Abstract: "In explicating a passage from *Physics* A 3, Simplicius reports a criticism by Alexander of Aphrodisias against Plato's conception of not-being in the *Sophist*. Alexander deems this conception contradictory, because it posits that unqualified not-being is. Simplicius defends Plato and gives a diagnosis of what he regards as Alexander's interpretative mistake in raising his objection. I unpack this debate and bring out ways in which it sheds light on important aspects of Plato's project in the *Sophist* and of Simplicius' own philosophical background, notably in Damascius' *De principiis*."

15. Gregoric, Pavel. 2017. "Alexander of Aphrodisias on the Common Sense." *Filozofski vestnik* no. 38:47-64.

"Introduction.

The primary aim of this paper is to present Alexander's understanding of the common sense and its functions. In doing so, I will keep an eye on Alexander's agreement with or departure from Aristotle and indicate his contributions to the subject matter. The secondary aim of this paper is to discuss

one particular point of departure which came to dominate later reception of Aristotle's notion of the common sense." (p. 47)

16. ———. 2018. "Aristotle's Transparency: Comments on Ierodiakonou, "Aristotle and Alexander of Aphrodisias on Colour"." In *The Parva naturalia in Greek, Arabic and Latin Aristotelianism: Supplementing the Science of the Soul*, edited by Bydén, Börje and Radovic, Filip, 91-98. Cham (Switzerland): Springer.

Abstract: "In my comment on Katerina Ierodiakonou's paper, I outline my understanding of the programme of *De anima* and how it bears on Aristotle's discussion of the transparent in *De anima* 2.7, in contrast with his discussion of the transparent in *De sensu* 3. I then explore Aristotle's notion of transparency and sketch an alternative to Ierodiakonou's interpretation of Aristotle's views as to how colours are generated in physical objects. At the end, I raise two objections to Alexander's interpretation of the transparent as discussed by Ierodiakonou."

17. Gregoric, Pavel, and Lautner, Péter. 2023. "*De mixtione* XVI: on Growth." In *Studies on Alexander of Aphrodisias' On Mixture and Growth*, edited by Guyomarc'h, Gweltaz and de Haas, Frans A.J., 231-262. Leiden: Brill.

Abstract: "In Chapter XVI Alexander investigates whether the Stoic notion of body going through body is applicable to the phenomenon of biological growth. If anything, growth through nutrition seems to recommend this Stoic notion. However, in Chapter XVI Alexander develops an Aristotelian explanation of growth, which is more convincing and does not rely on the Stoic notion. Since the Stoic notion of body going through body has been shown to be problematic in the earlier chapters of *De mixtione*, and the final chapter discards its utility even for an explanation of growth, we argue that the outcome of the treatise is that the Stoic notion should be abandoned. In this contribution we divide Alexander's text in 9 sections and analyse it section by section, availing ourselves of other relevant texts, such as Aristotle's *De generatione et corruptione* I 5, *Quaestio* I 5 attributed to Alexander, and his Commentary

on Aristotle's *Meteorology* IV. In the Appendix we discuss four points: (1) it is the nutritive capacity of the soul that is the efficient, formal and final cause of nourishment, (2) diminution in old age is due to the decreasing rate of absorption of digested nutriment, (3) for any episode of growth, some bit of matter needs to remain through it, which makes replacement of bodily ingredients a gradual process, (4) Chapter XVI is not extraneous to *De mixtione* or tucked at the end of it for want of a better place, as some scholars have suggested, but an integral part of the treatise at its right place."

18. Groisard, Jocelyn. 2023. "Alexander of Aphrodisias' *De mixtione*: Text, Tradition, Reception." In *Studies on Alexander of Aphrodisias' On Mixture and Growth*, edited by Guyomarc'h, Gweltaz and de Haas, Frans A.J., 1-27. Leiden: Brill.

Abstract: "Alexander of Aphrodisias' *De mixtione* did not share the fame of its author: it may have been read by Plotinus and its existence was known, probably through Alexander's own commentaries on Aristotle, by Themistius and Simplicius, but it does not seem to have been quoted, discussed or translated until the 16th century after its first edition was printed in 1527 by the Aldine Press in Venice. The manuscript tradition is very scarce with most witnesses copied after the *editio princeps*; our knowledge of the text relies on two medieval manuscripts of the late 13th or early 14th century, one of them incomplete and giving less than half of the text. This more than modest reception and textual tradition of Alexander's treatise contrasts with the intellectual fortune the issues it deals with had in Late Ancient, medieval and early modern philosophy: mixture models analysed and discussed by Alexander continued to be used and continually refined in a great range of intellectual fields, such as theories of soul, Neoplatonic metaphysics, Christian theology, pharmacology, as well as theories of hylomorphism in the Peripatetic tradition until the 17th century. For modern scholars, it is a precious document not only as a source on previous theories of mixture in Ancient philosophy but also as an entry point into the later

developments of mixture theories from Late Ancient to early modern philosophy."

19. Guyomarc'h, Gweltaz. 2021. "Dividing an Apple: The Nutritive Soul and Soul Parts in Alexander of Aphrodisias." In *Nutrition and Nutritive Soul in Aristotle and Aristotelianism*, edited by Korobili, Giouli and Lo Presti, Roberto, 197-219. Berlin: de Gruyter.

Abstract: "The nutritive soul provides a relevant test case to examine Alexander of Aphrodisias' conception of the parts of the soul, since it appears in Alexander's *De anima* along with methodological considerations, especially an analogy with the division of an apple. I examine here the unity of the powers of the soul, focusing especially on the case of the vegetative soul. If the division of soul parts and soul powers is neither local, nor numerical, what is it? I put forward three correlated hypotheses: 1) Even if there is no lexical distinction in Alexander between "powers of the soul" and "parts of the soul", Alexander nonetheless comes up with criteria which distinguish a soul power from a soul part, or from a soul of its own. The difference between his position and Aristotle's is found chiefly in Alexander's effort to clarify these criteria. 2) As will become clear in the case of the vegetative soul, even the powers that do constitute a soul or a soul part (vegetative/animal/human) are objectively distinct (in a sense that remains to be clarified) and are not simply the result of a change in perspective. 3) The main criterion by which one can account for the organization and the unification of soul parts is the teleological criterion."

20. ———. 2023. "The Services of Dialectic: Dialectic as an Instrument for Metaphysics in Alexander of Aphrodisias." In *Ancient Greek Dialectic and Its Reception*, edited by Mouzala, Melina G., 249-276. Berlin: de Gruyter.

"It is commonplace to think that ancient commentators aimed to systematize Aristotle." (p. 249)

(...)

"To put it plainly—I think this is painting too unilateral and simple a picture, and I would like to contribute, here, following

others,(6) to enrich and detail it. To do so, I will look into Alexander's usage of dialectical method in metaphysics, with particular interest for his exegesis of book Beta of the *Metaphysics* and his use of the aporetic method. Alexander's aporetic method in the *Quaestiones*(7) as well as the one he puts to use in his commentary on *Metaphysics* Beta has led to the same diagnosis. In both cases, no "honest perplexity"(8) is displayed, and the Beta aporiae are not treated like genuine puzzles but rather as simple exposition devices.(9) In contrast to this view, I would like to show two things: first, that aporia retains an authentically exploratory function for Alexander; and, second, that Alexander's use of aporia in metaphysics does not originate in systematization, but rather in the fulfillment of dialectic's status as an organon within Aristotelian tradition.

(...)

But I would like to pursue another path in this paper and examine the role of dialectic in metaphysics. I will claim that dialectic allows Alexander to retain the exploratory aspect of aporiae within a scientific investigation. If we show that the heuristic role proper to dialectic is an integral part of science, we will be better able to support the idea that Alexander retains the exploratory aspect of aporiae." (pp. 249-250)

21. ———. 2023. "Alexander of Aphrodisias and the Active Intellect as Final Cause." *Elenchos* no. 44:93-117.

Abstract: "In his own *De anima*, Alexander of Aphrodisias famously identifies the "active" (*poietikon*) intellect with the prime mover in *Metaphysics* Λ. However, Alexander's claim raises an issue: why would this divine intellect come in the middle of a study of soul in general and of human intellection in particular? As Paul Moraux [*] asks in his pioneering work on Alexander's conception of the intellect, is the active intellect a "useless addition"? In this paper, I try to answer this question by challenging a solution according to which the active intellect would intervene directly with the material intellect to trigger its ordinary working. I argue that the active intellect acts as a final cause, both for human intellect and for its ordinary objects of thought. The active intellect is twice "cause of the intellection", i.e. cause of the actualization of human thought: once (i) when it offers thought occasions for thinking through objects, and again (ii) when it actualizes mediately the human intellect itself in its development. This reading agrees with Alexander's usual position about the prime mover's causality. It accounts for the multiplicity of expressions with which Alexander describes the causality of the active intellect in his *De anima*. It also explains why the development of human intellect has been described without direct reference to active intellect, since substances do

not aim directly at the First cause, but their aiming at it is mediated by their desire for their own good."

Abstract: "Chapters XI and XII of *De mixtione* have been read as a digression from the main argument of the treatise. In the following, I will show that what takes place in IX–XII is not secondary regarding the issue of blending, or, more generally, regarding Alexander's opposition to Stoic philosophy. In my view, chapters IX–XII aim to produce a more fine-grained account of blending. They set the stage for the first requirement of blending in chapter XIII: that there is blending only of corporeal substances, i.e. of independently subsisting entities. To accomplish this, chapters XI–XII must bring their investigation up to the nature of the Stoic principles and criticize the Stoic notion of body. This is why Alexander must examine the fundamentals of Stoic ontology.

It also explains why these chapters, despite being essentially refutative, make explicit some of the main claims of Alexander's own ontology. In these chapters, Alexander makes us pivot smoothly from a Stoic ontology to an Aristotelian one."

- "The treatise of Alexander of Aphrodisias Περὶ Ἐίμαρμένης [*de Fato*] is probably the most interesting of his independent works to the general reader. Not only is it one of our chief sources for the Stoic doctrine of Destiny, as a glance at the relevant pages of *Stoicorum Veterum Fragmenta* will show, but it also contains a closely reasoned and exhaustive (if somewhat prolix) criticism of that doctrine from the Peripatetic standpoint. I therefore hope that an attempt to deal with some of the numerous corruptions and difficulties in the text may not be wholly useless." (p. 37)

Abstract: "Alexander of Aphrodisias picks up Aristotle’s insufficient treatment of simultaneous perception and develops an adequate solution for the problem, thereby offering an account of the unity of perceptual consciousness—the single mental activity of a single subject with complex content. I show the adequacy of the solution by using as criteria the requirements that have been identified by Aristotle and

approved (and explained) by Alexander. I analyze Alexander's solution in two turns.

First, with respect to heterogeneous perceptibles, Alexander adopts and reformulates Aristotle's metaphorical account invoking the analogy with a point. Second, with respect to homogeneous opposites, accordingly, perception is judgement, but it involves physical changes in diverse parts of the primary sense-organ. By this account Alexander resolves the issue of the unity of the subject on the level of the capacity of the soul, and coordinates the complexity of content with the complexity on the physical level. In addition to being adequate, the solution is faithful to Aristotle. I suggest that the interpretative decisions Alexander makes (the clarification of the analogy; the reference he finds to the analogy; the two components of the solution, judgement and parts of the organ) form an ingenious extension of Aristotle's treatment. Interestingly, even though many elements in Alexander's interpretation are taken up by modern commentators, no one has followed it in its entirety, nor even treated it in its own right."

26. ———. 2023. "Alexander of Aphrodisias' Criticism of the Stoic Theory of Perception: *typos* and *typōsis*." *Elenchos* no. 34:319-362.

Abstract: "The Stoics identified the *phantasia* with the impression (*typos*) in the soul, or the impressing process (*typōsis*). Alexander of Aphrodisias engages directly with this account at *De anima* 68.10–21, and argues against the applicability of the impression in a theory of perception in *Mantissa* 10, especially 133.25–134.23. I analyse Alexander's polemic account at *De anima* 68.10–21, I demonstrate that it differs from Chrysippus' criticism of Cleanthes (contrary to some commentators), and I show how it fits in the context of his argument.

From this analysis it will emerge how Alexander uses Stoic ideas to form his Aristotelian account. Then, I show that Alexander, by taking 'typos' metaphorically, not only prefers the term 'enkataleimma' over 'typos' in his theory of *phantasia*,

but he keeps the 'typos' terminology only to remain faithful to Aristotle's use (contrary to some commentators)."

27. Hankinson, Robert James. 2002-2003. "Xenarchus, Alexander, and Simplicius on simple motions, bodies and magnitudes." *Bulletin of the Institute of Classical Studies* no. 46:19-42.

Abstract: "Aristotle accounted for the fundamental dynamics of the cosmos in terms of the tendencies of the various elements to distinct types of natural motions, and (in the case of the sublunary elements) to rest in their natural places. In so doing, he introduced a fifth element, the ether, with a natural and unceasing tendency to revolve, as the matter for the heavenly bodies. This paper deals with some of the objections raised to this model, and to its conceptual underpinnings, raised by Xenarchus of Seleuceia, an unorthodox Peripatetic of the 1st century BC, and of the attempts of later philosophers to rebut them. In so doing it casts light on a little-known, but historically important and interesting, episode in the development of physical dynamics."

28. Harari, Orna. 2016. "Alexander against Galen on motion: a mere logical debate?" *Oxford Studies in Ancient Philosophy* no. 50:201-236.

"Since Shlomo Pines's pioneering study of Alexander of Aphrodisias' *Refutation of Galen*, the understanding of this treatise has significantly changed.(1)" (p. 201)

(...)

Admittedly, the *Refutation of Galen* is dedicated to a presentation and refutation of Galen's claim that Aristotle's argument in *Physics* 7.1 is invalid, but it is not obvious that the treatise is restricted to this logical point. As Pines pointed out, Alexander reports here that Galen based his criticism on substantive assumptions which suggest that in Galen's view certain things are not moved by something. In spite of Pines's observation, no one has examined in detail how these assumptions are related to Galen's criticism of Aristotle's argument. The following study is devoted to an examination of this question.£ (pp. 2301-202, anote omitted)

(1) This treatise is extant in an Arabic translation that has come down to us in two partially overlapping manuscripts, Carullah 1279 and Escorial 978. These manuscripts are respectively entitled *The Treatise of Alexander of Aphrodisias Answering Galen's Attack on Aristotle's View that Everything that Moves is Moved by Something* and *Alexander's Treatise in Reply to Galen concerning the First Mover*. For brevity, I use here the title *Refutation of Galen*. It is not clear whether this work is a part of Alexander's lost commentary on Aristotle's *Physics* or an independent treatise.

For the former view see S. Pines, 'Omne quod movetur necesse est ab aliquo moveri: A Refutation of Galen by Alexander of Aphrodisias and the Theory of Motion' ['Omne quod movetur'], *Isis*, 52 (1961) 21-54 at 22; for the latter view see N. Rescher and M. E. Marmura (ed., trans., comm.), *The Refutation by Alexander of Aphrodisias of Galen's Treatise on the Theory of Motion* [Refutation by Alexander] (Islamabad, (1971) 60-2.

29. ——. 2023. "Alexander of Aphrodisias' theory of action and the capacity of doing otherwise." *Apeiron* no. 56:693-721.

Abstract: "I examine Alexander of Aphrodisias' theory of action, addressing the question how his view that human actions are determined by reason accounts for the capacity of doing otherwise. Calling into question the standard view that Alexander frees agents from internal determination, I argue that (1) the capacity of doing otherwise is a consequence of determination by reason, since it enables agents to do something different from what they would have done had they followed external circumstances; and (2) this capacity is compatible with causal determination by reason because as a case of potentiality for opposites, it grants agents the qualified possibility of doing otherwise insofar as their nature as human beings is concerned – a possibility which remains also when their actions are causally determined by reason and by their internal disposition. I show further that these elements of Alexander's theory of action are ultimately based on his conception of the soul, specifically on his commitment to Aristotle's view that the human soul is not purely rational, as the Stoics hold, but has nonrational and rational parts."

30. ———. 2023. "De mixtione XIV: the Ingredients' Preservation in the Blend." In *Studies on Alexander of Aphrodisias' On Mixture and Growth*, edited by Guyomarc'h, Gweltaz and de Haas, Frans A.J., 192-211. Leiden: Brill.

Abstract: "I argue that in *De mixtione* XIV Alexander addresses the question of the ingredients' preservation in the blend from the viewpoint of the distinction between their substrates and their qualities. Through this interpretation I show that the discrepant claims regarding the ingredients' preservation found in *De mixtione* XIII–XV are compatible because they hold for different aspects of the ingredients: the claim that they perish holds for their substrates, whereas the claim that they are preserved holds for their qualities. In so doing, I clarify Alexander's stance in his debate with the Stoics as well as his contribution to the Peripatetic tradition. I show that in holding that blending is a real unification of the ingredients, he argues against the Stoics that the ingredients are not preserved as distinct individual bodies but their qualities are preserved in a diminished mode, and also departs from the earlier Peripatetic tradition, by stressing that blending does not result in a juxtaposition that appears unified due to the imperceptibility of its different ingredients. This interpretation helps place Alexander's account of blending in the broader context of his metaphysics, by indicating that his view of the preservation of the ingredients underpins his anti-reductionist conception of substantial forms."

31. Hasnawi, Ahmad. 2016. "Alexander of Aphrodisias *versus* John Philoponus in Arabic: A Case of Mistaken Identity." In *Aristotle Re-Interpreted: New Findings on Seven Hundred Years of the Ancient Commentators*, edited by Sorabji, Richard, 477-502. New York: Bloomsbury.

"One could claim that for an Aristotelian philosopher, particulars are not a philosophical problem – at least not an epistemological one. For an Aristotelian philosopher daily confronted with Stoic theories of Providence and individuation, however, this was a haunting question. After all, what did Aristotle have to say on the status of the particulars not qua

belonging to a species, but qua pure singularities taking place within the world? I would like to show that even if Alexander is too much of an Aristotelian to have a real theory of the particular, his reaction to his historical context leads him to new insights on this topic. These insights, in turn, constitute a starting point out of which Avicenna and Leibniz developed their ideas about how fatalism could be avoided without giving up the principle that the entire effect corresponds to its full cause. I will try to sketch, in the following pages, the main phases of this long and intricate story." (p. 161)

32. Havrda, Matyáš. 2021. "Five Views of *definienda* in Alexander's *Quaestiones* 1.3 and 2.14." *Elechos* no. 42:351-374.

Abstract: "In *Quaestiones* 1.3 and 2.14, Alexander presents a distinctly realist or essentialist view of the objects of definition, distinguished, on the one hand, from two types of realism rejected by Aristotle (*definienda* as separate forms and as particulars), and, on the other, from two types of conceptualism (non-essentialist and essentialist abstractivism) that probably belong within the Peripatetic tradition. The difference between Alexander's view and essentialist abstractivism lies in his understanding of *definienda* not as the common concepts of things existing in the particulars, but as the common things conceived of as existing in the particulars. This paper offers a close reading of *Quaest.* 1.3, whose aim is to flesh out Alexander's position vis-à-vis the objects of definition against the backdrop of the four rejected alternatives. The distinction between Alexander's essentialism and the essentialist abstractivist notion of *definienda* is further explained in light of *Quaest.* 2.14. The amended Greek text of *Quaest.* 1.3 is appended with an English translation."

33. Helle, Reier. 2023. "Alexander of Aphrodisias and the Stoics: Blending, Forms, and the Upwards Story." In *The History of Hylomorphism: From Aristotle to Descartes*, edited by Charles, David, 106-132. New York: Oxford University Press.

"The Stoics hold that animals, plants, and inanimate natural bodies are composites of pneuma ('breath') and matter.(1) The composition relation in question is 'blending' (krisis). And by

blending with the relevant matter, pneuma causes the animal, plant, or inanimate natural body to be what it is.(2) In his work on material composition, *De Mixtione*, Alexander of Aphrodisias discusses the Stoic theory of blending and the specific case of pneuma and matter at length. His aim is to refute the Stoic view, and in so doing to clear the ground for his own Aristotelian theory of blending, for the development and defence of which

he relies on Stoicism as a foil.(3)"

(1) I am grateful to Brad Inwood, Alexander Bown, Victor Caston, and especially to David Charles for helpful discussions, comments, and questions.

(2) For references and details, see section 1 below.

(3) Alexander, *De Mix.* is our most important source of evidence for Stoic thinking about blending.

Remarkably, out of the forty-seven total pages of Groisard's edition of the text, Alexander's discussion of the Stoic position takes up twenty-one; by comparison, the presentation and defence of his own

theory of blending is ten pages long.

34. Hendrix, John Shannon. 2010. "Philosophy of Intellect and Vision in the *De anima* and *De intellectu* of Alexander of Aphrodisias." *School of Architecture, Art, and Historic Preservation Faculty Papers*:1-29.

"There are thus three intellects: material, in habitus, and productive. Matter is defined as the substrate which can become a particular being through the presence of a form, as potential intellect can become actual intellect through the presence of an intelligible. According to Aristotle in the *Metaphysica*, the substratum of matter "is that of which everything else is predicated, while it is itself not predicated of

anything else” (7.3.1028b36),(9) meaning that matter can be seen as participating in anything which can be affirmed as a quality, but matter itself cannot be affirmed as a quality. Matter can be seen as neither a quality nor a particular (7.3.1029a20–21); it is a vocabulary element of neither the apprehension of the intelligible nor discursive thought. Matter can only be seen as a potentiality, and anything which can be described as material is so only as potentiality. Material intellect is thus potential intellect, and not an actual intellect. The material intellect has the potential to become actual intellect to the extent to which “existents are

possible objects of knowledge” (*De anima* 106), according to Alexander.

The faculty in material intellect which can apprehend an intelligible cannot be an intelligible itself, because then its own intelligible form would appear and interfere with the grasping of the intelligible. The faculty of intellect to know intelligibles can only be a potentiality, able to conform to the intelligible from without, in the same way that matter can only be a potentiality able to conform to the form of an object as it is perceived.” (pp. 12-13)

35. Hesamifar, Abdurrazzaq, and Baqershahi, Ali Naqi. 2018. "Intellect in Alexander of Aphrodisias and Its Impact upon Muslim Philosophers." *Athens Journal of Humanities & Arts* no. 5:447-468.

Abstract: "In his treatise "On the Intellect," Alexander of Aphrodisias paraphrases Aristotle's views on the intellect. He refers to four kinds of intellect. The first three include: the potential intellect which resides potentially in man's soul and will be actualized through perceiving the intelligible; the habitual intellect which has perceived certain intelligibles and can perceive some others as well; the Active Intellect which can change the first kind of intellect into the second one. This intellect can perceive its essence. And since its essence is

intelligible so it can perceive it through perceiving the intelligibles. The fourth is the acquired intellect and it is a part of the Active Intellect and comes to soul from outside and enables it to perceive the intelligibles. The main objective of this article is to treat Alexander's idea of the intellect and to explore its impact upon Islamic philosophy which can be traced in the similarities between their debates on the issue and the allusions to Alexander's view in the works about intellect written by Muslim philosophers."

36. Ierodiakonou, Katerina. 1995. "Alexander of Aphrodisias on medicine as a stochastic art." In *Ancient Medicine in Its Socio-Cultural Context: Volume 2*, edited by Horstmanshoff, H. F. J., van der Eijk, Philip J. and Schrijvers, P. H. , 473-485. Amsterdam: Rodopi.

Summary: "Medical practice in antiquity was conspicuous for its failures, which seriously challenged medicine's status as an art. Ancient philosophers and doctors tried to explain how a whole group of arts including medicine, the so-called stochastic arts, was characterised by the fact that even the most competent exercise of the art could not guarantee a successful outcome. This paper focuses on Alexander of Aphrodisias' (second century AD) explanation and compares it to some other ancient views, in particular to Gelen. The central feature at Alexander's suggestion is a distinction between the end of an art and its function. In the case of medicine end and function do not coincide; for the end is to heal the patient, whereas the function consists solely in doing artfully

what is possible to attain the end."

37. ———. 2018. "Aristotle and Alexander of Aphrodisias on Colour." In *The Parva naturalia in Greek, Arabic and Latin Aristotelianism: Supplementing the Science of the Soul*, edited by Bydén, Börje and Radovic, Filip, 77-90. Cham (Switzerland): Springer.

Abstract: "The aim of this paper is to unravel Aristotle's reasoning with regard to the ontological status of colours; also, to get a better understanding of his views on the production of the whole spectrum of colours; and finally, to evaluate the

explanatory power of his theory of colours. The texts I mainly draw my evidence from is Aristotle's *De sensu* 3 and the relevant passages from the *De anima* as well as from other Aristotelian treatises; in addition, I use for my interpretation remarks made by Alexander of Aphrodisias in his commentary on the *De sensu*, in his *Quaestiones* and in the dubious treatise *Mantissa*."

38. ———. 2021. "Aristotle and Alexander of Aphrodisias on Sight as a Relative." In *Encounters with Aristotelian Philosophy of Mind*, edited by Gregoric, Pavel and Fink, Jakob Leth, 99-118.

"Introduction

Most contemporary scholars who have tried to reconstruct Aristotle's perceptual theory have bypassed his remarks on the relational character of perception without taking them into serious consideration. This is perhaps justifiable, since there are very few and scattered passages in the Aristotelian corpus that present perception as a relative. On the other hand, the Aristotelian commentators of late antiquity, and especially Alexander of Aphrodisias, often refer to this fact in their attempt to explain how, according to Aristotle, perception, in general, and sight, in particular, function. Does Alexander simply unravel Aristotle's thought, or does he develop the Aristotelian doctrine in innovative ways? Before I look into Alexander's more detailed account of sight as a relative, let me begin with the scarce relevant evidence found in Aristotle's own works." (p. 99)

39. ———. 2022. "Aristotle and Alexander of Aphrodisias on the Individuation and Hierarchy of the Senses." In *Forms of Representation in the Aristotelian Tradition. Volume One: Sense Perception*, edited by Toivanen, Juhana, 40-65. Leiden: Brill.

"Conclusion

To conclude, both Aristotle and Alexander are well aware of the fact that their aim to individuate and classify the senses is a complicated affair. Indeed, in their attempt to come up with plausible ways of differentiating the senses, they are often faced

with difficulties that undermine the intuitive idea that the senses are easily distinguished from one another. To deal with such difficulties, Aristotle suggests a multiplicity of demarcating criteria as well as a multiplicity of hierarchies, which are later further developed more systematically by Alexander. As we have seen, the role of the criteria for individuating the senses other than the criterion of proper objects proves to be significant, especially in the case of touch, but also in the cases of smell and taste; that is, criteria other than proper objects are significant for individuating three out of the five standard Aristotelian senses. This should be a good enough reason, I think, for reassessing the established view, according to which the one essential Aristotelian criterion for defining and distinguishing the senses is their proper objects. After all, Aristotle and his followers seem to have considered multiple criteria, which allowed them to classify the senses in a complex and rather sophisticated way." (p. 64)

40. Jackson, J. D. 1999. "From Alexander of Aphrodisias to Young and Airy." *Physics Reports* no. 320:27-36.

Abstract: "A didactic discussion of the physics of rainbows is presented, with some emphasis on the history, especially the contributions of Thomas Young nearly 200 years ago. We begin with the simple geometrical optics of Descartes and Newton, including the reasons for Alexander's dark band between the main and secondary bows. We then show how dispersion produces the familiar colorful spectacle. Interference between waves emerging at the same angle, but traveling different optical paths within the water drops, accounts for the existence of distinct supernumerary rainbows under the right conditions (small drops, uniform in size). Young's and Airy's contributions are given their due."

41. Johnstone, Mark A. 2015. "Aristotle and Alexander on perceptual error." *Phronesis. A Journal for Ancient Philosophy* no. 60:310-338.

Abstract: "Aristotle sometimes claims that (i) the perception of special perceptibles by their proper sense is unerring. This claim is striking, since it might seem that we quite often

misperceive things like colours, sounds and smells. Aristotle also claims that (ii) the perception of common perceptibles (e.g. shape, number, movement) is more prone to error than the perception of special perceptibles. This is puzzling in its own right, and also places constraints on the interpretation of (i). I argue that reading Alexander of Aphrodisias on perceptual error offers an understanding of Aristotle that can help us to make good sense of both of Aristotle's claims."

42. Jurasz, Isabela. 2021. "Destiny, Nature and Freedom According to Bardaisan and Alexander of Aphrodisias: An Unknown Aspect of the Controversy Against Determinism." In *Women's Perspectives on Ancient and Medieval Philosophy*, edited by Chouinard, Isabelle, McConaughy, Zoe, Medeiros Ramos, Aline and Noël, Roxane, 133-159. Cham (Switzerland): Springer.

Abstract: "The relationship between Bardaisan the Syriac (150–221) and Greek philosophy remains the object of several hypotheses. In the past, Bardaisan's teaching has already been compared with Stoicism and Platonism. Some points in common with Aristotelianism have only been recently suggested by scholars. The present article provides an in-depth analysis of a doctrinal theme for which Bardaisan was well known in the Greek-speaking world: his anti-fatalist polemic deployed in the *Book of the Laws of Countries*. In this dialogue, in the course of which his disciples put forward various questions, Bardaisan's answers show a certain resemblance to the theses of Alexander of Aphrodisias' treatise *On Fate*, written against the determinism supported by the Stoics. A detailed analysis of the two texts reveals the extent of the similarities (and differences) between them, particularly in the approach to the notions of nature, freedom, and destiny or fate."

"MS Ambrosianus Q74 sup. is a codex in minuscules from the tenth century, containing miscellany of extracts mainly taken

from patristic sources and with questions relating soul as its dominant theme." (p. 103)

(...)

"There remains the first and longest text attributed to Alexander (fols 167v-172r), the subject of the present article. It is headed 'Alexander of Aphrodisias's selections from the definitions given in Aristotle' .6 It does indeed take the form of a series of definitions, in what at first seems, apart from some clustering of terms in related areas, a random sequence.

Closer inspection however shows that the sequence reflects the manner of composition. The compiler has apparently gone through the Corpus Aristotelicum, work by work, extracting from Aristotle's text definitions of terms mentioned there. With a few minor exceptions the sequence of terms defined simply reflects the sequence in which they appear in Aristotle's own text. This explains the occurrence of several definitions of the same term. It also explains why the definitions of virtuous and vicious moral states come in two separate sequences." (p. 104, notes omitted)

44. Kessler, Eckhard. 2011. "Alexander of Aphrodisias and his Doctrine of the Soul: 1400 Years of Lasting Significance." *Early Science and Medicine* no. 16:1-93.

Abstract: "This piece of work intends to shed light on Alexander of Aphrodisias from the second-century Aristotle commentator through the history of Aristotelian psychology up to the sixteenth century's clandestine promoter of the new philosophy of nature. In the millennium after his death the head of the Peripatetic school in Athens served as the authority on Aristotle in the Neo-Platonic school, survived the Arabic centuries of philosophy as Averroes' exemplary exponent of the mortality of the soul and as such was not considered worthy of translation by the Latin Scholastics. This attitude changed only in the Late Middle Ages, when the resistance against Averroes grew fierce and Alexander emerged as the only Aristotelian alternative to him. In 1495 his account of Aristotle's psychology was translated and published and the underlying principles of a natural philosophy, based on sense perception and exempt

from metaphysics, became accessible. The prompt reception and widespread endorsement of Alexander's teaching testify to his impact throughout the sixteenth century."

45. King, Daniel. 2010. "Alexander of Aphrodisias' 'On the Principles of the Universe' in a syriac adaptation." *Lè Muséon* no. 123:159-191.

"The seventh century Syriac manuscript BL Add.14658 is a wide-ranging collection of texts of mostly non-Christian origin(1)." (p. 159)

(...)

"The present study concerns another of the texts in this important collection, namely that which is entitled *A treatise concerning the causes of the universe, written by Mar Sargis, priest of Rish Ayna, according to the view of Aristotle the Philosopher, that it is a sphere*(5).

Earlier work on the manuscript and on Sergius assumed that this was an original work of the Syrian's(6). Only in 1994 was the text correctly identified by Dana Miller as an adapted version of a work by Alexander of Aphrodisias(7), otherwise known only in an Arabic version entitled *Alexander of Aphrodisias' treatise on the theory concerning the Principles of the Universe according to the philosopher Aristotle's opinion* (more generally referred to as the Mabadi'(8). This Arabic text was edited originally by Badawi(9), and more recently in a much improved edition in 2001 by Charles Genequand(10), following closely on the heels of an important study of this and related texts by Prof. Endress(11).

The present offering seeks to complement the critical Syriac text published in the present volume by indicating the characteristics of the adaptation and by locating Sergius' treatment of it within the broader currents of cosmological and theological concern among educated Greeks and Syrians of his era." "In this paper, I argue that Alexander, while he knows the *Parv. nat.* as we know it, has no very good solution to the problems of demarking *Parv. nat.* from *De an.*, on the contrary, his concern is the integration of *Parv. nat.* into *physikê*, and, to boot, a fairly rigid view of the structure of what is happening in *Parv. nat.*, which undersells the flexibility and breadth of the work. However, what Alexander does bring to the table is a

consuming interest in *anathymiasis*, which, while not prominent on the surface of *Parv. nat.*,

is certainly to be found there. Given Alexander's interest in the *Meteor.*, where Aristotle does make extensive use of *anathymiasis* to explain everything from lightening to the eructations of the earth, this emphasis in his commentary is hardly surprising. This emphasis is Alexander's own take on the way sensation is treated in the *Parv. nat.* as opposed to in *De an.*, and puts a process in the centre of his interpretation which is at once material, but also formal. Not only that, it is a process that happens both in living

things, and outside, that is to say, both serving the ends of living things, and as a blind natural phenomenon.

Anathymiasis achieves two noteworthy aims in terms of its explanatory power: it anchors life in the material world, and, as the change of state of food, is the formation of the living thing itself. This paper concentrates on *anathymiasis* in Alexander's reading of *De sens.*, and investigates the extent to which he is being faithful to Aristotle." (p. 135)

47. Koch, Isabelle. 2021. "How to Limit Fatalism? A Comparison Between Alexander of Aphrodisias and Bardaisan." In *Women's Perspectives on Ancient and Medieval Philosophy*, edited by Chouinard, Isabelle, McConaughy, Zoe, Medeiros Ramos, Aline and Noël, Roxane, 161-167. Cham (Switzerland): Springer.

Abstract: "Alexander of Aphrodisias and Bardaisan, at the end of the second/beginning of the third century CE, are part of a cultural context where astrology, beyond popular or civic beliefs, is integrated into a cosmological reflection on the principles of reality. In such a context, they analyse the concepts of nature and free choice with the project of limiting the influence of fate, in the face of adversaries who submit everything to destiny (the Chaldeans for Bardaisan, the Stoics—and perhaps other deterministic currents—for Alexander). In both cases, the aim is not to deny but to recognise the causal power of fate, while nonetheless assigning it to a particular sphere of reality rather than the whole. In both cases, too, it is

mainly through the relations between nature, fate and free choice that this restrictive assignment takes place. Here we will study, regarding a few points, the different strategies by which these two authors fit into the ancient anti-fatalist tradition and contribute to the emergence of the idea of free will in late antiquity."

48. Kotwick, Mirjam. 2016. *Alexander of Aphrodisias and the Text of Aristotle's Metaphysics*. Berkeley: California Classical Studies.

"Aristotle's *Metaphysics* was written in the fourth century BC. But our testimonies about the transmission of Aristotle's writings suggest that the earliest date of an edition containing the 14 books known to us, in the order known to us, is the first century BC. Worse still, our manuscript tradition containing Aristotle's *Metaphysics* begins with the transliteration process in the ninth century AD: *Metaphysics* manuscripts of an earlier date did not survive. This means that our direct access to the *Metaphysics* begins about 1200 years after it was written." (*Introduction*, p. 11)

(...)

"The present study analyzes Alexander's commentary as a textual witness to Aristotle's *Metaphysics*. It thereby pursues two main objectives, which correspond to two different ways in which Alexander's commentary provides information on the *Metaphysics* text. The first objective is to analyze how the *Metaphysics* text Alexander used when composing his commentary relates to the versions of the direct transmission, α and β , and to their common ancestor $\omega^{\alpha\beta}$. A clear picture of how these versions interrelate will enable us to use the readings we can extract from Alexander's commentary more effectively. The second objective is to investigate the effects that Alexander's commentary had on the transmission of the *Metaphysics* text. Alexander's impact on the *Metaphysics* text can be identified through words or phrases present in the *Metaphysics* text that were not actually written by Aristotle but were adopted into the text from Alexander's commentary. Such traces of contamination reveal to us the dynamics that shaped

the text we read today, and hence can improve our understanding of the textual history of the *Metaphysics*." (p. 12)

49. ———. 2021. "Aristotle, *Metaphysics* A -10, 993a13-15. A new reading and its implication for the unity of book Alpha." *The Classical Quarterly* no. 71:183-188.

Abstract: "This article argues for an emendation in Aristotle's *Metaphysics* A 10, 993a13–15. The emendation is based on a hitherto overlooked reading preserved in Alexander of Aphrodisias' commentary on A 7. First, the article problematizes the reading of the

Metaphysics manuscripts in terms of syntax, diction and content. Second, it shows that Alexander's reading is free of all three problems. Third, it argues for the originality of Alexander's reading according to the principle *utrum in alterum abiturum erat?* and

based on the fact that the new reading reveals a subtle didactic link between A 7 and A 10 that sheds new light on the argumentative architecture of *Metaphysics* Book A."

50. Krause, Katja. 2015. "Transforming Aristotelian Philosophy: Alexander of Aphrodisias in Aquinas' early anthropology and eschatology." *Przegląd Tomistyczny* no. 21:175-217.

"As is well known, almost all ancient Greek and Arabic Peripatetic works following the footsteps of Aristotle's psychology and ethics were opposed to some aspects of traditional Christian doctrines of the human soul, intellect, and ultimate happiness. Alexander of Aphrodisias - the most influential Hellenistic commentator on the corpus Aristotelicum, who flourished around 200 AD - presents no exception to this picture."

(...)

"In fact, Aquinas' treatment of Alexander's thought will no longer seem paradoxical if examined in light of the two kinds of transformation just outlined.

For, as will emerge, whenever Aquinas implements an anchored transformation of Alexander's thought, he disapproves of it on the grounds of its irreconcilability with Christian doctrine. In contrast, whenever Aquinas implements a dissociated transformation of his thought, he approves of it on the grounds of usefulness for Christian doctrine, since the formal-structural elements from Alexander's conception of ultimate happiness serve in allowing him to conceive of the face-to-face beatific vision by way of ultimate conjunction. To the best of my knowledge, the particular nature of Aquinas' transformations of Alexander of Aphrodisias' thought have not yet been the subject of a detailed study.

The purpose of my paper is thus to provide such a study and to show how and why Aquinas treats Alexander's conceptions of the human soul, intellect, and ultimate happiness in such a twofold way." (pp. 178-179, two notes omitted)

51. Krayer, Jill. 1991. "Alexander of Aphrodisias, Gianfrancesco Beati and the Problem of *Metaphysics* α ." In *Renaissance Society and Culture. Essays in Honor of Eugene F. Rice, Jr.*, edited by Monfasani, John and Nusto, Ronald G., 137-160. New York: Italica Press.

"Book α of Aristotle's *Metaphysics* has troubled scholars since Alexander of Aphrodisias composed his commentary in the second century A.D. Doubts as to the authenticity of this unusually short book (less than four columns in the Bekker edition), whose numbering seems to classify it as an afterthought to the far more substantial Book A, must have been circulating even earlier: Alexander felt it necessary to argue that α was indeed written by Aristotle, on grounds of both style and content." (p. 137)

(...)

"The situation changed in 1527 when Alexander of Aphrodisias' commentary on the *Metaphysics* became generally available in the Latin translation of Juan Gines de Sepulveda.(18)" (p. 141)

(...)

"More interesting is the case of Gianfrancesco Beati, who used Alexander's comments, or at any rate some of them, as the basis for a new theory of a. In 1543, Beati, a Dominican professor at the University of Padua, published a treatise in which he attempted to demonstrate that Metaphysics a was in reality the preface to Physics II.(26)" (p. 143)

Alexander of Aphrodisias' metaphysics: Annotated bibliography of the studies in English: Kup - Sch

Bibliography

1. Kupreeva, Inna. 2003. "Qualities and bodies: Alexander against the Stoics." *Oxford Studies in Ancient Philosophy* no. 25:297-344.

Abstract: "The goal of this paper is to examine the relation between the Stoic notion of quality and Aristotelian form on the basis of some discussions in Alexander of Aphrodisias, the leading Peripatetic of the late second century AD, who expended a considerable effort on criticism of the Stoic system, while recognizing a number of shared goals and principles."

2. ———. 2004. "Alexander of Aphrodisias on Mixture and Growth." *Oxford Studies in Ancient Philosophy* no. 27:297-334.

"The discussion of mixture and growth by Alexander of Aphrodisias presents special interest in this respect, as he uses both topics in order to articulate the key concepts of Aristotelian metaphysics of hylomorphism, such as form and matter of individual substance identity, and continuity through change.

The goal of this paper is to study these concepts as presented by Alexander in his polemic against the Stoic theory of mixture and in his elaboration of Aristotle's analysis of growth. The first part of the paper has to do with mixture. I show that Alexander's criticism of the Stoic theory of total pervasion is

based on his idea that ingredient qualities cannot be individuated in a mixture because in a mixed state they lose their specific identities on which their spatio-temporal continuity depends. The second part is devoted to Alexander's account of growth, which elaborates on the Aristotelian thesis of persistence of form by spelling out some ontological constraints on the concept of 'flowing matter' in the account of material continuants. Both discussions have a bearing on the concept of individual substance construed in terms of Aristotelian

hylomorphic theory, and show differences between treatments of the individual in the Stoic and Aristotelian systems." (pp. 297-298)

3. ———. 2004. "Aristotelian dynamics in the 2nd century school debates: Galen and Alexander of Aphrodisias on organic powers and movements " In *Philosophy, Science and Exegesis in Greek, Arabic and Latin Commentaries: Volume 1*, edited by Adamson, Peter, Baltussen, Han and Stone, Martin William Francis, 71-95. London: London: Institute of Classical Studies, University of London.

"This paper has to do with the explanation of the nature of organic movements by Galen and Alexander. I shall avoid the controversial subject of direct contacts between the two men,⁽¹⁾ and focus instead on the analysis of some doctrinal parallels in their respective use of Aristotelian background. A particular question to be examined in each case is how the material constitution of living beings and operation of lower living functions is explained.

This question has been recognised as important at all periods of history of ancient philosophy and medicine." (p. 71)

(...)

"The paper falls into three parts. I begin by looking at the relation of the concepts of organic and inorganic in the explanation of the mechanism of growth as found in the Aristotelian corpus, and identifying some problems left unresolved by Aristotle that were taken up by later thinkers. In

the second part, I review Galen's discussion of the nature of organic powers in *On natural faculties*, reconstructing some theoretical motives behind his use of Aristotle's theory of elements and mixture as a part of his physiological doctrine. In the third part, I focus on Alexander's explanation of the mechanism of growth, and discuss the role of his version of the theory of elements in his exposition of the concepts of power and motion in Aristotle's system of natural philosophy." (p. 72)

4. ———. 2010. "Alexander of Aphrodisias on Form: A Discussion of Marwan Rashed, *Essentialisme*." *Oxford Studies in Ancient Philosophy* no. 38:211-249.

"Marwan Rashed's new book is the first monograph-length discussion of Alexander's theory of form. The author is sensitive to the problem of sources. Taking his stand against Zeller's view of Alexander as a line-by-line commentator without a sustained

philosophical agenda of his own, he challenges the very assumption that the commentaries cannot be taken as evidence for Alexander's original philosophical position. He claims that commentaries often provide more insight into this philosophy than the opuscula and school treatises, where the pressure of pedagogical and expository tasks occasionally leads to simplifications.

In his discussion of the central problem, Rashed makes use of relevant texts taken from all over the Alexandrian corpus, including commentaries and school treatises, authentic works and testimonia, in Greek and in Arabic. Many of these texts are little known and some only recently discovered. One particularly important discovery seems to be that of the Byzantine scholia in MS Paris. Suppl. Gr 643 which, Rashed argues, are excerpted from Alexander's lost Physics commentary.⁽¹⁰⁾ Rashed appends a number of new annotated translations into French, with many valuable textual and exegetical suggestions. However, the main goal of the book is not the study of the texts as such, but of Alexander's tackling of the tension between the individual substance and substance-form in Aristotle's metaphysics." (p. 214)

(10) An edition of the fragments is forthcoming as M. Rashed (ed., trans., comm.), *Alexandre d'Aphrodise: Commentaire perdu à la 'Physique' d'Aristote (livres IV–VIII). Les Scholies byzantines* (Berlin, 2010).

5. ———. 2012. "Alexander of Aphrodisias and Aristotle's 'De anima': What's in a commentary?" *Bulletin of the Institute of Classical Studies* no. 55:109-129.

Abstract: "A study of testimonia for Alexander's lost commentary on Aristotle's *De anima* can shed new light on his interpretation of Aristotle. Two cases are discussed. (1) Alexander reads *De anima* 3.12 (434b3-8) as applying teleological explanation of soul's powers to the souls of heavenly bodies, which in his own treatise *De anima* he excludes from the scope of psychology.

Inclusive reading agrees with Alexander's position in other writings and must be his considered view. (2) Philoponus

reports a Platonist (probably Numenius') exegesis of *De anima* 2.2 (413bl 1-13). Alexander's argument against it, with parallels in his other psychological writings, provides evidence that his controversial definition of soul as a power supervenient on elemental mixture is due, in part, to his polemic against Platonist readings of Aristotle's theory of soul and soul's powers."

"This paper is a report on work in progress which will hopefully lead to a collection of testimonia for Alexander's lost commentary on *De anima*. A reconstruction of this commentary was once contemplated by Paul Moraux, who printed a partial collection of fragments as an appendix to his dissertation based monograph on the intellect. (1) Later on, Moraux outlined some problems and prospects of a more comprehensive study, in an essay published as a section devoted to Alexander's *De anima* commentary in the posthumous volume III of *Aristotelismus bei den Griechen* devoted to Alexander, published by J. Wiesner and R. W. Sharples in 2001(2) I would like to address some preliminary questions concerning the scope and tasks of such a study, including, in particular, the questions of the sources available for the reconstruction of this commentary and of the potential interest of such a study for the understanding of Alexander's views on the soul. I shall begin with a brief survey of sources which should make it clear that there is room for both kinds of questions, and then discuss two samples of Alexander's argument in the commentary which hopefully will provide some moderately reassuring answers." (p. 109)

(1) P. Moraux, *Alexandre d'Aphrodise: Exégète de la noétique d'Aristote* (Liège; Paris 1942) 205-21.

2 According to J. Wiesner's introduction, the section on *De anima* dates back to the 1960s (P. Moraux, *Der Aristotelismus bei den Griechen Von Andronikos bis Alexander von Aphrodisias III: Alexander von Aphrodisias*, ed. J. G. Wiesner (Berlin 2001) v).

6. ———. 2016. "Aristotelianism in the Second Century AD: Before Alexander of Aphrodisias." In *Brill's Companion to the*

Reception of Aristotle in Antiquity, edited by Falcon, Andrea, 138-159. Leiden: Brill.

"The second century AD sees a revival of Aristotelianism. Its culmination is the activity of Alexander of Aphrodisias whose monumental literary legacy provided later commentators with an authoritative school reading of Aristotle.

Presence of Aristotelian ideas is also perceived in the works of philosophers of other schools, such as Stoics, Platonists, and Epicureans, who debate with Peripatetics,(1) and outside school philosophy, in scientific and medical writings such as the works of Galen and Ptolemy, where we find both adaptation and criticism of various Aristotelian doctrines. Peripatetic philosophy is popular with the Roman elite.(2) Its ideas and characters make it to the jokes of urban wits.(3)" (p. 138)

(...)

"The most striking feature of this period, not documented before, is a thorough and detailed knowledge that all the Peripatetic philosophers have of the Aristotelian corpus. Most often dialectical engagement with problems or criticisms happens in the course of interpretation of an Aristotelian text or argument, and search for solution usually mobilizes the full theoretical arsenal of Aristotle's logic and ontology, whether the problem under discussion belongs to physics, logic, or ethics, to use the Hellenistic classification. The prevalence of Aristotelian method and Aristotelian ontology in all these areas puts Hellenistic agenda in a new perspective.

This is the same approach that is documented much more fully in the work of Alexander of Aphrodisias, and it is possible to say that it has been formed during the second century AD." (p, 156)

7. ———. 2018. "Aporia and Exegesis: Alexander of Aphrodisias." In *The Aporetic Tradition in Ancient Philosophy*, edited by Karamanolis, George and Politis, Vasilis, 228-247. Cambridge: Cambridge University Press.

"In this essay it is not my goal to discuss *aporia* as a genre in Alexander's literary work. Instead I would like to probe into a somewhat different area, that of Alexander's thinking about the *aporia* as a part of philosophical method. This is not an easy task, since despite the ubiquity of aporetic contexts in Alexander's work, there is no single place where we can find the statement of his views on this subject. Is there a specific role for *aporia* in Aristotle's scientific methodology, according to Alexander? I will present an answer in the affirmative and try to show, using several important texts, that for Alexander, *aporia* is a vehicle of dialectical method, and this method itself has an important formative and auxiliary role in sciences – helping to elucidate and clarify key concepts and arguments, respond to objections, and bring out conceptual problems. This approach informs Alexander's exegesis of Aristotle's *aporiai* in *Metaphysics Beta*. I begin in section one with a survey of Alexander's Aristotelian background.

In section two, I present Alexander's view on the methodological function of dialectic. In section three, I show how this function is fulfilled by an *aporia* in relation to first philosophy." (p, 228, a note omitted)

"In this paper, I would like to provide an outline of Alexander's reading of Aristotle's argument which will allow us to see how his position stands in the light of contemporary discussions of Aristotle's argument. After a very brief summary of the main points of Aristotle's argument in Γ 4 in § 1, I discuss (in § 2) Alexander's interpretation of elenctic demonstration (with special attention to his distinction between the *elenchos* proper and the more general argument from signification), and in § 3, I try to show that Alexander develops his own version of unrestricted essentialist interpretation of Aristotle's argument which has some philosophical merits." (pp. 287-288)

9. Laks, André. 2018. "Destructible Worlds in an Aristotelian Scholion (Alexander of Aphrodisias' Lost Commentary on Aristotle's *Physics*, Frag. 539 Rashed)." *Elenchos* no. 39:403-420.

Abstract: "Does Anaxagoras admit that the world is destructible? Aëtius' doxographical handbook says as much, and so does a doxographical scholion derived from Alexander of Aphrodisias' lost commentary on Aristotle's *Physics* (Frag. 539 Rashed) according to the transmitted text. However, because of other difficulties occurring in the same scholion, Rashed was led to correct not only this text, thus making it contradict Aëtius' testimony, but also the entry dedicated to Plato. My article suggests that while Rashed's corrections are superfluous, the problems that triggered them are of great interest for the history of the doxographical tradition, for the way in which this tradition was used by Alexander of Aphrodisias and Simplicius in their commentaries on Aristotle's *Physics* and, last but not least, for the understanding of the difficulties that ancient interpreters had to confront when they had to make sense of the lines now known as Anaxagoras B12 DK – difficulties that modern interpreters have still to confront."

"Basing his theory of the soul on Aristotle's theses, Alexander cannot pretend to be unfamiliar with the doctrine of the Stoics who offered a powerful alternative to the Aristotelian version. This holds true particularly of the concept of *phantasia*, since they made it central to the theory of knowledge, and so forced Alexander to elaborate a notion more detailed and, perhaps, more clear-cut than what we find in Aristotle.(1) No wonder that in doing so he incorporates much of the views of the rival school into his account. Apart from remarks scattered throughout the corpus, Alexander discusses this problem in a relatively long portion of his *de Anima*, where he follows the line of Aristotle's *de Anima* III 3.(2) As my aim is to examine the role and meaning of some special terms, I am going to dwell mainly on this text, although, when necessary, relevant passages elsewhere will also be examined." (p. 33)

(1) Aristotle's own account is notoriously complex. New Unitarian approaches have been proposed by G. Watson, "Phantasia in Aristotle *de Anima* III 3", *CQ* n.s. 32, 1982, 100-113, and H.J. Horn, "Aristote, *Traité de l'âme*, III 3, et le concept aristotélicien de phantasia", *Les Etudes Philosophiques* 2, 1988, 221-235. As my purpose is not to examine Aristotle's concept, it is unnecessary to list even the main items of the vast literature.

(2) 66.9-13A3 Bruns, *CAG Suppl.* II,Γ A translation of Alexander's *de Anima* has been offered in A. Fotinis, *The de anima of Alexander of Aphrodisias. A translation and commentary*, 1979. His own treatment of *phantasia* is to be found on pp. 262-274. For an evaluation of his work which I accept, see P. Donini, *Le scuole, l'anima, l'impero: la filosofia antica da Antioco a Plotino*, 1982, 247 n. 50. According to R.B. Todd, "Two displaced passages in Alexander of Aphrodisias' *de Anima*", *Eranos* 74, 1976, 28-31, 72.5-13 and 73.3-7 have been

displaced from its original place in all our manuscripts of the whole treatise. But this fact, I believe, does not alter my point.

"The logic and metaphysics behind Alexander's notion of fate have been much discussed in the literature about ancient views on determinism. By contrast, the ethical and epistemological aspects have received considerably less attention.

In what follows I shall concentrate, first, on the way the various definitions of ἐφ' ἡμῖν, what is "up to us", culminate in the account of character states involving knowledge, and then, second, on the inner conditions that make free action possible. It will involve a discussion of the appropriate cognitive and conative states alike. My aim is to give a unitarian explanation in the sense that I shall try to show that the accounts we find in the *Mantissa* and in *On the Soul* are by no means exclusive of one another. As a consequence, I shall have much less to say about the metaphysical conditions of fate and free action or about the logic behind them." (P. 152)

12. Long, Anthony A. 1970. "Stoic Determinism and Alexander of Aphrodisias *De Fato* I-XIV)." *Archiv für Geschichte der Philosophie* no. 52:247-268.

"There is more similarity than difference between the views of ps,~Plutarch and Calcidius and those of the Stoics. On Alexander the Stoic influence is only a little less strong.

He too has been influenced by the Community of language and doctrine characteristic of the contemporary philosophical climate.

In such circumstances it is not surprising that his and other attacks on determinism are expressed in anonymous terms.

Are we then to conclude that Alexander is not attacking 'the Stoics' ? The answer must, I fear, be equivocal. He attacks

'those who say that all things are determined', and he does so by focussing attention on certain Stoic theses. But unless we assume, what is improbable, a more extreme form of Stoic determinism than that known to us as Chrysippus' doctrine, Alexander cannot be said to direct the *De fato* as a whole against Stoicism. Many of the views he attacks will have been held by Stoics, but Alexander does not attempt a systematic presentation and critique of Stoic determinism." (p. 268 a note omitted)

"The book of Alexander's ethical problems has been edited by I. Bruns.(1)

(...)

Given that the book has received comparatively little study, and given the aims of ANRW, it seems best to present an analytical account of its contents, as an invitation to and an instrument of future research, which would include a study of Alexander's terminology and of the background (Peripatetic, Stoic, other) of each of the problems, and eventually yield a full commentary. While the book is far from being an epitome of Peripatetic doctrine in the manner of Arius Didymus, its treatments of virtue and of pleasure are fairly detailed, its treatments of responsibility and of the objects of choice somewhat less so. As widely separated texts treat of the same or allied themes, and as there is no need to suppose that the order found in our texts comes from Alexander, I will group the problems under these main headings." 15. ———. 1994. "Alexander on Aristotle's species and genera as principles." In *Aristotle in Late Antiquity*, edited by Schrenk, Lawrence P., 76-91. Washington (D. C.): The Catholic University of America Press.

"It is commonly held, and correctly held, that the arguments of *Metaphysics 3* are in large part dialectical, that is, that they proceed from premises that are plausible or agreed upon, but not known to be true. And it is notorious that the arguments of *Metaphysics 3* come to contradictory conclusions. So one might say, Why look here for Alexander's views on the status of genera and species as principles? My answer is, I want to turn the difficulty into an opportunity. When Alexander handles dialectical material, he tries, at times, to sort out the wheat from the chaff, the sound from the unsound. He does not always limit himself to explaining the arguments on their own terms and within their dialectical assumptions.

On the contrary, he often gives signs of which assumptions he regards as merely dialectical, and which he regards as more than merely dialectical.

To observe Alexander's handling of these largely dialectical arguments will show us something about his philosophical gut instincts." (pp. 76-77)

16. Mansfeld, Jaap. 1988. "Diaphonia, the argument of Alexander *De fato* chs. 1-2." *Phronesis. A Journal for Ancient Philosophy* no. 33:181-207.

"In the present paper, I wish to argue that the prologue [to *De fato*] consists of chs. 1-2 and that the exposition of the Aristotelian view only begins at ch. 3. Chs. 1-2 provide a continuous and coherent argument which serves to introduce and justify Alexander's undertaking as a whole. We should not confuse the *exordium*, containing the dedication of the monograph to the emperors which indeed does not go beyond ch. 14 (and is recalled in the final chapter, or epilogue), with the introduction in the proper sense of the word, which consists of both *exordium* and *status quaestionis*. 18. McGinnis, Jon. 2006. "Positioning Heaven: The Infidelity of a Faithful Aristotelian." *Phronesis. A Journal for Ancient Philosophy* no. 51:140-161.

Abstract: "Aristotle's account of place in terms of an innermost limit of a containing body was to generate serious discussion and controversy among Aristotle's later commentators, especially when it was applied to the cosmos as a whole. The problem was that since there is nothing outside of the cosmos that could contain it, the cosmos apparently could not have a place according to Aristotle's definition; however, if the cosmos does not have a place, then it is not clear that it could move, but it was thought to move, namely, in its daily revolution, which was viewed as a kind of natural locomotion and so required the cosmos to have a place. The study briefly outlines Aristotle's account of place and then considers its fate, particularly with respect to the cosmos and its motion, at the hands of later commentators. To this end, it begins with Theophrastus' puzzles concerning Aristotle's account of place, and how later Greek commentators, such as Alexander of Aphrodisias, Themistius and others, attempted to address these problems in what can only be described as *ad hoc* ways. It then considers Philoponus' exploitation of these problems as a means to replace Aristotle's account of place with his own account of place understood in terms of extension. The study concludes with the Arabic Neoplatonizing Aristotelian Avicenna and his

novel introduction of a new category of motion, namely, motion in the category of position. Briefly, Avicenna denies that the cosmos has a place, and so claims that it moves not with respect to place, but with respect to position."

Abstract: "Chapters III–IV of *De mixtione* represent a new beginning of the treatise where the Stoics, the main target of Alexander's critical assessment of preceding theories of blending, are presented in a more systematic manner than in the first chapters. Closer reading reveals that the context of the Stoic theory which Alexander is reporting is most probably the ontological query into the unity of the cosmos on its different levels in which the challenge is to distinguish blendings from other types of unified objects.

This can be done thanks to corresponding common notions, although these notions cannot stand for a firm and detailed grasp of the unified objects in question but are rather the means to make one acknowledge the existence of blending as a special kind of unity (between fusion and juxtaposition). The existence of this kind of unity is then supported by examples of analogical processes in which a result is achieved by the

mutual interaction of two bodies upon each other or their mutual help. The conclusion should be that the Stoics' effort to present a special kind of unity was part of their general account of the unity of the world which however did not include a claim about the blending of the first principles (insofar as cosmic pneuma is not such a principle)."

20. Militello, Chiara. 2023. "The *paschein* and *pathê* of the Earth and Living Beings in Aristotle and Alexander of Aphrodisias (*Meteorologica* 1.14)." *Peitho. Examina Antiqua* no. 24:185-200.

Abstract: "In his 2013 monograph on *Structure and Method in Aristotle's Meteorologica* [*], Malcolm Wilson has shown both that Aristotle conceived of meteorological phenomena as analogous to the bodily processes of animals, and that for the Stagirite the sublunar world should not be seen as a single body, but rather as composed of many different individuals. However, Wilson did not articulate the relationship between these two theories—that is, he did not answer the following question: how is it possible for the Earth to behave like an animal if it is not a single body? This paper argues that the answer to this question lies in the Aristotelian statement about the different *paschein* of the Earth and animals. In fact, in the chapter of *Meteorology* dedicated to climatic changes (1.14), Aristotle, after comparing such changes to the maturing and ageing of living organisms, states that 'only, in the case of the bodies of plants and animals being affected does not occur in each part separately, but it is necessary for the being to mature and decay all at once, whereas in the case of the Earth this occurs in each part separately, due to cooling and warming' (351a.28-31). In his commentary, Alexander of Aphrodisias reiterates that the difference between the changes of the Earth and those of living organisms concern the way in which these different subjects undergo affections (*pathê*). The concept of *paschein/pathos* is thus fundamental to understanding how Aristotle conceives of biological analogies, which play a key role in his meteorology: as the affections of maturing and corruption show, parallels with organic processes can be found in meteorological phenomena, but always at the level of the individual parts of the Earth. Although the sublunary world can be understood in organic terms, this world is not a 'cosmic animal', but rather a multiplicity of 'regional animals'. To corroborate this thesis, this paper addresses several related questions, including: the mechanics of environmental changes according to Aristotle; the differences between the regions of the Earth; the lexicon used in *Meteorology* to refer to the transformations of the Earth; the personal notes that Alexander adds to Aristotle's discussion. Finally, the first modern translation of the relevant section of Alexander's commentary is also provided here."

"in order to harmonize the conflicting views that impair the Aristotelian definiens of the soul, at least two paths suggest themselves. the first is to recast the ὄργανον of the soul so as to "soften" its separation from its immaterial user. To such effect, a suitably redefined notion of ὀργανικόν may prove useful. the second way is to endorse the instrumental characterization of the body, but understanding the soul in such a way that it can do duty as "first actuality," despite being separated from its instrument. the first line of argument was supported by Alexander of Aphrodisias, who sought to release the adjective 'ὀργανικόν' from the dualist overtones it usually evokes. even today the Alexandrian reinterpretation is held to be the most natural reading of that qualification in the definiens.(12) the second line, which focuses on the ontology of the user rather than that of the instrument, flourished in Neoplatonic quarters. Although Philoponus willingly accepted the lexical innovation introduced by Alexander,(13) his efforts (as well as those of the Ps. Simplicius) were aimed at reinterpreting the Aristotelian notion of "first actuality" (ἐντελέχεια ἡ πρώτη), that constitutes the other pole of the definiens. Within the Neoplatonic conceptual framework, Philoponus was able to show that in spite of its separation and ontological subsistence, the soul behaves as the true entelechy of the ship, steering it all along its journey. in the following pages, our goal will be confined to reconstructing the chief features of both exegetical proposals, in order to assess their strengths and weaknesses." (p. 548)

22. Modrak, Deborah. 1993. "Alexander on *Phantasia*: A Hopeless Muddle or a Better Account." *Southern Journal of Philosophy* no. 31:173-194.

"Alexander is in an excellent position to give a rich and compelling account of phantasia (φαντασία). As the leading exponent of Peripatetic philosophy in the second century, he is heir to Aristotle's perceptive insights and systematic analysis of psychological phenomena. Aristotle makes phantasia the faculty for sensory representation, which is required for memory and other higher cognitive processes. In the Hellenistic era, the moderate empiricism of the Peripatetics was eclipsed by the empiricist epistemologies developed by the Epicureans and the Stoics; their theories were more radical, clearer, and arguably more defensible. As the immediate stamp of experience upon the senses and intellect, phantasia assumed a critical importance in their attempts to define knowledge and to defend their epistemological positions against sceptical attacks. There is abundant evidence in Alexander's writings that he is sensitive to these debates. His lengthiest treatment of phantasia explores both the psychological and epistemological dimensions.

This analysis, found in the *de Anima*, is detailed and largely satisfactory. All would be well were this the only discussion of phantasia in the extant corpus. But it is not, and what emerges from an examination of Alexander's various treatments of this subject is a chameleon concept that seems to change with each new context." (p. 173, notes omitted)

23. Mouzala, Melina. 2022. "Proclus on the Forms as Paradigms in Plato's *Parmenides*. The Neoplatonic Response to Aristotle and Alexander of Aphrodisias' Criticisms." *Journal of Ancient Philosophy* no. 16:115-163.

Abstract: "This paper sets out to analyze Proclus' exegesis of Socrates' suggestion in *Parmenides* 132d1-3 that Forms stand

fixed as patterns (παραδείγματα), as it were, in the nature, with the other things being images and likenesses of them. Proclus' analysis of the notion of being pattern reveals the impact of the Aristotelian conception of the form as paradigm on his views, as we can infer from Alexander of Aphrodisias' and Simplicius' explanation of the paradigmatic character of the Aristotelian form. Whereas Aristotle and Alexander of Aphrodisias refute the efficient causality of the Platonic Forms and support that μέθεξις is just a metaphor, Syrianus, Proclus and Asclepius defend the Platonic theory, and specifically Proclus, who brings to the fore the multilateral role of the Forms as patterns with regard to the secondary things of this realm."(1)

Second revised edition. First edition London: Duckworth 1990, pp. 463-480.

"Summary.

In this paper I have argued for the following account of the treatment of abstractionism in later antiquity:

(1) Alexander established abstractionism as an interpretation of Aristotle's philosophy of mathematics. Alexander's account was accepted, with insignificant variations, as an interpretation by all subsequent philosophers.

(2) The doctrine of abstractionism was accepted as a true account of ordinary mathematics by Porphyry, Ammonius, and Philoponus, who saw ordinary mathematics as a Platonic bridge from the sensible to the intelligible world.

(3) Iamblichus put forward the doctrine of projectionism as an account of Pythagorean mathematics, which he glorified at the expense of ordinary mathematics; he was followed by Syrianus,

but Proclus transformed projectionism into an account of ordinary mathematics to which he restored its Platonic role.

(4) Simplicius accepted the 'Porphyrean' position on ordinary mathematics, but elevated Pythagorean mathematics, of which he thinks projectionism provides the correct account, to the level of philosophy." (pp. 519-520, a note omitted)

25. Natali, Carlo. 2020. "Determinism and Deliberation in Alexander of Aphrodisias." In *Fate, Providence and Free Will: Philosophy and Religion in Dialogue in the Early Imperial Age*, edited by Brouwer, René and Vimercati, Emmanuele, 137-151. Leiden: Brill.

"In this paper I defend a minority position in contemporary scholarship on Alexander of Aphrodisias with regard to the theme of determinism and his theory of what is up to us. Many modern scholars agree about the following basic points. The first point is that Aristotle did not develop a specific stance on the problem of determinism, given the fact that at the time this problem was not considered a central theme in the philosophical debate. Second, Alexander's position on indeterminism was influenced by the debate in the imperial period and was not merely a precise account of what Aristotle had maintained.

In the third place, indeterminism is a slightly embarrassing position to hold; therefore, it is better to liberate the ancient philosophers from it, as far as possible.

What is more, a strong tendency can be discerned to attribute some form of compatibilism to most of the ancient philosophical schools – which cannot be easily reconciled with the polemics that existed between the schools.

As for me, I think that already in Plato's Academy philosophers began to reflect upon the problem of determinism, freedom and human responsibility, starting out from certain statements in Plato's *Republic* and in book 10 of the *Laws*.⁽¹⁾ As far as Alexander is concerned, I think that his position can be characterised as a kind of "creative orthodoxy", which consists in trying to show the vitality of the Aristotelian viewpoint in the

debate in imperial times. In order to make this clear, I will concentrate on the problem of deliberation and the Peripatetic notion of causality, particularly in relation to chapters 11–15 in Alexander's *On Fate*." (p. 137)

Abstract: "The paper discusses chapters VII–VIII of *De mixtione*, where Alexander argues against the possibility of a Stoic blend. I will show that Alexander offers good reasons in chapter VII to think that the Stoics were committed to co-extension and the preservation of surfaces in a mixture and that these constraints are indeed incompatible.

I will argue further that chapter VIII continues the argument of chapter VII by offering a response on behalf of the Stoics and that the two chapters are a unity. Building on my argument that Alexander's criticism is neither polemical nor confused, I argue that chapters VII–VIII, although employing a different terminology than chapters III–IV, provide an accurate picture of the Stoic theory and that Alexander's criticism is very much to the point."

"IN 1952 Professor Franz Rosenthal discovered in the course of a sojourn in Istanbul that the MS. 127-9 of the Carullah Collection in the Millet Library was a collection of philosophical texts, most of which he obtained on micro-film. He described these texts in an article which appeared in the *Journal of the American Oriental Society* (1955, 75: 14-23) under the title "From Arabic books and manuscripts, V: a one-volume library of Arabic philosophical and scientific texts in Istanbul." As Rosenthal observes, the scribe was named Muhammad b. Hasan b. 'All b. Mu'taql al-Nihmi, was born and brought up and probably also resided in Sa'dah in the Yemen and copied out

most of the texts in 1477-1478, but made additions to the manuscript at least up to 1480. Though the name and the pedigree of the scribe are purely Arabic, the fact that some of the texts included in the manuscript are of Jewish provenience suggests, Rosenthal points out, that he may have been of Jewish origin, a circumstance which he may have tried to conceal. He certainly knew the Hebrew script. Certain of the texts found in the manuscript purport to be translations of treatises composed by Alexander of Aphrodisias. Some of these were unknown up to now either in Greek or in Arabic. I intend to study this group of writings. The first part of this article deals with Galen's critique of the Aristotelian thesis "omne quod movetur necesse est ab aliquo moveri." The second part discusses some relevant opinions of certain commentators and philosophers. I should like to express my gratitude to Professor Rosenthal for having put at my disposal his microfilms of these and other texts contained in the manuscript." (p. 21, two notes omitted)

31. Ramelli, Ilaria. 2014. "Alexander of Aphrodisias: a source of Origen's philosophy?" *Philosophie Antique*:237-289.

Reprinted in I. Ramelli, *Origen, the Philosophical Theologian: Trinity, Christology, and Philosophy-Theology Relation. Selected Studies/Kleine Schriften*, Berlin: de Gruyter 2025, pp. 237-284.

Summary: "Alexander of Aphrodisias and Origen are two semi-contemporary philosophers and teachers of philosophy who composed the same kinds of works. Origen was a Christian philosopher, a disciple of Ammonius Saccas, Plotinus' teacher. It is

very probable that Origen knew Alexander of Aphrodisias' works, which were read at the school of Plotinus, and drew inspiration from them. Many clues support my hypothesis.

For instance, Origen's *Περὶ Ἄρχῶν* in its structure was probably inspired by Alexander's homonymous work. The expression ἦν ποτε ὅτε οὐκ ἦν, very interestingly, was used for the first time exactly by Alexander and Origen; the latter very probably imported it from the philosophical debate on the

eternity of the world into Christian Trinitarian theology. The notion of hypostasis as «individual substance», which becomes technical in Origen and will exert an enormous influence on Christian Trinitarian theology, was present in Middle Platonists and medical theorists of the early imperial age who are very likely to have inspired Origen, and possibly also in Alexander.

Also, Origen seems to have modified the Stoic doctrine of mixture in a way that comes closer to Alexander and his criticism of that doctrine. The concepts of ὕλη/ὑποκείμενον and εἶδος in Origen are clearly influenced by Aristotle and probably by Alexander too. Both the presentation and the refutation of Stoic determinism are very similar in Alexander and Origen. The doctrine of God as Intellect and the whole characterisation of God in Alexander is remarkably similar to that which is found in Origen and is almost sure to have exerted some influence on him. The doctrine of the soul and its existence in a body and the doctrine of the Ideas also reveal impressive parallels in our two philosophers. The contribution of the present research to (hopefully) advancing scholarship also helps to cast light on Origen's relation to Greek philosophy, which is the object of critical debate."

32. ———. 2021. "Bardaisan of Edessa on Free Will, Fate, and Nature: Alexander of Aphrodisias, Origen, and Diodore of Tarsus." In *Women's Perspectives on Ancient and Medieval Philosophy*, edited by Chouinard, Isabelle, McConaughey, Zoe, Medeiros Ramos, Aline and Noël, Roxane, 169-176. Cham (Switzerland): Springer.

Abstract: "Against the backdrop of the relations between Alexander of Aphrodisias and Bardaisan and Origen, and of Diodore of Tarsus' reading of Bardaisan, this article reflects on Bardaisan's ideas towards free will, fate, and nature in the so-called *Book of the Laws of Countries*, based on Bardaisan's *Against Fate*. With reference to the article by Izabela Jurasz on the comparison between Alexander and Bardaisan, I present the main topics that scholarship debates regarding Bardaisan and argue that Eusebius had already found important parallels between Alexander, Barsaisan, and Origen. Attention is paid to the strong affinities on crucial questions (including free will

and eschatology) between Bardaisan and Origen, as established by recent research. These two comparisons—between Alexander and Bardaisan and between Origen and Bardaisan—reinforce one another. Bardaisan’s knowledge of parts of Philo’s oeuvre is also brought to the fore as an issue recently explored and in need of further investigation. Lastly, the article focuses on Diodore of Tarsus’ *Against Fate*, its indebtedness to Bardaisan’s *Against Fate* and generally his anti-astrological, anti-fatalistic arguments (indebtedness represented by arguments and rather unequivocal details), and its reproach to Bardaisan for maintaining the category of “fate,” albeit Christianized.”

33. Rashed, Marwan. 1997. "A « new » text of Alexander on the soul's motion." *Bulletin of the Institute of Classical Studies. Supplement no. 68:181-195.*

"To conclude, then, the historical evolution of the polemics may be summarised as follows:

1. 'Aristotelian' claim of the intellect from without;
2. Atticus attacks the intellect from without because of its inability to move;
3. Aristoteles of Mytilene (as reported by Alexander in C1 [in Sharples]) defends the intellect from without by claiming its ubiquity;
4. Alexander (C2) criticises Aristoteles' solution to Atticus' criticisms and gives an alternative reply to Atticus by accounting for separation in terms of thought processes;
5. Alexander (*In Phys.*) attacks Atticus' vehicle-theory on the grounds that it does not resolve the question at all and alludes indirectly to his previous solution.

Thus, we may conclude that the *De intellectu* is an authentic work of Alexander, but an earlier one than the commentary on the *Physics*." (pp.1 94-195)

Reprinted in R. Sorabji (ed.), *Aristotle Re-Interpreted: New Findings on Seven Hundred Years of the Ancient Commentators*, New York: Bloosbury 2016, pp. 161-177.

"One could claim that for an Aristotelian philosopher, particulars are not a philosophical problem – at least not an epistemological one. For an Aristotelian philosopher daily confronted with Stoic theories of Providence and individuation, however, this was a haunting question. After all, what did Aristotle have to say on the status of the particulars not qua belonging to a species, but qua pure singularities taking place

within the world? I would like to show that even if Alexander is too much of an Aristotelian to have a real theory of the particular, his reaction to his historical context leads him to new insights on this topic. These insights, in turn, constitute a starting point out of which Avicenna and Leibniz developed their ideas about how fatalism could be avoided without giving up the principle that the entire effect corresponds to its full cause. I will try to sketch, in the following pages, the main phases of this long and intricate story." (p. 157)

35. Rist, John M. 1966. "On Tracking Alexander of Aphrodisias." *Archiv für Geschichte der Philosophie* no. 48:82-90.

"We are then back to Alexander, and what we have seen in this study, when combined with such analyses as that of Schwyzer in his article on Plotinus in *Pauly* [RE 21 (1951) cols. 573-574], must lead to the conclusion that Plotinus' attitude to Alexander is much like his attitude to most other writers.

Not only does he not follow him closely, but even where he is criticizing certain theories which occur in Alexander he only

rarely refers clearly enough to the original text to make it certain that he is in fact using

that particular text at all. Plotinus' interest throughout the *Enneads* is almost always constructive. He is not greatly interested in the detailed refutation of the specific theories of particular opponents. He

undertakes such refutations, as with the Aristotelian and Stoic categories in 6.1, to clear the ground. In such examinations — and this applies perhaps particularly to his treatment of the Stoic views of the soul in the fourth *Ennead* — he is often not concerned to destroy a particular view but a particular kind of view." (p. 89)

36. Robert, Aurélien. 2020. "John of Jandun on Sense Perception and Instantaneous Change." In *Philosophical Problems in Sense Perception: Testing the Limits of Aristotelianism*, edited by Bennett, David and Tohivanen, Juhana, 193-212. Cham [Switzerland]: Springer.

Abstract: "The aim of this paper is to show that John of Jandun, a French philosopher active in the first decades of the fourteenth century, defended an interesting interpretation of Aristotle's theory of sense perception. His view on this topic could help us clarify some aspects of the contemporary debate among specialists of the Aristotelian tradition about the dependence of sense perception on physical changes in the medium and the organs. John of Jandun made use, much more than his contemporaries, of Alexander of Aphrodisias' commentary on the *De sensu*, and Averroes' commentaries on the *De anima* and the *Physics*. But his solution seems nonetheless original. This paper will focus on the nature of the changes involved in sense perception. I will try to show (1) that for Jandun sense perception is a kind of relational and qualitative change in the soul, which is not a mere Cambridge change; and (2) that for him sense perception is an activity of the soul, which is not reducible to the reception of a form in the organs."

37. Roreitner, Robert. 2023. "Nous thurathen: between Theophrastus and Alexander of Aphrodisias." *British Journal*

for the History of Philosophy:1-22.

Abstract: "The idea that *nous* comes from without, deriving from Aristotle's *Generation of Animals* II.3, became a key element in late ancient and Medieval accounts of human rationality drawing on Aristotle's *De Anima*. But two very different understandings of the concept were around (often occurring next to each other): either it was taken to refer to the human capacity for thought and its origin outside the natural ontogenetic process; or it was taken to stand for the most perfect act of thought, existing separately as the supreme divinity, and becoming, hopefully, ours at the very climax of human development. This paper shows how these two influential conceptions derive from the work of the two greatest scholars of Aristotle's school, Theophrastus and Alexander of Aphrodisias, respectively. More to the point: it shows that (i) there is an intriguing philosophical story to be told of how the notion developed from one understanding to the other, this being the core of a larger story of *nous* from without in Western thought; and that (ii) this story sheds new light on what was at stake in the early – genuinely Peripatetic – reception of Aristotle's account of *nous* (as contrasted with later, heavily Platonized, interpretations)."

Correction: "When the above article was first published online the *Commentary on Generation of Animals* traditionally attributed to Philoponus was mentioned among Philoponus' genuine works. That mention has now been removed to reflect scholarly consensus that the work was in fact written by Michael of Ephesus."

38. ———. 2025. "Thought 'From Without' The Role of the Agent Intellect in Alexander's 'De intellectu'." *Oxford Studies in Ancient Philosophy* no. 64:1-81.

Preprint to be published in January 2025.

"Interpreters used to understand Alexander's account along the traditional compatibilist (abstractionist) lines. But since the pioneering doctoral dissertation of Paul Moraux on Alexander's noetic, the attention of scholars has been captured by

Alexander's circumspection in describing the role of the agent intellect in his *De Anima*. He analyzes here the development of the 'potential' or 'material' intellect from the state of a pure potentiality to the acquisition of universal concepts, and apparently also of scientific definitions, without any reference to the agent intellect whatsoever (80. 16–86. 6). Such a reference is only made much later at 88. 24–89. 11, where Alexander, in contrast to compatibilist interpreters, seems to ascribe only an indirect role to the agent intellect." "The aim of this paper is to examine the relationship between "causality", "nature", and "fate" in the *De Fato* of Alexander of Aphrodisias. The Greek commentator follows the Aristotelian doctrine on this matter, but it is worth noting that Alexander diverges from the letter of the master on more than one occasion. It is well known that the most important Aristotelian commentators in late Antiquity offer us a detailed reconstruction of the Aristotelian arguments, but also the development of new positions in the framework of very different traditions. The works of Alexander of Aphrodisias in general and his book *De fato* ("On Fate") in particular are one of the best examples of this practice." (p. 319)

41. Salis, Rita. 2018. "The accident and its causes: pseudo-Alexander on Aristotle, *Metaphysics* E 3." In *Proceedings of the XXIII World Congress of Philosophy*, edited by Boudouris, Kostantinos, 297-302. Charlottesville: Philoosphy Documentation Center.

Abstract: "Pseudo-Alexander's commentary in *Metaphysics* E3 is one of the three ancient commentaries which came down to us together with Ascepius's commentary and Pseudo-Philoponus's one, in Latin. Pseudo-Alexander's work, in particular, constitutes the source of interpretation of the Aristotelian text for many modern scholars. In chapter 3 Aristotle shows that there are causes of accidental being, which are generable and destructible without ever being in course of being generated or destroyed. This problem is one of the most difficult and controversial for Aristotle. The thesis is explained by Aristotle with examples concerning past and future events. Pseudo-Alexander considers them as referring to accidental causes. The exegete's explanation of both cases introduces some elements which are totally extraneous to the Aristotelian text, but nevertheless it could be helpful to cast some light on the understanding of the most controversial passages. In the final passage, Aristotle raises the question of what kind of cause

the accident leads to, whether to the material or to the final or to the efficient cause. It is apparently left without an answer. Pseudo-Alexander gives a plausible solution, which is nonetheless probably only partial. The chapter was also examined with reference to the problem of determinism in Aristotle."

42. ———. 2024. "The identification of wisdom with the science of being as being. Unity and universality of Aristotle's *Metaphysics* according to Alexander of Aphrodisias." *Acta Philosophica* no. 33:11-30.

Abstract: "The entire ancient and late antique commentary tradition tends to read Aristotle's *Metaphysics* as a unitary work. According to this reading, one and the same science is developed, culminating in book Λ, containing the famous doctrine of the unmoved mover. The systematic intent of the reading of the *Metaphysics*, which extends to the entire *corpus aristotelicum*, begins with Aristotle's greatest ancient commentator, Alexander of Aphrodisias. Through an analysis of key passages in Alexander's commentary on books A and Γ of Aristotle's *Metaphysics*, this paper aims to show that the thesis according to which the exegete considered wisdom and science of being as being to be independent is not in fact borne out in Alexander's texts. The connection between the books A and Γ is shown by Alexander through the identification of wisdom with the science of being as being. This, in turn, constitutes the fundamental step for the demonstration of the existence of the science of being as being, which, according to Alexander, is initially only assumed by Aristotle."

43. Salles, Ricardo. 1998. "Categorical possibility and incompatibilism in Alexander of Aphrodisias' theory of responsibility." *Méthexis* no. 11:65-83.

"Alexander of Aphrodisias' animosity against Stoic philosophy is well attested in his extant writings. One of his preferred targets is Stoic compatibilism - thesis that there are things which "depend on us", and for which we are morally responsible, *despite the fact* that everything that happens has a necessitating cause, or set of causes. In recent times, it has been

argued that many of Alexander's objections are unfounded inasmuch as they stem from a misunderstanding and distortion of the Stoic position² This thesis has been sometimes complemented with the further claim that the disagreement between the two parties is less substantial than is contended by Alexander. This deflationary interpretation is defended by Dorothea Frede in an important article published in 1982."

44. Santi, Raffaella. 2020. "Plato Revealed: Alexander of Aphrodisias and His Philosophical Historiography." *Philosophy Study* no. 10:177-186.

Abstract: "Alexander of Aphrodisias's *Commentary on Aristotle's Metaphysics* is an important testimony to understand Plato's philosophy. In fact, Alexander uses some lost Aristotelian books, especially a work *On the Good*, from which we learn that Plato's metaphysics is a dialectical metaphysics, founded on an original opposition of two principles that shapes the whole reality—these principles being the One and the indefinite Dyad. Sensible things participate in ideas (they receive their being from ideas) and the intermediate mathematical entities lie between these two realities. However, ideas can be traced back to ideal numbers and the principles of ideal numbers are the One and the indefinite Dyad. Thus, these principles constitute their metaphysical foundation of ideas and, through the ideas, of the whole reality."

45. Schroeder, Frederic. 1981. "The Analogy of the Active Intellect to Light in the "De Anima" of Alexander of Aphrodisias." *Hermes* no. 109:215-225.

"The Active Intellect by the fact of being supremely intelligible is cause of being and intelligibility to other intelligibles and is thus indirectly the cause of human intellection. At the same time the second order of intelligibles make their own contribution toward intelligibility (and toward intellection) when they are abstracted by the human mind from their

material substrate and brought into that relation with the Active Intellect which will allow intellectual illumination to take place. The human mind progresses through a natural evolution to the abstraction of form from matter. In this moment of illumination, the natural and metaphysical orders meet in the philosophy of Alexander." (p. 225, a note omitted)

47. ———. 1984. "Light and the active intellect in Alexander and Plotinus." *Hermes* no. 112:2539-248.

"Plotinus indeed takes issue with Alexander's explanation of sensible light in stressing the unique role of the source and the effect of its withdrawal. The inspiration of this critique of Alexander's theory of sensible light may lie elsewhere. For Plotinus metaphysical illumination is an effect uniquely of the source. His orientation toward the other world may be more firm. In 4,5 [29],- 7, the chapter concerning sensible light which we discuss above, Plotinus illustrates his point that light is an effect of the source alone. He observes (lines 49- 51): "So it is in the case of the soul, considered as the act of a prior soul, that as long as the prior soul abides, so does the subsequent act. It may seem extraordinary that he would illustrate the nature of sensible light with such an example, as if the intelligible world were somehow more familiar. It is the same Plotinus, however, who says of sensible fire (1,6 [1],3,26) that "it shines and glitters as if it was a form"(36)." (p. 248)

(36) Tr. A. H. Armstrong, *Plotinus*, London and Cambridge, Mass. 1966, vol. 1, 241.(...)

48. ———. 1997. "The provenance of the « *De intellectu* » attributed to Alexander of Aphrodisias." *Documenti e Studi sulla Tradizione Filosofica Medievale* no. 8:105-120.
49. Schroeder, Frederic, and Todd, Robert B. 2008. "The *De Intellectu* Revisited." *Laval théologique et philosophique* no. 64:663-680.

Abstract: "The author of the *De Intellectu* is acquainted with the *De Anima* of Alexander of Aphrodisias and offers a Neoplatonic interpretation of that document in its consideration of the noetic doctrine at Aristotle, *De Anima* 3.5. That interpretation reveals that philosophical independence from a purely philological examination of Aristotelian texts which the present volume is exploring. The *De Intellectu*, because of its Neoplatonic character, is to be dated some two to four centuries after Alexander. There is no reference to an Aristotle of Mytilene, teacher of Alexander, as has been supposed."

Alexander of Aphrodisias' metaphysics: Annotated bibliography of the studies in English: Sha - Z

Bibliography

1. Sharples, Robert W. 1975. "Aristotelian and Stoic Conceptions of Necessity in the *De Fato* of Alexander of Aphrodisias." *Phronesis. A Journal for Ancient Philosophy* no. 20:247-274.

"I(n chapter IX of his treatise *De fato* Alexander of Aphrodisias (fl. c. 200 A.D.) argues that the occurrence of some things contingently is incompatible with the view of those who say that everything occurs of necessity (174.30-175.2). The whole of this part of the treatise is devoted to pointing out the difficulties in the view those who assert a theory of universal causal determinism; and, just as Alexander claims that those who hold such a view cannot preserve chance or 'what is up to us' except by giving these terms strained and unusual meanings (172.4-16, and cf. 172.20-6; 181.7-12), so here he asserts that the occurrence of some things contingently is incompatible with the assertion that everything occurs of necessity, if the proper, (175.2) sense of 'contingently' is that those things occur contingently which can also not happen (175.2-3)." (pp. 247-248, notes oitted)

2. ——. 1975. "Responsibility, chance, and not-being (Alexander of Aphrodisias *mantissa* 169-172)." *Bulletin of the Institute of Classical Studies* no. 22:37-64.

Abstract: "In this article I propose to give a translation and discussion of a passage⁽²⁾ which occurs in the so-called second book of the treatise *de anima* by the Aristotelian commentator Alexander of Aphrodisias (fl. c. A.D. 200), rechristened *de anima libri mantissa* by the Berlin editor Ivo Bruns. It has frequently been mentioned by scholars discussing Alexander's *de Fato* - references to these discussions will be given in the course of what follows - and has recently been the subject of a special study;⁽³⁾ but it has not, as far as I am aware, been fully translated into any modern European language.⁽⁴⁾

It is I think of particular interest. I will first give a translation and then proceed to discuss the passage."

(2) *Supplementum Aristotelicum* 11.i (ed. I. Bruns, Berlin 1887) 169.33-172.15. (169.34-39 and 170.2-7 are nos. 111 and 76 respectively in A. Gercke, *Chrysippea*, Jahrb. f. Klass. Phil. Supplbd. 14 (1885) 691-781.)

(3) P. Merlan, "Zwei Untersuchungen zu Alexander von Aphrodisias, I: Eine eigenartige Erklärung des ἐφ' ἡμῖν", *Philol.* 113 (1969) 85-88. On the opening section in particular cf. also P. L. Donini, *Tre Studi sull' aristotelismo nel II secolo d. C.* (Torino 1974) 165-8.

(4) There is however quite a full paraphrase in French in J. F. Nourrisson, *De la liberté et du hasard: Essai sur Alexandre d'Aphrodise suivi du Traité du Destin*, etc. (Paris 1870) 61-67. There are two Renaissance Latin translations of *de anima II* which include our text, one by Angelus Caninius Anglarensis (Venice 1546 etc.), the other by an as yet unidentified author and extant only in manuscript; cf. F. E. Cranz, "Alexander of Aphrodisias", in P. O. Kristeller, ed., *Catalogus Translationum et Commentariorum*, I 86 and II 412, 414.

3. ——. 1978. "Alexander of Aphrodisias, *De Fato*: some Parallels." *The Classical Quarterly* no. 28:243-266.

"As was first pointed out by Gercke,⁽¹⁾ there are close parallels, which clearly suggest a common source, between Apuleius, *de Platone* 1.12,2 the treatise *On Fate* falsely attributed to Plutarch, Calcidius' excursus on fate in his commentary on

Plato's Timaeus, and certain sections of the treatise *de Natura hominis* by Nemesius." (p. 243, some notes omitted)

(...)

"To elucidate this I propose to discuss various alleged parallels in turn, considering also certain parallels between Alexander and other later authors. (Reference will be made, in addition to the *de fato*, to the last section of the *de anima libri mantissa* attributed to Alexander. This draws on the *de fato* at certain points, but its authenticity is doubtful; I hope to discuss this elsewhere)." (p. 245, note omitted)

"There are attributed to the Aristotelian commentator Alexander of Aphrodisias (floruit early 3rd century A.D.) two works concerned with the establishment of an Aristotelian doctrine of fate, εἰμαρμένῃ. One is his well-known treatise *To the Emperors concerning Fate and Responsibility*; the other is the last section of the collection of passages appended to his treatise *de anima*, named *de anima libri mantissa* by Bruns (mantissa= "worthless addition").(2) The passages in this collection frequently reflect themes found in Alexander's major treatises, and clearly reflect the activity of his school; but in some cases at least it seems that they may be the work of pupils rather than of Alexander himself.(3) In the case of the text that concerns us, however, there seems no strong reason to doubt Alexander's authorship; it is in any case the question of its chronological relationship to the treatise *To the Emperors* that is of most importance, rather than that of its authorship, as will be seen. For convenience' sake I will refer to the author of both works as "Alexander", but this should not be taken as a categorical assertion that they are by the same author. And, for

the sake of simplicity, "de fato" will henceforth be used only to refer to the treatise *To the Emperors*, and "mantissa" will, unless otherwise indicated, refer to the last text in that collection, the one with which we are concerned." (p. 76)

6. ———. 1982. "Alexander of Aphrodisias. Problems about Possibility I." *Bulletin of the Institute of Classical Studies* no. 29:91-108.

"The concept of possibility is one that has been of central interest in ancient and modern philosophy alike, not least because of its bearing on the question of determinism and of whether anything could in fact have happened otherwise than it did - or can in fact happen otherwise than it will. One of the most important works in the ancient discussion of determinism and related issues is the treatise *On fate* by the Aristotelian commentator Alexander of Aphrodisias (floruit ca. 200 A.D.) - important as a source, even though a biased one, for the determinist position of the Stoics; for the breadth and thoroughness of the way in which it treats the topic, bringing out many important issues; and for its influence on later writers.(1) Among the *quaestiones* attributed to Alexander are a number which relate to the topic of possibility; these have

never been translated into English, and in view of the importance of the topic and of their alleged author it seems useful to make them more widely available. Whether any individual passage is by Alexander himself or by a pupil,(2) the aim is the same - to take a case where the apparent implications of an Aristotelian doctrine seem to conflict with our natural assumptions, and to try to resolve the difficulty; this has been a fruitful exercise for philosophers in almost every century from Aristotle's to our own, and there is no little interest in observing the attempts of our predecessors. Accordingly, in this article and in a sequel to appear in *BICS* 30 (1983) I have translated a number of these *questiones*(3). There are also some discussions of possibility in Alexander's commentary on Aristotle's *Prior Analytics* which are "questiones" in all but name - indeed, one of them begins "I investigated";(4) these too I have included. And, finally, an important part in ancient discussion of possibility was played by what became known as the debate "Concerning the Possibles"; an important source for this - and one of the earliest - is a passage in Alexander's commentary on the *Prior Analytics*, and I have therefore translated this and some later passages too, as providing an introduction to the whole topic." (p. 91)

7. ———. 1982. "Alexander of Aphrodisias, *On Time*." *Phronesis. A Journal for Ancient Philosophy* no. 27:58-81.

"The treatise *On Time* by Alexander of Aphrodisias, the Aristotelian commentator (c.200 A.D.), has never been the subject of any detailed philosophical study, in spite of the interest of its subject matter and the importance of its author. It enables us to see how Aristotle's theory of time was handled and modified by one of the most important of his ancient followers; and it is also of significance as one stage in the series of discussions of time which begins with Plato and continues to the Neoplatonists and beyond.

The Greek original is lost. The work survives in an Arabic translation made by Hunain ibn Ishaq in the ninth century, published by A. Badawi in *Commentaires sur Aristote perdus en grec et autres épîtres* (Beirut 1971; 19-24), and in a Latin translation from the Arabic made by Gerard of Cremona in the twelfth century, published by G. Thery in 'Autour du décret de 1210: 1I, Alexandre d'Aphrodise, Aperçu sur l'influence de sa noétique' (*Bibliothèque Thomiste* 7, 1926, 92-97).

(,,.)

I have here translated Gerard's Latin version into English; this is the first English rendering of the treatise to have appeared." (p. 58)

8. ———. 1982. "Alexander of Aphrodisias *On divine providence: Two problems*." *The Classical Quarterly* no. 32:198-211.

"The position on the question of divine providence of the Aristotelian commentator Alexander of Aphrodisias (fl. c. A.D. 200) is of particular interest. It marks an attempt to find a *via media* between the Epicurean denial of any divine concern for the world, on the one hand, and the Stoic view that divine providence governs it in every detail, on the other.(2) As an expression of such a middle course it finds a place in later

classifications of views concerning providence.(3) It is also of topical interest: Alexander's fullest discussion, in his treatise *De providentia* (*On Providence*) (surviving only in two Arabic versions), has only recently been edited and translated,(4) although some aspects of his position had long been known from other texts preserved in Greek.(5)" (p. 198)

(2) *De providentia* I. 1-9. 2 Ruland, cf. 31. 11 ff. (cf. Bibliography). All references to this work are by Ruland's pagination, and unless otherwise indicated are to the upper of his two texts; cf. below, n. 14, and nn. 42-4. I should stress that my knowledge of the Arabic versions derives entirely from Ruland's translation and from discussions in the other secondary literature, and that it is on Ruland's German that my translations are based, except where otherwise indicated.

(3) Notably in Maimonides' *Guide of the Perplexed*, 3. 17. I suspect that the position formulated and attacked at Nemesius *de natura hominis* 44, PG 40. 800a ff. Migne, may owe something to Alexander; cf. especially 804a and the objection, peculiarly appropriate against a Peripatetic, brought at 804 b. I hope to discuss this issue more fully elsewhere.

(4) By Ruland; the outlines of the work were however previously known from references in later literature (notably in Maimonides *Guide* 3. 16 and 3. 17) and from modern summaries, especially that by Thillet. Cf. Bibliography.

5 Especially *quaestiones* I. 25 and 2. 21 (cf. Bibliography).

9. ———. 1982. "An Ancient Dialogue on Possibility; Alexander of Aphrodisias, *Quaestio* 1.4." *Archiv für Geschichte der Philosophie* no. 64:23-38.

"In a series of papers which were of great importance both for modern logic and for the study of ancient logic, the Polish logician Jan Lukasiewicz drew attention to many points concerning the relation between logical considerations and the problem of determinism(1). Three points in particular are relevant to the present paper." (p. 23)

(...)

"All these points, together with many others, are illustrated by the text here translated for the first time, as far as I know, into any modern language. It employs the first of the three points in polemic against determinism; and, by combining it illegitimately with the second, it produces conclusions which are even more paradoxical. And it is in the final section of this text that the view of the Sea-Battle paradox which was standard in later antiquity makes, as far as I know, its first appearance.

The text is included among the *quaestiones* attributed to the Aristotelian commentator Alexander of Aphrodisias (fl. c. 200 A. D.)." (p.24)

"Conclusion

The interest of these *quaestiones* is twofold. Firstly they are of interest as historical documents, for the evidence they provide of the development of ideas and for their relation to the works of thinkers both earlier and later. But, secondly, they are of interest as attempts to clarify thought on the topics with which they are concerned, and to remove difficulties. And in this respect we can see them as essentially engaged on similar tasks to ourselves today; for it is a feature of the history of philosophy that the historical and the timeless aspects are always combined in it. The basic questions remain the same; and answers are not necessarily either better or worse because they are more recent, though it is true that those who come later can

profit by the experience- and the mistakes! - of their predecessors.

That in itself, however, is sufficient justification for the study of the history of philosophy. If we criticise the attempts of our predecessors to answer certain questions, that is not to be taken as an assertion that we can necessarily answer them any better; but rather as a hope that others may learn by comparing our predecessors' solutions and our criticisms, and thus be enabled to improve on us both." "In the *De caelo* Aristotle argued that the heavenly spheres move with a circular motion because it is their nature to do so. (1) But in other works he explains their continuous circular motion by their desire directed towards the Unmoved Mover. (2) Modern scholars have debated whether these two explanations represent two different and incompatible stages in Aristotle's development, or whether, on the contrary, the latter is a completion, rather than a contradiction, of the former. (3) And a related question is whether Aristotle throughout held that the heavenly spheres had souls (as the theory of the Unmoved Mover, at least, requires), or whether there was a stage in his thought when he regarded them as moved only by their own inanimate nature. (4)" (p. 62)

ensouled heaven as altogether un-Aristotelian; but cf. *De caelo* 2.2 258 a 29, 2.12 292 a 18-21, and W.D. Ross, *Aristotle: Metaphysics* (Oxford, 1924) cxxxvi f.

13. ———. 1985. "Ambiguity and opposition: Alexander of Aphrodisias, *Ethical Problems*, 11." *Bulletin of the Institute of Classical Studies* no. 32:109-116.

The eleventh of the *Ethical Problems* attributed to Alexander of Aphrodisias is one of a number of items in this collection which are concerned with questions relating to voluntary and involuntary action, and thus with discussions in the first half of the third book of Aristotle's *Nicomachean Ethics*. Problem 11 differs from the others in this group, however, in that its immediate concern is with an issue of logic, rather than of ethical philosophy. And it is of particular interest for two reasons.

Firstly, from the historical point of view, the issue with which this text is concerned, that of whether one of a pair of opposites can have several senses if the other does not, is one that exercised both other commentators on the *Ethics* and also Alexander himself in his commentary on Aristotle's *Topics*. It therefore gives us the opportunity of tracing the discussion of a particular theme in Peripatetic philosophy, and what is more of doing so in the earliest period from which we have first-hand evidence for the Aristotelian commentators.

(...)

Secondly, from the philosophical point of view, the issue discussed in this text relates to the wider one of when it is and is not correct to say that a term is used in two different senses. That was an issue which Aristotle himself did much to clarify; as what follows will show, it continued to be discussed in later antiquity and in Islamic philosophy; and it is still a topic of debate among philosophers and philosophers of science at the present day." 14. ———. 1987. "Alexander of Aphrodisias: Scholasticism and Innovation." In *Aufstieg und Niedergang der römischen Welt*, vol. 36.2: *Philosophie, Wissenschaften, Technik. II. Teilband*:

Philosophie (Platonismus, [Forts.]; Aristotelismus), edited by Haase, Wolfgang, 1176-1243. Berlin: Walter de Gruyter.

"A particular difficulty for our study is the almost complete loss of the relevant literature. This is in large measure due to the character of that literature, much of which consisted of commentaries on Aristotle's works or discussions of problems arising out of them. Such writings were by their very nature liable to be superseded as each generation reread Aristotle in the light of its own needs and preoccupations. The only writings by professed Aristotelians of this era to have survived in their original form are a commentary on parts of the 'Nicomachean Ethics' by Aspasius (second century AD) and the 'De mundo' wrongly attributed to Aristotle himself, to which one can doubtfully add the pseudo-Aristotelian 'De virtutibus et vitiis' with its doublet, falsely ascribed to Andronicus of Rhodes. In addition two treatises by Nicolaus of Damascus,

originally perhaps parts of the same work, have survived through being translated into Syriac or Arabic. Besides these we only have fragments quoted by later writers; the chief sources are the commentaries on Aristotle's works written by Alexander of Aphrodisias in the third century and by Ammonius (the son of Hermeias), Philoponus and Simplicius in the fifth and sixth. The last-named is especially generous with quotations and sometimes gives a synopsis of the views of earlier interpreters on particular problems; the introduction of his commentary on the 'Categories' (pp. 1-2) includes a survey of the work of earlier commentators. The information they provide is sufficient to give us an idea of the problems which interested the earlier Aristotelians and the kind of answer they gave, but usually not to reconstruct their arguments in full." "In this paper I propose to examine the views of three figures from this period on one of the major questions of post-Aristotelian and perhaps of all philosophy, that of the criterion of truth, or the source of our knowledge. It gives me great pleasure to offer this study to George Kerferd, one of the leading ancient philosophy specialists of our day and a personal friend, as a contribution to his *Festschrift*." (p. 231)

(...)

"There is as a matter of fact some evidence for Alexander's interest in contemporary Platonism, and there is also evidence which suggests that he did hold that God had awareness of earthly things, at least in universal terms. But there is no suggestion of this idea either in *On the Soul* (where the objects

of the Supreme Intelligible's thought seem to be the other Unmoved Movers) or in *On the Intellect*; and thus it does not seem that the Active Intellect can be described as in any real sense a criterion of truth for Alexander." (p. 243, note omitted)

17. ———. 1994. "On Body, Soul and Generation in Alexander of Aphrodisias." *Apeiron* no. 27:163-170.

"The Aristotelian commentator Alexander of Aphrodisias (c.200 AD) has been criticised for defining soul as the product of the mixture of the bodily elements, a view which has been criticised for making form dependent on matter rather than the reverse and for being un-Aristotelian in doing so. Alexander's account of soul in his treatise *de Anima* works upwards from the simple bodies or 'elements' to progressively more complex compounds, of which living creatures are the most complex. This approach certainly suggests that form is something that emerges from or supervenes upon arrangements of matter. But it is one thing to recognise that Alexander's emphasis is different from Aristotle's, and another to suggest that his views are actually inconsistent with Aristotle's. Even while developing this analysis, Alexander insists that it is the form of each thing that determines its nature and argues that form (and matter) are substances in their own right, not just because they are parts of the composite substance. And a number of texts attributed to Alexander⁶ argue that soul is not in body 'as in a substrate', that is in the way in which one thing can be in another separately existing thing; for the organic body of which soul is the form cannot exist as such in the first place without soul." (pp. 164-165, notes omitted)

(...)

"However, Aristotle himself asserts that 'a human being is produced by a human being and the sun.'³⁰ The combination of the two causes, the heavenly movement and the father, is present in Aristotle himself; there is no need to suppose that Alexander saw them as alternatives or that he did anything other than combine them in Aristotelian fashion." (p. 170)

18. ———. 1998. "Alexander and pseudo-Alexanders of Aphrodisias, Scripta minima: Questions and Problems, makeweights and prospects." In *Gattungen wissenschaftlicher Literatur in der Antike*, edited by Kullmann, Wolfgang, Althoff, Jochen and Asper, Markus, 383-403. Tübingen: Narr.

"The works attributed to Alexander of Aphrodisias, who lived and worked at the end of the second century A.D. and the beginning of the third, are conventionally divided into two groups. First there are the commentaries on works of Aristotle, of which five (on *Prior Analytics 1*, *Topics*, *Meteorology*, *On Sensation* and *Metaphysics A-Δ*) survive in whole or in part; in addition, extensive parts of the *Physics* commentary have recently been discovered by Marwan Rashed in the margins of a Paris MS.(2) Other commentaries are known from secondary reports.

Of the remainder of the works attributed to Alexander, most of what survives in Greek was edited by Ivo Bruns in two fascicles of the *Supplementum Aristotelicum* which accompanied the *Commentaria in Aristotelem Graeca*.(3)

These scripta minora can however be further divided into two groups. There are the major treatises, Alexander's work *On the Soul* occupying 100 quarto pages in the standard edition, for example, the treatise *On Fate* approximately half that. And there are also collections of minor texts.(4) It is the latter that I have labelled *scripta minima* for the purposes of this discussion."(p. 383)

(2) Parisinus supp. gr. 643. M. Rashed, Alexandre d'Aphrodise et la "Magna Quaestio": Rôle et indépendance des scholies dans la tradition byzantine du corpus aristotelicien, *Les Etudes Classiques* 63, 1995, 295-351; id., A "new" text of Alexander on the Soul's Motion, in: R. Sorabji (ed.), *Aristotle and After*, London 1997.

(3) *Supplementum Aristotelicum* 2.i (Berlin 1887) and 2.ii (1892).

(4) There is good reason to think that there were once other such collections now lost. Cf. the reference to σκολιὰ λογικά at

Alexander, In an. pr. 250.2; on the “explanation and summary of certain passages from (Aristotle’s) On sensation and what is sensed” referred to in a scholion on *Quaest.* 1.2 (Sharples, below, n. 10, 1196-7), see further below, n. 96.

19. ———. 1999. "On being a τὸδε τι in Aristotle and Alexander." *Méthexis* no. 12:77-87.

"For Aristotle, what primarily exists is individual substances. These substances are indeed, with the exception of the unmoved movers of the heavenly spheres, compounds of form and matter, and they have form in virtue of being members of species.(2)" (p. 77)

(...)

"Perhaps, then, consideration of the first section of the *mantissa* attributed to Alexander may lead us to question whether *Notes on Eta and Theta* are right in holding that "to say that ... fire is not τὸδε τι ['this-something'] is not to say that it is a stuff without qualities or attributes, but that it is not a reidentifiable something" (my emphasis).(39)

Rather, the criteria for being a τὸδε τι may sometimes after all have to do with definability rather than with reidentifiability. As Charlton indeed remarks in the passage quoted in § 1 above, "The phrase T68E Tt may sometimes mean rather 'a particular sort of thing' than 'a particular individual'. (40)

20. ———. 1999. "The Peripatetic School." In *Routledge History of Philosophy. Volume II: From Aristotle to Augustine*, edited by Furley, David, 147-187.

"The history of Aristotelianism as a separate tradition in the ancient world comes to an end with Alexander and Themistius. Part of the reason for Alexander's having no distinguished followers in his own school is undoubtedly the decline in interest in formal higher education in the third century by contrast with the second. But that does not on its own explain why Aristotelianism declined where Platonism did not. Once again, as in the third century BC, the lack of a distinctive doctrinal appeal may have played a part; where Platonism had a radical and distinctive message, Aristotelianism appealed to scholars and, on a different level, to common sense. The difference was that, where Aristotelianism in the Hellenistic period lacked a distinctive identity except in so far as the pursuit of enquiry itself provided one, the revived Aristotelianism of the Empire was limited in its scope by being too closely tied to the exposition of the Aristotelian texts. More might indeed have been made of those texts and their implications; but if Alexander had developed his ideas concerning intellect further, he would, as already indicated, have been adopting a position not unlike that of the Neoplatonists themselves." (p. 168)

21. ———. 2000. "Alexander of Aphrodisias *Quaestio* 2.21: a question of authenticity." *Elenchos* no. 21:361-379.
22. ———. 2000. "The unity of the virtues in Aristotle, in Alexander of Aphrodisias, and in the Byzantine commentators." *Etica e*

Politica:1-20.

Abstract: "Aristotle's argument in *Nicomachean Ethics* 6 for the mutual implication of the virtues by one another is developed, and others added to it, in a repertory of arguments for this thesis in section 18 of the *De anima libri mantissa* (Supplement to the Book On the Soul) attributed to Alexander of Aphrodisias. The last part of this is echoed in no.22 of the *Ethical Problems* attributed to Alexander; nos. 8 and 28 of the same collection are also relevant. A distinction can be drawn between the mutual implication of the virtues and the unity of virtue in some stronger sense; the arguments in the texts attributed to Alexander are examined to see whether they imply the latter more clearly than Aristotle's own argument does, and the conclusion is drawn that some do so because of the use they make of the conception of the noble as the goal of virtuous action, or of virtue as a whole of parts. The treatment of Aristotle's argument in the Byzantine commentaries is characterised by a preoccupation with the special status of practical wisdom."

23. ———. 2002. "Aristotelian Theology After Aristotle." In *Traditions of Theology: Studies in Hellenistic Theology, Its Background and Aftermath*, edited by Frede, Dorothea and Laks, André, 1-40. Leiden: Brill.

"There has been no shortage of discussion among modern scholars as to just what Aristotle's own views on god were. I cannot hope to reproduce that whole debate here, let alone develop it further. The identification of certain central questions will here be purely preliminary to consideration of how these are reflected in discussions of Aristotle's views in the subsequent half-millennium. On a strict interpretation of "Hellenistic philosophy" it is indeed only the first three of those five centuries that are strictly relevant. However, interpretations of Aristotle's position from the first two centuries of the Roman Empire reflect those developed in the Hellenistic period; and the views developed by Alexander of Aphrodisias and his school around the turn of the third century A.D., much more fully documented than what had preceded, are developments of, and reactions to, the preceding debate.(5)

Moreover, in terms of the contrast between Hellenistic and post-Hellenistic theology developed by Runia [*] elsewhere in this volume, Alexander's treatment, just because it keeps so closely to the Aristotelian texts and the problems they raise, falls on the "Hellenistic" side of the divide, in spite of its later date." (p. 2)

[*] *The beginnings of the end: Philo of Alexandria and Hellenistic Theology*, pp. 281-316.

(5) On the general history of the Peripatetic school in the Hellenistic period see Wehrli, F., 'Der Peripatos bis zum Beginn der römischen Kaiserzeit', in: Flashar, H., ed., *Grundriss der Geschichte der Philosophie*, begründet von Friedrich Ueberweg: *Die Philosophie der Antike*, 3, Basel: Schwabe, 1983, 459-599; in the Imperial period, Moraux 1973, id. 1984, and Gottschalk 1987. I have attempted an overview of the entire period in 'The Peripatetic School', in D.J. Furley, ed., *From Aristotle to Augustine*, London: Routledge 1999 (Routledge History of Philosophy, vol. 2), 147-187.

März 2001 in Würzburg*, edited by Kobusch, Theo and Erler, Michael, 1-21. München · Leipzig: K. G. Saur.

"This paper will be concerned with two distinct though related aspects of Alexander's thought about the divine; firstly the nature of god's own intellectual activity and of the connection between his thinking and ours; second that of the sense in which and extent to which the universe is for Alexander

governed by divine providence. The connection between the two points in terms of the genesis of Alexander's own position is indirect(4): he is, as we shall see, prompted to construct an "Aristotelian" theory of providence by the need to defend Aristotelianism against attack, and is very probably influenced in the way in which he does so by the fact that he regards the *De mundo* as a genuine Aristotelian work(5).

Since for Alexander providence is the result of the movement of the heavens itself caused by their desire for the Unmoved Mover, its effects - though not, as we shall see, its status as providence - are completely independent of the question whether or not the Unmoved Mover is itself aware of the world.

(...)

The second point to be emphasised at the outset is that, especially on the first topic but also on the second, the nature of our sources is in various ways less than satisfactory; it is a matter of piecing together an account from various pieces of information, and many of the questions that we would like to have answered must remain unanswered." (p. 2)

(4) I am grateful to Daniel Schulthess for pressing the need to clarify this point.

25. ——. 2003. "Threefold providence: the history and background of a doctrine." *Bulletin of the Institute of Classical Studies. Supplement* no. 78:107-127.

"Three texts from antiquity preserve a distinctive classification of providence into three levels. In probable order of composition it appears in the work *De Platone* attributed to

Apuleius (fl. c.160 AD), in the treatise *De fato* attributed to Plutarch but certainly not by him, and in the treatise *De natura hominis* by Nemesius of Emesa (c.400 AD)." (p. 107)

(...)

"The doctrine found in these texts is clearly and explicitly derived from Plato's dialogues; in particular, the distinction between primary and secondary providences is based on that at Timaeus 41c and 42e between the creation carried out by the Demiurge himself and the part of it that he delegates to the secondary gods, and the notion of an aspect of providence concerned with human affairs is based on Timaeus 42e, though the specific link with *daemones* derives from other texts." (p. 109, notes omitted)

(...)

"The present paper will therefore attempt to examine some of these in order to put the Platonist doctrines into their intellectual context; it will also attempt a partial classification of some views concerning providence held in the late Hellenistic and Roman periods, with a view both to clarification of the Platonist texts and to the larger project of a history of ancient theories of providence."(p. 110)

26. ———. 2003. "Pseudo-Alexander on Aristotle, Metaphysics Lambda." In *Alessandro di Afrodisia e la 'Metafisica' di Aristotele*, edited by Movia, Giancarlo, 187-218. Milano: Vita e Pensiero.

"Conclusion

What then can we regard as established concerning the author of the pseudoAlexander commentary on Λ ?

1. He is neither identical with the genuine Alexander, nor did he use the genuine Alexander's commentary.
2. There are reasons to suppose that he used, and therefore wrote later than, both Simplicius and the *De intellectu* attributed to Alexander.

3. On some of the issues which are most controversial today in the interpretation of Λ , or of Aristotle's thought generally (notably the nature of the Unmoved Mover's thinking in the first case, and the question of individual forms in the second) pseudo-Alexander follows the Aristotelian text so closely that it is difficult to attribute to him any definite position. Similarly on issues which had already been topics of discussion, such as the relation between Unmoved Movers and sphere-souls, pseudo-Alexander follows Aristotle's text closely without consideration of alternative views.
4. Pseudo-Alexander is influenced by Platonism but does not regard himself as a Platonist.
5. Contrasts drawn between the naturalism of Alexander and the mysticism of pseudo-Alexander have rested on a one-sided reading of the former and have involved a failure to recognise passages in the latter borrowed directly from the former." (p. 214)
27. ———. 2004. "Alexander of Aphrodisias: What is a Mantissa?" In *Philosophy, Science and Exegesis in Greek, Arabic and Latin Commentaries (Vol. One)*, edited by Adamson, Peter, Baltussen, Han and Stone, M.W.F., 51-69. London: Institute of Classical Studies, University of London.

"Conclusion

- The answers to many questions about the *Mantissa* remain obscure; the origins of some of the arguments the texts contain, the circumstances in which the collection was assembled, and the earlier stages of its transmission before the copying of V, our earliest extant MS. It is to be hoped however that even the foregoing brief discussion will have helped to show the interest of the material contained in the collection, and its relevance to the study of Alexander's thought, and thus to an important stage in the transmission of Aristotelian philosophy to the commentators of late antiquity." (p. 66)
28. ———. 2005. "Implications of the new Alexander of Aphrodisias inscription." *Bulletin of the Institute of Classical Studies* no. 48:47-56.

Abstract: "Abstract The new inscription dedicated to his father by the Aristotelian commentator Alexander of Aphrodisias does not help us in establishing his dates more precisely. It does, however, show conclusively for the first time that his post was at Athens, and strongly suggests that at the end of the second century AD the term *diadokhos* 'successor' was applied to the imperially appointed holders of the chairs of philosophy at Athens. It also provides us with a possible candidate for the authorship of works attributed to Alexander of Aphrodisias but not apparently by him, notably *On fevers*."

29. ———. 2005. "Alexander of Aphrodisias on universals: two problematic texts." *Phronesis. A Journal for Ancient Philosophy* no. 50:43-55.

Abstract: "Two texts that raise problems for Alexander of Aphrodisias' theory of universals are examined. *De anima* 90.2-8 appears to suggest that universals are dependent on thought for their existence; this raises questions about the status both of universals and of forms. It is suggested that the passage is best interpreted as indicating that universals are dependent on thought only for their being recognised as universals. The last sentence of *Quaestio* 1.11 seems to assert that if the universal did not exist no individual would exist, thereby contradicting Alexander's position elsewhere. This seems to be a slip resulting from the fact that species with only one member are the exception rather than the rule."

30. ———. 2005. "Alexander of Aphrodisias on the Nature and Location of Vision." In *Metaphysics, Soul, and Ethics in Ancient Thought: Themes from the work of Richard Sorabji*, edited by Salles, Ricardo, 345-362. Oxford: Clarendon Press.

"The so-called second book of the treatise *On the Soul* (*De anima*) by Alexander of Aphrodisias is a collection of short discussions on a range of topics, more or less closely connected with psychology. Since 1887 it

has commonly been known by the title *Mantissa* given to it by its editor Ivo Bruns, *Mantissa* originally being an Etruscan word meaning a makeweight, something the trader puts in to balance up the scales. One

sequence of discussions in the *Mantissa*, §§9–14, consists of a series of refutations of non-Aristotelian theories of vision, followed in §15 by an exposition of Aristotelian doctrine and in §16 by a discussion of the

Aristotelian account of colour. I have attempted to say something about the relations of these texts to one another, and also to Alexander's commentary on Aristotle's *On Sensation* (*De sensu*), in an earlier paper.(2)

Vision is also discussed by Alexander in the first book of his treatise, *De anima*, which, unlike the *Mantissa*, is a single and self-contained discussion, structured in a similar way to Aristotle's own treatise *De anima*. The topic of vision was one in which Alexander's teacher Sosigenes had a special interest, writing a work *On Vision* in at least eight books.(4)" (pp. 345-346, some notes omitted)

Althoff, and M. Asper (eds.), *Gattungen wissenschaftlicher Literatur in der Antike* (ScriptOralia 95) (Tübingen: Gunter Narr, 1998), 383–403.

(4) Alexander, *In meteor.* 143.12–14, cf. Themistius, *In de an.* 61.23–4; P. Moraux, *Der Aristotelismus bei den Griechen*, ii (Berlin: de Gruyter, 1984), 359.

31. ———. 2005. "An Aristotelian commentator on the naturalness of justice." In *Virtue, Norms, and Objectivity: Issues in Ancient and Modern Ethics*, edited by Gill, Christopher, 279-293. Oxford: Clarendon Press.

"The question of whether justice or 'what is right', *dikaiousunê* or *to dikaion*,(1) is a matter of nature or convention is a central one in ancient Greek thought from the time of the Sophists onwards. It has a particular

importance in the context of ancient eudaimonistic ethics. Justice in the more general sense of the term is, Aristotle argues, the aspect of virtue concerned with our behaviour towards other people;(2) and in a system of thought which

assumes, as ancient eudaimonistic ethics does, that I should act in my own true self-interest, the question whether and why it is in my own interest to treat other people justly is nothing less than the question of the basis of morality." (p. 279)

(...)

"The text we shall be considering also shows how an interpreter or interpreters of Aristotle could draw upon the different and more universal perspectives and agendas of Hellenistic philosophy.

This text is §19 of a collection transmitted in the MSS as Book 2 of the treatise *On the Soul* by the Aristotelian commentator Alexander of Aphrodisias (fl. c. ad 200), and labelled *Mantissa* ('makeweight' or 'supplement') by its nineteenth-century editor Ivo Bruns." (pp. 281-282, a note omitted)

(1) The Greek terms cover the meanings of both the English ones; indeed, 'general' justice as described by Aristotle is close to the archaic English 'righteousness'. In the major part of this chapter, 'right' and 'just(ice)' should both be understood as translating the Greek terms as they apply to actions. The connection is that performance of 'just' actions is a necessary, though not in Aristotle's view sufficient, condition for being a 'just' person (*EN* 2.4, 1105b5–9).

32. ———. 2007. "Peripatetics on fate and providence." *Bulletin of the Institute of Classical Studies. Supplement* no. 94:595-605.

"Issues relating to fate and providence are not prominent among Peripatetics of as far as our evidence goes; it is Alexander of Aphrodisias who really develops themes as far as the Peripatetic tradition is concerned. Nevertheless, earlier views examination, for this enables us to assess, in so far as the evidence allows, what found in the tradition of his school, and is also relevant to consideration of interaction between the Peripatetics and other schools. Both topics are prime examples of Aristotle did not himself discuss as such, but where Peripatetics found themselves formulate positions for him to match those of other philosophical schools." (p. 595)

33. ———. 2010. "Peripatetics." In *The Cambridge History of Philosophy in Late Antiquity: Volume I* edited by Gerson, Lloyd P., 140-160. Cambridge: Cambridge University Press.

"What, finally, did later ancient philosophy take from the Peripatetic tradition?"

The answer must be, in the first instance, interpretations of Aristotle's text, since some of his works continued to be part of the standard Platonist philosophical curriculum. But beyond that, the philosophical agenda continued to be influenced by the issues that concerned the Peripatetics discussed in this chapter; and they provided later thinkers with ideas to incorporate (as with the notion of the divine intellect making use of our intellects), or to react against (as with arguments for the mortality of the human soul)." (p. 160, a note omitted)

34. ———. 2012. "Alexander on *Physics* 2.9." *Bulletin of the Institute of Classical Studies* no. 55:19-30.

Abstract: "In this paper, Bob Sharples considers a report regarding Alexander in Simplicius' *Physics* commentary, which touches on the problem of hypothetical necessity and how it relates to unqualified necessity. Simplicius seems to think that for Alexander, necessity imposed by matter is not purposive. This is why bricks do not necessarily give rise to a brick house. He here exploits the genuinely Aristotelian idea that form and end account for the matter, rather than vice versa; yet Alexander will have been motivated also by his opposition to the Stoics."

35. ———. 2016. "The school of Alexander?" In *Aristotle Transformed: The Ancient Commentators and Their Influence*, edited by Sorabji, Richard, 89-118. New York: Bloomsbury.

Second revised edition. First edition London: Duckworth 1990, pp. 83-111.

"It is not my concern here to give a full enumeration of the works attributed to Alexander or to classify them in detail. That has been done elsewhere both by myself and by others. Rather, I will proceed to a discussion of what the works can tell

us about the context in which they arose. It will be helpful to start with consideration of the relation of Alexander's works to those of his predecessors, teachers and contemporaries." (p. 91)

(...)

"The impression given by the writings attributed to Alexander is one of lively philosophical discussion. The opinions of his predecessors and of his nearcontemporaries from other philosophical schools play a part in this; but it is difficult to believe that some at least of the texts here considered do not reflect the activity of Alexander's own philosophical school. This makes it all the more odd that we know so little about any pupils of Alexander, and that as far as our information goes he seems to mark the end of a distinctive and continuous Peripatetic tradition." (pp. 117-118)

36. Sirkel, Riin. 2011. "Alexander of Aphrodisias's Account of Universals and Its Problems." *Journal of the History of Philosophy* no. 49:297-314.

"The aim of this paper is to explore Alexander's account of universals, the difficulties it entails and the possible solutions to those difficulties. I focus on presenting a broad picture of Alexander without delving into particular and often controversial interpretive issues. I begin by analyzing the Aristotelian definition of a universal as that which is predicated of many things. In the second part of the paper, I will outline Alexander's distinction between being a form and being a universal, as I understand it. In the third and fourth parts, I consider two problems this distinction introduces, viz. the problem about the ontological status of the form, and that of the universal. In the last part of the paper, I will briefly examine Boethius's solution to the problem of universals, which he claims to take from Alexander, and which clarifies some of the problems raised by Alexander's account." (p. 298)

37. Sorabji, Richard. 2017. "A Neglected Strategy of the Aristotelian Alexander on Necessity and Responsibility." In *Rereading Ancient Philosophy: Old Chestnuts and Sacred Cows*, edited by Harte, Verity and Woolf, Raphael, 240-256. Cambridge: Cambridge University Press.

"A justly influential author, Michael Frede, has treated as an orthodoxy, needing no discussion, an interpretation of Alexander, put forward earlier in an objective spirit, in a seminal article by Susanne Bobzien(1)

She discussed the Stoics' opponent, Alexander of Aphrodisias, who held the Aristotelian chair in Athens 500 years after Aristotle's death, at or soon after 200 AD. He was the greatest defender of Aristotelianism, and at a time when Aristotelianism needed defending against the refurbished versions of Stoicism and Platonism. Her interpretation of Alexander on this subject has now been treated not only as an orthodoxy,

but as a ground for a sustained onslaught on Alexander as caught in a hopeless tangle, which will, I am afraid, mislead some readers, if nothing is said on the other side. I will draw attention to two small

passages of Alexander, mentioned but not discussed in Bobzien's enlightening treatment, which I think may suggest that he had an entirely different strategy. I also disagree with the other objections raised against Alexander, and will try to fill out the picture of his approach, as I see it. But first I should give the context of Bobzien's interpretation; I will come to what I think is a mistaken use of her interpretation later." (p, 240)

In *Polyhistor: Studies in the History and Historiography of Ancient Philosophy Presented to Jaap Mansfeld on his Sixtieth Birthday*, edited by Algra, Keimpe A., Van der Horst, Pieter Willem and Runia, David T., 265-283. Leiden: Brill.

"In the following pages, I will reconsider the relation between the closing section of the *De an.* and what is to be found in

Galen's writings, most notably the *PHP* [*On the doctrines of Hippocrates and Plato*]. I shall argue that Alexander does respond to specific arguments he had read in Galen. Meanwhile Accattino's critique may stand as a reminder of the strict criteria needed for assessing 'parallels' in terms of historical relations.

Mere resemblances are not good enough. Many current arguments and ideas used in the controversy over the regent part were traditional and hence not confined to Galen and Alexander.

(...)

"My argument is structured as follows. I shall begin by presenting some observations on the overall design and strategy of Alexander's demonstration (§ 2). Next I shall compare his arguments concerned with the nutritive and other faculties of the soul with the relevant passages in Galen (§ 3). This is followed by a few observations on Alexander's rebuttal of two encephalocentric arguments at the end of his demonstration (§ 4). Finally I shall draw some conclusions with special reference to Alexander's dialectical procedures (§ 5)" (pp. 267-268)

42. ———. 1974. "Lexicographical Notes on Alexander of Aphrodisias' Philosophical Terminology." *Glotta* no. 52:207-215.

"Here I shall confine myself to examining Alexander of Aphrodisias' use of two groups of words. The first is a set of non-Aristotelian epistemological terms that he uses to describe various concepts in

Aristotle's theory of knowledge; and the second a group of terms, partly borrowed and partly developed by himself, that are employed to describe major metaphysical concepts in the Aristotelian system:

substance, form, matter, and potentiality. In each of these cases the lexicon [*] entry is deficient. This is unfortunate since although much of the vocabulary of the Greek commentators is necessarily parasitic on that of the author they are discussing, it is important to acknowledge occasions on which this pattern is broken. In particular is this necessary in the case of as relatively early an author as Alexander of Aphrodisias who drew on a well-established philosophical tradition.⁶) The words I shall discuss are for the most part sufficiently familiar for the indices to have recorded a large number of instances, and in only one case are they entirely silent. By examining contexts as thoroughly as possible I have tried to offset any residual deficiencies that they may possess. Although I shall concentrate here on Alexander of Aphrodisias my account could in a very large measure be extended to the vocabulary of the later commentators who in this, as in other areas, were greatly in Alexander's debt. I shall therefore also include some evidence of their usage." (p. 208)

[*] Hereafter I shall refer to *A Greek-English Lexicon*, compiled by Henry George Liddell and Robert Scott, revised by H. Stuart Jones (9th ed.; Oxford 1940, with a supplement, 1968) simply as "the lexicon".

(6) Although only the commentary of Aspasius (c. 100 A. D.) on the *Nicomachean Ethics* is extant (*Commentaria*, XIX-i) it is a reasonable assumption that Alexander's vocabulary was influenced by that of earlier second century commentators such as Adrastus, Herminus, or Sosigines.

44. ———. 1976. *Alexander of Aphrodisias on Stoic Physics: A Study of the De Mixtione with Preliminary Essays, Text, Translation and Commentary*. Leiden: Brill.

"The importance of Alexander of Aphrodisias in the Aristotelian tradition in Western philosophy is well established. This reputation however rests almost exclusively on his very influential interpretation of Aristotle's doctrine of the active intellect. The subject of the present study, the *de mixtione*, is a treatise in which he deals with the philosophically less important topic of the mixture of physical bodies. My aim is to show that both as an exposition of Aristotelian thought and as an extended discussion of Stoic physics it offers an excellent opportunity to observe the development of Peripatetic scholasticism in the face of ideas developed in post-Aristotelian philosophy. In this way I shall try to establish the largely unacknowledged importance of Alexander's contribution to the Greek philosophical tradition." (*Preface*, p. XI)

45. ———. 1976. "Alexander of Aphrodisias on de Interpretatione 16a 26-29." *Hermes* no. 104:140-146.

"At de interpretatione 16a 26-29 Aristotle makes the brief assertion that names (ὀνόματα) exist by convention and not by nature. In his note on this text Ammonius, the fifth century Alexandrian commentator, reports that Alexander of Aphrodisias had proposed the following syllogism, presumably in his own commentary on this work which is no longer extant: ὀνόματα and ῥήματα are sounds' (φωναί), sounds exist by nature, therefore so do οὐνόματα and ῥήματα. Ammonius then proceeds to offer a refutation of this argument. Although he does not explicitly attribute this subsequent reasoning to Alexander I shall try to show in this note that he must be

offering an account of the earlier exegete's thought, for all the essentials and some of the details of Ammonius' report can be paralleled in some philosophically interesting ways from texts in other Alexandrian works." (p. 140, notes omitted)

46. ———. 1982. "Alexander of Aphrodisias, *De anima* 76.16. Michael of Ephesus' text defended." *Liverpool Classical Monthly* no. 7:48-49.

