format of the paper is that in each of the three major sections (Brentano, Husserl, Meinong) I first survey the primary literature sources and mention one or two useful works of secondary literature, before proceeding to a summary of the relevant aspects of the work in question. I prefer this to an elaborate system of page references which is out of place in an introductory survey article.(1)" (p. 305)

(1) There is no general monograph on the logic of the Brentano School. More of the individual papers I have written on various aspects of this topic are collected in my 1992.

29. ———. 1999. "Bolzano, Brentano and Meinong: Three Austrian Realists." In *German Philosophy Since Kant*, edited by O'Hear, Anthony. Cambridge: Cambridge University Press.

"Although Brentano generally regarded himself as at heart a metaphysician, his work then and subsequently has always been dominated by the *Psychology*. He is rightly celebrated as the person who reintroduced the Aristotelian-Scholastic notion of *intentio* back into the study of the mind. Brentano's inspiration was Aristotle's theory of perception in *De anima*, though his terminology of intentional inexistence was medieval. For the history of the work and its position in his output may I refer to my Introduction to the reprinted English translation. Alongside Aristotle the work shows influences of Descartes, Comte and the British empiricists. The theory of intentionality presented in the *Psychology* is much less modern and less plausible than almost all recent commentary would have it, and was in any case not where Brentano's main interest lay. Intentionality simply served to demarcate mental phenomena

from physical, in Book One, but the main aim was a classification of the mental, outlined in Book Two. Books Three to Five were to have dealt in detail with the three main classes of presentations, judgements and feelings, with the final book considering the metaphysics: mind-body and the immortality of the soul. Brentano's shifting views, recently documented in English with Benito Muller's translation of *Descriptive Psychology*, a work from the transitional 1890s, made the original plan obsolete. The role of an *a priori*, philosophical or descriptive psychology, methodologically prior to empirical-experimental genetic psychology, foreshadowed and influenced Husserl's notion of phenomenology, and Brentano's Comtean methodological *epoche* of desisting from controversial metaphysical statements in favour of an examination of the phenomena likewise presaged Husserl's more ponderous phenomenological reductions.

Brentano's other work covers most areas of philosophy, notably ethics, where he upheld a form of *a priori* intuitionism much admired by G. E. Moore, the philosophy of religion, metaphysics, philosophy of language, deductive and inductive logic, and the history of philosophy. I shall mention just two areas. In his logic lectures from 1866 onwards (a compilation published 1956) Brentano rejected the subject-predicate analysis of simple judgements and proposed instead (for which he apparently secured written assent from Mill) that all judgements are logical compounds of positive and negative existential judgements. For example the universal judgement *All men are mortal* becomes the negative existential *There are no immortal men*. On this basis Brentano radically simplified the inference rules of deductive logic. While unlike de Morgan, Frege and others he does not go beyond logic's traditional scope by recognising relations, within its bounds his reformed-term logic is simple, elegant and easily teachable. Some of his ideas in logic influenced the young Husserl. Unfortunately Brentano took against mathematical logic, which he wrongly associated exclusively with Hamilton's confused doctrine of the quantification of the predicate. His inductive logic, which takes

up by far the greater part of his logic lectures, remains unresearched to this day." (pp. 118-119)

30. ———. 2000. "The Four Phases of Philosophy: Brentano's Theory and Austria's History." *The Monist* no. 83:68-88.

Abstract: "From the beginning of the nineteenth century to the present day, philosophy in Austria has progressed through four phases. The particularities of the first three of these phases have prompted a number of commentators rightly to distinguish a characteristic Austrian, as distinct from German, way of doing philosophy. The main figure of the second phase was Franz Brentano, and his distinctive theory of the four-phase cycle of philosophical development is outlined, and critically compared to other views of the development of philosophy. In Austria itself the caesuras between the phases were marked as much by political as by philosophical events, and the paper shows how philosophy in Austria has been notable in all its phases for the high level and overwhelmingly negative effect of political interference in intellectual life, a doleful saga which continues to this day."

31. ———. 2004. "Judging correctly: Brentano and the reform of elementary logic." In *The Cambridge Companion to Brentano*, edited by Jacqueline Dale, 45-65. Cambridge: Cambridge University Press.

"In this chapter I outline the simple but effective reforms Brentano proposed for elementary deductive logic, basically syllogistic plus; I then discuss briefly how they can be made the basis of a sensible and pedagogically accessible approach to term logic even today, and finally mention their subtle but important influence on logic in the twentieth century." (p. 46)

(...)

"Brentano himself never published his reforms of logic, which is the main reason why historiographers of the subject have passed them by. The reducibility of judgments to the existential form is argued for in chapter VII of the *Psychology* (PES-E, pp. 201-34) and there are some remarks in the appendix prepared for the 1911 second edition of parts of that book, published as

On the Classification of Mental Phenomena. These remarks appear in the English PES-E, pp. 291–301, and Brentano's negative comments on mathematical logic at pp. 301–6." (p. 47)

32. ———. 2015. "How to Do Things with Things: Brentano's Reism and its Limits." In *Objects and Pseudo-Objects: Ontological Deserts and Jungles From Brentano to Carnap*, edited by Seron, Denis, Richard, Sebastien and Leclercq, Bruno, 3-16. Berlin: de Gruyter.

"From about 1904 until the end of his life in 1917, Franz Brentano held an ontological view which has come to be called reism. This is the view that the only things that exist are concrete things (*res*). The list of objects that this view denies existing is long indeed, and includes: properties and relations, whether considered as individual accidents or as universals; events and processes; facts and states of affairs; numbers, sets and all other mathematical objects; space and time as entities in their own right; intentional contents and objects; propositions, and other abstract senses or meanings. The objects that Brentano does accept as *entia realia* or things include as individuals mental souls, physical bodies and their parts and lower-dimensional boundaries, and collections of individuals. Brentano conceives it as possible that the primary physical things be of more than three dimensions: he calls such things *topoids*." (p. 3)

33. Simons, Peter M., and Wolenski, Jan. 1989. "*De Veritate*: Austro-Polish contributions to the theory of truth from Brentano to Tarski." In *The Vienna Circle and the Lvov-Warsaw School*, edited by Szaniawski, Klemens, 391-442. Dordrecht: Kluwer.

Abstract: "Tarski's essay on truth is the single most important work from the Lw6w-Warsaw school. But it did not come from nothing: its philosophical pedigree goes back to earlier philosophy in Vienna. This paper traces in detail the influences from Brentano, through his pupils and their pupils to Tarski, noting the fluctuating nature of Austro-Polish obsession with truth. An examination of the characteristics inherited from this

tradition by Tarski's theory enables us to correct several misconceptions about his work."

34. Smith, Barry. 1987. "The Substance of Brentano's Ontology." *Topoi* no. 6:39-49.

"The literature on Brentano of recent times has manifested an unmistakably deflationary tendency, often presenting Brentano as little more than a forerunner of analytic philosophy, and rarely taking account of more than those few passages in which Brentano talks about something called 'intentionality'. (1) The present paper is an attempt to redress this balance. It seeks to demonstrate that Brentano is to be classified not with the dry logic-and-language-choppers of modern times, but rather with the great metaphysical visionaries of the past, from Leibniz and Spinoza to Bergson and Lord Kelvin. Only in these terms, it may be argued, is it possible to explain the tremendous influence exerted by Brentano on so many of his pupils and disciples.

The paper is a study of Brentano's ontology, and more specifically of his theory of substance and accident, particularly as put forward toward the end of his life in the materials collected together as the *Kategorienlehre*." (p. 39)

(1) A notable and heroic exception to this general trend is of course provided by Roderick Chisholm, who is almost single-handedly responsible for the fact that a wider spectrum of Brentanian ideas is at last beginning to make itself felt in certain circles. My indebtedness to him -- and particularly to his classic paper of 1978 [*] which first awakened my interest in Brentano's ontology -- is I hope obvious. He should not, of course, be held responsible for what follows.

[*] *Brentano's Conception of Substance and Accident*.

35. ———. 1988. "The Soul and its Parts. A Study in Aristotle and Brentano." *Brentano Studien* no. 1:75-88.

Abstract: "The attempt is made to show that the key for a correct interpretation of Brentano's writings can be derived from an examination of his very early dissertations. The overarching context of all Brentano's writings is the psychology

of Aristotle and the ontology of material and immaterial substance that goes together therewith. The present remarks will accordingly consist in an account of Aristotle, and more specifically of Aristotle's conception of the soul, as reflected by Brentano in his *Psychology of Aristotle, Psychology from an Empirical Standpoint* and *Descriptive Psychology*."

36. ———. 1989. "The primacy of place: an investigation in Brentanian ontology." *Topoi* no. 8:43-51.

"1. Introduction

What follows is an investigation of the ontology of Franz Brentano with special reference to Brentano's later and superficially somewhat peculiar doctrine to the effect that the substances of the material world are three-dimensional places. Taken as a whole, Brentano's philosophy is marked by three, not obviously compatible, traits. In the first place, his work is rooted in the metaphysics of Aristotle, above all in Aristotle's substance-accident ontology and in the Aristotelian theory of categories. In the second place, Brentano embraced a Cartesian epistemology. He saw the source of all knowledge as residing in our direct awareness of our own mental phenomena and in our capacity to grasp evident incompatibilities in the realm of concepts.(1)

Thirdly, he regarded the existence of an external world as at most probable, and denied outright the existence of a world similar to the world that is given in experience.

Finally, and in some sense linking together these opposing strands, he propagated an idea of what he called "descriptive psychology", a discipline which would on the one hand yield exact knowledge of the structures and categories of mental life, and on the other hand provide an epistemologically sure foundation for other branches of philosophy. As we shall see, it is this psychological aspect of Brentano's philosophy which leads him to his conception of the substantiality of place.

Surprisingly, however, the psychological considerations which underlie Brentano's thinking will be shown to raise a series of

questions strictly ontological in nature, questions which are not without a systematic interest of their own."

(1) Knowledge of the first sort he called "empirical"; knowledge of the latter sort "analytic".

37. ———. 1990. "On the Phases of Reism." In *Kotarbinski: Logic, Semantics and Ontology*, edited by Wolenski, Jan, 137-184. Dordrecht: Kluwer.

"The paper will consist of a critical survey of Kotarbinski's development from his early nominalism and 'pansomatistic reism' to the later doctrine of 'temporal phases'. It will be shown that the surface clarity and simplicity of Kotarbinski's writings mask a number of profound philosophical difficulties, connected above all with the problem of giving an adequate account of the truth of contingent (tensed) predications. The paper will examine in particular the attempts to resolve these difficulties on the part of Lesniewski. It will continue with an account of the relations of Kotarbinskian reism to the ontology of things or *entia realia* defended by the later Brentano.

Kotarbinski's identification of Brentano as a precursor of reism is, it will be suggested, at least questionable, and the paper will conclude with a more careful attempt to situate the Brentanian and Kotarbinskian ontologies within the spectrum of competing ontological views." (pp. 137-138)

38. ———. 1990. "Brentano and Marty: An Inquiry into Being and Truth." In *Mind, Meaning and Metaphysics: The Philosophy and Theory of Language of Anton Marty*, edited by Mulligan, Kevin, 111-149. Dordrecht: Kluwer.

"Aristotle, as is well known, distinguished in his ontology between *being in the sense of the categories* and *being in the sense of being true*. (*Met.*, 1017 a 31ff.) The early Brentano, correspondingly, distinguished between things or *ens reale* on the one hand, and *entia rationis* or irrealia on the other. *Ens reale* are for example a soul and its constituents (or 'divisives'), the various mental acts of presentation, judgment, love and hate. *Entia rationis* are entities such as the existence of A and

the non-existence of A, entities which have a role to play in making true our judgments about *entia realia*.

In the course of time, however, Brentano changed his mind, and his later ontology is an ontology of things alone. Hence there are no *entia rationis*, and there are no divisives or other non-thingly parts of things. We should talk not of mental acts or psychic phenomena but of 'thinkers' or 'thinking things', all of whom relate exclusively in their thinking to other things (or to themselves) as their objects. 'Thinking' is in this sense univocal. Things are divided into psychic things (minds, presenters, judges, lovers, haters, and so on) and spatial things (places, hard places, red places, hard red places, and so on)." (p. 111)

39. ——. 1993. "The Soul and its Parts II: Varieties of Inexistence." *Brentano Studien* no. 4:35-52.

"A Brentanian might criticize contemporary philosophy of mind on at least the following counts:

- i. its taxonomy of types of mental act and state is too narrow (thus its repertoire consists, on many standard accounts, in little more than 'beliefs' and 'desires');
- ii. its treatment of mental acts and states is too slavishly oriented around linguistic factors (thus for example it is standardly suggested that the philosophy of mind is most properly concerned with the so-called 'propositional attitudes');
- iii. its treatment of the temporal structures of mental acts and states is overly crude (thus in many standard accounts punctual and episodic acts are not distinguished from enduring states and dispositions);
- iv. it presupposes an over-crude theory of the internal structures of mental acts and states and of the corresponding types of parts and unity.

It is with this last that we shall be principally concerned in what follows, and more precisely with Brentano's own account of the part-whole structures obtaining in the mental sphere." (p. 35)

"1. Brentano's Metaphysics

Much of the literature on Brentano has manifested a certain deflationary tendency, often presenting Brentano as little more than a forerunner of Husserl or of analytic philosophy, and rarely taking account of more than those few passages in which Brentano talks about his doctrine of intentionality. Here, in contrast, I shall seek to do full justice to the metaphysical aspects of Brentano's thinking. At the centre of our concern, as always with Brentano, will be the philosophy of Aristotle, and more specifically Aristotle's theory of substance and accident, which is given detailed treatment by Brentano in the materials collected together as the *Theory of Categories*." (p. 61)

41. ———. 2000. "Boundaries: a Brentanian Theory." *Brentano Studien* no. 8:107-114.

"According to Brentano's theory of boundaries, no boundary can exist without being connected with a continuum. But there is no specifiable part of the continuum, and no point, which is such that we may say that it is the existence of that part or of that point which conditions the boundary. - An adequate theory of the continuum must now recognize that boundaries be boundaries only in certain directions and not in others. This leads to consequences in other areas, too."

42. Smith, David Woodruff. 2020. "Descriptive Psychology and Phenomenology: From Brentano to Husserl to the Logic of Consciousness." In *Franz Brentano and Austrian Philosophy*,

edited by Fisette, Denis, Frechette, Guillaume and Stadler, Friedrich, 49-71. Cham (Switzerland): Springer.

Abstract: "In his *Psychology from an Empirical Standpoint* (1874) Franz Brentano launched the discipline of phenomenology as descriptive psychology. Drawing on Brentano's work, Edmund Husserl developed a conception of phenomenology founded on an enhanced theory of intentionality as a distinctive property of consciousness.

Husserl expanded Brentanian descriptive psychology with an ontology of meaning or content influenced by logical theory, from Bolzano to Frege and beyond.

Here I shall outline an evolving line of phenomenological analysis of the structure of consciousness and its intentionality. This lineage draws key factors from first Brentano and then Husserl with further explication through subsequent forms of ideal meaning and modal ontology. The resulting model of intentional consciousness is a direct legacy flowing from Brentano's work, though it goes beyond Brentano's more purely empiricist constraints.

On Brentano's analysis, an act of consciousness is "directed" primarily toward an object: an object existing "intentionally in" the act. And the act is also directed secondarily, "incidentally", toward itself: in "inner consciousness". The primary form of directedness leads into Husserl's theory of intentionality via phenomenological content or "noematic" meaning. The secondary form of directedness leads into Husserl's theory of awareness-of-consciousness in "inner time-consciousness".

Thus, phenomenal intentional consciousness features the way the object is presented in consciousness modified by the way that presentation itself is carried out.

These two features of an act of consciousness define the fundamental form of consciousness.

These features can be further explicated in terms of the way the act is directed via phenomenological content toward the object in "intentionally possible" situations ("in" consciousness) and

the way the act itself is executed phenomenally (with “inner consciousness”). The result is a “modal” model of precisely intentionality cum inner awareness.

Recent philosophers of mind have gradually come to focus on features of phenomenological content and inner consciousness that were sharply characterized in Brentano and pursued further in Husserl. The modal model affords a theory of the ideal “logical” structures that define the Brentanian forms of “intentional in-existence” and “inner consciousness”.

43. ———. 2021. "Structures of inner consciousness: Brentano onward." *Inquiry. An Interdisciplinary Journal of Philosophy*.
Published online: 26 Apr 2021.

Abstract: "For Brentano, an act of consciousness features a *presentation of an object* joined with an *inner presentation* – an ‘inner consciousness’ or inner awareness – of that object-presentation. On Mark Textor’s articulation of Brentano’s model, the act has the structure of a single experience directed upon a *plurality*, viz.: the object and the experience itself. I consider an alternative development of this Brentanian model. Drawing on Husserl’s part-whole ontology, I submit, the act itself has the structure of a whole formed from two *co-dependent parts*, viz., the object-presentation and inner awareness of that presentation. Looking to Husserl’s analysis of inner time-consciousness, Textor proposes an enhancement of Brentano’s model of inner consciousness. On Textor’s model, inner awareness is such that one may be aware of one’s experience, in the stream of one’s consciousness, ‘without grasping any adumbrations [of the experience], but temporal ones’. I dig into Husserl’s doctrine of ‘adumbration’ (as where a tree is given visually with adumbrations of its shape on the back side, of its color in gradations, etc.). On my reconstruction, inner awareness of an experience presents the experience within a *manifold* of ‘adumbrated’ *temporal* retentions and protentions that place the experience in its stream of consciousness."

Papers of the 27th International Wittgenstein Symposium, edited by Reicher, M. E. and Marek, J. C., 63-73. Kirchberg am Wechsel: Austrian Ludwig Wittgenstein Society.

"§ 1. Preliminaries

Brentano's theory of inner perception, evidence and truth upsets some widespread assumptions in contemporary philosophy. It rests on an unusual notion of inner perception and on a nominal theory of judgement; it attributes a central role to evidence in epistemology and treats mental states as being intrinsically true.

The present contribution aims first at presenting and elucidating some of Brentano's views on these matters. In some crucial points Brentano's position will be modified and hopefully enhanced in a way that is compatible with the overall picture.(1) Considerable space will be devoted to the examination of some of the most important objections that have been or might be raised against the position presented on Brentano's behalf. If by far not invulnerable, the position under scrutiny should hopefully appear more challenging than what it is often taken to be." (p. 63)

(1) References to the passages on which the suggested interpretation of Brentano's position is based will be provided. The discussion of more problematic texts in Brentano's work will have to be left for another occasion.

Second revised edition 1978; Third expanded edition with the collaboration of Karl Schuhmann 1982.

Chapter I. *Franz Brentano (1838-1917) forerunner of the phenomenological movement* - pp. 27-50.

"Brentano's first concern in psychology was to find a characteristic which separates psychological from non-psychological or 'physical' phenomena. It was in connection with this attempt that he first developed his celebrated doctrine of intentionality as the decisive constituent of psychological phenomena. The sentence in which he introduces the term 'intentionality' is of such crucial importance that I shall render it here in literal translation: Every psychical phenomenon is characterized by what the Scholastics of the Middle Ages called the intentional (or sometimes the mental) inexistence of an object, and what we should like to call, although not quite unambiguously, the reference (Beziehung) to a content, the directedness (Richtung) toward an object (which in this context is not to be understood as something real) or the immanent-object quality (immanente Gegenständlichkeit). Each contains something as its object, though not each in the same manner. In the representation (Vorstellung) something is represented, in the judgment something is acknowledged or rejected, in desiring it is desired, etc. This intentional inexistence is peculiar alone to psychical phenomena. No physical phenomenon shows anything like it. And thus we can define psychical phenomena by saying that they are such phenomena as contain objects in themselves by way of intention (intentional). (1) Actually, this first characterization of the psychological phenomenon makes use of two phrases: 'intentional inexistence' and 'reference to a content.' It is the first of these phrases which has attracted most attention, and it has even given rise to the view, supported by both anti-scholastics and neo-scholastic critics, that this whole doctrine was nothing but a loan from medieval philosophy. While a quick reading of the passage may seem to confirm this view, it is nevertheless misleading. 'Intentional inexistence,' which literally implies the existence of an 'intentio' inside the intending being, as if imbedded in it, is indeed a Thomistic conception. But it is precisely this conception which Brentano himself did not share, or which in any case he abandoned, to

the extent of finally even dropping the very term 'intentionality.' Thus, the second characterization of the psychic phenomenon, 'reference to an object,' is the more important and the only permanent one for Brentano; it is also the one listed exclusively in the Table of Contents, beginning with the first edition. What is more: as far as I can make out, this characterization is completely original with Brentano, except for whatever credit he himself generously extends to Aristotle for its 'first germs' in a rather minor passage of the *Metaphysics* (1021 a 29). It was certainly none of Brentano's doing that this new wholly unscholastic conception came to sail under the old flag of 'intentionality.' Reference to an object is thus the decisive and indispensable feature of anything that we consider psychical: No hearing without something heard, no believing without something believed, no hoping without something hoped, no striving without something striven for, no joy without something we feel joyous about, etc. Physical phenomena are characterized, by contrast, as lacking such references. It also becomes clear at this point that Brentano's psychological phenomena are always acts, taking this term in a very broad sense which comprises experiences of undergoing as well as of doing, states of consciousness as well as merely transitory processes. Here, then, Brentano for the first time uncovered a structure which was to become one of the basic patterns for all phenomenological analysis." pp. 36-37

47. ———. 1976. "Intention' and 'Intentionality' in the Scholastics, Brentano and Husserl." In *The Philosophy of Brentano*, edited by McAlister, Linda L., 108-127. London: Duckworth.

Translated from the German by Linda L. McAlister and Margarete Schättle.

The present translation is based on a reprinted version of the German original which appeared in *Studia Philosophica*, vol. 29 (1970), pp. 189-216.

"The attempt at a more thorough investigation of what is designated by the expressions 'intention' and 'intentional' in

present-day philosophy needs no special justification at the present stage of philosophy. Brentano and Husserl discovered the strategic role of these phenomena within all mental life, and brought it to the fore. Nevertheless, one can hardly claim that the subject and its context have been sufficiently explored. In several respects more clarity is needed. In many cases unexamined or insufficiently examined preconceptions and anticipations are obstructions to the real understanding of the situation. In part these harken back to conscious or unconscious historical recollections by which one is guided or, rather, misguided, in the study of the phenomena. It is the main purpose of this essay to render them harmless and at the same time to work out more clearly the systematic problems that stand behind the historical development.

Not everything, however, that goes by the name 'intention' will be dealt with, but only extra-practical intention. 'Intention' is commonly understood in the sense of an intention to do something or a purpose. That is the original practical meaning of the term and it has been preserved in ordinary language. This meaning will not be discussed here. By contrast, the extra-practical is secondary; it has been limited to academic philosophy, and is demonstrably derived from the Scholastics of the Middle Ages." (pp. 108-109)

48. ———. 1978. "On the Significance of the Correspondence Between Franz Brentano and Edmund Husserl." *Grazer Philosophische Studien* no. 5:95-116.

"This correspondence, still unpublished, extends over forty years. Its significance is both biographical and philosophical. Biographically it shows Brentano's tolerant friendship for his emancipated student and Husserl's unwavering veneration for his only philosophical teacher. The philosophical issues taken up are Euclidean axiomatics, Husserl's departure from Brentano in the *Logical Investigations* by distinguishing two types of logic as the way out from psychologism, and the possibility of negative presentations, but not Husserl's new phenomenology. Few agreements are reached, but the dissents were clarified."

49. Spinicci, Paolo. 1988. "Some Observations on the Concept of Descriptive Psychology in the Philosophy of Franz Brentano." In *La Scuola di Brentano*. Dordrecht: Kluwer.

"In an oft-quoted passage of *Philosophie als strenge Wissenschaft*(1) Husserl characterize descriptive psychology as the mature fruit of Brentano's philosophy, and the most vital part of his thought. Brentano, then fore, is seen by him primarily as a descriptive psychologist: this opinion could be shared, but it leads to several problems of interpretation. The term 'descriptive psychology' is too vague, and can be applied to very different philosophies.

(...)

Of course some suggestions as to the real meaning of the term 'descriptive psychology' can be found in the literature on Brentano (...), but it is only since the recent publication of Brentano's university courses (1887/88; 1888/89; 1890/91) on psychognosy (*Psychognosie*)(3) that we are in a better position to resolve the theoretical problem, which is of such importance in Brentano's philosophy. In the pages of *Deskriptive Psychologie*, Brentano points out that pure psychology is in principle independent from considerations of a physiological-genetic nature, and indicates what he regards as the essential features of psychognosy. According to Brentano, descriptive psychology is a conceptual formulation of our psychic experience which must result in necessarily valid propositions. One can go from here to clarify Brentano's concept of descriptive psychology, pointing out its connection with Husserl's phenomenology, so confirming earlier statements of this relationship(4). Brentano speaks of psychognosy as a pure psychology (*reine Psychologie*) and as an exact science (*exakte Wissenschaft*) (see *DP*, p. 1), and from the beginning he explicitly compares psychognosy with mathematics in order to bring out clearly that its assertions are necessarily true, which leads us inevitably to the pages of *Ideen III* where Husserl explains the meaning and nature of pure eidetic phenomenology.

Such a relationship does indeed exist, but an evaluation of the historical significance and the theoretical importance of psychognosy should not be limited to this assertion: it must try to clarify exactly what Brentano means by 'pure psychology' and 'exact science' and to what extent these definitions can explain the nature of his work. In my opinion Brentano really goes beyond the boundaries of such definitions, and a full understanding of his project for a descriptive psychology must take this into account." (pp. 82-83, a note omitted)

50. Srzednicki, Jan. 1962. "Remarks concerning the interpretation of the philosophy of Franz Brentano." *Philosophy and Phenomenological Research* no. 22:308-316.

"Most of the editors of Brentano's works and his commentators have a tendency to attempt to arrest his thought at a given moment and then to try to work out, in a systematic way, his views concerning most problems.

So, for instance, Alfred Kastil (in *Die Philosophie Franz Brentano's*, Salzburg, 1951) "...attempted to represent Brentano's teaching in its final form . . ." 1 The same tendency is clearly evident in, e.g., F. Mayer-Hillebrand's edition of *Die Lehre vom Richtigen Urteil* (Bern, 1956). In order to attain this objective the editor used Brentano's own writings and some writings of Hillebrand, and produced a systematic whole by skillful arrangement, subtle changes and additions. The effect is one of detailed and systematic theory represented as Brentano's final views."

(...)

"Despite a certain sympathy with the attitude, and some respect for the justification produced, I am of the opinion that the treatment does not suit Brentano's philosophy really well; that it is not likely to bring out the best in his work; and finally that it possibly rests to some extent on a misunderstanding of his advice." (p. 308)

51. ———. 1963. "A reply to Professor F. Mayer-Hillebrand." *Philosophy and Phenomenological Research* no. 23:445-446.

"In this brief comment upon Professor Mayer-Hillebrand's reply to my article, I shall not contest the points concerning Brentano's own earnest permission to have his papers edited in the Kastil-Hillebrand way. I have already admitted its existence and I was doubtful merely because I did suspect that his modesty might have led him to be unwilling to have his pupils spend most of their ability and energies editing his papers. I admit also that this type of edition is often very acceptable. I have great admiration for the painstaking work both of A. Kastil and Mayer-Hillebrand, notwithstanding which, I am under the impression that they might have, to say the least, underemphasized some important aspects of Brentano's philosophy. It was the purpose of my article to re-emphasize them. As to the point of pure scholarship, even if one would agree that EL. 67 belongs firmly to a transitory and formative period, would not the fact that Brentano's philosophy was in this stage after about forty years of active professional life support my general contention? Further, I find it unlikely that Brentano would ever produce a *systematic presentation* if it meant *system-building*. The fact that impresses one here is not so much Brentano's late blindness and dictating difficulties, but that he was engaged in new research, as shown by his discussion, admittedly late, of evidence. The open-mindedness with which he approached the subject appertaining to one of the main problems that occupied him for a long time is also significant. Is it really consonant with a system-building attitude? However, I have not denied that Brentano was a systematic philosopher, even if he was not a system-builder." (p. 445)

52. ———. 1965. *Franz Brentano's Analysis of Truth*. The Hague: Martinus Nijhoff.

"Brentano has established many points and provided a number of important suggestions. Let us now survey briefly those of his observations that appear to be of more importance for the future research into the matter. Brentano has shown that the correspondence theory is not acceptable. His detailed reasoning concerning the nature of the relation itself and the nature of its termini is quite conclusive. The relation itself cannot be properly explained: If it is discussed in general terms it soon degenerates into a mere metaphor. However, if an attempt is made at giving it a more definite meaning, we find that there are grave objections to each suggested solution. None of the suggested particular determinations can account for all past, future and negative assertions. We are in difficulties whether we assume that both termini of the relation must exist or not. It is impossible to characterise sufficiently well the thing with which our judgement is to correspond.

If it is outside the mind, we cannot give a consistent picture of it; even *entia rationis* will not help because they would naturally correspond to affirmative judgements only. Should they correspond also to negative judgements, then how could the same situation correspond closely enough with both? Further difficulties arise with regard to intellectus, etc.(5) In view of all these difficulties, it is quite clear that it is impossible to resurrect the correspondence theory. We must therefore investigate other possibilities." (p. 112)

53. ———. 1966. "Some Elements of Brentano's Analysis of Language and Their Ramifications." *Revue Internationale de Philosophie* no. 20:434-445.

"Brentano's departure from the traditional correspondence theory of truth was precipitated by his qualms about Aristotle's account of judgement as the combination or separation of ideas. We can see it very clearly in his early: *Über den Begriff*

der Wahrheit (1889) (1). He maintains there that the basic form of judgement is not "A is B", as Aristotle would have it, but "A is", what he calls an existential judgement.

It will be clear that this must put serious strain on Aristotle's theory of truth where he characteristically says: (2)

... he who thinks the separated to be separated and the combined to be combined has the truth, while he whose thought is in a state contrary to that of the objects is in error (tr. W. D. Ross)." (p. 434)

54. ———. 1998. "Brentano and the Thinkable." In *The Brentano Puzzle*, edited by Poli, Roberto, 139-150. Aldershot: Ashgate.

"Our original puzzle was that thinkability constituting a common umbrella of consideration tended to reduce all our proposals to questionbegging; this is now resolved at least in principle.

The picture suggested here, without at the moment supplying many details, is that the parameter of 'thinkable' provides us with the possibility of having something as 'the given.' Having that much, we can envisage how object-level choices arise on some natural basis. The parameter of compatibility perspectives can then supply an interconnected matrix that in turn supports various: operations, systems, structures, etc.

This does not deal sufficiently with the whole problem of preferencecompatibility without referring to work beyond what could be presented today. What has been said constitutes, I hope, a demonstration of the importance of the sub-level of the thinkable. That level permits us to make moves capable in principle of resolving a difficult situation sketched above, for it enables us to side-step the main difficulty of questionbegging. Short of it every possible proposal seemed subject to it.

I conclude by suggesting that Brentano's doctrine of *Doppelurteile* can be developed and applied very usefully in this direction." (p. 150)

Annotated bibliography on Franz Brentano: Studies in English, Eight Part: Tai - Z

Bibliography

1. Taieb, Hamid. 2015. "Relations and Intentionality in Brentano's Last Texts." *Brentano Studien* no. 13:183-209.

Abstract: "This paper will present an analysis of the relational aspect of Brentano's last theory of intentionality. My main thesis is that Brentano, at the end of his life, considered relations (Relatives) without existent terms to be genuine relations (Relatives). Thus, intentionality is a non-reducible real relation (the thinking subject is a non-reducible real relative) regardless of whether or not the object exists. I will use unpublished texts from the Brentanian Nachlass to support my argument."

2. ———. 2017. "Brentano on Properties and Relations." In *The Routledge Handbook of Franz Brentano and the Brentano School*, edited by Kriegel, Uriah, 156-162. New York: Routledge.

"Brentano wrote his doctoral dissertation on Aristotle's ontology (Brentano 1862/1975a).

However, the books and articles that Brentano published during his lifetime do not contain much information about his own theory of properties and relations. His main texts on this topic can be found in the posthumous volumes *The True and the Evident* (Brentano 1930/1966b), *The Theory of Categories* (1933/1981a), and *The Renunciation of the Unreal* (1966a), which mainly contain documents from after his reistic turn of

1904 (see Chapter 13). The manuscripts “About the Theory of Categories” (Brentano 1992–3), “On Substance” (1993), and “Abstraction and Relation” (2013a/c), all from approximately 1900, are Brentano’s most important published pre-reistic texts on properties and relations.

Some information is also present in Brentano’s logic lectures, given from 1869–1870 until 1877 in Würzburg and Vienna (Brentano, EL 80).⁽¹⁾ Much information on the young Brentano’s theory of properties and relations can be found in the metaphysics lectures given in Würzburg from 1867 onward (ms. M 96), but these lectures are unpublished.

In this chapter, I will focus on Brentano’s theory of properties and relations as established during his mature period, from *Psychology from an Empirical Standpoint* (Brentano 1874) until his death in 1917, and indicate the most important changes that his reistic turn entailed for his theory of properties and relations.⁽²⁾ First, I discuss the ontological features common to properties and relations (§1); then I deal with relations in particular (§2).” (p. 156)

(1) For the dating of these lectures, see Rollinger 2011.

(2) I will briefly outline the young Brentano’s theory of properties and relations in the footnotes. For the recognition of three periods in Brentano’s ontology, namely “conceptualism” (1862–1874), “ontology of intentionality” (1874–1904), and “reism” (1904–1917), see Chrudzimski 2004, Chrudzimski and Smith 2004.

3. ———. 2017. "Intentionality and Reference: A Brentanian Distinction." *The Monist* no. 100:120-132.

Abstract: "Brentano distinguishes between intentionality and reference. According to Brentano, all mental acts are intentionally directed toward something. Some mental acts also refer to something, which is the case when their object exists in reality. For Brentano, such acts, besides their intentionality, have a peculiar relation of similarity to their object. However, there is no mention of Brentano's distinction between intentionality and reference in the literature. Drawing on some lesser known texts, this paper aims both at showing that Brentano makes such a distinction and at underscoring the philosophical significance of his position."

4. ———. 2018. *Relational Intentionality: Brentano and the Aristotelian Tradition*. Dordrecht: Springer.

"Indeed, though Brentano's monograph on Aristotle may have helped to produce some confusions, especially as regards the assimilation of intentionality with causality, nevertheless, in his later works he draws a distinction between the intentional relation, the causal relation and the relation of reference. Moreover, he finds this tripartition already in Aristotle, specifically in *Metaphysics* Δ.15, which is about the different classes of relation. Similar distinctions were made by authors in antiquity and the Middle Ages, precisely in the context of the reception of Aristotle's texts on relations. This might make it possible to clear up the confusions mentioned above, in Brentano and perhaps in Aristotle, but also in medieval thinkers and the Aristotelian tradition more generally. The present work is intended to meet these desiderata: from its

point of departure in Brentano, it goes back to Aristotle, then considers Alexander of Aphrodisias and the Neoplatonist commentators, before proceeding to the scholastic philosophers of the late Middle Ages and Suárez in the early modern period; it aims at analyzing these authors' accounts of intentionality, and the way they distinguish it from the relations of causality or reference. This is, in broad strokes, the topic of this work. From the point of view of method, it will aim to harmonize scholarship over the *longue durée* with systematic analysis in the history of philosophy." (Preface, pp. VI-VII)

5. ———. 2020. "A Paleo-Criticism of Modes of Being: Brentano and Marty against Bolzano, Husserl, and Meinong." *Ergo: An Open Access Journal of Philosophy* no. 7:849-876.

Abstract: "Brentanians defend the view that there are distinct types of object, but that this does not entail the admission of different modes of being. The most general distinction among objects is the one between realia, which are causally efficacious, and irrealia, which are causally inert. As for being, which is equated with existence, it is understood in terms of "correct acknowledgeability." This view was defended for some time by Brentano himself and then by his student Anton Marty. Their position is opposed to Bolzanian, Husserlian, and Meinongian ontologies, in which a distinction in the (higher) types of object

implies a distinction in their mode of being. These Austro-German discussions anticipate much of the contemporary debate between Quineans, who accept only differences in objects, and neo-Meinongians or other ontological pluralists, who accept different modes of being.

My paper first presents the Brentanian view in detail and then evaluates its philosophical significance."

6. ———. 2020. "Brentanian Association of Ideas." *Grazer Philosophische Studien* no. 97:203-222.

Abstract: "This paper presents and evaluates the Brentanian theory of association of ideas. The topic of association usually brings to mind British Empiricism, which is often thought to have a monopoly on the matter. Brentano, however, adopts an original, alternative account of association.

He argues that all cases of association can be placed under a single general law, that of "habit".

His explicit account of the topic is rather brief; however, his most faithful pupil, Anton Marty, thoroughly developed his master's views. Marty presents Brentano's account of association in detail, and endeavours to defend it against rival theories, notably those which hold that the laws of "similarity", or of what is called "redintegration", are able to explain all cases of association. First, the paper presents the information found in Brentano himself on association of ideas. Then, it turns to Marty to analyze his developments of the Brentanian view. Finally, the paper evaluates Brentano and Marty's account by tackling some objections that it may face."

7. ———. 2020. "Husserl on Brentanian Psychology: A Correct Criticism?" In *Franz Brentano's Philosophy after Hundred Years: From History of Philosophy to Reism*, edited by Fisette, Denis, Fréchette, Guillaume and Janoušek, Hynek, 87-108. Cham (Switzerland): Springer.

Abstract: "Husserl often pays tribute to his teacher Brentano for having opened the path towards phenomenology. However, the praise is systematically followed by a criticism: Brentano failed to draw all the consequences from his ground-breaking

rediscovery of intentionality, and remained stuck in inadequate psychological research.

For Husserl, there are three ways to study mental acts: empirical, eidetic, and transcendental.

What is objected to Brentano is his adherence to empirical psychology. Husserl himself focuses on the second and third levels. It is clear that Brentano never entered into transcendental considerations. However, it seems also clear that he was doing eidetic-like research in psychology in a way similar to Husserl. In the paper, I first present Husserl's criticism of empirical and, thus, Brentanian psychology. I then turn to Brentano's and the psychology of his heirs and try to show that Husserl's criticism is unjustified. In the course of the discussion, I treat the crucial epistemological question of eidetic vs empirical knowledge, both in Husserl and in Brentano."

8. ———. 2020. "Ordinary language semantics: the contribution of Brentano and Marty." *British Journal for the History of Philosophy* no. 28:777-796.

Abstract: "This paper examines the account of ordinary language semantics developed by Franz Brentano and his pupil Anton Marty. Long before the interest in ordinary language in the analytic tradition, Brentanian philosophers were exploring our everyday use of words, as opposed to the scientific use of language. Brentano and Marty were especially interested in the semantics of (common) names in ordinary language. They claimed that these names are vague, and that this is due to the structure of the concepts that constitute their meaning: concepts expressed by such names are themselves vague, based on typicality, and have more or less similar items within their extension. After presenting the views of Brentano and Marty, this paper compares them to later accounts of meaning and concepts, notably Wittgenstein's theory of family resemblances and the prototype theory of concepts, and emphasizes the originality of the Brentanian position."

9. ———. 2021. "Brentano and the Medieval Distinction Between First and Second Intentions." *Topoi* no. 41:143-158.

Abstract: "Brentano's account of intentionality has often been traced back to its scholastic sources. This is justified by his claim that objects of thought have a specific mode of being—namely, “intentional inexistence” (*intentionale Inexistenz*)—and that mental acts have an “intentional relation” (*intentionale Beziehung*) to these objects. These technical terms in Brentano do indeed recall the medieval notions of *esse intentionale*, which is a mode of being, and of *intentio*, which is a “tending towards” (*tendere in*) of mental acts. However, within the lexical family of *intentio* there is another distinction that plays an important role in medieval philosophy—namely, the distinction between first and second intentions (*intentio prima* and *intentio secunda*), which are, roughly speaking, concepts of things and concepts of concepts respectively. What is less well-known is that Brentano explicitly borrowed this distinction as well, and used it in his account of intentionality. This paper explores this little-known chapter in the scholastic-Austrian history of intentionality by evaluating both the historical accuracy and the philosophical significance of Brentano's borrowing of the scholastic distinction between first and second intentions."

10. ———. 2021. "Brentano on the Characteristics of Sensation." In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 192-208. Leiden: Brill Rodopi.

"In this paper, I present Brentano's account of sensation and the way he distinguishes this type of psychic phenomenon from other types. After introducing the three main classes of psychic phenomena in Brentano, I focus on his positive account of sensation. I then address in turn each of the other candidates with which sensation may be confused, and I explain how Brentano distinguishes sensation from them." (p. 193)

11. ———. 2023. "Brentano on the individuation of mental acts." *European Journal of Philosophy*:431-444.

Abstract: "This paper aims to present and evaluate Brentano's account of the individuation of mental acts. In his early works,

Brentano assimilated mental acts to tropes; however, he encountered difficulties in explaining their individuation, since the usual solutions for the individuation of tropes were not readily applicable to his theory of mental acts. In a later period, Brentano introduced into his psychology what he called the “soul,” and this allowed him to explain the individuation of mental acts. Finally, after his “reistic” turn, he excluded mental acts from his ontology, for he rejected abstracta of any kind, including abstract particulars, and admitted only things, or *res* (in Latin), that is, concrete particulars; in his late philosophy, there are no “thinkings,” but only “thinkers.” However, he still needed to explain what individuates different thinkers, and this was again the soul. In the conclusion, the paper critically compares the different theoretical options considered by Brentano.”

12. Taieb, Hamid, and Cesalli, Laurent. 2018. "Brentano and Medieval Ontology." *Brentano Studien* no. 16:335-362.

Abstract: "Since the first discussion of Brentano's relation to (and account of) medieval philosophy by Spiegelberg in 1936, a fair amount of studies have been dedicated to the topic. And if those studies focused on some systematic issue at all, the beloved topic of intentionality clearly occupied a hegemonic position in the scholarly landscape. This paper considers the question from the point of view of ontology, and in a twofold perspective: What did Brentano know about medieval ontology and what kind of access did he have to that material (section 1)? What kind of use did Brentano make of medieval material in his own philosophy, and with what kind of results (section 2)?"

13. Tănăsescu, Ion. 2012. "Franz Brentano's Dissertation and the Problem of Intentionality." In *Franz Brentano's Metaphysics and Psychology*, edited by Tănăsescu, Ion, 154-179. Bucharest: Zeta Books.

"It is well known that Franz Brentano's dissertation *On the Several Senses of Being in Aristotle* (1862) played a decisive role in the genesis of the problem of being for the young Heidegger." (p. 154, a note omitted)

(...)

"Against this background, the thesis of this study is that in Brentano's dissertation two phenomenological veins through which Aristotle influenced the phenomenology of the XXth century can be identified: the polysemy of being expressly featured by Heidegger, and Brentano's analysis of Aristotle's being in the mind. Though this latter vein did not receive any attention from Heidegger, convincing arguments can be made in favour of the idea that the analysis of being in the dissertation leads to the problem of intentionality in Brentanian psychology and his School, including the Husserlian phenomenology. For that reason I consider the analysis of being in the mind from the dissertation as the Husserlian phenomenological vein, while the polysemy of being belongs to the Heideggerian phenomenological vein." (p. 155)

15. ———. 2014. "Categorical relations as truth-makers in Franz Brentano's dissertation." *Tijdschrift Voor Filosofie* no. 76:247-260.

"...I shall further understand by the term 'truth-maker' the categorical relations between substance and its accidents, considered as relations by virtue of which the judgments concerning them are true or false. This position allows me to specify the perspective from which the term 'truthmaker' is approached in this essay: this study is not in any way intended to provide a contribution to the contemporary research devoted to this problem. Instead, it will provide an interpretation of categorical relations as being what the term 'truth-makers' designates in the statement concerning the neglect of their role in Brentano's reading and aimsto provide arguments on behalf of the opposite thesis.(8) Therefore what follows is only an exegetical contribution, the goals of which are carefully limited to the way in which Brentano understood Aristotle's correspondence theory of truth in his first work. Also, I am specifying that in order to formulate the ideas that follow I accepted from the beginning the assumption on which the position I call into question relies, namely, that the Aristotelian correspondence theory of truth analysed by Brentano can be discussed in the specific terms of the truth-maker account.

In accord with this, I shall present further arguments in favour of the thesis that, in his dissertation, Brentano did not neglect but, on the contrary, placed a particular emphasis on the role of categorical relations as truth-makers in Aristotle." (pp. 249-250, a note omitted)

16. ———. 2015. "The two Theories of Intentionality in Brentano and the Program of *Psychology from an Empirical Standpoint*." *Brentano Studien* no. 13:211-231.

Abstract: "The paper defends the following thesis: the intentionality passage from Brentano's *Psychology from an Empirical Standpoint* (1874) can be interpreted from two perspectives: intentionality as the most salient distinguishing feature separating the mental from the physical, and intentionality as a theory of the way in which mental acts, with their contents, are related to extra-mental objects.

Fundamentally, the theory of intentionality from 1874 is an example of the former. Its role is that of allowing the establishment of psychology as a science. However, it can also be understood as a theory of intentionality in the second sense through a clarification of the relations it entails between the content and the object of the act. For this reason, it could be said that the act–content–extra-mental object distinction was already achieved in the 1874 work, at least at the level of sensory acts. The distinction between the psychical act, the content, and the object presented through this content was already made in the EL 80 *Logik* manuscript from 1869/70 at the level of nominal presentation, which provides a further argument for the above thesis."

17. ——. 2017. "The Intentionality of Sensation and the Problem of Classification of Philosophical Sciences in Brentano's empirical Psychology." *Axiomathes* no. 27:243-263.

Abstract: "In the well-known intentionality quote of his *Psychology from an Empirical Standpoint*, Brentano characterises the mental phenomena through the following features: (1) the intentional inexistence of an object, (2) the relation to a content, and (3) the direction toward an object. The text argues that this characterisation is not general because the direction toward an object does not apply to the mental phenomena of sensation. The second part of the paper analyses the consequences that ensue from here for the Brentanian classification of mental phenomena: in Brentano's psychology one can distinguish two concepts of mental phenomena—the mental phenomenon in a broad sense and the mental phenomenon in a narrow sense; the former concept allows the separation of the mental from the physical, while the narrow concept allows the distinguishing of the main classes of mental

phenomena. The third part of the paper shows that, with respect to sensation, the absence of a direction toward an object is compatible with both Brentano's early taxonomies of philosophical sciences, and his early program for the establishment of a new, empirical and non-speculative philosophy. For this reason, I hold that intentionality is important for the foundation of both psychology, and empirical philosophy."

18. ——. 2019. "Monism and Particularism: Methodology in Brentano's Psychology." *Axiomathes* no. 29:397-412.

Abstract: "The paper argues that Brentano was the exponent of a methodological monism, which is based on the requirement that science should be grounded on experience, and not on a speculative-idealistic principle, as in the case of German idealism. In Brentano's psychological writings, this methodological requirement concretized in two different theses: (T1) The method of psychology is *identical with* the method of natural science; (T2). The method of psychology is *inspired* by the method of natural science. The thesis of this study is that an important part of *Psychology from an Empirical Standpoint* is elaborated in accordance with T1. By contrast, Brentano's *Descriptive Psychology* illustrates the subsequent decision to give up this idea. In its place, the aforementioned requirement is elaborated in the spirit of a methodological particularism that recommends the scientist elaborate his methods according to the specificity of the phenomena under investigation and to the difficulties that need to be overcome when approaching them."

19. ——. 2020. "The two Theories of Intentionality in Brentano and Chisholm's Ontological and Psychological Theses." *Revue Roumaine de Philosophie* no. 42:341-350.

Abstract: "R. M. Chisholm interprets Brentano's theory of intentionality through the lens of two theses: the ontological thesis, according to which the intentionality of the mental designates the fact that there is an immanent object in the act; and the psychological thesis, according to which intentionality consists of the direction of the mental act toward the extra-

mental object. In my paper I interpret Chisholm's and Brentano's theses on intentionality from two perspectives: intentionality as the most salient distinguishing feature separating the mental from the physical (Chisholm's ontological thesis), and intentionality as a theory of the way in which mental acts with their content are related to extra-mental but theoretically-constructed objects of physics (Chisholm's psychological thesis). Thus, an important issue of my paper is also to show that Chisholm's well-known ontological and psychological theses on Brentanian intentionality rest on presuppositions that do not fit the program of Brentanian psychology."

20. ———. 2021. "Franz Brentano and Anton Marty: Two Versions of Descriptive Psychology?" In *The Philosophy of Brentano: Contributions from the Second International Conference Graz 1977 & 2017, in Memory of Rudolf Haller*, edited by Antonelli, Mauro and Binder, Thomas, 179-191. Leiden: Brill Rodopi.

"In the following, I attempt to clarify the relation between Anton Marty's descriptive psychology and Brentano's empirical and descriptive psychology. In this respect, I shall start by describing the structure of PDP [see Note] and by distinguishing two concepts of descriptive psychology. I want to specify from the very beginning that what follows addresses only the relationship between the published versions of Brentano's and Marty's lectures on descriptive psychology. A full assessment of this issue will be possible only after the two manuscript versions of Brentano's lectures on descriptive psychology become available, and after determining if and to what extent Anton Marty was familiar with them. Given that hitherto specialist literature has highlighted mostly the common features of Marty's and Brentano's psychologies (Antonelli, 2011, pp. xxixf.; Marek & Smith, 1987, pp. 38ff.), I shall focus mainly on their differences." (pp. 180-181, notes omitted)

Note: For the sake of brevity, I shall use the following abbreviations: PES for *Psychology From an Empirical Standpoint* (1874), DP for Franz Brentano's *Descriptive*

Psychology (1982) and PDP (Prague Descriptive Psychology) for Anton Marty's *Descriptive Psychology* (2011).

22. Tassone, Biagio G. 2011. "Franz Brentano's Phenomenological Transformation of Aristotle's Theory of Judgment." *Journal of the British Society for Phenomenology* no. 42:305-328.

"In what follows Brentano's early reading, adoption and reformulation of selected, central Aristotelian doctrines pertaining to philosophy of mind and ontology will be examined. Here it will be shown how the epistemological and ontological grounds for the theory of intellectual judgment found in Aristotle's writings strongly influenced the early Brentano. Nonetheless, for various reasons, Brentano critically rejected certain aspects of the Aristotelian theory of judgment and developed what can be called his phenomenological theory of judgment as an alternative. To better understand Brentano's phenomenological theory of judgment and its significance, special emphasis will be placed on two related areas: philosophy of mind and the theory of truth. Focusing on selected passages in Brentano's and Aristotle's writings that

discuss mental reference, representation, semantic content and the nature of truth claims, the implications and consequences of Brentano's phenomenological transformation of Aristotelianism will be spelled out. The most important consequence of Brentano's transformation of Aristotle's theory of judgment will be seen to be the articulation of a new and different understanding of the nature of truth." (p. 305)

23. ———. 2012. *From Psychology to Phenomenology: Franz Brentano's 'Psychology from an Empirical Standpoint' and Contemporary Philosophy of Mind*. New York: Palgrave Macmillan.

"The following book presents an outline and critical reading of Franz Brentano's philosophy of mind focusing closely on the system outlined in his magnum opus *Psychology from an Empirical Standpoint*.⁽¹⁾ In this 1874 text Brentano articulates a teleological and neo-Aristotelian framework for understanding the mental as representational. Brentano's earlier development of Aristotelian metaphysics and ontology in an empirical direction set the stage for the articulation of his philosophical psychology and new theory of the mental. Nonetheless Brentano's philosophical psychology still forms one of the overlooked alternatives in contemporary philosophy of mind. This is not to deny that the philosophical system of the PES has not had a strong, albeit indirect, influence on subsequent philosophy of mind. Many isolated aspects of Brentano's thought have been critically examined and commented on in the existing literature, yet the actual position put forth in the PES is almost never examined in itself as a whole and within its historical context.⁽²⁾" (p. 1)

The Second expanded edition *Psychologie vom empirischen Standpunkt* appeared in 1924 and was published by Felix Meiner, Leipzig. The standard and only widely available English translation is by A. C. Rancurello, D. B. Terrell, & L. McAlister, first published in 1973; the latest edition, edited with an introduction by Peter Simons, is published as *Psychology from an Empirical Standpoint*, London: Routledge Press, 1995.

Henceforth the English edition will be referred to simply as Psychology or PES, the German text will be cited as PES-G. Where the available English translation has been changed or altered in any way, this will be noted, following, the quoted text.

(2) Although there are always exceptions, in the case of Brentano's PES they do seem to prove the rule. That is, while there have been many full length studies of Brentano's descriptive psychology and analyses of its philosophical import, such as those by Antos Rancurello (1968), Liliana Albertazzi (2001 & 2006), Robin Rollinger (1999), Arkadiusz Chrudzimski (2001), etc., many of these studies either view the PES as merely a stepping stone in Brentano's development or read contemporary or non-Brentanian interests into the system he introduces there. Thus, while valuable, they do not make any sustained effort to evaluate the importance of Brentano's 1874 work as a systematic framework for understanding philosophy of mind.

Abstract: "Brentano is to be credited with overcoming representationalism originating mainly from Descartes. He arrived at direct realism while giving up the correspondence theory of truth which is wrongly equated with epistemological realism. Crucial is Brentano's intentional relation specific to mental acts and relating directly to objects. Moreover, his view that mental acts have objects but no content is also relevant because it excludes that the content can play the role of representative of the object. Brentano not only dropped the correspondence theory of truth, he throws out truth altogether and substitutes it with evidence. This is in line with direct realism which focusses on the object."

Reprinted with revisions in: Linda McAlister, *The Philosophy of Brentano*, pp. 204-212.

"Various sorts of considerations can be advanced in support of such a doctrine as reism. Since it is intended to exclude from the world and from our thought certain alleged entities,⁽³⁾ Ockham's razor (or the principle of *Denkökonomie*, as German idiom puts it) can be called upon directly. But the razor is never by itself sufficient. It can cut only what has been shown to be unnecessary. This is the typical role of *Sprachkritik* in Brentano's later philosophy. Even though language appears to contain names that designate all sorts of unreal objects, we can show by linguistic analysis that our thought can afford to do without them. All such references can be eliminated by translation into a language containing only the names of *realia*, i.e. persons and physical things.

Brentano also attempts to support reism by arguments independent of either Ockham's razor or linguistic analysis. Most of them are indirect arguments in which an absurdity or an infinite regress is shown to be implied by the assertion of an unreal entity of some sort. There is only one general and direct argument for reism, as Reinhard Kamitz acknowledges in his

painstaking study of Brentano's attempts to establish his position.(4)

Professor Mayer-Hillebrand also gives priority to the same argument on which Dr Kamitz places such emphasis, the proof from the univocal significance of *vorstellen*.(5) Both Professor Mayer-Hillebrand and Dr Kamitz attribute to me certain objections to this argument.(6) In the remainder of this article I shall expand upon these objections and explore some of the features of Brentano's theory which are brought to our attention by them." (p. 205 of the reprint)

(3) Brentano, unlike Kotarbinski, who coined the expression *Reismus*, was never a physicalist Both persons and physical things are *realia*. Excluded are objects of thought as such (e.g. Lockean ideas), abstractions formed by hypostasising adjectives, the existence or the possibility of anything, and so on. For brief accounts of the distinction between *realia* and *irrealia*, see Professor Mayer-Hillebrand's Introduction to *Die Abkehr vom Nichtrealen* (pp. 92ff) and Professor Chisholm's Introduction to *The True and the Evident* (pp. vii-viii).

27. ———. 1976. "Franz Brentano's Logical Innovations." *Midwest Studies in Philosophy* no. 1:81-91.

"A comparison with the approach that was taken by Frege provides the spark.

Brentano's devoted follower, Anton Marty of the German University in Prague, briefly commented on the relationship between the two in one of a series of articles published five years after the *Begriffsschrift* had appeared.(10)" (p. 82)

(...)

"In Marty's comparison between Brentano's and Frege's account of the nature of judgment, we come closer to the nerve of Brentano's theory than Flint or Land did. Their attention was still fixed on the comparison with the traditional logic, i.e. the categorical forms and the rules of the syllogism. And is curiosity not somewhat enlivened by Marty's claim that Brentano's scheme represents a more thoroughgoing and fundamental innovation than Frege's?"

These are the points that emerge from Marty's comments:

1. A sharp distinction must be drawn between the content or material of judgment, which is by itself neutral, and the judgmental function itself. This is the point of agreement between Brentano and Frege.
2. The content of a judgment may be simple, i.e. it need not be either a) a propositional content, as in Frege, nor b) a combination of ideas, as in the categorical forms and their existential equivalents. Furthermore even when the content is compound, the distinction between subject and predicate is of no logical significance.
3. The judgmental function may be either affirmative or negative, according to Brentano, whereas for Frege the assertion sign is sufficient and negation is assigned to the propositional content.

In sum. the basic description of a judgment within Brentano's scheme is that it is an affirmation or denial of something; the something, what is affirmed or denied, may be but need not be a "combination of ideas." (p. 83)

(10) Marty, Anton, *Gesammelte Schriften*, II, ed. Alfred Kastil (Halle, 1918), 56 ff. The article in which these comments occur originally appeared as the second of a series of articles under the general title "Über subjektlose Sätze und das Verhältnis der Grammatik zu Logik und Philosophie;" published in *Vierteljahrsschrift für wissenschaftliche Philosophie*. The second article appeared in Volume 8 (1884).

28. ———. 1978. "Quantification and Brentano's Logic." *Grazer Philosophische Studien* no. 5:45-66.

"Brentano's innovations in logical theory are considered in the context of his descriptive psychology, with its distinction between differences in quality and in object of mental phenomena. Objections are raised to interpretations that depend on a parallel between *Urteil* and assertion of a proposition. A more appropriate parallel is drawn between the assertion as subject to description in a metalanguage and the *Urteil* as secondary object in inner perception. This parallel is then applied so as to suggest a reinterpretation of substitutional quantification, rendering the substitutional interpretation immune to problems that often arise as to the relation between substitutional range and referential range."

29. ———. 1983. "Brentano's philosophy of mind." In *Contemporary Philosophy: A New survey - Vol. 4: Philosophy of Mind*, edited by Fløistad, Guttorm, 223-247. The Hague: Nijhoff.

"Despite fluctuations of doctrine and style and the apparent fragmentation of the philosophical enterprise into discrete fields of specialization, topical or temporal boundaries within philosophy continue to be arbitrary. The purpose to be served by this volume establishes at least a rough definition of the period to be covered.