48. Torrijos Castrillejo, David. 2017. "Alexander of Aphrodisias on Fate, Providence and Nature." *Forum. Supplement to Acta Philosophica* no. 3:7-18.

Abstract: "To study the influence of divinity on cosmos, Alexander uses the notions of 'fate' and 'providence,' which were common in the philosophy of his time. In this way, he provides an Aristotelian interpretation of the problems related to such concepts. In the context of this discussion, he offers a description of 'nature' different from the one that he usually regards as the standard Aristotelian notion of nature, i.e. the intrinsic principle of motion and rest. The new coined concept is a 'cosmic' nature that can be identified with both 'fate' and 'divine power,' which are the immediate effect of providence upon the world.

In the paper it is exposed how the conception of providence defended by Alexander means a rejection of the divine care of the particulars, since the divinities are only provident for species. Several texts belonging to the Middle Platonic philosophers will convince us that such thinkers (and not directly Aristotle) are the origin of the thesis that will be understood as the conventional Aristotelian position, namely that divinity only orders species but not individuals."

49. Towey, Alan. 1991. "Aristotle and Alexander on Hearing and Instantaneous Change: A Dilemma in Aristotle's Account of Hearing." In *The Second Sense: Studies in Hearing and Musical Judgement from Antiquity to the Seventeenth*

Century, edited by Burnett, Charles, Fend, Michael and Gouki, Penelope, 7-18. London: Warburg Institute.

"Aristotle's account of hearing,(1) despite its considerable influence on subsequent thought,(2) has usually been discussed only as part of a wider treatment of some other subject in the context either of ancient music(3) or of Aristotle's general psychology.(4) Yet there is much to be said for a study that concentrates specifically on hearing. Such an approach accords well with Aristotle's own advice that accounts seeking to embrace different psychological capacities in a general survey are less informative than ones which are focused on the peculiar differences of each.(5) More significantly, despite this apparent emphasis on autonomous explanations for each sense modality, it is clear that Aristotle himself took hearing to be in certain important respects paradigmatic of sense perception generally. (6)" (p. 7)

(1) I shall concentrate on Aristotle himself, in particular his discussions of hearing in the *De anima*, edited with introduction and commentary by W. D. Ross (Oxford, 1961), and the *De sensu et sensibili* from Aristotle, *Parva naturalia*, edited by W. D. Ross (Oxford, 1955): also the commentary on the latter by the Aristotelian commentator, Alexander of Aphrodisias (floruit 205 AD), *In librum De sensu commentarium*, edited P. Wendland, *Commentaria in Aristotelem graeca*, 3. 1 (Berlin, 1901), and Alexander's own treatise *De anima*, edited by I. Bruns in Alexander, *Praeter commentaria scripta minora*, Supplementum Aristotelicum, 2.1 (Berlin, 1887). I shall not consider the Pseudo-Aristotelian *Problemata*, beyond noting that Book XI contains an account of hearing close in some respects to the account given by Alexander. For a discussion of the *Problemata* see the article by Burnett in this volume. All translations of Aristotle are, except where otherwise stated, from *The Complete Works*, edited by J. Barnes, 2 vols (Princeton, 1984). Translations of Alexander are my own.

(2) See especially the chapters by Burnett and Frangenberg in this volume.

(3) There is a useful treatment in E. A. Lippman, *Musical Thought In Ancient Greece* (Columbia, 1964), pp. 118-20; see also A. Barker, *Greek Musical Writings* (Cambridge, 1984-9), II, pp. 74-80.

(4) The standard account remains J. I. Beare, *Greek Theories of Elementary Cognition* (Oxford, 1906).

(5) *De anima* 11. 3-4, 414^b25-415^a16. Aristotle is referring to nutrition, perception and thought, but the same principle will apply to the five senses which constitute perception. See Alexander, *De anima*, p. 40.3-15.

Charles Burnett, *Sound and its Perception in the Middle Ages*, same volume, pp. 43-69.

Thomas Frangenberg, *Auditus visu prestantior: Comparisons of Hearing and Vision in Charles de Bovelles's Liber de sensibus*, same volume, pp. 71-94.

50. ———. 2019. "The Physiology of Vision in Alexander's Commentary on the *De sensu*." *Ancient Philosophy* no. 39:211-223.

"I consider how far the commentary of Alexander of Aphrodisias on Aristotle's *De sensu* (henceforth *IDS*) presents a coherent account of the workings of the eye while at the same time assessing the extent to which Alexander was aware of the work of Galen in this area. These two questions are linked. Galen's account of the workings of the eye in *De methodo medendi* (*MM*), *De usu partium* (*UP*), and above all *De placitis Hippocratis et Platonis* (*PHP*), is characterised by its anatomical detail. The account presented in *IDS* is in contrast devoid of anatomical detail. And yet in other areas various studies have argued the case for seeing Alexander as responding to Galen. If Alexander when he wrote *IDS* was mindful of Galen's contribution to the subject of visual physiology, his apparent disregard for the fruits of Galen's

dissections of the human eye requires explanation." (p. 211, two notes omitted)

51. Tuominen, Mitra. 2010. "Receptive Reason: Alexander of Aphrodisias on Material Intellect." *Phronesis.A Journal for Ancient Philosophy* no. 55:170-190.

Abstract: "According to Alexander of Aphrodisias, our potential intellect is a purely receptive capacity.

Alexander also claims that, in order for us to actualise our intellectual potentiality, the intellect needs to abstract what is intelligible from enmattered perceptible objects. Now a problem emerges: How is it possible for a purely receptive capacity to perform such an abstraction? It will be argued that even though Alexander's reaction to this question causes some tension in his theory, the philosophical motivation for it is a sound one. Rather than a calculation of actualities and potentialities, the doctrine of receptivity is supposed to explain how human beings come to grasp universal aspects of reality in an accurate manner."

52. Tweedale, Martin. 1984. "Alexander of Aphrodisias Views on Universals." *Phronesis.A Journal for Ancient Philosophy* no. 29:279-303.

"Alexander's views on universals are, it seems, quite important history philosophy. When Boethius gives in his second commentary on Porphyry's *Isagoge*(1) his solution to the problem of universals as he conceived it, he claims to be adopting Alexander's approach."

(...)

"However, it is not at all straightforward to determine what Alexander's theory of universals or common items exactly was, and this for several reasons. First of all, the view as we find it in Greek texts attributed to Alexander seems not entirely coherent, and the interpreter naturally feels unsure whether he has understood it properly. Secondly, doubt has been cast on the authenticity of some of the more important of these texts.

Finally, commentators, both ancient and modern, have ascribed an extreme anti-realist view to Alexander that, as we shall see, is not borne out by the texts we possess, authentic or not.

In the following I shall try to surmount these difficulties, to the extent that this is possible on our present knowledge, and give an account of what Alexander's view probably was, or at least what it would have appeared to Boethius and Avicenna to be, and then go on to locate the philosophical difficulty it leaves unresolved. For my overall estimate of Alexander's theory is that it is not entirely satisfactory and probably did not appear so to thinkers such as Boethius and Avicenna." (pp. 279-280)

53. Twetten, David. 2023. "Why the Prime Mover Is Not an Exclusively Final Cause. Alexander of Aphrodisias and Averroes." In *Contextualizing Premodern Philosophy: Explorations of the Greek, Hebrew, Arabic, and Latin Traditions*, edited by Krause, Katja, López-Farjeat, Luis Xavier and Oschman, Nicholas A. , 29-55. New York: Routledge.

"The argument of this chapter is, first, that Alexander of Aphrodisias is not the source of the "final cause only" interpretation,(13) since the greatest commentator on Aristotle, in fact, takes Aristotle's prime mover to be an efficient cause. (14) For Alexander, celestial ensoulment, rather than being a threat to the prime mover's efficiency, is precisely that through which efficiency is discovered. Second, Averroes largely agrees with Alexander on the causality of the heavens and Aristotle's god, and, where Averroes disagrees, he is closer to Aristotle's mind than is Alexander. I make these points largely by lining up, successively, the surprisingly parallel teachings of the two great commentators, then by introducing considerations from the text of Aristotle that lend support to their readings.(15)" (p. 30)

(13) Syrianus is the first I have found for whom Aristotle's prime mover is a final cause only. Syrianus, *In Metaphysica commentaria*, ed. Kroll, B.1, 8.30–33 and 10.20–11.9; M.5, 117.16–20. 14 Berti, "Da chi è amato," 70, aptly observes that the creationist/emanationist reading of Aristotle has been an obstacle to a contemporary appreciation of the efficiency of Aristotle's prime mover. Accordingly, when Simplicius famously criticizes Alexander for taking god to be a final cause, not efficient, of the heavens, we readily imagine Simplicius to be ascribing the "exclusively final cause" interpretation to Alexander. On the contrary, Simplicius repeatedly ascribes to Alexander efficiency over the motion, though not over the very being, of the heavens. For discussion, see Sharples, "Aristotelian Theology," 19 n. 94; Twetten, "Aristotelian Cosmology," 335–37. Nevertheless, an investigation of what "efficient causality" means is clearly in order, as I undertake in a preliminary way below.

(15) I treat other parallel argumentation in Alexander and Averroes in Twetten, "Whose Prime Mover," 379–90.

"My strategy in this paper is as follows: First I shall examine what may be called Aristotle's definition of possibility. Then I shall explain the use that Alexander of Aphrodisias makes of this definition in an interesting argument of his. And finally I shall try to show that the soundness of this argument depends on a conception of truth that is tacitly presupposed by Aristotle and strongly rejected by Cicero. Some glimpses beyond will round off the picture." (p. 33)

4. Bazán, Bernardo Carlos. 1973. "L'authenticité du « De intellectu » attribué à Alexandre d'Aphrodise." *Revue Philosophique de Louvain*. no. 71:468-487.

Résumé : "En confrontant le *De anima* d'Alexandre d'Aphrodise et le *De intellectu* que la tradition scolastique lui a attribué, M. Paul Moraux a cru pouvoir mettre en évidence de telles divergences doctrinales entre ces deux traités qu'elles laisseraient supposer deux auteurs différents. La présente étude, reprenant la comparaison de près, remarque non une opposition mais une évolution qui, loin d'exclure l'identité d'auteur, la suggère au contraire fortement."

Abstract: "In comparing the *De Anima* of Alexander of Aphrodisias and the *De Intellectu* which scholastic tradition attributed to him, M. Paul Moraux believed that he was able to bring to light such doctrinal divergencies between these two treatises as to lead one to believe in a difference of authorship. This study, which closely reexamines the comparison, observes not an opposition, but an evolution which, far from excluding an identity of authorship, on the contrary strongly suggests it."

5. Bertier, Janine. 1978. "Une hénadologie liée au stoïcisme tardif dans le commentaire d'Alexandre d'Aphrodise à la *Métaphysique* d'Aristote (990 B 9)." In *Les Stoïciens et leur logique. Actes du colloque de Chantilly, 18-22 sept. 1976*, edited by Brunschwig, Jacques, 41-57. Paris: Vrin.

Abstract: "In the passage offered for analysis (*Met.* 990 b 9 = 123.19-125.2) Alexander sets out the practice and the principles of *ekthesis*, i.e. the method by which the Platonists believed they were able to demonstrate that the One is the most fundamental essence. The doctrine which Alexander sets forth does not attribute any essentially formal function to the One; the function of the One in this theory is ontological, and consists in the production of beings, and in maintaining the durability of their nature. The idea of the One that comes into play in this passage is thus not so much that of an indivisible minimum of quantity it is closer to the idea of a tie, of a force of unification. This activity of the One is reproduced by the Ideas, which, each within their own field, pass on to others the unifying force which they have received from the One. It is for this reason that the Ideas are called henads. There follows a study of this word in *l'lato* (*Phil.* 15a) and in the Neoplatonic commentators writing on Plato, namely I'roclus and Damascius. The commentators distinguish henad, as the unity of the Idea in its relation to whatever entity may depend upon the Idea, and monad, as the unity of the Idea in the relation which the Idea itself has to the One.

There are differences between this doctrine and that recorded by Pseudo-Alexander (813.24-9) in his commentary on *Met.* N 3, 1090 a 17 ff. The theory recorded in Pseudo-Alexander is concerned to bring out and to highlight the « depossession » which any sensible particular must manifest in virtue of having its nature fixed in the way it is as a result of participation in an intelligible. The argument given in this text to justify the non-identity that obtains between terms attributed in common and the beings to which these terms are attributed is not far removed from that which is given in texts of Plotinus (VI, 6, 5, 29 ff; *ibid.*, 13, 2 ff) and of Sextus (*Adv. math.* IV, 21-32, X, 248-309, *Hyp. pyrrh.* III, 150-167). The theory presented by the

genuine Alexander does not distinguish so sharply between what is intelligible and what is sensible, and is in general closer to Porphyry's « tree » (*Isag.* IV 21), and notably to Seneca, *Epist.* 58, 8-22; the three passages have in common, alongside certain differences of detail, the general notion of the genus as a tie and of an opposition between the flux of movement spread through the universe and the stabilising grasp of the One. "

6. Bonelli, Maddalena. 2009. "Dialectique et philosophie première: Syrianus et Alexandre d'Aphrodise." In *Syrianus et la métaphysique de l'antiquité tardive*, edited by Longo, Angela, 423-438. Napoli: Bibliopolis.

"Dans cet article je me propose d'analyser un passage du commentaire de Syrianus sur le livre Γ de la *Métaphysique* d'Aristote, en le comparant à un passage parallèle du commentaire d'Alexandre d'Aphrodise sur le même livre(1).

Trois raisons rendent le passage de Syrianus extrêmement intéressant. Tout d'abord, on trouve là un essai de la méthode du commentaire "spéculatif" de Syrianus, qui ne se limite pas à donner une explication littérale du texte d'Aristote (ce qui est le cas pour Alexandre), mais qui juge et parfois utilise, comme c'est le cas ici, des doctrines aristotéliennes pour ses propres buts théoriques. Deuxièmement, ce passage se trouve dans une partie du commentaire particulièrement importante pour l'histoire de la métaphysique ancienne tardive, parce que Syrianus, en accord substantiel avec la description de la science de l'étant en tant qu'étant donnée par Aristote, opère une sorte de fusion entre la dialectique platonicienne et la science philosophique aristotélienne, fusion qui connaîtra une certaine réussite et qui sera développée par son élève Proclus. Enfin, dans ce passage on peut voir ce qu'on commence à reconnaître seulement maintenant, à savoir que parfois l'aristotélisme que Syrianus accepte et élabore n'est pas l'aristotélisme d'Aristote, mais celui, en partie modifié, d'Alexandre d'Aphrodise.

Je vais donc ici présenter le passage de Syrianus, en le comparant à celui d'Alexandre d'Aphrodise et en le commentant en détail. Le but est de mettre en relief le mélange

d'éléments platoniciens et aristotéliens élaboré par Syrianus, ainsi que l'influence d'Alexandre dans son élaboration de la métaphysique platonico-aristotélienne.

Alexandre et Syrianus sur Aristot. *Metaph.* r 1003 a 21-25" (pp. 423-424, notes omises)

7. ———. 2009. "Alexandre d'Aphrodise et la cause matérielle." *Journal of Ancient Philosophy (Brésil)* no. 3:1-17.

Abstract: "This paper considers the conception of material cause according to Alexander of Aphrodisias. I defend the view that Alexander tries to conciliate two conceptions of material cause which are often confused in Aristotle: the concept of material cause as *conditio sine qua non* and the concept of material cause as a genuine cause (as 'because', *dia ti*). In his *De fato* and in his commentary on chapters 2 and 24 of book *Delta* of Aristotle's *Metaphysics*, Alexander analyses the three Aristotelian elements of material cause, namely (1) the *ex hou* (the 'out of which'), (2) the *enuparchon* (internal constituent) and (3) the *hupokeimenon* (substratum), and confirms the Aristotelian conception of material cause as the condition of becoming and existence of items. But explaining that material cause seems to be rather a *conditio sine qua non*, in his commentary on book Beta of *Metaphysics* Alexander explains also that, for this reason, it is less a cause than the other Aristotelian causes."

8. ———. 2012. "Alexandre d'Aphrodise et la philosophie première." In *Physique et Métaphysique chez Aristote*, edited by Bonelli, Maddalena, 259-275. Paris: Vrin.

"Alexandre d'Aphrodise traite de la philosophie première dans son commentaire à la *Métaphysique* d'Aristote.

Son intention est de montrer que « philosophie première » n'est qu'une des dénominations d'une seule science ou discipline, qui est désignée aussi par Aristote sous d'autres noms: σοφία, σοφία, πρώτη, science de l'étant en tant qu'étant, théologie. La science est unique parce que son objet est unifié(2) Alexandre en effet, s'efforce ici et là de montrer que les sujets « métaphysiques » de la *Métaphysique*,

apparemment disparates, (les causes et les principes premiers; l'étant en tant qu'étant; la substance; _les étants divins) sont unifiés de fait. Mais Alexandre se montre parfois conscient du fait que cette unité est problématique, et, dans un cas au moins, terriblement difficile," (p. 259, deux notes omises)

(...)

"Les passages importants pour essayer de déterminer ce qu'Alexandre entend par « philosophie première » sont au nombre de deux. Ces deux passages semblent être en conflit: en effet, le premier (Alex., *in Metaph.*, p. 245, 33-246, 13) présente deux philosophies premières, avec deux sens de « premier »; en revanche, le _deuxième (Alex., *in Metaph.*, p. 266, 2-14) établit de façon orthodoxe (à savoir, selon la solution suggérée par Aristote en *Métaph.*, E, 1) qu'après tout il y en a seulement une et un seul sens de « premier ». Dans les deux cas, c'est Aristote le responsable: les analyses de Alexandre sont toujours déterminées par la nécessité d'expliquer des passages d'Aristote, et dans notre cas, de la *Métaphysique*." (p. 260)

(2) Sur cette unité, voir P.-L. Donini, « Unità e oggetto della metafisica secondo Alessandro di Afrodisia », in G. Movia (a cura di), *Alessandro di Afrodisia e la « Metafisica » di Aristotele*, Milano, Vita e Pensiero, 2003, p. 15-19 (traduction française in M. Narcy et A. Tordesillas (éd.), *La « Métaphysique » d'Aristote: Perspectives contemporaines*, Paris, Vrin et Bruxelles, Ousia, 2005, p. 81-98). L'article de Donini représente à ma connaissance l'étude la plus exhaustive d'une liste, assez maigre, d'études consacrées au concept de métaphysique dans le commentaire à la *Métaphysique* d'Alexandre. Cette liste comprend: P. Merlan, « Metaphysik: Name und Gegenstand », *Journal of Hellenic Studies*, 77 (1957), p. 87-92; C. De Vogel, « La méthode d'Aristote en métaphysique d'après *Métaphysique A 1-2* », in *Aristote et les problèmes de méthode*. Communications présentées au Symposium Aristotelicum tenu à Louvain du 24 au 1 septembre 1960, Louvain-Paris, Publications universitaires, 1961, p. 147-70; C. Genequand, « L'objet de la Métaphysique selon Alexandre d'Aphrodise », *Museum Helveticum*, 36 (1979), p.

48-57; G. Verbeke, «Aristotle's Metaphysics viewed by the Ancient Greek Commentators», in D.J. O'Meara (ed.), *Studies in Aristotle*, Washington D.C., Catholic University of America Press, 1981, p. 107-127; M. Bonelli, « Le caratteristiche della scienza filosofica », in M. Bonelli, op. cit. [*Alessandro di Afrodisia e la metafisica come scienza dimostrativa*, Napoli, Bibliopolis, 2001], p. 199-235 Voir aussi G. Movia, Introduzione, in G. Movia (ed.), *Alessandro di Afrodisia, Commentario alia Metafisica di Aristotele*, Milano, Bompiani, 2007, spécialement p. lix-lxxvi.

9. ———. 2013. "Alexandre d'Aphrodise : les causes κατά τὸ εἶδος." In *Aitia. I. Les quatre causes d'Aristote : origines et interprétations*, edited by Viano, Cristina and Natali, Carlo, 209-220. Leuven: Peeters.
10. ———. 2013. "Alexandre d'Aphrodise et le destin comme cause productrice." In *Fate, Chance, and Fortune in Ancient Thought*, edited by Guadalupe Masi, Francesca and Maso, Stefano, 83-101. Amsterdam: Hakkert.

Abstract: "This paper considers the theory of fate to be found in Alexander of Aphrodisias' *On fate*. Against the opposing theory, which may be regarded as Stoic, and using Aristotelian 'materials', Alexander constructs a theory that identifies fate with nature. In this way, he saves human freedom on two fronts: on one hand, because in nature everything happens only "for the most part"; on the other, because in nature so conceived, and hence as regards fate, there is room for "counter-nature" and for "counter-fate", and, so, for human responsibility."

11. ———. 2015. "Alexandre d'Aphrodise et la cause ποιητική." In *Aitia II avec ou sans Aristote. Le débat sur les causes à l'âge hellénistique et impérial*, edited by Natali, Carlo and Viano, Cristina, 119-135. Leuven: Peeters.

"Pour comprendre la position alexandriste sur n'importe quelle théorie philosophique, il faut toujours considérer le double rôle qu'Alexandre a eu par rapport à Aristote, ainsi que ses écrits, qui en sont la conséquence : (i) les commentaires aux ouvrages aristotéliciens, où Alexandre, en commentateur, s'arrête à

éclaircir les affirmations d'Aristote, souvent difficiles à comprendre, en introduisant parfois de véritables virtuosismi exégétiques, non dépourvus d'originalité (exégèse philosophique) ; (ii) les oeuvres ainsi dites 'personnelles' (mais qui de fait sont foncièrement influencées par Aristote), où Alexandre, en philosophe, utilise les théories d'Aristote pour ses propres buts philosophiques (philosophie exégétique).

Ainsi, pour analyser la théorie alexandriste de la cause ποιητική, il faudra d'abord considérer son commentaire sur la *Métaphysique*, étant donné que celui sur la *Physique*, où on aurait peut-être pu trouver plus de matériel, est perdu. Ensuite, on considérera brièvement les ouvrages 'personnels', car Alexandre utilise la théorie des quatre causes d'Aristote tantôt pour présenter sa théorie du destin, tantôt pour parler de l'âme et des objets divins. En particulier, c'est au *De fato* qu'on s'adressera, car ici Alexandre présente la célèbre théorie du destin comme cause ποιητική." (p. 119, notes omises)

12. ———. 2019. "Alexandre d'Aphrodise et les présocratiques. *Les amis et les disciples. Mélanges offerts à Francis Wolff*, édités par Julie Giovacchini & Juliette Lemaire." *Journal of Ancient Philosophy (Brésil)* no. Supplementary volume 1:3-25.

"L'importance de la considération d'Alexandre pour les présocratiques réside dans le fait qu'il a été un point de repère insigne pour tous les commentateurs d'Aristote successifs, et notamment pour Simplicius ??Je après J.-C. qui, lui, est l'une des sources les plus importantes pour la reconstruction des doctrines présocratiques. L'on retrouve des références aux présocratiques dans plusieurs textes d'Alexandre (notamment dans les commentaires des textes d'Aristote, par exemple dans les commentaires des livres *Alpha et Gamma* de la *Métaphysique*, du *De sensu*, des *Meteorologica* et des *Topiques*), mais pour une raison que j'expliquerai, je me contenterai de son commentaire du livre *Alpha* de la *Métaphysique*." (p. 3)

13. ———. 2022. "Alexandre d'Aphrodise et l'existence des intermédiaires." *Revue de Philosophie Ancienne* no. 40:113-135.

Résumé : "Dans le commentaire d'Alexandre d'Aphrodise sur la *Métaphysique* d'Aristote, nous trouvons plusieurs passages concernant « les intermédiaires » (τα ` μεταξὺ). Dans cet article, j'en considérerai quelques-uns, tirés des commentaires sur les livres *Alpha* (6, 987b14-18) et *Beta* (2, 997a34-b3 ; 997b25-28 ; 998a7-9), car dans ces passages on ne trouve pas une simple paraphrase de ce qu'Aristote dit (comme c'est fréquent chez Alexandre), mais une prise de position qui me semble fort originale. À partir de cette analyse, nous trouverons une confirmation de ce que l'on dit souvent, à savoir qu'Alexandre ne s'intéresse pas aux philosophes (passés et contemporains) en tant que tels, mais seulement en tant qu'objets de considération, souvent polémique, d'Aristote et des aristotéliens « purs et durs » comme lui. On trouvera aussi une autre confirmation, à savoir qu'Alexandre essaye toujours et à tout prix d'expliquer systématiquement Aristote, même lorsque les thèses aristotéliennes ne paraissent pas cohérentes ou bien harmonisées entre elles. D'ailleurs, il faudra constater aussi que les passages du commentaire d'Alexandre que l'on analysera ont le mérite de souligner et d'expliquer clairement les difficultés sérieuses que nous rencontrons lorsque nous réfléchissons sur les μεταξὺ des Platoniciens : la difficulté de concevoir leur rapport avec la réalité sensible si on les considère comme les objets de certaines sciences mathématiques ; la difficulté de considérer leur existence si on les conçoit comme des objets immanents au réel."

"Dans la présente étude, je me propose d'aborder un nombre limité de parallèles entre Alexandre et Plotin ; je voudrais montrer que l'existence de ces parallèles ne doit pas conduire à trouver du platonisme chez Alexandre ou de l'aristotélisme chez Plotin, mais à mettre en valeur les analogies et les différences qui subsistent entre la version de l'aristotélisme développée par Alexandre et la version du platonisme développée par Plotin." (p. 380)

17. ——. 2017. "Catégories et métaphysique chez Alexandre d'Aphrodise: l'exégèse de *Catégories* 5." In *Alexandre d'Aphrodise et la métaphysique aristotélicienne*, edited by Balansard, Anne and Jaulin, Annick, 157-179. Leuven: Peeters.

"Cette contribution vise à reconstruire la lecture de *Cat. 5* par Alexandre d'Aphrodise dans le cadre de l'exégèse qu'Alexandre propose de ce traité. Comme nous le verrons, Alexandre semble réagir à une lecture plus ancienne des *Catégories*, une lecture de type particulariste ou extensionnelle, qui fut probablement développée par Boéthos de Sidon(1). On peut montrer que l'interprétation d'Alexandre conserve certains aspects de l'exégèse de Boéthos et notamment la lecture sémantique du traité (c'est ce qu'on voit dans la doctrine du σκοπός). Cependant, Alexandre introduit des corrections qui visent à intégrer, contre Boéthos, l'ontologie des *Catégories* et celle de la *Métaphysique*, ainsi qu'à répondre aux problèmes posés par l'interprétation de Boéthos (mais aussi, peut-être, aux apories du platonicien Nicostrate). C'est cette démarche générale qui explique l'interprétation essentialiste ou intensionnelle du traité que développe Alexandre. La discussion de ce dossier n'est pas facile, car les textes sont assez peu nombreux et, comme on va le voir, les commentateurs néoplatoniciens ont parfois tendance à superposer les positions de Boéthos et d'Alexandre sans reconnaître leurs différences."

(1) Les conclusions de mon analyse se rattachent à celles des recherches conduites par Rashed 2007.

References

18. Coda, Elisa. 2015. "Un fragment du commentaire perdu au « De Caelo » d'Alexandre d'Aphrodise sur les différents sens des termes « engendré » et « inengendré » (Thémistius, *In De Caelo*, p. 43.3-44.17 Landauer)." *Studia greco-arabica* no. 5:13-26.

"Abstract: "Well before Philoponus' attack against eternalism and Simplicius' response, taking the form of a colossal commentary on Aristotle's *De Caelo*, another thinker, the 4th century rhetorician and philosopher Themistius, had embarked upon a running exegesis of the this Aristotelian work. Themistius still had at his disposal the commentary on the *De Caelo* penned by Alexander of Aphrodisias, lost to us. Notwithstanding its importance, Themistius' paraphrase of the *De Caelo* is poorly known: the Greek text is lost; a medieval Hebrew translation made on the basis of a lost Arabic one survives, together with a Latin translation of the Hebrew text, made during the Renaissance. From this unpromising material it is however possible to unravel important issues. This article deals with Themistius' and Alexander's exegeses of the meaning of the key terms "generated" and "ungenerated" and argues that Themistius attests the classification made by Alexander, but in his own exegesis endorses the typical Neoplatonic distinction between "generated" as "temporally generated", on the one hand, and "generated" as "having a cause of its coming into being", on the other."

19. Cordonnier, Valérie. 2008. "Corps, matière et contact. La cohérence du sensible selon Alexandre d'Aphrodise." *Les Études philosophiques*:353-378.

Résumé : "Cet article étudie la manière dont Alexandre analyse le monde sensible, en ses structures constitutives et quant aux principes tenus pour être à l'origine ses opérations fondamentales que sont l'alteration et le mélange. En premier

lieu, il s'agit de voir quels sont les critères pour qu'un être soit un "corps". Ensuite, je montre les facteurs mobilisés par Alexandre pour expliquer les caractéristiques de ces corps, leur activité et leur passivité réciproques. Prenant pour point de départ la définition du corps prôtée dans le *De anima* aux stoïciens comme matière ou composé matériel, j'essaie de dégager, pour le projet d'Alexandre lui-même, le sens de cette étrange reconstruction doxographique. Celui-ci tiendrait à l'orientation résolument "anti-matérialiste" et "anti-réductionniste" de son analyse du sensible : pour lui, ni la constitution ni l'opération des corps ne peuvent être ramenées à leurs conditions nécessaires que sont, respectivement, la matière et le contact physique. À l'exact opposé de la physique stoïcienne, l'aristotélicien développe ainsi sa théorie du sensible en référence aux principes intelligibles et incorporels donnant les véritables fondements à la cohérence du monde corporel, entendue au double sens de la polarité et de la sélectivité réglant les relations entre corps. Pour finir, j'étudie un problème particulier de cosmologie où Alexandre met en application ce programme. Je montre alors l'originalité d'un "naturalisme" qui, de fait, s'est avéré stimulant pour les néoplatoniciens de Plotin autant qu'ensuite pour les Médiévaux en quête d'une philosophie satisfaisant aux exigences implicitement posées à l'enquête rationnelle par les religions révélées. Et ce serait, en somme, parce que les corps d'Alexandre sont déjà plus que des corps et parce que la *physis* aristotélicienne devient avec lui plus qu'une pure "nature", que sa physique a pu devenir la référence obligée des penseurs ultérieurs, à qui elle a fourni le cadre de ce qu'on pourrait appeler une approche métaphysique du monde sensible."

Abstract: "This paper addresses Alexander's theory of the sensible world, and of the most important sorts of change within it, such as alteration and blending. First, I overview the minimal requirements for an item to be considered a "body" according to Alexander. Then, I determine which factors explain the physical characteristics of the bodies and their mutual interactions (that is, their relations of activity and passivity with one another). I also examine why Alexander does

not find the Stoic account of material bodies to be satisfactory and, I consider Alexander's strange construal of the Stoic body as a "stuff" composed either of matter, or of matter and qualities. The solution to these questions lies in the "anti-materialist" and "anti-reductionist" orientation of Alexander's physics : according to him, neither the constitution nor operation of bodies can be reduced to their minimal and necessary conditions (that are, respectively, matter and contact). Thus, his position is the exact opposite of the Stoic view: the essence of bodies and their changes can only be understood by reference to the incorporeal and intelligible principles that ultimately form the very factors responsible for the specific "coherence" of the sensible world (that is, of both its polarity and selectivity). Finally, I will examine a specific problem Alexander solves by emphasizing the non-corporeal causes of the natural world. And I will show that his position leads him to a special type of "naturalism", which was particularly exciting for the Neoplatonists and, later, highly consonant with the medieval approaches to accounting for the causes of sensible things. Because bodies are, for Alexander, more than mere bodies, his physics becomes not only the common point of reference for Plotinus and his followers in Late Antiquity and Middle Ages, but also an important point of departure for what we might call a metaphysical approach to the sensible world."

Bruxelles: Ousia.

Repris dans P. Donini, *Commentary and Tradition: Aristotelianism, Platonism, and Post-Hellenistic Philosophy*, Berlin: Walte de Gruyter 2011, pp. 107-123.

Abstract: "To our knowledge Alexander was the first who attempted to reconcile Aristotle's (apparently conflicting) views regarding the object of that science which Alexander now and there already dubs "metaphysics". For much of his commentary, in fact, Alexander acknowledges that the universal science of being qua being is identical to the science of first substances that are unchangeable, unmoved, and divine, i.e. that science which in *Metaph.* E 1 Aristotle once even dubbed "theology". But this unified conception of Aristotle's "first philosophy" is strangely marred in Alexander's commentary by a few pages (pp. 245-246 H. [Hayduck]), where a wholly different situation arises. In his effort to account for a text of *Metaph.* Γ 2 that differs from the one found in manuscripts and in modern critical editions, Alexander suggests that two different levels of first philosophy should be distinguished, even though he applies the same designation to both levels: 1) the first and most universal level of first philosophy as a general science of being qua being, where being is regarded as a genre. This level of first philosophy is responsible for the partition of being into ten categories and for their distinction. In addition to that 2) a second-level science would address each of the individual species of being (i.e. each category) that is conceived of as a species subject to the most universal science. Amid these special sciences of being, however, abides yet another "first philosophy" ("first" but subordinated to the other) operating at a second and thus lower degree of universality, namely, the science of first substance (the immovable and immaterial substance of the divine). Since all other substances are subordinated to the first substance, in accordance with the Aristotelian principle of ἀφ' ἑνός καὶ πρὸς ἕν, this science also deals with all the other substances and any properties belonging to them. The idea of a two-level first philosophy takes up limited space in the commentary and would not necessarily be contradictory in itself if only Alexander had squarely associated the general science of being

qua being with just one of the two distinct levels. As this is not the case and both “first” philosophies are identified with the science of being qua being, the outcome is a confused and inherently inconsistent presentation. But more problems lie ahead in pp. 245-246: the biggest is that among the special sciences of being we find practical philosophy, whose object is hard to bring into line with or condense into any one (and if so, which?) of the ten categories. Moreover, the suggestion by those modern scholars, who would liken Alexander’s distinction between the two levels of first philosophy with the later distinction between general metaphysics and special metaphysics, appears somewhat flawed. In any case, identifying the doctrine of categories as the content of the more universal science of being almost seems typical of an age in which this doctrine was attacked or defended as if it were considered the mainstay and the cornerstone itself of Aristotelian philosophy.”

"Le problème de la création ou génération ex nihilo, dont je vais m'occuper, est un bon exemple, me semble-t-il, des raisons qui peuvent rendre souhaitable une nouvelle évaluation de l'Alexandre Arabe dans son ensemble.

Nous pouvons partir d'un témoignage de Miskawayh (mort en 1030). Dans son *al-Fawz al-a~gar* («Le moindre triomphe»), Miskawayh parle de la création, par Dieu, du monde à partir du néant, et cite une série d'arguments contre l'opinion, dit-il, de

Galien et de certains philosophes, «que tout s'engendre toujours à partir de quelque chose». À ce propos, Miskawayh cite un traité qu'Alexandre aurait écrit, pour réfuter justement la théorie que «tout s'engendre toujours à partir de quelque chose», et prouver que «les choses contingentes qui viennent à être ne s'engendent d'aucune autre chose», (pp. 277-278, une note omise)

d'Alexandre d'Aphrodise." *Laval théologique et philosophique* no. 64:607-626.

Résumé : "Le commentaire continu d'Alexandre d'Aphrodise sur le livre *Lambda* de la *Métaphysique* d'Aristote était déjà perdu au XIIe siècle. Néanmoins, il exerçait toujours une influence par l'entremise du commentaire d'Averroès et de deux autres textes d'Alexandre : le traité *Sur les principes de l'univers* et la *Quaestio* I.1. Le présent article montre que ces deux derniers textes renferment chacun une section qui s'appuie sur *Métaphysique Lambda*, chapitres 6 et suiv., ce qui confirme le fait, ayant été établi ailleurs, que tous les textes d'Alexandre revêtent un caractère exégétique et prennent pour base les textes d'Aristote. Qui plus est, une comparaison entre le texte du chapitre *Lambda* et l'interprétation alexandriste permet d'apercevoir l'apport distinctif d'Alexandre à ce que la tradition a reçu comme la théologie d'Aristote.

Entre autres choses, nous devons à Alexandre, ou à ses sources proches, l'idée que les cieux, étant animés, se meuvent en cercle parce qu'ils désirent imiter la parfaite quiétude du Premier Moteur. Nous devons également à Alexandre une mise en rapport détaillée de la théorie du livre *Lambda* avec les analyses du chapitre 8 de la *Physique*."

Summary: "This paper deals with the most ancient tale about
the way and the time Aristotle's *Metaphysics* was composed.
This is found at the beginning of Asclepius' commentary in
Metaphysicam (4.4-16 Hayduck). If we consider the general
context which the tale seems to presuppose, its interest is
twofold: it witnesses for a time when the *Metaphysics* could
still be regarded as an unfinished work. In this paper, after
some remarks on the reception and the textual constitution of
the text, I suggest that Asclepius' source could be Alexander of
Aphrodisias in his lost introduction to Aristotle's *Metaphysics*.
If so, Alexander could have still been in condition to apologize
for some lately made changes in the overall shape of the work."

35. Genequand, Charles. 1979. "L'objet de la métaphysique selon Alexandre d'Aphrodisias." *Museum Helveticum* no. 36:48-57.

"Le fait que la *Métaphysique* se préoccupe avant tout de l'être en général et seulement très brièvement du divin contribue à expliquer le destin ultérieur de l'ouvrage dans le monde grec tardif et au-delà. Ce qui retient l'attention, lorsque l'on jette un coup d'oeil sur l'ensemble des *Commentaria in Aristotelem Graeca*, c'est le petit nombre et la médiocrité de ceux consacrés à ce qui nous paraît être le plus important des traités d'Aristote. Asclépius et Syrianus cherchent surtout à néoplatoniser le Stagirite et à réfuter les critiques qu'il adresse à Platon. Quant au meilleur et au plus détaillé de ces commentaires, celui d'Alexandre, il est significatif qu'une grande partie (à partir du livre E) en ait disparu très tôt et ait dû être remplacée par le médiocre travail de Michel d'Ephèse(20). La raison de cet état de choses n'est guère difficile à découvrir. Entre Alexandre et les commentateurs des Ve et Vie siècles, il y a eu Plotin et

Porphyre. Plotin établit définitivement au sommet de toute la philosophie et comme partie essentielle de celle-ci une métaphysique dérivée de Platon et ne s'occupant que du monde intelligible, dont le monde sensible n'est qu'un pâle reflet. Dans la mesure où les entités du monde intelligible de Plotin et de ses successeurs peuvent être considérées comme des dieux, on peut dire que pour eux la métaphysique se réduit à une théologie. Porphyre, lui, jeta les fondements du syllabus philosophique qui s'imposera à l'Antiquité tardive et à une bonne partie du Moyen-Age et dans lequel la logique et la physique sont tirées pour l'essentiel d'Aristote et la métaphysique de Platon. Pour une philosophie qui se réfugiait de plus en plus dans le ciel, la *Métaphysique* d'Aristote n'offrait qu'une assez maigre pâture. On se contenta de récupérer dans les chapitres 5-10 du livre A ce qui était utilisable dans le grand système du néoplatonisme.

Le caractère insatisfaisant de la métaphysique aristotélicienne pour une philosophie ainsi orientée permet de rendre compte d'un autre phénomène surprenant. Le Moyen-Age arabe et, à travers lui, les scholastiques latins ont connu sous le nom de *Théologie d'Aristote* et de *Liber de Causis*, également attribué à Aristote, ce qui n'était en fait que des paraphrases assez libres des *Ennéades* de Plotin et des *Eléments de Théologie* de Proclus. Quels que soient les accidents mécaniques de transmission qui ont pu donner naissance à ces fausses attributions, il est évident que la situation qui résultait de celles-ci était profondément satisfaisante pour les esprits systématiques; elle permettait de faire passer sous l'autorité d'Aristote, qui était alors devenu le philosophe par excellence, un système philosophique complet tel que le concevait l'Antiquité tardive, c'est-à-dire dans lequel le monde intelligible était à la fois la cause de tout et la partie essentielle de la philosophie. Pour ces philosophes, la partie proprement ontologique de la *Métaphysique* sombra rapidement dans l'oubli. L'expression même d'être en tant qu'être disparaît pratiquement sans laisser de traces de la philosophie ultérieure, simplement parce qu'aucune notion n'y correspondait plus. Dans cette synthèse de l'aristotélisme et du platonisme, la contribution d'Aristote à la philosophie «première» se résume à

un nom - métaphysique - et guère plus." (pp. 56-57, une note omise)

(20) C'est l'attribution qui a pour elle le plus de vraisemblance; cf. K. Praechter, *Gött. Gel. Anz.* 1906, 882, n. 1.

36. Giovacchini, Julie. 2017. "De elementis, 5, 14-16 : la *tetrapharmakos* et l'épistémologie galénique du mélange." *Aitia. Regards sur la culture hellénistique au XXI^e siècle* no. 7:1-13.

Résumé : "On souhaite reconstituer les sources de la référence à la *tetrapharmakos* dans un passage du *De elementis*, afin d'élucider le statut exact de l'argument utilisé par Galien. Cette source est probablement stoïcienne mais on en trouve également des traces dans l'Anonyme de Londres. Manipulant les concepts stoïciens, Galien fait un usage épistémologique et non directement physique du paradigme du mélange fusionnel, que l'on distinguera en ce sens du mélange dit « total » utilisé quant à lui pour conceptualiser la théorie humorale que Galien souhaite défendre dans la suite du *De elementis*."

"Le *De mixtione* propose une synthèse très complète sur les différentes définitions physiques du mélange, et présente notamment les thèses stoïciennes comme des réponses (certes imparfaites aux yeux de l'auteur) aux impasses de l'atomisme, avant de les critiquer à leur tour, le texte d'Alexandre étant tout entier construit comme une critique analytique de la thèse stoïcienne dite du « mélange total ». Le *De mixtione* est probablement légèrement postérieur au *De elementis* de Galien mais il en reste assez voisin chronologiquement. Il décrit en vérité l'opposition entre physique péripatéticienne et physique stoïcienne du mélange dans des termes très proches de ceux de Galien, se rapprochant comme lui très nettement de la conception aristotélicienne et rejetant la conception stoïcienne considérée comme contradictoire. On peut donc considérer qu'il représente une sorte d'état de l'art de la question du mélange physique à l'époque de rédaction du *De elementis*." (p. 5)

"Philosophe déjà reconnu au tournant du II au III s., Alexandre a dû naître au début de la seconde moitié du IIe s. On considère qu'il était originaire d'Aphrodise de Carie, bien que d'autres cités, moins importantes, aient porté ce nom.

Alexandre dit avoir « écouté » Herminus (*apud Simplicius, In De caelo*, p. 430, 32-33 Heiberg), disciple d'Aspasius (et maître de Galien, si l'on en croit des sources arabes : voir Thillet 1, p. IX n. 3 et XL VI n. 2), et il le cite à plusieurs reprises (références dans Thillet 1, p. VIII n. 3). Il présente également Sosigènes comme son maître (références dans Thillet 1, p. IX n. 4). On a pensé que son compatriote, le péripatéticien Adraste d'Aphrodise, avait pu lui enseigner, mais Thillet 1, p. XXXII, souligne qu'on ne dispose d'aucun témoignage positif en ce sens." (p. 126)

40. Guyomarc'h, Gweltaz. 2008. "Le visage du divin : la forme pure selon Alexandre d'Aphrodise." *Les Études philosophiques*:323-241.

Résumé : "Dans son *De anima*, Alexandre d'Aphrodise identifie l'intellect agent au premier moteur et décrit cette "cause première" comme forme sans matière et séparée. Cet article tente de mesurer l'écart qui se creuse sur ce point entre le

Philosophe et son Exegete. Le premier moteur n'est jamais défini par Aristote comme forme et la détermination primordiale de son être est l'acte. Comment Alexandre, réputé pour sa fidélité à Aristote, peut-il soutenir une telle thèse qui semble dangereusement proche du platonisme ? On essaie de montrer ici que cette description du premier moteur comme pur visage (*eidōs*) n'est pas un accident de la pensée alexandrinienne et qu'elle touche aussi bien à sa théorie de la connaissance qu'au cœur de sa métaphysique."

Abstract: "In his *De anima*, Alexander of Aphrodisias identifies the active intellect with the first mover and describes this "first cause" as an immaterial and separate form. This article aims at explaining to what extent, and why Alexander differs from Aristotle on this point. Aristotle never defines the first mover as a form: he claims that its being is actuality. How could Alexander, who became famous as "the Commentator" par excellence, assert a thesis that seems so dangerously close to Platonism? I intend to show that this description of the first mover as a pure "visage" (*eidōs*) is not an accident in Alexander's thought and that it is linked up with his epistemological conceptions as well as with his metaphysics."

41. ——. 2012. *Aux origines de la métaphysique : l'interprétation par Alexandre d'Aphrodise de la Métaphysique d'Aristote*, Université de Lille; Université de Liège.

"Notre hypothèse générale est la suivante : l'oeuvre de l' « Exégète par excellence » a rendu possible la fondation de la métaphysique. Paradoxalement – mais le paradoxe n'est qu'apparent –, la possibilité même de « faire de la métaphysique », sans que cela signifie seulement commenter Aristote, a été assurée par le travail de ces commentateurs, et singulièrement d'Alexandre. Le processus de différenciation du travail exégétique et du travail du métaphysicien est un processus qui court sur un temps long. On a pu faire l'hypothèse qu'il était accompli seulement à la fin du Moyen Âge, par Suárez(30). Nous proposons d'en situer l'origine chez Alexandre d'Aphrodise. L'Exégète travaille à faire de la *Métaphysique* un livre, et de la métaphysique une science une.

L'étude qu'on va lire porte sur cette double naissance, d'un livre et d'une science." (p.6)

(30) Cf. par exemple J.-P. Coujou [1999], p. 8-9, où l'on voit Suárez qui se pique de pointer les « défauts » de composition et de cohérence dans l'oeuvre aristotélicienne. Voir aussi la synthèse stimulante de P. Porro [2005] qui s'intitule de façon éloquente : « Dalla Metafisica alla metafisica, e ritorno : una storia medievale ».

"Le problème aristotélicien de l'unité de la science de l'étant en tant qu'étant se laisse formuler dans un désormais classique trilemme, établi par P. Aubenque(1) : il y a une science qui étudie l'étant en tant qu'étant ; une science une porte sur un genre un ; l'étant n'est pas un genre. Le Commentaire d'Alexandre d'Aphrodise à *Métaphysique* Γ dénote une conscience du problème ainsi formulé, et, en ceci fidèle au texte, rappelle tour à tour ces trois thèses. Alexandre ne renie rien des deux premières propositions, voire accentue le caractère impératif de la deuxième. À titre de science la plus haute, la métaphysique se doit de porter sur un genre. Or l'étant, parce qu'il se dit en plusieurs sens, n'est pas un genre : la proposition inaugurale de Γ 2 semble contredire celle de Γ 1.

Mais, comme on sait, Aristote poursuit : « mais relativement à une unité et une unique nature » (1003a33-34). Chez nombre de lecteurs d'Aristote, le recours à cette unité référentielle a semblé fournir un moyen de résoudre le trilemme. De fait, pour paraphraser le Philosophe en 1003b12-14 : il y a une science une non seulement de ce qui se dit d'après une unité (« καθ'ἓν

- », c'est-à-dire pour ce qui forme un genre), mais aussi de ce qui se dit « relativement à une unique nature ». Cette thèse trace les contours d'un domaine possédant une certaine unité de sens, qui, quoique différente de l'unité générique, rend possible l'unité d'une science. Étant donné le maintien par l'Exégète des deux premières prémisses du trilemme, la conception alexandrinienne du $\pi\rho\omicron\varsigma\ \acute{\epsilon}\nu$ mérite qu'on s'y arrête." (p. 39)
43. ——. 2015. *L'unité de la métaphysique selon Alexandre d'Aphrodise*. Paris: Vrin.

Présentation: "Aristote passe pour avoir fondé la métaphysique. Ce terme, pourtant, lui était inconnu. Les livres rassemblés sous le titre de *Métaphysique* semblent, de surcroît, manquer d'unité. La science qu'ils désignent, enfin, ne paraît pas obéir aux règles classiques de l'épistémologie aristotélicienne.

Le présent ouvrage part de l'hypothèse que la science métaphysique est historiquement née de la tradition des lectures et des reprises successives du projet aristotélicien, et, au premier chef, de celle d'Alexandre d'Aphrodise. Alexandre, connu depuis l'Antiquité comme « l'Exégète par excellence », est professeur de philosophie aristotélicienne à Athènes, au tournant des II^e et III^e siècles de notre ère. Il rédige le premier commentaire à la *Métaphysique* qui nous ait été transmis. Mais, en s'efforçant de saisir l'unité littéraire de l'ouvrage qu'il commente, l'Exégète travaille aussi à dégager l'unité de la science recherchée. Science à la fois universelle et première, à la fois modèle et fondatrice des autres savoirs, elle a, selon lui, trois objets principaux : l'étant en tant qu'étant, la substance et le divin.

C'est en actualisant des potentialités du texte aristotélicien qu'Alexandre d'Aphrodise dessine ainsi une figure possible de la philosophie première. Alexandre est l'un de ces maillons qui, en la transmettant, font que la métaphysique gagne son histoire. Son interprétation déterminera, sur un temps long, la façon dont cette science architectonique s'est édifiée, et comment cette « reine des sciences » que deviendra la métaphysique a commencé d'accéder au pouvoir."

44. ———. 2017. "Analyse et axiomes : la connaissance du premier principe selon Alexandre d'Aphrodise." In *Réceptions de la théologie aristotélicienne : d'Aristote à Michel d'Ephèse*, edited by Baghdassarian, Fabienne and Guyomarc'h, Gweltaz, 59-83. Louvain-la-Neuve: Peeters.

45. ———. 2017. "« Métaphysique » et « Organon » selon Alexandre d'Aphrodise : l'utilité de la logique pour la philosophie première." In *Alexandre d'Aphrodise et la métaphysique aristotélicienne*, edited by Balansard, Anne and Jaulin, Annick, 83-111. Leuven-la-Neuve: Peeters.

"si, comme on le dit, Alexandre d'Aphrodise travaille à « systématiser » l'oeuvre d'Aristote (en un sens qui reste pour partie à déterminer), il est légitime de s'interroger sur la façon dont il conçoit les frontières entre

les différentes disciplines dans la cartographie aristotélicienne des savoirs.

dans le cas de la métaphysique, ce sont les relations avec deux types de discours qui méritent en priorité un examen: d'une part, la physique, pour d'évidentes raisons internes à l'aristotélisme; d'autre part, la logique, pour des raisons qui tiennent aussi au contexte d'Alexandre. C'est à cette dernière que l'on souhaite s'intéresser ci-dessous. on voudrait plus précisément essayer d'éclairer le sens et la portée de trois passages du *Commentaire à la Métaphysique*, trois textes qui font explicitement se croiser logique et métaphysique." (p. 83)

Premier passage : Alexandre, in *Met.* 173, 27-174, 4.

Deuxième passage : Alexandre, in *Met.* 245, 33-35.

Troisième passage : Alexandre, in *Met.* 266, 18-25.

"S'il est courant, dans les études aristotéliennes, de s'interroger sur la causalité du premier moteur immobile – est-elle finale, motrice, voire formelle ? – il est néanmoins plus rare d'approcher ce point d'Archimède de l'univers aristotélien en examinant son statut de principe.

Lire *Métaphysique* Λ comme une enquête sur les principes, comme une « archologie », est pourtant le plus à même de rendre compte de l'unité problématique de ce livre(1). Du reste, Alexandre d'Aphrodise, d'après le témoignage d'Averroès, comprend précisément le σκοπός de Λ en ce sens : après les développements des livres Z et H sur la nature de la substance et les principes de la substance sensible, le livre Λ accomplit l'enquête en la portant au niveau des principes de la substance première, ce qui permet d'achever l'enquête sur les principes de tout être(2). C'est moyennant un double mouvement de remontée de la série des causes et des principes, d'une part, et d'ascension dans l'échelle des êtres, d'autre part, qu'on passe d'une enquête sur l'être en tant qu'être à une enquête sur la substance, et de celle-ci à une étude de ce principe absolument premier qu'est le premier moteur." (p. 143)

Abstract : "According to some testimonies, the Aristotelian ethics have been torn between a hedonist reading, as much as an anti-hedonist one, throughout Antiquity. From Critolaos to Verginius Rufus and Sosicrates, pleasure is considered both as

“an evil [that] gives birth to many other evils” and as the first appropriate thing and the supreme good. This noteworthy disagreement stems from a famous difficulty within the Aristotelian corpus, raised by Aspasius, i.e. the alleged coexistence of two ‘definitions’ of pleasure in Aristotle’s *Nicomachean Ethics* VII and X. In this paper, I offer a reconstruction of Alexander’s treatment of this difficulty, based on some passages from Alexander’s *Ethical Problems* and the *Mantissa*. I try to show that Alexander does not dismiss the so-called “definition A” of pleasure (the unimpeded activity of one’s natural state) as being spurious, although he obviously values more the definition B (according to which pleasure perfects the activity as a kind of supervenient end). Even if he never openly brands the definition A as “dialectic” (like Aspasius), Alexander takes it as a reputable *endoxon*, which however needs to be emended in that it blurs the distinction between pleasure and activity. Pleasure only supervenes on the activity to which it is appropriate, and this supervenience is precisely what accounts for the inaccuracy of the definition A. As much as the child conflates the apparent good and the good, so the hedonist takes pleasure to be identical with the activity and the telos of human life. On the contrary, for Alexander, pleasure is actually only a sign of happiness and the shadow of the activity.”

Bibliographie annotée des études en français sur Alexandre d'Aphrodise: Has - Z

Bibliographie

1. Hasnawi, Ahmad. 1994. "Alexandre d'Aphrodise vs Jean Philopon Notes sur quelques traités d'Alexandre 'perdus' en grec, conservés en arabe." *Arabic Sciences and Philosophy* no. 4:53-109.

Résumé : "Dans cet article, l'auteur fait état de nouvelles données à propos de trois traités attribués à Alexandre d'Aphrodise en arabe et dont on pensait qu'ils n'avaient pas de correspondant grec. Il montre que le premier (D.8a) est une version adaptée – selon les normes du “cercle d'al-Kindi” – de *Quaestio* I 21, à côté de la traduction plus tardive et plus exacte de cette même *Quaestio* due à Abū 'Uṭmān al-Dimašqī (m. 900). Il montre que les deux autres traités (D.9 et D.16), en revanche, ne sont pas d'Alexandre d'Aphrodise, mais qu'il s'agit de versions adaptées – toujours selon les normes du “cercle d'al-Kindi” – de passages du *De Aeternitate mundi contra Proclum* de Jean Philopon, empruntés respectivement à IV, 4–6 et IX, 11. On savait que cet ouvrage fut traduit en arabe. Mais, hormis quelques courts fragments dans al-Bīrūnī (m. 1048), c'est, semble-t-il, la première fois que l'on en met au jour des extraits adaptés de cette importance. Des jalons sont posés en vue de répondre à la question de la situation historique de l'epitomateur. Dans l'Appendice II, un autre traité attribué à Alexandre (D.27g) apparaît – provisoirement – comme un texte composite mêlant des éléments issus de Philopon et d'autres issus des textes néoplatoniciens en arabe. Enfin dans

l'Appendice III, sont situées la manière dont Miskawayh (m. 1030) utilise D.16, et celle dont 'Abdallaṭīf al-Baġdādī (m. 1231) utilise D.27g."

2. Hoffmann, Philippe. 2015. "Le σκοπός du traité aristotélicien *Du Ciel* selon Simplicius." *Studia greco-arabica* no. 5:27-34.

"Abstract: "A six-page Prologue introduces the commentary on Aristotle's *De Caelo* written by Simplicius after 529 AD. As usual in the exegeses typical of the Neoplatonic schools of late Antiquity, this Prologue addresses a series of preliminary questions that are meant to steer the interpretation in its entirety, as well as to frame the text to be commented upon within the reading canon of the Aristotelian works, which were intended to provide the propaedeutics to the reading canon of Plato's dialogues. Simplicius addresses the question of the scope of *De Caelo*, discussing the interpretations advanced by Alexander of Aphrodisias, Iamblichus, and Syrianus. According to Alexander, this treatise deals with the universe as a whole, as well as with the five simple bodies contained in it. It was with Iamblichus, who advocated the idea that for each Platonic dialogue there was only one σκοπός, that the unity of a philosophical work was raised to the rank of a general rule. According to Iamblichus, the σκοπός of the *De Caelo* is the divine body of heaven. As a consequence, the primary elements that depend upon the heavens are included in the treatise. Syrianus deepens the theological tendency implied in Iamblichus' interpretation: for him, the σκοπός of the *De Caelo* is primarily the divine body of heaven, and only secondarily the set of sublunar elements. Simplicius treasures the commentary by Alexander; nevertheless, he questions the σκοπός assigned by him: Alexander underestimated the importance of the unity of the treatise, even though his intention to account for each and every question raised by Aristotle was laudable.

Contrarily, Syrianus was right in emphasizing the theological vein of the *De Caelo*, but focussed only on the section on the divine body of heaven, playing down books III and IV as if they were only ancillary, thus forgetting that the σκοπός must account for the whole of the treatise at hand. Between the two positions, Simplicius advocates the idea of a synthetical

σκοπός, following in the footsteps of Iamblichus' interpretation, but taking systematically into account the best of Alexander's. The σκοπός of the *De Caelo* is the divine heaven, that "communicates" its perfections to the entire universe. Simplicius' position is revealed to be very different with respect to that of other commentators like Ammonius and Philoponus, who both considered that the title was self-evident and required no special investigation."

3. Jaulin, Annick. 2008. "Remarques sur la construction de la nature dans les § 2-6 du *De fato* d'Alexandre d'Aphrodise." *Les Études philosophiques*:343-352.

Résumé : "Dans le § 6 du *De fato*, Alexandre d'Aphrodise déclare exposer la conception peripatéticienne du destin. Il pose à cet effet l'identité de la nature et du destin. Le but de cet article est d'expliciter la détermination de la nature mise en oeuvre pour établir cette identité et de la confronter à la théorie aristotélicienne. L'examen est mené d'un double point de vue : celui des procédures méthodologiques utilisées et celui du concept de nature qui en résulte."

Abstract: "In *De fato* VI, Alexander of Aphrodisias states the Peripatetic theory of Fate, arguing that nature and Fate are identical. What notion of nature results from this statement? Is it still aristotelian? The question will be examined under two aspects, methodological and conceptual."

4. ———. 2017. "L'être et l'un selon le commentaire d'Alexandre d'Aphrodise à Γ 2." In *Alexandre d'Aphrodise et la métaphysique aristotélicienne*, edited by Balansard, Anne and Jaulin, Annick, 131-136. Leuven-la-Neuve: Peeters.
5. Jurasz, Isabela. 2023. "L'interprétation astrologique de la philosophie naturelle d'Aristote selon Alexandre d'Aphrodise et Bardesane le Syrien." *Elenchos* no. 44:119-151.

Abstract . "The existence of common points between Alexander of Aphrodise and Bardaisan the Syrian has been pointed out on various occasions. However, this question has not been explored in depth. The article proposes to analyse the cosmological ideas of Alexander and Bardaisan. Because both

authors are known for their anti-determinist and anti-astrological polemics, it is preferable to place this comparison in the context of the astrological interpretation of Aristotle's natural philosophy. The article discusses the Aristotelianism of Bardaisan, who may be the first representative of the reception of this doctrine in Syriac."

6. Koch, Isabelle. 2018. "Alexandre d'Aphrodise et la κίνησις ἀναίτιος." *Anais de Filosofia Clàssica* no. 12:72-87.

Résumé _ "Alexandre d'Aphrodise a défendu une conception aristotélicienne de la responsabilité, en particulier dans son traité *Sur le destin*, où il se propose de présenter « la doctrine d'Aristote sur le destin et sur ce qui dépend de nous » (*De fato*, 1), ainsi que dans des textes de la *Mantissa* ou dans certaines *Quaestiones*. Cette défense l'a conduit à reprendre des arguments anti-déterministes traditionnels (par exemple l'argument par les conséquences juridico-morales ou sociales) et à en proposer de nouveaux. Parmi ses arguments plutôt originaux et audacieux, on peut compter celui qui consiste à admettre l'existence d'un « mouvement sans cause », *kinesis anaitios*. Il est développé notamment en *Mantissa XXII*, dans un texte dont l'authenticité est fortement discutée. Je chercherai à montrer que ce texte, même s'il ne peut être attribué avec certitude à Alexandre, fait écho à des arguments authentiquement alexandriniens développés dans le traité *Sur le destin*."

7. ———. 2019. *La causalité humaine : sur le De fato d'Alexandre d'Aphrodise*. Paris: Garnier.
8. Labarrière, Jean-Louis. 2009. "De « ce qui dépend de nous »." *Les Études Philosophiques* no. 88:7-26.

"Alors, une nouvelle fois, malgré l'usage, *Self*, qu'est-ce à dire chez les Grecs ? Est-il approprié, même s'il faut bien pouvoir parler (« soyons charitables » !), de se servir de ce terme ou de « Je », « Moi », « Sujet » ? Telle est la question que je voudrais poser. Ainsi énoncée, ma question semblera bien plate : on ne m'a pas attendu pour la poser ! Même et peut-être surtout dans la littérature secondaire ! C'est pourquoi je voudrais, en un

premier temps, relever certains des énoncés et des procédures de ladite littérature secondaire (je serai très sélectif, donc fort injuste) afin de parvenir à une question : quoi du *eph' hemin* chez Aristote et Alexandre d'Aphrodise ? Je n'en dis pas plus à ce point." (p. 8)

(...)

"Pourquoi Alexandre d'Aphrodise dans son *De fato*, voire dans sa *Mantissa* ou certaines de ses *Quaestiones*(1), peut-il sembler si injuste envers ses adversaires, alors même qu'il intègre certaines de leurs innovations (à commencer par les termes *sunkatathesis*, « assentiment », et *autexiouston*, « liberté »), tout en leur déniait d'avoir su de quoi ils parlaient ? La réponse à cette question me semble ne faire guère de doute : devrait-on même accepter une conception large selon laquelle Alexandre se serait approprié des pans de doctrine entiers en provenance des Stoïciens, Alexandre n'a rien d'un auteur éclectique et, en aristotélicien orthodoxe, du moins à ses yeux, il est au contraire tout prêt à retourner ces « nouveaux outils » contre ceux qui les avaient forgés ! Allons plus loin, l'Exégète ne peut ni ne veut comprendre quelque distinction que ce soit entre *soft determinism* et *hard determinism*. Il ne peut non plus entendre qu'on puisse se passer de la notion de *bouleusis*, ce qui, selon lui, réduit à rien le *eph' hemin*, donc la proairesis, qu'il comprend,

non sans quelque raison, nous venons de le voir chez Aristote lui-même, en un sens « libertarien ». C'est ce que je vais m'efforcer de montrer « textes à l'appui »." (p. 18)

(1) textes sont aisément à disposition dans Sharples (1983). Pour le seul *De fato*, voir, en grec et en français, Thillet (1984).

- "Cette première traduction française d'une portion significative de l'*In « Isagogen » Porphyrii Commentorum Editio secunda*, en regard d'un texte latin reponctué en conséquence et accompagné d'annotations critiques, est précédée d'une présentation historico-doctrinale mettant en relief le rôle — à la fois central et problématique — de l'abstraction dans la solution boécienne, ouvertement rattachée à Alexandre d'Aphrodise (dont le traité *De l'âme* est ici examiné), du statut des genres et des espèces dans ce texte qui, à travers l'exégèse du célèbre questionnaire porphyrien, a fait connaître le problème des universaux à l'Occident latin et en est demeuré l'expression la plus achevée jusqu'au xii^e siècle, où Abélard en a donné un méta-commentaire particulièrement brillant dans sa *Logica « Ingredientibus » : Super Porphyrium*, éditée, traduite et étudiée ci-après dans ce numéro thématique."
11. Lardelli, Giacomo. 2021. "Plotin contre Alexandre d'Aphrodise: une lecture de l'*Ennéade* VI, 8." *Revue de Philosophie Ancienne* no. 39:207-249.

Résumé : "Cet article soutient que Plotin a écrit l'*Ennéade* VI 8 (39) pour mener ses élèves à voir que notre liberté est fondée sur l'Un, un but poursuivi par le biais d'une polémique avec le *De fato* et le *De anima* d'Alexandre d'Aphrodise. La première partie cherche à établir que le « discours téméraire » introduit au chapitre 7 est une interprétation de la position du *De fato* sur la liberté des dieux. Plotin lit la thèse de son adversaire en transférant au niveau de l'Un une structure tripartite constituée par la nature, la raison et le hasard, une structure qu'Alexandre utilisait pour expliquer les événements des réalités en devenir. La seconde partie propose de voir le traité comme un procédé

dialectique. Plotin commence son enquête par le niveau de l'âme et celui de l'Intellect. Il arrive ensuite au discours sur l'Un, où il essaie de franchir progressivement les limites du langage en analysant les positions alternatives du point de vue du discours, des mots et enfin de la pensée. Ce faisant, il insiste sur le renversement des thèses d'Alexandre : l'Un est simple et donc il n'est pas contraint par sa nature, il est libre grâce à une volonté incapable de choisir parmi les contraires et tournée métaphoriquement vers elle-même."

12. Lavaud, Laurent. 2008. "Matière et privation chez Alexandre d'Aphrodise et Plotin." *Les Études philosophiques*:399-414.

Résumé : "L'influence d'Alexandre d'Aphrodise sur la pensée de Plotin reste encore à évaluer avec précision. Le projet de cet article est de confronter ces deux auteurs sur un point déterminé qui est celui de la définition de la matière. Certains passages des *Quaestiones* d'Alexandre d'Aphrodise semblent avoir exercé une influence directe sur le traité II, 4 (12) de Plotin, intitulé *Sur les deux matières*. Mais les différences restent profondes entre le péripatéticien et le platonicien. Le premier voit dans la matière une quasi-substance distincte aussi bien de la qualité que de la privation. Le second identifie absolument matière et privation, et rattache la définition de la matière à la question de l'existence du mal."

Anàtract: "Alexander of Aphrodisias' influence on Plotinus still remains to be estimated exactly. The aim of this article is to compare these two authors on a precise point: the definition of matter. Some passages of Alexander's *Quaestiones* seem to have directly influenced the treatise II, 4 (12) of Plotinus, entitled *On two matters*. But the differences remain important between the Peripatetic and the Platonist philosopher. Whereas the former considers matter as a quasi-substance different from quality as well as privation, the latter identifies without specification matter with privation, and connects the definition of matter with the question of the existence of evil."

13. Lefebvre, David. 2008. "Le commentaire d'Alexandre d'Aphrodise à *Métaphysique*, A, 9, 990 a 34 - b8. Sur le nombre et l'objet des idées." *Les Études philosophiques*:305-322.

Résumé : "On se propose de lire le commentaire par Alexandre de la première critique aristotelicienne aux Idées de Platon en *Metaphysique*, A, 9, 990 a 34 - b 8. Cette critique (rappelée dans une première section de l'article) comprend deux parties : dans la première, Aristote voit dans les Idées une multiplication inutile d'êtres ; dans la seconde, il envisage la question du nombre des Idées et précise de quoi il y a des Idées. Le commentaire d'Alexandre, qui ne peut s'appuyer ici sur le traité perdu *Sur les Idées*, est dense et complexe. A partir de son étude, on propose d'abord (2e section) une hypothèse pour reconstituer le sens des lignes corrompues p. 76, 16-18. Dans une troisième section, on montre comment Alexandre hésite entre deux interprétations des Idées : sont-elles les causes des communs ou sont elles l'unité d'une plénitude et on dégage ce que signifie cette difficulté à articuler les Idées et les communs."

Abstract: "In his criticism of the theory of Ideas, Aristotle starts with an argument (A, 9, 990 a 34 - b 8) against this type of platonic causes which has two parts : he first points out that Ideas are a useless multiplication of beings and then explains in a somehow obscure way why Ideas are so numerous and what are the objects of the Ideas (I). In his commentary on this text, Alexander of Aphrodisias is very cautious and propounds three different interpretations of the first part of Aristotle's argument. We (II) submit an hypothesis in order to establish the meaning of two lines of the text that are corrupted {*In Metaph.*, 76,16-18). In a third section (III), we show how Alexander does hesitate between two interpretations about the Ideas : are they the causes of the commons (*ta koina*) or are they a "one over many" (*hen epi pollôn*)? Even in this last case, Alexander says, they still are Ideas of the commons, because the commons are in the particulars."

14. ———. 2022. "La triade « ousia dynamis energeia » et l'antériorité logique en *De anima* II 4: sens et contresens." In *Essence, puissance, activité dans la philosophie et les savoirs grecs*, edited by Lecerf, Adrien, Casas, Ghislain and Hoffmann, Philippe, 63-98. Paris: Garnier.
15. Libera, Alain de. 1999. *L'art des généralités : théories de l'abstraction*. Paris: Aubier.

Chapitre premier: *Alexandre d'Aphrodise*, pp. 25-157.

"En philosophie, une histoire de longue durée ne peut être que locale. Tout médiéviste le sait : une histoire de « la » philosophie médiévale n'est qu'un choix plus ou moins bien articulé d'histoires sectorielles. Le point de départ de l'histoire qu'on va lire est donc un réseau de concepts porté par un réseau de textes. Je considère ce réseau là où il se constitue comme tel : chez celui qui est, à mes yeux, et plus que tout autre, l'« absent de l'histoire » de la philosophie médiévale - *Alexandre d'Aphrodise*.

Ce réseau aphrodisien a une durée propre, qui fait que tous ceux qui viennent s'y inscrire sont, en quelque manière philosophiquement contemporains, même si, pris hors de ce réseau, tout les sépare. Je veux parler de Porphyre et de Boèce. Pour désigner ce complexe, il me paraît légitime de forger l'expression d'« épistémé alexandrinienne ». De cette épistémé relèvent, selon moi, tous les auteurs qui, de Boèce au XIIe siècle, ont abordé sous des formes diverses le complexe de lieux, de thèmes et de problèmes que j'ai provisoirement indexés du terme abstraction. Pierre Abélard est de ceux là, si tant est, comme je le crois, que c'est chez lui que culminent, via Boèce et Porphyre, les choix philosophiques engagés par Alexandre." (p. 14)

(...)

"*Alexandre d'Aphrodise* Parmi ses nombreuses oeuvres préservées en grec ou en arabe, certaines ont joué un rôle capital dans le réseau de problématiques lié à la question de l'abstraction : le *Περὶ ψυχῆς*. bien sûr, mais aussi, et surtout, les *Quaestiones* (conservées en grec) et plusieurs questions ou traités transmis en arabe. L'hypothèse que nous suivrons ici, et nous efforcerons de vérifier, est que ces « questions » ont profondément influencé les doctrines philosophiques de Porphyre et de Boèce, avant de peser décisivement, par la suite, sur ce qui a pu apparaître comme l'une des innovations philosophiques les plus importantes d'Avicenne : la doctrine dite de l'« indifférence de l'essence »." (p. 26)

16. Longo, Angela. 2009. "La réécriture analytico-syllogistique d'un argument platonicien en faveur de l'immortalité de l'âme (Plat. *Phaedr.* 245c5-246a2). Alcinoos, Alexandre d'Aphrodise, Hermias d'Alexandrie." *Philosophie Antique* no. 9:1-13.

Résumé : "Les preuves de l'immortalité de l'âme, qui sont un des thèmes centraux de l'enseignement de Platon, ont fait l'objet d'une réflexion d'ordre logique et formel sur la manière dont elles sont (ou devraient être) exprimées. En particulier l'argument en faveur de l'immortalité de l'âme contenu dans le *Phèdre* (245c5-246a2), fondé sur la notion d'âme automotrice et principe de mouvement, a été assidûment analysé, pour ce qui est de sa formulation, par plusieurs représentants de la tradition platonicienne (Alcinoos, Hermias d'Alexandrie), ainsi qu'à l'intérieur de la tradition péripatéticienne (Alexandre d'Aphrodise). Par conséquent, il représente, à l'avis de l'auteur, un point privilégié d'observation de la façon dont les platoniciens s'approprient la logique aristotélicienne et récrivent, à partir de l'époque impériale, certains arguments platoniciens. En outre, il apparaît qu'Alexandre d'Aphrodise, bien qu'étant de tradition péripatéticienne, a grandement contribué à la reformulation des arguments de Platon selon les canons de la logique aristotélicienne par les platoniciens contemporains et postérieurs. Il semble aussi qu'Hermias, dans ses scholies sur le *Phèdre*, réagit justement à certaines affirmations d'Alexandre. Dans cet article, on montre quels sont les points de contact ainsi que les différences dans la réécriture analytico-syllogistique de l'argument du *Phèdre* en faveur de l'immortalité de l'âme par Alcinoos et Hermias, sans négliger l'apport d'Alexandre."

"M. Pierre Thillet vient de nous donner une édition très soignée de la version latine médiévale du *De fato* d'Alexandre d'Aphrodise (1)." (p. 253)

(...)

"Au demeurant, qu'il soit dû à une erreur intelligente d'humaniste ou à un pur accident de transmission manuscrite,

le rapprochement entre l'oeuvre d'Alexandre et celle de Pléthon garde sa valeur. L'une dépend de l'autre, et le *Traité du Destin* atteste la haute estime où le critique d'Aristote tenait la pensée de l'Exégète." (p. 256)

(1) Alexandre d'Aphrodise, *De fato ad imperatores*. Version de Guillaume de Moerbeke. Édition critique avec introduction et index par Pierre Thillet. Paris, Vrin, 1963, 8°, 178 pp. (Études de philosophie médiévale, 51).

20. Moraux, Paul. 1942. *Alexandre d'Aphrodise, exégète de la noétique d'Aristote*. Paris: Faculté de Philosophie et Lettres e l'universite de Liège.

"Dans l'ensemble, la psychologie alexandriste mérite donc un intérêt spécial. Mais, plus que tous les autres chapitres, c'est la noétique de l'Aphrodisien qui s'impose à l'historien de la philosophie.

Elle constitue en effet l'explication d'un passage qui compte parmi les plus obscurs du corpus aristotelicum (*De Anima*, Γ, 4 et 5).

Ensuite, du point de vue doctrinal, elle soutient réellement toutes les voûtes de la pensée alexandriste : dans la perspective péripatéticienne, la construction philosophique procède d'une série d'opérations cognitives que couronnent les démarches de l'intelligence.

Or, il va de soi que la valeur épistémologique de ces démarches est presque exclusivement conditionnée par la structure ontologique de l'esprit et par le mécanisme de son fonctionnement.

Les diverses attitudes qui vont de l'innéisme au nominalisme, en passant par le réalisme, commandent donc autant de façons de concevoir l'univers, l'homme, la Divinité... C'est ainsi que l'étude de la noétique alexandriste ouvre la route à des enquêtes plus générales sur le système entier de l'Aphrodisien.

Enfin, du point de vue historique, elle présente un intérêt plus large encore. Alexandre inaugure les longues discussions sur l'intellect qui ont rempli non seulement le moyen âge chrétien,

mais aussi les scolastiques grecque, byzantine, arabe et juive, la pensée de la Renaissance et même celle des temps modernes. Le *Ich denke* de Kant, l'Esprit de Hegel répondent à des préoccupations voisines de celles qui hantaient les exégètes grecs, Avicenne, Averroès Albert le Grand, Siger de Brabant, Thomas d'Aquin etc. A ce titre on ne peut sous-estimer l'importance d'Alexandre, le premier et le principal responsable après Aristote de cette polémique séculaire." (*Préface*, p. XVII)

21. ——. 1970. *D'Aristote à Bessarion. Trois études sur l'histoire et la transmission de l'aristotélisme grec*. Québec: Les Presses de l'Université de Laval.

"Chez Alexandre d'Aphrodisias, l'un des plus fameux parmi les commentateurs d'Aristote, nous allons trouver une théorie « aristotélienne » de la providence assez différente des précédentes et beaucoup plus fouillée qu'elles. Alexandre avait écrit un traité *Sur la Providence* dont l'original grec est perdu, mais dont nous possédons une adaptation arabe et dont Cyrille d'Alexandrie nous a, en outre, conservé quelques extraits. Plusieurs petites pièces du recueil des *Difficultés et solutions* sont également consacrées au problème de la providence, mais elles n'offrent pas, hélas ! un traitement systématique et complet de la question. Peut-être même certaines d'entre elles ne sont-elles pas dues à Alexandre lui-même, mais à des membres de son école. Sans entrer dans tous les détails, je me propose d'examiner ici trois aspects de la doctrine alexandriste, à savoir la réduction de l'action providentielle à l'influence que Dieu exerce sur le monde, en fonction des besoins de ce monde, la jortée de l'action èrovidentielle et ses limites, et enfin la finalité dans l'action providentielle." (p. 58)

22. Morel, Pierre-Marie. 2011. "Cardiocentrisme et antiplatonisme chez Aristote et Alexandre d'Aphrodise." In *Plato, Aristotle, or Both? Dialogues Between Platonism and Aristotelianism in Antiquity*, edited by Bénatouïl, Thomas, Maffi, Emanuele and Trabattoni, Franco, 63-84. Hildesheim: Georg Olms.

"Mon propos est de comparer le cardiocentrisme tel qu'il est élaboré dans les traités psychologiques d'Aristote à celui qu'Alexandre d'Aphrodise expose et défend dans son propre *De*

anima. Prenant la suite d'Aristote, Alexandre soutient que le coeur est le siège de la partie principale de l'âme et, comme le Stagirite, il le fait contre l'encéphalocentrisme notamment défendu par les platoniciens. Il mène cependant la polémique par un biais original et nuancé : fidèle à l'aspect proprement physiologique du cardiocentrisme d'Aristote, Alexandre le radicalise et l'enrichit dès lors qu'il l'envisage du point de vue des facultés de l'âme." (p. 63)

(...)

"J'insisterai enfin sur les enjeux pratiques de la polémique. Ce n'est pas le seul aspect du problème, car la thèse selon laquelle le coeur est le siège de la partie principale de l'âme a de nombreuses implications, notamment psychologiques. Les implications éthiques, en tout cas, sont particulièrement révélatrices du fond de la question : en situant la partie hégémonique dans le coeur, Alexandre montre que le désir, la faculté ou partie de l'âme qui est le plus étroitement associée au coeur, est proche de l'hégémonique et qu'elle n'en est pas séparée. Or, selon Aristote, c'est sous l'effet du désir que l'agent se meut et réalise des actions. L'éthique aristotélicienne est donc renforcée par la thèse de l'unité du désir et de la partie rationnelle dominante. Dans le contexte spécifique de la pensée d'Alexandre, l'argument permet de faire coïncider les deux dimensions de l'hégémonique : sa partie théorique et sa partie pratique. Il conduit donc à rejeter le modèle platonicien de la séparation des deux instances, l'instance rationnelle et l'instance désirante. La manière dont Alexandre présente et organise les facultés de l'âme lui permet également, nous le verrons, de se démarquer des positions stoïciennes." (p. 64)

23. Papadis, Dimitri. 1991. "'L'intellect agent" selon Alexandre d'Aphrodise." *Revue de Philosophie Ancienne* no. 9:133-151.

"Depuis l'époque hellénistique jusqu'à ce jour prédomine l'opinion qu'Alexandre d'Aphrodise, dans son traité *De l'âme*, identifie l'"intellect agent" ("ποιητικός νοῦς") à Dieu et qu'il existe, de ce fait, une différence essentielle entre Alexandre et Aristote, sur un sujet si important de leur psychologie. Vers le milieu du siècle dernier le célèbre historien de la philosophie

grecque Eduard Zeller a contribué à consolider le bien-fondé cette opinion, que depuis lors tous les interprètes modernes mettent comme indubitable, voire même comme évidente. Le terme "intellect agent" nous le rencontrons pour la première fois dans le traité *De l'âme* d'Alexandre d'Aphrodise(2). Ce terme n'apparaît pas dans le traité du même nom d'Aristote où nous rencontrons néanmoins en plus de la substance, les propriétés: l'adjectif "ποιητικός"³ et l'infinitif "ποιεῖν"⁽⁴⁾. Aristote parle de cet intellect (νοῦς) par opposition à l'intellect en puissance ou patient. Bref, le terme "intellect agent" est substantiellement aristotélien, bien qu'il ait été créé par Alexandre." (pp. 133-134, une note omise)

Repris dans M. Rashed, *L'Héritage aristotélien. Textes inédits de l'Antiquité*, Paris: Les Belles Lettres 2007, pp. 85-141.

25. ———. 1997. "Textes inédits transmis par l'Ambr. q 74 Sup. Alexandre d'Aphrodise et Olympiodore d'Alexandrie." *Revue des Sciences philosophiques et théologiques* no. 81:219-238.

Repris dans M. Rashed, *L'Héritage aristotélien. Textes inédits de l'Antiquité*, Paris: Les Belles Lettres 2007, p. 159-178.

Résumé : "L'édition et l'étude de deux textes grecs antiques jusqu'ici inédits (Alexandre d'Aphrodise et Olympiodore d'Alexandrie), transmis par l'Ambrosianus Q 74 sup., manuscrit byzantin de la fin du X^e siècle, éclairent certains aspects méconnus du commentarisme antique. Le texte d'Alexandre, dirigé contre les Idées platoniciennes, a la particularité unique dans la tradition aristotélienne conservée d'être un centon, dont l'analyse a permis d'exhumer un nouveau fragment du *Protreptique* d'Aristote; il est possible, en outre, que ce centon

ait gardé trace d'un argument du traité d'Aristote *Sur les Idées*. Le second texte, consacré à la réfutation d'un développement d'Alexandre sur les universaux, constitue sans doute l'unique fragment connu à ce jour d'un commentaire d'Olympiodore au *De anima*."

27. ———. 2007. *Essentialisme. Alexandre d'Aphrodise entre logique, physique et cosmologie*. Berlin: Walter de Gruyter.

"J'ai suivi dans ce livre l'ordre sous-jacent à l'entreprise d'Alexandre, qui est avant tout une fondation de la théorie aristotélicienne de la substance. La première partie, consacrée à la logique de l'Exégète, est une tentative pour cerner les mérites et les limites d'une doctrine standard de la différence spécifiante des substances composées. Celle-ci ne trouve son fondement qu'en dehors de la logique, dans la physique de l'hylémorphisme. La deuxième partie est ainsi consacrée à montrer que l'inadéquation de principe d'une théorie exclusivement logique de la différence spécifiante reflète les conditions particulières de la relation matière-forme, en particulier son inaptitude à exprimer l'inversion de la prédication canonique sujet-prédicat en sorte que ce soit la forme qui devienne le sujet d'un nouveau type prédicationnel. Cette théorie physique de la forme du composé laisse cependant à son tour des problèmes ouverts, liés à la temporalité de la forme – est-elle ou non éternelle? –, qu'Alexandre pense ne pouvoir dépasser que par une recherche cosmologique, concentrée sur l'idée, encore innommée chez Aristote, de transmission (διαδοχή). Ce sera l'objet de la troisième partie, qui débouchera sur la conclusion que l'ontologie d'Alexandre, parce que fondationnelle, est primordialement une cosmologie, par bien des aspects plus proche du providentialisme du *De mundo* que de l'« ouranologie » du *De caelo*. Cette cosmologie comporte,

- paradoxalement, un certain retour à la saisie logique, par genre et différence, de la forme spécifique." (Avant-propos, p. VI)
28. ——. 2008. "Présentation. Alexandre d'Aphrodise. De l'eidocentrisme comme actualisation d'un aristotélisme possible." *Les Études philosophiques*:281-284.

"On peut donc affirmer que les trois grands domaines où Alexandre s'est montré le plus inventif – réflexion ontologique « pure » sur le statut de la forme immanente et son rapport à l'universel, réflexion psychologico-biologique sur le statut de l'âme humaine, réflexion cosmologique sur la Providence – sont parties intégrantes d'une refondation de l'ontologie aristotélicienne de l'eidos. Chaque âge a puisé, en fonction de ses intérêts philosophiques propres, à la partie du corpus alexandrique qui permettait le mieux de construire un certain aristotélisme, ou un certain morceau d'aristotélisme, fût-ce pour s'y opposer." (p. 282)

29. ——. 2014. "Priorité de l'εἶδος ou du γένος entre Andronicos et Alexandre: vestiges arabes et grecs inédits." *Arabic Sciences and Philosophy* no. 14:9-63.

Repris dans M. Rashed, *L'Héritage aristotélicien. Textes inédits de l'Antiquité*, Paris: Les Belles Lettres 2007.

"La première partie de cet article vise à enrichir cette bibliothèque logico-ontologique d'Alexandre d'une nouvelle *Quaestio*, consacrée elle aussi, on le verra, au rapport genre-espèces.

Ce texte, perdu en grec, nous a été transmis sous la forme d'une paraphrase du philosophe médecin 'Abd al-Laṭīf al-Bag' dādī.

L'analyse doctrinale de son contenu, c'est-à-dire de la théorie de l'εἶδος sous-jacente, nous conduira de la logique à la physique, plus particulièrement à un passage déterminé de la *Physique* d'Aristote (IV 3, 210 a 15–21). La pleine compréhension des préoccupations logiques d'Alexandre demandera que l'on restitue son exégèse de la *Physique* telle qu'elle se présente dans l'une des scholies grecques inédites tirées de son commentaire perdu.(4)"

30. ———. 2017. "Alexandre d'Aphrodise sur la « chose » (πρᾶγμα) et le « quelque chose » (πρᾶγμα τι)." In *Alexandre d'Aphrodise et la métaphysique aristotélicienne*, edited by Balansard, Anne and Jaulin, Annick, 181-215. Leuven-la-Neuve: Peeters.
31. ———. 2022. "Philosophies universelles et philosophies premières selon Alexandre d'Aphrodise." *Quaestio. Yearbook of the History of Metaphysics* no. 22:71-87.

Abstract: "This article is devoted to the interpretation of the object of metaphysics and theoretical sciences proposed by Alexander of Aphrodisias (fl. 200 AD). I shall propose two conjectures on crucial passages from his commentary on the *Metaphysics* (In *Metaph.* 245.37-246.6 et 246.6-13) and, on this new textual basis, defend the thesis according to which Alexander articulated a primary fundamental philosophy, devoted to immobile substances and treated by Aristotle in *Metaphysics* Λ, and a philosophy, if one can say so, more primary but less ontological, hence less fundamental, devoted to the general structure of being and treated by Aristotle in *Metaphysics* Γ. The latter seems to differ from the *Categories*, according to Alexander, in that in the *Categories*, Aristotle studies the general classes of beings as general, while in *Metaphysics* Γ, he studies them as beings."

32. Schniewind, Alexandrine. 2019. "Comment pensons-nous? Éléments de noétique antique grecque et médiévale arabe." *Studia Philosophica* no. 78:25-37.

Abstract: "This contribution shows the central influence of Aristotle on Ancient and Medieval noetics.

It examines various interpretations of the famous passage of the *De Anima* that sets two kinds of intellects. Alexander of Aphrodisias' interpretation is set as being most influential and determining on later philosophers, such as Plotinus and then the Arabic philosophers al-Farabi, Avicenna and Averroes. The nodal question is how human intellect thinks and which stages of development it has to go through. Furthermore, the role of

the Agent intellect is examined, as well as the question of the universal or individual status of the human intellect."

34. ———. 2008. "L'accident du déterminisme: Alexandre d'Aphrodise dans son contexte historique." *Les Études philosophiques*:285-303.

Resumé : "Alexandre d'Aphrodise a été étudié plus intensément en Europe continentale que dans le monde anglophone. Cet article s'interroge sur les raisons culturelles d'un tel fait. L'une des raisons de l'étude de la philosophie antique en général dans le monde anglophone est la volonté de montrer qu'elle est reliée, et peut rendre service, à des débats philosophiques contemporains. Un cas emblématique nous est fourni par le débat concernant le libre arbitre et le déterminisme. Susanne Bobzien a défendu la thèse (dans son article "The inadvertent conception and late birth of the free-will problem", *Phronesis*, 43 [1998], p. 133-175) qu'alors que les termes du débat contemporain peuvent être décelés au II^e siècle après J.-C., et en particulier dans le traité d'Alexandre *Sur le destin*, il serait anachronique de les faire remonter à la période hellénistique. La partie finale du présent article se penche sur la façon dont elle rend compte de l'approche post-hellénistique de la question, vue comme le développement, à partir d'un certain nombre de textes aristotéliens, d'une nouvelle doctrine de la contingence, reflétée dans une série de textes généralement décrits comme médioplatoiciens. On se demande, finalement, quelle relation il faut supposer entre ce développement et les changements, dans la forme et dans le fond, du déterminisme stoïcien."

Abstract: "Alexander of Aphrodisias has been studied more intensively in continental Europe than in the English-speaking

world. This paper examines the cultural reasons for this. One factor in the study of ancient philosophy generally in the English-speaking world is the pressure to show that it relates to, and can be of service in, contemporary philosophical debates. One such case is the debate concerning free-will and determinism. Susanne Bobzien has argued (in her "The inadvertent conception and late birth of the free-will problem", *Phronesis*, 43 [1998], 133-175) that while the terms of the contemporary debate can be recognised in the second century AD, and in particular in Alexander's treatise *On Fate*, it is anachronistic to read them back into the Hellenistic period. The latter part of the present paper examines her account of the origin of the new approach to the question in the development from a number of Aristotelian texts of a new account of contingency, reflected in a range of texts commonly described as Middle Platonist, and asks what relation we should suppose between this development."

36. ———. 1981. "Matérialisme et théorie de l'âme et de l'intellect chez Alexandre d' Aphrodise." *Revue Philosophique de la France et de l'Étranger* no. 171:5-24.

"Concluons : Alexandre n'est pas proprement matérialiste. Toutefois, sa conception de la genèse de l'âme à partir des corps élémentaires, sa théorie de la connaissance où un intellect matériel se constitue de lui-même en intellect en acte, enfin l'absence d'une doctrine de l'immortalité de l'âme, l'absence d'affirmation d'un statut de l'intellect comme substance spirituelle indépendante du corps, tout cela justifie à la fois ceux qui l'ont condamné comme matérialiste, et ceux qui ont trouvé dans ses écrits un contrepoids à des doctrines qui tendaient à nier la signification humaine de la vie de l'homme de chair." (p. 24)

37. ———. 1982-1983. "Éléments pour l'histoire du texte du *De fato* d'Alexandre d'Aphrodise." *Revue d'Histoire des Textes* no. 12-13:13-56.

Résumé : "Le texte grec du *De fato* d'Alexandre d'Aphrodise se lit, en entier ou en partie, dans dix-neuf manuscrits, qu'on date du IXe au XVIIe siècle. Le prototype, Marcianus gr. 258 = F, exemplaire de petit format de la collection philosophique, est une copie de translittération, et son modèle comptait environ seize lettres à la ligne. F a appartenu au traducteur dominicain Guillaume de Moerbeke, comme l'a signalé Miss L. Labowsky. Or, trois manuscrits latins (deux de la fin du XIIIe siècle, l'autre de 1423) nous ont conservé une traduction latine que ses particularités signalent comme une version de Guillaume. L'examen de cette version, sa comparaison avec le grec de F, permettent d'inférer que la traduction a été faite sur un autre modèle, une copie en onciales du *De fato*. La traduction latine n'a pas été faite sur F. Il faut penser que Guillaume l'a faite avant d'entrer en possession du Marcianus gr. 258. Comme la version latine est une sorte de calque du grec, elle permet d'atteindre un archétype différent de celui qu'a utilisé le copiste de F. L'éditeur a ainsi pour tâche d'éditer deux archétypes perdus, le modèle de F, le modèle de la traduction.

Toutefois, le cardinal Bessarion a, par endroits, corrigé F (jusqu'à 176,26) qu'il possédait dans sa bibliothèque, et c'est aussi à lui qu'on doit probablement la plupart des variantes du Marcianus gr. 261, copié pour lui. Ces conjectures ne sont pas sans mérite et sauvent parfois le sens.

Les leçons qu'offrent les autres manuscrits sont plus hasardeuses : conjectures de copistes ou de lecteurs, elles n'ont que l'intérêt de montrer le souci de bien saisir les idées de l'Exégète. Certaines de ces copies reproduisent l'une ou l'autre des deux premières éditions du *De fato* dues à Victor Trincavelli (Venise, Aide, 1534 ; Zanetti, 1526)."

38. ———. 1985. "Alexandre d'Aphrodise et la poésie." In *Aristoteles - Werk und Wirkung, Paul Moraux gewidmet, I: Aristoteles und seine Schule*, edited by Wiesner, Jürgen, 107-119. Berlin: Walter de Gruyter.

"L'Exegète d'Aristote, dont Paul Moraux a contribué avec tant de science à faire connaître les doctrines, n'est certes en rien un poète. Il ne paraît pas même avoir été, en tant que commentateur, soucieux de poétique. Mais il a cité ou évoqué des auteurs qui, eux, avaient puisé des exemples, peut-être aussi des thèmes doctrinaux, chez des poètes.

Alexandre d'Aphrodise n'est pas totalement « prosaïque ». Voilà qu'il apporte quelques bribes à une pièce perdue de l'un des grands Tragiques de l'antiquité. Son nom pourrait désormais figurer dans les futurs *Fragmenta Euripidis*. Qui s'en étonnerait? Les Grecs, même à la fin du deuxième siècle de notre ère, n'avaient-ils pas toujours Homère comme maître? La poésie grecque vivait encore." (p. 119)

40. Verbeke, Gérard. 1968. "Aristotélisme et stoïcisme dans le *De Fato* d'Alexandre d'Aphrodisias." *Archiv für Geschichte der Philosophie* no. 50:73-100.

"Au cours de l'exposé qui précède, on a essayé de mettre en évidence les éléments aristotéliens et stoïciens qui se rencontrent dans le *De Fato* d'Alexandre. Que l'auteur ait l'intention d'exposer la doctrine d'Aristote, personne ne s'en étonnera(98): il l'affirme d'ailleurs lui-même explicitement. C'est pourquoi on voudrait plutôt, en guise de conclusion, relever les quelques traits d'origine stoïcienne qui s'y rencontrent:

1. Tout l'exposé d'Alexandre est basé sur un argument qui est pour ainsi dire toujours présent en filigrane, sans que sa valeur démonstrative soit analysée ni justifiée: c'est l'argument du savoir anticipatif (πρόληψις) et du consensus universel; l'auteur y fait continuellement appel pour justifier ses prises de position. Qu'on nous comprenne bien: dans ses exposés philosophiques, surtout dans ses traités de morale, Aristote aussi se base sur des opinions courantes, surtout si elles sont anciennes et très répandues. Mais la manière dont l'argument est présenté chez Alexandre, est nettement stoïcienne: il se

présente toujours comme un consensus provenant d'un savoir anticipatif. Ce langage n'est pas aristotélicien, bien que l'idée essentielle de cet argument se rencontre chez le Stagirite.

(...).

5. Les Stoïciens, contrairement aux Epicuriens, admettaient la providence divine: à leurs yeux, la divinité ne réside pas loin du monde et des hommes dans une tranquillité inaccessible; la divinité est présente dans le monde, elle est immanente à chaque être, elle réside surtout à l'intérieur de l'homme qui porte en lui une parcelle du logos divin. Alexandre ne s'oppose pas à la doctrine de la providence; il se demande simplement si Dieu peut connaître de façon déterminée le futur contingent et il semble estimer plutôt que pareille connaissance est impossible.

Le *De Fato* d'Alexandre est donc un exemple caractéristique de syncrétisme philosophique chez un auteur qui veut rester et se croit fidèle à la pensée d'Aristote." (pp. 99-100, une note omise)

8. ———. 1995. "Generazione dell' anima in Alessandro di Afrodisia, "De anima" 2.10-11.13?" *Phronesis* no. 40:182-201.

"Sull' interpretazione della sezione iniziale del *De anima* di Alessandro di Afrodisia ha esercitato un'enorme influenza la lettura che ne fece Paul Moraux nel saggio dedicato alla noetica alessandrista(1). Moraux intitolava significativamente "l'origine de l'ame" la prima sezione del secondo capitolo, perché di fatto le prime pagine del trattato costituirebbero un vero e proprio trattato *De generatione animae*, dove Alessandro, muovendo dai principi basilari della fisica aristotelica, traccerebbe le linee di un processo spontaneo di generazione che, attraverso l'aggregazione dei corpi semplici nei composti, metterebbe capo niente meno che all'anima. In un lavoro precedente(2) avevo avanzato un dubbio su una delle conseguenze che Moraux credeva di poter trarre dalla trattazione della "genesì dell'anima" e cioè che essa renderebbe superflua la teoria aristotelica della riproduzione. Credo di aver mostrato che, come per Aristotele, anche per Alessandro *De an.* 36.19 sgg. la riproduzione presuppone un principio agente, il seme, che trasmette al nascituro le facoltà psichiche possedute dal genitore. Credo ora di poter mostrare che vi sono buone ragioni per dubitare che la sezione di *De an.* 2.10-11.13 sia una sorta di trattazione della genesì dell'anima che implicherebbe tutti quei risvolti anti-aristotelici che vi ha letto Moraux." 9. ———. 2014. "Alessandro di Afrodisia interprete del *De anima* di Aristotele." *Studia Graeco-Arabica* no. 4:275-288.

"Tra i testi giunti nel corpus degli scritti di Alessandro, quelli utili a ricostruire la sua interpretazione della psicologia aristotelica sono sostanzialmente due, ossia *De Anima* e *De Anima II*; lascerei infatti qui da parte il *Commento al De Sensu. De Anima II*, meglio noto col nome di *Mantissa*, è in realtà una raccolta di venticinque brevi scritti che solo in parte (grossomodo la maggioranza dei primi sedici) hanno a che fare con tematiche psicologiche; qui parleremo soltanto del secondo scritto, intitolato *De Intellectu*.¹ Oltre al *De Anima*, che è un trattato continuo, e alla *Mantissa* noi sappiamo dalle citazioni che ne fanno i commentatori posteriori (Temistio, Filopono, pseudo-Filopono e Simplicio) che Alessandro aveva anche redatto un commentario al *De Anima* che però non ci è giunto.² Ora, proprio quelle citazioni dal commento perduto registrate da questi autori e che trovano un riscontro puntuale nel *De Anima* personale di Alessandro ci permettono di precisare il carattere di questo trattato. Si può con buona verosimiglianza affermare che Alessandro ha concepito il suo trattato personale come una esposizione continua e sistematica dei risultati acquisiti col lavoro di esegesi.³" (p. 275, note omesse)

"valore e l'importanza della cosiddetta "oralità" di Platone - come si è soliti chiamare l'insegnamento orale di Platone attestato dalla uadizione indiretta - ai fini di una ricostruzione complessiva e del pensiero filosofico di Platone e di particolari dottrine professate dal filosofo, sono stati autorevolmente

ribaditi dal Kràmer (1), superando la posizione di chi aveva messo in dubbio la tradizione circa l'insegnamento orale di Platone." (p. 233)

(...)

"L'importanza della testimonianza di Alessandro è costituita dal fatto ch'egli ci trasmette un'altra lezione [del testo di *Metafisica* (A 6.988a.9-11)], riportata da alcuni manoscritti e a noi non altrimenti nota, il che ha rappresentato un motivo di interesse per non pochi studiosi che hanno appuntato la loro attenzione su questo passo del commento di Alessandro. Ripercorrere oggi le tappe salienti che hanno segnato la storia dell'interpretazione di questo passo, riassumendo le differenti posizioni assunte al riguardo dagli studiosi, potrebbe anche apparire inutile dopo il dotto (27) articolo del Moraux che ha proposto una interpretazione innovativa della γράφη riferitaci da Alessandro. Pur rinviando all'articolo di Moraux, che, senza dubbio, rappresenta un superamento dell'interpretazione tradizionale, riteniamo utile riassumere, sia pur schematicamente, in stretta relazione con le precedenti interpretazioni, i risultati cui lo studioso berlinese era giunto." Abstract: "In chapter XIV of the *Life of Plotinus*, Porphyry tells us that Plotinus made use of Alexander of Aphrodisias'

commentaries for his lectures. The scholarly debate focused on Alexander's influence on Plotinus' doctrine of intelligible matter as is exposed in *Ennead* II 4, with particular regard to Aristotle's conception of *nous* in the *De Anima*. The main purpose of this paper is to further analyse the usefulness of Alexander's Commentary on the first book of *Metaphysics* for understanding *Ennead* II 4. For if it is appropriate to read Plotinus' doctrine of intelligible matter in light of the first book of Aristotle's *Metaphysics*, Alexander's mediation allows us to view additional elements that remain implicit in the Aristotelian text. In particular, Alexander's Commentary will prove to be useful in understanding three points. Firstly, the implicit doxographical references in the introductory chapter of Plotinus' treaty. Secondly, the Plotinian genesis of an interpretation of Plato that clearly distinguishes between two sorts of matter: one sensible, substratum of bodies; the other intelligible, substratum of ideas. Finally, the different type of composition of form and matter in the sensible and the intelligible, illustrated by Plotinus in the third chapter of the treaty."

14. Bonelli, Maddalena. 2001. *Alessandro di Afrodisia e la metafisica come scienza dimostrativa*. Napoli: Bibliopolis.

"Quali sono i contributi filosofici che si trovano nel commentario al libro *Gamma* della *Metafisica*? E perché concentrarsi su questi? E perché, in generale, analizzare il commentario di Alessandro alla *Metafisica*? Inizierò col rispondere alla terza questione. La *Metafisica* di Aristotele si occupa di un argomento a mio parere fondamentale, quale è quello dello statuto e dell'oggetto della filosofia; e nel presentare uno studio su Alessandro, mi allineo con tutti coloro che riconoscono nella versione della filosofia peripatetica espressa nel suo commentario alla *Metafisica* un proprio interesse e importanza, non solo come veicolo di trasmissione della filosofia aristotelica, ma anche e soprattutto perché, tramite il genere del commentario, Alessandro praticò la filosofia, e vi contribuì.

Ora, sono essenzialmente due le ragioni che mi hanno portato a concentrarmi sul commentario al libro *Gamma*. La prima è che

Alessandro ritenne i libri precedenti della *Metafisica* come introduttivi, mentre considerò il libro *Gamma* come l'esposizione della teoria aristotelica circa l'oggetto e lo statuto della filosofia. D'altra parte, il libro *Delta* è sui generis, poiché non è un vero e proprio trattato di filosofia, e dei libri successivi non possediamo il commentario autentico: mi è parso quindi giustificato considerare il commentario a *Gamma*, data la sua centralità riconosciuta appunto dallo stesso Alessandro. La seconda ragione mi permette di rispondere anche alla prima domanda: mi è sembrato importante concentrarmi principalmente sul commentario a *Gamma* (e soprattutto sulla prima parte di esso, cioè quella che precede le prove di confutazione degli avversari del principio di non-contraddizione) perché è proprio qui che Alessandro assume una posizione originale, fino ad oggi a mia conoscenza rimasta inesplorata, circa lo statuto della scienza filosofica." (pp. 14-15)

15. ——. 2001. "Alessandro di Afrodisia e la metafisica scientifica." *Documenti e Studi sulla Tradizione Filosofica Medievale* no. 12:61-83.

"In questo articolo presenterò la concezione della metafisica come scienza dell'ente in quanto ente, quale emerge in Alessandro di Afrodisia, celebre e ortodosso commentatore di Aristotele del II-III secolo d. C. Ciò significa che discuterò principalmente la prima parte del suo commento al libro Γ della *Metafisica* di Aristotele, perché in essa mi è sembrato di individuare dei contributi originali, fino ad oggi rimasti in ombra, circa la natura della metafisica. Alessandro fu un commentatore fedele, e il suo intento fu soprattutto esplicativo nei confronti dell'opera del suo maestro. Tuttavia, ciò che qui mi propongo è di dare un piccolo saggio di ciò che oggi è una verità che si sta imponendo: e cioè che il commento di Alessandro non è fondamentale solo come veicolo di trasmissione della filosofia aristotelica, ma anche e soprattutto come modo di praticare la filosofia e di contribuirvi." (p. 61)

(...)

"Conclusioni

Il filo conduttore del presente lavoro è stato quello di presentare e discutere la concezione di Alessandro della filosofia. In tal senso, ho cercato di mostrare che egli la concepì come scienza che definisce il proprio oggetto e dimostra l'appartenenza ad esso di alcune proprietà essenziali. Constatata la naturalezza con cui Alessandro attribuisce alla filosofia la dimensione dimostrativa, mi sembra che sorga spontanea una domanda : è possibile trovare dei predecessori di questa teoria? Ma a questa domanda risulta particolarmente difficile rispondere : nel periodo che intercorre tra Aristotele ed Alessandro, infatti, la riflessione sulla natura della filosofia è, per quel che ne sappiamo, pressoché inesistente. Solo in Aspasio (commentatore di poco precedente Alessandro) è forse possibile trovare una traccia di questa riflessione. Egli fu certamente autore di un commento alla *Metafisica* di Aristotele(96); e nel suo commento all'*Etica Nicomachea* è possibile trovare qualche affermazione circa lo statuto scientifico e anche dimostrativo della filosofia(97).

Riguardo invece alla fortuna che questa concezione ha avuto in seguito, mi pare di poter affermare che l'idea della filosofia come scienza dimostrativa non sarà rivendicata solo da Alessandro: la si ritroverà, quantomeno come idea ben conosciuta, in tutta la storia della filosofia successiva." "Allo stato attuale, la divisione tra opere personali e commenti pare oggi superata. Come che sia, qui verrà considerato solo il

commento di Alessandro alla *Metafisica*, testo che, a mio parere, riveste un interesse

particolare per più ragioni. Innanzitutto perché è un lavoro ancora poco conosciuto, malgrado sia stata da qualche anno pubblicata la traduzione italiana, con testo greco a fronte, del commento integrale alla *Metafisica* tramandatoci sotto il nome di Alessandro, inclusa la parte inautentica(5). In secondo luogo, perché il commento di Alessandro rappresenta il primo vero tentativo compiuto nell'antichità di comprendere 'la metafisica' aristotelica, intesa non solo come opera, ma anche e soprattutto come disciplina(6). Infine perché Alessandro, con il suo metodo tendente a rendere chiara e sistematica tale disciplina, presenta a volte dei tentativi teoretici estremamente originali e articolati, che non esiterei a mettere sullo stesso piano (pur con le debite differenze di stile e di epoca) di quelli condotti dai commentatori aristotelici contemporanei." 19. Del Forno, Davide. 2019. "Alessandro di Afrodisia e Proclo sulla dialettica." *Elenchos* no. 40:165-197.

Abstract: "In this paper I compare Alexander of Aphrodisias' and Proclus' conceptions of dialectic by discussing a passage from Alexander's commentary on Aristotle's *Topics* and texts from Proclus' *Platonic Theology* and commentary on Plato's *Parmenides*. I show how Alexander takes up Aristotle's view of dialectic as an argumentative technique that has no specific object but can be put in the service of philosophy e. g. to establish first principles. In a key passage, Alexander quotes some lines from the *Parmenides* to emphasize that this was also Plato's view on dialectic. By contrast, Proclus uses the *Parmenides* as a crucial source for his conception of dialectic as the crowning glory of philosophy, and fiercely criticizes such interpretations of the *Parmenides* as that of Alexander, which reduce it to the illustration of a logical method. I argue that the difference in their conceptions of dialectic lies in Alexander's positive and Proclus' negative view on *doxa* and on its role in knowledge."

"Al trattato di Alessandro gli studiosi moderni hanno costantemente rivolto l'accusa di professare, nella sua parte costruttiva, una dottrina non genuinamente aristotelica, ma influenzata dallo Stoicismo, e di non riuscire nelle pagine polemiche ad argomentare in modo sempre pertinente contro gli Stoici : tutto questo, benché non una sola volta Alessandro nomini esplicitamente gli Stoici, o un qualsiasi stoico, nemmeno come bersaglio della sua polemica. È forse tempo, allora, di suggerire che la parte dello Stoicismo possa essere, nel *de fato*, minore di quella che comunemente si assume, soprattutto nella funzione di ispiratore di Alessandro, ma anche in quella di suo obiettivo polemico. Ed è poi importante domandarsi chi siano gli avversari di Alessandro, là dove sia dimostrato che non sono gli Stoici ." (p. 173)

"Nel trattato *De anima* del grande commentatore aristotelico Alessandro di Afrodisia si incontra un capitolo sulla facoltà appetitiva e motrice dell'anima che non ha ancora ottenuto particolare attenzione dagli studiosi. Poiché nella ripresa degli

studi alessandristi a cui abbiamo assistito negli ultimi anni il problema del determinismo e stato sì quello più ampiamente trattato, ma quasi unicamente a proposito dell'altra maggiore opera di Alessandro, il trattato *De fato*, è opportuno far notare che anche il capitolo del *De anima* ha forse qualche collegamento con la discussione sul determinismo; se questo collegamento esiste, alcune considerazioni di qualche rilievo possono poi essere avanzate, sia a proposito della filosofia di Aristotele che del pensiero di Alessandro." (p. 72, una nota omessa)

27. ——. 1987. "Il *De fato* di Alessandro di Afrodizia: question! di coerenza." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. Band 36.2: Philosophie, Platonismus [Forts.], Aristotelismus*), edited by Haase, Wolfgang and Temporini, Hildegard, 1244-1259. Berlin: Walter de Gruyter.

"Lo scopo del trattato

Nessuno dei problemi maggiori di coerenza filosofica posti dal 'De fato' - i problemi che ho creduto di dover illustrare nelle pagine precedenti — ha direttamente a che fare con lo Stoicismo o con la discussione di tesi stoiche. Tutti nascono invece dal confronto fra Alessandro e la filosofia di Aristotele. Se si tiene conto del notevole sforzo (fino a un certo punto, come si è visto, anche felicemente riuscito) di reinterpretare le dottrine aristoteliche al fine di trovare loro una sistemazione coerente all'interno della discussione sul determinismo, meno che mai dovrebbe risultare adeguata alla situazione l'opinione comune che vede nel 'De fato' sostanzialmente uno scritto di polemica contro lo Stoicismo e negli stoici gli avversari che costantemente Alessandro avrebbe presenti. Ovviamente, so bene ehe sarebbe follia negare che lo Stoicismo abbia larghissima parte nello scritto e nella polemica di Alessandro; ma, accanto alla polemica contro lo Stoicismo, dovrebbe essere evidente un'altra preoccupazione preminente di Alessandro: quella, appunto, di riuscire a dar conto in modo coerente dell'aristotelismo come di una filosofia indeterministica. Più della ripetizione degli argomenti usuali, credo che valgano le considerazioni sopra svolte a confortare

l'idea che lo scritto di Alessandro è una riflessione complessiva e generale sul problema del determinismo, in cui, come era lógico che accadesse, gli Stoici ottengono certo gran parte (non la totalità) dell'attenzione polémica dell'autore, ma in cui la polémica non è comunque tutto: almeno altrettanto importante era per Alessandro venire a capo di quelli che a lui parevano (quasi sempre a ragione) gli aspetti problematici della filosofia di Aristotele nel confronto con la grossa e ormai inevitabile questione." (pp. 1258-1259, una nota omessa)

28. ——. 1994. "Testi e commenti, manuali e insegnamento: la forma sistematica e i metodi della filosofia in età postellenistica." In *Aufstieg und Niedergang der römischen Welt. Teil II: Principat. "Che per Alessandro la fisica occupi un rango inferiore alla metafisica non è cosa di cui si possa seriamente dubitare; non è altrettanto chiaro, invece, che la metafisica si identifichi per lui totalmente o direttamente con la teologia. In ogni modo, la teologia rimane al vertice della gerarchia o come scienza suprema, o come parte speciale della scienza suprema. Anche in questo caso nel testo aristotelico ci sono le basi minime per arrivare a una conclusione di tal genere: è evidente che Alessandro si fonda sul passo di 'Metafisica' E 1, 1026 a 18-23 dilatandone l'importanza e generalizzandone l'applicazione." (p. 5044, due note omesse)

29. ——. 1995. "Alessandro e i metodi dell'esegesi filosofica." In *Esegesi, parafrasi e compilazione in età tardoantica. Atti del 3° Congresso dell'Associazione di studi tardoantichi*, edited by Moreschini, Claudio. Napoli: D'Auria.

Ristampato in P. Donini, *Commentary and Tradition: Aristotelianism, Platonism, and Post-Hellenistic Philosophy*, Berlin: Walter de Gruyter 2011, pp. 87-106.

Abstract: "The distinction between implicit assumptions and actual methods enables to see how Alexander developed his systematic interpretation of Aristotle. He approaches the

Aristotelian texts with the firm conviction that they represent a unified and consistent system. Wherever contradictions seem to dwell, it will be up to the commentator to restore consistency, by interpreting an author out of himself. Examples of this procedure are drawn from the *De anima*. In some cases, faced with patent inconsistencies in Aristotle's own writings, Alexander thought he could harmonize the meanings of the terms; on other occasions he suppressed a term of contradiction, or chose to leave them unchanged. Another form of intervention is the tendency to change the punctuation in the text. In so doing he was probably influenced by Aristotle himself; this technique probably already existed in the previous exegetical tradition.

In addition to this, perhaps as an extension of that same method, which allowed changing the syntax of the sentence and hence the possible meaning of the texts under scrutiny, Alexander also changes the word order by importing into the sentence some terms and even whole passages, albeit rarely. In light of these methods of interpretation one may seek to explain even those extreme cases where the philosophical reading set forth by Alexander seems to veer so strongly away from Aristotle's thought as to be otherwise inexplicable. The two most glaring examples of such a situation will be examined: the theory on the origin of the soul as stemming from a blend of bodily elements at the beginning of *De anima* and, especially, the famous theory laid out at the end of that same treatise whereby the agent intellect is identified with the heavenly Unmoved Mover of the *Metaphysics*. One can therefore reasonably presume that, without in any way altering the reading of Chapter III 5 of Aristotle's *De anima*, Alexander merely construed it with a different word order and a different syntax of the sentence, thus easily yielding a Greek text that shored up his own understanding and solved a number of manifest philosophical difficulties raised by the words of Aristotle."

30. ———. 1996. "Doti naturali, abitudini e carattere nel *De fato* di Alessandro di Afrodisia." In *Polyhistor: Studies in the history and historiography of ancient philosophy presented to J.*

Mansfeld, edited by Algra, Keimoe A., van der Horst, Pieter W. and Runia, David T., 284-299. Leiden: Brill.

"Di Alessandro di Afrodisia lo studioso a cui è dedicato questo volume ebbe occasione di occuparsi più di una volta; tuttavia lo scritto *De Fato* è fra le opere del commentatore fino a oggi l'unica cui Jaap Mansfeld abbia dedicato un intero saggio. Non ripeterò qui quale importanza abbia quel lavoro in vista dell'interpretazione complessiva dello scritto; prenderò invece in considerazione un piccolo suggerimento, a mio giudizio estremamente fecondo, che Mansfeld diede in quelle pagine.[*]

(...)

"Occorre in primo luogo ricordare i termini del problema, che concerne la possibilità di riconoscere ad Alessandro e al suo trattato una sostanziale coerenza di pensiero fra le due parti in cui lo scritto si articola (cioè i capitoli 1-62 contenenti la dottrina del fato che Alessandro considera aristotelica e la parte rimanente con la sua lunga polemica contro il determinismo)."

(p. 284)

(...)

"Siamo forse ora in grado di capire il ragionamento di Alessandro benché esso rimanga largamente implicito e possiamo finalmente rendere conto in modo coerente tanto delle affermazioni del cap. 6, quanto di quelle dei capitoli 27-29. È verissimo, infatti, che in questa serie di capitoli, apparentemente contraddicendo il 6, si riconduce la formazione del carattere all'educazione, all'esercizio, alle abitudini e non più alla natura; ma si doveva aggiungere (cosa che finora nessuno ha fatto) che in quei capitoli Alessandro intende parlare soprattutto e, anzi, quasi esclusivamente della formazione dei caratteri virtuosi, cioè del modo in cui si diventa φρόνιμοι: solo pochissimi e brevissimi sono gli accenni alla formazione dei caratteri viziosi (e di questi ci occuperemo in un secondo tempo). Se dunque il cap. 6--quando sia stato debitamente interpretato l'esempio di Socrate--concorda con 27-29 quanto all'ammissione che una personalità virtuosa, formata come tale dalle abitudini contratte con l'esercizio e

l'educazione, e realmente un'occorrenza molto rara e rappresenta un'eccezione alla regola che dice che la maggioranza degli uomini è inferiore alla misura della virtù, tutto il discorso di Alessandro può assumere una sua coerenza anche se lascia

implicite troppe cose e sorvola inoltre su difficoltà tutt'altro che marginali. Il significato complessivo potrebbe essere questo." (p. 290)

31. ———. 1996. "Θεία δύναμις in Alessandro di Afrodisia." In *Dunamis nel neoplatonismo. Atti del II Colloquio Internazionale del "Centro di Ricerca sul Neoplatonismo", svoltosi a Catania nel mese di Ottobre del 1994*, edited by Romano, Francesco and Cardullo, R. Loredana, 11-30. Catania: CUECM.

Ristampato in P. Donini, *Commentary and Tradition: Aristotelianism, Platonism, and Post-Hellenistic Philosophy*, Berlin: Walter de Gruyter 2011, pp. 125-138.

Abstract: "The discussion on "divine power" developed by Alexander in one of his *Quaestiones* (II 3) should be connected with the debate that opposed Peripatetics, Platonists, and Stoics. The focus of the discussion is divine providence, which the other two schools had accused Aristotle of ignoring. Alexander's *Quaestio* can be easily interpreted as a response to charges identical or very similar to those leveled against Aristotle by the Middle Platonist philosopher Atticus. Alexander provides two solutions that confer both upon the divine power derived from celestial bodies the ability to exert a providential influence on earthly matters, and especially on the origin of psychicality; their difference resides merely in the role played by Θεία δύναμις in the formation of elementary bodies. Under the first explanation, the nature of elementary bodies is already fully shaped and defined before being affected by the dynamis, which is cast upon them as a secondary nature only; whereas in the second solution the divine power firstly bestows upon the four elementary bodies their specific and different

forms. But nothing in the text indicates that Alexander liked this second solution better; this one was probably devised ad hoc as a particularly effective riposte to Platonists, for it expands the influence of divine providence over the earthly world to a greater extent. As for the primary origin of psychicality and the latter's differentiation in living bodies Alexander's two explanations adopt the same argument: it makes no difference if divine power is cast upon simple bodies (elements) as a secondary nature or is responsible for the diversification of the actual forms of these bodies. Through its inclusion in the constitution of compounds (albeit in varying degrees) it establishes the different scale or level of psychicality in the compound. Since not all compounds are animated, Alexander comes to distinguish the organic from the inorganic, simply by assuming that compounds become animated only when the composition of their elements undergoes mixing processes and qualitative alterations (*alloiosis*). Should these processes fail to occur, we would only be left with inanimate bodies resulting from the mere juxtaposition of elementary bodies. A theory of this kind would overthrow the whole framework of Aristotle's physical chemistry, but since it does not reappear in any of Alexander's other texts, it should most likely be construed as another ad hoc argument devised both as a response to Platonists, and as an explanation for a phenomenon (the differentiation between organic and inorganic) upon which Alexander elsewhere maintains a conspicuous, perhaps embarrassed, silence. Furthermore, his discourse fails to clarify whether he regards $\Theta\epsilon\iota\alpha\ \delta\upsilon\mu\alpha\nu\iota\varsigma$ itself as a psychical force and how it should be set apart from the natural impulse of movement featured in elementary bodies."

32. ———. 2003. "Unità e oggetto della metafisica secondo Alessandro di Afrodisia." In *Alessandro di Afrodisia e la «Metafisica» di Aristotele*, edited by Movia, Giancarlo, 15-51. Milano: Vita e Pensiero.

"Gli studi sul commentario di Alessandro alla *Metafisica* di Aristotele non sono molti e, quanto meno a proposito della questione dell'oggetto della scienza filosofica che noi chiamiamo appunto metafisica - e che anche Alessandro qua e

là denominava già in questo modo(1) -, non sono molto convincenti. Si può con una certa sicurezza considerare superata e ormai improponibile la tesi di Philip Merlati(2), che identificava l'essere "in quanto essere" direttamente con la sostanza prima, intelligibile e divina e perciò considerava la teologia come il tema unico e proprio della metafisica aristotelica anche nell'interpretazione di Alessandro: la confutazione che di questa tesi fece qualche tempo fa C. Genequand(3) appare, infatti, adeguata." (p. 15)

(...)

"Come la proposta più costruttiva rimane allora quella del lavoro di Genequand ora ricordato, che attribuirebbe ad Alessandro un primo abbozzo della distinzione tipica della tarda scolastica tra una *metaphysica generalis* (la scienza generale dell'essere) e una *metaphysica specialis* (cioè la scienza specifica della sostanza divina, la teologia). Tuttavia anche questa interpretazione(5) non risulta a mio giudizio soddisfacente; essa coglie forse un aspetto della concezione di Alessandro, ma un aspetto soltanto secondario; l'idea fondamentale di Alessandro era un'altra ed è mio proposito descriverla in queste pagine. Intendo inoltre mostrare che la tesi di una distinzione di due livelli nella scienza che noi chiamiamo metafisica (distinzione peraltro solo episodicamente presente nelle pagine del commento) potrebbe essere compatibile con un'interpretazione strettamente unitaria dell'oggetto della metafisica aristotelica, che è invece e comunque la convinzione personale di Alessandro esposta nella grandissima parte della sua opera(6)." (p. 16)

(1) É una buona osservazione della tesi di dottorato di M. Bonelli, *La filosofia come scienza dimostrativa: il commentario di Alessandro di Afrodisia al libro Gamma della Metafisica di Aristotele*, Université de Genève, Faculté des Lettres 1999, pp. 33-34, che almeno in alcuni passi del commentario (p. es. a p. 237,3-7 H [Hayduck].) l'espressione *ta meta ta physika* non possa essere intesa come il titolo del libro di Aristotele, ma debba essere interpretata come il nome della disciplina(...)

(2) *Metaphysik: Name und Gegenstand*, «Journal of Hellenic Studies», 77 (1957), 87-92.

(3) *L'objet de la Métaphysique selon Alexandre d'Aphrodisias*, «Museum Helveticum», 36 (1979), 48-57.

(5) Che è stata in parte ripresa, anche se in un quadro complessivamente molto più ricco, più articolato e in definitiva piuttosto differente da quello di Genequand, da M. Bonelli, pp. 8, 56, 235 e 250 del lavoro citato sopra (in n. 1).(...)

(6) In questo lavoro non mi preoccuperò né di interpretare il testo aristotelico e nemmeno principalmente di decidere se la spiegazione che ne dà Alessandro sia quella corretta; mi interesserò essenzialmente della presentazione che egli fa dell'oggetto che ritiene trattato da Aristotele nelle pagine della *Metafisica* e cercherò di stabilire se e quanto essa sia in sé coerente. La mia opinione in merito al testo aristotelico è esposta nel lavoro *Introduzione alla Metafisica di Aristotele*, Roma 1995.

Ristampato in P. Donini, *Commentary and Tradition: Aristotelianism, Platonism, and Post-Hellenistic Philosophy*, Berlin: Walter de Gruyter 2011, pp. 169-171.

Abstract; "This essays argues against the deletion of lines 90, 24-25 of Alexander's *De anima*, suggested by Ivo Bruns. Two minimal changes are suggested that enable to restore the original text and convey an important point: Alexander emphasizes that none of man's intellectual faculties are immortal, not even the thought that man may momentarily have regarding eternal and divine objects."

34. Fazzo, Silvia. 1988. "Alessandro d'Afrodisia e Tolomeo: aristotelismo e astrologia fra il II e il III secolo d. C." *Rivista di storia della filosofia* no. 43:627-649.

Summary: "The works of Alexander of Aphrodisias were written a few decades after the publication of the most

successful astrology handbook in antiquity, Ptolemy's *Tetrabiblos Syntaxis*, which attempts to naturalize astrology, i.e. to make it agree with Aristotelian theory of science.

A comparison of the doctrines between the *Tetrabiblos* and some passages of Alexander's works on fate demonstrates a noteworthy convergence of the two scholars, and probably a dependence of the last great Greek Aristotle's exegete on the theories of Ptolemaic astrology, at least in reference to three points: theory of fate; justification of divining as a technical and natural conjecture about man's fate; analysis of the stars' influence on the sublunary world in physical and philosophical terms."

"Prima che se ne perdesse l'originale greco, il commento di Alessandro di Afrodisia al *De generatione et corruptione* di Aristotele era stato tradotto, forse per un intermediario siriano, in lingua araba. Il *Kitab al-Fihrist* di al-Nadim ne attribuisce una versione completa ad Abu Bisr Matta ibn Yunus(2)

Di fatto, il commento di Alessandro si trova citato ripetutamente da fonti arabe, ed è utilizzato largamente da Averroè nel suo proprio commento medio al *De generatione*. Allo stato attuale delle ricerche, anche la traduzione è perduta.

Le tracce più consistenti finora conosciute, limitatamente alla sezione di testo che corrisponde a parte degli attuali capitoli II.2-5, sono state segnalate da Paul Kraus nel *Kitab al-Tasrif*, un'opera del corpus alchemico attribuita a Jabir ibn Hayyan, e precisamente nel ms. Paris. ar. 5099, ff. 129b-138b, che conserva il *Kitab al-Taṣrif* ai ff. 128b-147b(3)."

36. ———. 2000. "La versione araba del περι προνοιασ di Alessandro di Afrodisia e i frammenti greci nel trattato contra iulianum di Cirillo Alessandrino." *Aevum. Rassegna di Scienze Storiche, Linguistiche e Filologiche* no. 74:399-419.

Sommario: "Perduto nell'originale greco, il trattato *Sulla provvidenza* di Alessandro di Afrodisia è conservato nella versione araba di Abu Bisr Matta ibn Yunus e in alcuni frammenti contenuti nel *Contra Iulianum* di Cirillo di Alessandria. Un confronto fra la versione e i frammenti conferma l'autenticità e la letteralità sia della versione che della maggior parte dei frammenti; induce inoltre a rilevare nell'opera di Cirillo un uso prevalentemente indiretto e "di repertorio" della letteratura greca non cristiana."

"Conclusioni

Riassumo i risultati di questa ricerca. L' autenticità dei frammenti del trattato περι προνοιασ di Alessandro di Afrodisia conservato da Cirillo e quella della versione araba del trattato tradotta da Abil Bisr Matta ibn Yilnus si confermano vicendevolmente in virtù della corrispondenza letterale di quasi tutti quei frammenti che Cirillo espressamente ascriveva al trattato, ad eccezione di uno solo.

Per quest'ultimo e inoltre per altri di Alessandro citati da Cirillo ma non ascritti precisamente a quell' opera, lo stile e la dottrina confermano come altamente probabile che Alessandro fosse l' autore, ma la provenienza resta ignota.

Il modo in cui i frammenti vengono citati puo suscitare qualche perplessità, soprattutto perche talora il senso generale ne viene distorto rispetto alle intenzioni originali dell'autore. Non c'e pero motivo di pensare a un deliberato travisamento da parte di Cirillo: il raffronto infatti fra queste citazioni e le altre citazioni di autori pagani nel *Contra Iulianum* di Cirillo fa pensare che l'autore non usi il testo di Alessandro direttamente, bensì attinga a fonti indirette (non ultimo opere di altri autori ecclesiastici) forse per il tramite di un lavoro di schedatura che avrebbe ulteriormente offuscato le indicazioni di provenienza e

aggravato il distacco fra i singoli frammenti e il contesto originale di produzione."

"Una ricostruzione per loci paralleli

La storia della tradizione aristotelica è anche storia più o meno sommersa della fortuna dei commenti di Alessandro di Afrodisia alle opere di Aristotele. Prendiamo il caso della tradizione interpretativa del *De Generatione et corruptione*. Il commento originale di Alessandro, si sa, ora come ora è perduto. Restano come pilastri delle tradizioni esegetiche rispettivamente greca e araba, il commento di Filopono e il Commento Medio di Averroè (l' esegeta di Cordova non scrisse infatti alcun Commento Grande su questa opera di Aristotele, ma solo il Commento Medio e un'Epitome).

Ora, la natura e la frequenza dei riferimenti al magistero esegetico di Alessandro dei quali questi due commenti si trovano costellati sono tali, da suggerire che il commento di Alessandro - che i due autori utilizzarono indipendentemente - abbia costituito nella stesura di entrambi un termine costante di riferimento. Un modo relativamente agevole per verificare questa ipotesi consiste nel mettere in parallelo i due commenti, onde verificare se e in che misura esistano fra di essi punti di convergenza significativi, anche al di là e a prescindere dalle esplicite menzioni del nome di Alessandro. Questo corrisponde in parte a ciò di cui si intende qui dare *specimen*. C'è poi, oltre a questi, un testimone di più, [*] del tutto indipendente dai precedenti, che presenta prerogative in qualche modo eccezionali. Non copre l'intero trattato, ma soltanto, lacunosamente, alcune parti dei capitoli II 2-5; le quali diventano, con ciò stesso, punto di osservazione del tutto privilegiato.

Nelle pagine che seguono sceglieremo in particolare il capitolo II 2, la cui rilevanza sarà fra breve elucidata con particolare

riferimento al suo ruolo fondativo per la dottrina aristotelica delle 'contrarietà tangibili'." (pp. 151-152, note omesse)

38. ———. 2002. *Aporia e sistema. La materia, la forma, il divino nelle Quaestiones di Alessandro di Afrodisia*. Pisa: Edizioni ETS.

"Di qui l'interesse di una ricerca specifica sulla funzione dell'aporia come aspetto caratterizzante e solo apparentemente marginale del magistero e dell'attività esegetica di Alessandro.

Una tale ricerca consente infatti di mettere a fuoco aspetti distintivi di quel determinato aristotelismo che è l'aristotelismo di Alessandro, caratterizzato da tensioni sistematiche molto forti e già pienamente espresse, ma non interamente risolte. È di queste tensioni non risolte che sono infatti documento le aporie.

Nei prossimi paragrafi di questa introduzione (§§ 2 ss.) anticiperò alcuni di questi aspetti distintivi, prefigurando quanto emergerà poi dettagliatamente dall'analisi dei testi nel corso dei quattro capitoli.