My report on Brentano's philosophy of mind will consider books and articles that have appeared in print during the years 1966 through 1978." (p. 223)

(...)

"So far as the philosophy of mind is concerned, Vol. III of the *Psychology*, titled *Vom sinnlichen und noetischen Bewusstsein* [5], is especially important. Its principal subject is the distinction between sensory and noetic consciousness. Most of the themes of Brentano's philosophy of mental phenomena are represented: inner and outer perception, perception and apperception, modes of presentation and perception, the theory of abstraction and the thesis that the intentional reference

characteristic of all mental phenomena is always a general reference, varying in degree of generality, never reference to a specific individual." (p. 224)

Brentano, F. [5] *Psychologie vom empirischen Standpunkt*, Vol. III: *Vom sinnlichen und noetischen Bewusstsein*. Hamburg 1974. Revised edition with introduction by F. Mayer-Hillebrand.

30. Textor, Mark. 2006. "Brentano (and some neo-Brentanians) on inner consciousness." *Dialectica* no. 60:411-432.

Abstract: "Brentano's theory of inner consciousness has recently had a surprising comeback. However, it is still an open question how it is best understood. It is widely held that according to Brentano a mental act is conscious iff it is self-presenting. In contrast, I will argue that Brentano holds that a mental act x is conscious iff it is unified with an immediately evident cognition ('Erkenntnis') of x . If one understands Brentano's theory in this way, it promises to shed light on standard problems for theories of inner consciousness."

31. ———. 2007. "Brentano on the Doxastic Nature of Perceptual Experience." *History of Philosophy & Logical Analysis* no. 10:137-156.

Abstract: "Brentano, the founder of phenomenology, argues in his manuscript "Von der Natur der Vorstellungen" [1903] that perception involves the belief in the object presented. The argument from revealed perceptual illusions argues that a perceptual experience can rationally persist even if one knows that it represents the world incorrectly, while the corresponding belief cannot rationally persist in this situation. For this reason, perceptual experiences cannot be beliefs or intrinsically connected to them. Brentano and Marty have responded to this argument by arguing that a revealed perceptual illusion involves manifestly contradictory beliefs. In this paper I will discuss whether Brentano's controversial response can be defended and supported by independent reasons.."

32. ———. 2013. "Brentano on the dual relation of the mental." *Phenomenology and the Cognitive Sciences* no. 12:465-483.

Abstract: "Brentano held that every mental phenomenon has an object and is conscious (the dual relation thesis). The dual relation thesis faces a number of wellknown problems. The paper explores how Brentano tried to overcome these problems.

In considering Brentano's responses, the paper sheds light on Brentano's theory of judgement that underpins his philosophy of mind."

33. ———. 2013. "Unity Without Self: Brentano on the Unity of Consciousness." In *Themes from Brentano*, edited by Fisette, Denis and Fréchette, Guillaume, 67-86. Amsterdam: Rodopi.

"Brentano's marks of the mental have been received differently. The thesis that intentionality is the mark of the mental was and still is central to discussions in the philosophy of mind. By contrast, the view that only mental phenomena are real and that we are infallible about them has not had many supporters. Finally, Brentano's thesis that a particular kind of unity is a mark of the mental has been neglected in discussions. In this paper I will expound and assess Brentano's view that mental phenomena exhibit a distinctive kind of unity. Brentano attempts to explain the unity of consciousness without assuming the existence of an owner of mental phenomena, that is a soul, self or mental substance.(4) What does the unity of consciousness consist in if it does consist in the fact that one and the same self has the mental phenomena? After outlining the Humean background of this question I will develop and assess Brentano's answer." (p. 69)

(4) Brentano will later change his view and acknowledge the existence of a mental substance. See his manuscript 'Von der Seele'. In this paper I am only concerned with the position articulated in his *Psychologie*.

34. ———. 2017. *Brentano's Mind*. New York: Oxford University Press.

"0.3 Aim of the Book

The primary aim of this book is not historical. I will engage with two philosophical questions-'What is the nature of mind?' and 'What is the structure of consciousness'-through Brentano's work. My interest is not so much to find a plausible reading of Brentano's often dense and difficult texts, but to evaluate the arguments and views that can be distilled from them for truth. I will argue that Brentano gave a defensible and illuminating answer to the second question, while his answer to the first question is in interesting ways wrong. Intentionality is not the mark of the mental. I will argue that Brentano's student Husserl succeeded where Brentano failed: he developed a mark of the mental.

My overall goal is to bring out something true and philosophically illuminating in Brentano's thinking about the mind, in a historically informed way. I don't aim to capture and defend every detail of his philosophy of mind or reconstruct the historical development of his views. I will set aside those aspects of Brentano's thought that don't contribute to a viable philosophical view. The philosophical view that will emerge in this book will, I hope, preserve the spirit and often enough the letter of Brentano's work." (pp. 6-7)

35. ———. 2017. "Towards a Neo-Brentanian Theory of Existence." *Philosophers' Imprint* no. 17:1-20.

"In analytic philosophy the concept of existence has been approached by investigating the logical grammar of 'exists' and its synonyms.

Grammatically, 'exists' seems to be a first-order predicate that is true of objects. It occurs in predicate position in subject-predicate sentences such as 'Pluto (the planet) exists' and in quantified sentences such as 'No tame tigers exist.'" (p. 1, a note omitted)

(...)

"Only if we illegitimately assume that the sense of 'self-identical' has been independently fixed can we hold on to the view that the sense of 'self-identical' and 'exists' are different.

According to the satisfaction clause, 'exists' and 'is self-identical' have the same sense.(...).

This is a serious drawback. For intuitively the senses are different. I can have reason to think that *A* might not have existed. I can have no reason to think that *A* might not have been identical with itself.

This leaves the proponent of the first-order view with the task of removing "philosophical perplexity" about the concept expressed by 'exists'. Its sense cannot be articulated in terms of necessary and sufficient conditions. Yet it is desirable to articulate it in some way in order distinguish the sense of 'exists' from the sense of other universal first-order predicates. I will tackle this task in this paper by drawing on Franz Brentano's work.(16) Brentano aims to shed light on the concept of existence by appealing to a non-propositional attitude and when it is right to have it. In this paper I will defend the core of Brentano's approach to existence, but criticise his implementation of it. The proposed Neo-Brentanian view agrees with Brentano that the attitude of acknowledgement grounds our mastery of the sense expressed by 'exists'.

It disagrees with Brentano in that it does not give an analytic definition of existence in terms of correct acknowledgement."

(16) Schlick 1925, 39–41, and Stumpf 1939, 81–2, are early critical discussions of Brentano's theory of existential judgement. However, Schlick seems to throw out the baby with the bathwater: while Brentano's theory may not be a general theory of judgement, it may nonetheless be a promising theory of a particular kind of judgement. Schlick's criticism, it seems to me, has informed the reception and rejection of Brentano's ideas in analytic philosophy. The analytic literature on Brentano on existence is therefore sparse. An exception is Prior 1976, 111ff. Vallicella 2001 focuses on Brentano's treatment of existence, and Kriegel 2015 on the attitude of acknowledgement. Brandl 2002, section 5, gives a helpful overview of Brentano's view of judgement and its connection

with existence. I will discuss Vallicella and Kriegel's contributions briefly in section 4.

36. ———. 2017. "From Mental Holism to the Soul and Back." *The Monist* no. 100:133-154.

Abstract: "In his *Psychologie vom empirischen Standpunkt* Brentano proposed a view of consciousness that neither has room nor need for a subject of mental acts, a soul. Later he changed his mind: there is a soul that appears in consciousness. In this paper I will argue that Brentano's change of view is not justified. The subjectless view of consciousness can be defended against Brentano's argument and it is superior to its predecessor."

37. ———. 2017. "Brentano on Consciousness." In *The Routledge Handbook of Franz Brentano and the Brentano School*, edited by Kriegel, Uriah, 49-60. New York: Routledge.

"Consider a perceptual activity such as seeing a colour, hearing a tone, tasting a flavour.

How are these activities related to one's awareness of them? I will use Brentano's struggle with this question to guide the

reader through the development of his view on consciousness.

My starting point will be Brentano's book *Die Psychologie des Aristoteles* (Brentano 1867), in which he developed an inner sense view of consciousness (§§1–2). Brentano's early view is underexplored in the literature but is crucial for understanding the development of his thought on the matter. In his major work *Psychologie vom Empirischen Standpunkt* (1874), he rejected the existence of an inner sense: the exercises of our five senses yield awareness of the world (or at least of intentional objects) as well as awareness of these perceptions. This same-level view of consciousness has been explored and developed by contemporary philosophers of mind. I will discuss the arguments that moved Brentano to change his mind, outline the view, and, finally, respond to Husserl's influential criticism of Brentano's view (§§3–5)."

38. ———. 2018. "Newton's Intellectual Joy. Or A New Look at Brentano on Intellectual and Sensory Pleasure." *Brentano Studien* no. 16:277-304.

Abstract: "The paper gives a reconstruction of Brentano's distinction between intellectual and sensory pleasures. I will argue that for Brentano a sensory pleasure is a non-propositional liking of a sensory and an intellectual pleasure a non-propositional liking of an intellectual activity. In addition, these likings are only conceptually distinct from the activity liked. Sensory pleasures are supposed to be fundamentally different from intellectual ones in that the former have, while the latter lack intensity. I will deal with a philosophical and exegetical problem that arises from this distinction and use it to shed light on Chisholm's reading of Brentano's remarks on intellectual pleasure. The so-called 'Brentano-Chisholm view of Pleasure' has it that intellectual pleasure is, roughly, a propositional attitude of being pleased that p which causes sensory 'pleasure. I use my reconstruction of Brentano's view to argue that the 'Brentano-Chisholm-line' is not Brentano's and that Brentano even theorized about a different phenomenon."

39. ———. 2019. "How a Statement Has Meaning by Expressing a Judgement—Brentano Versus Marty on Utterance Meaning." In

Anton Marty and Contemporary Philosophy, edited by Bacigalupo, Giuliano and Leblanc, H el ene, 33-57. Cham (Switzerland): Palgrave Macmillan.

"In this paper, I will focus on the second commitment of intentionalist semantics: meaning facts supervene on facts about someone doing something with a communicative intention. My aim is to explore an alternative view of meaning according to which not speaker, but utterance meaning is the basic notion of a theory of meaning. The alternative is suggested in the work of Marty's philosophical teacher Franz Brentano (1838–1917). In his lectures on logic, Brentano took some utterances to have meaning in the relevant sense of 'meaning' independently of whether they are made in order to influence the thought of others. Brentano therefore prioritized utterance meaning over speaker meaning: the primary source of meaning is not a speaker meaning something by doing something, but what she does has meaning.

Brentano's proposal constitutes a welcome alternative to meaning intentionalism, and I will argue that it solves a number of problems that plague the intentionalist view of Marty and Grice. Hence, while Brentano seems to endorse later elements of meaning intentionalism in unpublished work, he shouldn't have.(4)

I will start with some scene setting (Sect. 2) and then argue that non-communicative utterances pose a problem for the meaning intentionalism of Marty and Grice (Sect. 3). I will use the problem to expound Brentano's theory of meaning and argue that it has the potential to solve the problem of non-communicative utterances (Sect. 4). However, the Brentano's view faces a different problem (Sect. 5). The remainder of the paper (Sects. 6–11) is devoted to answering the problem and thereby to show that Brentano's original idea can be defended and developed to yield an insight into speaker meaning." (p. 35)

(4) In unpublished manuscripts, Brentano endorsed also an intentional view of utterance, see his MS ('Die Sprache' Sp 4d).

40. ——. 2019. "Correctness first: Brentano on judgment and truth." In *The Act and Object of Judgment: Historical and*

Philosophical Perspectives, edited by Ball, Brian Andrew and Schuringa, Christoph, 129-150. New York: Routledge.

"1. Introduction

Truth is one of our most central concepts. Many philosophers tried to get clear about truth by giving definitions of this concept that decompose it into its marks. Franz Brentano took this approach to be of limited value. According to him, the primary question about any concept is how we acquire it, not how to define it. He argued that the concept of truth is derived from our awareness of correct judging, where correctness is a notion prior to truth. Truth stands to judgment as goodness to love: x is good if, and only if, x is correctly loved; x is true if, and only if, x is correctly judged. In current philosophy, Brentano's correctness is often called 'fittingness'. (1) In this terminology, Brentano proposed that fittingness is the primitive notion that allows us to understand value in general and truth in particular. In this paper, I will use an objection made by Moore to develop and defend Brentano's story of how we come to acquire the concept of correctness. In particular, I will argue that we need to revise our conception of self-evident judgment if we want to be a fittingness-first theorist like Brentano." (p. 129)

41. ———. 2019. "Brentano's Empiricism and the Philosophy of Intentionality." *Philosophy and Phenomenological Research* no. 98:50-68.

Abstract: Brentano's Thesis that intentionality is the mark of the mental is central to analytic philosophy of mind as well as phenomenology. The contemporary discussion assumes that it is a formulation of an analytic definition of the mental. I argue that this assumption is mistaken. According to Brentano, many philosophical concepts can only be elucidated by perceiving their instances because these concepts are abstracted from perception. The concept of the mental is one of these concepts. We need to understand Brentano's Thesis accordingly: It is a piece of advice on how to become introspectively aware of the distinctive feature of mental phenomena. On this understanding of Brentano's Thesis standard objections to it no longer arise."

42. Thomasson, Amie. 2000. "After Brentano: a one-level theory of consciousness." *European Journal of Philosophy* no. 8:190-209.

"I will argue that the presence of an early one-level theory in Brentano's work is not merely of historical interest, for it can show the way to develop an alternative one-level view of consciousness. Although certain modifications from his original view are required, I will argue that a phenomenologically sensitive one-level view developed along the lines he suggests can provide a better analysis of what consciousness consists in, and what distinguishes conscious from unconscious states, than either higher-order or current one-level representational views of consciousness." (p. 190)

43. Tomasi, Pietro. 2007. "The unpublished "History of Philosophy" (1866-1867) by Franz Brentano." *Axiomathes* no. 17:99-108.

"There are many difficulties with the existing interpretation of Brentano's works. The problem stems from the fact that Brentano's works, letters, manuscripts, memoirs, etc. remain unpublished or undiscovered. Moreover some Brentano's scholars, namely Kastil and Mayer-Hillebrandt, were incorrect in their method in publishing the philosopher's works. Namely, they misinterpreted his earlier works by incorporating numerous interpolations from different time periods as being the philosopher's final thoughts. More importantly, as evidenced by Antonio Russo's recent discovery (*), they also failed to realise the fact that Brentano's own theoretical views or works were mostly based on Aristotle and Thomas thoughts on metaphysics, that Brentano's main intention was to develop a scientific demonstration on this topic, and that this issue occupied his mind until his death.

It is hoped that this paper goes some way in resolving the said errors and coupled with the continue discovery of new material that the jigsaw of Brentano's works and thinking shall someday be correctly completed."

(*) [See: Russo Antonio (2003)]

44. Torrijos-Castrillejo, David. 2020. "The early Brentano and Plato's God." *Brentano Studien* no. 17:137-156.

Abstract: "The interest of the young Brentano for the philosophy of Plato is linked to his Aristotelian studies. Brentano understands Aristotle's philosophy in deep continuity with Plato's one. This continuity is clear in one of the most controversial points of Brentano's interpretation of Aristotle: the nature of God and the status of human soul. Brentano finds in both Plato and Aristotle a personal, monotheistic and creationistic God who also creates human soul, which is immortal. This approach is explained in some texts from the youth of Brentano, although there are signs indicating that he sustained it until the end of his life. In his interpretation of Plato's God, we see that Brentano identifies Him with the Idea of Good and the Demiurge. The Idea of Good would have even created the other Platonic Ideas, which should be understood as gods."

45. Tucker, Miles. 2020. "Moore, Brentano, and Scanlon: a defense of indefinability." *Philosophical Studies* no. 177:2261-2276.

Abstract: "Mooreans claim that intrinsic goodness is a conceptual primitive. Fitting-attitude theorists object: they say that goodness should be defined in terms of what it is fitting for us to value. The Moorean view is often considered a relic; the fitting-attitude view is increasingly popular. I think this unfortunate. Though the fitting-attitude analysis is powerful, the Moorean view is still attractive. I dedicate myself to the influential arguments marshaled against Moore's program, including those advanced by Scanlon, Stratton-Lake and Hooker, and Jacobson; I argue that they do not succeed."

46. Twardowski, Kazimierz. 1999. "Franz Brentano and the History of Philosophy." In *On actions, Products and Other Topics in Philosophy*, edited by Brandl, Johannes and Wolenski, Jan, 243-253. Amsterdam: Rodopi.

Translation by Arthur Szylewicz of a review of F. Brentano, *Die vier Phasen der Philosophie und ihr augenblicklicher Stand*

(1895) published in: *Przelom*, 11 (II) August 3 1895, Vienna, pp. 335-346.

"By defending Brentano's views in this fashion, I by no means wish to claim that his "four phases" are the last word in the historiosophy of philosophy. I am convinced that even these sorts of investigations advance only gradually, and cannot be made complete and perfect all at once. We should also remember that from a different vantage point, say, one which takes into account the relation of philosophy to religion, other historiosophical laws can be formulated, as Professor Straszewski has done in the work cited in our introduction. It seems to me, however, that as far as philosophy itself is concerned, rather than its relation to other realms in the intellectual evolution of mankind, the philosophy of the history of philosophy that Brentano offers may, for the time being, pass for the relatively best solution to the problems that are mounting in this growing field." (p. 250 of the reprint)

47. Valentine, Elizabeth. 2003. "The relation of Brentano to British philosophy." *Brentano Studien* no. 10:263-268.

"Brentano's work has had its greatest influence in Austria, Germany, Poland and Italy, but its importance for an understanding of British analytical philosophy is increasingly being recognised.

Brentano visited England in 1872, meeting with Herbert Spencer amongst others; he had a preference for British philosophy, regarding Kant and Hegel as the height of decadence. Despite this, English editions of his work were slow to appear. For a long time the only work to be translated into English was *Our knowledge of right and wrong* (1902). The first English edition of *Psychology from an empirical standpoint* did not appear until 1973. A new edition has recently been prepared (1995).

It could be argued that Brentano's work set the agenda for much twentieth century British philosophy, with regard to method (analysis); topic (reference, intentionality and meaning); and, to some extent, doctrine (the shift from idealism to realism). A key figure in the mediation of this influence was G.F. Stout." (p. 263)

48. Vallicella, William. 2001. "Brentano on Existence." *History of Philosophy Quarterly* no. 18:311-327.

"Franz Brentano is an important transitional figure in the history of philosophy. Although he was steeped in Aristotle and the scholastics, his deflationary linguistic approach to metaphysical questions anticipates twentieth-century analytic treatments.

Indeed, Gustav Bergmann calls him "the first linguistic philosopher."(1) A good example of Brentano's deflationism is his theory of existence, which in some ways anticipates the influential theories of Frege and Russell. My aim here is to present and evaluate Brentano's theory of existence. Although I will be arguing that it is fatally flawed, there is much to learn from it." (p. 311)

Abstracty: "In [Vasyukov 1993] some systems of Leśniewskian Ontology were introduced as a toolkit for Husserl's and Meinong's theory of objects. Here such consideration is extended to Brentano-Husserl's theory of time. So-called antidiodorean logics are used as the foundations of the approach undertaken."

50. Velarde-Mayol, Victor. 2002. *On Brentano*. Belmont: Wadsworth.

"Brentano is in the crossroads between the two major philosophical traditions in Western philosophy, namely, Continental and Analytic philosophy. He resurrected the notion of intentionality, which was pervasively used by both philosophical traditions with very different outcomes and applications. In Continental philosophy, phenomenology is a development of Brentano's ideas on intentionality, in such a way, that without this, phenomenology would be impossible. In Analytic philosophy, one of the few notions shared with Continental philosophy is precisely the intentional character of mental acts, but with different application and interpretation. Here, in this book, we will dedicate to Brentano's psychology more attention than to other topics, not only because of its historical influence but also because it plays an essential role in his whole philosophy.

There are some subjects that are missing here: aesthetics and the relations between philosophy and religion. The reason of this lack is only the constraints of space. A decision was made in favor of some topics over others that could illustrate better Brentano's philosophy." (p. 1)

51. Vendrell Ferran, Íngrid. 2020. "Brentano and the Birth of a New Paradigm in Philosophy of Emotion." In *Franz Brentano's Philosophy after Hundred Years: From History of Philosophy to Reism*, edited by Fissette, D., Frechette, Guillaume and Janoušek, Hynek. Cham (Switzerland): Springer.

Abstract: "This chapter argues that the view of the emotions put forward by Brentano, and the modifications and refinements of his claims undertaken by his followers, led to the birth of new paradigm in the philosophy of emotion. The paper is structured as follows. After the introduction, section 2 presents the context in which Brentano's theory emerged. Section 3 is devoted to Brentano's three main claims on the emotions, focusing on their intentionality, their dependency on cognitions, and their relation to values. Section 4 offers an overview of the main debates surrounding these claims among the authors belonging to Brentano's school. Section 5 underlines the parallels between views on the emotions put forward by Brentano and his

followers and similar claims defended in contemporary analytic philosophy."

52. Vinogradov, Evgeni G. 1998. "The Rationalistic Paradigm of Franz Brentano and Kazimierz Twardowski." In *The Lvov-Warsaw School and Contemporary Philosophy*, edited by Kijania-Placek, Katarzyna and Wolenski, Jan, 101-104. Dordrecht: Kluwer.

"In the philosophical heritage of Kazimierz Twardowski the comparatively small work 'Franz Brentano and the History of Philosophy' is probably not very important.

But the breath of a new day and new ideas make it available nowadays, a hundred years after its first publication in Vienna.

(1) This work is a summary or a detailed review of Franz Brentano's paper 'The Four Phases of Philosophy and Its Contemporary Stage', in which the Brentanian historical-philosophical conception is put forward.(2)" (p. 101)

54. Weingartner, Paul. 1978. "Brentano's Criticism of the Correspondence Theory of Truth and the Principle '*Ens et verum convertuntur*'." *Grazer Philosophische Studien* no. 5:183-196.

"This paper investigates Brentano's criticism of the correspondence theory of truth within the context of a discussion of his ontological assumptions. Brentano's

interpretation of the formula *veritas est adaequatio rei et intellectus* and of the principle *ens et verum convertuntur* is shown to fit into the history of these principles and into modern interpretations like that of Tarski."

55. Werner, Sauer. 2017. "Brentano's Reism." In *The Routledge Handbook of Franz Brentano and the Brentano School*, edited by Kriegel, Uriah, 133-143. New York: Routledge.

"On January 7, 1903, Brentano wrote to Anton Marty that by now he thought it to be "impossible that factuality (*Tatsächlichkeit*) should belong to an irreal except in dependence on something real" as "concomitantly" occurring (Brentano 1966a: 106). For instance, when someone is thinking of a reale or thing (*Ding*) A, say the sun or a centaur, there exists concomitantly to the A-thinker (who is a thing) also an irreal, namely, a thought-of thing (*Gedankending*) which is the thought-of A (Brentano 1930: 31, 48).

Thus, when writing this letter, Brentano still held the view that the realm of beings comprises besides *entia realia* or things also *entia irrealia*.⁽¹⁾ But then on September 10, 1903, he tells Marty that now he "is making a new attempt to understand all *entia rationis* [i.e., irrealia] as fictions, viz., to deny that they are" (1966a: 108). So it was during the time between these two letters that there occurred what has been dubbed the "reistic turn" in Brentano's ontological thinking.

In the following, we will, first, give a rough outline of the scope of the *entia realia*; second, what we may call Brentano's master argument for reism will be discussed; and third, we will attempt to sketch a way out Brentano might have taken in the face of the difficulties inherent in his brand of reism." (p. 133)

(1) Albeit in a restricted way, since before he had acknowledged also irrealia that are entirely independent of realia: see Brentano 1930: 26.

56. Willard, Dallas. 1998. "Who Needs Brentano? The Wasteland of Philosophy without its Past." In *The Brentano Puzzle*, edited by Poli, Roberto, 15-43. Aldershot: Ashgate.

"In the volume of studies which forms the immediate background for this conference,(1) we read of "the oblivion into which the figure and thought of Brentano have fallen," and of his current 'invisibility' (pp. xv, 9, etc.). I believe Brentano to be someone of great philosophical value in his own right. But it seems to me that the state of affairs thus described with reference to Brentano is much greater than Brentano, and is of profound significance for the understanding of philosophy as a practice and a field of inquiry. Brentano's invisibility is chiefly a matter of what has come to be regarded as 'good philosophical work' in the course of the 20th Century. And this is especially true from the viewpoint of current North American Analytic philosophy, which I shall almost exclusively have in mind with my comments. If we are concerned about the fate of Brentano's thought, it is essential to deal with prevailing assumptions about how philosophy is done and when it is well done.

I think that similar points as I shall make here with reference to current Analytic philosophy in North America and Brentano could also be made with reference to, say, Hermeneutical philosophy from Heidegger on and Brentano, or to the various other forms of what, in the United States, tends to be called 'Post-Structuralism,' or sometimes 'Post-Modernism,' and Brentano. But I cannot cover all these areas, of course, and am most familiar with how 'Analytic' philosophy is now actually practiced in the United States. And it is philosophical practice that lies at the heart of my concerns." (p. 15)

57. Wolenski, Jan. 1989. "Brentano's criticism of the correspondence conception of truth and Tarski's semantic theory." *Topoi* no. 8:105-110.

"This paper is a sequel to Simons and Wolenski [*De Veritate: Austro-Polish contributions to the theory of truth from Brentano to Tarski*, 1989], which contains a short discussion of Brentano's arguments against the theory of truth based on the concept of a correspondence between truth-bearers and reality (or its appropriate portions). In that paper we attempt to show that Tarski's conception successfully meets Brentano's objections. Here I should like to extend as well as, in some points, improve what we said in Simons and Wolenski [1989]. There are several reasons for doing this. First, the renaissance of Brentano's own philosophy and Brentanism in general requires that his arguments deserve considerable attention. Secondly, Brentano's arguments against the correspondence theory of truth have become part of philosophical folklore.

Thirdly, Tarski's semantic truth-definition, despite the reservations raised by several authors, is often considered as a possible modern interpretation of the classical theory of truth. Fourth, Tarski's theory of truth is deeply rooted in the Brentanian theoretical tradition, independent of Tarski's own philosophical consciousness.

It is further interesting to see how, if at all, his definition of truth is affected by critical arguments of his philosophical great-grandfather (*via* Twardowski, Lukasiewicz, Lesniewski and Kotarbinski)." (notes omitted)

58. ———. 1994. "Brentano, the Univocality of Thinking, 'Something', and 'Reism'." *Brentano Studien* no. 5:149-166.

"Brentano's argument for Reism from the univocality of 'thinking' is examined. Firstly, Brentano's original formulation is given. Secondly, comments on the argument made by Marty, Kamitz, Teller and Farias are summarized and briefly discussed. The univocality argument is then embedded into the frameworks of two logical systems: predicate calculus and Lesniewskian ontology; the latter system is shown as a more effective basis for reism than the former. Finally, it is argued that a distinction between formal-ontological reism and metaphysical reism should be made."

59. Woleński, Jan. 1996. "Reism in the Brentanist Tradition." In *The School of Franz Brentano*, edited by Albertazzi, Liliana, Libardi, Massimo and Poli, Roberto, 357-375. Dordrecht: Kluwer.

"The term 'reism' was introduced by Tadeusz Kotarbinski to denote the philosophical view that the category of things is the sole ontological category.(1)

Shortly after *Elementy* went in print, Kazimierz Twardowski pointed out in a letter to Kotarbinski, that a similar ontological theory has been elaborated by Franz Brentano in the last period of his life. In 1930, Kotarbinski delivered a lecture at 7th International Philosophical Congress in Oxford. After the congress, he received a letter from Georg Katkov with further information on Brentano's reism.(2)" (p. 357)

(...)

"The later course of Brentano's ontology may be seen as a constant departure from his early view.(7)

Brentano became a reist around 1904 but earlier he restricted the categories of irrealia which can be objects of presentations to four kinds, namely immanent objects, contents of mental acts (judging, loving, hating), relations, and *collectiva*. Especially, he rejected universals (genera, differentiae specifficae) as genuine objects." (p. 358)

(1) Kotarbinski 1929, 67. This letter was published in Kotarbinski's 1966. The term 'reism' appears on p. 57 of the English edition.

(2) Kotarbinski mentions letters from Twardowski and Katkov in his 1930-1931. This paper contains a brief comparison of his views with those of Brentano. In Kotarbinski 1935 (his review of Kraus 1934) and in Kotarbinski 1976 one finds more comprehensive comparisons written by Kotarbinski himself. See also Smith 1990, 170-174.

(7) Mayer-Hillebrand 1966, 1-99, 399-403 gives extensive treatment to Brentano's ontological development (page-

numbers henceforth according to Meiner's edition, Hamburg 1977); see also Srzednicki 1965.

"Brentano now continues his analysis by turning to self-awareness, or as he calls it inner consciousness (*inneres Bewußtsein*). As we have just seen, Brentano takes consciousness to be characterized by a reference to an object, namely to the object that it is conscious of. But as he then points out, the term 'conscious', can be used in a twofold sense. On the one hand, we say of an act that it is conscious, insofar as it is aware of an object. On the other hand, we say of an object that it is conscious, insofar as one is aware of it. All psychical acts are characterized by their being conscious of something. The question is whether they are also conscious in the second sense, that is, whether one is also aware of them, or whether one must deny this and consequently admit the existence of unconscious psychical acts.(15)" (p. 5)

61. ———. 2004. "Back to Brentano?" *Journal of Consciousness Studies* no. 11:66-87.

Abstract: "For a couple of decades, higher-order theories of consciousness have enjoyed great popularity, but they have recently been met with growing dissatisfaction. Many have started to look elsewhere for viable alternatives, and within the last few years, quite a few have rediscovered Brentano. In this paper such a (neo-)Brentanian one-level account of consciousness will be outlined and discussed. It will be argued that it can contribute important insights to our understanding of the relation between consciousness and self-awareness, but it will also be argued that the account remains beset with some problems, and that it will ultimately make more sense to take a closer look at Sartre, Husserl, and Heidegger, if one is on the lookout for promising alternatives to the higher-order theories, than to return all the way to Brentano."

Abstract: "In this article I discuss a view on individuation exposed by Brentano in his *Theory of Categories*. According to this view, it is the spatial location of a physical thing that is its principle of individuation. I put forward hypotheses concerning the assumptions on the force of which Brentano might have arrived at this view. I also assess the 'price' that has to be paid for making such assumptions."

64. Zimmer, Alf. 1998. "On Agents and Objects: Some Remarks on Brentanian Perception." In *The Brentano Puzzle*, edited by Poli, Roberto, 93-112. Aldershot: Ashgate.

"Introduction: the 'invisibility' of Brentano in modern psychology

From my point of view, the Brentano puzzle (Albertazzi, Libardi and Poli, 1996) has two aspects: (i) The quantitative Zeitgeist of psychological science during the second part of the nineteenth century was incompatible with Brentano's genuinely qualitative approach and (ii) the open-mindedness of modern psychology for qualitative analysis can not refer to Brentano because the mental avenue to his Psychology from an empirical point of view is blocked by Husserl's reinterpretation and his rebuttal of psychologism. While the latter part of the puzzle has been analyzed in detail, the first aspect remains unaddressed because the exclusively quantitative orientation of psychological science at the end of the last century appears alien in the light of today's psychology where the most stringent tools of experimentation and mathematics are used to build formal models of qualitative change (see Kruse and Stadler, 1995)." "Brentano and Whitehead - last heroes of the old debate. There are, broadly speaking, three doctrines about physical boundaries to be found in the medieval and modern debate; I shall call them "indivisibilism", "moderate indivisibilism", and "anti-indivisibilism". In section II I describe these views, and mention some of their better-known proponents. Then indivisibilism, moderate indivisibilism, and anti-indivisibilism each receives a section of its own. Although this paper will not pretend to offer a decisive answer to the question which of these three (if any) is in fact correct, it is intended to serve as a sort of historical propaedeutic to the consideration of this question. Along the way, I shall try to show that the most promising version of moderate indivisibilism was being developed by Franz Brentano at the same time Alfred North Whitehead was providing mortar to fill the holes remaining in earlier versions of anti-indivisibilism. Whitehead's contribution to anti-indivisibilism is his famous method of extensive abstraction, first developed in a series of papers written between 1914 and 1917. Curiously enough, these were the very years during which Brentano - near the end of his life and by then completely blind - dictated his works on boundaries and continua. Brentano admits physical points, lines, and surfaces as real parts of extended bodies; and, just as Whitehead's work advances the anti-indivisibilist cause, Brentano's is a step forward for moderate indivisibilism. Brentano's work on boundaries trickled out ever so slowly, the lion's share remaining unpublished until 1976. Furthermore, although Whitehead discussed the philosophical problems about boundaries in his first exposition of the method of extensive abstraction, he did not realize that the method contributed to their resolution; and his better known later works omit discussion of these problems altogether. For these reasons, the continuity between the older debate and the contributions of

Whitehead and Brentano is easy to miss." (pp. 149-150, notes omitted)

"The objective of this paper is to refute the widely held view that in the wake of his so-called reistic turn Brentano subjected his notion of intentionality to a deep-going revision, viz., that he turned from an ontological account of the intentional object by way of identifying it with the thought-of-thing, i.e., the intentional correlate, or by way of attributing to it a peculiar sort of existence, to a non-ontological account thereof. It will be shown that neither the pre-reistic Brentano espoused anything of an ontological account of the intentional object in that he both distinguished it sharply from the intentional correlate and definitely rejected the idea of there being different sorts of existence, and it will be argued that the apparently ineradicable inclination to ascribe to the pre-reistic Brentano an ontological account of the intentional object stems from ignoring the Aristotelian background of Brentano's thinking about relations."

Résumé: "La théorie adverbiale du jugement chez Brentano en tant qu'elle va de pair avec la distinction du *modus rectus* et du *modus obliquus* peut apparaître comme une interprétation originale de la théorie de la connotation. On montre que la théorie des noms « connotatifs » et des « noms relatifs » de John Stuart Mill éclaire effectivement l'horizon conceptuel où s'inscrit la distinction brentanienne des deux modes. Transposé à l'acte de penser brentanien, la thèse de Stuart Mill sur les « noms corrélatifs » revient à dire que 'B est-pensé-par A' et 'A pense-B' connotent exactement le même fait: qu'il y a un A-pensant-B. C'est une des premières amorces de l'adverbialisme. Mais, en ce qui concerne Brentano, c'est loin d'être la seule. On analyse ici deux autres dispositifs: la théorie aristotélicienne des relatifs, telle que l'exposent quelques textes des *Catégories* et de la *Métaphysique*; la distinction entre trois types de relations formulée par Thomas d'Aquin dans la I^a Pars, q. 13 a. 7, sur la base d'une distinction générale entre « relations réelles » et « relations de. »

On montre que le troisième type de relation défini par Thomas, où une chose devient ou cesse d'être connue en vertu des états intentionnels d'un connaissant, peut être énoncé sous la forme

'aR3b' où a, le connaissant, a une relation réelle à b, le connaissable,

& le sensible b a une relation de raison à a & b acquiert une relation à a du fait d'un changement dans les propriétés de a. C'est cette relation qui caractérise la relation intentionnelle dans la *Deskriptive Psychologie*. Après une brève comparaison des thèses de Brentano avec celles de Reid et d'Ockham sur la perception, on revient sur le débat Sauer-Chisholm concernant l'Intentionality-thesis. On présente quelques arguments en faveur d'une interprétation continuiste, selon laquelle Brentano affine d'abord sa théorie de la relation intentionnelle dans un sens qui incline au réisme, puis qui en fait partie intégrante. On soutient que les modifications apportées étaient appelées par les caractéristiques mêmes de ses premières théories sur l'inexistence intentionnelle et leur enracinement dans un certain aristotélisme, et qu'elles ont revêtu la forme d'une marche progressive, constante et raisonnée vers l'adverbialisme, vu par Brentano comme l'authentique position d'Aristote."

Résumé : "Dans le dernier quart du XIXe siècle, l'ambition d'une philosophie scientifique inspire la *Psychologie vom empirischen Standpunkt* de Franz Brentano. Appelée à refonder sur des bases empiriques l'univers de l'être, cette forme nouvelle de psychologie réactualiserait ainsi, en un sens, un certain héritage de la métaphysique ancienne.

Et Brentano parviendrait à assembler dans une même vision systématique les sources de la pensée grecque, en particulier aristotélicienne, et moderne. Mais peut-on vraiment considérer Brentano comme un aristotélicien en raison de son projet psychologique ?

La question est bien connue et comme Franco Volpi, entre autres, le soutient, il semblerait que l'orientation épistémologique de la psychologie brentanienne ne trouve pas dans l'aristotélisme son véritable motif directeur. Une autre lecture est toutefois possible à nos yeux, si nous considérons qu'à aucun moment Brentano ne prétend faire de la psychologie un moyen pour revenir à Aristote. C'est notre hypothèse de recherche qui nous conduit à lire avec la plus grande attention le traité de 1867, *Die Psychologie des Aristoteles* : le recours à Aristote resterait alors nécessaire pour comprendre le projet d'une nouvelle psychologie qui n'oublie pourtant pas sa vocation métaphysique."

- Résumé : Le chapitre vise à confronter la théorie de l'intentionnalité de Brentano à sa critique carnapienne. D'abord, l'auteur discute quelques convergences et divergences entre la première et la conception fonctionnelle de l'objet défendue par Carnap dans l'*Aufbau*, détaillant en quel sens l'une et l'autre s'enracinent dans une commune entreprise de critique du langage. Ensuite, il énonce contre l'intentionnalité de Brentano quatre objections directement inspirées de la conception carnapienne, dont il suggère qu'elle est, à certains égards, moins problématique."

Abstract: "Brentano's views on the ontological status of sensations have been almost completely ignored in the scholarly debate on his ontology of the mind. This is rather unfortunate, because such views shed light on the evolution of Brentano's perspective. In his "Psychology" (1874), Brentano claimed that all intentional objects both sensible, and intellectual share the same ontological nature. Yet he later dismissed this whole doctrine and began to distinguish rigorously between sensible and noetic conscience. I argue that this change was due to Brentano's views about the neurophysiology of human sensibility. After a long confrontation with Fechner, Brentano eventually embraced Helmholtz's idea of neural «specific energies» and shaped his newly developed doctrine of sensible qualities in accordance with it. Far from letting his ontology be driven by what he called «genetic psychology», Brentano was nevertheless prudent enough to develop his theories so that any contradiction with ascertained scientific facts could be avoided."

25. Poli, Roberto. 1993. "Ontologia e logica in Franz Brentano: giudizi categorici e giudizi tetici." *Epistemologia* no. 16:39-76

"The various attempts to clarify and interpret Brentano's logical analysis have merely provided a paraphrase of Brentano own words. We will analyse Brentano's proposals against the background of traditional logic. In his *Formale Logik*, Bochenski explicitly warns us that logic not only "does not give proof of a linear continuity of evolution", but that the logic which follows a long period of decadence "departs, for the most part, from different presuppositions and points of view, uses a different technique, and develops previously neglected aspects of the problematic. It is a different *form* of logic". I shall bear

these remarks of Bochenski's carefully in mind and I shall argue that mathematically-based modern formal logic and syllogistic theory of the past exemplify two distinct formal paradigms. My reference to two different paradigms, and not just to two different calculuses, implies that most of the syllogistic reformulations of this century are, broadly speaking, suspect; and specifically because they take the syllogistic to be a part or a fragment of first-order predicative calculus. Careful study of traditional logic immediately shows that traditional logic expresses specific ontological perspectives which are deeply embedded in its formal structures. From this point of view, Brentano's theory is a brilliant attempt to escape from some of the most difficult impasses of traditional logic and offers tools for new developments. Unfortunately, it arrived too late, just as the Fregean paradigm was about to burst on the scene."

"Conclusion.

Peirce explores two different hypotheses with respect to classifying the phaneron's constituents. The first is that they may be classified according to the three basic predicate forms of firstness, secondness, and thirdness. This is the formal classification and the one to which Peirce devotes the most energy. The second is that the phaneron's constituents may be classified on a continuum between positiveness and negativeness.

There are only hints throughout Peirce's manuscripts as to how such a classification is to work. Nonetheless, Peirce evidently holds that the formal and material categories can be combined to construct a sort of "phanerochemical" table of constituents.

Much as the chemical elements are classified by their periodicity and atomic weight, a phanerochemical table of constituents would have (I) as its columns (A) firstness, secondness, and thirdness, including these in (B) their logical ingredient relations (the firstness of secondness, the secondness of thirdness, etc.) and (C) their degenerate and genuine forms and (II) as its rows degrees of intensity between positiveness and negativeness.

Yet it must be admitted that Peirce's project remains largely unfinished and its prospects remain uncertain." (p. 74)

Abstract: "Charles Peirce's theory of signs greatly depends on his doctrine of categories, since this doctrine informs or inspires virtually all of his classifications of signs (e.g., that of iconic, indexical, and symbolic signs). Thus, an adequate understanding of Peirce's semiotic or (as he most often spelled it) semeiotic is impossible apart from at least a working knowledge of the Peircean categories. This essay offers a primer of Peirce's categories of firstness, secondness, and thirdness. Here the author succinctly explains the articulation, definition, number, names, functions, applications, origin, status, derivation, and justification of these categories. Such explanations throw much light on the theoretical structure exhibited by, and the intricate classifications encountered in, Peirce's minutely detailed theory of signs."

- Abstract: "This paper explores ways in which semiotic concepts of Charles Sanders Peirce illuminate the meaning-potential of English comparative adjectives. Having classified all phenomena into categories of Firstness, Secondness, and Thirdness, Peirce describes the three degrees of adjectives in terms of these categories: "Firstness is the mode of being of that which is such as it is, positively and without reference to anything else" (Hardwick, 1977: 24). The uncomparative positive degree of an adjective such as red or hard, then, is Peirce's example of Firstness. We return to this idea later."

Contents: Part. I. The elements of Phenomenology. Foreword VII; I. The beginnings of Phenomenology - Introductory 1; II. The birth of Phenomenology (1867-1868) 19; III. The same subject concluded 53; Part II. IV: Phenomenology and Nature (1867-1904) 59; V. Phaneroscopy: the description of the phaneron 77; Appendix 103; Bibliography 105, Index 107-109.

From the Foreword: "To trace the development of Peirce's phenomenology from a doctrine of Categories to the ground on which philosophy and science rest is the purpose of this book. Although parallels with Husserl's thought are inevitable, it has seemed proper to this writer to emphasize the growth of Peirce's own ideas and the scientific-philosophical background out of which they emerged. Thus Peirce's most original contributions, viz., a set of universal categories appearing in thought, nature and experience, the method of their discovery, and Phaneroscopy, the science that describes the *phaneron*, or the collective total of all that is in any way or in any sense present to the mind, are shown in the context of a single, evolving body of thought - a comprehensive philosophy shaped by Peirce's lifelong interest in logic, the sciences, ethics, aesthetics and metaphysics."

Abstract: "The article is devoted to the hypothesis explaining the order of signs' classes presented in the manuscripts and articles of Ch.S. Pierce via the diagram of relations of Aristotle's categories which was described in the first translation of Aristotle into Latin conducted after Boethius by Julius Pacius. The hypothesis allows explaining not only the order of categories in the Ch.S. Pierces diagram but also interpreting them via ten categories of Aristotle on the background of scholastic tradition of depicting relations. The conclusion is drawn that the theory of Ch.S. Pierce seems to be the development of Aristotle's doctrine of categories. The article can contribute to the history of philosophy."

Frege's Ontology: Being, Existence, and Truth

Being

"One of Frege's main semantic principles, is however, missing in Dummett's book, [*Frege: philosophy of language*] and it has been ignored by most Frege scholars. That principle is the thesis concerning the ambiguity of the word 'is'. Angelelli come close to attending to it when he makes some remarks on identity and predication, and Matthias Schirn puts special emphasis on the role of the thesis in Frege's work. However, the great majority of Frege scholars have neglected the ambiguity doctrine, even when they have commented on each of the allegedly different meanings of 'is' separately. This is strange in view of the fact that it was Frege and Russell who proposed the thesis and established it as one of the basic ingredients of modern logic. They have in fact been followed by most philosophers. For instance, in the *Tractatus* Ludwig Wittgenstein emphasizes the ambiguity of the verb 'to be' and stresses the importance of constructing a language which prevents confusions between the different meanings of 'is'. Wittgenstein also remarks that Frege's and Russell's conceptual notation: is such a language although it does not succeed in excluding all mistakes (*Tractatus*, 3.323 - 3.325). This work sets out to show that a large part of Frege's philosophy is an attempt to make us realize the importance of keeping the different meanings of 'is' apart and to catch the philosophical mistakes brought about our failure to see the ambiguity.

But how is the verb 'is' ambiguous in Fregean logic? Frege distinguishes between the following meaning of 'is':

1) the 'is' of identity (e.g., Phosphorus is Hesperus; $a=b$),

2) the 'is' of predication, i.e., the copula (e.g., 'Plato is blond'; $P(a)$),

3) the 'is' of existence,

(i) expressed by means of the existential quantifier and the symbol for identity (e.g., 'God is'; $(\exists x) (G=x)$),

or

(ii) expressed by means of the existential quantifier and the symbol for predication (e.g., 'There are human beings' / 'There is at least one human being'; $(\exists x) H(x)$),

and

4) the 'is' of class-inclusion, i.e., generic implication (e.g., 'A horse is a four-legged animal'; $(x) (P(x) \supset Q(x))$)." (pp. 13-14)

From: Leila Haaparanta, *Frege's Doctrine of Being*, Helsinki: *Acta Philosophica Fennica*, vol. 39, 1985.

Existence

"If you want to assign a content to the verb 'to be', so that the sentence 'A is' is not pleonastic and self-evident, you will have to allow circumstances which the negation of 'A is' is possible; that is to say, that there are subjects of which being must be denied. But in that case the concept 'being' will no longer be suitable for providing a general explanation of 'there are' under which 'there are B's' means the same as 'something that has being falls under the concept B'; for if we apply this explanation to 'There are subjects of which being must be denied', then we get 'Something that has being falls under the concept of not-being' or 'Something that has being is not'. There is no way of getting over this once a content of some kind -- it doesn't matter what it is -- is agreed to the concept of being. If the explanation of 'there are Bs' as meaning the same as 'Something that has being is B' is to work, we just have to understand by being something that goes entirely without saying.

For this reason the contradiction still remains if we say 'A exists' means 'The idea of the A has been caused by something affecting the ego'. (...)

We can say that the meanings of the word 'exist' in the sentences 'Leo Sachse exists' and 'Some men exist' display no more difference than does the meanings of 'is a German' in the sentences 'Leo Sachse is a German' and 'Some men are Germans'. But then the sentence 'Some men exist' or 'Something existing is a man' only means the same as 'There are men' if the concept 'existing thing' is superordinate to the concept man. So if such forms of expression are to have the same meaning in general, the concept 'existing thing' must be superordinate to every concept. This is only possible if the word 'exist' means something that goes entirely without saying, and if therefore nothing at all is predicated in the sentence 'Leo Sachse exists', and if in the sentence 'Some men exist' the content of what is predicated does not lie in the word 'exist'. The existence expressed by 'there is' is not contained in the word 'exist' but in the form of the particular judgement. 'Some men are Germans' is just as good an existential judgement as 'Some men exist'. But once the word 'exist' is given a content, which is predicated of an individual thing, this content can be made into the characteristic mark of a concept-a concept under which there falls the individual thing of which existence is being predicated. E.g. if one divides everything into two classes:

1. What is in my mind, ideas, feelings etc.

and

2. What is outside myself, and says of the latter that it exists, then one can construe existence as a characteristic mark of the concept 'centaur', although there are no centaurs. I would not acknowledge anything as a centaur that was not outside my mind; this means that I shall not call mere ideas or feelings centaurs.

The existence expressed by 'there is' cannot be a characteristic mark of a concept whose property it is, just because it is a property of it. In the sentence 'There are men' we seem to be speaking of individuals that fall under the concept 'man', whereas it is only the concept 'man' we are talking about. The content of the word 'exist' cannot well be taken as the characteristic mark of a concept, because 'exists', as it is used in the sentence 'Men exist', has no content.

We can see from all this how easily we can be led by language to see 'things in the wrong perspective, and what value it must therefore have for philosophy to free ourselves from the dominion of language. If one makes the attempt to construct a system of signs on quite other foundations and 'with quite other means, as I have tried to do in creating my concept-script,,we shall have, so to speak, our very noses rubbed into the false analogies in language." (pp. 65-67)

From: Gottlob Frege, *Dialogue with Punjer on Existence* (written before 1884), in: Hans Hermes, Friedrich Kambartel, Friedrich Kaulbach (eds.) *Posthumous Writings*, Chicago: The University of Chicago Press 1979, pp. 53-67.

Truth

"When entering upon the study of a science, we need to have some idea, if only a provisional one, of its nature. We want to have in sight a goal to strive towards; we want some point to aim at that will guide our steps in the right direction. The word 'true' can be used to indicate such a goal for logic, just as can 'good' for ethics and 'beautiful' for aesthetics. Of course all the sciences have truth as their goal, but logic is concerned with the predicate 'true' in a quite special way, namely in a way analogous to that in which physics has to do with the predicates 'heavy' and 'warm' or chemistry with the predicates 'acid' and 'alkaline'. There is, however, the difference that these sciences have to take into account other properties besides these we have mentioned, and that there is no one property by which their nature is so completely characterized as logic is by the word 'true'. (...) Now it would be futile to employ a definition in order to make it clearer what is to be understood by 'true'. If, for example, we wished to say 'an idea is true if it agrees with reality' nothing would have been achieved, since in order to apply this definition we should have to decide whether some idea or other did agree with reality. Thus we should have to presuppose the very thing that is being defined. The same would hold of any definition of the form 'A is true if and only if it has such-and-such properties or stands in such-and-such a relation to such-and-such a thing'. In each case in hand it would always come back to the question whether it is true that A has such-and-such properties, or stands in such-and-such a relation to such-and-such a thing. Truth is obviously something so primitive

and simple that it is not possible to reduce it to anything still simpler. Consequently we have no alternative but to bring out the peculiarity of our predicate by comparing it with others. What, in the first place, distinguishes it from all other predicates is that predicating it is always included in predicating anything whatever." (pp. 128-129)

From: Gottlob Frege, *Logic* (1897), in: Hans Hermes, Friedrich Kambartel, Friedrich Kaulbach (eds.) *Posthumous Writings*, Chicago: The University of Chicago Press 1979, pp. 126-151.

"7. What true is, I hold to be undefinable.

8. The expression in language for a thought is a sentence. We also speak in an extended sense of the truth of a sentence. 12. Logic only becomes possible with the conviction that there is a difference between truth and untruth.

13. We justify a judgement either by going back to truths that have been recognized already or without having recourse to other judgements. Only the first case, inference, is the concern of Logic.

14. The theory of concepts and of judgement is only preparatory to the theory of inference.

15. The task of logic is to set up laws according to which a judgement is justified by others, irrespective of whether these are themselves true.

16. Following the laws of logic can guarantee the truth of a judgement only insofar as our original grounds for making it, reside in judgements that are true.

17. No psychological investigation can justify the laws of logic." (pp. 174-175)

From: Gottlob Frege, "17 Key Sentences on Logic" (1906 or earlier), in: Hans Hermes, Friedrich Kambartel, Friedrich Kaulbach *Posthumous Writings*, Chicago: The University of Chicago Press 1979, pp. 174-175.

Selected Bibliography on Frege's Ontology

Bibliography

1. Angelelli, Ignacio. 1967. *Studies in Gottlob Frege and Traditional Philosophy*. Dordrecht: D. Reidel.

Contents: 0. Introduction 1; 1. Ontology 9; 2. Semantics 37; 3. The so-called logical relations 92; 4. The traditional lack of distinction between UF [das Fallen eines Einzelnen unter einen Begriff] and UO [the relation of subordination between two concepts] 107; 5. 'Merkmal-Eigenschaft' 138; 6. Function 150; 7. The idea of levels ('Stufen') in the philosophical tradition 192; 8. 'Wertverlauf' 205; 9. Existence 224; 10. Number 231; 11. The main results of the present investigation 252; Appendix 261; Bibliography 274; Index of names 287; Index of subjects 291.

From the Introduction: "The present work is not intended to be a presentation of or an introduction to Frege's doctrines (though it may be so in some respects). It presupposes a general knowledge of Frege's main doctrines and terminology, as well as of the main recent discussions on Frege.

Fregean terminology or doctrines are explained only so far as is necessary for each single discussion. (For instance, from an explanatory point of view, Frege's ideas on number should have been presented at the beginning, and not in the last chapter.)

As has been said, Frege's different aspects are distributed according to a hierarchy, in which his insight into *number* has the central place.

Nevertheless, in looking for an answer to our primary question, the *method* used has been analytical rather than synthetical; thereby, of course, the deep unity of Frege's thought has continually been taken into account.

Some of the philosophically relevant aspects of Frege's philosophy have been, so to speak, isolated, and the general question of his significance in the context of the philosophical tradition has been reiterated in reference to each single aspect. Thus the general question has split into a set of particular investigations, which is reflected in the title of the present work.

(...)

Each one of these 'Studies on G. Frege and Traditional Philosophy' is intended to satisfy simultaneously, at least in some degree, the following three conditions:

(1) that they be a critical discussion of some fragment of Frege's thought;

(2) that they be an application of Fregean doctrines to the philosophical past;

(3) that they be a study of some feature of the philosophical tradition which seems *necessary* for a better understanding of Frege's doctrines, and this in two ways: (a) intrinsically (i.e., a Fregean doctrine is confusing or not easily intelligible unless it is situated in the whole context of Western philosophy), (b) extrinsically (i.e., a Fregean doctrine, clear enough in itself, may be better appreciated in its full significance by comparing it with some similar doctrine of the philosophical tradition)."

Vol. II

4. ———. 1982. "Frege's Notion of 'Bedeutung'." In *Logic, Methodology and Philosophy of Science Vol. Vi. Proceedings of the Sixth International Congress of Logic, Methodology and Philosophy of Science*, edited by Cohen, Jonathan, 735-754. Amsterdam: North-Holland.
5. ———. 1984. "Frege and Abstraction." *Philosophia Naturalis* no. 21:453-471.

I list, and quote from Frege's texts on abstraction (section 1). Their content falls under three rubrics: ordinary abstraction, magical abstraction and definitions by abstraction. Frege's remarks on each of these types of abstraction are examined (sections 2, 3, 4). The result (section 5) is negative: Frege was not interested in abstraction; in fact, he even recommended that the term 'abstraction' be avoided.

The phrase 'definition by abstraction' is mentioned by Frege just once, in a letter to Russell. Although Frege has hardly anything to say about it, that Peanian phrase leads to a wider historical discussion (section 6) in which two methods are contrasted: the abstraction method (Peano, Weyl, Lorenzen) and the looking-around method (Frege, Carnap et al.). The phrase 'definition by abstraction', originally designed by Peano to refer to the abstraction method, ended up being used, quite inappropriately, as a designation of the looking-around procedure.

Peano's abstraction method may be referred to as "modern abstraction", insofar as it improves upon the traditional theories of abstraction. In section 7 it is argued that modern abstraction rescues the pre-Fregean persistent attempts to define number as product of abstraction. These pre-Fregean attempts, right in their purpose, went astray in their application of abstraction, basically because of lacking a logico-linguistically well defined theory of abstraction. If reconstructed by means of modern abstraction, the pre-Fregean attempts appear (1) to be immune to Frege's criticisms, (2) to yield a better notion of number than Frege's own, "logistic", looking-around inspired definition.

Also in section 7, modern abstraction is shown to establish a "bridge" between the traditional and Fregean theories of predication."

Note: I am grateful to CAMLS (Committee for attendance to meetings of learned societies) as well as to the Liberal Arts Foundations, The University of Texas at Austin, for helping me to attend the VII International Congress of Logic, Methodology and Philosophy of Science, Salzburg, July 1983, where this paper was presented. An abstract of the paper, published at the time of the meeting, needs the following two qualifications: a) "Frege refers to abstraction on several occasions, always negatively": this is wrong to the extent that in Frege's references to ordinary abstraction there is no criticism. (b) "Numbers as set of units" is not a traditional notion "vindicated" by modern abstraction except in the queer sense that the predicate "x is a set of units" might be shown to be invariant with respect to underlying equivalence relation of one-one correspondence among the sets from which number is abstracted.

From the General Introduction by Leila Haaparanta and Jaakko Hintikka: "In his paper, entitled 'Frege on Truth', Tyler Burge suggests that Frege's odd-sounding conclusion about truth and falsity should be taken seriously. In the first section of his article he claims that too little attention has been paid to the pragmatic basis of Frege's view that truth values are objects. According to Burge, Frege is committed to the doctrine that logic is primarily concerned with the normative notion of truth. The second section of Burge's paper consists mainly of the criticism of Dummett's interpretation of Frege's theses on truth values. In section III Burge purports to show how Frege's identification of the truth values with particular objects has its sources in 'some of his deepest philosophical conceptions'. He holds the view that 'in particular, it proceeds from a theory about the nature of logical objects, from a thesis about the aim and ordering of logic, and from his conceptions of assertion and truth.'" p. 6

Paperback edition reprinted with corrections, 2002; reprinted with further corrections, 2003.

"While many books discuss the individual achievements of Frege, Russell, Wittgenstein, and Quine, few books consider how the thought of all four thinkers bears on the fundamental questions of twentieth century philosophy. This book is about existence-identity connections in Frege, Russell, Wittgenstein, and Quine. The thesis of the book is that there is a general form of ontology, modified realism, which these great analysts share not only with each other, but with most great philosophers in the Western tradition. Modified realism is the view that in some sense there are both real identities and conceptual (or linguistic) identities. In more familiar language, it is the view that there are both real distinctions and distinctions in reason (or in language). Thus in modified realism, there are *some* real beings which can serve as a basis for accommodating possibly huge amounts of conceptual or linguistic relativity, or objectual identities' 'shifting' as sortal concepts or sortal terms 'shift.' Therefore, on the fundamental level of ontology, the linguistic turn was not a radical break from traditional substance theory. Dejnožka also holds that the conflict in all four analysts between private language arguments (which imply various kinds of realism) and conceptual "shifting" (which suggests conceptual relativism) is best resolved by, and is in fact implicitly resolved by, their respective kinds of modified realism. Frege and Russell, not Wittgenstein and Quine, emerge as the true analytic progenitors of 'no entity without identity,' offering between them at least twenty-nine private language arguments and fifty-eight 'no entity without identity' theories."

31. ———. 2007. "Dummett's Backward Road to Frege and to Intuitionism." In *The Philosophy of Michael Dummett. The Library of Living Philosophers*, edited by Auxier, Randall E., 55-113. La Salle: Open Court.

"This paper is on Michael Dummett's paper, "The Context Principle: Centre of Frege's Philosophy" (read in 1993, published in 1995), in which Dummett revises his thinking on Frege. But it is really on Frege. I argue that Dummett's semantic program for Frege rests on a scholarly and philosophical mistake. Namely, it takes what Russell calls the

backward road from reference to sense. Since Dummett endorses the backward road, I must show that the mistake is genuine. But I need not enter the murky waters of "On Denoting" to do so, since I make the mistake independently clear. After arguing that no senses are objects or functions, I show how we can keep Frege's context principle from bifurcating into one principle for senses and another for references. I conclude by showing that intuitionism is a form of the backward road and shares in the mistake." (Jan Dejnožka)

"Thus, I recant my earlier view and am now in full agreement with Jan Dejnožka that senses - even thoughts - cannot be objects. He deserves credit for perceiving this....The whole apparatus of objects, concepts, and functions is inapplicable in the realm of sense. Dr. Dejnožka perceives this too....I think now that Frege ought to have held that view, and I applaud Dr. Dejnožka's recognition of this." Michael Dummett, "Reply to Jan Dejnožka," in *The Philosophy of Michael Dummett*, 122-23.

32. ———. 2010. "Dummett's Forward Road to Frege and to Intuitionism." *Diametros* no. 25:118-131.

"This paper continues my discussion of Frege with Michael Dummett in *The Philosophy of Michael Dummett* (2007). Most of it is about Dummett's adopting my view that Frege's senses cannot be objects. The issues include: the cognitive order versus the ontological order for the forward road; the nature and identity of senses; the different senses of "intension;" the nature of saturation; whether special quantifiers are now needed for senses; and Frege's earlier and later permutation arguments. I also continue our discussion of the implications of the forward road for intuitionism."

Contents: Preface 3; A note on the textual references and the bibliography 5; I. Introduction 9; II. The interpretational framework 27; III. The origin of the thesis concerning the ambiguity of the word 'Is' 47; IV. Identity and predication 59; V. Existence 128; VI. Concluding remarks 159; Bibliography 162; Index of names 179.

"The purpose of this work is to clarify the philosophical basis of Frege's doctrine concerning the word 'is'. Frege's doctrine of being is partly considered in its historical setting, formed mainly by Leibniz and Kant. Since the ambiguity thesis is one of the cornerstones of Frege's new logic, this work will, to some extent, help to indicate how Frege arrived at his great logical innovation. I shall proceed by first presenting a short survey of the different approaches to Frege's philosophy and thereafter outlining Frege's historical setting (Chapter II.1.). Then I shall present the main features of Frege's view of logic (Chapter II.2.). After that, I shall say a few words of the history of the

word 'being' in philosophical and philological literature and study Frege's texts concerning the ambiguity doctrine (Chapter III). In Chapter IV there is a discussion on Frege's distinction between identity and predication with reference to Leibniz's and Kant's thought and some remarks are also made on class-inclusion. In Chapter V there are comments on Frege's doctrine of existence with reference to Kant's ideas. Finally, I shall make some concluding remarks on Frege in a wider historical context (Chapter VI). Chapter II will give the interpretational framework for considering Frege's doctrine of being. Chapters IV and V are meant to show how this general hypothesis works in the textual material and thereby to yield a detailed interpretation of Frege's view." pp. 16-17.

From the General Introduction by Leila Haaparanta and Jaakko Hintikka: "In her article 'Frege on Existence' Leila Haaparanta emphasizes that Frege's greatest insight was the idea of first-order language, which, to a large extent, motivated the rest of his innovations. Haaparanta focuses her attention on Frege's concept of existence, which receives special attention in Frege's thought in connection with the thesis concerning the ambiguity of such words for being as the English 'is'. The ambiguity thesis was an important part of the Fregean paradigm of first-order logic. Haaparanta argues that Frege does not only assume the word 'is' to be ambiguous but that he considers 'exists', or the 'is' of existence, to be an equivocal word. She suggests that the equivocality view has a metaphysical and epistemological background in Frege's thought. Her paper thus pushes a great deal further the suggestions of Jaakko Hintikka mentioned earlier in this Introduction." p. 6

From the General Introduction: "In recent literature [about Frege], one can also find a wealth of new and sometimes controversial viewpoints. For instance, Jean van Heijenoort has called our attention to an important but neglected aspect of

Frege's attitude to logic and language that he calls 'logic as language'. Hans Sluga has challenged on a large scale the received view of Frege as a lonely figure in nineteenth-century philosophy whose ancestry goes to medieval objectivists rather than his German predecessors. Sluga wants to place Frege firmly in the middle of the German philosophical tradition of his day. It is indeed unmistakable that there are, for instance, Kantian elements in his thinking that had earlier been overlooked. Indeed, the idea of logic as language is likely to be one of them. Another one is the sharp contrast between the realm of thinking and understanding and the realm of sense and intuition. Sluga's influence is illustrated amply in several papers in this volume. In an attempt to reverse the traditional priorities, Jaakko Hintikka has suggested, relying partly on van Heijenoort's interpretation, that the crucial part of Frege's work in semantics lies in his ideas about the semantics of the familiar elementary logic (truth-functions and quantification) rather than in Frege's theory of sense and reference, which is merely intensional frosting on a more important extensional cake, even though it is typically given the pride of place in expositions in Frege's semantics. As a part of this attempted reversal of emphasis, Jaakko Hintikka has also called attention to the role Frege played in convincing almost everyone that verbs for being had to be treated as multiply ambiguous between the 'is' of identity, the 'is' of predication, the 'is' of existence, and the 'is' of class-inclusion -- a view that had been embraced by few major figures (if any) before Frege, with the exception of John Stuart Mill and Augustus De Morgan. Hintikka has gone on to challenge this ambiguity thesis. At the same time, Frege's role in the genesis of another major twentieth-century philosophical movement, the phenomenological one, has become an important issue. Even the translation of Frege's key term '*Bedeutung*' as 'reference' has become controversial.

The interpretation of Frege is thus thrown largely back in the melting pot. In editing this volume, we have not tried to publish the last word on Frege. Even though we may harbor such ambitions ourselves, they are not what has led to the present editorial enterprise. What we have tried to do is to bring

together some of the best ongoing work on Frege. Even though the ultimate judgment on our success lies with our readers, we want to register our satisfaction with all the contributions."

Contents: Abbreviations IX; Preliminary terminological comments XI; Glossary XIII; Acknowledgments XIV; Introduction 1.

Part One: Logic, realism and the foundations of arithmetic

1. The argument that Frege influenced Husserl 7; 2. Husserl, Frege, and psychologism 13; 3. Sense, meaning, and noema; 4. Husserl's 1891 critique of Frege 43; 5. Frege's review and the development of Husserl's thought 57; Conclusion: analyticity 91.

Part Two: Conceptual clarity

Introduction 99; 6. Intensions and extensions 103; 7. Presentation and ideas 125; 8. Function and concept 137; 9. On denoting 147; Conclusion: The way *things* are 163; Notes 175; Bibliography 191; Index 215.

From the Introduction: "As a book by the founder of phenomenology that examines Frege's ideas from Brentano's

empirical standpoint, Husserl's *Philosophy of Arithmetic* is both an early work of phenomenology and of logical empiricism. In it Husserl predicted the failure of Frege's attempt to logicize arithmetic and to mathematize logic two years before the publication of the *Basic Laws of Arithmetic* in 1893. I hope to show that Husserl did so in terms that would prefigure both the account Frege would give of his error after Russell encountered the paradoxes ten years later and the discussions of *Principia Mathematica*. Moreover, in locating the source of Frege's difficulties in the ambiguous theory of identity, meaning, and denotation that forms the basis of Frege's logical project and generates Russell's contradictions, Husserl's discussions indicate that these contradictions may have as serious consequences for twentieth century philosophy of language as they have had for the philosophy of mathematics.

This book is about these Austro-German roots of twentieth century philosophy. It is mainly about the origins of analytic philosophy, about the transmission of Frege's thought to the English speaking world, and about the relevance of Husserl's early criticism of Frege's *Foundations of Arithmetic* to some contemporary issues in philosophy. It is more about Husserl the philosopher of logic and mathematics than it is about Husserl the phenomenologist, and it is principally addressed to those members of the philosophical community who, via Russell, have been affected by Frege's logic.

This makes it very different from work on Husserl and Frege that has focused on the importance of Frege's criticism of Husserl's *Philosophy of Arithmetic* and attendant issues. The goal of this book is quite the opposite. It studies the shortcomings in Frege's thought that Husserl flagged and Russell endeavored to overcome. One possible sequel to this book would be a thorough study of Husserl's successes and failures in remedying the philosophical ills he perceived all about him, but that goes beyond the scope of this work, which follows the issues discussed into the work of Russell and his successors." Selected bibliography 577; Index 583-586.

"As Frege's writings became more widely read, a number of articles were written about various aspects of Frege's work-his

ontology, semantics, logic. Many of these papers are of great value for the study of Frege, and it was thought desirable to assemble some of them in a single volume. I have divided these essays into three main categories: (1) Frege's ontology, (2) his semantics, and (3) his logic and philosophy of mathematics. To some extent, these labels are not quite accurate. Thus a paper included in the section on semantics may have something to say regarding Frege's ontology as well. The categorization is a matter of emphasis; if a paper is chiefly about, say, Frege's ontology, then it appears in that section.

Two of the papers that are included in the volume have not been previously published. These are "Frege, Concepts, and Ontology," by Prof. Moltke S. Gram of Northwestern University (who so generously offered to write it for its appearance here), and my essay, "Frege's Ontology: Realism."

I have included as appendices three important essays by Frege, none of which were included in the excellent collection of translations by Geach and Black, but which are valuable for the study of Frege's thought." (from the Preface).

"In spite of the fact that a number of semantic notions currently used in modal logic go back to the work of Gottlob Frege as it was interpreted by Carnap in 1947 (1) Frege's rare remarks on the subject of modality show that he considered modal distinctions of little relevance to logic. And this may strike one as rather odd: for was it not one of Frege's aims to show that arithmetical propositions are analytic, if they are derivable as theorems in a sufficiently strong logic, on the basis of impeccable definitions and purely logical axioms? Moreover -- the objector may continue -- analytical propositions are knowable a priori (actually, necessarily so) and whatever is knowable a priori is a necessary truth (though, perhaps, not viceversa). Since in *Die Grundlagen der Arithmetik* (2) Frege did appeal to some of these notions, the question arises how we are to interpret his statements on the subject of modality. This may at first seem a rather roundabout way of approaching the

subject of assertion and assertion sign, and perhaps it is. But if we are to appreciate the profoundly innovative character of Frege's doctrine of truth and assertion it may prove a good strategy to touch briefly on the way in which Frege addressed the subject of analyticity and modality. Accordingly, after my having advanced some tentative suggestions as to the grounds of Frege's disparaging remarks about modality, I shall concentrate on the issue of Frege's recasting certain traditional distinctions in the theory of judgement, epitomized as it were in the introduction of a new sign into his logical notation -- a truly "momentous event" (to borrow a phrase of Wittgenstein's [TLP 5.452]), who, however, emphatically denied that this was a case in point (TLP 4.442) (3). I shall also mention a number of reinterpretations of Frege's judgement stroke proposed by later authors, so that the peculiarity of Frege's symbolic notation can be better appreciated." p. 139

"Frege had not one but two different notions of sense, namely, that of 'Uber Sinn und Bedeutung' and one implicit in a letter to Husserl of 1906 and elsewhere. This last one originates in Frege's notion of conceptual content. The distinction is used to clarify some obscurities in Frege's thought. In the last section a sort of 'explicans' of Frege's notion of conceptual content is introduced and applied to the semantic analysis of mathematics."

"The present collection of articles, mainly consisting of new publications, is a critical appreciation of the work of the logician, mathematician and philosopher Gottlob Frege.

Volume I opens the collection with a programmatic contribution determining critically the historical position of Frege's philosophy. The main part of the volume contains papers on logic and philosophy of mathematics. Among other things it is argued that Frege's introduction of the universal quantifier in the *Begriffsschrift* enabled an integration of the statement- and predicate- calculus, going far beyond Boole's logic. Besides textual analyses of special problems concerning Frege's logical system and an elucidation of the 'logistic thesis' in the context of modern investigations in the foundations of mathematics, Frege's discussion of Hilbert's axiomatic method is subjected to critical analysis. One point made is that, contrary to a prejudice in the recent history of mathematics, Frege's understanding of the axiomatic method is tenable."

"The first papers of volume II deal, in a critical way, with Frege's theory of functions and his concept of logic. An account showing the development of his doctrine of judgment, is followed by two papers on the theory of quantification. The first discusses Frege's change from a substitutional to an objectual definition of quantification, while the second compares Frege's approach with corresponding reflections of Russell and Quine. Finally, several articles discuss problems of identity in Frege under comparative and analytical aspects."

Alexius Meinong's Theory of Objects

The influence of Meinong

"Nowadays, a need for formal tools is strongly felt in the treatment of two special areas of ontological inquiry. One area is concerned with intentional objects, an area which seems to contain difficulties on the level of things, but also on the level of states of affairs, facts and other "propositional" entities. An intentional relation holds between either persons (more generally experiencing subjects) or acts of consciousness on the one hand, and the intentional objects on the other. The latter are what people see, fear, expect, look for; and the problem, naturally, consists in the fact that – contrary to usual predication – the predicates in question truly apply to intentional objects which do not exist in the same sense as my cat in "My cat is on the mat". In short: "We are thinking about Sherlock Holmes" may be true (and in fact is true while we are writing the sentence) in a real-world-context, but "Sherlock Holmes lives on Baker Street" can be true only inside the fictive context of the novels. Nevertheless, intuitively everybody can think about Sherlock Holmes in just the same sense as he can think about Baker Street, which "really" exists in London. Historically, this problem of intentional objects forms one of the roots of formal ontology, as well as of the philosophy of mind.

One of the most influential thinkers of ontology at the beginning of our century was the Austrian philosopher Alexius Meinong, Ritter von Handschuchsheim. His best known conception deals, among other things, with objects that do not exist. This doctrine is part of Meinong's Object Theory (*Gegenstandstheorie*) which is based on certain assumptions concerning the correspondence of various types

of mental states to objects. Thus, there are objects of higher order, founded on the so-called objects of passive perception. Such founded objects are said to subsist (*bestehen*) rather than exist. According to Meinong, the entities we assume or infer are very complex objects called objectives. Objectives are built from other objects. They do not exist either; they may either be or not be a fact (*tatsächlich*). They can be expressed, for example by a that-clause, although their being an objective does obviously not depend on their being expressed by a sentence. "Objectives" are the "propositions" of Bertrand Russell and George Edward Moore who were, by the way, heavily influenced in many ways by Meinong. On that basis, non-existing objects or objectives, which are not facts, turn out to be genuine objects or objectives nevertheless – their status does not depend on thought or expression. The non-existence of a huge golden sphere is very different from the nonexistence of a huge uranium sphere, a difference which provides them with an objective status. Yet Meinong never claims that non-existing objects subsist, or have any other form of being (*Sein*). What he assumes them to have is a certain nature (*Sosein*), unaffected by their existence or nonexistence. To say that a huge uranium sphere is heavy and round is not to say that there is such a thing. Contrary to Russell's opinion, "there is a P" does not follow from "something is a P". Meinong's incompletely determined objects, which violate the law of excluded middle, play an extremely important role in his theory of knowledge; they are the "pointers" through which the human mind refers to the completely determinate, existing objects. " (pp. 12-13)

From: Jan Faye, Uwe Scheffler and Max Urchs (eds.), *Things, Facts and Events*, Amsterdam: Rodopi 2000.

Meinong's main works

"Of his two profound and sympathetic *Hume-Studien*, done under Brentano's supervision, the first (1877), on Hume's theory of abstraction, secured his 'habilitation', the second, on Hume's theory of relations, appeared in 1882: both were published in the Proceedings of the Imperial Academy of Sciences at Vienna, of which Meinong was later to be a Fellow. That Meinong should have served his first serious philosophical apprenticeship with Hume, places him in the Anglo-Saxon rather than the Germanic philosophical tradition,

and it was in this tradition that he continued mainly to work. It was in the Anglo-Saxon world, likewise, that his philosophical reputation and influence were at their greatest.

Meinong spent four years (1878-82) as a *Privatdozent* at Vienna, and then moved on to Graz, where he remained for the rest of his life, first as Professor Extraordinarius (1882-9), and then as Ordinary Professor (1889-1920).

(...)

Apart from the foundation of an Institute of Experimental Psychology in 1894, the first in Austria, there seem to have been few events during Meinong's professorship. His history was the history of his publications and of the academic activities of his small school of pupils.

Among these publications the most notable were the *Psychologisch-ethische Untersuchungen zur Werttheorie* (1894), which almost succeeds in formalizing ordinary morality; the composite school-publication *Untersuchungen zur Gegenstandstheorie und Psychologie* (1904), to which Meinong contributed an article 'Über Gegenstandstheorie'; the valuable (...) epistemological essay *Über die Erfahrungsgrundlagen unseres Wissens* (1906); the programmatic *Über die Stellung der Gegenstandstheorie im System der Wissenschaften* (1906-7); the brilliant *Über Annahmen* (1910), with its manifold contributions to psychology, value-theory, etc., and its important introduction of 'objectives', the *Sätze-an-sich* of Bolzano, as peculiar *entia rationis*; the long treatise *Über Möglichkeit und Wahrscheinlichkeit* (1915), with its important doctrine of 'incomplete objects'; the treatise *Über emotionale Presentation* (1917), a uniquely original essay in the epistemology of valuation; and the somewhat unpersuasive *Zum Erweise des allgemeinen Kausalgesetzes* (1918). Meinong wrote many important articles which were collected by his pupils in the two volumes of *Gesammelte Abhandlungen*, one volume devoted to psychology, the other to epistemology and object-theory: a third, to be devoted to value-theory, was never issued. Several important articles on value-theory, as well as the unreprinted *Psychologisch-ethische Untersuchungen*, are therefore practically inaccessible [written in 1962; Meinong's works are now published in the *Gesamtausgabe*:

see the Bibliography]. The *Grundlegung zur allgemeinen Werttheorie* was published posthumously in 1923, and a work entitled *Ethische Bausteine* is still in manuscript in the Library at Graz. [now published in the third volume of the *Gesamtausgabe*, pp. 657-724]." (*Preface*, pp. V-VII)

From: John N. Findlay, *Meinong's Theory of Objects and Values*, Aldershot: Ashgate, 1995 (Reprint of the Second edition of 1963).

An overview of Meinong's Theory of Objects

"The two basic theses of Meinong's theory of objects (*Gegenstandstheorie*) are (1) there are objects that do not exist and (2) every object that does not exist is yet constituted in some way or other and thus may be made the subject of true predication.

Traditional metaphysics treats of objects that exist as well as of those that merely subsist (*bestehen*) but, having "a prejudice in favor of the real," tends to neglect those objects that have no kind of being at all; hence, according to Meinong, there is need for a more general theory of objects.

Everything is an object, whether or not it is thinkable (if an object happens to be unthinkable then it is something having at least the property of being unthinkable) and whether or not it exists or has any other kind of being. Every object has the characteristics it has whether or not it has any kind of being; in short, the *Sosein* (character) of every object is independent of its *Sein* (being). A round square, for example, has a *Sosein*, since it is both round and square; but it is an impossible object, since it has a contradictory *Sosein* that precludes its *Sein*.

Of possible objects -- objects not having a contradictory *Sosein* -- some exist and others (for example, golden mountains) do not exist. If existence is thought of as implying a spatio-temporal locus, then there are certain subsistent objects that do not exist; among these are the being of various objects and the nonbeing of various other objects. Since there are horses, there is also the being of horses, the being of the being of horses, the nonbeing of the nonbeing of horses, and the being of the nonbeing of the nonbeing of horses. And since there is no Pegasus, there is the nonbeing of Pegasus, as well as the

being of the nonbeing of Pegasus and the nonbeing of the being of Pegasus.

Meinong's theory must be distinguished from both Platonic realism, as this term is ordinarily interpreted, and the reism, or concretism, of Brentano and Tadeusz Kotarbinski. (Meinong noted that since his view is broader than realism, it might properly be called objectivism.) Thus, the Platonic realist could be said to argue: "(P) Certain objects that do not exist have certain properties; but (Q) an object has properties if and only if it is real; hence (R) there are real objects that do not exist." The reist, or concretist, on the other hand, reasons from not-R and Q to not-P; that is, he derives the contradictory of Plato's first premise by taking Plato's second premise along with the contradictory of Plato's conclusion. But Meinong, like Plato and unlike the reist, accepted both P and R; unlike both Plato and the reist, he rejected Q by asserting the independence of *Sosein* from *Sein*; and therefore, again unlike both Plato and the reist, he said that the totality of objects extends far beyond the confines of what is merely real .

This doctrine of *Aussersein* -- of the independence of *Sosein* from *Sein*-- is sometimes misinterpreted by saying that it involves recourse to a third type of being in addition to existence and subsistence. Meinong's point, however, is that such objects as the round square have no type of being at all; they are "homeless objects," to be found not even in Plato's heaven. Bertrand Russell objected that if we say round squares are objects, we violate the law of contradiction. Meinong replied that the law of contradiction holds only for what is real and can hardly be expected to hold for any object, such as a round square, that has a contradictory *Sosein*.

Russell's theory of descriptions is often thought to constitute a refutation of the doctrine of *Aussersein*; actually, however, his theory merely presupposes that Meinong's doctrine is false. According to Meinong, the two statements "The round square is round" and "The mountain I am thinking of is golden" are true statements about nonexistent objects; they are *Sosein* and not *Sein* statements. The distinction between the two types of statements is most clearly put by saying that a *Sein* statement (for example, "John is angry") is an affirmative statement that can be existentially generalized upon (we

may infer "There exists an x such that x is angry") and a *Sosein* statement is an affirmative statement that cannot be existentially generalized upon; despite the truth of "The mountain I am thinking of is golden," we may not infer "There exists an x such that I am thinking about x and x is golden." Russell's theory of descriptions, however, presupposes that every statement is either a *Sein* statement or the negation of a *Sein* statement and hence that there are no *Sosein* statements. According to Russell, a statement of the form "The thing that is F is G" may be paraphrased as "There exists an x such that x is F and x is G, and it is false that there exists a y such that y is F and y is not identical with x." If Meinong's true *Sosein* statements, above, are rewritten in this form, the result will be two false statements; hence Meinong could say that Russell's theory does not provide an adequate paraphrase.

An impossible object, as indicated above, is an object having a *Sosein* that violates the law of contradiction. An incomplete object, analogously, is one having a *Sosein* that violates the law of the excluded middle. Of the golden mountains, which most readers will think of on reading the paragraph above, it will be neither true nor false to say that they are higher than Mount Monadnock. And some objects are even more poorly endowed. For example, if I wish that your wish will come true, then the object of my wish is whatever it is that you happen to wish; but if, unknown to me, what you wish is that my wish will come true, then this object would seem to have very little *Sosein* beyond that of being our mutual object. Meinong said that such an object is a defective object and suggested that the concept may throw light upon some of the logical paradoxes.

The theory of complexes -- that is, the theory of wholes and other such "objects of higher order" -- upon which Meinong wrote at length, also falls within the theory of objects.

None of the objects discussed above is created by us, nor does any of them depend in any way upon our thinking. Had no one ever thought of the round square, it would still be true of the round square that it does not exist; the round square need not be thought of in order not to exist. We draw these objects, so to speak, from the infinite depths of the *Ausserseienden*, beyond being and not-being." (pp. 115-116)

From: Roderick M. Chisholm, *Meinong, Alexius* in: Paul Edwards (ed.), *Encyclopedia of Philosophy*, New York: Macmillan The Free Press, 1967; Second edition: Donald M. Borchert (ed.), New York: Thomson Gale 2006, Volume VI, pp. 114-119.

"Meinong accepted Brentano's thesis of the intentionality of the mental but modified it in a realistic direction, distinguishing, like Twardowski, between the content and object of a mental act; indeed this distinction had been pointed out in 1890 by Meinong and Höfler as an ambiguity in the notion of object. Like Twardowski and unlike Husserl, Meinong regarded it as necessary that a mental act of whatever kind always have an object as well as a content, and in those cases where nothing exists which is targeted by the act, Meinong followed Twardowski in accepting a non-existent item as the object. It is from this use of the accusative term 'object [sc. of an act]' that Meinong derives the term 'theory of objects' which he preferred to such -- as he thought, existentially loaded -- terms as 'metaphysics' and 'ontology'. Both of these, and especially the former, suffered from a prejudice, rampant among materialists and nominalists, but present to some degree in most philosophers, the 'prejudice in favour of the actual', i.e., an unsupported preference for the spatiotemporally situated or real object. Ontological questions always interested Meinong, from his early preoccupation with universals, especially relations, through his interest in Gestalt or higher-order objects and complexes. But object theory as a distinct discipline and forming the nucleus of his philosophical endeavour dominate only late in his career, from about 1899 until his death in 1920.

The first major work in object theory, initially prompted by considerations of the psychology of play and make-believe, is *On Assumptions* of 1902. What Meinong calls an assumption is roughly any intellectual act regarding what might be the case (nowadays called a 'propositional attitude') that falls short of a firm conviction or judgement. Only while working on this area did Meinong realise that he needed an ontology of the objects of assumptions and judgements, which objects he called objectives, preferring not to use Stumpfs term *Sachverhalt* (state of affairs), which he thought was loaded in favour of the true. Objectives combine some of the

behaviour of propositions and other characteristics of states of affairs. Like propositions, they are there for all judgements and assumptions, including false ones, but like states of affairs their existential status is different for truth than for falsity: the objective of a true judgement or assumption, while not spatiotemporally real, still subsists or obtains (*besteht*), while the objective of a false judgement or assumption does not even have this kind of being.

The property of objectives corresponding to the truth of judgements Meinong calls factuality, the property corresponding to falsity untruthfulness. He reserves 'true' for objectives which are both factual and apprehended by someone; 'false' is similarly restricted. For an objective, to be factual is to subsist, to be untruthful is to not subsist: there is an existential distinction between them. Objectives about an object do not have that entity as part, for an objective can at best subsist, whereas many objects can also be spatiotemporally actual or real. If Graz is in Austria had Graz as part, then it would be a subsistent with a real part, and if Sherlock Holmes is not real had Sherlock Holmes as part, it would have an object as part which does not exist at all. Both cases are absurd, thinks Meinong, so what an objective is about is not part of it.

Object theory received its programmatic statement in the 1904 essay 'The Theory of Objects'. This appeared in a volume by the Graz School commemorating ten years of the Psychology Laboratory and contained Essays on object theory by Rudolf Ameseder and Ernst Mally. Meinong's earlier work was enthusiastically reviewed by Russell in a three-part article for *Mind*, a journal which Meinong himself had regularly reviewed for German speakers in the 1880s. Russell had presumably hoped that Meinong's theory of impossible objects would offer some help on the solution of the logical paradoxes, but he was disappointed there. It was Meinong's painstaking method that Russell admired. Russell could not accept non-existent objects like the round square, or untruthful objectives: he avoided them initially by adopting Frege's distinction between sense and reference for definite descriptions, and saying that false propositions do exist. (Russell wrongly identified Meinong's objectives with his and Moore's propositions.) In 1905 Russell rejected Frege too: 'On denoting' is a battle on two fronts, one against non-existent objects, one against sense. Russell's initial

sympathy gave way to increasing criticism of Meinong, whom he accused (wrongly) of believing in contradictions. Although the dismissal of Meinong in *Introduction to Mathematical Philosophy* is curt and unfair, in the unpublished 1913 manuscript *Theory of Knowledge* Russell still discussed Meinong's views extensively, accurately and with some sympathy." (pp. 122-124)

Bertrand Russell appreciation of Meinong

"Before entering upon details, I wish to emphasise the admirable method of Meinong's researches, which, in a brief epitome, it is quite impossible to preserve. Although empiricism as a philosophy does not appear to be tenable, there is an empirical manner of investigating, which should be applied in every subject-matter. This is possessed in a very perfect form by the works we are considering. A frank recognition of the data, as inspection reveals them, precedes all theorising; when a theory is propounded, the greatest skill is shown in the selection of facts favourable or unfavourable, and in eliciting all relevant consequences of the facts adduced. There is thus a rare combination of acute inference with capacity for observation. The method of philosophy is not fundamentally unlike that of other sciences : the differences seem to be only in degree. The data are fewer, but are harder to apprehend; and the inferences required are probably more difficult than in any other subject except mathematics. But the important point is that, in philosophy as elsewhere, there are self-evident truths from which we must start, and that these are discoverable by the process of inspection or observation, although the material to be observed is not, for the most part, composed of existent things. Whatever may ultimately prove to be the value of Meinong's particular contentions, the value of his method is undoubtedly very great; and on this account if on no other, he deserves careful study." (pp. 205-206)

From: Bertrand Russell, "Meinong's Theory of Complexes and Assumptions", *Mind*, 1904, reprinted in: Bertrand Russell, *Essays in*

Analysis, London: George Allen & Unwin Ltd, 1973, pp. 204-219.

"Presentations, judgments and assumptions, Meinong points out, always have objects; and these objects are independent of the states of mind in which they are apprehended. This independence has been obscured hitherto by the 'prejudice in favour of the existent' (*des Wirklichen*), which has led people to suppose that, when a thought has a non-existent object, there is really no object distinct from the thought. But this is an error: existents are only an infinitesimal part of the objects of knowledge. This is illustrated by mathematics, which never deals with anything to which existence is essential, and deals in the main with objects which cannot exist, such as numbers. Now we do not need first to study the knowledge of objects before we study the objects themselves; hence the study of objects is essentially independent of both psychology and theory of knowledge. It may be objected that the study of objects must be coextensive with all knowledge; but we may consider separately the more general properties and kinds of objects, and this is an essential part of philosophy. It is this that Meinong calls *Gegenstandstheorie*.

This subject is not identical with metaphysics, but is wider in its scope; for metaphysics deals only with the real, whereas the theory of objects has no such limitations. The theory of objects deals with whatever can be known a priori about objects, but knowledge of reality can only be obtained by experience. The theory of objects is not psychology, since objects are independent of our apprehension of them. It is also not theory of knowledge; for knowledge has two sides, the cognition, which belongs to psychology, and the object, which is independent. The theory of objects, Meinong contends, is also not to be identified with pure logic, since logic, in his opinion, is essentially practical in its aim, being concerned with right reasoning. (On this point, opinions will differ; but the question is in any case only one of nomenclature.) The conclusion is, that the theory of objects is an independent subject, and the most general of all philosophical subjects. Mathematics is essentially part of it, and thus at last finds a proper place; for the traditional division of sciences into natural and mental left no room for mathematics, because it took account only of the existent. Grammar may be a guide in the

general theory of objects, as mathematics in more special parts of the theory." (pp. 77-78)

From: Bertrand Russell, "Review of: A. Meinong, Untersuchungen zur Gegenstandstheorie und Psychologie", *Mind*, 1905, reprinted in: Bertrand Russell, *Essays in Analysis*, George Allen & Unwin Ltd 1973, pp. 77-88.

Gilbert Ryle: "Object Theory is dead"

"What differences did Alexius Meinong make to philosophy? Are there any big lessons, especially about the nature of thinking, of which we, in 1970, must say either that we did learn them or, repentantly, that we could and should have learned them from Meinong?"

Let us frankly concede from the start that *Gegenstandstheorie* itself is dead, buried and not going to be resurrected. Nobody is going to argue again that, for example, 'there are objects concerning which it is the case that there are no such objects.' Nobody is going to argue again that the possibility of ethical and aesthetic judgments being true requires that values be objects of a special sort.

As Professor Findlay suggests in his fine book *Meinong's Theory of Objects and Values*, we have to allow in candid retrospect that one important part of Meinong's contribution to twentieth-century thought is precisely the anti- *Gegenstandstheorie* with which he vaccinated Brentano, Russell and Wittgenstein. We in 1970 do not merely suspect that *Gegenstandstheorie* will not do; we have learned just why it will not do; and to have learned this is to have learned from Meinong, via Russell and Wittgenstein, an important and new lesson about thinking, though not the one intended by Meinong.

a) Within a year of his famous articles in *Mind* on *Meinong's Theory of Complexes and Assumptions* (1904) Russell had written his even more famous and more influential *Mind* article ' *On Denoting* ', in which he assembled logicians' arguments against the pretensions of various ostensibly entity-designating nominative-phrases, including several that Meinong had championed and that Russell had himself championed in his own *Principles of Mathematics* of 1903. It was the Platonising Meinong who, in effect but of course not wittingly,

spurred the newly Occamising Russell to leapfrog over his back on to a terra firma that he himself was never to reach or even to wish to reach.

Though not everything, much was both new and true in Russell's Theory of Descriptions, in his account of Incomplete Symbols and Logical Constructions, in his doctrine of illegitimate totalities and thence in his Theory of Types. In all of these there were working conscious recoils against Meinong's Theory of Objects, as well as against his own and Moore's recent analogue to it. In the hands of Frege, in the differently moving hands of Russell and in the again differently moving hands of Wittgenstein, Meaning-theory expanded just when and just in so far as it was released from that "Fido"-Fido box, the lid of which was never even lifted by Meinong.

b) Wittgenstein had, via Russell, some second-hand knowledge of Meinong, but apparently he also had a little first-hand knowledge of the thoughts both of Meinong and of Husserl. The opening pages of his Tractatus are unqualified *Gegenstandstheorie* and their German often echoes Meinong's German. Yet by Tractatus 4.126-4.1274 Wittgenstein has correctly located concepts like object, thing, fact and complex among formal concepts, i.e. category-concepts, as distinct from proper, i.e. genus-concepts or species-concepts. He has thereby disqualified in principle *Gegenstandstheorie*, including that in his own opening pages, from being informative or even misinformative about what there is in the world. Moreover he has thereby identified for us just that disquieting but previously elusive feature of Meinong's Higher-Order Objects which had made us all along hanker to protest to Meinong: 'Yes, but notwithstanding all your rigorous arguments, these *entia rationis* of yours are only the verbalised simulacra of genuine entities.'

For though of course we can think, talk and say true things 1) about Socrates; 2) about the fact that Socrates was snub-nosed; 3) about the snubness of his nose, none the less, when we have done so, we still cannot enumerate three *somethings*, three members of any one genus or species, that we have thought or talked about --unless we like to speak vacuously of all three as 'subject-matters', or 'remark-tops'; and if we do this, we see at once that the important-sounding word 'object' never did have any other positive function than to be a

synonym for 'subject-matter' or 'remark-topic'. The three phrases carry the same ontological burdens --namely none. To parody Kant, '... is an object' is not a predicate. 'Is so and so an it?' is not a proper question. About what can we significantly ask 'Is it an object or not?' If asked 'How many Objects, i.e. how many its, are mentioned in this newspaper-article?' we could no more even begin to make a count than we could even begin to make a count of the Events that took place in the course of the Battle of Waterloo; or than we could even begin to make a count of the Actions that someone had performed or the Experiences that he had between 10 a.m. and 11 a.m. Category-words do not list countables -- not because they list too many to count, but because they do not provide qualifications for, or disqualifications from being on any list. 'It' does not describe; 'object' does not distinguish." (p. 7)

From: Gilbert Ryle, *Intentionality-Theory and the Nature of Thinking*, in: Rudolf Haller (ed.), *Jenseits von Sein und Nichtsein. Beiträge zur Meinong-Forschung*, Graz: Akademische Druck- u. Verlagsanstalt 1972, pp. 7-14.

Meinong's Theory of Objects in contemporary research

"Alexius Meinong and his circle of students and collaborators at the Philosophisches Institut der Universität Graz formulated the basic principles for a general theory of objects.(1) They developed branches and applications of the theory, outlined programs for further research, and answered objections from within and outside their group, revising concepts and sharpening distinctions as they proceeded. The object theory that emerged as the result of their efforts combines important advances over traditional systems of logic, psychology, and semantics.

The fate of object theory in the analytic philosophical community has been unfortunate in many ways. With few exceptions, the theory has not been sympathetically interpreted. It has often met with unfounded resistance and misunderstanding under the banner of what Meinong called "The prejudice in favor of the actual". (2) The idea of nonexistent objects has wrongly been thought to be incoherent or confused, and there are still those who mistakenly

believe that the theory inflates ontology with metaphysically objectionable quasi-existent entities.' These criticisms are dealt with elsewhere by object theory adherents, and are not considered here. In what follows, the intelligibility of an object theory such as Meinong envisioned is assumed, and ultimately vindicated by the construction of a logically consistent version. The inadequacies of extensionalist theories of ontological commitment and definite description, hallmarks of the Russell-Quine axis in recent analytic philosophy, justify an alternative intentional Meinongian object theory logic. Analytic philosophy survives the rejection of extensionalist treatments of definite description and ontological commitment, since analytic methods are not inherently limited to any particular set of extensional or intentional assumptions.

A comprehensive historical treatment of Meinong's philosophy is not attempted in these chapters, though some historical issues are addressed. Some of Meinong's most important philosophical writings have now been translated or are expected to appear in the near future, and there are several recent commentaries on Meinong's work, including Richard Routley's *Exploring Meinong's Jungle and Beyond*, Terence Parsons' *Nonexistent Objects*, and Karel Lambert's *Meinong and the Principle of Independence*. These studies have contributed to renewed interest in and unprejudiced reappraisal of object theory. Analyses of the subtle turnings in Meinong's thought over several decades may be found in J. N. Findlay's *Meinong's Theory of Objects and Values*, Reinhardt Grossmann's *Meinong*, Robin Rollinger's *Meinong and Husserl on Abstraction and Universals*, and Janet Farrell Smith's essay "The Russell-Meinong Debate". These works trace the complex development of Meinong's early nominalism or moderate Aristotelian realism in the *Hume-Studien* to his mature realistic interpretation of relations and factual objectives or states of affairs as subsistent entities, the theory of objects of higher order, and the doctrine of the *Aussersein* of the pure object. I have relied on these among other sources, I cannot hope to improve on them in some respects, and my topic in any case is somewhat different. I am concerned exclusively with the logic, semantics, and metaphysics or ontology and extraontology of Meinong's theory. Accordingly, I shall not discuss Meinong's epistemology, theory of perception, or value theory, which I

nevertheless regard as essential to an understanding of his philosophy as a whole. The logic, semantics, and metaphysics of object theory are in a sense the most fundamental aspects of Meinong's thought, and therefore require the most careful preliminary investigation."

(1) I refer to Meinong's *Gegenstandstheorie* as a theory of objects, but alternative English equivalents have been proposed which should also be considered. Reinhardt Grossmann argues that the theory must be called a theory of entities because it includes not merely objects (*Objekte*), but objectives or states of affairs (*Objektive*). Grossmann, Meinong [1974], pp. 111-12: "If we keep in mind that Meinong will eventually divide all entities (other than so-called dignitatives and desideratives) into objects on the one hand and objectives on the other, we cannot speak of a theory of objects as the all-embracing enterprise, but must speak -- as I have done and shall continue to do -- of a theory of entities." This argument is inconclusive, since objectives are also objects of a kind, which Meinong describes as objects of higher order (*höherer Ordnung*), *superiora* founded on *inferiora* or lower order objects. An objective in any case can be as much an object of thought as any other nonobjective object, as when someone thinks about the fact that Graz is in Austria, and thereby makes that state of affairs an object of thought. In this sense, the theory of objects, of lower and higher order, is already all-embracing in the way Grossmann thinks Meinong's *Gegenstandstheorie* is meant to be. Nicholas Griffin identifies a further difficulty in Grossmann's terminological recommendation. In "The Independence of Sosein from Sein" [1979], p. 23, n. 2, Griffin writes: "Grossmann standardly uses the term 'entity' for Meinong's '*Gegenstand*', which is usually translated as 'object'. Since the Oxford English Dictionary defines 'entity' as 'thing that has real existence', this switch is unsatisfactory. Accordingly I have switched back either to 'object' or to the even more neutral term 'item'." Griffin's choice of translation agrees with Richard Routley's in *Exploring Meinong's Jungle and Beyond* [1981], where Routley refers to a theory of items distinct in some respects from but directly inspired by Meinong's theory of objects. Routley's 'theory of item' is perhaps better used to designate his own special version of object theory, which he also denotes 'noneism'. Neither Grossmann's nor

Routley's terminology carries the intentional force of 'Gegenstand', which as Meinong explains is etymologically related to 'gegenstehen', to stand against or confront, as objects of thought are supposed to confront and present themselves to the mind.

Notes

(2) Alexius Meinong, "The Theory of Objects" ("*Über Gegenstandstheorie*") [1904], pp. 78-81.

(3) In his early work, Meinong expressed the belief that nonexistent objects have what he then called *Quasisein*. "The Theory of Objects", pp. 84-5. Meinong here refers to the first edition of his *Über Annahmen* [1902], p. 95. See J. N. Findlay, *Meinong's Theory of Objects and Values* [1963], pp. 47-8. Routley, *Exploring Meinong's Jungle and Beyond* [1981], pp. 442, 854. Routley reports that Meinong renounced the theory of *Quasisein* in favor of the *Aussersein* thesis by 1899 (presumably with the publication in that year of his essay "*Über Gegenstände höherer Ordnung und deren Verhältnis zur inneren Wahrnehmung*"). As a statement of the frequent misinterpretations of Meinong's object theory that persist today, see P.M. S. Hacker, *Insight and Illusion: Themes in the Philosophy of Wittgenstein*, revised edition [1986], p. 8: "The Theory of Descriptions ... enabled Russell to thin out the luxuriant Meinongian jungle of entities (such as the square circle) which, it had appeared, must in some sense subsist in order to be talked about ..." (pp. 1-3)

Meinong last views on the Theory of Objects

"*Meinong's Ontology*. (1)

I. We must turn, in the first place, to a philosophical discipline which is not as yet part of the tradition, which is therefore in a certain sense new, and about which I have said some things which were intended

to be of a fundamental nature. To begin with, it is impossible to give a regular definition of entity [Gegenstand]; for genus and differentia are lacking, since everything is an entity. However, the etymology of the word '*gegenstehen*' yields at least an indirect characteristic, since it points to the experiences which apprehend entities; but these experiences must not be thought of as somehow constituting the entities. Every inner experience, at least every sufficiently elementary one, has such an entity; and insofar as the experience finds an expression – hence first of all in the words and sentences of language – this expression has a meaning [*Bedeutung*], and this meaning is always an entity. All knowledge, too, deals therefore with entities.

But large and important groups of entities have found no home in the traditional sciences; these sciences, moreover, are for the most part exclusively concerned with a knowledge of reality [*Wirklichen*], while even unreal things with being, things without being, possibilities, and even impossibilities can be objects of knowledge, namely, of a knowledge which is of interest to the as yet theoretically naive person only, as it were, when it promises to serve as a means for knowledge of reality. In contrast to such a preference for reality, which, in fact, has been overcome so far in no science, there exists the obvious need for a science which deals with entities without any restriction, especially without restriction to the special case of existence, so that it can be called existence-free [*daseinsfrei*]. This science about entities as such, or about pure entities, I have called the theory of entities.

Much of what belongs to this theory has already been studied under the title 'Logic' (especially: 'Pure Logic'); and that modern mathematical logic belongs completely to the realm of the theory of entities is only concealed by its goal of being a calculus, which seems to favor an extensive externalization [*Veräusserlichung*] in the sense of the logic of extensions, while it is just a complete internalization [*Verinnerlichung*] which the theory of entities strives for and makes possible. People have dealt with topics from the theory of entities since antiquity under the heading of 'Metaphysics', and especially, under the heading of 'Ontology' as part of metaphysics; and they have not always failed to recognize the characteristic feature of freedom from existence. But as a goal in itself, the concept of a theory of what is free from existence has, so far as I can see, never

been espoused. According to this concept, there belongs to the theory of entities everything that can be made out about entities irrespective of their existence (for example, whatever it is that holds for the class of all colors which make up the 'color space,' as distinguished from the 'color body' which is restricted to the psychologically given); hence, everything that is a matter of a priori knowledge, so that the a priori can be treated as a defining characteristic of the kind of knowledge of which the theory of entities consists.

What belongs to the theory of entities is thus what is rational. Insofar [as it is that], it is therefore anything but a newly discovered country, but rather, in regard to one of its most important parts, mathematics, the justly admired standard of scientific precision. What is new is, perhaps, an insight into the peculiarity of this country and into the nature of its boundaries – unless one should rather speak of its boundlessness. In this respect, it is a kind of companion piece to metaphysics which tries to comprehend the totality of reality, while the theory of entities, because of its freedom from existence, tries to encompass also everything that is not real. Naturally, this freedom from existence does not mean that entities as such cannot have existence in the true sense. The fact that the kind of consideration and knowledge peculiar to the theory of entities therefore also appears where it can be applied to existents, constitutes one of the main values of the postulation of the new science.

Just as the concept of an entity in general is to be determined, at least *cum grano salis*, with an eye on apprehension, so are the main groups of entities characterized in regard to the main groups of apprehending experiences; and apprehensions are, as mentioned, all elementary experiences. Corresponding to the four main groups of the latter – to presentation [*Vorstellen*], thought [*Denken*], emotion [*Fühlen*], and desire [*Begehren*] – there are, therefore, four main groups of entities: objects [*Objekte*], objectives [*Objektive*], dignitatives [*Dignitative*], and desideratives [*Desiderative*]. However, the characteristics of the latter are not derived from the characteristics of the apprehending experiences. For this reason, nothing stands in the way of assigning to the immeasurable realm of objects, for example, also the inner experiences, even though these inner experiences cannot be given through presentations, but can

only be apprehended through self-presentation or with the help of imagination."

(1) This is a translation of a part of Meinong's contribution to the book *Die Philosophie der Gegenwart in Selbstdarstellungen* (Leipzig, 1923). The part is entitled '*Zur Gegenstandstheorie*'. Meinong's contribution to the book was written at the beginning of 1920, shortly before his death on November 27, 1920. Meinong's terminology is at times rather idiosyncratic. I have, therefore, sometimes used his own Latin terms.

"1. Some reasons are given for rejecting the view that there are entities that do not exist. 2. It is suggested, nevertheless, that this view has some plausibility when we consider unrealized empirical possibilities. 3. Even if nonexistent entities are rejected, there remains Meinong's distinction between object and objectives, roughly: things and facts. The author would analyze objects in terms of objectives, yielding a world of facts."

"Meinong justifies the need of his *Gegenstandstheorie* by presenting it as a generalization of (existing) metaphysics, in that the former deals with both existent and non-existent objects, whereas the latter used to deal with existent objects only. But this justification is disingenuous, since the notion of a non-existent object is virtually a contradiction in terms for the traditional paradigm. What Meinong is really proposing is a conceptual revolution of a Kantian variety, and we need to get clearer about the full import of this revolution. This is what the present paper attempts to do."

"The paper deals with Gustav Bergmann's analysis of Meinong's ontology, carried out in *Realism: A Critique of Brentano and Meinong* (1967); more specifically it aims at making it clear in what sense Meinong can be regarded as a "reist". Reism is characterized by Bergmann as a position -- largely dominant in the philosophical tradition -- which

(i) neglects the ontological category of facts;

(ii) neglects or downplays nexus (and more in general subsistents);

(iii) tends to consider all entities as things or thing-like.

As a by-product, some light will be thrown on the sense of Bergmann's ontological enterprise."

Grazer Philosophische Studien no. 25/26:501-531.

"Anti-Meinongian philosophers, such as Russell, do not explain what they mean by existence when they deny that there are nonexistent objects - they just sense robustly. I argue that any plausible explanation of what they mean tends to undermine their view and to support the Meinongian view. But why are they so strongly convinced that they are right? I argue that the reason is to be found in the special character of the concept of existence, which has been insufficiently examined by anti-Meinongian as well as by Meinongian philosophers."

29. Campbell, Richard. 1972. "Did Meinong plant a jungle?"
Philosophical Papers no. 1:89-102.

"This article presents a detailed analysis of Meinong's paper on "The theory of objects" in order to untangle the complex dialectic of his argument. It is argued that Meinong's position has been grossly misunderstood; far from maintaining that all objects of reference must have some kind of logical being, Meinong explicitly denies such a 'solution' to the problem of how reference is to be understood when the expression which occurs referentially in a linguistic context fails to refer to an existing object. He is not ontologising the logic of our ordinary use of referring expressions. Rather, Meinong's position is that being is not intrinsic to having the logical status of an object, But rather is only relevant when we come to determine whether the existential proposition concerning some object is true.

The question of being does not arise when an object is considered as such. Just what this is to be taken as meaning is developed through a discussion of intentionality. It is proposed that Meinong can be understood as holding that the meta-Remark 'reference is there being made to x' does not entail the existence, nor the non-existence of x."

Abstract: "Meinong's thought continually lends itself to alternative solutions, to a critical rethinking of the concepts he developed and to comparison both with the doctrines of other thinkers, and the ideas of his disciples. The essays presented in this issue place his thinking in dialogue with the major figures in the history of philosophy, thinkers as various as Plato and Aristotle, Avicenna, Suárez, Clauberg, Hume and Kant, who appear as ideal interlocutors in order to comprehend in depth the significance of Meinongian object theory.

The purpose underlying these studies is also to illustrate how features and problems of *Gegenstandstheorie* retain a vital relevance for contemporary philosophy."

Reprinted in: *Brentano and Meinong Studies*, pp. 53-67.

"Meinong wrote: "There are objects of which it is true that there are no such objects." (1) But he was well aware that this statement of his doctrine of *Aussersein* was needlessly paradoxical. Other statements were: "The non-real" is not "a mere nothing" and "The object as such ... stands 'beyond being and non-being.'" (2) Perhaps the clearest statement was provided by Meinong's follower, Ernst Mally: "*Sosein* is independent of *Sein*." (3) We could paraphrase Mally's statement by saying: "An object may have a set of characteristics whether or not it exists and whether or not it has any other kind of being."

It is commonly supposed that this doctrine of *Aussersein* is absurd and that whatever grounds Meinong may have had for affirming it were demolished by Russell's theory of descriptions. I believe, however, that this supposition is false. I shall attempt here to set forth the doctrine in its most extreme form and I shall then consider what may be said in its favor."

41. ———. 1973. "Homeless Objects." *Revue Internationale de Philosophie* no. 104-105:207-223.

Reprinted in: *Brentano and Meinong Studies*, pp. 37-52.

"In 1907 Meinong introduced the expression 'homeless object' (*Heimatlose Gegenstände*) to refer to certain objects which, he said, did not fall within the subject-matter of any of the generally accepted branches of knowledge. One might also characterize such objects by saying that they are neither 'concreta' nor 'abstracta'.

Three such objects are discussed in the present paper: (1) certain 'intentionalia', or objects of thought; (2) what Meinong called 'Objectiva' and what might also be called 'states of affairs'; and (3) 'incomplete objects', or objects that are not completely determinate. Meinong's position with respect to these types of object is here assessed and to a certain extent defended."

42. ———. 1982. *Brentano and Meinong Studies*. Amsterdam: Rodopi.

Contents: Foreword 1; 1. Brentano's theory of Substance and Accident 3; 2. Brentano's theory of Judgment 17; 3. Homeless objects 37; 4. Beyond Being and Nonbeing 53; 5. Correct and incorrect emotion 68; 6. Objectives and intrinsic value 80; 7. The quality of pleasure and displeasure 92; 8. Supererogation and offence 98; 9. Beginnings and endings 114-124.

"I present these papers on Brentano and Meinong in the hope that they will lead the reader back to the original sources. Some of the papers are expositions and commentaries. Others are developments of certain suggestions first made by Brentano or by Meinong.

(...)

The third and fourth papers are concerned with Meinong's theory of objects, a theory that grows out of Brentano's theoretical philosophy. "Homeless Objects" first appeared in the Meinong issue of *Revue Internationale de Philosophie*, Vol. 22 (1973). "Beyond Being and Nonbeing" was presented to the

Colloquium on Meinong that took place at the University of Graz in September and October, 1970. It first appeared in *Jenseits von Sein und Nichtsein*, edited by Rudolf Haller (Graz: Akademische Druck- und Verlagsanstalt, 1972). The paper makes clear, I think, that Russell's theory of descriptions - despite its great philosophical merit - does not provide a refutation of Meinong's theory.

The four papers that follow are concerned with the theory of value, as it had been conceived by Brentano and developed by Meinong.

(...)

"Objectives and Intrinsic Value" is a revised version of a second paper that I presented to the Meinong Colloquium in 1970; the original version appears in *Jenseits von Sein und Nichtsein*.

>"Supererogation and Offence" first appeared in *Ratio*, Vol. V (1963). In this work I make use, not only of certain insights of Meinong, but also those of one of his followers, Dr. Ernst Schwarz. Schwarz's excellent book, *Über den Wert, das Soll, und das richtige Werthalten*, has been almost entirely neglected. It was first brought to my attention by Hofrat Dr. Rudolf Kindinger who first introduced me to Graz.

I hope that these essays will be thought of as carrying out the tradition of the Brentano school." (From the *Foreword*)

43. Chrudzimski, Arkadiusz. 2001. "Die Theorie der Intentionalität Meinongs." *Dialectica. International Journal of Philosophy of Knowledge* no. 51:119-143.

"The most striking feature of Meinong's theory of intentionality is his thesis that every mental act has its reference-object beyond being and non being . This theory seems, at first, to be a clear example of the so called object-theory of intentionality, as it introduces special postulated entities in the target-position of the mental act. Closer examination, however, reveals in Meinong's works important elements of the mediator-theory. Meinong speaks of auxiliary incomplete objects situated between the subject and the object of reference and mediating the intentional access to the (complete) reference-object.

Moreover, even if the object of reference is of the simple nominal form, the mediating structure involves essentially propositional entities (objectives). In the paper we attempt to give a set-theoretical interpretation of Meinong's theory in the frame of which we could eventually do without the incomplete mediating objects. Yet, some general epistemological considerations suggest the indispensability of such incomplete mediating structures."

"Nowadays the philosophers that are sympathetic to Meinongian ideas are accused of planting an ontological jungle. However in the paper it is shown that a significant part of Meinong's philosophy can be interpreted within the framework of an astonishingly sparse ontology.

The proposed interpretation does not introduce any nonexistent entities but instead uses supervaluational techniques and substitutional interpretation of quantifiers."

47. ———. 2005. "Abstraktion und Relationen beim jungen Meinong." *Meinong Studies / Meinong Studien* no. 1:7-62.
48. ———. 2005. "Drei Versionen der Meinongschen Logik." *Zeitschrift für Philosophische Forschung* no. 59:49-70.

"The most striking part of Meinong's theory of objects is his thesis that the 'pure objects' should be considered as ontologically neutral.

Meinong says that they are 'beyond of being and non-being'. There are three *prima facie* plausible ways how this ontological neutrality could be analyzed. It can be construed as (i) an expansion of ontology; (ii) an introduction of an ontologically non-committing quantification; or as (iii) a version of free logic."

Reprinted in *Logical Studies in Early Analytic Philosophy*, pp. 119-151.

"A reconstruction of Bertrand Russell's pre-1905 theory of nonexisting individuals is contrasted with terry parsons' reconstruction of Meinong's theory in this book "nonexistent objects". Meinongian objects, complete and incomplete, possible and impossible, are shown to be parasitic upon Russellian individuals, and Meinong's distinction between nuclear and extra-nuclear properties and relations is explained in terms of the distinction between those properties and relations which can hold only of existing individuals and those which can hold of nonexisting individuals as well."

56. ———. 1997. "On Alexius Meinong's theory of signs." In *The Brentano Puzzle*, edited by Poli, Roberto, 199-214. Aldershot: Ashgate.

"The Austrian philosopher Alexius Meinong (1853-1920) is known for his works on the theory of objects, epistemology, philosophy of value and psychology. Little attention has so far been paid to his considerations concerning the philosophy of signs (*Zeichen*). It is the aim of this paper to study this aspect of Meinong's work by way of his book *Über Annahmen*.

In this book, first published in 1902, and in 1910 in an enlarged second edition, Meinong approached the phenomenon of assuming (*Annehmen*), on the one hand, by an analysis of semiotic processes and, on the other, by investigating a certain type of objects, the so-called objectives (*Objektive*), on which *Annahmen* are directed. Here, he starts from the close relationship between signs and the theory of intentionality of psychic acts developed by Brentano (cf. Brentano 1874). Brentano's definition of psychic phenomena shares a common feature with the definition of sign: their distinguishing

characteristic is their being related to something else. Meinong made use of the word *Annahme* as a technical term for all experiences (*Erlebnisse*) in the field between presentations (*Vorstellungen*) and judgments.(2) A judgment is a psychic act by which Something is accepted or rejected. He or she who judges concerning something or believes in something is convinced (*überzeugt*) of it (cf. Meinong 1977, p. 2). "The two ... factors mentioned, namely conviction and position within the contradiction of yes or no, can without exception be found in everything claimed to be a judgment" (Meinong 1977, p. 3). Examples: (1) Vienna is the capital of Austria, (2) Men exist, (3) Mermaids are fabulous creatures. All judgments are based on having presentations, which is but a passive psychic act and involves neither the moment of conviction nor that of assertion. As far as the psychic act of assuming is concerned it is a matter of judgment without conviction, i.e. *Annahmen* do not, or do not necessarily, involve being known or even believed. Examples: (4) Assuming a rectangular triangle be given, one leg of which is half as long as the other, (5) / assume that the problem of determinism and indeterminism is unsolvable, (6) Assuming that this stick is a horse, (7) Let us assume that you are Hamlet, (8) If AB and BC hold, so will AC, (9) If it rains today we cannot take the planned trip, (10) Imagine turning yourself into a princess.

In *Über Annahmen* Meinong gave much attention to the proof that *Annahmen* occupy an independent field between presentations and judgments.(3) In the final analysis, however, these considerations only served him as preliminary inquiries to determine the function of *Annahmen* in the different context in which they are used. In particular he was interested in the function of *Annahmen* in certain kinds of communicative behaviour such as a lie, play or art. *Annahmen* both in play and art are especially relevant to a semiotic analysis of *Annahmen*.