Se i quattro capitoli non copriranno tutte le *Quaestiones*, ma solo alcuni gruppi di testi, questo non sarà dovuto solo a ragioni di spazio e di praticabilità. È una raccolta di esplorazione relativamente recente, che

può apparire molto eterogenea, ed è sfuggita sinora a considerazioni d'insieme che rendessero ragione degli elementi di continuità fra testo e testo.

Eppure i fattori di continuità sono spesso evidenti. In particolare dove l'argomento è affine anche i testi che ne trattano tendono a costituire gruppi relativamente omogenei. È stata pertanto una scelta precisa quella di concentrare l'attenzione su aree problematiche alquanto coerenti, che si prestassero a linee di lettura più specifiche, dunque più efficaci, e che al tempo stesso offrissero un quadro sufficientemente ampio e significativo da poter contribuire alla comprensione

- dei trattati maggiori di Alessandro e del suo distintivo contributo alla storia dell'interpretazione di Aristotele." (pp. 13-14)

§ 3. Alessandro di Afrodisia: impersonalità e tradizione 373; § 4. Sulla fortuna di Alessandro e dei commentatori 377-379.

"Partecipe delle tendenze archeologizzanti della cultura dei primi secoli dell'età imperiale, l'artistotelismo. si codifica e configura definitivamente entro l'epoca di Alessandro di Afrodisia come tradizione esegetica, legata al commento 'continuo' dei testi del maestro. Una tale tradizione si stratifica da un commentatore all'altro con fortissimi, ma per lo più impliciti, elementi di persistenza. L'operato individuale esce dall'ombra soprattutto nei casi di aporia o di intendimento controvertibile. Di qui le difficoltà della storiografia tradizionale nel rendere conto dell'apporto dei singoli commentatori; e per converso l'interesse delle più recenti prospettive di ricerca." (p. 367)

"La centralità di Alessandro si deve sia alla statura del personaggio in sé sia al ruolo cruciale che la sua opera viene di fatto a rivestire nella tradizione esegetica ai testi di Aristotele. Alessandro è il primo esegeta aristotelico del quale si possiedano interi commenti ad opere complete. In ragione infatti della tendenza sopra menzionata all'obliterarsi vicendevole e progressivo di questo genere di produzione, i commenti di Alessandro sostituirono quasi per intero il precedente patrimonio della letteratura di scuola.

La sua centralità consiste d'altronde nel fatto che oltre ad essere il primo ad essere conosciuto bene, in qualche modo Alessandro è anche l'ultimo autore di veri commenti strettamente aristotelici(6), Sebbene infatti una parte dei suoi commenti, fra il V e il VI secolo sia stata soggetta a rifacimento (per questo infatti andò poi perduta) gli autori di questi nuovi

commenti non sono aristotelici in senso stretto. Di fatto, dopo Alessandro non abbiamo più traccia di una scuola aristotelica connotata come tale, contrapposta dunque in una relazione di concorrenza con le altre sette filosofiche." (p. 373)

(6) Temistio (IV sec.) scrisse non più commenti ma parafrasi. Fu forse l'ultimo filosofo antico a volersi presentare come seguace di Aristotele, almeno nella misura in cui glielo consentiva il contesto culturale, fortemente impregnato di neoplatonismo, cfr. Jr. J. Blumenthal, *Themistius: the last Peripatetic Commentator on Aristotle?*, in R. Sorabji, (a cura di), *Aristotle Transformed: The Ancient Commentators and their influence*, London, Duckworth, 1990, pp. 113-123. (a cura di), *Alessandro di Afrodisia, La Provvidenza. Questioni sulla provvidenza*, Milano, BUR, 1999, in part pp. 5-18.

41. ———. 2005. "Aristotelismo e antideterminismo nella vita e nell'opera di Alessandro di Afrodisia." In *La catena delle cause. Determinismo e antideterminismo nel pensiero antico e in quello contemporaneo*, edited by Natali, Carlo and Stefano, Maso., 269-295. Amsterdam: Hakkert.

"Ciò che qui si è voluto proporre è un'ipotesi provvisoria che potrà essere verificata, corretta, ulteriormente sviluppata (specie in riferimento alle eterogenee collezioni di opuscoli della *Mantissa* e delle *Quaestiones*), o smentita. In ogni caso suo scopo principale, va precisato, non è spiegare l'una o l'altra divergenza dottrinale all'interno del campus alessandrino. In linea di massima, in questo tipo di letteratura l'identità non garantisce sempre la coerenza, anche perché l'autore di volta in volta deve interagire con la tradizione esegetica dei singoli passi e problemi. E d'altra parte, vige fra i commentatori uno zelo di continuità dottrinale, tale per cui la coerenza non garantisce l'identità dell'autore.

Ci si propone, piuttosto, di esemplificare una possibile scansione cronologica e tipologica del corpus alessandrino, che ne metta le diverse parti in qualche relazione con l'evoluzione della scuola, per la quale il passaggio ad Atene, attestato (a quanto sembra) dal recente reperto archeologico, dovette comportare uno slittamento verso un livello di insegnamento meno specializzato e più generico - quello per l'appunto dei trattati. La precarietà stessa di questa, come di altre analoghe ipotesi sui rapporti fra i due 'Alessandri', potrà almeno servire a mettere in evidenza quante cose non sappiamo e quante certezze potrebbero restare più sfumate.

Di più infatti non è lecito per ora sapere né congetturare. Sulle fasi precedenti della tradizione grava, qui come sovente altrove, l'ombra di un anonimato voluto e creato dai maestri stessi, dei quali Alessandro di Afrodisia il padre, questo sconosciuto, appare figura emblematica e riassuntiva," (p. 295, una nota omessa)

42. ——. 2017. "Alessandro di Afrodisia e il sistema aristotelico in età imperiale: stato dell'arte e prospettive di ricerca." In *Studi su ellenismo e filosofia romana*, edited by Alesse, Francesca, Fermani, Arianna and Maso, Stefano, 123-151. Roma: Edizioni di Storia e Letteratura.

"Gli studi su Alessandro infatti da alcuni decenni conoscono un rinnovamento sostanziale, uscendo progressivamente da una certa difficoltà, quasi un'impasse della storiografia di fronte alla filosofia degli esegeti.

Comincerò dunque da una presentazione a grandi linee del problema storiografico di fondo, per poi mostrare come gli studi recenti aprano prospettive di almeno parziale sviluppo e superamento. Ciò comporterà, per tappe successive, una parziale rassegna bibliografica (inevitabilmente selettiva), atta a esemplificare e a mostrare, almeno per specimina, in che modo si sia arrivati a questo punto negli studi, quali siano le differenze maggiori rispetto al passato, e quali prospettive di sviluppo si possano individuare.

Come esito complessivo, fin d'ora lo stato dell'arte può ben dirsi evoluto: in assoluto, gli studi su Alessandro e sulla tradizione

esegetica sono divenuti un settore di punta nella storiografia filosofica antica, suscettibile di progressi decisivi e inediti." (p. 124)

44. ———. 2018. "L'emergenza della *Metafisica* di Aristotele in età romana: problemi di costituzione del testo e il ruolo del commento di Alessandro di Afrodisia." In *Da Stagira a Roma. Prospettive aristoteliche tra storia e filosofia*, edited by Gastaldi, Silvia and Zizza, Cesare, 155-183. Pisa: ETS.

Abstract: "La tradizione esegetica della *Metafisica*, forma, insieme al testo stesso della *Metafisica* in quattordici libri, entro l'epoca di Alessandro di Afrodisia e dei suoi maestri. Nel corso del 2° secolo AD si può situare un periodo decisivo per la trasformazione del pensiero di Aristotele in aristotelismo, cioè la costituzione della filosofia di Aristotele come sistema. Il fenomeno è indubbiamente molto articolato,

strutturante e trasversale; è difficile da descrivere e definire secondo i criteri storiografici focalizzati sull'innovatività e originalità. In questa direzione si può rileggere, e potenzialmente risolvere, l'impasse della storiografia filosofica

nel rendere conto del contributo di Alessandro di Afrodisia. Su Alessandro, in effetti, nonostante l'ampliarsi recente della bibliografia, manca ancora una monografia comprensiva di riferimento. Il ruolo di Alessandro, commentatore aristotelico e ortodosso per eccellenza, potrebbe essere stato importante proprio nella configurazione attuale della *Metafisica* e nella definizione del suo ruolo nel *corpus aristotelicum*."

45. ———. 2018. "Perché 'Alexander Arabus'." In *Alexander Arabus. Studi sulla tradizione greco araba di Alessandro di Afrodisia*, edited by Fazzo, Silvia, 17-33. Pistoia: Petit Pleasance.

"«L' Alexander Arabus ... chi è? ... che cos'è? Come vedremo, non si tratta tanto di un "chi", quanto piuttosto di un "che cosa"; una sorta di etichetta per designare il corpus di trattati conservati in arabo e attribuiti al

commentatore greco di Aristotele Alessandro di Afrodisia, che visse tra il secondo e il terzo secolo della nostra era (fl. 200 d.C. ca.). Sarebbe fin troppo semplice, infatti, voler attribuire questo corpus a una singola figura storica. Dovremmo probabilmente considerare il comune denominatore di questi trattati dal punto di vista della loro funzione culturale comune: e questa è un'ipotesi di lavoro che mi propongo di esaminare anche negli studi a venire». Così cominciava il mio primo intervento su questo tema, che presentavo nel marzo 1993 all'Institut du Monde Arabe di Parigi. Era il primo studio che avesse mai menzionato un 'Alessandro Arabo' in quanto significativamente diverso dalla somma dei possibili testi greci di Alessandro di Afrodisia tradotti o citati o menzionati nella tradizione araba. Da allora, ho perseguito quella pista ed ipotesi di lavoro per venticinque anni, senza vere interruzioni." (p. 17)

46. ———. 2018. "Un caso di cittadinanza privilegiata in epoca romana imperiale. Alessandro di Afrodisia." In *Cittadinanza: chi è incluso e chi no, per gli antichi e i moderni*, edited by De Luise, Fulvia, 144-164. Trento: Università di Trento.

"La cittadinanza romana di Alessandro di Afrodisia, massimo esponente della scuola in esame, è uno dei pochissimi dati fattuali di cui disponiamo nell'intero ambito di studi. In virtù

del sistema dei *tria nomina*, che la cittadinanza conferiva, e che l'epigrafe di Karakasu restituisce (Chaniotis 2004, cfr. qui infra), si è in condizione di datare l'acquisizione della cittadinanza stessa nella genealogia familiare, risalendo di un paio di generazioni nella ascendenza patrilineare." (p. 262)

47. Forcignanò, Filippo. 2018. "Sul significato dell'argomento ἀπο τοῦ νοεῖν del « De ideis » di Aristotele: (Alex. Aphrod. in *Metaph.* 81, 25-82) " *Acme* no. 71:43-55.

Abstract: "Nel presente contributo si discute l'argomento del Περί ἰδεῶν aristotelico noto come «argomento dal pensare» (ἀπο τοῦ νοεῖν), vale a dire l'argomento che afferma che le forme esistono perché possiamo pensare cose che sono e non sono particolari anche dopo che si sono corrotte. Si mostra qui come Aristotele muova non una, ma due obiezioni a tale argomento. Tali obiezioni si fondano su un significato di νοεῖν differente da quello attribuito ai platonici. Questo, infatti, prevede capacità di astrazione, mentre le critiche di Aristotele si limitano al pensiero di individui. Gail Fine ha distinto un significato *broad* del verbo νοεῖν (i.e. il pensiero genericamente inteso) da un significato *high* del verbo (i.e. la forma più alta di pensiero in senso tecnico). Su questa base ha sostenuto che l'argomento attribuito ai platonici sia diverso dal secondo degli «argomenti dalle scienze» perché adotta un significato *broad* di νοεῖν. Io sostengo invece che l'argomento ἀπο τοῦ νοεῖν è differente dal secondo degli «argomenti dalle scienze», nonostante adotti un significato *high* di νοεῖν. Infine, si prende in esame la connessione tra la memoria e le forme attribuita da Aristotele ai platonici, mostrando come si tratti verosimilmente di un argomento extra e intra-academico non attribuibile direttamente a Platone."

48. Gambi, Giovanni. 2021. "L'assimilazione a Dio in Alessandro di Afrodisia." *Universa. Recensioni di filosofia* no. 10:39-58.

Abstract: "This essay aims to show how Alexander of Aphrodisias uses the notion of "assimilation to God", presented by Plato in the *Theaetetus* and codified during the subsequent platonic tradition, in relation to some fundamental issues of his philosophical system. This notion will turn out to be a key aspect of his thought, both in terms of his theological-cosmological and moral reflection, and in relation to his idea of providence which joins these two types of reflection."

49. Gannagé, Emma. 2002. "Matière et éléments dans le commentaire d'Alexandre d'Aphrodise *In de generatione et corruptione*." In *Aristotele e Alessandro di Afrodisia nella tradizione araba*, edited by D'Ancona, Cristina and Serra, Giuseppe, 133-149. Padova: Il Poligrasfo.

"De manière générale, la mise au jour et l'examen des extraits du commentaire d'Alexandre *In De Gen. corr.* reproduits dans le *K. al-Tasrīf* aura permis de jeter un éclairage différent sur certains points doctrinaux de la philosophie de la nature d'Alexandre. Car, il faut le souligner, pour la première fois nous sommes en présence d'importants extraits d'un commentaire d'Alexandre d'Aphrodise en version arabe. Jusque là, c'est à la transmission du grec à l'arabe des *Quaestiones* d'Alexandre que l'histoire de la philosophie s'était intéressée. Or ces petits traités ont la particularité de présenter la pensée de l'Aphrodisien dans ce qu'elle a d'original, affranchie du devoir d'allégeance à la pensée du maître. En outre, la recherche récente a montré avec éclat les manipulations que les versions arabes de ces traités avaient subies; c'est ainsi qu'on a mis au jour d'abord un 'Proclus Arabus' et puis un 'Philoponus Arabus' «portant directement les habits d'Alexandre» (48) Cet aspect de la recherche, très fructueux au regard de la transmission des idées, a contribué à jeter un voile de suspicion sur ce qu'on appelle désormais communément 'l'Alexandre Arabe'. L'helléniste chevronné y voit un zeste méprisant, le produit d'un syncrétisme néoplatonicien ne gardant de l'Alexandre grec, le vrai, que le nom et ne pouvant par conséquent apporter aucune contribution à la restitution de la pensée de ce dernier.

Or avec les extraits du commentaire d'Alexandre in *De Gen. corr.* c'est, d'une part, à l'activité d'exégète d'Alexandre que

nous avons affaire et, d'autre part, à une traduction fidèle. Nous avons eu l'occasion de le constater au sujet de la lecture de certains lemmes qui nous ont révélé un état du texte aristotélicien plus ancien que celui des manuscrits du *De Gen. corr.* que nous possédons. Quant à l'apport philosophique de ces extraits, on pourrait s'interroger d'abord sur l'intérêt d'une exégèse qui prétend à l'orthodoxie, si ce n'est qu'il réside précisément dans la distance entre le commentaire et le texte qu'il entend éclairer." (pp. 148-149)

(48) Nous empruntons cette jolie métaphore à A. Hasnawi, qui a fait cette découverte dans un article remarquable, *Alexandre d'Aphrodise vs Jean Philopon: Notes sur quelques traités d'Alexandre 'perdus' en grec, conservés en arabe*, «Ar. Sc. Phil.», 4 (1994), 53-109.

50. Geoffroy, Marc. 2002. "La tradition arabe du Περὶ νοῦ d'Alexandre d'Aphrodise et les origines de la théorie farabienne des quatre degrés de l'intellect." In *Aristotele e Alessandro di Afrodisia nella tradizione araba*, edited by D'Ancona, Cristina and Serra, Giuseppe, 191-231. Padova: Il Poligrafo.

"C'est un trait commun à toutes les théories arabes orientales de l'intellect que d'attribuer à Aristote l'enseignement selon lequel il existe quatre degrés de l'intellect humain, de la puissance à l'acte pur. L'origine de ce lieu commun est difficile à préciser. On peut seulement constater que sur le fond de ce principe s'élaborent, d'al-Kindî à Avicenne, diverses doctrines de l'intellection humaine qui présentent entre elles des disparités considérables. Les filiations menant de la tradition exégétique tardo-antique du *De Anima* d'Aristote à sa réception arabe restent encore à retracer. De même le rôle précis de la tradition pseudo-aristotélicienne de la *Théologie d'Aristote* et du *Livre des Causes* dans le développement de ces théories. Tout cela constitue un essaim de questions trop vaste pour être même résumé ici. Et l'on pourrait moins encore proposer une réponse à chacune d'elles, le terrain étant encore pour la plus grande part inexploré. Dans ces conditions, le mieux à faire est d'essayer de le déblayer parcelle à parcelle, mais minutieusement, quitte à réserver les conclusions fortes et les synthèses pour l'avenir. C'est à ce type de déblayage partiel que

- l'on voudrait se consacrer dans les lignes qui suivent." (p. 191, une note omise)

Abstract: "This article is about the terms used in the works traditionally ascribed to Alexander of Aphrodisias to mean the process of abstraction through which intellect separates form and matter. The passages are studied in order to identify what nouns and verbs are used. Since in two works of dubious authorship *aphaireô* and *aphairesis* are found, the usage of these terms in the works that can be ascribed with certainty to Alexander is studied. The results obtained are examined in the light of the hypotheses about the authorship and chronology of the cited works formulated by scholars so far."

60. ———. 2017. *Dialettica, genere e anima nel commento di Alessandro di Afrodisia al quarto libro dei Topici di Aristotele*. Milano: Vita e Pensiero.

"Il volume comprende una serie di saggi sui passi più significativi del commento di Alessandro di Afrodisia al IV libro dei *Topici* di Aristotele. In particolare, i saggi sono dedicati ai seguenti tre argomenti, su cui Alessandro espone tesi estremamente interessanti. Il primo tratta la dialettica, cioè l'argomento dei *Topici*; segue poi il genere, che costituisce l'argomento del IV libro in particolare; infine l'anima, le discussioni intorno alla quale costituiscono per il commentatore un esempio privilegiato per illustrare i "luoghi" dialettici via via discussi. È fornita ai lettori anche la traduzione integrale del commento di Alessandro al IV libro, supportata da note esplicative. Ai saggi di commento e alla traduzione è premessa un'introduzione in cui sono presentate brevemente la concezione aristotelica della dialettica, la figura di Alessandro di Afrodisia e le caratteristiche generali della sua esegesi dei *Topici*.

Abstract: "Philoponus and Alexander of Aphrodisias on entelechy The discussion about the notion of entelechy is perhaps the most apt to resume Philoponus' opposition to Alexander's conception of the soul. The paper analyses the first two books of Philoponus' commentary on Aristotle's *De anima*,

in order to show the precise relationships between Philoponus' and Alexander's philosophical arguments about entelechy."

"Il tratto comune, che può apparire come una sorta di filo conduttore della raccolta di scritti di Alessandro di Afrodisia giuntaci col titolo di *De anima* II e che è stata rinominata *Mantissa* (aggiunta, supplemento) dall'editore ottocentesco(1), è il costante riferimento critico allo stoicismo: sono, infatti, scritti che testimoniano la polemica di Alessandro prevalentemente contro gli stoici, in difesa delle tesi aristoteliche." (p. 457)

(...)

"Alessandro fa notare che, se l'assenso viene negato, non segue nemmeno l'azione(59). E siccome, dal suo punto di vista, la felicità consiste in un'attività, se manca l'assenso, manca anche la felicità. In realtà, si è visto che per gli stoici la felicità non consiste nelle attività, ma nel solo possesso della virtù.

Quindi, anche senza concedere il suo assenso e senza agire, il saggio è felice, perché la sua felicità consiste in una disposizione interiore costante e non in singole attività. Quindi, come detto, in questo caso la strategia di Alessandro consiste nel prendere in considerazione, tra le differenti formulazioni del fine presenti nella riflessione stoica, quella che più si avvicina alla formulazione peripatetica e che, come tale, meglio si presta ad essere interpretata attraverso categorie aristoteliche senza tuttavia apparire deformata. Prendendo in considerazione, tra le varie formulazioni stoiche di fine, quella che più si avvicina alla formulazione peripatetica, egli riesce nell'intento di interpretarla attraverso categorie aristoteliche senza tuttavia farla apparire falsata e a combattere così gli avversari su un piano di maggiore familiarità.

Questa, dunque, l'intonazione generale presente nello scritto, questo lo spirito che sembra permeare tutta la costruzione argomentativa di Alessandro e che può essere preso ad esempio di come si poteva condurre una polemica contro una scuola rivale in epoca imperiale." (p. 468)

"Qui discuteremo soprattutto cinque tra i capitoli iniziali del *de fato*, II- VI, in cui Alessandro ci dice di volere esporre la posizione di Aristotele, «della cui scuola filosofica io sono a capo, essendone stato proclamato maestro... intorno al destino e a ciò che dipende da noi» (164, 13-15). Tale esposizione verrà fatta in positivo, ed ad essa farà seguito poi la critica delle altre dottrine: «Poiché, peraltro, la difesa di alcune dottrine risulta più chiara attraverso la discussione contro chi sostiene tesi diverse... dopo avere parlato secondo la posizione di Aristotele, svilupperò il mio discorso contro coloro che non si sono espressi come lui su tali argomenti, perché dal confronto delle prese di posizione la verità vi risulti più chiara» (165, 1-5). I

capitoli II- VI del *de fato* corrispondono alla prima parte del proposito di Alessandro, l'esposizione positiva della dottrina peripatetica del destino, ed i capitoli da VII a XXXVIII alla seconda parte, la difesa della dottrina peripatetica del destino, e il suo approfondimento, attraverso la discussione delle tesi degli avversari." "Il commento di Alessandro al libro IV dei *Meteorologica* è continuo; ma non a tutte le parti del libro IV è accordata la stessa attenzione. Alcune sezioni, in particolare i capitoli 8 e 9, sono trattate molto cursoriamente ed a sette colonne Bekker (circa, da 384 b 24 a 388 a 10) sono dedicate poco più di sei pagine di commento (da 212, 33 a 219, 5); per di più, un'intera pagina (212, 33-213, 38) è dedicata alle sole dieci righe iniziali di IV 8, (384 b 24-34), il che lascia ben poco spazio per il resto del commento. L'abbreviazione è particolarmente significativa a partire dalla pagina 216, 12 sgg., che commenta il passo 385 b 27 sgg. Per contro, nel commento all'ultimo capitolo del libro IV, ove Aristotele affronta temi metafisicamente più interessanti, come la forma e il fine dei corpi anomeomeri, a circa due colonne Bekker sono dedicate quattro pagine e mezzo di commento (circa, da 223, 4 a 227, 22). Ne leggeremo più avanti qualche brano. In generale si può dire che Alessandro, rispetto ad Aristotele, ha una visione abbastanza moderna di cosa

sia "filosofia", e che trova inutile soffermarsi sulle questioni particolari, mentre dedica molta cura al chiarimento dei principi metafisici di base." (p. 42)

"Il passo del primo libro del *De caelo* di cui si esamina qui la storia interpretativa all'interno dell'aristotelismo di età imperiale e tardo antica è luogo tra i più criticamente documentati del Περὶ οὐρανοῦ; per esso sono infatti ricostruibili i tentativi esegetici di Alessandro di Afrodisia, Temistio, Ammonio, di alcuni anonimi e più recenti commentatori(1), e, infine, di Simplicio. Se si considera che di tutta l'attività interpretativa antica che riguarda il *De caelo* ci restano soltanto la Parafrasi di Temistio(2) e il commento di Simplicio, in questo caso la sopravvivenza di testimoni così numerosi costituisce un'eccezione."

(...)

"In questo tentativo di sondaggio della stratigrafia esegetica di *cael.* A 9, 279a18-b3, oltre che alla parafrasi di Temistio e al commentario di Simplicio, ricorrerò, da una parte, ad uno scolio tratto dal codice Parisinus Coisilinianus 166, per integrare la posizione di Alessandro e documentare quella di Ammonio; dall'altra, al *Commentum magnum* e, soprattutto, al *Commentum medium* di Averroé, per precisare quella assai determinante di Temistio. Alla fine di questa ricerca, sia detto in anticipo, emergerà ancora una volta l'isolamento a cui Alessandro fu destinato nella storia successiva dell'aristotelismo di scuola." (pp. 313-314)

(1) Se essi non devono essere identificati con Temistio e Ammonio; in questo caso, infatti, i nostri testimoni si ridurrebbero a quattro.

(2) Per giunta pervenutaci nella traduzione ebraica condotta sulla translatio araba, a sua volta basata sulla redazione siriana del testo greco; vale a dire che la Parafrasi che leggiamo è ciò che risulta da un processo di triplice trasposizione. In più deve considerarsi che, in vista di questo studio, chi scrive è dovuto ricorrere ad un quarto stadio della trasmissione, vale a dire alla versione latina del testo ebraico, una revisione che Samuel Landauer, l'editore berlinese di Temistio, condusse sulla precedente traduzione di Mosé Alatino: cf. Themistius, *In libros Aristotelis De caelo paraphrasis, hebraice et latine*, ed. S. Landauer, Berolini 1902 (CAG V 4); *Themistii peripatetici lucidissimi paraphrasis in libros quattuor Aristotelis de coelo nunc primum in lucem edita Moyse Alatino Hebraeo Spoletino medico ac philosopho interprete*, Venetiis apud Simonem Galignanum 1574.

"Conclusioni

All'inizio del presente lavoro, si è mostrato che il cap. 8 di *Metaph.* A si inserisce a pieno titolo nel contesto dell'intero libro. Ciò ha come conseguenza che la dimostrazione dell'esistenza di una pluralità di sostanze immobili e la successiva determinazione del loro numero rientra nell'ambito della ricerca annunciata nel cap. 1 e sviluppata nel corso del libro.

Riguardo alla questione dell'animazione delle sfere celesti, si è visto che la posizione di pseudo-Alessandro ricalca quella del vero Alessandro nell'ammettere che le anime delle sfere sono distinte dalle sostanze immobili, e si è altresì evidenziato come essa non sia priva di difficoltà e contraddizioni.

L'ammissione esplicita del primato del Motore immobile primo da parte di pseudo-Alessandro non aggiunge nulla a quanto ritroviamo in Aristotele, e non contribuisce perciò a chiarire il tipo di rapporto tra il primo Motore e le altre sostanze

immobili. È certo comunque che, secondo pseudo-Alessandro, a distinguerli non sia un diverso tipo di immobilità.(...)" (p. 165)

79. ———. 2023. "Alessandro di Afrodisia e la nascita della dottrina dell'analogia dell'essere." *Rivista di Filosofia Neo-Scolastica* no. Online first:1-18.

Abstract: "This paper contributes to the debate on the origins of the doctrine of the analogy of being. The author argues that it was Alexander of Aphrodisias who started the process that was ultimately to lead, with Thomas Aquinas, to the complete formulation of the doctrine of the analogy of being.

Alexander's decisive contribution appears to lie not in the overlap between the unity by analogy in *Metaph.* Δ 6 and the προ`ς ἔν of *Metaph.* Γ 2, as recently claimed by K.L. Flannery [*], but in the commentator's having placed being as an intermediate between homonymous and synonymous.

Alexander's distinction between the three terms seems to mark a turning point in the way Aristotle's passage has been interpreted. By going beyond Aristotle, and placing being in an intermediate position, Alexander seems to pave the way towards the doctrine of the *analogia entis*, grasping the feasibility of it stemming from Aristotle's own text."

80. Sgarbi, Marco. 2011. "Metaphysica Λ 7. 1072 B 10-13." *Antiquorum Philosophia* no. 5:165-176.

Abstract: "La presente ricerca parte da una riflessione sul passo di *Metaphysica* Λ 7. 1072 b 10-13 per sottolineare un aspetto trascurato dagli studi aristotelici, cioè che il primo motore per Aristotele è principio in quanto bene ed è ciò senza di cui il bene non sarebbe realizzabile. Solo a partire da questa idea del principio primo come bene fu possibile per Aristotele concepire una filosofia prima distinta dalla fisica."

88. ———. 2012. "Contributi critici al testo del « De fato » di Alessandro di Afrodisia." *Rheinisches Museum für Philologie* no. 155:364-388.

"Secondo la ricostruzione stemmatica di P. Thillet,(1) l'edizione del *De fato* di Alessandro di Afrodisia deve fondarsi su due testimoni, il cod. *Ven. Marc. gr. 258* (= V), da cui derivano tutti gli altri codd. greci dell'opera, e la traduzione latina del *De fato* attribuita da Thillet stesso a Guglielmo di Moerbeke (= Lat). Tale traduzione(2) ha infatti alla base un esemplare greco indipendente da V, dal momento che V è in minuscola, laddove *Lat* deriva da un perduto ms. greco in onciale. Thillet ha dato seguito alle proprie importanti ricerche sulla tradizione manoscritta del *De fato* curandone un'edizione critica,(3) che però propone un testo spesso insoddisfacente (anche nell'interpunzione) e un apparato che in troppi casi tace palmari congetture. Per questo motivo, l'edizione di Thillet non può costituire uno strumento affidabile per i filologi e gli storici della filosofia antica che intendano occuparsi del *De fato*." (p. 364)

"Über die philosophische Ausbildung Alexanders von Aphrodisias sind wir ebenso schlecht informiert wie über die sonstigen Umstände seines Lebens. Unter den zweifellos zahlreichen Schülern und Bewunderern

des berühmtesten aller griechischen Interpreten des Aristoteles fand sich leider keiner, der wie etwa Porphyrios für Plotin die wichtigsten Lebensdaten des Meisters in einem βίος piet tsvoll aufzeichnete. Das wenige, was wir von seinem Leben wissen, verdanken wir kurzen autobiographischen Angaben aus seinen eigenen Schriften. Aus einem Fragment seines Kommentars zu *De caelo* geht z. B. hervor, da er bei Herminos gehört hatte.

In seinem Kommentar zur Meteorologie nennt er Sosigenes als seinen Lehrer; eine hnliche Auskunft begegnet bei Themistios und bei Ioannes Philoponos. Ferner wird ein dritter Lehrer des Exegeten in der kleinen Abhandlung über den Intellekt erwähnt.

Simplikios und Kyrillos kennen ihn ebenfalls als den Lehrer des Exegeten. Da die Persönlichkeit, um die es sich dabei handelt, ziemlich rätselhaft ist, wollen wir zuerst die Testimonien in ihrem berlieferten Zustand betrachten." (s. 169,

13. Moraux, Paul, and Sharples, Robert W. 2001. *Der Aristotelismus bei den Griechen. Von Andronikos bis Alexander von Aphrodisias, Band 3: Alexander von Aphrodisias* Berlin: Walter de Gruyter.

"Die Arbeit an seinem „Aristotelismus bei den Griechen" hat Paul Moraux über 25 Jahre begleitet. Planungen und erste Vorarbeiten für dieses Werk wie auch für sein anderes großes Projekt, den Handschriftenkatalog „Aristoteles Graecus", reichen bis in die zweite Hälfte der 50er Jahre zurück. Beide Vorhaben hat Moraux nicht mehr zum Abschluß bringen können. Wer freilich die Fülle seiner sonstigen Publikationen aus den Jahren 1960-1985 sowie seine vielfältigen universitären Verpflichtungen in Betracht zieht, kann für das Geleistete nur Respekt und Bewunderung empfinden. Der erste und zweite Band des „Aristotelismus" mit über 1400 Seiten erschienen 1973 bzw. 1984; etwa drei Viertel des dritten Bandes lagen vor, als 1985 ein vorzeitiger Tod dem rastlosen Wirken des großen Aristotelikers ein jähes Ende setzte.

Der Umfang des Nachgelassenen, nun über fünfhundert Seiten im Druck, macht bereits deutlich, daß dieses Konvolut kaum in der kurzen Zeitspanne zwischen dem Erscheinen des zweiten Bandes und dem Tod des Autors entstanden sein kann. In der Tat begann Moraux seine Arbeit für den „Aristotelismus" nicht sogleich mit dem ersten Band. Vielmehr hatte er auf Grund seiner Vertrautheit mit Alexander von Aphrodisias, dem zentralen Thema des dritten Bandes, in den 60er Jahren zunächst einige Kapitel über die Kommentare zur Naturphilosophie und zur Psychologie des Aristoteles

- entworfen, bevor er sich den Bänden I und II zuwandte. Manche Abschnitte des dritten Bandes sind also wesentlich früher als die Kapitel zur Analytik und zur Metaphysik, die nach Band I und II gegen Ende seines Lebens geschrieben wurden." (Vorwort, s. V)

Boethius' Metaphysics of Being and Goodness

Introduction: An Overview of the Work of Boethius

"By writing the *Consolation of Philosophy* Boethius provided all educated people of the Middle Ages and the Renaissance with one of their principal classics, a work of both intellectual profundity and literary delight to be read not only in Latin by clerks in their study but also by laymen at leisure, and therefore often in the vernacular.

(...)

"His world is the old world of antiquity with an intellectual framework dominated by Ptolemaic ideas about the world, by Aristotle's doctrines of substance and accidents, by a Platonic metaphysic setting asunder mind and matter, by Pythagorean ideas of mathematics and of musical proportion as the key to the structure of the cosmos."

(...)

"Boethius was by temperament a man who liked to strike out on his own. In all the fields that he touched he had some Latin predecessors. Apuleius anticipated him in writing a short guide to Aristotle's difficult treatise on *Interpretation*. It is likely that Boethius knew Apuleius' work, but he never mentions it by name. Apuleius also anticipated him in making an adaptation of the *Arithmetic* of Nicomachus of Gerasa, but Boethius sets about his own version of Nicomachus as if he had no predecessor. Marius Victorinus, the African rhetor of the mid-fourth century whose conversion to Christianity astonished high Roman society about 355, directly covered some of the ground that Boethius was to claim as his

own. He made a translation of Porphyry's *Isagoge* or introduction (Porphyry did not explain what he was introducing, but in the sixth century it was assumed to be an introduction to Aristotle's *Categories*; a version, with eight books of commentary, of Aristotle's *Categories*; a version of Aristotle *on Interpretation*; a tract on the hypothetical syllogism; and a commentary on Cicero's *Topics*. Boethius acknowledges that Victorinus was the most eminent orator of his time, but loses no opportunity of drawing attention to Victorinus' blunders either in logic or in translation from the Greek. Nevertheless, it can hardly be accidental that the portion of Boethius' dialectical work which became most widely known covers much the same area as that laid down as the standard curriculum by Victorinus in the fourth century. Although Boethius succeeded in making careful translations, which were then given a further meticulous revision, of both *Analytics*, *Topics*, and *Sophistic Refutations*, the transmission of these last treatises is a thin line. Until the twelfth century they were little known or not at all. Neither in his dialectical studies nor in his works on mathematics did Boethius claim to be original. For arithmetic he closely follows his Greek model in the Pythagorean Nicomachus of Gerasa. This study is intended as a preparation for the introduction to music, a much longer work dependent on Nicomachus and on Ptolemy. The *Institutio Musica* is transmitted incomplete in the manuscript tradition, which breaks off in the middle of a sentence half way through the fifth book. Originally the work must have run to six or seven books.

(...)

"In his logical treatises there stands one monograph which had special interest for him, namely, that on the hypothetical syllogism of the conditional form: 'if A, then B; but A, therefore B', or 'if A, then B ; but not B, therefore not A.' The school of Aristotle had begun the investigation of the logic of conditional statements of this kind. The Stoics had taken the matter considerably further, treating the variables AB as symbols not (as in Aristotle) for terms but for entire propositions. Cicero took some notice of this Stoic logic, so that it was not bringing out matter of which the Latin world knew nothing. But Boethius' monograph is the most careful and detailed study in logic to come from his pen, and without it our knowledge of ancient propositional logic would be thin. To medieval logicians this treatise

was not perhaps of the greatest interest. John of Salisbury regarded it without enthusiasm, but conceded that it was at least clearer than anything that Aristotle would have written on the subject, had he done so. In recent times modern logicians have shown a more benevolent interest in Boethius' work in this complex field. John of Salisbury felt that some of Boethius' logical studies were too abstract to be of any use. There is no doubt that his expositions of Aristotle are academic and detached, but written with the conviction that they train the mind to detect fallacies. In his second commentary on Porphyry's *Isagoge* he utters the warning: 'Those who reject logic are bound to make mistakes. Unless reason shows the right path, the incorrupt truth of reality cannot be found'. In the commentary on Aristotle's *Categories* he writes in pain of the threat to the survival of culture in his own time, and speaks of the imminent collapse of liberal studies unless drastic action is taken to preserve the values of the classical past. Knowledge is not only gained in the process of historical change; it is even more easily lost. Human culture can suffer impoverishment more readily than it can achieve enrichment. Hence Boethius' sweat and toil in his study to make available to the Latin world those works which the best philosophers of his age regarded as the proper ladder of true education. They were Neoplatonists and set action far below contemplation. Their educational ideal was relatively little concerned with politics or economics or even ethics (though Boethius' contemporary Simplicius wrote a commentary on the *Enchiridion* of Epictetus which must be reckoned a treatise on the moral life), but was directed towards what they called 'theoria', rendered by Boethius 'speculatio'. Under the heading of speculative philosophy they wrote of physics, i.e. the scientific study of the natural order; or of mathematics; or of metaphysics and 'theology'."

3. Adams, Marilyn McCord. 2012. "Evil as Nothing: Contrasting Construals in Boethius and Anselm." *The Modern Schoolman*:131-145.

Abstract: "Anselm inherited a Platonizing approach to philosophy from Augustine and Boethius. But he characteristically reworked what he found in their texts by questioning and disputing it into something more rigorous. In this paper, I compare and contrast Anselm's treatment of the trope 'evil is nothing, not a being' with Boethius's use of it in

The Consolation of Philosophy. In the first section, I expose a fallacious argument form common to them both: paradigm Fness is identical with paradigm Gness; X participates in paradigm Fness and so is F; therefore, X participates in paradigm Gness and so is G. In the second section, I contrast Philosophy's "strong medicine"-'evil is nothing,' evil-doings are nothing,' evil humans do not exist'-with Anselm's development of the point that injustice is a privation and so parasitic on the beings that are deprived. By contrast with Boethius, Anselm emphasizes that the will-instrument, will-power, the will's action and turnings are something and so from God. Likewise, Anselm insists pace Boethius that Adam's fallen race is still the human race. In the final section, I turn to Anselm's distinction between injustice (*iniustitia*) and disadvantage (*incommoda*), his concession that some disadvantages are something, and his explanation of happiness in terms of advantage or *bona sibi*. For Anselm, happiness and justice break apart, so that it is possible in this world for the just to lack advantage. Moreover, in the world to come, the damned will suffer radical deprivation not only of the justice, which they deserted, but of advantages. I contrast this with Boethius's insistence (based on the argument in section I) that virtue suffices for happiness and vice for unhappiness, and that there is no such thing as bad fortune. I conclude by pondering why Anselm treated disadvantage as a something rather than as a misfit between somethings."

Chapter 3: *Boethius and the Early Mereological Tradition*, pp. 62-140.

"In what follows I will examine the mereological tradition founded by Aristotle and presented to the early medieval West by Boethius. Given the paucity of what was available from Aristotle's extensive opera, it is no surprise that some important concepts are not carried over to the early medieval period, or if they do appear, they often do so in a distorted form. Sometimes this omission and distortion is attributable to Boethius. Boethius' logical works are almost without exception introductory treatises. As one would expect from introductory textbooks, Boethius' treatment of mereology often glides over complexities, which a more advanced work would stop to address. Hence, Boethius' remarks about parts and wholes are often general and devoid of nuance.

It is by no means clear that Boethius actually has a theory of parts and wholes. He might, as some of his contemporary interpreters have urged, be merely parroting remarks he finds in elementary, (probably) neoplatonic textbooks without worrying whether these remarks are consistent. (49) I will not assume that this is the case from the start. Rather, I will attempt as best as I can to reconstruct Boethius' metaphysics of mereology. This reconstruction will require that I piece together stray remarks, think through the specific examples that he gives, and generally extrapolate from an admittedly sparse collection of rules, examples and hints. My method carries the risk of yielding not Boethius' theory of parts and wholes, but rather a Boethian theory. But this is the same risk that Abelard, Pseudo-Joscelin, and all the thinkers of the early medieval period took when attempting to piece Boethius' remarks into a coherent metaphysics of mereology." (pp. 64-65).

(49) Some have argued that Boethius' *De divisione* is derived from Porphyry's lost commentary on the *Sophist*. Andrew Smith reprints the entire *De Div.* as 169F in his edition of Porphyry's fragments. On his reasons for inclusion consult his introduction (Frag. x-xii). Others suggest that Boethius had two

sources, one being Porphyry's commentary and the second being a treatise on division by Andronicus of Rhodes.

Magee concludes that Porphyry's prolegomena to his *Sophist* commentary is the direct source of Boethius' *De divisione*. However, he does not discount the possibility that Andronicus is an indirect source, nor does he discount the possibility that some of the material in *De divisione* is original to Boethius (1998, lv-lvii).

One of the reasons that scholars suspect that Boethius borrows from more than one source is that there are problems with Boethius' presentation of the modes of division (Zachhuber 2000, 88-89).

6. ———. 2009. "The Metaphysics of Individuals in the *Opuscula sacra*." In *The Cambridge Companion to Boethius*, edited by Marenbon, John, 129-154. Cambridge: Cambridge University Press.

"Three of the five treatises that comprise the *Opuscula sacra* [= OS] contain interesting philosophical material. (1) All three treatises attempt to make aspects of God intelligible using Greek philosophical concepts.

The treatise *Quomodo substantiae* (OS III) discusses how something can be essentially predicated of both God and His creatures. *On the Trinity* (OS I) and *Against Eutyches and Nestorius* (OS V) are concerned with the individuality and unity of, respectively, God and Christ. Along the way to formulating his solution to his chosen puzzles, Boethius presents some of the elements of a general theory of individuals.

In this chapter we will concentrate on the general theory of individuals that can be reconstructed from Boethius' *Opuscula*. (2) The theological treatises are not the only places that he discusses individuals, and at times we will make use of

Boethius' commentaries on Aristotle and Porphyry to flesh out some of his remarks. (3)

Nonetheless, we will focus on the account of individuals that can be reconstructed from the theological treatises for two reasons. First, this account has exerted a tremendous influence on subsequent generations. Second, Boethius admits that his main role in the logical commentaries is to present a sympathetic elucidation of Aristotle's or Porphyry's views. (4) The doctrines in the *Opuscula* presumably are Boethius' own.

After we have examined and reconstructed Boethius' general treatment of individuals, we will finish this chapter by asking whether this general account of individuals can illuminate the nature of the Incarnation and the Trinity." (p. 129)

(...)

"Conclusion.

In his *Opuscula sacra*, Boethius presents some of the elements of a metaphysical theory of individuals. He does not flesh out his theory.

But what he does tell us is tantalizing. It is little wonder that Boethius' brief and incomplete treatments of individuals captured the imagination of numerous medieval philosophers. (29) The elements of the theory of individuals that he presents in the *Opuscula* are marshaled in order to make the Incarnation and Trinity intelligible in so far as these Divine truths can be made intelligible to the unaided human intellect. Our assessment has been that Boethius comes up short. But then again, Boethius admits that his task is doomed to fail.

These inadequacies, however, should not detract from the importance of Boethius' *Opuscula*. The student of medieval metaphysics should begin with Boethius. Boethius defines the problems that will inspire generations of philosophers, and he gestures toward many of the solutions that subsequent philosophers will offer." (p. 151)

(1) All references are to the Latin edition by Claudio Moreschini (Boethius 2000), in the format of number of the opusculum,

followed by its section and the line of the edition. As an aid to students who do not have much Latin, citations of passages from the *Opuscula* will include a reference to the corresponding English passage in the Loeb edition (Boethius 1973).

The Loeb edition is still the only volume that contains a complete English translation of the *Opuscula*. For a good, recent English translation of *Quomodo substantiae* see MacDonald 1991b. A good, recent translation of *On the Trinity* is Kenyon 2004. There is a new French translation of *Quomodo substantiae* with commentary in Galonnier 2007. Galonnier's translations of *On the Trinity* and *Against Eutyches* are to appear in a future volume [*Opuscula sacra II*, Louvain: Peeters, 2013].

(2) For this reason, we will not be able to touch upon many of the interesting and puzzling aspects of the *Quomodo substantiae*. The third theological treatise is an extremely difficult one, and there is significant disagreement over its structure and meaning. For introductions to *Quomodo substantiae* see Marenbon 2003a, 87–94 and Chadwick 1981, 203–11.

For detailed studies see De Rijk 1988; MacDonald 1988; and McInerney 1990, 161–98. There are book-length studies by Schrimpf (1966) and Siobhan Nash-Marshall (2000), and a detailed commentary by Galonnier (2007). Pierre Hadot's interpretation of Boethius has been extremely influential. See, in particular, Hadot 1963 and 1970. Recently there has been a lot of work on Boethius' metaphysical *Opuscula* in Italian. For example, see Maioli 1978; Micaelli 1988 and 1995.

(3) For a survey of Boethius' remarks on individuals and individuation that carefully considers not only the *Opuscula sacra*, but also the logical commentaries, see Gracia 1984, Chapter 2, 65–121.

(4) For example, in his famous discussion of universals Boethius announces that he has provided an Aristotelian solution to the problem because he is commenting on an Aristotelian treatise, not because it is the best solution (2IS

[Second Commentary on *Isagoge*] 167.17–20; English translation in Spade 1994, 25).

(29) On Boethius' influence in general see the next chapter. [Christophe Erismann, *The medieval fortunes of the Opuscula sacra*, pp. 155-177] For Boethius' influence on medieval ruminations on the metaphysics of individuals, start by consulting Gracia 1984; Spade 1985 I, Chapter 23; and King 2000.

Reprinted in Manfred Fuhrmann und Joachim Gruber (Hrsg.), *Boethius*, Darmstadt: Wissenschaftliche Buchgesellschaft, 1984, pp. 232-246.

"The exact status of the fourth tractate included among the *Opuscula Sacra* of Boethius is still uncertain, though the other theological works are now almost universally accepted as genuine. Boethian scholars of the late nineteenth and early twentieth centuries were generally inclined to reject Tractate IV. (1)" (p. 55)

(...)

"Another possibility, more prosaic, corresponds better with what we know about the treatise. Tr. IV is simple and brief, but it is not incomplete. It is so written, with energy, with conviction, and with sensitiveness, as to be exceedingly impressive. There are, in addition, definite indications of a didactic motive on the part of the author. (46) Because of these considerations, I wonder if it is not more likely that Boethius meant it to be a guide for the layman. We know that the doctrinal questions of Boethius' day, especially those of Oriental origin, were very confusing to ordinary Western Christians, who were interested in them but for obvious reasons could not always distinguish between the orthodox and the heretical. We know also that there were attempts both by the Scythians and by their opponents in Rome to win public support. (47) It has already been shown that Boethius' theology was very close to the Scythian; whether their alliance was openly avowed or not, we do not yet know. Boethius unquestionably understood the Eastern doctrines then being discussed so widely in Rome better than any of his countrymen. Perhaps he and his friends thought it advisable for him to turn from his highly specialized theological works to edify, to protect, and if possible, to win over the Romans. That would accord with the strange weaving together of Trinitarian doctrine and a compact narrative of Christian history. In that fabric nothing is clearer than the importance the writer put upon his Trinitarian teaching, which he proclaimed one of the fundamental doctrines of the Catholic faith." (pp. 68-69)

(1) Viktor Schurr lists some of those for and against in *Die Trinitätslehre des Boethius im Lichte der "skythischen Kontroversen"* (Paderborn, 1935), 8, n. 40. He mistakenly cites August Hildebrand as supporting the authenticity of the document.

(46) Lines 94-96 and 247-253. Note Schurr's comment, 8-9, n. 46.

(47) For that reason an unknown Scythian compiled the *Collectio Palatina* and in it appealed to the definitions of

Nestorianism and Eutychianism patriot, John, bishop of Tomi, who was presumably John Maxentius. Dionysius Exiguus made his translations of theological documents for the same reason. Pope Hormisdas vigorously defended his rather hostile treatment of the Scythians and Maxentius replied. A senator, Faustus by name, asked the presbyter Trifolius to explain the Scythian formula and Trifolius gave an unfriendly interpretation of the Theopaschite position. Both sides energetically tried to win the support of senate and people.

20. Bradshaw, David. 2009. "The *Opuscula sacra*: Boethius and Theology." In *The Cambridge Companion to Boethius*, edited by Marenbon, John, 105-128. Cambridge: Cambridge University Press.

"The *Opuscula sacra* are a collection of brief but dense and highly influential theological treatises. Their unquestioning commitment to Catholic orthodoxy, not to mention their concern over issues of dogma, has seemed to many to be at odds with the philosophical

detachment of Boethius' other works. For a time in the nineteenth century scholars almost unanimously denied their authenticity, but this situation was reversed in 1877 with the publication of a fragment from a hitherto unknown work by Cassiodorus. The fragment states that Boethius "wrote a book concerning the Holy Trinity and certain dogmatic chapters and a book against Nestorius."(1) This description corresponds

nicely to the first, fourth, and fifth of the treatises that have come down to us. Although the others are not mentioned, since they are included in all the manuscripts, and all save the fourth are explicitly attributed to Boethius, there seems little reason to doubt them as well. Our concern here will be the relevance of the treatises for revealed theology, as distinct from their relevance for metaphysics (to be discussed in the next chapter [Andrew Arlig, *The metaphysics of individuals in the Opuscula sacra*]). Accordingly we will set aside the third treatise, the so-called *Quomodo substantiae* or *De hebdomadibus*, and focus upon the others." (p. 105)

(...)

"Conclusion.

I have observed that each of the four treatises discussed here is problematic. The problems derive in part from Boethius' desire to treat theological issues using a purely philosophical method, and in part from his exclusive reliance on Augustine as a theological authority. In addition, there is a certain tendency to exaggerate the role of authority itself within theology, as if theology's sole task were to make authoritative pronouncements which it is then the job of philosophy to render rationally coherent. This is not a very fruitful way to think of the relationship between the two disciplines. Despite such problems, however, the treatises remain a remarkable achievement.

Boethius almost single-handedly made philosophy into theology's indispensable handmaiden, in the process raising theology to a new level of sophistication. (54) Anyone who finds his views unsatisfactory would do well to consider the challenge posed at the end of the *Utrum Pater*: "if you are in any point of another opinion, examine carefully what has been said, and if possible, reconcile faith and reason" [37]." (pp. 124-125)

(54) As B. E. Daley ['Boethius's Theological Tracts and early Byzantine Scholasticism', *Mediaeval Studies* 46, 1984, pp. 158–191] observes, this process occurred almost simultaneously with

a similar movement in the Greek-speaking East, so that scholasticism had two more or less independent births.

21. Casey, Gerard. 1987. "An Explication of the *De Hebdomadibus* of Boethius in the Light of St. Thomas Commentary." *The Thomist* no. 51:419-434.

"Introduction

The writings of Ancius Manlius Severinus Boethius exercised a powerful influence on the nature and development of mediaeval philosophy. The extent of his influence was such that I think it fair to say that anyone seeking more than a superficial grasp of mediaeval philosophy must acquire some first-hand knowledge of his work. The trouble is, however, that while *The Consolation of Philosophy* is well-known and much commented upon, Boethius's other works are relatively neglected. (1) Included in this latter group are the five theological tractates, one of which has this imposing title: *Quomodo Substantiae In Eo Quod Sint Bonae Sint Cum Non Sint Substantialia Bona*. This tractate also has the more manageable title *De Hebdomadibus* and it is as such that I shall refer to it throughout this article. (2) I have chosen to give an explication of the *De Hebdomadibus* for three reasons.

First the problem with which it deals (the nature of the relation between goodness and substance) is intrinsically interesting and Boethius's solution to the problem is a model of philosophical analysis. Second, in addition to the fact that the philosophical status of the nine axioms listed in the tractate is a matter of some scholarly controversy, the answer to the obvious question of how these axioms function in the tractate as a whole is not at all clear. And third, this tractate is philosophically significant to those philosophers who take St. Thomas as their inspiration since it appears that St. Thomas's existence/essence distinction is adumbrated here. I shall begin my explication by giving a brief overview of the main lines of the tractate. Then I shall lay out the arguments contained in the statement and resolution of the dilemma which Boethius constructs, indicating (by means of Roman numerals in parentheses) where I think particular axioms are meant to

apply. Finally, I shall display the axioms as perspicuously as possible and comment on them." (pp. 419-420)

(1) I am obliged to Professor Ralph McInerny for awakening my interest in Boethius and for his suggestion that the *De Hebdomadibus* would repay careful study.

(2) All references are to the H. F. Stewart and E. K. Rand edition of *The Theological Tractates* and *The Consolation of Philosophy*, in the Loeb Classical Library (Cambridge, Massachusetts: Harvard University Press, 1973)

22. Caster, Kevin J. 1996. "The Distinction between Being and Essence according to Boethius, Avicenna, and William of Auvergne." *The Modern Schoolman* no. 73:309-332.

"A close analysis of William of Auvergne's metaphysics reveals a distinction between being and essence that more closely approximates the celebrated real distinction of St. Thomas than has generally been recognized. Like St. Thomas, William maintained both a real distinction and a real composition between being and essence in the metaphysical structure of the concrete thing. Since William's position thus represented a marked development in the history of philosophy with respect to this topic, it is obviously valuable to look at William's sources, namely, Boethius and Avicenna. Of course, I am in no sense suggesting that the study of Boethius and Avicenna is valuable only for the insights it might lend to one's perspective of William's position. On the contrary, such study is eminently valuable in itself.

1. Boethius's Contribution to the Doctrine of the Real Distinction

In his *Opuscula Sacra*, Boethius distinguishes between being (*esse*) and that which is (*id quod est*). Because William, who borrowed Boethius's terminology for his own position, was especially influenced by the *De hebdomadibus*, one needs to look at this work in order to reach a more complete understanding of William. While the scholarly opinion on Boethius's distinction is quite divergent, Pierre Hadot's work — in my opinion — represents the best of the scholarly

interpretations regarding this topic. Hadot not only seems best to capture Boethius's doctrine, but his perspective of Boethius also highlights what William seemed to find in him.

In "La distinction de l'être *et de l'étant dans le De Hebdomadibus de Boèce*," Hadot summarizes the differences between being (*esse*) and that which is (*id quod est*) as they appear in the axioms found in the *De hebdomadibus*. The characteristics of being (*esse*) and that which is (*id quod est*) may be translated as follows. Being: 1) "is not yet," 2) "in no way participates in anything," and 3) "has nothing besides itself added on." That which is: 1) "has received the form of being," 2) "has received being," 3) "participates in that which is being," 4) "is and exists," 5) "is able to participate in something," and 6) "is able to have something besides the fact that it is." (1)

(1) See Pierre Hadot, "La distinction de l'être et de l'étant dans le *De hebdomadibus de Boèce*," *Die Metaphysik im Mittelalter*, *Miscellanea Mediavalia*, 2 (Berlin: De Gruyter, 1963), p. 147.

The characteristics of *esse*: 1) "nondum est," 2) "nullo modo aliquo participat," and 3) "nihil aliud praeter se habet admixtum." The characteristics of *id quod est*: 1) "acceptit formam essendi," 2) "suscipit esse," 3) "participat eo quod est esse," 4) "est atque consistit," 5) "participare aliquo potest," and 6) "potest habere aliquid praeterquam quod ipsum est."

"Born fifteen hundred years ago (within a reasonable approximation), Boethius wrote one of the dazzling masterpieces of European literature. But he has been seldom studied as a whole, and has been seen more through the eyes of those whom he influenced than in relation to the writers whom he had read and who influenced him.

The purpose of this book is to see the man in the setting of his own turbulent and tormented age, not to trace his large posterity in thought and literature. Moreover, the latter concern predominates in the collection of studies on Boethius by various authors, including myself, edited by Dr Margaret Gibson ([*Boethius*] Blackwell, 1981). Much is also said of that in the studies of Boethius by Pierre Courcelle ([*La consolation de philosophie dans la tradition littéraire: antécédents et postérité de Boèce*. Paris,] 1967). Modern reappraisal of Boethius, especially since the work of Klingner ([*De Boethii Consolatione Philosophiae*. Philologische Untersuchungen, 27. Berlin,]1921) and Courcelle ([*Les lettres grecques en occident de Macrobie à Cassiodore*. 2nd edn. Paris,] 1948. [Eng. tr. by H.E. Wedeck, *Late Latin Writers and their Greek sources*. Harvard, 1969.]), has concentrated on his debt to the late Platonists of Athens and especially of Alexandria. The present book continues that line, and adds fresh Neoplatonist evidence for the interpretation of the five tractates on Christian theology. On the other side, I have also found more affinity with Augustine than has been generally recognized, and therefore conclude with a portrait of Boethius simultaneously more deeply Neoplatonic and more deeply Augustinian than has been acknowledged. I have also tried to integrate the various constituent elements in his intellectual achievement. The substructure of the *Consolation of Philosophy* is only clear when one has also seen something of his arithmetic, music, and logic, the last being the grand obsession of his mind. It is then possible to make a fresh attack on the question of his religious allegiance, debated since the tenth century when Bovo of Corvey asked how the evidently Christian author of the

theological tractates could write a work of so exclusively non Christian inspiration as the *Consolation*. The examination in the first chapter of the political tangle between the Gothic kingdom of Theoderic the Great and the Byzantine ambitions of Justinian leads me to conclude that it is quite wrong to exclude religion from the causes of his tragic arrest and execution." (*Preface*, p. V)

26. Chase, Micharel. 2014. "Time and Eternity from Plotinus and Boethius to Einstein." *Schole* no. 8:67-110.

Abstract: "This article seeks to show that the views on time and eternity of Plotinus and Boethius are analogous to those implied by the block-time perspective in contemporary philosophy of time, as implied by the mathematical physics of Einstein and Minkowski. Both Einstein and Boethius utilized their theories of time and eternity with the practical goal of providing consolation to persons in distress; this practice of *consolatio* is compared to Pierre Hadot's studies of the "Look from Above", of the importance of concentrating on the present moment, and his emphasis on ancient philosophy as providing therapy for the soul, instead of mere abstract speculation for its own sake. In the first part of the article, Einstein's views are compared with those of Plotinus, and with the elucidation of Plotinus' views provided in the Arabic *Theology of Aristotle*. The second part of the article studies Boethius' *Consolation of Philosophy*, which, contrary to recent interpretations, is indeed a genuine consolation rather

than a parody thereof. The *Consolation* shows how the study of the Neoplatonic philosophical curriculum can lead the student along the path to salvation, by awakening and elaborating his innate ideas. To illustrate this doctrine, a passage from the little-known Pseudo-Boethian treatise *De diis et praesensionibus* is studied. Finally, after a survey of Boethius' view on fate and providence, and Aristotle's theory of future contingents, I study Boethius' three main arguments in favor of the reconcilability of divine omniscience and human free will: the distinction between absolute and conditional necessity, the principle that the nature of knowledge is determined by the knower, and finally the doctrine that God lives in an eternal

present, seeing past, present, and future imultaneously. This last view, developed primarily from Plotinus, is once again argued to be analogous to that advocated by contemporary block-time theorists on the basis of Eisteinian relativity. God's supratemporal vision introduces no necessity into contingent events. Ultimate, objective reality, for Boethius as for Plotinus and Einstein, is atemporal, and our idea that there is a conflict between human free will and divine omniscience derives from a kind of optical illusion, caused by the fact that we cannot help but think in terms of temporality."

"In his treatise on how substances are good in virtue of their existence without being substantial goods (1) Boethius draws a distinction between the existing object (*id quod est*), composed of a subject and the forms it receives, and pure Being (*esse*), simple in itself. All things are good in their own substantial existence only because their *ipsum esse* derives from the First Good, whereas the First Good is good simply and solely in the fact that it exists. In several articles (2) Pierre Hadot has traced the roots of this distinction to two principal sources: (I) the distinction between absolute Being and determinate Being (respectively Being-infinite, *To eivai*, and being — participle, *Tò ov*) found in the anonymous *Commentary on the Parmenides* (ascribed to Porphyry) and in Marius Victorinus (3). And (II) the late Neoplatonic distinction (of Proclus, Damascius (4) and Victorinus) between *hyparxis*

(preexistence) and *ousia* (substance), i.e., between pure Being in its simplicity prior to all things and Substance, as the determinate subject taken together with all its accidents. I think Hadot is correct in his assessment of these sources, but what I shall do here is attempt to show firstly, that an earlier source is Plotinus himself and secondly, that the distinction is ultimately based upon something more general, but well-founded, in Graeco-Roman thought."

33. Craig, William Lane. 1988. "Boethius on theological fatalism." *Ephemerides theologicae Lovanienses* no. 64:324-347.

Abstract: "Incarcerated and awaiting execution on a trumped up charge of treason, Boethius (d. 524) comforted himself by writing *The Consolation of Philosophy*. In book five of this work he deals with the problem of theological fatalism, an issue with which he had become familiar as a translator and commentator on Aristotle's *De interpretatione*. His discussion draws heavily upon the commentary of Ammonius and the tradition of Plotinus and Proclus in order to frame his solution, which would have a profound effect upon medieval theology's conception of God and His knowledge of the world."

34. ———. 1988. *The Problem of Divine Foreknowledge and Future Contingents from Aristotle to Suarez*. Leiden: Brill.

Chapter III, *Boethius*, pp. 79-98.

"Summary: With regard, then, to the problem of divine foreknowledge and human freedom, Boethius seems to have

granted that future contingent propositions are as such neither true nor false because the corresponding states of affairs are indeterminate. Hence, they cannot as such be known by God. If He did know them to be antecedently true or false, then the corresponding states of affairs would have to occur necessarily. That does not, however, mean that God has no knowledge of future contingents. Though we cannot know them, the faculty of divine intelligence exceeds the faculty of human reason by virtue of its eternity. In His timeless eternity God has no past, present, or future, but only a timeless present. In this eternal "now" the whole course of time is present to God and known to Him. He knows, as if present, which events are occurring contingently and which necessarily. His knowledge imposes no absolute necessity on the things He knows, but only a conditional necessity: if He knows them, then they must exist—but there is no necessity that He know them. Therefore, events which for us lie in the future are known by God as present and as occurring contingently, insofar as they are the product of our free decisions." (pp. 97-98)

36. Cross, Richard. 2012. "Form and Universal in Boethius." *British Journal for the History of Philosophy* no. 20:439-458.

Abstract: "Contrary to the claims of recent commentators, I argue that Boethius holds a modified version of the Ammonian three-fold universal (transcendent, immanent, and conceptual). He probably identifies transcendent universals as divine ideas, and accepts too forms immanent in corporeal particulars, most likely construing these along the Aphrodisian lines that he hints at in a well-known passage from his second commentary on Porphyry's *Isagoge*. Boethius never states the theory of the three-fold form outright, but I attempt to show that this theory nevertheless underlies and gives structure to what Boethius has to say on the topic."

For biographical as well as literary and philosophical reasons, then, the riddle of the depth and orientation of Boethius' Christianity remains important. I do not propose to solve it completely here, when so many others have failed. But I do think it helps us towards a solution to look more carefully at his theological writings, not just by themselves but in the context of the kind of theology being done in the first two decades of the sixth century, especially in the Greek-speaking East. The main point I want to make is simply that Boethius' theological work 'fits', far better than many modern students have supposed: fits organically into his own life and program of work, into his intellectual profile, precisely because it fits into a general pattern of philosophical and theological thinking that was just then beginning to emerge among Greek Christian writers, especially in Alexandria and Palestine. As a result, I believe Boethius deserves to be taken more seriously than he often is as a Christian thinker, and possibly even as an ecclesiastical politician." (p. 163)

(...)

"The point I have been making throughout this article - the closeness of Boethius' theological tracts, in method, style and content, to contemporary Greek 'scholastic' theology- leaves some central riddles still unsolved. What, for instance, was the 'home' of this new style of theological writing in the East? Where would Boethius or his informants have made its acquaintance? In what kind of 'school' was it originally done? Were there lecture halls, similar to that of Ammonius, where Christians carried on their theological debates and taught others how to take this dialectical approach to revelation and tradition?" (p. 185)

(...)

("That Boethius could find Lady Philosophy consoling in her own right during his final days should not surprise us, or cause us to doubt in the least the sincerity of his Christian faith. It should simply remind us of the respect he felt he owed her, and of the thoroughness with which he had made the Greek cultural tradition which nurtured her his own." (p. 191)

43. Daly, Gerald O. 1991. *The Poetry of Boethius*. Chapel Hill: The University of North Carolina Press.
44. Dane, Joseph A. 1979. "Potestas / Potentia: Note on Boethius's *De Consolatione Philosophiae*." *Vivarium* no. 17:81-89.

"Boethius's treatment of the two words *potestas* and *potentia* in the *Consolatio* is based on a hierarchical model, a model which finds both political and philosophical expression. In classical and medieval usage, *potestas* implies a legitimate realm of power, and is often the title of a particular office. *Potentia*, on the other hand, implies the exercise of power; its military applications further suggest the notion of external resistance. (5)" (p. 82)

(...)

"In Boethius's commentaries on Aristotle, a similar distinction appears in a philosophical context. In his commentary on Aristotle's *De interpretatione* (*Editio secunda*, ed. Meiser II, 459.19-464.4) *potestas* is used in conjunction with *actus* to express the abstract relation between potential and act.

Potentia, however, appears to have a more concrete application. In Book III of *In Categorias Aristotelis*, *potentia* is used in the dichotomy *potentia/ impotentia* in relation to a physical ability to run or fight: *quae ex quadam naturali potentia impotentia que proveniat* (244C). The political distinction between "legitimate domain" or "office" (*potestas*) and "exercise of physical power" (*potentia*) clearly influences this latter usage. Both the political and philosophical contexts suggest an individual "potens" as intermediary. His legitimate power expressed in the epithet *potensis* derived from a realm (*potestas*) and is expressed concretely as physical power (*potentia*)." (p. 83)

(...)

"What has taken place, then, is a redefining and refining of a verbal pair centering on the concept of power in such a way that the once *vana nomina* with their cumbersome worldly referents can participate in the final union asserted in Book V. Throughout the *Consolatio*, Boethius rigorously maintains the relation of *potestas* to *potentia* - a relation which in both political and philosophical contexts implies subordination of the second term. Once the connection of *potentia* with *summum bonum* is established, *potestas* cannot retain its specifically worldly connotations without denying the linguistic subordination of a now highly elevated *potentia*. When *potestas* does reenter the dialectic with a positive connotation, it relates to the psychological dimension on which the definitions of *potentia* and *summum bonum* itself depend.

Reversal or confusion of this proper relation is inevitable whenever notions of power are referred to various levels within a worldly hierarchy (*potentia* of kings or *potestas* of mice). Reorientation toward the spiritual leads to reestablishment of proper linguistic relations." (pp. 88-89)

In *The Cambridge History of Later Medieval Philosophy from the Rediscovery of Aristotle to the Disintegration of Scholasticism 1100-1600*, edited by Kretzmann, Norman, Jenny, Anthony P. and Pinborg, Jan, 46-79. Cambridge: Cambridge University Press.

"All of Aristotle's works were translated into Latin in the Middle Ages and nearly all were intensely studied. The exceptions are the *Eudemian Ethics*, of which no complete translation survives, and the *Poetics*, which, although translated by William of Moerbeke, remained unknown. Most of the works were translated more than once, and two of them, the *Physics* and *Metaphysics*, were translated or revised no fewer than five times. The translations we are concerned with spanned a period of about 150 years; some were made from the Arabic, but the majority directly from the Greek. Some translations became popular and remained so; some became

popular but were then superseded by other translations; others barely circulated at all." (p. 45)

(...)

"At the beginning of our period only two of Aristotle's logical works, the *Categories* and *De interpretatione*, were known in Latin, in Boethius' translation; these two works, which together with Porphyry's *Isagoge* became known as the 'logica vetus', had already become standard school texts in logic. One of the results of the quickening interest in logic in the early twelfth century was the recovery, from about 1120 onwards, of the rest of Boethius' translations of the logic: the *Prior Analytics*, *Topics* and *Sophistici elenchi*. How and where these translations, made some six centuries earlier, were found is not known. The logical corpus was completed by James of Venice's translation (from the Greek) of the *Posterior Analytics*; in 1159 John of Salisbury in his *Metalogicon* shows a familiarity with all these works. (He also quotes from a second translation of the *Posterior Analytics*, that of Ioannes, which otherwise remained virtually unknown.)" (p. 46)

49. Donato, Antonio. 2012. "Boethius's *Consolation of Philosophy* and the Greco-Roman Consolatory Tradition." *Traditio* no. 67:1-42.

"The aim of this study is to show that an adequate assessment of the literary genre of the *Consolatio* requires (i) a thorough analysis of features (*topoi*, themes, and methods) considered typical of the consolatory genre and (ii) a consideration of the goal of Greco-Roman consolations. (11)

It is only by following this approach that we can gain the knowledge and insights necessary to determine accurately the ways in which Boethius's text resembles and differs from Greco-Roman consolations. (12)

The significance of an investigation into whether the *Consolatio* is a consolatory text is not only that of assessing its literary genre, but has further exegetical importance. Typically, an author's choice of employing a specific literary genre — particularly in the case of ancient and medieval authors — is a

telling sign of the purpose of the text, the way the content of the text is to be considered, and the author's motivation to write it. (13) Thus, the exegetical importance of assessing the literary genre of the *Consolatio* is that, among other things, it crucially affects the way we interpret the text's goal and its philosophical arguments. If we consider the *Consolatio* to be a consolatory text, then it is appropriate to focus on its overt meaning and consider its philosophical arguments as designed to offer consolation. On the other hand, if we think that the *Consolatio* is, for example, a "Menippean satire" we cannot stop at the overt meaning of the text but have to read between the lines in order to identify the text's underlying agenda. (14)

This paper will be divided into seven parts. After a brief discussion of the origin of the Greco-Roman consolatory tradition, we shall examine, one by one, those features of the *Consolatio* which can be traced back to Greco-Roman consolations (sections 2–5) and those which seem to distinguish it from these texts (sections 6–7)." (pp. 3-4)

(11) Means and Phillips offer very persuasive arguments in support of the interpretation that the *Consolatio* is a consolation; yet they give no consideration to Boethius's relation to Greco-Roman consolations (M. Means, *The Consolatio Genre in Medieval English Literature* [Gainesville, 1972], 18; P. Phillips, "Boethius's *De Consolatione Philosophiae* and the Lamentatio/Consolatio Tradition," *Medieval English Studies* 9 [2001]: 5–27).

(12) The very significant number of consolatory texts composed before and immediately after the *Consolatio* makes it impossible to study, within the limited scope of a paper, the relation between the *Consolatio* and ancient as well as medieval consolatory texts. Thus, we shall limit our study to the investigation of the relation between the *Consolatio* and some well-known Greco-Roman consolations. Greco-Roman consolatory texts present several advantages for our study: 1) scholars such as Gruber (*Kommentar zu Boethius*) have persuasively demonstrated that Boethius knew these texts; 2) many of the consolatory strategies contained in these texts are

very clearly spelled out and easy to recognize; 3) these texts are amongst the earlier examples of consolations and hence it is reasonable to start from them when investigating the place of the *Consolatio* within the consolatory tradition.

(13) R. B. Rutherford, *The Meditations of Marcus Aurelius: A Study* (Oxford, 1989); P. Hadot, "Forms of Life and Forms of Discourse in Ancient Philosophy," *Critical Inquiry* 16 (1990): 483–505.

(14) The scholars who consider the *Consolatio* to be a "Menippean satire" believe that the goal of its philosophical arguments is not really to convey philosophical ideas, but to present flawed arguments that are supposed to illustrate the limitations (Marenbon) or failures (Payne, Relihan) of the discipline of philosophy. See Marenbon, *Boethius*; Payne, *Chaucer and Menippean Satire*; Relihan, *The Prisoner's Philosophy*.

50. ———. 2013. *Boethius' Consolation of Philosophy as a Product of Late Antiquity*. New York: Bloomsbury.

Contents: Acknowledgements VII; Introduction 1; 1. Boethius and the Ideology of the Roman Senatorial Aristocracy 7; 2. The Hilliness and the Healer 57; 3. How does *Philosophy* Convey her Therapy? 101; 4. Christianity and the *Consolation* 163; Concluding Remarks 197; Bibliography 199; Index 217-221.

"In the last 50 years the field of Late Antiquity has advanced significantly. Today we have a picture of this period that is more precise and accurate than ever before. Nonetheless, the study of one of the most significant texts of this age, i.e. Boethius' *Consolation of Philosophy* (henceforth *Consolation*), did not sufficiently benefit from these advancements in the scholarship. This book aims to fill this gap by investigating how the study of the *Consolation* can profit from the knowledge of Boethius' cultural, philosophical and social background that is available today.

The goal of this enterprise, however, is not simply that of placing the *Consolation* in its historical and cultural background, but to unlock its exegetical difficulties by

employing an approach hitherto mostly unexplored. In this text, I show that some of the *Consolation's* long-standing exegetical issues can be more adequately addressed by going beyond the text and investigating the extent to which the cultural, philosophical and social context of Late Antiquity informs Boethius' last work.

In this book I explore the hypothesis that the *Consolation* is not simply influenced by the context of Late Antiquity, but is a 'product' of Late Antiquity. A text may be regarded as the 'product' of its age when (i) it does not simply contain individual views and features that are common to intellectuals of a particular age, but also (ii) presents elements that are specific to the mindset of the time in which it was written. The view that the *Consolation* is a product of Late Antiquity, however, does not imply that the text lacks originality and can be reduced to its background. On the contrary, it is by examining how Boethius receives, refashions and expresses literary, philosophical and cultural elements that are typical of his age that it is possible to fully appreciate the *Consolation's* originality." (From the *Introduction*)

51. ———. 2013. "Forgetfulness and Misology in Boethius's *Consolation of Philosophy*." *British Journal for the History of Philosophy* no. 21:463-485.

Abstract: "In book one of the *Consolation of Philosophy*, Boethius is portrayed as a man who suffers because he forgot philosophy. Scholars have underestimated the significance of this portrayal and considered it a literary device the goal of which is simply to introduce the discussion that follows. In this paper, I show that this view is mistaken since it overlooks that this portrayal of Boethius is the key for the understanding of the whole text. The philosophical therapy that constitutes the core of the 'Consolation' can in fact be properly evaluated only if we recognize the condition it is designed to cure. Through the portrayal of Boethius's forgetfulness, the 'Consolation' illustrates that it is the very nature of philosophical knowledge that makes it susceptible to being forgotten. Philosophical knowledge can (i) turn into misology, when it appears unable to solve certain problems, and (ii) be overrun by strong emotions.

The therapy offered in the 'Consolation' is designed to make Boethius aware of the 'fragility' of philosophical knowledge and show him how to 'strengthen' it. He is taught how to more fully embody philosophy's precepts and that philosophy's inability to solve certain problems reveals not its failures but its limits."

52. Dougherty, M. V. 2004. "The Problem of *Humana natura* in the *Consolatio Philosophiae* of Boethius." *American Catholic Philosophical Quarterly* no. 78:273-292.

Abstract: "In Boethius's *Consolatio Philosophiae* one finds a rather unusual argument contending that human beings can lose their natures as the result of immoral or virtuous activity. A number of texts in the work argue that the polarities of beast and god serve as options for those who lead highly immoral or highly virtuous lives. This argument is examined in detail in light of its philosophical ancestry. The paper argues that those who think the Boethian doctrine is Platonic in origin tend to read the texts about the loss of human nature as metaphorical. The paper then suggests that if one places the argument in an Aristotelian context one is able to see it as a metaphysical argument, and more particularly, as part of Boethian psychology. This paper thus provides a new context for approaching Boethius's contention that human beings can lose their natures."

53. Erismann, Christophe. 2009. "The Medieval Fortunes of the *Opuscula Sacra*." In *The Cambridge Companion to Boethius*, edited by Marenbon, John, 155-177. Cambridge: Cambridge University Press.

"The history of the medieval reception of the *Opuscula sacra* shows that, like late ancient philosophy, medieval philosophy was often a question of exegesis. Early medieval philosophy is characterised by its frequent reliance on ancient, late ancient and Patristic texts, as a basis for speculation. Commenting on an authority was often the occasion of expressing original thought, as noted by John Marenbon: 'It is in commentaries that much of the most important philosophical work of the ninth to twelfth centuries was accomplished.' (6)

Despite its particular rules, the practice of commentary did not restrain philosophical thought; on the contrary, it often stimulated it. Gilbert of Poitiers and Thomas Aquinas are good examples of this phenomenon.

I shall proceed in three stages: first, I shall give an historical overview of the medieval reception of the *Opuscula sacra*; I shall then consider the methodological and lexical influence of Boethius, and conclude with a presentation of some of the philosophical discussions

which Boethius initiated in the Middle Ages." (pp. 156-157)

54. Evans, Jonathan R. 2001. *The Boethian Solution to the Problem of Future Contingents and its Unorthodox Rivals*, University of Nebraska, Lincoln.

Unpublished Ph.D. thesis available at ProQuest, reference number 3034374.

Abstract: "One concern bothering ancient and medieval philosophers is the logical worry discussed in Aristotle's *De Interpretatione* 9, that if future contingent propositions are true, then they are settled in a way that is incompatible with freedom. Another is if we grant God foreknowledge of future contingent events then God's foreknowledge will determine those events in a way precluding freedom.

I begin by discussing the standard compatibilist solution to these problems as represented in Boethius's *Consolation of Philosophy* and then examine theories that allegedly deviate from the Boethian solution. Boethius's solution to these separate problems involves showing that both problems operate on an ambiguity in the scope of the modal operator 'necessarily' present in the articulation of the problem. Once the ambiguity is removed we see that both disambiguations fail to offer a sound argument against the compatibility of free action with either God's omniscience or future contingent

proposition's being true. The only difference between the solutions is that before executing the scope distinction strategy in the theological problem, Boethius reminds us that God knows future contingents rather than foreknowing them, since God is timeless.

The rest of my discussion examines positions that allegedly deviate from the Boethian solution: positions held by Peter de Rivo, William Ockham and Plotinus. I argue that Ockham doesn't in fact deviate from the Boethian solution to the theological problem as is commonly held. Instead of offering a compatibilist position where God's omniscience includes foreknowledge, Ockham denies that God foreknows the future advocating instead a more sophisticated Boethian position. The other two philosophers, Rivo and Plotinus, deviate from Boethius, but unfortunately neither position appears philosophically plausible. Rivo's incompatibilist solution to the logical problem is inconsistent with his retention of the Boethian solution to the theological problem and is probably implausible on its own. Plotinus's compatibilist account fails not because it claims that necessity and freedom are compatible, but because the account of moral responsibility Plotinus offers to justify the compatibility fails."

55. ———. 2004. "Boethius on Modality and Future Contingents." *American Catholic Philosophical Quarterly* no. 78:247-271.

Abstract: "In *The Consolation of Philosophy* Boethius addresses two main problems posed by the problem of future contingents that shed important light on his conception of necessity and possibility: (1) a logical problem that alleges that if propositions about the future are true now then they are necessarily true, and (2) a theological problem that centers on a supposed incompatibility between divine foreknowledge and a contingent future. In contrast to established readings from the *Consolation*, this paper argues that a proper understanding of book 5 requires understanding the modal concepts employed there in atemporal terms. This interpretation requires revising the traditional understanding of the two problems present in the *Consolation* text, particularly in seeing how timeless knowledge or truth could be conceived as a threat to human

freedom. It also stresses the importance of a strategy used by Boethius to disambiguate the scope of modal operators used in his opponent's arguments and how that strategy unifies his discussion in book 5."

56. ———. 2018. "Boethius and the Causal Direction Strategy." *Ancient Philosophy* no. 38:167-185.

Abstract: "Contemporary work on Boethius' *Consolation of Philosophy* often overlooks a discussion in CP.V.3 of a Peripatetic strategy for dissolving theological fatalism. Boethius' treatment of this strategy and the lesson it provides about divine foreknowledge requires a reorientation of our understanding of the *Consolation* text. The result is that it is not foreknowledge nor any other temporally-conditioned knowledge that motivates Boethian concern but divine knowledge simpliciter."

57. Ford, Lewis S. 1968. "Boethius and Whitehead on Time and Eternity." *International Philosophical Quarterly* no. 8:38-67.
58. Fortin, John R. 2004. "The Nature of Consolation in the *Consolation of Philosophy*." *American Catholic Philosophical Quarterly* no. 78:293-308.

Abstract: "Does *The Consolation of Philosophy* console? Is Philosophy able to bring the prisoner not simply to an acceptance of and reconciliation with his situation, but further to move him beyond this to ultimate peace through philosophical activity? The *Consolation* does offer some consolation but only ironically and not in the way intended by the character Philosophy. Philosophy is attempting to bring the prisoner to a philosophical experience in which he will contemplate and enjoy eternal truths, and thereby be consoled. Nevertheless the prisoner will in the end reject this project which takes him away from what he perceives to be his life's work. Philosophy's failure to console the prisoner is disconsoling in part to herself because the prisoner ultimately rejects her invitation to become a martyr for her sake. It is disconsoling in part to the prisoner who seeks a consolation that would support his firmly held desire to remain engaged in public life."

59. Fournier, Michael. 2011. "Boethius *pro se de magia*." *Dionysius* no. 19:205-222.
60. Frakes, Jerold C. 1984. "The ancient concept of casus and its early medieval interpretations." *Vivarium* no. 22:1-34.

"Even after the Prisoner has accepted Philosophia's specific arguments concerning fortuna, however, he is not yet prepared to accept the abstract principle necessitated by this analysis: i.e. that the all-encompassing divine ordo precludes the existence of any and all random events.

Thus Boethius presents in *Cons. V*, pr. 1 a brief analysis of the abstract concept of *casus*. This treatment is heavily dependent on the Aristotelian and post-Aristotelian analyses, but Boethius omits much of the traditional material and incorporates subtle alterations into his argument, especially in changing the emphases of the Aristotelian presentation, resulting to a certain degree in a new definition of chance. The concept naturally undergoes further modifications in the post-Boethian tradition. The first attempts to assimilate the *system* of the *Consolatio* in the vernacular were the translations by Alfred the Great in the ninth century into Old English and by Notker Labeo at the turn of the eleventh century into Old High German. They further modify the tradition derived from antiquity, not only by translating the text of the *Consolatio*, their principle source for that tradition, but also by attempting to translate Boethius' system of thought in such a fashion as to render it accessible to their own cultures. The present study investigates the concept of casus as it is developed by Boethius, Alfred and Notker in the context of the tradition. The analysis must then begin by establishing this context, and thus Aristotle's discussion of the topic must be briefly treated, since his was the first full examination of the problem, which then through Boethius' adaptation became the basis for medieval analyses." (pp. 1-2)

(...)

"Boethius transforms the Aristotelian concept through his 'metaphysical' perspective; Alfred treats Boethius' transformation with the reverence which he deemed

appropriate for an ancient work of Christian philosophy, but in doing so transforms the concept again; and Notker presents an annotated translation/edition. One sees in the three texts three quite distinct methods and products, and thus three different stages in the interpretation and reception of the ancient philosophical concept of chance." (p. 33)

61. Gersh, Stephen. 1986. *Middle Platonism and Neoplatonism. The Latin Tradition*. Notre Dame: University of Notre Dame Press.

Volume II, Part II, *Neoplatonism*, Chapter 9: *Boethius*, pp. 647-718.

"That Boethius should be considered primarily as part of the Platonic tradition follows from a consideration of both his aims and his achievements. On the one hand, we have his projected but never completed program of translating with commentary all of Aristotle's writings on logic, ethics, and physics; of translating with commentary all of Plato's dialogues; and of demonstrating that the two philosophers are in agreement on the most fundamental questions. (2) This program should be understood in terms of the Alexandrian Neoplatonic one, in which Aristotle's works were studied not for their own sake but as introductions to Plato's philosophy. (3) On the other hand, we have the extant work *De Consolatione Philosophiae* which includes not only frequent allusions to passages in Plato's *Gorgias*, *Meno*, *Republic*, and *Timaeus* (4) but also references to Plato as a profound philosophical authority. (5) This should be contrasted with the same work's relatively limited appeal to Aristotle's *Protrepticus* and *Physics*. (6) But Boethius was also a Christian, and this immediately leads to the question: how did he reconcile Platonism and Christianity? Here the influence of Augustine, who is explicitly cited on one occasion as a source, (7) is perhaps the crucial factor. Indeed, Boethius seems to have fashioned the synthesis along his predecessor's lines, realizing clearly that this involved both a responsibility and an opportunity.

In the first place, only those aspects of Platonism consistent with the Christian teaching could be adopted. (8) Thus,

Boethius made no place in his theory for the order of henads postulated by Proclus; he combined the first and second hypostases of the Neoplatonists: the One and Intellect, in order to remove a subordination element from the divinity; and he found little use for the Platonic doctrine of the world soul . (9) In requiring these modifications of the doctrine derived from contemporary philosophical schools, Christianity played an indirect role in determining the character of the system which finally emerged.

In the second place, it was possible to pursue Platonism independently of Christian teaching from a methodological viewpoint. (10) This was demonstrated when Boethius employed philosophical theories as additional support for dogmatic positions in *De Trinitate* and *Contra Eutychen et Nestorium*. (11) and in detachment from theological dogma in *De Consolatione Philosophiae*. (12) In permitting such elaborate discussion of philosophical questions to take place, Christianity assumed a subordinate role at least in the presentation of material.

That he is primarily a Platonist and that Christianity often plays merely an indirect or subordinate role in his arguments are two facts which make it imperative to include Boethius in our survey of the pagan philosophical tradition in late antiquity. In describing his teaching , we shall therefore take our starting point from its relation to the philosophical tenets of the pagan schools, although sometimes it will be necessary also to take account of peculiarly Christian transformations of the material." (pp. 651-654)

(2) Boethius: *In De Interpr.* ed II. 2, 3, 79, 1-80, 17.

(3) See for example Elias: *In Categ.* pr. 123, 7-11.

(4) See Boethius: *De Consol. Philos.* IV, pr. 2. 1 ff. (to Plato: *Gorg.* 466 a ff. on the respective powers of the good and the wicked); *ibid.* I. pr. 2, 13-14 (to Plato: *Meno* 81 c ff . on learning as recollection); *ibid.* I. pr. t , 18-21 (to Plato: *Rep.* V. i 7.3c-d on the need for philosopher-kings); *ibid.* III. pr. 9. 99-101 (to Plato: *Tim.* 27b on the need to pray for divine assistance); *ibid.*

111. pr. 12. 110-112 (to Plato: *Tim.* 29h on language and reality); and *ibid.* V , pr. 6, 31 ff. (to Plato: *Tim.* 37d on the perpetuity of the cosmos). On the passages in this work influenced by Plato see P. Courcelle: *Late Latin Writers and their Greek Sources*, translated by H . E. Wedeck (Cambridge, MA, 1969), pp. 296-297 and J. Gruber: *Kommentar zu Boethius De consolatione philosophiae* (Texte undi Commentate 9) (Berlin/New York, 1978), p. 36.

(5) In the passages mentioned above Philosophy refers to our Plato' (*Plato noster*), to Plato's decree' (*Platone sanciente*). and so on.

(6) See Boethius: *De Consol. Philos.* III, pr. 8, 23 together with lamblichus: *Protr.* 8. 47, 13 (to Aristotle: *Protr.* on the eyes of Lynceus); *ibid.* V, pr. 1, 33 ff. (to Aristotle: *Phys.* II, 4 , 195b 31 ff. on the relation between causation and chance); and *ibid.* V. pr . 6, 18-22 (to Aristotle: *De Caelo* II, 1. 283b26-31 on the world's eternity). On the passages in this work influenced by Aristotle see Courcelle: *La Consolation de Philosophie dans la tradition littéraire. Antecedents et posterité de Boece*, pp. 25-26 and 124-125; and Gruber: *op. cit.* , pp. 36-37.

(7) At *De Trin.* pr. 31 -32 Boethius asks the addressee: ' You should however examine whether the seeds of argument from Saint Augustine's works have borne any fruit in my writing' (*Vobis tamen etiam illud inspiciendum est, an ex beati Augustini scriptis semina rationum aliquos in nos venientia fructus extulerint*).

(8) Cf . Augustine: *De Vera Relig.* 4, 7 (CCSL 32, 192-193) where it is stated that the Platonists could become Christians by changing a few words and opinions. The kinds of modification required are described in texts like *Conf.* VII, 9 (CSEL 33/1, 154-157); *Civ. Dei.* X, 30 (CCSL 47. 307-308); etc.

(9) These doctrines will be discussed in detail below.

(10). Cf. Augustine: *De Ord.* II, 5, 16 (CCSL 29, 115-116) where two separate methodological routes to the doctrine of the Trinity are postulated: that of reason and that of faith. That the

first method is prior in reality and the latter prior in time is stated at *ibid.* II, 9, 26 (CCSL 29. 121- 1 22).

(11) In accordance with this approach, certain chapters like Boethius: *De trin.* 2 and 4; *Contra Eutyech. et Nest.* 1-3 are free of explicitly Christian content.

(12) In accordance with this approach, the only indisputable scriptural citation is that of *Sap.* 8: 1 at Boethius: *De Consol. Philos.* III , pr. 12. 63-64.

62. ———. 1998. "Dialectical and Rhetorical Space: The Boethian Theory of Topics and its Influence During the Early Middle Ages." In *Raum und Raumvorstellungen in Mittelalter*, edited by Aertsen, Jan A. and Speer, Andreas, 391-401. Berlin: Walter de Gruyter.

"According to L. Obertello's chronology, Boethius' writings on topics: the commentary on Cicero's 'Topica' and the 'De Topicis Differentiis' date from the last few years of his life (ca. 518 — 524) (1). They do indeed reveal the maturity of reflection characteristic of a thinker who has translated and commented upon Aristotle's *Organon* and is perhaps on the threshold of elaborating the Platonic synthesis of which 'De Consolatione Philosophiae' stands as a poignant reminder. In this paper I hope to show how the notion of 'place' (*locus*) developed in Boethius' topical writings lies at the heart of important issues not only in rhetoric and dialectic but also in metaphysics." (p. 391)

(...)

"Boethius develops in response to Cicero two definitions of 'topic': a. A topic is the seat or foundation of an argument (24); and b. A topic is that from which one draws an argument (25). These formulations are of considerable interest because of the connection established with the notion of 'argument'.

Since for Boethius, an argument is a rather complicated phenomenon — on the surface it is simply a reason producing belief regarding something which is in doubt (26), yet on a deeper level it embraces the complementary aspects of being 1a. something expressed verbally (27) and 1b. something thought

conceptually (28); and 2a. a connected set of propositions (29) and 2b. that through which propositions are connected (30) — then we must allow that this complexity arises from the topic as the argument's source. Thus, it may be that a topic is implicitly both verbal and conceptual, both connected and connecting (31)." (p. 395)

(1) See L. Obertello, *Severino Boezio I*, Genova 1974, 342. Cf. L. M. de Rijk, 'On the Chronology of Boethius' Works on Logic II', in: *Vivarium* 2 (1964), 159-161.

(26) *De top. diff.* I, 1180 C; *In Cic. Top.* I, 1048 B.

(27) *In Cic. Top.* I, 1050 B *oratione prolatum*. Strictly speaking, Boethius distinguishes I. 'argumentation' (*argumentatio*) which is verbal and II. 'argument' (*argumentum*) which is conceptual. See *In Cic. Top.* I, 1050B. However, the distinction having been made quickly breaks down in practice. See *In Cic. Top.* I, 1053 B.

(28) *De top. diff.* I, 1180 C *ratio*.

(29) *In Cic. Top.* I, 1050 B *propositionum contexione dispositum*.

(30) *In Cic. Top.* I, 1051 A *medietatis inventio*. The mediating function of a topic is an important matter which cannot be pursued here. In brief, it operates in an argument by supplying either a middle term or a second premiss for a syllogism. See Stump, *Boethius's De topicis differentiis*, 183-204 for detailed discussion. Cf. O. Bird, 'The Formalizing of the Topics in Mediaeval Logic', in: *Notre Dame Journal of Formal Logic* 1 (1960), 138-149; id., 'The Tradition of Logical Topics. Aristotle to Ockham', in: *Journal of the History of Ideas* 23 (1962), 307-323; J. Pinborg, 'Topik und Syllogistik im Mittelalter', in: *Sapienter Ordinare. Festgabe für E. Kleineidam*, Leipzig 1969, 157-178; id., *Logik und Semantik im Mittelalter. Ein Überblick*, Stuttgart - Bad Cannstatt 1972, 21 sqq., 69 sqq.

(31) That the topic cannot be totally separated from its argument follows from the dynamic nature of both. See below.

63. ———. 2012. "The First Principles of Latin Neoplatonism: Augustine, Macrobius, Boethius." *Vivarium* no. 50:113-138.

Abstract: "This essay attempts to provide more evidence for the notions that there actually is a Latin (as opposed to a Greek) Neoplatonic tradition in late antiquity, that this tradition includes a systematic theory of first principles, and that this tradition and theory are influential in Western Europe during the Middle Ages. The method of the essay is intended to be novel in that, instead of examining authors or works in a chronological sequence and attempting to isolate doctrines in the traditional manner, it proceeds by identifying certain philosophemes (a concept borrowed from structuralist and post-structuralist thought and here signifying certain minimal units from which philosophical "systems" can be constructed), and then studying the combination and re-combination of these philosophemes consciously and unconsciously by a selection of important medieval writers. These philosophemes occur in Augustine, *De Genesi ad Litteram*; Augustine, *De Trinitate*; Augustine, *De Vera Religione*; Augustine, *De Musica*; Macrobius, *Commentarius in Somnium Scipionis*; and Boethius, *De Consolatione Philosophiae*. The sampling of medieval authors who use these philosophemes includes Eriugena, William of Conches, Thierry of Chartres, and Nicholas of Cusa."

"Ergo, domine, non solum es quo maius cogitari nequit, sed es quiddam maius quam cogitari possit. St Anselm, *Proslogion* c. 1078 (2)

Over five centuries earlier Boethius had made the same point: we cannot extend our thought and language to describe God. 'Ten categories can be predicated of all things: substance, quality, quantity, relation, place, time, condition, position, being active or passive . . . But if you apply them to God, everything in the case is changed'. (3) For both the acknowledged master was Augustine. 'When we think of God the Trinity, (5) he had written 'our very thought itself is aware of how far it falls short of its object; it does not grasp God as he is, but through a glass darkly. (4) Yet Augustine persevered. Throughout the fifteen books of the *De Trinitate* he defined his linguistic tools and applied them to the nature of God. Within his own terms it is virtually complete: Boethius and Anselm say nothing that is not said in greater detail in the *De Trinitate*. Augustine was the catalyst, and the quarry of material, bold

explorer of the divine and at the same time a sheltering authority. (5)

Given the dominance of the *De Trinitate*, we may well ask why the *Opuscula Sacra* had any future beyond the remote political infighting of the early sixth century. Boethius' prose has a hard clarity of expression that may seem more objective than Augustine's, and here at least he is brief. Such qualities — and no doubt others which I have not discerned — commended the *Opuscula* as teaching texts, and it was principally in the schoolroom that they were to survive: as useful to the eclectic scholars of the ninth century as to the sophisticated professionals of twelfth-century Paris and fifteenth-century Cracow." (pp. 214-215)

Boethius' Metaphysics. An Annotated Bibliography: Second Part: Gra - Mez

Studies in English

1. Gracia, Jorge J.E. 1981. "Boethius and the Problem of Individuation in the *Commentaries on the Isagoge*." In *Congresso Internazionale di Studi Boeziani (Pavia, 5-8 ottobre 1980): Atti*, edited by Obertello, Luca, 169-182. Roma: Editrice Herder.

"The paper I am going to read here consists of a section from a much longer study on which I am presently working. This longer study deals with the problem of individuation not only in relation to Boethius, but also discusses the views of other early medieval figures, such as John Eriugena, Gilbert of Poitiers and Abailard. Unfortunately, due to time constraints I cannot engage here in a presentation of the views of so many authors. My efforts, therefore, will be directed only to the presentation of Boethius' views on the stated topic and to the defense of my interpretation of those views. (1) Moreover, again for reasons of time, I shall have to restrict my remarks to Boethius' views as presented in the two editions of his Commentary on Porphyry's « Isagoge » (2)." (p. 169)

(1) I would like to express my appreciation to Eleonore Stump for reading an early draft of this paper and for bringing to my attention a number of ambiguities and infelicities present in the text.

(2) In « *Isagogen* » *Porphyrii commentorum editio secunda*, ed. Samuel Brandt, in *Corpus scriptorum ecclesiasticorum*

7. Harding, Brian. 2005. "Metaphysical Speculation and its Applicability to a Mode of Living: The Case of Boethius' *De Consolatione Philosophiae*." *Bochumer Philosophisches Jahrbuch Fur Antike Und Mittelalter* no. 9:81-92.

Abstract: "This paper argues that Boethius' *De Consolatione Philosophiae* presents theoretical metaphysical speculation as having a direct bearing on the life of the metaphysician. Boethius accomplishes this through his depiction of Lady Philosophy's 'therapy' wherein complex metaphysical arguments are utilized to pull Boethius out of his depression, returning him to what she calls his true self. I begin the paper by contextualizing this discussion in terms of the debate as to whether or not the 'philosophic life' of pagan antiquity is present in medieval thought. I then turn to a discussion of the therapeutic metaphysical arguments of Lady Philosophy and

their effects on Boethius' mental and emotional state. I conclude the essay by listing some questions raised and directions for further study."

16. Kaldramova, Elitza. 2018. "Understanding and Truth in Boethius's "The Consolation of Philosophy"." *Archiv für mittelalterliche Philosophie und Kultur* no. 24:47-54.

Abstract: "Understanding is associated with reason. It is correct when it corresponds to the truth and is incorrect when fallacy is mistaken as truth. The latter is considered as great value because it is necessary for achieving human's ontological purpose, namely achieving the good. Truth also leads to understanding and is associated with light. Correct understanding provides information about the value of different things and thus striving for seemingly valuable and god things is avoided. It has a significant role in noticing the differences between truth and false opinion. Understanding and truth are necessary conditions for acquiring knowledge and have a two-way relationship between them. On the one hand, understanding is acquired by means of the spark of truth present in the human soul. On the other hand, truth leads to understanding different relations, for example the one between material and non-material world."

21. Kijewska, Agnieszka. 2003. "Boethius' conception of the supreme good." In *Metamorphoses of Neoplatonism: Being or Good?*, edited by Kijewska, Agnieszka, 307-317. Lublin: Wydaw. KUL.

"Yet this reasoning, based on the dialectic of Platonic and Aristotelian tradition will remain paradoxical and difficult to accept from the standpoint of common-sense thinking. It is also hard to imagine such paradoxical dialectic bringing any real

consolation to someone who is in plight like that of Boethius the prisoner. What, then, should we make of the encounter of Dame Philosophy and Boethius?

4. Suggestion of a solution

It is my opinion - and in this I am in full agreement with John Marenbon - that in trying to interpret the *Consolation* it is worthwhile to realize the importance of the literary genre in which this work was written, namely the Menippean satire. The cynical philosopher Menippus in his lost writings upheld stoical ideals and derided human vices and weaknesses. He made fun of philosophical theories by introducing personifications of abstract concepts and parodies of mythological and literary characters (32).

It seems, by the way, that element of comedy is not totally absent from the *Consolation*, as in the scene of chasing the Muses from Boethius' bedside, though it is overshadowed by the pathos of Boethius' fate. Now Dame Philosophy is a typical allegorical character personifying the Platonic and Aristotelian ideal of wisdom. Yet, impressive as she is, it seems she is not the principal character of the work. The focus seems to be rather on Boethius the prisoner, it is he that is the dynamic character of the piece, as he undergoes a radical metamorphosis.

We know of him that he received excellent education in philosophical schools of late antiquity, to which Dame Philosophy clearly testifies by saying that he had been nourished with Eleatic and Academic teachings (33). It is no longer doubtful that, like other Roman aristocrats, Boethius was a Christian and a Catholic, and that he took special interest in theological discussions. He put to good use his philosophical skills and experience in explaining and clarifying theological notions and in perfecting theological methods. Why, at the end of his life, faced with a violent death, should he look for consolation to philosophy rather than religion?

It may be the case that Boethius, in choosing this precise literary genre and in constructing his dialogue the way he did,

wanted to call into doubt sufficiency of human reason alone, or human reason deprived of assistance from living, painful experience, in discovering the Supreme Good, that would give man his happiness. Philosophy demonstrates that there exists the Supreme Good that is both God and Providence, yet this supreme goodness is constantly found to be incommensurable with the expectations of the humans and thus philosophical reasoning and everyday thinking part company. As Karl Jaspers wrote: *Philosophizing has, as it were, two wings, one that moves in the medium of communicable thinking, common theory, the other, whose medium is the individual existence. Only these two wings together are able to effect flight.* And a number of lines above he affirms: *Every essential philosophical idea points beyond itself to reality, without which it is not possible that the meaning of philosophizing be fulfilled.* (35). Thus it is life experience coupled with philosophical reasoning that can provide a proof there existing a reality that, though not apparent, yet can be discovered by the philosopher, who may bear witness to this discovery even by a sacrifice of his own life; for this hidden reality is no other than the Supreme Truth and the Supreme Good. *Consolation* - writes von Albrecht - *is merged in the conversion to God.* His work is a *πρωτρεπτικὸς εἰς θεόν* rather than a *consolatio*, (36) Boethius came close to that reality under the guidance of the Dame Philosophy, yet he had to testify to the truth of his knowledge by laying down his life. As we know he was eventually executed in 524 or 525, some sources say that he had to undergo torture before his death. King Theoderic allegedly ordered his body to be cleared away in order to prevent spreading of the martyr's cult, so claims in his *History of the Wars* (37) Procopius of Caesarea. Yet his scheme came to naught and Boethius has ever since been venerated as a martyr, his feast day being the 23 October, formally approved on the 15 December 1883." (pp. 316-317)

(37) Cf. Procopius of Caesarea, *History of the Wars* I, 1, 34, tr. By H. B. Dewing, Cambridge Mass., London 1953, p. 13: *Symmachus and his son-in-law Boetius were men of noble and ancient lineage, and both had been leading men in the Roman senate and had been consuls. But because they practised philosophy and were mindful of justice in a manner surpassed by no other men (...) they attained great fame and thus led men of the basest sort to envy them. Now such persons slandered them to Theoderic, and he, believing their slanders, put these two men to death, on the ground that they were setting about a revolution, and made their property confiscate to the public treasury.*

22. ———. 2013. "Boethius — Divine Man or Christian Philosopher?" In *Divine Men and Women in the History and Society of Late Hellenism*, edited by Dzielska, Maria and Twardowska, Kamilla, 75-89. Cracow: Jagiellonian University Press.
23. ———. 2014. "Divine Logos in the Heart of Boethius's Path Toward *Summum Bonum*." *Revista Española de Filosofía Medieval* no. 21:39-52.

Abstract: "This paper presents an outline of the way Boethius conceived the human path to the Supreme Good (*Summum bonum*). In order to achieve this goal one has first to specify the way he construed this Supreme Good, and this discussion is naturally related to the much-discussed problem concerning the Christian identity of Boethius: was he indeed a Christian? does his *Consolation*, from which any overt allusions to Christian faith are absent, provide us with any clue as to whether the Supreme Good of Boethius can be identified with the God of the Gospel? In the course of the analysis we propound a hypothesis that the message that Boethius puts

forward through the means of his *Consolation* and the utterances he puts in the mouth of his dame Philosophy are not far removed from the advice offered by Fulgentius to Proba.

She, too, was encouraged to acknowledge her own weakness and lack of sufficiency, to be contrite, and to have humble trust in wisdom and guidance of God, who is the best of all doctors. Is dame Philosophy's message not very similar? did not Alcuin, who regarded himself as a faithful «disciple» of Boethius, share a conception of philosophy as being the «teacher of virtues» and wisdom, as the one who leads man along the path of wisdom towards the divine light?"

24. King, Peter. 2007. "Boethius: First of the Scholastics." *Carmina Philosophiae* no. 16:23-50.

"Boethius was the first of the scholastics in much more than paraphrases and his word-for-word commentaries, Boethius also provided the mediæval world with an object lesson in how to think about it. His theological treatises set the style for later scholastic investigations of dogma: concise, tightly-reasoned chains of argument applied to matters of faith, rich enough to be commented on in their own right. His intellectual influence was so pervasive in the Middle Ages that we might be tempted to paraphrase Whitehead's famous dictum (1) and declare mediæval philosophy to consist in a series of glosses on Boethius.

One work, however, has been left out of this accounting. While the influence and impact in the Middle Ages of Boethius's translations, paraphrases, commentaries, and theological treatises has long been studied and is well known, the same cannot be said for his masterpiece, the *Consolation of Philosophy*. Yet it too received its 'series of glosses' in the Middle Ages. In what follows I propose to look into this neglected history, focusing primarily on the reception of the *Consolation* as a philosophical text by later mediæval thinkers.

Putting aside its literary qualities, then, we can ask: What did later scholastics make of the *Consolation* as a philosophical treatise? What philosophical problem did they take it to address, and how did they take it to solve that problem?

I'll proceed as follows. In §1, I'll describe the tradition of philosophical commentary on the *Consolation*, as far as it can be made out at present. In § 2, I'll discuss the interpretation of the logical structure of the *Consolation* in the commentary tradition. In § 3, we'll look at the particular question of how the issues and arguments given in Book 5 are related to the rest of the work, a question that has consequences for the unity of the *Consolation* as a whole.

In § 4, the medicinal metaphors Boethius uses to present the 'therapeutic' arguments will be looked at in detail as an example of how the commentary tradition can illuminate the logical structure of the text." (p. 23)

(1) Alfred Whitehead [*Process and Reality*. New York: Macmillan, 1929] 63: "The safest general characterization of the European philosophical tradition is that it consists in a series of footnotes to Plato."

25. ———. 2011. "Boethius' Anti-Realist Arguments." *Oxford Studies in Ancient Philosophy* no. 40:381-401.

"Boethius opens his discussion of the problem of universals, in his second commentary on Porphyry's *Isagoge*, with a destructive dilemma: genera and species either exist or are concepts; but they can neither exist nor be soundly conceived; therefore the enquiry into them should be abandoned (*In Isag. maior* 1.10). Boethius' strategy to get around this dilemma is well known. He follows the lead of Alexander of Aphrodisias, distinguishing several ways in which genera and species can be conceived, and he argues that at least one way involves no falsity. Hence it is possible to conceive genera and species soundly, and Porphyry's enquiry into them is therefore not futile after all (1.11).

Boethius thus resolves the second horn of his opening dilemma.

Yet he allows the first horn of the dilemma, the claim that genera and species cannot exist, to stand. The implication is that he takes his arguments for this claim to be sound. If so, this would be a philosophically exciting and significant result, well worth exploring in its own right.

Yet there is no consensus, either medieval or modern, on precisely what Boethius' arguments are, or even how many arguments he offers, much less on their soundness. (1) One reason for the lack of consensus is that Boethius' arguments need to be understood in the light of their ancient philosophical sources — particularly his difficult regress argument, which can be reconstructed only in this light — and this is rarely done. (2) In what follows I shall try to establish Boethius' dependence on his sources, and to show that Boethius offers three arguments as part of a unified dialectical strategy to establish that genera and species cannot be things (in some suitably robust sense of 'things')." (pp. 381-382)

(1) The secondary literature is sparse. Boethius' arguments do not rate even a single mention in J. Marenbon (ed.), *The Cambridge Companion to Boethius* [*Companion*] (Cambridge, 2009). There is an analysis of Boethius' entire discussion in M. Tweedale, *Abailard on Universals* [*Abailard*] (Amsterdam, 1976), and of these arguments in P. Spade, 'Boethius against Universals' [*Boethius*], which takes into account unpublished work by Spade and King. The brief treatment in A. de Libera, *La Querelle des universaux de Platon à la fin du Moyen Âge* [*Querelle*] (Paris, 1996), 128-30, is expanded in id., *L'Art des généralités: théories de l'abstraction* [*L'Art*] (Paris, 1999), 175-214. Some relevant material can be found in J. Barnes, *Porphyry: Introduction* [*Introduction*] (Oxford, 2003), 37-9. For Boethius' works in general see J. Magee and J. Marenbon, 'Boethius' Works', in Marenbon (ed.), *Companion*, 303-10, and the references given there.

(2) There is still controversy over Boethius' relation to his ancient sources: see J. Shiel, 'Boethius' Commentaries on Aristotle', in R. Sorabji (ed.), *Aristotle Transformed: The Ancient Commentators and their Influence*. (London, 1990), 349-72, and S. Ebbesen, 'Boethius as an Aristotelian Commentator', *ibid.* 373-91.

For the most recent overview of the debate see S. Ebbesen, 'The Aristotelian Commentator', in Marenbon (ed.), *Companion*, 34-55.

26. ———. 2013. "Boethius on the Problem of Desert." *Oxford Studies in Medieval Philosophy* no. 1:1-22.
27. Kirby, Helen. 1981. "The Scholar and His Public." In *Boethius: His Life, Thought and Influence*, edited by Gibson, Margaret, 44-69. Oxford: Blackwell.

"Today, the Tractates are again generally accepted as Boethian. The turning point was the publication in 1877 of a fragment of Cassiodorus discovered by Alfred Holder in a Reichenau manuscript and edited by Hermann Usener. In this fragment, called the *Anecdoton Holderi*, (2) Cassiodorus remarks that Boethius wrote a book on the Holy Trinity, some chapters on dogma, and a book against Nestorius. (3) This list seemed to accord well with the topics covered by the works themselves. Specifically, the 'book on the Holy Trinity' corresponded with Tractate I, and that 'against Nestorius' with Tractate V. The 'chapters on dogma' were taken as references to Tractates II and III, which deal respectively with the questions whether Father, Son and Holy Spirit may be predicated of God as substances; and how substances can be good simply by existing. The genuineness of Tractate IV, 'On the Catholic faith', remained in doubt. E. K. Rand wrote a doctoral thesis to disprove its genuineness, (4) but some years later 'deemed it expedient to recant' and concluded that the work was after all by Boethius. (5) It now seems clear that it is to this tractate that the term 'chapters on dogma' most aptly applies; and it may therefore be reasonable to treat Tractates I, II and III as together constituting the 'book on the Holy Trinity'. (6)

At all events, even if perhaps not yet irrefragable, (7) the authenticity of the *Opuscula Sacra* seems beyond reasonable doubt, and is assumed in what follows." (pp. 206-207)

(1) The text of the Tractates, with English translation, is most conveniently available in the Loeb Library revised edition by H. F. Stewart, E. K. Rand, and S. J. Tester (Cambridge, Mass./London, 1973), pp. 1-129. The Latin text in this edition is based upon Rand's collations of all the important manuscripts (Introduction, p. VII), and is substantially the same as that

printed in the first Loeb Library edition in 1918. See further below, p.211.

Hildebrand, *Boethius und seine Stellung zum Christentume* (Regensburg, 1885), pp. 148-314, argued from internal evidence for the authenticity of the Tractates.

28. Koterski, Joseph W. 2004. "Boethius and the Theological Origins of the Concept of Person." *American Catholic Philosophical Quarterly* no. 78:203-224.

Abstract: "Boethius's famous definition of "person" as *naturae rationalis individual substantia* (an individual substance of a rational nature) is frequently cited without reference to the specific theological purpose of his formulation (an attempt to provide some clarification about the mysteries of Christ and the

Trinity). This article elucidates some of the theological issues that required philosophical progress on the nature of "personhood." It also considers some of the residual difficulties with the application of this definition to divine persons that have been raised by subsequent theologians such as Thomas Aquinas who are otherwise sympathetic to Boethius's definition of person when applied to human beings."

29. Kretzmann, Norman. 1985. "*Nos Ipsi Principia Sumus: Boethius and the Basis of Contingency.*" In *Divine Omniscience and Omnipotence in Medieval Philosophy. Islamic, Jewish and Christian Perspectives*, edited by Rudavsky, Tamar, 23-50. Dordrecht: Reidel.

"Introduction. Boethius's two commentaries on Aristotle's *De interpretatione* contain an account of the metaphysical foundations of contingency in their discussions of Chapter 9. (1) For the countless medieval discussions of future contingents only *De interpretatione* 9 itself is of greater historical importance than Boethius's discussions of it. In this chapter, however, my concern is with the content of Boethius's theory of contingency and not with its historical sources or influences. In order to give his theory the kind of consideration I think it deserves, I need to extract it from the other material in the commentaries and expound it in its own right; I also want to examine some of its consequences. Because those tasks are the only ones I can undertake in this paper, I am not now concerned with what the later medievals thought about Boethius or with what Boethius thought about Aristotle or with what Aristotle thought about contingency, but only (or as nearly as possible only) with what Boethius thought about contingency in his two commentaries on *De interpretatione*. (2)" (p. 23)

(1) The Latin texts of the commentaries are published in Migne's *Patrologia Latina*, Vol. 64, cols. 329-342 and 487-518; and in the critical edition by C. Meiser, *Boetii Commentarii in Librum Aristotelis II EPI EPMHNIAS*, Leipzig: Teubner, 1877-1880 (2 vols.), Vol. I, pp. 103-126, and Vol. II, pp. 185-250. All my references to and quotations from Boethius's commentaries in the notes will be taken from Meiser's edition. For the

definitive edition of Boethius's translation of Aristotle see L. Minio Paluello (ed.), *Aristoteles Latinus II 1-2: De Interpretatione vel Periermenias*, Desclée de Brouwer, Bruges 1965.

Reprinted in: D. Blank, N. Kretzmann (eds.), *Ammonius on Aristotle On Interpretation 9 with Boethius on Aristotle On Interpretation 9*, London: Duckworth, 1998, pp. 24-52 (cited from the reprint).

"Lukasiewicz's interpretation of Aristotle's response to determinism in *Int.* 9 has stood, in one version or another, at the center of the modern controversy that has its source in his 1930 article. (*)

(...)

"Recent commentators on *Int.* 9, whether they accept or reject the oldest interpretation, have tended to follow Hintikka's lead in designating it 'the traditional interpretation'. (5)" (p. 25)

(...)

"My concern here is with the principal ancient rival to the so-called traditional interpretation, a rival whose subsequent medieval career was so long and so eminent that it provides another reason for feeling uneasy about calling the simple denial of universal bivalence 'the traditional interpretation'.

Since the one I am focusing on is the second-oldest on record, I will refer to it simply as the second-oldest interpretation and continue referring to the denial of universal bivalence as the oldest. I will also continue to refer to both of them as interpretations even when I am primarily interested in them as responses to logical determinism, regardless of their accuracy as interpretations of Aristotle. The second-oldest interpretation's claim to preserve bivalence while rejecting determinism is what essentially distinguishes it from the oldest interpretation. Its details will emerge gradually." (p. 25)

(...)

"Boethius' version of the second-oldest interpretation is based on his thoroughgoing Aristotelian correspondence theory of truth: 'the nature of predicative [i.e. categorical] propositions is acquired from the truth and falsity of things, events, or states of affairs; for however they are, so will the propositions that signify them be'. (28) For that reason propositions 'about past and present things, events, or states of affairs are, indeed, like those things themselves, stable and definite; ... [and], for that reason, of that which has happened it is true to say definitely that it has happened ... And concerning the present as well: whatever is happening has a definite nature in that it is happening. It is necessary to have definite truth and falsity in the propositions, too; for of whatever is happening it is definitely true to say that it is happening, [*definitely*] false that it is not happening.' (29)" (p. 29)

interpretation of the ancient commentators, especially Boethius and Ammonius.

(28) II 188,14-17: 'praedicativarum autem propositionum natura ex rerum veritate et falsitate colligitur. quemadmodum enim sese res habent, ita sese propositiones habebunt, quae res significant.'

(29) II 189,5-7, 9-10, 13-18: 'de praeteritis quidem et de praesentibus, ut res ipsae, stabiles sunt et definitae.... idcirco de eo quod factum est verum est dicere definite, quoniam factum est ... et de praesenti quoque: quod fit definitam habet naturam in eo quod fit, definitam quoque in propositionibus veritatem falsitatemque habere necesse est. nam quod fit definite verum est dicere quoniam fit, falsum quoniam non fit.'

31. LaChance, Paul Joseph. 2004. "Boethius on Human Freedom." *American Catholic Philosophical Quarterly* no. 78:309-327.

Abstract: "It is commonly asserted that Boethius defined free will as the judgment of the will or a rational choice. Accordingly, sin or evil is identified with ignorance or vice of the intellect, which prevents or distorts rational deliberation. However, Boethius adopted a more complex understanding of the self-motion of the soul and, consequently, articulated a more nuanced account of sin and the healing effects of Providence. Boethius treated human freedom as a complex including a natural motion, identified as the desire for happiness, the determination of reason following the judgment of deliberation, and the sovereignty of the will over its own acts and, to some extent, over other acts of the soul. Sin, therefore, involves mistaken ideas about reality but also deformations in the affective orientation of the will to the world and in the exercise of the will's control over the soul."

32. ———. 2011. "Transcendental Prediction in Boethius' Signification Theory: *De hebdomadibus* in the Context of the Commentaries on *Peri hermeneias*." In *Philosophy and Theology in the Long Middle Ages: A Tribute to Stephen F. Brown*, edited by Emery, Kent jr., Friedman, Russell L. and Speer, Andreas, 248-274. Leiden: Brill.

"In this essay I shall set out the basic terms and relations for an explanatory account of the central meaning of Boethius' *De hebdomadibus*. The basic terms and relations include *bonum*, *esse* and *id quod est* as well as the principle that terms which refer to objects that share a particular meaning but that subsist differently are analogically predicated. I shall argue that Boethius distinguished between the meaning of predicates and the mode or manner in which their referents are said to subsist.

Boethius offered only very brief and often tantalizing explanations of these concepts, leaving much room for interpretation as to their exact meaning. I will approach my interpretive task from two directions.

First, I shall investigate Boethius' logical commentaries and treatises, in which he discusses foundational questions of human knowing and the manner in which the content of one's predications may be brought closer to the meaning that one intends to communicate. Second, I shall adopt a hypothesis that locates Boethius' third tractate in the context of trinitarian theology. What I have to offer with respect to the meaning of *De hebdomadibus* will not verify the hypothesis, but I think that the hypothesis sheds light on the possible intention and meaning of the tractate. Thus, the linking of the hypothesis and the data of the text will yield an advance in 'understanding'. (1) (p. 248)

(1) Boethius commented on the importance of the task of understanding prior to judgment, noting that Aristotle treated the two parts of logic, understanding and judgment, whereas the Stoics neglected understanding. Cf. *Commentaria In Topica Ciceronis*, Lib. I–IV, PL 64, col. 1039–1174; english trans. by E. Stump, Ithaca 1988. Despite the fact that in this context judgment appears to be a logical activity concerned with the forms of arguments, evidence from the *De divisione liber* (cf. infra, n. 18) suggests that Boethius recognized the importance of a range of activities in the articulation of a definition. If we consider that predication involves not simply the synthesis of meanings but also the positing of a particular mode of subsistence (substantial, accidental, relational) or

manner of occurrence (necessary, contingent, or free), then the discussion of contingency in the commentaries on *Peri hermeneias* takes on a greater importance in the articulation of Boethius' epistemology.

34. Lewftow, Brian. 1990. "Boethius on Eternity." *History of Philosophy Quarterly* no. 7:123-142.

"The concept of eternity was prominent in medieval discussions of divine foreknowledge and human freedom and of God's relation to the world. Perhaps most importantly, the medievals took it to express the distinctive quality of God's life, experience and mode of being. For such writers as Boethius and Aquinas, the claim that God is eternal, properly understood, says most of what we can know about what it is like to be God. So an examination of the concept of eternity promises to repay our efforts with a better understanding of the history of philosophical theology and with insight into the concept of God.

Some thinkers see eternity as everlasting duration through time. Others liken it to a static, durationless instant, a timeless *nunc stans*. Language appropriate to both views occurs in such authors as Plato, Plotinus and Boethius, leading some scholars to conclude that these men wrote misleadingly, wavered between different views of eternity or were just inconsistent. (1) In a well-known article, Eleonore Stump and Norman Kretzmann suggest another possibility. (2) On their view, when Boethius *et al.* seem to waffle between talk of a durationless now and talk of everlasting duration, they are actually trying to communicate a single thesis, that eternity is "atemporal duration." This paper will argue that at least as regards Boethius, Stump and Kretzmann are correct, though not for the reasons they give. Stump and Kretzmann have recently tried to defend the concept of atemporal duration against an attack by Paul Fitzgerald. (3) I will suggest that their defense is

inadequate, then offer a different defense and a different view of atemporal duration." (p. 123)

38. MacDonald, Scott. 1988. "Boethius's Claim that all Substances are Good." *Archiv für Geschichte der Philosophie* no. 70:245-279.

Appendix: Boethius's *De Hebdomadibus* (How Can Substances Be Good in Virtue of the Fact That They Have Being When They Are Not Substantial Goods?), translated by Scott MacDonald, pp. 274-279.

"Boethius's short treatise *Quomodo substantiae*, known in the Middle Ages as *De hebdomadibus* (DH), has been oddly neglected. (1) It deserves close attention for at least two

reasons. First, in it Boethius presents a philosophically sophisticated defense of a provocative metaphysical position, viz., that all substances are good in virtue of the fact that they have being. Moreover, in the course of defending this position he lays out and attempts to resolve a deep philosophical problem the resolution of which appears to be necessary for *any* account of the nature of goodness, not just his own.

Second, DH deserves attention because of its historical significance.

The extant *De hebdomadibus* commentaries from the twelfth and thirteenth centuries and the number of references to DH in the works of Albert the Great and Thomas Aquinas, for example, testify to the use made of it by later medieval philosophers.⁽²⁾ In addition, the subject matter of the treatise places it in a long and distinguished philosophical tradition: Boethius's thesis that all substances are good in virtue of the fact that they have being is clearly a near relative of the Augustinian view that everything which exists is good insofar as it exists and of Aquinas's claim that 'being' and 'good' have precisely the same referents although they differ in sense.⁽³⁾ The fact that the account underlying Boethius's thesis is significantly different from either Augustine's or Aquinas's makes DH's

position in the philosophical tradition all the more interesting. In this paper I will offer a detailed analysis of DH in order to evaluate the support Boethius offers for his counter-intuitive thesis and identify the historical context into which his account of the nature of goodness fits." (pp. 245-246)

(1) I have provided a translation of *De hebdomadibus* in an appendix. All references to DH are to line numbers of this translation.

(2) The medieval commentaries on DH which have been edited are the ninth century glosses edited by E. K. Rand in *Commentaria in Boethium, Quellen und Untersuchungen zur Lateinischen Philologie des Mittelalters* (München, 1906), the twelfth-century commentaries by Gilbert of Poitiers, Thierry of

Chartres, and Clarenbald of Arras, all edited by Nikolaus M. Haering in (respectively) *The Commentaries on Boethius by Gilbert of Poitiers* (Toronto: Pontifical Institute of Medieval Studies, 1966), *Commentaries on Boethius by Thierry of Chartres and his School* (Toronto: Pontifical Institute of Medieval Studies, 1971), and *Life and Works of Clarenbald of Arras* (Toronto: Pontifical Institute of Medieval Studies, 1965), and the commentary of Thomas Aquinas edited by Fr. M. Calcaterra in the Marietti edition of Aquinas's works, *Opuscula theologica II* (Rome, 1954).

For Albert's use of DH, see his *Summa de bono*, vol. 28 in *Opera omnia* (Cologne edition), edited by Henricus Kuehle (Cologne, 1931), especially the first seven articles of the first question. For Aquinas's use of DH outside of his commentary, see especially *Summa theologiae* Ia.5 —6 and *De veritate* I and XXI.

(3) For a statement of Augustine's thesis, see, e. g., *Confessiones* VII. For Aquinas's claim, see *Summa theologiae* Ia.5.1—3.

"It is difficult to determine how much of the corpus [of *Boethian works*] has disappeared. There may have been a translation, possibly with draft commentary, of the *Physics*.
(15)

Boethius was acquainted with the *Posterior Analytics*, although it is uncertain whether he translated or commented on it; he certainly had access to Themistius' paraphrases of both *Analytics* and to Praetextatus' translation thereof (*In Perih.* 2.3.7–4.3; *Div.* 885d; *In top. Cic.* 1051b). A bucolic poem has evidently vanished, but the *Liber de definitionibus* transmitted under his name belongs to Victorinus (*In top. Cic.* 1098a; 1100b). Certain works are mentioned in such a way as to make it impossible to say whether they were merely planned, partially drafted, or actually completed. A treatise *De ordine Peripateticae disciplinae* was evidently written some time between the second *Peri Hermeneias* commentary and *De divisione*; another on the harmony of Plato and Aristotle was planned but may not have been written, and the same holds for a planned compendium of the *Peri Hermeneias* (*In Perih.* 2.80.1–6; 2.251.8–16; *Div.* 877b). Boethius obviously planned numerous projects in advance and must have worked on more than one at a time, and although some of his cross-references furnish reliable evidence for establishing relative chronology, others, having been penned with an eye only to his readers' presumed order of study, carry no implication as to the order of composition. Boethius' failure to mention a work, or his mentioning it in such a way as to suggest borrowing from a source, does not amount to proof that he had no direct knowledge of the same. For example, certain hints of *De generatione et corruptione* in the commentaries may well reflect mere borrowing from a source (e.g., *In Cat.* 262a (cf. *Porph.*, *In Cat.* 141.14)), but the *Consolatio*, which draws from many sources but is a copy of none, suggests direct acquaintance with the treatise (cf. below, p. 802)." (p. 796)

46. ——. 2014. "Boethius's *Consolatio* and Plato's *Gorgias*." In *Boethius as a Paradigm of Late Ancient Thought*, edited by Kirchner, Andreas, Jürgasch, Thomas and Böhm, Thomas, 13–29. Berlin: Walter de Gruyter.

"Our understanding of Boethius the Platonist is remarkably less clear than that of Boethius the Peripatetic, owing to the fact that the precise range of Boethius's later Platonic sources is difficult to ascertain from his extant writings, which include no translation of or commentary on a Platonic dialogue. (1) Although there has been much discussion of his interpretation of the *Timaeus*, especially as evidenced in *Consolatio* III,m9 (2), and although numerous allusions to other Platonic dialogues have been teased out of various Boethian works, the evidence is generally rather piecemeal. For example, does Boethius's reference to Plato on the rule of philosopher-kings (3) indicate a direct knowledge of the *Republic* or is it merely echoing a commonplace? (4) And if the former, then how much of the *Republic* are we entitled to read into our interpretation of the *Consolatio* or of Boethius's Platonism generally? The most notable exceptions to this rather sparsely populated terrain are perhaps *Consolatio* IV,2 and IV,4, prose sections which since Klingner have been taken to reflect direct engagement with Plato's *Gorgias*. (5) The contrast between Boethius's use of the *Timaeus* and his use of the *Gorgias* seems particularly striking. For if the *Timaeus* serves in the context of the *Consolatio* to affirm the essential goodness of creation and to foster hope for the mind's ascent to the ordered serenity of the heavens, the *Gorgias*, with its pessimistic sense of a philosophical life desperately wagered (6) on hopes for improved conditions here on earth, is suggestive of much darker undercurrents within Boethius's dialogue.

It seems worth reconsidering the case of the *Gorgias*, and in what follows I hope to shed some light on Boethius's understanding of that great dialogue. Did he merely copy from it, or did he form an original interpretation? If the latter, then is it necessary to suppose that he had a copy of the *Gorgias* to hand when he wrote the *Consolatio*, or did he work from memory? And did he work exclusively from Plato, or did he consult a later intermediary?" (pp. 13-14)

48. Mair, John. 1981. "The Text of the *Opuscula Sacra*." In *Boethius: His Life, Thought and Influence*, edited by Gibson, Margaret, 206-213. Oxford: Blackwell.

"Today, the Tractates are again generally accepted as Boethian. The turning point was the publication in 1877 of a fragment of Cassiodorus discovered by Alfred Holder in a Reichenau manuscript and edited by Hermann Usener. In this fragment, called the *Anecdoton Holderi*, (2) Cassiodorus remarks that Boethius wrote a book on the Holy Trinity, some chapters on dogma, and a book against Nestorius. (3) This list seemed to accord well with the topics covered by the works themselves. Specifically, the 'book on the Holy Trinity' corresponded with Tractate I, and that 'against Nestorius' with Tractate V. The 'chapters on dogma' were taken as references to Tractates II and III, which deal respectively with the questions whether Father, Son and Holy Spirit may be predicated of God as substances; and how substances can be good simply by existing. The genuineness of Tractate IV, 'On the Catholic faith', remained in doubt. E. K. Rand wrote a doctoral thesis to disprove its genuineness, (4) but some years later 'deemed it expedient to recant' and concluded that the work was after all by Boethius. (5) It now seems clear that it is to this tractate that the term 'chapters on dogma' most aptly applies; and it may therefore be reasonable to treat Tractates I, II and III as together constituting the 'book on the Holy Trinity'. (6)

At all events, even if perhaps not yet irrefragable, (7) the authenticity of the *Opuscula Sacra* seems beyond reasonable doubt, and is assumed in what follows." (pp. 206-207)

(1) The text of the Tractates, with English translation, is most conveniently available in the Loeb Library revised edition by H. F. Stewart, E. K. Rand, and S. J. Tester (Cambridge, Mass./London, 1973), pp. 1-129. The Latin text in this edition is based upon Rand's collations of all the important manuscripts (Introduction, p. VII), and is substantially the same as that printed in the first Loeb Library edition in 1918. See further below, p.211.

- "I should like to address myself to the contention of several contemporary commentators to the effect that there is a critical inconsistency between Boethius's rejection of realism and his own solution to the "problem of universals." I shall propose an interpretation which will charge the time-honored transmitter with terminological laxity rather than basic conceptual confusion.

In his second commentary on Porphyry's *Isagoge* (1) Boethius takes as his starting point Porphyry's question as to whether genera and species are extramental entities (subsistant) or are only concepts or mental entities. On pp. 161-163 he rejects the first option and concludes (p. 163) that the genus, or any other universal (which would, under Porphyry's classification, be a species, differentia, property or accident), cannot be an entity existing in re. A realist theory of universals requires that one and the same thing exist in many at the same time as a whole, but Boethius adduces considerations which, he believes, show this to be impossible. The genus, for example, if present as a whole at the same time in several species, will lose its unity and fail to be as "one over many." (p. 35)

51. ———. 1998. "Boethius: From Antiquity to the Middle Ages." In *Routledge History of Philosophy. Volume III: Medieval Philosophy*, edited by Marenbon, John, 11-28. New York: Routledge.