Meinong developed his conception of signs against the background of the semiotics of Richard Gatschenberger, Eduard Martinak and Edmund Husserl. This is why their analyses of signs will be discussed in the first two sections of this paper. In the third section we will study how Meinong

modified the mentioned sign conceptions to meet his own purposes and how he exploited them for his semiotic analysis of *Annahmen*." (pp. 199-200, a note omitted)

(2) Meinong refers to Russell drawing his attention to G. Frege who was probably the first to introduce the concept of *Annahme* in his paper 'Function und Begriff' (1891). (...)

(3) Meinong's view that *Annahmen* are independent psychic acts did not meet general acceptance. Objections were raised mainly in Russell (1904) and Marty (1908). These disputes shall not be discussed here. Rather, Meinong's view of *Annahmen* will be largely accepted in the following remarks.

"I argue here that on one plausible reading Meinong's theory of objects, far from being mistaken in the way Russell thought it was, shows considerable insight into the notion of existence. In particular, Meinong can be seen as making an important distinction between what can be significantly referred to and what exists. This distinction is very close to one made recently by Fred Sommers."

"I argue here that on one plausible reading Meinong's theory of objects, far from being mistaken in the way Russell thought it was, shows considerable insight into the notion of existence. In particular, Meinong can be seen as making an important distinction between what can be significantly referred to and what exists. This distinction is very close to one made recently by Fred Sommers."

"For several years I was told, and believed, that while Russell's theory of descriptions might be flawed (viz. in the way Strawson showed), his rejection of Meinong's theory of objects, which led to the theory of descriptions, was undoubtedly correct. Now I doubt very much if this is so.

The "official" view is that Meinong had made the mistake of multiplying the senses of "exists" unnecessarily. According to this view, Meinong, since he held that the descriptive components of any meaningful sentence must refer to something, was forced to provide a special kind of existence, subsistence, for entities which are nonexistent but referred to meaningfully. Russell avoided this position by claiming that statements referring to nonexistent entities are meaningful but false (since they logically entail the existence of the entity referred to). I think the official view underestimates Meinong's philosophical abilities. Indeed, I think, rather than engaging in the philosophically dangerous task of multiplying kinds of existence, Meinong was expressing a keen insight into the nature of existential commitment." 69. Gellman, Jerome I. 1969. "Suter on Russell on Meinong."

Philosophy and Phenomenological Research no. 29:441-445.

"The author replies to Ronald Suter's "Russell's 'refutation' of Meinong in 'On denoting'," "Philosophy and phenomenological research," June, 1967. Suter's interpretation of one of Russell's arguments is criticized on exegetical grounds, And his defense of another argument is rebutted on logical grounds. Meinong's thesis is presented as the thesis that all statements of a certain form are true. It is argued that all of Russell's arguments are attempts to pose counter-examples to this single view. Meinong is defended against Russell's counter-examples."

"For a long time it was widely believed that Meinong held that every object of reference had being. This has since come to be recognized as a 'horrible travesty' (Findlay's phrase) of Meinong's position.

However, A new horrible travesty has grown up: namely, that the original misinterpretation of Meinong was due to Russell's early discussions of his work. While it is conceded that Russell's later writings contained travesties of Meinong, it is shown (using unpublished documents in the Bertrand Russell archives as well as Russell's published writings) that, in his early critical discussions of Meinong, Russell was fully aware that for Meinong some objects had no kind of being at all."

72. ———. 1979. "The Independence of *Sosein* from *Sein*." *Grazer Philosophische Studien* no. 9:27-34.

"Meinong's theory of objects is at last getting some of the attention it deserves, and it now seems that the time has passed when the theory could be dismissed as merely a source of

philosophical amusement. But, despite the fact that Meinong's position is now taken much more seriously than it used to be, the theory is, for the most part, still rejected, and even Meinong's more careful critics still fail to do justice to the plausibility of his theory of objects. Recently Reinhardt Grossmann (1) has presented a series of arguments designed to show that the greater part of the theory of objects is mistaken, although he concedes that 'Meinong's doctrine is neither too obscure to be understood nor too wrongheaded to be enlightening' (p. 67). In this paper I shall be concerned with showing how Meinong's theory can be defended against Grossmann's arguments.

Grossmann usefully lists the four central theses of Meinong's theory of objects (p. 67):

(1) Nonexistent objects (2) have no form of being whatsoever.

(2) Such objects are, nevertheless, constituents of certain states of affairs.

(3) They even have a number of quite ordinary properties - the golden mountain, for example, is golden.

(4) Being is not a part of any object.

He then argues that, of the four, only the first is true. My own view is that all four are true." p. 27

(1) See R. Grossmann - *Meinong's doctrine of the Aussersein of the pure object* - *Noûs*, 8 (1974) pp. 67-82. All references, except where otherwise indicated, are to this paper.

(2) Grossmann standardly uses the term 'entity' for Meinong's 'Gegenstand', which is usually translated as 'object'. Since the Oxford English Dictionary defines 'entity' as 'thing that has real existence', this switch is unsatisfactory. Accordingly I have switched back either to 'object' or to the even more neutral term 'item'.

73. ———. 1986. "Russell's critique of Meinong's theory of objects." *Grazer Philosophische Studien* no. 25/26:375-401.

"Russell brought three arguments forward against Meinong's theory of objects. None of them depend upon a misinterpretation of the theory as is often claimed. In particular, only one is based upon a clash between Meinong's theory and Russell's theory of descriptions, and that did not involve Russell's attributing to Meinong his own ontological assumption. The other two arguments were attempts to find internal inconsistencies in Meinong's theory. But neither was sufficient to refute the theory, though they do require some revisions, viz. a trade-off between freedom of assumption and unlimited characterization. Meinong himself worked out the essentials of the required revisions."

"This book on Meinong is primarily concerned with his arguments for the positions for which he is famous among some philosophers and infamous among others. But philosophical contentions carry little weight when they are viewed in isolation. Matters are too complex, too difficult, to be settled in an isolated way. Every argument must be evaluated against a background which includes a philosopher's other arguments and some of his basic assumptions or -- if you wish -- prejudices. I therefore discuss Meinong's arguments within the context in which they appear, but with an eye on his earlier positions as well as on his later changes of mind. There are at least two further reasons for adopting this particular approach in Meinong's case.

Findlay, in his classic study of Meinong's philosophy, compares him with G. E. Moore.⁽¹⁾ Although this comparison is apt, there is one respect in which Meinong differs greatly from Moore. Meinong's philosophy develops over the years from a sparse ontology into an ample one. Every new idea is built upon an old one; new problems arise in the wake of earlier solutions; certain questions are raised time and again, but their answers are more and more refined. In short, there is a definite development, with a definite trend, definite stages, and a distinct final view.

I also wished to impress on the reader how misleading the prevalent view is that Meinong was a spendthrift metaphysician who delighted in multiplying entities continuously and needlessly. If one becomes aware of how Meinong's full

ontology develops very slowly over many years from very austere beginnings, how he resists the temptation to solve a problem by admitting a new kind of entity, and how he gives in only after a whole series of arguments for the new kind of entity has accumulated, one will, hopefully, be less inclined in future to think of Meinong as the 'supreme entity multiplier in the history of philosophy'.(2)" (from the Preface).

(2) This phrase is from Gilbert Ryle's article in the *Oxford Magazine* 26 October 1933.

77. ———. 1974. "Meinong's Doctrine of the *Aussersein* of the Pure Object." *Noûs* no. 8:67-82.

"Meinong's doctrine of the *Aussersein* of the pure object consists, in my view, of the following four main theses: (1) Nonexistent entities, like the golden mountain and the round square, have no form of being whatsoever. (2) Such entities are, nevertheless, constituents of certain states of affairs. (3) They even have a number of quite ordinary properties—the golden mountain, for example, is golden. (4) Being is not a part of any object. I shall try to explain and evaluate these four theses, and I shall claim that only the first one is true. However, even if my arguments fail to convince, they may at least show that Meinong's doctrine is neither too obscure to be understood nor too wrongheaded to be enlightening."

78. ———. 1984. "Non-Existent Objects vs. Definite Descriptions." *Australasian Journal of Philosophy* no. 62:363-377.

"Some years ago, I published an article about Meinong's theory of objects. (1) I listed there four main theses of Meinong's view:

(1) The golden mountain (and other nonexistents) has no being at all.

(2) Nevertheless, it is a constituent of the fact that the golden mountain does not exist.

(3) Furthermore, it has such ordinary properties as being made from gold.

(4) Existence is not a constituent of any object.

And I argued in that paper that only thesis (1) is true. In particular, I insisted that (3), which I consider to be the most characteristic feature of Meinong's view, is false.

Since then, there have been quite a few discussions of Meinong's view. I would like, in response to some of these works, to reiterate my earlier criticism of Meinong. My purpose is threefold. Firstly, I would like to state once more my own view, which is a version of Russell's theory of definite descriptions, as clearly as possible. Secondly, I shall defend my past contention that the golden mountain is not golden against some recent objections. And thirdly and most importantly, I want to describe the dialectic of the philosophical problem as I perceive it. It seems to me to be an exasperating shortcoming of the discussion that most participants do not clearly state the basic options and their reasons for preferring some to others."

(1) 'Meinong's Doctrine of the *Aussersein* of the Pure Object', *Noûs*, 8 (1974), pp. 67-81. See also my *Meinong* (Routledge and Kegan Paul, London, 1974).

80. ———. 2001. "Meinong's Main Mistake." In *The School of Alexius Meinong*, edited by Albertazzi, Liliana, Jacqueline, Dale and Poli, Roberto, 477-488. Aldershot: Ashgate.

"Seldom has a modern philosopher become as famous for a view which he does not hold as Alexius Meinong. One generally attributes to him the belief that there are, not just such ordinary things as mountains and relations, but even such things as the golden mountain and the round square. He is therefore often viewed as a spendthrift ontologist who delighted in multiplying entities continuously and needlessly. But this conception, I shall try to show, is mistaken. Anyone who has studied Meinong's philosophy carefully will come to the conclusion that he is not the 'supreme entity-multiplier in the history of philosophy' as Gilbert Ryle claims.(1)

But even though Meinong never embraced the rather extreme view that there are, in addition to existing things in space and time and subsisting things (ideal things) outside of space and time, also such things as the golden mountain, and even such contradictory things as the round square, he nevertheless insisted on another ontological principle not any less mistaken than what I just called the 'extreme' view. It is this insistence, and not his ontological inventory, which I consider to be Meinong's main mistake. I shall, therefore, first defend Meinong against the kind of accusation implied in Ryle's description of Meinong. And then I shall, secondly, show where Meinong really went wrong in his ontology." (p. 477)

81. Guigon, Ghislain. 2005. "Meinong on magnitudes and measurement." *Meinong Studies / Meinong Studien* no. 1:255-296.

"The paper comprises a presentation and defence of Meinong's discussion on magnitudes and measurement found in his *Über die Bedeutung des Weber'schen Gesetzes*. The first and longer part of the presentation examines Meinong's analysis of magnitudes. According to Meinong, we must distinguish between divisible magnitudes and indivisible ones. He argues that relations of

distance, or dissimilarity, are indivisible magnitudes that coincide with divisible magnitudes called stretches. The second part of the presentation is concerned with Meinong's account of measurement as a comparison of parts.

Meinong holds that measuring is comparing parts and, thus, only divisible magnitudes are directly measurable. When indivisible magnitudes like distances are indirectly measured, they are measured by means of divisible magnitudes like stretches. Meinong's account allows us to reject important objections against measurement of similarity and to reconsider the logical form of the sentences involving comparative similarity."

93. ———. 1995. "Meinong in a Long Perspective." *Grazer Philosophische Studien* no. 50:29-45.

"Meinong's thought is considered in relation to several major conceptual problems, including the Frege-Russell thesis that words like *is* are multiply ambiguous and Aristotle's treatment of existence. This treatment leads to a problem of how to interpret quantifiers. The three main possible interpretations are: (i) quantifiers as ranging over actual individuals (or individuals existing in some one world); (ii) quantifiers as ranging over a set of possible individuals; (iii) quantifiers merely as a way of specifying the interdependencies of the concepts (forms) specified by syllogistic terms. The subsequent history of philosophers' and logicians' treatments of existence is characterized by a tension between (i)-(iii). Meinong's position is in the main (iii) whereas Russell in his *On Denoting* defended (i). The contrast between (i) and (iii) has a counterpart in nineteenth-century discussions about foundations of mathematics."

94. Hochberg, Herbert. 1995. "Abstracts, Functions, Existence and Relations in the Russell-Meinong Dispute, the Bradley Paradox and the Realism-Nominalism Controversy." *Grazer Philosophische Studien* no. 50:273-291.

"The paper begins by considering Russell's criticism of Meinong's theory of objects and *Sosein* that center on the notions of negation and existence. The discussion raises issues about functions, properties, predication, the "concept" of existence and relations.

These lead to a consideration of recent revivals of moderate nominalism in the form of trope theories. An argument against such theories suggests a fundamental principle of ontology and a reformulation of the nominalism-realism dispute."

95. ———. 2005. "*Being and Nothingness, Nichtsein and Aussersein, Facts and Negation: Meinongian reflections in Sartre and Russell.*" *Meinong Studies / Meinong Studien* no. 1:199-232.

"The paper explores connections among and problems related to (1) Sartre's notions of *Being* and *Nothingness*, (2) Meinong's concerns with non-being, *Aussersein*, objectives and negation, (3) Russell's diverse views of negative facts, and (4) the respective rejections (and sometimes purported refutations) of idealism stemming from considerations of the act-object distinction and the focus on "intentionality" that characterized the Brentanist turn in philosophy.

Alternative ontological analyses of negation and their connections to the "relations" of *diversity* and *identity* are also considered, along with Sartre's attempt to place consciousness outside of any causal framework and to found an "ethic of existentialism" on his accounts of *consciousness*, *being* and *negation*."

96. Hodges, Michael. 1971. "On "Being about"." *Mind* no. 80:1-16.

"Interest in the concept 'about' has often centered around Meinong's argument: I.) the golden mountain does not exist. II.) sentence (1) is about the golden mountain. III.) if sentence (1) is a sentence about a golden mountain, then there is golden mountain which it is about. IV.) there is a golden mountain. This argument, which is formally valid, depends on two assumptions: 1) that it is generally correct to say, if a sentence has "x" as its grammatical subject then it is about 'x'; 2) that to say that a sentence is about something is to say the sentence stands in some relation to some object. Most attacks on Meinong's argument deal with the first of these assumptions while I argue that in the relevant sense the second assumption is false. Goodman has developed formal definitions of two senses of "about" which would forestall the argument a step III and I show that his definitions are inadequate. Having shown that (2) above is false I examine a number of attacks on Meinong's argument including those of Ryle, Linsky, Strawson and Cartwright. Each of these attacks in the transition from (i) to (ii) above and in so doing runs counter to our intuitions concerning the concept of 'being about'."

97. Höfer, Ulf. 2009. "Defekte Gegenstände und andere Aspekte der Ontologie Meinongs." *Meinong Studies / Meinong Studien*

no. 3:241-267.

98. Hunter, Daniel. 1981. "Reference and Meinongian Objects." *Grazer Philosophische Studien* no. 14:23-36.

"Terence Parsons has recently given a consistent formalization of Meinong's theory of objects. The interest in this theory lies in its postulation of nonexistent objects. An important implication of the theory is that we commonly refer to nonexistent objects. In particular, The theory is committed to taking fictional entities as objects of reference. Yet it is difficult to see how reference to fictional entities can be established if Parsons' theory is correct.

This difficulty diminishes the attractiveness of the theory and also raises questions as to the ability of the theory to give a satisfactory account of intentional attitudes towards fictional entities."

100. Jacques, Francis. 1973. "Référence et description chez Meinong. De la phénoménologie à l'analyse." *Revue Internationale de Philosophie* no. 104-105:266-287.
101. Jacquette, Dale. 1982. "Meinong's Theory of Defective Objects." *Grazer Philosophische Studien* no. 15:1-19.

"In his difficult work *On Emotional Presentation*, Meinong introduces the concept of defective objects. These are meant to provide part of the solution to Mally's paradox about self-referential thought. But the discussion of defective objects is ambiguous in ways which give rise to a dilemma.

It is not clear whether defective objects are supposed to be a special kind of intentional object on Meinong's theory, or whether they are not really supposed to be intentional objects at all. If defective objects are a special kind of intentional object, then it is possible to put forward a strengthened version of Mally's paradox which cannot be solved by the theory of defective objects. The strengthened paradox represents a counter-example to the intentionality thesis, according to

which every psychological experience is directed toward an object of intention. But if defective 'objects' are not really intentional objects at all, then psychological experiences which have defective objects will themselves constitute counter-examples to the intentionality thesis. In either case, the thesis cannot be consistently maintained." (p. 1)

102. ———. 1985/86. "Meinong's Doctrine of the Modal Moment." *Grazer Philosophische Studien* no. 25/26:423-438.

"Meinong's doctrine of the modal moment and the watering-down of extranuclear properties to surrogate nuclear counterparts was offered in response to Russell's problem of the existent round square. To avoid an infinite regress of successively watered-down factualities, Meinong stipulates that the modal moment itself cannot be watered-down. This limits free assumption, since it means that the idea of the existent-cum-modal-moment round square cannot be entertained in thought. It is possible to eliminate the modal moment and watering-down from Meinongian semantics in favor of a strict enforcement of the distinction between nuclear and extranuclear properties. This provides a simpler, more economical Meinongian object theory, and regains unrestricted free assumption."

103. ———. 1989. "Mally's Heresy and the Logic of Meinong's Object Theory." *History and Philosophy of Logic* no. 10:1-14.

"The consistent formalization of Meinong's object theory in recent mathematical logic requires either plural modes of predication, Or distinct categories of nuclear or constitutive and extranuclear or nonconstitutive properties. The plural modes of predication approach is rejected because it is reducible to the nuclear-extranuclear property distinction, But not conversely, And because the nuclear-extranuclear property distinction offers a more satisfactory solution to object theory paradoxes."

104. ———. 1989. "Modal Meinongian Logic." *Logique et Analyse* no. 125-126:110-130.

- "A formalization of four distinct quantificational modal Meinongian logics is given, with nonstandard model set theoretical semantics. The derivation of Barcan and converse Barcan theorems prompts revision of two systems of modal Meinongian logic to restore congruence of semantic and inferential structures of Meinongian systems with identical uniform domain distributions of existent and nonexistent objects. The problem of transworld identity of incomplete and impossible objects is examined, and world-indexing of nuclear properties is recommended as a solution."
105. ———. 1990. "The origins of *Gegenstandstheorie*. Immanent and transcendent intentional objects in Brentano, Twardowski and Meinong." *Brentano Studien.Internationales Jahrbuch der Franz Brentano Forschung* no. 3:177-202.
106. ———. 1992. "Meinongian models of scientific law." In *Theories of Objects: Meinong and Twardowski*, edited by Pasniczek, Jacek, 86-104. Lublin: Wydawnictwo Uniwersytetu Marii Curie-Slodowskiej.
107. ———. 1994. "A Meinongian Theory of Definite Description." *Axiomathes*:345-360.
108. ———. 1994. "Meinongian logic and Anselm's ontological proof for the existence of God." *Philosophical Forum* no. 25:231-240.
- "The key assumption of Anselm-inspired ontological proofs for the existence of God, that existence is part of God's essence or greatness, is submitted to a Meinongian criticism. Meinong's distinction between nuclear and extranuclear properties disallows existence to be included as a constitutive property of any existent or nonexistent object. The unsolved problem of evil suggests instead that to be omniscient, omnipotent, perfectly benevolent, and the author of an actual world in which there is natural evil, is tantamount to being a round square, Meinongian logic implies that even if God exists, an existent God could not possibly be greater or more perfect than an impossible necessarily nonexistent Meinongian object God."
109. ———. 1994. "Tarski's quantificational semantics and Meinongian object theory domains." *Pacific Philosophical*

Quarterly no. 75:88-107.

110. ———. 1995. "Meinong's Concept of Implexive Being and Nonbeing." *Grazer Philosophische Studien* no. 50:233-271.

"Meinong introduces the concept of implexive being and nonbeing to explain the metaphysics of universals and as a contribution to the theory of reference and perception. Meinong accounts for Aristotle's doctrine of the inherence of secondary substances in primary substances in object theory terms as the implection of incomplete universals in complete existent or subsistent objects. The derivative notion of implexive so-being is developed by Meinong to advance an intuitive modal semantics that admits degrees of possibility. A set theoretical interpretation of Meinong's mereological concept of the implection of incomplete beingless objects in existent or subsistent complete objects is proposed. The implications of Meinong's concept of implection are exploited to answer extensionalist objections about "Meinong's jungle," defending the ontic economy of an extraontological neo-Meinongian semantic domain that supports individual reference and true predication of constitutive properties to beingless objects."

111. ———. 1995. "Object theory foundations for intensional logic." *Acta Analytica* no. 13:33-63.

"The logic of existent and nonexistent objects provides a formal theory of reference and true predication for ordinary discourse, the semantics of ontological commitment, and logic of fiction. The intensional logic proposed in what follows offers a rigorous object theory semantics with nonstandard propositional and predicate inference machinery. The system is distinguished from previous formalizations of object theory by formal criteria for nuclear (constitutive) and extranuclear (nonconstitutive) properties, three-valued propositional semantics for predications of nuclear properties to incomplete nonexistent objects for which the objects ostensibly are undetermined, nonstandard set theory semantics with unrestricted comprehension for object theory predicate semantics (licensed by existence restrictions on abstraction equivalence),

- demonstrations of internal determinacy, consistency, and Henkin completeness, nonstandard deduction theorem, and consistency considerations in light of free assumption and unrestricted comprehension."

115. ———. 2000. "Confessions of a Meinongian Logician." *Grazer Philosophische Studien* no. 58/59:151-180.
- "In a chapter of- so to speak - an intellectual autobiography I sketch the reasons and ways I became a practicing Meinongian logician.

The way is a chain of transgressions, e.g., the transgression of extensionalism or of the law of excluded middle, and a struggle against widespread misinterpretations of Meinong's *Gegenstandstheorie*. Although the opposition towards Meinong's theory of objects persists in analytic philosophy, its main insights - that thought is intentional and that logic must be ontologically neutral - haven't lost their attraction. Moreover: there is no substantive criticism to show that we cannot refer and truly predicate properties of intended objects regardless of their ontic status."

116. ———. 2001. "Aussersein of the pure object." In *The School of Alexius Meinong*, edited by Albertazzi, Liliana, Jacquette, Dale and Poli, Roberto, 373-396. Aldershot: Ashgate.
117. ———. 2001. "Nuclear and extranuclear properties." In *The School of Alexius Meinong*, edited by Albertazzi, Liliana, Jacquette, Dale and Poli, Roberto, 397-426. Aldershot: Ashgate.
118. ———. 2003. "Meinong on the phenomenology of assumption." *Studia Phaenomenologica. Romanian Journal of Phenomenology* no. 3:155-177.

"This essay offers a detailed critical exposition of Alexius Meinong's theory of free assumption in its relation to inner perception in his book, *On Assumptions*. I argue that the concept of free assumption is key to understanding the basic principles of Meinong's object theory, and his extra-ontology of nonexistent objects, including the golden mountain and round square. I situate Meinong's object theory in the context of Brentano's descriptive psychology, and consider the phenomenological foundations of the Meinongian domain.

Meinong's theory of assumption introduces a fourth category of assumptions to supplement Brentano's tripartite division between presentations, judgments, and emotions, on the grounds that assumptions are phenomenologically distinct from and in some sense stronger than presentations, and also distinct from and in some sense weaker than judgments."

123. Jorgensen, Andrew Kenneth. 2002. "Meinong's much maligned modal moment." *Grazer Philosophische Studien* no. 64:95-118.
 "Russell's objections to object-theory have been refuted by the proofs of the consistency of Meinong's system given by various writers. These proofs exploit technical distinctions that Meinong apparently uses very little if at all. Instead, Meinong introduces a theoretical postulate called the modal moment. I describe this postulate and its place in Meinong's system, and I argue that it has been much under-rated by Meinong's logician expositors."
124. ———. 2004. "Types of Negation in Logical Reconstructions of Meinong." *Grazer Philosophische Studien* no. 67:21-36.
 "Russell's criticisms force Meinong to adopt a distinction between two types of negation. Logical expositions of Meinong's theory show the distinction is easily drawn in formal terms, but that alone does not justify the distinction intuitively. I criticise Routley's treatment of the distinction and argue that only Terence Parsons' theory retains and preserves the tight network of conceptual connections between the notions of

- negation, contradiction and impossibility. Hence, Parsons' approach best expresses the Meinongian perspective."

127. Kroon, Frederick W. 1992. "Was Meinong Only Pretending?" *Philosophy and Phenomenological Research* no. 52:499-527.
"In this paper I argue against the usual interpretation of Meinong's argument for nonexistent objects, an interpretation according to which Meinong imported nonexistent objects like "the golden mountain" to account directly for the truth of statements like the golden mountain is golden'. I claim instead (using evidence from Meinong's "On Assumptions") that his argument really involves an ineliminable appeal to the notion of pretense. This appeal nearly convinced Meinong at one stage that he could do without nonexistent objects. The reason, I argue, why he nonetheless embraced an ontology of nonexistents has to do with the phenomenology of representation, and not with semantics."
128. ———. 2006. "Russell's Descriptions and Meinong's Assumptions." In *Modes of Existence. Papers in Ontology and Philosophical Logic*, edited by Bottani, Andrea and Davies, Richard, 81-104. Frankfurt: Ontos Verlag.
"The paper is structured as follows. In the next section, I describe a problem for Russell's account of the logical form of negative existentials involving descriptions, and suggest a Russellian solution. This solution is one that no one will care to adopt -- it seems to turn negative existentials into self-contradictions -- but I later argue that, properly interpreted, it constitutes a promising way of reconciling some of Meinong's views about negative existentials with the kind of "robust sense

of reality" that informed Russell's own analysis. In section 3 I begin the task of articulating this reading of Meinong by describing Meinong's Assumption View as articulated in the second edition of his *On Assumptions* (Meinong 1910). Because this view presupposes Meinong's infamous commitment to non-existent objects, it would still offend Russell's "robust sense of reality", and so section 4 considers a weakened version of the view, one that retains the appeal to assumptions while giving up the appeal to non-existent objects. (Meinong defends a similar view in the 1902 edition of *On Assumptions*, which predates his discovery of non-existents.) Section 5 offers the finale: it shows how Meinong had himself tried to apply such a weakened Assumption View to the case of negative existentials, that Russell had known about the attempt (this arguably solves the first, hermeneutic puzzle), and that, properly interpreted, this way of understanding negative existentials provides Russell with a solution to the problem facing his theory of negative existentials." (pp. 82-83)

132. ———. 1995. "Some Varieties of Thinking. Reflections on Meinong and Fodor." *Grazer Philosophische Studien* no. 50:365-395.

"The first half of the paper reflects on a couple of folk-psychological notions. "Belief" and "judgement" are selected for special attention.

They cover two varieties of thinking, a mental state and a mental act. Both lay claim to truth, and thereby stand in marked contrast to their nowadays sadly neglected non-committal counterparts. Meinong, of course, did not neglect them, and his notions of "*Annehmen* (merely entertaining a thought)" and "*Denken* (entertaining a thought)" play a decisive role in the paper. The Lingua Mentis Hypothesis is a bold contribution to cognitive subpersonal psychology. The second half of the paper tries to show that careful reflection on the conceptual resources of folk psychology makes certain arguments for this Hypothesis as well as certain philosophical arguments against it look rather feeble. The paper culminates in a discussion of Jerry Fodor's Systematicity Argument for the Language of Thought Hypothesis. In this discussion critical use is made of certain Meinongian insights."

"According to K. Perszyk, (*) Meinong's description of homeless objects is a novelty: it does not trace back to any traditional ontological assumption, neither avicennian nor scholastic. While discussing this claim, one focuses on two key-notions in ancient and medieval ontology: subsistence and existence, which seem to be akin to the meinongian *bestehen*, *Sosein* vs. *Sein* and *existieren*. In this respect, one comments on Porphyry's, Proclus', Abaelard's, Aquinas' and Bacon's theory of general objects, fictitious entities and non-existing particulars."

"Music represents a crucial issue in nineteenth-century philosophy and science. Scholars generally possessed a good musical competence and contributed to the explanation of sound perception and aesthetic enjoyment in music. Reflexions on musical psychology, in turn, influenced general theories of mind, sometimes in an impressive way. Meinong plays a remarkable role within this context. Together with Mach, Ehrenfels and Stumpf, Meinong contributed to overtake Helmholtz' physical-physiological theory, supporting a more comprehensive approach. He was repeatedly concerned with problems such as tonal fusion, tone quality (*Klangfarbe*) and melodic perception. Although Meinong did not develop musical problems systematically, he assumed a quite original and interesting position. His ideas have been developed by some of his followers in the School of Graz."

16. ———. 1995. "Meinong's Theory of Objects: An Attempt at Overcoming Psychologism." *Grazer Philosophische Studien* no. 50:87-112.

"I intend to take into account Meinong's theory of objects from a point of view allowed by the author himself, when he agrees that the proper "place" for such a doctrine is the theory of knowledge. According to this suggestion, I think it convenient to explain the doctrine at issue in the light of the definition of knowing as a "double" act, in which the object known is "in front of" the knowing act itself as something comparatively autonomous. From this point of view a comparison with Husserl's "pure logic" - as Meinong again suggests - as well as a valuation of the part played by our philosopher in their common opposition to psychologism seem to be of interest.

Pure logic seems to answer in the most adequate way the demands that induce Meinong to elaborate a theory of pure objects: such objects are taken into consideration as to their positivity and possibility founded on equally pure operations of a subject. At the same time pure logic provides us with a clue to the ambiguity of *Aussersein*: as a matter of fact, Meinong, freeing himself from the prejudice in favor of what is actual, remains involved in what I would call a prejudice "in favor of what has being"; he thinks it necessary to resort to an assumption, that is to a simulation of being in order to explain our thinking of a non-being object. Furthermore according to him an assumption is in general demanded in order to think of an object as to his so-being, that is of the outside-being object.

There are two orders of questions: the first one regards the "formal" generality of the fundamental gnosiological problems, leaving out of consideration every "matter" of knowledge, the second refers to the gnosiological-phenomenological foundation of the concepts and of the laws of pure logic. They are absolutely inseparable, and yet strictly distinct. The first

- order should be the right place for the *Aussersein* of pure objects."

"Grammar (and the bad old traditional logic) says that quantifier phrases such as 'nobody', 'everyone', 'all women', 'some men' and 'a man' are in the same category as names such as 'Milly', 'Molly' and 'Mandy'. So, prior to their first corrective lessons, students are awfully muddled, the first and fundamental problem being the Woozle hunt for somebody called 'nobody'. Hoorah for modern logic and logic teachers!

The story used to justify our current logics is entirely fictional. The claims about names and quantifier phrases in English are wildly false. Two of the heroes of modern logic, Russell and Hilbert, make the very mistakes which are falsely blamed on traditional logic. The villain, Meinong, turns out to have been working a different patch. Ideas ascribed to traditional grammar are modern inventions. Neither logicians nor grammarians can be trusted to tell the history of either grammar or logic."

"Meinong's philosophy is at present mostly unknown; where it is known it is mostly regarded as unacceptable. This is partly due to its obscurity, and partly to the apparently devastating criticisms directed at it by Bertrand Russell in 1905. In the present paper I attempt to provide a reconstruction of some of Meinong's philosophy which is simultaneously clear, faithful to the original, and immune from Russell's criticisms. Sections 1, 2 and 4 concentrate on his theory of objects; section 3 sketches how to relate such objects to a canonical symbolism."

37. ———. 1975. "A Meinongian analysis of fictional objects." *Grazer Philosophische Studien* no. 1:73-76.

"Meinong is best known as the loser of the Russell-Meinong debate of 1905. Russell had the last word then, and (unfortunately) most of us know only his version of Meinong's views.' But there is more to be said on Meinong's side. In an earlier paper I tried to develop a version of Meinong's ontology which is clear, consistent, and immune to Russell's attacks. Most importantly, that theory preserves - rather than analyses away - Meinong's radical and exciting ontological views: that there are non-existent objects; that there are impossible objects; etc.

So what? We want more of a theory than clarity and consistency; we also want reason to believe that it's true. How might we offer evidence in favor of such a theory? I think that the only evidence that we ever have in favor of a general metaphysical theory is that it has many interesting applications. The Meinongian theory agrees with more orthodox theories in its treatment of existing objects, so any evidence in its favor will consist of applications to issues concerning non-existent objects. The present paper contains

one of these; it's an application of the Meinongian theory to an analysis of fictional objects.

By "fictional" I do not mean "non-existent", but rather "occurring in fiction". Many fictional objects are indeed non-existent, and it is their non-existence that in some sense causes all the problems, but fictional works also abound in reference to real objects, and this fact must be taken into account.

I will begin by giving an exposition of the Meinongian ontology." p. 73

38. ———. 1978. "Nuclear and Extranuclear Properties, Meinong and Leibniz." *Noûs* no. 12:137-151.

"In *A Prolegomenon to Meinongian Semantics* (1974) and in *A Meinongian analysis of fictional objects* (1975) I attempted to develop a theory of objects for a Meinongian ontology. That theory presupposed an account of two sorts of properties, called "nuclear" and "extranuclear" properties. This paper is an attempt to provide such an account. The theory developed here is a rich and parochial one, based on the notion of "possible world." In the last section I will show how, relative to this account of properties, Leibniz's ontology of monads (on one construal, anyway) corresponds to a fragment of Meinong's ontology of objects.

Since most of this paper utilizes the controversial notion of a "possible world," the Editor has requested that I include a defense of this line of approach. Is it really useful to base a theory of properties on such a notion?

I don't believe that this question can be answered with any degree of certainty by anyone right now. In my view, "possible worlds" are theoretical entities, and as such they are as useful or useless as the theories within which they appear. At present, theories using possible worlds are both varied and controversial. Some have a long tradition; for example, probability theory, where possible worlds typically appear under the title "possible cases". More recently they have been used in theories dealing with necessity, possibility, essence, belief, knowledge, proposition, intension, freedom, etc. This is a

fruitful tradition, and I don't believe that we know at present whether it will last, or whether it is a blind alley which will eventually be seen as an historical aberation. But even in the latter case there is hope for theories based on possible worlds. For even when scientific or philosophical progress leads to the abandonment of an earlier tradition, many of the "results" of that earlier tradition tend to be preserved in some new guise. So in spite of the controversial nature of possible worlds, I think we have learned enough of lasting value from their employment to justify not terminating their tradition yet."

39. ———. 1979. "The methodology of nonexistence." *Journal of Philosophy* no. 76:649-662.

"There is apparent evidence that some objects do not exist; i. e., that there are objects that do not exist. "Naive object theory" (sometimes attributed to Meinong) takes this evidence at face value, but leads to contradiction. Several ideas about how to develop a more sophisticated account have been proposed, but not worked out in detail. The paper discusses some issues that will be encountered by any theory of nonexistent objects, using the theory of my forthcoming book, *Nonexistent objects*, as an example."

42. ———. 1995. "Meinongian Semantics Generalized." *Grazer Philosophische Studien* no. 50:145-161.

"It is tempting to think that Meinong overlooked the "specific/nonspecific" distinction. For example, "I am looking for a grey horse" may either mean that there is a specific horse I am looking for (e.g., one I lost), or just that I am grey-horse-seeking.

The former reading, and not the latter, requires for its truth that there be a grey horse. The purpose of this paper is to investigate whether it is defensible to maintain Meinong's theory here: to take nonspecific reading of *any* verb concerning

a possibly nonexistent but incomplete object. This requires essential appeal to the distinction between nuclear and extranuclear properties. Included is a discussion of criticisms of Meinong's own theory and of the Medieval theory of ampliation, according to which psychological discourse can "ampliate" a term such as 'chimera' so as to stand for one or more things that cannot exist, yet are chimeras. The paper concludes inconclusively."

43. Pasniczek, Jacek, ed. 1992. *Theories of Objects: Meinong and Twardowski*. Lublin: Wydawnictwo Uniwersytetu Marii Curie-Slodowskiej.

Contents: Jacek Pasniczek: Preface 7; Francesca Modenato: Alexius Meinong: the theory of relation as a theory of knowledge 9; Liliana Albertazzi: Is there a transcendental object? 26; Roberto Poli: Twardowski and Wolff 45; Jacek Juliusz Jadacki: The metaphysical basis of Kazimierz Twardowski's descriptive semiotics 57; Jan Wolenski: 'Being' as a syncategorematic word: a completion (?) of Twardowski's analysis of 'nothing' 75; Dale Jacquette: Meinongian models of scientific law 86; Jacek Pasniczek: The Meinongian logic vs. the Classical logic 105-112.

This volume contains a selection of papers from the conference "The Theory of Objects in Central Europe. The Austrian-Polish Connection: Meinong and Twardowski" held in December 1989 in Kraków. It was supported and sponsored by the Jagiellonian University, Centro Studi per la Filosofia Mitteleuropea, The National Research Project "Sign-Language-Reality", and The Institute of Austrian Culture in Warsaw. The conference was organized by Prof. Jan Wolenski with dr. Georg Jankovic's generous assistance.

Alexius Meinong and Kazimierz Twardowski studied philosophy at the University of Vienna at the end of XIX century. Both were under a great influence of Franz Brentano, who is considered the father of contemporary theory of intentionality. He viewed intentionality as the crucial feature of consciousness consisting in „directness to an object". Such conception should presuppose some general theory of objects

of consciousness. Meinong and Twardowski adopted Brentano's idea of intentionality subsequently elaborating their own ontologies of objects. What is common in the views of the two philosophers, barring many differences, is that they assume an extensive sphere of non-existent objects that can be possibly objects of intentional acts.

Nowadays there is a growing interest in theories of intentionality and intentional objects on the part of analytic philosophy as well as phenomenology. That is why there is also a renaissance of Meinong's and Twardowski's philosophical thought, although the former philosopher is much better known, more popular, and, what follows, more inspiring. The main purpose of the conference that took place in Kraków was to investigate, from various historical and theoretical perspectives, theories of objects created by the two of Brentano's followers. It is to be regretted that the present volume does not fill a serious gap in philosophical literature: no paper is devoted to direct comparison of Meinong and Twardowski. Nevertheless we hope that the papers collected in the volume may contribute to better understanding of the two philosophers and prepare the ground for such a comparative study.

F. Modenato, in her essay, traces the development of Meinong's idea of relations while linking his views with the views of Hume and Locke. She is concentrating on epistemological relevance of the idea. Relations are treated by Meinong as some complexities and both relations and complexities are higher-order objects. Higher-order objects play the central role in Meinong's theory of knowledge and are of great importance to his ontology.

L. Albertazzi points to some Kantian motives in Twardowski's ontology. The Polish philosopher distinguishes several categories of objects which, according to Albertazzi's interpretation, correspond closely to that distinguished by Kant. In particular, 'the object in general' may be taken as Kant's transcendental object, and 'the general object' as a universal presented individually in the subject of proposition.

R. Poli argues in his paper that many elements of Wolff's ontology can be found in Twardowski's theory of objects. Both philosophers conceive objects as possible wholes. For Twardowski, being an object is ontologically prior to having existence and it is enough for being an object to be representable in an act of presentation.

J.J. Jadacki presents a comprehensive survey of Twardowski's ontological (metaphysical) and epistemological views. On this basis he reconstructs the philosopher's descriptive semiotics focusing his attention on the theory of judgment.

Additionally, Jadacki carries out a formal semantic analysis of Twardowski's semiotics.

J. Wolenski considers the main traditional views of 'being' and wonders if 'being' could be situated somewhere in the formal hierarchy of concepts. He comes to the conclusion that "being" expresses no concept at all and, what follows, it has the syncategorematic character as Twardowski claimed. Wolenski proposes a completion of Twardowski's claim by appealing to modern logic and Lesniewski's ontology.

D. Jacquette sketches informally the principles of Meinongian semantics and shows how the semantics can be applied in formalisation of scientific laws. By contrast to extensionalist models of scientific discourse which admit only existent objects, in Meinongian semantics the reference to ideal and non-existent objects is possible. Many problems of contemporary philosophy of science such as, for example, the justification of induction and confirmation can be uniformly treated and solved on the ground of Meinong's theory.

J. Pasniczek proposes quite a simple logic which obeys the main theses of Meinong's theory of objects. This logic resembles closely the classical predicate logic with respect to syntax and semantics (it is basically extensional). Despite that resemblance, the proposed logic is associated with very rich ontology of objects including various kinds of non-existent objects.

I am deeply indebted to Prof. Jan Wolenski for encouragement and assistance in editing this book." (Preface, pp-7-8)

44. ———. 1992. "The Meinongian logic vs. the Classical logic." In *Theories of Objects: Meinong and Twardowski*, edited by Pasniczek, Jacek, 105-112. Lublin: Wydawnictwo Uniwersytetu Marii Curie-Sklodoskiej.

45. ———. 1993. "The Simplest Meinongian Logic." *Logique et Analyse* no. 143-144:329-342.

"The Meinongian logic is a logic which accommodates main principles of Meinong's theory of objects. This principles give rise to a very extensive ontology which contains various kind of nonexistent entities (e.g., incomplete and impossible ones). In the paper quite a simple Meinongian logic is developed. This logic has the following features: 1) it is extensional, 2) it differs slightly from the classical first-order logic, 3) it is a first-order system, 4) it is closer to the natural language than classical logic, 5) it is much more simple than Meinongian systems created by T. Parsons and E. Zalta."

47. ———. 1995. "Are Contradictions Still Lurking in Meinongian Theories of Objects?" *Grazer Philosophische Studien* no. 50:293-303.

"Contemporary formalizations of Meinong's theory of objects prove that Russell's accusation of inconsistency of the theory is not valid.

However, in the same formalizations there has appeared a new source of potential inconsistency. Theories of objects inspired by Meinong's ontology usually include, in addition to basic principles of the ontology, abstraction-axioms for defining objects and properties (relations). Although these axioms seem to be perfectly acceptable, they lead to paradoxes when adopted without any restrictions. These paradoxes may be understood as paradoxes of size (not of self-referentiality): too many objects or too many properties are defined by the axioms. We

- can avoid them at the cost of counterintuitive stipulations, some of them similar to those applied in set theory or in higher-order logics (like a stratification of formulas). We need, however, to look for phenomenologically well-grounded protections against paradoxes. This search can deepen our understanding of the nature of Meinongian objects."

"Some commitments at the interface of semantics and ontology, such as numbers, symphonies, incomplete objects, values, oughts or possibilities tend to appear problematic. The scorekeeping approach to semantics introduces contextually shifting parameters that allow for construal of truth as indirect correspondence.

Meinong did recognize diversity and richness that is made possible by the non-reductionist engagement of the scorekeeping approach. Because of his commitment to the deep presupposition of direct correspondence construal of truth though, Meinong had to interpret richness of normative discursive scorekeeping commitments as richness of ontological strata, features and engagements.

Once as Meinong's theory is adapted to the construal of truth as indirect correspondence, many problems related to his objects dissolve, naturally placing his scorekeeping discovery into discursive normative setting. A translation of Meinongian objects into discursive scores confirms that his discovery aims at these indeed, which is obscured by his sticking to the construal of truth as direct correspondence."

60. Pouivet, Roger. 1999. "Lukasiewicz: de l'aristotélisme autrichien à l'aristotélisme polonais." *Philosophiques* no. 26:263-277.

"En 1910, Jan Lukasiewicz publiait *Du principe de contradiction chez Aristote* (1). Dans cet article, on explique les points principaux du livre de Lukasiewicz. Ce dernier affirme qu'Aristote n'a pas réussi dans sa tentative pour justifier le principe de contradiction. En fait, ce principe est moins logique qu'éthique, selon Lukasiewicz, et cela explique bien des difficultés posées par la théorie d'Aristote. On discute également de la façon dont Lukasiewicz utilise la notion d'« objets contradictoires », empruntée à la Théorie des Objets de Meinong; on montre que Lukasiewicz se situe dans le cadre d'une version brentanienne de l'aristotélisme. Certaines connexions entre Lukasiewicz et la conception wittgensteinienne de la nécessité ou le conservatisme logique de Quine sont indiquées. Le but de mon article est essentiellement d'encourager une lecture attentive du livre qui n'a pas reçu l'attention qu'il mérite parce qu'il a été écrit à l'origine en polonais. Souvent, les philosophes croient connaître son contenu à travers le résumé que Lukasiewicz écrit en allemand en 1910, et qui a été traduit en anglais. Mais, en fait, il y a bien des choses importantes dans le livre qui n'apparaissent nullement dans le résumé."

61. Priest, Graham. 2003. "Meinongianism and the Philosophy of Mathematics." *Philosophia Mathematica* no. 11:3-15.

"If meinongianism isn't dead, nothing is', Gilbert Ryle is reputed to have said, in the heyday of Oxford Philosophy. (1) I think that Ryle was exactly right. No idea in philosophy is ever past its use-by date, at least, no idea of any substance. We may always come back and find new depths in it, new applications for it, new answers to objections that were taken to be decisive. Thus, for example, platonism has re-emerged many times in the history of Western philosophy, most recently in a perhaps unexpected place: in connection with technical results in the

foundations of mathematics. Aristotelian virtue ethics has reappeared recently after a long period in which ethics has been dominated by kantianism and utilitarianism. And so the list goes on.

Of course, this is not how Ryle intended his words to be understood. What he meant was that meinongianism was dead for all time. It would perform no Lazarus-like return. For many years I shared Ryle's view. Educated about thirty years ago in Britain, I took it for granted that Russell had shown that meinongianism was little more than superstition (though one that he himself had subscribed to for quite a long time), and that Quine had shown that it was all just simple obfuscation. That which exists is that over which one can quantify; and that's that.

Thus it was that I was outraged when I met Richard Routley (Sylvan as he later became) in the mid-1970s, and found him stoutly defending a version of meinongianism. (Richard never defended a view in any other way!) I could not understand how the view could possibly be taken seriously. It was my good fortune not just to have met Richard, but to have been able to talk with him about the matter over many years. He persuaded me that all the knock-down arguments that I thought I had were lame or just begged the question. He persuaded me that meinongianism is a very simple, natural, and common-sense view. He persuaded me that the theory has many applications to areas of philosophy where more orthodox views creak at the seams. I am still not sure whether or not I believe it.; but I certainly lean towards it in certain areas."

(1) I have not been able to track down the source of this quote; so it may just be hearsay. [Note added by Raul Corazzon: "Let us frankly concede from the start that *Gegenstandstheorie* itself is dead, buried and not going to be resurrected." Gilbert Ryle, *Intentionality-Theory and the Nature of Thinking* (1972) - p. 7]

62. Priest, Graham, and Read, Stephen. 2004. "Intentionality: Meinongianism and the medievals." *Australasian Journal of Philosophy* no. 82:421-442.

"Intentional verbs create three different problems: problems of nonexistence, of indeterminacy, and of failure of substitutivity.

Meinongians tackle the first problem by recognizing nonexistent objects; so too did many medieval logicians. Meinongians and the medievals approach the problem of indeterminacy differently, the former diagnosing an ellipsis for a propositional complement, the latter applying their theory directly to non-propositional complements.

The evidence seems to favor the Meinongian approach. Faced with the third problem, Ockham argued bluntly for substitutivity when the intentional complement is non-propositional; Buridan developed a novel way of resisting substitutivity. Ockham's approach is closer to the Meinongian analysis of these cases; Buridan's seems to raise difficulties for a referential semantics. The comparison between the Meinongian and medieval approaches helps to bring out merits and potential pitfalls of each."

63. Purtil, Richard. 1973. "Meinongian Deontic Logic." *Philosophical Forum* no. 4:585-592.

"In modal logic we can think of ourselves as dealing with four "truth values": 1) necessarily true, 2) factually true, 3) factually false, and 4) necessarily false. It turns out that it is not possible to regard modal logic merely as a four-valued logic; what we need in fact is an infinite number of values. But to a limited extent, a four-valued interpretation of modal logic is useful and suggestive. (1) This being so, it is tempting to look for a four-valued interpretation of deontic logic, which has so many parallels with modal logic. But what four values are we to take, and how are they to be related? In this paper I would like to develop a suggestion made by Meinong, and relate it to some modern problems, giving at least the beginnings of a "Meinongian" deontic logic."

(1) For a fuller discussion of these points, see my *Four Valued Tables and Modal Logic*, *Notre Dame Journal of Formal Logic* [11, 1970 pp. 505-511].

65. ———. 1978. "Meinongian Theories and a Russellian Paradox." *Noûs* no. 12:153-180.

"This essay presents a re-examination of Alexius Meinong's article *Über Gegenstandstheorie* (*On the Theory of Objects*) and undertakes a clarification and revision of it which, I hope, is both faithful to Meinong and capable of overcoming the various objections to his theory that have appeared in the literature. (1) I then turn to a discussion of a historically and technically interesting Russell-style paradox that arises in the modified theory. I also examine the alternative Meinong-inspired theories of Hector-Neri Castañeda and Terence Parsons, using the modified theory as a sharper tool for investigating their worth than that provided by unaided intuitions or less comprehensive, ad-hoc theory fragments.

As with all theories, many of my claims are not susceptible of proof but, rather, gain their plausibility and value from their ability to deal with data and to provide solutions to various problems. The two main problems which, I believe, a properly constructed Meinongian theory ought to be capable of handling are, first, a linguistic problem of long-standing philosophical concern: that of providing a foundation for a semantics of natural languages, and, second, the problem of intentionality and the analysis of the structure of psychological discourse. Even Quine, ordinarily no friend of intentional language, attests to the importance of the latter problem, considering such discourse to be "less clearly dispensable" than other modalities (*Replies* [to Follesdal] in: D. Davidson and J. Hintikka (eds.) - *Words and objections* - Dordrech, Reidel, 1969, p. 336).

For this problem, the theory must embody a characterization of the objects of thought (in the sense of that which is thought

about). In order to account for the psychological phenomenon illustrated by puzzles concerning objects

considered under different descriptions (e.g., the morning star and the evening star), the objects of thought must be "non-substitutable"; i.e., it must be possible for a person to believe that an entity, a, has a property, F, without believing (or being committed to the belief) that an entity, b, has F, even when a and b are said to be the same entity.

To serve as a foundation for a natural-language semantics, the theory must account for the uniformity of thought and language with respect to fact and fiction, i.e., our ability to think and talk about anything. This observation, incidentally, is common to all philosophers who countenance non-existing objects. The theory ought also to provide for a total semantic interpretation function by supplying "referents" for all "non-referring" expressions. By means of such a function, the theory can account for the truth values, taken as part of the initial data, of sentences containing "non-referring" expressions (e.g., 'The golden mountain is golden'). To do this, properties must be meaningfully (i.e., truly and falsely) predicable, in some sense, of non-existents. Finally, a means of quantifying over the "referents" of "non-referring" terms will require an underlying "free" logic in which 'exists' will be an informative predicate not embodied in the quantificational machinery of the theory."

66. ———. 1979. "An Adverbial Meinongian Theory." *Analysis* no. 39:75-81.

"A fundamental assumption of Alexius Meinong's Theory of Objects (1904) is the act-content-object (ACO) analysis of psychological experiences. I suggest that Meinong's theory *need not* be based on this analysis, but that an *adverbial* theory might suffice. I then defend the adverbial alternative against a recent objection raised by Roderick Chisholm, and conclude by presenting an apparently more serious objection based on a paradox discovered by Romane Clark."

"Natural languages differ from most formal languages in having a partial, rather than a total, semantic interpretation function; e.g., some noun phrases don't refer. the usual semantics for handling such noun phrases (e.g., Russell, Quine) require syntactic reform.

The alternative presented here is semantic expansion, viz., enlarging the range of the interpretation function to make it total. a specific ontology based on Meinong's theory of objects, which can serve as domain on interpretation, is suggested, and related to the work of Castañeda, Frege, Katz and Fodor, Parsons, and Scott."

68. ———. 1982. "Meinong, Defective Objects and (Psycho)-logical Paradox." *Grazer Philosophische Studien* no. 18:17-40.

"Alexius Meinong developed a notion of "defective objects" in order to account for various logical and psychological paradoxes. The notion is of historical interest, since it presages recent work on the logical paradoxes by Herzberger and Kripke. But it fails to do the job it was designed for.

However, a technique implicit in Meinong's investigation is more successful and can be adapted to resolve a similar paradox discovered by Romane Clark in a revised version of Meinong's Theory of Objects (W. J. Rapaport *Meinongian Theories and a Russellian Paradox*, *Noûs*, 12, 1978 pp. 153-180; *Errata*, *Noûs*, 13, 1979 p. 125). One family of paradoxes remains, but it is argued that they are unavoidable and relatively harmless."

"The paper deals with Alexius Meinong's theory of "auxiliary objects", which, according to Meinong, provide us with a link between our thoughts and the (extramental) reality our thoughts are directed upon.

In its original form, this theory is contradictory. There are two strategies to free the theory from contradictions: (1) a distinction between "nuclear" and "extranuclear" properties (adopted by Meinong); (2) a distinction between "satisfying" a property and "being determined by" a property (adopted by Mally). It is argued that Meinong's strategy works only if it is interpreted in such a way that it can be reduced to Mally's strategy."

"In "On Denoting" Russell attacked Alexius Meinong's so-called "theory of objects" (*Gegenstandstheorie*), arguing, among other things, that according to Meinong's theory both the sentence "The existent present King of France exists" and "The existent present King of France does not exist" is true, which would render Meinong's theory inconsistent. Some Neo-Meinongians have claimed that one could avoid this consequence by making use of a distinction between two kinds of properties ("nuclear" and "extranuclear" ones), which Meinong worked into his theory several years after "On Denoting". My aim in this paper is to re-evaluate this contemporary attempt to defend

- Meinong's theory against Russell's attack and to offer an alternative solution."

"Meinong, like other noteworthy philosophers from central Europe, began his career in philosophy under the guidance of Franz Brentano. Though Meinong's philosophical investigations from early on were very Brentanian in character, he came to develop views that diverged from certain doctrines of his mentor. In epistemology Meinong introduced the notion of immediate evidence of surmise in his views on memory and perception, whereas Brentano found this notion unacceptable. In descriptive psychology Meinong regarded feelings and desires as two distinct classes and introduced an additional class of mental phenomena called "assumptions". Thus he opposed Brentano's classification of mental phenomena into presentations, judgments, and acts of love and hate. In ontology Meinong allowed for non-real objects. In value theory he even introduced the notion of special irrealia corresponding to feelings and desires. Brentano, however, came to reject irrealia altogether. Such differences are discussed here, but attention is also given to the underlying and enduring philosophical affinity between Meinong and Brentano, namely their commitment to the ideal of scientific philosophy as attainable through descriptive psychology (what might be called "descriptive phenomenology"), which is concerned with intentionally directed consciousness as its subject matter and does not in any way differ methodologically from natural science."

92. ———. 1979. "The Theory of Objects as Commonsense." *Grazer Philosophische Studien* no. 9:1-22.

"It is beginning to be appreciated that the Meinong of the mainstream philosophical literature is a mythological figure, that Meinong's philosophy has in fact been presented in an unfair fashion (perhaps even by largely sympathetic expositors such as Findlay, *Meinong's Theory of Objects and Values*, Second edition, Clarendon Press, Oxford, 1963), and that the theory of objects in particular has been either widely misunderstood or else deliberately misrepresented. What has not been much appreciated is that Meinong's theory of objects represents an important alternative to standard (Russellian) logical theory.(1) Whereas the entrenched theory is both reductionist and logico-empiricist in spirit, the alternative is nonreductionist, antiverificationist, and common-sense. Since the theory of objects has often — there are, however, important exceptions — been taken to be the very antithesis of commonsense, there is some explaining to be done. The problems are compounded by the fact that it is not at all easy to say what commonsense amounts to, and even more difficult to show that a philosophical theory is a commonsense one." (p. 1)1. There need be no apology for calling modern, standard, orthodox, "nondeviant", "classical" logic 'Russellian'. The orthodox logic of the textbooks consists essentially of variations and improvements (or sometimes the reverse) on the logical theory devised in large measure by Russell, building on the work of Peano and others, and worked out in collaboration with Whitehead in *Principia Mathematica* [5]. Certainly there have been important additions by Hilbert, Wittgenstein, Tarski,

Gentzen and others but these do not affect the general claim. In these terms influential modern logical theories, such as those of Quine [15], are but variations on a theme of Russell's. And they share the reductionist empiricist assumptions of Russell's logical theory."

"The judgment constitutes a fundamental notion for several disciplines such as descriptive psychology, ontology and logic, and hence its investigation represents a pivotal area of research within theoretical philosophy. Inside the Brentano-School, Alexius Meinong (1853-1920) and Adolf Reinach (1883-1917) made significant contributions to this topic, separating and exploring both the subjective side of judgment (the intentional experience of judging) as well as its objective side (the "state of affairs" or the "objective"). In this publication Meinong's and Reinach's lore regarding the psychological and object-theoretical aspects of judgment are explicated, compared and evaluated."

105. Santambrogio, Marco. 1990. "Meinongian theories of generality." *Noûs*:647-673.

"It is not widely appreciated that Meinong's non-existent objects are closely related with Twardowski's general objects and Locke's general abstract triangle. The latter is usually thought to be an incoherent notion. In order to disprove that, a formal semantics for such objects is outlined. The adequacy conditions it satisfies are discussed in detail. It is argued that general objects are needed e.g., in order to account for such uses of definite descriptions as in 'The whale is a mammal'. The central section of the paper is devoted to discussing which notion of reference is appropriate for general objects."

111. ———. 1994. "Incompleteness and *Tertium Non Datur*." *Conceptus. Zeitschrift für Philosophie* no. 27:203-218.

"The article investigates Meinong's claim that the *tertium non datur* does not hold for objects which he calls "incompletely determined" and for objects which have a peculiar kind of deficient or pseudo-being which he calls "Aussersein" as e.g., inherently contradictory objects.

Both, objects and kinds of being are examined: first, existence; second, subsistence and Aussersein; third, completely versus incompletely determined objects. They will be discussed on the basis of Meinong's theory of presentation together with the completeness of fictional objects. It is shown that incomplete determination is not ontologically pre-given. An object is incompletely determined if it is intended to be so. The tertium

non datur fails to apply as a consequence of our intentional attitude. Finally, the exceptional status of objectives in respect to incompleteness is acknowledged."

114. Sierszulska, Anna. 2005. *Meinong on Meaning and Truth*. Frankfurt am Main: Ontos Verlag.

Introduction: "Most studies of Meinong's philosophy concentrate on ontological issues and they are often accompanied by providing a logical system of so called Meinongian logic. The epistemological problems are raised rarely and primarily in the light of historical considerations. The purpose of this study is to provide a presentation of the views of Alexius Meinong upon truth and related issues, in such a way as to expose the points which may be interesting for analytic philosophers.