"Boethius is a difficult figure to place in the history of philosophy.

Considered just in himself, he clearly belongs to the world of late antiquity. Born in 480, at a time when Italy was ruled by the Ostrogoths under their king, Theoderic, Boethius was adopted into one of the most distinguished patrician families of Rome and benefited from an education which made him at home not only in classical Latin culture but also in Greek literature and philosophy. Although most historians doubt that Boethius actually went to Alexandria or Athens to study, he certainly knew the work of Greek neoplatonists of the immediate past: Proclus, Porphyry and probably Ammonius. Although a Christian, writing in Latin, he therefore falls into a tradition stretching back directly to Plotinus and, ultimately, to Aristotle and Plato. Yet considered as a late antique

philosopher, his importance is limited. Most of Boethius' ideas and arguments derive from his Greek sources; his own contribution lay more in choosing, arranging and presenting views than in original thinking.

By contrast, from the perspective of medieval philosophy, Boethius looms large. Only Aristotle himself, and perhaps Augustine, were more important and wide-ranging in their influence. Besides providing scholars in the Middle Ages with two of their most widely-read textbooks on arithmetic and music,(1) through his translations, commentaries and monographs Boethius provided the basis for medieval logic. His short theological treatises helped to shape the way in which logical and philosophical techniques were used in discussing Christian doctrine.

His *Consolation of Philosophy*, read and studied from the eighth century through to the Renaissance, and translated into almost every medieval vernacular, was a major source for ancient philosophy in the early Middle Ages and its treatment of goodness, free will and eternity continued to influence thirteenth- and fourteenth-century thinkers. In short, it would be hard to understand the development of philosophy in the medieval Latin West without looking carefully at Boethius' work — and it is for this reason that, although he falls outside its chronological limits, a chapter on his work (with glances forward at its medieval influence) begins the present volume." (pp. 11-12)

(1) For these works (and possible works on geometry and astronomy), which fall outside the scope of this discussion, see Chadwick [1.12] 69–107 and the articles in Gibson [1.16] by Caldwell, Pingree and White.

"I shall argue that, in his theological treatises (*Opuscula sacra*) and in the *Consolation*, Boethius is an original and important thinker — one who fully deserves to have been treated by medieval readers as a great author. His individual arguments are often far more careful, sophisticated, and, in their own terms, successful than has usually been recognized, although it is certainly true that Boethius often bases himself on ideas taken from others. But Boethius's especial distinction as a thinker lies in how he uses, combines, and comments on philosophical arguments. The *Opuscula* are innovative in their very approach to theology. The *Consolation* is, as its complex literary structure should immediately suggest, a work not just of but about philosophy: a subtle text which can be understood on various levels. The remaining writings — treatises on music and arithmetic, logical translations, commentaries — that make up Boethius's oeuvre are not usually innovative, but they are at the least very competent examples of genres where originality was not sought. The logical monographs offer an insight into two branches of logic, hypothetical syllogistic and the theory of topical inferences, about which there are no other extensive treatises from late antiquity. The logical commentaries are remarkable for the way they continue the project of the first great Neoplatonic logician, Porphyry, rather than follow the more usual approach of Boethius's contemporaries." (pp. 4-5)

Abstract: "The "problem of paganism" is my name for the set of questions raised for medieval thinkers and writers, and

discussed by some of them (Abelard, Dante, and Langland are eminent examples), by the fact that many people--especially philosophers--from antiquity were, they believed, monotheists, wise and virtuous and yet pagans. This paper argues that Boethius, though a Christian, was himself too much part of the world of classical antiquity to pose the problem of paganism, but that his *Consolation of Philosophy* was an essential element in the way medieval writers saw and resolved this problem. In particular, because it was a text by an author known to be Christian which discusses philosophy without any explicitly Christian references, it opened up the way to treating texts by ancient pagan philosophers as containing hidden Christian doctrine."

Abstract: "This article discusses Boethius's argument in *Consolation V.3-6* that divine omniscience of even the future is compatible with some things happening contingently. Section 1 argues that, according to Boethius, the kernel of the problem is not that God's beliefs about the future are true, but that they must be incapable of turning out false – something which seems incompatible with the unfixedness of contingent events. Section 2 looks at the Modes of Cognition Principle (everything that is cognized is cognized, not according to its own power, but rather according to the capacity of those who are cognizing), one of the building blocks of Boethius's solution, and contends that it is far bolder than anything Boethius may have found in his sources, putting forward as it does a limited relativism about knowledge. Section 3 argues that the other important building block, the view that all things, past, present and future, are present to God, should be understood epistemically (he knows them as if they were in his present) rather than metaphysically (God's present is co-extensive with worldly past, present and future)."

"The title of this article needs an apology and an explanation. Not only is it unwieldy.

It also presents itself as a discordant rejection of the line of thinking about Boethius on which this volume, and the conference which gave rise to it, are based. But ‘paradigm’ is, in my view, a strange word to use in connection with Boethius. Rather than acting as a paradigm, he is a writer who seems to resist being fitted into any of the apparently appropriate existing paradigms. This exceptionality emerges even when trying to answer some of the simplest questions about him. Was he a Church Father (like, for instance, Jerome or Gregory of Nyssa) or an ancient philosopher (like his near contemporary Ammonius)? The answer is obviously neither — and both. Does he belong to the Middle Ages — his birth coincided with the deposition of the last Western Roman Emperor — or to antiquity, with which his cultural ties were so much closer than those of Augustine, a century earlier? Again, it would be wrong to choose either alternative, and the same would be true even if it were asked, simply, whether he fits best into Greek or into Latin culture." (p. 231)

60. ———. 2021. "The Whole Boethius. What are the Links between the Consolation and Boethius's Other Works?" *Rivista di Filosofia Neo-Scolastica* no. 113:9-18.

Abstract: "This article aims to indicate the unity of Boethius's thought, which is often overlooked. It focuses on how the contingency of some future events can be compatible with God's foreknowledge of everything. It argues that the complex and elusive discussion of this issue in the last four prose sections of the *Consolation of Philosophy* is closely linked to discussions in two of Boethius's earlier logical commentaries, the second commentary on Aristotle's *On Interpretation* and the second commentary on Porphyry's *Isagoge*. A connected

reading of the three texts shows that the notion of divine prescience in the *Consolation* should not be understood, as they are by most historians, in metaphysical terms, but rather in logical and epistemological ones: it is only relative to God's eternal power of cognition that future events, which in themselves remain contingent, are known as if they were necessary."

62. Marshall, Mary Hatch. 1950. "Boethius' Definition of Persona and Mediaeval Understanding of the Roman Theater." *Speculum* no. 25:471-482.

"In this paper, I wish to draw attention to a rather explicit source of information on ancient representation of formal comedy and tragedy, widely known in the Middle Ages, which has hitherto been ignored in histories of mediaeval drama — Boethius' definition of *persona* in his fifth theological tract, *De Duabus Naturis et Una Persona Jesu Christi, contra Eutychem et Nestorium*, c.3. Cloetta mentioned the passage, but only to show that Boethius himself knew the old dramas, since he alluded familiarly to rôles in plays by Euripides and Seneca, Plautus and Terence. (10) This tract, longest and most interesting of Boethius' *Opuscula Sacra*, was of fundamental importance to post-Augustinian conceptions of the Trinity; and the definition of *persona*, widely accepted but often contested or modified, was a crux of the Trinitarian controversy of the eleventh and twelfth centuries. (11)

One conservative monk of the eleventh century, Otloh of St Emmeram, in the preface of his *Dialogus de Tribus Quaestionibus* objected vehemently to dialecticians who put more credence in Boethius than in Holy Scriptures for some things, and who reproved him if he used *persona* in any but the Boethian theological sense. (12) Although criticized by conservatives, Boethius' theological authority was second only to Augustine's in the early scholastic period. Because Boethius'

definition of the important theological concept of 'person' refers to the ancient theatrical masks called *personae* and their uses, many men of learning with theological interests incidentally derived from it a reasonable idea of the representation of Roman plays by masked actors using voice and gesture. In the evidence to be presented here from Boethius and his mediaeval commentators and interpreters, it is clear that some understanding of the Roman theater was a great deal more common than we have thought, particularly in the twelfth century in France." "Today, the Tractates are again generally accepted as Boethian. The turning point was the publication in 1877 of a fragment of Cassiodorus discovered by Alfred Holder in a Reichenau manuscript and edited by Hermann Usener. In this fragment, called the *Anecdoton Holderi*, (2) Cassiodorus remarks that Boethius wrote a book on the Holy Trinity, some chapters on dogma, and a book against Nestorius. (3) This list seemed to accord well with the topics covered by the works themselves. Specifically, the 'book on the Holy Trinity' corresponded with Tractate I, and that 'against Nestorius' with Tractate V. The 'chapters on dogma' were taken as references to Tractates II and III, which deal respectively with the questions whether Father, Son and Holy Spirit may be predicated of God as substances; and how substances can be good simply by existing. The genuineness of Tractate IV, 'On the Catholic faith', remained in doubt. E. K. Rand wrote a doctoral thesis to disprove its genuineness, (4) but some years later 'deemed it expedient to recant' and concluded that the work was after all by Boethius. (5) It now seems clear that it is to this tractate that the term 'chapters on dogma' most aptly applies; and it may therefore be reasonable to treat Tractates I, II and III as together constituting the 'book on the Holy Trinity'. (6)

At all events, even if perhaps not yet irrefragable, (7) the authenticity of the *Opuscula Sacra* seems beyond reasonable

doubt, and is assumed in what follows." (pp. 206-207)

(1) The text of the Tractates, with English translation, is most conveniently available in the Loeb Library revised edition by H. F. Stewart, E. K. Rand, and S. J. Tester (Cambridge, Mass./London, 1973), pp. 1-129. The Latin text in this edition is based upon Rand's collations of all the important manuscripts (Introduction, p. VII), and is substantially the same as that printed in the first Loeb Library edition in 1918. See further below, p.211.

"This volume has been a long time emerging from well over a decade of research aimed at writing "a book about Boethius," a project I had the temerity to announce in an article devoted to Boethius and Saint Thomas which appeared in the 1974 commemorative volume of *Rivista di filosofia Neo-Scolastica*. Originally I thought of presenting the thought of Boethius in all its scope to English readers, by which I mean of course readers of English. J. K. Sikes's book on Abelard and Gilson's on Augustine and Scotus suggested models of what I might do. A chapter on Boethius in Volume 2 of the *History of Western Philosophy* I undertook with my late colleague A. Robert Caponigri was the first fruits of my labors. The work I wrote on Thomas for the Twayne series on world authors dwelt on the role Boethius had played in the formation of Thomas's thought. And various papers, notably several read at the spring gatherings of medievalists in Kalamazoo at Western Michigan University, formed if only in my own mind pieces of the larger thing.

By 1974, I had made enough progress to permit me to refer in a footnote to a "work in progress, devoted to the thought of Boethius in its full scope." However, that same year appeared the imposing two volumes of Luca Obertello's *Severino Boezio*. Boethian studies would never be the same again. Here was a massive survey of the Boethian corpus along with the secondary literature on it accompanied by a full volume of bibliography. I

will not say that my thunder had been stolen, since that would suggest that I could, then or now, achieve what Obertello had. But I did feel a bit deflated. My hopes began to revive when I considered that there are many who do not read Italian. And, after all, the book I planned was not at all like the one Obertello had written. And then in 1981 came the publication of Henry Chadwick's masterful book on Boethius.

Chadwick's book did, so much better than I ever could, what I had dreamt of doing that it forced a rethinking of my whole project. I leafed through the chapters I had written on Boethius's *Quadrivial Pursuits* and acknowledged that the world would not be a poorer place if they were never published. But it was not until 1985, after I resigned as Director of the Medieval Institute, that I saw my way clear. The book I would write would be a focused monograph on the relation between Boethius and Thomas Aquinas." (pp. XII-XIII).

67. McKinlay, Arthur Patch. 1907. "Stylistic tests and the chronology of the works of Boethius." *Harvard Studies in Classical Philology* no. 18:123-156.

"Whoever undertakes to treat of Boethius finds himself in illustrious company. Potentates, churchmen, scholastics, and philosophers have busied themselves with this "last of the Romans."

It would appear that but little remains to be said on such a well worn subject. Much less does it seem fitting in a beginner to essay that little. Yet, as the recent researches of Usener and Brandt and the acute suggestions of Rand have marked an epoch in *Boethiana*, one may hope to gain still further insight into the character and mode of thought of the author of the *Consolatio*. With this purpose in view, by the help of the so-called stylistic method, I intend to examine the writings of Boethius, in case it may be possible more accurately to place works the dates of which are not yet certain. To be explicit, I hope to show that the *De Arithmetica* and the *De Musica* should be placed neither first nor together; more definitely to place certain other works; to throw light on the authenticity of the *De Geometria* and the *De Fide Catholica*, and incidentally

to test the value of the so-called stylistic method in determining the relative chronology of an author's writings.

For a definition of the meaning of stylistic method, and an illustration of its application, I may refer to the well-known work of Lutoslawski, entitled *The origin and growth of Plato's logic with an account of Plato's style and of the chronology of his writings*, 1897." (p. 123)

(...)

"In the beginning of my paper I implied that any such study as I have undertaken, to be of value, must serve to give us a deeper insight into the character of our author. What have the present results contributed to this end? One thing at least. If the *De Arithmetica* and *De Musica* were not written first of Boethius's works nor together, we must place a new estimate on our author's temperament and habits." (pp. 154-155)

(...)

"For all must concede that before he had carried out his plan of translating and perhaps of commenting on all the works of Aristotle and Plato, he had begun to work on Cicero. In the same way, he may have undertaken the *De Musica* as a parergon." (p. 156)

Boethius' Metaphysics. Studies in English: Third Part: Mic - Z

Studies in English

1. Micaelli, Claudio. 2004. "Boethian Reflections on God: Between Logic and Metaphysics." *American Catholic Philosophical Quarterly* no. 78:181-202.

Abstract: "This paper systematically reconstructs Boethius's reflections on God, attempting to find the common element to which all of the variations in these reflections can be retraced. This common element is constituted by the continuous tension between kataphatic and apophatic theology. Boethius apparently both kataphatically defines God in his logical works, and maintains that God can only be defined apophatically in his theological works. This tension can, at times, cause some incoherence as one moves from one level of discourse to another: that is, from the logico-linguistic to the metaphysical-ontological level of discourse. Boethius's thought manifests this incoherence. This incoherence is in part common to Neoplatonic thought and its sources, but would also seem to be dictated by the nature of the very operation of reflecting upon God."

2. Mignucci, Mario. 1989. "Truth and Modality in Late Antiquity: Boethius on future Contingent Propositions." In *Atti del convegno internazionale di storia della logica. Le teorie della modalità*, edited by Corsi, Giovanna, Mangione, Corrado and Mugnai, Massimo, 47-78. Bologna: CLUEB.

"As is well known, Aristotle's analysis of future contingents in *De interpretatione*, Chapter 9 has generated since ancient

times a lot of discussion (1), which ranges from the interpretation of his own words to the philosophical meaning and adequacy of the solution proposed by him. Unfortunately, the former question is entailed by the latter and there is no agreement between scholars about the kind of answer that Aristotle gives to the question of determinism, despite the astonishing quantity of works dedicated to it. I would by no way like to be involved in the problem of Aristotle's interpretation. My task here is to illustrate the meaning and relevance of Boethius' analysis of future contingents, and I will consider his commentary on the *De interpretatione* for its own sake. In other words, I do not feel myself committed to evaluate the adequacy of Boethius' proposal with respect to Aristotle, even if, of course, he believed that his interpretation was faithful to the pages of the *De interpretatione*. Nor will I try to compare Boethius' solution with other solutions which have been proposed by ancient and modern interpreters who have tried to explain Aristotle's text. I will just consider one view different from that of Boethius, because Boethius himself discusses it, and his discussion is relevant to the understanding of his position." (p. 47)

"The conclusion to be drawn from this short investigation could be, first of all, that Prof. de Vogel is right when she is of the opinion that there are certain Christian features in the >Consolatio<. But this statement can be completed: these Christian elements concern Christian piety and they seem to find their source particularly in the liturgy. Boethius has been rather successful in his attempt to ban Christian theology from his philosophical dialogue, but he failed to conceal that he was a pious Christian." (p. 61)

"The core of this book has its origin in the lectures I delivered at the University of Bremen in October 2011 during the annual graduate seminar " Christentum als antike Religion" organized

by Christoph Auffarth, Marvin Doebler, and Hince Tanaseanu-Doebler.

(...)

As it may be inferred from it, this book is neither an introduction, nor a general study on Boethius, but is meant to investigate the question of Boethius' Christianity, secular and at the same time theologically profound. Secular, because Boethius was a layman, who did not belong to the Church, and because he used almost exclusively the heritage of Greek (and partly Latin) Neo-Platonism together with those rational tools typical of a philosophical system. On the other hand, he was thoroughly interested in the issues of contemporary Christianity, starting from Augustine, whose legacy is perceivable even when not overtly mentioned. "The last of the Romans" (as Martin Grabman called Boethius, a designation that has generally become accepted) was therefore able to produce a synthesis, the validity of which was acknowledged throughout the Middle Ages until the rediscovery of Aristotle." (p. 7)

"In *Contra Eutychem et Nestorium* (CEN), as is well known, Boethius offers a definition of *persona* and *hypostasis*. This definition is influenced by the dispute between the Western Christian tradition, which since Tertullian and the Arian debate normally employed *persona* for the persons of the Trinity, and the Greek tradition which used 'hypostasis'. The debate was provoked by a misunderstanding, which is testified, for instance, by Gregory of Nazianzus (*On The Great Athanasius, Bishop of Alexandria* 21, 35, delivered on 379 AD):

„We use in an orthodox sense the terms one Essence and three Hypostases, the one to denote the nature of the Godhead, the other the properties (ἰδιότητες) of the Three; the Italians (1) mean the same, but, owing to the scantiness of their vocabulary, and its poverty of terms, they are unable to

distinguish between Essence and Hypostases, and therefore introduce the term Persons, to avoid being understood to assert three Essences. The result, were it not piteous, would be laughable. This slight difference of sound was taken to indicate a difference of faith. Then, Sabellianism was suspected in the doctrine of Three Persons, Arianism in that of Three Hypostases, both being the offspring of a contentious spirit.“
(2)

This was a momentous dispute between Oriental and Western Christianity. Boethius, thanks to his philosophical education, perceived much more than other Christian writers in the West the imprecision of the word *persona*: in CEN, since he is discussing the nestorian and Monophysitic Christology, he is compelled (so to say) by the Western tradition to employ *persona*, but he considers ‘*hypostasis*’ much more exact.

Introducing, therefore, *persona* in philosophical or theological vocabulary is, in his opinion, not without inconveniences, which he tries to avoid. Yet just for these reasons he has to face other difficulties." (p. 83)

"What Siobhan Nash-Marshall offers in this volume is a study in Hoethian metaphysics by focusing on participation and the good. Neither doctrine is unambiguous in the texts of Boethius — in fact, the *prima facie* claims seem contradictory and relatively obvious problems appear to go unresolved. Boethius never explicitly employs any of his axioms (let alone those that mention participation) in his explanation of the ontological goodness of composite beings. Yet, he envisions participation as crucial for the resolution of the problem of how things can be good by virtue of their essences without thereby being substantial goodness (that is, God). The variety of definitions offered for the good in the *Consolation of Philosophy* sometimes invoke the notion of participation, for instance, in the claim that the human good re-stiles in one's participation in the prime good, and yet the inclusion of such language seems directly at odds with other definitions, including the notion that the human good consists in the self-possession of one's own being, for this cannot involve participation in anything other than one's own nature.

By engaging in the thoughtful reconstruction of both of these key Boethian doctrines — participation and the good — Nash-Marshall proposes a credible and sustained case for better understanding the inner logic of Boethius. But in doing so she also offers an exceptional insight into the very problems that drew Boethius to begin to articulate his own views — whether so tersely in the succinct deductions of the *Quomodo* or so tantalizingly unreconciled a set of affirmations that undergird the conversations of the *Consolation*.

Central to her re-thinking of the issues is the assumption of the dialectic of *exitus* and *reditus* that Neoplatonists are always traversing, but to which they consciously advert as seldom as travelers do to the road itself when their minds are fixed on getting to their destination or getting back home. Yet, this simple distinction enables both the philosopher and the historian of philosophy to make better sense of the fragmentary comments in Boethius's texts about participation. From this distinction too one gains a stance by which to reconcile the apparently contradictory claims Boethius makes about the substantive and teleological definitions of the good for composite beings. On the basis of the difference between *exitus* and *reditus*, Boethius needs to assign analogous meanings to participation which in turn help us to grasp why composite beings must already be good in their essence and yet still need to acquire the perfections appropriate to their existence by their participation in God and in their own essences.

To grasp the inner logic of Boethius's reasoning on these issues entails a readiness to complete the articulation of a synthesis Boethius envisioned but was unable to provide. While some scholars have thought the project impossible, Nash-Marshall ventures a thoughtful reconstruction of the connections intrinsic to his positions." (from the *Foreword* by Joseph W. Koterski, pp. Xi-XII)

11. ———. 2004. "God, Simplicity, and the *Consolatio Philosophiae*." *American Catholic Philosophical Quarterly* no. 78:225-246.

Abstract: "One of the primary concerns of the *Consolatio* is to draw out many of the paradoxical conclusions concerning the relation between creation and God that stem from the premises of classical creationist metaphysics, and attempt to solve them. Once one accepts that God does exist, is omnipotent, omniscient, and simple, it becomes viciously difficult to explain: (1) how anything contrary to God's will--evil--can exist; (2) how any cause can act independently of God's will--human freedom; and (3) how "independent causes" can relate to God through their own agency--human prayer. This naturally begs the question: why should we accept the premises of classical

creationist metaphysics? This paper addresses this question by analyzing and defending two of the central premises of Boethius's version of classical creationist metaphysics as they are addressed in *Consolatio* 3,10: (a) that God exists, and (b) that God is simple."

13. ———. 2012. "Boethius's Influence on Theology and Metaphysics to c. 1500." In *A Companion to Boethius in the Middle Ages*, edited by Kaylor Jr., Noel Harold and Phillips, Philip Edward, 163-191. Leiden: Brill.

"My two general points here are meant not just to give an account of the current state of Boethian affairs. They are also a caveat of sorts: no article written at the present time can hope to give an exhaustive overview of Boethius's influence on medieval metaphysical and theological thought. There is simply too much basic work left to be done to hope for a comprehensive overview. (22) It is also true that Boethius's influence on medieval thought is so pervasive that no article would begin to do it justice.

In what follows, I will attempt merely to sketch a partial picture of that influence, based both on current manuscript work and, above all, on an impartial recognition of Boethius's originality as a thinker. The sketch will be divided into two primary parts. In the first part, it will outline and broadly discuss the characteristics of Boethius's thought and their significance with respect to the development of medieval thought. In the second, it will briefly present the history of the process through which medievals came to appropriate Boethian texts and thought. The second part will itself be divided into two sections, which will deal with the logical and the "theological" texts respectively." (p. 171)

(22) This is one of Troncarelli's complaints with respect to the status of studies of medieval manuscripts of the *Consolatio*. See, on this point, Fabio Troncarelli, *Cogitatio Mentis. L'eredità di Boezio nell'alto Medioevo* (Naples, 2005), p. 9: "Se esaminiamo, ad esempio, le edizioni critiche della *Consolatio*,

ci rendiamo conto che un uso poco coerente dei manoscritti ha generato una condizione di confusione, in conseguenza della quale è assai difficile stabilire se alcune questioni siano irrisolvibili o, piuttosto, non siano state ancora risolte" ... (If, for example, we examine the critical editions of the *Consolatio*, we will realize that the hardly coherent use of the manuscripts has generated a condition of confusion, the consequence of which has made it very difficult to establish if certain questions are unresolvable, or, on the other hand, have as yet to be resolved...]

14. O'Daly, Gerard. 1991. *The Poetry of Boethius*. Chapel Hill: University of North Carolina Press.

"To label the poetry of the *Consolation* 'didactic' is too simplistic a response to its many functions, unless we are aware of the importance and value of moral and metaphysical reflection and instruction in Greek and Roman cultural life, and in literature as well as philosophy. This book has explored several of the traditions of which the *Consolation* is a beneficiary, and to which it contributes. It has attempted to show that a responsive reading of Boethius' work depends upon a realization of the many kinds of allusiveness in that work. Virgil, Ovid, and Senecan tragedy, no less than Plato and the Neoplatonists, Cicero's philosophical writings, and Epictetus, form the imaginative and intellectual world of the *Consolation*. In this world the art of poetry has its privileged place. We cannot know what sense Boethius may have had of writing at the end of a long tradition: it is unlikely that he saw with the clarity which historical hindsight has given us that he was, in Gibbon's words, 'the last of the Romans whom Cato or Tully could have acknowledged for their countryman'. The *Consolation of Philosophy* has often been regarded as the final chapter of ancient philosophy. This book has endeavoured to show that its cultural importance is much wider: when Boethius sought consolation in his captivity, he was also consoled by the idioms and images of Latin poetry, and his own poetry is a late and subtle flowering of that art form." (pp. 236-237)

15. O'Donnell, James J. 2011. "Why Boethius Had to Die." In *"Omnium Magistra Virtutum": Studies in Honour of Danuta R. Shanzer*, edited by Cain, Andrew and Hays, Gregory, 73-92. Turnhout: Brepols.
16. Obertello, Luca. 1981. "Proclus, Ammonius and Boethius on Divine Knowledge." *Dionysius* no. 5:127-164.

"Whoever undertakes to treat of Boethius finds himself in illustrious company. Potentates, churchmen, scholastics, and philosophers have busied themselves with this "last of the Romans."

It would appear that but little remains to be said on such a well worn subject. Much less does it seem fitting in a beginner to essay that little. Yet, as the recent researches of Usener and Brandt and the acute suggestions of Rand have marked an epoch in Boethiana, one may hope to gain still further insight into the character and mode of thought of the author of the *Consolatio*. With this purpose in view, by the help of the so-called stylistic method, I intend to examine the writings of Boethius, in case it may be possible more accurately to place works the dates of which are not yet certain."

(...)

"For a definition of the meaning of stylistic method, and an illustration of its application, I may refer to the well-known work of Lutoslawski, entitled *The origin and growth of Plato's logic with an account of Plato's style and of the chronology of his writings*, 1897." (p. 127)

(...)

"Bearing in mind the foregoing facts, we are now ready to take up our chronological study of the writings of Boethius. Any such research must be based on the painstaking and masterly investigation (1) of Samuel Brandt. Utilizing all the references made by Boethius to his own writings, he has fixed beyond all question the chronology of most of the works.

He has made out an almost complete framework, leaving now and then a gap of more or less uncertainty which, I hope, may

be at least partly supplied by my investigations." (p. 130)

(...)

"Having thus traversed the whole series of Boethius's extant writings, I may briefly recapitulate the results of this examination. The so-called stylistic method is a recognized form of investigation, applied notably in the case of Plato. In any stylistic study of Boethius two traits must be taken into account. There is, first, the influence of translation on his style. Translation tends to explain new phenomena in style. It tends to unification of vocabulary. Its influence is more transient than one might anticipate. The second trait is Boethius's marked desire for variety.

Bearing these influences in mind and basing my study on Professor Brandt's researches as a framework, I have shown that works of a given period agree and works of a different period disagree. Then I classified them stylistically, giving up Professor Brandt's classification, based on subject matter. I have shown that my criteria fit in exactly with all the arguments, inductive and deductive, that Professor Brandt has formulated." (p. 153)

18. Patch, Howard Rollin. 1929. "Fate in Boethius and the Neoplatonists." *Speculum* no. 4:62-72.

"The great figure of the orb of destiny in the Fourth Book of the *Consolatio Philosophiae* is the means used by Boethius to present his unusual conception of a mutable Fate. The stability of the centre is occupied by Providence; all else controlled by the turning sphere is subject to Fate, who, however, by this very fact is also subservient to God. The whole idea, justly famous

and well known to later writers, immediately suggested to many the corresponding idea that Fate's more customarily fickle sister, Fortune, is also subject to God, and thus helped to give us the Christian conception of Fortune.' Brief study will show, nevertheless, that the mutability of Fate is probably not original with Boethius; and the whole passage has been traced, with apparent satisfaction among scholars, to the works of Proclus. It is my intention here to offer a different explanation, and to suggest that more important problems are involved than have so far been appreciated." (p. 62)

20. ———. 1935. "Necessity in Boethius and the Neoplatonists." *Speculum* no. 10:393-404.

"Necessity, one had always supposed, admits of no conditions. Release for man in this fashion is startling, and at first sight the solution may appear like a verbal device to escape from a logical dilemma. But it has a more dignified basis in reasoning than that. As a brief review of its history will show, Boethius did not invent the conception. His originality consisted rather in the way in which he adapted it to his purpose.

A study of the force of necessity in the scheme of things, as he saw it, will show that in his references to the frame of nature and the power of fate he is loyal to most of its implications and shows no willingness to ignore them. (3) For his sufferings in prison the idea would have afforded him a natural consolation. But his courage was too great and his moral integrity too vigorous to let the question rest there, and he pressed his search further until he found justification for a belief in some degree of human freedom although that also implies moral responsibility. In fact he obviously strove to justify such responsibility together with its appropriate reward of pleasure or pain. In his debate he was guided partly by the treatise *De Providentia et Fato* of Proclus; I have elsewhere pointed out hints for the plan of his discussion that were available to him there.¹ But he added material from other sources, and Proclus

did not give him his present solution. The process by which his theory of conditional necessity was first thought of and then elaborated may be possible to discover. In following something of the distinguished history of the phrase we may actually have the opportunity of seeing Boethius at work, and, although the centuries that intervene since his day must make anyone cautious about jumping at conclusions, some light may be thrown on his method in composing the book." (pp. 393-394)

23. Pessin, Sarah. 1999. "Hebdomads: Boethius Meets the Neopythagoreans." *Journal of the History of Philosophy* no. 37:29-48.

"The thesis of this article is three-fold. First, I suggest, uncontroversially, that Boethius was in many ways influenced by Neopythagorean ideas. Second, I recommend that in light of our appreciation of his Neopythagorean inclinations in at least some of his writings, we understand his esoteric reference to the "hebdomads" — at the outset of his treatise often called by that name — as a reference to something Neopythagorean. This I suggest in light of the fact that, as I will discuss, the "hebdomad" plays an important role within the Neopythagorean literature of Nicomachus of Gerasa, an author with whose writings Boethius was intimately familiar. Lastly, I suggest— following Dillon's analysis of the Triad and the Hebdomad within Nicomachus' works [*] — an interpretation of the 'hebdomad' within the Neopythagorean corpus which, if correct, would make appropriate Boethius' reference to it at the outset of a treatise on the nature of God and creation." (p. 29)

25. Phillips, Edward Philip. 2001. "Boethius's *De Consolatione Philosophiae* and the *Lamentatio/Consolatio* Tradition." *Medieval English Studies* no. 9:5-27.

 Abstract: "While some critics argue that Boethius's *De Consolatione Philosophiae* participates in the tradition of Menippean satire, this paper maintains that Boethius's masterpiece is primarily a consolation that employs topics of the *lamentatio/consolatio* tradition in order to dramatize the fallen narrator's educational journey from despair to hope, a journey facilitated by Lady Philosophy, who assumes the significant roles of Socratic teacher and spiritual physician. The paper argues, furthermore, that the *Consolation* is not a bitter, satirical work but rather a work of philosophical optimism whose consolation, both for the grieving narrator and for the reader, is based upon the premise that the universe is governed by eternal reason, a belief initially "forgotten" by the narrator but eventually restored through the application of Lady Philosophy's "gentler" and "stronger" remedies."

Reprinted in Manfred Fuhrmann und Joachim Gruber (Hrsg.), *Boethius*, Darmstadt: Wissenschaftliche Buchgesellschaft, 1984, pp. 249-277.

"Hermann Usener whose justly admired interpretation of the *Anecdoton Holderi* (*) has done more than any single publication toward restoring Boethius to his rightful place among the Christian theologians, suggests in this work a theory with regard to the composition of the *Consolatio*, to which nobody hitherto has devoted the consideration it deserves." (p. 1)

(...)

"The object of the present paper is not to attempt an ultimate determination of the various writings from which Boethius drew inspiration, but merely, as a precursor to such a study, to discuss Usener's theory regarding the composition of the *Consolatio*, Naturally we may best approach our subject by examining in turn the four elements into which Usener analyzes this work— the poetry, the prose introduction, the chapters from Aristotle's *Protreptikos*, and the Neoplatonic section." (pp. 3-4)

(...)

"The *Consolatio* does not, like the *Opuscula Sacra*, deal directly with problems of Christian theology, but it is the work of a Christian theologian who holds fast the distinction between *fides* and *ratio*. There are naturally no traces of Christian doctrine in the *Consolatio*, for the reason that Philosophy speaks and not Faith. Boethius is trying by the unaided effort of the reason to establish a theodicy for which revelation has its own proofs, and for this reason, inevitably, recurs to the utterances of the schools and not the councils. But, be it noted, the solution at which he arrives, though expressed consistently in terms of Philosophy, is at one with the conclusion of Theology: reason could not prove something contradictory of faith. (1) Sometimes we meet a doctrine that would not have been accredited by St. Thomas (that of the world's perpetuity, for instance), because it had not been definitely excluded from

orthodoxy when Boethius wrote. (2) Sometimes Boethius includes what would doubtless have been dangerous in contemporary theology, as, for instance, the Neoplatonic imagery in 5, pr. 2. But these are matters of detail. The general scheme of the *Consolatio* is in harmony with Christian theology.

Nor need we ponder why Boethius chose a philosophical rather than a theological consolation in his last hours. Schrockh remarks, (3) "Unwürdig waren sie (i. e. philosophische Trostgründe) doch eines christlichen Gelehrten nicht. Es sind sehr nahe mit seiner Religion verwandte Gründe; es ist der letzte und edelste Erfolg seiner vieljährigen philosophischen Untersuchungen." The fundamental aim of the work is to make the language of philosophy approach as closely as possible to the meaning of faith; for Boethius was neither a Pagan, nor a cold eclectic, nor a dilettante reviser of others' texts, but the first of the scholastics." (pp. 27-28)

"For all of his acknowledged importance in the development of Western thought and literature, however, Boethius is at present hardly a household name in either Europe or America. It is difficult to think of any other literary figure who has plummeted from such heights of prestige to such depths of oblivion. Whereas from the Middle Ages to the nineteenth century every educated person in the Western world knew Boethius's name, now he is virtually unknown to all except advanced students of classical and medieval thought and literature. Because of this neglect, which has come about only in the twentieth century, it is necessary to insist on a greatness that would otherwise seem obvious. Still, Boethius is too important—and too interesting—to be known only by the few who have had occasion to come to him through their study of something else.

The principal barrier facing anyone wishing to study Boethius is not so much the remoteness of his age or the difficulty of his language—real as these hurdles are—but the need for expertise

in mathematics, music, logic, rhetoric, theology, metaphysics, and poetry; and few modern scholars possess Boethius's breadth and depth of knowledge. Though readers of Boethius may find common ground in the *Consolation of Philosophy*, those interested in the thought and poetry, for instance, are not likely to make the effort to study the scientific and logical treatises. Understandable as this may be, the result is the present fragmented state of Boethian studies where historians, students of literature, logicians, theologians, musicologists, and medievalists concentrate on writings pertinent to their individual fields and have little to say to those working in the other areas. While the bibliography of scholarly writings on Boethius is large, few articles or books are concerned with his total literary output. For instance, the last full-length study in English of Boethius—published forty years ago—includes only two pages on the scientific writings and three pages on the logical works.

Although as a student of literature I cannot pretend to have the expertise or the interest necessary for explicating Boethius's more technical and arcane treatises, I can at least try to make clear what each of these works is doing and relate them to each other in such a way that modern readers may acquire a sense of their meaning and accomplishment. And I can certainly suggest some of the many reassessments of Boethius and his work that have come about in the last forty years. My purpose is to introduce Boethius to the student and the general reader and to reaffirm his achievements and importance. While my particular interests are in understanding the interrelationship of the different writings and in examining how the *Consolation of Philosophy*, detached from the legend of Boethius the martyr, functions as a finely wrought piece of literature, I have tried to say something—and in some cases something new—about each work.

Chapter 1 concerns Boethius's early life and scientific writings; Chapter 2, his logical treatises; and Chapter 3, his theological tractates. Chapter 4 examines his later life and its relationship to the *Consolation of Philosophy*; Chapter 5, the argument of the *Consolation*; and Chapter 6, Boethius's patterning of his

- material in this work. Finally, Chapter 7 looks briefly at Boethius's legacy and its importance to the Western world." (pp. IV-V)

"Both response and resistance to a dozen years of scholarly activity have proved fruitful. A number of works appeared immediately after the publication of *Ancient Menippean Satire* [Baltimore: Johns Hopkins University Press, 1993]"

(...)

"Classicists and medievalists may be surprised to discover how popular the term Menippean satire has become in discussions of modern literature, and how many works have been claimed to fall under its influence, among them *Tristram Shandy*, *Moby Dick*, and *Gravity's Rainbow*. Such contemporary critical approaches to the genre offer welcome insight into the

intellectual enterprise of *Consolation*, but Boethius rarely finds a place in them."

(...)

"Granted, *Consolation* is awkwardly poised between the usual traditions and divisions of Western literature, but the fundamental problem is the general lack of recognition that *Consolation* is critical of the intellectual synthesis that it both presents and undermines, that it is both philosophical and ironic. I wish to place *Consolation* in the genre's vital center, which I understand more in terms of the parody of encyclopedic knowledge than in the exaltation of polyphony; my debts to Northrop Frye's anatomy are ultimately greater than those to Bakhtin. The questions that need to be raised and answered about *Consolation* have to do with plot and intertextuality, with irony and the presentation of wisdom, with literary history and a many-branched reception. Modernists must be called to take Boethius into account; classicists must be urged not to allow their knowledge of late antiquity and its philosophical and religious traditions to determine the interpretation of the text, but to let an understanding of the Menippean *Consolation* modify their understanding of late antique culture."

(...)

"I used to rake the Christian presence in *Consolation* more as a latent thing, as the path not taken, as the way out of Philosophy's labyrinth that is hinted at but never achieved. But, emboldened by the work of others, I now see it much more actively at work—the prayer advocated at the end is not the philosophical path to God that Philosophy had earlier intended the prisoner to travel, but a different, Christian path that the prisoner chooses, offered grudgingly by a Philosophy forced to admit that her intended approach does not quite satisfy or console this particular patient, a Philosophy who wanted to lead but who ultimately only can point him to his true home. Boethius is truer to Plato by not being as optimistic as Augustine: there is no logical path, and certainly no trivial or quadrivial path, that leads from the world of human logic and

perception to the divine realm. What is most remarkable about *Consolation*, in its relation to Platonic and Christian worlds, is that the author tries so hard to resist apocalypse, and that the narrator is neither an Er nor a Scipio nor a St. John nor a Plotinus. After all of its intellectual heavy weather, *Consolation* is about humble access to God through prayer, not revelation." (from the *Preface*, IX-XI).

37. Rijk, Lambertus Marie de. 1988. "On Boethius' Notion of Being. A Chapter of Boethian Semantics." In *Meaning and Inference in Medieval Philosophy. Studies in Memory of Jan Pinborg*, edited by Kretzmann, Norman, 1-29. Dordrecht: Kluwer.

Reprinted as chapter I in: L. M. de Rijk, *Through Language to Reality. Studies in Medieval Semantics and Metaphysics*, edited by E. P. Bos, Northampton: Variourum Reprints, 1989.

"From Parmenides onwards, ancient and medieval thought had a special liking for metaphysical speculation. No doubt, speculative thought was most influentially outlined by Plato and Aristotle. However, what the Christian thinkers achieved in metaphysics was definitely more than just applying and adapting what was handed down to them. No student of medieval speculative thought can help being struck by the peculiar fact that whenever fundamental progress was made, it was theological problems which initiated the development. This applies to St Augustine and Boethius, and to the great medieval masters as well (such as Anselm, Thomas Aquinas, Duns Scotus). Their speculation was, time and again, focused on how the notion of being and the whole range of our linguistic tools can be applied to God's Nature (Being).

It is no wonder, then, that an inquiry into Boethius's notion of being should be concerned, first and foremost, with his theological treatises, especially *De hebdomadibus*.

(...)

My final section aims at showing how Boethius's notion of being is clearly articulated in accordance with his semantic distinctions. This is most clearly seen in the main argument of *De hebdomadibus* where they may be actually seen at work.

As is well known, the proper aim of *De hebdomadibus* is to point out the formal difference between *esse* and *esse bonum*, or in Boethius's words: 'the manner in which substances *are good* in virtue of their *being*, while not yet being substantially good' (38.2-4). Its method consists in a careful application of certain formal distinctions, viz.:

(a) The distinction between an object 'when taken as a subsistent whole and *id quod est* = the constitutive element which causes the object's actually' being; it is made in Axiom II and used in Axiom IV.

(b) The distinction (closely related to the preceding one) obtaining between the constitutive element effecting the object's actual being (*forma essendi*, or *ipsum esse*) and the object's actuality as such (*id quod est* or *ipsum est*); it is made in Axioms VII and VIII.

(c) The distinction between *esse* as 'pure being' (= *nihil aliud praeter se habens admixtum*), which belongs to any form, whether substantial or incidental, and *id quod est* admitting of some admixture (lit. 'something besides what it is itself'); it is made in Axiom IV and in fact implies the distinction between *esse simpliciter* and *esse aliquid*.

(d) The distinction between 'just being some thing', *tantum esse aliquid*, and 'being something *qua* mode of being'. It is made in Axiom V and used in Axiom VI and is in fact concerned with a further distinction made within the notion of *id quod est*. It points out the differences between the effect caused by some form as constitutive of being *some* thing and that caused by the main constituent (*forma essendi*) which causes an object's *being simpliciter*.

(e) The distinction between two different modes of participation, one effecting an object's *being subsistent*, the other its being *some* thing, where the 'some thing' (*aliquid*) refers to some (non-subsistent) quality such as 'being white', 'being wise', 'being good', etc.

The application of these distinctions enables Boethius to present a solution to the main problem: although the objects

(*ea quae sunt*, plural of *id quod est*) are (are good) through their own constitutive element, *being* (*being good*), nevertheless they are not identical with their constitutive element nor (*a fortiori* with the IPSUM ESSE (BONUM ESSE) of which their constituent is only a participation." (pp. 1 and 22-23).

38. ———. 2003. "Boethius on *De interpretatione* (ch. 3): is he a reliable guide?" In *Boèce ou la chaîne des savoirs*, edited by Galonnier, Alain, 207-227. Louvain-Paris: Éditions Peeters.

"There can be no doubt whatsoever about Boethius's exceptional merits for transmitting Aristotle's logic to us. But while 'Aristotelian' logic is in many respects synonymous with 'Aristotelico-Boethian' logic, the question can be raised whether Aristotle himself was an 'Aristotelian'. To give just one example: from Lukasiewicz onwards there has been much debate among scholars about the telling differences between traditional syllogistic and that of the *Prior Analytics*. (1)

In this paper I intend to deal with two specimens of Boethius's way of commenting upon Aristotle's text. They are found in his discussion of *De interpretatione*, chapters 2 and 3, which present Aristotle's views of *ónoma* and *rhema*. (2) One concerns the semantics of indefinite names, the other that of isolated names and verbs." (p. 227)

(1) Jan Lukasiewicz, *Aristotle's Syllogistic from the Standpoint of Modern Formal Logic*, Oxford, 1951. G. Patzig, *Aristotle's Theory of the Syllogism. A Logico-Philological Study of Book A of the Prior Analytics*, Dordrecht, 1969.

(2) *Rhema* properly stands for 'what is said of', including not only our 'verb' but also adjectives, when used in attributive position. One should realise, however, that 'verb' refers to a word class, rather than a semantic or syntactical category, as *rhema* does.

(...)

"Conclusion.

Returning now to Boethius' manner of commenting upon Aristotle's texts, the following points can be made:

[1] In the wake of Ammonius, (3) Boethius explains [De int.] 16b22-25 on the apophantic level, i.e. in terms of statement-making, instead of framing significant concepts, i.e. on the onomastic level.

[2] Whereas in Ammonius' report of the predecessors, Alexander and Porphyry, as well as his own exposition of the issue, there are many clues to the previous alternative reading and interpretation on the onomastic level, Boethius does not even refrain from cleansing the text (including his 'quotations'), by changing, at any occurrence, '*ens*' into '*est*'.

[3] In doing so, Boethius decisively influenced the commentary tradition on account of the purport of De int. 3, 16b19-25. He effectively contributed to the common verdict on this paragraph in terms of 'a curious medley'.

[4] As far as the semantics of the indefinite verb (3, 16b14-15) is concerned, Boethius' apparently adhering to the so-called 'Ammonii recensio' was far less disastrous for the common understanding of Aristotle on this score, and, in effect, merely provided us with some stimulating Medieval discussions of the semantics of term infinitation.

[5] Finally by way of speculative surmise, it might be suggested that both the fact that Boethius dealt with the 'Ammonii recognise' without reading it in his lemma of 16b14-15, as well as his rather ruthlessly interfering in the quotations of the pre-Ammonian sources, should make it more plausible that Boethius had extensive, but incomplete marginal notes to his Greek text of Aristotle at his disposal, rather than a full copy of Ammonius' commentary (or those of other Greek commentators).

To comment upon Aristotle's work naturally includes developing his lore. But nothing can ever guarantee that this will happen *ad mentem auctoris*. (4)"

(3) It is unmistakably plain that in *De int.* ch. 3, Boethius is strongly influenced by what he read in Ammonius (or in marginal notes on Ammonius' view).

39. Rogers, Katherin. 2011. "Defending Boethius: Two Case Studies in Charitable Interpretation." *International Philosophical Quarterly* no. 51:241-257.

Abstract: "Among those who study medieval philosophy there is a divide between historians and philosophers. Sometimes the historians chide the philosophers for failing to appreciate the historical factors at work in understanding a text, a philosopher, a school, or a system. But sometimes the philosopher may justly criticize the historian for failing to engage the past philosopher adequately as a philosopher. Here I defend a philosophically charitable methodology and offer two examples, taken from John Marenbon's book *Boethius*, as instances where exercising more philosophical charity would likely have resulted in more adequate or complete interpretations. The examples are taken from Marenbon's analyses of the conclusion of Boethius's discussion of freedom and divine foreknowledge and of Boethius's argument against Euthyche's understanding of the Incarnation."

"The specific aesthetic structure of the *Consolation* has until recently been ignored. Earlier commentary on its structure

tended to stress the generic influence of such classical forms as “consolation literature” (Cicero, Seneca), “incentives to philosophy” (Aristotle, Cicero), and “Menippean satire.” Emphasis on these genres has inevitably carried with it the implication that a hard center of thought and feeling must be made palatable by presentation in a leisurely style. Even E. K. Rand’s admiring consideration of the *Consolation* occasionally threatens to slip into the diminutive: “To vary the presentation, to break the flow of dialogue, a number of little poems are interspersed —thirty-nine in all—which now sum up the argument of the preceding prose section, and now themselves carry it on.”⁽¹⁾ While the leisurely element of the work should be recognized, the words of Boethius in *Quomodo Substantia* should be remembered: “[I] would rather bury my speculations in my own memory than share them with any of those pert and frivolous persons who will not tolerate an argument unless it is made amusing.” The “leisure” of the *Consolation* might be more accurately described as the grace with which Boethius presents a rigorously premeditated structure. It is in part by understanding the logic of that structure, its aesthetic integrity, that the passion of the author’s conviction and the power of his *Consolation* are made accessible to the contemporary reader.

As this essay will show, the structure of the work reflects and sustains the idea of the work. The circular relation of form and content is immediately suggested by the title “consolation of philosophy”: Philosophy originally consoles Boethius (book 1) so that he will be receptive to philosophy, by means of which he may eventually attain philosophy and so be consoled (book 5). Philosophy is the cause of its own consummation; philosophy is the cause of the consummation of consolation; consolation is the cause of its own consummation; consolation is the cause of the consummation of philosophy. Knowledge and happiness are one in the co-incidence of form (cause) and idea (end). The consistency with which form recapitulates idea will be shown after first suggesting Boethius’s attitude toward this circularity.” (pp. 92-93, notes omitted).

49. Simpson, Peter. 1988. "The Definition of Person: Boethius Revisited." *The New Scholasticism* no. 62:210-220.

"*Persona est rationalis naturae individua substantia*. So runs the classic definition of Boethius. (1) But is it a definition that is still of value? Or, to put it another way, is this the sort of definition that will serve for a philosophy of persons?

Certainly it is not Boethius's definition that is operative in contemporary discussions about persons. (2)" p. 210

(...)

"In conclusion then, I think it may be said that Boethius's definition is by no means an obvious non-starter for the philosophy of person. In fact in many respects it may be the

best one. In which case a philosophy of person grounded on that definition is going to be

more accurate and more compelling than others. It will also direct attention back to key ideas such as nature, reason and substance, that are in particular need of close analysis, and which may yield more fruitful results than even the term 'person' by itself, or any of the moral and other features mentioned earlier. Such a philosophy of person may prove to be a better way to sort out the problems of person than any current alternative." (p. 220)

(1) "A person is an individual substance of a rational nature." The definition is given in Boethius's *Liber de Persona et Duabus Naturis*, ch. 3.

(2) It is notable that the most recent article on persons in *The New Scholasticism* rather summarily dismisses Boethius: D. O Dahlstrom, "Personal Pleasure", *The New Scholasticism*, LX, 1986, pp. 276- 277. I respond to this article later.

50. Sommaggio, Paolo. 2005. "Boethius' Definition of Persona: A fundamental Principle of Modern Legal Thought." In *Epistemology and Ontology. IVR-Symposium Lund 2003*, edited by Bankowski, Zenon, 163-170. Stuttgart: Franz Steiner.

"The definition is set out in the *Opuscula Sacra*, which with all probability date back to 512. Amid the conflicts that followed the Council of Calcedon. and therefore in a period dense with intricate political and religious events, Boethius wrote these *Opuscula*. As he did so, he addressed the problem of giving rigorous definition to the concept of person.

The first of the *Opuscula* was *De Trinitate*, the second *Utrum Pater et Filius et Spiritus Sanctus substantialiter praedicentur*, the third *De hebdomadibus (Quomodo substantiae in eo quod sint bonae...)*; the fourth *De fide catholica*, and the fifth the *Liber de persona et duabus naturis contra Eutychem et Nestorium*, thereafter known more simply as *Contra Eutychem et Nestorium*.

The most interesting of the *Opuscula* for my purposes here is the last of them, because it contains the definition of person

that made Boethius famous in his own lifetime (5).

The Council of Calcedon had laid down the celebrated formula that in Christ there are two natures and one person. In the introduction to his *Treatise*, Boethius points out that the premises established by the Council lead only to four possible conclusions: 1. that in Christ there are two natures and two persons, as Nestorius maintained; 2. that there is one nature and one person, as Eutychus claimed; 3. that there are two natures and one person, as the Catholic faith affirmed; 4. that there is one nature and two persons - though this conclusion, Boethius wrote, was so nonsensical that no heresy affirmed it. Boethius' main concern was to structure his work with clear and unambiguous language.

According to Boethius, it is entirely legitimate to enquire as to the unitary definition of the term person, in that the philosophy and theology of ancient Christianity had failed to give it a precise definition. In order to understand what was meant by the word, he analysed the concept of nature which, in fact, has a broader meaning than person and to some extent is its *genus proximus*." (p. 166)

(5) Boezio, *Contra Eutychem et Nestorium*, PL 64 1343, Caput III, 1-6. 'Quocirca si persona in solis substantiis est atque in his rationibus, substantiaque omnis natura est, nec in universalibus sed in individuabilibus sed in individuis constat, reperta personae est igitur definitio: persona est naturae rationa(bi)lis individua substantia'. 52. Spade, Vincent. *Boethius against Universals: Arguments in the Second Commentary on Porphyry* 1996.

Available on-line at pvspade.com/Logic/docs/boethius.pdf

"Apart from his *Consolation of Philosophy*, perhaps the most well known text of Boethius is his discussion of universals in the *Second Commentary on Porphyry's Isagoge*. In that passage, he first reviews the arguments for and against the existence of universal entities, and then offers a theory he attributes to Alexander of Aphrodisias, a kind of theory called in recent times "moderate realism," according to which there are no universal entities in the ontology of the world, but nevertheless there is an objective, non-arbitrary basis for the formation of our universal or general concepts about that world. At the very end of the passage, Boethius adds the intriguing comment that he has presented this view not necessarily because it is his own, but because it is the one that fits Aristotle's doctrine the best, and Porphyry's *Isagoge*, the work Boethius is commenting on, is intended after all as an introduction to Aristotle's *Categories*. (2)

There are many interesting things about this passage, not the least of which is that it is an early example of a form that would later be codified in the scholastic *quaestio*: a yes/no question is stated (or in general some question expressed in terms of an exclusive dichotomy), then arguments are presented on both sides, pro and con, the author gives his own answer to the question, and finally (although this part of what would become the classic form is missing from Boethius' discussion) the arguments for the losing side of the question are answered.

I do not intend to discuss the whole of Boethius' passage in this paper, and in fact will not even be saying very much about Boethius' own theory of universals in the passage — if indeed it contains his own theory. What I want to focus on instead is just one part of the discussion's *quaestio* structure: the preliminary statement of the case against universals." (pp. 1-2, note 1 omitted)

53. Speer, Andreas. 2011. "The Division of Metaphysical Discourses: Boethius, Thomas Aquinas and Meister Eckhart." In *Philosophy and Theology in the Long Middle Ages: a tribute*

to Stephen F. Brown, edited by Emery, Kent jr., Friedman, Russell L. and Speer, Andreas, 91-116. Leiden: Brill.

"When one considers the history of metaphysics in the Latin West, there is at least one important forerunner, Boethius, who not only had provided the Latin speaking community up to the middle of the twelfth century with its only Latin translations of Aristotelian writings, namely of the *Organon* with the exception of the *Posterior Analytics*. Moreover, in his 'theological treatises', especially in the second chapter of his *Liber quomodo Trinitas unus Deus ac non tres Dii* (or *De sancta Trinitate*), he displays the division of the three theoretical sciences according to Book *E* of Aristotle's *Metaphysics*. (3) In the twelfth century especially this *divisio philosophiae* became the point of reference for the epistemological enterprise, notably in the 'Chartrian' and 'Porretanean' schools, to establish a *scientia naturalis* based on reason and argument alone, and to establish theology as a deductive science, which proceeds more geometrico in a strong axiomatical order and provides the highest and most common principles (*maximae* or *rationes communes*) for the other sciences." (p. 93)

(...)

"According to McInerny, Boethius fits with Thomas' endeavour to reconcile the thought of Aristotle and Christian faith; in fact, according to McInerny, "Boethius taught what Thomas said he taught." Therefore, as McInerny concludes, "the Thomistic commentaries on Boethius are without question the best commentaries ever written on the tractates". (6) This completely a-historical construction, which finds its expression in the dictum "sine Thoma Boethius mutus esset" (coined after Pico's famous dictum "sine Thoma mutus esset Aristoteles" (7)), not only ignores the important commentary-tradition of the twelfth century but also overlooks the fact that Thomas, who surprisingly enough composed the only thirteenth-century commentaries on two of Boethius' theological treatises (*De hebdomadibus* and *De Trinitate*, unfinished), (8) fundamentally dismissed the underlying idea of Boethius'

metaphysics. Here we come face-to-face with a division of metaphysical discourses. According to one 'progressive' narrative of the history of metaphysics, it would appear that at this dividing of the ways Thomas had successfully relegated Boethius' conception to "the dust-bin of history", as it were. But the story does not end here and has an unexpected sequel, when at the very beginning of the fourteenth century Meister Eckhart, in explaining his understanding of the first of the Aristotelian theoretical sciences, resumes the Boethian intuition and once more equates metaphysics and theology." (p. 94)

Abstract: "Anicius Manlius Seuerinus Boethius has been regarded one of the major sources of Platonism in the Middle Ages, and the influence of different Platonists on his thought has been widely discussed. In his Aristotelian commentaries, however, Boethius rejects Platonists' opinions while saying that Aristotle and Plato essentially agree. Boethius may have intended to show the agreement he saw, but did not provide any explanation in his works. In this article, I consider how Boethius could have seen such an agreement. While reexamining past remarks about Platonism in Boethius, I conclude that he adopts Porphyry's view that Aristotelian logic functions as a step toward the metaphysical appreciation of the universe, which Platonists consider to be the most essential form of philosophy. However, Boethius follows Iamblichus in holding that the highest level of metaphysical appreciation involves mathematization."

In *The Torn Robe of Philosophy: Philosophy as a Woman in The Consolation of Philosophy by Boethius*, edited by Thorgeirsdottir, Sigridur and Hagengruber, Ruth Edith, 83-95. Cham (Switzerland): Springer.

Abstract: "Symbolic figures like Sophia, Philosophia or Lady Reason represent feminine features in texts of the Western philosophical tradition that are often overlooked in their later interpretations. *The Consolation of Philosophy* by Boethius (480–524), one of the most widely read philosophical texts of medieval times, includes a dialogue between the imprisoned Boethius who awaits his death sentence and Philosophia, a

feminine personification of philosophy. In my interpretation of Philosophia, I analyze how the practice of philosophy she and Boethius stage in this text consists of working with and reflecting on the difficult emotions he struggles with. This argument is based on how ancient meanings of the noun sophia include practical, embodied, and sensual knowledge and not only theoretical knowledge. My interpretation hence involves underscoring feminine elements of philosophical reasoning that includes embodiment and emotions. Philosophia resurfaces in many philosophical texts, such as in Christine de Pizan's *The Book of the City of Ladies* (1405), one of the greatest feminist books of the middle ages, where Lady Reason teaches the author to help her trust her feelings and judgements about women."

60. Torrijos-Castrillejo, David. 2020. "Divine foreknowledge and providence in the commentaries of Boethius and Aquinas on the *De interpretatione* 9 by Aristotle." *Biblica et Patristica Thoruniensia* no. 13:151-173.

Abstract: "Boethius represents one of the most important milestones in Christian reflection about fate and providence, especially considering that he takes into account Proclus' contributions to these questions. For this reason, *The Consolation of philosophy*

is considered a crucial work for the development of this topic. However, Boethius also exposes his ideas in his commentary on the book that constitutes one of the oldest and most relevant texts on the problem of future contingents, namely Aristotle's *De interpretatione*.

Although St. Thomas refers to Boethius many times in his systematic works and even devotes two commentaries to two of his theological opuscles, it is of special interest that both authors composed a commentary on the abovementioned work by Aristotle. The commentary of Saint Thomas does not interpret the whole book, but it does study the pages about future contingents in dialogue with Boethius. We will study such texts in our presentation. They constitute one of the greatest contributions of Aquinas to the problem of necessity

and contingency and therefore to the *vexata quaestio* of divine intervention in the world and particularly in human free will. Not only Augustin but also Aristotle (read by Boethius) and Nemesius of Emesa will be decisive in Aquinas' perception of this matter."

"Boethius, the Roman Boethius, the philosopher Boethius, invented himself as a theologian and invented, as well, Scholastic theology, as St. Thomas recognised in his commentary on the first Boethian theological treatise. Quoting Father Marie-Dominique Chenu, we can say that after Boethius: Theology is a science. The best medicine against Augustine and the poison of his deep pessimism.

1. Boethius inventing Boethius

But Boethius invented himself in another way, becoming, for the second time, the best antidote against Augustine, because he invented his death. The execution of an innocent was more than a crime: it was a murder, the murder of the "Civilization", the murder of the last philosopher of Antiquity as well as the last of the Romans." (p. 218)

".A highly controversial problem is: whence did Boethius derive his Greek culture, from Athens, from Alexandria, - or have we to imagine that he simply worked in his library in Rome?

[Follow an examination of the opinions of Courcelle, Minio-Paluello, Shiel and de Rijk: Courcelle thinks that Boethius studied at Athens, the other authors are of the contrary opinion.]" (p. 49)

(...)

Summing up the result of this part of my inquiry I think I can make the following modest statements.

(1) On the basis of contemporary evidence it must be accepted as certain that Boethius spent his school years in Athens, say from the age of 9 or 10 up to about 17 or 18.

(2) It is very probable that immediately after that period he was Ammonius' student at Alexandria, from the age of 17 or 18 till about 20.

(3) Taking into the account that he was extremely precocious it is probable that he returned to Rome as early as the year 500 or a little later. There and about that date he composed the first of his mathematical treatises, the *Institutio arithmetica* and followed it up by the other three.

To these three points I add a fourth, concerning the period in which Boethius' other works were written. In the preceding pages I did not discuss the important article of C. H. Coster on *The fall of Boethius*, (34) which did not touch on my subject. However, the present account of Boethius' younger years which brings us up to the beginning of his own works may be duly concluded by a correction of the traditionally accepted final term of his life and work. I think that Coster's above-cited paper offers the grounds for such a correction. By a careful analysis of the contemporary sources the author comes to the conclusion that the execution of Boethius and Symmachus must have taken place in the summer of 526, shortly before Theodoric's death. If that is correct- and I think Coster's

arguments are solid -, the framework into which the list of Boethius' works is to be fitted will be enlarged by two years. Since a few years ago Dr. De Rijk drew up such a list in the

pages of the present Journal, (35) it may not be out of place to mention the result of Coster's research at the end of this study.

What I have not done in these pages but wish to do in the next number of this Journal, is to reconsider Boethius' argument in the *Consolatio* more closely from the point of view of what does and what does not correspond to his own convictions." (pp. 65-66)

"So to Boethius, as it had been to St. Augustine, true philosophy and Christian faith tended in the same direction. To Augustine Christian faith had been the fulfilment of that which philosophy had promised.

He did not identify them. Did Boethius?" (p. 2)

(...)

"In fact, Courcelle thinks that Boethius tried to give a kind of synthesis of the Alexandrian Neoplatonism of Ammonius and Christianity, in the same way as later St. Thomas Aquinas proposed a synthesis of Aristotle's philosophy and Christian theology without mixing up the fields of reason and faith. Thus, we can understand that such an expression as the "prima divinitas", even on the lips of Philosophia, appears a lapsus to Courcelle. On the whole, again, I think his view of Boethius is right: in fact, the "last of Romans", who was a Christian, spent his life in the Neoplatonic philosophy of his age, and he did so rather technically. Even in his theological treatises he tackled the problems as a philosopher, applying the distinctions of Aristotle's logic to the terms used in theology.

Was it so strange then, that to him, when in prison, philosophy appeared to have a word to speak, a word which must have appealed to him the more since its tendency was in agreement with what he believed as a Christian.

No doubt this is the main-point. But there are a few unsettled problems. I wish to dispose them under the following three points.

1. Are there any clearly Christian features in the *Consolatio*? And if so, where and which are they?

2. What about the *loci sacrae Scripturae*, gathered by Fortescue and mentioned as parallels in Bieler's new edition of the *Consolatio*? Are all of them either vague parallels or just a matter of coincidence, or will there be found one or two cases in which a very peculiar biblical thought or expression occurs in the *Consolatio* in precisely the same form? This would be an interesting thing to us. I think it has to be carefully checked.

3. In which form do the "pagan", non-Christian elements present themselves in the *Consolatio*? Are they confined to the part in which Philosophia is speaking, or do they sometimes occur in our Christian-philosopher's own part as well? Another question might be raised in this context: is it necessary to believe that Boethius accepted every word spoken by his Mistress without any reservation, or can he be supposed to have had some reservations with regard to certain details of her teaching?" (p. 3)

67. ———. 1972. "Amor, quo caelum regitur." *Vivarium* no. 1:2-34.

68. ———. 1973. "The Problem of Philosophy and Christian Faith in Boethius' *Consolatio*." In *Romanitas et christianitas. Studia Iano Henrico Waszink A.D. VI Kal. Nov. A. MCMLXXIII XIII lustra complenti oblata*, edited by den Boer, Willem, 357-370. Amsterdam: North-Holland.

Reprinted in Manfred Fuhrmann und Joachim Gruber (Hrsg.), *Boethius*, Darmstadt: Wissenschaftliche Buchgesellschaft, 1984, pp. 286-301.

"Boethius, a catholic Christian, fallen in disgrace with the East Gothic king Theodoric, lies there in prison, bereft of all his earthly goods - his family, his friends, his home, his library and whatever comfort a well-to-do and cultivated man may be used to have at his disposal. What is left to a man in such a situation? When he is a deeply believing Christian, there is Christ and God -, nearer to him now by that very state of bereavement in which he finds himself. So the reader who takes up the *Consolatio*, might expect to find there a man who, outwardly speaking bereft of everything, turns to Christ and in Him feels himself near to God, nearer than ever, and thus at the bottom of his heart more and more quiet and at last, through the Light of the divine Presence, unutterably blessed.

Nothing of that in Boethius. Nor is there with him that perfect serenity and indifference towards earthly things which we find with Socrates on his last day, in prison and waiting for execution. Boethius is depressed, deeply depressed. At first, he seeks for some relief in the company of the Muses: he tries to give utterance to his grief in poems. But then, the majestic figure of Philosophy appears to him, and it is hers to draw his heart from earthly things - those seeming but no real goods - upward to the one and true Good which is not here but "yonder".

So she does, and she does precisely according to the rules laid down for such a case by the philosopher Plotinus in that well-known first treatise of the fifth *Ennead* which opens with the question: "How does it come about that so many souls have forgotten God, their Father, and do not know any more whence they are?" Plotinus replied: these souls have turned to perishable things and attached a real value to them, thus, [358] in fact turning away from the true value. To the question of how to cure a man who is in this state of mind Plotinus replied: "That must be done by two kinds of λόγοι, one of which has to explain the non-value of those things in which that man has now put his trust, while the other must bring home to him what real value is and whence the soul takes its origin." I noted elsewhere (1) that this is precisely the diagnosis and the therapy

which Philosophia applied to Boethius in *Cons.* 1, pr. 6, 28-40 Bieler (the diagnosis) and the books II and III (the therapy).

Philosophia offers her consolation in the language suiting her person. Hence, we shall not wonder so much at finding in her lessons certain elements which have undoubtedly more to do with Plato or with Proclus than with Christ. (2) The presence of such elements in the *Consolatio* is, so to speak, known to everyone. What is perhaps less known is: that in these same lessons there are certain elements of syncretism, for instance, in that same Neoplatonic hymn *O qui perpetua*, where the *summum bonum* of philosophy is identified with the Creator of the world, - an identification which is neither found in Plato nor in Proclus or any other Neoplatonist. For the rest, the very formula *terrarum caelique sator* stems from Roman poets, not from Genesis." (pp. 357-358)

(1) In 'Boethiana I', *Vivarium* 9, 1971, 55.

(2) Such elements can be found, e.g. in the famous Neoplatonic hymn to the Good, *O qui perpetua* (*Cons.* 3, m. 9), which was again and again commented on in the Middle Ages, and was excellently treated by Fr. Klingner, *De Boethii Consolatione Philosophiae*, Berlin 1921; repr. 1966.

70. Walz, Matthew D. 2011. "Stoicism as Anesthesia: Philosophy's "Gentler Remedies" in Boethius's *Consolation*." *International Philosophical Quarterly* no. 51:501-520.

Abstract: "Boethius first identifies Philosophy in the *Consolation* as his *medica*, his "healer" or "physician." Over the course of the dialogue Philosophy exercises her medical art systematically. In the second book Philosophy first gives Boethius "gentler remedies" that are preparatory for the "sharper medicines" that she administers later. This article shows that, philosophically speaking, Philosophy's "gentler

remedies" amount to persuading Boethius toward Stoicism, which functions as an anesthetic for the more invasive philosophical surgery that she performs afterwards. Seeing this, however, requires understanding how Philosophy draws out Boethius's spiritedness in the first book and how in the second book she sublimates it into an intellectual and volitional apathy toward the things of fortune, i.e., into a Stoic attitude toward that which is other. Significantly, though, the Stoicism to which Philosophy leads Boethius is of a mitigated sort, inasmuch as friendship is not included among the things of fortune to which Boethius is anesthetized, an exception that opens up Boethius to genuinewonder and, consequently, to genuine philosophizing."

71. ——. 2016. "Boethius and Stoicism." In *The Routledge Handbook of the Stoic Tradition*, edited by Sellars, John, 70-84. New York: Routledge.

"The Stoics mistake a small part of Philosophy's garment for the whole of her. Instead of possessing the fullness of philosophy, as did Plato and Aristotle, the Stoics possess only a portion of its appearance.

Stoicism is philosophically superficial and incomplete. (2)

This severe take on Stoicism must be qualified, however, in light of a subsequent passage in Book 1, [of *Consolation of Philosophy*] in which Philosophy relates how not only Greek philosophers suffered for her sake, but Roman ones as well. The three Romans she names - Canius, Seneca, and Soranus - were all Stoics (*Cons.* 1.3, 31-7). The pieces of her garment that they snatched sufficed for facing adversity under tyranny in an exemplary fashion. (3) Something about Stoicism, then, is able to fortify human beings in times of distress.

This mixed review makes sense in the *Consolation*; for there Stoicism is presented as a necessary stage within the Prisoner's philosophical development. Though it be superficial and incomplete, it is also indispensable. This dual characterization, moreover, illuminates

Boethius's criticism of Stoicism in earlier works; (4) for it helps us see what those critiques are ultimately driving at, namely, the philosophical superficiality and incompleteness of Stoicism, which compares poorly with the multidimensional, expansive thinking Boethius finds in Plato and Aristotle.

In what follows we explore Boethius's works chronologically in order to elucidate his twofold judgment of Stoicism. Beginning with references to the Stoics in his logical works (5) and then turning to the *Consolation*, we delineate the intelligible contours of Stoicism as

Boethius sees it, including the positive impetus Stoicism provides toward a philosophical apprehension of reality as well as its innate inadequacy for attaining the full measure of wisdom available to us through philosophical inquiry." (pp. 71-72, note 4 and 5 omitted)

(2) Indeed, in light of these passages, we can see why one might arrive at the judgment that in Boethius's eyes "the Stoics . . . in general are considered to be pseudo-philosophers" (Marenbon [*Boethius*] 2003: 154).

(3) Each of these Romans, like Boethius, suffered under the reigning authority: Canius was executed by Caligula; Seneca was forced to commit suicide by Nero; and Soranus was condemned to death by Nero and committed suicide. Canius is mentioned again at 1.4, 9; Seneca, at 3.5, 28-36. Soranus is not mentioned again.

72. Watson, Cristalle. 2020. "Timaeian double-circle spiral structure in the « *Consolatio Philosophiae* »." *Dionysus* no. 38:36-70.

Abstract: "The poetry of Boethius's « *Consolatio* » has largely been neglected. Where they are treated, the poems are mined for textual and philosophical content, although poetry is a necessary element of the prisoner's cure. The rhythmic pattern of *Cons.* 3 carm. 9 reveals not a simple circle, but rather a double-circle spiral, a microcosmos reflecting its Timaeian content and incorporating rectilinear and helical as well as circular motion. The prisoner's narrative motion similarly

traces a double-circle spiral path, which – unlike the simple circle – returns upon itself while simultaneously preserving, rather than annihilating, the distance traveled. This blended mode of return to God perfects the individual identities of created beings while granting them participation in the circular motion characteristic of divine activity."

74. ———. 2010. "It Depends on What One Means by "Eternal". Why Boethius is not an Eternalist." *Proceedings of the American Catholic Philosophical Association* no. 84:253-261.

Abstract: "Objections to the traditional view that God knows all of time eternally stand or fall on what one means by "eternally." The widely held supposition, shared by both eternalists and those who oppose them, such as Open Theists, is that to say God knows all of time eternally entails that he cannot know all of time from a temporal perspective. In this paper I show that Boethius's characterization of God's eternal knowledge employs a different meaning of "eternal," which is incompatible with this supposition. I argue that Boethius's claim that "the most excellent knowledge is that which by its own nature knows not only its own proper object but also the objects of all lower kinds of knowledge" entails that God is not limited by perspective and so eternally and simultaneously knows every temporal event from a temporal as well as a timeless perspective."

75. Wiltshire, Susan Ford. 1972. "Boethius and the *Summum Bonum*." *The Classical Journal* no. 67:216-220.

"The definition of the *summum bonum* itself comes in the tenth prose section of book 3 [of *The Consolation of Philosophy*]. The main steps of Boethius' argument are as follows:

1. Human beings agree that God, the ruler of all things, is good-and further, that he is perfectly good (3.pr.10.7).
2. But the perfect good is true happiness (*sed perfectum bonum veram esse beatitudine*» (3) *constituimus* (3.pr.10.10).

3. There cannot be two perfect, highest goods, because if one lacked anything of the other, it would not be perfect (3.pr.10.19).

4. Therefore true happiness and God, being both the same thing, are both the *summum bonum*, and the supreme good is identical with supreme divinity (Atqui et beatitudinem et deum summum bonum esse collegimus; quare ipsam necesse est summam esse beatitudinem quae sit summa divinitas: 3pr.10.20). Later Boethius adds that a person becomes *beatus* by attaining divinity and that, while by nature there is only one God, there can be many by participation. (4)

Boethius' identification here of the *summum bonum* with God is explicit." (p. 217)

(...)

"Boethius offers just such a preethical vision, a concept of the ideal good. True, it is one that leaves the hard questions of justice, morality, and mercy unsolved; but it does demand an ultimate framework within which the answers to penultimate questions are sought. His creation of this concept of the summum bonum, argued through dialogue, illustrated and enlarged through poetry, and presented with the powerful effect of drama throughout, suggests to us that in his own life Boethius did achieve in the end some sense of the unity and goodness he sought." (p. 220)

(3) Boethius uses the terms *beatitudo*, *felicitas*, *verum* or *perfectum bonum*, and on one occasion (3.pr. 10.38) even *bonitas* all interchangeably with *summum bonum*.

(4) Cf. *John* 10:34: also 2 *Peter* 1:4.

77. Wittala, Michael. 2019. "Every Happy Man Is a God: Deification in Boethius." In *Deification in the Latin Patristic Tradition*, edited by Ortiz, Jared, 231-252. Washington, D. C.: The Catholic University of America Press.

78. Wood, Laurence. 2010. "Divine omniscience: Boethius or open theism?" *Wesleyan Theological Journal* no. 45:41-66.
79. Zamora Calvo, José Maria. 2017. "Truth and modes of cognition in Boethius: a Neoplatonic approach." *Schole* no. 11:354-371.

Abstract: "Boethius does not accept the principle of realism that considers truth as the adaptation - or adequation - of the subject to the knowable object, and instead defends that knowledge should be studied by relating it to the capacity of the cognoscente subject. Thus, truth is relative to the faculty or level of knowledge in which we stand, since each faculty - each level of knowledge - has its own object: the material figure for the senses, the figure without matter for the imagination, the universal for reason and the simple form for intelligence. But this epistemological relativism is moderate, precisely because of its hierarchical character. Therefore, although in a sense truth is manifold, the perfect truth, proper to divine knowledge, includes and surpasses all others. In order to cement the architecture of this system of relativisation of knowledge, Boethius starts from a Neoplatonic interpretation of the simile of the line of the *Republic* (VI.510a-b) and Plato's *Timaeus*, but not completely tied to it. The beings endowed with knowledge are ordered according to the Neoplatonic hierarchy of cosmic realities."

"L'œuvre scientifique de Boèce.

Moins connue certainement que son œuvre philosophique et que la *Consolation*, l'œuvre scientifique de Boèce est de toute première importance par l'influence qu'elle a exercée au Moyen Age, même si elle nous est parvenue fort mutilée. Nous avons perdu l'Astronomie qu'il pouvait avoir rédigée comme quatrième ensemble de son travail sur le *quadriuium*; nous

n'avons plus sous sa forme authentique sa *Géométrie*; mais il nous reste les deux autres traités mathématiques de Boèce, l'*Institution Musicale* (éd. Friedlein, Leipzig, 1867) et l'*Institution Arithmétique* dont la lecture devait précéder celle du traité sur la musique. Tous deux doivent l'essentiel de leur substance (l'intégralité, peut-on même dire, pour l'*Institution Arithmétique*) à l'œuvre arithmétique de Nicomaque de Gérasa. Bien que l'ordre pythagoricien auquel s'est conformé Boèce (cf. *Inst. ar.* 1,1) soit le suivant: arithmétique, musique, géométrie, astronomie, nous laisserons l'arithmétique pour la fin et considérerons d'abord les traités portant sur les trois autres sciences."

(...)

"Les buts de l'étude.

En définitive, le parti-pris de fidélité au texte de Nicomaque est évident chez Boèce, dont les compétences mathématiques, du reste, n'étaient sans doute pas assez développées au moment de la rédaction de l'*Institution Arithmétique* pour qu'il pût se permettre une véritable originalité. Il faut alors se demander pour quelles raisons l'auteur, encore si jeune, avait décidé de s'attaquer à ce difficile exercice. Les motivations, sans doute, ne lui manquaient pas. Malgré la véritable difficulté du contenu, le texte de Nicomaque était d'une grande valeur pédagogique, clairement structuré comme le montrent *a contrario* les quelques longueurs ajoutées par Boèce et, à ce titre, parfait pour une initiation. Une progression soigneusement réglée devait permettre au débutant de suivre l'exposé sans se décourager et sans lâcher prise. Au demeurant, l'intérêt de l'ouvrage de Nicomaque dépassait le domaine mathématique *stricto sensu*. Il permettait également une initiation commode à la philosophie de Platon, pour le contenu, et d'Aristote, pour les systèmes de classification. Il avait d'ailleurs toujours joué ce rôle avant Boèce et, comme on l'a souligné, il était devenu matière classique d'enseignement à Alexandrie. Aussi était-il investi d'une importance culturelle particulière."

(...)

L'Institution Arithmétique est donc la première pierre posée par Boèce pour la réalisation du grand dessein dont il partage la conception avec son beau-père. Dans la lettre de dédicace à Symmaque qui précède le traité, il affirme avec netteté sa volonté de rendre accessibles aux lecteurs latins les trésors de la culture grecque. En ce qui concerne la partie scientifique du programme, il était évident que la primauté traditionnellement reconnue à l'arithmétique, dans la classification pythagoricienne des mathématiques qui avait traversé le cours des temps, imposait de commencer par l'étude de cette science un cursus sérieux. Boèce fait lui-même cette expérience: c'est évidemment un tout jeune homme qui dédie ce traité, avec une piété filiale, à son beau-père dont il sollicite à la fois l'indulgence (ce travail lui a coûté tant de peines, tant de nuits de veille!) et la sévérité: il n'est pas question de publier un texte qui ne serait pas satisfaisant, et Symmaque est instamment prié d'user de l'encre rouge pour amender et émonder le travail de son beau-fils. C'est avec l'espoir d'une lecture sans complaisance que Boèce ose offrir à l'helléniste érudit ces prémices de son esprit." (pp. XLIV-XLVI)

Abstract: "Lorsque Boèce écrivit son *De Institutione Musica*, il s'est manifestement inspiré des traités théoriques de Nicomaque de Gêrèse. Qu'il s'agisse du son, des consonances, de la voix, des instruments, de l'harmonie cosmique, nous retrouvons presque partout chez Boèce non seulement les théories de Nicomaque, mais aussi sa manière de les exposer. Souvent, Boèce cite Nicomaque comme étant sa source. Si nous ne trouvons pas toujours chez l'auteur grec l'équivalent des théories émises par l'auteur latin, la raison en est que nous avons perdu une partie des écrits du premier, notamment un *Περὶ Μουσικῆς* dont il ne nous reste que des fragments. Dans ce cas, c'est toujours chez un théoricien de la même école, l'école pythagoricienne, que nous découvrirons ce qui nous manque chez Nicomaque. Ces quelques mots sont nécessaires pour comprendre ce qui va suivre."

"Le grand historien Etienne Gilson a bien remarqué que c'est à propos du problème du Bien que la pensée de Boèce fut la plus personnelle et la plus féconde. Avec Platon et Saint Augustin, il identifie dans son opuscule *Quomodo substantiae* l'être au Bien (comme le Mal au non-être). Il est évident que dans l'opinion de Boèce la doctrine de l'être obtient une importance décisive comme base de la théorie du Bien. Aussi la solution du problème du Bien et du Mal fut esquissée dans sa métaphysique de l'être.

L'identification de l'être et du Bien implique que pour tout ce qui est, c'est une seule et même chose *d'être* et *d'être bon*. Mais si les choses sont *substantiellement* bonnes, en quoi différentes du Bien en soi, qui est Dieu? Dans cette question la problématique du *Sophiste* de Platon a dû revivre. On sait que dans ce dialogue Platon a essayé de résoudre le problème fondamental de l'être des choses périssables par une analyse vraiment pénétrante des notions de «Même» (*tauton*) et «Autre» (*heteron*).

Il me semble que Boèce fait une chose comparable. Il n'est pas étonnant qu'il commence (dans *De hebdomadibus = Quomodo substantiae* etc.; voir l'édition de Stewart-Rand) ses exposés approfondis sur la notion de l'être par l'axiome qui a dû provoquer tant de commentaires pendant le moyen âge: *diversum est esse et quod est* (II 28-30: «il y a diversité entre "être" et "ce qui est"»). Cette formule, qui est valable pour tout être composé concerne la différence ontologique entre

l'élément constitutif, ou la forme, de tout être composé d'un côté, et la chose elle-même, ou le tout établi par cette forme, de l'autre. Le tout doit son être à l'élément constitutif qui est la forme substantielle, sans laquelle il n'est pas du tout. Cependant la question sur son essence ne peut pas être résolue en désignant cette forme. (...)

Il semble être utile de prendre au sérieux la suggestion des commentateurs médiévaux et d'entreprendre la réponse à notre question du point de vue sémantique. Je propose de discuter d'abord (1) la notion de *qualitas* chez Boèce (2), ensuite son modèle sémantique (3), et ses idées sur le rôle (logico-sémantique) du nom et du verbe (4-5); enfin la signification exacte de sa notion de l'être (*esse*) sera discutée (6) et éclaircie en mettant en lumière le but et la méthode du traité *Quomodo substantiae* (7)." (pp. 141-142, notes omises).

Résumé: "Célébré comme l'égal des grands philosophes du passé, auxquels il aurait appris à parler Latin mieux qu'ils ne parlaient Grec, Boèce a caressé le rêve d'une émancipation radicale de la culture romaine vis-à-vis des modèles grecs qu'il se proposait de traduire et interpréter assez fidèlement pour que la comparaison avec les sources ne soit plus nécessaire. De son effort de livrer un Aristote et un Platon latins à la hauteur des originaux grecs, nous étudions l'étroite solidarité qui relie la traduction mot-à-mot des textes grecs et la restitution scrupuleuse de leur sens. Cette double tâche, que Boèce a conçue et menée d'un seul tenant, nous est dès lors apparue comme le reflet d'un philhellénisme sans complexes, tout aussi éloigné des sentiments ambivalents que

nourrissaient vis-à-vis des hellènes ses devanciers romains que des efforts visant à domestiquer l'héritage classique auxquels se livraient certains de ses contemporains de même confession que lui. Affranchis de tout rêve d'autonomie, les traductions et les commentaires de Boèce se conçoivent comme parfaitement autosuffisants. Ensemble ils constituent ce qu'il y a à la fois de franchement novateur et de profondément conservateur dans son projet de faire parler Latin les sources grecques."

67. Omelyantchyk, Valentin. 2003. "Boèce et Ammonius sur la question d'Alexandre d'Aphrodise (*Peri hermeneias*, 16 A 1-2)." In *Boèce ou la chaîne des savoirs*, edited by Galonnier, Alain, 241-256. Louvain-la-Neuve: Peeters.

"En nous fondant sur les témoignages de Boèce et d'Ammonius, nous nous proposons d'enquêter sur le sens de la question d'Alexandre d'Aphrodise, rapportée par Boèce, à propos de l'interprétation des premiers chapitres du *Peri hermeneias*. Nous suivrons d'abord le commentaire majeur de Boèce, pour tenter de comprendre le contexte dans lequel cette question apparaît. Nous examinerons ensuite la question elle-même, en précisant sa raison d'être à partir du commentaire d'Ammonius. Nous passerons ensuite à l'évaluation de sa pertinence pour une théorie du discours. Enfin, en guise de conclusion, nous essayerons de dégager/quelques remarques générales." (p. 241)

(...)

"À suivre Boèce, Porphyre développe une analyse générative du discours pour justifier l'idée que l'assertion simple se compose d'expressions simples (37), c'est-à-dire du nom et du verbe, qui sont les parties nécessaires et suffisantes de l'assertion simple (38). L'affirmation et la négation sont ainsi les deux éléments constitutifs du genre de l'assertion simple. Cette analyse

conduit à associer à l'assertion simple une sémantique de l'inhérence (ὑπαρχειν). Porphyre « projette », en quelque sorte, la structure syntaxique de l'assertion simple sur la structure ontologique de l'inhérence: l'affirmation signifie l'inhérence de quelque chose dans quelque chose, la négation, sa non-inhérence. Il a donc développé son analyse de la construction syntaxique complète en lien avec sa sémantique de l'inhérence empruntée aux *Catégories*. Cette construction syntaxique, Boèce l'appelle « assertion simple » ou « assertion catégorique » (39). On comprend alors que s'il se concentre sur l'assertion simple dans les premiers chapitres de son commentaire, c'est parce qu'il vise en fait la notion de complétude. Dès lors que l'assertion simple exprime l'inhérence ou la non-inhérence, Boèce enchaîne, après la question de la structure de l'assertion (ch. 4-6 du *Peri hermeneias*), sur le thème des universaux (ch. 7) (40), car la théorie de l'inhérence présuppose toujours la division des étants en particuliers et en universels (41). La deuxième partie du chapitre *De oratione* de Boèce, qui correspond au commentaire des chapitres 4-8 du *Peri hermeneias*, achève par conséquent l'exposé sur l'assertion simple (ou assertion catégorique) en traitant de Γ inhérence et de la non-inhérence." (pp. 254-255)

(37) Voir « Simplicis quiddem idcirco quod quaelibet simplex parvissimaque oratio nomine et verbo coniungitur, quae sunt simplices dictiones » (84, 27-30).

(38) « In simplicibus enim orationibus huiusmodi partes sunt » (82, 23-5).

(39) « [S]ic in simplicibus propositionibus praedicatio vim obtinet, unde et Graece quoque tales propositiones κατηγορικαί, id est praedicativae, dicuntur, scilicet quae sunt simplices, quod in totam propositionem obtineat praedicatio » (Migne, PL 64, 447 B). « Igitur quoniam supra dixerat simplicem propositionem, quam κατηγορικαί Graeci dicunt, nos praedicativam interpretari possumus, semper verbi praedicatione constitui, non autem semper nomine subjecto, quod aliquoties quiddem vel infinitum nomen, vet casus

nominis, vel verba subjecta sunt» 112, 10-16). C'est nous qui soulignons.

(40) « Necessè est autem enuntiare quoniam inest aliquid aut non, aliquoties quidem eorum alicui quae sunt universalia, aliquoties autem eorum quae sunt singularia, hujusmodi est tanquam si diceret: omnis quidem adfirmatio et negatio inesse aut non inesse demonstrat et quidquid enuntiatur, aut de eo quod est esse proponitur... aut de eo quod est, non inesse » (140, 22-141, 1).

(41) « Ergo quoniam necessè est, aut aliquid alicui inesse dicere, aut aliquid alicui non inesse, illud quoque necessè est ut intelligamus cui inesse aliquid dicimus, aut universale esse... aut certe particulare ac singulare » (141, 3-8).

Boezio: traduzioni italiane e Bibliografia degli studi sulla sua filosofia

Traduzioni

1. Boezio. 1969. *Trattato sulla divisione*. Padova: Liviana.

Testo latino e traduzione italiana con commento di Lorenzo Pozzi.

Indice: Avvertenza V; Introduzione 1; Nota bibliografica 17, Trattato sulla divisione 19; Appendice: Anitii Manlii Severini Boethi - *De Divisione* 105; Indice analitico 131-136.

"La traduzione è stata condotta sull'edizione di Venezia (sull'esemplare appartenente alla Biblioteca Palatina di Parma), che viene riportata in Appendice nel testo latino diviso in paragrafi per comodità di lettura e di commento. Un controllo eseguito sul Manoscritto conservato nella Biblioteca Antoniana di Padova (Scaff. XXII, 553, ff. 55r-68v) ha permesso di convalidare l'opinione corrente circa la superiorità dell'edizione di Venezia su quella di Basilea riprodotta dal Migne. Le poche varianti tratte dal manoscritto che miglioravano la stampa dell'incunabolo veneziano sono state direttamente introdotte nel testo, dandosene notizia in nota." (Avvertenza)

"La divisione, già fin dai tempi di Cicerone, era considerata una parte essenziale della logica, infatti nel *De finibus bonorum et malorum* (7) viene criticato Epicuro per non avere una logica: *Iam in altera philosophiae parte, quae est quaerendi oc disserendi, quae λογική dicitur, iste vester plane, ut mihi quidem videtur, inermis ac nudus est. Tollit definitiones; nihil*

de dividendo ac partiendo docet; non, quomodo efficiatur concludatur que ratio, tradii; non, qua via captiosa solvantur, ambigua distinguantur, ostendit. Dal che si vede che vengono elencate queste quattro parti della logica e cioè la definizione, la divisione, il sillogismo o ragionamento, il sofisma o falso ragionamento.

Boezio, per quel che concerne la divisione, conosceva tre concezioni e cioè la platonica, l'aristotelica e la stoica, per cui è necessario accennare brevemente a tutte e tre.

Per Platone la divisione è il metodo che permette di costruire una corretta definizione ed è il secondo momento della dialettica. Il primo momento consiste nel ricondurre ciò che si deve definire ad un'idea, che, per la sua estensione, sia capace di includerlo totalmente.

(...)

Aristotele, negli *Analitici Primi* (14), critica la divisione platonica, che è per lui «un sillogismo impotente», in quanto a) chiede che sia concesso ciò che deve dimostrare e b) conclude sempre con un predicato superiore a ciò che deve essere provato. Aristotele considera il sillogismo nella sua funzione dimostrativa e perciò richiede che in esso il termine medio debba avere un'estensione minore dell'estremo maggiore ed un'estensione maggiore dell'estremo minore. Si considera evidentemente un sillogismo che concluda universalmente ed affermativamente, cioè della prima figura in cui il termine medio è il soggetto della premessa maggiore ed il predicato della premessa minore.

(...)

Nella dottrina stoica abbiamo una rivalutazione della divisione, rivalutazione che segue quella della dialettica. Gli Stoici definiscono la dialettica «la scienza di discutere rettamente su argomenti, per domanda e risposta» (18). Per questo si può affermare una certa dipendenza della concezione stoica dalla dottrina aristotelica, infatti anche per gli Stoici la dialettica si riferisce al dialogo e, punto essenziale, non ha riferimento all'essere, di cui non può produrre scienza.

(...)

Il trattato di Boezio è un'originale sintesi delle tre concezioni sopra esposte. (...)

Il trattato ha come punto di partenza lo stesso nome « divisione » e l'elenco delle diverse cose da esso significate. Scopo del trattato è infatti quello di indicare le proprietà di ciascuna divisione e le reciproche differenze. Egli innanzitutto distingue le divisioni *secundum se* da quelle *secundum accidens*: mentre nelle prime sono sostanze sia il dividendo che i divisi, nelle seconde o il dividendo o i divisi o entrambi sono accidenti. Sono divisioni *secundum se* quelle del genere nelle specie, del tutto nelle parti, e della voce nelle significazioni. Sono divisioni *secundum accidens* quelle del soggetto negli accidenti, dell'accidente nei soggetti e dell'accidente negli accidenti. Queste distinzioni hanno la funzione di evidenziare la divisione del genere nelle specie, che è la vera divisione logica, quella che permette di giungere alla definizione essenziale: motivo conduttore di tutto il trattato è la continua preoccupazione di distinguere la divisione del genere nelle specie dalle altre divisioni." (pp. 5-10)

Sommario: 1. Il progetto boeziano e il commento di Tommaso al *De hebdomadibus*. 2. La questione dell'essere boeziano e tommasiano. 3. La partecipazione. 4. Ci può essere partecipazione con o senza Idee platoniche. 5. L'essere stesso partecipa ad una causa. 6. L'essere non si partecipa come un genere e comunque inerisce alle cose. 7. L'essere si partecipa

secondo le categorie e l'essere *simpliciter* è l'essere sostanziale.
8. L'essere partecipato appartiene per sè. 9. Conclusione.

Abstract: Several features of St Thomas's commentary on the *De hebdomadibus* suggest that he was taking quite seriously Boethius's view concerning the fundamental harmony between the philosophies of Plato and Aristotle. The paper focuses on the commentary's treatment of the doctrine of participation in being (*esse*). There are several places where St Thomas seems to be working quietly to bring the doctrine in line with Aristotelian ontology. These have a bearing on the much disputed question of the relation between St. Thomas and Boethius on the distinction between *esse* and *id quod est*.

"Lungi dal purismo classicista della Consolatio, la traduzione di Boezio è caratterizzata dalla frantumazione della compattezza dell'ordine classico delle parole mediante la frequente introduzione di moduli espressivi estranei alla tradizione latina, dal conio di calchi linguistici e semantici e dall'accettazione di sintagmi propri del latino tardo. In questo modo Boezio cerca di risolvere i molti problemi di ordine esegetico, sintattico, di interpretazione ed espressione lessicale presenti nell'*Organon* aristotelico e spera di contribuire al progresso della letteratura latina."

"L'opuscolo teologico dal titolo *Quomodo substantiae bonae sint in eo quod sint, cum non sint substantialia bona*, comunemente indicato con il titolo abbreviate *De hebdomadibus*, è stato spesso oggetto di studio soprattutto in relazione al grande influsso che esso ha esercitato sul pensiero medievale, al punto che Gangolf Schrimpf ha potuto definire questo trattato, non a torto, come 'Lehrbuch des Mittelalters'. (1)" (p. 33)

(...)

"...ma il più importante tentativo di inquadrare l'opuscolo teologico nell'ambito della tradizione filosofica tardo-antica è stato, senza dubbio, quello intrapreso da P. Hadot, il quale, concentrando la propria attenzione sulla celeberrima formula *forma essendi*, ha ipotizzato delle affinità tra la concezione boeziana dell'essere e quella di Porfirio, estendendo così i confini di un rapporto fino a quel momento delimitato agli scritti di logica. (5) Del contributo di Hadot vogliamo riprendere, allargandolo ad una prospettiva più ampia, il metodo di indagine, basato sulla ricerca di un equilibrio tra 'interprétation philologique' e 'interprétation philosophique', per esprimerci con le parole dello studioso: non partiremo, dunque, dall'esame di una singola affermazione, ma cercheremo di individuare i nuclei concettuali che costituiscono, per così dire, l'impalcatura di tutta l'opera. Le direttrici fondamentali della nostra ricerca saranno, pertanto, le seguenti : 1) la dottrina boeziana circa l'essere; 2) i concetti di somiglianza e partecipazione; 3) l'identità tra essere e agire di Dio. Nell'approfondimento di queste tematiche cercheremo anche di mettere in luce gli eventuali rapporti del *De*

hebdomadibus con problemi di ordine non solo filosofico, ma concernenti anche aspetti del dogma cristiano." (pp. 33-34)

(...)

"A conclusione di questa nostra disamina, necessariamente breve ma, nel contempo, aperta ad una molteplicità di problematiche, abbiamo ancora una volta chiara, davanti ai nostri occhi, quella che ci pare una delle caratteristiche principali del filosofo romano, vale a dire una originalità di pensiero che non esclude l'apporto delle più varie tradizioni, dalle quali Boezio sa ricavare, con acume e senso critico, ciò che più si adatta alla soluzione dei problemi da lui affrontati: ciò che ne risulta non è un disomogeneo eclettismo, ma una costruzione speculativa che, pur con i limiti e le aporie da noi messi in luce, è dotata di una sua intrinseca coerenza. Si farebbe un torto a Boezio analizzando il suo pensiero con la pretesa di 'quantificare' le percentuali di platonismo e di aristotelismo in esso presenti: il *De hebdomadibus* è da ritenersi, a buon diritto, un trattato teologico, anche se non vi compaiono espliciti riferimenti a tematiche cristiane, perché nell'orizzonte culturale di Boezio, come abbiamo avuto modo di ribadire in altri nostri contributi, non esistono rigide separazioni tra la filosofia e la teologia, accomunate, per così dire, dal fatto di avere, come supremo oggetto della conoscenza, Dio e la sua relazione con il mondo. Di questa relazione l'opuscolo teologico indaga il fondamento ontologico, chiedendosi in quale modo le cose, pur non essendo Dio, abbiano la bontà come caratteristica costitutiva del proprio essere. Speriamo di aver contribuito, almeno in parte, ad una più precisa collocazione di quest'opera nel panorama filosofico del tardo-antico.£ (pp. 52-53)

(1) Cf. G. Schrimpf, *Die Axiomenschrift des Boethius (De hebdomadibus) als philosophisches Lehrbuch des Mittelalters*, Leiden, 1966. Il termine *Axiomenschrift*, impiegato dallo studioso, è indicativo di un'altra diffusa tendenza esegetica, per la quale l'attenzione degli interpreti si è spesso soffermata sui singoli enunciati assiomatici che costituiscono la premessa del trattato, senza considerarli nel contesto generale dell'opera.

"Il cod. A (Orléans, Bibliothèque municipale 267 + Paris, BNF, Nouv. acq. lat. 1611, 10° s.), allestito nell'abbazia benedettina di Fleury, trasmette integralmente un indice delle opere di Boezio contenute nel manoscritto; tale elenco costituisce una prova del fatto che già nell'antichità i testi del filosofo erano organizzati in un corpus, un'unità libraria a sè stante. Il riesame codicologico e paleografico del codice consente di identificare in Cassiodoro sia l'autore di una sottoscrizione tramandata a f. 51r di Aβ, sia il possessore nonché il revisore di un esemplare

- tardoantico del corpus usato nel monastero di Vivarium, copia del cosiddetto « codex Renati » (entrambi databili alla prima metà del 6° s.)."

Eriugena: Dialectic and Ontology in the *Periphyseon*

The philosophical relevance of John Scottus Eriugena

"Philosophy properly speaking begin in the ninth century with John Scottus Eriugena." (p. 42)

G. W. F. Hegel, *Lectures on the History of Philosophy 1825-6. Volume III: Medieval and Modern Philosophy*, Revised Edition, Translated and edited by George F. Brown, New York: Oxford University Press 2009.

"It is anachronistic to separate philosophy and theology in Eriugena. 'Speculation' would be a less misleading description of his thought than 'teaching'. But we must use words in any case. Although Augustine is the major source of Eriugena's doctrine, its characteristic features do not derive from the teaching of Augustine.

(...)

Platonism and Neoplatonism, that is to say the revival of Platonism especially by Plotinus in the third century A.D., were, on the other hand, freely embraced by the Eastern Fathers, by those precisely from whom Eriugena derived his distinctive thought, St Gregory Nazianzen, the brothers Saints Basil and Gregory of Nyssa and the great Origen. Here Eriugena found Christian authority for his negative theology ('one knows God best by not knowing Him'), for creation as being co-eternal with God, and for the final restoration of all things in the end. Curiously enough, as I have indicated elsewhere, Eriugena derives some Greek ideas from St Ambrose of Milan - but in fact this fits in with the new (but not, of course, on that

account necessarily correct) view of St Ambrose presented by a number of our contemporaries and notably Courcelle.

The corpus of Eriugena's work is considerable commentaries, translations and original works, all making up one ponderous volume (number 122) of Migne's *Patrologia Latina*. The centerpiece of his achievement is the *Division of Nature*, written about 867, running to five books and a quarter of a million words. It deals ostensibly with the Creator, the first or primordial Causes, the created universe, and finally God as End. It considers five different and unrelated modes of being: things may be said to be according as we perceive them, according to their place in a hierarchy, according as they become actualized, according to the faculty by which they are perceived (sense or intellect for example), and fifthly according to their realization of God's image. These are truly unrelated, and illustrate the easy overlapping of what we optimistically call philosophy and theology. In the system of Eriugena the most important of these modes of being is the second, i.e. that according to a thing's place in a hierarchy.

Eriugena and his Greek predecessors, pagan and Christian, are essentially concerned with the greatest problem - or perhaps the second greatest problem - of all: assuming a Creator, how can He create? If He begins to create, He changes, is completed and has been imperfect - which imperfect - which is unacceptable. If He always has been creating, His creatures are as eternal and as infinite as Himself: they are Himself - which is pantheism. The contrast between Augustine and Eriugena is nowhere greater or more visible than in this. Augustine wrote the sixth to the tenth books of his imposing work, the *City of God*, on the problem of how, taking account of Neoplatonism, the creature can be united with the Creator, which is another version of the problem just mentioned. Characteristically, however practically, he looks at the matter from the point of view of man, the creature. He differs from the Neoplatonist Porphyry by accepting Christ as the great Mediator between God and man, but follows him in much consideration of mediation in general and a hierarchy of mediating demons, angels and heroes as well. It is only fair to say that he does not always take so practical a view of the problem. But how different, how more Plotinian, is Eriugena, who fixes his gaze on the Creator, scrutinizing

His revelations of Himself, his 'theophanies' or 'appearances' as Eriugena calls them, for any clue; and searches the ineffable, incomprehensible and inaccessible clarity of the divine goodness for understanding, at least of what God is not. Almost the only images employed are air and light and fire, and these are used in contexts suggesting rarefaction and incandescence. The whole of the *Division of Nature* is essentially an exercise in trying to follow the descent, or possibility of descent, of creatures from the One, and their return to the One up the hierarchy of being. The return of all is the conversion of bodies to souls, of souls to causes (such as Goodness), and of causes to God.

One may ask if, after all, Eriugena is not a pantheist? Certainly he himself was aware that he might be thought so, but denied explicitly that he was. 'God', he says, 'is all in all. All things that are in God, even are God, are eternal.' 'We should not understand God', he writes, 'and the creatures as two things removed from one another, but as one and the same thing. For the creature subsists in God, and God is created in the creature in a wonderful and ineffable way, making himself manifest, invisible making himself visible.' But the divine nature, he finally insists, because it is above being, is different from what it create within itself.

Eriugena circles around the object of his thought insistently, patiently, lovingly. He can sustain prolonged concentration on the Creator, on that darkness, as he calls it, of incomprehensible and inaccessible light. One thinks of the nearly contemporary work of the great Irish metal-workers, sculptors and especially illuminators of manuscripts; the abstraction, the subtlety, the incredible detail. In the end Eriugena knows only that God is, not at all what He is. Of the creature he chooses to investigate for the most part only how he can be - for he refuses, under one aspect, to deny that the Creator and the creature are one thing. He cannot have truck with lower things. One might as well ask for practical considerations Teilhard de Chardin. He is sublime, he is subtle, but in a curious way his very openness, his lack of word-bound assertion may very well help us in our evolutionary age to approach an understanding of reality. Certainly he ennobles man, but still leaves him less than God.

These few words have been intended to convey something of Eriugena's characteristic thought. Circumstances have worked against his recognition in the area of the world in which he lived and wrote - the Latin world dominated by Augustine and Aquinas. Even so he is the greatest philosopher in the ages that separate these two. Copleston writes of his system as 'standing out like a lofty rock in the midst of a plain'. Another of his biographers has described him as 'one of the greatest metaphysicians of all time'. Be that as it may, he is certainly an outstanding figure in the history of thought, a favourite of the mystics and one who may provide for the future a Christian synthesis, at once purified of anthropomorphism and capable of bringing ideas of evolution, the continuum and the relative to the focus of Infinite Being: this after all is what Eriugena attempts to do." (pp. XI-XIII)

From: John J. O'Meara, *Introduction* to: John J. O'Meara and Ludwig Bieler (eds.), *The Mind of Eriugena*, Dublin: Irish University Press 1973.

"The Western philosophical tradition has been characterised, in a somewhat misleading and over generalised manner, as centring on the concept of being from the time of the earliest Greek thinkers. Eriugena, inspired by Dionysius, departs from this tradition and regards non-being as equally as important as being in the study of the nature of reality as a whole. For Eriugena ontology is not the most fundamental or universal discipline; in fact, he develops a negative dialectic which counterbalances ontological affirmations and constructions with a radical meontology, giving the most detailed analysis of non-being since Plato's *Sophist* and *Parmenides*.

But Eriugena goes farther and anticipates many of the features of the modernist turn in philosophy begun by Descartes (1596-1650). Eriugena begins with a typical Carolingian psychology but is stimulated by Saint Augustine to develop an understanding of the cogito and a deep appreciation of inwardness, which was enriched by his encounter with the anthropology of the Greeks, especially Gregory of Nyssa. He does not stop there, however, but goes on to articulate, in his own terms, what might be called a philosophy of subjectivity. Eriugena sees the human subject as essentially mind. Everything is a product of mind -- material reality, spatiotemporal

existence, the body itself. In this sense, Eriugena is a thoroughgoing idealist. Matter is a commingling of incorporeal qualities which the mind mistakenly takes to be corporeal; spatiotemporal reality is a consequence of the seduction of the mind by the senses, which is the true Fall of Adam; the body itself is an externalisation of the secret desires of the mind. But more than that, the true being of all things is their being in the mind. Eriugena takes this to be a consequence of the scriptural revelation that the human mind is an image of the divine mind, and that the divine mind contains in itself the ideal exemplars of all things.

Eriugena inserts this radical view of the human mind and of human nature into his account of the cosmos, his fourfold division of nature. The whole of nature, which includes God, proceeds or externalises itself in its multifarious forms through the operation of the human mind, which is pursuing its own course of intellectual development or enlightenment. In the four divisions of nature, we have not only a typical mediaeval cosmology of a hierarchy of being but also a dynamic process of subjectivity becoming objective, of the infinite becoming finite, the drama of God's and of human self-externalisation in the world, which anticipates the idealist systems of Schelling and Hegel." (*Preface*, pp. XIII-XIV)

(...)

How are we to interpret Eriugena's philosophy?

He made use of the logical and dialectical material available to the ninth century in his metaphysical discussions of the nature of essence, substance, accident, and the categories, but he stands above his contemporaries in offering a unique metaphysical system -- the four divisions of nature -- which introduced to the West not only a new cosmology but also the first important meontology, or study of non-being -- *me on* (με ον)." (p. 81)

From: Dermot Moran, *The Philosophy of John Scottus Eriugena. A Study of Idealism in the Middle Ages*, Cambridge: Cambridge University Press 1989.

"While one may well attempt to write about the works of Eriugena, one can hardly as yet essay with any confidence to describe his life,

so much in connection with him is legend or slender hypothesis. We can say that he was born in Ireland around the first quarter of the ninth century, and that he lived and worked for most of the third quarter of that century at the court of Charles the Bald in the general area of Laon, north-east of Paris. He would appear to have been a teacher who became a philosopher.

His greatest work, written in Latin, was the *Periphyseon*, known also as *De divisione naturae*, a comprehensive investigation into all things that are and all things that are not. Here the philosophical doctrines of Augustine in his understanding of Revelation (already significantly, if not consistently, indebted to Neoplatonism) are as far as possible brought into relation with the more direct and prevailing Neoplatonism of the Pseudo-Dionysius, Maximus the Confessor, and the Greek Fathers. The result is a synthesis of what we might now call philosophy and theology where the influence of the Neoplatonists dominates. To theologians he is too philosophical; to philosophers, too theological. But as long as Plato is counted a philosopher, then Eriugena must be reckoned a philosopher too. His message is essentially optimistic, and it is conveyed in language that is subtle, often warm, and always distinguished.

Eriugena had more influence in western Christendom than is generally recognized, even if the spirit of the times, guilt by association, and finally a flood of Aristotelianism told against him. The mystics listened carefully to what he had to pass on from the Pseudo-Dionysius, and nineteenth-century German Idealists discovered in him a spirit and a thinking akin to their own." (*Preface*, p. VII)

From: John J. O'Meara, *Eriugena*, Oxford: Clarendon Press 1988.

The name of the philosopher

"The subject of this study was named by Archbishop Ussher in his *Veterum epistolarum hibernicarum sylloge* (Dublin, 1632) 'Scotus Erigena'. This is a pleonasm since, in the lifetime of the man in question and up to the eleventh or twelfth century, Scotus or Scottus meant 'Irish' and Erigena or Eriugena (1) meant 'of Irish birth'. Since he called himself Johannes, that is, John, the name John Scotus Erigena became fairly common after Ussher's time. This had the

grave inconvenience of causing confusion between our Irish philosopher of the ninth century and John Duns Scotus, the better-known Scottish (in the present meaning of that term) Franciscan philosopher of the thirteenth.

Scholars nowadays, to avoid both pleonasm and confusion, have a tendency to call him Eriugena. This is the name that appears at the head of his translation of Dionysius the Areopagite: 'incipiunt libri sancti Dionysii Areopagitae, quos Ioannes Eriugena transtulit de graeco in latinum': 'Here begin the books of the holy Dionysius Areopagiticus which John Eriugena translated from Greek into Latin.' (2) Eriugena, not Erigena, is attested by the oldest manuscripts of this work. (3) But he was known to his contemporaries and in later times as Johannes Scottus, (4) where 'Scottus' refers to his origins rather than being used as a surname. He refers to himself usually and is also referred to by some of his contemporaries as simply Johannes. (5) We shall call him Eriugena." (p. 1)

Notes

(1) Formed on the model of *Graiugena* (Virgil, *Aeneid*, 3. 550), 'of Grecian birth'.

The title of his main work

I

"In the development of Eriugena's *De divisione naturae* or *Periphyseon* (if you will allow me to introduce the alternative title right away) it is possible to distinguish a series of stages:

1. An essay in dialectic, possibly abandoned before completion, concerning the division of the genus Nature (defined as "all things that are and all things that are not") into four species: the Nature that creates but is not created, the nature that is created and creates, the nature that is created but does not create, and the Nature that neither is created nor creates. From this the work as we now have it derives its generally accepted title, *De divisiones naturae*; and for convenience I shall refer to this primitive version as *De divisione naturae A*. Here Eriugena's sources may all have been Latin: chiefly, St. Augustine, Boethius, and Martianus Capella.
2. The next stage, the first of which there is MS evidence, already contains the substance of the full *Periphyseon*, but in a somewhat shorter form. It is found in the earliest extant MS, Rheims 875, which I shall call R. Whatever may have been the case with the *De divisione naturae A*, we have here already the great work running to five books(1), and already, from the end of Book I (which may not differ greatly from the primitive version) dependence on Greek sources predominates. It bears (or seems to bear) the Greek title περι` φύσεως μερισμοῦ, and I shall refer to it as *De divisiones naturae B*. But although the Four Divisions of Nature still remain as a framework for the whole, this scheme is of secondary importance to the Platonic notion of the Descent of the Soul from God and her Return, seen through the eyes of St. Gregory of Nyssa, the pseudo-Dionysius and St. Maximus the Confessor.
3. The next stage first appears on the margins of R in the form of extensive enlargements to the text which were incorporated in a copy perhaps made at Rheims, of which the first part (containing Books I—III) survives as MS Bamberg Ph. 2/1, which I shall call B.
4. Finally, similar marginalia, and in the same hand as the principal ones of R, but fewer, shorter, and less important, were added to B, and thus constitute a fourth stage in the development of the text. These in turn were incorporated, together with a small quantity of additional matter (none of which is undeniably authentic, while some of it is clearly unacceptable), in a group of Paris MSS which derive from B. They may be referred to collectively as P. In B and P the title is περι` φύσεων.

All these MSS are of the 9th century, and could have been written during the author's life-time. Fifty years ago Traube made the interesting suggestion(2) that the hand responsible for most of the marginal enlargements in R and all in B was Eriugena's own. It cannot be said that this has been finally established, but it seems very likely. But whose-ever the hand that wrote them there can be little doubt that the matter is Eriugena's, even when, in R, the hand is not the "Eriugena" hand. Although they do not as a rule affect the main argument, being for the most part qualifications of assertions made in the text, or similes to illustrate the meaning, all bear the stamp of authority. To say that they were not by Eriugena would be to make the *Periphyseon* a work of collaboration.

III

It follows that everything in the "Eriugena" hand in B is authoritative. This will include not only the enlargements similar to those of R, but the very full set of lemmata, which here appear for the first time, and the new Greek title: περι` φύσεων. Clearly, then, this was the title by which the author wished his work, in its final form, to be known. But the evidence does not rest on this one MS: he himself refers to his work by this name elsewhere; by this name it was known to his friends and his enemies, and generally, with a single vacillating exception, throughout the middle ages; and under this name it was eventually condemned.

In his *Commentary on the Celestial Hierarchy* Eriugena refers three times to this work, each time as περι` φύσεων.(3) On a blank leaf of a MS of his translation of the *Ambigua* of St. Maximus, a 9th century hand has written out a list of the books belonging to Wulfad, the friend to whom he dedicated the *Periphyseon*. The list contains, among other works of Eriugena, the item: *Libri perifision*. I. I.(4)

(...)

Yet the fact remains that the oldest extant MS is headed περι` φύσεως μερισμοῦ, and the work is generally known today as *De divisiones naturae*. There can, of course, be no doubt that Eriugena made use of that title — at one time: but it belongs to the earlier stages of the development of the text, and is perhaps an accidental

survival from the earliest — that which I have called *De divisione naturae A*.

(...)

Gale chose the title *De divisiones naturae* for his edition; reasonably enough, for he found this given as the Latin equivalent for *peri fiseon merismou* at the beginning of his MS. In doing so he established a precedent for his successors⁽⁵⁾, and so it has come about that the title which Eriugena may have first adopted but certainly discarded subsequently, and which, after R, is only found in MSS of secondary importance (and even these do not speak with a certain voice) has been universally substituted for that which is found in MSS of the highest authority, and by which the work was known to all, including the, author himself, from the 9th to the 12th century.

IV

De divisione naturae is not only less well authenticated, it is less appropriate to the text in its developed form, in which the theme of the "division of nature" is largely overshadowed by speculations which reach beyond it. Indeed, a reading of Book I, where much of the primitive stage of the text seems to survive, suggests that the word *divisio* is used in the technical sense of substantial division of genus into species and that *de divisione naturae A* was a treatise on dialectic. In its final stage, however, it is very much more than this, comprising a whole philosophical system which embraces cosmology, metaphysics and theology. One can well understand why Eriugena seized the opportunity afforded by the re-copying of the text (MS B) to change its title, and why the name he chose should be of the kind traditionally given to books in which philosophical systems were expounded.⁽⁵⁾

Notes

(1) R itself is incomplete, ending in the middle of Book IV, but there are marginal references to a fifth book, and this book is found in MSS copied from R.

The concept of Natura in the Periphyseon

"Introduction: Definition of φύσις-Natura (441A 1-441B 4).

Chapter I: περι φύσεως μερισμοῦ (441B 5-450B 2).

1. The four species of Nature (441B 5-10).

2. Classification of the species into pairs of opposites (441B 10-442A 12).

3. The need to discuss each species separately (442A 12-B 9).

4. Amplification of the Introduction, in which Nature was defined as comprising that which is and that which is not. This can be understood-in five different ways (442B 10-446A 3):

(i) That which is sensible or comprehensible is: that which is insensible or incomprehensible is not (443A 9-D 3).

(ii) In a hierarchy, if the superior order is said to be, the lower is said not to be, and vice versa (443D 4-444C 12).

(iii) The manifested effect is: the unmanifested cause is not (444C 13-445B 10).

(iv) That which is is: that which becomes and passes away is not (445B 11-C 2).

(v) Man in a state of grace is: man who has fallen from grace is not (445C 3-446A 3).

5. An objection to 4 (i): angels contemplate the primordial causes, and men may contemplate God in the Beatific Vision; therefore that which by this definition is not is yet comprehensible. Answer: these comprehend not the nature of what they contemplate, but theophanies of it (446A 3-451C 10). The section includes a digression on theophanies (449A 1-450B 2).

Chapter II: *De natura creante et non creata* (451C 11-462D 8).

1. God is $\varphi\upsilon\sigma\iota\varsigma$ and therefore *non-creatus*; and is the First Cause and therefore *creans* (451C 11-452A 7).

2. If God is said to be created, this is because He pervades all things and thus becomes manifest in all things, and so comes to being in them. If He did not they would have no being at all (452A 8-455A 6).

3. Therefore, although we cannot know God, we know three things about Him:

(i) that He exists, from the fact that His creatures exist; (ii) that He is wise, from the fact that they are rationally ordered; (iii) that He lives, from the fact that they are in constant motion. These three things are substantial to Him, and therefore we know that He is a Trinity consisting of Being, Wisdom, and Life, i.e. Father, Son, and Holy Spirit (455A 6-D 3). 4. How the One God can be Three. His Unity does not exclude multiplicity, and therefore contains within itself the Unbegotten Substance, the Begotten Substance, the Proceeding Substance. The relation of the first to the second is the Father; that of the second to the first is the Son; that of the third to the first and second is the Holy Spirit (455D 3-457D 5).

5. There are two theologies: the Apophatic, which declares that nothing of God's creation can be predicated of Him literally; and the Cataphatic, which declares that all things can be predicated of Him

metaphorically. The two are reconciled by adding to every predicate the prefix 'More-than-' (457D 6-462D 8).

Appendix (462D 8-524B 12).

(This appendix applies the principle of the two theologies to each of the ten Categories. It provides the opportunity for a little treatise on the Categories for which an appropriate title would be that which Hugh of St. Victor gave to the whole Book:(1) *On the Ten Categories in relation to God*. The new topic is really broached at 457D 6, where Alumnus breaks into the discussion on the Trinity with the irrelevant words: 'Nosse tamen aperte et breuiter per te uelim utrum omnes categoriae, cum sint numero decem, de summa diuinae bonitatis . . . essentia . . . possint praedicari.' [*] Nutritor insists on dealing with the two theologies first, and then deals with Alumnus' question at 462D 8. Within this appendix there is a long digression which deals with the first eight Categories in greater detail. So as not to obscure the structure of the dialogue, this digression will be analysed separately at the end.)

1. Introduction (462D 8-464A 10).

2. The Ten Categories (464A 10-524B 11)

(i) *essentia* (464A 10-13).

(ii) *quantitas* (464A 13-B 15).

(iii) *qualitas* (464B 15-C 7).

(iv) *relatio* (464C 8-465C 6).

(v) *situs* (465C 7-466A 1).

(vi) *habitus* (466A 2-468B 12).

(vii and viii) *locus, tempus* (468B 13-469A 4).

(Here follows the digression on the first eight Categories, 469A 4-504A 4.)

(ix and x) *agere, pati* (504A 5-524B 11).

Conclusion of Book I (524B 11-12).

Treatise on the First Eight Categories (469A 4-504A 4).

1. Introduction: Alumnus remarks that the nature of the Categories and their application to God have been sufficiently covered (although in fact only eight Categories have so far been dealt with) (469A 4-9).

2. The reduction of the ten Categories to the two higher Categories of status and motus, and of these to the universal genus, φύσις (469A 10-B 1 1).

3. Doubts about *habitus* and *relatio*. They have been allocated to *motus*, but seem to be in *status*. Answer: That which subsists in another subject is in motion; *habitus* and *relatio* subsist in another subject; therefore they are in motion (469B 12-470B 3).

4. But this argument would equally apply to *locus*, *quantitas*, and *situs*, which have been allocated to *status*. Answer: *locus*, *quantitas*, and *situs* are not in the subject, but rather each is a subject in which other things are. Therefore they are at rest (470B 5-D 3).

5. But *locus*, *quantitas*, and *situs* are accidents of *essentia*, and therefore cannot be self-sufficient subjects. Answer: there are two kinds of accidents, περιοχαί and συμβάματα. The former enclose the subject and are its limits, and therefore are at rest. *Locus*, *quantitas*, and *situ* are always this kind of accident, and therefore at rest (470D 3-472B 10).

6. In the course of this discussion the Categories have been shown to be so closely interrelated that Alumnus is compelled to ask for their properties to be clearly distinguished (472B 11-C 3).

7. The properties of the Categories (472C 4-504A 4).

(i) *essentia* (472C 4-15).

(ii) *quantitas* (472C 15-D 9).

(iii) *qualitas* (472B 9-473B 1).

(iv) *relatio* (473B 2-C 8).

(v) *situs* (473C 9-474A 5)-

(vi) *habitus* (474A 6-B 5).

(vii and viii) *locus*, *tempus* (474B 6-504A 4). With this long section on *locus* and *tempus* the interpolated treatise comes to an end, for

the passage on *agere* and *pati* which follows is concerned with the question whether these two Categories may be predicated of God, and therefore belongs to the main body of the Appendix." (pp. 28-22)

Notes

[*] But I should like to hear from you, clearly and succinctly, whether all the categories, - for they are ten in number - can truly and properly be predicated of the supreme *One* essence.

From: I. P. Sheldon-Williams, *Introduction to Books I-III*, in: *Iohannis Scotti Eriugenae Periphyseon (De Diuisione Naturae)*. Liber Primus, Dublin: The Dublin Institute for Advanced Studies 1968.

The four division of Natura in the Periphyseon

The *Periphyseon* begins by setting out a fourfold division of universal nature (...) into: 1) that which is not created and creates, 2) that which is created and creates, 3) that which is created and does not create, and 4) that which is not created and does not create. God, as creator, constitutes 1); the primordial causes -- which are both like Platonic Ideas and the Stoic seminal reasons Eriugena learnt about in Augustine's *Literal Commentary on Genesis* -- make up 2); 3) is the created world of men, animals and things and 4), like 1), is identified with God, but God as the Final Cause to which all things return. The underlying course of universal history, seen as the progress from 1) to 4), is described in the five books of the work, which takes the form of a dialogue between master and pupil. Book I is mainly devoted to showing that God does not belong to any of Aristotle's ten categories. Drawing on pseudo-Dionysius' negative theology, Eriugena argues that God does not even belong to the first category, that of *ousia* (substance or essence) as Augustine had held. The remaining four books are structured round an exegesis of the story of creation and fall in Genesis, in which Eriugena discovers not

only an account of divisions 2) and 3) but also that of the return of all things at the end of time to the uncreated and creating God of 4)." (pp. 120-121)"

From: John Marenbon, "Introduction" to: *John Scottus Eriugena and Anselm of Canterbury*, by Stephen Gersh, in: J. Marenbon (ed.), *Medieval Philosophy*, Routledge History of Philosophy, Vol. II, Chapter 6, New York: Routledge 1998.

The first book of the Periphyseon

"Introduction: Definition of φύσις-Natura (441A 1-441B 4).

Chapter I: Περὶ φύσεως μερισμοῦ (441B 5-450B 2).

1. The four species of Nature (441B 5-10).
2. Classification of the species into pairs of opposites (441B 10-442A 12).
3. The need to discuss each species separately (442A 12-B 9).
4. Amplification of the Introduction, in which Nature was defined as comprising that which is and that which is not. This can be understood-in five different ways (442B 10-446A 3):
 - (i) That which is sensible or comprehensible is: that which is insensible or incomprehensible is not (443A 9-D 3).
 - (ii) In a hierarchy, if the superior order is said to be, the lower is said not to be, and vice versa (443D 4-444C 12).
 - (iii) The manifested effect is: the unmanifested cause is not (444C 13-445B 10).
 - (iv) That which is is: that which becomes and passes away is not (445B 11-C 2).
 - (v) Man in a state of grace is: man who has fallen from grace is not (445C 3-446A 3).
5. An objection to 4 (i): angels contemplate the primordial causes, and men may contemplate God in the Beatific Vision; therefore that which by this definition is not is yet comprehensible. Answer: these comprehend not the nature of what they contemplate, but theophanies of it (446A 3-451C 10). The section includes a digression on theophanies (449A 1-450B 2).

Chapter II: *De natura creante et non creata* (451C 11-462D 8).1

1. God is φύσις and therefore *non-creatus*; and is the First Cause and therefore *creans* (451C 11-452A 7).

2. If God is said to be created, this is because He pervades all things and thus becomes manifest in all things, and so comes to being in them. If He did not they would have no being at all (452A 8-455A 6).

3. Therefore, although we cannot know God, we know three things about Him:

(i) that He exists, from the fact that His creatures exist;

(ii) that He is wise, from the fact that they are rationally ordered;

(iii) that He lives, from the fact that they are in constant motion.

These three things are substantial to Him, and therefore we know that He is a Trinity consisting of Being, Wisdom, and Life, i.e. Father, Son, and Holy Spirit (455A 6-D 3).

4. How the One God can be Three. His Unity does not exclude multiplicity, and therefore contains within itself the Unbegotten Substance, the Begotten Substance, the Proceeding Substance. The relation of the first to the second is the Father; that of the second to the first is the Son; that of the third to the first and second is the Holy Spirit (455D 3-457D 5).

5. There are two theologies: the Apophatic, which declares that nothing of God's creation can be predicated of Him literally; and the Cataphatic, which declares that all things can be predicated of Him metaphorically. The two are reconciled by adding to every predicate the prefix 'More-than-' (457D 6-462D 8).

Appendix (462D 8-524B 12).

(This appendix applies the principle of the two theologies to each of the ten Categories. It provides the opportunity for a little treatise on the Categories for which an appropriate title would be that which Hugh of St. Victor gave to the whole Book:(1) *On the Ten Categories in relation to God*. The new topic is really broached at 457D 6, where Alumnus breaks into the discussion on the Trinity with the irrelevant words: 'Nosse tamen aperte et breuiter per te uelim utrum omnes categoriae, cum sint numero decem, de summa diuinae bonitatis . . . essentia . . . possint praedicari.' [*] Nutritor insists on dealing with the two theologies first, and then deals with Alumnus' question at 462D 8. Within this appendix there is a long digression which deals with the first eight Categories in greater detail. So as not to obscure

the structure of the dialogue, this digression will be analysed separately at the end.)

1. Introduction (462D 8-464A 10).

2. The Ten Categories (464A 10-524B 11)

(i) *essentia* (464A 10-13).

(ii) *quantitas* (464A 13-B 15).

(iii) *qualitas* (464B 15-C 7).

(iv) *relatio* (464C 8-465C 6).

(v) *situs* (465C 7-466A 1).

(vi) *habitus* (466A 2-468B 12).

(vii and viii) *locus, tempus* (468B 13-469A 4).

(Here follows the digression on the first eight Categories, 469A 4-504A 4.)

(ix and x) *agere, pati* (504A 5-524B 11).

Conclusion of Book I (524B 11-12).

Treatise on the First Eight Categories (469A 4-504A 4).

1. Introduction: Alumnus remarks that the nature of the Categories and their application to God have been sufficiently covered (although in fact only eight Categories have so far been dealt with) (469A 4-9).

2. The reduction of the ten Categories to the two higher Categories of status and motus, and of these to the universal genus, τὸ πᾶν (469A 10-B 1 1).

3. Doubts about *habitus* and *relatio*. They have been allocated to *motus*, but seem to be in *status*. Answer: That which subsists in another subject is in motion; *habitus* and *relatio* subsist in another subject; therefore they are in motion (469B 12-470B 3).

4. But this argument would equally apply to *locus, quantitas*, and *situs*, which have been allocated to *status*. Answer: *locus, quantitas*, and *situs* are not in the subject, but rather each is a subject in which other things are. Therefore they are at rest (470B 5-D 3).

5. But *locus*, *quantitas*, and *situs* are accidents of *essentia*, and therefore cannot be self-sufficient subjects. Answer: there are two kinds of accidents, περισχαί and συμβάματα. The former enclose the subject and are its limits, and therefore are at rest. *situ* are always this kind of accident, and therefore at rest (470D 3-472B 10).

6. In the course of this discussion the Categories have been shown to be so closely interrelated that Alumnus is compelled to ask for their properties to be clearly distinguished (472B 11-C 3).

7. The properties of the Categories (472C 4-504A 4).

(i) *essentia* (472C 4-15).

(ii) *quantitas* (472C 15-D 9).

(iii) *qualitas* (472B 9-473B 1).

(iv) *relatio* (473B 2-C 8).

(v) *situs* (473C 9-474A 5).

(vi) *habitus* (474A 6-B 5).

(vii and viii) *locus*, *tempus* (474B 6-504A 4).

With this long section on *locus* and *tempus* the interpolated treatise comes to an end, for the passage on *agere* and *pati* which follows is concerned with the question whether these two Categories may be predicated of God, and therefore belongs to the main body of the Appendix.

Notes

(1) *Eruditionis didascalicon*, iii, PL clxxvi. 765 *De decem categoriis in Deum*; cf. Cappuyns, [*Jean Scot Érigène sa vie, son œuvre, sa pensée*. Paris: Desclée de Brouwer 1933] p. 71, n. 2.

[*] But I should like to hear from you, clearly and succinctly, whether all the categories, - for they are ten in number - can truly and properly be predicated of the supreme *One* essence.

From: I. P. Sheldon-Williams, *Introduction to Books I-III*, in: Iohannis Scotti Eriugenae *Periphyseon* (De Diuisione Naturae). Liber Primus, Dublin, The Dublin Institute for Advanced Studies, 1968, pp. 28-32.

Ontology and Semiotics in the Periphyseon

"In some respects, Western medieval philosophy can be viewed as beginning with the brilliant and controversial ninth-century thinker John Scottus Eriugena. (1) Marenbon values him for his ability to reason abstractly yet criticizes his tendency to system building. However, it is Eriugena's notion of structure which perhaps makes him closer to modern writers than to other medieval ones.

Few would deny that a particular concept of 'structure' is one of the intellectual paradigms of our era. This involves a priority of relation to related terms, such relations being either of opposite to opposite where one opposite exists through or is understood through the other, or else of whole to part where the whole exists through or is understood through the part, or vice versa. (...) Although avoiding the term 'structure' itself, Eriugena builds his metaphysical system with identical components. Priority of relation is underlined by his discussion of the Aristotelian categorical doctrine in *Periphyseon* I where the category of 'relation' (*relatio, ad aliquid*) or of 'condition' (*habitus*) is found to be present in all the other categories. (2) Contrast of opposite with opposite is a recurrent theme of Eriugena's writing, as instanced by the negative and affirmative predicates applied to God (I. 458A-462D, II. 599B-600A, III. 684D-685A, etc.) and the five dichotomies constituting nature (II. 529C-545B); contrast of whole with parts is only slightly less frequent, an instance being God's status with regard to created things of which man's is the microcosmic reflection (IV. 759A-B. Cf. II. 523D-524D). Strict relatedness is clearly the writer's underlying assumption in such cases, since each binary term is said to be dependent ontologically and epistemologically on its counterpart (V. 953C-954A, V. 965A-B).