Part I contains an outline of Meinong's theory of objects and his account of intentionality. The subjective "contents" of mental acts are contrasted with "objects" of different kinds. Chapter 2 focuses upon objects of higher order and the notion of an objective. Meinong's notion of *Aussersein* is introduced and it is claimed that objectives are abstract entities belonging to *Aussersein*.

Part II presents Meinong's theory of meaning and his views related to truth and cognition. The conception of meaning is discussed especially in relation to the views of Husserl and Frege upon this issue. Meinong's theory of truth is shown to be a version of logical realism, where identity of logical structure between an objective intended and reality is the basic idea but no facts as entities in reality are postulated. A Fregean interpretation of Meinong's theory of objectives as function-like entities, and not as states of affairs, is proposed. Factuality of objectives is interpreted non-objectually as the "obtaining" of objectives. The notion of self-evidence of judgments is presented in the role of Meinong's substitute criterion of truth.

The problem with subjectivity of the experience of self-evidence is solved in Meinong's conception by means of probability attribution in uncertain epistemic contexts.

Part III contains a discussion of the reception of Meinong's ideas related to truth, since Russell until the present time. This part contains a chapter concerning Russell's interpretation of Meinong's objectives as complexes, in agreement with Russell's early theory of singular propositions. It is shown why this is not a correct interpretation. The issues addressed are the accusations of psychologism directed at Meinong and the mutual misunderstandings about ontological questions between these philosophers. Meinong's reaction to these criticisms is presented, mainly as expressed in the second edition of *On Assumptions*. Next, there is a polemical discussion with these critics who regard Meinong's objectives either as complexes or as states of affairs. And finally, some objections related to Meinong's understanding of truth and cognition are attended to. These objections concern mainly the traces of Kantian idealism in Meinong's epistemological views. In the case of empirical judgments, there is no certainty whether they are true in the objective sense, but such uncertainty in the process of cognition does not imply that we have no possibility to acquire objective knowledge. Scepticism is overcome, because we know that many of our judgments are highly probable.

Part IV is devoted to an analysis of some typical features of Meinongian-style semantics. Chapters 8 and 9 present Meinong's original views by way of comparing his ideas to later developments within Meinongian semantic theories. It is observed that if a semantic domain is understood in the characteristic Meinongian way, it contains both real and meaning-objects of different kinds. This feature of a Meinongian-style semantics is responsible for what is proposed to be called a "double theoretical approach" to objects. It is shown that two senses of being, of quantification, of predication, of extension and of linguistic reference are required, in order to provide a theoretical framework which applies both to real objects and to abstract sense-entities. The

main questions discussed in this part are related to the consequences of introducing "merely semantic" objects into a semantic theory.

The study ends with a conclusion which sums up the results of the discussions with respect to their relevance for the issue of epistemological realism. Meinong's suggestion for developing a probabilistic semantics for undetermined contexts is considered to be a positive way to counterweight scepticism in scientific discourse."

"Though himself no logician, Meinong, by his iconoclastic philosophical views, indirectly contributed significantly to the development of nonclassical logic, notably modal, many-valued, probability, deontic, free, paraconsistent and dialectical logics. After outlining Meinong's mature object theory, emphasizing his views on existence, modality and probability, I show how he influenced the younger logical pioneers

Lukasiewicz and Mally, as well as more recent logicians such as Parsons, Routley and Lambert."

119. ———. 1995. "Meinong's Theory of Sense and Reference." *Grazer Philosophische Studien* no. 50:171-186.

"Gilbert Ryle wrote that "Meaning-theory expanded just when and just in so far as it was released from that 'Fido'-Fido box, the lid of which was never even lifted by Meinong." This paper sets out to relieve Ryle's oversimplification about Meinong and the role of meaning theory in his thought. One step away from canine simplicity about meaning is the recognition of a distinction between sense and reference, such as we find in Frege, Husserl, and the early Russell. In *Über Möglichkeit und Wahrscheinlichkeit* (1915) Meinong seems to corroborate Ryle when he writes, "Word-meanings are objects," but immediately after this, he qualifies it: "Word-meanings are very often auxiliary objects." The distinction between auxiliary and target objects in Meinong's later work allows us to attribute to him a theory of sense and reference which shows him to have indeed lifted the box-lid."

120. ———. 1999. "Bolzano, Brentano and Meinong: three Austrian realists." In *German Philosophy since Kant*, edited by O'Hear, Anthony, 109-136. Cambridge: Cambridge University Press.
121. ———. 2001. "Meinong und Modalität." In *Bausteine zu einer Geschichte der Philosophie an der Universität Graz*, edited by Binder, Thomas, 209-217. Amsterdam: Rodopi.

"Meinong's theory of modality (which is also a theory of probability) is an unexplored alternative to standard views. Meinong's ontology allows him a rich and arguably modernizable account which eschews the notion of possible worlds. It is based on his concepts of *Objective* (state of affairs) and incomplete object. An *Objective* ascribing a property to an incomplete object is possible if some actual completion of the object has the relevant property, and is possible to degree w , where $0 \leq w \leq 1$, if the proportion of actual completions having the property to all actual completions is w ."

122. ———. 2005. "Meinong, Consistency and the Absolute Totality." *Meinong Studies / Meinong Studien* no. 1:233-254.

"Since Russell, Meinong's ontology has often been accused of inconsistency.

By accepting impossible objects, Meinong appears to play into the hands of his opponents. But his distinction between nuclear and extra-nuclear properties enables him to avoid Russell's criticism, and can be employed to deflect other charges of inconsistency. Meinong accepts a single, absolute totality of objects, including a totality of all truths. This seems also to commit him to paradoxical conclusions, but I show he can avoid these. Within the absolute totality, there should be numerous subcollections constituting alternative possible worlds.

The problem is that we can have no way to construct or evaluate the consistency of such collections, which means we have at best inductive assurance that Meinong's ontology is consistent."

See Chapter Five: *Alexius Meinong and Stephan Witasek: on art and its objects* - pp. 125-154.

"Philosophers in the field of analytic metaphysics have begun gradually to come to terms with the fact that there are entities in a range of categories not dreamt of in the set-theory and

predicate-logic-based ontologies of their forefathers. Examples of such *entia minora* would include: boundaries, places, events, states holes, shadows, individual colour- and tone-instances (tropes), together with combinations of these and associated simple and complex universal species or essences, states of affairs, judgment-contents, and myriad abstract structures of the sorts which are studied by the mathematical sciences. How, as hunter-gatherer ontologists, are we to bring order into this vast array? How are we to gauge the ontological merits of given candidate entities, and how are we to understand their relation to entities of more humdrum sorts? Meinong, it turns out, offers a very simple answer to all of these questions."

127. Smith, David Woodruff. 1975. "Meinongian Objects." *Grazer Philosophische Studien* no. 1:43-71.

"This is a study of Meinongian "objects" - specifically, individual objects - and their motivations in intentionality theory. Others have dwelt on their "indifference to being" (*Aussersein*). Principally, I shall argue that, contrary to what we might have hoped for them, Meinongian objects must be intensional entities if, as asked, they are to serve as objects of thought in an appropriately Meinongian, "object-theoretic" account of intentionality. Briefly, the argument is as follows. (The roman numerals mark off roughly the content of parts I through V of the paper.)

I. Meinong's theory of objects can in general be seen as motivated by the theory of intentionality, for "objects" are assumed to serve as the objects of thought or "intention". What seems largely to distinguish a Meinongian approach to intentionality is the attempt to account for the peculiarities of intention in terms of peculiarities of the objects "intended".

II. One class of objects Meinong propounded are "incomplete", or "incompletely determined", objects. An example is the golden mountain, which is golden and mountainous but otherwise "undetermined".

III. For Meinong, incomplete objects serve to mediate the intention (or apprehension) of complete objects. Meinong believed we cannot properly "intend" complete objects. We

intend them only indirectly insofar as we intend incomplete objects which are "embedded" in them. This is Meinong's account of how, as best he thought we can, we intend everyday existing physical individuals, which are complete. (As stated, this is not quite Meinong, which treats of "Soseinsmeinen".)

IV. This theory of the indirect intention of complete objects via incomplete objects also explains another familiar fact about intention, though Meinong himself probably did not put it to this use. It explains in a straightforward way the distinction between, for instance, one's conceiving the morning star and one's conceiving the evening star - and hence, in the "formal mode" the failure of the logical law of substitutivity of identity for terms in intentional contexts. For, on Meinongian lines these intentions would be indirect intentions of the same complete object (Venus, we would say) but intentions proper of distinct incomplete objects ("The Morning Star" and "The Evening Star", as we shall call them), and so they would be distinct intentions.

V. Different sorts of entities have been considered intensional, including Frege's "senses" and Carnap's "intensions". What seems to qualify them as intensional is their role vis a vis, specifically, ordinary physical individuals in a Frege like semantics. Further, it is intensional entities that determine the "directedness" or intentionality of mental acts. Meinong's incomplete objects fill these bills and so, I argue, are intensional. However, since complete objects are continuous in kind with incomplete objects, complete objects too - including ordinary physical individuals - must be intensional.

Generalizing, the genre of Meinongian intentionality theory is characteristically "extensionalist", treating intention straightforwardly as a relation and thus accounting for its peculiarities in terms of the objects intended. We may conclude that any such approach to intentionality must render the objects of intention intensional.

I conclude (in part VI) that such a Meinongian view of intentionality leaves the intensional playing the wrong role in

intention. This can be remedied by replacing incomplete objects with something like individual concepts or senses (which are not themselves incomplete) and making them the mediators rather than the objects of intention.

I should stress that this essay is not an historical study in the interpretation of Meinong's writings. It is rather a critical study of the genre of Meinongian object-cum-intentionality theory, of what happens if we make certain assumptions apparently fundamental to Meinong's program. I shall here largely rely on Findlay's lovely book' as a convenient and well-received gathering of Meinong's views. At a few indicated points I shall extend, to some extent modify, or reconstruct Meinong's views as I know them." (pp. 43-44)

129. ———. 1985. "The Russell-Meinong Debate." *Philosophy and Phenomenological Research* no. 45:305-350.

"The debates between Bertrand Russell and Alexius Meinong from 1904 to 1920 dealt with some fundamental issues in philosophy: reference, nonexistent objects, intentionality. Along with the enduring influence of Russell's philosophy, sonic misapprehensions about these exchanges have persisted. One is that Russell's objections to Meinong were definitive. The other stems from taking too seriously Russell's casual remark in 1918 that Meinong's theories evidenced a deficient "sense of reality." Contrary to the impression left by this comment, Russell, during the most intensive years of the debate (1904-1907), felt a real respect for Meinong's theories,' and his main concern lay elsewhere. The exchange did not center on "reality" or "realism," as is often believed, but on the classical laws of logic (noncontradiction, excluded middle) and the correct analysis of logical form, for instance, of existence statements. Russell also took a dim view of the modal concepts Meinong used to support the canons of object theory, but his main concern was that Meinong's overall analysis appeared to

threaten the foundation of Russell's philosophical logic. Russell and Meinong's disagreement thus came down to competing logical frameworks tied to different notions of what it is to be an object.

In claiming that Russell's main objection to Meinong's theory was logical, I do not mean to deny that ontology and metaphysics were in the forefront of Russell's concerns up to 1910 or that for him a correct foundational view of logic would tell us much about the way the world is. Russell's motivation for criticizing Meinong may well have been a concern with what is 'real', but his philosophical reasons for rejecting Meinong's object theory in 1905-1907 had to do with logical principles and their reputed violations. Interestingly, during the years Russell was debating with Meinong most intensively (1904-1907) he was also struggling to find the solution to his paradox of classes. With his 1905 invention of the theory of descriptions, Russell believed he had simultaneously found a way to deal with apparent reference to nonexistents in ordinary grammar and a new analysis of classes. It seems that the two difficulties of paradoxical classes and nonexistent objects plagued Russell's sense of consistency in a parallel manner.

In this paper I focus on giving an internal analysis of the objections and replies exchanged by Russell and Meinong to show that Russell's objections failed to be decisive and that the standoff between them came down to fundamentally different frameworks. Some scholarly evidence supports this interpretation as well. Russell's 1904 letter to Meinong emphasizes that what Meinong called "Theory of Objects" Russell had been accustomed to calling "Logic." [See Appendix] In pressing his contradiction charge, Russell continued to evaluate Meinong's object theory by the standards of his own view of "logic." Lastly, evidence of a more circumstantial nature points to the parallelism of Russell's worries over nonexistent objects and classes."

135. Swanson, Carolyn. 2011. *Reburial of Nonexistents. Reconsidering the Meinong-Russell Debate*. Amsterdam: Rodopi.

"Alexius Meinong claimed to uncover a brave new world of nonexistent objects. He contended that unreal objects, such as the golden mountain and the round square, genuinely had properties (such as nonexistence itself) and therefore, deserved a place in an all-inclusive science. Meinong's notion of nonexistents was initially not well-received, largely due to the influence and criticisms of Bertrand Russell. However, it has gained considerable popularity in more recent years as academics have uncovered shortfalls in Russell's philosophy and strived to explain apparent "facts" about the beingless. Some philosophers have continued Meinong's project, further explaining nonexistent objects or formulating logic systems that incorporate them.

The more recent developments beg for a re-examination of Meinongianism. This book does just that, putting the theory on trial. Part One considers if Russell truly defeated Meinongianism. It addresses Meinongian rejoinders in response to Russell's main criticisms and further defends Russell's alternative solution, his Theory of Descriptions. Part Two explores the rationale for nonexistents and their use in interpreting three types of statements: characterization, negative existential, and intentional. The book argues that, despite appearances, Meinongianism cannot plausibly account for its own paradigm claims, whereas Russell's framework, with some further elucidation, can explain these statements quite well. Part Three primarily addresses claims about fiction, exploring the short-comings of Meinongian and Russellian frameworks in interpreting them. The book introduces a contextualization solution and symbolic method for capturing the logical form of such claims – one with the complexity to handle cross-contextual statements, including negative existential and intentional ones. It finally considers where that leaves nonexistent objects, ultimately rejecting such so-called entities."

136. ——. 2012. "A Meinongian Minefield? The Dangerous Implications of Nonexistent Objects." *Human Affairs* no. 22:161-177.

Abstract: "Alexius Meinong advocated a bold new theory of nonexistent objects, where we could gain knowledge and assert true claims of things that did not exist. While the theory has merit in interpreting sentences and solving puzzles, it unfortunately paves the way for contradictions. As Bertrand Russell argued, impossible objects, such as the round square, would have conflicting properties. Meinong and his proponents had a solution to that charge, posing genuine and non-genuine versions of the Law of Non-Contradiction. No doubt, they had a clever response, but it may not adequately address Russell's concern. Moreover, as I argue, genuine contradictions are inherent to the set of all nonexistent objects. And such contradictions lead to even further absurdities, for example, that nonexistent objects have and lack every property. Unfortunately, such implications of the theory make it too treacherous to adopt."

137. Sweet, Dennis J. 1993. "The *Gestalt* Controversy: The Development of Objects of Higher Order in Meinong's Ontology." *Philosophy and Phenomenological Research* no. 53:553-575.

"To show how Meinong's ontology developed from the stark "Hume Studies" to the richness of his mature thought, I trace his analysis of complexes in light of the views of Ehrenfels, Cornelius, and Twardowski. Through their influences Meinong was compelled to modify his ontology in two ways. First, he developed a variety of reism that acknowledged ontological heterogeneity within perceptual complexes.

Second, he endorsed the view of perceptual realism. With these modifications Meinong was able to introduce objects of higher order'."

138. Tegtmeier, Erwin. 2000. "Meinong's Complexes." *Monist* no. 83:89-100.

"The ontological problem of complexity is a most difficult one and has not been solved satisfactorily until the 20th century. Meinong came as close as any philosopher in the 19th century to a solution. Meinong's view of complexes changed. He kept to the principle that there is a relation where there is a complex.

But only in his later view does the relation have the role of connector of the complex. The article argues (also against Bergmann and Grossmann) that relational connectors would not be sufficient without facts, that facts connect without connectors though and that facts are the only genuine complexes. Meinong's Objektive are very similar to facts, yet in a crucial respect more like things than like facts."

139. ———. 2005. "Object-Theoretic Foundations of Logic." *Meinong Studies / Meinong Studien* no. 1:297-308.

"Logical semantics is not ontology. Meinong's and Mally's application of their object theory to logic must not be understood as a contribution to logical semantics but as an ontological grounding of logic. The object-theoretical grounding relates logic to the world though it is accompanied by a rationalist interpretation of logical laws. Meinong's and Mally's realist analysis of logic

has been revived and continued by Gustav Bergmann and Reinhardt Grossmann. Both adopt Meinong's category of objective in a more or less modified version. This category is pivotal for Meinong's view of logic."

141. Thrush, Michael. 2001. "Do Meinong's impossible objects entail contradictions?" *Grazer Philosophische Studien* no. 62:157-173.

Abstract: "Meinong's theory of objects commits him to impossibilia: objects which have contradictory properties. Russell famously objected that these impossibilia were apt to infringe the law of noncontradiction. Meinong's defenders have often relied upon the distinction between internal and external negation, a defense that only works against less exotic impossibilia. The more exotic impossibilia fall victim to an argument that uses an intuitively attractive logical principle similar to the abstraction principle, but which is not subject to Russell's paradox. The upshot is that things are not as bad as Russell claims. Some impossibilia don't entail contradictions.

- Nevertheless, things are still disastrous for Meinong. Some of his impossibilia do entail contradictions."

 147. Voltolini, Alberto. 1995. "Is Meaning Without Actually Existing Reference Naturalizable?" *Grazer Philosophische Studien* no. 50:397-414.
"According to Jerry Fodor, meaningful expressions denoting no actual entity, like "unicorn", do not constitute an exception to his project of semantic naturalization based on the notion of asymmetrical dependence between causal relations. But Fodor does not give any principled reason in order to show that, say, a non-unicorn caused "unicorn"-token means Unicorn, as he on the contrary does regarding a non-X caused "X"-token for any existing X. Nevertheless, his claim that one such expression has a mere denotational meaning can be accounted for, though in a non-naturalistic way. Suffice it that one appeals to the weak Meinongianism contained in the thesis that one can directly refer to possible entities by means of suitable fixing reference description."

Edmund Husserl: Formal Ontology and Transcendental Logic

Introduction

"Husserl's work include lengthy treatment of universals, categories, meanings, numbers, manifolds, etc. from an ontological perspective. Here, however, we shall concentrate almost exclusively on the *Logical Investigations*, which contain in a clear form the ontological ideas which provided the terminological and theoretical basis both for much of the detailed phenomenological description and for many of the metaphysical theses presented in Husserl's later works.

The ontology of the *Logical Investigations* is of interest first of all because of its clear conception of a formal discipline of ontology analogous to formal logic. (Here Husserl's thinking parallels Meinong's development of ontology as a general 'theory of objects.'). Formal disciplines are set apart from 'regional' or 'material' disciplines in that they apply to all domains of objects whatsoever, so that they are independent of the peculiarities of any given field of knowledge.

Logic, as Husserl sees it, is concerned in the first place with meanings (propositions, concepts) and with associated meaning-instantiating acts. Most importantly, it is concerned with that sort of deductively closed collection of meanings which constitutes a scientific theory. For Husserl, as for Bolzano, logic is a theory of science. Only where we have an appropriate unity and organization also on the side of the objects (states of affairs, properties) to which the relevant acts refer, however, will we have a scientific theory, so that the unity which is characteristic of the latter must involve both (1) an interconnection of truths (or of propositional meanings in

general), and (2) an interconnection of the things to which these truths (and the associated cognitive acts) are directed.

Where formal logic relates in the first place to meaning categories such as proposition, concept, subject and predicate, its sister discipline of formal ontology relates to object categories such as object and property, relation and relatum, manifold, part, whole, state of affairs, existence and so on. Logic in a broader sense therefore seeks to delimit the concepts which belong to the idea of a unity of theory in relation to both meanings and objects, and the truths of logic are all the necessary truths relating to those categories of constituents, on the side of both meanings and objects, from out of which science as such is necessarily constituted (including what we might think of as bridge-categories such as identity and truth which span the division between meanings and objects).

Husserl's conception of the science of logic is not an arbitrary one.

For formal-ontological concepts are like the concepts of formal logic in forming complex structures in non-arbitrary, law-governed ("recursive") ways. And because they are independent of any peculiar material of knowledge, we are able to grasp the properties of the given structures in such a way as to establish in one go the properties of all formally similar structures." (pp. 27-29)

From: Barry Smith Barry & David Woodruff Smith, *The Cambridge Companion to Husserl*, Cambridge: Cambridge University Press 1995.

"The term 'formal ontology' has been given two different interpretations. The first of these, entirely in keeping with the mainstream of contemporary philosophy, has been what I shall call analytic: formal ontology is that branch of ontology which is analysed within the framework of formal logic. The leading exponent of this approach has undoubtedly been Nino Cocchiarella.' On the premise that each particular science has its own 'mode of being', Cocchiarella has written that 'metaphysics [...] -- or what we might instead call formal ontology -- is concerned with the study and development of alternative formalizations regarding the systematic co-ordination of all the 'modes' or 'categories of being' under the most general laws'

(1). From this point of view, formal ontology studies the logical characteristics of predication and the various theories of universals.

The other interpretation, which I shall call phenomenological, developed from Husserl's early works, in particular *Logical Investigations*. As a first approximation, we may say that this approach mainly addresses the problems of parts and wholes and of dependence. Despite their differences, these two varieties of formal ontology quite frequently overlap each other, although to date there has been no systematic study of the categories and layers that constitute formal ontology and no systematic analysis of the issues addressed by it.

(...)

The best way to deal with Husserl's theory of formal ontology, therefore, is to explicate both the connections between the formal and material, and those between the ontological and the logical.

In introducing his distinction between formal and material ontology, Husserl asserts that the former is descriptive and involves analytic a priori judgements, and that the latter involves synthetic a priori judgements. In its most general sense formal ontology concerns itself with characterizing the simple 'something'. Depending on how this 'something' is conceived, Husserl adds, the 'field of formal ontology should be the "formal region" of the object in general' (*Formale und transzendente Logik* 1929, art. 38).

Characterizing material ontology is a more complicated matter, because the term can be interpreted in either of two ways. In the genetic interpretation it relates to the field of perception and its foundations (Husserl *Krisis* 1954, art. 6, sec. 1). In the descriptive interpretation, material ontology is instead ontic and concerns the highest material genera, i.e. the material categories in which single ontologies are rooted (*Ideen zu einer reinen Phenomenologie* 1913, vol. 1, art. 75). The sphere of material ontology in this sense are the laws of non-independence (2) which delimit the ontological regions. For the genetic interpretation, material ontology precedes formal ontology; for the descriptive interpretation it is the other way round (1913, art. 10). Here emerges 'the fundamental distinction between formal and material ontology': namely, the distinction between

analytic a priori and synthetic a priori (Introduction to *Formale und transzendente Logik*, 1929).

Detailed treatment has never been given to the stratified connections between material ontology in the genetic sense, formal ontology, and material ontology in the regional sense. It would, however, go beyond my present brief to investigate this question in detail, even though one should have at least a general topographical outline in mind.

The second opposition distinguishes the 'formal' into ontological and logical. In this sense, we must not confuse or superimpose that which pertains to formal logic and that which pertains to formal ontology. Likewise, we should not superimpose or mix the formal and material meanings of the concepts used." (pp. 1-2)

Notes

(1) "Formal Ontology and the Foundations of Mathematics", in: G. Nakhnikian (ed.), *Bertrand Russell's Philosophy*, Duckworth: London 1974, pp. 29-30.

From: Roberto Poli, "Husserl's Conception of Formal Ontology", *History and Philosophy of Logic*, vol. 14, 1993 pp. 1-14.

"The Conception of a pure logic - Husserl himself freely admitted that this was anything but a new idea. He mentions Kant, Herbart, Lotze, and Leibniz among its proponents and gives special credit for the nearly forgotten Bernhard Bolzano, 'one of the greatest logicians of all times.' But Husserl's own blueprint shows several original features, among which I shall mention merely what one might call the two-level structure of pure logic. The first level is that of the propositions or 'truths' studied by the logic of statements ('apophantics') as composed of meanings and their various combinations. The second level consists of the 'things' to which these statements refer, i.e., of the states of affairs (*Sachverhalte*) which they assert, the relations, complexes, and other configurations which they can enter and which are to be investigated by what Husserl calls a formal ontology.

Actually, this two-level pattern incorporates two one-level conceptions of pure logic, formulated most impressively by Bolzano

and by Meinong respectively. Bolzano had organized his pure logic on the propositional level around representational ideas, propositions, and truths (*Vorstellung an sich, Satz an sich, Wahrheit an sich*). Meinong knew only of the 'state of affairs,' which he had named "Objektiv", and of other categories of formal ontology. Husserl's conception incorporated both these levels, that of the propositions, which are valid or invalid, and that of the states of affairs, which do or do not 'subsist,' as Bertrand Russell rendered Meinong's term. ('To be the case' might be a less hypostatizing equivalent of the rather harmless German word 'bestehen'.) However, the development of this pure logic in Husserl's own published writings, originally planned for a third volume (1) is rather sketchy, although the mathematician Husserl continued to show interest in its mathematical formalization. He even seems to have taken notice of Bertrand Russell's work, but remained sceptical toward the value of a merely symbolic logic and of logical calculus, in which he took no active share. His *Formale and transzendente Logik* (1929) contains some important additions to the conception of pure logic. Among them is that of a third level of logic, likewise of ideal structure, namely, that of speech, which consists of the identical sentences that express our propositional meanings: ideal, since, even when uttered at different times and places and by different speakers, they remain identically the same sentences. (...) Husserl's major interest, once he had established the possibility of a pure logic, turned immediately to different problems. He left its more systematic development to works like Alexander Pfänder's *Logik* (1921), which investigated the logic of concepts, of propositions, and of inferences, and to studies undertaken by some of his students based on this work, which dealt with the logic of questions, of assumptions, and of laws and commands. Roman Ingarden, one of Husserl's Polish students, gave a particularly impressive application of this type of analysis to the literary work of art, in which he explored separately and in considerable detail its main strata such as that of the sounds, that of the meanings, and that of the objects meant, without neglecting additional aspects and the total structure of the work." (pp. 152-153)

Notes

(1) Karl Schuhmann, *Husserl-Kronik*, Husserliana Documente I. La Haye: Martinus Nijhoff, 1977 pp. 63-64. (some notes omitted)

From: Herbert Spiegelberg, *The Phenomenological Movement. A Historical Introduction*, The Hague: Martinus Nijhoff 1963 (third edition).

"Husserl's conception of formal ontology is intimately involved with his conceptions both of logic and of what comprises possible objects of theoretical inquiry. He inherited an Aristotelian metaphysical perspective from the school of Franz Brentano; his conception of logic was informed by an ontology that included both universals and particulars of ontologically dependent and independent types. The elucidation of his conception of logic as formal ontology therefore requires a consideration of his ontology of universal essences and his eidetic method. He distinguishes various types of universal essences (*eide*) in terms of the relations of generalization and formalization.

Husserl assumes that each thing is an instance of some *eidos* or essence, and that essences may not only have, but be instances (e.g., he holds that every essence is an instance of the universals "object in general" and "essence"). Besides the relation of instance to essence, he held that there is a second relation (of generalization) defined on essences. In *Ideen zu einer reinen Phänomenologie und phänomenologischen Philosophie I* (1913), the essence "red" is a specification (but not an instance) of the more general essence, "color." Specification and generalization are inverses: for any two essences *x* and *y*, *x* is a generalization of *y* just in case *y* is a specification of *x*.

But the genus "essence" is not a generalization of the essence "red" or the essence "triangle." These are instances (not specifications) of the genus "essence." A (rough) guide for understanding this distinction: the instancing relation is to the generalization relation as the membership relation is to the subset relation; similar and easily confused but different. Husserl provides a part-whole characterization of the difference between the relations of instance to essence and specification to generalization (which he treats under the topics "formalization" and "generalization," respectively). If *y* is a generalization of *x*, then *y* is a part of *x* (at least in some

"comprehensive" use of the term "part" that Husserl is willing to accept). But if y is a part of x (even in the comprehensive use of the term "part"), then y is not a formalization of x .

From this it follows that no formalization is a generalization and vice versa. The relation of specification to generalization enables the definition of some important types of essences. Any essence x is a genus iff there is some different essence y such that x is a generalization of y . Similarly, any essence x is a species iff there is some different essence y such that y is a generalization of x . Any essence x is a highest genus iff it is a genus and not a species, and a lowest species iff it is a species and not a genus. Every essence either is a lowest (*infima*) species or is specifiable to an infima species, and is either a highest genus, or is generalizable to a highest genus.

Husserl distinguishes between the extension and the empirical extension of an essence. For any essence x , there exists an extension of instances of x . Any y is the extension of an essence x iff y is the class of all possible instances of x . Any y is the empirical extension of an essence x iff y is the class of all actual (i.e., real) instances of x . If both the empirical extension and the extension of a given essence are non-empty, then the former is a proper subclass of the latter.

But Husserl distinguishes further types of extensions relevant to his conception of formal ontology. For any essence x , there exists an eidetic extension of x . The eidetic extension of any essence x is the class of lowest species that are specifications of x . Husserl then distinguishes between two types of eidetic extensions of universals: "material" and "mathematical." Any eidetic extension is mathematical just in case it is a subset of the eidetic extension of the essence "object in general" (*etwas überhaupt*); otherwise, it is a material eidetic extension.

A second set of distinctions regarding *eide* are developed by Husserl in terms of his notions of ontological dependence and independence. He calls things that require nothing else (other than the essences they instance) in order to exist ontologically independent (example: the nose of Socrates), and things that require something else (besides the essences they instance) in order to exist ontologically dependent (example: the pugnness of the nose of Socrates). He refers to

dependent individuals as moments of the things they require in order to exist." (pp. 238-239)

Bolzano and Husserl

"Though Bolzano's propositions in themselves had originally seemed to Husserl to be metaphysical abstrusities, it then became clear to him that what Bolzano had in mind was basically something quite obvious. By proposition in itself, Husserl now understood what people ordinarily called the sense of a statement, what is explained as one and the same when, for example, different persons are said to have asserted the same thing. Or, again, propositions in themselves were simply what scientists called a theorem, for example, the theorem about the sum of the angles in a triangle, which no one would think of considering the product of anyone's subjective experience of judging. This realization demystified Bolzano's teachings for Husserl (Husserl, *Early writings in the philosophy of logic and mathematics*, 1994, 201-02; Husserl, *Briefwechsel. Die Brentanoschule, I* (Husserl to Brentano, 27.III. 1905) 1994, 37).

It then further became clear to Husserl that this identical sense could be nothing other than the universal, the species, which belongs to a certain moment present in all actual assertions with the same sense and makes that very identification possible, even when the descriptive content of the individual lived experiences of asserting varies considerably otherwise. Interpreted in this way, he found Bolzano's idea that propositions are objects that nonetheless have no existence quite intelligible. They had the ideal being or validity of objects which are universals, the being which is established, for example, in the existence proofs of mathematics (Husserl, *Early writings*, cit. 1994, 201-02).

So, although Husserl had come to Halle free of Platonic idealism, he was to leave a committed Platonic idealist, who had come to believe that idealistic systems were of "the highest value", that entirely new and totally radical dimensions of philosophical problems were illuminated in them, that "the ultimate and highest goals of

philosophy were opened up only when the philosophical method which these particular systems require is clarified and developed" (Husserl, "Recollections of Franz Brentano" (1919) in: *Husserl: Shorter works*, 1981, 345). Every possible effort, Husserl would write, had been made in the *Logical Investigations* "to dispose the reader to the recognition of this ideal sphere of being and knowledge ... to side with 'the ideal in this truly Platonistic sense', 'to declare oneself for idealism' with the author" (Husserl, *Introduction to the Logical Investigations* 1975, 20). Phenomenology would be an "eidetic" discipline. The "whole approach whereby the overcoming of psychologism is phenomenologically accomplished", Husserl explained, "shows that what ... was given as analyses of immanent consciousness must be considered as a pure a priori analysis of essence" (Husserl, *Introduction* cit. 1975, 42).

This transformation had been prepared, Husserl said, by the study of Leibniz and reflections on his distinction between *verités de raison* and *verités de fait* and on Hume's ideas about knowledge about matters of fact and relations of ideas. Husserl had become keenly aware of the contrast between Hume's distinction and Kant's distinction between analytic and synthetic judgments and this became crucial for the positions that he later adopted (Husserl, *Introduction* cit. 1975, 36).

The early 1890s thus found Husserl striving to develop the true concept of analyticity and to discover the basic philosophical line separating genuine analytical ontology from material, synthetic a priori, ontology, which he believed must be fundamentally distinct from it (Husserl, *Introduction* cit. 1975, 42-43). In the *Logical Investigations*, he would condemn Kant's logic as being utterly defective (Husserl, 1900-01, *Prolegomena*, 58). Kant, Husserl maintained, had not understood the nature and role of formal mathematics and the way in which he had defined the concept of analyticity was totally inadequate and even utterly wrong (Husserl, *Einleitung in die Logik und Erkenntnistheorie* 1906-07, 23). "Not only", Husserl complained, did Kant "never see how little the laws of logic are all analytic propositions in the sense laid down by his own definition, but he failed to see how little his dragging in of an evident principle for analytic propositions really helped to clear up the

achievements of analytic thinking" (Husserl, 1900-01, *Sixth Investigation*, 66).

Persuaded of the inadequacy of Kant's analytic- synthetic distinction, Husserl came to believe that Bolzano's more Leibnizian approach to analyticity and meaning

harbored the insights logicians needed to prove their propositions by purely logical means. However, in Husserl's opinion, Bolzano never saw the internal equivalence between the analytic nature of both formal logic and formal mathematics made possible by developments in the field of mathematics that had only taken place after his death (Husserl, *Formal and Transcendental Logic* 1929, 26; Husserl, *Introduction* cit. 1975, 36-38).

By drawing the boundary line existing a priori between mathematics and natural sciences like psychology, Husserl believed that he was drawing the line of demarcation and expanding the domain of the analytical in keeping with the most recent discoveries in mathematics. Analytic logic, Husserl would ultimately explain in *Formal and Transcendental Logic*, is first of all valid as an absolute norm presupposed by any rational knowledge. His "war against logical psychologism, was in fact meant to serve no other end than the supremely important one of making the specific province of analytic logic visible in its purity and ideal particularity, freeing it from the psychologizing confusions and misinterpretations in which it had remained enmeshed with from the beginning". The value of his criticisms of logical psychologism lie, he believed, precisely in his drawing attention to a pure, analytic logic, distinct from any psychology, as being an independent field, like geometry or the natural sciences. Epistemological questions may well arise regarding this pure logic, he considered, but this must not interfere with its independent course, or involve delving into the concrete aspects of the logical life of consciousness. For that would be psychology (Husserl, *Formal* cit. 1929, 67).

No psychologistic empiricism, Husserl had come to believe, "can change the fact that pure mathematics is a strictly self-contained system of doctrines which is to be cultivated using methods that are essentially different from those of natural science" (Husserl, *Ideas. General Introduction to Pure Phenomenology* 1913, 29). "The

empirical sciences--natural sciences", Husserl wrote to Brentano in 1905, "-- are sciences of 'matters of fact' Pure Mathematics, the whole sphere of the genuine Apriori in general, is free of all matter of fact suppositions We stand not within the realm of nature, but within that of Ideas, not within the realm of empirical ... generalities, but within that of the ideal, apodictic, general system of laws, not within the realm of causality, but within that of rationality Pure logical, mathematical laws are laws of essence ... " (Husserl, cit. 1905, 37).

Husserl did, though, realize that not all the sciences are theoretical disciplines that, like mathematical physics, pure geometry or pure arithmetic, are characterized by the fact that their systemic principle is a purely analytical one. Sciences like psychology, history, the critique of reason and, notably, phenomenology, he believed, require that one go beyond the analytico-logical model. When they are formalized and one asks what it is that binds the propositional forms into a single system form, one finds oneself facing, Husserl maintained, nothing more than the empty general truth that there is an infinite number of propositions connected in objective ways that are compatible with one another in that they do not contradict each other analytically (Husserl, *Logik und allgemeine Wissenschaftstheorie* 1917/18, 54)." (pp. 83-84)

"An aspect of Bolzano's influence on Husserl which is well known is the Husserlian definition of analyticity (Simons, 1992, Ch. 15; Benoist, 1997, Ch. 2). In the Third Logical Investigation, 12, Husserl gives a definition by substitutivity: an analytic proposition is a proposition that keeps its truth-value by substitution of its extra-logical constituents. That definition seems evidently Bolzanian (Bolzano, 1837, 148), and not Kantian.

However, concerning that point, there are also differences. Bolzano's definition of analyticity is not only a logical one (Proust, 1986).

According to Bolzano, there is logical analyticity, but also a more general kind of analyticity (defined by the possibility of substituting a determinate representation of the proposition by any other one, without changing the truth value of the proposition). Bolzano is aware of the difficulty of defining the logical constituents of a proposition as opposed to the other constituents (Simons, 1992, Ch. 2). In that sense, he is very far from the contrast between "formal" and "material" constituents that Husserl defends. Husserl was aware of this because he says that Bolzano completely missed the very idea of a "formal ontology".

A remaining point may not be as well known: the Bolzanian idea of "synthetic a priori" may also have had a great influence on Husserl's thought. Bolzano had the idea of synthetic a priori ("internal") relations between concepts, especially (in his early work: cf. Laz, 1993) concepts related to perception. According to him, there was an a priori of color, as well as of spatial extension, etc. Such ideas (of a "conceptual a priori", but one concerning intuition) may have played a decisive role in the invention of a phenomenological a priori (Benoist, 1999).

There are, in fact, numerous similarities between Bolzano's and Husserl's thoughts, and one may say that, along with Brentano, Bolzano was the author who had the greatest influence on Husserl. We are not, however, to forget the fundamental differences which also separate their ways of thinking. Bolzano was above all a realist. He did not care for constitution problems, and Husserl was right when he wrote in Ideas 94 that Bolzano had no idea of what phenomenology actually was. Certainly, the first stage of Husserl's thought, which can be called a "realist" one, was much closer to Bolzano's thought than what came afterward. However, Husserl, who inherited a way of thinking in terms of "acts" from his mentor Brentano, was at that time already of the opinion that consciousness may determine the real, and give an intentional sense to it. The very idea of intentionality is, however, very far removed from Bolzano's thought, which holds to an absolute realism. Such a position can also explain the fact that Bolzano had no idea of the Husserlian concept of "formal object", which is bound up in the concept of categorial operations on the object. Consequently, Husserl remarks, not without reason, that Bolzano was much more of an empiricist than

he himself was (Husserl, 1913, 9). In Bolzano's work, a form of semantical realism (and, in another sense, of idealism) is to be found, but no sense of ontological (Platonic) idealities, because Bolzano had no way of constituting them.

The Bolzano-Husserl relation therefore provides an interesting example of a very close relationship, both historical and conceptual, between two ways of thinking founded on very different, even quite opposite presuppositions. Such a paradoxical synthesis may actually constitute the originality of phenomenology, in its unification of both branches (the psychological and the semantical) of the Austrian philosophical tradition." (p. 99)

Frege and Husserl

"There is a historiographical myth or tale in analytic circles according to which in his youth Husserl was a very naive philosopher who in his *Philosophie der Arithmetik* (1) of 1891 not only propounded an extreme form of psychologism but also dared to criticize the almighty Frege's views as presented in *Die Grundlagen der Arithmetik* (2) of 1884. According to the tale, it was Frege's 'devastating' critique of Husserl's book in 1894 and the study by Husserl of other of Frege's writings which were responsible for Husserl's abandonment of psychologism in the first volume of his *Logische Untersuchungen* (3) of 1900/1901 and his embracing of Frege's views on logic, mathematics and their relationship, and of Frege's distinction between sense and reference of expressions in the First Logical Investigation.

Husserl, however, so says the tale, fell once more out of grace into psychologism in the second volume of *Logische Untersuchungen* and never freed himself from such a pernicious addiction. To this historiographical myth have adhered many influential scholars in the analytic tradition, e.g., Evert W. Beth in *The Foundations of Mathematics*, (4) Michael Dummett in *Frege: Philosophy of Language*, (5) Dagfinn Føllesdal in *Husserl and Frege*, (6) and, of

course, almost every Fregean scholar that has ever mentioned issue, e.g., Hans Sluga (7) and Christian Thiel, (8) to name just two of the most distinguished. It is then no mystery that Husserl's views on logic and mathematics have been completely ignored in the analytic tradition.

The historiographical myth has been challenged in my dissertation of 1973 and especially in my paper "Remarks on Sense and Reference in Frege and Husserl," (10) and also by J. N. Mohanty in various writings, (11) and more recently and forcefully by Claire Ortiz Hill in her *Word and Object in Frege and Russell* (12) and in other writings. The result of such investigations is essentially the following: (1) *Philosophie der Arithmetik*, although published in 1891, represents Husserl's views at most up to 1890; (2) Husserl made the distinction between the sense and reference of expressions around 1890, and it is present in his review of the first volume of Ernst Schroder's *Vorlesungen ber die Algebra der Logik* also published in 1891, as Frege himself acknowledged in a letter to Husserl of May of that same year; (13) (3) Husserl's views on logic and mathematics as presented in *Logische Untersuchungen* and other later writings were developed from 1890 to 1895 with total independence of Frege, but under the influence of Bolzano, Lotze, and others, and of the mathematical work of Riemann, Cantor, and others, and are clearly distinct from Frege's; (4) there was no conversion to psychologism in the second volume of *Logische Untersuchungen* and later writings. By the way, as Claire Ortiz Hill has shown, (14) Husserl was not the propounder of a naive extreme psychologism in *Philosophie der Arithmetik* as Frege and his uncritical followers would like us to believe. But even if that were the case, it is a very unusual piece of scholarship to consider only a philosopher's early views on a subject while completely ignoring his mature views. If Kantian scholars from the very beginning had examined only Kant's pre-critical writings, we would very probably never had learnt about his duly famous views on space and time in his critical philosophy." (pp. 199-200)

Husserl's Formal and Transcendental Logic (1929)

"In 1929 Husserl published *Formal and Transcendental Logic*, which was the product of decades of reflection upon the relationship between logic and mathematics, between mathematical logic and philosophical logic, between logic and psychology, and between psychologism and his own transcendental phenomenology. One of the stated goals of the book was to redraw the boundary line between logic and mathematics in light of the new investigations into the foundations of mathematics. A second goal was to examine the logical and epistemological issues such developments have raised (Husserl, 1929, 10-17).

In *Formal and Transcendental Logic*, Husserl expressed his conviction that the formalization of large tracts of mathematics in the nineteenth century had laid bare the deep, significant connections obtaining between formal mathematics and formal logic, and had thus raised profound new questions about the deep underlying connections existing between the two fields. Logic and mathematics, he believed, had originally developed as separate fields because it had taken so long to elevate any particular branch of mathematics to the status of a purely formal discipline free of any reference to particular objects. Until that had been accomplished the important internal connections obtaining between the two fields were destined to remain hidden. However, once large tracts of mathematics had been formalized, the parallels existing between its structures and those of logic became apparent, and the abstract, ideal, objective dimension of logic could then be properly recognized, as it traditionally had been in mathematics. Developments in

formalization had thus unmasked the close relationships between the propositions of logic and number statements, making it possible for logicians to develop a genuine logical calculus which would enable them to calculate with propositions in the way mathematicians did with numbers, quantities and the like (Husserl, 1929, Chapter 2).

Mathematics, Husserl deemed, has its own purity and legitimacy. Mathematicians are free to create arbitrary structures. They need not be concerned with questions regarding the actual existence of their formal constructs, nor with any application or relationship their constructs might have to possible experience, or to any transcendent reality. They are free to do ingenious things with thoughts or symbols that receive their meaning merely from the way in which they are combined, to pursue the necessary consequences of arbitrary axioms about meaningless things, restricted only by the need to be non-contradictory and in coordination with concepts previously introduced by precise definition. And the same, Husserl contended, was true for formal logic when it was actually developed with the radical purity that is necessary for its philosophical usefulness and gives it the highest philosophical importance. Severed from the physical world, it lacks everything that makes possible a differentiation of truths or, correlatively of evidences (Husserl, 1929, 138, 23, 40, 51).

However, as theoreticians of science in general, philosophical logicians are obliged to contend with the question of basic truths about a universe of objects existing outside of formal systems. They are called upon to seek solutions to the problems that come up when scientific discourse steps outside the purely formal domain and makes reference to specific objects or domains of objects. They are not free to sever their ties with nature and science, to accept a logic that tears itself entirely away from the idea of any possible application and becomes a mere ingenious playing with thoughts, or symbols that mere rules or conventions have invested with meaning. They must step out of the abstract world of pure analytic logic, with its ideal, abstract entities, and confront those more tangible objects that make up the material world of things. In addition, they are obliged to step back and investigate the theory of formal languages and systems themselves, and their interpretations (ex. Husserl, 1929, 40, 52).

So, Husserl believed that formal logic required a complement. Once liberated from things and psychologizing subjectivity, pure logic had to find its necessary complement in a transcendental logic that would take into account the connections that philosophical logic inevitably maintains with both knowing subjects and the concrete world. For Husserl, true philosophical logic could only develop in connection with a transcendental phenomenology by which logicians penetrate an objective realm which is entirely different from them (ex. Husserl, 1929, 40, 42).

However, Husserl always insisted on the primacy of the objective side of logic. He insisted that the subjective order could not be properly examined until the objective order had been, and until the objectivity of the structures girding scientific knowledge had been established and demonstrated. He maintained that pure logic with its abstract ideal structures had to be clearly seen and definitely apprehended as dealing with ideal objects before transcendental questions about them could be asked (Husserl, 1929, 8, 9, 11, 26, 42-44, 92, 98, 100).

It is knowledge of formal logic, he reminded readers in *Formal and Transcendental Logic*, that supplies the standards by which to measure the extent to which any presumed science meets the criteria of being a genuine science, the extent to which the particular findings of that science constitute genuine knowledge, the extent to which the methods it uses are genuine ones (Husserl, 1929, 7). The world constituted by transcendental subjectivity is a pre-given world, Husserl explained in *Experience and Judgement*. It is not a pure world of experience, but a world that is determined and determinable in itself with exactitude, a world within which any individual entity is given beforehand in a perfectly obvious way as being in principle determinable in accordance with the methods of exact science and as being a world in itself in a sense originally deriving from the achievements of the physico-mathematical sciences of nature (ex. Husserl, *Experience and Judgement*, 1939, 11; Husserl, 1929, 26b).

Husserl was perfectly conscious of the extraordinary difficulties that this dual orientation of logic involved. Since, according to his theories, the ideal, objective, dimension of logic and the actively

constituting, subjective dimension interrelate and overlap, or exist side by side, logical phenomena thus seem to be suspended between subjectivity and objectivity in a confused way. In *Formal and Transcendental Logic*, he suggested that almost all that concerns the fundamental meaning of logic, the problems it deals with, its method, is laden with misunderstandings owing to the very fact that objectivity arises out of subjective activity. He even considered that it was due to these difficulties that, after centuries and centuries, logic had not attained the secure path of rational development (ex. Husserl 1929, 8)." pp. 90-94

Ontology in Formal and Transcendental Logic

"In his work *Formale und Transzendente Logik* with its significant subheading "*An Attempted Critique of the Logic Reason*", Husserl formulates his final conception of logic.

We shall deal here only with the principal theses set forth in this work which, we feel, may introduce us into the core of Husserl's conception.

The formal character of logic. What specifically characterizes logic is the generality of its principles (its applicability to all the fields) an aprioristic or essential generality which is formal in nature. Moreover, according to Husserl, the mind itself is a formal concept. In order to define the most general of all concepts, i.e. that of form, which is extremely important in his system, he makes the following remarks: in a certain sense, any essential knowledge is a formation of "pure" reason, i.e. free from any empirical process, but in a second sense, that of principle form, any principle knowledge is not pure. An aprioristic sentence about sounds in general, thought of, hence, in "pure" generality, is pure in the first sense but it is an a priori contingent (*Formale und Transzendente Logik*, p. 26). This sentence has in the eidos "sound" its concrete kernel, which

transcends the realm of principle generalities and connects the sentence with the "contingent field of ideally possible sounds".

"Pure" reason exceeds not only what is empirical fact, but also any essential sphere related to hylé (the matter), to the concrete. Pure reason - writes Husserl - designates the system of pure principles closed in itself, which principles precede any a priori relating to the hylé (*ibidem*).

These two aspects of the general induce Husserl to accept two notions of formal: (1) the a priori formal, analytical in nature; (2) the a priori formal, material and contingent in nature.

Summing up, logic is formal for it is but the development of pure reason, which is a formal concept. Logic is thus the self-interpretation of pure reason (*die Selbstausslegung der reinen Vernunft*) which is a formal activity.

Formal logic is conceived as apophantic analytics. According to Husserl, Aristotle's logic was a formal logic in the above sense, but this was a specific sense. Aristotle was the first, he writes, to have fully brought out the concept of form meant to determine the fundamental sense of a "formal logic", such as we understand it at present and such as Leibniz understood in his synthesis of formal logic (as apophantic logic) and in his formal analysis of a unique *mathesis universalis*.

(...)

Formal logic, conceived in this way, will have a triple "stratification". Although Aristotle, says Husserl, foresaw this formal logic as an apophantic analytics, he still failed to discriminate all its strata or levels. Here are the three formal levels as conceived by Husserl:(a) Pure morphology of judgements, which is the first logical-formal discipline or the first formal level. It is concerned with the simple possibility of judgements as such without questioning their truth or falsehood. It deals with the generality of judgement forms, the fundamental forms and their variants.

Morphology will also be concerned with the concept of operation as the directing idea in the search for forms.

(b) Logic of consequences (logic of non-contradiction) is the second level of formal logic... This new level, which is one step higher than the first, is the science of the possible forms of true judgements. About these forms Husserl writes: "Particularly as regards the forms of deduction (complex forms of sentences in which correct as well as false deductions are to be found), it is clear that they are not arbitrary forms of sentences which may be associated in order to constitute forms of authentic deductions, of effectively consistent deductions" (op. cit., p. 47).

Thus it is obvious that some forms of deduction have at the same time the value of essential formal laws, especially of general truths relating to judgement consequences.

(c) Formal logic of truth. The third level of formal logic, superior to the other two, is the research of the formal laws of possible truth and its modalities.

Let us now see how logic proceeds from simple forms of the meaning of enunciations, i.e. from the forms of judgement, to become a logic of truth. It is clear that non-contradiction is the essential condition of possible truth. But it is equally obvious, that only by connecting concepts different in themselves can analytics become a logic of truth (op. cit., 49). "This stratification, writes Husserl, has remained alien to the usage of logic so far. It stands to reason that the separation of the formal logic of non-contradiction from the formal logic of truth is something essentially and fundamentally new, no matter how well this separation might have been known, if we only refer to words. For these expressions were themselves aiming at something else, namely at the distinction between the problems of formal logic, taken generally, and in this way leaving out all the material contents of knowledge, and those problems which have to be posed in a wider sense through a logic which, however, is such that it brings into play this material content. This last logic raises questions relating to the possibility of knowing natural reality and to the configuration of truths concerning the real world" (op. cit., p. 63). (...)

Formal apophantic and formal ontology. Examining the relation between formal apophantics (which is concerned with true or false judgements) and formal ontology, Husserl makes an essential distinction. In formal analytics the object is regarded solely as an

object of possible judgements, as an object of the forms of judgement attributed to it by analytics. This may also be the case in mathematics. In other words, a formal analytics, as well as a formal mathematics, may be conceived of as a game in itself, with an autonomous aim which does not consider any field whatever where it might be applied. This is formal analytics as a pure play of thought. "Consequently, writes Husserl, mathematics (formal) may remain indifferent to the fact that all these formations are intended to appear within any sort of judgement aimed at knowledge (remaining undetermined in their substance).

(...)

It is therefore necessary to make a clear distinction between these two formal ways of conceiving logic: one aimed at the possibility of sentences being true or false - a domain of apophantics - and another, the domain of formal ontology, which includes knowledge. The first distinction Husserl's makes is the following: formal apophantics is thematically directed towards judgement (which also implies a tendency toward syntactic configurations which appear as constituents in the judgement which has become a theme; formal ontology is directed towards objects and their syntactic forms which are taken as themes in the activity of the judgement, though they are taken in such a way that the judgements and their elements are not themes. The solution of this problem is given by Husserl in this way: the judging act is not directed towards judgement but towards the thematic object. However, when we are considering our own judgements, their constitutive elements, their connections and their relations, this takes place within a new to-judge-act, of a second degree, a judgement about judgements, in which judgements become thematic objects.

Analytics as formal ontology. Since every science has its own field, scientific knowledge is directed towards a thematic object and in this case analytics, being a formal doctrine of science, has, as all sciences have, a real direction, and because of its a priori generality, it may be said to have an ontological direction. It is a formal ontology (op. cit., p. 107). Its a priori truths enunciate what is valid and therefore endowed with formal generality for objects-in-general, for domains of objects in general. They enunciate in what form these objects in

general exist or may exist; these enunciations are themselves judgements, for it is in judgements alone that objects-in-general "exist" in the form of categories." (pp. 362-366)

Selected Bibliography on Husserl's Logic and Ontology (First Part: A - J)

Bibliography of Husserl's works

The most complete bibliography is: *Edmund Husserl. Bibliography*, Compiled by Steven Spileers, Dordrecht: Kluwer 1999, VI + 450 pages.

From the *General Introduction*: "This bibliography contains the publications of Husserl and the main secondary literature on Husserl, from Husserl's earliest publication (1887) till today (1997), As the collection of material was concluded in June 1997, the list of publications for the year 1997 if of course incomplete.

In this bibliography publications in the following languages have been included: German, English, French, Italian, Spanish, Portuguese and Dutch - for both primary and secondary literature. Since this bibliography has been base primarily on the consultation of the included documents (and not restricted to copying already existing Bibliographies), it was not possible to include publications in languages other than those mentioned."

Table of Contents: General Introduction 1; Bibliographies (in chronological order) 9; Husserliana (Gesammelte Werke) 12; Husserliana-Dokumente III (Briefwechsel) 14; 1 Edited volumes [1-513] 15; 2 Works of Husserl; 2.1 German texts [514-707] 48; 2.2 English translations [708-786] 62; 2.3 French translations [787-872] 68; 2.4 Italian translations [873-923] 75; 2.5 Spanish translations [924-959] 78; 2.6 Portuguese translations [960-965] 81; 2.7 Dutch translations [966-967] 82; 2.8 Texts published by other authors in the Jahrbuch fiir Philosophie und phänomenologische Forschung

[968-1005] 82; 3 Secondary literature; 3.1 Secondary literature in German [1006-2345] 84; 3.2 Secondary literature in English [2346-4668] 154; 3.3 Secondary literature in French [4669-5433] 266; 3.4 Secondary literature in Italian [5434-6341] 303; 3.5 Secondary literature in Spanish [6342-6959] 344; 3.6 Secondary literature in Portuguese [6960-7067] 374; 3.7 Secondary literature in Dutch [7068-7184] 379; Index of names 386; Index of words 392; Index of keywords 396; Index of Husserl editors 409; Index of Husserl translators 410; Index of editors 412; Index of authors 418; Glossary (German-English) 445.

7. Banchetti-Robino, Marina. 1997. "Husserl's Theory of Language as Calculus Ratiocinator." *Synthese* no. 112:303-321.

"This paper defends an interpretation of Husserl's theory of language, specifically as it appears in the *Logical Investigations*, as an example of a larger body of theories dubbed 'language as calculus'. Although this particular interpretation has been previously defended by other authors, such as Hintikka and Kusch, this paper proposes to contribute to the discussion by arguing that what makes this interpretation plausible are Husserl's distinction between the notions of meaning-intention and meaning-fulfillment, his view that meaning is instantiated through meaning-intending acts of transcendental consciousness, and his view that the content of meaning-intending acts is ideal meaning simpliciter. As well, the paper argues that the phenomenological method of reduction itself presupposes the notion that reality as such can be reached by subtracting the influence of the language of the natural attitude and its ontological commitments and it, thus, presupposes the conception of language as a reinterpretable calculus." (p. 303)

9. Bégout, Bruce. 2000. *La généalogie de la logique. Husserl, l'antéprédicatif et le catégorial*. Paris: Vrin.

"Si le concept husserlien de passivité a fasciné toute une génération de philosophes (Merleau-Ponty, Landgrebe, Levinas, Henry), il a rarement fait l'objet d'une étude qui

adopte la perspective du fondateur de la phénoménologie. Husserl considère que la passivité appartient sans reste à la sphère de la constitution et qu'elle consolide par conséquent son transcendantalisme. Loin d'être un domaine de sens irréductible à la rationalité, elle représente même le fondement des opérations de la pensée catégoriale. C'est en son sein que doivent être cherchées les "sources" des formes supérieures de la logique. Toute passive et préconsciente qu'elle soit, l'expérience antéprédicative appartient donc pour Husserl au sujet transcendantal.

Ce travail s'attache ainsi à montrer que la genèse du catégorial à partir de l'expérience passive entre dans le projet général de Husserl d'asseoir la phénoménologie sur le socle originaire de l'expérience du monde."

11. Bell, David. 1989. "A Brentanian philosophy of arithmetics." *Brentano Studien.Internationales Jahrbuch der Franz Brentano Forschung* no. 2:139-144.

The aim of this paper is to identify the main respects in which Husserl's early philosophy, and in particular his early writings on the foundation of arithmetic, were influenced by Brentano's thought. It is claimed that the doctrinal, conceptual and methodological perspective within which Husserl's *Philosophy of Arithmetic* is conceived and executed (but which remains very largely suppressed in Husserl's texts) is that which he inherited, more or less without modification, from Brentano in the period to which *Psychology from an Empirical Standpoint*, *The Origin of our Knowledge of Right and Wrong*, and the lectures on *Descriptive Psychology* belong. That influence was extensive and profound enough to warrant calling Husserl's philosophy of arithmetic 'Brentanian'."

 "In his *Logical Investigations*, Husserl uses a concept of "analyticity" that seems quite different from the Kantian one. Analyticity is defined as formal and by the possibility of regular variations, so as in mathematical equations which determine relations between variables. In that matter, Husserl is influenced by Bolzano and is much more deeply connected with the Austrian tradition of logical studies than with the transcendental tradition of the German Idealism. But he deals also with the problem that Bolzano left unsolved: if analyticity in the "strict" sense means the logical rule, what does "logical" mean?"

"Chacune des études rassemblées ici se propose de jeter sur les rapports de Husserl et de Frege un regard neuf et surtout exempt des nombreux préjugés qui, jusqu'ici, ont déterminé les diverses «lectures frégéennes de la phénoménologie». En pointant les différences profondes qui, sous le couvert de quelques similitudes de surface, ont en fait, et de très bonne heure, orienté les deux philosophes sur des voies radicalement opposées, ce recueil permet de se faire une idée plus claire de ce que fut en réalité l'antipsychologisme de Husserl dans tout ce qui le sépare de la version logiciste que lui a donné Frege. De cette manière, il concourt également à apporter quelques éclairages nouveaux sur la question des origines de la philosophie contemporaine."

 51. Casari, Ettore. 2005. "On Husserl's theory of wholes and parts." *History and Philosophy of Logic* no. 21:1-43.

"The strongly innovative theory of whole-parts relations outlined by Husserl in his *Third logical Investigation*-to which he attributed a basic value for his entire phenomenology-has recently attracted a renewed interest. Although many important issues have been clarified (especially by Kit Fine) the subject seems still worth being revisited. To this aim *Husserlian universes* are introduced. These are lower bounded distributive lattices endowed with a unary operation of *defect* and a binary relation of *isogeneity*. Husserl's contents are

identified with nonzero elements of a *Husserlian universe* and the *dependence relations among contents* are defined and studied starting from the idea that the defect of x is what x needs in order to "exist" i.e., in order to be "closed" with respect to the closure operation defined as the sup of x and its defect. It turns out that there are (at least) eight dependence relations which are worth to be considered. Many other questions concerning the world of contents (among them the proofs of the famous *Husserl's Satze*) may now be discussed and clarified. Then the theory of species and genera is developed. Ultimate species (for short: *species*) are identified with equivalence classes of contents *modulo isogeneity*, and species in general (for short: *genera*) are identified with arbitrary unions of *species*. On the basis of the relation obtaining among two contents when they are isogeneous to two contents the first of which is a part of the second it becomes possible to develop a rather satisfying interpretation of Husserl's theory of the *dependencies among species and genera and of the material a priori laws*. By strengthening the notion of Husserlian universe into the notion of *rigid Husserlian universe*, the theory of species and genera obtains a stronger version. Three models of the theory are exhibited. The first one, suggested by combinatorial-topological considerations, identifies contents with finite non-empty sets of natural numbers ; the second one identifies contents with non-empty sets of formulas of a formal language; the third one (not totally "rigid") identifies contents with positive integers."

53. Celis, Raphael. 1996. "Le problème de la mathématisation du savoir dans l'oeuvre tardive de Husserl." *Revue de Théologie et de Philosophie* no. 128:1-24.

"The distinction established by Husserl in 1913 between formal and material ontology constitutes the theoretical basis needed in phenomenology to mathematize knowledge, and physics in particular. In "The Crisis of European Sciences and Transcendental Phenomenology", this distinction appears as a subwork in the sections concerned with Galileo and the birth of

modern physics. Through its reformulation. Husserl tried to imagine the foundational range of an eidetic interpretation of nature as entrenched in the "Lebenswelt".

59. Cortois, Paul. 1996. "From Apophantics to Manifolds: the structure of Husserl's Formal Logic." *Philosophia Scientiae* no. 1:15-50.

"A global picture of Husserl's architectonic view of the structure of formal science (including formal mathematics) is offered, as the view got its fullest (yet elliptic) articulation in the first three chapters of *Formale und transzendente Logik* (1929). It is shown how Husserl's understanding of the structure of formal science (abstracting from the latter's subjective foundation) requires the independent consideration of at least three dimensions with respect to the formal, in terms, respectively, of 'approaches', epistemic 'interests', and 'successive layers'. First, there is the dimension of apophantic versus ontological approaches; second, the distinction of combinatorial (syntactic) versus truth (semantic) interest; and third, the consideration of the three layers of pure grammar, derivability relations, and systems or manifold theory. Moreover, it is shown how, in Husserl's view, the virtual identity of apophantic and

- ontological approaches on the top layer (deductive systems and/or manifolds) is supposed to give a kind of technical (if not philosophical) warrant for the unity of formal science."

"This paper presents and discusses Husserl's conception of logic, formal logic in particular. A special emphasis is giving to Husserl's idea of a theory of manifolds as the closure of the thematic field of formal logic. Husserl's own version of logicism in the philosophy of mathematics is also presented and some aspects of his conception of formal logic are highlighted and contrasted with Frege's."

65. ———. 2000. "Husserl's two notions of completeness. Husserl and Hilbert on completeness and imaginary elements in mathematics." *Synthese* no. 125:417-438.

"In this paper I discuss Husserl's solution of the problem of imaginary elements in mathematics as presented in the drafts for two lectures he gave in Gottingen in 1901 and other related texts of the same period, a problem that had occupied Husserl since the beginning of 1890, when he was planning a never published sequel to "Philosophie der Arithmetik" (1891).

In order to solve the problem of imaginary entities Husserl introduced, independently of Hilbert, two notions of completeness (definiteness in Husserl's terminology) for a

formal axiomatic system. I present and discuss these notions here, establishing also parallels between Husserl's and Hilbert's notions of completeness."

Veritas no. 45:117-134.

"This article seeks to show that, although emerging out of a so-called traditional, metaphysical view of language, Edmund Husserl's theory of meaning qua ideal species in the "Logical Investigations" cannot be reduced to the linguistic expression of an essentialist, representational adequation, but rather emphasizes the role of intentionality, the ideality of language, and the constitutive character of consciousness in the fulfillment of "meaning" ("Bedeutung")."

69. Dougherty, Charles J. 1979. "The significance of Husserl's *Logical Investigations*." *Philosophy Today* no. 23:217-225.

"The purpose of this paper is to explore Husserl's critique of psychologism and his positive theory of mind against both its historical background and the developments that issued from it. The conclusion of the paper is the claim that Husserl's rejection of psychologism led him to ground logic in a realm of ideal relationships made available by way of a new method of non-reductive analysis, phenomenology. Phenomenological analysis itself is shown to be a methodological expression of a theory of mind as an active participant in the constitution of reality."

- "It is stated that Husserl's theory of truth is ambiguous. when Husserl attacked psychological interpretations of truth, a logicism seemed to be predominant; later he inclined toward intuitionism, where truth is constituted by the real presence of the object. Purely logical relations in an eternal order of truth, independent of things, seems to conflict with the idea of evidence, which is a psychological experience. It is concluded that truth is the result of an intuition in which the thing itself is given. Finally, parallels are drawn between Husserl's double truth and Leibniz's truths of reason and truths of fact."

"Phenomenology is a science of noemata.

An object, for Husserl, is anything toward which an act can be directed. Not all objects are material; there are also immaterial objects, for example, numbers and the other ideal objects of mathematics.

Mathematics and all natural sciences, including psychology, are sciences about the objects of our acts. But we have just noticed that in addition to possibly having an object, every act also has a noema. And what Husserl wanted to create with his phenomenology was a new science, a science of noemata.

Noemata are objects, too. In an act of reflection the noema of one act can be made the object of another act.

Mathematicians and scientists explore what we experience, the world of nature around us. In the phenomenological reduction we disregard this nature, this world of objects toward which our acts are directed. We do not deny that it is there, as if we were sophists, nor do we doubt that it is there, as if we were sceptics, but we, as it were, put it in brackets. We perform an epoché, Husserl said, borrowing a word which the skeptics of antiquity used to denote abstinence from any judgment.

The phenomenologist does not worry about what is or is not in the real world around him. He is not disturbed by the fact that some of our acts have objects, others not, but turns to the noemata of our acts. These are the phenomena he considers. The real world is reduced to a correlative of our acts, which constitute it, bring it forth. All that is transcendent is put in brackets together with the other objects of our acts. What is left, purified of all that is transcendent, Husserl called transcendental. The phenomenological reduction hence leads us from the transcendent to the transcendental.

Phenomenological analysis-

The phenomenologist analyzes the noemata of his acts in order to clarify how the world is 'constituted' by his consciousness. He observes that he expects a tree to have a back, to continue to be there if he turns away from it for a moment, and so forth. He studies the structure of the noemata of his acts. He elucidates how his expectations are arranged in patterns, how new sense

impressions can change his expectations and sometimes lead to an 'explosion' of the noemata and make him reject his original supposition about the direction of his act. According to Husserl, phenomenology thereby becomes an analysis of something similar to what Kant called the a priori. If one were to describe phenomenology in brief, it would therefore be this: an investigation of the a priori, the necessary. Its aim is similar to that of many other philosophies from antiquity onward. But its methods, and the general framework of acts, noemata, and objects within which it tries to make sense of this aim, are different.

It is also not difficult to see the close connection between analytic philosophy and phenomenology here. For just as analytic philosophers, especially those of the so-called linguistic variety, analyze meaning, meanings of linguistic expressions, so the phenomenologist analyzes noemata, or meanings of acts in general."

"The problem of justifying our beliefs, giving evidence for them, is central in Husserl's phenomenology. In his writings he comes back again and again to the notions of justification and evidence.

Husserl is particularly interested in *perfect* evidence, of which he distinguishes two kinds: adequate evidence, which we have when all our anticipations are filled, and apodictic evidence, which we have when the negation of our judgment is self-contradictory. This emphasis on apodictic and adequate evidence, together with Husserl's concern with philosophy as a

strict science and with the possibility of establishing absolutely certain and obvious first premisses, might give us the impression that Husserl was a foundationalist: he wanted to establish a firm foundation for science and philosophy of the kind that Aristotle, Descartes, and many others have been striving for.

However, in this paper I shall argue that in spite of appearances, Husserl was not a foundationalist. He was not even a foundationalist in logic and mathematics,- the classical strongholds of foundationalism; on the contrary he was close to the position that was later put forward by Nelson Goodman and some other "holists". Abstract: "Brentano's lectures attracted a large number of very gifted students who became fascinated with the idea of intentionality and developed it further in several different directions. Brentano followed up Aristotle's view on our mind taking on the form of the object and he was particularly influenced by Thomas Aquinas' approach. His students struggled with how to deal with acts without objects, for example hallucinations, and proposed different solutions. Husserl tried to agree with his teacher as far as he could. He even regarded agreement with one's teacher as a duty, which could only be forsaken for very good reasons. But he thought he had such reasons. These led him to phenomenology, which is briefly presented in this paper. In a short appendix I use the connection between Aristotle and Husserl to examine the controversy between two prominent Aristotle scholars, Myles Burnyeat (1992) and Richard Sorabji (1974, 1992), and their many followers on both sides concerning the interpretation of Aristotle's theory of perception. The appendix was presented in lectures at conferences in 1995 and 1996, but never sent off for publication.

It was published in Greek translation in 1997. In the following years, Burnyeat, who died on September 20, 2019, modified his view, probably without knowing about my criticism. As far as I know, Sorabji stands by his view."

"There are not too many philosophers who have tried to give a natural explanation for the miracles of nineteenth century logic. We know that a radically new logic came into being in those days. But little, if anything, has been said about the incentives of these innovations. Hans Sluga and Gottfried Gabriel have stressed and worked on the historical perspective of that remarkable period, and I have tried to give an answer to

the question, as far as Frege's logic is concerned, but much can still be done.(1)

If we wish to solve this interpretational puzzle, it is useful and quite instructive to try to find out how the pioneers of modern logic and the philosophers of logic in the nineteenth century did what they did. That is, we must look for the methods which guided their logical studies. This interpretational task amounts to giving a methodological reconstruction of the work of nineteenth century logicians. This paper is an attempt to find out the methods which Frege and Husserl followed in their logical studies." (p. 73)

"Frege's devastating attack on logical psychologism leaves philosophers of logic in a quandary: If logical propositions exist altogether independently of human acts of thinking, then "how" can they be grasped by thinkers? Husserl's "Prolegomena to Pure Logic" contains a thorough critique of psychologism, but manages to avoid Frege's problem by developing a plausible theory of logical cognition. Husserl's account entails that a) logical propositions are essentially knowable by finite rational minds, but also b) those propositions are irreducible to individual human minds. Hence Husserl shows that there can be a weak form of psychologism that is perfectly consistent with anti-psychologism."

"According to the leading commentators and the author himself, Edmund Husserl's "Formal and transcendental logic" is the most important work on phenomenological logic ever

written. Nonetheless, it has, in general, gained far less attention than the "Logical investigations" and the "Ideas on a pure phenomenology and phenomenological philosophy". In particular, the argument of section 1 of the "Logic", namely, that it is fruitful to start with the meanings of the expression "Logos" in order to develop a genuinely transcendental logic, has received virtually no consideration. This paper takes a step towards filling this empty space by analyzing and criticizing the argument of section 1 as a problem to which (a) solution(s) must be found. Throughout, the paper reads Husserl's "descriptions" as 'arguments' for his positions, thereby avoiding any of the obscurity sometimes infecting work in continental philosophy."

Part One: Logic, realism and the foundations of arithmetic

1. The argument that Frege influenced Husserl 7; 2. Husserl, Frege, and psychologism 13; 3. Sense, meaning, and noema; 4. Husserl's 1891 critique of Frege 43; 5. Frege's review and the development of Husserl's thought 57; Conclusion: analyticity 91.

Part Two: Conceptual clarity

Introduction 99; 6. Intensions and extensions 103; 7. Presentation and ideas 125; 8. Function and concept 137; 9. On denoting 147; Conclusion: The way *things* are 163; Notes 175; Bibliography 191; Index 215.

From the Introduction: "As a book by the founder of phenomenology that examines Frege's ideas from Brentano's empirical standpoint, Husserl's *Philosophy of Arithmetic* is both an early work of phenomenology and of logical empiricism. In it Husserl predicted the failure of Frege's attempt to logicize arithmetic and to mathematize logic two years before the publication of the *Basic Laws of Arithmetic* in 1893. I hope to show that Husserl did so in terms that would prefigure both the account Frege would give of his error after Russell encountered the paradoxes ten years later and the discussions of *Principia Mathematica*. Moreover, in locating the source of Frege's difficulties in the ambiguous theory of identity, meaning, and denotation that forms the basis of Frege's logical project and generates Russell's contradictions, Husserl's discussions indicate that these contradictions may have as serious consequences for twentieth century philosophy of language as they have had for the philosophy of mathematics.

This book is about these Austro-German roots of twentieth century philosophy. It is mainly about the origins of analytic philosophy, about the transmission of Frege's thought to the English speaking world, and about the relevance of Husserl's early criticism of Frege's *Foundations of Arithmetic* to some contemporary issues in philosophy. It is more about Husserl the philosopher of logic and mathematics than it is about Husserl the phenomenologist, and it is principally addressed to those members of the philosophical community who, via Russell, have been affected by Frege's logic.

This makes it very different from work on Husserl and Frege that has focused on the importance of Frege's criticism of Husserl's *Philosophy of Arithmetic* and attendant issues. The goal of this book is quite the opposite. It studies the

shortcomings in Frege's thought that Husserl flagged and Russell endeavored to overcome. One possible sequel to this book would be a thorough study of Husserl's successes and failures in remedying the philosophical ills he perceived all about him, but that goes beyond the scope of this work, which follows the issues discussed into the work of Russell and his successors." "Few have entertained the idea that Georg Cantor, the creator of set theory, might have influenced Edmund Husserl, the founder of the phenomenological movement. Yet an exchange of ideas took place between them when Cantor was at the height of his creative powers and Husserl in the throes of an intellectual struggle during which his ideas were particularly malleable and changed considerably and definitively. Here their writings are examined to show how Husserl's and Cantor's ideas overlapped and crisscrossed in the areas of philosophy and mathematics, arithmetization, abstraction, consciousness and pure logic, psychologism, metaphysical idealism, new numbers, and sets and manifolds."

"The indications provided by Heidegger himself in his course on 'Phenomenological interpretation of Kant's Critique of Pure Reason' make it possible to pinpoint his debt to Husserl. It

turns out that this course followed the same main steps in its argument as Husserl in 'Formal logic and transcendental logic': a) formal logic and transcendental logic; b) the subordination of formal logic to transcendental logic; c) regional unity as a basis for formal logic; d) transcendental subjectivity as ultimate basis. The account of this parallel structure makes it possible to interpret from a different point of view Heidegger's reading of Husserl and provides the proof of the phenomenological closeness of these two texts as regards the basis of their 'logic'."

8. Küng, Guido. 1972. "The World as Noema and as Referent." *Journal of the British Society for Phenomenology* no. 2:15-26.

"A major stumbling block in the way of a dialogue between phenomenology and; logistic philosophy is the fact that the semantical terminology of the two movements has developed in opposite directions. In logistic philosophy Frege's 3-levelled semantics of sign, sense and referent soon gave way to Russell's 2-levelled semantics of sign and referent. In Husserlian phenomenology, on the other hand, the notion of sense was not abandoned but broadened, especially through the elaboration of the notion of the noema. A closer look at the contemporary discussions in logistic philosophy shows however that the 3-levelled semantical framework is reappearing in a new form. The straightforward realism of Russell has given way to a more Kantian position where the universe of discourse is no longer simply identified with absolute reality. This means that the logistic philosophers are discovering the noematic character of their universes of discourse.

This new logistic distinction between universes of discourse and absolute reality, which parallels the phenomenological distinction between the world as noema and the absolute real world (if there is any), brings with it a distinction between ontology and metaphysics: the description of different universes of discourse, respectively of different noematic worlds, can be called the ontological task, and the question as to which universe of discourse, respectively which noematic world (if any), is the best map of absolute reality is the concern of metaphysics.

The parallelism between the semantics of contemporary logistic philosophy and phenomenology is obscured by a terminological discrepancy due to the above mentioned divergent historical development: in logistic philosophy the signs are said to refer to the entities in the universe of discourse, whereas in phenomenology the noemata are not properly speaking the referents of noetic acts, but are said to belong on the level of

sense. However, the phenomenological way of distinguishing noematic world and absolute reality in terms of sense and referent is very important, because it provides the most adequate way of conceiving the puzzling relationship between appearance and reality, and avoids the shortcomings of the causal and the picture theory, the identity theory and the adverbial theory."

"Psychologism in logic holds that logic is a branch of psychology. This view has been vigorously defended by John Stuart Mill and by a number of German philosophers of logic, notably Erdmann. Its chief critics have been Husserl and Frege and, to a lesser extent, Russell. Husserl set forth a profound

and detailed critique of psychologism in "Logical Investigations".

This paper examines this critique. First, I explain why the psychologistic theory is attractive. Then I show that Husserl's critique is not convincing, partly because he does not take the theory in its most plausible form and partly because he ignores certain important distinctions (for example, between what a statement is about and what it is true in virtue of).

Then I raise two new objections to the psychologistic theory. The purpose of this paper is to suggest that the psychologistic theory remains an important and serious position from which we can learn much about the status of logic."

"I present a detailed itemization of Husserl's criticisms of logical psychologism. I use this to explore H. L. Mansel's formulation of his self-proclaimed psychologism. I argue that Husserl's criticisms do not engage Mansel's views. Thus the common view that Husserl presents a mortal attack on psychologism is misleading. The lessons of this comparison are two: first, the standard cursory dismissal of the Victorian psychologists' program needs reexamination. And second, the contrasts between this program and its transcendental counterparts need sharpening or dissolution."

56. Picardi, Eva. 1997. "Sigwart, Husserl and Frege on truth and logic, or is psychologism still a threat?" *European Journal of Philosophy* no. 5:162-182.

"The paper argues that Husserl's criticism of Sigwart's normative conception of logical laws rests on an absolutist conception of truth and content which is itself in need of justification. Also the contrast between psychological laws of holding true and logical laws of being true used by Frege in his criticism of psychologism fails to explain the epistemological status of logical laws. A better understanding of the latter is to be found in Frege's conception of truth and justification. Sigwart's psychologism comes to the fore in the privileged role he assigned in his logic to judgments of recognition and naming. While the attention paid to the indexical component of certain utterances enables Sigwart to give an original account of the import of impersonal judgments, his concentration on a first-person account of sentence meaning prevents him from

- appreciating the public dimension of meaning, which alone renders communication possible."

60. Poli, Roberto. 1993. "Husserl's Conception of Formal Ontology." *History and Philosophy of Logic* no. 14:1-14.

"The concept of formal ontology was first developed by Husserl. It concerns problems relating to the notions of object, substance, property, part, whole, predication, nominalization, etc. The idea of formal ontology is present in many of Husserl's works, with minor changes. This paper provides a reconstruction of such an idea. Husserl's proposal is faced with contemporary logical orthodoxy and it is presented also as an interpretative hypothesis, namely that the original difference between the general perspective of usual model theory and formal ontology is grounded in the fact that this latter starts from an *intended* interpretation and not from the set of all the possible interpretations."

"1. Introduction

The term 'formal ontology' has been given two different interpretations. The first of these, entirely in keeping with the mainstream of contemporary philosophy, has been what I shall call analytic: formal ontology is that branch of ontology which is analysed within the framework of formal logic. The leading exponent of this approach has undoubtedly been Nino Cocchiarella. (1) On the premise that each particular science has its own 'mode of being', Cocchiarella has written that 'metaphysics [...] - or what we might instead call formal ontology - is concerned with the study and development of alternative formalizations regarding the systematic coordination of all the "modes" or "categories of being" under the most general laws' (1974, 29-30). From this point of view,

formal ontology studies the logical characteristics of predication and the various theories of universals.

The other interpretation, which I shall call phenomenological, developed from Husserl's early works, in particular Logical investigations. As a first approximation, we may say that this approach mainly addresses the problems of parts and wholes and of dependence. Despite their differences, these two varieties of formal ontology quite frequently overlap each other, although to date there has been no systematic study of the categories and layers that constitute formal ontology and no systematic analysis of the issues addressed by it."(p. 1).

"In his influential paper 'Mathematical Truth' (1) Paul Benacerraf states two requirements for any account of mathematical truth to be worth considering, namely: (i) that the semantic treatment of mathematical statements does not differ essentially from the semantic treatment of non-mathematical statements, and (ii) that the account of mathematical truth harmonize with what he calls a reasonable epistemology. According to him, combinatorial accounts of mathematical truth, which tend to identify mathematical truth with derivability in a formal system, violate the first requirement, whereas, platonist philosophies of mathematics (like Gödel's) violate the second requirement. Such a violation of the second requirement, however, depends on Benacerraf's understanding of, 'reasonable epistemology'. It should be clear that if one identifies 'reasonable epistemology' with empiricist theory of knowledge (causal or not), platonist philosophies of mathematics are not easy to reconcile with reasonable epistemologies. But such an identification need not be taken for granted.

In this paper, however, we are not interested in discussing the merits of Benacerraf's sketch of a causal theory of mathematical truth, but would like to state a third requirement (i. e. a third necessary condition) for a semantics plus epistemology of mathematics, which in our opinion is not satisfied by any causal account. (iii) A semantics plus epistemology of mathematics must give a satisfactory account of the equivalence -- in the sense of interderivability -- of apparently unrelated mathematical statements -- like the Axiom of Choice and its many mathematical equivalents.

The best known representatives of platonism in the philosophy of mathematics, i. e. Cantor, Frege and Gödel, did not develop enough -- so far as we know -- an epistemology of mathematics. Husserl, however, whose philosophy of mathematics (as developed in *Logische Untersuchungen* (2) and *Formate und transzendente Logik* (3) can also be considered as a sort of platonism, tried to develop in his *Sixth Logical Investigation* and in *Erfahrung und Urteil* (4) such an epistemology of mathematics. It is our opinion that Husserl's sketchy epistemology of mathematics plus his somewhat scattered remarks of a semantical nature can be elaborated further to produce a semantics plus epistemology that satisfies all three requirements stated above. In this paper, however, we will limit our consideration to some of Husserl's semantical insights and will try to show rather sketchily how some of these insights can be fruitfully applied in a semantics of mathematics that satisfies the first and third of the above requirements (i. e. those which are more properly of a semantic nature, since the second is rather a requirement on epistemologies of mathematics).

"Philosophy as Universal Science

Husserl insisted from the very beginning that the concept of philosophy involves two different, yet equally essential elements. Philosophical knowledge is both absolutely valid and *completely universal*. The first aspect concerns the way in which philosophical truths are known, i.e. the quality of philosophical cognition. Philosophy, Husserl says, is apodictic, evident and radical; it yields absolutely legitimized knowledge whose evidence flows from ultimate sources of cognition and is founded upon definitive fundamentals. Philosophy, in short, is a rigorous science. The second aspect concerns the object of philosophical knowledge, i.e. the quantity of its field. The range of philosophy, as Husserl conceives it, is the universe of whatever can be known. Philosophy is all comprehensive knowledge or "universal knowledge of what is". Husserl thereby takes up the traditional definition of philosophy as the science of being qua being. But he also goes along with the traditional division of philosophy into a number of special disciplines, which together constitute philosophy as such.

Two main divisions of philosophical disciplines are to be found in Husserl's writings, which at first sight seem to have no connection with one another. On the one hand, he divides philosophy into a *theoretical* and a *practical* branch. Philosophy is, first of all, theoretical because it defends the idea of absolute knowledge and is to issue forth in 'pure theory'. The philosopher is from this perspective an uninterested spectator watching over subjective acts and their objective correlates. On the one hand, however, philosophy is practical also because its *goal* is absolute ethical life and rational practice, and from this perspective philosophy aims at a revolution in our life and habits in order to make us perfect personalities. Its purpose is to bring about a philosophical culture in which reason alone will determine the will and decisions of mankind.

In addition to this however Husserl also, and indeed more frequently, adopts a tripartite division into *theoretical*, *axiological* and *practical* philosophy. This division agrees with the three main areas of reason - cognitive (logical) reason, evaluative and practical. Since the phenomenological elucidation of reason is at the same time a critique of the

possibilities of reason, Husserl also says that phenomenology aims at a critique of knowledge, of value and of practice.

Let us first turn to theoretical philosophy. According to Husserl, it is natural that philosophy should "set out from what is most general and from there pass over to the particulars contained under it". Correspondingly he introduces into theoretical philosophy a distinction between a discipline of general forms and the doctrine of their material specifications. The first he calls 'formal ontology'; it deals with the forms of objects. The second he divides into a number of different 'material ontologies', each one of which relates to a region of objects circumscribed by certain features they have in common.

Formal ontology - or, as he also sometimes calls it, *mathesis universalis* - is, Husserl says, the science of the pure forms of something-in-general and of its modalities or derivations. It treats formal categories such as state of affairs, genus and species, identity and difference, number, whole and part. This shows that formal ontology is the sphere to which Husserl devoted most of his work in the period ranging from the *Philosophy of Arithmetic* (1891) to the *Logical Investigations* (1901). He distinguishes between several sub-disciplines of formal ontology, reflecting diverse formal aspects of the object-as-such. Thus as parts of formal ontology he mentions logic (i.e. the formal doctrine of meanings), pure arithmetic and the pure theory of manifolds or sets.

Only in later years did Husserl turn to material ontologies, e.g., in his lectures on nature (1907), on intersubjectivity (1910/11) or in *Ideas II* (1912ff.), as well as in his various lectures and seminars on *Natur* and *Geist*. Nowhere does he give an exhaustive list of disciplines which together would make up the realm of material ontology in its entirety. He does, though, repeatedly mention *nature*, *soul* and *society* as delimiting three corresponding material ontologies." pp. 274-275 (Notes omitted).

"It is sometimes said that questions of form are questions of logic or language. In his "Logical Investigations" Husserl, however, clearly distinguished formal ontology from formal grammar and formal logic. The article attempts to explain Husserl's notion of formal ontology. It investigates the relation between formal and material ontology as well as the relation between epistemic and metaphysical necessity. The article provides an interpretation of Husserl's claim that there are

metaphysical necessities which are necessarily recognized by the human mind on the basis of Husserl's well-known distinction between the meanings of mental acts and their objective correlates."

114. Spiegelberg, Herbert. 1972. "Remarks on Findlay's Translation of Edmund Husserl's *Logical Investigations*." *Journal of the British Society for Phenomenology* no. 3:195-196.

"I have the highest admiration for this effort and its result, much higher than for all other Husserl translations known to me. But it would be too bad if the users of this translation were denied the chance of minor emendations which I would like to suggest as a result of an intensive reading of the translation in a seminar at Washington University along with the German text. I shall therefore select some of the more important ones as follows:

1. On page 218 line 20 read "quantitative" for "qualitative," (pointed out by Robert Sokolowski in *Inquiry* 14 (1971), 347).

2. On page 225 in the first line of paragraph 62 the phrase "unified item in anthropology" (as a characterization of science) for "*anthropologische Einheit*" might better be rendered as "cultural system". In Husserl's framework anthropology, as introduced in Chapter VII ("Anthropologismus") has no relation to the science of anthropology, at the time mostly physical, but to the emphasis on human factors.

3. In the title of Chapter I in Investigation II (p. 535) the rendition of the German *Bestand* ("*Bewusstsein als phänomenologischer Bestand des Ich . . .*") by "Subsistence" ("Consciousness as Phenomenological Subsistence of the Ego") is misleading, since here the German word (of many meanings) clearly refers to the composition or content of the ego, rather

than to any mode of its existence in the sense of Meinong's *Bestand* of his *Objektive* (states of affairs).

4. In the title and text of Chapter IV in Investigation VI the rendition of the German *Verträglichkeit* and *Unverträglichkeit* by "Consistency and Inconsistency" seems to me debatable, since their German equivalents are *Widerspruchsfreiheit* and *Widerspruchlichkeit*. Closer English equivalents of the words in the German title are "Compatibility" and "Incompatibility".

5. On p. 804 line 17 from the bottom the word "own" (repeated in the following line) ought to be dropped.

6. On p. 812 line 10 the proper translation of the idiomatic *Mit nichten, wurden wir einwenden* would be "By no means, we would object" (rather than "Binding them with nothing . . .").

I have only one serious regret about these two volumes. The distribution of the two very unequal German volumes of the first and even of the second edition (subdividing volume II) may be technically defensible, provided that it does not conceal the fact that the German volumes appeared separately in two subsequent years (1900 and 1901 respectively). It is also only a minor incongruency that volume II begins on the back page of volume I, thus minimizing the break by not even inserting a new page; whereas each of the six Investigations within volume II is preceded by a special title page. But what is really unfortunate is that the title of volume II (*Untersuchungen zur Phaenomenologie und Theorie der Erkenntnis*) is missing both on p. 248 and in the Table of Contents, this all the more since the title of volume I ("Prolegomena to Pure Logic") appears correctly in both places. Among other things this conceals the important historical fact that it was in the title of the second volume that Husserl for the first time used the term "phenomenology," still absent from volume I, explicitly and conspicuously. While it is controversial whether the undeniable historical impression was correct that Volume II meant a new departure in Husserl's development, as it was certainly interpreted at the time, the fact that there was definite reason for this impression must not be forgotten." p. 196.

- "This article is an attempt to displace many of the traditional, overly Cartesian (epistemological) interpretations of Husserl's transcendental turn, and to replace them with an interpretation based on Husserl's formal ontology as developed in the "Logical Investigations". In particular, the theory of wholes and parts in conjunction with Husserl's principle of intuitive, eidetic rationality, it is argued, lead directly to transcendental idealism. And as a consequence, the fundamental unity of Husserl's entire philosophical project, from the pre-transcendental through the transcendental period, is established."

Abstract: In recent work, Amie Thomasson has sought to develop a new approach to the philosophy of the categories which is metaphysically neutral between traditional realist and conceptualist approaches, and which has its roots in the 'correlationalist' approach to categories put forward in Husserl's writings in the 1900s–1910s and systematically charted over the past few decades by David Woodruff Smith in his studies of Husserl's philosophy. Here the author aims to provide a recontextualization and critical assessment of correlationalism in a Husserlian vein. To this end, the author presents, first, the reasons why, later in his life, Husserl himself found his earlier treatment of categories philosophically naive, and why he increasingly advocated for a more genetic-teleological account. The author then draws upon arguments made a century earlier by Schelling and Hegel, in criticism of Fichte, to point up what might remain philosophically unsatisfying about even the post-correlationalist genetic

- position of the later Husserl, in light of the pronounced trend in Husserl's own development, on the questions of reason and spirit, toward absolute idealism."

"In this paper I try to identify the deficiency of logic which Husserl refers to in the "Forward" to his "Logical Investigations" of 1900. Logics known to him were unable to explain how formal systems of signs function to advance knowledge, as in the case of formal arithmetic. Simultaneous efforts to elucidate the procedures of general arithmetic (in the last part of his "Philosophy of arithmetic") and to write a review of Schroder's "lectures on the algebra of logic", made Husserl

(by 1891) forsake Weierstrass's program of reconstructing mathematics from the concept of number alone, which he had hoped to carry out with tools drawn from Brentano's psychology."

136. ———. 1984. *Logic and the Objectivity of Knowledge. Studies in Husserl's Early Philosophy*. Athens: Ohio University Press.

" This book attempts to explain the path by which Husserl's concern for an elucidation of mathematical, chiefly arithmetical, knowledge led to an analysis of the mental act which allows for a realist interpretation of science and ordinary perceptual experience. It attempts to go more thoroughly than has been done into the content and significance of his first book, "The philosophy of arithmetic". It provides discussion of many Husserlian texts not available in English and little discussed in the English literature. Its aim is not merely historical, but systematic as well."

141. Wojciech, Krzysztof. 1995. "Noemata and their formalization." *Synthese* no. 105:53-86.

"The presentation of the formal conception of noemata is the main aim of the article. In the first section, three informal approaches to noemata are discussed. The goal of this chapter is specifying main controversies and their sources concerned with different ways of the understanding of noemata. In the

second section, basic assumptions determining the proposed way of understanding noemata are presented. The third section is devoted to the formal set-theoretic construction needed for the formal comprehension of noemata. In the fourth section, definitions of noemata and their various kinds, as well as definitions of other phenomenological notions are formulated. In the last section, possibilities of further developing the proposed formal conception are indicated."

142. Wolenski, Jan. 1997. "Husserl and the Development of Semantics." *Philosophia Scientiae* no. 2:151-158.

"This paper investigates the role of Edmund Husserl in the development of formal or model-theoretic semantics through glasses of the distinction of language as calculus vs. language as universal medium, introduced by Jaakko Hintikka and Martin Kusch. In particular, the paper raises the question of possible Husserl's influence on the conception of language accepted in Polish philosophy, in particular by Lesniewski and Tarski."

143. Zahavi, Dan. 1992. "Constitution and ontology: some remarks on Husserl's ontological position in the *Logical Investigations*." *Husserl Studies* no. 9:111-124.

"One of the major exegetical difficulties in connection with Husserl's *Logical Investigations* has always been the clarification of his ontological position and the closely related concept of constitution. Ever since the publication of the first edition - which will be the point of departure - in 1900-1, there has been an ongoing discussion as to which concept of reality Husserl had committed himself, initiated with a realistic interpretation by his Gottingen students. My aim in the following paper will be a critical evaluation and interpretation of this relationship, thereby also taking Husserl's philosophical development - especially as concerns his idea of phenomenology - into consideration."

147. Zalta, Edward N. 1998. "Mally's Determinates and Husserl's Noemata." In *Ernst Mally. Versuch einer Neubewertung*, edited by Hieke, Alexander, 9-28. Sankt Augustin: Academia Verlag.

"In this paper, the author compares passages from two philosophically important texts and concludes that they have fundamental ideas in common. What makes this comparison and conclusion interesting is that the texts come from two different traditions in philosophy, the analytic and the phenomenological. In 1912, Ernst Mally published *Gegenstandstheoretische Grundlagen der Logik und Logistik*, an analytic work containing a combination of formal logic and metaphysics. In 1913, Edmund Husserl published *Ideen zu einer reinen Phänomenologie und phänomenologischen Philosophie*, a seminal work in phenomenology in which noemata are defined and given a crucial role in directing our mental states. In the passages from these two texts reproduced below, the author shows that the abstract 'determinates' postulated by Mally in 1912 are assigned much the same role that Husserl assigned to noemata in 1913. Though Mally's determinates are not as highly structured as Husserl's noemata, they have a feature that explains how they manage to play the role assigned to them. The corresponding feature is missing, or at least, not emphasized in Husserl's account of noemata. Therefore, insights from both philosophers, and thus from both the analytic and phenomenological traditions, are needed to give a more complete account of directed mental states."

Kazimierz Twardowski on the Content and Object of Presentations

Introduction

"It is not easy to characterize Twardowski's place in the history of Polish philosophy. This is always difficult with regard to those persons who sacrifice their own creativeness to initiate a school or a movement which may reach a culminating point in the next generation. Twardowski was not so original a thinker, or at any rate not so accomplished as some of his pupils. He gave rise to the analytical movement in Poland, but himself belonged to the period of transition. His original contributions were in the philosophy of mind, which later was developed by Meinong as the theory of object, and which inspired Husserl to create a new branch of philosophy-phenomenology. Twardowski's merit was to advocate effectively the classical (correspondence) concept of truth, the extensive discussion of which accelerated the emergence of semantics in the narrower sense as contrasted with syntax. His greatness lay in his teaching, which led to the creation of a school of philosophy of international reputation. His importance for Poland goes beyond philosophy. One might say about him what John Stuart Mill said about his father: 'He did not revolutionize or create one of the great departments of human thought. But in the power of influencing by mere force of mind and character the convictions and purposes of others, he left few equals among men.' " (p. 55)

From: Henryk Sklolimowski, *Polish Analytical Philosophy. A Survey and a Comparison with British Analytical Philosophy*. London: Routledge & Kegan Paul 1967.

"Twardowski's little book (...) is one of the most remarkable works in the history of modern philosophy. It is concise, clear, and -- in Findlay's words -- "amazingly rich in ideas." (1) It is therefore a paradigm of what some contemporary philosophers approvingly call 'analytic philosophy.' But Twardowski's book is also of considerable historical significance. His views reflect Brentano's earlier position and thus shed some light on this stage of Brentano's philosophy. Furthermore, they form a link between this stage, on the one hand, and those two grandiose attempts to propagate rationalism in an age of science, on the other hand, which are known as Meinong's theory of entities and Husserl's phenomenology. Twardowski's views thus point to the future and introduce many of the problems which, through the influence of Meinong, Husserl, Russell, and Moore, have become standard fare in contemporary philosophy." (p. VII)

From: Reinhardt Grossmann, "Introduction" to: Kasimir Twardowski, *On the Content and Object of Presentations*, The Hague: Martinus Nijhoff 1997.

Twardowski's ontology

"1. One of the characteristic features of modern ontology relates to the distinction between a *Dasein* and a *Sosein* of objects -- that is, between the existence of objects and their properties. Most of modern ontology is *Daseinsfrei*: it is an ontology of the nature of objects in general as they are given to thought. And it is this feature that distinguishes modern ontology from traditional metaphysics, since this ontology concerns objects as things (*res*) and not their existence. (1) This was already to be seen in the school of Brentano, but its origins are in effect even older and can be traced back to the Middle Ages and to the Stoic interpretation of Aristotle, which passed on to Wolff. Starting from Kant the role played by the acts of consciousness has become a fundamental component of ontology.

2. As regards Twardowski's ontology, I shall try to specify its Kantian commitment. Since this analysis is somewhat pioneering, I shall present it in the form of a proposal. Moreover, I shall confine myself to his book of 1894, *Zur Lehre vom Inhalt und Gegenstand der Vorstellungen*.

The following features will be of service to my proposal:

- a) Its descriptive basis stemming from Brentanian psychology. Twardowski's ontology, like Brentano's, is grounded in inner perception: it is concerned not with the genesis but with the description of the elements of consciousness. (2)
- b) The distinction between act, content and object in presentation (*Vorstellung*). (3)
- c) The primacy of the act over the contents of consciousness. In fact every presentation is an act which possesses an intentional object. In the case of Twardowski the intentional object is the content of the act, which pictures an image (*Bild*) the external object of presentation. (4)
- d) The consequent distinction concerning the act of presentation of two different directions: 1. towards the object, which is presented in a modified way by consciousness, and 2. towards the content, which is presented in a determinate way. (5)
- e) The presence of Kantianism, as Twardowski points out on several occasions in his text, especially at the outset of his ontological analysis (i.e. the description of the object of presentation), in the concept of characteristic, and in its conclusion, concerning the nature of general objects. (6)" (pp. 26-27)

Notes

- (1) According to this ontology, existence is a mode or an attribute, not an essential property of all objects. The objects of ontology, therefore, are possible objects.
- (2) As we shall see, certain basic concepts in Twardowski' ontology like the object in general, a the outcome of genetic research in the phenomenological sense.
- (3) We translate the German word *Vorstellung* as presentation rather than representation, pointing out the Brentanian meaning of this term: presentation, in fact, refers to the intentional character of the consciousness, directed towards an intentional object. It is worth noting that the term *Vorstellung* has Kantian origin. Also in the case of Kant, then, we shall adopt presentation instead of representation, even if we are conscious that also in Kant the term is not univocal.

Put briefly, we could speak of the representation only at the level of concepts.

(4) The intentional object is the secondary object of presentation and coincides with the content, by means of which the object is presented. On this see Husserl's criticism: Twardowski, according to Husserl, does not distinguish between the mental picture (*Bild*) proper of content, which has a psychological root, and ideal meaning (*Bedeutung*). See *Logische Untersuchungen* (Hua XVII), E. Holestein ed., 1975, *First Investigation*. Content may vary in relation to different presentations of an object, says Husserl, however meaning remains identical. Meaning is not a constitutive part of the act, it is not psychological but logical. Moreover picture is only a special case of intentional consciousness, related to imagination: in literature or science, in fact, presentations do not occur by means of pictures. What matters, according to Husserl, is the individual capacity to refer to the object on the basis of mental picture. On this see K. Schuhmann, "Husserl and Twardowski", forthcoming. [published in: Coniglione, Francesco, Poli, Roberto, Wolenski, Jan (eds.) - *Polish Scientific Philosophy: The Lvov-Warsaw School* - Amsterdam, Rodopi, 1993, pp. 41-58]

(5) There is still a way in which also the object is given in a determinate way, which is opposed to all others, as *etwas überhaupt* in presentation.

Bibliography of the philosophical work of Kazimierz Twardoski

Main works in German

Works available only in Polish are not enclosed.

A complete bibliography up to 1997 (with the works published in Polish and not translated in other languages) can be found in: Kazimierz Twardowski, *On Actions, Products and Other Topics in Philosophy*, Amsterdam: Rodopi, 1999, pp. 287-297.

1. Twardowski, Kazimierz. 1891. *Idee und Perzeption. Eine erkenntnis-theoretische Untersuchung aus Descartes*. Wien: Konegan.
2. ———. 1894. *Zur Lehre vom Inhalt und Gegenstand der Vorstellungen. Eine Psychologische Untersuchung*. Wien: Hölder.

Nachdruck: München: Philosophia Verlag 1982 mit Einleitung von Rudolf Haller.

3. ———. 1902. "Über sogenannte relative Wahrheiten." *Archiv für Systematische Philosophie* no. 8:415-447.

Translation by M. Wartenberg of a an essay published in Polish (1900).

Reprinted in D. Pearce, Jan Wolenski (eds.), *Logische Rationalismus. Philosophische Schriften der Lemberg-Warschauer Schule*, Frankfurt am Main: Athenäum, 1989, pp. 38-58.

4. ———. 1902. "Über begriffliche Vorstellungen." *Verlag der Philosophischen Gesellschaft in Wien*.

- Conference held 18th November 1902 (28 pages).
5. ———. 1911. "Seches Vorlesungen über die mittelaterliche Philosophie." *Die Philosophie der Gegenwart* no. 3:58-59.
German summary of a book in Polish.
 6. ———. 1911. "Über die Methode der Psychologie. ein Beitrag zur vergleichenden Methodologie der Wissenschaften." *Die Philosophie der Gegenwart* no. 3:272.
German summary of an articole published in Polish in 1910.
 7. ———. 1911. "Über Funktionen und Gebilde. Einige Bemerkungen zum Grenzgebiet der Psychologie, Grammatic, und Logik." *Die Philosophie der Gegenwart* no. 3:214.
German summary of an essay published in Polish in 1912.
 8. ———. 1991. "Selbstdarstellung (1926)." *Grazer Philosophische Studien* no. 39:1-24.
Edited by Jan Wolenski and Th. Binder.
English translation as *Self-Portrait* in: *On actions, Products and Others Topics in Philosophy*.
 9. ———. 1996. "Funktionen ung Gebilde." *Conceptus* no. 29:157-186.
Original Polish edition 1912.
English translation in *On Actions, Products and Others Topics in Philosophy*.
 10. ———. 2016. *Logik: Wiener Logikkolleg 1894/95*. Berlin: Walter de Gruyter.
Herausgegeben von Arianna Betti und Venanzio Raspa.

English translations

1. Brandl, Johannes, and Wolesnki, Jan, eds. 1999. *Kazimierz Twardowski on Actions, Products and Other Topics in Philosophy*. Amsterdam: Rodopi.
Translated and annotated by Arthur Szylewicz.

Contents: Introduction 7; Translator's note 15; Self-portrait (1926/91) 17; Biographical notes 33;

I. On mind, psychology and language.

Psychology vs. physiology and philosophy (1897) 41; On the classification of mental phenomena (1898) 65; The essence of concepts (1903/24) 73; On idio- and allo-genetic theories of judgment (1907) 99; Actions and products (1912) 103; The Humanities and psychology (1912/76) 133; On the logic of adjectives (1923/27) 141;

II. On truth and knowledge.

On so-called relative truths (1900) 147; *A priori*, or rational (deductive) sciences and *a posteriori*, or empirical (inductive) sciences (1923) 171; Theory of knowledge. A lecture course (1925/75) 181;

III. On philosophy.

Franz Brentano and the history of philosophy (1895) 243; The historical conception of philosophy (1912) 255; On clear and unclear philosophical style (1920) 257; Symbolomania and pragmatophobia (1921) 261;

Address at the 25th anniversary session of the Polish Philosophical Society (1929/31) 271; On the dignity of the University (1933) 277;

Bibliography 287-297.

1. Albertazzi, Liliana. 1993. "Brentano, Twardowski and Polish Scientific Philosophy." In *Polish Scientific Philosophy: the Lvov-Warsaw School*, edited by Coniglione, Francesco, Poli, Roberto and Wolenski, Jan, 11-40. Amsterdam: Rodopi.
2. Betti, Arianna. 2006. "Sempiternal Truth. The Bolzano-Twardowski-Leśniewski Axis." In *The Lvov-Warsaw School. The New Generation*, edited by Jadacki, Jacek Jusliuz and Pasniczek, Jacek, 371-399. Amsterdam: Rodopi.
3. ——. 2006. "The Strange Case of Savonarola and the Painted Fish. On the Bolzanization of Polish Thought." In *Actions, Products, and Things. Brentano and Polish Philosophy*, edited by Chrudzimski, Arkadiusz, 55-81. Frankfurt: Ontos Verlag.

"I have previously discussed in several papers specific Bolzanian elements present in the Polish tradition. This paper

will not, for the most part, add anything in particular to that. The new - and rather blunt hypothesis to be put forward here is that, despite appearances, Twardowski also contributed *de facto* to slowing down the reception of Bolzano's most modern logical discoveries. For in Poland Bolzano was to remain one logician among many for rather long. It was chiefly thanks to two factors that Bolzano's star could, slowly, begin to rise in Poland, or, at least, that the fundamental achievements of his logic could be known. One factor is antipsychologistic (more precisely Platonistic) influence coming from Husserl and from Twardowski's student Łukasiewicz. The other factor is the change in the conception of logic which took Polish logic from, say, Sigwart, to Tarski through Leśniewski and Łukasiewicz," p. 55

"In several manuscripts, written between 1894 and 1897, Twardowski developed a new theory of judgment with two types of judgment: existential and relational judgments. In *Zur Lehre* he tried to stay within a Brentanian framework, although he introduced the distinction between content and object in the theory of judgment. The introduction of this distinction forced Twardowski to revise further Brentano's theory. His changes concerned judgments about relations and about nonpresent objects. The latter are considered special cases of relational judgments. The existential judgments are analyzed in a Brentanian way."

21. Jacquette, Dale. 1987. "Twardowski on Content and Object." *Conceptus. Zeitschrift für Philosophie* no. 21:193-199.

"Kasimir Twardowski's reduction of psychological experience to an act, Content, and Object had a decided impact on the development of modern phenomenology and the theory of objects of Alexius Meinong, Ernst Mally, And the Graz school of philosophical semantics and psychology.

Twardowski offers four arguments to show that the content and object of a presentation can never be same. These conclusions are challenged by a formal diagonal counterexample in which it is possible for the content and object of a thought to be precisely identical.

Twardowski's reduction and the act-Content-Object structure of psychological experience may nevertheless be upheld in

- somewhat different form not as an exclusive but as a nonexclusive kind of distinction."

- " Kazimierz Twardowski's contribution to semiotics has been fourfold: as a "critic" of others conceptions, a "constructor" of his own analyses, distinctions, and theses, a "precursor" of new ideas and methods, and an "inspirer" of posterior polemics (especially in Lvov-Warsaw School). The work bears the detail presentation of Twardowski's semiotic views, showing that his theory consists in the psycho-physical conception of signs, the functional conception of expression, the noematic conception of sense, and the discrepant conception of language. The reach bibliography contains the list of 21 Twardowski's works on semiotics, and of 43 works on his views."

This volume contains a selection of papers from the conference "The Theory of Objects in Central Europe. The Austrian-Polish Connection: Meinong and Twardowski" held in December 1989 in Kraków. It was supported and sponsored by the Jagiellonian University, Centro Studi per la Filosofia Mitteleuropea, The National Research Project "Sign-Language-Reality", and The Institute of Austrian Culture in Warsaw. The conference was organized by Prof. Jan Wolenski with dr. Georg Jankovic's generous assistance.

Alexius Meinong and Kazimierz Twardowski studied philosophy at the University of Vienna at the end of XIX century. Both were under a great influence of Franz Brentano, who is considered the father of contemporary theory of intentionality. He viewed intentionality as the crucial feature of consciousness consisting in „directness to an object". Such

conception should presuppose some general theory of objects of consciousness. Meinong and Twardowski adopted Brentano's idea of intentionality subsequently elaborating their own ontologies of objects. What is common in the views of the two philosophers, barring many differences, is that they assume an extensive sphere of non-existent objects that can be possibly objects of intentional acts.

Nowadays there is a growing interest in theories of intentionality and intentional objects on the part of analytic philosophy as well as phenomenology. That is why there is also a renaissance of Meinong's and Twardowski's philosophical thought, although the former philosopher is much better known, more popular, and, what follows, more inspiring. The main purpose of the conference that took place in Kraków was to investigate, from various historical and theoretical perspectives, theories of objects created by the two of Brentano's followers. It is to be regretted that the present volume does not fill a serious gap in philosophical literature: no paper is devoted to direct comparison of Meinong and Twardowski. Nevertheless we hope that the papers collected in the volume may contribute to better understanding of the two philosophers and prepare the ground for such a comparative study.

F. Modenato, in her essay, traces the development of Meinong's idea of relations while linking his views with the views of Hume and Locke. She is concentrating on epistemological relevance of the idea. Relations are treated by Meinong as some complexities and both relations and complexities are higher-order objects. Higher-order objects play the central role in Meinong's theory of knowledge and are of great importance to his ontology.

L. Albertazzi points to some Kantian motives in Twardowski's ontology. The Polish philosopher distinguishes several categories of objects which, according to Albertazzi's interpretation, correspond closely to that distinguished by Kant. In particular, 'the object in general' may be taken as

Kant's transcendental object, and 'the general object' as a universal presented individually in the subject of proposition.

R. Poli argues in his paper that many elements of Wolff's ontology can be found in Twardowski's theory of objects. Both philosophers conceive objects as possible wholes. For Twardowski, being an object is ontologically prior to having existence and it is enough for being an object to be representable in an act of presentation.

J.J. Jadacki presents a comprehensive survey of Twardowski's ontological (metaphysical) and epistemological views. On this basis he reconstructs the philosopher's descriptive semiotics focusing his attention on the theory of judgment.

Additionally, Jadacki carries out a formal semantic analysis of Twardowski's semiotics.

J. Wolenski considers the main traditional views of 'being' and wonders if 'being' could be situated somewhere in the formal hierarchy of concepts. He comes to the conclusion that "being" expresses no concept at all and, what follows, it has the syncategorematic character as Twardowski claimed. Wolenski proposes a completion of Twardowski's claim by appealing to modern logic and Leśniewski's ontology.

D. Jacquette sketches informally the principles of Meinongian semantics and shows how the semantics can be applied in formalisation of scientific laws. By contrast to extensionalist models of scientific discourse which admit only existent objects, in Meinongian semantics the reference to ideal and non-existent objects is possible. Many problems of contemporary philosophy of science such as, for example, the justification of induction and confirmation can be uniformly treated and solved on the ground of Meinong's theory.

J. Pasniczek proposes quite a simple logic which obeys the main theses of Meinong's theory of objects. This logic resembles closely the classical predicate logic with respect to syntax and semantics (it is basically extensional). Despite that resemblance, the proposed logic is associated with very rich

ontology of objects including various kinds of non-existent objects.

I am deeply indebted to Prof. Jan Wolenski for encouragement and assistance in editing this book." (Preface, pp. 7-8)

"This paper advocates the view that thoughts which are qualitatively the same are also numerically identical. The point of departure is the puzzle: if thoughts are unchanging and eternal inhabitants of a "third realm", then it is mysterious how we grasp them, whereas, the assumption that they are outputs of some mental processes casts doubt on the possibility of communicating thoughts. To solve the puzzle Twardowski's teaching on actions and their products is applied and further elaborated."

51. ———. 2006. "Why Polish Philosophy Does Not Exist." In *The Lvov-Warsaw School. The New Generation*, edited by Jadacki, Jacek Jusliuz and Pasniczek, Jacek, 19-40. Amsterdam: Rodopi.

"Why have Polish philosophers fared so badly as concerns their admission into the pantheon of "Continental philosophers?" Why, for example, should Heidegger and Derrida be included in this pantheon, but not Ingarden or Tarski? Why, to put the question from another side, should there be so close an association in Poland between philosophy and logic, and between philosophy and science? We distinguish a series of answers to this question, which are dealt with under the following headings: (a) the role of socialism; (b) the disciplinary association between philosophy and mathematics; (c) the influence of Austrian philosophy in general and of Brentanian philosophy in particular; (d) the serendipitous role of Twardowski; (e) the role of Catholicism. The conclusion of the paper is that there is no such thing as 'Polish philosophy' because philosophy in Poland is philosophy per se, it is part and parcel of the mainstream of world philosophy -- simply because, in contrast to French or German philosophy, it meets international standards of training, rigour, professionalism and specialization."

Placek, Katarzyna and Wolenski, Jan, 153-167. Dordrecht: Kluwer.

"In spite of the historical proximity of S. Leśniewski to K. Twardowski, an attempt to look at Twardowski's heritage through Leśniewski's eyes leads to striking results. Firstly, it results in a wider framework than Leśniewski's Elementary Ontology and secondly, it involves a transition from Formal Ontology to Formal Phenomenology. In this paper an extension of Leśniewski's Non-Elementary Ontology is presented which is suitable for investigating Twardowski's Theory of Presentation."

56. ———. 1999. "Twardowski and the Distinction between Content and Object." *Brentano Studien. Internationales Jahrbuch der Franz Brentano Forschung* no. 8:15-36.

"The content/object distinction was the main philosophical result achieved by Twardowski. However, he had predecessors. This paper discusses the development of the mentioned distinction from Bolzano to Twardowski. Views of Zimmermann, Brentano, Meinong, Höfler are taken into account; also some objections of Husserl against Twardowski are discussed and evaluated. The paper also stresses the general philosophical significance of Twardowski's work."
57. ———. 2002. "From Intentionality to Formal Semantics (From Twardowski To Tarski)." *Erkenntnis* no. 56:9-27.

"This paper intends to show that the rise of semantics in Poland was related to Kazimierz Twardowski and his understanding of mental acts as intentional (in Brentano's understanding plus the principally realistic conception of intentional objects). Twardowski's theory of language was consequently semantic considering words as products of mental acts and as referring to the world. This view was then refined by Twardowski's students, in particular Stanislaw Leśniewski and Tadeusz Kotarbinski. Both were teachers of Alfred Tarski, the founder of modern formal semantics. These facts suggest that the intentional conception of language was an important philosophical context of Tarski's work."

1. Brandl, Johannes. 1996. "Kazimierz Twardowski uber Funktionen und Gebilde: Einleitung zu einem text aus dem Nachlass." *Conceptus.Zeitschrift für Philosophie* no. 24:145-156.

"Among the unpublished writings of Kazimierz Twardowski so far there is an essay in which Twardowski tries to embed the concept of an intentional object' within a theory that comprises at the same time psychological, logical and grammatical aspects. This theory of actions' and products' is presented here and several applications of the theory are discussed. The central question thereby is whether the distinction between actions and products enables Twardowski to counter the objection of psychologism raised against him. Having explained Twardowski's position we describe from an editorial point of view the text in which his theory is transmitted. The text itself is published according to the given editorial principles after this introduction."

5. Rusnock, Paul. 2007. "Qu'est-ce que la représentation? Bolzano et la philosophie autrichienne." *Philosophiques* no. 30:67-81.

"Largely ignored in Germany during the nineteenth century, Bolzano was certainly better known in Austria, in particular among Brentano's students, who enthusiastically studied his *Theory of Science*. In this respect it makes sense to speak of Bolzano as belonging to a tradition of Austrian philosophy. Yet an examination of the reception of Bolzano's ideas among Brentano's students indicates that he was not always well understood. This article discusses a particular case, Twardowski's reaction to Bolzano's theory of representation."

6. Sebestik, Jan. 1994. "Twardowski entre Bolzano et Husserl: la théorie de la représentation." *Cahiers de Philosophie Ancienne et du Langage* no. 1:61-85.

"La plus importante des possibilités ainsi ouvertes consiste sans doute dans le réalisme de Twardowski, dans son orientation en direction de l'objet. L' "étude psychologique" qui porte sur la représentation finit pas se constituer en une ontologie relationnelle de l'objet. Par delà les analyses psychologiques de l'objet intentionnel, Twardowski a intégré dans sa théorie deux doctrines essentielles de Bolzano : la méréologie, qui forme la

base de son système mathématique, et la théorie de l'objet, le noyau de sa sémantique logique.

Malgré la critique husserlienne des "deux faces qui donneraient à l'expression, l'une la signification, et l'autre la détermination de son orientation vers l'objet", la séparation méthodique et le traitement indépendant du contenu et de l'objet de la représentation, ont permis à Twardowski d'accorder aux objets l'autonomie et l'indépendance nécessaires pour permettre à Tarski, disciple de Łukasiewicz, lui-même disciple de Twardowski, d'établir la sémantique logique."