Eriugena exploits the notion of structure in developing his own variant of the classical Platonic Theory of Forms. The expression of this doctrine, acquired through intermediary Greek and Latin patristic sources, combines ontological and semiotic criteria.

From the ontological viewpoint, (3) there exists a set of transcendent i.e. atemporal and non-spatial principles. These are termed 'reasons' (*rationes*) in Latin, and 'Ideas' (*ideai*), 'prototypes' (*prototypa*), 'pre-destinations' (*proorismata*), or 'divine volitions' (*theia thelêmata*) in

Greek. (4) They possess a metaphysically intermediate status since they depend upon a prior cause: God (the technical term for such dependence being 'participation' (*participatio*), while subsequent terms, created objects, depend on them. (5) According to Eriugenian textual exegesis, when the Bible describes God as making heaven and earth 'in the beginning', it means that the first principle establishes the reasons or Ideas of intellectual or sensible creatures within its Word. (6) Examples of the transcendent principles are Goodness, Being, Life, Wisdom, Truth, Intellect, Reason, Power, Justice, Salvation, Magnitude, Omnipotence, Eternity, and Peace (II. 616C-617A).

From the semiotic viewpoint, (7) Eriugena proposes an analysis of the term 'nature' (*natura*) using a combination of traditional logical principles like the square of opposition (8) and the division of genus into species versus the partition of whole into parts. (9) Within nature, four 'differences' (*differentiae*) are posited: creating (A), not created (D), created (B), and not creating (C), these combining to form four 'species' (*species*): creating and not created (1), both created and creating (2), created and not creating (3), and neither creating nor created (4). (10) The relations between 1 and 3 and between 2 and 4 are described as 'opposition' (*oppositio*), those between A2 and A1, between B3 and B2, between C3 and C4, and between D4 and D1 as 'similarity' (*similitudo*), and those between B2 and D1, between C3 and A2, between B3 and D4, and between C4 and A1 as 'dissimilarity' (*dissimilitudo*) (I. 441A-442A, II. 523D-528B). This semiotic analysis is applied to metaphysics when species 1 is identified with God as the beginning of the cosmic process, species 2 with the reasons or Ideas, species 3 with the effects of the reasons or Ideas, and species 4 with God as end of the cosmic process (11)." (pp. 125-126, some notes omitted).

Notes

(1) The most useful books providing a general introduction to Eriugena's life and works are Cappuyns [1933] and Moran [1988]. See O'Meara and Bieler [1973], Allard [1986], Beierwaltes [1987] and [1990], Jeaneau [1987], for Essays on specific aspects of his thought. [for the complete references see the [Annotated bibliography](#)]

(2) Eriugena, *Periphyseon* I. 466A-467C. References to Eriugena's work give the column numbers of Floss's edition [6.1] which are reproduced in the modern editions and translations and so provide a standard form of reference. Because of his interpretation of pseudo-Augustine: *The Ten Categories*, Eriugena allows the separate Aristotelian categories of relation and condition to coalesce. On Eriugena's theory see Flasch [1971].

(3) In discussing both Eriugena's and Anselm's notions of structure, I shall distinguish 'ontological' and 'semiotic' components. By the former is meant any aspects of the metaphysical system stated in the texts, by the latter those aspects corresponding to elements in the notion of structure described earlier. Of course, neither Eriugena nor Anselm could have made such a distinction.

(4) II. 529A--C. Elsewhere, Eriugena calls these 'primordial causes' (*causae primordiales*). See III. 622Bff

(5) II. 616B. 'And they are said to be the principles of all things since all things whatsoever that are sensed or understood either in the visible or invisible creation subsist by participation in them, while they themselves are participations in the one cause of all things: that is, the most high and holy Trinity'. Cf. III. 630A--C, III. 644A--B, III. 646B--C, III. 682B--C.

(6) II. 546A--B. 'But on considering the interpretations of many exegetes, nothing strikes me as more probable or likely than that in the aforesaid words of Holy Scripture -- that is, within the meaning of "heaven" and "earth" -- we should understand the primordial causes of the entire creature which the Father had created before the foundation of all other things in his only begotten Son who is designated by the term "beginning", and that by the word "heaven" we should hold the primal causes of intelligible things and celestial essences to have been signified, but by the word "earth" those of the sensible things in which the entire corporeal world is completed'.

(7) That Eriugena was aware of the linguistic even if not semiotic starting point of his analysis is suggested by his reference to nature as a 'generic term' (general nomen) rather than as a generic entity. See Cristiani, [1981].

(8) The square of opposition was a classificatory schema applied by Greek writers of late antiquity to (a) substance and accident and (b) the numbers 1-10. Thus, in (a) four terms: of a subject (A), not in a subject (D), in a subject (B), not of a subject (C) are grouped into four combined terms: of a subject but not in a subject 1), both in a subject and of a subject 2), in a subject but not of a subject 3), neither of a subject nor in a subject 4) where 1 = universal substance, 2 = universal accident, 3 = particular accident, 4 = particular substance. See Porphyry, *On the Categories* 78, 25ff. In (b) four terms: generating (A), not generated (D), generated (B), not generating (C) are grouped into four combined terms: generating but not generated 1), both generated and generating 2), generated but not generating 3), neither generating nor generated 4) where 1 = the numbers one, two, three, and five, 2 = the number four, 3 = the numbers six, eight, and nine, 4 = the number seven. See Theo of Smyrna, *Exposition of Mathematical Matters* 103. 1-16. Such schemata were repeated in Latin texts and thereby transmitted to Eriugena and others: see Marius Victorinus, *To Candidus* 8. 1-21, Macrobius' commentary on Cicero's *Dream of Scipio* I. 5. 16, Martianus Capella, *On the Marriage of Mercury and Philology* VII. 738, Boethius, *Commentary on Aristotle's Categories* I. 169Bff. The square of opposition in antiquity has been discussed by P. Hadot, *Porphyre et Victorinus*, Paris, 1968 148ff., Libera, A. de, 'La sémiotique d'Aristote', in *Structures élémentaires de la signification*, ed. F. Nef, Brussels, 1976, pp. 28-55. The square of opposition in Eriugena has been examined most recently by D'Onofrio [1990] and Beierwaltes [1990] 17-38. An analogous schema applied to propositions was also traditional and certainly known to Eriugena; see Martianus Capella, *On the Marriage of Mercury and Philology* IV. 400-1.

(9) See Martianus Capella, *On the Marriage of Mercury and Philology* IV. 352-4.

(10) I. 441A-442B. Eriugena himself seems to envisage a diagram in the form:

The notation A, B ... 1, 2 ... is not provided by Eriugena.

(11) I. 442A--B, II. 525A, II. 526C-527A, II. 527C. The fourfold schema is repeated later in *Periphyseon* but with no additions to the basic doctrine. Cf. III. 688C-689A, IV. 743B--C, V. 1019A--B.

From: Stephen Gersh, *Structure, Sign, and Ontology from Johannes Scottus Eriugena to Anselm of Canterbury. A reply to Marenbon*, in: *Reading Plato, Tracing Plato. From Ancient Commentary to Medieval Reception*, Aldershot, Ashgate 2005, Essay XIII.

The Works of Eriugena: Editions and Translations

Works in chronological order

An updated and detailed examination of the manuscripts and editions can be found in the following essay (in Italian): Ernesto Sergio Mainoldi. *Iohannes Scottus Eriugena*. In *La trasmissione dei testi latini del medioevo / Mediaeval Latin Texts and their Transmission*. Edited by Chiesa Paolo and Castaldi Lucia. Firenze: SISMEL - Edizioni del Galluzzo 2005, pp. 186-264.

1. *De diuinae praedestinatione* (On divine predestination) (ca. 850-851)
2. *In Priscianum* [also known as *Glosa Prisciani*] (ca. 850)
3. *Annotationes in Marcianum* (ca. 840-850)
4. *Glosae Martiani* (ca. 840-850)
5. *Glossae divinae historiae* (850-860)
6. *Versio operum sancti Dionysii Areopagitae* (translation of the works of Pseudo-Dionysius the Areopagite) (before 860-864); revised (864-866)
7. *Versio sancti Gregorii Nissenii Sermonis de imagine* (translation of Gregory of Nyssa's *On the Image of Man*) (862-864)
8. *Versio sancti Maximi Confessoris Ambigua ad Iohannem* (translation of Maximus the Confessor's *Ambigua to John*) (862-864)

9. *Versio sancti Maximi Confessoris Quaestiones ad Thalassium* (translation of Maximus the Confessor's *Questions to Thalassius*) (864-866)
10. *Periphyseon* (Concerning Nature) (862-866)
11. *Expositiones in Ierarchiam Coelestem* (Exposition on the *Celestial Hierarchy* of Pseudo-Dionysius the Areopagite) (864-870)
12. *Vox spiritualis aquilae* (Homily on the Prologue to St. John's Gospel) (870-872)
13. *Commentarius in Iohannem* (Commentary on St. John's Gospel) (875-877)
14. *Carmina* (Poems) (850-877)
15. *Epistola "Domine Winiberte..."*

Works of uncertain attribution

1. Pseudo-Ioannes, Chrysostomus. 1862. "Opus imperfectum im Matthaeum." In *Patrologia Graeca. vol. 56*, edited by Migne, Jacques Paul, 611-946. Paris.

English translation: *Incomplete Commentary on Matthew (Opus imperfectum)* with an introduction and notes by James A. Kellerman, edited by Thomas C. Oden; Downers Grove: InterVarsity Press, 2010, two volumes.

The work is probably a compilation of different writings; two groups of homilies: (C1 = 24-31, Migne: 756-798 and C2 = 46b-54, Migne: 897-946) were attributed by Gustavo Piemonte (1996, 2002) to a lost work of Eriugena, the *Tractatus in Matheum* (a commentary on the Gospel of Matthew).

This attribution was accepted by Ernesto Sergio Mainoldi (2005), but has been challenged by Peter Dronke in his *Introduction* to the Italian translation of the first book of the *Periphyseon* (Giovanni Scoto, *Sulle nature dell'universo. Libro I*, Milano: Fondazione Lorenzo Valla - Arnoldo Modadori, 2012, pp. XXXI-XXXII).

See also Jean-Paul Bouhot, *Adaptations latines de l'Homélie de Jean Chrysostome sur Pierre et Elie (CPG 4513)*, *Revue bénédictine*, 112, 2002, pp. 201-235: according to the Author the part of the homilies corresponding to C1 and C2 was written in the Carolingian period.

Sigebert of Gembloux (c. 1030 - 1112) in his *Catalogus Sigeberti Gemblacensis monachi de viris illustribus*, Chapter LXV, wrote:

"Joannes Scotus, in exponendis divinis et humanis scripturis satis idoneus, fecit tractatus in Matthaëum. Scripsit librum De officiis humanis et alia quae ab aliis habentur." (John Scotus, in explaining the divine and human Scriptures, made a *tractatus in Mattheum*. He wrote the book of the human duties and other things which others have." (critical edition by Robert Witte, Bern, Frankfurt a.M.: Peter Lang, 1974, p. 71; old edition in Migne, *Patrologia Latina*, 56, with the title *Liber de scriptoribus ecclesiasticis*, coll. 547-592).

For completeness, I give also the traditional view on the authorship of this work:

"The *Opus imperfectum in Matthaëum* is a set of fifty-four Latin homilies on the first gospel which throughout the Middle Ages were believed to be translations of Greek homilies by John Chrysostom. In reality, they are probably the work of an unidentified Arian bishop or priest writing in Latin in the fifth or sixth century. The great range of dates, authors, and places of origin that have been proposed for these homilies (up through the 1960s) is usefully summarized by Gauthier (1972 pp. 50-54). Dekkers (CPL 707) captures a dominant trend in the scholarship in advocating a date of composition in the mid-sixth century; however, Joop van Banning, the senior editor of a new edition in progress, believes the *Opus* was composed in the second or third quarter of the fifth century (CCSL 87B.v). Schlatter's (1988) suggestion that the author was Anianus of Celeda is deemed "attractive" yet "problematic" by Cooper (1993), who cautions against accepting this hypothesis without further evidence." (Thomas N. Hall).

Forthcoming in: Thomas N. Hall (ed.), *Sources of Anglo-Saxon Literary Culture. Volume 5: Julius Caesar to Pseudo-Cyril of Alexandria*, Kalamazoo: Medieval Institute Publications.

"Il ne revient pas à l'éditeur de donner des consignes de lecture. Qu'on me permette toutefois de préciser l'avertissement que Jean Scot adresse à ses lecteurs à la fin de sa préface et que je paraphrasais en commençant. La réfutation de la thèse sur la double prédestination est fondée sur le principe de la simplicité absolue de Dieu et sur une dialectique de l'être et du non-être (71). Il n'y a absolument pas de prédestination au mal ; car Dieu, être au suprême degré (*summa essentia* (72)), est la cause de tout ce qui est ; il n'est donc pas ni ne peut être la cause de ce qui n'est pas (73). Il n'a de contraire que le non-être ; et il n'a donc aucune part dans les modalités du non-être que sont le péché et les peines du péché: la mort et le malheur (74). Il n'y a, à parler strictement, de prescience et de prédestination

au bien qu'en un sens impropre ; car *scientia* et *destinatio* sont des noms quasi-propres de Dieu, au même titre que *essentia*, *ueritas*, *uirtus*, *sapientia* (75). Mais le préfixe, dans *praescientia* et *praedestinatio*, implique l'idée d'une temporalité qui est évidemment étrangère à l'action et à l'être de Dieu: "De quel droit dirait-on que Dieu pré-sait quelque chose par pré-science ou pré-destine par pré-destination, lui pour qui rien n'est futur, puisqu'il n'attend rien, et rien n'est passé, puisque pour lui rien ne passe" (76). L'action divine n'est précédée d'aucune préparation ; elle est immédiate : "omnia semelet simulfecit" (77). Toutes choses sont toujours présentes dans le Verbe, "par qui toutes choses ont été faites et en qui toutes choses vivent immuablement, non seulement celles qui ont existé, mais aussi celles qui existeront. Du reste, en lui, elles n'ont pas existé ni n'existeront ; elles sont seulement ; et toutes sont un" (78).

Cette argumentation peut se recommander de nombreux textes d'Augustin (79) ; et M. Jacquin a pu écrire justement que "la doctrine augustinienne forme la trame de ce court traité et lui fournit les principaux arguments sur lesquels repose sa thèse" (80). Or c'est cette thèse ontologique qui autorise ou plutôt qui réclame l'interprétation des formules littéralement prédestinarianistes et, plus généralement, la critique de tout discours théologique, qu'il soit scripturaire ou patristique (81). L'intention fondamentale de Jean Scot me paraît donc être de réduire l'augustinisme de la prédestination par l'augustinisme de la simplicité divine et d'instaurer ainsi, dans l'intelligence de la foi, l'identité de la vraie religion et de la vraie philosophie (82)." Reprinted 2012.

5. Dutton, Paul Edward, and Luhtala, Anneli. 1994. "Eriugena in *Priscianum*." *Mediaeval Studies* no. 56:153-163.

This essay is about the discovery of a commentary *In Priscianum*, to be attributed to Eriugena. An appendix contains the edition of the *accessus* to the commentary.

"Squeezed between copies of Priscian's *Periegesis* and *Institutiones* in the so-called Dubthach Codex, Leiden,

Bibliotheek der Rijksuniversiteit B.P.L. 67 (henceforth L), is a late ninth-century copy of a set of Greek grammatical terms, definitions of grammar and rhetoric taken from an early redaction of Eriugena's *Periphyseon*, and the incomplete commentary on *Institutiones* 1.1. The Leiden manuscript bears other traces of Eriugena's direct possession and work, including glosses on the *Institutiones* written by the Irish writer known as i1. (5)

There is now new evidence to conclude that the L commentary on *De uoce* is entirely contained within a longer commentary on Priscian in Barcelona, Archivo de la Corona de Aragon, Ripoll 59, fols. 257v-288v (hereafter B), an eleventh-century manuscript of Catalan provenance. (6) Indeed the Caroline scribe who copied out the Eriugenian definitions and commentary on *De uoce* on fol. 8r-v of L also copied passages from the *accessus* of the longer commentary onto fol. 9r of L. He was joined—or perhaps preceded—by several Irish scribes who entered other materials from the commentary into the margins of fols. 9r-10r.

Thus it must follow that at least the *accessus* and the *De uoce* portions of the commentary *In Priscianum* date from the ninth century, and the arguments already made to connect the L commentary on *De uoce* to Eriugena also apply here. The evidence includes an overriding interest by the author in the priority of dialectic, an emphasis upon the superiority of *usiadis definitio* over *ennoematice* (or substantial over accidental definition), which is consistent with Eriugena's emphasis in the *Periphyseon*, and shared cosmological terms and concepts. Moreover, the definitions of grammar and rhetoric found on fol. 8r of L and that of grammar found in the *De uoce* commentary (fol. 8v) are exactly the same as those added by i! to the working copy of the *Periphyseon* (Rheims, Bibliothèque Municipale 875, fol. 41r). At the next manifest stage of recension of the *Periphyseon* as found in Bamberg, Staatsbibliothek Msc. Phil. 2/1, fol. 26r, the wording of the definition of rhetoric was changed by the Irish scribe i2. (7) It can therefore be claimed that the *De uoce* portion of the commentary *In Priscianum* contains materials not only

consistent with the work of Eriugena and his school but also particular to it. These probably date from the early stages of Eriugena's career on the continent.

There is some evidence to suggest that the scribes who wrote in the first ten folios of L knew even more of the longer commentary *In Priscianum*." (pp. 154-155)

(5) Bernhard Bischoff first drew attention to the existence of ii's glosses in L: see "Irische Schreiber im Karolingerreich," reprinted with revisions in Bernhard Bischoff, *Mittelalterliche Studien: Ausgewählte Aufsätze zur Schriftkunde und Literaturgeschichte*, vol. 3 (Stuttgart, 1981), 52. See also Dutton, "Evidence that Dubthach's Priscian Codex Once Belonged to Eriugena," (1992) 15-45.

"Introduction.

This edition introduces grammatical commentary associated with the first encounter of Aristotelian logic and ancient grammatical heritage in the Middle Ages, which took place in the so-called Carolingian Renaissance. As a result, grammatical method was renovated so as to involve its interaction with dialectic, which continued throughout the medieval period. The principal object of philosophical commentary was Priscian's *Institutiones grammaticae*, which was introduced into the medieval curriculum by Alcuin of York, the key figure in the educational reform of Charlemagne. Priscian's philosophically-oriented grammar immediately appealed to Alcuin, who assigned a major importance to the study of dialectic in his reform of learning. He encouraged the assimilation of the dialectical and grammatical approaches to language study in

his own grammar, which seems to have been pivotal in inspiring application of a new interdisciplinary approach to grammar. Far from remaining the preoccupation of few individual scholars, the new method became standard practice in the ninth and tenth centuries, as will be made plain by the material edited in this article.

The material edited below contains extracts from a newly-discovered Priscian commentary attributed to Eriugena as well as various sets of glosses copied anonymously in the margins of Priscian manuscripts in the ninth and tenth centuries. Some sixty Priscian manuscripts have come down to us from this period (M. Passalacqua, *I codici di Prisciano*, Roma: Edizioni di storia e letteratura, 1978), many of which are heavily annotated and show philosophical influence. It is true that much of early medieval Priscian commentary is unsystematic and derivative, typically consisting of a quotation from the *Categoriae Decem*, the *De nuptiis* of Martianus Capella, or the *Etymologiae* of Isidore of Seville; such glosses have been excluded from this edition. But many glosses contain highly relevant observations, and occasionally even important new developments. Such is the case, for instance, when an anonymous ninth century teacher introduces the dialectician's subject - predicate distinction into grammatical analysis. Only comments representing new developments of traditional grammatical concepts have been included in this edition." (p. 115).

"A century ago Bruno Güterbock suggested that a set of biblical glosses accompanied by the notation IO(H) in a ninth-century Vatican manuscript (Reg. lat. 215) should be attributed to Iohannes Scottus, the celebrated Irish scholar who was active in the kingdom of Charles the Bald (840-877).⁽¹⁾ Since then, despite the discovery of further manuscript witnesses, neither the glosses nor Güterbock's attribution has received much attention. The present work addresses these deficiencies and presents the first complete edition of the glosses.

The modest length and scope of the glosses (occupying only five folios in the most important manuscript witness) belie their intrinsic interest. The textual sources of the glosses, the version of the Bible which they gloss, the Old-Irish words among the predominantly Latin, and the use of Greek in the glosses all

repay close attention. More broadly, the glosses also shed light on early medieval biblical studies and on Carolingian education. And they may even provide new evidence about the early career of John Scottus who, in the details of his background and life, remains “un personnage mystérieux”.(2)" (p. 3)

(...)

"To sum up the evidence. The probable date of the *Glossae* before 860 accords with the chronology of John Scottus's scholarly career. Likewise, the textual history of the *Glossae*, especially its use by Martin Hiberniensis, its early diffusion in the diocese of Reims, its conflation with other glosses, a process perhaps executed by Heiric of Auxerre who had connections with both John Scottus and Haimo of Auxerre, fully accords with the locus and tempus of John Scottus. That the glossator was an Irishman is indicated by his use of Old-Irish words and his references to Irish flora, fauna, customs, and culture. The same conclusion is suggested by his frequent and relatively correct handling of Greek. Indeed, his bold use of that language sets him apart from other Irish and continental contemporaries and points to the preeminent scholar of Greek in the middle years of the ninth century, John Scottus. This indication is fully corroborated by the close and striking agreements in wording and content between the *Glossae* and the known works of John Scottus. Especially significant among these agreements are instances where the author of the *Glossae* went far beyond the customary requirements of a plain explanation to elaborate personal concerns that have close parallels in the later, discursive work of John Scottus.

The case for John Scottus' authorship of the *Glossae* might have rested so, were it not for a recent discovery. In preparing an edition of the *Scholica graecarum glossarum* Professor Patrizia Lendinara came across the following note in an eleventh-century manuscript, Vatican, MS Barb., lat. 477 (f. 54V):

A comentarius [sic] est secundum Iohannem Scottum minister et custos librorum uel cartarum magister. Alii dicunt

scriptorem annalium qui rerum gesta scribebant.(97)

The author of this note provides two definitions of a *commentariis* (from 2Sm 8, 16 and 1Par 18, 15, respectively) which are attributed to Iohannes Scottus.

(The second sentence provides the traditional, *Rz* [*] definition). In fact, the source for the note must have been the *Glossae diuinae historiae*, since the first definition derives from gl. 222, “a commentariis, de libris minister”, and the second from gl. 518, “A commentariis, ab his qui cartas faciunt”. The Barberinus glossator’s skilful conflation of two different glosses on lemmata from two different parts of the Old Testament suggests a careful reading of the *Glossae*. All the more reason then to give full credence to the glossator’s attribution and accordingly, to expand the IOH abbreviation of the earlier manuscripts to Johannes (Scottus).

By the eleventh century or probably earlier, there was independent evidence that John Scottus was the author of the *Glossae diuinae historiae*. The qualifiers “doubtfully” or “wrongly” can at last be removed from the attribution to John Scottus and the *Glossae* can take its place among the authentic corpus of the great ninth-century scholar and teacher." 14. Allard, Guy-H., ed. 1983. *Periphyseon. Indices generales*. Paris: Vrin.

"Présentation

Les pages qui suivent contiennent le recensement complet des mots du *Periphyseon* de Jean Scot. Cet index général se subdivise en cinq index spécifiques (les mots latins, les auteurs et citations bibliques, les auteurs et citations non-bibliques, les noms propres et collectifs, les mots grecs) et a été préparé à l'aide de l'ordinateur et du logiciel JEUEMO de l'Université de Montréal. Cet instrument de travail n'est pas une concordance ni un index lemmatisé; il n'a pas d'autre prétention que de permettre aux chercheurs le repérage rapide des mots, de leur fréquence et de leur localisation dans le texte, répondant ainsi à un vœu largement exprimé par les spécialistes de Jean Scot.

Edition utilisée

L'édition du *Periphyseon* utilisée est celle de Migne (PL, 122), que nous avons reproduite dans l'ordinateur avec la plus grande fidélité possible. Nous avons ainsi maintenu les graphies «latinisées» de certains mots grecs. Nous avons également respecté le découpage des séquences Maître/Disciple, sauf dans le cas de quelques erreurs évidentes où il nous a fallu nous en remettre soit à l'édition de Gale ou à celle de M. Sheldon-Williams (pour les trois premiers livres). En ce qui concerne les citations, nous les avons recensées

conformément à l'édition de Migne, qui les signale par des caractères italiques. Mais fidélité n'est pas aveuglement. En effet, il nous est apparu nécessaire de corriger certaines coquilles (u.g. 478,26; 597,14; 602,5; 662,30; 681,1; 800,50; 806,35; 813,1; 815,34; 890,16), de supprimer certains mots inutilement répétés (u.g. 720,10) et de retrancher du texte la dernière ligne de la colonne 528 qui n'est manifestement pas à sa place et que l'ordinateur n'a pas su localiser." (p. V).

This edition is superseded by that of M. W. Herren (1993).

22. Herren, Michael W., ed. 1993. *Johannis Scotti. Carmina*. Dublin: School of Celtic Studies, Dublin Institute for Advanced Studies.

Latin and Greek text with English translation.

23. Eriugena, Iohannis Scotti. 1972. "Epistola "Domine Winiberte..."." *Le Moyen Âge. Revue d'Histoire et de Philologie* no. 1:9-14.

In: John J. Contreni, 'A propos de quelques manuscrits de l'école de Laon au IXe siècle: découvertes et problèmes', *Le Moyen Âge*, 78, 1972, 5-39.

"The three mss in question are related to the study of Virgil and of Martianus Capella. MS Laon Bibl. Municipale 24 contains on fol. 1r a letter to a certain Winibertus, probably abbot of Schüttern in connection with the correction of a copy of the *De nuptiis*. The letter is in an Irish hand, possibly that of Eriugena. Winibertus (Wenebertus) was known for his scholarly activities which are documented in a poem by Walafrid Strabo. The author of this study emphasises the links between contemporary Irish scholarship in the Rhineland and at Laon. A second Laon ms, MS 468, is a handbook for the study of Virgil and of the liberal arts, from which the text of a poetic *vita* of Virgil is here transcribed (pp. 17-21), part of it identifiable as the *Vita Ternensie*, the remainder probably from Donatus. This manuscript had belonged to Martinus Scottus. Marginal notes in an Irish hand indicate knowledge of Isidore of Seville. The

removal of manuscripts of classical texts from Laon in the 16th and 17th century renaissance resulted in discoveries in other libraries of texts related to e.g. MS Laon 444. The author discusses one Vatican manuscript of such probable origin (cf. C. Leonardi, 'Nuove voci poetiche tra secolo IX e XI', *Studi medievali*, 3a serie, II, 1961, 139-168) the authorship of which might be traced to Auxerre in the late 9th or early 10th century, and probably to Remigius." (B.).

Publication of the Latin translation (made ca. 862-864) by John Scottus of the *De hominis opificio XVI* by Grégory of Nissa (P. L. 122, coll. 793C-797C), based on ms. Bamberg B. IV. 13.

Modern editions of the works of uncertain attribution

1. Pseudo-Ioannes, Chrysostomus. 1862. "Opus imperfectum im Matthaeum." In *Patrologia Graeca. vol. 56*, edited by Migne, Jacques Paul, 611-946. Paris.

English translation: *Incomplete Commentary on Matthew (Opus imperfectum)* with an introduction and notes by James A. Kellerman, edited by Thomas C. Oden; Downers Grove: InterVarsity Press, 2010, two volumes.

The work is probably a compilation of different writings; two groups of homilies: (C1 = 24-31, Migne: 756-798 and C2 = 46b-54, Migne: 897-946) were attributed by Gustavo Piemonte (1996, 2002) to a lost work of Eriugena, the *Tractatus in Matheum* (a commentary on the Gospel of Matthew).

This attribution was accepted by Ernesto Sergio Mainoldi (2005), but has been challenged by Peter Dronke in his *Introduction* to the Italian translation of the first book of the *Periphyseon* (Giovanni Scoto, *Sulle nature dell'universo. Libro*

I, Milano: Fondazione Lorenzo Valla - Arnoldo Modadori, 2012, pp. XXXI-XXXII.

See also Jean-Paul Bouhot, *Adaptations latines de l'Homèlie de Jean Chrysostome sur Pierre et Elie (CPG 4513)*, *Revue bénédictine*, 112, 2002, pp. 201-235: according to the Author the part of the homilies corresponding to C1 and C2 was written in the Carolingian period.

Sigebert of Gembloux (c. 1030 - 1112) in his *Catalogus Sigeberti Gemblacensis monachi de viris illustribus*, Chapter LXV, wrote:

"Joannes Scotus, in exponendis divinis et humanis scripturis satis idoneus, fecit tractatus in Matthaëum. Scripsit librum De officiis humanis et alia quae ab aliis habentur." (John Scotus, in explaining the divine and human Scriptures, made a *tractatus in Mattheum*. He wrote the book of the human duties and other things which others have." (critical edition by Robert Witte, Bern, Frankfurt a.M.: Peter Lang, 1974, p. 71; old edition in Migne, *Patrologia Latina*, 56, with the title *Liber de scriptoribus ecclesiasticis*, coll. 547-592).

For completeness, I give also the traditional view on the authorship of this work:

"The *Opus imperfectum in Matthaëum* is a set of fifty-four Latin homilies on the first gospel which throughout the Middle Ages were believed to be translations of Greek homilies by John Chrysostom. In reality, they are probably the work of an unidentified Arian bishop or priest writing in Latin in the fifth or sixth century. The great range of dates, authors, and places of origin that have been proposed for these homilies (up through the 1960s) is usefully summarized by Gauthier (1972 pp. 50-54). Dekkers (CPL 707) captures a dominant trend in the scholarship in advocating a date of composition in the mid-sixth century; however, Joop van Banning, the senior editor of a new edition in progress, believes the *Opus* was composed in the second or third quarter of the fifth century (CCSL 87B.v). Schlatter's (1988) suggestion that the author was Anianus of Celeda is deemed "attractive" yet "problematic" by Cooper

(1993), who cautions against accepting this hypothesis without further evidence." (Thomas N. Hall).

Forthcoming in: Thomas N. Hall (ed.), *Sources of Anglo-Saxon Literary Culture. Volume 5: Julius Caesar to Pseudo-Cyril of Alexandria*, Kalamazoo: Medieval Institute Publications.

Translations

English

1. John, Scottus Eriugena. 1998. *Treatise on Divine Predestination*. Notre Dame: Indiana University Press.

Translated by Mary Brennan.

Contents: Mary Brennan: Foreword IX; Avital Wohlman: Introduction to the English Translation XV;

Preface 3; One: That Every Question Is Solved by the Fourfold System of the Four Rules of the Whole of Philosophy 7; Two: From the Argument of Necessity It Is Concluded That there Cannot Be Two Predestinations 11; Three: Reason Does Not Permit of Two Predestinations 17; Four: The One, True and Only Predestination of God 25; Five: No One Is Compelled to Do Good or to Do Evil by the Foreknowledge and Predestination of God 33; Six: Every Sin Has No Other Source Than the Free Choice of the Individual Will 41;

Seven: Free Choice of the Will Should Be Reckoned among the Good Things That God Bestows on Man, although He May Misuse It. What Is It That Causes Sin and Is Sin? 45; Eight: The Difference between Man's Nature and His Free Choice 51; Nine: Foreknowledge and Predestination Are Predicated of God, Not Properly but by a Similitude of Temporal Things 59; Ten: When God Is Said to Know in Advance and to Predestine Sins or Death or the Punishments of Men or Angels, It Is to Be

Understood from the Contrary 65; Eleven: It Can Be Established by Divine and Human Authority That God's Predestination Concerns Only Those Who Are Prepared for Eternal Happiness 71; Twelve: The Definition of Predestination 77; Thirteen: What Can Be Inferred from the above Judgment of Saint Augustine 83; Fourteen: Collected Attestations of Saint Augustine by Which It Is Clearly Proved That There Is but One Predestination and It Refers Only to the Saints 87; Fifteen: What Kind of Expressions God Is Said to Have Foreknowledge of Sins since They Are Nothing, or to Predestine the Punishments of Them Which Likewise Are Nothing 93; Sixteen: No Nature Punishes Nature and the Punishments of Sinners Are Nothing Other Than Their Sins 101; Seventeen: Why God Is Said to Have Predestined Punishments although He Neither Makes nor Predestines Them 111; Eighteen: The Error of Those Whose Thinking on Predestination Disagrees with That of the Holy Fathers Has Grown Out of an Ignorance of the Liberal Arts 117; Nineteen: Eternal Fire 125;

Epilogue: Divine Predestination 129;

Bibliography 131-134.

2. Johannes, Scotus Erigena. 1976. *Periphyseon. On the Division of Nature*. Indianapolis: Bobbs-Merrill.

Translation of nearly half of *Periphyseon* by Myra Uhlfelder, with introduction and summaries by Jean A. Potter.

Reprint: Wipf & Stock Publishers, Eugene (Oregon), 2011.

Contents: Translator's Preface VII-VIII; Introduction IX-XLI; Selected Bibliography XLIII; Book I 1; Book II 107; Book III 123; Book IV 207; Book V 271-362.

"This work is an attempt to present Eriugena's *Periphyseon: On the Division of Nature* in a fuller translation than is now readily available in English. Where the text has not been translated, summaries have been inserted to give a precise and reasonably detailed idea of the content of passages deleted. The procedure ranges from a complete translation of Book 1 to a treatment of Book 2 almost entirely by summary except for the

inclusion of a few brief excerpts. Books 3, 4, and 5 include fairly lengthy passages in translation joined by summaries.

The basic Latin text followed is Floss's edition, printed in volume 122 of Migne's *Patrologia Latina*. Sheldon-Williams's recent edition of Books 1 and 2 is based on earlier manuscripts and would have to be adopted by anyone concerned primarily with paleographical and textual problems. In several passages as noted, Sheldon-Williams's readings are helpful in establishing a controversial reading or correcting a faulty one. On the whole, however, it is encouraging to see how reliable the older text is. The future availability of a complete modern edition, desirable for a number of reasons, will fortunately not invalidate scholarship based on the earlier edition. For a translator who still needs the Floss text for the later books of the *Periphyseon*, this essential soundness of the Floss text is both important and heartening." (from the Translator's Preface).

3. John, Scottus Eriugena. 1987. *Periphyseon (The Division of Nature)*. Montréal: Bellarmin.

Translation by I. P. Sheldon-Williams. Revised by John J. O'Meara.

"About this translation.

The first three books of this translation are a reproduction, with the minimum necessary adjustments, of that by Dr. I.P. Sheldon-Williams in the Dublin Institute for Advanced Studies' edition of the *Periphyseon*, still in course of completion, for which due gratitude to the Institute is hereby expressed. To this has been added the publication of a draft translation of the remaining two books of the work, exactly as edited by H.J. Floss in Migne's *Patrologia Latina* 122, prepared by Sheldon-Williams and considerably revised by me - not however, for reasons of desirable continuity, to the extent of eliminating unusual elements of style and structure that indicate Sheldon-Williams' close and conscious affinity with Eriugena. The *marginalia* for books 4 and 5 are taken from MS Bamberg H.J.IV 6, as reproduced by M. Cappuyns in *Jean Scot Erigene* 207-13. The numbers and letters in the margins refer to the

columns and sections of *P.L.* 122; the numbers (only) refer to the sequence of chapters there. The terms (N)utritor and (A)lumnus correspond to Master and Disciple. For all references, including Biblical, notes, and some help with the use of brackets (especially in the early books) the reader is referred, when it is available, to the Dublin Institute's edition." John J. O'Meara.

4. O'Meara, John J. 1988. "Homily of John Scot, the Translator of the Hierarchy of Dionysius." In *Eriugena*, 158-176. Oxford: Oxford University Press.

First English translation of the *Homily on the Prologue to St John's Gospel*.

5. Johannes, Scotus Erigena. 1990. *The Voice of the Eagle. Homily on the Prologue to the Gospel of St. John*.

Translation of *Homilia in prologum Sancti Evangelii secundum Joannem*, with an introduction and reflections by Christopher Bamford.

6. Rorem, Paul. 2005. *Eriugena's Commentary on the Dionysian Celestial Hierarchy*. Toronto: Pontifical Institute of Mediaeval Studies.

"The book is a comprehensive study of John Scotus Eriugena's commentary (*Expositiones*) on the Pseudo-Dionysian *Celestial Hierarchy*, with special attention given to its literary form and theological content.

The order for introducing various aspects of the *Expositiones* follows the format of the work itself: first in John's own order comes the Dionysian text in translation, followed by a paraphrase or two and then by Eriugena's own comments, sometimes on particular sources, more often on the points of doctrine he wants to expound. Thus this book starts with the author, that is, John's perspective on Dionysius himself (Chapter I: "Dionysian Biographies").

For Eriugena, Dionysius was the Athenian Areopagite, but was he also the Parisian martyr Saint Denis? Turning to the text of *The Celestial Hierarchy*, the particular Greek codex John was

working with contained its own variants and challenges (Chapter II: "The Greek Manuscript and Its Problems"). Next comes a study of John's "Patterns of Translation and Paraphrase" (Chapter III). After his multiple paraphrases, Eriugena often adds his own expository remarks, sometimes invoking other sources, especially the remaining works of the Dionysian corpus (Chapter IV).

Those interested primarily in John's philosophical theology could turn directly to the last three chapters, spanning the arc of "procession and return" so characteristic of the *Periphyseon*. The *Expositiones* show a particular interest in creation (Chapter V), anthropology (Chapter VI) and "Christ and Salvation" (Chapter VII). Eriugena's treatment of the doctrine of creation includes a particularly innovative understanding of *creatio ex nihilo*. His anthropology turns on the question of humanity's relationship to the divine, whether immediate (unmediated) or mediated or somehow both. The discussion of Christ includes skillful expansions of the biblical and Dionysian images for Christ, and a presentation of salvation as "theosis" or deification.

Translations of major sections of the *Expositiones* are appended [pp. 180-226], as well as John's prologue to his earlier translation of the Dionysian corpus [pp. 174-179]. The book also contains a bibliography, an index of premodern and modern names, a scriptural index, and an index to the works of Eriugena." (p. IV).

7. *A Thirteenth-Century Textbook of Mystical Theology at the University of Paris*. 2004. Leuven: Peeters Publishers.

The *Mystical Theology* of Dionysius the Areopagite in Eriugena's Latin translation, with the scholia translated by Anastasius the Librarian, and excerpts from Eriugena's *Periphyseon*.

Edition, translation, and introduction by L. Michael Harrington.

La *Vox spiritualis* est une homélie. On entend par là un petit discours destiné à exposer une péricope évangélique, en d'autres termes, un bref passage extrait du texte sacré pour la lecture liturgique. Cette définition s'applique parfaitement à l'homélie érigenienne. On la rencontre souvent, en effet, dans des homiliaires, c'est-à-dire dans des recueils liturgiques d'homélies. Et, bien que les homiliaires qui nous l'ont conservée ne soient guère antérieurs au XII^e siècle, donc, dans le cas présent, relativement tardifs, on est porté à croire qu'ils nous présentent la *Vox spiritualis* dans son cadre naturel, celui de l'office divin. Tout concourt à nous en convaincre : l'exorde et la conclusion du discours, son accent religieux et jusqu'à la modulation de ses phrases. Si telle est la destination de l'homélie érigenienne, il est facile de dire à quel jour de l'année liturgique elle devait trouver place. Il ne peut s'agir que du Jour de Noël. Ce jour-là, en effet, comme en témoigne l'homiliaire de Paul Diacre (1), on célébrait trois messes et, par conséquent, on lisait trois péripopes évangéliques. A la troisième messe, celle du Jour, se lisait, comme on le fait encore aujourd'hui, le prologue de l'évangile selon saint Jean c'est-à-dire les versets 1-14 du premier chapitre de cet évangile. Ce sont précisément les versets que commente la *Vox spiritualis*. Celle-ci était donc destinée à exposer l'évangile de la troisième messe de Noël, dite "messe du Jour". C'est dans cette perspective liturgique qu'il convient de replacer et de lire l'homélie érigenienne., si on veut la comprendre et l'apprécier justement. Cependant, la destination liturgique de la *Vox spiritualis* ne nuit aucunement à sa valeur philosophique et théologique. Origène n'est pas moins Origène dans ses homélies que dans son *Periarchon*.

Quel est le contenu doctrinal de la *Vox spiritualis*?

Je suis tenté de répondre : "Prenez et lisez !" Le texte est court : on n'aura pas de peine à y reconnaître les grands thèmes érigeniens. Quant à ce qui n'y sont pas mentionnés explicitement et qui pourtant s'y laissent deviner en filigrane -- causes primordiales, théophanies, division des sexes, etc. -- je

les ai signalés dans les notes doctrinales de l'édition : il est facile de s'y reporter.

Je me bornerai ici à indiquer sommairement le plan de l'homélie. Comme on peut s'y attendre, l'auteur suit, verset par verset, le texte du prologue johannique. Il ne faut pas perdre de vue, cependant, que nous avons affaire, non à un commentaire de type scolaire, mais à une pièce de rhétorique harmonieusement équilibrée et solidement construite. Il est possible et utile de dégager les grandes lignes de son architecture. La *Vox spiritualis* commence par un éloge de saint Jean l'Évangéliste ; elle se poursuit par le commentaire du prologue. Ce commentaire à son tour se divise en deux sections : 1° "La montagne de théologie" (versets 1-5) ; 2° "La vallée de l'histoire" (versets 6-14). L'ensemble comprend donc trois grandes parties, elles mêmes subdivisées en parties plus petites." (pp. 73-74)

Bibliographical resources about Eriugena

1. Brennan, Mary. 1977. "A Bibliography of Publications in the Field of Eriugenian Studies, 1800-1975." *Studi Medievali* no. 18:401-447.

Preface by Werner Beierwaltes.

Introductory note: "The bibliography which follows was initially compiled for the use of members of the Society for the Promotion of Eriugenian Studies established in 1970. While drawing attention to my major bibliographical sources, indicated in Section I. a., I wish to acknowledge my particular indebtedness to the following members of that Society: W. Beierwaltes, L. Bieler, J. J. Contreni, J. Garcia, E. Jeauneau, H. Liebeschütz and G. Schrimpf. Most particularly I would wish to acknowledge my great debt of gratitude to the late I. P. Sheldon-Williams for his guidance at the early stages of this work.

I should like also to express my thanks to the former librarian of University College, Dublin, Miss Ellen Power, as well as to assistant librarians R. Brennan and M. Dennigan Brown for much practical help. Finally, I want sincerely to thank Professor John O'Meara of University College under whose direction the work was undertaken and with whose encouragement it is now being published, as also the editor of *Studi Medievali*, Professor Claudio Leonardi, who has made publication possible.

The bibliography attempts to cover a limited field. It has been necessary to make judgments in the matter of inclusion or exclusion of items of related interest. For any shortcomings in this regard I take sole responsibility."

The bibliography contains 520 titles plus 66 Addenda, Index of Authors pp. 443-447.

2. ———. 1989. *Guide des études érigéniennes. Bibliographie commentée des publications 1930-1987 - A Guide to Eriugenian Studies. A Survey of Publications 1930-1987*. Paris: Éditions du Cerf.

Summaries of 523 publications.

From the Introduction: "A short section of this survey (I (b): 14-19) draws attention to progress in Eriugenian studies and, in an attempt to illustrate such progress, the individual sections are ordered chronologically from 1930 to 1987 (alphabetically within each year). The year 1930 has been chosen as an appropriate starting point, barely introducing, as it does, the publication in 1933 of *Jean Scot Erigène, sa vie, son oeuvre, sa pensée* by Dom Maïeul Cappuyns (Louvain/Paris 1933; reprint Brussels 1964). That volume was a major contribution to Eriugenian studies in this century. If it does not figure in the body of this survey or in the indices this is because the present writer regards it as meriting a separate survey. One may repeat the judgement of G. Mathon (*) that it dispenses us for the most part from reading the literature that pre-dates it. Hence it seems advisable that any student of Eriugena should begin with Cappuyns. The volume is provided with important bibliography, effective indices and a wealth of analytic treatment within the text itself. It could be assigned to all

sections of the present survey, apart from III, (b) *Editions*, and (c) *Instrumenta Lexicologica*. On the other hand, acknowledgement is also due to Migne, *Patrologia Latina* CXXII (Paris 1853) whose publication date lies outside the scope of this survey but which for over a century provided the sole printed edition of most of the works of Eriugena.

The present survey is intended as a guide for students and others who may be approaching the study of Eriugena from a great variety of perspectives. The compiler has striven to present summaries of the material read and not to pass judgement. Titles of books or articles are not always informative and the summaries, even when they may appear to run to some length, are intended only to indicate to the reader the main direction of the publication in question. In the case of books, published reviews have been listed or longer review articles summarised. Unpublished theses have not been included, with the single exception of the study of Greek sources by L. Vietorisz (**). Published *Acta* of conferences are listed both under the editor's name and the names of individual authors of papers. In only two cases is a publication by a single author listed twice, where two quite separate studies appeared in one volume. Where a publication that could be assigned to more than one section has been assigned to only one, the Indices which follow the survey are intended to expand on the information implied by the section headings and titles."

(*) Gérard Mathon, *Jean Scot Erigène*, in: G. Jacquemet (ed.), *Catholicisme hier, aujourd'hui, demain*, VI (1967) cols. 626-631.

(**) Lenke Vietorisz, *Greek Sources in the 'Periphyseon' of John Scotus, called Eriugena*, Pontifical Institute of Mediaeval Studies, Toronto, 1966.

The volume contains 523 titles.

3. Riel, Gerd van. 1996. "A Bibliographical Survey of Eriugenian Studies 1987-1995." In *Iohannes Scottus Eriugena: the Bible and Hermeneutics. Proceedings of the Ninth International Colloquium of the Society for the Promotion of Eriugenian Studies held at Leuven and Louvain-la-Neuve, June 7-10, 1995*,

edited by Riel, Gerd van, Steel, Carlos and McEnvoy, James, 367-400. Leuven: Leuven University Press.

"This bibliography is intended to complement the extensive bibliographical study of Mary Brennan [*Guide to Eriugenian studies*], whose work covers the period from 1930 to 1987.

Among the sources we used, the most important are *Medioevo Latino. Bollettino bibliografico della cultura europea dal secolo VI al XIII*, a cura di C. Leonardi, Spoleto (Centro Italiano di Studi sull'Alto Medioevo); the *Répertoire Bibliographique de la Philosophie - Bibliografisch Repertorium van de Wijsbegeerte*, Louvain-la-Neuve (Editions de l'Institut Supérieur de Philosophie) Leuven; and the *Bibliography* which Prof. J. McEvoy periodically published in *Eriugena. The Annual Bulletin of SPES* (1992 -).

Contrary to M. Brennan's practice, we did not arrange the references by subject item. Instead, we used larger subdivisions: 1) Bibliographical Surveys, 2) Editions, 3) Translations, 4) Proceedings and *Festschriften*, 5) Collected Papers, 6) Monographs, and 7) Articles. All papers included in the volumes mentioned under the heading "Proceedings and *Festschriften*" figure also as separate articles in the corresponding section.

Summaries are given only when the reference to Eriugena is not clearly stated in the title. Reviews are listed under the sign 'I'. Items marked with an asterisk (*) refer to publications earlier than 1987, not present in the survey of M. Brennan.

I am deeply indebted to all the contributors to this volume (particularly to Prof. J. Contreni and É. Jeauneau), to Prof. W. Beierwaltes and D. Moran, for their willingness to revise the first draft of this survey, and for the additions they suggested. I also want to express my profound gratitude to Prof. C. Steel, for his support and sympathy. *Magistro discipulus opusculum dedico.*" (p. 367)

List 302 titles.

4. ——. 2002. "Eriugenian Studies 1995-2000." In *History and Eschatology in John Scottus Eriugena and His Time*.

Proceedings of the Tenth International Conference of the Society for the Promotion of Eriugenian Studies - Maynooth and Dublin August 16-20, 2000, edited by McEnvoy, James and Dunne, Michael, 611-636. Leuven: Leuven University Press.

"The work of John Scottus Eriugena continues to interest modern scholars. The last lustrum saw the publication of a large amount of articles and books devoted to this early medieval thinker. The most important event in the field of Eriugenian studies was the textual edition, by Edouard Jeauneau, of the *Periphyseon (de divisione naturae)*, which will soon be fully achieved. One can expect that this critical edition of Eriugena's major work will give an extra stimulus to the ever growing stream of publications on the Irish master.

This survey of Eriugenian studies completes the "Bibliographical Survey of Eriugenian Studies 1987-1995" [referred to as Van Riel 1996], which was published in the proceedings of the Ninth Colloquium of the Society for the Promotion of Eriugenian Studies (*Johannes Scottus Eriugena. The Bible and Hermeneutics*, ed. G. Van Riel, C. Steel, and J. McEvoy, Leuven, 1996, p.367-400). We have adopted the same subdivisions here (editions, translations, monographs, and articles).

The survey also contains an index (authors, topics, and manuscripts), which covers not only the present list of works, but also the "Bibliographical Survey 1987-1995" [the numbers 1-302 refer to items listed there]. This provides the reader with a complete and indexed survey of the period from 1987 to 2000." (p. 611)

List of 134 titles.

5. Sheldon Williams, Inglis Patrick. 1959. "A Bibliography of the Works of Johannes Scottus Eriugena." *Journal of Ecclesiastical History* no. 10:198-224.

"This bibliography is part of the preparation of an edition of Eriugena's *Periphyseon (De diuisione naturae)* for the series,

Scriptores latini Hiberniae, published by the Dublin Institute of Advanced Studies.

It supplements the shorter one contained in J. F. Kenney's *Sources for the Early History of Ireland, I: Ecclesiastical* (New York 1929), and, except in the lists of MSS., does not repeat what is contained there. The letter K against a MS. indicates that it is mentioned by Kenney. Dom Maieul Cappuyns's study, [*Jean Scot Erigène: sa vie, son oeuvre, sa pensée*] published in 1933, would have afforded a broader and sounder foundation to build upon, but its bibliographical material, though ample, is not systematically arranged. Kenney supplies the form, Cappuyns the greater part of the matter, the rest of which derives from researches carried out since he wrote.

In the light of these researches Eriugena is shown to be the author of the following:

1. *De Praedestinatione* (851).
2. A commentary on the *De Nuptiis Philologiae et Mercurii* of Martianus Capella (859/860).
3. A commentary on Boethius's *Consolation of Philosophy* III, met. 9 (between 859 and 862).
4. A translation of the works of Dionysius the Areopagite (between 860 and 862).
5. A translation of the *Ambigua* of Maximus the Confessor (between 862 and 864).
6. A translation of the *De hominis opificio* of Gregory of Nyssa (*De Imagine*) (between 862 and 864).
7. A translation of the *De fide* of Epiphanius.
8. *Periphyseon (De diuisione naturae)* (between 864 and 866).
9. *Expositiones super Ierarchiam caelestem* (between 865 and 870).
10. A revised version of the translation of Dionysius (between 865 and 875).

11. A homily on the Prologue to St. John's Gospel.

12. A commentary on St. John's Gospel.

13. *Tractatus de uisione Dei*.

14. Poems.

Of these fourteen works eight are included in Floss's edition in P.L., CXXII: De Praedestinatione, the translation of Dionysius (the earlier version, emended to some extent from the later), the translation of Maximus (incomplete), Periphyseon, Expositiones (incomplete), the homily and three of the four extant fragments of the commentary on the Fourth Gospel, and the poems (incomplete). A new and complete edition of the poems was published by Traube in 1896, and in recent years editions have appeared of the Boethius commentary, the missing portion of the Expositiones, and a commentary on Martianus Capella in which parts, at least, of Eriugena's work are included. The MSS. of the De Imagine and the rest of the translation of the Ambigua have been identified by Cappuyns (as, with less certainty, a fourth fragment of the commentary on St. John) but have not been published. The translation of Epiphanius and the Tractatus have not been discovered." (pp. 198-199).

6. ———. 1965. "A List of the Works Doubtfully or Wrongly Attributed to Johannes Scottus Eriugena." *Journal of Ecclesiastical History* no. 15:76-98.

"Eriugena made a name for himself both by his outstanding scholarship and by the boldness, not to say the heterodoxy, of his opinions. As a natural consequence of this, there has been since the Middle Ages a tendency to attribute to him works displaying these characteristics for which no more likely author could be found. My 'Bibliography' of Eriugena (*) was an attempt to give an account of his genuine writings purged of these accretions, and I made no reference to them in it. As, however, many of them have been published under his name in Migne's *Patrologia* and elsewhere, and as the literature in which their genuineness is questioned or refuted is not always easily accessible, it seemed that a supplement to the

`Bibliography' containing a list of the works that were excluded from it with, where possible, the reasons for their exclusion might be useful. This supplement breaks no new ground: particularly, my debt to Dom Maïeul Cappuyns is greater than in the `Bibliography' for, whereas more Eriugena material has come to light since he wrote, I know of no work excluded by him from the Eriugena *corpus* which has since been proved to be genuine. Such value as this note has is that of convenience.

It cannot in all respects follow the shape of the 'Bibliography', in which I gave a catalogue of Eriugena's writings, as fully documented as possible and (except for the Poems) in chronological order. Pseudepigrapha do not require such documentation and do not lend themselves to chronological arrangement. But, since some sort of order must be adopted, I have tried to align them as far as possible with the stages of Eriugena's development as revealed in his genuine extant works, in which he shows himself first (in the *De praedestinatione*) as a controversialist, then (in the commentaries on Martianus Capella and Boethius) as a grammarian and logician, and finally, after reading the Greek Fathers, as a Christian Platonist philosopher. Among the works doubtfully or falsely attributed to him, apologetics are represented by a treatise on the eucharist, grammar and logic by works on Aristotle, Porphyry, the two Priscians, Macrobius, which, if they ever existed, would probably belong to this group; and philosophy by works related to, or influenced by, the translations of the ps.-Dionysius. As in the 'Bibliography' I have left poetical works to the end." (pp. 76-77)

Rosemann: Causality as Concealing Revelation in Eriugena: A Heideggerian Interpretation 653-671.

2. "Erigène." 2013. *Les Études philosophiques* no. 104:3-141.

Édité par Willemien Otten.

Table des matières : Willemien Otten : Avant-propos 3; Bernard McGinn : Jean Scot Érigène. Une introduction 7; Édouard Jeauneau : Le *Periphyseon*: son titre, son plan, ses remaniements 13; Dermot Moran : Jean Scot Érigène, la connaissance de soi et la tradition idéaliste 29; Stephen Gersh : *L'ordo naturalis* des causes primordiales. La transformation érigénienne de la doctrine dionysienne de noms divins 57; Adrian Guiu : Le *Periphyseon* d'Érigène comme une extrapolation de l'*Ambiguum* de Maxime le Confesseur 79; Elizabeth Kendig : La forme dialogique dans le *Periphyseon* : recréer l'esprit 101; Willemien Otten : Le langage de l'union mystique : le désir et le corps dans l'oeuvre de Jean Scot Érigène et de Meister Eckhart 121-141.

3. Allard, Guy-H. 1973. "La structure littéraire de la composition du *De divisione naturae*." In *The Mind of Eriugena*, edited by O'Meara, John Joseph and Bieler, Ludwig, 147-157. Dublin: Irish University Press.

"Tout se passe en effet comme si l'auteur du *De divisione* avait voulu élaborer un large commentaire des trois premiers chapitres de la *Genèse* et instaurer, à l'exemple de ses prédécesseurs, son propre *Hexameron*. Il me semble que ce soit le texte de la *Genèse*(7) qui ait commandé la mise en œuvre de toutes les ressources culturelles de l'auteur, qui ait organisé les éléments de son savoir et ordonné l'enchaînement des questions discutées. A plusieurs reprises, comme si la science du Maître était à bout de souffle et la patience du Disciple agacée par tant de prouesses théologico-philosophiques, on se met d'accord pour revenir à l'Écriture et en poursuivre le commentaire: 'M. Redeamus ad Scrip-turam.—D. Tempus invitât' ; et aussitôt l'auteur enchaîne sur un autre verset de la *Genèse*.(8) Ce constant effort de ne pas perdre de vue le fil conducteur de son projet (c'est-à-dire revenir à la *Genèse*) est secondé très souvent par la technique des rappels et des reprises de la division des livres précédents et de leur contenu. (9) C'est ainsi par exemple, qu'au début du livre IV, l'auteur nous rappelle (se rappelle) qu'il a traité au livre précédent des

questions relatives au cinq premiers jours de la *Genèse*,⁽¹⁰⁾ se réservant ce IV^e livre pour le sixième jour.⁽¹¹⁾

(...)

"Ainsi le livre I serait un commentaire de *Deus et fecit*, le livre II, un commentaire du *In principio*, et les trois derniers livres, explicitant l'expression *caelum et terram*, se déploient selon la distribution même de la *Genèse*, c'est-à-dire que le livre III porte sur les cinq premiers jours de la création, le livre IV, sur le sixième jour et le récit adamique, le livre V sur l'expulsion d'Adam du paradis. Mais il est temps de procéder à une rapide démonstration de cette hypothèse, et de faire voir comment les trois premiers chapitres de la *Genèse* servent de canevas au vaste déploiement rédactionnel du *De divisione*." (pp. 147-148)

(8) Comme c'est le cas par exemple en *De divisione* III 36; IV. 2.

(9) Sauf peut-être pour le livre V où on ne retrouve pas cette conscience réflexive, coutumière aux autres livres, par laquelle l'auteur se remémore le projet initial du livre et de l'ensemble de l'œuvre. Cette technique de composition n'est pas propre à notre auteur. C'est déjà une vieille coutume à l'époque, et saint Augustin s'était déjà signalé dans la maîtrise de cette technicalité, voir G.-H. Allard, 'Pour une nouvelle interprétation de la Cité de Dieu', dans *Studia Patristica*, 9 (1966), pp. 329-339.

(10) Ce qui était le projet principal du livre III (voir *De divisione* IV. 1, à la fin) quoiqu'il ait accordé beaucoup de place à des questions introductives, comme il le mentionne en III 23 (à la fin). Car il lui arrive souvent, en cours de discussion, d'oublier la question principale, I, 13 (à la fin).

(11) Où il est question de la production du genre 'animal' et de l'espèce humaine. ('Sexta autem die non solum generis conditio, verum etiam trina divisio ipsius in species narratur', IV. 5). Voir IV. 3 et IV. 1 (à la fin).

4. ——. 1977. "Quelques remarques sur la "disputationis series" du *De divisione naturae*." In *Jean Scot Erigène et l'histoire de*

la philosophie, edited by Roques, René, 211-224. Paris: Éditions du Centre national de la recherche scientifique.

"This author finds that Eriugena in the *Periphyseon* does fulfil his promise of an internal order and coherence in the progress of his reasoning. But the order may be difficult to discern. The author proposes to survey the *Periphyseon* on three levels - logical, pedagogical and epistemological. The work is a vast logical definition of the *phusis*, entirely centred on the *universitas*. The ten categories are not merely the objects of Eriugena's discourse but the conditions thereof (p. 213). This author considers Eriugena's four divisions of nature and five modes of being in the light of that remark: even in these basic analyses there is a logical order of anteriority and posteriority. At the pedagogical level the *Periphyseon* is a debate and between the two participants in the dialogue there is the mediatory figure of Reason. The device of *repetitio* far from manifesting mere prolixity is a time-honoured element of rhetoric: it represents the gradual adaptation of the eye to the light (p. 218) and clarifies any obscurities remaining over from earlier exposition of a theme; the dialogue takes on the allure of a symphony. In Book I the discussion of the Categories is a propaedeutic to the principal theme. At the epistemological level the discussion moves from the deep obscurity of being/non-being to 'the less obscure and to epiphanies. This author emphasises the framework of the *trivium* to be discerned in the structure of the *Periphyseon*. The metaphor of a knot which is to be untied is recurrent; reasoning is a weave and God a weaver." (Brennan, p. 233).

5. ———. 1980. "Vocabulaire érigénien relatif à la représentation de l'Écriture." In *Eriugena. Studien zu seinen Quellen*, edited by Beierwaltes, Werner, 15-32. Heidelberg: Carl Winter.

"Les présentes recherches lexicographiques visent à déterminer la place occupée par la Bible dans l'économie générale du système de Jean Scot Erigène. Il s'agit en définitive de savoir comment il a perçu l'Écriture, i. e. ce qu'il a retenu d'essentiel de son contact avec elle, une fois la lecture faite, le commentaire achevé, la citation empruntée. Or nous trouvons sous la plume de Jean, deux jugements de valeur qui vont

retenir ici notre attention pour plusieurs raisons. Premièrement, lorsque Jean déclare d'une part que l'écriture est *artificiosa*(1) et que d'autre part *propter nos machinata est*(2), il fait appel à des expressions fort complexes sur lesquelles on ne semble pas encore avoir fait le point si l'on considère le flottement de certaines traductions et le peu d'études systématiques de ce vocabulaire(3). Deuxièmement ces termes, reliés aux différents sens qu'a pris le mot *technè* à travers les âges, demandent à être explorés en fonction des significations qui ont cours dans la langue de Jean Scot, de ses contemporains et de ses prédécesseurs. Enfin ce vocabulaire, comme nous le verrons, n'est pas neutre ni innocent, mais au contraire il a l'incalculable mérite de nous révéler „la passion platonicienne“(4) de son auteur, vu les jugements métaphysiques qui s'y trouvent embusqués. L'étude lexicographique permettra donc de mieux saisir ce que peuvent bien signifier et connoter ces expressions: *Scriptura artificiosa* ou *propter nos machinata est.*" (p. 15)

(1) *De divisione naturae* (DDN), 512A. A moins d'indication contraire, j'utilise l'édition de la Patrologie latine, 122.

(2) *Expositiones...*, (éd. Barbet), VII, 19.

(3) A propos de l'expression *artificiosa scriptura*, M. Sheldon-Williams dans sa traduction du Periphyseon parle de „Scripture in its ingenuity" tandis que M. Roques traduit par „l'art de l'écriture"; il serait même tenté de rendre par „l'artificieuse écriture“ si l'acception française du terme n'était pas péjorative (voir *Libres sentiers . . .*, Rome, 1975, p. 82 et la note 88 de la même page). On observe les mêmes hésitations et les mêmes ambiguïtés par rapport aux mots *machina*, *machinamenta*, *machinatio* (voir à ce sujet, par exemple, R. Roques, op. cit., p. 64. la note 53). A ma connaissance, des études systématiques de tout ce vocabulaire manquent.

(4) L'expression est de M.-T. d'Alverny, dans les Actes du Congrès de la SIEPM, *Les arts libéraux au Moyen âge*, Montréal, 1969, p. 66.

6. ——. 1981. "The Primacy of Existence in the Thought of Eriugena." In *Neoplatonism and Christian Thought*, edited by

O'Meara, Dominic, 89-96. Albany: State University of New York Press.

"One can scarcely be mistaken in asserting that Neoplatonism - whether it be Christian or not - is fundamentally an "essentialist" philosophy; by that I mean that it is a system of thought at the core of which a universe of essences and intelligible beings is organized according to relationships of causality which are universal, timeless and necessary, a system in the face of which phenomenal realities possess little or no ontological density. In this respect the thought of Eriugena marks an important date in the history of Neoplatonism since it bears witness to a profound change in its customary perspectives. Indeed, the acute awareness that Eriugena has of the idea of existence, perceived as the ontological pole complementary to essence, leads him, so to speak, to shift the observation post of reality and to look in the other direction: the approach to being, to intelligible beings, is now mediated by existence, by "existents." Polarized in this way, thought succeeds in integrating quite naturally the spatiotemporal realities and in conferring on them not only a decisive gnosiological function, but also a new ontological status. This increased sensitivity towards the idea of existence, need we emphasize, does not of course entirely destroy the quite Neoplatonic structure of Eriugena's thought, but it does already suffice to shake the edifice to the extent to which Eriugenian thought sets out to distinguish, in the heart of being, between what is (*quod est*) and the crude radical fact of existing (*esse*). I shall certainly not be able within the framework of this paper to examine the various influences which affected the thinking of Eriugena on this question; but it does remain that the mental equipment which he inherited and which he transformed in such an original manner enabled him to make a completely new reading of the dogma of creation." (pp. 89-90).

7. ——. 1989. "Un analyseur syntaxique du *Periphyseon*." In *Giovanni Scoto nel suo tempo. L'organizzazione del sapere in età carolingia*, edited by Leonardi, Claudio, 457-467. Spoleto: Centro italiano di studi sull'alto medioevo.

8. ———. 1990. "'Medietas" chez Jean Scot." In *Begriff und Metapher. Sprachform des Denkens bei Eriugena*, edited by Beierwaltes, Werner, 95-107. Heidelberg: Carl Winter.
9. ———. 1991. "Jean Scot et l'ordinateur: le traitement syntaxique du "Periphyseon"." In *From Augustine to Eriugena. Essays on Neoplatonism and Christianity in honor of John O'Meara*, edited by Martin, Francis X. and Richmond, John A., 1-11. Washington: Catholic University of America Press.

"Le texte-témoin de notre recherche (subventionnée par le Conseil de recherches en sciences humaines du Canada) est le *Periphyseon* de Jean Scot, un corpus de 217,450 mots répartis en cinq livres. Dans un premier temps, nous nous sommes consacrés à des travaux purement lexicographiques : 1) au recensement de chaque mot (latin, grec, de citation biblique et autres) en fonction de sa localisation dans le texte et de sa fréquence soit par livre soit pour l'ensemble des livres; 2) à l'étude de sa "semmatisation", de son affixation, de son appartenance au vocabulaire des arts libéraux. Ces recherches ont donné lieu à deux publications, une première en 1983 intitulée *Indices générales*, Institut d'études médiévales-Vrin, 639 pages, une deuxième qui vient de paraître dans *Jean Scot écrivain*, Bellarmin-Vrin, 360 pages, spécialement les pages 311 à 360.

Nous en sommes maintenant non plus à l'analyse du mot seul mais à celle de ses liaisons avec les autres éléments dans la proposition ainsi qu'à l'analyse de l'enchaînement propositionnel lui-même. Ce qui nous entraîne sur le terrain du traitement syntaxique de notre corpus." (p. 1).

10. ———. 1992. "Jean Scot et la logique des propositions contraires." In *From Athens to Chartres. Neoplatonism and Medieval Thought. Studies in Honour of Edouard Jeauneau*, edited by Westra, Haijo Jan, 181-193. Leiden: Brill.

"Les études sur la théologie négative chez Jean Scot ne manquent pas. A leui propos, deux remarques s'imposent: 1) on garde souvent l'impression, quand or parcourt les travaux des spécialistes, que les deux parties de la logique (ou de la

théologie) c.-à-d. la καταφατική et Γάποφατική, n'ont d'autre terrain d'application qu'en Dieu, comme si Jean Scot eût exclu leur actualisation à d'autres problèmes et à d'autres réalités. Nous verrons que Jean Scot n'a pas voulu cette exclusive réduction du phénomène et qu'au contraire, il lui a assuré la plus large extension qui soit; 2) une seconde impression a trait au réflexe presque automatique prédécesseurs en la matière (v.g. Aristote, le Parménide de Platon, Plotin, Proclus, Marius Victorinus, Damascius, Boèce, Augustin, Denys, Maxime, etc.), soit avec ses successeurs (Anselme, Thomas d'Aquin, Nicolas de Cues, maître Eckart, Hegel, Gadamer, etc.). L'idée en soi est certes bonne et utile, sauf qu'à trop insister ainsi sur les préfigurations et les survivances de sa pensée, on finit par en perdre l'originalité, par en escamoter les nuances et les manques, par en rater, en somme, l'exacte compréhension et la totale extension. C'est pourquoi les pages qui suivent n'ont d'autre objet que l'oeuvre érigénienne elle-même, y cueillant çà et là tout texte susceptible, tantôt d'exprimer une théorie, tantôt d'illustrer une pratique." (pp. 181-182, note omise)

(...)

"Le sens de cette logique

Que retenir de ce qui précède? Une idée simple, si évidente qu'il arrive parfois de l'oublier, à savoir la polyvalence de la pensée érigénienne. L'omniprésence dans l'oeuvre de cette logique des propositions contraires ainsi que la compréhension que nous nous en sommes donnée nous incitent à percevoir en elle une structure fondamentale du système par laquelle l'unidimensionalité de la pensée se voit, interdite. La hantise érigénienne de la contradiction ne rend pas pour autant le texte univoque. Bien au contraire le jeu de la contrariété donne tellement à l'écriture des allures paradoxales, aux propositions du texte un tel caractère amphibologique et à la pensée elle-même tant de mouvance que le lecteur, à l'instar du disciple du Periphyseon, passe son temps à tituber. On croit tenir l'opinion du maître au détour d'une affirmation, elle est tôt ou tard niée; on voudrait s'installer en toute sécurité dans un lieu de certitude, il est aussitôt remis en question; on s'accroche

désespérément à des assertions apparemment définitives, peine perdue, la réflexion est rendue ailleurs, à un autre niveau sémantique, braquée sur des considérations inverses. De quoi décourager tout amateur d'univocité! Ce style de pensée dégage pourtant un air de liberté, fécond pour la pédagogie du savoir, propice à l'attitude prudente de la démarche intellectuelle, exigeant enfin du lecteur qu'il circule sans cesse dans le texte en toutes directions, de sa surface à sa profondeur variable, du début jusqu'à la fin de son élaboration. Voilà la leçon à tirer, à mon sens, de cette logique des propositions contraires." (pp. 192-193).

11. Alverny, Marie-Thérèse d'. 1953. "Le cosmos symbolique du XIIe siècle." *Archives d'Histoire Doctrinale et Littéraire du Moyen-Age*:31-81.

Repris dans: M.-T. d'Alverny, *Études sur le symbolisme de la Sagesse et sur l'iconographie*, Aldershot: Variorum, 1993.

"Les mésaventures de Jean Scot, suspect de déviation doctrinale au sujet de la prédestination, et plus encore sans doute la difficulté de l'ouvrage, d'une richesse un peu confuse, ne lui avaient pas attiré beaucoup d'adeptes, semble-t-il, à la fin de l'ère carolingienne(1).

On le vit resurgir au cours du XIIe siècle, et les causes d'une vogue qui paraît avoir atteint son point culminant au début du siècle suivant, et gagna, non seulement de nombreux théologiens, mais, par l'intermédiaire de clercs imprudents, des laïques peu instruits, nous échappent en partie.

Il est permis de supposer que l'un des agents de diffusion de la synthèse érigénienne fut l'un des plus remarquables vulgarisateurs d'un âge qui en a pourtant compté beaucoup : le « mystérieux » Honorius.

Les documents d'archives et les sources narratives actuellement connues ne contiennent pas de renseignements sur ce personnage, et les historiens en sont réduits à interpréter les quelques indications qu'il a bien voulu laisser, soit dans ses préfaces, soit dans la notice terminale de son catalogue d'écrivains ecclésiastiques, *De Luminaribus Ecclesiae*(2),

consacrée à « Honorius Augustodunensis ecclesiae presbyter et scholasticus », auteur d'estimables ouvrages « non spemenda opuscula », parmi lesquels la *Clavis Physicae*.

12. ———. 1977. "Les "Solutiones ad Chosroem" de Priscianus Lydus et Jean Scot." In *Jean Scot Erigène et l'histoire de la philosophie*, edited by Roques, René, 145-160. Paris: Éditions du Centre national de la recherche scientifique.

Repris dans: M.-T. d'Alverny, *La transmission des textes philosophiques et scientifiques au Moyen Age*, Aldershot: Variorum, 1994.

14. Arfé, Pasquale. 2011. "Triplex modus theories de reditu. The Doctrine of Universal Return in Eriugena." *Archives d'Histoire Doctrinale et Littéraire du Moyen-Age* no. 78:7-45.

"The central thread of Book V of John Scottus Eriugena's *Periphyseon* is the theme of the *reditus in unum*, which is a characteristic paradigm of Neoplatonism. This theme provided a philosophical interpretation of a fundamental element of ancient worldviews, both Eastern and Western: the idea of an eternal cyclical process in the universe. At the end of late antiquity, this cyclical process was given a clear and precise philosophical formulation by Proclus: « Every effect remains in its cause, proceeds from it, and reverts upon it » (3). Three phases are distinguished here. First, all entities insofar as they exist are grounded in the absolute cause of the One, which constitutes the permanent basis and the original identity of their existence (μονή, *manentia*, remaining). Second, this state is followed by the unfolding of all entities into being in order to give rise to their appearance (προοδος, *exitus*, procession). Third, there is the process which brings all entities to the end of their existence by guiding them to return to the absolute cause (επιστροφή, *reditus*, reversion)." (p. 8)

(...)

"Book V of the *Periphyseon* offers several accounts of *reditus*, which have often generated interpretative difficulties for historians. It is my intention in this article to show that the hermeneutical key to the *reditus* is found in the *recapitulatio totius operis*, the final summary, placed at the end of the *Periphyseon*, where Eriugena clearly explains the correct way to interpret the phenomenon by presenting a *triplex modus theoriae*, that is, a threefold way of understanding it. This key will not only prevent us from misunderstanding

Eriugena's thought, but will also clarify its anthropological foundation. The threefold way of seeing the universal return of all things resembles the threefold structure of spirit, soul, and body, according to St Paul's anthropology, and enables us to comprehend the central Eriugenian idea of man as a microcosm." (pp. 9-10).

15. Armando, Bisogno. 2002. "Essentia, voluntas, et scientia': esiti escatologici della gnoseologia del *De Praedestinatione Liber*." In *History and Eschatology in John Scottus Eriugena and his Time*, edited by McEvoy, James and Dunne, Michael, 283-302. Leuven: Leuven University Press.
16. Armstrong, Arthur Hilary. 1991. "Apophatic-Kataphatic tensions in religious thought from the Third to the Sixth century A.D.: a background for Augustine and Eriugena." In *From Augustine to Eriugena. Essays on Neoplatonism and Christianity in Honor of John O'Meara*, edited by Martin, Francis X. and Richmond, John A., 12-21. Washington: Catholic University of America Press.

"In considering the *via negativa* it is important to distinguish between the apophatic method of intellectual approach to God, or negative theology, and the experience of supreme transcendence (which is also deepest immanence) which impels to and is undergone in the search for (and, for those to whom it is given, the attainment of union with), the Divine mystery beyond speech or thought.(1)

(...)

"In this essay we shall be concerned with apophatic or negative theology in the strict sense of the negative intellectual approach to God, though it will be as well to remember throughout what has just been said. Now any genuine and serious negative theology presupposes a kataphatic or positive theology, and continually needs one to wrestle with and struggle to transcend. (2) Both the apophatic and the kataphatic ways must be continually present to the mind of the apophatic theologian, and there will be a certain tension and a certain oscillation between them. And this tension will also be felt by theologians who are by temperament and tradition strongly kataphatic, as long as the ultimate necessity of apophatic theology is generally admitted." (p. 12-13)

"Eriugena, in his very different world and with his very different position and professional concerns, did not share Augustine's episcopal preoccupations. He did, on the other hand, share with Proclus that speculative intemperance common to all great system builders, the tendency to push logic far further than on his own principles it should go—a tendency that is not so evident in Augustine. But this no more prevented Eriugena than it prevented Proclus from accepting apophatic theology in its strongest and most radical form when he found it in Dionysius. And he did so, I think rightly, without feeling that he was separating himself in any fundamental way from Augustine. What he says as he passes from the kataphatic to the apophatic at the end of his on the whole very Augustinian exposition of the doctrine of the Trinity ("Neque enim talis unitas est seu trinitas qualis ab ulla creatura potest excogitari seu intelligi seu aliqua fantasia quamuis lucidissima et uerisimillima formari . . . siquidem plus quam unitas est et plus quam trinitas. Jubemur tamen aliquid de ea dicere et cogitare et intelligere . . . ut quodam modo materiam habeamus laudandi earn atque benedicendi") (16) is no doubt inspired by the *Mystical Theology* of Dionysius. But it is also very near to the spirit of the great chapter in the *Confessions* that foreshadows the *De Trinitate*, which begins, "Trinitatem omnipotentem quis intellet? et quis non loquitur earn, si tamen earn? rara anima, quaecumque de ilia loquitur, scit quod

loquitur. Et contendunt et dimicant, et nemo sine pace videt istam visionem.”(17)” (p. 21)

17. Arruzza, Cinzia. 2003. "«Ordo» e mediazione gerarchica nelle «Expositiones in ierarchiam coelestem» di Giovanni Scoto Eriugena." *Studi medievali* no. 44:117-145.

Abstract: "Il lavoro è svolto sull'edizione del testo realizzata da J. Barbet (Turnhout 1975; cfr. MEL IV 1751) sulla base del ms. Douai, BM, 202. L'Autore prende inoltre in esame il ms. Paris, BNF, gr. 437: questo codice, donato dall'imperatore Michele a Ludovico il Pio, contiene l'originale greco del corpus dionisiano utilizzato da Giovanni Scoto Eriugena."

18. ——. 2013. "The Authority of Reason: on John Scottus Eriugena's *Periphyseon*, I.508C-513C." *Glossator* no. 7:137-150.

"In what follows, I will first address the question of the relationship between *ordo verborum* and *ordo rerum* in Eriugena's thought. Then I will analyze the arguments Eriugena provides in order to reach and support the claim that reason has priority over authority, paying particular attention to his peculiar use of the *De divinis nominibus*'s passage [I. 1] and of Dionysius's authority." (pp. 139-140)

(...)

"Conclusion. By briefly commenting on this passage from the *Periphyseon*, I have tried to show Eriugena's own freedom in

using his sources, in this case, the short quotation from Augustine's *De ordine* [II.9. 26] and the long passage from Book I of Dionysius's *De divinis nominibus*. While being in agreement with Dionysius's insistence on negative theology, Eriugena uses Dionysius's text in order to reassure the Alumnus that reason and the liberal arts, which reason uses to carry out its investigations, are indeed the prominent source of authority—a conclusion which does not belong to Dionysius' text. On the basis of this conclusion, Eriugena interprets the apophatic climax of negative theology not as an irrationalistic move, but rather as the necessary logical conclusion of correct and rigorous reasoning, in which reason exhausts itself and its representational capacities, and both authority and dialectics are suspended. Finally, by quoting and commenting on this passage from *De divinis nominibus*, Eriugena performatively grants to himself as a commentator the freedom he wants to grant to reason, which lies in the fidelity of reason to its own necessity, the necessity of truth." (pp. 149-150).

19. Athanasopoulos, Constantinos. 2004. "The Influence of Dionysius the Areopagite on Ioannes Scotus Eriugena and St. Gregorios Palamas: Goodness as Transcendence of Metaphysics." In *Being or Good? Metamorphoses of Neoplatonism*, edited by Kijewska, Agnieszka, 319-341. Lublin: Wydaw Katolicki Uniwersytet Lubelski.

Abstract: "The paper investigates the Platonist and Neoplatonist project of uniting metaphysics and ethics. This project is encapsulated in the position 'all that the God has made are good' and is based (for the Christian side) on *Genesis* 2, 31 "And God saw every thing that he had made, and, behold, it was very good." This position is expressed in both Byzantine and medieval philosophy and in particular in the relevant theories of (Pseudo-) Dionysius the Areopagite, Ioannes Scotus Eriugena and St. Gregorios Palamas. The paper shall elaborate on the theory of Ps. Dionysios, and shall put forward the claim that Ioannes Scotus Eriugena's interpretation of it in medieval philosophy led to serious problems in both medieval ethics and medieval political philosophy. It will also prove that the interpretation of St. Gregorios Palamas on key passages from

the Dionysian corpus are more close to the Dionysian positions and general theory and can escape the problems that Ioannes Scotus' interpretation presented. It will close the discussion with an investigation into some of the philosophically important ramifications for Palamas' theory of the Divine Energies."

Translated by F. Uehlein.

"The philosophical preoccupation with Eriugena in the nineteenth century may be styled a rediscovery, since his ideas, having been obscure and silent for a long time, came to life again by virtue of new philosophical impulses and were questioned and discussed intensively.

(...)

It is, however, impossible from any hermeneutical standpoint simply to add Eriugena's ideas to all kinds of idealism without critical inspection and mediating reasoning.⁽⁵⁾ But it is worth considering whether there is an objective reason after all for the strong interest in Eriugena in nineteenth-century philosophy: whether there is a converging of identical questions, aspects of argumentation or ways of thinking,

In the following I will try to outline the pertinent reason for such a convergence by means of the concepts of speculation, pantheism and salvation, not in support, however, of the maxim that 'there is nothing new under the sun' but, being well aware of the hermeneutical difference, to work out the philosophical point of identity which is at all time concomitant with differing premises and differing consequences." (pp. 190-191)

(...)

"Apart from the problems mentioned above, the idealistic aspect could be revealing for further questions: the relation of being and thinking (of being real and being ideal) in Eriugena's philosophy, the idea of the intelligibility of all being, the positive value of the negation regarding God (the unity of affirmative and negative theology), and the possibility of intuition ('intellektuelle Anschauung'). (48)

The idealistic aspect shows not so much an evidently 'idealistic' structure in Eriugena's philosophy, but reveals the implications which could have developed into idealistic thought. These implications could therefore be identified with idealistic forms of thinking, which was quite legitimate as to the position of idealistic philosophy in the history of thought.

The idealistic reception of Eriugena is indeed a striking proof of his philosophical strength and enduring relevance." (p. 196)

(5) Cf. Christlieb, *Leben und Lehre des Johannes Scotus Erigena* (Gotha 1860), pp. 460 seqq.

(48) As for the way of thinking and the place within the philosophical system an analogy could be shown between Eriugena's concept of the 'cognitio intellectualis, visio intellectualis, contemplatio intelligibilis' and Schelling's concept of intuition ('intellektuelle Anschauung').

The problems mentioned and discussed above are worked out more intensively in my book, *Platonismus und Idealismus*, Frankfurt, 1972.

24. ———. 1986. "Language and Object. Reflexions on Eriugena's Valuation of the Function and Capacities of Language." In *Jean Scot écrivain*, edited by Allard, Guy-H., 209-228. Paris: Vrin.

Translated from German by Dominic J. O'Meara.

"A fundamental question lies at the heart of philosophies of the Absolute and of those theologies which not only describe the history of salvation, but also insist on the incommensurability of their object. This is the question of how their "highest concept" is to be expressed in words. If, within a shared metaphysical perspective, it is assumed that the first principle, God, cannot be grasped by means of the categories and forms of thought of a logic appropriate for what is limited, finite, created, then every effort must be made to produce at least a reasoned expression of the inexpressibility of the object. Thus the central concern of such philosophies and theologies leads them to the need to explain the function and capacities of language. They must address the question of the relation between thinking and speaking, as well as that of the relation between speech or word (name) and the object to which it refers. The explanation may be explicit, or it may remain implicit, yet opening the way towards an interpretation of the relevant function of language.

Among philosophies this situation obtains especially in Neoplatonic metaphysics. As for metaphysically characterized theologies, a paradigmatic instance of this may be found in the case of Eriugena.

We can approach Eriugena's thought on this subject by reference to a series of questions, all of which, generically or specifically, have to do with the subjects I have mentioned: How does Eriugenian thought express what is in itself inexpressible? What degree of accuracy, certainty or truth does

such language attain? To what extent does it correspond to the object it expresses and according to what criterion is this to be judged? What conception of thought and language is presupposed, explicitly or implicitly, by this speech as it occurs? To what extent does Eriugena show trust or distrust concerning the nature, capacities and function of language? Of what significance to language is the scientific (logical, dialectical) grasp of the object achieved through discovery or interpretation of the truth, God's truth mediated in nature and in Holy Scripture? What influence does this theoretical background have on literary form or on the use of specific rhetorical and dialectical terms and categories which relate closely to Eriugena's general interest in philosophy of language?

Some of the questions that I have enumerated here will serve as guidelines in what follows, enabling us to achieve some insight into Eriugena's basic assumptions concerning the subject as a whole." (pp. 209-210).

"We can base our study of the relationship of Nicholas Cusanus to Eriugena - effective despite a time distance of six hundred years - upon a solid historical foundation: Cusanus had quite an intensive and accurate knowledge of a large part of Eriugena's work. This he documented less in direct quotations than through occasional references and marginalia to Eriugena's texts." (p. 115)

(...)

"Although in the preceding reflections I have by no means weighed up and dealt with all conceivable relationships between Eriugena and Cusanus, on the basis of what I have said the following can be suggested in thesis form concerning the central constellations of ideas characteristic of both thinkers: The thought of Eriugena found in Cusanus its most intense and most appropriate reception from the 12th century until German Idealism. Though on the whole not so productive and terminologically influential as for example the reception of Proclus, Dionysius, the Platonists of Chartres or Meister Eckhart, it shows the deep-rooted congeniality of both: they are united in a daring speculative force which in the Cusanian reception retains, through a prudently selective process in the context of a rather complex tradition, its own identity and remains true to its own aims. Looked at philosophically the strongest bond is an open or - in the case of Eriugena - a latent Platonism which is none the less effective for his being largely unaware of it; from a theological point of view, the strongest bond is the many-sided 'Dionysian' phenomenon which - both for Eriugena and Cusanus - in no way excludes the "Augustinian" element; but the philosophical idea in fact remains an essentially determining factor. Historically both thinkers stand at a point of upheaval in which new things - arising out of a past assimilated both reflectively and practically - are not only suggested but have already begun to develop." (p. 152).

metaphysics substantially conditioned the dogmatisation of Christian truth whether consciously or unconsciously." (p. 1)

(...)

"In the context of this long lasting 'serious game' played out between philosophy and theology in order to develop a concept of the Trinity, and as befits the occasion, I wish to turn to - among others - Eriugena. It is not least in this dimension of his thought that he can be seen as a mediator between the East and the West. In order to clarify both the difficulty and the productivity of this mediation, I shall develop the elements of Dionysius Areopagita's Trinitarianism as the presupposition for my discussion of Eriugena. Firstly, however, we must turn to a short recapitulation of the Neoplatonic conception of unity as a starting point, and the philosophical presupposition for the formation of, the theological thought (concept) of Tri-Unity." (p. 3).

29. ———. 1991. "Eriugenas Faszination. "...ut sua osculabuntur" ('Periphyseon', V 40)." In *From Augustine to Eriugena. Essays on Neoplatonism and Christianity in honor of John O'Meara*, edited by Martin, Francis X. and Richmond, John A., 22-41. Washington: Catholic University of America Press.

Nachdruck in: *Eriugena. Grundzüge seines Denkens*, pp. 13-31.

Zusammenfassung: "Mein bisheriges philosophisches Leben gait dem Platonismus — einer philosophischen Theorie, die vom dialogischen Fragen Platons ausgehend in unterschiedlicher Form und Intensität den geschichtlichen Gang des Denkens leitete und ihn auch als Lebensform prägte, bis in die Gegenwart. Die ursprüngliche Dynamik dieser Theorie blieb vor allem durch die Frage nach dem Einen, der Idee, dem göttlichen und welthaften Sein und den Möglichkeiten des Erkennens auch im philosophisch-theologischen Denken des Mittelalters lebendig. Eriugena, der wohl bedeutendste und spekulativ kraftvollste Denker im frühen Mittelalter, hat eine wissenschaftlich sich sichernde Verständigungsart über die Wirklichkeit im ganzen entwickelt, die — bewußt und zugleich durch die geschichtlichen Verhältnisse verdeckt — in einer extremen Form neu-platonisch zu begreifen ist."

30. ———. 1992. "Eriugena's Platonism." *Hermathena* no. 149:53-72.

"The term 'Platonism' is a complex concept. In connection with Eriugena we shall confine it to the form of thought developed in late antiquity which we usually call 'Neoplatonism'. The question which I wish to discuss, at least in its outlines, is this: what position does Eriugena, the most important thinker in the early Middle Ages between Boethius and Anselm of Canterbury, assume in respect of the basic metaphysical questions of Neoplatonism? In so far as Eriugena's relation to Neoplatonism was not, and could not, be a direct one, the question should be raised to what extent he came into contact with just this sort of philosophy? This justifies the comparison of the two structures of thought. This comparison, along with the attempt to trace Eriugena's central concepts back to the fundamental metaphysical issues in Neoplatonic philosophy upon which it is based, and thus to reveal the reflexive structure of his thought, presupposes a close relationship between what we, at least since the time of Aquinas, can define more objectively and in more precise terminology as 'philosophy' and 'theology'." 39. ———. 1982. "Periphyseon: The Descent of the Uncompleted Copy." In *Ireland in Early Mediaeval Europe. Studies in Memory of Kathleen Hughes*, edited by Whitelock, Dorothy, McKitterick, Rosamond and Dumville, David, 281-304. Cambridge: Cambridge University Press.

"In this carefully elaborated study this author describes first a complete text of the *Periphyseon* to be found in a manuscript of 256 pages (now Cambridge, Trinity College O. 5. 20, part I) written at Malmesbury in the second quarter of the 12th century by six scribes, the basis for Gale's 1681 edition. There is

a distinct division at pp. 56/7 indicating two distinct traditions of the *Periphyseon* and two distinct states of the text. The term 'uncompleted' derives from Cappuyns (*Jean Scot ...* pp. 195-6) and is represented by MS Paris B.N. lat 1764, fols 99-145, saec. IX (originally 'complete') and Bern, Burgerbibliothek 469, saec. XII-XIII: the 'supplementary' copy continuing from the broken-off text is represented by Avranches, Bibi. Mun. 230 saec. XII. Referring to a Stemma (p. 287) based on the original ('primitive') manuscript now lost, he traces the process of intervention (including that of the scribes named i¹ and i²) and correction which culminated in the Malmesbury manuscript, one of whose scribes was the librarian William himself who is assumed to have supervised the copying.

The article has most valuable footnotes." (Brennan, p. 94).

40. Bonfiglioli, Stefania, and Marmo, Costantino. 2007. "Symbolism and Linguistic Semantics. Some Questions (and Confusions) from Late Antique Neoplatonism up to Eriugena." *Vivarium* no. 45:238-252.

Abstract: "The notion of 'symbol' in Eriugena's writing is far from clear. It has an ambiguous semantic connection with other terms such as signification, 'figure, allegory, veil, agalma', 'form', shadow', mystery' and so on. This paper aims to explore into the origins of such a semantic ambiguity, already present in the texts of the pseudo-Dionysian corpus which Eriugena translated and commented upon. In the probable Neoplatonic sources of this corpus, the Greek term *symbolon* shares some aspects of its meaning with other words inherited from the ancient tradition, such as *synthêma*, *eikōn*, *homoiotês*. Some of them, such as *eikōn* and *homoiotês*, belong to the field of images and are associated with linguistic semantics in the Neoplatonic commentaries not only to Plato but also to Aristotle's logical works. Among the late ancient Neoplatonists, particular attention is paid to Proclus and to his use of the term *agalma*. In fact, the textual history of this word seems to be a privileged perspective from which to reconstruct the Neoplatonic semantic blending of symbol and image, as well as the main role played by linguistic issues in this conflation."

"Among the few occurrences of the term *agalma* in Dionysius' works, one, in the *De divinis nominibus* (IX, 1; PG 3: 909b), is in the plural and specified by the unusual epithet *theōnymika*. The resulting compound expression, which sounds almost as awkward as divine-name images, is curious in its association of linguistic questions with a non-ordinary image, as *agalma* is. (17)" (p. 242)

(17) 17) For the conception of *agalma* as a particular kind of image, cf. Kerenyi (1962); Criscuolo (1992), the latter expressly referring to Neoplatonic texts. See Bonfiglioli (2006a, 2006b) for a history of this notion in the Platonic tradition.

41. Boulnois, Olivier. 2011. "La théologie symbolique face à la théologie comme science." *Revue des sciences philosophiques et théologiques* no. 95:217-250.

Résumé: "La théologie symbolique recouvre l'ensemble des images métaphoriques par lesquelles on peut désigner Dieu, d'abord dans l'Écriture sainte, puis dans un discours théologique. Dans le néoplatonisme, ces symboles sont avant tout des empreintes du divin qui permettent, par contact, de s'unir au divin dans un acte de théurgie. Denys insiste sur leur caractère de dissemblance, qui nous renvoie vers le divin par

contact, et non par une relation représentative. Au Moyen Âge, Jean Scot Érigène intègre l'ordre symbolique au discours, sous le nom de théologie négative, mais il insiste déjà sur la nécessité de déchiffrer rationnellement les symboles en vue d'une intelligence du divin. Le traducteur de Denys, Jean Sarrazin, plaçait la théologie symbolique à la charnière entre théologie affirmative (des noms divins) et théologie mystique. Dès la *Summa fratris Alexandri*, la théologie symbolique n'est plus que le premier degré, inférieur à la théologie des noms divins et à l'union mystique. Albert le Grand et Thomas d'Aquin maintiennent le caractère médiateur

de la théologie symbolique entre l'affirmation et la mystique, tandis que Bonaventure suit Alexandre de Halès, mais tous maintiennent un « arraisonement » de la théologie symbolique : la métaphore et le symbole impropres doivent pouvoir se ramener au concept propre. La théologie comme science l'a emporté.".

42. Breen, Aidan. 1991. "Iohannes Scottus, "Periphyseon": The Problems of an Edition." *Proceedings of the Royal Irish Academy. Section C: Archaeology, Celtic Studies, History, Linguistics, Literature* no. 91C:21-40.

"The complex recensional history of "Periphyseon" poses especial difficulties for an editor, particularly in Books I-III. An outline of the ramifications of the problem is given here with respect to the palaeographical characteristics of the primary MSS, RB, the various recensions of the text represented in those MSS, the shortcomings in the text and apparatus of the printed edition (a sample list of errors from parts of Books I and III only), as well as other technical difficulties in the edition. A sample edition of a small portion of Bk IV is presented as an illustration of one solution to these problems.

I. Palaeography

The complex palaeographical problems relating to the earliest MSS of *Periphyseon* were very inadequately treated in the introduction to the edition of Book I (Sheldon-Williams 1968) and have not otherwise been fully analysed since then. Our understanding of the development of the various strata of the

text, laid down by a succession of amending scribes over several years, is consequently still unclear. The present contribution will outline the ramifications of the problem and propose a few solutions. A sample edition of Book IV, up to the end of the third lemma in Recension II, is given for comparison with the published edition of Books I-III (Sheldon-Williams 1968; 1972; 1981). But what has been done cannot be undone: it was singularly unfortunate that the editor should have been permitted, without rigorous supervision, to continue with a project that was flawed at its basis and could only aggravate the burden of its errors with each succeeding publication." (p. 21).

43. Brennan, Mary. 1986. "Materials for the Biography of Johannes Scottus Eriugena." *Studi Medievali* no. 27:413-460.

Testimonia 1-37 with Latin text and English translation: pp. 416-457; Index of Topics and Authors: 457-460.

"Below are close on forty testimonia dating from the ninth to the seventeenth century, of which the first fourteen, of the ninth and tenth century, could be said to have been original evidence and have been so considered; the remainder appear (with the exception of that of John Bale who introduced new exotic information in the sixteenth century) to be largely an elaboration of the notable twelfth century accounts of William of Malmesbury. On the other hand, intimations of the Malmesbury version can already be found in tenth and eleventh century material (e.g. Testimonia 14, 15, 16) possibly originating with Asser, bishop of Sherborne, who died in 910 - thus almost 'contemporary' - but the subject of which « Johannes » cannot clearly be identified as Eriugena. This identification was, for a variety of reasons favoured by James Ussher, Lord Archbishop of Armagh in *A Discourse of the Religion anciently professed by the Irish and British*, first printed in 1631 (Ussher, *The Whole Works*, ed. C. R. Elrington, Dublin, 1847, IV, p. 285). Ussher is also credited with being the first to combine the surnames « Scottus » and « Eriugena » (*Veterum epistolarum Hibernicarum sylloge*, Dublin, 1632, p. 57), a nomenclature subsequently to be established by Thomas Gale in the first printed edition of the *Periphyseon* published at Oxford in 1681.

Unhappily, one is far from being able to proclaim the undoubted authenticity of those first fourteen contemporary or near-contemporary *testimonia*. The first four, contemporary, illuminating and interrelated, adduced by recent scholarship, are ultimately circumstantial pieces of evidence. The rebuke supposedly administered to Eriugena by Pope Nicholas I (*Testimonium* 10), accepted as authentic by William of Malmesbury and later writers, has been critically shown to have its origins no earlier than in the twelfth century. Hence there remains only the matter of eight *testimonia* (5, 6, 7, 8, 9, 11, 13, 14: 12 is of doubtful significance) to add little to what might be inferred from Eriugena's own writings - that he came from Ireland, that he was not only learned but holy, that he impressed many by his exceptional erudition, and particularly by his knowledge of Greek, but that his preference for the Greek view offended not a few of his western contemporaries. Eriugenian scholarship is nowadays more concerned, and rightly so, with the sources of his erudition and, as we shall see in the first four *testimonia*, with the many facets of this erudition and, whereas the slightest detail about his early life could contribute to the discovery of his sources, one cannot but continue to be intrigued by the question of where and when, rather than how he ended his days." (pp. 414-415).

"La vie, l'œuvre et la pensée de Jean Scot Érigène ont fait, depuis un siècle, l'objet de recherches nombreuses. La plupart des questions que posent ces sujets ont été étudiées à maintes reprises et résolues dans les sens les plus divergents. La forme même du nom Érigène a été mise en cause ; et si nous la conservons habituellement telle qu'elle est reçue dans la langue française, c'est par respect de l'usage et de l'euphonie. La biographie de Jean Scot, peu prodigue de faits authentiques, ne l'est pas davantage de dates certaines ou indiscutées. Il a fallu la remettre à l'étude avant d'entreprendre l'examen des écrits et de la doctrine. Parmi les écrits attribués à Jean Scot plusieurs le sont indûment, d'autres le paraissent être à première vue sans raisons suffisantes ; la plupart ne sont connus que par des textes dont la valeur semble discutable ou médiocre. Une critique sévère des conditions littéraires et textuelles de l'œuvre érigénienne s'imposait. Quant à la doctrine, les interprétations les plus fantaisistes et les plus contradictoires ont été soutenues. Nous avons dû leur opposer une analyse strictement

objective ; assez sobre cependant pour ne pas faire paraître principal, le secondaire.

En dehors des écrits de Jean Scot, nous ne disposons pour établir sa biographie que de sources fort rares. Quelques mentions laconiques chez Hincmar de Reims, Prudence de Troyes, Florus de Lyon, Anastase le Bibliothécaire ; quelques notices tardives chez Sigebert de Gembloux, Guillaume de Malmesbury et les autres chroniqueurs : c'est tout ce qui peut entrer en ligne de compte. Les maigres renseignements fournis par ces auteurs n'auraient pas présenté grand intérêt, isolés de l'œuvre littéraire de notre écrivain. C'est pourquoi nous avons mené de front, dans notre exposé, le récit de sa vie et la description de ses écrits. C'est une première cause de disproportion entre les deux parties du présent ouvrage. Une deuxième tient à l'attention toute spéciale que nous avons accordée à l'étude des manuscrits. Comme une nouvelle édition des œuvres d'Érigène est depuis longtemps jugée indispensable, et que nous avons entrepris de combler nous-même cette lacune, il nous a semblé utile de soumettre dès aujourd'hui nos vues aux spécialistes, dans l'espoir qu'ils les complètent, les corrigent ou les corroborent. Une troisième cause de disproportion provient, et du but restreint poursuivi dans notre exposé doctrinal, et de la réserve que nous y imposent les déficiences de nos textes imprimés. L'étude doctrinale de Jean Scot ne pourra se faire, détaillée et définitive, qu'après la réédition critique de son œuvre maîtresse. En attendant, nous avons esquissé les principaux traits de la doctrine érigénienne, tels que la lecture impartiale des textes, — vérifiés, quant aux plus importants, sur les manuscrits, — nous l'ont fait connaître. Esquisse toute provisoire, mais que nous espérons assez convaincante pour que l'interprétation de notre auteur s'engage décidément à l'avenir sur une voie nouvelle, et consente à considérer Jean Scot lui-même comme un théologien, — et non plus seulement comme un philosophe, — dont on a dit trop de mal." (pp. VII-VIII).

47. ———. 1964. "Jean Scot Érigène et les *Scoliae* de Maxime le Confesseur." *Recherches de Théologie Ancienne et Médiévale*

no. 31:122-124.

"Dans les derniers livres de son *De divisione naturae*, Jean Scot cite explicitement ce qu'il appelle les *Scoliae* de Maxime le Confesseur(1) Il s'agit en réalité des *Quaestiones ad Thalassium*(2). Mais à cause de l'imprécision du titre, — *Scoliae*, — évoqué par Jean Scot, j'ai cru devoir conclure en 1933 que ce dernier empruntait, — en les traduisant sans doute lui-même, — ses citations à quelque chaîne de scolies patristiques(3). Dom P. Meyvaert vient de montrer dans une brillante étude(4) qu'il n'en est rien, que Jean Scot a traduit en entier l'*Ad Thalassium*, et que cette traduction nous est conservée dans au moins deux manuscrits : Monte Cassino 333 E, du XIe s., et Troyes 1234, du XIIIe." (p. 122)

(...)

"Le titre *Scoliarum Maximi* a été ajouté par le scribe du f. 219v quand tout le reste avait déjà été écrit et il n'y avait plus guère de place disponible, ni au f. 219v, ni au f. 220^r déjà occupé par un poème, ni au f. 220^v couvert de gloses diverses (*In epistola ad philippenses*, etc.), pour insérer une explication quelconque. Alors il s'est rabattu sur la marge supérieure du dernier folio et y a inscrit la glose que voici : *Scoliae insignes sententiae sine excerpta uel abreuiata quando ea quae obscura et difficilia sunt summam ac breuiter perstringuntur* (11). A mon avis cette glose se rapporte au titre *Scoliarum Maximi* et constitue une nouvelle preuve de l'extraordinaire importance du manuscrit *Mazarine 561*." (p. 124)

(1) « Proponit itaque in quinto scholiorum capitulo... » (*De div. nat.* IV, 26; PL 122, 857A) ; « Idem itaque Maximus non solum in ambiguis verum etiam in scholiis... » (*ibid.* V, 20 ; 895C). Voir M. Cappuyns, *Jean Scot Érigène*, Louvain 1933, p. 172 et 392. Au mot *scholiorum*, l'apparat de Migne note : « CF *scoliarum* ». Effectivement, tous les anciens manuscrits portent *scoliarum*.

(2) Le titre exact est : Περὶ διαφορῶν ἀπορῶν τῆς θείας γραφῆς. Voir M. Cap puyns, *ibid.* On trouvera le texte grec PG 90, 243-786. 3. Voir M. Cappuyns, *ibid.* 4. P. Meyvaert, *The*

Exegetical Treatises of Peter the Deacon and Eriugena's Latin Rendering of the Ad Thalassium of Maximus the Confessor, dans *Sacris Erudiri* 14 (1963) p. 130-148.

48. Carabine, Deirdre. 1990. "Apophysis and Metaphysics in the *Periphyseon* of John Scottus Eriugena." *Philosophical Studies (Dublin)* no. 32:63-82.

"Eriugena was the first Western philosopher to have afforded the neoplatonic theme of *apophysis* a prominent, indeed central place in the presentation of his own thought. Although the reader of the *Periphyseon* encounters the terms *kataphatic* and *apophatic* chiefly in Book I as systematic ways of speaking about the divine essence, I would like to demonstrate how apophysis, in its global ontological sense, is a key-concept in the understanding of the metaphysical schema of the *Periphyseon*. I preface this account of the nature of apophysis in the *Periphyseon* with a very brief outline of the two traditional ways of theology.

Apophysis has its origins in the speculative philosophy of late Platonism; in its Christian development we can distinguish two distinct points in its history. The first was the fusion of Platonic and Hebraic ideas in the writings of the first-century Jewish philosopher, Philo of Alexandria; it was this unique synthesis, centering as it does upon the theme of the transcendence and immanence of the divine, which was adopted and developed by the Christian Alexandrian Fathers. The second, and perhaps more important moment, was the neoplatonic fertilization of Christian principles effected in the works of Dionysius the Areopagite. It is in the short, and very condensed treatise, *De mystica theologia*, that we find Dionysius setting down the distinctions between the two ways of theology. If we understand theology in its most basic sense as speech about God, then *kataphatic*, or positive theology, is the way which is

towards speech, or relies on speech, and *apophatic*, or negative theology, is the way which indicates a moving away from speech.

Understood at its most basic level, the kataphatic approach states that man can attain to some knowledge of God, even though that knowledge be limited, by attributing all the perfections of the created order to him as its source. The apophatic approach, on the other hand, affirms God's absolute transcendence and unknowability to such an extent that no affirmative concept, except that of existence, may be applied to him. Both ways, then, take creation as their point of reference: the one states that God can be known through creation, since that is of his making; while the other states that God transcends creation and cannot be known truly through it." (pp. 63-64).

"Apophysis and Kataphasis

Book I of the *Periphyseon* gives the initial impression that it will explain the first division of nature: *creat et non creatur* (that which creates but which is not created) In fact, this book turns out to be an elaboration and explanation of the inapplicability of the ten categories to the divine essence. However, this apparent digression on Eriugena's part turns out, in fact, to be no such thing, for he uses the categories as a methodical means of testing the workings of kataphatic and apophatic theology(11) According to Eriugena, definition is concerned solely with created effects, with coming into being, and he describes this process in a very Plotinian way: form is

the measurement imposed on unformed matter which places it within the realm of limitation and, therefore, definability.(12)

Definition, then, pertains to the 'whatness' of a thing and its focus is finitude.(13) Therefore, what the human intellect can know about created things stems from the fact that these things are differentiated: they possess quantity, quality, relations, have a condition, are in place and time, and so on. In other words, we are able to define things and come to a knowledge of them through the *circumstantiae*, the accidents and attributes which differentiate them and surround their hidden essences.

(14) Like Gregory of Nyssa, Eriugena argues that the *essentiae* of things cannot be known without the clothing of accidents.

(15)

Can we then use the ten categories to come to an understanding of the nature which creates but is not itself created? It would be rather surprising, to say the least, if Eriugena had answered this question in the affirmative. Since the categories do not properly pertain to the divine essence - we do not perceive God's quality, quantity and so on - it follows that we cannot know the divine essence at all; unclothed as it is by attribute (in Dionysian terms, unveiled without symbol), it remains inaccessible to the human mind. This approach, then, is not a superfluous exercise, for the dialectic operative between the terms created and uncreated, provides a starting point for the two theologies: the one pertains to affirmations (*creat*), and the other to negations (*non creatur*)." (pp. 303-304).

55. Coallier, Christine. 1986. "Le vocabulaire des arts libéraux dans le "Periphyseon"." In *Jean Scot écrivain*, edited by Allard, Guy-H., 343-360. Paris: Vrin.

"Il nous reste cependant à découvrir, au sujet des arts libéraux chez Jean Scot Érigène, le versant opposé mais complémentaire de sa conception théorique, c'est-à-dire sa praxis des arts libéraux. Comment Jean Scot intègre-t-il à sa pratique des arts libéraux les idées théoriques qu'il a émises à leur sujet? La question à l'origine de nos recherches est la suivante : quelle utilisation, quelle application dans sa propre écriture, en particulier dans le *Periphyseon*, fait Jean Scot des arts libéraux

? Nous nous sommes donc fixés comme objectif d'explorer non pas la pensée de Jean Scot sur les arts libéraux, mais plutôt sa pratique, sa praxis des sept arts libéraux.

Nous savons tous que le *Periphyseon* porte sur la nature. Là où le voile n'a pas encore été levé, c'est sur la manière dont Jean Scot parle de cette nature. Nous savons en effet qu'il y a une différence entre l'objet d'un discours et la manière dont ce discours parle de son objet. Nous nous sommes donc demandé si Jean Scot disserte sur la nature avec le vocabulaire emprunté au grammairien, à l'astronome, davantage avec le vocabulaire du dialecticien qu'avec celui du physicien.

En répondant à cet ensemble de questions, nous chercherons à mettre en relief la variabilité des emprunts au vocabulaire des arts libéraux contenus dans les cinq livres du *Periphyseon*, à percevoir les modulations, les transformations, les développements affectant ce vocabulaire.

Précisons tout de suite que notre étude sera plus descriptive qu'analytique : nous nous limiterons presque exclusivement ici à offrir une exposition complète des résultats obtenus par le traitement informatique du texte. Nous n'analyserons pas ni n'interpréterons vraiment ces résultats, réservant aux chercheurs intéressés le soin de donner sens à ces informations." (pp. 343-344).

"C'est Mlle d'Alverny, dans son étude bien connue, *Le cosmos symbolique du XIIe siècle*,⁽¹⁾ qui a souligné en quelques pages l'importance et l'originalité de la doctrine érigénienne sur l'espace et le temps, telle qu'elle est exposée dans ce livre Ier du Periphyseon dont Mr Sheldon-Williams nous a heureusement donné le texte critique. Cette doctrine, que nous allons analyser très rapidement, compte enu de sa complexité, doit être considérée comme l'un des aspects multiple tde la dialectique fini-infini, être-non être, ou plutôt être au delà de l'être, qui constitue le noyau, le principe dynamique de tout le système." (p. 41)

(...)

"L'idée de création théophanique, affirmée par Érigène dans toute son œuvre, se trouve bien souvent contrastante, d'une façon apparente ou réelle, avec une tradition chrétienne, qui est

surtout la tradition latine: il n'en reste pas moins qu'il s'agit là d'une création au sens plein du mot, de laquelle l'idée de la transcendance divine se dégage dans toute sa force. La pensée divine ne se manifeste pas par une sorte de nécessité, comme il arrive dans d'autres systèmes néoplatoniciens, mais elle engendre, elle produit elle-même les conditions et les lois de sa propre manifestation.

Voilà les lignes essentielles d'une doctrine, d'une grande complexité, certes, mais, dans son ensemble, d'une originalité et d'une cohérence admirable, qui se conclut, d'ailleurs, avec une dernière hardiesse: l'affirmation la plus claire que le lieu s'identifie avec l'activité de l'intellect, humain, angélique, ou divin, qui localise et circonscrit les êtres, qui connaît la réalité grâce à cet acte même, à ce pouvoir de définition, considéré en même temps comme pouvoir de création.(20)" (pp. 46-47)

(20) 20. Cf. *Periphyseon*. I. 43-44, cols. 484D-486D, Sheldon-Williams. pp. 132-136.

63. ——. 1973. "Lo spazio e il tempo nell'opera dell'Eriugena." *Studi Medievali*:39-136.

"The author of this study suggests at the outset that she intends the term 'spazio' to be construed rather as 'place' (*locus*) and proposes to deal with her theme in the context of *Periphyseon* Books I and V, that is in relation first to *processio* - in which Eriugena makes a coherent case -- and then to *reditus* -- where the clear-cut arguments cannot apply.

Section I (pp. 40-116) explores the question in relation to *processio* under the following headings: (1) the incognoscibility of Essence: Eriugena's (mis) translation of the ps-Dionysian dictum is adduced: *Cognitio... eorum quae sunt, ea, quae sunt, est*. In the formulation of his system his debt to Maximus Confessor and consequently to Gregory is emphasised. (2) "*Terminus naturae*": *locus* is one of the categories which though in describing a being necessarily delimits it yet renders it less unknowable; likewise the category *tempus* enjoys equal privilege. (3) The Unity of the Categories and the problem of "*locus*": the question of *locus* is discussed within the tradition of Plato and Porphyry as well as of the skeptic, Sextus

Empiricus, all responding to the *Categoriae* of Aristotle. (4) The notion of place as a function of the intellect: Eriugena did not adhere to the strict hierarchical structure of the ps-Dionysius. The distinction between knowledge of *quia est* and *quid est* and the problem of the divine intellect as *locus sui* are discussed. The variety of his sources has complicated the problem. (5) Spatio-temporal unity: on the question of time Eriugena has a clearer view. Again sources are discussed, going back to the Stoics, with Maximus Confessor providing the principal inspiration. Knowledge must be expressed in terms of space and time (*Periphyseon* I, 39, col. 481BC). (6) Space and time, primordial conditions of the real: this heading indicates Eriugena's divergence from the views of Maximus. Eriugena held a more dynamic view of creation. The question of other sources is looked into, particularly concerning the interpretation of the biblical *principium (arché)* (7)' Conclusion: Space and Time perform the function of determining and circumscribing and stabilising the frontiers of being; they precede created nature; they are a function of the intellect in the cognitive act.

Section II (pp. 116-134) considers space and time in the perspective of the *reditus*. This author suggests that the imprecision of language on this question may seem to involve a paradox in Eriugena's exposition (Book V) but it does contain its own internal logic. The Pauline phrase *tempora aeterna* is adduced in relation to the Primordial Causes. Eriugena has recourse to Augustinian texts to help him reconcile seemingly impossible contradictions. The author believes that even if Eriugena does seem to express views that are superficially negative, the *recapitulatio* profoundly demonstrates the ontological necessity of the incarnation of the Word (*Periphyseon* V, 29, col. 912 B). Eriugena's originality would seem to have been his characterisation of space and time as intellectual, not material categories." (Brennan, pp. 220-221).

68. d'Onofrio, Giulio. 1980. "A proposito del "magnificus Boetius": un'indagine sulla presenza degli "Opuscola sacra" e della "Consolatio" nell'opera eriugeniana." In *Eriugena. Studien zu seinen Quellen*, edited by Beierwaltes, Werner, 189-200. Heidelberg: Carl Winter.

"Come è noto vari tentativi sono stati operati nel corso del nostro secolo per attribuire a Giovanni Scoto alcuni commenti su queste due opere, in base soprattutto alle evidenti tracce di eriugenismo riscontrabili in alcune glosse di particolare interesse filosofico: ma un'attenta analisi di queste raccolte le riconduce tutte, come momento iniziale della loro diffusione, all'opera scolastica di Remigio di Auxerre, alla cui sola mediazione didattica è dovuto l'inserimento in esse di insegnamenti provenienti dall'Eriugena. Tutte queste tentate attribuzioni rientrano dunque nel progetto ancora non risolto di ricostruire un'ipotetica attività didattica del maestro irlandese sui testi boeziani: un insegnamento, cioè, sulla *Consolatio* e sugli *Opuscula*, simile a quello di cui rimane

traccia nelle *Annotationes* di Giovanni Scoto su Marziano Capella, e che potesse essere collocato, come fonte dello stesso Remigio, alle origini dell'uso medievale di commentare analiticamente gli „auctores“." (pp. 189-190)

(...)

"Di questo studio e di questo insegnamento non sono rimaste tracce dirette ed esplicite, ma soltanto indizi che suggeriscono la possibilità di tentarne la ricostruzione in via ipotetica. Nessuna prova conferma a questo punto le ipotesi sull'esistenza di un commento eriugeniano sulle due opere. Ciononostante, ed anzi proprio per questo a maggior ragione, assumono qui un'importanza particolare le raccolte di glosse su di esse redatte da Remigio di Auxerre o alla sua scuola, profondamente imbevute dell'influenza eriugeniana. Tale influenza è, è vero, spesso settoriale, talvolta superficiale, e l'eriugenismo vi sembra a volte invocato fuori posto per illustrare passi di particolare interesse speculativo senza un'effettiva aderenza al pensiero né dell'Eriugena né di Boezio stessi. Il *Periphyseon* è per queste glosse una fonte come le altre, tra le altre, particolarmente utile per risolvere i problemi filosofici o teologici suscitati dal testo commentato. Eppure questa particolare applicazione che un glossatore fecondo e polivalente come Remigio fa dell'insegnamento di Giovanni Scoto proprio agli *Opuscula* e alla *Consolatio*, accanto ai risultati positivi della nostra indagine sulla loro presenza nelle opere eriugeniane, sembra offrire la prova più evidente che l'interesse vasto e diffuso che essi avrebbero suscitato soprattutto nelle scuole a partire dal X secolo, trova un significativo precedente e un probabile impulso iniziale proprio in quella certa attenzione didattica che il maestro irlandese deve aver rivolto su di essi nei propri corsi di studio, e di cui fin qui si è cercato, sulla base dei pochi elementi a disposizione, di disegnare i lineamenti." (p. 200).

71. ———. 1981. "Giovanni Scoto e Remigio di Auxerre: a proposito di alcuni commenti altomedievali a Boezio." *Studi Medievali* no. 22:587-693.

Abstract: "

La *Consolatio* e gli *Opuscula sacra* di Boezio furono conosciuti e recepiti nell'alto medioevo come un blocco unitario. L'analisi della tradizione manoscritta conferma questa situazione: delle quattro famiglie in cui Rand suddivise i circa 170 mss. degli *Opuscula*, almeno due (quelle provenienti da Fleury e da Tours) testimoniano negli archetipi la presenza anche della *Consolatio*. È molto difficile ricomporre in un testo unitario i vari gruppi di glosse dei manoscritti dei secc. IX-XII a causa della particolare natura del commento medievale, che non è un genere letterario autonomo, quanto, piuttosto, uno strumento scolastico finalizzato alla lettura in cui confluisce il patrimonio di tutta una tradizione di cultura e di pensiero. Tuttavia, l'ipotesi dell'esistenza di un commento di Giovanni Scoto a Boezio, scaturita dall'osservazione di espressioni, concetti e dottrine erigeniane nelle glosse a Boezio, ha aperto un dibattito fatto di attribuzioni, ricostruzioni e distinzioni di corpi unitari di glosse e annotazioni, che ha notevolmente arricchito la conoscenza dell'argomento. L'Autore passa in rassegna le posizioni degli studiosi di questo secolo (pp. 591-610): da Rand, che attribuì a Giovanni Scoto il più antico corpus di glosse agli *Opuscula* e, sulla base del cod. Trier 1903, individuò un commento alla *Consolatio* attribuibile a Remigio di Auxerre; a Courcelle, per il quale il presunto commento dell'Eriugena era in realtà una commistione, del sec. XI, dei commenti di Remigio e di Adalboldo di Utrecht; per arrivare agli studi più recenti di H. Silvestre e N.M. Haring. Le pp. 610-30 sono dedicate allo studio della presenza di influssi erigeniani nei commenti altomedievali a Boezio; segue alle pp. 630-90

un'analisi delle tematiche eriugeniane, raggruppate per argomenti, dei commenti di Remigio secondo la problematica suggerita di volta in volta da Boezio: teologia negativa (647), dottrina trinitaria (657), interpretazione neoplatonica del processo creativo (663), l'essere e il tempo (676), antropologia ed escatologia (682). In appendice, alle pp. 690-3, un aggiornamento bibliografico."

72. ——. 1986. "'Disputandi disciplina". Procédés dialectiques et "Logica Vetus" dans le langage philosophique de Jean Scot." In *Jean Scot écrivain*, edited by Allard, Guy-H., 229-263. Paris: Vrin.

"Ce fut peut-être justement dans le filigrane de cette présentation mythique esquissée par Martianus Capella au début du quatrième livre de son *De nuptiis*, que Jean Scot apprit initialement à connaître le pouvoir merveilleux de la dialectique : l'art qui donne au discours humain, fabriqué par la grammaire, et dignement habillé par la rhétorique, la force vitale du mouvement coordonné au moyen de règles certaines et efficaces. Il comprit alors le sens des formules augustinienes qui désignent dans son ensemble ce patrimoine philosophique d'origine profane offrant la norme des procédés rationnels et de leur expression verbale : *ars disputatoria*, ou *disputandi disciplina*, ou bien, avec plus de précision, *bene disputandi scientia*(5)." (p. 230)

(...)

"Une familiarité évidente avec les termes de la logique classique et une application fréquente des principes et procédés correspondants sont de fait reconnaissables sans peine dans le langage érigénien(42). En outre Jean Scot lui-même nous dit avec clarté que pour lui ces matériaux logiques appartiennent à la compétence de la dialectique : à propos, par exemple, de la distinction des prédications « in subiecto » et « de subiecto », il dit de rapporter cette doctrine « iuxta dialecticorum opinionem »(43) ; une autre fois il affirme que lorsque la rhétorique prétend parler des « loci communes », c'est-à-dire, selon Boèce, des « topica », elle envahit le domaine de la dialectique(44). On est alors en droit de se poser la question de l'extension de ses

connaissances logiques, et donc avant tout des textes et des instruments dont il dispose et fait usage. Mais il est peu prodigue en citations explicites : une, ou deux fois, il nomme le *Categoriae decem* du pseudo-Augustin(45) ; une fois seulement le *Periermeneias* d'Aristote, mais le renvoi est si générique (peut-être même un peu timide) qu'il n'offre aucune garantie d'une lecture directe(46). Pas un mot sur les textes logiques de Boèce, commentaires ou monographies. Maigre récolte, en définitive, mais elle ne nous éloigne pas de la situation universelle à l'époque carolingienne, où le corpus de la première *logica* vêtus ne comprend même pas le texte original des *Categoriae* d'Aristote, substitué par la paraphrase pseudo-augustinienne : ses autres trésors sont limités à l'introduction de Porphyre, au *Periermeneias*, aux *Topica* de Cicéron, ces derniers peut-être avec le commentaire de Boèce ; mais surtout ce sont les sommaires de Martianus, de Cassiodore et d'Isidore qui complètent ce programme d'études avec leurs expositions élémentaires de la syllogistique et de la doctrine victorinienne de la définition(47)." (pp. 242-243)

(5) Augustin, *Soliloquio*, II, xi, 19, P.L. 32, col. 894 («non nego vim peritiamque definiendi... disputatoriae arti tribui»), et col. 893 («disciplina disputandi verane, an falsa est?»). La fameuse définition de la dialectique comme *bene disputandi scientia* ouvre l'opuscule attribué à saint Augustin, *De dialectica liber* (ou *Principia dialecticae*), I, P.L. 32, col. 1409 (cf. ed. B. Darrel Jackson & J. Pinborg, Dordrecht - Boston, 1975, «Synthèse Historical Library» 16, p. 83,2; sur la question de l'authenticité augustinienne cf. *ibid.* Introduction de Darrel Jackson ; et cf. H.-I. Marrou, *Saint Augustin et la fin de la culture antique*, Paris, 1938, p. 576-578). Cf. aussi le *Periermeneias* attribué à Apulée, I (je citerai d'après l'édition de P. Thomas, Leipzig, 1908 ; ici : p. 176, 3-4): «rationalis [philosophia], qua continentur ars disserendi».

(42) Il n'y a pas dans le *Periphyseon* une différence manifeste de langage ou de style, lorsque Jean Scot aborde une question purement philosophique ou des problèmes de théologie : en ce sens la quadripartition de la philosophie citée à la note précédente est par lui effectivement respectée.

(43) Cf. *Periphyseon*, I, col. 470 D6-7, p. 102, 11-12; cf. infra, la note 80.

(44) Cf. *ibid.*, V col. 870 A4-6.

(45) *Ibid.*, I, col. 493 A12-B13, p. 150, 31 - 152, 8 (= *Categoriae decem*, P.L. 42, col. 1427, §§ 71-72, p. 149, 4-17). L'autre citation, moins claire, se trouve dans les *Annotationes in Marcianum*, p. 84,23-24 (= *Categoriae decem*, col. 1424, § 45, p. 143, 10-13).

(46) *Periphyseon*, II, col. 597 C4-8, p. 162, 15-18 : « ... De quibus quisquis plene voluerit percipere légat Periermeneias hoc est *De Interpretatione* Aristotelem in qua aut de his solis, hoc est possibilibus et impossibilibus, aut maxime a philosophe disputatum est. » Je ne vois pas de raison pour citer à ce propos, comme le fait Sheldon-Williams, le commentaire boécien correspondant.

Capitolo 4 (con bibliografia annotata, pp. 294-303).

80. ———. 2002. "'Cuius esse est non posse esse': la quarta species della natura eriugeniana, tra logica, metafisica e gnoseologia." In *History and Eschatology in John Scottus Eriugena and His Time*, edited by McEvoy, James and Dunne, Michael, 367-412. Leuven: Leuven University Press.

"Per risolvere l'enigmaticità della prima presentazione della naturae species quae nec creai nec creatur è utile prendere le mosse da una verifica del valore semantico che nel linguaggio filosofico eriugeniano assumono i termini *impossibile* e

impossibilitas. Ad un rapido esame delle loro ricorrenze appare con evidenza come la loro utilizzazione possa essere articolata, grosso modo, secondo tre diverse funzionalità espressive."(p. 371)

(...)

"Questa introduzione del termine impossibile in una prospettiva di ordine squisitamente teologico, non concepibile nell'ordine creaturale senza l'apporto della rivelazione, ne incrementa in modo stupefacente il significato: ciò che è voluto da Dio come una 'realtà impossibile' appartiene alla natura, ma solo in quanto, come effetto appunto dell'incondizionata volontà creatrice, rientra nell'ambito indicibile e incomprendibile della natura divina. Ed è ovvio che la connotazione logica di *impossibilitas* descrive in tale caso per la ragione umana non una limitazione della res, ma una condizione propria del soggetto quando ne contempla il *mysterium* senza essere illuminato dall'*altitudo theologiae*, ossia dalla profonda conoscenza che sgorga dalla rivelazione e dalla grazia(40)." (p. 381)

(...)

"La conclusione del Periphyseon propone un riepilogo complessivo del pensiero erigeniano nella cui sinteticità l'autore ha modo di esprimere in una riformulazione essenziale, definitiva e chiarificatrice, il senso del processo che conduce al non posse esse della quarta natura¹²². La divisione quadripartita delle naturae appare ormai non altro che il risultato della duplice considerazione di Dio come causa prima e come fine, e della creatura come causa seconda e come effetto. La quarta natura è dunque conoscibile da parte dell'intelligenza creata nella misura in cui Dio, come fine, è il punto di arrivo di ogni moto-desiderio delle creature, nel quale tutte trovano il limite del loro movimento naturale⁽¹²³⁾." (p. 410)

81. Desrosiers-Bonin, Diane. 1986. "Étude des radicaux et de leur répartition dans le dialogue du "Periphyseon"." In *Jean Scot écrivain*, edited by Allard, Guy-H., 311-325. Paris: Vrin.

"Cette analyse a pour unité de base le mot, mais le mot considéré comme l'énoncé d'une idée. En effet, afin d'appréhender l'œuvre en respectant les cadres épistémologiques dans lesquels elle fut élaborée, nous nous sommes conformée à la conception médiévale selon laquelle la pensée, antérieure au langage, se manifeste à travers un lexique, une syntaxe et leur aménagement ordonné selon une stratégie rhétorique particulière. Dans cette conception, le mot fonctionne comme l'instrument épiphanique de la pensée, ainsi qu'en témoigne Jean Scot à l'occasion des *Expositiones in Ierarchiam coelestem* : « (...) vox imago est intellectus»(1).

Notre recherche, à son premier stade, ne porte donc pas sur la phrase ou sur des ensembles phrastiques. Elle ne se situe ni au niveau syntaxique, ni au niveau logique ou rhétorique sur lesquels nous concentrerons nos travaux ultérieurs. Enfin, notre étude ne repose pas sur une analyse de contenu ou une interprétation de sens. Nous nous proposons plutôt de fournir aux chercheurs un compte rendu descriptif des recherches de type quantitatif que nous avons menées au moyen de l'ordinateur.

Dans cette optique, notre contribution à l'étude du *Periphyseon* comporte deux volets. Nous verrons d'abord à établir la carte des idées sur lesquelles roule la dispute du *Periphyseon*, c'est-à-dire à cerner l'organisation générale des radicaux dans les cinq livres. Puis, nous éclairerons les caractéristiques du dialogue érigénien par une analyse quantitative et comparée des radicaux utilisés par le maître et le disciple, ainsi que ceux qui apparaissent dans les citations. Nous ferons ressortir leur degré de participation à l'ensemble du corpus, leur originalité lexicale et leur degré d'intégration, c'est-à-dire le vocabulaire qu'ils partagent(2)." (pp. 311-312)

(1) *Expositiones in Ierarchiam coelestem* (éd. J. Barbet), Cap. XV, 926."

82. Madec, Goulven. 1977. "L'augustinisme de Jean Scot dans le "De praedestinatione"." In *Jean Scot Erigène et l'histoire de la philosophie*, edited by Roques, René, 183-190. Paris: Éditions du Centre national de la recherche scientifique.
83. ———. 1980. "Observations sur le dossier augustinien du "Periphyseon"." In *Eriugena. Studien zu seinen Quellen*, edited by Beierwaltes, Werner, 75-84. Heidelberg: Carl Winter.

"Je distingue, en toute simplicité, trois opérations dans le traitement du texte érigénien: 1) l'établissement du texte, 2) l'investigation philologique, 3) l'interprétation doctrinale. La deuxième opération, à laquelle je veux me borner, concerne principalement l'inventaire des emprunts qui fait l'objet des notes de bas de pages; et je voudrais présenter ici une sorte de petite théorie de l'annotation.

Dans l'édition du *De diuina praedestinatione*, je me suis refusé l'usage de tout artifice typographique: guillemets ou caractères italiques, afin de préserver le texte de toute intrusion de l'érudition philologique. Dans le même esprit, j'estime que la détection des emprunts n'autorise pas d'elle-même, automatiquement, les conclusions d'ordre doctrinal. Le philologue en acte de repérage des emprunts est, en effet, selon moi, un lecteur anormal: il ne lit pas, il analyse, il décompose le texte. Pour être à même de porter un jugement doctrinal, il doit, ce me semble, se remettre en acte de lecture normale, suivre le courant du discours où les emprunts ont désormais la vie, le mouvement et l'être. Il faut considérer les emprunts comme des actes doctrinaux de Jean Scot, et non pas comme de simples signes de dépendance littéraire et doctrinale.

Les résultats du travail philologique doivent donc faire l'objet d'une attention critique; et je voudrais préciser d'entrée de jeu qu'un dossier augustinien du *Periphyseon* ne peut être que partiel et disparate.

Ce dossier est partiel: il ne fait pas un tout à lui seul, mais réclame les dossiers concurrents concernant toutes les œuvres, ecclésiastiques et profanes, exploitées dans le *Periphyseon*. Il faudrait, autrement dit, considérer la nomenclature des

auteurs, dressée par Dom Cappuyns(4), comme un programme d'études. Une enquête biblique serait particulièrement utile, qui donnerait les références précises des citations et des réminiscences, en relevant les particularités textuelles, et qui étudierait les remarques de Jean Scot sur les textes hébreu, grec et latin(5)."

(4) M. Cappuyns, *Jean Scot Érigène. Sa vie, son œuvre, sa pensée*, Louvain-Paris, 1933; Bruxelles, 1964, p. 387-392.