"The Scholar, who at the start of this century has indicated the direction towards philosophy not only of the School of Leopoli but, in a certain sense, of the whole Poland, was Kazimierz Twardowski. This study presents briefly his biography and his activity as teacher and as organiser. The knowledge of the setting in which he was formed in the intellectual attitude of the founder of the Philosophical School of Leopoli-Warsaw can facilitate a brief exposition of the theories of Twardowski. He

was an excellent Brentanist, and in the development of this doctrine he stands midway between F. Brantano and E. Husserl. K. Tardowski is the founder of the School which represents a relevant trend in modern analytical philosophy."

Bertrand Russell's Logic and His Ontological Development (1900-1919)

Introduction

"It was Frege and Russell, not Wittgenstein or Quine, who began what may be called the ontology of the analytic tradition."

Jan Dejnozka, *The Ontology of the Analytic Tradition and Its Origins*, (p. 149)

"Russell, in *Principles of Mathematics*, may seem to be a radical relativist. I quote this text again:

Numbers cannot be asserted of objects, because the same set of objects may have different numbers assigned to them...; for example, one army is so many regiments and such another number of soldiers. This view seems to me to involve too physical a view of objects: I do not consider the army to be the same object as the regiments. (*Principles of Mathematics* [POM] 519).

Alternatively, in that every application of a concept 'presupposes numerical diversity', in that every entity has its own immediate identity, *Principles* suggests a radical realism. The one thing *Principles* seems to not to be is modified realism, since Russell expressly denies the distinction between real distinction and conceptual distinction (POM 466). But this denial seems quite disingenuous in light of his own distinction between empirical (or actual) existence and mathematical (or logical) existence.

Surely the truth is that *Principles* indulges in a rich and complex modified realism. Spatial, temporal, and material points are kinds of terms which differ only immediately. (...)

Consider also Russell's distinction in *Principles* between actual existence, existence, and mere nonexistent being, in order of progressively muted substance substitutes. Empirical existents are much like Frege's concrete objects, existents are much like Frege's abstract objects. Logical existents seem real than empirical existents, but more real than nonexistent beings. Spatiotemporal reals (points and instants) seem to be in between empirical existents and logical existents, since empirical evidence determines the geometry actual world. Being is the general status of which the foregoing are kinds. Objects roughly include both terms and classes as many (*POM* 55n). Terms are simply beings. Classes as many have mathematical existence, or better, logical existence. Properties and relations are probably hybrid classifications, since some are empirically given and others are logico-mathematical. Possibly there are similar gradations of ontological status among nonexistent chairs, nonexistent material points, nonexistent colors, and so on, though possibly they are all just nonexistent entities. Russell does not address that question.

(...)

Russell rejects substances and essences in the traditional sense. But he admits six sorts of beings or substances, or substance substitutes: (1) All entities, including both being and existence, have timeless being in 1903. (2) Universals' have being in 1912. (3) Being is general timelessness in 1914. (4) Being is logical atoms in 1918. (5) Being is object words in 1940. (6) Being is qualities (particulars, not universals) in 1940-59. I described these six sorts of being in my *Erkenntnis* paper (Dejnožka 1990). In addition, Russell admits two substitutes for material substances: (7) Ordinary physical things are causal lines in 1927-59 (*The analysis of matter* [AMA] 285; *Human Knowledge: its scopes and limits* [HK] 453-60, 489-90; *My Philosophical development* [MPD] 146-47). "Thus the persistence of substance is replaced by the persistence of causal laws" (AMA 285). (8) Space-time structures are what are probably real in 1927-59 (AMA 249-57; HK 250-66, 460-75, 491-92; MPD 147-48). Russell speaks of 'substantial structures' which replace 'pieces of matter' and also of structures of events (HK 461). Of course, (7) and (8) overlap; a causal line is an instantiated structure.

In his 1914-18 philosophy of logical fictions, in which particulars (sense-data) or perhaps simples are alone real, Russell may seem a radical realist. Bodies, numbers, and minds (except one's own mind) are logical fictions with fictitious identities. And 'there is no such thing as a fiction' (The Philosophy of Logical Atomism [PLA] 189). In 1919 this virtually becomes Hume's neutral monist distinction between impressions and fictions. Like Hume's impressions, Russell's particulars are real beings. Each can logically happen to be the whole universe. But instead of admitting distinctions of reason within lone sense-data, as Hume does within impressions, Russell admits "parts" which, if you attend to them, become 'new' data (new real beings) in their own right (PLA 203; see On the relation of universals and particulars [RUP] 114 and An inquiry into meaning and truth [IMT] 334). Much as with Frege, this is a shifting of phenomenological real identities over time sans any shifting of concepts. Russell assigns particulars the 'logical position' of substances (PLA 204). Particulars are mind-independent (1a), essentially complete (1b), ultimate logical subjects of predication (1c), logically independent (1d), given in acquaintance (1e), the unchanging building blocks in the logical construction of changes (1f), and have phenomenologically real identities as opposed to the conceptual identities of logical fictions (1g). Criterion (1) seems fulfilled-but for radical realism, since logical fictions are said to exist only in a purely nominal sense.

Nonetheless, I classify the 1914-18 Russell as a modified realist. For there is that exception to logical fictions, one's own mind, which ought to be in some sense more substantial than sense-data, despite everything Russell says about sense-data as being as real as anything can be. Only the 1921 Russell's neutral monism, in which even one's own mind is a construction, seems a truly radical realism. It is also worth noting that as series of classes of sensibilia, two constructed bodies are really distinct in sense (2) just in case they have no sensibillum in common.

The 1914-21 Russell's constructionism (this includes neutral monism), in using unsensed sensibilia to account for perception and physical lawfulness, is a scientific explanatory realism. It is also a phenomenological realism in that sense-data are physically real events.

And third, it is a methodological realism. Analyses end with sensed entities, if not with entities known to be simple.

Russell's 1927-59 representational realism meets criterion (3) of explanatory modified realism. It is a kind of scientific realism. In *The Analysis of Matter*, Russell defends realism against radical reductionism. He says, "There are many possible ways of turning some things hitherto regarded as 'real' into mere laws concerning the other things. Obviously there must be a limit to this process, or else all the things in the world will merely be each other's washing" ([AMA] 325). Russell says, "We must find some reality for the electron, or else the physical world will run through our fingers like a jelly-fish" (AMA 319). Thus physical structures such as electrons are not mere logical fictions. Indeed, two electrons are really distinct in sense (2) if they have no constituent event in common (AMA 288). Yet Russell reserves metaphysical status for the events which compose electrons, and ultimately for whatever entities may comprise the final interpretation of physics (AMA 2, 9). This suggests a modified realism in which instantiated physical structures are real facts, but are less real than any ultimate, i.e. simple, constituents they may have." (pp. 244-247)

 Abstract. "My purpose here is purely historical. It is not an attempt to resolve the question as to whether Russell did or did not countenance nonclassical logics, and if so, which nonclassical logics, and still less to demonstrate whether he himself contributed, in any manner, to the development of nonclassical logic. Rather, I want merely to explore and insofar as possible document, whether, and to what extent, if any, Russell interacted with the various, either the various candidates or their, ideas that Dejnožka and others have proposed as potentially influential in Russell's intellectual reactions to nonclassical logic or to the philosophical concepts that might contribute to his reactions to nonclassical logics."

"Russell's account of existence as satisfaction of a propositional function presupposes a more fundamental notion of existence, which we would employ in deciding what to allow as arguments satisfying a function, a notion he never elucidates. Jan Dejnožka has distinguished three ways Russell used the term "exists," one being the phenomenalist's, in which it refers to correlations of sense-data. I argue that this phenomenalist notion cannot be the one Russell needs, since he explicitly held that existence be understood broadly, so that, e.g., the nonexistence of God would not follow by definition."

"Russell's paradox has two forms or versions, one in regard to the class of all classes that are not members of themselves, the other in regard to "the predicate: to be a predicate that cannot

be predicated of itself.”(1) The first version is formulable in the ideography of Frege's *Grundgesetze der Arithmetik* and shows this system to be inconsistent. The second version, however, is not formulable in this ideography, as Frege himself pointed out in his reply to Russell. (2) Nevertheless, it is essentially the second version of his paradox that leads Russell to avoid it (and others of its ilk) through his theory of types.

The first version is of course the relevant version with respect to any formulation of the theory of types in which membership in a class is the fundamental notion, that is, a formulation utilizing ' ε ' as a primitive binary predicate constant.(3) However, Russell's theory of types (even ignoring its ramification) is essentially concerned with the notion of predication, and only indirectly through the (philosophically questionable) interpretation of predication as the membership relation is the first version of his paradox relevant to this formulation.

Apparently, Russell saw his paradox as generating an aporetic situation in regard to two fundamental “notions,” namely, the notion of membership (in a class) and the notion of predication (of an attribute).(4) In regard to the notion of membership, the application of Russell's paradox is not here brought into question. However, in regard to the notion of predication, the applicability of the reasoning grounding Russell's paradox will here be very much brought into question. Indeed, I shall claim that in this case the paradox fails.(5)" (pp. 133-135)

(1) “Letter to Frege,” reprinted in [10], p. 125.

(2) “Letter to Russell,” *ibid.*, p. 128.

(3) Cf. [5], p. 140 for a specific formulation of this kind of type theory.

(4) Gödel (cf. [6], p. 131f.) distinguishes these two forms of Russell's paradox by referring to them as the “extensional” and the “intensional” forms, respectively. For the purposes of the present paper, this distinction is preferable to Ramsey's different but better known distinction between “logical” and “semantical” paradoxes.

(5) With this failure of course goes a primary if not sole motivation for the simple theory of ontological types of third and higher order. The ontological scheme of second-order logic remains unaffected, having as it does a natural motivation of its own. Ramification also has its own motivation, and it may be appended to second-order logic (cf. [2], §58.) even though historically it was first appended to the simple theory of types.

"Logical atomism, through its theory of logical form, provides one of the most coherent formal ontologies in the history of philosophy. It is a coherence which, whether we agree with the ontology or not, renders the framework important and useful as a paradigm by which to compare and better evaluate the coherence of alternative systems based upon alternative theories of logical form and especially alternative theories of predication.

As the basis of a formal ontology, logical atomism, aside from the differences between its realist and nominalist variants, specifies not only a 'deep structure' ontological grammar within which all analysis must ultimately be resolved, but determines as well a logistic for that grammar. Both together constitute the formal ontology and serve to indicate how logical atomism

views the fundamental structure of reality. Thus, for example, the grammar serves to indicate the formal as well as the material categories of being acknowledged by the ontology, while the logic, by regulating the proper 'logico-syntactical employment' ([TR], 3.327) of the expressions of that grammar serves to indicate not only the logical 'scaffolding of the world' ([TR], 6.124) but supplements the grammar in its presentation of the ontological structure of reality.

The distinction between logical scaffolding and ontological structure is fundamental to atomism and pertains to a distinction between material and formal content that grammar alone is insufficient to represent. It is a distinction that any proposed formalization of logical atomism must account for (through the Doctrine of Showing) in order to be an adequate formal representative of that ontology. It is a distinction, however, or so it will be argued here, that cannot be made without the introduction of modal operators for logical necessity and possibility.

The argument for this last claim was already given in chapter 6, but it was there restricted to the level of logical analysis dealing solely with propositional connectives."

(...)

"In what follows we shall be concerned with the problematic extension of these results to the level of analysis involving quantifiers for objects as concrete particulars along with some means for expressing their self-identity and mutual difference. On this level, logical atomism's theory of predication enters our considerations in a fundamental way. For according to that theory, only elementary predications represent or 'picture' a structure with material content, and that content is in all cases external to the constituents of the structure. Such a structure is an atomic situation (*Sachlage*) and the externality of its content to its constituents consists in both it and its complement being logically possible. The difficulty here is that since objects are quantified over, they are part of the world and therefore contribute to the ontological content of the world (cf. [TR] 5.5561); and in that regard their self-identity and mutual

difference or nonidentity, and thereby their total number, would prima facie seem to involve material content. Yet, in atomism, an object's self-identity or nonidentity with any other object is not an external condition of that object, (3) and, as a consequence of the dependence of logical space on reality, it is logically impossible for the totality of objects, no less the number of that totality, to differ from world to world. In other words, in logical atomism, if not in other ontologies, identity and difference, as well as objectual quantification, are formal and not material aspects of reality. Here already we begin to see the paradigmatic role of logical atomism, for in most other systems identity and difference, as well as objectual quantification, are also said to be formal in content, though propositions regarding that content are not also said to be either logically necessary or logically impossible.

Because our considerations will be restricted to quantifying over objects as concrete particulars and not, for example, over material properties and relations as well, the variant of logical atomism we shall discuss here is nominalistic. Several realist alternatives are sketched in order to highlight the significant theses and/or difficulties of nominalism, though it should be noted that not all forms of nominalism need agree with the special ontological theses of nominalist logical atomism.

Finally, it should also be noted that our concern in this chapter is with an adequate formal representation of the ontology of logical atomism and not with its theory of thought, meaning, or philosophy of language. We wish to leave open how these might or must be developed with respect to the system constructed here, especially with regard to how they might or must pertain to the question of its logistic completeness." (pp. 244-247 of the reprint)

(1) The convention adopted here is to use scare-quotes when speaking of what connectives represent as 'properties' or 'relations'. This is done to mark a special philosophical use which is convenient in our informal discussion but which strictly speaking is ontologically misleading. A similar convention applies throughout when we refer to existence

(being-the-case) and nonexistence (being-not-the-case) as material 'properties' of atomic situations.

(3) That is, an object's self-identity or nonidentity with any other object is invariant through all the possible worlds of a logical space containing that object. We must distinguish this ontological invariance from the varying semantical relation of denotation (*Bedeutung*) between an object and a (non-Tractarian) name or definite description of that object. The former must be accounted for within the formal ontology, the latter only within its applications.

34. ———. 1980. "The Development of the Theory of Logical Types and the Notion of a Logical Subject in Russell's Early Philosophy." *Synthese* no. 45:71-115.

Reprinted as Chapter 1 in *Logical Studies in Early Analytic Philosophy*, pp. 19-63.

"The development of the theory of logical types in Russell's early philosophy proceeds along a difficult and rather involuted path; and even the final product, the theory as adumbrated in [*Principia Mathematica* = PM], remains unclear in its syntax and problematic in its semantics. Indeed, one might well be left with the impression that Russell himself, in the end, remained unsure of which parts of the different views he had held along the way are finally to be adopted.

In what follows, we shall attempt to describe and explain the development of Russell's early views, at least to the extent to which they are available in published form today, from the perspective of the development in those views of the notion of a logical subject. It is the development of this notion in Russell's early philosophy, we believe, that holds the key to many of the problems confronting Russell in the development of his theory of logical types and that led to the various, and sometimes conflicting, proposals that he made along the way.

It should be noted, however, that in referring to the development of the theory of logical types in Russell's early philosophy we have in mind only the views developed by Russell up to, but not subsequent to, the 1910–13 publication of the first edition of [PM]. The subsequent views developed by Russell from 1913–25, that is, between the first and second editions of [PM], and summarized to some extent in his introduction (and added appendices) to the second edition, constitute Russell's version of logical atomism. Except for some concluding remarks in the final section of this chapter, we delay our discussion of those views until chapter 5." (pp. 19-20 of the reprint)

35. ———. 1982. "Meinong Reconstructed Versus Early Russell Reconstructed." *Journal of Philosophical Logic* no. 11:183-214. Reprinted as Chapter 3 in *Logical Studies in Early Analytic Philosophy*, pp. 119-151.

"Contemporary philosophy is in a rut, according to Terence Parsons in his recent book *Nonexistent Objects*, ([NO]), and it is one that stems from the (post-1905) work of Bertrand Russell. The main characteristic of this "Russellian rut" ([NO], 1) is strict adherence to the thesis that being, or being something, amounts to being something that exists—or equivalently that 'there is' is to be equated with 'there exists' ([NO], 6). This view is now so well entrenched, according to Parsons, that it is a main stay of what he also calls the orthodox tradition.

Now the orthodox view is in a rut, according to Parsons, "because it's a view in which most of us are so entrenched that it's hard to see over the edges" ([NO], 1). Naturally, if we want "to look over the edge and see how things might be different" ([NO], 8), as any objective seeker of truth would, then "we need to encounter an actual theory about nonexistent objects" (ibid.). It is the construction and presentation of such a theory that is Parsons's concern in *Nonexistent Objects*.

(...)

"Now we do not object to Parsons's choice of Meinong's theory here, nor for that matter to his elegant reconstruction and presentation of that theory. We do think, however, that a more balanced recognition of Russell's overall view is called for and that perhaps the best way to make the Meinongian notion of a concrete object understandable to the orthodox tradition is to compare it with the general Russellian notion of a concrete individual, i.e., the Russellian notion of an individual that can exist but which might in fact not exist. Indeed, on the basis of the analysis and comparison we shall give here, it is our position that the Meinongian notion of a concrete object, at least as reconstructed by Parsons, is parasitic upon, though in a beneficent way, the Russellian notion of a concrete individual, existent or otherwise." (pp. 119-121)

Reprinted as Chapter 2 in *Logical Studies in Early Analytic Philosophy*, pp. 64-118.

"Logicism by the end of the nineteenth century was a philosophical doctrine whose time had come, and it is Gottlob Frege to whom we owe its arrival. "Often," Frege once wrote, "it is only after immense intellectual effort, which may have continued over centuries, that humanity at last succeeds in achieving knowledge of a concept in its pure form, in stripping off the irrelevant accretions which veil it from the eyes of the mind" (Frege, *The Foundations of Arithmetic*, [Fd], xix). Prior to Frege logicism was just such a concept whose pure form was obscured by irrelevant accretions; and in his life's work it was Frege who first presented this concept to humanity in its pure form and developed it as a doctrine of the first rank.

That form, unfortunately, has become obscured once again. For today, as we approach the end of the twentieth century, logicism, as a philosophical doctrine, is said to be dead, and even worse, to be impossible. Frege's logicism, or the specific presentation he gave of it in *Die Grundgesetze der Arithmetik*, ([Gg]), fell to Russell's paradox, and, we are told, it cannot be resurrected. Russell's own subsequent form of logicism presented in [PM], moreover, in effect gives up the doctrine; for in overcoming his paradox, Russell was unable to reduce classical mathematics to logic without making at least two assumptions that are not logically true; namely, his assumption of the axiom of reducibility and his assumption of an axiom of infinity regarding the existence of infinitely many concrete or nonabstract individuals.

Contrary to popular opinion, however, logicism is not dead beyond redemption; that is, if logicism is dead, then it can be easily resurrected. This is not to say that as philosophical doctrines go logicism is true, but only that it can be logically reconstructed and defended or advocated in essentially the same philosophical context in which it was originally formulated. This is true especially of Frege's form of logicism, as we shall see, and in fact, by turning to his correspondence with Russell and his discussion of Russell's paradox, we are able to formulate not only one but two alternative reconstructions of his form of logicism, both of which are consistent (relative to weak Zermelo set theory).

In regard to Russell's form of logicism, on the other hand, our resurrection will not apply directly to the form he adopted in [PM] but rather to the form he was implicitly advocating in his correspondence with Frege shortly after the completion of [POM]. In this regard, though we shall have occasion to refer to certain features of his later form of logicism, especially in our concluding section where a counterpart to the axiom of reducibility comes into the picture, it is Russell's early form of logicism that we shall reconstruct and be concerned with here.

Though Frege's and Russell's early form of logicism are not the same, incidentally, they are closely related; and one of our goals

will be to reconstruct or resurrect these forms with their similarity in mind. In particular, it is our contention that both are to be reconstructed as second order predicate logics in which nominalized predicates are allowed to occur as abstract singular terms. Their important differences, as we shall see, will then consist in the sort of object each takes nominalized predicates to denote and in whether the theory of predication upon which the laws of logic are to be based is to be extensional or intensional." (pp. 64-65 of the reprint)

"Russell's philosophical views underwent a number of changes throughout his life, and it is not always well-appreciated that views he held at one time came later to be rejected; nor, similarly, that views he rejected at one time came later to be accepted. It is not well-known, for example, that the theory of logical types Russell described in his later or post-[PM] philosophy is not the same as the theory originally described in [PM] in 1910-13; nor that some of the more important applications that Russell made of the theory at the earlier time cannot be validated or even significantly made in the

framework of his later theory. What is somewhat surprising, however, is that Russell himself seems not to have realized that he was describing a new theory of logical types in his later philosophy, and that as a result of the change some of his earlier logical constructions, including especially his construction of the different kinds of numbers, were no longer available to him.

In the original framework, for example, propositional functions are independently real properties and relations that can themselves have properties and relations of a higher order/type, and all talk of classes, and thereby ultimately of numbers, can be reduced to extensional talk of properties and relations as “single entities,” or what Russell in [POM] had called “logical subjects.” The Platonic reality of classes and numbers was replaced in this way by a more fundamental Platonic reality of propositional functions as properties and relations. In Russell's later philosophy, however, “a propositional function is nothing but an expression. It does not, by itself, represent anything. But it can form part of a sentence which does say something, true or false” (Russell, *My Philosophical Development*, ([MPD]), 69). Surprisingly, Russell even insists that this was what he meant by a propositional function in [PM]. “Whitehead and I thought of a propositional function as an expression containing an undetermined variable and becoming an ordinary sentence as soon as a value is assigned to the variable: ‘x is human’, for example, becomes an ordinary sentence as soon as we substitute a proper name for V. In this view . . . the propositional function is a method of making a bundle of such sentences” ([MPD], 124). Russell does realize that some sort of change has come about, however, for he admits, “I no longer think that the laws of logic are laws of things; on the contrary, I now regard them as purely linguistic” (ibid., 102).

(...)

Now it is not whether [PM] can sustain a nominalistic interpretation that is our concern in this essay, as we have said, but rather how it is that Russell came to be committed in his

later philosophy to the atomistic hierarchy and the nominalistic interpretation of propositional functions as expressions generated in a ramified second order hierarchy of languages based on the atomistic hierarchy. We shall pursue this question by beginning with a discussion of the difference between Russell's 1908 theory of types and that presented in [PM] in 1910. This will be followed by a brief summary of the ontology that Russell took to be implicit in [PM], and that he described in various publications between 1910 and 1913. The central notion in this initial discussion is what Russell in his early philosophy called the notion of a logical subject, or equivalently that of a "term" or "single entity". (In [PM], this notion was redescribed as the systematically ambiguous notion of an "object.") As explained in chapter 1 this notion provides the key to the various problems that led Russell in his early philosophy to the development of his different theories of types, including that presented in [PM]. This remains true, moreover, even when we turn to Russell's later philosophy, i.e., to his post-[PM] views, only then it is described as the notion of what can and cannot be named in a logically perfect language. The ontology of these later views is what Russell called logical atomism, and it is this ontology that determines what Russell described as the atomistic hierarchy of sentences. In other words, it is the notion of what can and cannot be named in the atomistic hierarchy that explains how Russell, however unwittingly, came to replace his earlier theory of logical types by the theory underlying the atomistic hierarchy of sentences as the basis of a logically perfect language." (pp. 193-195 of the reprint)

37.

Abstract: "Russell's "new contradiction" about "the totality of propositions" has been connected with a number of modal paradoxes. M. Oksanen has recently shown how these modal paradoxes are resolved in the set theory NFU. Russell's paradox of the totality of propositions was left unexplained, however. We reconstruct Russell's argument and explain how it is resolved in two intensional logics that are equiconsistent with NFU. We also show how different notions of possible worlds are represented in these intensional logics."

"In Appendix B of his 1903 *Principles of Mathematics* (PoM), Russell described a "new contradiction" about "the totality of propositions" that his "doctrine of types" (as described in Appendix B) was unable to avoid. (1)

In recent years this "new contradiction" has been connected with a number of modal paradoxes, some purporting to show that there cannot be a totality of true propositions, (2) or that even the idea of quantifying over the totality of propositions leads to contradiction. (3) A number of these claims have been discussed recently by Mika Oksanen and shown to be spurious relative to the set theory known as NFU. (4) In other words, if NFU is used instead of ZF as the semantical metalanguage for modal logic, the various "paradoxes" about the totality of propositions (usually construed as the totality of sets of possible worlds) can be seen to fail (generally because of the existence of a universal set and the failure of the general form of Cantor's power-set theorem in NFU). It is not clear, however, how Russell's own paradox about the totality of propositions is resolved on this analysis, and although Oksanen quoted Russell's description of the paradox in detail, he did not show how it is explained in NFU after his resolution of the other related modal paradoxes; in fact, it is not at all clear how this might be done in NFU.

One reason why Russell's argument is difficult to reconstruct in NFU is that it is based on the logic of propositions, and implicitly in that regard on a theory of predication rather than a theory of membership. A more appropriate medium for the

resolution of these paradoxes, in other words, would be a formal theory of predication that is a counterpart to NFU.

Fortunately, there are two such theories, λ HST* and HST* λ , that are equiconsistent with NFU and that share with it many of the features that make it a useful framework within which to resolve a number of paradoxes, modal or otherwise. (5)" (pp. 25-26)

39. ———. 2017. Epistemological Ontology and Logical Form in Russell's Logical Atomism.

Not yet published.

Preprint available on academia.edu.

Abstract: "Logical analysis, according to Bertrand Russell, leads to and ends with logical atomism, an ontology of atomic facts that is epistemologically founded on sense-data, which Russell claimed are mind-independent physical objects. We first explain how Russell's 1914–1918 epistemological version of logical atomism is to be understood, and then, because constructing logical forms is a fundamental part of the process of logical analysis, we briefly look at what has happened to Russell's type theory in this ontology. We then turn to the problem of explaining how the logical forms of Russell's new logic can explain both the forms of atomic facts and yet also the sentences of natural language. The main problem is to explain the logical forms for belief and desire sentences and how those forms correspond to the logical forms of the facts of logical atomism."

40. ———. 2017. Russell's Logical Atomism 1914-1918: Epistemological Ontology and Logical Form.

- "What is logical relevance? Anderson and Belnap say that the "modern classical tradition [,] stemming from Frege and Whitehead-Russell, gave no consideration whatsoever to the classical notion of relevance." But just what is this classical notion? I argue that the relevance tradition is implicitly most deeply concerned with the containment of truth-grounds, less deeply with the containment of classes, and least of all with variable sharing in the Anderson-Belnap manner. Thus modern classical logicians such as Peirce, Frege, Russell, Wittgenstein, and Quine are implicit relevantists on the deepest level. In showing this, I reunite two fields of logic which, strangely from the traditional point of view, have become basically separated from each other: relevance logic and diagram logic. I argue that there are two main concepts of relevance, intensional and

extensional. The first is that of the relevantists, who overlook the presence of the second in modern classical logic. The second is the concept of truth-ground containment as following from in Wittgenstein's *Tractatus*. I show that this second concept belongs to the diagram tradition of showing that the premisses contain the conclusion by the fact that the conclusion is diagrammed in the very act of diagramming the premisses. I argue that the extensional concept is primary, with at least five usable modern classical filters or constraints and indefinitely many secondary intensional filters or constraints. For the extensional concept is the genus of deductive relevance, and the filters define species. Also following the *Tractatus*, deductive relevance, or full truth-ground containment, is the limit of inductive relevance, or partial truth-ground containment. Purely extensional inductive or partial relevance has its filters or species too.

Thus extensional relevance is more properly a universal concept of relevance or summum genus with modern classical deductive logic, relevantist deductive logic, and inductive logic as its three main domains."

- "Russell brought three arguments forward against Meinong's theory of objects. None of them depend upon a misinterpretation of the theory as is often claimed. In particular, only one is based upon a clash between Meinong's theory and Russell's theory of descriptions, and that did not involve Russell's attributing to Meinong his own ontological assumption. The other two arguments were attempts to find internal inconsistencies in Meinong's theory. But neither was sufficient to refute the theory, though they do require some revisions, viz. a trade-off between freedom of assumption and unlimited characterization. Meinong himself worked out the essentials of the required revisions."

Contents: Abbreviations IX; Preliminary terminological comments XI; Glossary XIII; Acknowledgments XIV; Introduction 1.

Part One: Logic, realism and the foundations of arithmetic

1. The argument that Frege influenced Husserl 7; 2. Husserl, Frege, and psychologism 13; 3. Sense, meaning, and noema; 4. Husserl's 1891 critique of Frege 43; 5. Frege's review and the development of Husserl's thought 57; Conclusion: analyticity 91.

Part Two: Conceptual clarity

Introduction 99; 6. Intensions and extensions 103; 7. Presentation and ideas 125; 8. Function and concept 137; 9. On denoting 147; Conclusion: The way *things* are 163; Notes 175; Bibliography 191; Index 215.

From the Introduction: "As a book by the founder of phenomenology that examines Frege's ideas from Brentano's empirical standpoint, Husserl's *Philosophy of Arithmetic* is both an early work of phenomenology and of logical empiricism. In it Husserl predicted the failure of Frege's attempt to logicize arithmetic and to mathematize logic two years before the publication of the *Basic Laws of Arithmetic* in 1893. I hope to show that Husserl did so in terms that would prefigure both the account Frege would give of his error after Russell encountered the paradoxes ten years later and the discussions of *Principia Mathematica*. Moreover, in locating the source of Frege's difficulties in the ambiguous theory of identity, meaning, and denotation that forms the basis of Frege's logical project and generates Russell's contradictions, Husserl's discussions indicate that these contradictions may

have as serious consequences for twentieth century philosophy of language as they have had for the philosophy of mathematics.

This book is about these Austro-German roots of twentieth century philosophy. It is mainly about the origins of analytic philosophy, about the transmission of Frege's thought to the English speaking world, and about the relevance of Husserl's early criticism of Frege's *Foundations of Arithmetic* to some contemporary issues in philosophy. It is more about Husserl the philosopher of logic and mathematics than it is about Husserl the phenomenologist, and it is principally addressed to those members of the philosophical community who, via Russell, have been affected by Frege's logic.

This makes it very different from work on Husserl and Frege that has focused on the importance of Frege's criticism of Husserl's *Philosophy of Arithmetic* and attendant issues. The goal of this book is quite the opposite. It studies the shortcomings in Frege's thought that Husserl flagged and Russell endeavored to overcome. One possible sequel to this book would be a thorough study of Husserl's successes and failures in remedying the philosophical ills he perceived all about him, but that goes beyond the scope of this work, which follows the issues discussed into the work of Russell and his successors." "Bertrand Russell is generally recognized as one of the most important English speaking philosophers, logicians and essayists of the twentieth century. Often cited along with G.E. Moore as one of the founders of modern analytic philosophy and along with Kurt Gödel as one of the most influential logicians of his time, Russell is also widely recognized for his sustained public contributions to many of the most controversial social, political and educational issues of his day. Even so, more than anything else, it is Russell's work in logic and the foundations of mathematics that serves as his core contribution to intellectual history and that makes Russell the

seminal thinker he is. His most significant achievements include

1. his refining and popularizing of Giuseppe Peano's and Gottlob Frege's first attempts at developing a modern mathematical logic,
 2. his discovery of the paradox that bears his name,
 3. his introduction of the theory of types (his way of avoiding the paradox),
 4. his defense of logicism, the view that mathematics is in some important sense reducible to logic, and his many detailed derivations supporting this view,
 5. his ground-breaking advances in technical philosophy, including both his theory of definite descriptions and his theory of logical constructions,
 6. his theory of logical relations, including his impressively general theory of relation arithmetic,
 7. his formalization of the reals,
 8. his theory of logical atomism, and
 9. his championing of the many connections between modern logic, mathematics, science, and knowledge in general." (p. 1)

"The paper is structured as follows. In the next section, I describe a problem for Russell's account of the logical form of negative existentials involving descriptions, and suggest a Russellian solution. This solution is one that no one will care to adopt -- it seems to turn negative existentials into self-contradictions -- but I later argue that, properly interpreted, it constitutes a promising way of reconciling some of Meinong's views about negative existentials with the kind of "robust sense of reality" that informed Russell's own analysis. In section 3 I begin the task of articulating this reading of Meinong by describing Meinong's Assumption View as articulated in the second edition of his *On Assumptions* (Meinong 1910). Because

this view presupposes Meinong's infamous commitment to non-existent objects, it would still offend Russell's "robust sense of reality", and so section 4 considers a weakened version of the view, one that retains the appeal to assumptions while giving up the appeal to non-existent objects. (Meinong defends a similar view in the 1902 edition of *On Assumptions*, which predates his discovery of non-existents.) Section 5 offers the finale: it shows how Meinong had himself tried to apply such a weakened Assumption View to the case of negative existentials, that Russell had known about the attempt (this arguably solves the first, hermeneutic puzzle), and that, properly interpreted, this way of understanding negative existentials provides Russell with a solution to the problem facing his theory of negative existentials." "Russell's introduction of negative facts to account for the truth of "negative" sentences or beliefs rests on his collaboration with Wittgenstein in such efforts as the characterization of formal necessity, the theory of logical atomism, and the use of the Ideal Language. In examining their views we arrive at two

conclusions. First, that the issue of negative facts is distinct from questions of meaning or intentionality; what a sentence or belief means or is about rather than what makes it true or false. Second, that the ontological use of the Ideal Language is incompatible with the requirements of its employment in the logical study of inferences. On this basis we conclude that despite elaboration by recent proponents, the doctrine of negative facts lacks adequate support, and perhaps more importantly, it is proper ontological method to free the Ideal Language from the exigencies of a symbolism constructed for logical investigation."

"In "On Denoting" Russell attacked Alexius Meinong's so-called "theory of objects" (*Gegenstandstheorie*), arguing, among other things, that according to Meinong's theory both the sentence "The existent present King of France exists" and "The existent present King of France does not exist" is true, which would render Meinong's theory inconsistent. Some Neo-Meinongians have claimed that one could avoid this consequence by making use of a distinction between two kinds of properties ("nuclear" and "extranuclear" ones), which Meinong worked into his theory several years after "On Denoting". My aim in this paper is to re-evaluate this contemporary attempt to defend Meinong's theory against Russell's attack and to offer an alternative solution."

"The debates between Bertrand Russell and Alexius Meinong from 1904 to 1920 dealt with some fundamental issues in philosophy: reference, nonexistent objects, intentionality. Along with the enduring influence of Russell's philosophy, some misapprehensions about these exchanges have persisted. One is that Russell's objections to Meinong were definitive. The other stems from taking too seriously Russell's casual remark in 1918 that Meinong's theories evidenced a deficient "sense of reality." Contrary to the impression left by this comment, Russell, during the most intensive years of the debate (1904-1907), felt a real respect for Meinong's theories, and his main concern lay elsewhere. The exchange did not center on "reality" or "realism," as is often believed, but on the classical laws of logic (noncontradiction, excluded middle) and the correct analysis of logical form, for instance, of existence statements. Russell also took a dim view of the modal concepts Meinong used to support the canons of object theory, but his main concern was that Meinong's overall analysis appeared to threaten the foundation of Russell's philosophical logic. Russell and Meinong's disagreement thus came down to competing logical frameworks tied to different notions of what it is to be an object.

In claiming that Russell's main objection to Meinong's theory was logical, I do not mean to deny that ontology and metaphysics were in the forefront of Russell's concerns up to 1910 or that for him a correct foundational view of logic would tell us much about the way the world is. Russell's motivation for

criticizing Meinong may well have been a concern with what is 'real', but his philosophical reasons for rejecting Meinong's object theory in 1905-1907 had to do with logical principles and their reputed violations. Interestingly, during the years Russell was debating with Meinong most intensively (1904-1907) he was also struggling to find the solution to his paradox of classes. With his 1905 invention of the theory of descriptions, Russell believed he had simultaneously found a way to deal with apparent reference to nonexistents in ordinary grammar and a new analysis of classes. It seems that the two difficulties of paradoxical classes and nonexistent objects plagued Russell's sense of consistency in a parallel manner.

In this paper I focus on giving an internal analysis of the objections and replies exchanged by Russell and Meinong to show that Russell's objections failed to be decisive and that the standoff between them came down to fundamentally different frameworks. Some scholarly evidence supports this interpretation as well. Russell's 1904 letter to Meinong emphasizes that what Meinong called "Theory of Objects" Russell had been accustomed to calling "Logic." [See Appendix] In pressing his contradiction charge, Russell continued to evaluate Meinong's object theory by the standards of his own view of "logic." Lastly, evidence of a more circumstantial nature points to the parallelism of Russell's worries over nonexistent objects and classes."

(1) See the newly published *Theory of Knowledge, The 1913 Manuscript*, Vol. 7 of Russell's Collected papers, edited by Elizabeth Eames and Kenneth Blackwell (Allen and Unwin, 1983). This manuscript, which contains many accurate references to Meinong's theories, was never published by Russell. He was apparently discouraged by Wittgenstein's criticism of his theory of judgment.

(2) The Appendix contains translations of Russell's three letters to Meinong. See also the chronological Bibliography at the end of this paper.

"Alexius Meinong claimed to uncover a brave new world of nonexistent objects. He contended that unreal objects, such as the golden mountain and the round square, genuinely had

properties (such as nonexistence itself) and therefore, deserved a place in an all-inclusive science. Meinong's notion of nonexistent was initially not well-received, largely due to the influence and criticisms of Bertrand Russell. However, it has gained considerable popularity in more recent years as academics have uncovered shortfalls in Russell's philosophy and strived to explain apparent "facts" about the beingless. Some philosophers have continued Meinong's project, further explaining nonexistent objects or formulating logic systems that incorporate them.

The more recent developments beg for a re-examination of Meinongianism. This book does just that, putting the theory on trial. Part One considers if Russell truly defeated Meinongianism. It addresses Meinongian rejoinders in response to Russell's main criticisms and further defends Russell's alternative solution, his Theory of Descriptions. Part Two explores the rationale for nonexistents and their use in interpreting three types of statements: characterization, negative existential, and intentional. The book argues that, despite appearances, Meinongianism cannot plausibly account for its own paradigm claims, whereas Russell's framework, with some further elucidation, can explain these statements quite well. Part Three primarily addresses claims about fiction, exploring the short-comings of Meinongian and Russellian frameworks in interpreting them. The book introduces a contextualization solution and symbolic method for capturing the logical form of such claims - one with the complexity to handle cross-contextual statements, including negative existential and intentional ones. It finally considers where that leaves nonexistent objects, ultimately rejecting such so-called entities."

Levels of Reality in Nicolai Hartmann's Ontology

Hartmann's New Ontology

"With the philosophy of Nicolai Hartmann we once again enter a world of sober, objective and impartial inquiry, which presses beyond man's self and seeks to grasp the universe of being so far as it is revealed to our limited capacity to know. The basic mood of Existence philosophy, as might be expected, is altogether missing from this universal way of viewing matters. (...).

The true concern of his philosophy is to discover the structural laws of the real world, of the world of being, not of some 'world of mere appearances' set out in front of the real world. Traditional philosophy, according to Hartmann, has sinned a great deal in this connection and in a double manner. First, it has always believed that it faced two basic alternatives - to accept an absolute knowledge of being, or else to assume the total unknowability of the 'things in themselves'. The latter course means rejecting the possibility altogether of objective knowledge of being, the former results in closed metaphysical systems that dismiss the irrational aspects of being and hold that the whole of being may in principle be grasped rationally. What has been overlooked is the middle possibility, namely, that being may be partially comprehensible conceptually despite the irrationality of the infinite portion that remains.

The second error of traditional philosophy is the propensity, stemming from the monistic need for unity, to transfer the categories or principles of one province to another that differs from it in kind. Illustrations are the application of mechanistic principles to the sphere of the organic, of organic relationships to social and political life, and, conversely, of mental and spiritual structures to the

inanimate world. This infringement of categorial boundaries, as Hartmann calls the theoretical encroachment of one province of being upon another, must be eliminated by rigorous critical analysis; yet the categories must preserve their relative validity for the domain from which they were taken originally. From the standpoint of a critical ontology, the totality of beings then turns out to be a far more complicated structure than finds expression in the traditional metaphysical formulas of unity.

Knowledge belongs to the highest stratum with which we are acquainted, that of spirit or culture. Consequently only an ontology of spiritual being (*geistiges Sein*) can comprehend the essence of knowledge. At the same time, however, the problem of cognition must already have obtained at least a partial solution if ontological inquiry is to be admissible at all. For to begin with we do not even know whether there is any such thing as objective knowledge of being or a transcendent object independent of the subject of cognition. This fact necessarily places epistemology in a dual position. On the one hand, it must create the foundation for all ontological inquiry; but at the same time it can reach its goal only within the framework of an ontology of spiritual being. Hartmann attempts to do justice to this twofold aspect of knowledge by prefacing his works in ethics and ontology with an investigation of knowledge, by including in this investigation the ontological viewpoint, and by discussing in his ontology the consequences of his findings for the phenomenon of cognition." (pp. 220-221)

From: Wolfgang Stegmüller, *Main Currents in Contemporary German, British, and American Philosophy*, Dordrecht; Reidel 1969.

"It is not easy to tell what exactly Hartmann understood by his 'ontology,' which he wanted to oppose to the old Pre-Kantian form of ontology. He certainly did not identify it with metaphysics. In this respect Hartmann's enterprise differed fundamentally from the many more or less fashionable attempts to resurrect metaphysics, attempts which have rarely led to more than tentative and precarious results. Superficially Hartmann's 'ontology' may seem to be nothing but what it meant to Aristotle: the science of being qua being in its most general characteristics. In order to determine its actual content, however, it will be best to look first at the type of topics and

problems which Hartmann took up under the time-honored name. They comprise not only being qua being, i.e., the most general concept of what is (*das Seiende*), but existence (*Dasein*) and essence (*Sosein*), which he calls *Seinsmomente*, and the types of being designated by the adjectives 'real' and 'ideal,' named *Seinsweisen*, all of which are discussed in the first volume of the ontological tetralogy. The second volume deals with the modes of being (*Seinsmodi*) such as possibility and actuality, necessity and contingency, impossibility and unreality -- particularly impressive and perhaps the most original part of the set. The next major theme is the categories, first the general ones applying to all the strata (*Schichten*) of the real world and explored in the third volume (*Der Aufbau der realen Welt*), then the special categories pertaining only to limited areas, such as nature, which Hartmann takes up in the final work.

Finally, there are the categories peculiar to the realm of cultural entities (*geistiges Sein*) which he discussed in a work whose publication actually preceded the ontological tetralogy.

The mere mention of these topics will make it clear that such an ontology differs considerably from what had passed as ontology before Hartmann. It covers more and less. It adds the spheres of being which have been opened up by the sciences and the new cultural studies as well as by the theory of values. But it omits the traditional metaphysical problems, i.e., the ultimate questions dealing with God and immortality, which were the prize pieces of speculative metaphysics. The fact that Hartmann abandoned this earlier metaphysics did not mean that he denied its problems. Their insolubility even provides the very background for his new ontology. Hence we have no right to simply ignore them.

Ontology thus conceived constitutes really a segment of a metaphysics which is no longer simply a field for speculative treatment by a priori methods. To Hartmann metaphysical problems are those which form the horizon of scientific knowledge, and which are inescapable because of their connection with what we can know scientifically, yet which cannot be solved by the methods of science alone. Some of these problems he considered to be impenetrable and 'irrational' on principle, even though they too contain an ingredient (*Einschlag*) which can be explored by the rational methods of critical

ontology. This 'least metaphysical part' of metaphysics is the proper field of the new ontology." (pp. 309-310)

From: Herbert Spiegelberg, *The Phenomenological Movement. A Historical Introduction*, The Hague: Martinus Nijhoff 1963 (third edition).

The relevance of Hartmann's work for contemporary philosophy

The philosophical debate of the past decades has shown no interest in Hartmann's ideas and contribution to philosophy. Judging from current discussion, the only available conclusion that one can draw is that Hartmann left no legacy behind. Though this is a rather unwelcome conclusion, it seems difficult to deny its validity. How, then, could *Axiomathes'* readers possibly be interested in Hartmann's ideas? We are not archaeologists concerned with dead fragments of the past. We are scientists and philosophers closely involved in contemporary debate.

One of *Axiomathes'* fundamental beliefs is that real advances in science may sometimes depend on consideration of the origins and intellectual history of certain key ideas at the forefront of current research. I believe that this applies to Hartmann. He developed ideas and tools that may stimulate a real advancement of contemporary science. I would therefore claim that one of the tasks of those few well acquainted with Hartmann's thought is to reorganize and represent his ideas so that they can be understood by most contemporary researchers.

Hartmann is only one of the many great figures of the past that have lapsed into oblivion, as witnessed by the well-known cases of Brentano, Peirce and Whitehead.

It is well known that the idea of ontology is grounded in the definition put forward by Aristotle at the beginning of the fourth book of *Metaphysics*: "there is a science which studies being qua being [...]". The problem is this: why does not Aristotle simply say that ontology is the theory of being? The main reason for distinguishing between theory of being and theory of being qua being rests on Aristotle's contention that the analysis of being *simpliciter*

cannot be developed scientifically. Aristotle's intention to submit being to scientific analysis was therefore the principal reason why he adopted a reduplicative form of analysis. His position derived from the thesis that being is not a genus, whereas scientific analysis can only be developed if there is a common genus for the items under examination. If being does not have a common genus, the study of being cannot be a science.

Aristotle stated very clearly that when one moves from the study of being to the study of being qua being, some of the ways in which one can talk about being are no longer valid. *Metaphysics VI, 2* tells us that being *simpliciter* can be talked about in various ways. On passing from being to being qua being, only two of them remain valid: analysis according to the categories, and analysis according to potentiality and actuality (the latter can be rephrased as what is nowadays called dynamics).

The two main underpinnings of a properly understood Aristotelian ontology are therefore the idea that metaphysics comes after physics that is, the idea that ontology requires science -- and that the theory of being should be replaced by the theory of being qua being (that is, by a categorical framework plus a dynamics).

Hartmann followed the same line of thought: he explicitly claimed that ontology comes after science, that the proper ontological viewpoint is the categorical one and that reality is thoroughly dynamic. Considering that ontology has been a pejorative label for twentieth-century mainstream philosophy, this may help explain why it has been so difficult for Hartmann's achievements to gain recognition.

This issue of *Axiomathes* is based on the papers presented at the conference *The Legacy of Nicolai Hartmann*, organized by the recently established MITTELEUROPA FOUNDATION for the fiftieth anniversary of Hartmann's death (Bolzano, June 21-22, 2001).

From Roberto Poli, "Foreword" to *Axiomathes*, Vol. 12, 2001, Nos. 3-4, Special Issue: *The Legacy of Nicolai Hartmann (1882-1950)*.

Hartmann' auto-presentation

"The projects in ontology constitute a special chapter, although only one of these was actually brought to completion in our period. The famous work of Martin Heidegger, *Sein und Zeit*, which had evoked great interest both in and out of Germany, was never finished. But its influence has been great even up to the present. (...) On the other hand, Nikolai Hartmann, after *Grundlegung der Ontologie* (1935) had opened up a new line of development, proceeded to publish two larger works -- *Möglichkeit and Wirklichkeit* (1938) and *Der Aufbau der realen Welt. Grundriss der allgemeinen Kategorienlehre* (1940). The third volume of this set, the *Spezielle Kategorienlehre* (philosophy of nature), could not be published. Nevertheless, the two published writings contain the gist of the scheme, which is further elaborated in a smaller writing, *Neue Wege der Ontologie* (in *Systematische Philosophie*, 1942. 2nd ed., 1947). The first of these books presents a new analysis of the modal categories. The main thesis is that the essence of reality, which is so difficult to conceive, if it is understood as the kind of being possessed by the world in which we live, can actually be so conceived in terms of the relation of the modes which govern it. The study shows that the traditional conception of these modes cannot account for the kind of being which reality possesses, and so the modes themselves must be interpreted in a completely new manner. The new interpretation consists of a thorough analysis of their mutual relations -- the "intermodal relations"; and the conclusions lead directly to new determinations of the nature of becoming, obligation, the puzzling character of aesthetic objects, etc. Also a new formulation and justification of the principle of sufficient reason is developed. Consequences are also found for the problem of ideal being, the realm of logic and knowledge, the general conclusion being that these modes and their interrelations vary with each of these realms. The second work develops the new ontological conception of the categories, and applies it to the group of "basic categories" (*Fundamental kategorien*) -- that is, those categories which are common to all levels, spheres and realms of being, and which are articulated even in the highest levels of being. In this connexion we find a great many "categorical laws", which underly the stratification of the real world and determine its inner structure. As a result we are led to the so called "laws of dependence", and eventually to the

controversial problem of moral freedom -- for which a new solution is proposed." (pp. 421-422)

From: Nicolai Hartmann, "German Philosophy in the Last Ten Years", translated by John Ladd, *Mind*, 58, 1949, pp. 413-433.

Metaphysics and Ontology

"In opposition to almost the whole of modern philosophy, Hartmann asserts the ontological nature of all fundamental problems which philosophy attempts to solve. Even idealism or the most extreme subjectivism have, somehow or other, to explain at least the "illusion" of being, no matter how they try to avoid it; there is no form of theoretical thought which can refuse to be basically ontological, that is, does not propose questions about "being as such." It is obviously the essence of thought that one cannot think "nothing," one must think "something," and that "something" immediately raises the problem of being. Furthermore, the natural sciences are in no position to cut themselves off from a metaphysical background. Metaphysics is born of wonder at the fact of life, which cannot be explained either mechanically or teleologically. Psychology, the philosophy of history, logic, aesthetics, and above all epistemology and ethics, are faced with the same problems.

The older metaphysics had made two mistakes. First, it undertook to solve the insoluble. Metaphysics signifies the irrational, and the irrational is the unintelligible. But being has also an intelligible side. The persistence of numerous problems is proof of this, for example in the recurrent contradictions between freedom and determinism, immanence and transcendence, life and mechanism. We cannot hope for a solution of these problems, but with appropriate methods we can advance their elucidation and confine to smaller and smaller compass the unintelligible remainder.

Second, the older metaphysics made the mistake of erecting closed systems and of forcing reality into these molds. The time for such systems is past, says Hartmann. What has weight in the works of the great philosophers is not their systems but the problems which they work out. All systems celebrate triumphs in the empty breeze of speculation. A few principles are laid down and then one proceeds forward by deduction. But even if the unity of the world is to be

considered as given we yet do not know what in fact is its ultimate principle. The method that is called for is precisely the opposite. The *philosophia prima* which is to be evolved can be a *philosophia ultima* for our cognitive capacities only because the *ratio cognoscendi* moves toward the *ratio essendi*.

In this critique of the older metaphysics we begin to see how Hartmann wishes the concepts, metaphysics and ontology, to be construed. In contrast to the classical usage of the term he does not regard metaphysics as a science but as a tissue of questions to which there are no answers. The intelligible aspect of being, on the other hand, falls into the domain of ontology.

Ontology in this sense is a science, but it is not identical with phenomenology which has great propaedeutic value but cannot constitute the whole of ontology. Phenomenology glides dangerously over the surface of problems, and on the basis of its very definition it does not reach beyond the external appearance of the real. It remains bound to mere matter of fact and cannot get beyond this.

Hartmann's magnificent and original investigations into the nature of problems as such have shown that even when an intelligible object is under discussion one always discovers it to be a mixture of the known and the unknown. The fact that problems may be distinguished from each other proves that something is known of the matter in hand, just as the fact of inquiring into it shows that it is not known. To state problems is the chief task of philosophy." (pp. 213-216)

From: I. M. (Józef Maria) Bochenski, *Contemporary European Philosophy*, translated from the German by Donald Nicholl and Karl Aschenbrenner, Berkeley: University of California Press 1957. (Original German published in 1947).

The dimensions and forms of being

"It is now clear that Hartmann's statement of fundamental problems and his theory of knowledge turn first of all on the issue of being qua being (*Seiendes als Seiendes*). His propositions about being and its properties may now be examined.

Here are encountered the comprehensive investigations of his main four-volume work of which only the most important ideas can be mentioned. The basic principle of Hartmann's doctrine of being is that being develops in two dimensions, namely (1) the four completely distinct spheres of being and (2) the levels of being (*Seinsstufen*) within these spheres.

In the spheres of being Hartmann distinguishes two primary ones, of real and of ideal being, which may also be designated as modes of being (*Seinsweisen*) and two secondary, the cognitive and the logical spheres. Real being must not be confused with actuality (*Wirklichkeit*) for there is both real possibility and ideal possibility, though this distinction is really part of modal analysis. As to the relation between the primary and secondary spheres, there is an intimate cross-relationship between the cognitive and the real modes of being, and between the logical and the ideal. Propositions about the latter are especially important, for Hartmann holds that ideal being is similar to real being in itself in that it can be known, and knowing is always by its very nature the grasp of what has being in itself. The most familiar types of ideal being are the realms of essences and values and of mathematical being. The first of these appears in reality as basic structure but without being exhausted in that context. There are entities in ideal being which do not become real, for example, spaces with more than three dimensions. On the other hand, there is real being which is not subject to the laws of ideal being; for example, the alogical, the value-negating, the real contradiction. All ideal being is general, and is either forms, conformity to law or relations. Compared with the real, the ideal is lesser being. We must reject Plato's view that it is something "higher, more sublime". Ideal being is not identical with the rational for in its domain there is also to be found the irrational, and this incidentally is a proof of its having independent being for the transintelligible is exempt from idealistic criticism.

Hartmann analyzes the other spheres in similar fashion. He then proceeds to specify the character of the second dimension of being, that of the strata or levels of being (*Seinsstufen*). In real being we find four levels, matter, life, consciousness, and spirit. Being known (*Erkenntnissein*), by a certain analogy to these, involves perception, intuition, knowledge, and comprehension (*Wahrnehmung*,

Anschauung, Erkenntnis, Wissen). Logical being finally divides, as the tradition has it, into concept, judgment, and inference. These separate levels are determined through the categories, the principles of a given level. Hartmann distinguishes two kinds of categories: modal categories which are accorded a special investigation, and fundamental categories which can be arranged in opposing pairs. In contrast to Kant and Alexander, the latter are not arranged in a definite system but are only loosely strung together in a table of existential opposites (*Seinsgegensätze*). The twelve pairs involved here include form-matter, inner-outer, determination-dependence, quality-quantity.

Hartmann has devoted extensive study to the question of the categories in his comprehensive work *Der Aufbau der realen Welt: Grundriss der allgemeinen Kategorienlehre*, the third volume of his *Ontologie*. After thorough survey of earlier views his theory culminates in the formulation of many categorial laws. Some of the most important are these: the law of strength (the lower is the stronger), and its counterpart, the law of freedom (the higher level is autonomous, for in respect to the lower level it is the richer). While therefore every higher level is borne by a lower one, still their relations are not always the same. The organic, the level of life, is only an over-forming (*Überformung*) of the spatio-physical aspect of matter, while the levels of consciousness and spirit rise in a more independent process of over-building (*Überbauung*) above life; that is, in this case not all the lower categories reappear.

The second great categorial group, the theory of the modalities of being (*Seinsmodi*) represents one of the most significant parts of Hartmann's metaphysics. What is notably original is that modal analysis leads to quite different results in the four spheres of being. Thus in each sphere there are distinguishable modalities of being. Of these, however, the laws which hold of real being are the most important. The modalities divide into the absolute modalities (reality and unreality) and the relative (possibility, impossibility, necessity). There is also a negative counter-modality to necessity, namely contingency, of which the rule holds that absolute necessity is likewise absolute contingency. One should further emphasize Hartmann's theory of possibility according to which in real being only that is possible whose conditions are all real. Hence all that is

possible is likewise real and necessary, and all that is negatively possible is likewise unreal and impossible. This does not mean of course that the modalities themselves are identical. Implication is not identity. The distinction between positive and negative possibility rests on the law of division of disjunctive possibility which is valid in real being though not in logical being.

In his ontology Hartmann has also addressed himself to the traditional distinction between essence and existence. These he calls "moments of being" (*Seinsmomente*): the "what" (*Sosein*) and the "that" (*Dasein*). It is noteworthy that these moments of being appear differently in both of the primary spheres of being. Thus the ideal "what" and "that" can be known a priori, but the real "that" only a posteriori. One cannot simply equate the "what" with the ideal and the "that" with real being. Actually there is no absolute difference between "what" and "that" in the existential relationships that obtain in the world for it is a question altogether of relative moments. The "that" of the leaf belongs to the "what" of the tree, and the "that" of the latter to the "what" of the forest. The distinction holds only for the whole of the universe and for particular beings." (pp. 217-221)

Hartmann's phenomenological ontology

"How to get at the basis of Hartmann's ontology? Let us sketch the superstructure, and then descend into the depths of the foundation. Besides the two primary spheres, there are two secondary spheres of being -- the spheres of 'logic' and 'knowledge'. These are mid-way spheres inasmuch as they share the categories of both the primary spheres. (Compare Whitehead's 'hybrid' entities.)

Following the Aristotelian tradition, Hartmann takes ontology as the science of beings as beings. Ontology is concerned with what first makes beings beings. The word "Sein" gives rise to the illusion, as if there is some entity or attribute corresponding to it, something over and above, may be, underlying or pervading the various beings. Hartmann rejects this thought. A science of beings as beings is not a

science of any such entity or attribute as *Sein*. On the other hand, it can only be a science which lays bare the various spheres of being along with their general and special categories and inter-categorical (hence, inter-sphere) relations. Hence, ontology becomes a doctrine of categories, a "Kategorienlehre". To keep these primary and secondary spheres along with their general and special categories before the mind, in their distinctions as well as in their interrelations, is essential for an understanding of Hartmann's ontology. Hartmann displays great acumen in drawing these distinctions and in keeping clearly apart what he considers to be distinct. Through these distinctions, he claims to have the clue in hand for avoiding many of the errors of the traditional ontologies.

There are two primary spheres of being: the real and the ideal. The real consists of the chain of temporal events. The structure of the real sphere is a stratification of various levels: the material, vital, psychical and spiritual. The stratification consists in the relation of "founding". The higher level is "founded" on the lower. The lower provides the basis for the higher. The real sphere has its general categories, those which determine the entire sphere, irrespective of the differences of strata. Such categories are, for example, the modal categories. But each stratum of reality has also its own special categories. The relation in which two levels of reality stand to each other is concretely illustrated in the relation in which the categories of the The key to this entire discussion lies in the formulation of the nature of the ideal sphere. In setting aside what he calls the errors of tradition, Hartmann shows here his capacity at its best." (pp. 116-117)

From: Jitendra Nath Mohanty, *Phenomenology and Ontology*, The Hague: Martinus Nijhoff 1970, Chapter XI. *A Recent Criticism of the Foundations of Nicolai Hartmann's Ontology*, pp. 115-128.

"... Hartmann regards ontology to be concerned with: (1) the two aspects ("moments") of being: *Dasein* and *Sosein*, or *that* and *what*; (2) the two spheres of being: real and ideal; and (3) the modalities of being: *actuality*, *possibility*, and *necessity*.

One of the errors of phenomenology -- including both Husserl's and Scheler's -- is that when it regards itself as investigation into

essences, as distinguished from existence (as a consequence of eidetic reduction), it forgets that essences also have their *Dasein* (existence) and their *Sosein*, that *Dasein* is not as such real existence. There is also, as with essences and mathematical idealities such as numbers, and values, ideal *Dasein*. Husserl does sometimes insist that essences are a kind of objects *sui generis*, so it may be just right to interpret eidetic reduction not as abstracting from existence, but as abstracting from real existence. But, then there is the curious consequence that essences have both real and ideal existence (when they are taken in their purity). Hartmann seems to have wavered on this question. In his early work *Grundzüge einer Metaphysik der Erkenntnis*, he denied existence and individuality to ideal entities, but still ascribed to them *Ansichsein*, intrinsic being. In *Die Grundlegung der Ontologie*, he ascribed existence to them, but that only means he was taking "existence" and "*Ansichsein*" as being the same.

So, for Hartmann, the *Dasein-Sosein* distinction is not quite the same as real-ideal distinction. In addition, Hartmann insisted that some *Soseins* are "neutral" as against both real and ideal existence: "roundness" belongs to a real spherical ball as well as a geometrical circle.

If concerns (1) and (2) do not coincide, it is also a mistake to collapse (2) with (3). The latter mistake is committed by those who hold that reality is the domain of all that is actual, while essences are pure possibilities. A corollary of this view is that truths about reality (i.e., about what is actual) are contingent, whereas truths about essences (i.e., about pure possibilities) are necessary. This is a widely held view, and one of Hartmann's important theses is that this view is based on an inadequate analysis of modal concepts.

Hence the importance of modal concepts in Hartmann's thinking. It is only the modal concepts as pertaining to a sphere of being, which explicate the precise mode of being of that sphere. In other words, Hartmann held that while in an important sense we cannot say much about what "real existence" (or "ideal existence") consists in, the best we can do in this regard is to look at how the concepts of "possibility" "actuality," and "necessity" (and their opposites) behave with regard to the domain of reality (or, with regard to the domain of ideality). So

we shall turn to his modal theory, but before I do that, perhaps a quick sketch of what he counts as belonging to the two domains would be in order.

The real world is a stratified structure, on Hartmann's view, with nonliving matter at the base, living organisms founded on it, mental reality founded on organic life, and spirit or *Geist* (including society and all social formations) at the apex. Each of these strata has its own categorial structure, and the entire domain of reality also has certain common structures.

The domain of idealities consists of: mathematical entities (such as numbers), essences, and values. None of the idealities is spatiotemporally individuated. An ideality maybe instantiated or be an ingredient in many real individuals, without surrendering its own identity.

Besides these two primary spheres of being, Hartmann also recognized two intermediate (or hybrid) spheres: those of logic and cognition. With this brief sketch, let us look at his modal theory worked out in *Möglichkeit and Wirklichkeit*." (pp. 26-27)

Hartmann's theory of modality

"In his *Möglichkeit und Wirklichkeit* (Berlin 1937, 2nd. ed. 1949), Hartmann gives us an ontological theory of the modes. He starts from a distinction between the modes of the various spheres of being, primary and secondary. The two primary spheres of being, according to his ontology, are the real and the ideal. The two secondary spheres are those of logic and knowledge. The modes of the real world are accordingly contrasted with those of the ideal realm; the modes of the realm of logic are again different from those of knowledge. The modal doctrine is thereby divided into four parts. But there must be also a part on the relations between these different spheres.

Traditional discussion of the problem of modality did not see clearly through these distinctions. This gives to Hartmann's treatment of the problem its originality. Further, these modes of the various spheres are distinguished from the naive day to day consciousness of modality.

The ontological point of view requires specification. For this purpose, we are to distinguish between three different approaches to the problem of modality:

First, it is possible to consider the modalities as criteria for classifying all objects in the three groups, those that are merely possible, those that are both possible and actual, and those that are possible, actual and also necessary.

Secondly, it is possible to consider the modes as if they were different stages of a process. Thus, it may be said that a thing first becomes possible, then is made actual, and further may or may not be necessary. The process however may not be carried to the end; what is possible may never be actualised.

Thirdly, the modes may be taken neither as criteria nor as stages of a process, but as the constituent aspects of the existent or the subsistent, as the case may be. This is the point of view which we may call the critical point of view, because we may trace it to Kant. Kant starts from the given object of experience and then asks how the same is possible, actual and necessary.

Hartmann rejects the first two approaches. Modes are for him neither criteria nor stages, but the most primary characteristics of the being of anything. As such, given an object of experience, we can ask: what makes it possible? What makes it actual? What makes it necessary?

Thus in an important sense, Hartmann's treatment of the problem is similar to Kant's, even though Kant's own solutions are rejected by Hartmann. For Kant, the given is possible when considered in relation to its form and actual when considered in relation to its matter. Hartmann finds this not only inadequate but also misleading; to this however we shall turn later on.

The second approach is attributed to Aristotle. Both the first and the second approaches attribute to the merely possible which is not 'or has not yet become actual' a sort of ghostly existence -- a position in between being and non-being. Aristotle's doctrine of *dynamis* and *energia* is further criticised as an illegitimate extension of the categories of the sphere of organic being to the entire domain of being. Further, if a prior stage of mere possibility is admitted, the question arises as to what must be added to it in order to render it actual. Kant had shown that any answer to this question is absurd. For, that which must be so added, argued Kant, must be other than the possible, that is to say, must be impossible! (1)

As such, we come back to the *critical* formulation of the question. This is one of the points where we begin to see the influence of Kant on Hartmann's ontology which claims the name of critical ontology." (pp. 181-182)

On the extant as extant in general

"The first one of the four treatises included in the *Grundlegung [der Ontologie]* is entitled "*Vom Seienden als Seienden überhaupt*" (On the Extant as Extant at all). It comprises three sections, consisting of ten chapters. The following is a summary of its contents.

Section I. The Concept of the Extant and its Aporia. Chapter 1. The Fundamental Question of Ontology.

A departure can be made from this side of realism and idealism. It only seems to be different because of the habit of understanding Being (Sein) as Being per se (*Ansichsein*). But the phenomenon must be viewed first without interpretation. One must not form any arbitrarily speculative prejudgment. He who tries to do so, is not yet on realistic grounds.

A careful distinction must be made between Being (*Sein*) and the Extant, that-which-is (*Seiendes*). The interrelationship of the two is the same as that of Truth and the True, of Reality and the Real, of Factuality and the Factual -- of *esse* and *ens*. Unfortunately, these pairs of concepts have always been confused with each other. Being (*Sein*) is the *One* the identical in the manifoldness of the Extant. Naturally, the two must not be separated from each other, but the lack of distinction has led to viewing Being as a substance.

The Aristotelian version of the question is helpful today still. Its chosen task is to explain Being as Extant, or the Extant as such. This clearly points up Being as such as something general, although the wording uses the term "Extant." Aristotle, too, failed to overcome the peril of substantialism, but the latter can be avoided by adhering faithfully to his wording. It is a wonderful formula. Just how wonderful it is can best be recognized by seeing how much it wards off. If Being is regarded as appearance or as something in the state of becoming, the formula is violated. Such a cognition does not involve a cognition of the Extant as Extant. Likewise in the case of the Extant as something posited, meant, imagined and subject-referred. For Being is not absorbed in the objecthood (*Gegenstandsein*). This is the supreme meaning of the Aristotelian formula which hits well the formal meaning of the fundamental question. Heidegger tried in vain to defend himself against it.

Chapter 2.

It is worth our while to take a closer look at Heidegger's abortive attempt. He abandoned Aristotle's formula for the other one which queries for the sense and meaning of Being. Heidegger's concept of hereness (*Dasein*) remains completely man-bound. Hereness (*Dasein*) is Being (*Sein*) that understands its own Being (*). This is why the Extant (*Seiendes*), the world, Truth, are the ever-mine. This prejudices everything, and such an analysis of Being ends up as the analysis of givenness. The modes of givenness are the modalities of Being. The objective spirit is de-powered, the stratum of Being (*Seinsschicht*) of the historical spirit become impalpable. The personal decision of the individual alone is proven right.

It is wrong to twist the question of Being into a question of meaning. It is as proper to inquire about the Being of meaning as about the

Meaning of Being. Yet, this is not the general question of Being. Meaning exists always only for somebody. There is no meaning in-itself. The Being of the Extant stands indifferent to whatever the Extant might be "for somebody."

Chapter 3. The Attitude of Ontological Cognition.

Being (*Sein*) is the ultimate and therefore cannot be defined. It is impalpable, the out-and-out universal. It cannot even be delimited against something else, such as some other universal. Only the contentual element of a mode of Being can be indicated, not the mode of Being itself.

But this irrationality is merely partial. Therefore, it cannot be defined and cannot be typed by characteristics, but the way from the general to the special is open, and this circumstance makes it necessary to bring in certain specific questions. This is the path which we take in this treatise.

There is a circumstance which proves useful in this reflection on the aporia of generality and indeterminacy of the Extant as Extant, of the Extant as such, of Being at all -- ontology is a re-approach to the natural. This makes one ponder the difference between natural and reflected attitude. Cognition is directed at its object, at that which it perceives, and not at that which constitutes the cognition. If we want to reach some conclusion on it, we must go into the attitude called reflection, which is a bending-back (re-flexion), whereas cognition stands for the natural. This bending-back becomes a source of aporias in epistemology. The same thing occurs in psychology. Acts are not given, like objects. The hardest task in this respect is that of logic, if it wants to make its object not the contentual element of the concepts, but the concepts themselves. This is why it has so often slipped from its own plane onto those of psychology, epistemology or ontology. We have thus found three fields in which the natural attitude must be replaced by a reflected one, involving diverse complications.

Borrowing certain concepts from scholasticism, from Wilhelm von Occam in particular, let us call the natural attitude *intentio recta*, and the reflected bending-back *intentio obliqua*. Then we can say that ontology is the restoration of the *intentio recta*.

Chapter 4. Position and Roots of the Problem of Being.

Three principal fields are present in the *intentio recta*: the natural, the scientific, and the ontological relationships to the world. Moreover, however, we classify epistemology, psychology and logic under the heading "Philosophy," not under "Science." Ontology continues the natural trend which starts in the pre-scientific, and which is taken over by natural science and also by the science of the mind. The recognition of the right, for instance, represents an unreflected mental attitude, and the same holds true for the other fields of objective spirit, in strong contradistinction to epistemology, psychology and logic. Ontology is, therefore, in this respect, a continuation. In the case of the *intentio recta* of natural science, the external material form of the givenness (*Gegebenheit*) is still predominant. Thus, all these fields, in contradistinction to the other three, show a common relationship to the Extant, the essential trend of a natural realism which knows that taking something for an object is not the same as taking something for an Extant.

As contrasted with the naive world-awareness, however, enormous contentual differences are involved here, but the unity of the object range remains intact in the four fields. The object is the same, but the view of the object changes. Something of the prescientific naive view is preserved in the theory. The word theory means view.

The *intentio obliqua* misses the given aspect of the Extant. Reflection gets always only as far as the objects and does not reach the Extant. It is therefore all too likely to wander into the blind alley of the immanence of the awareness.) .Thus, gnosiology wants to hold fast in the reflectedness of the awareness of it. Without gaining a firm footing ontologically, gnosiology here misses its own object -- cognition.

Phenomenology does not get as far as the things (as it so strongly emphasizes), but merely as far as the phenomenon of the thing. It becomes tuned to things through *intentio recta* -- to the phenomena by *intentio obliqua*. That which is given is grasped mentally in the reflected attitude. This casts a light on what the phenomenological methods call "bracketing" (*Einklammerung*), "reduction" (*Reduktion*), and raising before the bracket" (*Vor-die-Klammer-Heben*)." (pp. 15-19)

Notes

(*) It is Being concerned by its own Being, and which thus is Being-in-the-World.

From: Otto Samuel, *A Foundation of Ontology. A Critical Analysis of Nicolai Hartmann*, New York: Philosophical Library 1953.

Levels of reality and levels of being

"In his architectural ontology, Hartmann distinguishes between levels of reality and levels of being.(1)

As to levels of reality, he distinguishes at least four ontological strata of the real world: the material, the psychological and the social, among which specific forms of categorical and existential dependence exist. Reality, however, is only a section of being.

As to the levels of being, Hartmann distinguishes among ontology, ontics and metaphysics. In particular:

1. Ontology concerns the categorical analysis of entities by means of the knowledge categories able to classify them.
2. Ontics refers to a pre-categorical and pre-objectual connection which is best expressed in the relation to transcendent acts.
3. Metaphysics is that part of ontics or that part of ontology which concerns the residue of being that cannot be rationalized further according to categories.

On the basis of this last distinction, the psychological stratum is of crucial importance in Hartmann's ontology, and for various reasons.

Firstly, because it provides direct access to the ontic. This access is problematic, however, because certain layers of the psychological stratum, due to the lack of adequate knowledge categories, at first sight seem to be excluded from ontological categorization.

Secondly, because the psychological stratum is one of the levels of beginning of new series of categories. It is well known that in Hartmann's ontology the psychic level stands in a twofold relation, as follows:

1 . The relation of overforming (*Überformung*), which holds among ontological layers. According to this relation every category can constitute the matter of a higher category.

2. The relation of building above (*Überbauen*), which holds among ontological strata. According to this relation the higher stratum requires the lower one only as its external basis of existential support, but not as matter to be overformed.

Consequently, the psychological level assumes a fundamental role also as regards the problem of the categorical ontological dependences.

Hartmann describes the complexity of the psychological levels in *Zur Grundlegung der Ontologie*, affirming that psychology could deem itself extraneous to the problem of metaphysics as long as reality was considered to be a characteristic of the external world (things, physical being). But the psychic world is as real as the physical world. Psychology must understand of what psychic reality consists from an ontological point of view and then shed light on a complex series of states and acts that are not immediately experienced and are unconscious. Given in immediate experience are not elements but wholes, organized connections, which relate to whatever is not experienced immediately.

How can one explain be shed on the genesis of psychological wholes and organized connections whose components seem inextricable and therefore destined to constitute the nucleus of the non-rationalizable residue of metaphysics?" (pp. 299-300)

Notes

(1) Following Poli we use (i) *level* as a general term, (ii) *stratum* to refer to the realms of being characterized by categorical diverse groups, and (iii) *layer* to refer to the segmentation internal to each stratum. See Roberto Poli, *Alwis: Ontology for Knowledge Engineers*, Ph.D. Dissertation, University of Utrecht 2001, ch. 8, 124-126.

From: Liliana Albertazzi, "The Roots of Ontics," *Axiomathes* 12, 2001, pp. 299-315.

Hartmanns' concept of categories

"All ontology has to do with fundamental assertions about being as such. Assertions of this sort are precisely what we call categories of being. Like the Kantian categories -- which, as far as content is concerned, are also precisely this: fundamental assertions about being -- they have the character of universal constitutive principles comprising all more specialized ontological assertions. Hence, the new ontology might be expected to provide a transcendental deduction also of these ontological assertions. Otherwise, it is argued, it could not guarantee their objective validity. That, however, would mean that this ontology in its turn was in need of an epistemological foundation which would have to provide the justification of a priori principles of an even wider scope.

Thereby a way for ontology is traced, and this way once more follows the scheme of the old deductivity. But it is here that the roads of the old and the new ontology part. Just as in regard to the problem of being it is today no longer a question of substantial forms and of the teleological determination of actual processes by these forms, so also the problem at issue is no longer that of a *post factum* justification of a priori principles. The categories with which the new ontology deals are won neither by a definition of the universal nor through derivation from a formal table of judgments. They are rather gleaned step by step from an observation of existing realities. And since, of course, this method of their discovery does not allow for an absolute criterion of truth, here no more than in any other field of knowledge, it must be added that the procedure of finding and rechecking is a laborious and cumbersome one. Under the limited conditions of human research it requires manifold detours, demands constant corrections, and, like all genuine scholarly work, never comes to an end.

Here one may truly and literally speak of new ways of ontology. The basic thesis can possibly be formulated like this: The categories of being are not a priori principles. Only such things as insights, cognitions, and judgments can be a priori. In fact the whole contrast between a priori and a posteriori is only an epistemological one. But ontology is not concerned with knowledge, much less with mere judgments, but with the object of knowledge in so far as this object is

at the same time "transobjective", that is, independent of whether or to what extent being is actually transformed into an object of knowledge. The principles of the object in its very being are in no way *eo ipso* also cognitive principles. In some fields they can be quite heterogeneous, as the manifold admixtures of the unknowable in nearly all basic problems of philosophy amply prove. From this alone it follows that the principles of being cannot be a priori principles of our intellect, that they, as a matter of fact, are just as indifferent to the dividing line between the knowable and the unknowable as the being whose principles they are.

At this point it is incumbent upon us radically to unlearn the old and start to learn the new, not only if our approach be from the old ontology, but also if it be from the standpoint of transcendental epistemology. Of course, as far as their content goes, ontological categories can occasionally coincide with cognitive categories; and within certain limits this must be the case wherever an objectively valid knowledge of objects takes place a priori. But it must not be supposed that this occurs everywhere and without limits. The apriorism in our knowledge is subject to a very fundamental limitation, because our categories of understanding coincide at best only in part with the principles of being. This coincidence reaches farthest where it is a question of insights that are practically relevant and indispensable to the business of life -- in other words, in that field of objects to which our understanding is best suited. And correspondingly, it fails most signally where we are confronted with broad theoretical questions concerning our total world picture and its philosophical interpretation. For it is manifest that with our rational principles we can grasp a priori only that aspect of the real world which in itself is framed in accordance with those same principles.

One further step must here be taken. The statement that ontological categories are not a priori principles means simply that they cannot be immediately recognized a priori. Inasmuch as they are at all accessible to knowledge, they must be grasped by other methods. For this, a point of departure seems to offer itself in the relation between cognitive and ontological categories. We already know why this relation must involve at least a partial identity. It might then be concluded: In so far as the ontological categories are the same as the

cognitive categories, it should be possible to discover the former as included in the latter. In this way one might at least be able to grasp a priori a sector of the ontological principles.

Even this hope proves deceptive. In the first place, we have no criterion to measure the extent of that categorial identity. And precisely where on practical grounds we are more or less certain of this identity-- in everyday life and for our natural orientation in the world -- this identity is philosophically worthless because it does not bear upon the problems of philosophy. But where these begin, it becomes extraordinarily questionable and soon fails us completely. In the second place, in our cognitive apparatus there is lacking one fundamental prerequisite for so exploiting this identity: an immediate knowledge of our own cognitive categories.

It lies in the nature of all knowledge to be directed not toward itself but toward its object. What, in the process of knowing, the knower becomes conscious of are traits of the object only, not traits of his own action. Least of all do the inner conditions of his action fall within his consciousness; but cognitive categories are counted among these. So, philosophy had to pass through a long historical process before it finally began to become aware of a few of the cognitive categories as such. This awareness requires a reversal of the natural cognitive direction, a turning around, as it were, from the object to the knower. And in fact with this reversal, knowledge of a second order sets in where knowledge itself is made the object of knowledge. This epistemological reflection is "secondary" and must be carried through "against" the natural attitude. When it sets in, it does not lead immediately to the categories of understanding but by a special method must be directed toward them.

This is why not only the ontological categories but even our own cognitive categories on which all knowledge a priori rests are not themselves known a priori. In fact, it must be added that generally they remain unknown in the knowledge of the object. They function in our knowledge but do not in turn become an object of knowledge. Only through the intervention of epistemological reflection are they brought to the light of consciousness. But that is a phase of knowledge reached only late in the historical process. Were the functioning of these categories in our knowledge dependent upon

our knowledge of them, all human knowledge, even the most naïve, would have to await a philosophy to make them conscious. But since philosophy actually presupposes naive knowledge, philosophy, on this hypothesis, could never have arrived at the simple understanding of objects.

Actually, the reverse order prevails: Although cognitive categories are the first condition of our knowledge -- especially of the a priori elements in it, which are nowhere absent, not even in the naive world view -- they are not the first to be recognized in it. They are not unknowable, but can be known only indirectly, namely as mediated through the simple knowledge of the objects which is based upon their functioning. If they are known at all, they are, we might say, rather the thing known last. And this order is irreversible. That explains why they are hardest to know. The many detours and blind alleys by which epistemology tries to arrive at them provide an unambiguous demonstration of this fact.

Thus the possibility of making ontological categories comprehensible by a detour through the cognitive categories must be considered altogether negligible. One might believe that in the last analysis it is rather the cognitive categories which can be made intelligible by a detour through the ontological categories. The latter, at any rate, lie in the natural direction of cognition--in the background of objects--albeit the simple knowledge of objects may not penetrate to them. But since all knowledge of objects has in it the tendency toward progressive advance, it may very well, by dint of a progressive deepening, lead directly to ontological categories." (pp. 13-17)

From: Nicolai Hartmann, *New Ways of Ontology*, Chicago: Henry Regnery Company 1953.

"As Hartmann sees it, categories are "the silent presuppositions" that we accept in our interpretations, explanations, and evaluations of objects. Kant had specifically identified twelve. Hegel had many more. But it can readily be shown that there is an as yet undetermined number, for every field of inquiry has its own categories. And this means that the analysis of categories must be concerned with the structure of Being -- not simply with our modes of thinking.

What makes the analysis of categories possible is the basic principle of all a priori cognition, which, as we have seen, asserts that the conditions of the possibility of experience are at the same time the conditions of the possibility of the objects of experience.

Since the world consists of integrated structures at different levels of Being, it has always been tempting to look for its basic categories either at the lowest or at the highest level. The result has been the development of speculative forms of materialism, idealism, rationalism, and theism. But in their one-sided orientations, all of these have been distortions of reality. The *new* ontology, Hartmann insists, must break with all this, and it must also break with the tradition of constructing speculative systems. Its first task must be to clarify the essential character of each of the interrelated strata, and then to deal with their interrelations. For this purpose the traditional categories of form-matter, potency-act, idea-thing, *essentia-ens*, and others are hardly adequate. To realize that the unity of the world is a specific order of interrelated strata is but the beginning of an understanding of the whole.

It is tempting to regard the stratification of reality as the result of a development -- as a genesis. But the riddle of the origin of the world -- of this universe of galaxies and cosmic interrelations, of plants and animals and human beings -- is shrouded in a mystery that is far removed from what is actually given. It is and remains one of the unsolvable metaphysical problems.

The stratification of Being itself, however, is a fact, and is observable in the world around us. The order of rank from the merely material to the spiritual is undeniable, and an analysis of categories must clarify the relationships involved. Hartmann's attempt to do so is developed in great detail in *Der Aufbau der Realen Welt*, which, in effect, is the development of a new type of ontology -- of an ontology whose first task is to clarify whatsoever exists as existing; and whose second task is to deal with the modes of Being of the existent and with their interrelations. We must keep in mind, however, that the categories pertain not to *Dasein* -- not to existence as such; but to the *Sosein* of what exists -- to the forms, structures, and contexts that are characteristic of what is real (*Aufbau*.)" (pp. 33-34)

From: William Henry Werkmeister, *Nicolai Hartmann's New Ontology*, Tallahassee: Florida State University Press 1990.

"A theory of categories that does justice to the phenomena must at least recognize the distinctions -- but must also recognize the interrelations of Being that transcend them.

For Hartmann there are only three 'cuts' (*Einschnitte*) in the real world. The most obvious one is that between nature and spirit. The great riddle here is how this 'cut' can go through the center of the human being without destroying it (*Aufbau*, 196).

A second 'cut' is that between lifeless matter and living organic nature.

The third 'cut' is that between spiritual Being and mental acts.

We thus find four main levels of what is real, and understanding the unity of the world can but mean to understand the world in its structure and stratification. What makes this possible is that, from structure to structure, we find the same relation of the higher stratum resting upon, and being conditioned by, the next lower. Despite this fact, however, the higher stratum has in each case its own mode of Being and its own type of laws. This relation of the strata characterizes the basic unity of the real world. In other words, the structure of the real world is a sequence of supportive strata -- each stratum having its own laws and its specific categorial structure.

There are, however, also categories of such generality that they are common to all strata. Their ontological significance lies in the fact that they are the unitary basis of the real world as a whole. They are the "fundamental categories" that are basic to both the real and the ideal worlds. And these categories are the special concern of a universal theory of categories.

The categorial manifoldness of the world is evident in two respects: in the distinctness of the various strata and in their rank. In this structure, cognition is ontologically secondary. It presupposes the *Seiende* that is its object; but it is itself also a *Seiendes sui generis* and can occur only in strata of a specific height -- i.e., only where there is a consciousness which transcends mere mental associations. After all, cognition is a specific function of spiritual Being, and must

be understood as included in that specific stratum of the world." (pp. 38-39)

Translation by Keith R. Peterson.

Abstract: "Abstract This is a translation of an early essay by the German philosopher Nicolai Hartmann (1882–1950). In this 1923 essay Hartmann presents many of the fundamental ideas of his new critical ontology. He summarizes some of the main points of his critique of neo-Kantian epistemology, and provides the point of departure for his new approach in an extensive criticism of the errors of the classical ontological tradition. Some of these errors concern the definition of an ontological category or principle, and others concern the relations among categories themselves. The outline for the new ontology is sketched through the correctives Hartmann appends to the treatment of each error, prefiguring his mature ontological system."

6. ———. 2017. "The Megarian and the Aristotelian Concept of Possibility: A Contribution to the History of the Ontological Problem of Modality." *Axiomathes*.

Translated by Frédéric Tremblay and Keith Peterson.

Abstract: "This is a translation of Nicolai Hartmann's article "Der Megarische und der Aristotelische Möglichkeitsbegriff: ein Beitrag zur Geschichte des ontologischen Modalitätsproblems," first published in 1937. In this article, Hartmann defends an interpretation of the Megarian conception of possibility, which found its clearest form in Diodorus Cronus' expression of it and according to which "only what is actual is possible" or "something is possible only if it is actual." Hartmann defends this interpretation against the then dominant Aristotelian conception of possibility, based on the opposition between *dynamis* and *energeia*, and according to which there is always an open multiplicity of simultaneous "possibilities," the outcome of which remains undetermined. Since, according to Hartmann, reality suffers no indetermination, the Megarian conception of possibility is an account of *real possibility*, whereas the Aristotelian one is merely an account of *epistemic possibility* (Frédéric Tremblay)."

"Nota del Traductor.

La cuarta parte de la *Ontología* de Hartmann abarca en la edición original toda la "Filosofía de la Naturaleza" o "Teoría Especial de las Categorías" en un solo volumen de 700 páginas; y en uno solo de 136 se publicó en alemán "El Pensar Teleológico", que es en realidad una quinta y última parte de la *Ontología*, por la razón que se encontrará en el prólogo de ella, a pesar de la dada allí mismo para publicarla aparte. Para esta traducción española de la *Ontología* pareció mejor equilibrar los volúmenes, publicando como cuarto la primera mitad de la "Filosofía de la Naturaleza", a saber, "Las categorías dimensionales" y "Las categorías cosmológicas", y como quinto la segunda mitad, o sea, "Las categorías organológicas", y "El pensar teleológico", que es un desarrollo del estudio de estas últimas categorías. (...)"

11. ———. 1964. *Autoexposición sistemática*. México: Universidad Nacional Autónoma. Centro de Estudios Filosóficos,.

Translación de Bernabé Navarro

Studies about his work

The best introduction in English to Hartmann's thought are: W. H. Werkmeister, *Nicolai Hartmann's New Ontology* (1990) and R. Poli, C. Scognamiglio, F. Tremblay (eds.), *The Philosophy of Nicolai Hartmann* (2011).

1. "The Legacy of Nicolai Hartmann (1882-1950)." 2001. *Axiomathes. An International Journal in Ontology and Cognitive Systems* no. 12.

Contents: Roberto Poli: Foreword 157; Predrag Cicovacki: New Ways of Ontology - The Ways of Interaction 159; Wolfgang Wildgen: Natural Ontologies and Semantic Roles in Sentences 171; Ingvar Johansson: Hartmann's Nonreductive Materialism, Superimposition, and Supervenience 195; Erwin Tegtmeier: Hartmann's General Ontology 217; Alberto Peruzzi: Hartmann's Stratified Reality 227; Roberto Poli: The Basic Problem of the Theory of Levels of Reality 261; Maria van der Schaar: Hartmann's Rejection of the Notion of Evidence 285; Liliana Albertazzi: The Roots of Ontics 299; Antonio Da Re: Objective Spirit and Personal Spirit in Hartmann's Philosophy 317; Robert Welsh Jordan: Hartmann, Schütz, and the Hermeneutics of Action 327; Gabor Csepregi: The Relevance of Nicolai Hartmann's Musical Aesthetics 339; Mark Van Atten: Gödel, Mathematics, and Possible Worlds 355; Some Bio-Bibliographical Information on Nicolai Hartmann 365.

2. Albertazzi, Liliana. 2001. "The Roots of Ontics." *Axiomathes. An International Journal in Ontology and Cognitive Systems* no. 12:299-315.

"According to Hartmann's analysis, the psychological level concerns the following aspects of psychic acts:

- (i) The mode of being of psychic acts.
- (ii) The nature of the correlates of these acts.
- (iii) The relationship of psychic acts with the structures of the physical and/or biological world that underlie them.
- (iv) The non-rationalizable residue which makes it a paradigm example of fundamental ontic connection.

Some of these aspects are highly problematic. As Hartmann points out, the difficulty of understanding what types of entities psychic acts are is twofold, because:

(i) They do not appear to us objectively and they are not given to us as objects unless modified in reflection and memory once their presence is no longer actual, with all the 'objectual' modifications that the situation brings about.

(ii) Sometimes they are states that are not experienced immediately and are unconscious.

Because of the framework in which it is inserted, Hartmann's ontology of psychic acts can be considered a further development of Brentanian descriptive psychology." p. 300-301.

3. Allen, Michael. 1981. "Nicolai Hartmann's anthropology of knowledge." *Journal of the British Society for Phenomenology* no. 12:41-54.

"The article is an analysis of Hartmann's efforts to argue for the relevance of anthropological considerations in the context of epistemological realism. It concludes that Hartmann's arguments against Husserl's refusal to admit anthropological considerations into phenomenology are successful; but that realism must be redefined differently than Hartmann would define it. The article also concludes that the factor of "human interest" (Habermas) does not undermine the realist position."

24. Cadwallader, Eva Huel. 1984. *Searchlight on values: Nicolai Hartmann's twentieth-century value Platonism*. Washington: University press of America.

"This critique and defense of an updated value Platonism argues that Hartmann's ethics has been undeservedly neglected

because of "guilt by association" with discredited positions it only superficially resembles. After examining Plato's motives for his value Platonism, and discussing G. E. Moore, the author argues that Hartmann's theory rejects both naive value Platonism and dogmatic absolutism while also avoiding vicious Skepticism. Pluralism, fallibilism, and pragmatism are invoked in defending an updated version of "revised value Platonism".

25. ———. 1984. "The continuing relevance of Nicolai Hartmann's theory of value." *Journal of Value Inquiry* no. 18:113-121.

"This paper argues that Hartmann's much-neglected value theory has practical relevance for understanding the current American value polarization. First, ten of Hartmann's most permanent

contributions to axiology are outlined. next, these are related to work by psychologists and others (Horney, Maslow, Kohlberg, Benedict, Fromm, Jung, Yankelovich). Third, the heuristic value of

Hartmann's key notion of "the bi-polarity of ethics" is proposed as useful for understanding today's clash between "the moral majority" and "the new morality".

"Although Nicolai Hartmann made significant contributions to virtually all areas and disciplines of philosophy, his first and deepest love was ontology. Part of Hartmann's fascination with ontology was due to the fact that at his time the previously considered *philosophia prima* was practically non-existent. As he remarked, ontology fell in a deep sleep after Christian Wolff. (*) Hartmann certainly tried to awake the sleeping giant and restore its faded glory. Despite his ingenious efforts, ontology is still mostly absent from the philosophical scene. My paper will address some of the questions that this state of affairs gives rise to: Why did Hartmann's prodigious efforts to rebuild ontology

not have lasting effects? Why was it that his "new ways of ontology" did not revitalize the old discipline? Could it be that Hartmann's own way of presenting what is new about his ontology made a confusing impression about the real relationship of the old and the new?

Since I have the highest regard for Hartmann's work and nevertheless believe that his own presentation is - at least partially - responsible for possible misunderstandings, I will here attempt to explain his novel contribution in a way different from that employed by him. My strategy will be as follows. In section I, I will present Hartmann's criticism of the old ontology. Section II will bring a brief sketch of his main contributions to ontology. Finally, in section III, I will attempt to clarify Hartmann's "new ways of ontology" by using the model of interaction. If this conception of reality as

an interactive process is indeed useful and illuminating, it will both highlight the novelty of his approach and indicate the direction in which this new ontology should be further developed."

29. Collins, James. 1945. "The Neo-Scholastic critique of Nicolai Hartmann." *Philosophy and Phenomenological Research* no. 6:109-132.

"This is a report on the reception of Hartmann's epistemology and ontology by German and Italian Scholastics (1920-40). They appreciated his central attraction to the problem of being, his opening of human cognition to being, and his effort to transcend both idealism and naive realism. But realism can include a critical recognition of the transcendence factor in knowing and valuing, as well as a constant striving with the limits and perspectives of man's study of being. These are marks of human finitude rather than of irrationality in being."

"In order to discuss the theme of the relation between the personal and objective spirit in Hartmann's work appropriately, it is necessary at the outset to place his reflections within the context of the wide debate which developed within German philosophy at the beginning of the twentieth century. As is well known, the Hegelian concept of the objective spirit was taken up and reformulated by historicism, in particular by Wilhelm

Dilthey, apart from other writers who in various forms had drawn it towards neo-Kantianism (Georg Simmel, Ernst Cassirer). In this paper I hope to be able to highlight the characteristic traits of Hartmann's philosophy of the spirit through a critical comparison with the thoughts of Hegel and those of Dilthey. For this reason, the first part of this paper will be in the form of a brief presentation of the theory of the objective spirit, as is found in the writings of Hegel and Dilthey. In the second part I will summarise the main traits of Hartmann's theory. In the third and last part, I will highlight the critical elements proposed by Hartmann in comparison to Dilthey and above all to Hegel; in so doing Hartmann's innovative contribution to humanist and personalistic thought and philosophy will emerge. This can be summarised thus: (1) the refusal of individualism and the recognition of the existence of super-personal relations of the objective spirit and of the objectivated spirit, (2) the vindication of the autonomy and freedom of the human person."

"Nicolai Hartmann's approach to philosophy was both aporetic and systematic. He stressed that philosophy contains genuine but probably insoluble problems at the same time as he was working on an ontological system. Also, he meant that philosophical-ontological systems always have to take the knowledge progress of science into account. In philosophy, this has been, and still is, an unusual combination of views. Hartmann might seem to be completely at odds with a lot of different philosophical traditions; analytic philosophy being one of them. However, today, that is not really the case. In relation to analytic metaphysics there are several overlapping problem areas. This paper is concerned with one such area, the mind-body problem. In particular, I will relate Hartmann's view that mind is *superimposed* on matter to the view of some analytic philosophers that mind is *supervenient* on matter. Both sides, and many other philosophers interested in the mind-body problem, have something to learn from such a confrontation." (p. 195)

"The present work proposes to institute a critical comparison between the philosophies of 'ideal being' of two distinguished contemporary philosophers who come from very different philosophical traditions and had, in their lifetime, little to do with each other. Owing to the fact that the philosophers are eminently interested in the nature of the real actual world, we hope that the proposed study may make a contribution towards an evaluation of the meaning, nature, and role of the so-called 'ideal being'. We may even say that it may contribute towards an understanding of the *surviving* function of the so-called Platonic Ideas today. 'Platonism' is an expression that is often used to name the most diverse currents of thought and which, therefore, has contributed towards much confusion. But, if it is not the name but the content of a philosophy that matters, we may as well name the aspect of philosophy which comes up for consideration in this work as 'Platonic'. The name need not lead to any prejudice; but sometimes by its historical associations, it helps us to isolate an area of problem. We do not intend to insist on this name except for the sake of such convenience.

The very fact that today such a problem is considered as living requires justification. Positivism and pragmatism, analysis and logical empiricism, philosophies of 'change' and existentialism, all these diverse currents of thought agree in having declared all sorts of Platonism dead for ever. But, is it really so? Are the problems which Plato tried to tackle solved once for ever? Or, have they been declared, once for ever, as pseudo-problems? We grant that much illusion has been removed, that quite a lot of problems might have been shown to be only pseudo-problems. But making allowance for such modern developments in philosophy, is it not still possible to ask: how best can we understand Plato today?

When we find two contemporary thinkers, alive to the currents of modern thought, still, in some sense or other, recognising

- the importance of many of Plato's thoughts today, the presumption is that the question can be asked." (pp. XV-XVI).

"Which aspects of 'critical ontology' can provide effective orientation when confronted by the difficulties inherent to the opposition of logic-inspired philosophy vs phenomenology? Given the cyclical swing between the metaphysical realism of all-embracing Systems and the anti-realistic biases of relativism, does Hartmann offer a really satisfactory equilibrium-point? Is it still possible to construct a philosophical cosmology consistent with the natural sciences, while avoiding positivistic reduction of philosophy to analysis of language? How can we assign philosophy a task that goes beyond the meta-theoretical and the epistemological, while renouncing the temptation to adopt the view-from-nowhere? What about the project of a 'new' realism that refrains from positing Absolutes and yet admits the existence of perennially open problems, on which the advances of scientific knowledge seem to have little or no effect at all? How to anchor categorial analysis if not by connecting it to the advances of social, cognitive and natural sciences?"

82. Peterson, Keith R. 2012. "An Introduction to Nicolai Hartmann's Critical Ontology." *Axiomathes. An International Journal in Ontology and Cognitive Systems* no. 22:291-314.

"Nicolai Hartmann contributed significantly to the revitalization of the discipline of ontology in the early twentieth century. Developing a systematic, post-Kantian critical ontology 'this side' of idealism and realism, he subverted the widespread impression that philosophy must either exhaust itself in foundationalist epistemology or engage in system-building metaphysical excess. This essay provides an introduction to Hartmann's approach in light of the recent

translation of his early essay 'How is Critical Ontology Possible?' (1923) In it Hartmann criticizes both the pretensions of epistemology as well as the principal errors of classical ontology, and he proposes a series of correctives that lead to his development of a highly original and elaborate stratified categorial ontology. This introduction explains the most important errors of the 'old' ontology, his correctives to them, and further fleshes out these correctives with reference to his mature ontological work."

83. Philipse, Herman. 2001. "What is a Natural Conception of the World?" *International Journal of Philosophical Studies* no. 9:385-399.

"Continental philosophers such as Heidegger and Nicolai Hartmann and analytic philosophers such as Ryle, Strawson, and Jennifer Hornsby may be interpreted as using competing intellectual strategies within the framework of one and the same research programme, the programme of developing a natural conception of the world. They all argue that the Manifest Image of the world (to use Sellars's terminology) is compatible with, or even more fundamental than, the Scientific Image. A comparative examination of these strategies shows that Hartmann's strategy of stratification is superior to those of Heidegger, Ryle, and Strawson."

84. Pichler, Hans. 1952. "Die Wiedergeburt der Ontologie." In *Nicolai Hartmann. Der Denker und sein Werk*, edited by Heimsoeth, Heinz and Hein, Robert, 144-172. Göttingen: Vandenhoeck & Ruprecht.

85. Poli, Roberto. 1998. "Levels." *Axiomathes. An International Journal in Ontology and Cognitive Systems* no. 9:197-211.

"It is plain that the problem of the levels or layers of a work of art is an important part of any theory of the aesthetic object. In other words, what I wish to state clearly from the outset is that of the two components that select the field of interest - that of the object, and that of its aesthetic valence - reference to the object arranges reference to its aesthetic valence. Put otherwise, the theme of the aesthetic object is a particular subdivision of ontology - a subdivision, moreover, which may prove

fundamental, shedding light on several aspects of the overall framework of ontology. This was pointed by Nicolai Hartmann, when in the introduction to *Zur Grundlegung der Ontologie* - one of his main ontological works - he asserted that "the problematic [of art] belongs to the area

of problems in which the ontological problem is rooted." Evidently, when matters are viewed from this point of view, that part of aesthetics which addresses the problem of the aesthetic object may yield results of relevance to more general ontological reflection as well.

Complementary to investigation by objects is investigation by acts. In this case, however, it becomes more difficult to develop the theme that I wish to discuss here, namely that of levels or layers. Hartmann again points out: "the aesthetics of today still concentrates mainly on analysis of the act, and this is why the stratification relationship, although it has often been noted, is not yet familiar to it" ([Hartmann *Das Problem des Geistigen Seins* 1933], p. 565). The perspective to which I allude was first outlined by the phenomenologist Geiger, who not coincidentally sought to develop a form of phenomenological reduction which mainly involved objects and their structures. This, as we know, was a form of reduction different from the, so to speak, more classically phenomenological ones elaborated by Husserl in order to bring out the structures and operations of consciousness. Moreover, for the purposes of this paper, the decision to give priority to the perspective of the object becomes well-nigh obligatory.

That said, and before I develop with my theme in detail, I must present at least two presuppositions to the arguments that follow. These are two presuppositions that I shall present from perhaps an unusual point of view, but which are of central importance nonetheless."

86. ———. 2001. "The Basic Problem of the Theory of levels of Reality." *Axiomathes. An International Journal in Ontology and Cognitive Systems* no. 12:261-283.

"Two essential aspects of Hartmann's thought are its categorial perspective and the theory of the levels of reality. They are also

aspects which have exerted significant influence on Hartmann's intellectual legacy, however limited that may be. Here I wish to point out their importance for Bertalanffy (see his *General Systems Theory*, 1968) and Lorenz (see his *Behind the mirror: a search for a natural history of human knowledge*, 1978). The latter notes the close similarity between his own ideas and those of Hartmann, and he recalls that for Hartmann the world possesses the unity of a system, but it is a system made up of layers. Some pages earlier he writes that he once asked Roberto Corti, who was closely acquainted with Hartmann, how he thought Hartmann would have reacted to a phylogenetic interpretation of his thought. Corti replied that Hartmann would undoubtedly have rejected such an interpretation, but then added "And yet this is the only way to do anything with it." (p. 261)

87. ———. 2015. "Nicolai Hartmann's Theory of Levels of Reality." In *Objects and Pseudo-Objects: Ontological Deserts and Jungles From Brentano to Carnap*, edited by Seron, Denis, Richard, Sebastien and Leclercq, Bruno, 223-237. Berlin: de Gruyter.
88. Poli, Roberto, Scognamiglio, Carlo, and Tremblay, Frederic, eds. 2011. *The Philosophy of Nicolai Hartmann*. Berlin: de Gruyter.

"Nicolai Hartmann was one of the most prolific and original, yet sober, clear and rigorous, 20th century German philosophers. Hartmann was brought up as a Neo-Kantian, but soon turned his back on Kantianism to become one of the most important proponents of ontological realism. He developed what he calls the "new ontology", on which relies a systematic opus dealing with all the main areas of philosophy. His work had major influences both in philosophy and in various scientific disciplines. The contributions collected in this volume from an international group of Hartmann scholars and philosophers explore subjects such as Hartmann's philosophical development from Neo-Kantianism to ontological realism, the difference between the way he and Heidegger overcame Neo-Kantianism, his Platonism concerning eternal objects and his interpretation of Plato, his Aristotelianism, his

theoretical relation to Wolff's ontology and Meinong's theory of objects, his treatment and use of the aporematic method, his metaphysics, his ethics and theory of values, his philosophy of mind, his philosophy of mathematics, as well as the influence he had on 20th century philosophical anthropology and biology".

89. Ruttkowski, Wolfgang. 2007. *Essays on Aesthetics, Poetics and Terminology of Literary Studies*. München: Grin Verlag.

Essay I: *Stratum, Structure, and Genre* (1973) pp. 4-30.

"The concept of *genre* can be satisfactorily explained only in comparison with the concepts of *stratum* and *structure*. Proceeding from this conviction we shall try here to establish a demarcation of these often used terms and at the same time prove their interdependence."

Essay III: *The Main Differences between Roman Ingarden's and Nicolai Hartmann's Strata Systems* (1990) pp. 31-48.

"Although both designed strata-models for various kinds of art and especially for literature, the philosophers Nicolai Hartmann and Roman Ingarden never entered into any kind of dialogue. Also in secondary literature there is no exact comparison of their systems to be found.

For that reason, the two strata systems are compared here for the first time and their respective advantages and deficiencies are being pointed out.

Amongst other things. the following topics are being discussed:

1. In what way Hartmann's "Real Foreground" ("Realer Vordergrund") is more specifically subdivided in Ingarden's system. -
2. How, on the other hand. Ingarden's "Stratum of Depicted Objects" ("Schicht der dargestellten Gegenständlichkeiten") was more thoroughly subdivided by Hartmann.
3. Why there cannot be found in Hartmann's system a corresponding stratum for Ingarden's "Stratum of Schematized Aspects" ("Schicht der schematischen Ansichten") - and
4. Why Hartmann's two strata of the Treat Background ("Irrealer Hintergrund") are consolidated by Ingarden and expressly not seen as a stratum."

90. Sajama, Seppo. 1985. "Supererogation and high values." *Theoria* no. 51:77-88.

"Nicolai Hartmann's value-theory can be used to generate a five-fold classification of actions: "duties" are actions whose omission is blameworthy and performance not praiseworthy, whereas the performance of "supererogatory" actions is praiseworthy and their omission not blameworthy.

Moreover, the contrary of a duty is a "forbidden" action, that of an supererogatory action is an "excusable" action. Besides these four, there are also "indifferent" actions."

91. Samuel, Otto. 1953. *A Foundation of Ontology. A Critical Analysis of Nicolai Hartmann*. New York: Philosophical Library.

Contents: Introduction IX-XV; 1. Why must we return to ontology? 1; 2. The incomplete approach of Hartmann 7; 3. On the Extant as Extant in general 15; 4. On the difference between Being (*Sein*) and Extant (*Seiendes*) 29; 5. The relationship of Hereness (*Dasein*) and Suchness (*Sosein*) 45; 6. Modes and modalities of Being 57; 7. The Givenness of Real Being 74; 8. The certainty of Reality 90; 9. The problem and position of Ideal Being 115; 10. The transition to meontology 128; Index 151-155.

Note: Chapters 1, 3, 5, 7 and 9 are the outilemes of the teachings of Hartmann. Chapters 2, 4, 6, 8 and 10 contain the critical analysis of his views.

"Hartmann's literary accomplishments in life consist of three parts. The first one comprises the new foundations of ontology. It is composed of three books: "*Zur Grundlegung der Ontologie*" (On the Foundations of Ontology), "*Möglichkeit and Wirklichkeit*" (Possibility and Factuality), and "*Der Aufbau der realen Welt*" (The Structure of the Real World). The last of the three presents the general theory of categories (*). The second part covers natural philosophy, an introduction to the special theory of categories, furthermore "*Grundzüge einer Metaphysik der Erkenntnis*" (Outlines of a Metaphysics of Knowledge), and "*Das Problem des geistigen Seins*" (The

Problem of Spiritual Being). The third part is his "*Ethik*" (Ethics).

The present dissertation will be limited primarily to the first of these books, "*Zur Grundlegung der Ontologie*." This book consists of a thirty-eight-page introduction (the reader will find here a condensed, five-page summary) and four individual papers - "*Das Seiende als Seiendes*" (The Extant as Extant), "*Dasein and Sosein*" (Hereness and Suchness), "*Die Realitätsgegebenheit*" (The Givenness of Reality), and "*Das ideale Sein*" (Ideal Being)." pp. X-XI.

(*) [The fourth and last book, "*Philosophie der Natur. Abriss der speziellen Kategorienlehre*" (Philosophy of Nature. Sketch of Special Theory of Categories) was published in 1950].

"Any one fascinated by the problem of evidence, does well to read Günther Patzig's formulation of the problem given in an article on Husserl (Patzig 'Husserl on Truth and Evidence', in J. N. Mohanty (ed.), *Readings in Edmund Husserl's Logical Investigations*, The Hague: Martinus Nijhoff, 1977, pp. 179-196) (1). Either evidence is accessible to consciousness, in which case the evidence of our judgement can give no guarantee for (absolute) truth; or evidence is a guarantee for (absolute) truth, but then it cannot be accessible to consciousness. Possibly Patzig's attention was drawn to the problem of evidence by his teacher at Göttingen, Nicolai Hartmann. Although Hartmann was not alone in criticizing the concept of evidence at the first half of the twentieth century, he must be credited for having given a clear formulation of the problem of evidence. This paper attempts an evaluation of Hartmann's criticism of the concept of evidence. Any epistemological theory of evidence has to answer Hartmann's criticism on the notion of evidence. Hartmann's epistemology, and his criticism of the concept of evidence, will be dealt with in the first half of the paper. An outline of an epistemology that

meets Hartmann's challenge, in terms of an evidence theory of truth, is presented in the second half of the paper." (p. 285)

(1) 'Evidence not in the sense of piece of evidence *for* something, but as a characteristic of certain judgements, evidence *of*.

"The present book represents what may be called "archaeology of ideas." Its main aim is to give information on some scarcely known currents of thought and connexions between ideas in the philosophy of the present century, and to evaluate those ideas. The central concept of the book is *aporia* (impasse, perplexity, doubt), and the main figure is Nicolai Hartmann (1882—1950), a German ontologist and critical realist. Perhaps his most significant idea was that the Aristotelian method of aporetics or problem-discussion should be reactivated and given a basic role in doing philosophy. The Greek background of aporetics is first studied and its modern influence discussed. The dimensions of Hartmann's aporetics are then analysed in the context of his philosophy. It is examined and evaluated, how Hartmann's pupils Wein, Landmann and Hartkopf applied his ideas. Related tendencies, represented by Morris R. Cohen and Alf Nyman, are also studied. The main part of the book contains a detailed criticism of Hartmann's theory of aporetics." p. 9)

"It is striking how many different word combinations containing "being" you find in Hartmann: ways of being (Seinsweisen), modes of being (Seinsmodi), elements of being (Seinsmomente), degrees of being (Seinsstufen), grades of being (Seinsgrade), factors of being (Seinsfaktoren), regions of being (Seinsregionen), spheres of being (Seinssphären), layers of being (Seinsschichten), weight of being (Seinsgewicht), presentation of being (Seinsgegebenheit). I happen to have claimed at several places' that existence does neither allow for differentiation nor for gradation. However, the Phenomenologists, Hartmann's contemporaries, like such verbal combinations, too. And there is, of course, a long tradition of this. The founder of ontology, Aristotle, founded this subject before all on the term "being" and its ambiguities. He distinguishes between the use of "to be" with a substantial and with an accidental predicate, also between its use in actuality and potentiality predication. On the face of it, Aristotle distinguishes between kinds of predicative connection. However, he does not admit genuine connections but only

natured things. Thus, he can be taken to claim that substances, things with accidents, actual and potential things exist in different ways. He distinguishes in Hartmann's terms between two ways of existence (Existenzweisen), namely substantial and accidental existence, and two modes of existence (Modi der Existenz), namely actuality and potentiality. Following Plato who granted full existence only to forms and mere half-existence to perceptual things, Aristotle also assumes degrees of existence, accidents, e.g., have a lower degree of existence than substances and relational accidents a lower degree than qualitative accidents. In Aristotle categories are distinguished as different ways of being. Hartmann holds that different ways of being do not already found categories or only in a wide sense. On the whole Hartmann understands the distinction between ways of being as formal and that between categories as material (inhaltlich)." (pp. 217-218)

"The encounter between Lukács' philosophy and ontological thought of Nicolai Hartmann is a seldom tackled topic in philosophical historiography. The contact with Hartmann's great ontological works played a key role in the genesis of *Ontology of Social Being*, the work which has crowned the intellectual and political course of Lukács. This paper aims to clear up the deep affinity between two historical thoughts that all seemed to separate. Hartmann cultivated a *philosophia perennis* above socio-historical contingences, while Lukács, an engaged philosopher in the battles of the century, built a work which was saturated with Marxian thought. There are nevertheless significant links between them: a critique of Husserlian phenomenology, a critique of neo-positivist currents and, above all, strong reservation with regard to Heidegger."

"At first glance it may seem that relating the philosophies of Immanuel Kant and Nicolai Hartmann to Alexander Pope's conception of the Great Chain of Being is arbitrary to the point of absurdity. However, a closer look at the facts will soon show

that it is by no means absurd or even arbitrary, for both Kant and Hartmann are concerned with an interpretation of the Great Chain of Being -- albeit from radically different points of view. This difference Nicolai Hartmann has stressed in his formidable *Grundzüge einer Metaphysik der Erkenntnis*. (1) There he quotes Kant's "highest principle of all synthetic judgments": "The conditions of the possibility of experience as such are at the same time conditions of the possibility of the objects of experience, and therefore have objective validity in a synthetic judgment *a priori*." (2)

Kant had argued, quite correctly, that synthetic judgments *a priori* could not validly apply to objects if the conditions of the possibility of experience were imposed upon the subject by the objects of experience. The failure of empiricism in all its forms is proof of this fact. Not one of them can justify the *a priori* employment of synthetic propositions. Kant had therefore assigned to the subject the role of imposing the conditions of possible experience upon the object. But in doing so, he had overlooked a "third possibility", namely, that the conditions of the possibility of experience are imposed neither by the subject nor by the object; that they are simply metaphysical conditions "this side of idealism and realism" which are equally binding for subject and object.

It is Hartmann's contention that this "highest principle" is obvious to all who understand it, and that it finds its validation in the actual analysis of experience. In what sense, then, does it help us to understand Hartmann's conception of the Great Chain of Being? And how does this differ from Kant's commitment to Pope's idea?" (p. 69)

Adolf Reinach on States of Affairs (*Sachverhalt*) and Negative Judgments

The work of Reinach and early phenomenology

"Reinach's importance for the development of early phenomenology is particularly remarkable considering the brief life span of 34 years granted him for the development of his ideas and his influence. It was his death in action in 1917 rather than Husserl's going to Freiburg which cut short not only his own promise but that of the Gottingen phenomenological Circle. It is therefore not surprising that Reinach never found the time to formulate a comprehensive plan of a philosophy in which the place of phenomenology was clearly defined." One can only extrapolate such a plan from his Essays and fragments - for he never published a book. His conception would have incorporated a formal and material ontology on realistic lines." (p. 192)

(...)

His examples of the new method, which ranged all the way from mathematics to psychological science, displayed the following major features: I. The phenomenological method is to teach us how to see things which we have a tendency to overlook in our everyday practical attitude, and to see them in their unique whatness or essence without the customary attempts to reduce them to the smallest possible number, an attempt which can lead only to impoverishment and falsification of the phenomena. The prime objective of phenomenology is thus to lead us toward the phenomena and to clarify our conceptions of them.

II. Phenomenology does not restrict itself to making inventories of facts. It wants to explore their essences while disregarding their existence. This actually involves two attitudes, actually not yet sharply distinguished by Reinach: (a) disinterest in reality in the sense of independence of the observer, in contrast to the approach of a natural science, like physics; in Reinach's version this change in attitude did not require the adoption of a special method after the manner of Husserl's phenomenological reduction; (b) interest in pure models, as in geometry, which considers merely ideal types, even where no example can be produced in actual experience; this involves a theoretical idealization, though not Husserl's ideating abstraction or 'eidetic reduction,' which Reinach does not mention in this context.

III. Besides the intuiting of the phenomena and their essences, Reinach stressed one additional step: the study of the essential connections among these phenomena (Wesenszusammenhänge) and their laws (Wesensgesetze). These relations among the phenomena are determined by their essential nature and are expressed, for instance, in such phrases as 'it lies in the nature of movement to have a substratum,' 'it follows from its very nature.' According to Reinach, such essential connections occur not only among the formal structures of logic and general ontology, but also in the structures of concrete 'material' phenomena, for instance among colors in their similarities. They are of two basic types: essential necessities and essential possibilities. To be sure, these are usually so obvious that no one pays attention to them. But it is precisely these neglected 'trivialities' to which phenomenology has to give their due.

In this connection Reinach developed his theory of the phenomenological a priori, which was perhaps the most characteristic feature in his philosophizing. It differed radically from earlier conceptions of the a priori. To begin with, Reinach's a priori was not a property of propositions or acts of judging or knowing, but of states of affairs (Sachverhalte) judged or recognized. It is these ontological states of affairs or, more properly speaking, the connections between the elements of these states of affairs (the object judged about and its property judged), which by virtue of these connections are the carriers of the a priori property. 35 The a

priori is thus primarily an ontological, not an epistemological category.

But what does it mean that a state of affairs is a priori? Obviously not that we have an innate idea about it. In fact, Reinach agreed with the Kantian conception of the a priori to the extent of interpreting it as knowledge not grounded in experience, but not as knowledge without experience either. He also concurred with Kant that necessity and universality are important aspects of the a priori: A priori states of affairs are universal for all possible examples, and they are necessary in the sense that the a priori property contained in the Sachverhalt belongs to its carrier by an essential necessity. However, any implication that this necessity is really only a necessity of thought to be derived from the organization of our understanding must be avoided. This, to Reinach, would have meant sheer psychologism. His necessity was an ontological necessity grounded in the things, not an epistemological one based on our reason. Universality and necessity were for Reinach only secondary characteristics of the a priori; they followed from the more basic fact that there are essential connections (Wesenszusammenhänge) which are immediately intuitable and which can be given with complete adequacy. Thus 'a priori' means at bottom nothing but the fact that a certain property is necessarily entailed by the essential structure of an object and can hence be understood as such." (pp. 193-194)

"From: Herbert Spiegelberg, *The Phenomenological Movement. A historical introduction*, The Hague: Martinus Nijhoff 1963 (third edition).

"Only one of Reinach's treatises is historical in character: "Kant's Understanding of the Humean Problem" (*Zeitschrift für Philosophie und philosophische Kritik* 141; 1908). It deserves the most careful attention. Reinach's insights into "relations of ideas" and his discovery that Kant wrongly interpreted these as analytical judgments, were, as I studied them at the time, of decisive importance for me on the way to pure phenomenology. Reinach for his part, as an accomplished phenomenologist turning to the study of Kant, detected Kant's misunderstanding and treated of it in a rich and instructive article.