(5) Dans mes notes sur „Jean Scot et les Pères latins“, *Revue des études augustiniennes*, 22, 1976, p. 134-142, il manque deux références à saint Jérôme, relatives au texte hébreu. *Exp. in Hierarchiam caelestem*, viii, 366-369: „Similiter de Serubet Seraphim dicendum; proprie tamen, ut sanctus Ieronymus docet, Cherubim et Seraphim et pluralis numeri et masculina nomina sunt“ (éd. J. Barbet, CC, Cont. Med. XXXI, p. 128); cette remarque de Jérôme se trouve en Comm, in *Isaiam prophetam*, lib. 1, cap. i (PL 24, 259B9-11; CC 73, p. 7). *Exp. in Hierar-* 1

chiam caelestem, xv, 1018-1023 (p. 213): „Bcatus autem Ieronymus . . . Eccc quod Dionisius posuit hebraice TEA, TEA, PEA, Ieronymus latine uolubiles interpretatus est“. Cf. *Comm. in Ezechielem* lib. II, cap. x (PL 25, 93C-94B; CC 75, p. 114). Je me console de ces omissions, en constatant que le travail à l'ordinateur peut aussi subir pareils accidents: dans l'index nominum, CC Cont. Med. XXXI, p. 365, sub uerbo: Ieronymus, il manque une référence à xiv, 31 (p. 185).

86. ———. 1986. "Jean Scot et ses auteurs." In *Jean Scot écrivain*, edited by Allard, Guy-H., 143-186. Paris: Vrin.

Index auctorum pp. 154-186.

"Mais mon propos n'est pas de traiter des emprunts tacites de Jean Scot, bibliques et autres. Cela excéderait ma compétence

et ce devrait être un travail d'équipe. J'ai pensé, en revanche, que l'heure était peut-être venue de mettre à jour la nomenclature dressée par Dom Cappuyns à la fin de son grand ouvrage [*], dans l'appendice intitulé « Les auteurs cités par Jean Scot » (p. 387-392). Dom Cappuyns relevait « tous les passages où Jean Scot fait appel à quelque autorité, qu'il s'agisse d'auteurs profanes ou ecclésiastiques, de citations proprement dites ou de simples renvois » (p. 387). C'est aussi le parti que je prendrai ; mais cette formulation appelle quelques remarques. Premièrement, il y manque les auteurs bibliques ; j'y reviendrai. Deuxièmement, il faut observer que Dom Cappuyns employait le terme de citation au sens strict, ce qui est en effet indispensable dans ce genre de travail." (p. 144)

(...)

"La pratique des citations est générale chez les écrivains de l'époque. L'originalité de Jean Scot tient à son érudition ; et davantage à sa connaissance des Pères grecs, Denys, Grégoire, Maxime, qu'à sa culture classique, pour laquelle il faut compter avec l'intermédiaire des « maîtres-livres » de Martianus Capella, de Macrobie, de Calcidius et de Boèce (cf. É. Jeauneau, « L'héritage de la philosophie antique durant le haut Moyen Age » — *La cultura antica nell'Occidente Latino dal vii all'xi secolo*, Spoleto, 1975, p. 15-56), auxquels s'ajoute ici et là des renseignements pris dans la *Cité de Dieu* (pour Cicéron : *Expositiones in Ierarchiam caelestem* 15, 612; pour Varron : *Glosae Martiani* p. 147, 149 et 156)." "What this essay tries to offer you is not really an argument or thesis, but rather a map.(1) A somewhat primitive, medieval map to be sure, uncertain in scale and contour, and with large areas of "Here Be Dragons." But it seems worth trying, because Greek grammars and dictionaries are not easy to find one's way around; yet for any Westerner they were potentially the best means of getting, and using, a knowledge of Greek. Potentially, because much of course depends on what sort of grammar, what sort of dictionary." (p. 1)

(...)

"Macrobius wrote his work [*] for a Western audience; so it gives quite a full account of the morphology of the Greek verb, how to distinguish its conjugations, moods and tenses, based on native Greek analysis. Unfortunately it was not written as a didactic handbook, but rather as a learned comparative discussion, aimed at cultured aristocrats like the characters in his own Saturnalia. The Greek content is in fact pretty basic, a symptom of the times, but the manner is discursive; he gives no paradigms, and indeed wholly omits aspects which are not common to the two languages, like the dual and, more seriously, the aorist. Nonetheless it would be of great value to anyone prepared to work through it.

One such was a certain Johannes, surely John the Scot, to whom indeed we owe most of our knowledge of the work. A single manuscript (J) preserves his *defloratio* of the text - all the parts, he explains in a colophon, relevant to Greek. There is then a paradigm of ΠΟΙΨ, followed by a brief introduction, saying that, besides the *defloratio*, he thought it would be useful to make a summary of the work, organized by lutations rather than by moods and tenses as in Macrobius. This was a very intelligent idea. Unfortunately, the summary breaks off

near the beginning; either John left it unfinished or the scribe gave up." (pp. 20-21)

"Leiden B.P.L. 67 is a celebrated and much described codex containing three works of Priscian: the *Periegesis* (fols. 1-7), *Institutiones grammaticae* (9-207), and *De nominibus et pronomibus* (208-218). The last of these items was copied in the twelfth century, but the first two were written out by Irish scribes in the middle of the ninth century. One of these scribes was a certain Dubthach who claimed, in a clever inscription left at the end of the *Periegesis*, to have completed copying the

book on 11 April 838 at exactly 3 p.m. Despite the final flourish, Dubthach seems to have been but one of several scribes who produced the *Periegesis* and *Institutiones*. His name, however, is an especially significant one since Traube associated him with Sedulius Scottus' Irish circle, and the so-called Cryptogram of Dubthach in Bamberg reminds one of the playful inscription in Leiden. Dubthach and his fellow scribes seem to have copied out their collection of Prisciana on the continent, perhaps for the use of a colony of Irish scholars.

In piecing together the history of the Dubthach Codex (as I shall henceforth call fols. 1-207) an important element has been overlooked, for after its creation the codex seems to have passed into the possession of Eriugena and his school. The evidence for this is a series of fragments—a miscellany of notes, five poems, a list of Greek grammatical terms, an excerpt from the *Periphyseon*, a commentary on Priscian's "De uoce," and glosses by the Irish scribe known as *i*¹—that place the manuscript in the presence of the Irish philosopher and his circle between 853 and 866. A number of these fragments are edited here for the first time. These remnants of Eriugena and his school fall into three discrete parts of the Dubthach Codex and will be so presented and studied below." (pp. 15-16 notes omitted).

26. ———. 2007. "The Logic of Being: Eriugena's Dialectical Ontology." In *The Many Roots of Medieval Logic: The Aristotelian and the Non-Aristotelian Traditions*, edited by Marenbon, John, 203-218. Leiden: Brill.

Abstract: "In his major work, the *Periphyseon*, the ninth century Latin philosopher John Scottus Eriugena gives, with the help of what he calls "dialectic", a rational analysis of reality.

According to him, dialectic is a science which pertains both to language and reality.

Eriugena grounds this position in a realist ontological exegesis of the Aristotelian categories, which are conceived as categories of being. His interpretation tends to transform logical patterns, such as Porphyry's Tree or the doctrine of the categories, into a structure which is both ontological and logical, and to use them as tools for the analysis of the sensible world. The combination of dialectic interpreted as a science of being, capable of expressing truths about the sensible world as well as about discourse, with an ontological interpretation of logical concepts allows Eriugena to develop his metaphysical theory, a strong realism. Eriugena not only supports a theological realism (of divine ideas), but also, and principally, an ontological realism, the assertion of the immanent existence of forms. Eriugena claims that genera and species really subsist in the individuals: they are completely and simultaneously present in each of the entities which belong to them."

27. ———. 2011. *L'homme commun. La genèse du réalisme ontologique durant le haut Moyen âge*. Paris: Vrin.

"Le présent livre propose l'étude de la constitution, durant le haut Moyen Âge latin, d'une position philosophique: le réalisme de l'immanence à propos des universaux. Cette position est fondée sur la conviction qu'il existe, dans le monde qui nous entoure, certes des individus particuliers -- ce tilleul, cette tortue --, mais aussi des entités universelles. Ces entités n'existent pas séparées des individus, mais intégralement réalisées en eux, sans variation ni degré. Cet engagement philosophique résulte d'une exégèse des *Catégories* d'Aristote, réinterprétées selon des philosophèmes issus de la pensée de Porphyre. La généalogie de cette position est ici retracée en abordant successivement ses sources tant grecques que latines et ses ancêtres patristiques (avant tout Grégoire de Nysse), puis son élaboration conceptuelle durant les premiers siècles du Moyen Âge latin jusqu'à la critique qu'en donnera Pierre Abélard, et ce, par l'analyse de l'ontologie des quatre philosophes qui l'ont soutenue: Jean Scot Érigène, Anselme de Canterbury, Odon de Cambrai et Guillaume de Champeaux. Ce parcours permet de dessiner les contours d'un projet philosophique: comprendre, analyser et décrire le monde sensible au moyen des concepts issus de la logique aristotélicienne."

28. Eswein, Karl. 1930. "Die Wesenheit bei Johannes Scottus Eriugena. Begriff, Bedeutung und Charakter der "essentia" oder "ousía" bei demselben." *Philosophisches Jahrbuch* no. 43:189-206.

"This author's view is that even if it were to be conceded that Eriugena did not directly influence the solution to major universal questions posed by later philosophers, it must be conceded that he made an outstanding contribution to the development of later, and

particularly modern German, philosophy. Eriugena was not a precise writer: he employs dialectic adroitly to suit the point in hand, but his system must be studied in its totality. His christian platonism is fundamentally affected by Aristotelianism. His negative

theology is not pessimistic. Eriugena's particular interpretation of certain Aristotelian terms is discussed. In this discussion on *essentia* as treated by Eriugena, the author devotes 7 sections to the subject: 1 General; 2) Essence and Ideas or *causae primordiales*;

3) Essence and Being; 4) Essence and Substance; 5) Essence and Nature; 6) Essence and Body, Genus and Species; 7) Essence and Form, Matter." (Brennan, p. 170).

"This article deals with the tradition of the term *relatio*, successively depreciated from Aristotle onwards, which is, according to St. Thomas, the least of entities. The article sets out to show that in endeavouring to apply the Aristotelian categories to God, in his

day Eriugena harked back to late Platonism, seeking to revise the status of the relation category (otherwise *habitus/habitus* in his terminology), but his negative theology complicates the exposition of his doctrine. The emphasis Eriugena gives to certain correlative

categories, particularly those of Rest and Motion, is discussed. The author draws attention to the inexactness at times of Eriugena's terminology. A connection is made early in the article with Copernicus through Nicholas of Cusa. Finally connection is also made with Bonaventure, as well as with William of Ockham, Raymond Lull, Meister Eckhart and Pico della Mirandola." (Brennan, p. 289).

34. Frakes, Jerold C. 1988. "Remigius of Auxerre, Eriugena, and the Grec-Latin Circumstantiae-Formula of *Accessus ad Auctores*." In *The Sacred Nectar of the Greeks: The Study of Greek in the West in the Early Middle Ages*, edited by Herren, Michael W. and Brown, Ann Shirley, 257-276. London: King's College.

"Prefixed to seven of the commentaries attributed to Remigius of Auxerre are brief pedagogical prefaces, *accessus*, which introduce author and work, The various types of *accessus* found in the Remigian commentaries are distinguishable by the designated set of required topics of discussion. In the commentary on Priscian's *Institutio de nomine, pronomine, et verbo*, a four-fold formula of *accessus* is found (*persona, locus, tempus, causa scribendi*); in the commentaries on Donatus' *Ars prima* Bede's *De arte metrica* and Eutyches' *De verbo*, it is a three-fold formula (*persona, locus, tempus*); and in the commentaries on Sedulius' *Carmen Paschale* and Martianus Capella's *De Nuptiis Philologiae et Mercurii*, a seven-fold *circumstantiae/periochae* formula (*quis, Quid, cur, quomodo, quando, ubi, quibus facultatibus*); the commentary on the *Disticha Catonis* notes all three formulae." (p. 229 notes omitted)

(...)

"The pervasive influence on Remigius by his Irish forebears, especially Eriugena and Martin of Laon, is a scholarly commonplace, for which there are also abundant examples in regard to the present topic: Remigius, for instance, used the commentaries of both Eriugena and Martin/Pseudo-Dunchad on Martianus in his own commentary on the work. Further, in the Remigian commentary on Priscian, the four-fold *accessus*

formula appears immediately after a reference to Eriugena. Eriugena seems not just to be his major source in this regard, but more generally a primary model of scholarly method. It is this type of influence which is of essential significance here, for around the middle of the ninth century one notes a gradual shift in emphasis in Irish scholarship on the continent, especially in the work of Sedulius Scottus and Eriugena, away from grammatical studies towards commentary on what were to become "school authors." It was in this nascent period of the formulation of a school canon that the *accessus* began to develop." (p. 240)

(...)

"However, instead of taking Remigius' position in this generation of scholarly modification as *prima facie* evidence for his own invention or mediation of scholarly devices such as the *accessus*, and any and all occurrences thereof as evidence for Remigian authorship, it would perhaps be more to the point to consider another interpretive possibility, which in context seems more to the point than Lutz's [*] rather strained thesis: the Irish background of the *accessus*. One example thereof has already been mentioned: Sedulius on Donatus, *De octo partibus orationis* In his *Collectaneum in Apostolum*, the substantive and interrogative forms of the seven *circumstantiae* also appear as determinative categories in the formation of the preface." (p. 241 note omitted)

Résumé: "Dans *Periphyseon*, III, à propos de *Gen.*, I, 14, Jean Scot développe des explications sur les intervalles des corps célestes où l'on reconnaît des échos de deux oeuvres considérées comme ayant peu ou pas circulé au IXe siècle : Censorinus, *De die natali*, 1 3 ; le premier livre d'Aulu-Gelle, dont il n'existe pas de ms. avant le XIIe siècle. L'article examine

leur tradition (avec un excursus sur la *Compilation* de 809-810) et montre qu'ils furent connus dans des milieux proches de l'Érigène : les monastères de la région de la Loire (Loup et Heiric) ; Laon (les Scotti, et notamment Martin). Divers indices semblent en outre prouver que Jean Scot commenta le *De temporum ratione* de Bède."

Reprinted in: S. Gersh, *Reading Plato, Tracing Plato. From Ancient Commentary to Medieval Reception*, Aldershot: Ashgate, Essay XI.

"The 'return' has hitherto been among the less studied aspects of Eriugena's doctrine. This single word is the English translation of various Latin technical terms (primarily *reditus*, *redire* and *reversio*, *reverti*) for the motion of created things towards their creator(1). As the counterbalance to the originative motion of the creature called 'procession' (*processio*, *procedere*), it is conceived at the same time as a cancellation and a development of the latter(2). This ambivalence makes the return one of the most difficult aspects of *Periphyseon* to interpret.

Analysis of the structure of the return begins from the notion of God representing the end of the process. According to the fourfold interpretation of Nature which dominates the text, God is both source and goal of all creative activity: this duality arising not in his objective nature but in our subjective perceptions of it. So God is named as end to the extent that he possesses such a 'relation to created things' (*habitus ad ea quae condita sunt*)(3) or that we have this kind of 'concept' (*ratio*) of him(4). Here as elsewhere, the ideas of relativity and subjectivity are tightly interwoven in the texture of Eriugenian thought. According to the same fourfold schema, God is defined as that nature which neither creates nor is created. What this definition already implies is spelled out in various texts: after this world has reached its end in God, there will be no further productive act on the creator's part(5), no further procession into intelligible and sensible multiplicity(6). In other words, a

cyclic regeneration of the cosmos in the Origenistic manner is systematically excluded.

Such allusions to the notions of *reversio - reditus* are foundational in the sense that they raise the question of the transcendent ground of the process. However, the concept of return also implies the presence of an immanent divine principle not only in the culmination but also in the unfolding of the process. According to Eriugena, after the return of created things, God will be 'all in all' (*'omnia in omnibus'*) in a manner analogous to that of light's presence in air(7). But God is also 'all in all' at this moment, although the carnality of fallen man makes it difficult to conceive how this can be(8)."

(1) There seems to be no significant difference between the meanings of the pair *reditus-redire* and the pair *reversio-reverti*. Both sets of terms correspond roughly to the pair *epistrophe-epistrephein* in Pseudo-Dionysius - the basic source of Eriugena's Neoplatonism in its developed form.

(2) The doctrine of procession has been studied in S. Gersh: *From Iamblichus to Eriugena. An Investigation of the Prehistory and Evolution of the Pseudo-Dionysian Tradition*, Leiden 1978, passim.

41. ———. 1996. *Concord in Discourse: Harmonics and Semiotics in Late Classical and Early Medieval Platonism*. Berlin: Walter de Gruyter.

"The notion of "structure"(1) can be interpreted ontologically or semantically — that is, with the structured terms corresponding to existent things or to semantic properties(2) — and in modern times it is the second viewpoint which has predominated.(3)

Why? Undoubtedly because structure itself is seen to be significant and signification itself to be structured." (p. 4)

(...)

"As originally suggested, the notion of "structure" can be interpreted ontologically or semantically — where the structured terms correspond to existent things or to semantic properties.(72) Although in modern times it is the second approach which has been dominant, in the ancient and medieval worlds the two approaches were pursued concurrently with the second dependent on the first.(73) Our project is therefore to employ the modern semantic notion of structure to interpret both the ancient ontological and the ancient semantic notions of structure in an intertextual reading.(74) But since the corresponding term *structura* is unknown or rare in the relevant passages, we must begin the detailed analysis with its primary surrogate.(75)" (p. 9)

(2) The structured terms can also be treated as mental concepts. See pp. 7-8. In practice, this approach frequently turns into a variant of the ontological.

(3) See Eco 1968: 63, 361, 395; Greimas 1970: 39; Eco 1976: 83-84; Greimas — Courtés 1979:311-313.

(72) See p. 4.

(73) See n. 3.

(74) The modern semantic theory of structure will be applied to the ancient ontological theory of structure in chapters two and three; and to the ancient ontological and semantic theories of structure in chapter four.

(75) According to L & S [Liddell & Scott, *Greek-English Lexicon*], in the classical period *structura* only signified a physical building. When Cicero occasionally applied it to the arrangement of words, he noted that this was a strictly figurative usage (*quasi structura...*) Cf. Lausberg 1960, 2: 818.

With summarizing English version: *Eriugena, Al-Kindi, Nicholas of Cusa - Protagonists of Pro-scientific Cultural Change in Philosophical and Theological Thought*.

"Ancient Greek philosophers were the first to postulate the possibility of explaining nature in theoretical terms and to initiate attempts at this. With the rise of monotheistic religions of revelation claiming supremacy over human reason and envisaging a new world to come, studies of the natural order of the transient world were widely considered undesirable. Later, in the Middle Ages, the desire for human understanding of nature in terms of reason was revived. This article is concerned with the fundamental reversal of attitudes, from "undesirable" to "desirable", that eventually led into the foundations of modern science. One of the earliest, most ingenious and most interesting personalities involved was Eriugena, a theologian at the Court of Charles the Bald in the 9th century. Though understanding what we call nature is only one of the several aspects of his philosophical work, his line of thought implies a turn into a pro-scientific direction: the natural order is to be

understood in abstract terms of "primordial causes"; understanding nature is considered to be the will of God; man encompasses the whole of creation in a physical as well as a mental sense. Basically similar ideas on the reconciliation of scientific rationality and monotheistic religions of revelation were conceived, independently and nearly simultaneously, by the Arab philosopher al-Kindi in Bagdad. Eriugena was more outspoken in his claim that reason is superior to authority. This claim is implicit in the thought of Nicholas of Cusa with his emphasis on human mental creativity as the image of God's creativity; and it is the keynote of Galileo's "Letter to the Grand Duchess Christina" some 800 years later, the manifesto expressing basic attitudes of modern science."

51. Giltner, T. Alexander. 2016. "*Intimae Theologiae*. The Christocentric Cosmology of John Scottus Eriugena in the *Homilia super « In principio erat Verbum »*." *Archives d'histoire doctrinale et littéraire du Moyen Âge* no. 83:7-32.

Abstract: "The Christology of John Scottus Eriugena has often been criticized as underdeveloped or ignored. This is because Eriugena has primarily been studied by scholars of philosophy and not theology, who focus almost exclusively on the *Periphyseon*. This article contends that this mischaracterization occurs because scholars are not looking for it in the right place : the Homily. Here Eriugena most clearly elucidates the contours of his Christological thought, which is truly a Christocentric cosmology."

(...)

"Conclusion: At the outset, I proposed that examining the *Homilia* in some depth could fill a lacuna in Eriugena scholarship in two ways : 1) this would give attention to an important work in understanding the thought of Eriugena that has been as of yet understudied in Eriugena studies; and 2) it would elucidate the central importance of Christology in Eriugena's work. John Scottus Eriugena belongs, it seems, to that coterie of medieval thinkers such as Anselm of Canterbury and Thomas Aquinas who have long been celebrated by

philosophers, whereas the more theological trajectories have often been marginalized." (p. 31).

52. Gordon Moore, Kate. 1947. "Johannes Scotus Erigena on Imagination." *The Journal of Psychology* no. 23:169-178.

"It is in his philosophical and theological discussions that we must look for Erigena's views on psychological topics. In the quality of his prayer we see his interest in intellect, and where he discusses the relation of reason to authority he clearly places reason first. The authority of the church is to be accepted because it is in conformity with reason, rather than reason to be accepted because it conforms to the church. Rational truth is as the genus, with the truths of the church as species. He seems to subsume theology under philosophy.

The ideas which appear to have value for the student of the imaginative process are these: (a) The concept of creative goodness, which Erigena makes the center of his thought, (b) the relation between the thought and its object, (c) the idea of the union of minds, which he illustrates by esthetic experiences, and by social intellection. These will be the divisions of our discussion." (p. 171).

53. Gracia, Jorge J.E. 2007. "Ontological Characterization of the Relation between Man and Created Nature in Eriugena." *Journal of the History of Philosophy* no. 16:155-166.
54. Graff, Eric. 2002. "A primitive text of *Periphyseon V* rediscovered. The witness of Honorius Augustoduniensis in *Clavis physicae*." *Recherches de Théologie et Philosophie Médiévales* no. 69:271-295.

"Book V of Eriugena's *Periphyseon* presents new critical problems because of the lack of the Rheims manuscript, which contains the author's own revisions. The text which has been called *Versio Prima* in the first four books of Jauneau's new edition is lacking for the final volume. Working from a transcription of the second portion of the *Clavis Physicae*, the epitome of the *Periphyseon* by Honorius Augustodunensis, the author reports that the unpublished *Clavis II* contains a text of *Periphyseon V* that is analogous to *Versio Prima*. This article

first compares the transcription from *Clavis II* to Lucentini's notes on Honorius' work, then it analyses the difference between *Clavis II* and *Versio Secunda* in *Periphyseon* V. The relationship is found to be the same as that between the primitive text (*Versio Prima*) of *Periphyseon* in books I-IV and Eriugena's revised version (*Versio Secunda*). Consequently, *Clavis II* should be recognized as an essential witness to the early text of *Periphyseon* V."

55. Greetham, David C. 2005. "Édouard Jeauneau's Edition of the *Periphyseon* in Light of Contemporary Editorial Theory." *American Catholic Philosophical Quarterly* no. 79:527-548.

"Textual criticism and the scholarly editions it produces have all too often been regarded by academics as well as general readers as "objective" (or even "scientific") applications of a fixed set of procedures, designed to create a "definitive" text. But such editions are just as much a reflection of cultural and ideological expectations as are any other "critical" activities. Thus, the Jeauneau parallel-text edition of Eriugena's *Periphyseon*, with its presentation of "matière en fusion" and its embrace of a continually evolving work in "perpétuel devenir" is to be seen as an appropriate postmodernist celebration of the "supplément," the marginal, the incomplete, and the fragmented. In this promotion of the "scriptible" (or "open," "writerly") text over the "lisible" ("closed" or "readerly"), Jeauneau stands in contrast with the precedent edition of Eriugena by Sheldon-Williams, which is a modernist attempt to arrive at "satisfaction" and the positive." (p. 527).

Vol. 122: Papers presented at the eighteenth international conference on patristic studies held in Oxford 2019 / ed. by Markus Vinzent. 19, Eriugena's Christian neoplatonism and its sources in patristic and ancient philosophy*, edited by Ramelli, Ilaria L. E., 29-262. Leuven: Peeters.

Abstract: "In this essay I discuss the *Periphyseon* as a philosophical dialogue comparing it with two other philosophical dialogues that have preceded it: Augustine's *De ordine* and Boethius' *De consolazione philosophiae*; the goal is to discern some common elements and differences in order to shed light on less obvious aspects of the *Periphyseon*. Moreover, this essay is part of a larger project that tries to retrieve the philosophical dialogue tradition."

"Introduction: While the doctrine of apokatastasis, or universal return holds a central place in the thought of many Patristic writers, it has received relatively little scholarly attention. In what follows, I hope to redress this imbalance by analysing and comparing two of the greatest proponents of this doctrine: Origen (3rd cen.) and Eriugena (9th cen.). Although separated by obstacles of time, tradition, and language, the influence of the former upon the latter is well attested. Nowhere is this so evident as in Eriugena's discussion of the universal return of human nature in Book V of the *Periphyseon*. In the course of this exposition, I hope to demonstrate both the deep continuity that exists between Origen and Eriugena – the former the greatest ancient advocate of apokatastasis and the latter its greatest mediaeval proponent – as well some crucial ways in which they differ. While Eriugena's discussion of the return

shows him to be a true, latter day disciple of the “blessed Origen,” his Augustinian influences result in significant qualifications to the apokatastasis doctrine. As such, Eriugena’s treatment of the universal return offers a unique example of the creative encounter between the Eastern and Western theological traditions.” (p. 195).

Reprinted in M. Herren, *Latin Letters in Early Christian Ireland*, Aldershot: Ashgate, 1996, Essay IV.

"In the present paper I would like to try to shed some new light on the old problem of what John may have read in Ireland and what kinds of literary skills he may have acquired there, including such items as Greek grammar, Latin metrics, and Latin vocabulary. As it is generally believed that John came to the continent at some point in his adult life, it would seem likely that he did not acquire all the erudition that he displays from continental scholars (2). Of course, we have no way of proving what John did learn at home ; we are, however, in a reasonably good position to show what was available to the Irish - always bearing in mind that it is not easy to establish what aspects of Irish learning were available at home only, what in Irish centres on the continent only, and what in both places.

The so-called *Annotationes in Marcianum* obviously provide one of the best means of assessing John's reading and learning, since Martianus' encyclopedia embraces nearly all the areas of knowledge available to the ninth century. Moreover, the *Annotationes* frequently cite sources by name, and individual notes reveal a great deal about the technical learning of the author in such matters as astronomy, music, arithmetic, Greek grammar, and metrics. However, before we can undertake an assessment of John's learning in relation to this Irish

background, it will be necessary to address the problem of the authenticity of the *Annotationes* - a problem that has puzzled students of Eriugena since their discovery and has become more complex with the discovery of more Carolingian commentaries or sets of scholia to Martianus." (pp. 265-266)

History of Philosophy no. 19:385-393.

"This paper examines John Scottus Eriugena's account of material bodies. Some scholars have argued that Eriugena's account prefigures Berkeleyan idealism. The interpretation offered in the paper rejects the Berkeleyan interpretation on the grounds that Eriugena, unlike Berkeley, did not propose a thoroughly immaterialist view of reality."

70. Hochschild, Paige E. 2007. "Ousia in the *Categoriae decem* and the *Periphyseon* of John Scottus Eriugena." In *Divine Creation in Ancient, Medieval, and Early Modern Thought. Essays Presented to the Rev'd Dr Robert D. Crouse*, edited by Treschow, Michael, Otten, Willemien and Hannam, Walter, 213-222. Leiden: Brill.

"In this article I will show how Eriugena exploits the *Categoriae decem*, expanding the several notions of *ousia* contained therein and fitting them into a larger metaphysical framework. We shall see that Eriugena's understanding of *ousia* does not create confusion from what is obvious, as Marenbon suggests, but rather develops out of a legitimate reflection upon the philosophical content of the Latin paraphrase. While in no way diminishing the significance of more prominent influences on Eriugena's thought, the *Categoriae decem* may be the most important source for explaining Eriugena's notion of *ousia*, in its full, epistemological and potentially theological richness.(2) It is, however, a difficult and often merely suggestive source, as its varied and controversial history of interpretation indicates.

To this end, I will argue that what Eriugena finds in the *Categoriae decem* in the way of a doctrine of *ousia* is clearly that of Aristotle's *Categories* -- not I think, a radical claim. Moreover, Eriugena shows himself able to comprehend the limits of and distinctions between the several notions of *ousia* found in the *Categoriae decem*.(3) He is quite clear that the primary *ousia* of the *Categoriae decem* is not identical with the full philosophical content of *the ousia* of, for example, Augustine's *De Trinitate* or Gregory's *De hominis officio*. They are distinct but surely connected. Our task is to show how these

several notions of *ousia* are connected for Eriugena and by what specific paths he arrives at their connection." (pp. 213-214)

(2) *Anonymi Paraphasis Themistianae (Pseudo-Augustini Categoriae decem)*, in *Aristoteles Latinus 1.1-5, Categoriae vel Predicamenta*, ed. L Minio-Paluello (Bruges, 1961), pp. 133-175.

Citations will be from this edition and reference shall be made to paragraph, page, and line numbers respectively. Translations are my own. By an 'important' source we certainly do not mean an exhaustive one. By this means we simply limit the scope of our investigation.

(3) The assumption here is that the *Categoriae decem* is a faithful report of the content of Aristotle's *Categories*, though one which suggests directions of interpretation not explicit in Aristotle's text. Hence we occasionally use the term 'Aristotelian' loosely; as including a rich tradition of interpretation of which the *Categoriae decem* is a part.

72. Kabaj, Józef. 1977. "Homme et nature dans la cosmologie de Jean Scot Erigena." *Studia Mediewistyczne* no. 18:3-50.

"This article begins by tracing the history of the *term phusis/natura* from the earliest Greek philosophers onwards. The author finds the sources of Eriugena's four divisions in Augustine, Origen and Philo of Alexandria (p. 8) as also in Marius Victorinus. Another (tripartite) variation is to be found in Claudianus Mamertus or in Boethius. The author then analyses (pp. 12 ff.) Eriugena's synthesis of patristic and platonic views while finding Aristotelian elements within his exposition. At the outset this author has declared for a Marxist interpretation of Eriugena and much of section (3) Nature as seen by Eriugen is concerned with a review of mainly 20th century scholars' judgments of his work as either dualist i.e. orthodox in christian terms, or monist/pantheist i.e.

unorthodox, which would be this author's own view: thus the major themes of the *Periphyseon* are discussed, his dialectic leading, inevitably, to monism and pantheistic emanationism. Two sections (4 and 5) 'Human nature in Eriugena' and 'Man and his Existence' treat of man as microcosm, again going back to Heraclitus to trace the reception of this theory: according to Eriugena man participates in both the second and third divisions of nature. The supposed ontological dualism of Eriugena is in fact pancosmic spiritualist monism. In section (6) 'Man's cosmic consciousness' the factor of 'vital motion' is discussed. The author holds (p. 38) that Eriugena needed a fifth 'complementary' book for his *Periphyseon* because the first four did not suffice to resolve the theory of his four divisions. In a final section (7) entitled 'Dialectic of human knowledge' the problem of man's ignorance of *quid sit* and of the relation between gnoseology and ontology are discussed; self-knowledge (*quia sit*) is existence." (Brennan, pp. 232-233).

73. Katz, Sheri. 1990. "Two Views on John Scottus Eriugena's Use of Aristotelian Categories." *Medieval Perspectives* no. 4-5:97-110.

Abstract: "The article examines the two opposing views on John Scottus Eriugena's use of the Aristotelian categories in "Periphyseon." It agrees with Eriugena's belief that "natura" is the name for all things under the concept of "nature." It also discusses the different divisions of nature according to Eriugena which correspond to various dogmas such as "ea quae sunt et ea quae non sunt" and "rationes aeternae" of Augustine. It also explores the position of John Marenbon in his "From the Circle of Alcuin to the School of Auxerre."

74. Kavanagh, Catherine. 2002. "The Philosophical Importance of Grammar for Eriugena." In *History and Eschatology in John Scottus Eriugena and His Time*, edited by McEvoy, James and Dunne, Michael, 61-76. Leuven: Leuven University Press.

"For the ancients and medievals, the discipline of grammar ultimately consisted of two parts: linguistic analysis and literary criticism.¹ That linguistic speculation and textual exegesis were seen to be complementary aspects of a single *Ars* is due to the

particular hermeneutical conception of reality which emerged from the Christian and Platonic speculation of late antiquity and the early medieval period. Late antique — Stoic and Neoplatonic - belief in the patterning of the world according to the *Logos*, or Word of God, implied a rational world which could be understood. This belief was assimilated by Christians to the account of creation given in the Book of Genesis, which in turn was read in conjunction with the Prologue to the Gospel of St. John, a text which explicitly states that all things that were made were made through the Word of God, which is God. Of course, Scripture is also the Word of God, and the identification of the Word of Creation with the Word of Scripture helped to reinforce the sense that reality is rational in being textual. Seeing as both are a product of the same intelligence, a similar logic underpins both.

Thus from a Patristic and Carolingian perspective, the world really could be understood by means of a certain hermeneutic."

(...)

"Thus, the question of the relevance of medieval grammar to Eriugena's philosophical method is essentially a question of a certain kind of hermeneutic: either the obvious hermeneutic of textual study, or what one might call the metaphysical hermeneutic of linguistic structures. Certain significant features of his work are distinctively grammatical. First, there is the comparing and contrasting of several different texts from different authorities for the purposes of exegesis of a central text; second, the use of linguistic structures and grammatical figures as key devices, not only in the explication of difficult texts, but also in the establishment of important doctrines, and last, the close philological and philosophical work involved in the translations from Greek. At times Eriugena devises a new construction to serve the philological purpose of translation, which simultaneously introduces a new idea and sets up a new kind of metaphor, e.g. his use of *sub silentio*^{2 3} * and *praetexta*⁵, one apparently a hapax legomenon and the other a previously unknown metaphorical use of a standard word. This paper will concentrate on three important features of the grammatical

tradition, dealing first with borrowings from grammatical authors, then at more length with figures of grammar and finally with issues arising out of Eriugena's approach to translation before considering the problem as a whole, and concluding." (pp. 61-63)

76. ———. 2005. "The influence of Maximus the Confessor on Eriugena's treatment of Aristotle's *Categories*." *American Catholic Philosophical Quarterly* no. 79:567-596.

"The Aristotelian categories are a fundamental element in Eriugena's philosophical system on account of his realist view of dialectic. He received his texts concerning the categories from Boethius and the *De decem categoriis*, but key ideas in his treatment of them -- namely, the metaphysical importance of dialectic, the unknowability of essence, and the origin of being in place and time, ideas fundamentally rooted in Byzantine developments of the Christology of Chalcedon -- are taken from Maximus the Confessor. Eriugena's work on the categories represents an attempt, much misunderstood, to assimilate the richness of the Eastern tradition to Western philosophical and theological method. This paper examines the synthesis of

- Maximus's ideas with Ciceronian and Boethian elements in Eriugena's striking treatment of the Aristotelian *Categories*."

82. King-Farlow, John. 1992. "From Dionysius to Eriugena. A Bridge for Voluntarism of "Divine Freedom" ?" *Laval théologique et philosophique* no. 48:367-378.

Summary: "The moving style and apparent echoes of truly Christian Platonism left the works of Dionysius the Pseudo-Areopagite long tempting to identify with nearly authoritative writings by a friend of Saint Paul. The latter would have really lived centuries before. Centuries later the genius of John Scotus Eriugena drew copiously on the Pseudo-Areopagite, Plato, the Scriptures, etc., to provide a dazzling system of philosophy and theology. While these systems are now recovering modern interest, their ontologically Monist character and their confused attempts to uphold God's omnipotence and other perfections by absorbing creatures, merit analytical reproof. Free Will and ontological Pluralism belong with the metaphysics of the Bible. It is hoped to re-introduce the visions of two often neglected heretics."

83. Kristeller, Paul Oskar. 1976. "The Historical Position of Johannes Scottus Eriugena." In *Latin Script and Letters A.D. 400-900. Festschrift presented to Ludwig Bieler on the Occasion of his 70th Birthday*, edited by O'Meara, John Joseph and Naumann, Bernd, 156-164. Leiden: Brill.

"Eriugena's example seems to show that an individual scholar and thinker may surpass the intellectual limits of his century, but that he will not perpetuate his best achievements unless they are transmitted through his pupils and embodied in the curriculum of a school that constitutes a kind of institutional tradition. It is the lack of such a school tradition before and after him, that makes of Eriugena a great but isolated figure. It took several more centuries before the acquaintance with Greek sources, this time especially with Aristotle, and the continued struggle with philosophical problems became a wide concern in the Western world. The narrow limits of the seven liberal arts were finally overcome. New institutions, the cathedral schools and universities, attracted a large number of teachers and students and thus assured a continuity and expansion of learning in a variety of subjects. Medicine and jurisprudence, philosophy and the sciences as well as dogmatic theology were constantly and widely taught, discussed and written about, and in the course of the discussions, the problems and the terminology became more and more refined. This tradition, nourished in many ways by Arabic and Latin as well as by Greek sources, has continued through many changes and transformations up to the present day. It is the everlasting glory of Eriugena that through him, and through him alone, the period from 500 to 900, interesting for a variety of political, artistic and scholarly contributions, also deserves a prominent mention in the history of philosophy." (p. 163).

89. ———. 1986. "Martianus Capella et Jean Scot : nouvelle présentation d'un vieux problème." In *Jean Scot écrivain*, edited by Allard, Guy-H., 187-207. Paris: Vrin.

"Mais je ne veux pas maintenant faire la somme de toutes ces questions érudites, petites ou grandes, mais plutôt me reposer le problème du rapport entre Martianus et l'Érigène, en partant d'une autre base, c'est-à-dire de la signification du *De nuptiis* dans les premiers siècles du Moyen Age(4): considérer l'épisode de Jean Scot comme un épisode à l'intérieur d'une histoire, et en comprendre le sens seulement ainsi.

Il est vrai que, durant les trente dernières années, le *De Nuptiis Philologiae et Mercurii* de Martianus a suscité l'intérêt des chercheurs, mais on ne peut pas dire que, confrontés à cette œuvre difficile, ils aient trouvé une clef d'interprétation sûre et unanime ; et l'on ne peut pas dire non plus que les étapes de son extraordinaire succès, tout au long du Moyen Age et jusqu'à la Renaissance, aient été dégagées et analysées." (pp. 187-188)

(...)

"L'Érigène est bien conscient du fait que le monde de Martianus est éloigné et différent du sien, et il lui est facile de noter que toute la mythologie du *De nuptiis*, toute l'*Einkleidung* de l'œuvre, n'est autre que *poeticum*

deliramentum(65). Mais il n'y a pas seulement cet aspect dans son commentaire: « Martianus quippe Platonicus »(66) est aussi l'auteur antique qui transmet l'idée de l'*anima mundi*, « ex qua spéciales animae... in singulas mundani corporis partes... procedunt(67) » (« de laquelle dérivent les âmes particulières dans les diverses parties du corps humain »).

Les gloses sur Martianus de l'Érigène sont donc le témoignage de sa confrontation avec le passé : il repousse le passé et en même temps il en assume le problème, il l'érige en preuve de sa propre autoconscience intellectuelle, à l'école et dans la vie(68). (pp. 202-203)

91. ———. 1973. "The Place of Martianus *Glossae* in the Development of Eriugena's Thought." In *The Mind of Eriugena*, edited by O'Meara, John Joseph and Bieler, Ludwig, 49-58. Dublin: Irish University Press.

"This paper deals with work Eriugena did as a grammarian. It is considered here as a preparatory stage in the growth of the theory by which he tried to understand man and world in a systematic way. In doing so, we shall try to argue that even in this beginning some flexibility of thought and expression and even some development can be traced. These questions must be

seen against the problem which the historical phenomenon 'Eriugena' presents to us. There is a considerable anachronistic element in his appearance: he became the first philosopher of the medieval world in a cultural environment which did not seem to favour the rise of systematic thought. 'The owl of Minerva only starts its flight at dusk.' [**]

Moreover we know since Jacquin's paper of 1907 [*] on *De praedestinatione* that Eriugena's thought went through several phases. The topic of the Martianus glossae underlines the fact that Eriugena started as a grammarian at the court of Charles the Bald and forces us to face his link with Carolingian civilization. It is obvious that the great importance of royal patronage, which lasted throughout his career and has in this form not many parallels in the history of the following centuries of the Middle Ages, was a factor in shaping his mental attitude. Moreover I shall try to show that his original task as grammaticus had also some influence on his later work." (p. 49)

"A new grammatical work, a sophisticated Priscian commentary from the ninth century, has recently been discovered. It is the only full Priscianus maior commentary from the Carolingian period, during which Priscian's massive *Institutiones grammaticae* was studied mainly through glossing and excerpting. This commentary has been tentatively attributed to Eriugena(1). In this paper I will discuss the way in

which this text was used by Eriugena's contemporaries and by the immediately following generations of grammarians. It seems as if this sophisticated commentary as a whole has been practically unknown in the ninth and tenth centuries. The viewpoint that this commentary was not used by the Carolingians also finds support in the fact that it has survived only in one eleventh-century copy, Barcelona, Archivo de la corona de Aragon, MS Ripoil 59. However, certain parts of it became standard teaching material in Carolingian schools, as is attested by anonymous glosses to Priscian's *Institutiones grammaticae*. These glosses deal with the nature and status of grammar as a liberal art." (p. 279)

(...)

"The *Septem periochae* formula, etymologies concerning Priscian's name as well as various introductory material—that is what the sophisticated *In Priscianum* commentary seems to have contributed to Carolingian teaching. The influence is on a practical and elementary level. Only one Carolingian teacher seems to have used the text because of its grammatical content. Paradoxically, the exhortation to employ the dialectician's method to grammatical study was copied from one codex to another but the text itself, a prime example of the application of such a method, was not studied by the Carolingians. But one should not underestimate the importance of the teaching material that we have been examining. It deals with the highly topical issue of the nature and status of grammar in the scheme of the seven liberal arts and the disciplinary boundaries between the arts of the *trivium*. Such elementary teaching material served to integrate into Carolingian teaching the novel idea of the assimilation of the study of the arts of the *trivium*. It bears repeating just how radical a change was being introduced into the educational system, which had previously leaned on the differentiation of the various arts of discourse. But the task that Alcuin was proposing—to compare and synthesize the various aspects of language study—was by no means an easy one. He did not seem to know himself how to go about synthesizing the various methods.

The author of the new Priscian commentary knew better. He tackled Priscian's doctrine in a scholarly fashion scrutinizing its philosophical foundation with a keen eye on its inconsistencies and parallelisms with Peripatetic dialectic. It is a prime example of the new philosophical orientation that the study of grammar took in the ninth century. Though there was not likely to be a large audience for this highly theoretical treatise, this method did bear some fruit in the Carolingian period and came to flourish a couple of centuries later. The Carolingian period is one in which diverse experimentation was being conducted but no one continuous accumulating tradition of philosophical grammar established itself. By the end of the eleventh century we have signs of a more solid tradition in the so called Glosule commentaries. Then there was no longer need to assert that the grammarian should discuss the uox in his grammar. But it was soon time to rethink the disciplinary boundaries for grammar and dialectic —a topical issue at the time of William of Conches and Petrus Helias." (pp. 295-296)

(1) For the attribution of this Priscian commentary to Eriugena, see P.E. Dutton - A. Luhtala, *Eriugena in Priscianum*, in *Mediaeval Studies*, 56 (1994), 151-161 and P.E. Dutton, *Evidence that Dubthach 's Priscian Codex Once Belonged to Eriugena*, in H.J. Westra (ed.), *From Athens to Chartres. Neoplatonism and Medieval Thought. Studies in Honour of Édouard Jeauneau*, Leiden (E.J. Brill), 1992, 15-45. This commentary has survived in one eleventh-century manuscript of Catalan provenance, Barcelona, Archivo de la Corona de Aragon, Ripoll 59, fols. 257v-288v. For this manuscript, see M. Passalacqua, *I Codici di Prisciano* (Sussidi eruditi, 19), Roma (Edizioni di storia e letteratura), 1978, 10-11.

101. ———. 2002. "Time and the Substantival Verb in Eriugena." In *History and Eschatology in John Scottus Eriugena and His Time*, edited by McEvoy, James and Dunne, Michael, 77-87. Leuven: Leuven University Press.

"In the Early Middle Ages efforts were made to create a thoroughly Christian art of grammar. The most famous representative of Christian grammar is Smaragdus (ca 805), who introduced approximately 750 biblical examples into his grammar. He also approached the grammatical text as if it were divinely inspired: it had a deeper meaning, comparable to the figurative sense of the sacred text."

(...)

"Another major influence on medieval grammar came from dialectic which began to penetrate the grammatical method in the Carolingian Renaissance. The interaction between grammar and dialectic goes back to the initiative of Alcuin who encouraged the use of the dialectical method even in doctrinal issues. Dialectic was applied to doctrinal issues most notably by Eriugena in the first Book of the *Periphyseon* which is devoted to a discussion of the applicability of the Aristotelian categories to divine issues. Eriugena is probably also the author of a newly discovered grammatical commentary which makes heavy use of the dialectical method. It is the first systematic Priscian commentary preserved from the Middle Ages, and simultaneously the most remarkable achievement Ages(1). Religious issues do not generally figure in this text at all; thus, the main linguistic theme of the *Periphyseon*, the inapplicability of the categories to God, is absent from it. However, there is one context which invites comparison with Eriugena's main linguistic theme, namely the discussion of the substantival verb, which is the topic of this article. The substantival verb is compared with the Divine Nature, which — although permanent and timeless — is nevertheless said somehow to move in a similar way to our temporality. In the same way, the substantival verb signifies permanence, and yet expresses temporality by analogy with other verbs."

(...)

"The term substantival verb, *verbum substantivum*, occurs among the ancient authors only in Priscian's *Institutiones grammaticae*. Priscian also mentions its Greek equivalent, ῥήμα ὑπαρχτικόν(3), which he has probably adopted from his

principal Greek source, Apollonius Dyscolus (2nd century A.D.), as he did his doctrine concerning the substantival verb in general." (pp. 77-78)

(...)

"Conclusion

Throughout his works, Eriugena was concerned with finding parallels between linguistic phenomena and the Divine Nature. Priscian offers a highly stimulating analysis of the twofold nature of the substantival verb, which was elaborated in Eriugena's commentary on Priscian. It was moreover exploited in Eriugena's two late works. Although similar themes occupy him even at the time of *De divina praedestinatione* and the *Periphyseon*, he never refers to Priscian's view of the atemporal meaning of the verb *esse* in these works. This suggests to me that he might not have known Priscian's analysis of the substantival verb at this time. The *Periphyseon* shows some knowledge of the *Institutiones grammaticae*, but it is worth asking whether Eriugena did the majority of work on his Priscian commentary only late in his career." "The fact that Alcuin's revival of scholarship also involved the use of logic in the study of grammar has received attention from scholars only recently (Vineis 1988; Law 1992; Luhtala 1993). This method, which came to be applied primarily to Priscian's massive *Institutiones grammaticae* (launched into circulation probably by Alcuin himself), was applied highly competently by Eriugena in a text which has only recently been

attributed to him (Dutton-Luhtala 1994). This text, which survives in a single eleventh century

manuscript of Catalan provenance (Barcelona, Archivo de la Corona d'Aragón, Ripoll 59, fols. 257v-288v), is the first systematic Priscian commentary preserved to us from the Middle Ages (see Luhtala 2000a, 2000b). It covers the first sixteen books of Priscian's work, on the eight parts of speech, but its author also shows a knowledge of Priscian's syntactic doctrine, which is contained in the last two books, seventeen and eighteen." (p. 20)

(...)

"I have thus given a brief overview of the philosophical interests of the Priscian commentary attributed to Eriugena. Although it is premature to try to assess Eriugena's philosophy in this text as a whole, we are permitted to draw a couple of conclusions. Firstly, Eriugena has interpreted every occurrence of the term *accidit* as a philosophical term. It means that the categories are now applied even to the discussion on sound and letter because they have accidents; Priscian uses this vocabulary only as pertaining to the description of the noun and the pronoun. It also suggests that Eriugena regarded Priscian's work as a source for philosophy, in which every philosophical term was taken seriously. Philosophical ends occasionally even outweigh the grammatical ones. This is the case when Eriugena chooses to support a somewhat unusual view such that the pronoun can be substituted for the *nomina generalia*. This point seems to have little relevance for grammar. It rather seems to be the case that the author uses the grammatical text as a

point of departure to argue a philosophical (or ultimately theological) case that is important to him, by equating the individuals with the species. Here and elsewhere, this text exhibits philosophical tendencies comparable to those in the *Periphyseon*." (p. 28)

126. McEvoy, James. 1990. "Metaphors of Light and Metaphysics of Light in Eriugena." In *Begriff und Metapher. Sprachform des Denkens bei Eriugena*, edited by Beierwaltes, Werner, 149-167. Heidelberg: Carl Winter.

"The theme of light in the writings of Eriugena is a vast one, representing as it does a vitally important strand of his dialectic. To think it away, if the effort could be made, would be to destroy not a part only, but in a way the whole of his thought; very much would have to be re-cast, re-thought or left unspoken, if the concepts clustering around light and developed in the context of light were to be omitted, or the symbol of light suppressed."

(...)

"An entire study could be devoted to each one of the strands that together make up the light-thematic of Eriugena. One could study the phenomena of sight, for instance the concept of the visual ray and the long history of its transmission, taking in at the same time colour and form, reconstructing the sources which were at the disposal of Eriugena and assessing the use which he made of them. Fire has proved to be a rich and rewarding area of investigation in Eriugena, as Edouard Jeauneau has ably demonstrated in his study of what he rightly calls 'la métaphysique du feu'(2). The sun, taken together with (or even without) the other planets, in its relationship to its origin (fire) and its products (light and heat), is of particular interest to Eriugena (as it had been to Plato, Philo, Plotinus, Basil, Ambrose and Augustine before him), and has an almost transcendent importance in Eriugena's reflections on the physical universe, of which the sun is the 'central' body. The close connection between light and life, and the complementary symbolism of sight and object of sight, on the one hand, and hearing and the word, on the other (developed, for example, in the Homily') is also of great interest, as is the invocation of the authority of Scripture, so regularly made with regard to light and related subjects in *Periphyseon* and *Expositiones*: no

systematic study has as yet been made of the employment of the dozen or so main scriptural texts which Eriugena expounds in connection with light and the symbolism of light and sight(3).

Since it would be unsatisfactory, and indeed next to impossible to give a digest of all these themes, I have adopted the following strategy, for simplicity as much as for hermeneutical purposes. I choose two broad themes within the dialectic of Eriugena, viz the sun as the chief source of light in the universe, and sight or vision. In a first approach, each of these is discussed 'physically' (or physiologically), in order to lay bare the basic concepts and their sources. A second approach addresses itself to the metaphors raised by Eriugena on the base of the concepts as outlined, once again with an eye being kept to his sources. A third demarche attempts to study conjointly the role of the concepts and metaphors within the dialectic, in order to show the specific contribution of both to the dialectical discourse so thoroughly characteristic of Eriugena's personal thought." (pp. 149-150)

(2) Jauneau, Ed., 'Jean Scot et la métaphysique du feu', in the same writer's volume of collected studies, *Etudes erigéniennes*, Paris 1987, pp. 299-319.

(3) Among the favourite scriptural references to light of Eriugena are the following: *Gen* 1.3: Dixitque Deus: Fiat lux. Et facta est lux. *Gen* 1.4: vidit Deus lucem quod esset bona et divisit lucem a tenebris. *Jn* 1.5: Deus lux est, tenebrae in eo non sunt ullae. *I Tim* 6.16: qui solus habet immortalitatem, et lucem inhabitat inaccessibilem: quern nullus homo videt, sed nec videre potest. *Ps* 109.3: Ex utero ante luciferum genui te. To these may be added the Transfiguration narrative in the Synoptic Gospels: *Matt* 17.1-8; *Mk* 9.1-9; *Lk* 9.28-36.

"Foundations of Erlugenian Mysticism

The mystical theory of John Scottus Eriugena is inseparable from the whole philosophical-theological system presented in Periphyseon and underlying his commentaries on John's Gospel and Dionysius's *Celestial Hierarchy*. Hence it will be necessary to give a brief presentation of the foundational themes of his thought concerning *processio*, the self-manifestation of God, before turning to the more directly mystical themes mostly (but not solely) found in his treatment of *reditus*. I shall do so under three headings taken from his own words, the first two dealing primarily with *processio*, the third with *reditus*: (1) *Deus est superessentialis* (P 1 [460C]) the dialectical view of God; (2) *Omnia lumina sunt* (EI 1.1 [3.76-77] creation as the illuminating divine self-manifestation; (3) *Donec veniamus in unum* (EI 8.2 [133.550-1]) union with God through deifying contemplation." (pp. 97-98)

(...)

"What, then, does the Eriugenian *reditus* mean? What will change? What will the future state be like? John the Scot was always realistic enough to know what could be said and what could not be said about this final *adunatio*. The ultimate differentiating union will be a change in the awareness of all humanity. First, humanity will be absorbed back into the elements in death; then, in the general resurrection humankind will be brought to a state in which there will be no more divisions, with sexual differentiation being the first to go. Finally, after it has progressed through all the stages of sublimating unification, humanity will reach the final differentiation in unity of the cosmic Christ. The Word stands at the beginning and end. But the end is different from the beginning, and it is perhaps in this aspect of his thought that John Scottus Eriugena proves himself not just a clever synthesizer of East and West, but one of the creative minds of the Christian tradition." (p. 117).

1. McKitterick, Rosamond. 1992. "Knowledge of Plato's '*Timaeus*' in the Ninth Century. The Implications of Valenciennes, Bibliothèque municipale MS 293." In *From Athens to Chartres. Neoplatonism and Medieval Thought. Studies in Honour of Edouard Jeauneau*, edited by Westra, Haijo Jan, 85-95. Leiden: Brill.

"There is no doubt that Plato's *Timaeus* in Latin translation was known, at least to scholars, in the ninth century. John Scotus Eriugena and members of his circle, such as Remigius of Auxerre, reveal a familiarity with the content of this treatise, Calcidius' translation is listed in the Reichenau catalogue of the second half of the ninth century, and it is Hucbald of St. Amand's own copy of Calcidius' translation of, and commentary on, the *Timaeus* which survives in Valenciennes, Bibliothèque Municipale, MS 293. Nor is there any uncertainty as to the appeal such a text could have had in the Carolingian world. Its essentially philosophical and theological discussion of the divine creation of the world and natural phenomena, of

elements of astronomy, the structure of matter and of human psychology and physiology, incorporates nevertheless a great deal of Greek scientific theory about the physical world. In a Christian context, there were obvious comparisons to be drawn with the creation story in *Genesis*, but its essentially scientific content was also in keeping with the other scientific and especially astronomical interests of Carolingian scholars." "In this book I seek not only to expound Eriugena's philosophy in its historical and cultural context in ninth-century France

but also to evaluate the enduring significance of his philosophical system as a whole. This will, I believe, show Eriugena at his most original and most brilliant.

The Western philosophical tradition has been characterised, in a somewhat misleading and overgeneralised manner, as centring on the concept of being from the time of the earliest Greek thinkers. Eriugena, inspired by Dionysius, departs from this tradition and regards non-being as equally as important as being in the study of the nature of reality as a whole. For Eriugena ontology is not the most fundamental or universal discipline; in fact, he develops a negative dialectic which counterbalances ontological affirmations and constructions with a radical meontology, giving the most detailed analysis of non-being since Plato's *Sophist* and *Parmenides*.

But Eriugena goes farther and anticipates many of the features of the modernist turn in philosophy begun by Descartes (1596-1650). Eriugena begins with a typical Carolingian psychology but is stimulated by Saint Augustine to develop an understanding of the cogito and a deep appreciation of inwardness, which was enriched by his encounter with the anthropology of the Greeks, especially Gregory of Nyssa. He does not stop there, however, but goes on to articulate, in his own terms, what might be called a philosophy of subjectivity. Eriugena sees the human subject as essentially mind. Everything is a product of mind - material reality, spatiotemporal existence, the body itself. In this sense, Eriugena is a thoroughgoing idealist. Matter is a commingling of incorporeal qualities which the mind mistakenly takes to be corporeal; spatiotemporal reality is a consequence of the seduction of the mind by the senses, which is the true Fall of Adam; the body itself is an externalisation of the secret desires of the mind. But more than that, the true being of all things is their being in the mind. Eriugena takes this to be a consequence of the scriptural revelation that the human mind is an image of the divine mind, and that the divine mind contains in itself the ideal exemplars of all things.

(...)

In this book, therefore, I shall discuss Eriugena's philosophy both in terms of its mediaeval origins and in terms of the manner in which it appears to anticipate the turn towards the subject and towards idealism which is found in the modern philosophies of Descartes and Hegel.

In interpreting Eriugena's philosophy, I have concentrated almost exclusively on the *Periphyseon*, with the result that Eriugena's later theological works, including his homily and his commentary on Dionysius, receive scant mention. I hope this book will contribute to the revival of interest in Eriugena which has taken place in this century, by offering a philosophical interpretation of his most important dialogue, the *Periphyseon*."

Philosophical Essays in Honour of the Most Reverend Desmond Connell, Archbishop of Dublin*, edited by O'Rourke, Fran, 67-96. Dublin: Irish Academic Press.

"Eriugena has unusual theories of space, time and matter, theories which have led him to be called an immaterialist in the manner of Berkeley, or a critical idealist in the manner of Kant. (1) He may properly be termed an immaterialist with regard to his theory that sensible corporeal bodies are only apparently corporeal—for him physical bodies are a collection or assembly of incorporeal, insensible properties. He is labelled an idealist for his theory of place and time as categories in the mind, prior to all objects, and within which all empirical objects are contained. On this basis, the claim has been made that Eriugena is an original thinker and that his views should be accorded a respectful place in the history of philosophy. This article will examine Eriugena's originality with regard to his theory of the nature of the material world.² It will emerge that Eriugena indeed holds an immaterialist account of matter and

of physical things, but that there are nuances in his theory which need to be addressed." (p. 67)

(...)

"Conclusion. To conclude, the motif of beauty in Augustine's writings has allowed us to see that the basis of friendship is situated firmly in the context of the desire for, or delight in, the love of God. The desire for unity, truth, order, peace, virtue and benevolent love all find their focus in the desire for beauty, and Augustine always recognized that God alone is truly beautiful. In addition, while agreeing with the classical tradition that the experience of likeness provided the only acceptable basis for the attraction of, or delight in friendship, he nevertheless insisted that this likeness always referred primarily to one's likeness to God. For him, it was inconceivable that one could attain a likeness either to oneself or to another without first becoming like God, because ultimately the very existence of being is itself dependent upon, or is an expression of, this likeness to God. In this fashion, Augustine's insistence on situating friendship in the context of the love of spiritual beauty points inescapably to a metaphysical and religious foundation for friendship, namely our ontological dependence on God." (p. 96)

15. ———. 1999. "Idealism in Medieval Philosophy: The Case of Johannes Scottus Eriugena." *Medieval Philosophy and Theology* no. 8:53-82.

"In this article I wish to re-examine the vexed issue of the possibility of idealism in ancient and medieval philosophy with particular reference to the case of Johannes Scottus Eriugena (c. 800-c. 877), the Irish Neoplatonic Christian philosopher. Both Bernard Williams and Myles Burnyeat have argued that idealism never emerged (and for Burnyeat, could not have emerged) as a genuine philosophical position in antiquity, a claim that has had wide currency in recent years, and now constitutes something of an orthodoxy. (1) Richard Sorabji (instancing Gregory of Nyssa) and Werner Beierwaltes (citing Proclus and Eriugena), and Eyjólfur Kjalar Emilsson (discussing Plotinus), on the other hand, have all argued that idealism is to be found in the Neoplatonic tradition, a tradition neglected by Burnyeat. (2) Similarly, in a 1989 study, I argued not only that idealism was a genuine possibility in late classical and in medieval philosophy, but that that the ninth-century Carolingian philosopher Johannes Eriugena presents a striking example of an extremely radical, almost fantastical, idealism. (3) Of course, the whole discussion depends entirely on what is meant by 'idealism'. Burnyeat uses Berkeley's immaterialism as his standard for idealism, and it is this decision, coupled with his failure to acknowledge the legacy of German idealism, which prevents him from seeing the classical and medieval roots of idealism more broadly understood." (pp. 53-54)

16. ———. 2002. "Time and Eternity in the *Periphyseon*." In *History and Eschatology in John Scottus Eriugena and His Time*, edited by McEvoy, James and Dunne, Michael, 487-508. Leuven: Leuven University Press.

"In this paper I want to explore Johannes Eriugena's characteristically rich and original treatment of one of the most central themes in the Platonic and Christian traditions, namely, the theme of time and eternity (or timelessness), in his massive cosmological dialogue, *Periphyseon*. Given the elaborate richness of his vision, in evaluating Eriugena's commitment to Christian Platonism, we cannot then simply assume that he is repeating the accounts of time and eternity found, for example, in Plato's *Timaeus* or in Augustine's *Confessiones*. Eriugena is both a Platonist and a Christian, but he holds to both these doctrines in his own inimitable fashion, as a ninth-century author, heir to already ancient traditions." (p. 487)

(...)

"Conclusion

I have tried to sketch here the complex manner in which Eriugena combines his philosophical understanding (drawn from Platonic and Aristotelian sources) of the space and time as part of the procession and exitus of the divine nature, as the absolute marks of creation, as the boundaries of the physical world imposed by the fallen human understanding, with the message of Scripture concerning the passing away of all places and times in contrast to the abiding nature of eternal truth. What is significant is how far Eriugena will go to marry his grammatical interpretation of temporal verbs referring to historical events or stages in Scripture with his philosophical critique of temporal predicates in God, to more or less elide entirely the temporal and historical understanding, and to promote the true theoria which leads to theosis and to timelessness. There remains, however, an unresolved tension between time as part of the divine process and time as a consequence of the Fall. Eriugena himself, of course, feels that these accounts do not contradict but can be accommodated within duplex theoria. Finally, his discussion of time and space as frameworks of the mind, which are absent from the true nous, both of human nature and of God, again confirms his idealism." (p. 507).

Actes du IIe Congrès européen d'études médiévales*, edited by Hamesse, Jacqueline, 467-487. Turnhout: Brepols.

"In keeping with the theme of this FIDEM conference, « Medieval Studies Today and Tomorrow », in this contribution I want to report on the tremendous blossoming of studies in the philosophy of Johannes Scottus Eriugena, witnessed by the growth in critical editions, translations and critical discussions, over not just the past 10 years, but the past 30 years'. The man known to his contemporaries as Johannes Scottus (c.800 - c.877), and who signed himself 'Eriugena' (on the manuscript of his translation of Dionysius), is without doubt the most genuinely sophisticated philosopher of the Carolingian era, certainly to be ranked above such Carolingians as Alcuin¹ 2,

and indeed, stands as the most important philosopher writing in Latin between Boethius and Anselm. He is also, though this parallel remains to be explored, more or less a contemporary of the Arab Neoplatonist Al-Kindi. Eriugena can also be seen as the most significant intellectual figure to emerge from monastic Ireland, the so-called Island of Saints and Scholars, between the sixth to the ninth century (in comparison with Sedulius Scottus or Columban), although his debt to early Irish culture remains much disputed, even allowing for the fact that he worked, at least in part, with Irish-speaking scholars." Abstract: "In this article I examine the 'five modes' (*quinque modi*) of being and non-being of the ninth-century Irish Carolingian philosopher, Johannes Eriugena, as outlined in his dialogue, *Periphyseon*, especially in Books One and Three. Eriugena's immediate Latin sources have been suggested as Augustine, Marius Victorinus, and Fredigedus, but he was also deeply influenced by passages in the Greek Christian Fathers, especially Gregory of Nyssa, Dionysius, and Maximus, particularly on God as 'beyond being', or as 'non-being', or 'nothingness' (*nihilum*). In this essay, I will review Eriugena's bold and paradoxical claims about the non-being of the divine being and I shall evaluate the current research concerning its sources and its originality, and make the claim that the divine nothingness is Eriugena's original contribution in the *Periphyseon*."

"In this article I shall attempt (I) to isolate as far as possible what Eriugena means by his concept of *natura*, by reviewing both the sources he was inspired by and his use of these sources in the elaboration of this concept. I shall then seek (II) to determine the bearing of this concept on the general inquiry conducted in the *De divisione naturae* by examining its relationship to conceptions presented immediately after it, i.e. the well-known fourfold division of nature and the fivefold classification of modes of being and non-being. Finally (III), the philosophical implications of Eriugena's conception of a study of *natura* (*physiologia*) will be discussed briefly insofar as this study is suggestive of an unusual metaphysical project."

"The importance of arithmology as a feature not only of Eriugena's work but also of other medieval systems has been rightly stressed by Edouard Jeauneau(1). Medieval thinkers followed in this respect the practice of their ancient sources; arithmology had already played an important part, not only in late antique literature, but also in hellenistic thought, and is already attested in Aristotle's reports on pre-Platonic Pythagoreanism(2).

"Arithmology", as the term is used in modern scholarship, was made current especially, I believe, by Armand Delatte in the work he published toward the beginning of this century concerning ancient Pythagoreanism(3). He used the term in order to designate the associations made in ancient Pythagoreanism between numbers and various aspects of the world, of the gods and of human existence. Delatte regarded

such associations as being a mixture of healthy scientific research and the (by implication unhealthy) phantasies of religion and philosophy. His judgement is clearly based on modern philosophical assumptions. It leaves open the question of how ancient thinkers (and their medieval successors) understood the sense of the associations they made between numbers and other things. It seems that here a wide spectrum of possibilities opens up, going from fairly arbitrary pairings of numbers with various phenomena to a developed philosophy of mathematics and its hermeneutic value for other sciences. Much depends on the background, if any, against which arithmology occurs in an ancient or medieval text."

(...)

"The questions which I propose to discuss briefly here concern Eriugena's practice. How does he understand the arithmological associations he uses, as well as such associations as involve other mathematical objects like geometrical figures? Does his use have a philosophical background which explains and justifies it? What is the ultimate importance for him of such mathematical associations? Eriugena had access to some extent to the ideas on this subject of Proclus and of other ancient Neoplatonists through the works of Augustine and Boethius, Pseudo-Dionysius and Maximus, among others(5). If the idiosyncrasies of the tradition of texts imposed certain limits on Eriugena's access to late antique Neoplatonism, yet his philosophical capacity was such as to make him capable of recovering some of its profoundest ideas." 31. ———. 1986. "Translating Eriugena." In *Jean Scot écrivain*, edited by Allard, Guy-H., 115-128. Paris: Vrin.

"The use of Uhlfelder's serviceable, but incomplete translation of Eriugena's *Periphyseon* in the foregoing analysis was intended merely to help in measuring the value of Sheldon-Williams' rendering. Sheldon-Williams reminds one of Stephen MacKenna, who, although he had, unlike Sheldon-Williams, no professional qualification in Greek or Latin, having discovered Plotinus devoted himself to his translation as a fidus Achates for evermore. Sheldon-Williams had a real passion for the kind of ideas found in Eriugena and in Greek theology. Joined to this he had a strong sense of rhetoric and of an ample balanced style. He rather liked ideas that were complex and, it seemed at times, because they were complex. Altogether, work on the text and translation of the *Periphyseon* was congenial to him and on it he spent a good deal of his life. He reminds one not only of Stephen MacKenna but also of another famous translator, Scott-Moncrieff, of another famous author, Proust. Scott-Moncrieff, as you will know, was engaged in translating *A la recherche du temps perdu* while Proust was still finishing it. His translation began to be so well known and admired that Proust became jealous of him. I do not wish to suggest that Sheldon-Williams' translation of the *Periphyseon* is of the same class as MacKenna's of Plotinus or Scott-Moncrieff's of Proust; but he has a similar affinity with his author and his *opus magnum*. This gives his translation a feeling which is hard to describe but is for all that perceptible. In the *Foreword* and *Acknowledgements* to the first volume of his edition of the *Periphyseon* Sheldon-Williams, despite my requesting him not to do so, thanks me for, among other things, "important criticisms which have improved the translation." I could still find much to criticize in his translation — what translation is perfect? —, but my judgment for what it is worth is that we now have in Sheldon-Williams' rendering not only a workable English translation of the *Periphyseon*, but one of welcome affinity with the original." (p. 128).

35. ———. 1992. "Contrasting Approaches to Neoplatonic Immaterialism: Augustine and Eriugena." In *From Athens to Chartres. Neoplatonism and Medieval Thought. Studies in Honour of Edouard Jeuneau*, edited by Westra, Haijo Jan, 175-180. Leiden: Brill.

"In an earlier paper,⁽¹⁾ I drew a contrast between Augustine and Eriugena in their fundamentally different approaches to the interpretation of an important text from Genesis: *et diuisit Deus lucem a tenebris* (1.4): "For Augustine this signifies, Eriugena says, either the difference between the perfection of form on the one hand and the confusion of 'infirmity' on the other; or the separation of the faithful from the fallen angels. Eriugena here interprets Augustine as understanding that the 'reasons' or causes of things are eternal in God and in being created, from being light, become darkness. Eriugena for himself, however, takes so to speak, a diametrically opposite view of the matter. For him following, he says, Dionysius, darkness signifies the incomprehensibility of the eternal reasons in God as well as God himself; and light signifies the declaratio, manifestation or 'theophany' of these reasons in the effects that we see. This difference between Eriugena and Augustine, signalled by Eriugena himself, is, as I have said, fundamental . . ." There is a profound and perhaps revealing difference between looking at darkness as a symbol of

something transcendently superior to light (Eriugena's approach) and on the other hand greatly inferior to it (Augustine's).

This kind of fundamental difference of approach is, I venture to suggest, also to be discerned in Eriugena's handling of the question of predestination. His overriding view of the problem is, again, God-orientated—there can be no predestination: God's simplicity precludes it. But he does address himself to Augustine's opinions, and strains argument to discover a few texts in which Augustine appears to teach that there is only one predestination, to salvation, and to interpret the de facto overwhelming number of Augustine's declarations on the subject (to the effect that there was predestination to salvation and damnation) through the employment of the figure of speech known as antiphrasis or e contrario: Augustine, he suggests rather desperately, actually means the opposite of what he says.

Repeatedly Eriugena gives this kind of unsatisfying explanation for texts of Augustine that he considers unworthy of his "Father". A singular and important instance of this Eriugenian difficulty arises, as we shall see presently, with the question of Augustine's teaching on the resurrection of bodies. This is a test-case of the real allegiance of each of them to purer Neoplatonic doctrine, and one possible reason for the actual general rejection of Eriugena in the West, where Augustine's view has prevailed." (p. 169)

39. ———. 1990. "The Universe of Nature and the Universe of Man: Difference and Identity." In *Begriff und Metapher. Sprachform des Denkens bei Eriugena*, edited by Beierwaltes, Werner, 202-212. Heidelberg: Carl Winter.

"In view of this volume's theme, i.e. metaphor and philosophy in Eriugena, I would like to concentrate on the connection of these notions with each other. Through an analysis of the figure of man, whose significant role in the *Periphyseon* seems open to several interpretations, I want to show in this paper that in Eriugena metaphorical imagery and philosophical arguments are in fact closely interrelated. Thus, by focusing on one single figure in the context of one specific work, we can perhaps get a better impression of what may be considered the general atmosphere of Eriugena's thinking: subtlety of reasoning corresponding with an unusual flexibility of language.

In the *Periphyseon* the role of man is important, but unfortunately it is not very well-defined. There is only one of the work's five books which gives an explicit treatment of man, viz. Book IV(1).

(...)

1 will therefore try to evoke a portrait of Eriugenian man in which this dual aspect will be given sufficient attention without, however, leading to a fragmented picture. It is my view that even the most scattered elements of Eriugena's speculations

about man still leave openings towards a more integral approach of the matter. The unique philosophical set-up of the work is ultimately responsible for this." (pp. 202-203)

(...)

"What then does this study of Eriugena's allegorical exegesis, notably Eriugena's rational interpretation of it, imply for the interpretation of Eriugenian man? I think that once we have abandoned the static subject-object structure as a suitable model for analyzing Eriugena's figure of man, it may help us see how much room Eriugena actually leaves for man to play his own role within the vast universe of which he continues to form an integrated part. The observation of Eriugena's handling of allegorical exegesis can help us qualify this role as a creative rational one. Though dependent of nature -man reflects nature's development of processio and reditus - man appears also to be responsible for its execution. The dominance of the theme of the return of all things to God, which permeates the entire description of the Periphyseon's natura, as the collectio is implied in the divisio, is equally present in man as in the whole of nature. However, there is one difference, which gives man a slight lead over any other being in the Periphyseon. Whereas the universe of man longs for the realization of the return in the same manner as the whole of the universe, including God, it is still man whose rational nature must guarantee its success. Eriugena's allegorization of paradise with its gradual but definite elimination of the damaging effects of sin can show us how far Eriugena is actually prepared to go to reach his goal." (P. 212)

41. ———. 1991. *The Anthropology of Johannes Scottus Eriugena*. Leiden: Brill.

Contents: Preface VII; Introduction 1; 1. Division, definition and return. An inquiry into the Prologue of the *Periphyseon* 7;

2. Creation and God. An explanation of major themes in Eriugena's thinking 40; 3. From physiology to anthropology 82; 4. The universe of man. Its procession and return 118; 5. Back to God. The final *reditus* of man and nature 190; Latin Appendix 221; References 233; Index 239-242.

"... I have taken my starting-point in the *Periphyseon's* unbroken literary structure, thereby trying to give an analysis of the author's overall ideas. In doing so, I have been led to choose one central theme, namely the study of Eriugena's anthropology, (3) the scope of which I will I here try briefly to define.

The analysis of Eriugena's *Periphyseon* is by nature a historical enterprise. As such it has resulted first of all in an assessment of the early-medieval Christian context of Eriugena's views. Man in this early-medieval world was seen primarily as possessing a created, sinful state, and it is from this viewpoint that I have analyzed Eriugena's ideas. However, defining my purpose simply as the study of Eriugena's anthropology might suggest the analysis of man only in so far as he emerges as the clear object of the *Periphyseon's* text. However important man as a direct topic of discussion may be, it is not this aspect that has warranted my attention for so long. Rather, during the course of this study I have developed the view that in the *Periphyseon* there is a more veiled presence of man, influencing the whole text. I have tried to trace the origins of this view of man. Without assuming any judgement on the part of my readers, I want to make it clear that, for me, the position of man as the leading character in the vast universe Eriugena evokes was only gradually revealed. It resulted in a complete change in my initial perspective of the *Periphyseon* as a treatise of primarily metaphysical importance. For it put a definite stop to any distinction between man as the object and man as the subject of Eriugena's thought, making him instead the overall centre of the *Periphyseon's* universe. With this unifying view of man as the central character in the *Periphyseon's* literary structure, I think we can legitimately regard the work as a coherent exposition of ideas.

Though one should always be careful about the impact of one's descriptions, I think regarding the *Periphyseon* from an anthropological viewpoint may have some effect in counterbalancing attempts which have explained the *Periphyseon* too readily either as a modern, idealistic system comparable to a Heideggerian model for example,(4) or as a statically layered, Neoplatonic universe of Proclean design.(5) One should read and interpret my comparison between Eriugena's confidence in man as he is positioned in an outstretched universe of divine origin, and the far more modern notion of Descartes' self-awareness of the thinking subject along these same lines." (pp. 1-2)

(3) I have used the term 'anthropology' generally to indicate Eriugena's view of man within the context of his written works. Although throughout this study it will gradually be made manifest what I mean by this term, I want to make it clear from the very beginning that, unlike in earlier literature, I do not want to interpret 'anthropology' as psychology, as appears to be the case in Karpp 1950 [Heinrich Karpp, *Probleme altchristlicher Anthropologie. Biblische und philosophische Psychologie bei den Kirchenvätern des dritten Jahrhunderts*, Gütersloh]; Mathon 1964 [Gérard Mathon, *L'Anthropologie chrétienne en Occident de Saint Augustin à Joan Scot Erigène : recherches sur le sort des thèses de l'anthropologie augustinienne durant le Haut Moyen Age*, Lille]

(4) In his outlook on Eriugena's philosophy, Moran seems to be particularly interested in the relevance of his thought for modern, idealist philosophy, see Moran 1989: xii-xiv, 102, 184-185, 283-284.

(5) Cappuyns quotes Hauréau's statement about Eriugena as "un autre Proclus a peine chrétien", see Cappuyns 1933: 264. Hauréau's judgement can be seen as representative for much of the nineteenth and early twentieth century scholarship on Eriugena.

43. ———. 1992. "Between Damnation and Restoration. The Dynamics of Human Nature in Eriugens's *Periphyseon* and Alan of Lille's *Anticlaudianus*." In *From Athens to Chartres. Neoplatonism and Medieval Thought. Studies in Honour of Edouard Jeauneau*, edited by Westra, Haijo Jan, 329-350. Leiden: Brill.

"Introduction: Anthropology From a Theological Perspective

Approaching the learned literature of the pre-scholastic Middle Ages from a twentieth century viewpoint, one can make remarkable discoveries if willing to cross familiar boundaries. In this article I want to stress the continuity of the early-medieval intellectual tradition, that is to say until the twelfth century, by examining two important works. They were written by John Scottus Eriugena and Alan of Lille in the ninth and twelfth centuries respectively. While the historical connection between Eriugena and Alan may be a matter of scholarly debate, the general affinity between their ideas makes it definitely worthwhile to undertake a comparison. The Platonic orientation of both authors accounts for some striking parallels, and offers us a penetrating insight into a strong intellectual undercurrent of the prescholastic Middle Ages." (P. 329)

(1) For a discussion of Eriugenian influence in the twelfth century, see P. Lucentini, *Platonismo medievale. Contributi per la storia dell' eriukenismo* (Florence, 1980). For Alan's possible knowledge of Eriugenian metaphysics, one should think of Bernard Silvestris' *Cosmographia* as an indirect link of transmission. On Bernard and Eriugena, see P. Lucentini, *op. cit.*, 53, n. 150. P. Dronke has traced Eriugenian influence in Alan on the point of reason versus authority, see P. Dronke (ed.), *A History of Twelfth-Century Western Philosophy* (Cambridge, 1988) Introduction, 8, n. 13.

(2) For a general overview of the Platonisms of the twelfth century, and the role of Eriugena in them, see M.D. Chenu, *Nature, Man and Society in the Twelfth Century. Essays on New Theological Perspectives in the Latin West*, transl. and ed. by J. Taylor and L.K. Little (Chicago, 1968/repr. 1983) 49-98. See also W. Wetherbee, "Philosophy, Cosmology and the

Renaissance”, in P. Dronke (ed.), *A History of Twelfth-Century Western Philosophy*, 21-53. In accordance with Chenu’s views, Wetherbee mentions Eriugena’s translations of Pseudo-Dionysius and his *Periphyseon* as the two main sources of the mystical, hierarchical Platonism, which coexisted with the ‘scientific’ Platonism of the early twelfth century (29). He also points out that Platonist cosmological thought increasingly influenced the production of imaginative literature. Alan and Bernard Silvestris occupy an important position in this movement of creative, allegorical poetry (43-53). See also n. 44 below.

(44) For the importance of *integumentum* in the rise of imaginative literature in the twelfth century, see W. Wetherbee, “Philosophy, Cosmology and the Renaissance”, in P. Dronke, *A History of Twelfth-Century Western Philosophy*, 43-53. In his article Wetherbee points to three examples of this imaginative literature, namely Bernard Silvestris, John of Salisbury and Alan of Lille.

46. ———. 1999. "In the Shadow of the Divine: Negative Theology and Negative Anthropology in Augustine, Pseudo-Dionysius and Eriugena." *Heythrop Journal* no. 40.

"To analyze the tradition of negative theology, the article goes back to its prime architect, Pseudo-Dionysius. By comparing him to an author who preceded him, viz. Augustine, and one who followed him, viz. Eriugena, the article aims at giving a 'thicker' description of his position by framing it historically. In doing so it draws two conclusions. It first shows that the connection between negative theology and negative anthropology is indeed Dionysian; as such it is rightfully

- pointed to in postmodern thought. In contradistinction to postmodern applications, however, Dionysius' interest in negativity is shown to reflect before all a desire to wrestle with the overpowering presence of the divine instead of concluding to its absence."

55. Piemonte, Gustavo. 1968. "Notas sobre la creatio de nihilo en Juan Escoto Eriúgena." *Sapientia* no. 23:37-58.

"In this preliminary study the author, after briefly surveying the contradictory conclusions of scholars on the paradoxes inherent in Eriugena's writings, proceeds in two sections to address the problem of creation *de nihilo* as it occurs in Eriugena and in some other writers.

I. A large section of *De divisione naturae* III, chapters 5-23 is the subject of analysis. The problem is *nihil* by privation or alternatively by superexcellence. The Bible and the Fathers offer a solution through faith; reason offers an alternative. As the argument unfolds the author points out the sources of the responses of both master and pupil. The dialogue form admits of a discussion of controversial views, Eriugena expressing doubt through the words of the discipulus, a device which may have been responsible over the centuries for the imputation to him of various heresies. The antithesis of *aeterna/facta* is an overriding problem. In that context the author surveys the stages and extension of creation *de nihilo*. " (Brennan, pp. 211-212)

"II. This section is entitled 'John the Scot and the gnostic tradition in Judaism'. Common sources can be discerned in the work of Eriugena and that of Hebrew mystics of the later

middle ages (cf. Scholem, 481 below) e.g. in Provence and in Spain (as can neoplatonist influence in Shiite Islam of that period). This point is sustained by specific quotations and specific parallels from cabbalistic writers, who may indeed even have read Eriugena's text. It has to be remembered also that early christian writing owed much to earlier Jewish writing." (Brennan, pp. 211-212).

57. ———. 1986. "L'expression "*quae sunt et quae non sunt*": Jean Scot et Marius Victorinus." In *Jean Scot écrivain*, edited by Allard, Guy-H., 81-113. Paris: Vrin.

"L'expression double «*quae sunt et quae non sunt*», dont les membres antithétiques veulent embrasser la totalité du réel, revient souvent, comme on sait, dans les écrits de Jean Scot. Elle est présente, tout d'abord, dans le *Periphyseon*, et dès ses premières pages, consacrées à l'explication bien connue des manières d'entendre la distinction entre les «choses qui sont» et les «choses qui ne sont pas». Mais elle paraît aussi dans les autres ouvrages érigéniens ; on la trouve déjà — avec une signification qui ne coïncide qu'en partie avec celle que lui donneront les textes postérieurs — dans le *De divina praedestinatione*; on la rencontre également dans les *Expositiones in ierarchiam coelestem* et dans le *Commentaire sur l'évangile de Jean*, et même dans des pièces d'un genre littéraire très différent, moins techniques et destinées à un public plus large, comme l'*Homélie* sur le prologue de ce même évangile, ou les poèmes. C'est justement la première occurrence de cette expression dans la *Vox spiritualis*, au chapitre I, lignes 6 et 8-12, avec les problèmes textuels qu'elle a soulevés, qui m'a amené à l'étudier dans l'ensemble de l'oeuvre de Jean Scot, et à me poser la question des origines possibles d'une locution si typiquement érigénienne. Elle n'était probablement pas courante au temps de notre auteur, puisqu'il se donne plusieurs fois la peine de l'expliquer à ses lecteurs. Où Jean Scot avait-il trouvé l'inspiration pour cette formule d'apparence paradoxale, qui occupait souvent ses méditations et sur laquelle il exerçait toutes les forces de son intelligence («*saepe mihi cogitanti diligentiusque quantum uires suppetunt inquiringenti...* ») ? Chez Denys et Maxime le Confesseur, oui, sans doute; l'Érigène le dit

lui-même (4), et d'ailleurs il n'est pas difficile de retrouver, derrière les mots latins, les vocables grecs respectifs (*tà ônta, tà me ônta*) ; il s'agit bien d'un cas de traduction, et cela n'a rien d'extraordinaire. Mais on peut toujours se demander si notre auteur n'aurait pas suivi consciemment l'exemple de quelque prédécesseur dans son adaptation au latin de ces éléments de la terminologie philosophique grecque. Après avoir fait quelques recherches personnelles, je crois que l'opinion qu'expriment à cet égard, un peu en passant, certains historiens est juste, et que la réponse à la question posée doit être affirmative. Il me semble par ailleurs que l'influence du prédécesseur en question — je parle de Marius Victorinus — n'est pas limitée à ce seul point : elle s'étend aussi à d'autres thèmes, et la façon dont l'Érigène l'a assimilée pourrait nous dire quelque chose sur ses procédés de composition littéraire et en même temps éclaircir certains aspects de sa pensée." (pp. 81-83)

"Au terme de notre comparaison entre différents passages de Jean Scot et de Marius Victorinus, nous sommes donc en mesure d'affirmer que l'auteur irlandais a très probablement emprunté à ce difficile penseur chrétien du IV^e siècle non seulement certaines idées qu'il a intégrées dans sa synthèse personnelle, mais encore des formules, des phrases où ces idées sont exprimées, c'est-à-dire des matériaux littéraires. C'était justement ce que Victorinus lui-même avait fait à l'égard de Porphyre et d'autres philosophes grecs, d'après P. Hadot, qui note que ce mode de composition est d'ailleurs commun à tous les écrivains latins de l'Antiquité finissante: «Tous utilisent pour ainsi dire des éléments préfabriqués.(93) (94) »" (p. 108)

Abstract: "I would like to discuss in this article some issues concerning Scotus Eriugena's ontology. I will focus on the *De Divisione naturae* and, in particular, on the concepts of 'nature', 'essence/substance', 'matter', 'form', 'species' and 'genus'. I will also pay attention to the way in which Scotus deals with some traditional logic themes, like that of individuation and universals. The underlying assumption is that (realist) philosophers of the 'twelfth Century renaissance' take into some consideration elements of Scotus' ontology when discussing the problem of universals.

I tried to read Scotus language in a 'neutral' way, by translating it literally, disregarding historical metaphysical interpretations (which are considered anyway in the footnotes), and by rendering metaphors and literary texts in a comprehensible way, as far as possible."

"The first two parts of this study examine the formulations of Plotinus and Porphyry (Part 1) and of Iamblichus and Proclus (Part 2) with respect to the median and mediating nature of the human self in terms of its capacity for *anagogé* and *énoxis*. Part 3 examines the early reception and transformation of the Iamblichus-Proclus formulation. In Part 4 we see that in the «*Periphyseon*» of Eriugena an early and profound synthesis is to be found, with the result that in Eriugena the human soul or self is the agent of creation and thus central to the «*exitus*» and «*reditus*» of the cosmos."

67. Ramelli, Ilaria. 2012. "Eriugena's Commentary on Martianus in the Framework of his Thought and the Philosophical Debate of his Time." In *Carolingian Scholarship and Martianus Capella. Ninth-century Commentary Traditions on 'De nuptiis' in Context*, edited by O'Sullivan, Sinead and Teeuwen, Mariken, 245-272. Turnhout: Brepols.

Abstract: "It is well known that the Carolingian royal family inspired and promoted a cultural revival of great consequence. The courts of Charlemagne and his successors welcomed lively gatherings of scholars who avidly pursued knowledge and learning, while education became a booming business in the great monastic centres, which were under the protection of the royal family. Scholarly emphasis was placed upon Latin language, religion, and liturgy, but the works of classical and late antique authors were collected, studied, and commented upon with similar zeal. A text that was read by ninth-century scholars with an almost unrivalled enthusiasm is Martianus Capella's *De nuptiis Philologiae et Mercurii*, a late antique encyclopedia of the seven liberal arts embedded within a mythological framework of the marriage between Philology (learning) and Mercury (eloquence). Several ninth-century commentary traditions testify to the work's popularity in the ninth century. Martianus's text treats a wide range of secular subjects, including mythology, the movement of the heavens, numerical speculation, and the ancient tradition on each of the seven liberal arts. *De nuptiis* and its exceptionally rich commentary traditions provide the focus of this volume, which addresses both the textual material found in the margins of *De nuptiis* manuscripts, and the broader intellectual context of commentary traditions on ancient secular texts in the early medieval world."

"This essay sketches how Eriugena and Hugh of St. Victor interpreted the Areopagite, emphasizing key passages for each. Eriugena's translation of the *Corpus Dyonisianum* and his *Expositiones on The Celestial Hierarchy* exerted a tremendous influence on subsequent Latin readers, including Hugh, and even survived the condemnation of his masterwork, the *Periphyseon*. The Victorine, whose own Augustinian inclinations were largely untouched by his encounter with the Areopagite, nevertheless exerted a distinctive influence by (falsely) attributing to Dionysius the view that in our pursuit of God, "love surpasses knowledge." Together, despite their stark

differences, they bequeathed a lively Dionysian tradition to the high medieval authors, scholastics and mystics alike."

"Chapter IV, "Eriugena -- Causality as Concealing Revelation" follows the great Irish philosopher in his reflections upon causality as a manifestation of the cause in and through its effect, a manifestation, however, which by its very nature cannot but conceal the cause at the same time as it discloses it. For the Christian thinker that is Eriugena, the Trinity constitutes the paradigm of this "concealing revelation". God, who is beyond being and, therefore, strictly speaking "nothing", enters the domain of being -- "creates himself", as Eriugena puts it in daring terms -- in and through the Trinity, and then, derivatively, through the natural world. We can know God -- and, indeed, God can only come to "know" himself -- only through his effects; yet as in these effects God "alienates" himself from his "true" nature, which is "nothing", creation is as much an obstacle as an aid in our quest for God. Moreover, this ambiguity is not only a theoretical one, having as it does repercussions upon the moral quality of creation, which, as "revelation", serves as a signpost on the road to God, while as "concealment" it presents dangerous temptations, and the occasion of sin." (p. 27).

80. Russell, Robert. 1973. "Some Augustinian Influences in Eriugena's *De diuisione naturae*." In *The Mind of Eriugena*, edited by O'Meara, John Joseph and Bieler, Ludwig, 31-40. Dublin: Irish University Press.

"In assessing the Latin sources in Eriugena, it goes without saying that St Augustine holds the first place.

In the first of his more original works, the *De praedestinatione*, composed in 851, and before his contact with the *Corpus Dionysianum*, the Bishop of Hippo is quoted no fewer than sixty times. Just how Eriugena made use of Augustine's works on free will, grace, and predestination in that work has been shown by Professor Gérard Mathon in a Communication delivered during the Semaine Augustinienne in Paris in 1954, entitled 'Utilisation des textes de saint Augustin par Jean Scot Érigène dans son *De praedestinatione*'.(2)

It must be acknowledged, however, that, despite its obvious importance, no definitive work has yet appeared on the overall influence exerted by the writings of the African bishop.

(...)

The present paper is offered as a modest attempt to supply in part for this notable lacuna in Eriugenian scholarship. I have chosen to restrict this inquiry to an examination of the *De diuisione naturae* for several reasons. First, because of a limitation of time imposed by our programme; secondly, because the work itself is not only the most original of Eriugena's writings but also the one which reflects the full maturity of its author. (...)

Thirdly, since it was composed after the author's contact with the *Corpus Dionysianum*, it is possible to compare and evaluate Augustine's role in the formation of Eriugena's definitive teaching with this and other Greek sources. If one restricts this role to scriptural exegesis, the author of the *De diuisione naturae* expressly states his preference for Gregory of Nyssa and Augustine as preeminent after Apostolic times: '... post sanctos Apostolos nullum apud Graecos fuisse in expositionibus divinae Scripturae maioris auctoritatis Gregorio

theologo, nullum apud Romanos Aurelio Augustino'.(6) Again, in the field of theology, Augustine is 'sanctissimus divinusque theologus'.(7) Of learning in general, he is 'magnus divinarum humana-rumque rerum et solertissimus inquisitor et copiosissimus expositor'.(8) Finally, Augustine is quoted over forty times in this same work." (pp. 31-32)

(...)

"A fuller treatment of Augustinian influences on Eriugena's *De divisione naturae* would have had to include, in addition to those already indicated, certain aspects of the doctrine of creation, such as *materia informis* and the *rationes seminales*; also, the problem of evil, and perhaps, where Augustine's influence is strongest of all, Eriugena's presentation of Trinitarian theology.

In conclusion, it need hardly be noted that Eriugena's great respect for Augustine did not prevent him from departing consciously from his authority, a position fully justified by Eriugena's conviction of the natural superiority of reason over all human authority. Gilson describes his attitude this way: 'When a man speaks, even if his authority is universally recognized by other men, what he says is true only if reason approves of it.'(54) In a number of instances Eriugena rejects Augustine in favour of Greek authorities on such basic issues as authentic human nature, the constitution of corporeal reality, the status of original paradise, sexual differentiation, the nature of the glorified body, and many aspects of eschatology. In the final analysis, Eriugena's importance and greatness do not lie in the fact that he compiled a *Liber Sententiarum*, but rather that he achieved a new and powerful philosophic-theological synthesis in an age which made such a feat all the more remarkable. The present Colloquium then is not only a fitting tribute to the memory of Eriugena but, hopefully, the beginning of a new era which will witness a richly productive renaissance of Eriugenian studies." 83. ———. 1977. "Wertung und Rezeption antiker Logik im Karolingerreich." In *Logik, Ethik, Theorie der Geisteswissenschaften. XI. Deutscher Kongress für Philosophie, Göttingen, 5 - 9 Oktober 1975*, edited by Patzig, Günther, Scheibe, Erhard and Wieland, Wolfgang, 451-456. Hamburg: Meiner.

"In the years preceding the mid-9th-century Predestination controversy, the doctrine of the Church was defended, and taught, by means of the *catena*, that is by a survey of the teaching of the Fathers of the Church. In the middle of the 9th century a new method was resorted to by Eriugena, viz. the use of Logic. The author seeks to identify JSE's probable sources in ancient and late antique literature: these he lists, together with the provenance of the manuscripts to which JSE could have had access. He discerns three crucial stages in the dissemination of the relevant literature, viz. Charlemagne's circle and in particular Alcuin, the monastery of Fulda under Rhabanus Maurus, and the cathedral school at Laon in the period of Martinus Scottus and JSE - about 840-860. At the first stage Logic remained a theoretical school subject: at Fulda syllogistic argument began to be appreciated; in Eriugena's writings it became part of the very fabric, reflecting the inherent negative and positive aspects that he sought to express. This brief article is enriched by two valuable pages of footnotes." (Brennan, pp. 45-46).

"Johannes Scottus Eriugena stellt im dritten Buch seines Hauptwerks eine Verbindung zwischen den Begriffen Leben, Seele und Körper her, die ihm zu behaupten gestattet, nach dem Untergang der wahrnehmbaren Welt lebe jeder Mensch mit einem *corpus spirituale* weiter. Daß er mit diesem Gedanken die christliche Lehre von der Auferstehung des Fleisches als eine Behauptung nachweisen will, die widerspruchsfrei gedacht werden kann und daher eine reale Möglichkeit festhält, zeigt sich im fünften Buch. Um prüfen zu können, ob ihm dieser Nachweis gelungen ist, ist zunächst der systematische Ort zu bestimmen, den er dem der Begriff der Seele in *Periphyseon* zuweist; denn um seinetwillen wird der Gedanke entwickelt, der die drei genannten Begriffe miteinander verbindet. Sodann ist der Gedanke selbst darzulegen und ist zu klären, als was darin "Leben", "Seele", und vor allem *corpus spirituale* verstanden werden. Erst im Wissen darum kann untersucht werden, wie haltbar der entwickelte Gedanke ist." (s. 195).

"In the first part of this paper I should like to deal, briefly and on the whole dismissively, with the pagan sources, and in the second with the Christian sources, with an attempt to show how Eriugena first co-ordinated them into a single body of doctrine and then adapted that doctrine to purposes of his own." (p. 1)

(...)

"Plato, then, is known to Eriugena, as to others of his time, not as a writer with whose works he is immediately familiar, but as a kind of eponymous hero of Platonism revealed through the natural philosophers who were his successors: *Plato philosophantium de mundo maximus*.(20) Aristotle occupies a similar position in the field of dialectic: *acutissimus apud Graecos naturalium rerum discretionis repertor*.(21) He knew Boethius's commentary on the *De interpretatione*, and therefore its Greek name, which Boethius gives,(22) but what he says of the work itself is as vague and inaccurate as his knowledge of the *Timaeus*. In the *Annotationes* he simply says that it is a work that treats of the noun, the verb, the connection between them, affirmation, negation and species.(23) In the *Periphyseon*, written when memory of his early reading has grown fainter, he is even less precise and recalls it as a treatise

dealing wholly or for the most part with the possible and the impossible.(24) He also knows of the ten Categories, and devotes a long excursus to them in the first book of the *Periphyseon*, but his knowledge comes from the fourth-century Latin paraphrase of the *De categoriis* that was widely read in his time and commonly attributed to St Augustine. There is nothing, he says, that cannot be found in this paraphrase except that he knows from Martianus Capella of a divergent tradition which, in enumerating the Categories, places quality before quantity,(26) an order which he himself adopted in the first draft of the *Periphyseon*." (p. 2)

(...)

"At the beginning of the *De praedestinatione*, his earliest work, after re-stating St Augustine's declaration that the only true philosophy is religion and the only true religion philosophy, (44) he describes philosophy as a quadriium of which the four branches are διαιρετική, οριστική, αποδεικτική and αναλυτική. (45) These are the names given to the four branches of dialectic by the Peripatetic scholars of Alexandria: Ammonius in his commentary on the *Prior Analytics*,(46) the Pseudo-Ammonius in his commentary on Porphyry's *Isagoge*(47) and David, called the Armenian, in the first recension of his commentary on the same work.(48)" (pp. 3-4)

95. ———. 1992. "Yet more on the Autograph of John the Scot: MS Bamberg Ph. 2/2 and Its Place in *Periphyseon* Tradition." In *From Athens to Chartres. Neoplatonism and Medieval Thought. Studies in Honour of Edouard Jeauneau*, edited by Westra, Haijo Jan, 47-70. Leiden: Brill.

"Perhaps because the newest critical edition of Johannes Scotus Eriugena's *Periphyseon* reached only the end of book three before its editor's [J. P. Sheldon-Williams] death, recent discussion of the manuscript tradition of the work has tended to centre around the codices important to the first three books and containing, by and large, the first and second versions of Eriugena's text. Subsequently, those volumes containing only books four and five, or interesting particularly for versions three and four of the text, have been neglected. In this paper I should like to redress that balance somewhat, especially in regard to the Bamberg manuscript of books four and five, Bamberg, Staatsbibliothek, MS Ph. 2/2 (HJ. IV 6) = J. As I, together with Dr. Mark Zier, am presently assisting Edouard Jeauneau with the edition of *Periphyseon* books four and five, in order to complete Sheldon-Williams' critical edition, it seems appropriate to concentrate on this part of the textual tradition.

Against all expectations, Bamberg J has proved a singularly fascinating witness to the text and I shall concentrate on it in detail, particularly noting the light it brings to the thorny problem of Eriugena's autograph and the contemporary circle of scholars in the area. Firstly, however, in order to set the scene, and for the sake of a clarity which previous editions have not fostered, if only because of constantly shifting nomenclature, I shall survey the manuscript tradition of the work as a whole." (p. 47)

(...)

"This study has been centred on one manuscript and really only one book of Periphyseon; it shows the limitations as well as the fruitfulness of such concentration. It highlights the importance of a new edition since knowledge of the text— the actual writing of and working over of these manuscripts—is crucial to the understanding of their makeup and use. In the meantime, J shows us at least one other, somewhat learned, reader of Eriugena's text. It is becoming more and more evident that Johannes Scotus was not working in a vacuum but amongst a group of receptive and critical readers." (p. 70).

"The ninth-century metaphysician, John the Scot, who came very probably from Ireland to write both polemics and philosophy at the court of Charles the Bald, is known to have read a number of Augustine's writings, and to have cited them in his major work, *De Divisione Naturae* or *Periphyseon*,⁽¹⁾ at

times without showing much regard for the context of his quotations. He composed *Periphyseon* around 860 A.D., (2) in a period which was noted for the dissemination of traditional theological ideas to a large, poorly educated public, rather than for its innovations.(3) The influence of Greek ideas on John's mind, unusual in his day, but not quite so unusual as we used to believe, (4) gradually gave rise to the position, now commonly held by historians, that his thought was more or less dominated by Greek ideas to the exclusion of the Latins. This position has had to be modified, however, in the light of closer examination of his use of figures like the

Pseudo-Dionysius."

"My purpose is to suggest some new lines of direction in assessing the influence of Augustine on the *Periphyseon*."

To date, Augustine's influence has been gauged by allusions, quotations, misquotations and points of opposition to works which we know for sure that the bishop of Hippo wrote. But the now extensive literature on the subject(1) has paid little attention to the conception Eriugena himself had of Augustine. Eriugena was not only acquainted with most of the Maurist canon(2); he also considered authentic later syntheses of Augustine's doctrines like those of Bede and at least one spurious treatise, the anonymous fourth century *Decem Categoriae*. Eriugena's assimilation and transformation of these texts, particularly in books one and two, coloured his interpretation of better known passages from such works as *De Genesi ad Litteram*, *De Trinitate* and *De Civitate Dei*. Their logical bent not only provided him with a rationale for harmonizing the views of the Latins and the Greeks *secundum Augustinum*. In combination with other works on the trivium actively studied at the 'palace school'(3), they laid the foundation for a number of more general statements on language, reality and God's word.

Augustine's influence should therefore be viewed in two perspectives. The predominant role was played by the real Augustine. While some passages of the theological writings were undoubtedly read in the light of pseudo-Augustine, the majority were not. Nor is there any single key which will unlock the secrets of Eriugena's reading of Augustine as a whole. On the other hand, Eriugena should not be separated artificially from the intellectual milieu of the later Carolingian age. Alcuin, Rabanus Maurus, Heiric of Auxerre and others not only recognized Augustine as the central Latin father and philosopher of history but also as an incisive commentator on topics of ancient logic and grammar. Eriugena undoubtedly shared their views." (pp. 85-86)

"S'il reprend des thèmes chers à la patristique, Erigène adapte ces notions théologiques afin de penser non plus tant l'être divin, que l'être créé, en sa condition même de créature. Ainsi Erigène reconnaît-il aux êtres créés, qu'il nomme «existants» (*existentia*), une subsistence qui, si elle se fonde dans l'essence divine, s'en distingue toutefois.

Quoi qu'il en soit du contexte néoplatonicien dans lequel intervient le terme subsistence (utilisé notamment pour traduire l'*huparxis* du Pseudo-Denys ou de Maxime le Confesseur), l'on ne saurait le réduire à la nomination de la venue à l'être (c'est l'existence qui évoque cette idée). Réinvestissant la notion de subsistence qui s'est construite chez ses prédécesseurs latins, notre auteur s'en sert pour faire signe vers l'idée d'une permanence de ce qui est au-delà de la procession qui lui a permis d'accéder à l'être."

113. Weiner, Sebastian Florian. 2007. *Eriugenas Negative Ontologie*. Amsterdam: B. R. Grüner.

"Recently, there has been an upsurge of interest in the work *Periphyseon* of the early medieval philosopher John Scot Eriugena. Previous research has classified the book either as a piece of Neoplatonic philosophy or as part of the Latin dialectic

tradition, which has led to one-sided interpretations. The present publication focuses instead on the philosophical claims defended in the *Periphyseon* itself, examines its originality and discusses the soundness of its argumentation. As a result, a hitherto unnoticed basic thought of the work has been uncovered, namely the concept of a negative ontology, according to which all substance is completely incomprehensible. This notion constitutes the greatest innovation of Eriugena's thought. In keeping with his negative ontology, Eriugena downgrades the fourfold division of nature that he had presented at the beginning of his work. A critical survey of the current readings of Eriugena as a Neoplatonist and idealist completes this book."

114. ———. 2008. "Eriugena's Innovation." *Vivarium* no. 46:1-23.

"John Scot Eriugena's work *Periphyseon* is commonly regarded as having introduced Neoplatonism into early medieval thinking. Eriugena's theory of the reunification of the Creator and his creation is then viewed as being based on the Neoplatonic scheme of procession and reversion. However, this interpretation falls short of Eriugena's intentions. Above all, he denies any ontological difference between Creator and creation without taking recourse to the Neoplatonic considerations of procession and reversion. Surprisingly, according to Eriugena's explanation, God is not only the Creator but he is also created. He is created insofar as he alone, possessing all being, is the essence of all created things. Moreover, the fourfold division of nature, presented at the beginning of the work, is not Eriugena's own innovation, but a common Carolingian concept. It is rather his aim to show that from an ontological point of view this division has to be resolved."

Unpublished MA Thesis, Dalhousie University, Halifax, available at ProQuest Dissertations & Theses.

Contents: Abstract VI; Acknowledgments VII; 1. Introduction 1; 2. The Early Tradition of the *Categories* from Aristotle to

Ammonius 6; 3. Eriugena's Direct Sources - The *Categories* from Augustine to Alcuin 29; 4. Eriugena's Reception and Treatment of the *Categories* 48; 5. Conclusion 92; Bibliography 97-107.

"Eriugena's discussion of the Aristotelian categories in Book One of the *Periphyseon* has the appearance of a mere digression in the context of the work as a whole. Moreover, it is often seen as an incoherent interpretation of Aristotle's original doctrine put forward in the *Categories*. This thesis proposes to correct these views by reading Eriugena's treatment of the categories in the context of the Neoplatonic commentary tradition, as well as in Eriugena's own historical context. Eriugena's interpretation of the categories becomes coherent when read as a Carolingian development of the Late Antique commentators, Iamblichus in particular. The fruit of that development, namely Eriugena's unusual approach to the categories as generative intellectual realities, makes his treatment of them integral to his system, and the appropriate starting point for the *Periphyseon* as a whole."

Honour of Edouard Jeauneau, edited by Westra, Haijo Jan, 71-83. Leiden: Brill.

"At a rather more microcosmic level, the earliest manuscript of *Periphyseon*, Reims, Bibl. mun., MS 875 (= *R*), provides a glimpse of how these themes unfolded in the mind of the author himself through a fascinating sequence of additions and emendations to the text that are presently being clarified in the critical edition of the fourth book of that work.

Taken together, the additions and emendations in *R* effectively constitute the second recension of the text. The additions are generally straightforward and intended to amplify the author's argument. When the additions are brief, they accomplish that goal quite handily. But on several occasions the author chooses to amplify his text by means of lengthy citations of the authorities of the ancient church—Augustine, Boethius, Pseudo-Denis, Gregory of Nyssa, Maximus the Confessor—that occasionally do more to muddle than to clarify the author's point, as we shall see below.

Eriugena has emended his text, on the other hand, with an eye to reshaping his argument. In Book IV, which is cast as a commentary on the creation of human being and the events in Eden, it would seem to be the author's eschatological vision of Book V, both in its anthropology and its understanding of deification, that stands behind most of the major emendations. The understanding of that vision, which only becomes clear for the author as he first describes it in Book V, compels him to reshape his earlier text according to his later conclusions. His understanding of the return of all things to God in and through human nature leads him to rework in Book IV his presentation of human nature as the image of God, to precise the noetic nature of that image, and to distinguish between the general redemption of human nature and the deification of the saints." (pp. 71-72)

(...)

"Has Scottus revised his description of the microcosm in Book IV before composing his understanding of the eschatological

vision in Book V? It is perhaps more than coincidence that *R* gives evidence of significant emendation of some of the elements that will play a key role in his eschatological vision. Unfortunately the text in *R* terminates just prior to the end of Book IV, and provides no sure evidence. Nevertheless, it is entirely likely that as he worked out his understanding of the *reditus* in Book V, the implications of that understanding compelled him to return to his earlier work, especially his discussion of the nature of human being. And it is fitting that we can still trace in the manuscripts that preserve his thought this dialectical dimension in the mind of Eriugena, for whom dialectic was of the essence in the procession and return of the cosmos to God." (pp. 82-83).

Avicenna (Ibn-Sina) on the Subject and the Object of Metaphysics

Introduction

"Ibn Sina (Arabic), also known as Avicenna (Latin) and Abu Ali Sina (Persian) was the most original and systematic Muslim philosopher. In this light he is mentioned by two celebrated historians of medieval western philosophy: A. Maurer states, "...his [ibn Sina's] philosophy is a highly personal achievement, ranking among the greatest in the history of philosophy;" and F. Copleston holds, "The greatest Muslim philosopher of the eastern group without doubt is Avicenna or ibn Sina (980-1037), the real creator of a scholastic system in the Islamic world." (1) Y. Mahdavi lists 244 texts attributed to him and G. A. Anawati lists 270. (2) These works envelop a multiplicity of topics such as metaphysics, poetics, animal physiology, minerals, rhetoric, mechanics of solids, Arabic syntax, meteorology, mystical treatises, and a medical treatise, and are translated into more than nineteen languages. The crown of his philosophical corpus is a set of encyclopedic collections of treatises, especially al-Shifa, al-Najàt, al-Isharatwa al-Tanbihàt and the Danish Nameh; each collection contains elaborate philosophical treatises on metaphysics, physics, psychology, and logic. A standard edition of the logical texts of al-Shifa' alone comprises more than one sixteen hundred double size (1600) pages.(3) (pp. 1-2)

Contemporary philosophies of logical syntax of a language distinguish between two types of primitives-one, designative types of sign, the other, rules for transformation, designation, and interpretation, and these distinctions can be applied to ibn Sina's system.

Ibn Sina's two primordial notions of the soul are 'being' (hasti, wujûd) and the modalities [of necessity (wajib), contingency (mumkin) and impossibility (mumtani)]. The notion of being is the core of his system, while the modalities specify the subset of beings that are existents. The notion of 'being' concatenated with 'necessity' point to 'the necessary being;' using the second version of the ontological argument, 'necessary being' results in 'the Necessary Existent.' The notion of 'being' concatenated with 'contingency' has two possible results: (a) if there is a cause for the case in question, then the contingency is an actual existent-for example, in the case of 'being a human,' persons are existents because they have parents; (b) in the case of absence of the cause, the results are non-actual contingencies such as unicorns. 'Impossibility' and 'being' lead to no existent, as illustrated by 'round squares,' and 'the largest number.' The key notions of ibn Sina's system are very clear: 'Being-qua-being' (hasti, wujûd) corresponds to Aristotle's notion of 'being-qua-being' in *Metaphysica* 1002a 20 (ὄν ἢ ὄν) and E. Moody's reading of Ockham's use of 'ens' in *Summa Totius Logicae*. (4) It signifies the most determinable concept. 'Non-being' is meaningless. We should note that all mental concepts (actual or not actual) signify a being. For this reason 'being' is different from 'existent'.

'Existent' (mawjûd) signifies actual entities, Aristotle's notion of first substance (πρώτη φιλοσοφία). There are no impossible existents. For ibn Sina there is only one Necessary existent, which is the ultimate cause of generation of other existents. 'Existence' itself is not an existent, but signifies those entities which are neither uncaused 'contingent beings' nor 'impossible entities.' 'Essence,' (mahyya) is used by ibn Sina in the sense of "ti esti" and in the secondary sense of "ousia" employed by Aristotle. (5) An existent partakes of an essence; for example, the feature of a basket-hall can be discussed in terms of the formal properties of a sphere. An unrealized entity such as a unicorn may have an essence but no existence." (pp. 20-21)

The relation between ontology and theology according to Avicenna

"The inspection of the *Ilahiyyat* reveals not only the importance of Metaph. α, 1-2 and Λ, 6-10, but also the particular way in which Avicenna reproduces these two loci of the *Metaphysics* in his work: first, the doctrines of α, 1-2 and Λ, 6-10 are somehow interconnected in the final section of the *Ilahiyyat*, the one dealing with philosophical theology (VIII, 1–X, 3); second, within this section the doctrine of α, 1-2 is placed before that of Λ, 6-10, and constitutes a sort of introduction to philosophical theology. It is possible that Avicenna read α, 1-2 and Λ 6-10 during his secondary education according to this same pattern. (...)

In sum, Avicenna's approach to the *Metaphysics* at the time of his secondary instruction had three main features: (i) it was not an extensive reading of this work in its entirety, but only of the essential parts of it, namely--on the basis of the evidence at our disposal--α, 1-2 and Λ, 6-10; (ii) these two loci were read in connection with one another, as elements of the theological part of the *Metaphysics*, in disregard of the ontological part of it; (iii) α was read as an introduction to Λ, 6-10 whereas books A, B-K of Aristotle's work were probably neglected." (pp. 57-58)

"The first specific endeavour of clarifying the relationship between ontology and theology within the [Aristotle's] *Metaphysics* took place, as far as we know, in Arabic philosophy. In post-Aristotelian

Greek philosophy, this relationship was not perceived as problematic: it appears as a crucial issue neither in an independent "aporetic" treatise on metaphysics like Theophrastus' *Metaphysics*, nor in a reworking of the *Metaphysics* such as parts II and III of Nicholas of Damascus' *Philosophy of Aristotle* (at least judging from the extant portions of this latter work), nor in the commentaries on the *Metaphysics* by Alexander of Aphrodisias, Themistius, Syrianus and Ammonius/Asclepius. In Arabic philosophy the problem was determined by the "theologizing" interpretation of the *Metaphysics* offered by philosophers like al-Kindi, which derives proximately from the classifications of sciences of Late Antiquity and depends ultimately on Aristotle's perspective (iii) taken in isolation from the others. (*) Al-Farabi's reacted to al-Kindi's one-sided view of the *Metaphysics*: connecting himself with the commentatorial tradition of Alexander of Aphrodisias, Themistius and Ammonius/Asclepius, he had a broader view of the *Metaphysics* and in the *Fi Agrad* he clarified that Aristotle's work contains not only a theology, but also an ontology. (**) The background of the entire discussion is the relationship of *falsafa* and Islam: whereas al-Kindi emphasizes the theological part of the *Metaphysics* in order to assimilate Aristotelian metaphysics (and Greek metaphysics in general) and Islamic theology, al-Farabi stresses the distinction of metaphysics and philosophical theology and assigns a broader scope (and, implicitly, a higher rank) to the former with regard to the latter. Avicenna further develops al-Farabi's point of view, somehow incorporating in it al-Kindi's perspective, and presents the fullest and most articulated account of the relationship of ontology and theology within metaphysics in the history of Medieval philosophy.

Avicenna regards as very important to determine the subject-matter of metaphysics: he starts the *Ilahiyyat* addressing this issue and adding the "subject-matter" (*mawud*), as we will see in Chapter 5, to the preliminary questions traditionally discussed by Aristotelian commentators at the beginning of their exegesis of Aristotle's works. He appears to be the first in the history of philosophy to have devoted to this issue a separate and articulated treatment, and his contribution in the first two chapters of *Ilahiyyat* (I, 1-2) has rightly attracted the attention of scholars. (***) In Avicenna's powerful synthesis, Aristotle's different perspectives on the issue are

elucidated and harmonized. As we are going to see in the first part of the present chapter, the main elements of Avicenna's discourse are five. First, he starts with a notion of metaphysics that gathers points (iii) and (i), namely the idea that metaphysics deals with immaterial things and with the first causes and the absolute Prime Cause, i.e. God. Second, he adds point (ii) to point (i) by means of the distinction between the "subject-matter" of metaphysics and the "things searched" in it: according to Avicenna, "existent qua existent", rather than God or the first causes, is the subject-matter of metaphysics. God and the first causes are things searched in metaphysics, and can be taken into account by this discipline just because they are not its subject-matter, for the subject-matter of a discipline is something that is common to all the things searched by the discipline in question, without being itself one of them. Third, he brings to unity perspective (iii) and perspective (ii) by means of a peculiar notion of "existent", according to which this concept is immaterial in as much as it is not restricted to the sphere of material things. Conceived as immaterial, "existent" can be common to all the objects of research of metaphysics. Fourth, he reaches a synthesis between perspective (i) and perspective (ii) by stressing that the first causes and God are a part of "existent" and the principles of the "existent" that is caused. Fifth, he stresses that the first causes and God, despite not being the subject-matter of metaphysics, have nonetheless a fundamental function within this discipline: among the things searched by metaphysics, they are its "goal", namely the things whose knowledge is ultimately pursued." (pp. 113-114)

(***) See Fakhry [1984]; Davidson [1987], pp. 284-288; Hasnawi [1991]; Roccaro [1994]; Ramon Guerrero [1996]; Bertolacci [2001b] pp. 230-232, 259-261.

From: Amos Bertolacci, *The Reception of Aristotle's Metaphysics in Avicenna's Kitab al-Sifa'. A Milestone of Western Metaphysical Thought*. Leiden: Brill 2006.

"Martin Heidegger claims that the history of metaphysics is a history of the oblivion of being while propounding that his "fundamental ontology" presents a "genuine" account of the question of being that attempts to overcome metaphysics and its oblivion of being. Yet, it is perhaps doubtful that, for more than two thousand years (from Aristotle to Edmund Husserl), no philosopher was able to come up with a "genuine" approach to the question of being, and that no philosopher attempted to overcome the metaphysical history of the oblivion of being. This issue becomes more polemical and problematic, given that it is unlikely the case that in the global intellectual history of Chinese, Jewish, or Islamic philosophy, no philosopher or philosophical tradition has successfully attempted to overcome the history of the oblivion of being. In the case of Islamic philosophy, it is well documented that the Near Eastern Muslim world of the Middle ages has had an impact on the intellectual history of Western science and metaphysics. However, it is not yet well documented that the same Near Eastern Islamic philosophical tradition does indeed testify to the development of a phenomenological philosophical tradition that took the question of being to be the most central question of philosophical investigations. Considering the particular case of the physician, philosopher, and poet: Avicenna ([Ibn Sina] 980-1037), it is known that his influential *al-Qanun fi al-tib* (Book on medicine) was translated into Latin (*Liber Canonis*) and many other languages, and was in currency since the late Middle ages and early Renaissance in Europe. It is also known that Avicenna's philosophical works have had a strong impact on Thomism and on the works of Maimonides among others. Moreover, Avicenna's philosophical contributions constituted the milestones of a phenomenological mode of investigation in ontology that impacted subsequent philosophical developments in the Near East, up to the recent modern times, and some investigators have already depicted some of the phenomenological dimensions that characterize his views." (pp. XIII-XIV)

From: Nader El-Bizri, *The Phenomenological Quest between Avicenna and Heidegger*, Binghamton: Global Publications 2000.

Avicenna conception of metaphysics as the "science of being qua being"

"For Ibn Sina, metaphysics is basically the study of "being qua being", but he immediately adds that its most noble, although not its first object is God, the Necessary Being by virtue of itself. (3) All this implies that the existence of God is not self-evident, but has to be proven. In order to do so, Ibn Sina develops his theory of the essence/existence distinction. In God, His essence is His existence, while in all other Beings one has to sharply distinguish their existence from their essence. (4) In the latter case, he qualifies the existence as being not identical with, but "accidental" to essence. Ibn Rushd saw in it a simple affirmation of the pure accidentality of existence, and therefore vehemently criticized Ibn Sina on this point. (5) Till recent times, this latter interpretation remained the standard one in the West. F. Rahman seems to have been the first contemporary commentator to have seriously put into question such an understanding of Ibn Sina's affirmation. (6) However, it deserves to be stated that already Henry of Ghent, in the late thirteenth century, was aware of the fact that the restricted Aristotelian notion of "accidentality" was surely not involved here, but a larger one. (7)

Among the vast majority of the Latin scholastics who followed Ibn Rushd's line of interpretation, was Thomas Aquinas. However, he accepted as most valid Ibn Sina's distinction between essence and existence, (8) a fact already evident from the very title of his famous early work *De ente et essentia*. Thomas Aquinas uses Ibn Sina's theory in order to explain the composite nature of all creatures, especially the immaterial ones, i.e., the angels. He obviously rejects any kind of hylemorphic composition in them. Although he does not mention the Avicennian vocabulary of "necessary in virtue of itself", "necessary in virtue of another", and "possible", he clearly derived his view from Ibn Sina, and not from Aristotle, Boethius, or the *Liber de Causis* as he suggests. (9) But, on the other hand, Thomas wants to distance himself from what he considers to be Ibn Sina's "essentialism". For him, there is not only identity in God between essence and existence, but God is above all "*esse subsistens*", which clearly means that the priority is on the side of the existence. Thomas certainly believed that he thus was radically opposing Ibn Sina's view. Even if he misunderstood the accidentality of existence in the latter's thought, he was right in his opinion that Ibn Sina had not

fully appreciated existence as a part of the integral ontological dimension of Beings. (pp. 1-2)

I have already stressed that for Ibn Sina, metaphysics was essentially the study of being qua being, i.e., an ontology, but that its most noble object of investigation is God, in other words it also includes theodicy. One may add that for Ibn Sina metaphysics is moreover the science that has to demonstrate the principles of the other sciences, which means that it also deals with the "archaeology" of the sciences. Although Aristotle's metaphysics entails elements of all three of these views, it never linked them together within a substantial unity. Based on the important preparatory work of his predecessor al-Farabi, for the first time in the history of philosophy Ibn Sina had worked out a metaphysical "system" as "system". In this respect this latter rightly deserves to be qualified as a kind of onto-theology even if it does not completely match Heidegger's – inspired by Duns Scotus – conception. In view of all this, metaphysics is certainly the highest and most valuable of all sciences, a fact particularly underlined by Ibn Sina when he discusses, in his *Danesh-Nameh*, metaphysics immediately after the "instrumental" science of logic, but before "physics", and such contrary to the customary habit, a habit he himself respects in his Arabic encyclopaedias, of presenting it as the latest of all sciences. While it is commonly designated as "meta-physics", i.e., the science of what comes after physics, an appellation sometimes used by Ibn Sina as well, he does not hesitate to call it *Ilahiyyat*, i.e. "(science) of the Divine Things" as well, and indeed prefers to do so." (pp. 6-7)

Notes

(3) This is a common doctrine in his writings, clearly expressed in his major writing *al-Shifa, al-Ilahiyyat*, vol. I, eds. G.C. Anawati and S. Zayed, Cairo, OGIG, 1960, book I, chapters 1-2. This text is also available in a mediaeval Latin translation, see S. Van Riet (ed.), *Avicenna Latinus. Liber de philosophia prima sive scientia divina*, I–IV, Louvain, Peeters; Leiden, Brill, 1977, Tractatus primus, capitula 1-2.

(4) This idea is omnipresent in Ibn Sina's metaphysical works too. Again, I refer only to *al-Shifa, al-Ilahiyyat*, but now vol. II, eds. M.Y. Musa, S. Dunya and S. Zayed, Cairo, OGIG, 1960, book VIII, chapter

4; for the Latin translation, see S. Van Riet (ed.), *Avicenna Latinus. Liber de philosophia prima sive scientia divina V-X*, Louvain, Peeters; Leiden, Brill, 1980, Tractatus octavos, capitulum 4.

(5) See e.g., Ibn Rushd, *Tafsir ma ba'd al-Tabia*, ed. M. Bouyges, Beirut, 1938. Repr. Tehran, Int. Hikma, 1377 H.S., vol. I, commentary on book Gamma, C 3, p. 313; there exists a medieval Latin translation, see Averroes, *Opera omnia*, Venetiis, Junta, 1562, vol. VIII, f. 67 B.

From: Jules Janssens, *Ibn Sina and His Influence on the Arabic and Latin World*, Aldershot: Ashgate, 2006.

The subject of metaphysics

"...it behooves us to commence making known the ides of metaphysics. (...)

The philosophical sciences, as has been pointed out elsewhere in [our] books, are divided into the theoretical and the practical. The difference between the two has [also] been indicated. It has been mentioned that the theoretical are those wherein we seek the perfecting of the theoretical faculty of the soul through the attainment of the intellect in act -- this by the attainment of conceptual and verifiable knowledge through things that are [the things] they are, without [reference to their] being our [own] actions and states. Thus, the aim in these [things] is to attain an opinion and belief which is not an opinion and belief pertaining to the manner of an action, or to the manner of a principle of an action inasmuch as it is a principle of action. And [it has also been stated] that practical [philosophy] is that wherein one first seeks the perfection of the theoretical faculty by attaining conceptual and verifiable knowledge involving things that are [the things] they are in being our own actions -- thereby attaining, secondly, the perfection of the practical faculty through morals.

It was stated that theoretical knowledge is confined to three divisions -- namely, the natural, the mathematical, and the divine.

[It was also stated] that the subject matter of the natural is bodies, with respect to their being in motion and at rest, and [that] its investigation pertains to the occurrences that happen to them essentially in this respect.

[It was also stated] that the subject matter of mathematics is either that which is quantity essentially abstracted from matter, or that which has quantity -- the thing investigated therein being states that occur to quantity inasmuch as it is quantity and where one includes in its definition neither a species of matter nor a motive power.

[Finally, it was stated] that the divine science investigates the things that are separable from matter in subsistence and definition.

You have also heard that the divine science is the one in which the first causes of natural and mathematical existence and what relates to them are investigated; and [so also is] the Cause of Causes and Principle of Principles -- namely, God, exalted be His greatness.

This much is what you would have come to know from the books that have previously come to you. But from this it would not have become

evident to you what the subject matter of metaphysics really is (except for a remark in the *Book of Demonstration*, if you remember it). This is because in the other sciences you would have something which is a subject; things that are searched after; and principles, [universally] admitted, from which demonstrations are constructed. But now you still have not truly ascertained what is the subject matter of this science -- whether it is the essence of the First Cause, so that what one seeks here is knowledge of His attributes and acts, or whether the subject matter is some other notion." pp. 2-3 (Book One, Chapter One).

"Hence, we must inescapably indicate the subject matter of this science so that the purpose that lies in this science becomes evident for us. (p. 7)

"Moreover, [the subject matter of metaphysics] cannot be specifically confined to any one category, nor can it be the attributes of any one thing except the existent inasmuch as it is an existent.

It is thus clear to you from this totality [of what has been said] that the existent inasmuch as it is an existent is something common to all these things and that it must be made the subject matter of this are for the reasons we have stated. And, moreover, because it is above the need either for its quiddity to be learned or for itself to be established so as to require another science to undertake to clarify [such] a state of affairs therein ([this] because of the impossibility of establishing the subject matter of a science and ascertaining its quiddity in the very science that has that subject), [it thus needs] only the admission of its existences and quiddity. The primary subject matter of this science is, hence, the existent inasmuch as it is an existent; and the things sought after in [this science] are those that accompany [the existent,] inasmuch as it is an existent, unconditionally." (pp. 9-10, Book One, Chapter Two).

From: Avicenna, *The Metaphysics of the Healing*. A Parallel English-Arabic Text Translated, Introduced and Annotated by Michael E. Marmura, Provo, Utah: Brigham Young University Press 2005.

The object of metaphysics

"What adheres necessarily to this science [therefore] is that it is necessarily divided into parts. Some of these will investigate the ultimate causes, for these are the causes of every caused existent with respect to its existence. [This science] will [also] investigate the First Cause, from which emanates every caused existent inasmuch as it is a caused existent, not only inasmuch as it is an existent in motion or [only inasmuch as it is] quantified. Some [of the parts of this science] will investigate the accidental occurrences to the existent, and some [will investigate] the principles of the particular sciences. And because the principles of each science that is more particular are things searched after in the higher science -- as, for example, the principles of medicine [found] in natural [science] and of surveying [found] in geometry -- it will so occur in this science that the principles of the particular sciences that investigate the states of the particular existents are clarified therein.

Thus, this science investigates the states of the existent -- and the things that belong to it that are akin [to being] divisions and species - - until it arrives at a specialization with which the subject of natural science begins, relinquishing to it this specialty; [and at a] specialization with which the subject matter of mathematics begins, relinquishing to it this specialty; and so on with the others. And [this science] investigates and determines the state of that which, prior to such specialization, is akin to a principle. Thus, [some of] the things sought after in this science are the causes of the existent inasmuch as it is a caused existent; some [of the things sought after] pertain to the accidental occurrences to the existent; and some [pertain] to the principles of the particular sciences.

This, then, is the science sought after in this art. It is first philosophy, because it is knowledge of the first thing in existence (namely, the First Cause) and the first thing in generality (namely, existence and unity).

It is also wisdom, which is the best knowledge of the best thing known. For, it is the best knowledge (that is, [knowledge that yields] certainty) of the best thing known (that is, God, exalted be He, and the causes after Him). It is also knowledge of the ultimate causes of the whole [of caused things]. Moreover, it is knowledge of God and has the definition of divine science, which consists of a knowledge of

the things that are separable from matter in definition and existence. For, as has become clear, the existent inasmuch as it is an existent, and its principles and the accidental occurrences [it undergoes] are all prior in existence to matter, and none of them is dependent for its existence on [matter's] existence." (pp. 11-12, Book One, Chapter Two).

From: Avicenna, *The Metaphysics of the Healing*. A Parallel English-Arabic Text Translated, Introduced and Annotated by Michael E. Marmura, Provo, Utah: Brigham Young University Press 2005.

Translations of the Philosophical Works by Ibn Sina (Avicenna)

Bibliographical Resources

For a list of Avicenna's philosophical works see:

- Amos Bertolacci. *The Reception of Aristotle's Metaphysics in Avicenna's Kitab al-Sifa'. A Milestone of Western Metaphysical Thought*, Leiden: Brill 2006, Appendix C: *Overview of the Main Works by Avicenna on Metaphysics in Chronological Order*, pp. 581-591.
- Dimitri Gutas. *Avicenna and the Aristotelian Tradition*, Second Edition, Brill: Leiden, 2014, Appendix: *An Inventory of Avicenna's Authentic Works*, pp. 387-558.

I give a list of the translations in English, French, Italian, German and Spanish, in chronological order.

English Translations

1. Avicenna. 1951. *Avicenna on Theology*. Westport: Hyperion Press.

Translated by Arthur J. Arberry.

2. ———. 1952. *Avicenna's Psychology*. London: Oxford University Press.

An English translation of *Kitab al-Najat*, Book II, Chapter VI with historico-philosophical notes and textual improvements on the Cairo edition by Fazlur Rahman.

Reprinted: Westport, Hyperion Press, 1981.

3. ———. 1967. "Avicenna on the Divisions of the Rational Sciences." In *Medieval Political Philosophy: A Sourcebook*, edited by Lerner, Ralph, Mahdi, Muhsin and Fortin, Ernest L., 95-97. New York: Free Press of Glencoe.
Partial translation.
Reprinted: Ithaca Cornell University Press, 1972.
4. ———. 1967. "The Healing, Metaphysics. First Treatise, Chapter 6. Sixth Treatise, Chapter 1, Chapter 2." In *Philosophy in the Middle Ages. The Christian, Islamic and Jewish Tradition*, edited by Hyman, Arthur and Walsh, James, 240-254. New York: Harper & Row.
5. ———. 1969. "On the Soul." *Philosophical Forum* no. 1:555-562.
"Translation by L E. Goodman of the opening pages of the psychological portion of Avicenna's *Shifa*. Avicenna argues for the substantiality of the soul on the grounds that the soul is in no way dependent on or existent in another thing. He defends this assertion with a thought experiment which provides a historical antecedent to the cogito of Descartes: imagining a spontaneously created soul to exist without senses in space. The conceivability of such a state, he argues, demonstrates the distinctness of the notion of soul from all others and the independence of the soul from all other entities on which its existence might be thought to depend."
6. ———. 1971. *Avicenna's Treatise on Logic. (a Concise Philosophical Encyclopaedia) and Autobiography*. The Hague: Nijhoff.
Part One of *Danesh-name Alai*.
Edited and translated from the original Persian by Farhaang Zabeeh.
7. ———. 1973. *The Metaphysica of Avicenna (Ibn Sina)*. London: Routledge & Kegan Paul.
A critical translation-commentary and analysis of the fundamental arguments in Avicenna's *Metaphysica* in the *Danish Nam-i al'i* (*The Book of scientific knowledge*).

Reprinted Binghamton, Global Publications, Binghamton University 2001.

8. ———. 1973. *The Propositional Logic of Avicenna. A Translation from Al-Shifa': Al Qiyas*. Dordrecht: Reidel Publishing Company.

Translated by Nabil Shehaby with introduction (pp. 1-28), commentary (pp. 213-281) and glossary.

9. ———. 1974. *Avicenna's Commentary on the Poetics of Aristotle*. Leiden: Brill.

A critical study with an annotated translation of the text by Ismail M. Dahiyat.

Translation of *al-Shi'r*, which forms the 9th part of *al-Mantiq*, itself the 1st section of the author's *al-Shifa*.

10. ———. 1974. *The Life of Ibn Sina*. Albany: State University of New York Press.

A critical edition and annotated translation, by William E. Gohlman.

Arabic text and English translation of the author's autobiography, *Sirat al-Shaykh al-Ra'is*, which was completed by his disciple al-Juzajani.

11. ———. 1980. *Avicenna and the Visionary Recital*. Irving: Spring Publications.

English translation by Willard R. Task.

Part Two of the original edition, a translation of the Persian commentary on the "Recital of Hayy Ibn Yaqzan" has not been included.

12. ———. 1984. *Remarks and Admonitions. Part One: Logic*. Toronto: Pontifical Institute of Mediaeval Studies.

Translated from the original Arabic with an introduction and notes by Shams Constantine Inati.

13. ———. 1996. *Ibn Sina and Mysticism. Remarks and Admonitions. Part Iv*. London: Kegan Paul International.

An analysis and English translation of the fourth part (*Sufism*) of Avicenna's *Remarks and admonitions*.

14. ———. 1999. "Ibn Sina." In *An Anthology of Philosophy in Persia. Vol. I Vol. 1: From Zoroaster to 'Omar Khayyam.*, edited by Nasr, Seyyed Hossein and Aminrazavi, Mehdi, 247-322. New York: Oxford University Press.

Part III. Early Islamic Philosophy : The Peripatetics: 12. Ibn Sina.

1. Metaphysics (from *Danish-namah-yi 'ala'i*) 247; 2. Creation Ex-Nihilo and Immediate Creation (from *al-Isharat wa'l-tanbihat*) 269; 3. On Theodicy and Providence I (from *al-Shifa'*) 277; 4. On Theodicy and Providence II (from *al-Isharat wa'l-tanbihati*) 289; 5. On Time (from *al-Shifa'*) 292; 6. The Stations of the Knowers (from *al-Isharat wa'l-tanbihat*) 303; 7. Living Son of the Awake (from *Risalah Hayy ibn Yaqzan*) 312; 8. Introduction (from *Mantiq al-mashraqiyyin*) 321-322.

15. ———. 2005. *The Metaphysics of the Healing*. Provo, Utah: Brigham Young University Press.

A parallel English-Arabic text translated, introduced, and annotated by Michael E. Marmura.

16. ———. 2010. *The Physics of the Healing*. Provo, Utah: Brigham Young University Press.

A parallel English-Arabic text translated, introduced, and annotated by Jon McGinnis (two volumes).

French Translations

1. ———. 1892. *Le Livre Des Théorèmes Et Des Avertissements*. Leyden: Brill.

First part. Arabic text edited and translated by J. Forget.

Reprinted by Institut für Geschichte der Arabisch-Islamischen Wissenschaften an der Johann Wolfgang Goethe-Universität, Frankfurt am Main, 1999.

2. ———. 1933. *Introduction À Avicenne: Son Épître Des Définitions*. Paris: Desclée de Brouwer.

Translated with notes by Amélie-Marie Goichon and with a preface by Miguel Asin Palacios.

3. ———. 1951. "Les Notes D'Avicenne Sur La 'Théologie D'Aristote'." *Revue Thomiste* no. 51:346-406.

Translation by Georges Vajda.

4. ———. 1951. *Livre Des Directives Et Remarques*. Paris: Vrin.

Translated with an introduction and notes by Amélie-Marie Goichon.

Reprinted 1999.

5. ———. 1954. *Avicenne Et Le Récit Visionnaire*. Paris: A. Maisonneuve.

By Henry Corbin.

Vol. I: Étude sur le cycle des récits avicenniens. - Vol. II: Le Récit de Hayy Ibn Yaqzan, texte arabe, version et commentaire en persan attribués a Juzjany, traduction Française, notes et gloses.

English translation by Willard R. Task: *Avicenna and the visionary recital* - Irving, Spring Publications, 1980.

"Part Two of the original edition, a translation of the Persian commentary on the "Recital of Hayy Ibn Yaqzan" has not been included."

6. ———. 1955. *Le Livre De Science. Tome I. Logique, Métaphysique*. Paris: Les Belles Lettres.

Translated by Mohammad Achena and Henri Massé; second revised edition 1986.

Reprinted by Institut für Geschichte der Arabisch-Islamischen Wissenschaften an der Johann Wolfgang Goethe-Universität, Frankfurt am Main, 1999.

7. ———. 1958. *Le Livre De Science. Tome II. Physique, Mathématiques*. Paris: Les Belles Lettres.

Translated by Mohammad Achena and Henri Massé; second revised edition 1986.

Reprinted by Institut für Geschichte der Arabisch-Islamischen Wissenschaften an der Johann Wolfgang Goethe-Universität, Frankfurt am Main, 1999.

8. ———. 1956. *Psychologie D'ibn Sina (Avicenne) D'après Son œuvre as-Sifa*. Praha: Éditions de l'Académie Tchèque des Sciences.

Two volumes (vol. I: Arabic text; vol. II: French translation).

Arabic text and French translation by Jan Bakos.

9. ———. 1963. *Le Livre Des Définitions*. Caire: Publications de l'Institut Français d'Archéologie Orientale du Caire.

Edited and translated by Amélie-Marie Goichon.

10. ———. 1977. "Les Divisions Des Sciences Intellectuelles D'Avicenne." *Mélanges de l'Institut Dominicain d'Etudes Orientales (MIDEO)* no. 13:323-335.

Translated by Georges C. Anawati.

11. ———. 1978. *La Métaphysique Du Shifa'. Livres I À V*. Paris: Librairie philosophique J. Vrin.

Introduction, translation and notes by Georges C. Anawati.

12. ———. 1985. *La Métaphysique Du Shifa'. Livres Vi À X*. Paris: Librairie philosophique J. Vrin.

Introduction, translation and notes by Georges C. Anawati.

13. ———. 1980. "Les Sciences Physiques Et Métaphysiques Selon La *Risâlah Fî Aqsâm Al-'Ulûm* D'Avicenne. Essai De Traduction Critique." *Bulletin de Philosophie Médiévale* no. 22:64-71.

Partial translation by Jean R. Michot.

14. ———. 1983. "De La Joie Et Du Bonheur. Essai De Traduction Critique De La Section Ii, 8 Des *Isharat* D'Avicenne." *Bulletin de Philosophie Médiévale* no. 26:49-60.

Translation by Yahya R. Michot.

15. ———. 1984. "Épître Sur Les Parties Des Sciences Intellectuelles D'abu 'Ali Al-Husayn Ibn Sina." In *Études Su Avicenne*, edited by Jolivet, Jean and Rashed, Roshdi, 143-151. Paris: Les Belles Lettres.

Translation by Rabia Mimoune.

16. ———. 1985. "Prophétie Et Divination Selon Avicenne. Présentation, Essai De Traduction Critique Et Index De L'Épître De L'âme De La Sphère." *Revue Philosophique de Louvain* no. 83:507-535.

Translation by Yahya R. Michot.

17. ———. 1988. "L'eschatologie Dans Le "Livre De La Guidance" D'Avicenne. Présentation, Traduction Et Index De La Dernière Section Du *Kitab Al-Hidâya*." *Bulletin de Philosophie Médiévale* no. 30:138-152.

Translation by Yahya R. Michot.

18. ———. 1994. *Livre De La Genèse Et Du Retour*. Bruxelles.

Translation by Yahya R. Michot.

Translation by Yahya R. Michot.

20. ———. 2000. *Lettre Au Vizir Abu Sa'd. Editio Princeps D'après Le Manuscrit De Bursa*. Beyrouth: Éditions al-Bouraq.

Translated with introduction and notes by Y. Michot.

Italian Translations

1. ———. 1969. *Epistola Sulla Vita Futura*. Padova: Antenore.

Arabic text, Italian translation, introduction and notes by Francesca Lucchetta.

2. ———. 1994. "Il Soggetto Della Scienza Prima. Ibn Sina, *as-Sifa'*. *Al-Ilahiyyat*, I.1-2." *Giornale di Metafisica* no. 16:69-82.

- Italian translation by Giuseppe Roccaro of *Al-ilahiyyat*, I.1-2.
3. ———. 1995. "La Metafisica Del *Libro Della Guida*.
Presentazione E Traduzione Della Terza Parte (*Báb*) Del *Kitab-Al-Hidaya* Di Avicenna." *Le Muséon.Revue d'Études Orientales*
no. 108:367-424.

Presentation and translation by Olga Lizzini.
 4. ———. 2002. *Metafisica. La Scienza Delle Cose Divine (Al-Ilahiyyat) Dal Libro Della Guarigione (Kitab Al-Sifà)*. Milano: Bompiani.

Translated from Arabic, with introduction and notes by Olga Lizzini; with Arabic and Latin text.

Revised reprint 2006.
 5. ———. 2008. *Libro Della Guarigione. Le Cose Divine*. Torino: UTET.

Italian translation by Amos Bertolacci of the *Ilahiyyat* of Avicenna's *Kitab-al-Sifa'*, with introduction, corrections to the Arabic text and notes.

German Translations

1. ———. 1875. "Die Psychologie Des Ibn Sina." *Zeitschrift der Deutschen Morgenlandische Gesellschaft* no. 29:339-372.

German translation by Samuel Landauer of the *Compendium on the Soul*.
2. ———. 1907. *Die Metaphysik Avicennas. Enthaltend Die Metaphysik, Theologie, Kosmologie and Ethik*. Halle: Rudolf Haupt.

Translated by Max Horten.

Reprinted by Institut für Geschichte der Arabisch-Islamischen Wissenschaften an der Johann Wolfgang Goethe-Universität, Frankfurt am Main, 1999 and by Kessinger Publishing Co., Whitefish, MT.
3. ———. 2006. *Cuestiones Divinas (Ilahiyyat). Textos Escogidos*. Madrid: Editorial Biblioteca Nueva.

Texts selected, edited and translated by C. A. Segovia.

Spanish Translations

1. ———. 2006. *Cuestiones Divinas (Ilahiyyat). Textos Escogidos*. Madrid: Editorial Biblioteca Nueva.

Texts selected, edited and translated by C. A. Segovia.

Modern Editions of Latin Translations

1. Avicenna. 1992. *Avicenna Latinus. Liber Primus Naturalium. Tractatus Primus. De Causis Et Principiis Naturalium*. Louvain: Peeters Publishers.

Critical edition of the Latin medieval translation by Simone Van Riet.

With a doctrinal introduction by Gérard Verbeke.

2. ———. 2007. *Avicenna Latinus. Liber Primus Naturalium. Tractatus Secundus. De Motu Et De Consimilibus*. Louvain: Peeters Publishers.

Critical edition of the Latin medieval translation by Simone Van Riet.

3. ———. 1987. *Avicenna Latinus. Liber Tertius Naturalium De Generatione Et Corruptione*. Louvain: Peeters Publishers.

Critical edition of the Latin medieval translation and lexicon by Simone Van Riet.

With a doctrinal introduction by Gérard Verbeke.

4. ———. 1989. *Avicenna Latinus. Liber Quartus Naturalium De Actionibus Et Passionibus Qualitatum Primarum*. Louvain: Peeters Publishers.

Critical edition of the Latin medieval translation and lexicon by Simone Van Riet.

With a doctrinal introduction by Gérard Verbeke.

5. ———. 1972. *Avicenna Latinus. Liber De Anima, Seu Sextus De Naturalibus I-Iii*. Louvain: Peeters Publishers.

- Critical edition of the Latin medieval translation by Simone Van Riet.
- With an introduction on the psychological doctrine of Avicenna by Gérard Verbeke.
6. ———. 1968. *Avicenna Latinus. Liber De Anima, Seu Sextus De Naturalibus Iv-V*. Louvain: Peeters Publishers.
- Critical edition of the Latin medieval translation by Simone Van Riet.
- With an introduction on the psychological doctrine of Avicenna by Gérard Verbeke.
7. ———. 1977. *Avicenna Latinus. Liber De Philosophia Prima Sive Scientia Divina. I-Iv*. Louvain: Peeters Publishers.
- Critical edition of the Latin medieval translation by Simone Van Riet.
- With a doctrinal introduction by Gérard Verbeke.
8. ———. 1980. *Avicenna Latinus. Liber De Philosophia Prima Sive Scientia Divina. V-X*. Louvain: Peeters Publishers.
- Critical edition of the Latin medieval translation by Simone Van Riet.
- With a doctrinal introduction by Gérard Verbeke.
9. ———. 1983. *Avicenna Latinus. Liber De Philosophia Prima Sive Scientia Divina. Tractatus I-X. Lexiques*. Louvain: Peeters Publishers.
10. ———. 1994. *Avicenna Latinus. Codices*. Louvain: Peeters Publishers.
- Codices descripsit M.-T. d'Alverny. Addenda collegerunt S. Van Riet et P. Jodogne.
11. ———. 1926. *Avicennae Metaphysices Compendium (Al-Nagat)*. Roma: Pontificium Institutum Orientalium Studiorum.
- Translated in Latin with notes by Nematallah Carame.

Annotated Bibliography on Avicenna's Logic and Metaphysics: First Part: A - K

For the studies on Avicenna the main bibliographical resources are:

- Janssens, Jules L. 1991. *An Annotated Bibliography on Ibn Sina (1970-1989). Including Arabic and Persian publications and Turkish and Russian References* . Leuven: Leuven University Press.
- ———. 1999. *An Annotated Bibliography on Ibn Sina. First Supplement (1990-1994)* . Louvain-La-Neuve: Fédération Internationale des Instituts d'Études médiévales.
- ———. 2017. *An Annotated Bibliography on Ibn Sina. Second Supplement (1995-2009)*. Temple (Arizona): ACMRS Publications.

Bibliography

1. *Le livre du Millenaire d'Avicenne*. 1956. Teheran: Imprimerie de l'Université de Téhéran.

Vol. IV: "Conférences des membres du Congrès d'Avicenne prononcées en langue allemande, anglaise et Française et sur la biographie, l'époque, les opinions et les œuvres d'Avicenne (2-7 Ordibehechte 1333; 22-27 Avril 1954)"

2. Adamson, Peter. 2005. "On Knowledge of Particulars." *Proceedings of the Aristotelian Society* no. 105:273-294.

"Avicenna's notorious claim that God knows particulars only 'in a universal way' is argued to have its roots in Aristotelian epistemology, and especially in the *Posterior Analytics*."

According to Avicenna and Aristotle as understood by Avicenna, there is in fact no such thing as 'knowledge' of particulars, at least not as such. Rather, a particular can only be known by subsuming it under a universal. Thus Avicenna turns out to be committed to a much more surprising epistemological thesis: even humans know particulars only in a universal way."

7. Alonso, Alonso Manuel. 1957. "'Al-qiwwam' y 'al anniyya' en las traducciones de Gundisalvo." *Al-Andalus* no. 22:377-405.

"En muchas de las obras traducidas se encontró Gundisalvo con la palabra *al-qiwwam*. Vamos a recorrerlas transcribiendo los pasajes más representativos para darnos a entender su significado. (p. 381)

(...)

Después de haber señalado así la mayoría de los pasajes en que Gundisalvo, tanto en las traducciones como en sus propias obras emplea la palabra 'existencia' para traducir *al-qiwwam*, y después de haber visto que Gundisalvo quiere así significar et 'esse' o 'quo est' como contradistinto de 'quod est', debemos preguntarnos ¿qué es lo que et propio Avicenna entiende por *al-qiwwam*? Desde luego tratamos del sentido correspondiente

inmediato entre el concepto y la cosa significada, no de un sentido implícito o de un sentido consecuente al modo como al decir 'casa' significamos 'el techo' y significamos 'las paredes', y al designar et 'individuo' designamos su 'esencia específica'.

Primeramente observemos que hoy por *al-qiwam* todo el mundo entiende la 'subsistencia' (traducción que también Gundisalvo aceptó, como hemos visto). Por esto dice A.-M. Goichon: «599. -'Qiwâm', *subsistence*, sens donné par Lane art. *qiwam* et *rukn*, mais qui n'est presque jamais rendu exactement par les traductions, pourtant des plus diverses». No podían traducir *al-qiwam* por 'subsistencia', porque el latín corriente de entonces carecía de esa palabra. No se encontrará vocabulario del rabe ni arabista entendido que haya visto en Avicena el uso de *al-qiwam* en el sentido de 'existencia' contrapuesta a la 'esencia' como *principia quibus* de las cosas, ni Gundisalvo lo vió, ya que la 'existencia' para él no significa lo que en tiempos posteriores a los suyos vino a significar. Contra los que quieren ver en el *al-qiwam* de Avicena o en la 'existencia' de Gundisalvo ese significado de tiempos posteriores, ya es bastante decir que nadie, conocedor del árabe, haya encontrado tal significado en dicho *al-qiwam* aviceniano.

En segundo lugar, la existencia en ese sentido posterior a los tiempos de Gundisalvo es algo simple en sí el acto último que entra en la composición de las cosas. Es, como veremos, algo del orden de la *al-anniyya* de Avicena. En cambio, el *al-qiwam* aviceniano es algo compuesto de 'acto' y 'potencia', mas o menos simples (cada uno de por sí), o bien mas o menos determinados. (pp. 392-393).

(...)

Que ese 'acto' y esa 'potencia' pueden recibir (según la dottrina de Avicena) determinaciones, hasta convertirse en lo que Santo Tomás llamó 'materia' y 'forma', es manifiesto por et mismo pasaje a que aludimos, ya que a continuación prueba Avicena que ese acto de *al-qiwam* es en las plantas y animales 'et alma' y esa potencia del mismo *al-qiwam* es 'el cuerpo'. De aquí que ese *al-qiwam* sea ciertamente la 'constitución' de la cosa, o sea

su esencia específica, su *mahiyya*, como por otro nombre lo nombra el mismo Avicena, según luego vamos a ver. He ahí por que Gundisalvo, en la traducción de la *Isagoge* de Avicena equiparo el 'esse' (o 'quo est') de Boecio a la *rnahiyya* aviceniana, y la traduce cerca de cien veces por 'esse', y este 'esse', según el, se define: «Esse est existentia formae in materia». Esta existencia, pues, es la esencia específica o simplemente 'la esencia', dicha en abstracto, solo que latinistas posteriores a Gundisalvo cambiaron los conceptos que implicaban esas palabras.

De aquí que tengamos en Avicena pasajes que contradistinguen entre sí *al-qiwwam* y 'existencia' (*al-wuyud*) en cuanto se suele contraponer a 'la esencia'. (p. 394).

(...)

En otro artículo seguiremos: con el estudio de *al-anniyya* en las obras de Avicena. El hecho de que una palabra se apoderó del significado de la otra, al par que et confusionismo que de eso se siguió y aun vemos seguir, relacionó de un modo inconveniente los terminos *al-qiwwam* y *al-anniyya* y sus mismos conceptos. Pero quizá con lo dicho y con lo que diremos después encontremos alguna mayor claridad en ese bosquejo de traducciones e interpretaciones." (p. 405).

"In Islamic philosophy, in particular, with Ibn Sina (Avicenna), there appears, in quite explicit form, a view of predication at odds with many current interpretations of Aristotle and views of predication. That view is that the simple affirmative categorical proposition 'S is p' is to be read as 'S is (existent) as a p', and that for its truth it is required both that S be existent and that S be p. This paper sketches out the development of that view. It then shows how this view resolves such vexing problems in interpreting Aristotle's logic and ontology as the existential import assumption and his view of First philosophy."

28. Banchetti-Robino, Marina Paola. 2004. "Ibn Sina and Husserl on intention and intentionality." *Philosophy East and West*.

"The concepts of intention and intentionality were particularly significant notions within the Christian, Jewish, and Islamic medieval philosophical traditions, and they regained philosophical importance in the twentieth century. The theories of intention and intentionality of the medieval Islamic philosopher and physician Ibn Sina and the phenomenological philosopher and mathematician Edmund Husserl are examined, compared, and contrasted here, showing that Ibn Sina's conception of intention is naturalistic and, in its naturalism, is influenced by the medical professional culture to which Ibn Sina belonged. As well, Husserl's anti-naturalistic conception of intentionality is influenced by his background as a mathematician and by his desire to ground mathematics and the empirical sciences in a truly scientific philosophy. In conclusion, an argument is presented for the superiority of the Husserlian transcendentalist account of intentionality over the Avicennian naturalistic account, on the grounds that the latter falls prey to psychologism and reductionism, the two specters that according to Husserl must haunt all naturalistic accounts of consciousness."

31. ———. 2001. "From Al-Kindi to Al-Farabi. Avicenna's progressive knowledge of Aristotle's Metaphysics according to his autobiography." *Arabic Sciences and Philosophy* no. 11:257-295.

"The autobiography witnesses a significant evolution in Avicenna's approach to Aristotle's Metaphysics during the years of his education. It clearly shows that, at a certain point of his

philosophical training, Avicenna faced the entire text of the *Metaphysics*, was puzzled by its extent and complexity, and found in a treatise by al-Farabi a guide for its understanding. But, albeit less perspicuously, the autobiography also suggests that this was not Avicenna's first encounter with the *Metaphysics*. Avicenna dealt with Aristotle's work in a previous stage of his studies as well. Then, however, he did not read the *Metaphysics* in its entirety, but, rather, focused only on its essential parts and some commentaries thereupon. The parts of the *Metaphysics* that Avicenna read in this earlier stage were books Alpha Elatton and Lambda, as constituting the natural theology of Aristotle's work. He neglected, on the contrary, the books corresponding to its ontological part. The special attention to Alpha Elatton and Lambda and the close connection between these two books in a theological context were peculiar traits of al-Kindi's approach to Aristotle's *Metaphysics*. Therefore, the evolving approach to Aristotle's *Metaphysics* that Avicenna's autobiography witnesses can properly be described as a passage from the Kindian to the Farabian way of interpretation."

Contents: Introduction VII; Abbreviations XV;

Part One. The Arabic reception of the *Metaphysics* before Avicenna.

Introduction 3; 1. The Arabic translations of the *Metaphysics*: a new assessment on account of the evidence provided by Avicenna 5; 2. Beyond al-Kindi and al-Farabi: Avicenna's position in the history of the Arab reception of the *Metaphysics* 37; 3. Between Ammonius and Avicenna: al-Farabi's treatise *On the Goals of Aristotle's Metaphysics* 65;

Part Two. The scientific profile of the *Metaphysics* according to Avicenna.

Introduction 107; 4. Avicenna' conception of the theme of the *Metaphysics*: "existent *qua* existent" as the subject-matter, the first causes and God as the goal of metaphysics 111; 5. Avicenna's reworking of the structure of the *Metaphysics*: metaphysics as the discipline dealing with the species, the properties and the principles of "existent" 149; 6. Avicenna's elaboration of the method of the *Metaphysics*: metaphysics as a demonstrative, analytical, non-dialectical science 213; 7. Avicenna's view of the relationship of the *Metaphysics* with the other parts of the Aristotelian *corpus*: metaphysics as the founding discipline 265;

Part Three. The content of the *Metaphysics* according to Avicenna.

Introduction 305; 8. The quotations of the *Metaphysics* in the *Ilahiyyat* 309; 9. The main source of Avicenna's conception of metaphysics as a science: book *Gamma* and its quotations 375; 10. Avicenna's attitude towards dialectic: book *Beta* and its quotations 403; 11. The other sources of the *Ilahiyyat* 441; Conclusion 471;

Appendices.

Appendix A: Towards a critical edition of the *Ilahiyyat*: list of corrections of the Cairo printed text 483; Appendix B: Index of authors and works quoted in the *Ilahiyyat* 559; Appendix C: Overview of the main works by Avicenna on metaphysics in chronological order 581; Appendix D: Names for Aristotle's *Metaphysics* and metaphysics as a discipline in Avicenna's works 593; Appendix E: The style of the *Kitab al-Sifa'* 607; Appendix F: The terminology for "property" in the *Ilahiyyat* 613;

Bibliography 617; Index of names and places 655; Index of Aristotle's works with passages cited 665; Index of Avicenna's works with passages cited 666; Index of manuscripts 669; Index of texts, outlines, tables 670-675.

45. ———. 1999. "Mental existence in Thomas Aquinas and Avicenna." *Mediaeval Studies* no. 61:45-81.

"In this article I examine how Aquinas employs the Avicennian notion of the mental or conceptual existence of the common nature. I first show how the characteristic features of Avicenna's cognitive psychology, in particular its occasionalist and emanationist framework, bear upon his understanding of mental existence. I then examine Aquinas's adoption of the notion of mental existence with special reference to his doctrine of the intelligible species, which are totally absent from Avicenna's cognitive psychology. I conclude that Aquinas dilutes the original Avicennian conception of mental existence in virtue of his making the intelligible species, rather than the common nature itself, the subject of mental existence."

- "Avicenna has been interpreted as having held the real distinction between 'esse' and 'essence'; Averroes as having criticized him on this point: "Avicenna made a big mistake here." A closer reading, however, will, I believe, reveal that Avicenna was talking about two intelligible notes, 'intentiones' or 'dispositiones', in the comprehension of a concept, whereas Averroes was pushing two different modes of understanding that same content. St. Thomas thought that Averroes "was closer to the truth." No Arabic scholar today would, so far as I can make out, read that real distinction into this context. Avicenna has also been accused of holding an independent order of possibles, just as Averroes was accused of holding a double truth theory. Both charges were libels."

Reprinted in: H. A. Davidson, *Proofs for Eternity, Creation and the Existence of God in Medieval Islamic and Jewish Philosophy*, New York: Oxford University Press, 1987 pp. 281-310.

"The first philosopher known to use the concept of necessary existence in order to construct a proof of the existence of God was Avicenna. Avicenna's proof, it will appear, neither is, nor inevitably reduces itself to, an ontological proof. It is rather a certain kind of cosmological proof.

The concept of necessary existence is used by Avicenna to prove the existence of God in two works, at length in the *Najat*, briefly and somewhat obscurely in the *Isharat*. The concept is also discussed fully in two other works, the *Shifa* and *Danesh Namesh*, but there Avicenna employs it only to define the nature of God, not, as far as I can see, to establish His existence."

"An initial section traces the history of the development of these tendentious ideas first to Ibn Tufayl and then to the followers of his interpretation in the West in the nineteenth and twentieth centuries.

Further sections discuss the title of the book, list its contents insofar as they can be reconstructed from Avicenna's statements and the extant portions, and provide additional information about its manuscripts and transmission. The style of the work is then analyzed and compared with that of the *Sifa'* in order to verify Avicenna's claim in the preface to the latter work that the difference between the two was merely stylistic. A final section gives a table of concordance between the contents of the extant part on physics and the corresponding sections in the *Sifa'*, establishing the direct relationship and verbal congruity between the two works."

"In this paper I examine (I) Avicenna's view that existence is an accident, (II) the status of the problem of the real distinction between essence and existence, and (III) the nature of Avicenna's essentialism. I conclude that Avicenna anticipated Frege and Russell in holding that existence is an accident of accidents. I also defend the view that Avicenna held that there is a real distinction between essence and existence. Finally, I hold that Avicenna's essentialism anticipates Meinong's view about nonexistent objects."

111. ———. 1999. "Let them suffer into the truth: Avicenna's remedy for those denying the axioms of thought." *American Catholic Philosophical Quarterly* no. 73:107-133.

"For those who are intransigent enough to deny even the principle of noncontradiction, Avicenna advises putting them to the fire or beating them, until they admit that pain is different from nonpain. This treatment may seem too severe, but illustrates theory and practice in his philosophy, and when viewed in that light even becomes reasonable. The paper has four parts: (1) how certain events in Avicenna's autobiography illustrate the interplay of philosophy, religion, and politics in his mind, (2) Avicenna's treatment of the principles of metaphysics in "Shifa', Met." 1, (3) Avicenna's reading of Aristotle on noncontradiction, (4) Avicenna's own treatment of noncontradiction in " *Shifa'. Met.*" 1.8."

"Aborder les thèmes de l'être et de la création chez Avicenne c'est, en principe, risquer une recherche immense à travers les concepts qui structurent trois dès domaines où les spéculations du grand philosophe sont les plus remarquables et aussi les plus difficiles: l'ontologie et la cosmologie, avec leur jointure. Les prendre tels qu'ils s'offrent dans le travail des traducteurs tolédans du 12^e siècle, c'est tenter d'en saisir le fil tel qu'il pouvait apparaître à travers un ensemble lexical différent de celui de leur origine, constitué dans une langue d'un type différent et, *a priori*, moins riche; et d'autant moins que le fonds spécial dont disposaient ces traducteurs, leur vocabulaire technique, s'était constitué à partir de textes qui avaient assez peu à voir avec ceux que pratiquait Avicenne: c'étaient ceux de la philosophie latine, des Pères et de Boèce, quelque peu de Platon et de la logique d'Aristote, transposés en latin. D' autant plus remarquable, notons-le, est que les premiers lecteurs de ce corpus avicennien devenu accessible aient su en faire l'usage que l'on sait. On voudrait ici proposer seulement quelques remarques sur une partie du lexique ainsi constitué, en noter quelques correspondances plus ou moins réussies avec celui d'Avicenne, y accrocher quelques observations. Nous disposons pour cela d'un instrument de travail inestimable: les trois tomes de la *Philosophia prima* publiés par la regrettée Simone Van Riet et dont le troisième offre un double lexique: arabe-latin et latin-arabe, où est donc recueillie toute la matière de notre examen (1)." p. 35

(1) Avicenna Latinus. *Liber de philosophia prima sive scientia divina*, I-X. *Lexiques*, par S. Van Riet, Louvain-la-Neuve, E. Peeters - Leiden, E. J. Brill, 1983. Le texte latin se trouve dans les deux autres tomes (1977 et 1980), sous une numérotation des pages continue de l'un à l'autre (I, de 1 à 219 ; II, de 227 à 553). Le texte arabe est ici celui d'Ibn Sinâ, *Al-Şifa. İlahiyyât*, 2 vol., Le Caire, Organisation générale des impressions gouvernementales, 1380/1960.

"Following al-Farabi's approach, Ibn Sina undertakes a new foundation of the First Philosophy based on his own critical systematisation of the Aristotelian theory of science, yielding the result that metaphysics is only possible as a transcendental science, i.e. that not only the subject-matter of metaphysics and its properties but also the arguments by which the first principles of knowledge are defended must be transcendental."

Annotated Bibliography on Avicenna's Logic and Metaphysics: L - Z

Bibliography

1. Lagerlund, Henrik. 2009. "Avicenna and Tusi on Modal Logic." *History and Philosophy of Logic* no. 30:227-239.

"In this article, the author studies some central concepts in Avicenna's and Tusi's modal logics as presented in Avicenna's *Al-Isharat* (*Pointers and Reminders*) and in Tusi's commentary. In this work, Avicenna introduces some remarkable distinctions in order to interpret Aristotle's modal syllogistic in the *Prior Analytics*. The author outlines a new interpretation of absolute sentences as temporally indefinite sentences and argues on the basis of this that Avicenna seems to subscribe to the Principle of Plenitude. He also shows that he has no valid proof of the modal conversion rules and that he uses some rather ad hoc distinctions to show that Aristotle's modal syllogistic is correct. The author also notes some interesting differences between Avicenna's and Tusi's approaches to modal logic."

20. ———. 2004. *Probing in Islamic Philosophy. Studies in the Philosophies of Ibn Sina, al Ghazali and Other Major Muslims Thinkers*. Binghamton: Global Academic Publishing.

"Part I is devoted to Ibn Sina (Avicenna), noted for his refining the distinction between essence and existence, which constitutes the basis for his proof of God's existence and for his significant theory of the universals. The second part is devoted to Avicenna's theologian critic, Ghazali, noted for his argument that a necessary causal connection between natural events can be proved neither logically nor empirically. The third part pertains to various central themes in Islamic philosophy and includes discussions of the thought of such philosophers as Kindi, Razi, Ibn Tufayl, and Ibn Rushd (Averroes). It concludes with a discussion of on the issues that divided the Islamic theologians, namely whether the value of the moral act is intrinsic to it or whether it is solely derived from the religious law."

Contents:

I. Avicennan studies

Preface VII; Avicenna's *Division of the Sciences* in the *Isagoge* of his *Shifa* 1; Avicenna's metaphysics (from Encyclopedia Iranica) 15; Avicenna's *Chapter on Universals* in the *Isagoge* of his *Shifa*' 31; Quiddity and universality in Avicenna 57; Some aspects of Avicenna's theory of God's knowledge of particulars 67; Avicenna and the Kalam 91; Avicenna's proof from contingency for God's existence in the *Metaphysics* of the *Shifa*' 123; Avicenna on primary concepts in the *Metaphysics* of his *Shifa*' 141; Avicenna and the problem of infinite number of souls 161; Avicenna's "Flying man" in context 169; Avicenna's theory of prophecy in the light of Ash'arite theology 185;

II. Ghazalian Studies

The logical role of the argument from time in the *Tahafut*'s second proof for the world's pre-eternity 207; Ghazali and demonstrative science 217; Ghazali on ethical premises 247; Al-Ghazali on bodily resurrection and causality in the *Tahafut* and *Iqtis'ad* 253; Ghazali's Chapter on Divine power in the *Iqtis'ad* 279;

III. Other Studies

(With John Rist), Al-Kindi's discussion of divine existence and oneness 315; The fortuna of the *Posterior Analytics* in the Arabic Middle Ages 331; Divine Omniscience and future contingents in Alfarabi and Avicenna 349; The Islamic philosophers' conception of Islam 363; The philosopher and society: some medieval Arabic discussions 381; A medieval Islamic argument for the intrinsic value of the moral act 395.

23. McGinnis, Jon. 1999. "Ibn Sina on the Now (A new translation with commentary of a section of Avicenna's *Physics*)."
American Catholic Philosophical Quarterly no. 73:73-106.

"Ibn Sina's *Treatise on the Now* is philosophically deep analysis of Aristotle's temporal theory.

The text is translated and discussed, with particular attention to both its un-Aristotelian and uniquely Avicennian aspects. Among the former is his conception of time as the flow of the now, a view found among Aristotle's later commentators, but absent from Aristotle himself. Ibn Sina's originality emerges most vividly in his solution to Aristotle's paradox against a "flowing" or changing now ("Physics" iv 10, 218a8-21). Ibn Sina's answer conceives of the now analogously to our contemporary mathematical notion of a limit."

25. ———. 2006. "A penetrating question in the history of ideas: space, dimensionality and impenetrability in the thought of Avicenna." *Arabic Sciences and Philosophy* no. 16:47-69.

"Avicenna's discussion of space is found in his comments on Aristotle's account of place. Aristotle identified four candidates for place: a body's matter, form, the occupied space, or the limits of the containing body, and opted for the last. Neoplatonic commentators argued *contra* Aristotle that a thing's place is the space it occupied. Space for these Neoplatonists is something possessing dimensions and distinct from any body that occupies it, even if never devoid of body. Avicenna argues that this Neoplatonic notion of space is untenable on the basis of three arguments. In general he maintains that bodies' impenetrability is explained by reference to dimensionality. Avicenna argues that the method used to arrive at the possibility of space is illicit, and so Neoplatonist cannot show that space is even possible. Thus, concludes Avicenna, Aristotle's initial account must be correct.

The paper outlines the historical context of this debate and then treats Avicenna's arguments against space in detail."

26. ———. 2010. *Avicenna*. New York: Oxford University Press.

"Nearly three hundred works have been attributed to Avicenna. Moreover, even if one limits oneself to Avicenna's philosophical encyclopedias, he wrote no less than three (extant) *s ummas*, whose content, organization, and presentation can at times differ significantly. Additionally, recent scholarship has begun making a case that Avicenna's thought underwent an evolution, and so the problems of dating his works (even the encyclopedias) and determining what are his "mature" views arise. In order partly to address this last issue, I decided to focus primarily on Avicenna's philosophical system as it appears in his most extensive and well-known encyclopedic work, the *Cure (ash-Shifa)*, albeit in places drawing significantly on his other extant encyclopedias—particularly the *Salvation (an-Najat)*, and to a lesser extent *Pointers and Reminders (al-Isharat wa-t-tanbihat)* as well as his *Canon of Medicine (Qanun fit-tibb)*. Unfortunately, this meant that I gave rather short shrift to Avicenna's shorter specialized treatises as well as his *Discussions (Mubahathat)* and *Glosses (Ta'liqat)*, even though I recognize that these works frequently have a more fully developed presentation of certain technical and tricky points. Also because of this self-imposed limit, I have thought it prudent not to take up the issue of intellectual development, not because I deny that it occurred or that it is not important, but because in the end I think that presenting a roughly unified Avicennan system of thought as it appears predominantly in the *Cure* will be more useful for those readers who are interested primarily in getting some initial sense of Avicenna's overall philosophy as well as providing a starting point for scholars who want to explore systematic developments in his thought.

Even limiting myself to the *Cure*, however, presented problems, for what one quickly discovers is that Avicenna is indeed a systematic thinker, weaving and interlacing a few very basic concepts, ideas, and arguments throughout a legion of diverse philosophical topics and problems. Consequently, in order to

appreciate some move he makes, for example, in metaphysics, one must first understand the problem that he is addressing, which might have arisen initially in physics or medicine. Similarly, the value of some Avicennan notion, which might seem peculiar or even gratuitous—such as his doctrine of the Giver of Forms, which is virtually unique to his system—can be fully grasped only by seeing how it provides him with a single solution to a score of seemingly diverse philosophical problems that in fact Avicenna reveals to have a common ailment and so require a common cure. Moreover, often one cannot properly appraise Avicenna's philosophical contribution without first understanding the historical context and problematic to which he is responding. In short, what I had hoped to be a relatively concise presentation of Avicenna's philosophical system quickly grew into a somewhat lengthy tome as I tried to provide the necessary pieces needed to get some sense of the beautiful and, were it possible, almost seamless mosaic that is his system. I can only hope that the present work does justice to the systematic nature of Avicenna's unique philosophical mind." (From the Preface, XI-XII)

28. Mondin, Battista. 1999. "La metafisica di Avicenna." *Sapienza* no. 52:257-279.

"Avicenna is not only the greatest metaphysicians of Arabic philosophy, but through his excellent paraphrasis of Aristotle's "Metaphysics", he contributed to the knowledge of metaphysics among the Christian scholastics; and his influence on William of Auvergne, Albert the Great, St. Thomas Aquinas and Duns Scotus was quite strong. The present article analyzes the object and properties of metaphysics according to Avicenna; then it explains the structure of metaphysics, the four causes, the real distinction between essence and existence, and between the necessary and the possible, the proof of God's existence the attributes of God and the meaning of divine names, the origin of the world through emanation, divine providence and the problem of evil. The study is mainly based on the *Kitab al-Shifa*."

Contents: A introduction to Ibsn Sins's ontology 1; 1. Philosophical analysis and Ibn sina's essence-existence distinction 33; 2. The logic of Emanationism and Sufism in the philosophy of Ibn Sina (Avicenna) 57; 3. A third version of the ontological argument int eh Ibn Sinian *Metaphysics* 117; 4. The analysis of "Substance" un Tusi's *Logic* and in the Ibn Sinian tradition 165; 5. two senses of mysticism in the Neoplatonic and Sufic tradition 207-239.

"Summary: The enclosed collection of essays focuses on the ontology of the most important medieval Muslim philosopher, ibn Sina (980-1037), proffering the theses that: (a) his ontology is incompatible with monotheistic theologies; (b) his cosmogony is not derivable from either Aristotelian or Neoplatonic systems; and finally (c) the mystical dimension of his system is in accord with monistic "nature mysticism," as classified by R. C. Zaehner*. In contrast to the views of majority of contemporary scholars that ibn Sina's philosophy essentially follows monotheistic or Greek philosophical systems, this collection emphasizes his original contributions to ontology and meta-mysticism."

"This paper deals with the meaning of "wujud" and "mahiyyah" in various schools of Islamic thought. It begins by turning attention to the significance of this subject for Islamic philosophy as well as theology and even certain schools of sufism. It traces the history of the subject from Al-Farabi and Ibn Sina to Suhrawardi, Fakhr al-din Al-Razi and later Islamic philosophers such as Mir Damad and Mulla Sadra. The essay then deals with the basic distinctions made by Ibn Sina between necessity, contingency and impossibility which forms the basis of the ontology of Islamic philosophers."

43. ———. 2002. "A New Standard for Avicenna Studies." *Journal of the American Oriental Society* no. 122:562-577.

This is a review article of: *Ibn Sina, lettre au vizir Abu Sa'd: Editio princeps d'après le manuscrit de Bursa*, traduction de l'arabe, introduction, notes et lexique, by Yahya Michot. Sagesses musulmanes 4. Beirut: Éditions al-Boraq. 2000.

"Yahya Michot's recent contribution marks an important advance in the study of Avicenna's life and thought, not only because it offers a critical edition, translation, and commentary of a relatively unknown letter by Avicenna (the *Letter to the Vizier*), but also because it emphasizes the importance of historiographical and philological methods. However, many of Michot's conclusions concerning the historical context of a number of Avicenna's works, as well as his decision to publish preliminary editions and translations of these works, are open to serious criticism. Many of these historical questions are addressed here, along with manuscript and recension studies of Avicenna's *usul ilm wa-hikma* and *al-Ahd*."

44. ———. 2009. "Avicenna's Enthymeme: A Pointer." *Arabica* no. 56:529-542.

"In reaction to earlier scholarship on the role of Aristotelian political theory among medieval Arabic-writing intellectuals, this paper argues that another approach of those intellectuals might more profitably be followed: that of the role of rhetorical speech. That political speech is investigated in Aristotle's *Rhetoric* makes it a suitable candidate for such a pursuit. However, what the present investigation concludes is that even

this aspect of political theory by way of the Rhetoric also was not perceived to warrant investigation among medieval Arabic-writing intellectuals. In a review of all constituents of Greek political theory as it is now understood, this paper finds that there was one aspect of rhetorical speech that captivated the attention of these writers: the use of the enthymeme in speech patterns. Drawing on the writings of Avicenna, the author concludes that, instead of the application of the enthymemic construction of political rhetoric, Avicenna perceived yet another arena for its applicability: the training of philosophy students."

47. ———. 1963. *Studies in the History of Arabic Logic*. Pittsburgh: Pittsburgh University Press.

"In the ten essays brought together in this volume, the author discusses different aspects and problems related to the intellectual history of Islam and centered around logical and philosophical issues. the guiding line is that Arabic logic is entirely western and has nothing to do with "oriental philosophy." Six of the essays have appeared in different journals. The first essay, written especially for this volume, gives a brief account of the history of Arabic logic. The other essays deal with particular texts and problems related to the writings of such thinkers as Al-Farabi, Al-Kindi, Avicenna, Abu 'l-Salt of Denia, Averroes. The book contains extensive bibliographical references, documentary and critical notes."

48. ———. 1964. *The Development of Arabic Logic*.

"The book begins with a chapter on the "First century" of Arabic logic which is understood to be a period of transmission, translation and assimilation of mainly Alexandrian Aristotelianism.

The author relates how toward the end of the development of Arabic logic the initial relationship which logic bore to medicine, mathematics and astronomy was replaced by a new kinship with the Islamic "sciences" of theology, law, philology and rhetoric."

52. Rizvi, Sajjad. 2000. "Roots of an aporia in later Islamic philosophy. The existence-essence distinction in the metaphysics of Avicenna and Suhrawardi." *Studia Iranica* no. 29:61-108.

"The distinction between existence and essence in contingent beings is one of the foundational doctrines of medieval philosophy. Building upon the Aristotelian logical distinction between a thing and its existence, Avicenna posited the distinction as a proof for the radical contingency of creation. However, one Islamic philosopher, who had an enormous influence on the development of philosophical discourse in Iran, subverted the traditional Peripatetic vision of reality and disputed the ontological nature of existence. Through a critique of the Peripatetic notion of existence, Suhrawardi denied that the term had 'reference' and demonstrated the irrelevance of the distinction for metaphysical inquiry, which should, instead, rely upon an eidetic vision of the 'hierarchy of lights'. The synthesis of these two views led to the crystallisation of Mullâ Sadrâ Shirâzi's famous doctrine of the 'primacy and systematically graded nature of being'."

57. ———. 2005. "Le statut ontologique de l'image dans la doctrine avicennienne de la perception." *Arabic Sciences and Philosophy* no. 15:109-140.

"Our goal in this article is to show that the analysis of Avicenna's doctrine of perception enables the isolation of two distinct concepts of the image. In the first part, we examine the passages in which Ibn Sina characterizes the image, in agreement with the ancient conception, as the material replica of a concrete reality formed in the faculty-organs by reification. We then undertake to read his doctrine of perception in the light of the discussion of the essence or common nature, which in itself is indifferent to unity and plurality. This reading enables us to show that for Ibn Sina, the common element of the various representations--sensible, imaginative, and intellective--is the quiddity as it is in itself. Each of these representations adds to the quiddity an intention of universality or of particularity."

61. Street, Tony. 2001. "'The eminent later Scholar' in Avicenna's *Book of the Syllogism*." *Arabic Sciences and Philosophy* no. 11:205-218.

"Avicenna refers on a number of occasions in his *Book of the Syllogism* to "the eminent later scholar" (*al-fadil min al-muta'ahhirin*). At least three recent studies have argued or assumed that this eminent later scholar is Alexander of Aphrodisias.

It is argued in this article that Avicenna is in fact referring to Alfarabi. This has consequences for reconstructing the lost first part of Alfarabi's *Great Commentary on the Prior Analytics*, for highlighting certain aspects of Alfarabi's logical doctrines, and for understanding more about the relation between Avicenna and Alfarabi in matters logical."

62. ———. 2002. "An Outline of Avicenna's Syllogistic." *Archiv für Geschichte der Philosophie* no. 84:129-160.

"This study presents an outline of Avicenna's categorical syllogistic with divided modal premises. It is hoped that this will encourage further analysis of the system and, ultimately, the production of a formal semantics for it. The study also takes note of some of the problems in Avicenna's system which motivated the later logicians to introduce modifications into it. Finally, the study proposes translations for a number of the Arabic terms of art."

68. ———. 1982. "Transmission d'Avicenne a l'Occident Latin. Les cheminements l'histoire." *Revue de Théologie et de Philosophie* no. 114:51-64.
"During the last years a critical edition of two important works of Avicenna according to their Latin medieval translation has been published: "De anima" and "De philosophia prima". This translation dates back to the 12th century: as far as the "De anima" is concerned the translation was made with the help of a Jewish philosopher, Ibn Daoud, who was probably assisted by Dominicus Gundisalvi. Both translations were very influential in the Latin West: the doctrines expressed in them were widely accepted (with some restrictions) and were never censured by the Church."

"Avicenna's appeals to thingness occur most densely in passages devoted to analyzing the relationship between efficient and final causes, an entirely Aristotelian topic. A philological question arises: should these passages be emended to real causality (*sababiyya*) in place of thingness (*say'iyya*)? I argue that the balance of evidence compels us to retain

thingness. For Avicenna, thingness is the respect in which the final cause is prior to the efficient cause (as well as to the formal and material causes); existence, by contrast, is the respect in which the efficient cause is prior to the final cause. In fact, over the course of Avicenna's career a progression from the *kalam* problematic of *say' v. mawgud* to his own problematic of *mahiyya v. wugud* can be detected in his discussions of efficient and final causation."

Metaphysics or Ontology? The Debate about the Subject-Matter of First Philosophy

Introduction

"As it now exists, the subject of metaphysics can be described by a distinction that became standard in the seventeenth and eighteenth centuries. (*) According to this distinction, metaphysics has two principal divisions: general metaphysics and special metaphysics. *General metaphysics* includes ontology and most of what has been called universal science; it is concerned, on the whole, with the general nature of reality: with problems about abstract and concrete being, the nature of particulars, the distinction between appearance and reality, and the universal principles holding true of what has fundamental being. *Special metaphysics* is concerned with certain problems about particular kinds or aspects of being. These special problems are associated with the distinction between the mental and the physical, the possibility of human freedom, the nature of personal identity, the possibility of survival after death, and the existence of God. The traditional subject of what is real as opposed to what is mere appearance is treated in both general and special metaphysics, for some of the issues relevant to it are more general or fundamental than others." (p.11)

Notes

(*) See, for example, Baruch Spinoza, "Thoughts on Metaphysics," in *Earlier Philosophical Writings*, trans. Frank A. Hayes (Indianapolis, 1963), pp. 107-61. See also the note on "Pneumatology" in G. W. von Leibniz, *New Essays on Human Understanding*, trans. Peter Remnant and Jonathan Bennett (Cambridge, Eng., 1981), p. LXIV.

From: Bruce Aune, *Metaphysics. The Elements*, Oxford: Basil Blackwell 1986.

"The term 'metaphysics' as the name of the discipline is taken from the title of one of Aristotle's treatises. Aristotle himself never called the treatise by that name; the name was conferred by later thinkers. Aristotle called the discipline at work in the treatise first philosophy or theology and the knowledge that is the aim of the discipline, wisdom. Nonetheless, the subsequent use of the title *Metaphysics* makes it reasonable to suppose that what we call metaphysics is the sort of thing done in that treatise. Unfortunately, Aristotle does not give us a single account of what he is up to there. In some contexts, he tells us that what he is after in the treatise is a knowledge of first causes. This suggests that metaphysics is one of the departmental disciplines, a discipline with a subject matter distinct from that considered by any other discipline. What subject matter is identified by the expression 'first causes'? Perhaps, a number of different things; but central here is God or the Unmoved Mover. So what subsequently came to be called metaphysics is a discipline concerned with God, and Aristotle tells us a good bit about the discipline. He tells us that it is a theoretical discipline. (...)

But Aristotle is not satisfied to describe metaphysics as the investigation of first causes. He also tells us that it is the science that studies being *qua* being. As this characterization gets fleshed out, metaphysics turns out to be not another departmental discipline with a special subject matter of its own. It is rather a universal science, one that considers all the objects that there are. On this characterization, then, metaphysics examines the items that constitute the subject matter for the other sciences. What is distinctive about metaphysics is the way in which it examines those objects; it examines them from a particular perspective, from the perspective of their being beings or things that exist. So metaphysics considers things as beings or as existents and attempts to specify the properties or features they exhibit just insofar as they are beings or existents. Accordingly, it seeks to understand not merely the concept of being, but also very general concepts like unity or identity, difference, similarity, and dissimilarity that apply to everything that there is. And central to metaphysics understood as a universal

science is the delineation of what Aristotle calls categories. These are the highest or most general kinds under which things fall. What the metaphysician is supposed to do is to identify those highest kinds, to specify the features peculiar to each category, and to identify the relations that tie the different categories together; and by doing this, the metaphysician supposedly provides us with a map of the structure of all that there is.(...)

In the medieval Aristotelian tradition, we continue to meet with this dual characterization of metaphysics; and like Aristotle, the medievals believed that the two conceptions of metaphysics are realized in a single discipline, one that aims both to delineate the categorial structure of reality and to establish the existence and nature of the Divine Substance. But when we reach the metaphysical writings of the Continental rationalists of the seventeenth and eighteenth centuries, we meet with a conception of metaphysics that expands the scope of the metaphysical enterprise.

Someone schooled in the Aristotelian tradition would be puzzled by this new use of the term 'metaphysics' and would likely charge that, in the hands of the rationalists, what is supposed to be a single discipline with a single subject matter turns out to be the examination of a hodgepodge of unrelated topics. Evidently, rationalists were sensitive to this sort of charge, and they sought to provide a rationale for their redrawing of disciplinary boundaries within philosophy. What ultimately emerged is a general map of the metaphysical terrain. (5) The claim was that there is a single subject matter for metaphysics; it is being. So the metaphysician seeks to provide an account of the nature of being; but there is a variety of different perspectives from which one can provide such an account, and corresponding to these different perspectives are different subdisciplines within metaphysics. First, one can examine being from the perspective of its being just that -- being. Since this represents the most general perspective from which one can consider being, the branch of metaphysics that considers being from this perspective was dubbed *general metaphysics*. But the rationalists insisted that we can also examine being from a variety of more specialized perspectives. When we do, we are pursuing this or that branch of what the rationalists called *special metaphysics*. Thus, we can consider being as it is found in changeable things; we can, that is,

consider being from the perspective of its being changeable. To do so is to engage in cosmology. We can, as well, consider being as it is found in rational beings like ourselves. To consider being from this perspective is to pursue that branch of special metaphysics the rationalists called rational psychology. Finally, we can examine being as it is exhibited in the Divine case, and to examine being in this light is to engage in natural theology. Pretty clearly, the rationalist notions of general metaphysics and natural theology correspond to the Aristotelian conceptions of metaphysics as a thoroughly universal science that studies being qua being and as a departmental discipline concerned with first causes; whereas the claim that metaphysics incorporates cosmology and rational psychology as branches expresses the new and broader scope associated with metaphysics in the rationalist scheme." (pp. 2-5)

Historical division of metaphysics in a nutshell

"*Metaphysics (ta meta ta phusika)* names a discipline practiced, from the 2nd cent. C.E. on, by the 'Peripatetic and Platonic schools, and also names two "classic" early Peripatetic texts, a long treatise by Aristotle and a short one by Theophrastus. The phrase *ta meta ta phusika* is first attested, as a title for both treatises, in Nicolaus of Damascus (1st cent. C.E.), but is probably earlier as a title for Aristotle's work. While the title comes from the arrangement of this treatise after Aristotle's physical works, this arrangement is determined by the perceived logical order of the subjects of Aristotle's different treatises and the recommended order for instruction; there is no basis for the modern legend that the title originates in a library catalogue. (The systematic arrangement of Aristotle's works is often credited to Andronicus of Rhodes [1st cent. B.C.E.], but the texts had clearly been given some systematic and pedagogical order before Andronicus' edition; it is controversial how far Aristotle himself intended this order.) The Phrase "*ta meta ta phusika*" is intended as equivalent to Aristotle's "wisdom," "first philosophy," and "*theologikê*." Its advantage over these other names is that it is more specific. Thus the Stoics use "*theologikê*" to name

the discipline that studies gods or divine things; but since these gods are themselves natural bodies, t *theologikê* is a part of physics, although it may be the final, crowning part of physics, and although Cleanthes distinguished it from physics in a stricter sense (D.L. 7.41). The title "*ta meta ta phusika*," for a discipline occupying the same place as Stoic *theologikê*, makes it clear that the divine objects to be studied (unlike the divine objects studied in Aristotle's *De Caelo*) are beyond the physical world.

Although Aristotle uses "wisdom" and "first philosophy" for the same discipline, these names are not interchangeable and are used in different contexts. "Wisdom" (discussed mostly in ethical contexts) designates a certain intellectual virtue, namely, whatever knowledge is most desirable for its own sake and not for any practical consequences. "First philosophy" specifies the object of this knowledge and contrasts it with other disciplines: If there were only physical substances, then "physics would be the first science" (Met. 1026a27-9), but if (as Aristotle thinks) there are eternal unchanging substances separate from matter, then first philosophy can be *contrasted* with physics as the science of the best and divine kind of substance. Aristotle thinks that none of the existing sciences will do as first philosophy. In the early *Topics* (105b19-29) Aristotle recognizes the tripartition of logic, "physics," and "ethics" elsewhere credited to his Academic contemporary Xenocrates, in which all *theoretical* philosophy (knowledge pursued only for its own sake) would fall under physics. But now Aristotle seeks a further theoretical discipline. One candidate would be Platonic dialectic, which, beyond examining hypotheses by question and answer, also classifies and defines and so seeks to grasp the eternal Forms of the definienda. Aristotle admires the practice of dialectic and the ideal of a universal presuppositionless science, but rejects Plato's exaggerated claims for dialectic. Aristotle contrasts dialectic (which aims at defending or refuting, before a general audience, the claim that S is P) with the specialized causal investigations (seeking the real reason why S is P), which alone can produce scientific knowledge. The knowledge (and the scientific definitions) of the forms of natural things can be grasped only by physics, not by dialectic; and the forms reached in this way are not separate eternal stances but depend for their existence on matter. If separate eternal

substances do exist, then they can be known (if at all) only by another causal inquiry, which, unlike physics, would lead us from manifest sensible effects to a cause separate from sensible things.” (pp. 335-336)

From: Stephen P. Menn, "Metaphysical thought, Classical", in: Donald J. Zeyl (ed.), *Encyclopedia of Classical Philosophy*, London: Fitzroy Dearborn Publishers 1997.

"Aquinas divided *sapientia* into *metaphysica* (being as being), *prima philosophia* (first principles), and *theologia*. This scheme remained intact until early modern times. It was replaced by Christian Wolff, who divided metaphysics into general and special, calling general metaphysics, the science of being as being, by the name '*ontologia*' (...)

Special metaphysics was now divided into the three branches of rational theology, rational psychology, and rational cosmology, namely the (rational) sciences of God, souls and bodies respectively, which in fact correspond in subject matter to the divisions of Aristotle's second philosophy. Kant's 'metaphysics of nature', subordinated to epistemology, was divided similarly into a general part, ontology, opposed to the physiology of reason, itself divided into two 'transcendent' parts (rational theology, rational cosmology) and two 'immanent' parts (rational psychology and rational physics). Husserl gave the discipline of being the name of ontology, but divided it into formal ontology and several material or regional ontologies. Formal ontology deals with formal ontological concepts, those concerned with objects in general, as distinct from formal logical concepts, those concerned with truth and inference. Regional ontologies study the most general concepts and principles of the principal regions of being, including physical nature, consciousness, mathematics and the divine. Husserl himself spent much of his time on methodological issues and his regional ontologies were only sketched. Husserl's student Ingarden divided ontology into existential, formal and material. Existential ontology is concerned with what he called moments of existence, like forms of dependence, modality and temporality, which are combined into modes of being. Formal ontology studies different objects according to their form (thing, property, event, process, relation, state of affairs, system),

material ontology according to their kind (spatio-temporal, psychological, divine'. For Ingarden 'metaphysics' denotes among all possible ontologies the one that is actual." (p. 312)

The Debate about the Subject-Matter of First Philosophy in German Renaissance Philosophy

"The earliest German textbook on metaphysics was published by the Wittenberg professor Daniel Cramer in 1594, two years before Taurellus' *Synopsis*. Cramer's *Isagoge in Metaphysicam* is a very modest attempt to present the contents of Aristotle's *Metaphysics*, but the work is important because its basic structure was retained in other early German textbooks. After a preface on the subject-matter of metaphysics, he reversed the order of the two central sections of Aristotle's work, dealing in his book I with the properties of being (act and potency, *ens per se* and *ens per accidens*, the transcendentals), in his book II with its principles (the categories and the principles of natural substance) and finally in his book III with its species (the intelligences). Cramer's work was not strictly a commentary on the *Metaphysics*, but rather a textbook written in the form of questions and answers on points of metaphysical doctrine. The treatises of his successors were also independent of Aristotle's text and sought to apply and develop his thought. (...)

Decisive for the development of German metaphysics as the science of being was the publication of Suárez' *Disputationes metaphysicae* at Mainz in 1605, eight years after its first publication at Salamanca. Suárez' work was well suited to the purposes of the Lutheran thinkers. (...)

The influence of Suárez' approach may be observed as early as the works of Cornelius and Jakob Martini and most clearly in the *Opus metaphysicum* (1617) and *Epitome metaphysica* (1618) of Christoph Scheibler, professor of logic and metaphysics at Giessen.

In spite of such efforts to maintain the integral character of metaphysics, Lutheran writers came increasingly to regard an independent natural theology as a necessity. They distinguished between traditional metaphysics, as a discipline which had the task of explaining certain generally valid terms and principles, and a discipline which was often called *pneumatologia* because it dealt with the nature, properties and activities of spiritual being. (...)

Scheibler himself contributed to the distinction of the two subjects by publishing a separate textbook on *Theologia naturalis* (1621). In the preface to this work he gave a practical reason for treating the subject separately -- to limit the extent of his general treatment of metaphysics -- but the division was in fact a natural consequence of his own distinction between a *metaphysica generalis* and a *metaphysica specialis*. Also contributory to the separation of the two sciences was the publication at Cologne in 1595 of the *De communibus omnium rerum naturalium principiis* of the Jesuit Benito Pereira. The Wittenberg professor Johannes Scharf referred in the preface to his *Pneumatica* (1629) to Pereira's distinction between first philosophy as the science of being and metaphysics as the science of God, and maintained that it was well founded. (...)

The publication at Basle in 1594 of Jacopo Zabarella's *Opera logica* played an important role in this development. Whereas the theoretical sciences employ a synthetic method in the presentation of doctrine, drawing conclusions from first principles, the practical sciences make use of an analytic method -- described by Zabarella -- which takes as its point of departure the end or purpose of an action and seeks to discover the means and principles by which this end might be attained. (...)

Consequently, whereas Lutheran writers on metaphysics sought to maintain the unity of Aristotle's science and only reluctantly admitted the necessity of an independent natural theology, Calvinist authors tended to distinguish clearly between two sciences, a science of God to the extent that he is accessible to human reason and a science of being understood as a universal science which supplies the principles for all the particular sciences.

For the formulation of the distinction they turned to the Jesuit Benito Pereira. In the preface to his *Isagoge in primam*

philosophiam (1598) the Marburg professor Rudolphus Goclenius spoke of two separate sciences, a universal science called 'first philosophy' and a particular science called 'metaphysics'. First philosophy deals with being, its properties and its principles; metaphysics studies the various types of immaterial being: God, the intelligences and the human soul. Goclenius composed no treatise on metaphysics as the science of God, but his *Isagoge* is an introduction to first philosophy as the science of being. The work has two parts, the second of which deals with individual questions in the form of disputations. The first part, entitled *Praecepta metaphysica*, contains his complete treatment of the science. The first chapter deals with the definition of first philosophy and the notion of being, chapter 2-15 take up the simple and conjunct properties of being and the last three chapters treat substance and accident as its principles.

Goclenius seems to have been aware of the difficulties involved in restricting the term 'metaphysics' to the science of God while speaking of the science of being as 'first philosophy'. In his *Lexicon philosophicum* (1613) he made a new and important addition to philosophical terminology. In the article on abstraction he divided the speculative sciences according to the types of abstraction from matter that characterise them; that employed in physics he described as 'physical', that made use of in the science of God and the intelligences as 'transnatural' and that used in the science of being and the transcendentals as 'ontological'.' (pp. 13-19) The term occurs here in its adjectival form, but it soon appeared as a noun. The term 'ontology' made it possible to recognise the claim of the science of being to be metaphysics just as much as the science of God. It was in this way that the term 'metaphysics' came to designate both the universal science of 'first philosophy' or 'ontology' and the particular or special science of 'natural theology'." (pp. 626-632, notes omitted).

From: Charles H. Lohr, "Metaphysics", in: Charles B. Schmitt (ed.), *The Cambridge history in Renaissance philosophy* Cambridge: Cambridge University Press, 1988, pp. 537-638.

"Lutheran Aristotelianism

(...) (31)

By appealing to the philosophical idea of God, Lutheran theologians were to be able to respond to the threat to Orthodoxy which came from some extremist theologians, who maintained not only that the doctrines of faith could not be proved, but also that they are contrary to reason. Distinguishing clearly between that which belongs to reason and that which belongs to revelation, Calixt (*) maintained that reason in its own sphere cannot contradict revelation. The philosophical idea of God which man is able to attain is not such that we can say that it conflicts with the revealed idea. This approach may be observed in the works of Cornelius and Jakob Martini and most clearly in the *Opus metaphysicum* (1617) and *Epitome metaphysica* (1618) of Christoph Scheibler, professor of logic and metaphysics at Giessen.(32)

In this way a new understanding in Lutheran Orthodoxy of the nature and method of revealed theology brought about a distinction between metaphysics as the science of being and metaphysics as natural theology. Lutheran writers came increasingly to regard an independent natural theology as a necessity. They distinguished between traditional metaphysics as a discipline which had the task of explaining certain generally valid terms and principles, and a discipline which was often called *pneumatologia* because it dealt with the nature, properties and activities of spiritual being. Scheibler contributed to the distinction of the two subjects by publishing a separate textbook on *Theologia naturalis* (1621).

This understanding of the relationship between philosophy and theology opened the way for the free development in Lutheranism of natural theology as a theoretical science -- using the synthetic method -- distinct from the practical science of revealed theology -- using the analytic method.

Calvinist Aristotelianism

The analytic method had little success in those German territories -- like the Palatinate, Nassau, Hesse-Kassel and several smaller principalities -- which leaned towards Calvinism. In accordance with the architectonic spirit of Calvinist Scholasticism; (33) Reformed theologians at the universities of Heidelberg and Marburg and later at Herborn and Burgsteinfurt regarded their science as essentially speculative and followed the synthetic method in the presentation of

doctrine. Rejecting the Lutheran transposition of the tracts on salvation and soteriology in systematic works on theology, they took the glory of God and predestination as their point of departure.

Reformed dogmatics began with God as the first cause and final goal of all things, and treated his eternal decrees of providence and predestination before taking up his government of the world in time. In this conception natural theology formed an integral part of the *cognitio Dei perfecta* at which theology aimed.

Consequently, whereas Lutheran writers on metaphysics only reluctantly admitted the necessity of an independent natural theology, Calvinist authors tended to distinguish clearly between two sciences, a science of God (to the extent that he is accessible to human reason) and a science of being (understood as a universal science which supplies the principles for all the particular sciences).

Thus the Marburg professor Rudolph Goclenius (34) in the preface to his *Isagoge in primam philosophiam* (1598), spoke of two separate sciences, a universal science called 'first philosophy' and a particular science called 'metaphysics'. First philosophy deals with being, its properties and its principles; metaphysics studies the various types of immaterial being: God, the intelligences and the human soul.

Goclenius seems to have been aware of the difficulties involved in restricting the term 'metaphysics' to the science of God while speaking of the science of being as 'first philosophy'. In his *Lexicon philosophicum* (1613) he made a new and important addition to philosophical terminology. In the article on abstraction he divided the speculative sciences according to the types of abstraction from matter that characterize them; that employed in physics he described as 'physical', that made use of in the science of God and the Intelligences as 'transnatural' and that used in the science of being and the transcendentals as 'ontological'. The term 'ontology' made it possible to recognize the claim of the science of being to be metaphysics just as much as the science of God. It was in this way that the term 'metaphysics' came to designate both the universal science of 'first philosophy' or 'ontology', and the particular or special science of 'natural theology'." (pp. 290-291)"

4. "Aquinas on Separate Substances and the Subject Matter of Metaphysics." 2011. *Documenti e studi sulla tradizione filosofica medievale* no. 22:347-382.

Abstract: "Scholars who consider Thomas Aquinas's metaphysics have dedicated much attention to his account of how the separate substance known as God is related to the subject matter of metaphysics, *ens commune*. Little attention, however, has been paid

to his account of how created separate substances, which theologians call 'angels', are related to this subject matter. Indeed, Thomas himself does not address this topic in detail. To the extent that he does, his considerations seem somewhat inconsistent. On

the one hand, he presents created separate substances as principles or causes of *ens commune*, suggesting that they are not included under this subject matter. On the other hand, he also treats them as substances or beings, suggesting that they are somehow included under *ens commune*. This article attempts to show that despite Thomas's seemingly contradictory treatment of this topic, one can nevertheless discern in his writings a coherent and consistent account of how created separate substances are related to the subject matter of metaphysics."

Abstract: "This contribution offers a first-hand impression of Bartolomeo Mastri's *Disputations on Metaphysics*, the single most important work on metaphysics produced in the Scotist school during the Early Modern period.

I shall highlight a selection of key passages that convey an impression of this work's historical-literary context, its subject matter, its main motifs, and scientific aims, but also its limitations. Notably, we see Mastri

emphasizing the theological aspect of metaphysics, though he in the end refrains from exploring this aspect of metaphysics within his work on metaphysics. I suggest that this discrepancy between Mastri's concept

of metaphysics and his practice of metaphysics showcases the difficulty of organizing this discipline during the period of transition from the traditional commentary format, typical of medieval scholasticism, to the

Early Modern scholastic *Cursus philosophicus* literature."

Abstract: "For more than four decades around the middle of the sixteenth century, Giacomino Malafossa from Barge († 1563) held the Scotist chair of metaphysics at the University of Padua. In his *A Question on the Subject of Metaphysics, in Which Is Included the Question, Whether Metaphysics Is a Science*, he developed a remarkable stance on the subject matter of metaphysics. Metaphysics has two objects: being qua being and God. However, only when it deals with the latter object can it be said to be a science in a strict sense. The reason is that the strict Aristotelian notion of science presupposes that the object of any science has demonstrable properties, which is the case with God, but not with being as being. Although being qua being does have certain properties, namely the transcendentals, these cannot be truly demonstrated. Malafossa's *Quaestio* bears witness both to the clash between Averroism and Scotism at the Italian Renaissance universities and to the complexity of the Scotist tradition itself. This introductory article highlights Malafossa's sources and traces the critical reception of his views among later Scotist authors."

16. ———. 2022. "On the Arabic Titles of Aristotle's *Metaphysics*. The Case of "Book of Letters"." *Quaestio. Yearbook of the History of Metaphysics* no. 22:107-146.

Abstract: "The article has three interrelated aims. First, to document that the title "Book of Letters", despite its fame, was far from being 'traditional' in Arabic philosophy, as it is often presented, but it rather served as a temporary designation of the *Metaphysics* in Arabic. Apart from later derivatives, this title is attested only four times, in different forms, in writings of the IV/X century, with no trace beforehand and a life-span of a few decades, from the time of the translation activity of Abu-Biṣr Matta- (d. 328H/940) until the composition of an ethical work by Miskawayh (written between 358H/968 and 360H/970) and of the *Fihrist* (377H/987-8). This title soon disappeared from the philosophical scenario in the course of the V/XI century, when it apparently lost currency in philosophical contexts.

The second aim is to shed some light on the origin of this expression. "Book of Letters" as a title of the *Metaphysics* comes, in fact, from a cultural environment different from the Arabic-Islamic one, namely from the Syriac tradition of Greek philosophy, or from its Pahlavi offshoots. The Syriac provenience is indicated by the first known user of this expression, Paul the Persian (VI c. CE). It is corroborated by the Syriac background of some parts of Alexander of Aphrodisias' commentary on the *Metaphysics* preserved in Arabic, in which all the treatises of the *Metaphysics* are systematically designated through letters. The third aim is to explain the waning of the title under discussion with reference to Avicenna (Ibn Sī-na-, d. 428H/1037) and his renewal of philosophical nomenclature in the V/XI century.

The author of the *Book of the Cure/Healing* (*Kita-b al-Šifa - '*) not only neglected the title at stake, as already others had done before him: in his masterpiece on metaphysics, he also proposed a new and alternative denomination of Aristotle's eponymous work ("First Teaching", *al-ta 'l-m al-awwal*), which condemned to irrelevance the textual content of the

Metaphysics and a fortiori its material arrangement in distinct treatise designated by means of letters."

17. Biard, Joël. 2003. "God as First Principle and Metaphysics as a Science." In *The Medieval Heritage in Early Modern Metaphysics and Modal Theory, 1400-1700*, edited by Friedman, Russell L. and Nielsen, Lauge Olaf, 75-98. Dordrecht: Kluwer.

"In Aristotelian "first philosophy" (*prote philosophia*), wisdom is defined as 'the search for first causes and first principles.' (1) Thus, first philosophy is defined as the highest, governing science, even before its object has been determined, i.e. before knowing the precise number and the nature of these first principles, whether nature (*phusis*), being (*to on*), God, or, as Aristotle himself is inclined to think in *Metaphysics* VII (Z), *ousia*. The very claim that God is first principle -- if such a principle exists -- emerged in the field of philosophy. Before Aristotle, Anaxagoras had already characterized the *nous* as divine. Further, as we have seen, the question of the nature and existence of a first principle is a crucial one for determining the status of the "highest science" for which Aristotle was looking in the *Metaphysics*. In a situation like this, a confrontation with the doctrine of the great revealed religions was unavoidable. This began in the period of the Alexandrian commentaries, continued in the Arabo-islamic world, and the Latin Middle Ages inherited this rich and complex tradition. In fact, for a long time, medieval Latin thinkers believed that Aristotle had written a theology, supposedly the continuation of Book XII of the *Metaphysics*. They thought that this was to be found in the small text derived from Proclus' *Elements of Theology* and entitled *Liber de causis*. Does the investigation of the natural world allow us to conclude the existence of a first principle? Following natural reason, what might prompt us to call this principle 'God'? In the highest part of philosophy, what functions does God as first principle play? Are we talking about the same God as the God of the Bible, or is this pure homonymy?

In the first part of this paper I sketch the thirteenth and fourteenth century debate concerning the object of

metaphysics, which raised the question of whether God, insofar as he is first principle, is the object of this science. Then I investigate how the first principle can be apprehended and conceived as an integral part of a discipline that proceeds according to human reason. I consequently touch on how the question of the knowability of the first principle serves simultaneously to assign the limits of metaphysics and to determine fully the extent of its validity. Finally I show that Early Modern metaphysics, specifically René Descartes, while completely abandoning the peripatetic conception of knowledge prevalent in the Middle Ages, nevertheless retains certain aspects of the medieval tradition through the use that Descartes made of a philosophical conception of God that provided a foundation for the order of nature and guaranteed our knowledge." (pp. 75-76)

Abstract "Catholic Philosophy has long acknowledged the primary place of Metaphysics, and a primary question of metaphysicians is "what is Metaphysics about?" This paper engages this primary metaphysical question through the lens of Scholastic dispute over the adequate subject matter of Metaphysics. Chrysostom Iavelli defended the position that the subject of Metaphysics is real being common to God and creatures against the position of his predecessor Dominic Flandrensis who had argued that it is categorical being to the exclusion of uncreated being. I find Flandrensis's position represented in the writings of notable contemporary Thomists, but not Iavelli's. This paper, offers a sixteenth-century Thomist's position on the subject matter of Metaphysics as a challenge to current Thomist consensus. It attempts to prompt a re-investigation of the reasons behind the current consensus both as a philosophical position and as an interpretation of St. Thomas Aquinas."

"It is in his influential encyclopedia *De divisione philosophiae*, (*) however, that Gundissalinus presents his most systematic discussion of metaphysics as a science."

(...)

"Accordingly, the following discussion is divided into three parts: firstly, an exploration of the history of the relevant terminology will show how, for the first time, Gundissalinus interpreted metaphysics as the name of a discipline (1); in a second step, I will analyze the epistemological foundation of metaphysics as an autonomous science in the chapter on metaphysics in *De divisione philosophiae*, paying particular attention to Gundissalinus's criticism of twelfth-century philosophical theology (2); thirdly, I will examine a key text of the treatise on the division of the sciences, which has received little attention so far: Gundissalinus included a translation of a passage from Avicenna's *Kitâb al-burhân* in his treatise, which discusses the difficult matter of the subordination of the philosophical disciplines under metaphysics (3)." (pp. 691-692)

(°) A Latin edition with German translation of the text may be found in: Alexander Fidora, and Dorothee Werner, *De divisione philosophiae – Über die Einteilung der Philosophie*, Herders Bibliothek der Philosophie des Mittelalters, vol. 11 (Freiburg im Breisgau: Herder, 2007). "The Arabic divisions of the sciences mainly influenced the Latin West through translations from Arabic into Latin by Dominicus Gundissalinus (1110-1190) and even more so through his own works, which rely heavily on the materials he translated¹. Like other translators from the Iberian Peninsula, Dominicus Gundissalinus – who was by far the most philosophical of the Toledan translators of the twelfth century – began to translate from Arabic into Latin with the help of Jewish (Ibn Da'ud) and Mozarabic assistants. These co-translators, who were proficient in Arabic, produced oral translations into vernacular which Gundissalinus then brought into Latin." (p. 191)

(...)

"How much Gundissalinus himself was influenced by al-Fārābī's work is evident in the fact that he took his translation or adaptation of it, called *De scientiis*, as the basis of his own seminal philosophical encyclopedia *De divisione philosophiae*. This work constitutes a hallmark of the history of philosophy, primarily because this synthesis introduces a number of hitherto unknown sciences into Latin philosophy, such as optics (*de aspectibus*) and statics (*de ponderibus*), while substantially redefining others, namely metaphysics and politics. This makes Gundissalinus the first (Latin) thinker to treat metaphysics as the name of a discipline rather than of a text (4)." (p. 192)

- Inaugural Address at the Free University of Amsterdam (January 16, 2004).

"Concluding remarks. We have to come to a close. The study of the history of metaphysics has been addressed from the perspective of the postmetaphysical era. We shied from reproducing the claims to self-evidence that the various metaphysical projects convey and, seeking for safer, more objective ground, rather investigated into the structures that underlie this self-evidence and induce its very production. This line of questioning brought us to consider a connection which is characteristic of the foundation of metaphysics in the Middle Ages, the one between the first object of thought and the *subiectum* of first philosophy. Without reducing the speculation on the first object of thought to the modern concept of subjectivity - both parties would resist their insertion in such a history of continuity -, the medieval discussion on the first object of thought proved to have an important feature in common with the later philosophy of subjectivity, insofar as an investigation into the horizon of knowledge settles the possibility of a homogeneous field and, therewith, of metaphysics. Yet these same structures which establish the homogeneous field of metaphysics are, in the 14th century, involved in its dispersion. This event, the dispersion of metaphysics at the beginning of the 14th century, was verified by four examples and clarified by the image of the scattered

field: the collision of the homogeneous field of metaphysics with the object of knowledge made it disperse in a scattered field. Still, because of its foundation in an established distribution of subjectivity, the medieval dispersion of metaphysics remained entirely unproblematic. Only the explicit turn to the subject for the unfurling of the homogeneous field of metaphysics after the Middle Ages allowed a refreshed dispersion of subjectivity to damage the confidence in metaphysics and herald the postmetaphysical era.

Perhaps the question arises whether, in this way, metaphysics itself has indeed become impossible. Is it not rather a certain episode of its history that has come to a close, an episode in which this foundational scheme of subjectivity grew to full stature and then faded away? But it would be quite ahistorical to think that one could escape from this development and once more try, free now from the rise and fall of subjectivity, to establish a homogeneous field of metaphysics. This reality of which we are not the most creative part, is constituted, on a theoretical level, by structures of which we cannot dispose, structures that, historically determined, are imposed upon us and do not allow us - thus the diagnostics of our postmetaphysical era - to describe reality, like metaphysics intends to do, in terms of a homogeneous field.

This transition from the era of the philosophy of subjectivity to the post- metaphysical era was symbolized by the succession of those both catchwords 'subjectivity' and 'structure'. Structural reflection on subjectivity reveals its constitutive vigor to be embedded in or even derived, not to say borrowed from more fundamental structures in the ordering of knowing, structures that propose and indeed define both the subject-positions to be occupied and the object-domains of metaphysics allegedly constituted by mutually irreducible instances of subjectivity.

Turning things round, a conclusion is reached to which we - rather on the sly, as must be admitted - were tacitly leading all this time. For if, by accepting the perspective of the postmetaphysical era and receiving the self-evidence of metaphysical projects not as something given, but as

constituted by analyzable structures, we reached insight into tendencies of dispersion in the history of metaphysics, then, finally, also the self-evidence to which the *postmetaphysical* era appeals reveals itself to be produced and analyzable as to its constitutive structures -- with this analysis, thus we may conclude, we have made a beginning here." (pp. 63-64)

Abstract: "The epistemic constellation that underlies the transformation of metaphysics in the 13th and 14th century is legitimized by the identification of the subject of first philosophy with the first object of the intellect. In this epistemic constellation, a new thought presents itself: the foundation of Aristotle's unconditional starting point of thinking, i.e. the principle of non-contradiction, in the first known, transcendental concepts of the mind. The present article argues that, on the one hand, innovative attempts to found the principle of non-contradiction of the Franciscan Nicolaus Bonetus and the Carmelite John Baconthorpe demonstrate the stability of this epistemic constellation. It is true that, in their foundation of the principle of non-contradiction. Bonetus and Baconthorpe effect a dissociation of the subject of first philosophy and the first object of the intellect, which seems to challenge the very legitimizing strategy of the medieval transformation of metaphysics. But the very discourse that breaches the identification of the subject of metaphysics with the first object of the intellect, tacitly reproduces it by means of a division of first objects of the intellect. Its articulation of a first object of the intellect that surpasses the subject of first philosophy in generality, on the other hand, preludes tendencies in modern philosophy that, in presenting the thinkable as such as what grants access to reality, give full

attention to the modes of being excluded from Aristotle's *Metaphysics*."

"In the following, we will investigate metaphysics' status as a scientific discipline, through an examination of the medieval sources of the approach that most profoundly transformed modern metaphysics, i.e. Kantian transcendental philosophy. Starting with Kant's direct sources we will trace the discussion back to the ideas of John Duns Scotus (§ 1) and of Francisco Suarez (§ 2), in order to demonstrate with regard to its most important features just how Kant received (§ 3) and transformed (§ 4) these ideas."

Abstract: "In this essay an attempt is made to bring out the importance of the understanding of metaphysics. The origin of the term is discussed and the implication in the ancient Greek philosophy and medieval period in the West are given some consideration. The Ancient Greek philosophers were metaphysicians with a scientific mind. Their search is to find

out the one 'stuff' out of which the universe is made. Whereas the Pre-Socratics considered the 'stuff' as one or the other of the elements Socrates and Plato takes Ethics as one thing that is responsible for the universe. Aristotle names it as 'the philosophy' which is the 'wisdom' that inquires the first cause. It has implications on modern science."

Abstract: "The article analyzes the status of metaphysics in relation to other sciences, especially the sense and reasons behind its priority in the system of sciences, as conveyed in the works of Thomas Aquinas. The question of what comes first in the system of sciences has led to an exploration and justification of the criteria behind this priority. According to Thomas Aquinas, metaphysics is justly considered to be the first philosophy: on the one hand it is occupied with what comes first in the ontological order – the first causes of being, on the other hand, other sciences rely on it for their first principles. The article critically analyzes both substantiations of the idea of being first. The substantive criterion is questioned by the introduction of revealed theology into the system of sciences accepted by Aquinas; revealed theology is also occupied with what comes first, and does so with greater authority than metaphysics. The article focuses on the analysis of main doubts concerning metaphysics' methodological criterion of priority: the idea that metaphysics, in relation to other sciences, is in a sense first and functions as a determinant, while also being last and determined by these very sciences. Metaphysics is first, as other sciences draw from

it their first principles, and last, as it utilizes facts established by other sciences which come first in the process of knowledge acquisition. Hence the charge that Aquinas' argumentation concerning metaphysics' priority is circular in nature. The article analyzes various aspects of this difficulty and offers suggestions on how to overcome them."

"The subject-matter of metaphysics has been debated since the time when Aristotle first conceived the idea of the science. He himself speaks of 'the science we are seeking' and describes it differently in different places. In *Metaphysics* IV 1003a 21-6)) he speaks of a science which studies being as being and contrasts this science with the special sciences, like the mathematical disciplines, which investigate the attributes of a part of being. Two chapters later, IV.3 (1005b2), Aristotle speaks of a science which he calls 'first philosophy' because it grounds the first principles or axioms of the special sciences. But in book VI.1 (1026a18-19) he distinguishes three types of speculative science, physics, mathematics and 'divine science', so that one must ask how he understood the relationship between the general science of being, first philosophy and

divine science. It is clear that divine science studies objects that are separate from matter and not subject to change. But Aristotle seems to have wanted to identify this science both with the investigation of being and with the science of the principles of the sciences, on the ground that divine science concerns itself with the highest principle of being in general and can for this reason preside over the special sciences. At the same time, each of these definitions of metaphysics must be understood in accordance with Aristotle's own idea of what science is. In his conception, scientific knowledge is attained by way of the definition of the essential natures of things and the demonstration of the attributes which necessarily belong to them. Basically, Aristotle understood reality as an ordered structure. Even where his definitions are definitions of events, these are understood not in their variability as a process, but rather as reified. His science of metaphysics deals therefore with all reality according to its fixed essences and their necessary attributes and has consequently a static character, like the ancient society which it reflected.

In the course of history it was Aristotle's conception of metaphysics as divine science that gave rise to the most difficulties. The encounter of his idea of God as first substance with divergent religious traditions often forced later thinkers to modify the conception of metaphysics as the science of being. In late antiquity those philosophers who came to the defense of the pagan gods tended to interpret metaphysics as the science of intelligible reality, arranged in hierarchical degrees, separate from matter, but mediating between the divine and the material worlds. In Islam the doctrine of God's oneness compelled philosophers and theologians to emphasise the great gulf which separates the necessary being of the creator from the radically contingent being of the created world. Medieval Latin Christianity learnt of both of these approaches through Avicenna and Pseudo-Dionysius. The notions of a necessary first substance and a hierarchy of intelligences readily found a place in the contemplative and ordered society of the Middle Ages. The Christian notion of a God active in himself as triune and active in the world as incarnate as the fundamental articles

of a faith thought to be even more certain than scientific knowledge would seem to have demanded a new definition of science and a new definition of the reality which metaphysics studies. But, paradoxically, it was only with the revolutionary social changes that marked the period under consideration in this volume [the Renaissance] -- a period in which the medieval faith was breaking down - that a vision of reality as dynamic process and a new understanding of science emerged.

This new conception of reality appeared in various guises, as a new mathematics, as the idea of a magical control over nature, as a conflict between Plato and Aristotle, or in connection with the doctrine of God. It was resisted by scholastic authors, who sought for apologetical reasons to maintain Aristotle's static notion of being. But as more and more new sciences -- sciences connected with this new vision of reality and often undreamt of in antiquity -- came to maturity, even thinkers in the Aristotelian tradition were forced to reopen the question of the definition of metaphysics and its relationship to the individual sciences. Since each of these problems -- the problem of God and the problem of the science of being -- had its own history, I shall treat them separately." (pp. 537-538)

"The Subject of Metaphysics

The Islamic commentators Avicenna and Averroes set the background to the questions that discuss this issue in Scotus's *QM*, namely Book I, q. 1, Book IV, q. 1, and Book VI, q. 1. Avicenna had concluded that the only way to reconcile the criteria for

scientific knowledge laid down in Aristotle's *Posterior Analytics* with the descriptions given and the procedures followed by Aristotle in the text of the *Metaphysics* was to take the subject of investigation within metaphysics to be being as being. In proposing

this manner of understanding the subject of metaphysics, Avicenna showed how only being as being could fit the Aristotelian requirements for scientific knowledge (Aristotle,

Posterior Analytics 1.10, 76a31-76b23; 1.28, 87a38-87b4), the range of subjects

treated in metaphysics (truth, goodness, and unity; cause/effect; substance and accident; act and potency, as well as necessary and possible being), and, above all, the metaphysical proof of God's existence and the divine attributes (Avicenna, *Metaphysics*,

I.1.1 [IV 4: 64- 5: 81]; I.1.2 [IV 12: 14-22]). Fundamentally, Avicenna reasons that, since no science can prove the existence of its subject, if God's existence is shown in metaphysics, that science cannot have God as its subject.

Adopting the opposing standpoint, Averroes argued that, since no science proves the existence of its own subject, metaphysics must be about God as First Form and Substance or Last End. God's existence is not, contrary to Avicenna's claim, shown within metaphysics but in physics or natural philosophy and its treatment of the Unmoved Mover. Metaphysicians begin, then, with the proof of God's existence afforded them by the natural philosopher and hence the range of being displayed before them:

material and immaterial being. What metaphysical analysis strives to indicate is how all the beings of our experience are related to the First Form or God by way of final causality, while also attempting to show how we may meaningfully attribute certain

properties to God (Averroes, *Physics* I, t. 83 [1550, 22vb-23ra]; Averroes, *Metaphysics* IV, t. 6 [1562, 145vM-146vM]; IV, t. 2 [71 vG-M]).

Scotus 's discussion in Book I, q. 1 involves a protracted treatment of the two Islamic interpreters and their conflicting claims. Though this particular question is one in which there are layers of revision on Scotus 's part and, at times, the discussion is a

strain to follow, the gist of Scotus's successive views becomes clear. In the earliest view expressed in the primitive text, Scotus

held ultimately that metaphysics is a science that has being as being in the sense of substance as its subject (*Questions* I, q. 1, n. 91-2;

1997: 38-9). At this stage of his career he could see no greater unity to the concept of being than that of the ten categories of being and among these there is only a unity of attribution of the nine accidental categories to the category of substance. Since there is no common notion under which the full range of being can be treated, Scotus opted for the primary subject of the science as substance with the properties of accidents being treated in so far as they are dependent upon and exist for the sake of substance.

When we turn to the extras and additions found in Book I, q. 1, we encounter the more mature and developed position that is assumed in the later books of the *QM* and expounded at even greater length in Scotus's theological writings. The concept of being is univocal not only to the whole of categorial being, the being of substance and the nine accidents, but to being as considered prior to its modal differentiation into finite being and infinite being. Such a notion allows God to enter into metaphysical

discourse as something falling under disjunctive propositions such as "Every being is either First or not-First" or "Every being is either in act or in potency" and hence under the disjunctive properties of being "finite/infinite" and "act/potency" respectively

(*Questions* I, q. 1, n. 156-7; IV, q. 1, n. 45; 1997: 57-8, 264). This position is one that engenders its own difficulties, troubles that would cause Scotus to continue to struggle with the senses in which being can be predicated of its own differences and would lead to conflicts among his followers for a considerable period of time after his premature death (Dumont, 1987); subsequent refinements of the position aside, however, the position itself was attractive to contemporaries because of its ability to explain both the transcendental and theological dimensions of

metaphysical discourse within the same framework." (pp. 168-169)

"Considering the rich survey Professor Lohr has presented this afternoon of Medieval commentaries on Aristotle's philosophical works including *Metaphysics*, there is no point in discussing in general terms the vicissitudes of this Aristotelian work at the Parisian Faculty of Arts. On top of that, in *the lettre d'invitation* of the organizers we were asked to say something about our own recent research in the field under discussion. Therefore I shall confine myself to John Buridan's (c. 1290-c. 1360) commentaries on *Metaphysics*. Fortunately, Buridan's activity as a commentator on *Metaphysics* may to a large degree be regarded as representative of the period. As we learn from Lohr's survey, from the fourteenth century only some five commentaries on this important Aristotelian writing are extant, quite unlike the thirteenth and fifteenth centuries, from which a considerable amount of such works have survived. (*)" (p. 303)

77. Robiglio, Andrea A. 2004. "Breaking the Great Chain of Being. A note on the Paris condemnations of 1277, Thomas Aquinas and the proper subject of metaphysics." *Verbum* no. 6:51-59.

Abstract: "In the late 13th century Latin west, the problem of the proper subject of metaphysics (a legacy of the *Avicenna Latinus*) became relevant. Two candidates were open at the time: that of the 'ens in quantum ens' as the proper subject of metaphysics, and that of the separate and most noble substances.

This transition allows for a deeper reading of the Condemnation of 1277. The structure of the Condemnation reveals an intriguing commitment on the part of the condemned articles concerning the separate substances (or angels) and the peculiar neoplatonic "chain of being" that was the underpinning of their accounts. Peter Olivi argued against the neoplatonic chain of being soon after 1277. Even if this polemic is still neglected in the secondary literature on 1277, Olivi's interpretation of the state of the debate reinforces the reading of the Paris Condemnation with regard to neoplatonistic chains of being, and the options available for characterizing the proper subject of metaphysics."

78. Saeedimehr, Mohammad. 2019. "Muslim Philosophers on the Relation between Metaphysics and Theology." *Journal of Philosophical Theological Research* no. 81:103-118.

Abstract: "In different parts of *Metaphysics*, Aristotle presents different (and apparently, conflicting) views on the nature and subject matter of the discipline in question. These different characterizations led to wide-ranging interpretations of the relation between metaphysics and philosophical theology. Muslim Philosophers adopted two different views. Al-Kindi and al-Farabi (in some of his works) endorsed the view that metaphysics is the same as theology as far as its subject matter is the First Cause (God) and it deals essentially with incorporeal entities. After Avicenna, however, a second view became dominant according to which metaphysics has a broader realm that embraces theology as its most noble part. The rationale behind this view is that the subject matter of metaphysics is

“being qua being”, or unconditioned existent, in its broad sense so that philosophical theology can be taken as discussing some of the proper accidents of the unconditioned existent. This view requires that metaphysics cannot be a secular discipline and should be totally consistent with theology. It also provides us with a certain interpretation of what is usually called “Islamic philosophy”.”

Abstract: "The influential Scotist thinker Antonius Andreas (d. ca. 1333) ardently criticizes Averroes' theory of the subject matter of metaphysics. In his *Questions on the Metaphysics* Antonius systematizes Averroes' position and condenses it into three distinct statements, against each of which he argues. This paper presents Antonius' own take on the subject matter of metaphysics, evaluates the success of his interpretation of Averroes, and analyzes his arguments against the Commentator. The disagreement between Antonius and Averroes is ultimately rooted in their vastly different theory of science and ontology. Averroes would have disagreed with many premises of Antonius' arguments, whether regarding the conditions for unity or for priority of a science, or the univocity or analogy of being.

Surprisingly, however, the two thinkers agree on one central aspect, namely in their belief that sciences can provide certain demonstrations of the existence of their subject matter.

In *Knowledge and the Sciences in Medieval Philosophy: Vol. 1: Proceedings of the Eighth International Congress of Medieval Philosophy (S.I.E.P.M.)*, edited by Asztalos, Monika, Mordoch, John E. and Ilkka, Niiniluoto., 128-157. Helsinki: Acta Philosophica Fennica. Vol. 48.
83. Suárez, Francisco. 2004. *A Commentary on Aristotle's Metaphysics (Index locupletissimus in Metaphysicam Aristotelis)*. Milwaukee: Marquette University Press.

Translated with an introduction (pp. 7-19) and notes by John P. Doyle.

The *Index* is the preface to the *Disputationes Metaphysicae*. Content: English translation: 20-247; Corresponding Latin texts: I. Ad lectorem 248; II. Disputatio II: Prooemium 250; III. Index Locupletissimus 252; IV. Index Disputationum 390; Persons Mentioned in the Index 410; Bibliography 413; Index of Names 424-426.

"Balancing the system in the *Disputationes*, the Index amounts to a late medieval commentary, "by way of question," on the first 12 books of the *Metaphysics*. Shorter in length than, for example, St. Thomas Aquinas' (1225–1274) commentary on the same 12 books, Suárez's *Ample Index* more than makes up for that by cross-referencing the *Disputationes* itself hundreds of times. In fact, the *Index* and the *Disputationes* are exactly as Suárez intended them to be, complementary of one another and mutually supportive." (Doyle, p. 8).

"However, because there will be very many who will desire that this whole doctrine be collated with the books of Aristotle, not only in order to better perceive on what principles of the so great Philosopher it is based, but also in order that it be more easily and usefully employed for understanding Aristotle himself, I have also sought to provide the reader in this matter with an elaborate index, in which, if it is attentively read, most easily (if I am not mistaken) all those things which Aristotle treated in the books of *Metaphysics* can be comprehended and retained in memory. And again, [with that index] all questions

can be at hand which are customarily raised among the expositors of these books." (Suárez, p. 21).

84. ———. 2021. *Metaphysical Disputation I: On the Nature of First Philosophy or Metaphysics*. Washington, D. C.: The Catholic University of America Press.

Translated and annotated, with corrected Latin text, by Shane Duarte.

"Section 1: Identifying the adequate object or subject of metaphysics.

Suárez classifies metaphysics or first philosophy as a natural science (*scientia naturalis*) (DM 1.2.17). In so classifying it, he in no way means to identify it with a branch of physics or natural philosophy. Rather,

“natural” is here contrasted with “supernatural,” so that in this sense of the expression mathematics also counts as a natural science, whereas sacred or supernatural theology, based on divine revelation, does not.

Suárez further classifies metaphysics as a real science (*scientia realis*), since it is about things (*res*) or real beings (DM 1.2.13). The implicit contrast here is with a rational science (*scientia rationalis*) such as logic,

which is not about any thing or real being, but is commonly thought to deal with objective second intentions (e.g., genus, species, subject, predicate, antecedent, consequent), which are beings of reason or items

existing only objectively in the mind as objects of thought.

Suárez also classifies metaphysics as a theoretical or speculative science (*scientia speculativa*) (DM 1.2.13), since it has the contemplation of truth as its

highest end, unlike the practical and productive sciences, whose truths are ordered to some further goal (i.e., action or production)." (pp. XXVI-XXVII)

97. ———. 2010. "The subject of the Aristotelian science of metaphysics." In *The Cambridge History of Medieval Philosophy. Volume II*, edited by Pasnau, Robert, 609-621. Cambridge: Cambridge University Press.

Summary: "Aristotelian science conveys understanding by showing the necessary relationship between immediately evident first principles and conclusions about the natural world. To take a trivial example: induction from repeated experience teaches us that all broad-leaved plants are deciduous. We discover that grapevines have broad leaves. We infer that grapevines are deciduous, and thereby we also learn that they lose their leaves in winter because they are broad-leaved (see Aristotle, *Post. An.* II.16–17).

Aristotelian science explains a subject's possession of an attribute (the *explanandum*) by identifying the possession of that attribute with membership in a species, and then citing as *explanans* the inclusion of that species within a prior genus. In the present example, the property is "losing its leaves in winter," the species is "grapevines," and the genus is "broad-leaved plants." The explanation is then presented in the form of a syllogism. In the first premise an attribute (being deciduous) is predicated of a subject (broad-leaved plant). The second premise introduces a new subject that belongs to the class described by the subject of the first premise, allowing us to conclude that the second subject shares an attribute of the first.

Aristotle describes this demonstration as *propter quid* science because it explains why grape leaves fall. If the deduction were valid, but its premises were not explanatory, it would count as *quia* science: knowing a fact without understanding why it obtains (*ibid.*, I.13, 78a22–b3) (see also Chapter 26)." (p. 609)

Abstract: "Aristotle is considered to be the founding father of metaphysics. He specified the subject and scope of this science

and used the names “first philosophy (*prote philosophia*)”, “theology” and wisdom (*sophia*) for it.

However, there have been some changes both in the scope and naming of this science after his time. Although it is generally accepted that the subject of metaphysics is “being qua being,” there has been a confusion about the relationship between metaphysics and theology. Philosophers such as al-Fārābī and Avicenna directly studied this issue to eliminate such confusions. Different names such as first philosophy, after-physics, *al-‘ilm al-ilāhī* and *al-ilāhiyyāt* have always been used to refer to it. This study discusses why the science of metaphysics is named in different ways, mainly based on the evaluations of Abū al-Barakāt al-Baghdādī. It also questions if there is a relationship between different names and the scope of metaphysics and the method of analysis it uses? Do different names for the same scholarly area refer to the same science in terms of the subjects, areas of study and problems addressed, or does each name refer to different content than others? To achieve its intended aims, it also refers to the epistemology of Abū al-Barakāt al-Baghdādī.”

Abstract: "To our knowledge Alexander was the first who attempted to reconcile Aristotle's (apparently conflicting) views regarding the object of that science which Alexander now and there already dubs "metaphysics". For much of his commentary, in fact, Alexander acknowledges that the universal science of being qua being is identical to the science of first substances that are unchangeable, unmoved, and divine, i.e. that science which in *Metaph.* E 1 Aristotle once even dubbed "theology". But this unified conception of Aristotle's "first philosophy" is strangely marred in Alexander's commentary by a few pages (pp. 245-246 H.), where a wholly different situation arises. In his effort to account for a text of *Metaph.* Γ 2 that differs from the one found in manuscripts and in modern critical editions, Alexander suggests that two different

levels of first philosophy should be distinguished, even though he applies the same designation to both levels: 1) the first and most universal level of first philosophy as a general science of being qua being, where being is regarded as a genre. This level of first philosophy is responsible for the partition of being into ten categories and for their distinction. In addition to that 2) a second-level science would address each of

the individual species of being (i.e. each category) that is conceived of as a species subject to the most universal science. Amid these special sciences of being, however, abides yet another "first philosophy" ("first" but subordinated to the other) operating at a second and thus lower degree of universality, namely, the science of first substance (the immovable and immaterial substance of the divine). Since all other substances

are subordinated to the first substance, in accordance with the Aristotelian principle of ἀφ' ἐνὸς καὶ πρὸς ἓν, this science also deals with all the other substances and any properties belonging to them. The idea of a two-level first philosophy takes up limited space in the commentary and would not necessarily be contradictory in itself if only Alexander had squarely associated the general science of being qua being with just one of the two distinct levels. As this is not the case and both "first" philosophies are identified with the science of being qua being, the outcome is a confused and inherently inconsistent presentation. But more problems lie ahead in pp. 245-246: the biggest is that among the special sciences of being we find practical philosophy, whose object is hard to bring into line with or condense into any one (and if so, which?) of the ten categories. Moreover, the suggestion by those modern scholars, who would liken Alexander's distinction between the two levels of first philosophy with the later distinction between general metaphysics and special metaphysics, appears somewhat flawed. In any case, identifying the doctrine of categories as the content of the more universal science of being almost seems typical of an age in which this doctrine was attacked or defended as if it were considered the mainstay and the cornerstone itself of Aristotelian philosophy."

Abstract: "This article is devoted to the interpretation of the object of metaphysics and theoretical sciences proposed by Alexander of Aphrodisias (fl. 200 AD). I shall propose two conjectures on crucial passages from his commentary on the *Metaphysics* (*In Metaph.* 245.37-246.6 et 246.6-13) and, on this new textual basis, defend the thesis according to which Alexander articulated a primary fundamental philosophy, devoted to immobile substances and treated by Aristotle in *Metaphysics* Λ, and a philosophy, if one can say so, more primary but less ontological, hence less fundamental, devoted to the general structure of being and treated by Aristotle in *Metaphysics* Γ. The latter seems to differ from the *Categories*, according to Alexander, in that in the *Categories*, Aristotle studies the general classes of beings as general, while in *Metaphysics* Γ, he studies them as beings."

Abstract: "In late antiquity, in the context of the jagged tradition of Neo-Platonism, Aristotle's *Metaphysics* and the specific science that is traced out in it are indicated with the current denominations of *meta ta physika* and *theologikē pragmateia*, which are seen as consistent with one another and closely interconnected. In this connection, the *Metaphysics*, in the wake of previous philosophical readings, is considered as a treatise on "theological science" – the most elevated among the sciences – and the denomination *meta ta physika* is seen in a specifically theological sense.

According to a widespread Neo-Platonic reading, the science thematized in the *Metaphysics* is "metaphysics" in that it is theological science, an epistemic discourse on divine realities, which, within the *ordo rerum*, transcend the physical ones, and, therefore, according to the *ordo cognoscendi*, must be studied after the latter."

Sommario: "Da lungo tempo è stato riconosciuto il carattere scotista dell'Expositio in libros Metaphysicorum di Antonio Andrea, a tal punto che essa figura tra le opere di Scoto nelle edizioni del Wadding e di Vivés. Anche ora che la paternità di Antonio Andrea per quest'opera è stata comunemente riconosciuta, accade spesso che si faccia ricorso all'Expositio al fine di illuminare questo o quel punto oscuro del pensiero di Scoto. Tuttavia, una volta analizzata, quest'opera mostra di essere un adattamento puntuale del commento alla Metafisica di Tommaso dal punto di vista delle teorie di Scoto. Attraverso l'introduzione sistematica nelle formulazioni di Tommaso delle nuove dottrine scotiste dell'univocità dell'ente e della natura communis, Antonio realizzò il progetto di fornire ai primi discepoli di Scoto un manuale della scienza dell'ente come scientia transcendens."

"The history of modern metaphysics is essentially marked by its splitting up into a metaphysica generalis and a metaphysica specialis, a well-known distinction especially within Christian Wolff's systematic conception of metaphysics. This study investigates the actual origins of this significant development, which can be already found at the beginning of the 14th century. On the basis of a fundamentally revised doctrine of transcendentals the Franciscan theologian Francis of Marchia (~1290-1344) introduces for the first time a dissociation of the primum cognitum of the human intellect from the subject of metaphysics, according to which metaphysics is no longer one science in the sense of a scientia transcendens, as most of his predecessors claimed in the 13th century, but rather twofold: ontology and theology."

Second updated edition (first edition: Leiden: Brill, 1965).

"In the fourteenth century, a new version of the first solution makes its appearance. Unlike its thirteenth century predecessor, this version of the solution is aware of the notion of the formal object uniting the various discourses comprising a science, yet it rejects such a notion. This deconstruction of the problematic surrounding the subject of metaphysics may be seen most clearly in the writings of Ockham and Buridan. With this development, the medieval history of the problematic of the subject of metaphysics may be said to reach its apogee by returning to its origins. The notion of a formal unity in a science, a unity that transcends the merely logical unity of a particular demonstrative syllogism, is once again missing from the discussion.

In this, the second edition of his classic study, Albert Zimmermann has once again provided scholars with a remarkable collection of otherwise unavailable texts along with penetrating studies on that perennial metaphysical question: what is the subject of metaphysics. As indicated by the title, Zimmermann's treatment of the medieval discussion on the object of metaphysical knowledge ranges over the thirteenth and fourteenth centuries, covering authors from the generation of Richard Rufus and Roger Bacon up to John Buridan. The new edition takes account of most of the considerable literature that has appeared since the original publication in 1965. (...)

Zimmermann's volume divides into two parts. The first presents texts drawn from medieval commentaries on Aristotle's *Metaphysics* in which the subject of metaphysics is discussed. The second part is subdivided into three chapters: the first sketches out the primary sources for the medieval discussion -- found chiefly in the writings of Aristotle, Avicenna, and Averroes; the second describes the advent of the three basic solutions proposed by medieval authors for the solution to the problem; and the final chapter shows the subsequent development of these three solutions. The study closes with reflections upon the medieval treatment of the problem and what impact the medieval discussion had upon the development of early modern philosophy as well as contemporary European thought.

Given the ambiguity of Aristotle's various statements on the subject of metaphysics, Avicenna and Averroes attempted to work out systematic accounts of the subject of metaphysics. Applying rigorously the model of scientific knowledge expressed in Aristotle's *Posterior Analytics*, Avicenna concluded that being as being, understood as common to substance and accident, had to be the subject of metaphysics since God's existence was sought in metaphysics and no science proves the existence of its subject. Agreeing with many of the basic assumptions of Avicenna, Averroes came to the opposite conclusion: metaphysics has as its subject God since the existence of God is already shown in natural philosophy and

thus may be assumed for the purposes of metaphysical investigation.

The medieval philosophers worked out three alternative solutions to the problem presented to them by the texts newly received at the outset of the thirteenth century. The first solution, clearly evidenced in the writings of Roger Bacon, proposed that there are various subjects for the science of metaphysics and thus diffused the disagreement between Avicenna and Averroes. In the case of Bacon, the three subjects are being as being, substance, and God, subjects that are treated successively in the sequence of books in the Aristotelian *Metaphysics*. As Zimmermann notes, this solution is not only too facile but indicates that its proponents had not developed the notion of a single, formal subject that unites all the features treated within the scope of a science; Bacon is an especially clear case in this regard since he located the unity of metaphysical knowledge in the reducibility of all metaphysical objects to the First Cause and not in any formal unity of the subject matter.

The second solution Zimmermann finds most fully expressed in the writings of St. Thomas Aquinas, though he sees adumbrations of it in the commentaries of Albert the Great and Richard Rufus. Unlike the defenders of the first solution, those advancing the second solution are distinctive in having a refined notion of the formal object of the science and positing the unity of the science to be derived from the formal object. According to this solution, being as being or being in general (*ens in communi*) is limited to the range of creaturely being, a notion of which we attain through our acquaintance with sensible substances. The existence of God is not presupposed for metaphysical science though some judgment (*separatio*) that being is separate in notion and reality from merely sensible things is required. Instead, God relates to metaphysical knowledge as the cause and the principle of the subject of the science or *ens commune*; hence, God's existence may be known in and through metaphysics, but the names derived from the concept of being that constitutes the object of the science can tell us little about His nature.

The final solution developed by medieval philosophers was also the one most commonly adopted by them. Positing being as being as the subject in the widest possible sense, these thinkers claimed that God falls under the subject of metaphysics in that sense, albeit they often qualified that claim by stating that the sense of being that applies to God and creature is only analogously the same. One of the earliest adherents of this view was the great Dominican theologian Robert Kilwardby, but the most famous of those subsequently defending the view were Henry of Ghent and John Duns Scotus. In many ways, as Zimmermann notes (p. 329), Scotus's systematic presentation of this view marked the culmination of its development and led to the form that the medieval discussion would have thereafter, connecting the discussion of the subject of metaphysics to distinctively Scotistic theses such as the univocity of being."

Estudios en Español

1. Cabré Duran, Maria. 2022. "Notas sobre el primer sujeto de la metafísica según el comentario a la *Metafísica* de Antoni Andreu." *Anuario Filosófico* no. 56:59-77.

Resumen: En este artículo estudiaremos algunos elementos propios de la formulación del problema del sujeto de la metafísica tal y como aparece en el comentario de Antoni Andreu a la *Metafísica* aristotélica. Esta cuestión está estrechamente vinculada a la

concepción de la univocidad aplicada al ser transcendental, pero también a la inclusión de las sustancias separadas en el dominio de la metafísica. La afirmación de un concepto de ser unívoco y real como sujeto-objeto de la metafísica es la base del realismo metafísico propuesto por Antoni Andreu."

Abstract: "This article examines certain aspects of the problem of the subject-matter of metaphysics as presented in Antonius Andreae's commentary on Aristotle's *Metaphysics*.

This question is closely linked to the conception of univocal transcendental being, but also to the inclusion of separate substances into the domain of metaphysics.

The assertion of the univocal and real concept of being as the subject of metaphysics is the basis of metaphysical realism as proposed by Andreae."

2. Cumsille Marzouka, Kamal Andrés, and Figueroa Lackington, Benjamín Antonio. 2021. "Al-Farabi, 'Sobre los propositos de Aristoteles en la Metafisica'. Texto, traduccion y notas." *MEAH, Sección Arabe-Islam* no. 70:441-452.

Resumen: "El presente texto ofrece una nueva traducción al castellano del *Maqāla fī agrāḍ al-ḥakīm fī kitāb Mā ba'd al-ṭabī'a* (*Tratado sobre los propósitos de "el Sabio" en el libro de la Metafisica*) de Abū Naṣr al-Fārābī (m. 339/950-951). Desde un punto de vista filológico, nuestra versión toma por referencia los enfoques hermenéuticos de Jon McGinnis, David Reisman, Amos Bertolacci y, más considerablemente, de Dimitri Gutas, tanto en lo que refiere a la traducción de términos filosóficos técnicos como de reorganización del texto en párrafos. En este sentido, hemos querido ofrecer al público hispanohablante una nueva traducción del *Agrāḍ*, basada en la edición de Friedrich Heinrich Dieterici, que tuviera en cuenta los avances más recientes en el campo de los estudios árabes y, en particular, en los estudios de la obra filosófica de al-Fārābī. Para facilitar la contrastación con el texto de Dieterici, hemos incluido aquí su versión transcrita, con puntuación y párrafos reordenados."

Abstract: "This document offers a new Spanish translation of the *Maqāla fī agrāḍ al-ḥakīm fī kitāb Mā ba'd al-ṭabī'a* (*Treatise on the Aims of „the Sage" in the Book of Metaphysics*) written by Abū Naṣr al-Fārābī (d. 339/950-951). On a methodological level, our interpretation is mainly informed by the work of Jon McGinnis, David Reisman, Amos Bertolacci, and —more significantly— Dimitri Gutas, with regard to both the translation of key philosophical terms and to the rearrangement of the text in paragraphs. In this sense, we aim

to provide a new Spanish translation of the *Agrāḍ* —based in Friedrich Heinrich Dieterici's

edition— that takes into account the latest developments in the field of Arabic studies and, particularly, in the study of al-Fārābī's philosophical oeuvre. To facilitate the comparison of the original and the translated text, we have included Dieterici's transcription with punctuations and rearranged paragraphs."

Resumen "La *Philosophia Prima* de Avicena ocupa un lugar relevante en la historia de la metafísica. En sus primeros cuatro capítulos encontramos una definición de la metafísica como sabiduría y filosofía ciertísima. Avicena busca con todo ello destacar el carácter científico de la metafísica. En este mismo sentido, la elucidación del objeto propio de esta disciplina se inserta en el debate entre sus fuentes árabes (Al-Kindi y Al-Farabi), pero a su vez se extiende en la discusión histórica sobre el lugar de Dios y el ser en la metafísica.

En este artículo se presenta la definición de la metafísica como ciencia primera, y el establecimiento del ente como el objeto propio de la metafísica, y Dios como aquello buscado."

Abstract. "Avicenna's *Philosophia Prima* occupies a relevant place in the history of metaphysics. In its first four chapters, we find a definition of metaphysics as wisdom and the more certain philosophy that highlights the scientific character that Avicenna seeks to

- give metaphysics. The elucidation of the subject matter of this discipline is developed in the debate among its Arab sources (Al-Kindi and Al-Farabi), but at the same time, it extends in the historical discussion on the place of God and being in metaphysics. This article presents the definition of metaphysics as the first science, and the establishment of the being as the proper subject of metaphysics, and God as what is sought."

 19. ———. 2022. "El término « metafísica » en la tradición latina." *Pensamiento* no. 78:1871-1882.

Resumen: "Los estudios sobre la constitución de la noción y el término «metafísica» han sido poco abordados por la historia de la filosofía, y sobre todo, por la tradición filosófica misma. Este trabajo, sobre la base de lo realizado por Pérez Fernández (1975), es una parte de una serie de publicaciones que pretende arrojar luz sobre este proceso. Concretamente, aquí se narra brevemente cómo el término «metafísica» fue mudando gradualmente su uso y grafía en la tradición latina. Sugeriré que Boecio usa las locuciones *theologia* y μετα`τα`φυσικα` en dos sentidos, la primera la emplea para referirse al tema que es propio de los libros metafísicos de Aristóteles (i.e. teología filosófica), en tanto que la segunda locución la usa en un sentido bibliográfico. De este uso daría cuenta Abelardo en sus obras, que plausiblemente influyeron más tarde en la constitución definitiva del término en la Escuela de Toledo. Se incluyen imágenes de manuscritos para ilustrar lo apuntado."

Abstract: "Studies on the evolution of the notion and the term «metaphysics» have been scarcely addressed by the history of philosophy, and specially, by the philosophical tradition itself. This work, based on what was done by Pérez Fernández (1975), is part of a series of writings that aims to shed light on this process. Specifically, here I will briefly describe how the term «metaphysics» gradually changed its use and spelling in the Latin tradition. I will suggest that Boethius uses the locutions *theologia* and μετα`τα`φυσικα` in two senses, the first one uses it to refer to the subject that is proper to the metaphysical books of Aristotle (i.e. philosophical theology), while the second locution uses it in a bibliographic sense. Of this last use, Abelard would give account in his works, which plausibly later

influenced the definitive constitution of the term in the School of Toledo. Images of manuscripts are included to illustrate the point."

Estudios en Portugues

1. Costa Sousa, Meline. 2023. "Avicena e o problema do sujeito da metafísica: a hipótese das causas." *Veritas, Porto Alegre*:1-11.

Resumo: "Um dos problemas com os quais os leitores da *Metafísica* de Aristóteles se deparam é a dificuldade de delimitação do sujeito da sabedoria. Avicena (séc. X), em seu tratado metafísico *As coisas divinas (Ilāhiyyāt)*, põe-se a investigar cada um dos três candidatos à posição de sujeito dessa ciência (a dizer, Deus, as causas e o ser). Devido à amplitude da investigação, a análise que se segue se restringirá à segunda hipótese – se, em algum sentido, seria a filosofia primeira uma ciência sobre as causas (uma aitiologia). Desse modo, inicia-se com a exposição do contexto da *Ilāh. I*, que antecede à análise da hipótese das causas. Na sequência, aborda-se a hipótese, juntamente com os argumentos, para mostrar sua falsidade. Por fim, a conclusão apresenta a relação entre causalidade e ser, tendo em vista a resposta ontológica que será dada ao problema central e os problemas que decorrem dessa resposta."

Abstract: "An issue the readers of Aristotle's *Metaphysics* must deal with is the delimitation of the subject-matter of the wisdom. An attempt to answer this problem was proposed by Avicenna (10th Century) in his metaphysical treatise *On Divine Things (Ilāhiyyāt)*. In its first book, the philosopher investigates each one of the three candidates for the position of the subject-matter of this science (i.e., God, causes, and being). Having in mind the difficulties of this topic, the following analysis is limited to the second hypothesis, namely, if the first

philosophy is the science of the causes (an aitiology). I will start contextualizing the *Ilāh*. I since it precedes the analysis of the hypothesis of the causes. Then, I will discuss the hypothesis of the causes and show Avicenna's arguments against it. Finally, I will conclude this investigation discussing briefly the relation between causes and being in view of Avicenna's ontological answer to the main problem and the problems emerging from it."

2. Martins, António Manuel. 1994. *Lógica e ontologia em Pedro da Fonseca*. Lisboa: Fundação Calouste Gulbenkian.

English abstract: "The aim of the dissertation is to show the place of Fonseca's work in the history of ontology. Starting with a close analysis of the texts connected with the core of classical metaphysics it is argued that the *Commentarii in libros metaphysicorum Aristotelis* far reacher than a mere textual commentary of Aristotle's text and represent one of the rare efforts to bring out a real synthesis of the main theoretical problems and questions emerging in the context of the aristotelian project of a first philosophy. This systematic work is carried out in the second half of the sixteenth century, just before the beginning of modern philosophy. Chapter one is dedicated to a brief account of Fonseca's work in his historical context. The remaining chapters explores some of the central topics of Fonseca's ontology. Chapter two, after a brief discussion of the aristotelian project of first philosophy, follows the transformation of this project in Fonseca's text discussing in particular his analysis of the concept of being under the heading *ens commune* and the meaning of the thesis of *analogia entis* as well as the distinction between a formal and an objective concept of being. In chapter three we discuss the question of the distinction between essence and existence in order to grasp the meaning of Fonseca's thesis of a modal distinction *ex natura rei*. Chapter four seeks to articulate Fonseca's interpretation of the classical doctrine of the transcendentals (*unum, bonum, uerum*). The wish to articulate the universality and transcendentality of the concept of being has taken us to introduce the problem of the categories in this chapter and a brief historico-critical survey beginning in

Aristotle and ending in Kant. Finally, chapter five discusses the meaning of the principle of non contradiction in Aristotle and in Fonseca."

Birth of a New Science: the History of Ontology from Suárez to Kant

Introduction

"To begin with we want to state that ontology should be seen only as an interdiscipline involving both philosophy and science. It is a discipline which points out the problems of the foundations of the sciences as well as the borderline questions, and which further attempts to solve these problems and questions. Ontology is not a discipline which exists separately and independently from all the other scientific disciplines and also from other branches of philosophy. Rather, ontology derives the general structure of the world; it obtains the structure of the world as it really is from knowledge embodied in other disciplines. If one examines the history of philosophy one sees that ontology has never solved or attempted to solve the questions about the structures of our world independently, apart from the other philosophical disciplines or apart from the sciences. As is expressed by this symposium's topic, "Language and Ontology", ontology has derived the world's structure from other disciplines which describe reality, and has thus relied upon the languages of other disciplines. A common belief is that this derivation of the world's most general structures from the knowledge of other disciplines is ontology's only task. But now the belief is that in doing ontology one always selects the most important and most general laws from among all the laws which the various disciplines have to offer at any given time. Further, the ontologist interprets and generalizes those laws and must endeavor to establish certain of them as the most fundamental and general structures of our world.

If ontology is a discipline which uses knowledge from various other disciplines then it is obvious that, in the course of the history of philosophy, ontology must have developed in a most dramatic

fashion. If we look at the actual history of ontology we find confirmation of our claim. Ontology mirrors, so to speak, the level of our knowledge of the world at any given time. For instance, Plato and the Platonists have assumed that one could derive our world's most general empirical structures from an ideal world of Platonic Forms. Of this world of Forms it is said that one can experience it intuitively and that its existence has to be presupposed a priori. For this derivation, one needs only two relations, *methexis* and *parousia*. "Methexis" means "participation" or what we would call "representation" "parousia" means "manifestation" (of the ideas in the world) or what we would call "interpretation". These ontological procedures are explained in Plato's Parmenides.

For Aristotle, the main task of philosophy was not to perceive the world of ideas, but to experience the empirical world and acquire knowledge about it (Metaphysics, Chapter 9). He created the first system of ontology in the form of an ontology of substances. Aristotle's search for the world's true structures is interestingly opposed to Plato's. For Aristotle the general properties of things, that is, those properties of things which constitute their invariant form, have to be found through a cognitive process. These general properties of things are universal structures or patterns. These universal patterns are to be defined and axiomatized. For this task one calls on logic for help. The end result is that universals become generally comprehensible.

Here one may ask as Porphyry did what universals really are. The answers that have been proposed are numerous. They include: Platonic ideas, substances residing in things, concepts or representations in the human mind (conceptualism), terms or predicates contained in our language (nominalism), and mathematical-theoretical constructs in the languages of present day theories. The question about the very nature of universals (general structures) has occupied philosophy and the sciences up to the present day as one can see in reading Heisenberg's dialogues with Schrödinger where this question is discussed at length.

In the Middle Ages the concern with universals continued. Various elaborate systems evolved, including, importantly, varieties of conceptualism and nominalism. A decisive turn in the history of ontology is connected with the writings of Goclenius, Wolff, and

Leibniz. Goclenius needs to be mentioned for he is credited with the first use of the term 'ontology'. Like all ontologies, so also Wolff's, has to be made dependent upon the level of knowledge existing at his time. Knowledge for Wolff is logical knowledge. He established the interdisciplinary character of his ontology by deriving the most general laws of nature and of all things from the principles of a logic derived from Leibniz. According to Wolff, it is one of the basic ontological structures of everything that exists, that the principle of non-contradiction and the principle of sufficient reason are valid in all merely possible worlds in addition to the real world.

Kant rejected Wolff's logic as metaphysical and Platonistic. Therefore Kant rejected also Wolff's ontology. Instead of traditional logic, Kant introduced his own transcendental logic. This transcendental logic may be seen as a cognitively oriented method which is founded on concepts. If one wants to gain knowledge, then, according to Kant, only those categories (or most general concepts) may be used which fulfill certain spatio-temporal conditions when they are applied. These categories are of subjective origin, that is, created by the human mind. It is a scientific theory, namely, Newton's physics, which furnishes the natural laws which are the basis of Kant's ontology. In his epistemology (an "auxiliary discipline" of his ontology which is contained in the Critique of Pure Reason), Kant methodologically explains Newton's physics.

Leibniz's logic stands in the same relationship to Wolff's ontology, as the natural laws of Newton's physics and Kant's own epistemology stands to Kant's ontology. But for Kant it is not the world of things-in-themselves which determines his ontology but the spatio-temporal categorial system of relations of the phenomena. It is important that here ontology can be clearly separated from epistemology. Kant's epistemology is a metatheory of the cognitive presuppositions and methods of classical physics. Kant's categorial ontology derives from natural laws which are supported and confirmed by empirical evidence of the general structures of the world-the classical physical world, as we would say today. With this, ontology became an interdisciplinary, since it is here that for the first time in the history of philosophy and science that scientific results were thoroughly (philosophically) generalized. This is also an important point in the development of the ontology of the sciences. The ontology of the

sciences has progressed enormously in the twentieth century, since many scientific theories with their specialized, cognitively oriented languages and with their specialized mathematical methods did not originate before the twentieth century. Up to now, the ontology of the sciences is the last chapter of the history of ontology.

After Kant, ontology developed in several directions. Ontology of the sciences evolved in Neo-Kantianism, Positivism and Neo-positivism, the philosophy of the Vienna Circle, and in contemporary philosophy of science. On the other side stands phenomenological ontology. Phenomenological ontology expanded Kant's phenomenological "reduction" of the world. Its climax is Husserl's phenomenology in which the world itself becomes the (world) phenomenon. The world's basic structures exist exactly in that way in which they are experienced (phenomenologically) by human beings. The construction and the structure of the world "happen" in man's pure intentional consciousness vis-à-vis reality. According to Husserl, mathematics and logic also participate in the constitution of the world out of the phenomena. This constitution has a semantical character but happens, nevertheless, without language. Heidegger's fundamental ontology, on the other hand, speaks of an anti-logical and anti-scientific basic experience, which is said to be paramount to all scientific knowledge.

The next decisive step in the development of ontology was the result of another development, which had reached its climax in the twentieth century, the development of formal logic. Formal logic, and, in union with it, analytic philosophy, often show the tendency to dissolve epistemology into syntax and semantics, and even pragmatics. The syntactical semantic functions, the reference relation, etc., could, in turn, be based upon the respective functions of language, be it ordinary language or the language of the sciences. Wittgenstein's reduction of thinking to the linguistic medium became an object of a philosophical position whose task was to explain and clarify language. As a result, the ontology of the sciences acquires features which are best characterized by "regional linguistic ontology". An important result of Wittgenstein's reduction of thinking to language was the dissolution of conceptualistic ontology." (*Preface by the Editors*, pp. 18-20)

From: Werner Leinfellner, Eric Kraemer and Jeffrey Schank (eds.), *Language and Ontology. Proceedings of the Sixth International Wittgenstein Symposium. 23th to 30th August 1981 Kirchberg am Wechsel (Austria)*, Wien: Hölder-Pichler-Tempsky, 1982.

The origin of a new Latin term: Ontologia"

Until 2003 the first appearance of the Latin word "ontologia" was known in two works published in 1613:

Rudolf Göckel (1547-1628) Latin Rudolf Goclenius, Professor of Logic in the University of Marburg: in his *Lexicon philosophicum quo tanquam clave philosophiae fores aperiuntur, informatum opera et studio Rodolphi Goclenii*, Frankfurt (reprinted by Georg Olms, second edition 1980) XII, 1143 pages) on the left margin of *abstractio* (the term is written in Greek);

Jacob Lorhard (1561-1609) Latin Jacobo Lorhardo or Jacobus Lorhardus, Professor at the University of St. Gallen (Switzerland) in his *Theatrum philosophicum*, Basilea, SECOND edition.

Göckel's work was well known, but Lorhard's *Theatrum philosophicum* was first discovered by Joseph S. Freedman in the second edition of his *Deutsche Schulphilosophie im Reformationszeitalter (1500-1650): ein Handbuch für den Hochschulunterricht*, Münster, MAKs, 1985, and cited by Jean-François Courtine in his masterpiece *Suárez et le système de la métaphysique*, Paris, Presses Universitaires de France, 1990, p. 410 n. 6.

Lorhard was an unknown author and the only reference I found to him is in the *Syllabus auctorum*, Vol. 9 of the *Bibliographia Philosophica Vetus . Repertorium generale systematicum operum philosophicorum usque ad annum MDCCC typis impressorum* by Wilhelm Risse, Zürich - New York, Georg Olms, 1998:

"*Lorhardus, Jacobus* (fl. 1597), praeceptor Durlaci, rector S. Galli"

Wilhelm Risse 's outstanding work contains a bibliography of the published titles on philosophy up to 1800 (about 18.000 titles!); I tried to find the FIRST edition of Lorhard's work, which was unknown.

In Vol. II, - "*Logica*" of Risse's work, Jacobus Lorhardus is cited twice: year 1597 and year 1606 (references are to the year of publication).

1597: *Liber de adeptione veri necessarii, seu apodictici...*, Tubingae, 1598, (p. 217)

1606: *Ogdoas scholastica, continens diagraphen typicam artium grammatices, logices, rethorices...* Sangalli, 1606, (p. 232)

The title of the second work puzzled me: *Ogdoas* means "composed of eight elements" and the title cited only three disciplines.

May 16, 2003, I discovered that this work was the first edition of the *Theatrum philosophicum* and that the word "*ontologiae*" appeared in the complete title:

Jacobo Lorhardo: *Ogdoas Scholastica continens Diagraphen Typicam artium: Grammatices (Latinae, Graecae), Logices, Rhetorices, Astronomices, Ethices, Physices, Metaphysices, seu Ontologiae.*

The frontispiece of the book [*Ogdoas Scholastica*](#) and of the *Metaphysicae su Ontologiae Diagrapha*.

"The first occurrence of "ontology" (in German: *Ontologie*) in a dictionary of philosophy can be found in the first philosophical dictionary published in a modern language, the *Philosophisches Lexicon* by Johann Georg Walch (1693-1775): the first edition was published in 1726 (the second improved edition of 1733 has been reprinted in three volumes by Thoemmes in 2001).

July 15, 2005: I received new information about Jacob Lorhard from Peter Øhrstrøm, Institut for Kommunikation, Aalborg Universitet:

"Jacob Lorhard was born in 1561 in Münsingen in South Germany. In 1603 he became "Rektor des Gymnasiums" in the protestant city of St. Gallen. In 1606 he published his book *Ogdoas scholastica*, on the frontispiece of which the word "ontologia" appears - probably for the first time ever in a book. "Ontologia" is used synonymously with "Metaphysica". In 1607, i.e., the year after the publication of *Ogdoas scholastica*, Lorhard received a calling from Landgraf Mortiz von Hessen to become professor of theology in Marburg. At that time Rudolph Göckel (1547-1628) was also professor in Marburg in logic,

ethics, and mathematics. It seems to be a likely assumption that Lorhard and Göckel met one or several times during 1607 and that they shared some of their findings with each other. In this way the sources suggest that Göckel during 1607 may have learned about Lorhard's new term "ontologia" not only from reading *Ogdoas scholastica* but also from personal conversations with Lorhard. For some reason, however, his stay in Marburg became very short and after less than a year he returned to his former position in St. Gallen. Lorhard died on 19 May, 1609. Later, in 1613, Lorhard's book was printed in a second edition under the title *Theatrum philosophicum*. However, in this new edition the word "ontologia" has disappeared from the front cover but has been maintained inside the book. In 1613, however, the term is also found in Rudolph Göckel's *Lexicon philosophicum*. Here the word "ontologia" is only mentioned briefly as follows: "ontologia, philosophia de ente" (i.e., "ontology, the philosophy of being"). It is very likely that Göckel included this term in his own writings due to inspiration from Lorhard."

October 27, 2006: Dr. Marco Lamanna, Bari University (Italy) send me some important details:

"In July 2006 I had the opportunity to consult a copy of the *Ogdoas Scholastica* (1606) of Lorhard in the University Library in San Marino. The neologism *ontologia* appears four times in the course of the work. On three occasions it occurs in the genitive singular (*Ontologiae*): on the frontispiece, in the title of the section on metaphysics, and at the end of this same section. Only on one occasion (in the dedicatory letter) does the word appear in the accusative case (*Ontologiam*). I was subsequently able to consult Lorhard's *Theatrum philosophicum* at the Herzog August Bibliothek in Wolfenbüttel. This work, the second (amplified) edition of the *Ogdoas Scholastica*, and appeared posthumously at Basel in 1613. The *Theatrum philosophicum* is made up of twelve parts (*continens Grammaticen Latinam, Graecam, et Hebraeam, Logicen, Rhetoricen, Arithmeticen, Geometriam, Musicen, Astronomicen, Ethicen, Physicen, Metaphysicen seu Ontologiam*). The parts that appear here in addition to the material in the *Ogdoas* are the sections on Hebrew grammar, arithmetic, geometry and music. In the dedicatory letter of the *Theatrum philosophicum*, Lorhardus writes "*hancque Dodecada Scholasticam confeci*" (i.e. a work of twelve

parts), in contrast to what he had written in 1606: "*hancque Ogdoada Scholasticam confeci*" (i.e. a work of eight parts).

In September 2006 I confirmed that the part of the work dealing with metaphysics (*Metaphysices seu Ontologiae Diagraphe*) is identical in the *Ogdoas* and in the *Theatrum*, and also discovered that Lorhardus was not the author of this chapter. In fact, what Lorhard did was to create a diagrammatic representation, in the Ramist tradition, of the *Metaphysicae Systema methodicum* of Clemens Timpler, which ran through nine editions, including some unauthorized imprints (Steinfurt 1604, Lich 1604, Hanau 1606, Frankfurt a.M. 1607, Marburg 1607, Hanau 1608, Frankfurt a.M. 1612, Hanau 1612, Hanau 1616).

[See: Joseph S. Freedman, *European Academic Philosophy in the Late Sixteenth and Early Seventeenth Centuries. The life, significance and philosophy of Clemens Timpler (1563/4-1624)*. Hildesheim: Georg Olms 1988].

Since Lorhard finished working on his *Ogdoas Scholastica* (the dedicatory letter was dated 24 February 1606), he could presumably only have had the 1604 editions of Timpler's work to consult. Lorhard faithfully repeats most of the theorems with which Timpler had begun each of his chapters, except for a few minor differences, explicable by the fact that Lorhard was adapting Timpler's work to diagrammatic form and that the *Ogdoas* was a book for *studiosis adolescentibus* of the Gymnasium in Sankt Gallen where he was rector. The only important difference is that Lorhard introduces a new word, not found in Timpler, "*Ontologia*", by which he means all metaphysics. In the title page of the *Ogdoas* and in the title of his Ramistic diagram, Lorhard equates the two words with the phrases "*Metaphysices, seu Ontologiae*", and "*Metaphysicae seu Ontologiae Diagraphe*" respectively. (A similar phrase also occurs in the dedicatory letter).

I have also found another copy of the *Ogdoas Scholastica* (1606), in the Universitäts- und Landesbibliothek Sachsen-Anhalt in Halle, in addition to the four copies indicated on the website *Ontology. Theory and History*."

April 27, 2011: An update on Lorhard from Marco Lamanna:

Latest Findings on Jakob Lorhard and the Rise of the Term Ontology

"My latest finding at the Universitätsbibliothek Marburg of the *Lysis duorum sophismatum pro omnipraesentia carnis Christi in Eius Persona* by Jakob Lorhard, gives us the definitive confirmation of the presence of Lorhard in Marburg in 1607.

The work regards a public discussion held by Lorhard at the Faculty of Theology of Marburg's Philipps-Universität in 1607. It contains two dedications: the first to Hermann Vultejus (1565-1634), professor of law and chancellor at University of Marburg, and the second to Gregor Schönfeld (1559-1628), professor of theology and superintendent in Hessen.

In the work, Lorhard for the most part discusses the theme of the omnipresence of Christ in the world, contrasting every pantheistic degeneration.

Lorhard's "exoteric" approach is evident. He argues only on the basis of the literal exegesis of the Sacred Scripture, as evident also in his *Kurtzer begriff Dess wahren ungefälschten Christenthumbs*, completed on his return from Marburg to St. Gallen and published posthumously in 1610.

Probably, the unsuccess of his appointment as professor of theology in Marburg was caused by the distance of Lorhard's theology from the esoteric and apocalyptic researches that were being affirmed in Marburg and at the court of the prince Moritz of Hessen in Kassel, for example with a theologian like Raphael Egli (1559-1622). Perhaps this is the reason that led his return to St. Gallen from Marburg, just four months later, in september 1607.

The publication in Marburg of the *Lysis* not only confirms the indications contained in the biography of Lorhard by Georg Leonhardt Hartmann, but also confirms above all the hypothesis formulated by Peter Øhrstrøm, Jan Andersen, Henrik Schaerfe (*What has happened to Ontology*, in F. Dau / M.-L. Mugnier, G. Stumme (eds.), Springer Verlag, Berlin-Heidelberg 2005): Rudoph Göckel most probably met Lorhard in Marburg between may and September of 1607, and from Lorhard thus renewed the neologism *ontology*."

The first occurrence of ontology in English

According to the last printed edition of the *Oxford English Dictionary* (Second edition, 1989) the first occurrence of "ontology" was in *An Universal Etymological English Dictionary* (1721) by Nathaniel Bailey (born ? - died 1742): "An Account of Being in the Abstract."

Isaac Watts (1674-1748) in his *Logic, or the Right Use of Reason in the Enquiry after Truth. With a Variety of Rules to Guard against Error, in the Affairs of Religion and Human Life, as well as in the Sciences* (1724) wrote: "In order to make due enquiries into all these, and many other particulars which go towards the complete and comprehensive idea of any being, the science of ontology is exceeding necessary. This is what was wont to be called the first part of metaphysics in the peripatetic schools" I. VI. 9.

The first book in English with "ontology" in the title is: Isaac Watts - "*Philosophical Essays on Various Subjects, (...); With some Remarks on Mr. Locke's Essay on the Human Understanding. To which is subjoined a brief Scheme of Ontology, or the Science of Being in general with its Affections*" (1733).

The on-line *Draft Revision* of the Oxford English Dictionary (September 2008) give as first occurrence (discovered by Fred R. Shapiro in a message to the *Linguist List* (December 25, 2005): Gideon Harvey (1636/7-1702): *Archelogia philosophica nova; or, New principles of Philosophy. Containing Philosophy in general, Metaphysicks or Ontology, Dynamilogy or a Discourse of Power, Religio Philosophi or Natural Theology, Physicks or Natural philosophy* - London, Thomson, 1663, Book II, Chapter One, pp. 17-18: "It is [Metaphysics] called also the First Philosophy, from its nearest approximation to Philosophy, its most proper Denomination is *Ontology*, or a Discourse of a Being."

The first occurrence of ontologia in a work written in German

The poet Christian Weise (1642 - 1708) in a novel published in German in 1675 with the pseudonym *Catharinum Civilem* made use of the Latin "ontologia":

"Denn durch die PHILOSOPHIE. wird allhier nicht eine DISPUTATION aus der ONTOLOGIA verstanden sondern die rechte PHILOSOPHIA PRACTICA, welche sich in dem Lichte der Natur und

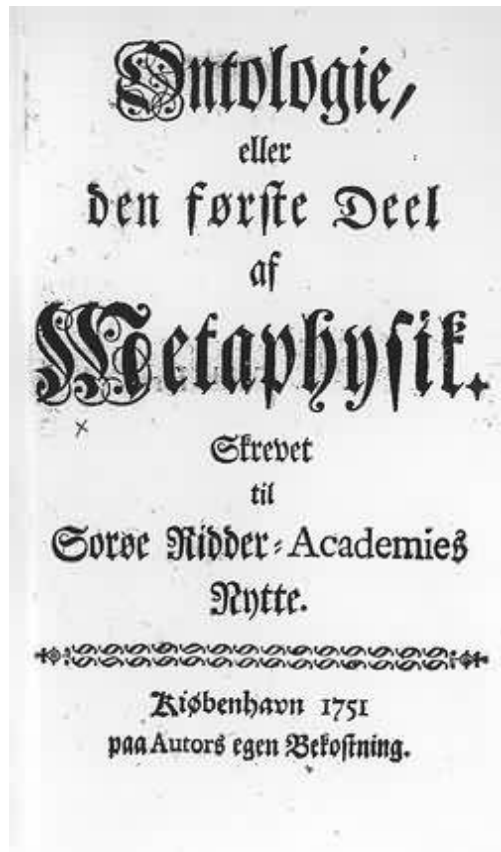

in denen Menschlichen Verrichtungen umbsiehet und dannen hero einen festen Grund der unverfälschten Klugheit gestellet hat."
(Chapter VIII, p. 181)

Christian Weise, *Die drey Klügsten Leute in der gantzen Welt*, Leipzig, J. Fritsch, 1675 (Critical edition in: *Sämtliche Werke*, XVIII, Berlin: Walter de Gruyter, 2005, p. 112)

The first occurrence of ontologie in Denmark

February, 24th 2004: I received this message from Dr. Jan Andersen (research assistant with Professor Peter Oehrstroem at the Department of Communication, Aalborg University, Denmark) on the origin of "ontology" in Denmark:

"The Danish-Norwegian author Jens Kraft (1720-1765) published a text book in Danish titled 'Ontologie' as a part of his 'Metaphysik' in 1751. When the book was published Kraft was a professor (mathematics and philosophy) at the Soroe University. 'Ontologie' was meant as a text book aimed at the students there. 'Ontologie' was a part of the larger work 'Metaphysik' which also contained 'Cosmologie' (1752), 'Psychologie' (1752) and 'Naturlig Theologie' (1753). Kraft was a dedicated admirer of Christian Wolff and had (before writing the book) attended Wolff's lectures at Halle University, Germany, but, as opposed to Wolff, Kraft was an adherent of Newtonian theory, and is considered to be the prime spokesman and the introducer of Newton to Denmark and Norway (the two countries being one united kingdom at the time). Kraft is mentioned in the Dictionary of Scientific Biography (Charles Coulston Gillispie ed.) vol. VII, New York 1973, Charles Scribner's Sons, p. 490 in an article written by Kurt Moeller Pedersen. Kraft's book can be found at the Statsbiblioteket in Aarhus, Denmark."

Jens Kraft, *Ontologie'*, frontispiece of the Book.

Texts with the term ontologia from Lorhard to Clauberg (1606-1664)

1. Lorhard, Jacob. 1606. *Ogdoas Scholastica, Continens Diagraphen Typicam Artium: Grammatices (Latinae, Graecae), Logices, Rhetorices, Astronomices, Ethices, Physices, Metaphysices, Seu Ontologiae*. St. Gallen.

According to the *Bibliographia philosophica vetus, Pars 1. Philosophia generalis*, by Wilhelm Risse, the volume is available only in two German Libraries: the Staatsbibliothek Augsburg and the Lüneburg Ratsbibliothek, but I discovered a third copy, not cited by Risse, in the Kantonsbibliothek St. Gallen, Switerland.

From 1998, a fourth copy is available in the "Fondo Young sulla memoria e la mnemotecnica" (Morris N. Young's Fund on memory and mnemotechnics) at the Library of the San Marino

- University; a fifth copy was discovered by Marco Lamanna, University of Bari, Italy in the Universitäts- und Landesbibliothek Sachsen-Anhalt in Halle.
2. Wegelin, Thomas. 1608. *Disputatio Theologica De Christo*. Tübingae: Gruppenbach.
Dissertation. (Advisor: Johann Georg Sigwart), see p. 9.
Available at München, Bayerische Staatsbibliothek.
 3. Lorhard, Jacob. 1613. *Theatrum Philosophicum, Continens Grammaticen Latinam, Graecam, Et Hebraeam, Logicen, Rhetoricen, Arithmeticen, Geometriam, Musicen, Astronomicen, Ethicen, Physicen, Metaphysicen Seu Ontologiam*. Basilea.

Selection of studies on the origin of the Latin ontologia

"In the prolegomena to his *Elementa philosophiae sive Ontosophiae* (1647), Johannes Clauberg remarks: 'Since the science which is about God calls itself Theosophy or Theology, it would seem fitting to call Ontosophy or Ontology that science which does not deal with this and that being, as distinct from the others owing to its special name or properties, but with being in general.' This text may be held, in the present state of historical knowledge, for the birth certificate of ontology as a science conceived after the pattern of theology, yet radically distinct from it, since being qua being is held there as indifferent to all its conceivable determinations. 'There is, Clauberg says, a certain science which envisages being inasmuch as it is being, that is, inasmuch as it is understood to have a certain common nature or degree of being, a degree which is to be found in both corporeal

and incorporeal beings, in God and in creatures, in each and every singular being according to its own mode.' Leibniz will later praise Clauberg for such an undertaking, but he will regret that it had not been a more successful one. The very word "ontology" occurs at least once in an undated fragment of Leibniz, (1) and one can expect accidentally to meet it later in various places, (2) but it is not until 1729 that it finally comes into its own with the *Ontologia* of Christian Wolff."

From: Etienne Gilson, *Being and Some Philosophers*, Toronto, Pontifical Institute of Mediaeval Studies, 1952 p. 112-113. French edition: *L'être et l'essence*. Paris, Vrin, 1948 (Second revised edition 1962).

"C'est un fait que l'*Ontologia* de WOLFF constitue une étape importante de l'histoire de la métaphysique, même s'il n'est pas vrai, comme on le dit trop souvent, qu'elle soit la toute première Ontologie. Avant lui déjà, en effet, CLAUBERG avait fait paraître à Amsterdam en 1656 une *Metaphysica de ente quae rectius Ontosophia, aliarum Disciplinarum, ipsiusque quoque Jurisprudentiae et Litterarum, studiosis accomodata*, car ainsi qu'il le déclare: *sicuti...geosofia vel geologia dicitur quae circa Deum occupata est scientia: ita haec, quae non circa hoc vel illud ens speciali nomine insignitum vel proprietate quadam ab aliis distinctum, sed circa ens in genere versatur, non incommode Ontosophia vel Ontologia dici posse videatur* (*Opera omnia, Amstelodami, 1691 t. I, p. 281*). De même, en 1669, le Père Réginald, dominicain, publia un ouvrage réédité à Paris en 1878 et intitulé: *Doctrinae Divi Thomae Aquinatis tria principia, cum suis consequentiis*, dont la première partie traite de l'être en général sous le titre: *De Ontologia*, cependant que Jean-Baptiste Du HAMEL, dans sa: *Philosophia vetus et nova ad usum scholae accomodata, in regia Burgundia ohm pertractata*, Parisiis, 1678, emploie le mot *Ontologia*

dans le même sens, lorsque, dans le tome III de cet ouvrage, divisant la métaphysique en trois parties, il déclare: In primo quae ad entis ipsius naturam, principia, affectiones et primas velut species pertinent, exsequimur; adeo ut Ontologiam seu entis scientiam hoc tractatu complexamur. Atque haec est prima philosophia aut scientia generalis, ex qua reliquae dimanant (p. 10 et 11 de l'édition de 1687).

Mais ces auteurs ne sont pas les premiers à avoir frayé la voie de l'Ontologie. Le terme même semble avoir fait sa première apparition, tout au moins sous sa forme grecque, dans le *Lexicon philosophicum quo tamquam clave philosophiae fores aperiuntur* de Rudolph GOCCLENIUS (Frankfurt, 1613), où l'on peut lire à l'article: *abstractio*, p. 16, dans la marge: οντολογία, et philosophia de ente, et dans le corps de l'article: οντολογία, idest philosophia de ente seu de transcendentibus.

vero separatur ratione, non etiã separantur definitione vt patet in formis Naturalib. Ioh. Talentonius Philosophus & Medicus Parmensis acutissim^o l. 3. c. 9. Itaq; Aristot. dixit formas naturales esse similes similitati & Mathematicas curuitati. Similitas nõ potest definiri sine mentione materiæ seu subie-

cti, q̄ est Nasus: At curuitas definitur sine mentione ligni vel çris, omninoq; sc̄sibilis materię seu naturalis corporis. Abstractio seu secretio igitur, alia est faciliior, alia difficiliior, vt: affectiones externę facilius ratione abiungi posse videntur à subiectis, quam internę seu intimę.

ABSTRACTIO MATERIÆ in scientijs contemplatricibus.

Abstractionis Materiæ in scientijs Theoreticis tres sunt Modi.

Seiunctio & Abstractio à materia est à

Singulari seu sensili. Signata, vt hoc vel illo corpore. Abstractio *physica* hæc est. Cum *singulari, tum vniuersali*, etiam secundum rationem tantum, vt à corpore simplici aut mixto. *Mathematica* hæc est. & *ἠολογικὴ*, id est, Philosophicę de ente seu Transcendentibus.

Omni tam secundum rem, quam secundum rationem. *Transnaturalis* de Deo & Intelligentiis hæc est. Hęc seiunctio est, quam recentiores nonnulli vocant abstractiõnem omnimodam à Materia per essentiam.

Hanc distinctionem habet Alexander Alensis in 6. Met. text. 2.

Sunt qui Metaphysicã Abstractiõnem à materia dicant fieri secundũ rem & rationẽ, illamq; faciant duplicẽ: Vnam per essentiã, qualis cernatur in Deo: Alterã per indifferentiã, quę conueniat in prædicata transcendentia, Bonũ, Verũ, Ens, & dicantur esse immaterialia, ac secundum rem abstracta à materia, eo q̄ indifferentiter inueniantur tã in reb. materialib. quã iis, quę vacant materia: cui^o distinctionis *κείων* † ego aliorũ iudiciis relinquo. Etsi huius distinctionis auctores erudite & subtiliter refutare videtur Ben. Peterius libr. 1. Phys. Nã si hæc ratio istius nouę appellationis valeat, propter eandẽ causam dicere aliquis posset, illa prædicata, Ens,

Bonum, &c. esse physica & materialia, quia non solum in rebus materiæ expertibus, sed etiam in his, quę habent materiam, reperiũtur. Quod est indifferens ad aliqua nõ magis referri dicitur ad vnũ illorũ, quã ad alterũ. Si ens est indifferens ad res materiales & immateriales, nõ ideo fit abstractũ secundum rẽ à materia, sed ab utroq; rerum genere abstrahi potest tãtum secundũ rationẽ: non secus atq; animal tantum ratione potest separari ab homine & bruto. Itaq; merito reprehenderetur, qui affirmaret, animal vniuerse sumptum, quod perse indifferens sit ad rationale & irrationale, esse poti^o rationale quam irrationale. Sed magis subtilia hæc videntur quam vtilia. Itaq; ad *πολυμαθημασὺν* sane referantur.

† [iudiciũ.]

Rudolf Göckel, *Lexicon philosophicum quo tanquam clave philosophiæ fores aperiuntur, informatum opera et studio Rodolphi Goclenii*, Frankfurt, 1613: *abstractio* ('ontologia' is written in Greek).]

C'est encore sous sa forme grecque qu'on le rencontre chez Abraham CALOV qui, dans sa: *Metaphysica divina a principiis eruta, in abstractione entis repræsentata ad S. S. Theologiam applicata, monstrans terminorum et conclusionum transcendentium usum genuinum abusum hereticum constans* (Rostockii, 1636), déclare: *Scientia de ente, Metaphysica appellatur communiter a rerum ordine,*

οντολογα rectius ab objecto proprio (*Scripta philosophica*, Lubecae, 1651, p. 145) et qui, tout au long de cet ouvrage, appelle ainsi οντολογα la science de l'être; à tel point que sa *Metaphysica divina...* peut être considérée, dans l'état actuel de nos connaissances, comme la première ontologie. Quoi qu'il en soit, on peut bien dire qu'avec CALOV, l'Ontologie en tant que discipline est déjà née. Et c'est cette science de l'être en général que les scolastiques du XVII^e siècle se sont plu à ériger en une sorte d'introduction à la philosophie - d'où le nom de philosophie première qu'ils lui donnèrent encore -- et qu'ils réduisirent peu à peu à n'être qu'un vocabulaire ou un lexique philosophique, destiné à servir d'instrument de base à l'enseignement de la métaphysique, grâce à la définition des termes employés par celle-ci, comme nous l'apprennent: Johann Franz BUDDE dans une longue note de son ouvrage: *Isagoge historico-theologica in theologiam universam singulasque ejus partes*, Lipsiae, 1727, lib. I, cap. IV, 28, t. I, p. 252-261, et surtout Jacob THOMASIIUS dans son: *Historia variae fortunae quant Metaphysica jam sub Aristotele, jam sub Scholasticis, jam sub Recentibus experta est*, ajoutée en appendice à ses *Erotemata metaphysica pro incipientibus*, Lipsiae, 1692, p. 19-87.

Ainsi donc, lorsque l'ouvrage de WOLFF parut, l'ontologie était une conquête de la philosophie vieille déjà d'à peu près cent ans. Mais, à défaut d'en avoir été le créateur, il peut bien être considéré comme son réformateur et son rénovateur. Car, indépendamment du fait qu'il a été le premier à lui donner des dimensions matérielles aussi considérables et à en faire un traité bien à part à côté des autres traités constituant l'ensemble de la métaphysique, il s'est élevé contre la prétention d'en faire purement et simplement un lexique philosophique et a tenté de l'ériger en authentique science première qua *omnis cognitionis humanae principia continentur*, comme le dit son titre. Il lui attribue, en effet, pour rôle d'établir les principes et de définir les concepts nécessaires aux autres disciplines, non seulement philosophiques, mais aussi scientifiques et utiles à la pratique de la vie, en même temps qu'il vise à y édifier une théorie générale de l'être, ainsi que le veut la définition qu'il en donne au 1: *Ontologia seu Philosophia prima est scientia entis in genere, seu quatenus ens est*. En un mot, pour être l'héritier des scolastiques du XVII^e siècle, et tout en adoptant leur réduction de la philosophie première à l'Ontologie, alors qu'elle était coextensive à toute la métaphysique chez

ARISTOTE, WOLFF n'en a pas moins donné à celle-ci un statut à la fois plus ample et plus ferme. Et c'est ce qui fait que son nom est resté plus intimement lié que celui de ces derniers à son apparition." (p. 116).

From: Jean École, *La Philosophia prima sive Ontologia de Christian Wolff: Histoire, doctrine et méthode*, Giornale di metafisica, 1961/1 pp. 114-125 (reprinted in: Jean École, *Introduction à l'Opus Metaphysicum de Christian Wolff*, Paris, Vrin, 1985 pp. 8-19).

"Christian Wolff popularized (in philosophical circles) the word 'ontology' (*ontologia*, *Ontologie*). The word appears in the title of his *Philosophia prima sive ontologia methodo scientifica pertractata, qua omnes cognitionis humanae principia continentur*, first published in 1730. *Ontologia seu philosophia prima* is defined as *scientia entis in genere, quatenus ens est* (op. cit., § 1). Ontology uses a "demonstrative [i.e., rational and deductive] method" (ibid., § 2), and purports to investigate the most general predicates of all *entes* as such (ibid., § 8). Following Wolff, Alexander Baumgarten (>*Metaphysica*, 1740) defined ontology (also called ontosophia, metaphysica, metaphysica universalis, architectonica, philosophia prima) as "the science of the most general and abstract predicates of anything" (op. cit., § 4), in so far as they belong to the first cognitive principles of the human mind (ibid., § 5). Kant launched an epoch-making attack against rational ontology in the sense of Wolff and Baumgarten; for ontology was to him both a pseudo-science and a temptation. He was convinced that he had succeeded in eliminating it by the "transcendental Analytic." The whole *Critique of Pure Reason* is, in a way, the work of a man who was obsessed, and deeply distressed, by ontology. On the other hand, the expression 'ontological proof' (*ontologischer Beweis*) used by Kant is not a mere alternative expression to 'Anselmian proof'; it is intended to emphasize the very nature of the proof. Since Kant is at the crossroads of modern thought, it is important to know what he had in mind when he decided to overthrow the ambitious projects of rational ontologists. An examination of the origins of the concept of ontology is an indispensable step in the clarification of Kant's thought.

Although the concept of ontology preceded the word 'ontology', it can be assumed that only when such a word (or the alternative word,

'ontosophy') came into use, could philosophers begin to understand fully all the implications of the concept." (p. 36)

"Unless I have missed the pertinent texts, a new name for a new discipline of the character stated above -- which is at the same time 'a new name for some old ways of thinking' - occurred only in the Seventeenth Century. It was proposed by philosophers who did not belong to the Schools, but who had been directly or indirectly influenced by the Scholastic tradition supplemented by the modern rationalist tradition. A number of historians (Rudolf Eucken, Etienne Gilson, Hans Pichler, Max Wundt, Heinz Heimsoeth) mention Johannes Clauberg as the first philosopher who used the new term we are looking for: the term 'ontology.' This is not the case. The first instance occurs in Rudolf Goclenius (*Lexicon philosophicum, quo tanquam clave philosophiae fores aperiuntur, Informatum opera et studio Rodolphi Goclenii*. Francoforti, 1613). In his *Worterbuch der philosophischen Begriffe*, Rudolf Eisler refers to this instance, but fails to indicate its significance. In a way, Eisler was right, because it has no significance.⁽¹⁾ The word 'ontology' occurs in Goclenius's *Lexicon* on page 16 as follows: "οντολογα, philosophia de ente." This is all. Furthermore, it occurs on the left margin of the article "Abstractio," in which the author discusses the concept of abstractio materiae according to Alexander of Hales. If this were not enough, Goclenius does not even include an article on Metaphysics or First Philosophy in his *Lexicon*. There is, indeed, an article on Philosophy (Philosophia) which contains various definitions, among them the following one: Philosophy can be understood *per excellentiam as prima philosophia* (definition 4). Therefore, if it is true that Goclenius actually used the word 'ontology' he did very little with it. Neither does he mention such a word in his *Isagoge* (Rod. Goclenii ... *Isagoge in peripateticorum et Scholasticorum primam philosophiam quae vulgo dicitur Metaphysica*, Francoforti, 1612). Here the expression *prima philosophia* is introduced as a technical term for the more "common" *Metaphysica*. Goclenius writes to this effect: '1. Duae sunt communissimae disciplinae liberales: Logica, Metaphysica, quae sapientia dicitur ... 3. Metaphysica seu prima philosophia cognitio communis est eorum, quae sunt altissimis causas & prima principia; ... 9. Prima philosophia scientia de Ente qua ens, hoc est, universaliter sumto' (P.A. 4). He therefore relapsed into a relatively long established tradition in philosophical terminology, but 'to relapse

into' is probably too strong an expression when he had scarcely done anything to produce a new terminology. At any rate, his introduction of the word 'ontology' in the *Lexicon* does not seem to be the result of a careful plan; it looks more like a purely casual and inconsequential remark." (pp. 38-39).

Notes

(1) Jean École, in an article on Wolff's *Ontologia* (*Rivista di metafisica*, XVI [1961], 114-125) published after the present one was written, also mention Goclenius.

[École's article is the French version of the author's Latin "Introductio" to his critical edition of Wolff's *Philosophia Prima sive Ontologia*, Hildesheim: Olms, 1962].

From: José Ferrater Mora, "On the Early History of 'Ontology' ", in: *Philosophy and Phenomenological Research*, 24, 1963 pp. 36-47.

"Wir gehen vom Titel "Ontologia" aus Dieser ist dem Christian Wolff ganz selbstverständlich. Er benutzt ihn, ohne über seine Herkunft Rechenschaft abzulegen. Dabei ist nicht die historisch verstandene Herkunft entscheidend, sondern die ausgewiesene Zugehörigkeit dieses Titels zum Wesen der in ihm ausgesprochenen Prima Philosophia aus gerade diesem Wesen. Bekanntlich ist der Titel "Prima Philosophia" ein von Aristoteles der Sache und dem Kern der Sache des Denkens verliehener Titel. Dieser Vorgang der Namensgebung ist kein beliebiger! Der Titel "Prima Philosophia", beziehungsweise "prothé filosofia" wird dem Denken beigegeben, als es die ihm zugehörige Gestalt aus seinem eigenen Wesen annimmt. Die ihm später zugetragenen Titel "Metaphysik" und "Ontologie" sind dagegen nur Nebentitel.

Johannes Micraelius (1597 - 1658) schreibt in seinem *Lexicon Philosophicum: Metaphysicae objectum est Ens quatenus Ens est. Unde etiam vocatur aliquibus ; (1).* Er spricht hier ausdrücklich von "einigen"! Einer davon ist Johannes Clauberg (1622 - 1665), der oft als der erste genannt wird, der den Titel "Ontologia" gebraucht. Dieser verfaßte ein Werk: *Elementa philosophiae sive Ontosophia* (Groningen 1647). 1660 kam das Buch, oder vielmehr sein Hauptteil, unter einem anderen Titel als: *Ontosophia nova, quae vulgo Metaphysica* (Duisburg) heraus; es konnte 1664 unter einem

nochmals geänderten Titel erscheinen: *Metaphysica de ente, quae rectius Ontosophia*, Amsterdam. Bereits in der ersten Ausgabe von 1647 ist der Titel "Ontosophia" auch durch den Titel „Ontologia" verdeutlicht (2). Die dritte Ausgabe ist später in die *Opera philosophica* aufgenommen worden (1691). Dort lautet der Passus: *Sicuti autem: Ontologia dicitur quae circa Deum occupata est scientia: ita haec, quae non circa hoc vel illud ens speciali nomine insignitum vel proprietate quaedam ab aliis distinctum, sed circa ens in genere versatur, non incommode Ontosophia vel Ontologia dici posse videatur* (3).

Wenig später heißt es: *Est quaedam scientia, quae contemplatur ens quatenus ens est, hoc est in quantum communem quandam intelligitur habere naturam vel naturae gradum, qui rebus corporeis et incorporeis, Deo et creaturis, omnibusque adeo et in singulis entibus suo modo inest. Ea vulgo Metaphysica, sed aptius Ontologia vel scientia Catholica, eine allgemeine Wissenschaft, et philosophia universalis nominatur.* 13). Der Titel "Ontologia" findet sich jedoch noch vor Clauberg. Abraham Calov (1612 - 1686) hat ihn schon 1636 in seiner *Metaphysica divina: Scientia de Ente Metaphysica appellatur communiter a rerum ordine, ' οντολογία*; rectius ab objecto proprio (4). Und noch vor Calov benutzt ihn Johann Heinrich Alsted (1588 - 1638). Er gibt 1620 seinen *Cursus philosophici Encyclopaedia* heraus. Dort heißt es: *Metaphysica est sapientia quae considerat ens qua ens: alias dicitur prima philosophia, et οντολογία* in *Lexico Goclenii* pag. 16 (5). Alsted verweist hier auf den Schulmetaphysiker Rudolf Göckel (Goclenius, 1547 - 1628), der nach allem, was wir wissen, der erste gewesen ist, der den Titel "Ontologia" geprägt hat (6)." (pp. 265-266)

(6) Das hätte man schon immer im Eisler nachschlagen können: Rudolf Eisler, *Wörterbuch der Philosophischen Begriffe*, 4. Aufl., Berlin 1927, Artikel "Ontologie". Trotzdem hielt sich hartnäckig die Behauptung, Clauberg sei der Erfinder dieses Titels gewesen

From: Ernst Vollrath, "Die Gliederung der Metaphysik in eine *Metaphysica Generalis* und eine *Metaphysica Specialis*", *Zeitschrift für Philosophische Forschung*, April-June 1962, XVI, 2.

"La thèse de Goclenius qui sépare radicalement la *prima philosophia* et la *metaphysica* (1), nous paraît d'autant plus intéressante que son auteur est très vraisemblablement celui qui a forgé pour la première fois (2) le mot d'ontologie, destiné par la suite à nommer précisément cette *philosophia prima* comme science universelle, dans sa séparation de toute recherche théologique appréhendée désormais comme 'spéciale'. On peut lire en effet, sous la plume de Goclenius, mais encore sous sa forme grecque, le terme d'ontologia, non pas à vrai dire dans son *Isagoge*, mais dans le célèbre *Lexicon philosophicum quo tanquam clave philosophiae fores aperiuntur, informatum opera et studio Rodolphi Goclenii*, publié quelques années plus tard, à Francfort en 1613. (3) Il est très significatif de trouver cette première occurrence du terme à l'article *abstractio*. Nous avons déjà signalé (cf. chapitre III, p. 458 sq.) que Pérérius introduisait son opposition insolite entre philosophie première métaphysique à partir d'une réflexion critique sur la doctrine

classique ('aristotélico-thomiste') de l'abstraction, et que Suárez développait le plus nettement l'orientation ontologique de son projet métaphysique en fonction de sa doctrine de l'abstraction et de la *praecisio* (*Disputationes Metaphysicae*, II, 2, 15-16)."

(1) Est-il besoin de souligner qu'une telle opposition est contraire à l'esprit de l'enquête aristotélicienne comme à l'élaboration terminologique des commentateurs les plus anciens?

(2) La prudence est ici plus que jamais de mise. Après avoir rédigé ces pages, nous avons été mis, grâce à l'obligeance de J. S. Freedman, à qui l'on doit un excellent travail (*Deutsche Schulphilosophie im Reformationszeitalter 1500-1650*, dact., Münster, 1984), sur la piste d'un auteur assez singulier et à la vérité peu connu, un certain Jacobus Lorhardus, recteur au Gymnasium de Saint-Galles, qui publie à Bâle en 1613, comme *secunda editio* un *Theatrum philosophicum* qui présente à la manière ramiste une série de tabelles à travers lesquelles se répartissent toutes les disciplines philosophiques. Or le 'diagraphe' qui introduit les divisions de la Métaphysique est précisément intitulé : *Metaphysicae seu Ontologiae Diagraphe* (p. 157). Et il se termine, après la division des ficta ou des êtres de raison, par ces mots : *Finis Ontologiae*. L'ouvrage de Lorhardus est très remarquable également dans sa définition la plus générale de la Métaphysique qui fait évidemment référence à Clemens Timpler (cf. supra, p. 265 sq.): " *Metaphysicae* (quae est epistheme tou noetou noeton quatenus ab homine naturali rationis lumine sine ullo materiae conceptu est intelligibile) partes duae sunt... !" (ibid.).

(3) Reprint Hildesheim, 1964. Signalons aussi qu'en revanche le terme *ontologia* n'apparaît pas, du moins à notre connaissance, dans le *Lexicon philosophicum graecum* de 1615 (Marbourg). (p. 410 n. 6)

From: Jean-François Courtine, *Suárez et le système de la métaphysique*, Paris: Presses Universitaires de France 1990.

Lutherans vs Calvinists on the subject matter of metaphysics

In Calvinism the idea of a synthetic presentation of doctrine was retained, but the encyclopedia of the sciences was enlarged and transformed into a system of systems, governed by a theory of the arts, a "technology", according to which philosophical conclusions

were presented as derived from nature and theological conclusions as derived from revelation. Whereas Lutheran thinkers - regarding their teaching as essentially practical - adopted the analytic order in presenting their theological teaching, Reformed theologians of the early seventeenth century in Germany regarded their science as the theoretical and used rather a synthetic order in the presentation of doctrine. In accordance with the architectonic spirit of Calvinist Scholasticism, Reformed dogmatics began, in accordance with the synthetic order, with the glory of God as the first cause and final goal of all things, and treated his eternal decrees of providence and predestination before taking up his government of the world in time.

In this conception natural theology formed an integral part of the *cognition Dei perfecta* at which theology aimed. Reformed writers tended, therefore, to distinguish clearly between natural theology and the doctrine of being - a distinction only reluctantly accepted by the Lutherans. Calvinist authors spoke of two sorts of doctrine, a doctrine of God to the extent that he is accessible to human reason and a doctrine of being which had the function of assigning to each of the particular disciplines its proper domain.

The Marburg professor Rudolph Clementius (d. 1628) distinguished two separate disciplines, a universal science called "first philosophy" or "ontology" and a particular science called "natural theology". Ontology deals with being, its properties and its principles; natural theology studies the various types of immaterial being: God, the intelligences and the human soul. The term "metaphysics" was used to designate both. In the works of authors like Bartholomeus Keckckermann (d. 1609) of Heidelberg and Danzig, Clemens Timpler (d. 1624) of Heidelberg and Steinfurt, and Johann Heinrich Alsted (d. 1638) of Herborn there then appeared a new, unified vision of the encyclopaedia of the scientific disciplines in which ontology had the role of assigning to each of the particular disciplines its proper domain. This new vision was grounded in a conception of doctrine which was specifically a product of the Renaissance, a conception which set it apart from the Aristotelianism of both Catholic Scholasticism and Lutheran Orthodoxy. According to the traditional Aristotelian understanding, taken up by Catholic theologians, scientific knowledge was - as we have seen - made up of conclusions which are both true and certain, because they are the result of a

demonstration based on an evident principle or cause. "Science" was the habit or faculty by which the mind is disposed to assent to such conclusions. Only necessary, universal statements can be scientific; there can be no demonstration of contingent, singular facts and no science of changeable things as such.

Calvinist writers departed from this traditional definition of scientific knowledge in a way which was conditioned by Reformed theology. Because they wanted to assure the truth and certainty of theological conclusions, they extended the range of scientific validity beyond the universal conclusions which natural theology can derive from the properties of things to the singular, contingent facts of history which are dependent on God's providential care and which revealed theology holds, on the testimony of Scripture, to be principles of knowledge.

In the approach of men like Keckermann scientific doctrine was, for this reason, understood as a body of knowledge, systematically ordered so as to make it possible for a learned man to impart the habit of scientific knowledge to others by correct explanation. The notion of a *corpus doctrinae* differed from the Lutheran idea in a way which betrayed the influence of humanism. Whereas Lutheran writers concerned themselves primarily with theological doctrines and sought simply to show the logical connections between individual theological teachings, the Calvinists saw theological doctrine as part of the sum total of the knowledge which has been gained by man in the course of history and transmitted to the present generation by written and oral tradition. The task of the teacher was to order, to systematize, the doctrine of each of the disciplines and to relate them to one another in a new encyclopaedia of knowledge. In his *Praeognita philosophica* (Hanau 1608) Keckermann presented a general theory of science - now we should probably say a theory of art - in which he appealed to the norms of certitude which had been proposed by Melanchthon: revelation, the universal sense experience of men, common innate notions and the orderly presentation of syllogistic conclusions (*Opera, Corpus Reformatorum*, XIII 149-53, *De anima, Causae certitudinis*).

Keckermann went beyond Melanchthon, however, by defining the « intellectus ordinis in syllogismo as a *facultas artificialis acquisita per certam disciplinam* ». By "faculty" he meant an internal source of

certitude which is a habit or disposition - in accordance with the Aristotelian conception. By the “discipline” through which the habit is acquired, he meant the external, ordered body of doctrine handed down in the traditional liberal arts which must be mastered by the learned man.

The most significant word in Keckermann’s definition is the word “artificial”. He described the habit acquired by the learned man not as “scientific”, but rather as “artificial”, because it concerns conclusions which belong to all the liberal arts and includes both universal conclusions drawn from the nature of things and singular, contingent conclusions based on tradition, for the reason that knowledge of both types of conclusion can be gained by the systematic application of methodical principles. (pp. 127-129)

Charles H. Lohr, "*Technologia: The Calvinist Theory of Science in the Renaissance*", in Gregorio Piaia (ed.), *La presenza dell'aristotelismo padovano nella filosofia della prima modernità*, Roma-Padova: Editrice Antenore 2002, pp. 123-132.

Further developments of the history of ontology

"In 1620 the Calvinist Johannes Heinrich Alsted (1588-1638) takes up the term 'ontology' and identifies ontology with metaphysics or 'first philosophy' as 'general discipline of being'. This ontology has a general part which deals with transcendentia and a special part which deals with praedicamenta (categories). Alsted opposes this general discipline or ontology to inferior disciplines which are concerned with special beings such as physics with natural bodies, mathematics with quantity), as well as to the science of transnatural beings, which he calls pneumatologia, the science of God, angels, and separate souls. Metaphysics or ontology is the most general discipline, which cannot have a double subject (being and God) (*Cursus philosophici Encyclopaedia*, 1620, Lib. V-VI).

Johann Micraelius (1579-1658) departs from the reduction of metaphysics to the science of being as being and sees it as embracing also the special sciences of pneumatology (theology, angelography, psychology). These he opposes to ontology as the general part (see the articles 'Metaphysica' and 'Philosophia' in his *Lexicon philosophicum*

of 1653). Micraelius thereby seems to coin the distinction between *metaphysica generalis* and *metataphysica specialis*, a distinction which has been current ever since. Thee notion of 'ontology' was also affected by Cartesianism. Johannes Clauberg distinguishes three kinds of entia: being as thinkable (*ens cogitabile*), being as something (*aliquid*), and being as thing or substantial being (*res sive ens substantiale*). Ontology or 'ontosophy' deals with being in the third sense and it presupposes the science of thinkable things, in other words metaphysics or 'first philosophy', as this is elaborated in René Descartes's *Meditationes (Metaphysica de Ente, quae rectius Ontosophia, 1664, 1, 1-5)*.

Traces of this same distinction, between ontology and a science or method of thought, appear also in the 18th century, for example in the work of Christian Wolff and in Kant. According to Wolff, ontology deals with being in general, but it can also be termed 'first philosophy' in so far as it concerns first principles and notions 'which are used in reasoning'. The method of ontology conforms to that of mathematics (*Philosophia prima sive Ontologia, 1730, 'Prolegomena'*). Kant identifies ontology (the system of all those concepts and principles of reason which relate to objects in general) with the first part of the system of his metaphysics of nature. Ontology in this sense presupposes the method or propaedeutic of the critique of pure reason, the knowledge of the limits of human knowledge. Kant's reformed ontology is concerned only with objects which are accessible to human knowledge (appearing objects, ontology of 'immanent thought') and it is based on the principles of this knowledge developed by Kant in his 'analytic of the pure understanding' (*CPR, Letter to Beck. 211 January 1792*). (On the relations of methodology, metaphysics, and ontology, see also Johann Friedrich Herbart. for example *Kurze Enzyklopädie der Philosophie, 1831, 11, 190, and Lotze*).

Also in the 18th century. the German tradition tends sometimes to locate the object of ontology in the essence of things, rather than in the things themselves. In Wolff's work, this transformation becomes manifest in the fact that the first thing, conceived in being is not existence, but essence (*Philosophia prima, 144*). In Christian August Crusius, ontology becomes explicitly a science of the 'general essence of things', and he sees this essence as something to be analysed

entirely a priori (*Entwurf der notwendigen Vernunftwahrheiten*, 1745, 1, 5: see also Georg Bernhard Bilfinger. (1693-1750), Johann Heinrich Lambert, and Hegel).

As for the relation between metaphysics and ontology, Wolff (*Philosophia rationalis, 'Discursus praeliminaris'*, 79, 99), Crusius (*Entwurf*, 1, 5), and Kant (*CPR, Reflection 4851*) remain faithful to the distinction between general metaphysics (ontology) and special metaphysics (psychology or pneumatology, cosmology, theology).

In the 19th and 20th centuries, the evolution of the notion of 'ontology' can again be analysed in terms of the distinction between the object of ontology and the relation of ontology to other disciplines. The relation between ontology, 'epistemological' sciences and metaphysics is discussed by authors such as Rudolf Hermann Lotze, Nicolai Hartmann, and Günther Jacoby (1881-1969)."

From: Léo Freuler, "ONTOLOGY. I: History of Ontology", in: Hans Burkhardt & Barry Smith (eds.), *Handbook of Metaphysics and Ontology*, Philosophia Verlag GMBH, Munchen 1991, pp. 637-640.

"The study of being in so far as this is shared in common by all entities, both material and immaterial. It deals with the most general properties of beings in all their different varieties.

The books of Aristotle's *Physics* deal with material entities. His *Metaphysics* (literally 'what comes after the *Physics*'), on the other hand, deals with what is beyond or behind the physical world - with immaterial entities - and thus contains theology as its most prominent part. At the same time, however, Aristotle conceives this 'metaphysics' as having as its subject matter all beings, or rather being as such. *Metaphysics* is accordingly identified also as 'first philosophy', since it deals with the most basic principles upon which all other sciences rest.

From the very beginning, then, an alliance was established between theology and the science of being qua being, and this alliance was sustained successfully throughout the Middle Ages. By the seventeenth century, however, the two disciplines were beginning to fall apart, and there was effected a distinction between *metaphysica generalis* on the one hand - the science of the most general concepts or categories of being - and *metaphysica specialis* on the other -

embracing not only theology but also other special sciences of being, including psychology (the science of finite mind) and cosmology.

'Ontology', now, is just another name for *metaphysica generalis* as thus conceived. The term was introduced into philosophy by the German Protestant Scholastic Rudolphus Goclenius (Rudolf Göckel) in his *Lexicon philosophicum* (1613) and was given currency above all through the influence of Christian Wolff (1679-1754).

Where metaphysics had traditionally confined itself to the treatment of existent beings, Leibniz, Wolff and others dealt also in their metaphysical writings with the being of what is merely possible. It fell to Meinong in his '*Über Gegenstandstheorie*' (1904) to conceive the project of an absolutely general 'theory of objects', which would embrace within its subject matter not merely actual and possible objects, but also impossible objects, obtaining and non-obtaining states of affairs and other higher-order objects, merely hypothetical objects, and also objects 'beyond being and non-being' which are as it were awaiting realization.

In part under the influence of Meinong, in part also under the inspiration of contemporary work in logic and mathematics, Husserl put forward in his *Logical Investigations* (1913-21) the idea of a 'pure theory of objects' or 'formal ontology', a discipline which would deal with such formal-ontological categories as: object, state of affairs, property, genus, species, unity, plurality, number, relation, connection, series, part, whole, dependence, magnitude, open and closed set, boundary, manifold, and so on.

Formal ontology would deal also with the different formal structures manifested by entire regions of being. To each such formal structure there would then correspond in principle a number of alternative material realizations, each having its own specific material or regional ontology. The most important such material ontology relates to the natural world of spatio-temporally extended things, and thus includes ontological theories of space, time, movement, causality, material body, and so on.

Next in order of development is the material ontology of organic entities, followed by the material ontology of minds (of thinking bodies and of their mental acts and states), perhaps also by the

material ontology of cultural and institutional formations." (pp. 373-374)

"Tinology": an alternative to Ontology?

"In our contribution to the *Festschrift* in honour of Ruedi Imbach the focus will be on the term « tino-logia ». The notion is not mentioned in the most complete philosophical dictionary of our time, the *Historisches Worterbuch der Philosophie*, which appeared in 13 volumes from 1971-2007. The vocable was suggested by French scholars two decades ago in their analysis of the genealogy of Western metaphysics and has since then found acceptance. « Tinology » is meant to characterize an alternative for the traditional ontological model of metaphysics. Influential was an observation made by Jean-Francois Courtine at the end of his monumental study on the metaphysics of Francis Suárez : « En rigueur de termes, l'ontologie classique-moderne devrait donc plutot être caractérisée comme une 'tinologie' »(1). The emergence of this neologism and its historical place is the first thing that calls for attention.

The emergence of the notion

The notion « tinology » originated in the study of ancient philosophy, was next applied to modern philosophy and finally also assigned to medieval philosophy.

1. In the continuation of the conclusion just cited, Courtine refers to Pierre Aubenque for the phrase « tinology », but does not specify this reference (2). It turns out that Aubenque puts forward the expression and explains its philosophical significance in an essay on Plato's *Sophist* (3). The analysis of the text is reason for a summary of the basic features of Stoic ontology: (i) only bodies « are » and can be called « beings » ; (ii) there are incorporeal realities, which are not « beings », namely place, time, void and the *lekton* (« sayable ») ; (iii) bodies and incorporeals, which constitute the Stoic world, are joint members of a single supreme genus, which is called « something » (*ti*). It is the title for the most general determination, of which « being » is only a specification (4).

Aubenque's objective is to show the critical potential of the Stoic doctrine. In the history of ontology, the concept of « being » has again and again been found to be too determined and too limited, for instance, as « idea » or « substance », in proportion to the universal extension it claims. The Stoic « tino-logy » offer the possibility of « un dépassement de l'ontologie surdéterminée du substantialisme au profit d'une doctrine plus englobante du « quelque chose », c'est-à-dire, de la détermination en général » (3) Although the term « tinology » thus refers to a doctrinal development in ancient philosophy, its introduction has a general aim. It signifies an alternative model of metaphysics, insofar as it is based on a more encompassing notion than « being ».

2. In his study on Suárez, Courtine exploits the critical potential of the term. He applies the notion « tinology » to modern philosophy. He recognizes that the systematics underlying the *Disputationes Metaphysicae* is the Scholastic tradition of transcendental thought, but also highlights, the « modernity » of Suárez's metaphysics by presenting his thought as a « turn » (« le tournant Suárezien ») in the history of this discipline. The *Disputationes Metaphysicae* took a decisive step towards the early modern understanding of metaphysics, which devised an alternative for the Aristotelian ontological model.

One of its features is that knowability becomes the ultimate criterion of entity. At the end of this development metaphysics is no longer conceived as a science of (real) being, but as an « onto-logic », as a science of what is thinkable, a theory of « something (*ti*) in general », which can therefore be characterized as a « tinology » (6). In Courtine's reading, the most significant sign of this transformation is Suárez's identification of *ens* and *res*. The central notion of his ontology, becomes a new concept of « reality » (*realitas*), which does not refer to what actually « is », but to the more encompassing notion of *res*, less in the sense of « thing » than of « something » (*aliquid*) -- in an exemplary way expressed as « quelque chose » in French and « etwas » in German (7).

3. Courtine sees a prefiguration and preparation of the modern turn to a « tino-logical » understanding of metaphysics in medieval philosophy. He ascribes a particular importance to Henry of Ghent's account of *res*, according to which « thing » is the most universal

concept and « the first object of metaphysical thought » (8). His conclusion inspired Olivier Boulnois, who explicitly labels one of the forms of metaphysics in the Middle Ages as « tinology ». Duns Scotus's First Philosophy is a tinology rather than an ontology, since it is the science of *res* or *aliquid*, that is, of all that is not nothing (*non-nihil*). This notion is more encompassing than « being », because it includes real being as well as what is merely thinkable (9). In the next pages, we make some observations on the search for an alternative, tinological model of metaphysics in medieval philosophy." (pp. 729-730)

Proceedings of the 13th International Conference on Conceptual Structures, ICCS 2005, Kassel, Germany, July 17-22, 2005*, Berlin: Springer 2005, pp. 425-438

"Abstract: Ontology as the study of being as such dates back to ancient Greek philosophy, but the term itself was coined in the early 17th century.

The idea termed in this manner was further studied within academic circles of the Protestant Enlightenment. In this tradition it was generally believed that ontology is supposed to make true statements about the conceptual structure of reality. A few decades ago computer science imported and since then further elaborated the idea of 'ontology' from philosophy. Here, however, the understanding of ontology as a collection of true statements has often been played down. In the present paper we intend to discuss some significant aspects of the notion of 'ontology' in philosophy and computer science. Mainly we focus on the questions: To what extent are

computer scientists and philosophers -- who all claim to be working with ontology problems -- in fact dealing with the same problems? To what extent may the two groups of researchers benefit from each other? It is argued that the well-known philosophical idea of ontological commitment should be generally accepted in computer science ontology."

Uckelman Henrik Schärfe, "Historical and Conceptual Foundations of Diagrammatical Ontology", in: Simon Polovina, Richard Hill, Uta Priss (eds.), *Conceptual Structures: Knowledge Architectures for Smart Applications*. 15th International Conference on Conceptual Structures, ICCS (2007), Sheffield, UK, July 22-27, 2007, Dordrecht: Springer, 2007 pp. 374-386.

"Abstract: During the Renaissance there was a growing interest for the use of diagrams within conceptual studies. This paper investigates the historical and philosophical foundation of this renewed use of diagrams in ontology as well as the modern relevance of this foundation. We discuss the historical and philosophical background for Jacob Lorhard's invention of the word 'ontology' as well as the scientific status of ontology in the 16th and 17th century. We also consider the use of Ramean style diagrams and diagrammatic ontology in general. A modern implementation of Lorhard's ontology is discussed and this classical ontology is compared to some modern ontologies."

"In 1694, Leibniz defines his metaphysical project in the *Réflexions sur l'avancement de la métaphysique réelle*, et particulièrement sur la nature de la substance expliquée par la force, a French translation of the *De primae philosophiae emendatione et de notione substantiae*. In the following pages, the history of the concept of advancement from Bacon and Glanvill to Leibniz is investigated. The notion moves from dignity to progress. The reasons why the translation of *emendatio* by advancement is not sufficient lead the reader to look, with accuracy, at the syntagma 'real metaphysics', used by Leibniz from 1691 on. The *emendatio* involves both ideas of progress and correction. The latter is echoed in the 'real' metaphysics. Thus, the first elements of the history of that real metaphysics, a formula that occurs until 1716, are presented here. As the translation of *emendatio* by 'advancement' and 'real' is disjunctive, I suggest a one-word translation with the French *rétablissement*."

"Medieval transcendentals are on the side of things while Kantian transcendentality is on the side of the knower. Is there a link between the two in the Seventeenth-Century scholastic understanding of 'supertranscendentals'? In the century before Kant, scholastic supertranscendental being was primarily identified with extrinsic intelligibility and regarded as a contribution of the knower. It was said to be the same as 'the object as such' (objectum ut tale). This seems very close to 'der Gegenstand überhaupt' which Kant has called a 'missing concept' above the dichotomy of the possible and the impossible."

44. ———. 2013. *La nascita dell'Ontologia nella metafisica di Rudolph Göckel (1547-1628)*. Hildesheim: Georg Olms.

"Nel dibattito seguito al cosiddetto *Ontological Turn* della filosofia analitica contemporanea un posto di assoluto rilievo ha avuto, e continua ad avere, l'ipotesi di distinguere l'ambito dell'ontologia da quello della metafisica. Si tratta solo dell'ultima insorgenza di un dibattito epistemologico che ha conosciuto più riprese nel corso dei secoli, in contesti anche molto differenti tra loro. A livello strettamente terminologico, la prima distinzione dell'ontologia dalla metafisica si registra all'inizio del XVII secolo, all'interno della *Schulmetaphysik* riformata, in particolare calvinista. È in quell'ambito che un autore come Rudolph Gōckel (lat. Goclenius) potè intestarsi una simile operazione a seguito delle istanze scaturite dall'"importazione" dei modelli metafisici dell'aristotelismo

gesuita (in particolare di Benet Perera, più che di Francisco Suárez) nella Germania protestante. Erano trascorsi quasi ottant'anni dall'interdetto pronunciato da Lutero contro la metafisica e le sue pretese epistemologiche. Il "ritomo" alla metafisica tra i calvinisti coincise pertanto con la nascita dell'ontologia come scienza propriamente detta e con la distinzione di quest'ultima dalla metafisica, intesa perlopiù come teologia: nel corso delle dispute tra riformati e protestanti si affinerà un modello che dominerà il dibattito scolastico in ambito continentale sino agli anni di Kant, determinando profonde conseguenze nel modo di pensare la realtà."

45. ——. 2014. "Ontology Between Goclenius and Suárez." In *Suárez's Metaphysics in Its Historical and Systematic Context*, edited by Novák, Lukáš, 135-152. Berlin: Walter de Gruyter.

Abstract: "From latest findings the "birth of ontology" has emerged as a debate in which three Reformed authors originally participated: Rudolph Goclenius, Clemens Timpler and Jakob Lorhard. Under this new label ("*ontologia*"), the Calvinist Goclenius aims to make the model of science of being first proposed by the Jesuit Benet Perera standard within Reformed scholastic philosophy. This paper focuses on the dispute between Goclenius and Timpler concerning the status of metaphysics and its subject-matter (*ens*). According to Timpler the subject of the universal part of metaphysics is not being qua being but the purely intelligible (*intelligibile*), a concept even more general than that of being. In this solution Timpler drew upon the Jesuit Pedro da Fonseca, who seemed to approve of the hypothesis that the concept of *ens* might be subordinated to *aliquid*, in a single passage of his *Commentarii in libros metaphysicorum Aristotelis*.

Unlike Timpler, Goclenius adopts the more traditional thesis according to which each noetic definition, however abstract and universal, has to be conceived "*sub specie entis*". Still, Goclenius' point of view is only seemingly "traditional", just like the doctrine of being on which he builds his metaphysics – or rather his "ontology" –, which is based on a new elaboration of the concept of being and that of other transcendentals. In particular, Goclenius removes the concepts of *res* and *aliquid*

from the list of transcendentals, and he puts them into extensional identity with the concept of *ens*. This philosophical choice of Goclenius is not new, but draws upon the doctrine of “*synonymia entis*”, proposed also by Suárez in the *Disputationes metaphysicae* (DM 3.2.5)."

"The bibliographical history offers an interesting point of view for a better understanding of the rise and development of ontology, as an autonomous discipline, in early modern thought. After Luther's interdict, the metaphysics was neglected in many protestant academies and excluded from the disciplinary classifications (§§ 1-2). The return of metaphysics, at the end of the 16th century, coincided, in many cases, with the affirmation of the new scholastic paradigm of ontology (§ 3). An illustrious precedent of this paradigm was constituted by the Jesuit Francisco Suárez and his *Disputationes metaphysicae* (§ 5). The Jesuit models - not only that by Suárez, but also those by Benet Perera and Pedro da Fonseca - represented the standard on which Calvinists and Lutherans built their own metaphysics in an ontological way. This paper provides a conspicuous number of case studies in which the passage from metaphysics to ontology becomes definitively clear: this debate takes place throughout the first handbooks, treatises, magisterial and doctoral disputations (§ 6) proposed by the Calvinist and Lutheran authors."

"The aim of this paper is to focus on the distinction between logic and metaphysics in German philosophy from Philipp Melanchthon to G.W.F. Hegel. Its scope is a temporal route that goes from the Renaissance to the 19th century, and which exhibits a movement from one extreme to another. Thus, Melanchthon -- owing to his nominalistic background -- was in fact repelled by metaphysical forms and chose not to include metaphysics among the philosophical sciences. For him, metaphysics was to be identified with logic. On the other hand, Hegel was repelled by logical formalism and did not include logic among the philosophical sciences. For Hegel, logic was to be identified with metaphysics. While Melanchthon and Hegel are the subjects, respectively, of the first and last parts of this paper, the second, the third, and the fourth parts are dedicated to the understanding of the relationship between logic and metaphysics in the work of Scheibler, Leibniz and Kant." Bibliography of the Ontologists from 16th to 18th Centuries (First part)

Philosophers in chronological order:

- Pedro da Fonseca (1528-1599)
- Benet Perera (Benedictus Pererius) (1535-1610)
- Diego de Zúñiga (1536-1597)
- Rudolf Göckel (Goclenius) (1547-1628)
- [Francisco Suárez \(1548-1617\)](#)
- Gabriel Vasquez (Vazquez) (1549-1604)
- Diego Mas (Didacus Masius) (1553-1608)
- Cristóbal de los Cobos (1553-1613?)
- [Jacob Lorhard \(1561-1609\)](#)
- Clemens Timpler (1563/4-1624)
- Cornelius Martini (1568-1621)
- Bartholomäus Keckermann (1572-1609)
- Francisco de Araujo (1580-1664)
- Johann Heinrich Alsted (1588-1638)
- [Joannes a sancto Thoma \(John Poincot\) \(1589-1644\)](#)

Suggested readings: among the most important studies on this period, I suggest: Courtine (1990) (fundamental) and (2005), Freedman (1999), Honnefelder (1990) and (2002), Leinsle (1985),

Lohr (1988, the best introduction in English), Marion (1975), (1981) and (1988), Schmutz (2000), Wundt (1939 and (1945), Zimmermann (1998).

For the complete references see: [Selected Bibliography on the History of Continental Ontology from Suárez to Kant](#)

Pedro da Fonseca (1528-1599)

Being (not God) is the subject of Metaphysics - Exclusion of accidental beings and beings of reason from Metaphysics

"Comprising four quarto volumes, Fonseca's *In libros Metaphysicorum Aristotelis Stagiritae* (Commentary on the Books of Aristotle's *Metaphysics*) contains a critical Greek text which he himself established from the best available manuscripts and printed editions. (...)

After rejecting opinions which hold that the subject of metaphysics is God, Aristotelian 'separate substances', or being in the categories, Fonseca says that the first and adequate subject of metaphysics is being -- in so far as it is common to God and creatures (*In libros Metaphysicorum* IV c.1 q.1 s.3). Understood in this way, being is analogous, although as said of species within one genus or of individuals within one species it is univocal. Between God and creatures, between created substance and accidents, between different classes of accident, and between real being and being of reason, being is analogous by analogies both of proportion and of attribution. As God is related to his being, so in proportion a created substance is related to its being. Likewise, as created substance and its being are related, so in proportion is an accident related to its being. Again, as one kind of accident is disposed to its existence so is each other kind of accident to its existence. And as real beings are disposed to their being, so beings of reason are to theirs (*Metaphysicorum* IV c.2 q. 1 s.5, 7). An analogy of attribution obtains among accidents as an analogy of two things to a third (that is, created substance), while between accidents and substance it is analogy of one to the other. The same is true of beings of reason among themselves and then in comparison with real being; for beings of reason do not depend less upon real beings than do accidents upon substance. Again, a creature is being only by attribution or reference

to God. Pursuing this, Fonseca distinguishes between formal and objective concepts. A formal concept is an 'actual likeness' (*actualis similitudo*) of a thing that is understood, produced by the intellect in order to express that thing. An objective concept is that thing is understood in so far as it is conceived through the formal concept. Both the formal and the objective concept of being are one, but not perfectly so for the reason that they do not prescind perfectly from the concepts of the members which divide being. Being as such is transcendent as are also the concepts of thing, something, one, true and good (*Metaphysicorum* IV c.2 q.2 s.1, 4-5; q.5 s.2).

In God alone there is a perfect identity of essence and existence. In every creature, essence is distinct from existence, but not as one thing from another. Rather, says Fonseca, a created essence is as distinct from its existence as a thing from its ultimate intrinsic mode. In this opinion, he tells us, he is following Alexander of Hales and Duns Scotus (12) (*Metaphysicorum*, IV c.2 q.3 s.4). It is possible that here Fonseca has also to some extent anticipated the Suárezian doctrine of modes.

Excluded from the subject of metaphysics are accidental beings (*entia per accidens*) and beings of reason. An accidental being, in the sense excluded, is a juxtaposition of two or more beings which lack any (intrinsic) relation to one another (*Metaphysicorum* IV c.1 q.1 s.3). Beings of reason are those which exist only inasmuch as they are objects of understanding. Within such beings of reason, as they stand in contrast with mind-independent real beings, Fonseca distinguishes proper being of reason from one which is fictitious. Properly taken, a being of reason is one whose being depends upon the understanding in such way that it can still be said of real beings, for example, the concepts of genus, species, and the like. A fictitious being as such is a being whose essence depends upon the understanding in such way that it cannot be said of any real being, for example, a chimera, a goat-stag, or the like (*Metaphysicorum* IV c.7 q.6 s.5).

"I intend to show that the sixteenth century Jesuit, Petrus Fonseca, whose *Institutionurn Dialecticarum libri octo* (1564) was one of the most popular textbooks of the period, was well acquainted with [material implication].

Fonseca introduces the subject in his discussion of the appropriateness of the name 'hypothetical' as applied to compound propositions."

3. ———. 1997. "Petrus Fonseca on Objective Concepts and the Analogy of Being." In *Logic and the Workings of the Mind. The Logic of Ideas and Faculty Psychology in Early Modern*

Philosophy, edited by A., Easton Patricia, 47-63. Atascadero: Ridgeview.

"Petrus Fonseca was a Portuguese Jesuit who lived from 1528 to 1599. He was one of those responsible for drawing up the Jesuit *Ratio Studiorum* which set the curriculum for Jesuit schools across Europe, and he was also responsible for initiating the production of the Coimbra commentaries on Aristotle, or Conimbricenses, which served as texts for many schools and universities in the seventeenth century. He was himself the author of two popular texts, an introduction to logic, and a commentary on Aristotle's *Metaphysics*. His logic text was one of two alternatives prescribed by the *Ratio Studiorum* of 1599, and may have been used at La Flèche; his *Metaphysics* commentary was used at many Jesuit schools, and may also have been used at La Flèche.

In short, Fonseca was a leading figure in the Scholastic Aristotelian tradition of the late sixteenth century, a tradition which lies behind many of the developments in early modern philosophy, and which in many ways is more important than the humanist tradition represented by Petrus Ramus.

I have chosen to discuss Fonseca on objective concepts and the analogy of being both because an examination of these issues will help us to understand how logic came to be bound up with the philosophy of mind and because the history of how these issues were treated helps solve a small problem about Descartes's sources. My paper has four parts. I shall begin by giving a historical outline of treatments of analogy and their relevance to Descartes. Secondly, I shall discuss late medieval theories of signification, particularly as they appear in Fonseca, in order to show how logicians turned away from spoken language to inner, mental language. Thirdly, I shall explain how it was that analogy, as a theory of one kind of language use, was particularly bound up with the discussion of concepts. Finally, I shall look at the distinctions Fonseca made while discussing the concepts associated with analogical terms." p. 47 (notes omitted).

6. Felipe, Donald. 1996. "Fonseca on Topics." In *Studies on the History of Logic. Proceedings of the Iii. Symposium on the History of Logic*, edited by Ignacio, Angelelli and Cerezo, Maria, 43-64. Berlin:

de Gruyter.

"Fonseca's treatment of topics in the rather substantial section on topics in *Institutionum dialecticarum* is of interest for at least three reasons. First, although the works of Bird, Stump, and Green-Pederson have shed a great deal of light on the tradition of the topics from Boethius to the 15th century, little is known about later scholastic views on topics in the late 16th and 17th centuries. The tract on topics in Fonseca's well-circulated logic book is certainly a good place to begin an examination of this obscure area. Second, in the tract on topics in ID a heavy dependence on Boethius's works *De topicis differentiis* and *In Cicerona topica* is very evident; a legitimate prima facie concern is that Fonseca's views on topics are unoriginal and not worth the trouble of careful study. I think it can be shown, however, that Fonseca's views on topics are very different from those of Boethius. Not only does Fonseca conceive of the primary purpose of topics in a different way from Boethius, but certain features of Fonseca's treatment of topics reflect the concerns of non-scholastic approaches to logic in the 16th century, e.g. the humanist concern for usefulness and relevance of logic, the humanist and Ramist concerns for pedagogy and easy memorization. What results is a rather unusual, hybrid treatment of topics. Finally, Fonseca's views on topics happen to provide some rather interesting background to Cartesian criticism that certain rules of dialecticians hinder the natural light of reason in the discovery of truth."

13. ———. 1991. "A Metafísica Inacabada De Pedro Da Fonseca." *Revista Portuguesa de Filosofia* no. 47:517-533.

"This paper starts from the fact that the fourth volume of Fonseca's "Commentariorum in Metaphysicorum Aristotelis Stagiritae libros" (CMA) contains no "quaestiones" to Met. XII. An analysis of several explicit remissions to topics and questions to be developed in the context of that Aristotelian script (Met. XII), made by Fonseca in several places in volumes I, II and III of his CMA, reveals that his project was, from the beginning, to develop in the IV volume the subjects related to the philosophical discourse about God, divine attributes, omnipotence and freedom, contingency as well as to the separate substances'. This indicates clearly that the metaphysics of Fonseca remained unfinished given the fact that the text on an important thematic cluster was not published notwithstanding the inclusion of such text in the original project of Fonseca. It is sustained that this fact should be taken in due consideration in any global interpretation of Fonseca's thought

as well as in any comparison with other (finished) ontologies. Suarez is the most obvious case but not the only one."

English abstract: "The aim of the dissertation is to show the place of Fonseca's work in the history of ontology. Starting with a close analysis of the texts connected with the core of classical metaphysics it is argued that the *Commentarii in libros metaphysicorum Aristotelis* far reaches than a mere textual commentary of Aristotle's text and represent one of the rare efforts to bring out a real synthesis of the main theoretical problems and questions emerging in the context of the aristotelian project of a first philosophy. This systematic work is carried out in the second half of the sixteenth century, just before the beginning of modern philosophy. Chapter one is dedicated to a brief account of Fonseca's work in his historical context. The remaining chapters explore some of the central topics of Fonseca's ontology. Chapter two, after a brief discussion of the aristotelian project of first philosophy, follows the transformation of this project in Fonseca's text discussing in particular his analysis of the concept of being under the heading *ens commune* and the meaning of the thesis of *analogia entis* as well as the distinction between a formal and an objective concept of being. In chapter three we discuss the question of the distinction between essence and existence in order to grasp the meaning of Fonseca's thesis of a modal distinction *ex natura rei*. Chapter four seeks to articulate Fonseca's interpretation of the classical doctrine of the transcendentals (*unum, bonum, uerum*). The wish to articulate the universality and transcendentality of the concept of being has taken us to introduce the problem of the categories in this chapter and a brief historico-critical survey beginning in Aristotle and ending

in Kant. Finally, chapter five discusses the meaning of the principle of non contradiction in Aristotle and in Fonseca."

15. ———. 1999. "Tópica Metafísica: De Fonseca À Suárez." In *Francisco Suárez (1548-1617). Tradicao E Modernidade*, edited by Cardoso, Adelino, Martins, António Manuel and Ribeiro, Dos Santos Leonel, 157-168. Lisboa: Edioes Colibri.

"It is claimed that in order to a better understanding of the reception of the text of the *Metaphysics* of Aristotle in the second half of the sixteenth century one must carefully distinguish the commentaries to the whole work from texts that treat particular questions. Although much work is still to be done, the great commentary of Pedro da Fonseca appears as the major original commentary to the *Metaphysics* produced during that period."

Benet Perera (Benedictus Pererius) (1535-1610)

"The problem that continues to haunt the commentators [of Aristotle] is how to reconcile *philosophia prima* as universal *scientia de ente* with *philosophia prima* as *theologia* . The latter appears to be a special science rather than a universal one, since it studies one particular being (albeit the highest one), whereas the former studies being qua being. Aristotle had already recognised this problem and

had come up with a solution that proved so cryptic that it provoked even more discussion. (26)

In the sixteenth and seventeenth centuries this discussion received an entirely new impulse in Protestant metaphysics. Although the early reformers had a very low opinion of Aristotelian metaphysics, by the end of the sixteenth century their successors had taken to writing textbooks on Aristotle's *Metaphysics* which copied the model of earlier commentaries. In fact, the Protestant scholasticism that emerged from the middle of the sixteenth century onwards drew heavily on the great Commentaries of the Counter Reformation, notably the ones composed by the Spanish Jesuits.(27) Faced with the institutional problem of how to teach theology and philosophy, the Protestant masters turned back to systematic Aristotelian philosophy of the familiar kind.(28) Moreover theological controversies within Lutheranism and between Lutheranism and Calvinism "made precise definitions of terms like 'substance' and 'accident, 'nature' and 'person' absolutely imperative. (29)

This fuelled a keen interest in Aristotelian metaphysics. The Protestants were trying to construct a metaphysics conceived as a universal science of being, a *scientia de ente*. This meant the removal of all the heterogeneous elements of Aristotelian metaphysics that could only with difficulty be combined with this "pure" science of being. Hence we find in most Protestant metaphysics a marked tendency to separate natural theology from metaphysics as a science of being *qua* being. Therefore, by separating true metaphysics as a universal science of being from natural theology as a *scientia particularis*, the ubiquitous problem of the subject matter of metaphysics was solved. The first to make this separation in the sixteenth century was actually a Jesuit, Benito Pereira (c 1535-1610). (30) His solution was taken up in various ways by Protestant scholastics, both Calvinist and Lutheran, such as Nicolaus Taurellus (1547-1606), Abraham Calov (1612-1686) and Rudolphus Goclenius the Elder (1547-1628). This tradition was not an isolated German phenomenon but also spread to England. By distinguishing between "first" or "summary philosophy" and natural theology, Francis Bacon clearly draws on this tradition as well."

"Thomas Aquinas is usually studied as a metaphysician, this is not the reading given to him by three Renaissance philosophers. At the turn of the sixteenth century there were at least two schools of Thomists, one influenced by Avicenna and Scotus, and the other influenced by Averroes, a reading of Aristotle and

Thomas Aquinas himself. The discussion below traces how the interpretation of Thomas' *De ente et essentia* was changed from being a text for metaphysics to one used for physics. One of the meanings of ens-being-was as a term that was coterminous with the object. As a result, the debate over the first thing thought or the De primo cognito debate centered around the meaning for the term ens, the following essay demonstrates how it moved from metaphysics to physics."

"Benedictus Pererius (1535-1610) published in 1576 his most successful book *De principiis*, after he had taught philosophy at the Roman College of the Jesuits. It will be shown that parts of this book are actually based on his lectures. But the printed version was intended as a contribution to the debate within his Order on how science should be conceived. Pererius redefined the meaning of scientific speculation to the effect that metaphysics was split into ontology and natural theology, and that further speculative sciences, such as physics, gained their own competence. Throughout this book, as well as in his warning against magic and in his commentaries on the Bible, the Jesuit addresses Renaissance strains of neo-Platonism, Aristotelianism, and syncretism."

Rudolf Göckel (Goclenius) (1547-1628)

"Goclenius is best described as a protestant Scholastic', his most important contribution to the metaphysics being terminological. He is the first philosopher to use the word *ontologia* [in Greek] (*) to describe general metaphysics (...) Strangely enough, this word does not appear in the *Isagoge*, but rather in the *Lexicon* . Still, his use of the word precedes that of Calovius by 23 years (...), and that of Jean-Baptiste Duhamel by 65 (...).

Although he does not use the term *ontologia* in the *Isagoge*, Goclenius does distinguish general metaphysics from special metaphysics in this work and a fortiori stood the concept of general metaphysics. The distinction between general and special metaphysics is not Goclenius's invention, however. The Spanish Jesuit Benito Pereira (c. 1535-1610) had already made it by 1562 (see Rompe *Die Trennung von Ontologie und Metaphysik. Der Ablösungsprozess und seine Motivierung bei Benedictus Pererius und anderen Denkern des 16. und 17. Jahrhunderts* 1968, pp. 7-13) and an earlier manuscript making the distinction has been found (Zimmermann *Ontologie oder Metaphysik. Die Diskussion über den Gegenstand der Metaphysik an 13. und 14. Jahrhundert* 1965, p. 60).

Both Wundt and Vollrath seem to have discovered the distinction between general and special metaphysics only in the *Praefatio* of Goclenius's *Isogoge* and have remarked that this distinction does not appear in the main text of the work. This is incorrect, however. The second part of the *Isagoge* is a series of disputations, the first of which, entitled *De ente Communi, ad omnes Categorias consequente* discusses this distinction (Rompe is aware of this and hers is at present the most trustworthy account of Goclenius's work) Goclenius says that some divide first philosophy (*prima philosophia*), which is usually called 'metaphysics', into two parts. The first is universal and studies the most general notion of being common to all things (*de Ente in communi*). The second part is particular and deals with God, divine spirits (*daemones*), and disembodied intellect (*intellectus separatus a corpore*, p. 126). Goclenius ascribes this view to Aristotle and then goes on to say that he prefers to divide things up differently. Knowledge (*scientia*) should be divided into a universal and a particular part, and the universal part should be called 'first philosophy'. The particular part in turn should be divided into a 'transnatural' part which deals with God, and a 'natural' one, which deals with natural entities (pp. 126-7).

Goclenius's idea of knowledge, then, has a particular part which seems to contain every specific science. In contrast, Perera includes only theology, 'spiritology', and psychology, and Christian Wolff only theology, psychology, and cosmology, within special metaphysics. Thus Goclenius is proposing a way of cutting up the sciences such that *prima philosophia* is truly cast in the role of the queen of the sciences,

lording over them all as the *scientia universalis*. On the face of it, Goclenius's taxonomy of metaphysics is more reasonable than that of Wolff or Pereira. If one is going to take seriously the notion of a 'superscience' which studies the most abstract idea of being which the objects of all specific sciences share, then one is compelled, I think, to include all of the particular sciences within specific metaphysics. This is true *unless*, of course, one has platonic misgivings about the possibility of being able to have knowledge about substances which have matter mixed up in them. However, a good Scholastic, wedded as he is to the spirit of Aristotle, has no such misgivings."

(*) The term [*ontologia*](#) was coined by Jacob Lorhard in 1606 [Note added by Raul Corazzon]

From: *Goclenius, Rudolphus* by Jeffrey Coombs - in: *Handbook of Metaphysics and Ontology* - Edited by Barry Smith Barry and Hans Burkhardt. Munich: Philosophia Verlag 1991, pp. 312-313.

"Thus the Marburg professor Rudolph Goclenius in the preface to his *Isagoge in primam philosophiam* (1598), spoke of two separate sciences, a universal science called 'first philosophy' and a particular science called 'metaphysics'. First philosophy deals with being, its properties and its principles; metaphysics studies the various types of immaterial being: God, the intelligences and the human soul."

2. ———. 2013. *La Nascita Dell'ontologia Nella Metafisica Di Rudolph Göckel (1547-1628)*. Hildesheim: Georg Olms.

"Nel dibattito seguito al cosiddetto *Ontological Turn* della filosofia analitica contemporanea un posto di assoluto rilievo ha avuto, e continua ad avere, l'ipotesi di distinguere l'ambito dell'ontologia da quello della metafisica. Si tratta solo dell'ultima insorgenza di un dibattito epistemologico che ha conosciuto più riprese nel corso dei secoli, in contesti anche molto differenti tra loro. A livello strettamente terminologico, la

prima distinzione dell'ontologia dalla metafisica si registra all'inizio del XVII secolo, all'interno della *Schulmetaphysik* riformata, in particolare calvinista. È in quell'ambito che un autore come Rudolph Gōckel (lat. Goclenius) poté intestarsi una simile operazione a seguito delle istanze scaturite dall'"importazione" dei modelli metafisici dell'aristotelismo gesuita (in particolare di Benet Perera, più che di Francisco Suárez) nella Germania protestante. Erano trascorsi quasi ottant'anni dall'interdetto pronunciato da Lutero contro la metafisica e le sue pretese epistemologiche. Il "ritomo" alla metafisica tra i calvinisti coincise pertanto con la nascita dell'ontologia come scienza propriamente detta e con la distinzione di quest'ultima dalla metafisica, intesa perlopiù come teologia: nel corso delle dispute tra riformati e protestanti si affinerà un modello che dominerà il dibattito scolastico in ambito continentale sino agli anni di Kant, determinando profonde conseguenze nel modo di pensare la realtà."

" *Résumé.* On essaie ici de tester sur un texte de Diego Mas la fécondité théorique d'une lecture traditionnelle thomiste, au sens de lecture au sein d'une école. À partir des questions concernant l'ordre de l'existence à la forme et à l'essence, on aperçoit progressivement que la rigoureuse procédure scolastique utilisée par l'auteur du texte reconduit son lecteur à la question elle-même, et le met ainsi en mesure d'être philosophe en acte. En outre cette rigueur permet à une pensée de ce type d'entrer en rapport avec les développements de la philosophie exacte moderne et contemporaine où se manifeste aujourd'hui un regain d'intérêt pour la métaphysique et l'ontologie que l'on aurait tort de négliger."

Clemens Timpler (1563/4-1624)

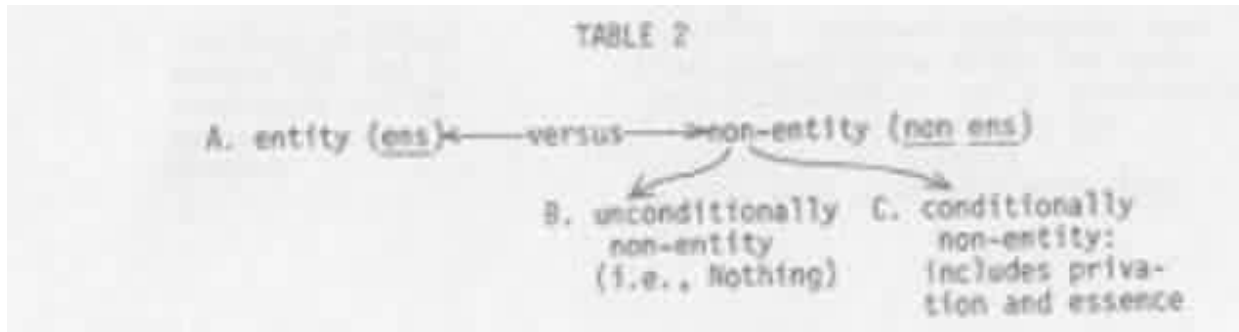

"Within three of his writings, Timpler notes that the study and knowledge of metaphysics is required for the study and knowledge of all other philosophical disciplines. For this reason, Timpler's Metaphysics textbook merits examination here prior to consideration of his other philosophical writings. The basic components of Timpler's Metaphysics textbook can be outlined as follows:

Timpler considers the subject matter of metaphysics to be everything which is intelligible to human beings; therefore, All that is Intelligible (*omne intelligibile*) is the all-inclusive category within which all component parts of Timpler's metaphysics are subsumed. Timpler divides the category All that is Intelligible into Something (*aliquid*) and Nothing (*nihil*). Each individual intelligible falls within one and only one of these two categories.

Timpler asserts that Nothing cannot be perfectly defined. His brief remarks concerning Nothing shall be presented within chapter 15 section 17 and within chapter 20 section 9. Timpler's "Something" (

aliquid) is equivalent to "Being" (*esse; est*) in the broadest sense of the latter. Timpler's "Being" can be explained with the use of the following table:

"Being" (understood in its broadest sense) includes A and C yet excludes B.

The broadest and most basic distinction made within Timpler's *Metaphysics* textbook, therefore, is the distinction made between something (i.e., "Being" understood in its broadest sense) and Nothing (i.e., Non-Being). There is no medium between Something and Nothing; any given intelligible object falls into one and only one of these two categories. According to Timpler, these two categories are contradictorily opposed to one another. The principle which states this contradictory opposition--i.e., which states that it is absolutely impossible for an intelligible subject matter to be both Being and Non-Being simultaneously -- is the principle of contradiction; Timpler regards this principle to be indemonstrable and absolutely necessary. The principle of contradiction is the most important rule contained within Timpler's *Metaphysics* textbook; in so far as it comprises All that is Intelligible, it regulates the entire subject matter of that textbook.

Timpler also notes that the principle of contradiction is "that primary complex principle which is basic to all of the arts" (i.e., to both the liberal arts and the illiberal arts).

It must be emphasized that All that is Intelligible and the Principle of Contradiction (all sub-categories of the former are regulated by means of the latter) are the broadest, most general categories not only of Timpler's *Metaphysics* textbook, but of all of his other writings as well. These two categories embrace the entirety of Timpler's thought as expressed within his various philosophical writings. The study of

metaphysics is basic to the study of all other disciplines partly due to the fact that it directly deals with these two general categories which are basic to every other discipline."

[Theory and History of Ontology](#)

Raul Corazzon || rc@ontology.co || [Info](#)

Bibliography of the Ontologists from 16th to 18th Centuries (Second part)

Philosophers in chronological order:

- Christoph Scheibler (1589-1653)
- Johannes Micraelius (1597-1658)
- Sebastian Izquierdo (1601-1681)
- Bartolomeo Mastri (1602-1673)
- Juan Caramuel y Lobkowitz (1606-1682)
- Abraham Calov (1612-1686)
- Johannes Clauberg (1622-1665)
- Jakob Thomasius (1622-1684)
- Jean Baptiste Du Hamel (1624-1706)
- Jean Le Clerc (1657-1736)
- Johann Franz Budde (Buddeus) (1667-1729)
- [Christian Wolff \(1679-1754\)](#)
- Alexander Gottlieb Baumgarten (1714-1762)
- Christian August Crusius (1715-1775)
- Johann Heinrich Lambert (1728-1777)

Suggested readings: among the most important studies on this period, I suggest: Courtine (1990) (fundamental) and (2005), Freedman (1999), Honnefelder (1990) and (2002), Leinsle (1985),

Lohr (1988, the best introduction in English), Marion (1975), (1981) and (1988), Schmutz (2000), Wundt (1939 and (1945), Zimmermann (1998).

For the complete references see: [Selected Bibliography on the History of Continental Ontology from Suárez to Kant](#)

Christoph Scheibler (1589-1653)

Texts

1. Scheibler, Christoph. 1617. *Opus Metaphysicum Duobus Libris Universum Hujus Scientiae Systema Comprehendens*. Giessen.

Second edition Oxford 1633; definitive edition in *Opera philosophica: Metaphysica duobus libris universum huius scientiae systema comprehendens. Opus, tum omnium facultatum tum in primis philosophiae & theologiae studiosis utile & necessarium. Premissa est Summaria methodus, ...* Frankfurt 1665.

2. ———. 1654. *Opera Philosophica*. Frankfurt.

Four volumes (1654-1658): *Opera philosophica ut sunt Opus logicum, quatuor partibus ... Opus metaphysicum, duobus libris ... Liber physicus de anima ... Adiectis ubique indicibus necessariis ...* (reprinted 1665).

6. ———, ed. 2006. *Rem in Seipsa Cernere. Saggi Sul Pensiero Filosofico Di Bartolomeo Mastri (1602-1673)*. Padova: Il Poligrafo.

Con introduzioni di Alessandro Ghisalberti e Gregorio Piaia.

7. Knebel, Sven K. 2002. "Entre Logique Mentaliste Et Métaphysique Conceptualiste: La *Distinctio Rationis Ratiocinantis*." *Études Philosophiques*:145-168.

"In the scholastic way of spelling out "A = A", some sort of distinction intervened between the relata, viz. the *distinctio rationis ratiocinantis*. To distinguish between the *distinctio rationis ratiocinatae* and *ratiocinantis* was commonplace from the sixteenth up to the eighteenth centuries. But how to make sense of a distinction that is without any foundation in the object itself? Mastri's account marks a crisis within Scotism, since his reception of Peter Aureol's conceptualism made it possible to give the *distinctio rationis ratiocinantis* a metaphysical rather than a logical interpretation."

Juan Caramuel y Lobkowitz (1606-1682)

Texts

1. Caramuel y Lobkowitz, Juan. 1642. *Rationalis Et Realis Philosophia*. Louvain.

4. ———. 2006. "Juan Caramuel Y Lobkowitz (1606-82)." In *Centuriae Latinae Ii. Cent Et Une Figures Humanistes De La Renaissance Aux Lumières, À La Mémoire De Marie-Madeleine De La Garanderie*, edited by Nativel, Colette, 182-202. Geneva: Droz.
5. Serrai, Alfredo. 2005. '*Phoenix Europae*'. *Juan Caramuel Y Lobkowitz in Prospettiva Bibliografica*. Milano: Sylvestre Bonnard.

Abraham Calov (1612-1686)

"His most interesting metaphysical works are the *Metaphysica divina pars generalis* and the *Metaphysica divina pars specialis*. Calovius's logical / epistemological works, the *Gnostologia* and *Noologia*, may be of some interest, although as logic the works are weakened by the psychologism which is often found in logic texts of that period and school.

Calovius is a good example of the typical Protestant metaphysician of the 17th century. According to Calovius, one's metaphysical studies should be guided by the truths of revealed faith, in this case orthodox Lutheranism. Without the guidance of the celestial light, all our travels into scholarly study are nothing more than pitiable wandering. But we cannot follow this celestial light unless we pay attention to both Scripture and nature. Calovius reveals himself to be a true scholastic by naming Aristotle the foremost philosopher. Thus, the main task of Calovius's work is to reconcile the revealed truths of orthodox Lutheranism with the principles of Aristotle's metaphysics. That one is so enabled to refute the errors of agnostic natural scientists, Socinians (a favourite target of Protestant attacks, this Protestant sect denied the doctrine of the Trinity and the divinity of Christ), Jesuits, Calvinists, and other heretics, so much the better. Still, *both* sources of knowledge are required: without Aristotelian

natural science, there will be factual errors; without Scripture, heresy. (*Hinc tot errores, tot haereses* .)

Metaphysics, according to Calovius, is the wisdom of being qua being (*sapientia Entis qua Entis*). This definition should be understood as denoting one discipline, which is also called 'ontology' or 'transcendental wisdom' (*ontologia* [in Greek] *sive transcendentalis Sapientia*). The usual and improper sense of 'metaphysics' adopted by the Jesuit Benito Pereira (c. 1535-1610), according to whom metaphysics is concerned with disembodied spirit, is rejected. Indeed, he says, they hallucinate who make the object of metaphysics either God or immaterial substance, and they plainly do not understand the nature of wisdom.

Thus, Calovius believes that the mistake of people like Pereira was to fail to acknowledge a notion of being which is general enough to be common both to spiritual and material beings. This, of course, may not be entirely fair to Pereira and other Thomists, since theological discomfiture may arise from claiming that God and creatures are subsumed under a general concept of being. Does this most general of concepts logically or ontologically precede God? Or is the dignity of God affected by sharing the notion of being with beings like you and me?

Metaphysics, finally, must deal with what *really* is, not merely what *could* be. Calovius claims that truly and properly, metaphysics concerns itself with non-complex, essential, positive, real, actual being (*Ens incomplexum, per se, positivum, reale et actuale*).

Only in an attenuated sense does it contain complex, accidental, deprived beings, beings of reason, and potential beings (*Entia complexa, per accidens, privationes, Entia rationes et in potentia*). Calovius prefers to limit metaphysics to the former, and we might not incorrectly call him an 'actualist'. After all, Calovius wonders, how does one abstract notion of being common to actual and potential being, if potential being is not truly being?"

From: *Calovius, Abraham* by Jeffrey Coombs - in: *Handbook of Metaphysics and Ontology* - Edited by Barry Smith Barry and Hans Burkhardt. Munich: Philosophia Verlag 1991, pp. 112-113.

6. Lagrée, Jacqueline. 2002. "Sens Et Vérité Chez Clauberg Et Spinoza." *Philosophiques* no. 29:121-138.

"This paper aims to show how the Spinozistic hermeneutical position in the *Tractatus Theologico-Politicus* is founded in a particular tradition, that of Johannes Clauberg, which makes a strong distinction among the *sensus genuinus* (i.e., the meaning intended by the author), the true meaning, and the truth. L. Meyer, a physician and friend of Spinoza, accepts this distinction but he reduces the true meaning to the truth as it is understood in the philosophy of Descartes or Spinoza. Spinoza, however, maintains the distinction between true meaning and truth, and for him the Bible keeps its holy character as long as it helps man to practice justice and charity. Human reason brings

out the universal moral teachings of the Bible and it fosters a community of those who genuinely seek the truth."

8. Savini, Massimiliano. 2006. "L'insertion du cartésianisme en logique: la *Logica vetus & nova* de Johannes Clauberg." *Revue de Métaphisique et de Morale*:73-88.

"The *Logica vetus & nova* published by Johannes Clauberg (1654) is directly inspired by the works of Descartes. For this reason, this text is commonly considered as the first handbook of 'cartesian' logic. Which are, therefore, the Cartesian elements distinguishing this logic from the previous ones? Our aim is to show that there are two main aspects which Clauberg derives from the works of Descartes: on the one hand the foundation of logic on the *perceptio clara et distincta*; on the other the role of *medicina mentis* assumed by logic, on the basis of a philosophical theory of prejudices that has been derived from the *Principia philosophiae* (but also from Bacon). Clauberg's logic, anyway, does not accept the most radical innovations of Cartesian theory of knowledge: in this way it is still bound up with the scholastic tradition."

14. Weier, Winfried. 2000. "Leibnitiana Bei Johannes Clauberg." *Studia Leibnitiana* no. 32:21-42.

"It is a much neglected fact that the young Leibniz expressed particular interest for the philosophy of Johannes Clauberg, a follower of Descartes with Aristotelian outlook who taught at the University of Duisburg. Indeed he found here, against the background of Cartesianism, important impulses and preconceptions for important basic positions of his, which in many respects can be understood as extensions and unfoldings of Claubergian approaches. In this way nothing less than a story of creation and development of Leibnizian thought is uncovered, e. g. from the gnoseological (symbolism of ideas; differentiation of nominal and real definitions, truths of reason and fact; the importance of real existence for the coherence of concepts) to the ontological area (the preparation of Leibnizian monadology through the question about the character of being in the innate ideas of Descartes; development of the concept of potency by means of that of facultas to that of virtus, of the *petites perceptions* of Leibniz and accordingly, for the first time in intellectual history, to his basic understanding of the unconscious): Further development of the anthropological question formulation through the idea of pre-established harmony."

Alexander Gottlieb Baumgarten (1714-1762)

"Baumgarten's basic argument for the existence of a special faculty of sensitive cognition leads back to the core of his metaphysics. To be aware of the material perfection of the world from a finite point of view is, he held, possible only in a sensitive way that is not overwhelmed by abstractive concepts of the intellect. For Baumgarten, beauty is the observable phenomenon representing this material perfection, and the finite created mind is able to gain consciousness of it because of its original disposition to represent the reality and order of the world by clear but confused perceptions. Baumgarten elaborates a set of conditions for the 'art of thinking beautifully' (*ars pulchre cogitandi*). He hereby relies on the doctrines of 'special metaphysics': cosmology, psychology, and the discipline yielding the ultimate ground of the relation between these, namely natural theology.

In his account of metaphysics Baumgarten in general follows Wolff. The first main part is 'ontology' or 'general metaphysics'. This sets out the 'predicates of being'. Baumgarten interprets the principle of contradiction in a way which yields the basic ontological concept 'something' or simply 'thing' (ens): what is not 'A and not-A', i.e. 'nothing' (*nihil*), is 'something' (*non-nihil*). The universal connection of all things is governed by the principle of *ratio* and *rationatum* : whatsoever B exist, is founded in something other A, and at the same time there is something other C which is founded in B. The further universal predicates are *unum*, *ordo*, *verum*, and *perfectum*, traditionally called the 'transcendental' predicates of being.

Baumgarten's ontology manifests much sophistication. Yet there are profound difficulties which cannot be ignored. How, for example, can the universal predicates be compatible with each member of such disjunctive predicates as: necessary/contingent; changeable/unchangeable; real/unreal; singular/universal; total/partial; finite/infinite; simple/composed; substance/accidence? The universal and disjunctive predicates constitute the internal determination of the *ens qua ens* . They differ altogether from such external (or 'relative') predicates as: similar and diverse, simultaneous, successive, cause and caused, etc. The ontological predicates then furnish the basic material for most of the arguments of special metaphysics. In two points Baumgarten proves

especially his independence from Wolff: in his doctrine of monads as immaterial, inextended substances; and in his doctrine of pre-established harmony in the absence of *influxus physicus* .

He herewith reinstates the genuine ideas of Leibniz, more than any other of the Wolffians."

"Historically Wolff recedes from Leibniz while Baumgarten, coming nearer to Leibniz, recedes from Wolff. If they are compared on two major issues: monadology and preestablished harmony, together with the principle of sufficient reason, concept of substance as force, concept of individual substance, it appears (as in our work on Baumgarten's metaphysics) that Baumgarten is more Leibnizian than Wolff. His metaphysics is the first Leibnizian-Wolffian philosophy; he assumes and develops, with the methodology of Wolff, the philosophy of Leibniz."

Christian August Crusius (1715-1775)

"Crusius, in his *Entwurf der nothwendigen Vernunftwahrheiten* (*Sketch of necessary rational truths*; Leipzig, 1745), divided metaphysics into ontology, theology, cosmology, and pneumatology, in explicit opposition to Wolff's ordering of the metaphysical sciences.

Ontology begins, not with first principles, but with the notion of a thing in general, directly connected with the notion of a "really given thing". Only after introducing these notions did Crusius discuss essence, existence, and causality. Crusius regarded existence as indefinable and as a primary notion arising from sensation.

In his discussion of causality, Crusius expounded a principle of determining reason, his version of Gottfried Wilhelm Leibniz's principle of sufficient reason. Crusius held, against Wolff, that a sufficient reason suffices only for free actions insofar as they are free. Rational truths and natural events not depending on free causes

need a more cogent foundation, a determining reason. This principle does not derive from the principle of identity, but rather from what we must conceive or what we cannot conceive as united or separate, and thus from a new case of the principle of *cogitabilitas*. Crusius, aiming at a sharper distinction between mechanism and free actions, held that the real nature of causality is unknown and that our knowledge of causal connections is based on the constant conjunction of two events in experience. This, of course, cleared the path for the members of his school to accept the Humean critique of the causal connection.

Crusius's ontology reveals a general characteristic of his metaphysics. His was not a monolithic system beginning with a single principle and deducing from it all subsequent notions and propositions, as was Wolff's. Rather, it was founded both on several independent principles and on a multitude of elementary notions that could be defined only by an appeal to reality (by their concrete representation)--notions such as existence, space, time, and force; or, in psychology, the particular powers of the soul, some mental faculties, and pleasure and pain. Through Hoffman Crusius derived this view from Locke's doctrine of simple ideas, but he supposed that the number of elementary notions (which he once called categories) could be infinite."

"In this paper we examine some passages of a logical treatise by Christian August Crusius. It seems that Crusius anticipated what might be called the circle of deduction, first discussed by Lewis Carroll.

The question now emerges: why was it possible for Crusius to have deeper logical insights than his contemporaries, given that he was not a brilliant logician? The answer here proposed traces these insights back to his very peculiar philosophical premisses, which have been important for Kant's development in his early career."

Johann Heinrich Lambert (1728-1777)

"A. Simple concepts. Simple, or fundamental, concepts (*Grundbegriffe*) are a subclass of empirical concepts (*Erfahrungsbegriffe*) and must be found by the Lockean method of collecting and inspecting (*Musterung*) examples. But whereas

empirical concepts may be erroneous (i.e., may have no object corresponding to them) and give only a mere delusory appearance of things, the fundamental concepts are derived from the experience of the *sensu interno* and must be granted even by the skeptic (the solipsist, *der Egoist*) who denies the existence of everything except himself and his experience.(45) The simple concepts can only be ostensively defined, not nominally. They can appear as predicates in a judgment whose subject is a complex empirical concept; but in this case the subject can be analyzed into simple concepts, and the original judgment will thereby be resolved into tautologies ("white is white"), simple negative propositions like Locke's intuited disagreements of ideas ("white is not black"), or relational propositions (such as "space has length, breadth, and height" or "motion has velocity and direction") .(46)

B. Combinations of simple concepts. Our knowledge of such propositions is a priori, for though experience is necessary if we are to have the concepts, we do not have to experience their combinations to see the truth of the propositions.(47) The various sciences are based upon some of the simple concepts (for example, geometry on that of space, chronometry on that of time, phronomy on space and time, "agathology" on the concept of good), and Lambert builds up large and elaborate tables showing what simple concepts are involved in each of the branches of science and philosophy.(48)

But while Lambert is clear in his theory of simple concepts, his theory of their combination is no more satisfactory than that of Crusius. Lambert uses a weaker form of Crusius' criterion of what can or cannot be thought together, calling it the criterion of "thinkability" (*Gedenkbarkeit*). But while thinkability is a test for a concept, something stronger is needed as a test for judgment; "not to be thought apart," or "must be thought together" as Crusius would say, are needed. This criterion of thinkability, or inseparability, applies to propositions whose predicate is included in the subject, as Leibniz thought; but obviously it will not work for that reason on propositions connecting simple subjects and predicates. Lambert sometimes appeals to the law of contradiction, which in turn is based upon the incredibility (*nicht-glauben-lassen*) of contradictions(49) and sometimes to

the mere possibility of thinking a combination of ideas under maxim that "cogitabile is equal to possibile." (50) But if *Gedenkbarkeit* is too weak a test, the law of contradiction is too stringent, and Lambert must rightly confess that the "fons possibilitatis duos ideas combinandi has not been fully discovered." (51) It was to remain hidden until Kant clearly distinguished the synthetic a priori from the analytic; and to explain the kind of combinations Lambert and Crusius were concerned with required the whole labor of the *Critique of Pure Reason*.

The total system of all the simple concepts and their permissible combinations constitutes what Lambert calls the realm of truth. (52) It is equally the object of logic (i.e., the science of reason, *Vernunftlehre*) and ontology, which is therefore completely a priori, since it deals with objects only insofar as they are possible. Still, Lambert does not wish the realm of truth to be defined solely in formal terms as a set of non-contradictory propositions having simple concepts as their subjects. He speaks rather of a harmony (53) reigning in the realm of truth. Harmony is what later in the history of philosophy will be called "coherence." Each proposition in the system is not only consistent with all the others, but harmonizes with it in some more intimate fashion, supporting and being supported by all the others. Every erroneous proposition can be discovered by a stepwise process (*Schritt für Schritt*, as Lambert liked to say) of testing it against each of the others; but since every proposition is ultimately reducible to simple concepts which are always logically true, every error contains some truth which we are to discover by analysis. The most harmonious system is, by definition, the logically true system: wholly unified, with no contingencies, and completely comprehensive. Any lacuna is a warning, and any dissonance a sign of error. (54)"

Francisco Suárez on Metaphysics as the Science of Real Beings

Introduction

References to the Latin edition of the *Disputationes Metaphysicae* (= *DM*) are to the edition in two volumes edited by Charles Berton reprinted in the Luis Vivés edition (voll. 25-26).

"Suarez's contributions are important in three areas in particular: philosophy, law, and theology. From a philosophical standpoint his most important works are: *De anima*, which contains much of his psychology, epistemology, and philosophy of mind; *De gratia*, which deals with issues of philosophical theology involving free will and determinism; and the monumental *Disputationes metaphysicae*. The last is undoubtedly one of the great works of Western philosophy. It is the first systematic and comprehensive treatise on metaphysics composed in the West that is not a commentary on Aristotle's *Metaphysics*. Furthermore, it summarizes and evaluates the metaphysical thought of fifteen hundred years of medieval and scholastic metaphysical speculation. Indeed, it is to this day the most complete and comprehensive exposition of scholastic and Aristotelian metaphysics. Its fifty-four disputations cover every metaphysical topic known during Suarez's time. *De legibus* is Suarez's most important work dealing with legal and political theory. In it he explores in detail the nature of law and of civil society. Suarez's views on international law (*ius gentium*) make him one of its founders. Suarez's contributions in theology are contained in his numerous books on the subject. He touched upon almost every aspect of sacred doctrine, from the Trinity to questions pertaining to the spiritual life. This has made his theological writings a standard source of Catholic theology. Moreover, his role in helping to shape

the response of the Catholic Counter-Reformation to the rise of Protestantism, guarantees a prominent place for his ideas in history. Suarez's place in the history of philosophy is frequently disputed. Some authors place him firmly in the medieval tradition, claiming that he should be seen as perhaps the last world-class figure of that tradition before modern philosophy changes the philosophical direction of the West. Others see Suarez as providing the foundation for some of the views that were going to form the core of modern philosophy. Under the latter interpretation he is seen as a precursor of modern philosophy, rather than as the term of a medieval process of development." (pp. 260-261, notes omitted).

From: Jorge J. E. Gracia, "Francisco Suárez: the Man in History", *The American Catholic Philosophical Quarterly*, 65, 1991, pp. 259-266.

"Perhaps the most important enterprise of the *Doctor eximius*, the *Disputationes metaphysicae* is a complete résumé of his own and previous Scholastic thought on a myriad of questions, arranged in the form of fifty-four "Disputations" dealing with various topics systematically. (...)

In format, Suárez's *Disputationes* represented a radical departure from previous metaphysical treatises. Until its appearance, metaphysics had been explicitly treated either just incidentally in the form of *Opuscula* ("little works"), such as St. Thomas Aquinas's *De ente et essentia* ("On Being and Essence"), or in commentaries on the text of Aristotle. Both methods were clearly unsatisfactory, the one incomplete and the other shackled to the rambling obsolete order of Aristotle. So Suárez says that he intends to give, preparatory to theology, a complete exposition of metaphysics which, instead of following the text of Aristotle, will proceed in a systematic fashion.

In executing his intention, the *Doctor eximius* has divided his work into two main parts, to which correspond two tomes. After explaining in the first Disputation the object, the dignity, and the utility of metaphysics, he proceeds in the first part to treat of being in general, its properties and causes. In the second tome, he descends to items under being, considering them from a metaphysical viewpoint.

The first part studies the concept of being (Disputation 2) which, representing in some way everything that entails an order to existence, transcends all genera, species and differences. It will encompass everything real, from extrinsic denominations, through mere possibles, to the subsistent, purely actual, and necessary reality of God. Following this is a treatment of the essential properties of every being inasmuch as it is a being, namely, unity, truth and goodness. Under the discussion of unity, space is given to questions concerning the principle of individuation (Disputation 5), the reality of universal natures (Disputation 6), and the various kinds of distinction (Disputation 7). The discussion of truth (Disputation 8) is balanced by discussion of falsity (Disputation 9) and that of goodness (Disputation 10) by that of evil (Disputation 11) After the essential properties, there follows a consideration of the causes of being. Disputation 12 treats causes in general while Disputations 13-25 deal with various types of causes. Concluding this first part, Disputation 26 presents a comparison of causes with their effects and Disputation 27 considers the mutual relations of causes one to another.

The second part opens with the division of being into infinite and finite (Disputation 28). Infinite being, or God, is the subject of the next two Disputations. In Disputation 29, the existence and unicity of God is demonstrated metaphysically. Disputation 30 goes on to investigate, as far as unaided human reason can, the divine perfection, simplicity, immensity, immutability, wisdom, and omnipotence. With Disputation 31 Suárez begins his treatment of finite being. It is this Disputation which is the locus of the famed Suárezian denial of the real distinction between essence and existence in creatures. In Disputation 32, Suárez considers the distinction of substance and accident in general. Substance is treated in metaphysical detail through the next four Disputations while the different categories of accident are the subject matter of Disputations 37 to 53. The fifty-fourth Disputation, (...) concludes the whole work with a discussion of "beings of reason" including negations, privations, and reason-dependent relations -- all of which fall outside real being, the object of metaphysics." (pp. 8-10, notes omitted)

From: John P. Doyle "Introduction" to: Francisco Suárez, *On Beings of Reason. (De Entibus Rationis). Metaphysical Disputation LIV.*

Milwaukee: Marquette University Press 1995.

"It is generally agreed that modern philosophy places greater stress on the subjectivity of the knower than on the objective reality of the known, as does medieval philosophy. Suárez, when faced with a basic problem of metaphysics, whether the concept of "being" is one or multiple, decided, without any Scholastic precedent, to make a subjective state of mind (*conceptus formalis entis*) the criterion for establishing the unitary sense of objective reality (*conceptus obiectivus entis*). When problems like that of "being" became too difficult to resolve by the usual medieval objective" approach, Suárez recommended recourse to the "subjective" because it was better known (*notior*) to us than the objective, especially as the subjective is produced "by us and in us" (*a nobis et in nobis*). On the basis of the principle that "to one formal concept one objective concept necessarily corresponds;" *uni conceptui formali unus conceptus obiectivus necessario respondet*, Suárez, as never before in Scholasticism, made extra-mental reality dependent for its truth on an intra-mental concept, thus changing the main thrust of medieval philosophy. Descartes adopted the same approach when faced with the basic problem of his system, of establishing, through the resources of the intellect, knowledge that was objectively certain. Like Suárez, he made an intra-mental concept the criterion for determining extra-mental reality. The intra-mental concept was the thinker's "cogito"; the extra-mental reality was the thinker's existence, "sum"; with the certainty of the existence following as a necessary consequence, "*ergo*", from the intra-mental concept itself.

Suárez could not have become the founder of modern philosophy before he had worked out his own system, the technical vocabulary of which provided the groundwork for the emerging modern systems. This vocabulary was first needed to systematize metaphysics. The long subjection to the unmethodical text of Aristotle had delayed the attainment of this important philosophical object, realised at last in the *Disputationes Metaphysicae*.

In the two volumes of that great work, the philosophy of being was given a binary structure, characterized, though not by its author, as general (vol. 1) and special (vol. 2) metaphysics. *General metaphysics* has as its theme the common concept of being, its

general attributes, and its causes; and *special metaphysics*, the kinds of being contained under the common concept, (*) classified in two dichotomies, the primary of finite and infinite, and the secondary of substance and accident. Suárez also furnished the burgeoning modern systems with vocabulary as groundwork for their ideas, in many cases the vocabulary anomalously grew to be alien to the system that was its source. How was this possible? Through that system undergoing anamorphosis, a condition where something distorted occasionally appears to be regular; indeed so regular, that the distorted ideas seem to belong to the nature of anamorphosed thing itself. Which may explain why the realist Suárez is made out to be a crypto-idealist, and it may be that the philosophies of realism (Scholasticism) and idealism (modern philosophies) have some hidden affinity and are closer together than one would suppose." (pp. 27-28)

Notes

(*) Suárez describes *general* metaphysics and its "proprium et adaequatam rationem, ac deinde proprietates eius et causas." DM 2: 1, introductory paragraph [25: 64] "... de communi conceptu entis, illiusque proprietatibus, quae de illa reciproce dicuntur." DM 28, introductory paragraph [26: 1]. He describes *special* metaphysics as "res omnes, quae sub ente continentur, et illius rationem includunt, et sub obiectiva ratione huius scientiae cadunt, et a materia in suo esse abstrahunt." DM 2: 1, introductory paragraph [25: 64] "... definitas rationes entium... divisiones varias ipsius entis et membrorum eius... primam et maxime essentialem divisionem entis in finitum et infinitum secundum essentialitatem seu in ratione entis." DM 28, introductory paragraph [26: 1].

From: José Pereira, *Suárez Between Scholasticism and Modernity*, Milwaukee: Marquette University Press 2007.

Overview of Suárez's Metaphysical Disputations

"The two large folio volumes of the *Disputationes metaphysicae* appeared in Salamanca in 1597. In his brief foreword, "Ad lectorem," Suárez indicates his reason for undertaking this project: "It is impossible for anyone to become a competent theologian unless he

builds upon a solid metaphysical foundation." He develops this view in the *Prooemium* or prologue to his work. The science of metaphysics, he holds, is indispensable for a mastery of theology. More intimately than any other human field of knowledge, it is connected with theology; it has for its object the most universal and supreme principles which embrace all being and are the foundation of all knowledge. This function of metaphysics was for Suárez a compelling motive for interrupting his theological labors and producing, in one systematic, comprehensive work, the results of his metaphysical studies and investigations, begun many years before. The prologue reads as follows:

"Sacred and supernatural theology relies on divine illumination and on principles revealed by God. However, it is cultivated by human reasoning and investigation, and therefore enlists the aid of truths naturally known, using them as ministers and instruments to develop its deductions and to illustrate divine truths. But of all the natural sciences, that which holds the primacy and has won the name of first philosophy is most valuable for promoting sacred and supernatural theology. For among them all it approaches most closely to the science of divine things, and also explains and vindicates those natural principles which embrace the universe of being and in one way or another stand at the basis of all learning.

For this reason I wished to revise and expand what I have worked out for my students and publicly taught on various occasions during many years concerning this natural wisdom, so that the results of my reflections might be made available to the general public.

Accordingly I am forced for a time to interrupt, or rather to postpone, the more weighty commentaries and disputations on sacred theology I am so busily engaged in, as well as the taxing labor required for their publication.

It often happened that while I was treating of divine mysteries, metaphysical problems would come up. Without a knowledge and understanding of these, the higher mysteries of Christianity can scarcely, if at all, be discussed as they deserve. Hence I had to mingle baser questions with supernatural subjects, a practice that is annoying to readers and is not very profitable for them; or else, to avoid this awkward procedure, I had briefly to propose my own

opinion in such matters, and its demand of toy readers a blind faith in my judgment. This was embarrassing for me, and could well seem out of place to them. Metaphysical principles and truths are so closely interwoven with theological conclusions and deductions, that if knowledge and full understanding of the former are lacking, knowledge of the latter must necessarily suffer.

Led on by such considerations, I yielded to repeated requests and decided to write the present work. I have arranged all the metaphysical disputations according to a method calculated to combine comprehensive treatment with brevity, and so to be of greater service to revealed wisdom. Hence it will not be necessary to divide the work into several books. For all that pertains to this doctrine and is suitable to its subject matter in the light of the method adopted, can be fully handled in a limited number of disputations. What belongs to "pure philosophy" or dialectics has, so far as possible, been left out as not in keeping with the scope of the work. I shall adhere to this norm, even though I am aware that other writers on metaphysics devote much space to such subjects. But before I begin to treat of the subject-matter of this doctrine I shall, God willing, discuss wisdom or metaphysics itself, its object, use, necessity and its attributes and rewards."

The work falls into two main parts, coinciding with the two volumes in which it was published. It comprises fifty-four disputations in all. The first volume treats of metaphysics in its broadest comprehension: being as such, and the properties and causes of being. The first disputation deals with the object of metaphysics; the second inaugurates an exposition of the concept of being. Disputations III to XI discuss the passions and transcendental properties of being. Disputations XII to XXVII embody the author's doctrine on causes.

The second volume opens with a consideration of infinite and finite being. Two disputations deal with natural knowledge of the existence, nature, and attributes of God. The remaining disputations are devoted to the metaphysics of finite being, distributed according to the Aristotelian categories.

As the title indicates, the work is cast in the form of disputations. The discussions follow a regular pattern. First, the problem is stated.

Then the various solutions that have actually been proposed by philosophers are reviewed (*Variae opiniones*). Thirdly, Suárez gives what he considers to be the true doctrine or, as the case may be, the most probable theory (*Vera sententia or Resolutio quaestionis*). A refutation of opposing views often brings the disputation to a close." (pp. 6-7)

Outline of the Metaphysical Disputations

- I. The nature of metaphysics (1)
- II. The transcendentals: being and its attributes (2-11)
 - A. Being (2, 3)
 - B. One (4, 5- 7)
 - C. True (8, 9)
 - D. Good (10, 11)
- III. The causes of being (12-27)
 - A. Causes in general (12)
 - B. The material cause (13, 14)
 - C. The formal cause (15, 16)
 - D. The efficient cause (17-19, 20-22)
 - E. The final cause (23, 24)
 - F. The exemplar cause (25)
 - G. Relation of the causes to their effects and to each other (26, 27)
- IV. The division of being into infinite and finite (28-31)
 - A. The distinction between infinite and finite being (28)
 - B. The existence and nature of the First Being (29, 30)

- C. Finite being (31)
- V. The division of finite being into substance and accident (32-38)
 - A. The distinction between substance and accident (32)
 - B. Created substance in general (33)
 - C. Primary substance (or *suppositum*) (34)
 - D. Immaterial substance (35)
 - E. Material substance (36)
 - F. Accidents in general (37, 38)
- VI. The division of accidents into the nine categories (39-53)
 - A. The division of accidents into the nine highest genera (39)
 - B. Quantity (40, 41)
 - C. Quality (42-46)
 - D. Relation (47)
 - E. Action (48)
 - F. Passion (49)
 - G. Time (50)
 - II. Place (51)
 - I. Position (52)
 - J. Having (53)
- VII. Real being versus being of reason (54)" (pp. XVI-XVII)

The object of metaphysics in the three first Metaphysical Disputations

"In the twenty-seven Disputations which make up the first volume, Suárez is concerned with being in general while, symmetrically, in

the twenty-seven Disputations of the second volume he descends to particular being -- in effect dividing metaphysics itself into a general and a special part.

In the very first Disputation (*Opera omnia*, Paris: Vivès [1856]: vol. 25, pp. 1-64), he tells us that the object of metaphysics is "being insofar as it is real being." Explaining this, in Disputation 2 (pp. 64-102) he uses two distinctions already familiar to Scholastic authors. The first is between the formal concept as an act of the mind and the objective concept as what is immediately the object of that act. This latter may be an individual thing or some common feature (ratio) of things. It may, further, be something mind-independent, whether actual or possible, or it may be something merely objective or mind-dependent. The second distinction is between being as a participle, which refers to actual existents and being as a noun, which refers to whatever is not a simple fiction but is true in itself and apt really to exist. The object of metaphysics is then identified with the "common objective concept of being as a noun." This precise object, which reflects Avicenna's (980-1037) understanding of Aristotelian metaphysics, abstracts from existence and, as common, transcends all categories, genera, species and differences to embrace everything real. This last runs a range from extrinsic denominations (such as "being right," "being left," "being known," or "being willed"), through mere possibles (which reduce to non-contradiction), to actual created substances and accidents, to the subsistent, purely actual, necessary, untreated, and infinite reality of God. Over this range, the common concept of being as a noun is analogous with what Suárez will call "an analogy of intrinsic attribution." In this analogy, a unified concept of being is shared, in an order that is intrinsic to it, by different beings (God and creatures, substance and accidents) in such way that the being of what is posterior depends upon and indeed "demands" (postulat) the being of what is prior.

Disputation 3 (pp. 102-115) offers a general treatment of the transcendental properties, namely unity, truth, and goodness, which belong to every being insofar as it is a being." (pp. XI-XII, notes omitted)

From: John P. Doyle, "Introduction" to: Francisco Suárez, *The Metaphysical Demonstration of the Existence of God. Metaphysical*

Disputations 28-29, South Bend: St. Augustine Press 2004, pp. IX-XXIV.

"To what extent Suárez, despite his token references to Thomas Aquinas, follows Scotus' approach is evident from the definition of the subject matter of metaphysics in the first of the 54 disputations. Here he discusses six possible solutions to the problem, but dismisses all of them as either too comprehensive or too restrictive. The subject matter of metaphysics is neither everything that is knowable nor the "supreme real being" (Suárez, *Disp. Met.* 1.1.9), i.e. God or the immaterial being; nor is it the finite being that is the subject matter of physics. Rather, the subject matter of metaphysics is "being as such" (*ens inquantum ens*), i.e. a common determination (ibid. 1.1.23 and 26) that is grasped in a concept that abstracts from all categorial determinations as well as from being finite/infinite, being caused/uncaused, and being material/immaterial. Metaphysics is, therefore, the "most general science" (ibid. 1.5.14), because it treats of the "*rationes universales transcendentales*" (ibid. 1.2.27). That is to say, metaphysics is a *scientia transcendens* in the Scotistic sense. Because the immaterial being (God) cannot be known except through previously known transcategorial attributes of being, metaphysics as transcendental science and metaphysics as theology coincide.

According to Suárez, metaphysics deals with the "formal" as well as the "objective" concept of being. By the formal concept of being, Suárez understands the act of knowing, which "*ex unica et prima impositione*" (ibid. 2.2.24) yields an intentional representation of the object; by the objective concept he designates that which is intentionally represented by that act. In other words, Suárez does not assume a theory of concepts characterized by a noetic-noematic parallelism of *res* and *conceptus*; rather he accepts Ockham's critical approach towards a strictly realistic interpretation of universal concepts. Since Scotus himself does not rely on that parallelism when it comes to the concept of being, Suárez can substantially follow Scotus and apply 'being' to a first and unified formal concept which, in virtue of its imposition, represents a first and unified objective concept of absolutely simple content that grasps all different beings in an indeterminate way, i.e. as being.

To the formal concept of being there corresponds an appropriate and immediate objective concept, which is explicitly neither substance nor accident, neither God nor creature, but which designates these in a unified way, i.e. inasmuch as they are similar and agree in being. (ibid. 2.2.8)

What does the objective concept that corresponds to the formal concept of being mean? According to Suárez, it is a determination that transcends the generality of the genus; this determination cannot be defined, but only explicated through its relationship to actual existence. 'Being' means "that which can exist" (*id quod aptum est esse seu realiter existere*: ibid. 2.4.7); the possibility of existence is grounded in an ontological disposition which (as we have seen before) appears in the non-contradiction of the internal contents constituting essences.

Because entity in the sense of being(ness) -- which in a concrete being is identical with the entity or being(ness) of that being -- is grasped indeterminately by the concept of being, that concept has an "illimitability and transcendence" (ibid.2.6.10) on account of which it precedes all more determinate modes. First among those more determinate modes, according to both Suárez and Scotus, is the classification "finite/infinite", which Suárez understands in terms of "intensity"; this allows him to interpret finite being as a non-determinate mode of an intensive quantity and infinite being as the "totally indivisible infinity of perfection which in itself is most real and complete" (ibid. 30.2.25)." (pp. 62-63)

From: Ludger Honnefelder, "Metaphysics as a Discipline: from the "Transcendental Philosophy of the Ancients" to "Kant's Notion of Transcendental Philosophy"." Exclusion of the "Beings of reason" from the subject of metaphysics

"As every historian of philosophy knows, Aristotle thought the subject of metaphysics was "being insofar as it is being" and from this subject he excluded "being as true". Centuries after Aristotle,

Francisco Suárez, S.J., designated the subject of metaphysics more explicitly as "being insofar as it is real being".

The addition of "real" to Aristotle's formula highlighted the inclusion of all that can as well as does exist (4). Against the backdrop of two already well known distinctions - (1) between formal and objective concepts, and (2) between being as a participle and being as a noun - - for Suárez the subject so conceived was identical with "the objective concept of being as a noun" (5). Concurrently, while being was said to be analogous with regard to hierarchically ordered objects (God and creatures, substance and accidents) with an intrinsic attribution of the perfection it represented (6), such analogy presupposed a common, unitary, and all but univocal, concept (7). But from that concept and from the subject of metaphysics Suárez excluded "beings of reason" (8), which he subsumed under Aristotle's being as true (9), and of which impossible objects, in the sense of those that would be self-contradictory, furnished the paradigm case. (10)" (pp. 297-298)

Heidegger appreciation of Suárez

"Heidegger reserves the place of honor in his exposition [*of the Thesis of Medieval Ontology*] for the Spanish Jesuit Francisco Suárez (1548-1617), a figure whose pre-eminence for Heidegger is both systematic and historical. Suárez is the bridge between the Middle Ages and the modern world (*Grundprobleme der*

Phänomenologie 111-16/ English translation 79-83). It was through Suárez that the metaphysics of Scholasticism flowed into modern thinkers; his influence is clearly detectable in Descartes, Leibniz, Wolff, Schopenhauer, Kant, and Hegel. Suárez abandoned the format of the *commentarium* employed by the classical Scholastic thinkers and developed instead a strictly philosophical and systematic treatise entitled *Disputationes metaphysicae*. Although it was written in the seventeenth century, it is the first major systematic Scholastic treatise on metaphysics (GP 112/80). St. Thomas' major works, for example, are either commentaries or, when they are systematic, theological treatises. The *Disputationes* is divided into fifty-four tracts. The first twenty-seven treat of *metaphysica generalis* (or *ontologia*); the next twenty-six treat of special beings (*metaphysica specialis*); the fifty-fourth is devoted to beings of reason (*entia rationis*). In general metaphysics Suárez investigates the properties of the abstract concept of being in general. In special metaphysics, he investigates God and creatures, that is, infinite and finite beings. This distinction between general and special metaphysics was imported fully intact by Wolff and made its way to the center of Kant's architectonic -- to the distinction between the transcendental analytic and the transcendental dialectic -- in the *Critique of Pure Reason*." (p. 69)

From: John D. Caputo, *Heidegger and Aquinas. An Essay on Overcoming Metaphysics*, New York: Fordham University Press 1982.

"The first *Disputatio* treats: *De natura primae philosophiae seu metaphysicae*, of the essence of First Philosophy or metaphysics. Suárez begins in the introduction (3) by discussing the various designations of metaphysics (*varia metaphysicae nomina*), and does so with independent recourse to Aristotle. Here he finds that metaphysics is designated as *sapientia (sophia)*, *prudentia (phronesis)*, then as *prima philosophia (proté philosophia)*, then as *naturalis theologia (theologiké)* -- which Suárez here interprets in a sense quite unlike that of antiquity (*quoniam de Deo ac divinis rebus sermonem habet, quantum ex naturali lumine haberi potest* 4) -- and finally as *metaphysica*.

Suárez says that this natural theology or First Philosophy is called metaphysics because it deals with God (*ex quo etiam metaphysica nominata est* 5). He thereby gives the expression a different meaning from that of Aquinas. Aquinas uses the expression *metaphysica* insofar as it treats *de ente in communi*. Suárez, on the other hand, says it is called metaphysics because it is theology. He remarks that this title 'metaphysics' does not stem from Aristotle himself, but from his interpreters (*quod nomen non tam ab Aristotele, quam ab ejus interpretibus habuit* 6). However, he is of the opinion that Aristotle did put together this collection.

He explains the expression 'metaphysics' in a sense that deviates from the explanation given by Aquinas, and brings in another point of view which is significant in the history of metaphysics: *de his rebus, quae scientias seu res naturales consequuntur*. (7) (...)

The *Metaphysics* is not concerned, then, with such books as come after those about physics, rather 'coming after' is now taken in the sense of *content*: knowledge of the suprasensuous is later than that of the sensuous. In the order of appropriation, in the order in which knowledge of the suprasensuous arises, in the sequence of investigation, metaphysical knowledge is placed after knowledge of physics. Suárez stresses the *méta* in the sense of *post* and understands this *post* in the sense of the stages of knowledge proceeding from the sensuous to the suprasensuous. At the same time however he brings into play the interpretation in terms of content: *méta*, afterwards, that which comes afterwards, which exceeds the sensuous." (pp. 52-53)

(5) *ibid.*

(6) *ibid.*

(7) *ibid.*

From: Martin Heidegger, *The Fundamental Concepts of Metaphysics. World, Finitude, Solitude*, translated by William McNeill and Nicholas Walker, Bloomington: Indiana University Press 1993.

"Suárez is the thinker who had the strongest influence on modern philosophy. Descartes is directly dependent on him, using his terminology almost everywhere. It is Suárez who for the first time systematized medieval philosophy and above all ontology. Before him the Middle Ages, including Thomas and Duns Scotus, treated ancient thought only in commentaries, which deal with the texts seriatim. The basic book of antiquity, Aristotle's *Metaphysics*, is not a coherent work, being without a systematic structure. Suárez saw this and tried to make up for this lack, as he regarded it, by putting the ontological problems into a systematic form for the first time, a form which determined a classification of metaphysics that lasted through the subsequent centuries down to Hegel.

In accordance with Suárez' scheme, distinctions were drawn between [*metaphysica generalis*](#), general ontology, and [*metaphysica specialis*](#), which included *cosmologia rationalis*, ontology of nature, *psychologia*, ontology of mind, and *theologia rationalis*, ontology of God. This arrangement of the central philosophical disciplines recurs in Kant's *Critique of Pure Reason*. Transcendental logic corresponds in its foundations to general ontology. What Kant deals with in transcendental dialectic, the problems of rational psychology, cosmology, and theology, corresponds to what modern philosophy recognized as questions. Suárez, who gave an exposition of his philosophy in the *Disputationes metaphysicae* (1597), not only exercised great influence on the further development of theology within Catholicism but, with his order colleague [Fonseca](#), had a powerful effect on the shaping of Protestant Scholasticism in the sixteenth and seventeenth centuries. Their thoroughness and philosophical level are higher by far than that which Melancthon, for example, attained in his commentaries on Aristotle." (p. 80)

Editions and Translations of the Metaphysical Works of Francisco Suárez

Metaphysical works

The standard edition of Suárez's works is: André Michel and Charles Berton (eds.), *R. P. Francisci Suárez e societate Jesu, Opera omnia*, Parisiis apud Ludovicum Vivès (1856-1861) in 26 volumes, with two additional volumes of indexes (27-28).

The main philosophical works are:

a) *Disputationes Metaphysicae* (DM): The first edition was published in Salamanca (Spain) in 1597 (two volumes) with the title *Metaphysicarum disputationum, in quibus et universa naturalis theologia ordinate traditur, et quaestiones omnes ad duodecim Aristotelis libros pertinentes accurate disputantur*, and reprinted Mainz 1605.

The standard edition, edited by Charles Berton who adopted the current title, is part of the edition of the *Opera omnia*, voll. 25 (I-XXVII) and 26 (XXVIII - LIV). This edition is reprinted by Georg Olms, Hildesheim, 2009.

b) *Commentaria una cum quaestionibus in libros Aristotelis "De anima"*, Introduction and critical edition by Salvador Castellote, Spanish translation by C. Baciero and L. Baciero: vol. I (*Disputations I-II*) Madrid, Labor, 1978; vol. II (*Disputations III-VII*) 1981, vol. III (*Disputations VIII-XIV*), Fundación Xavier Zubiri, 1981.

c) *De essentia, existentia et subsistentia* in: Jesús Iturrioz, "Un primer opúsculo de Suárez, desconocido hasta ahora," *Estudios eclesiásticos* 18: 330-359 (1944); reprinted in: J. Iturroz, *Estudios*

sobre la metafísica de Francisco Suarez, S. J., Madrid, Ediciones Fax, 1949.

English translations of the Disputationes metaphysicae

1. Suárez, Francisco. 2004. *A Commentary on Aristotle's Metaphysics (Index locupletissimus in Metaphysicam Aristotelis)*. Milwaukee: Marquette University Press.

Translated with an introduction (pp. 7-19) and notes by John P. Doyle.

The *Index* is the preface to the *Disputationes Metaphysicae*.

Content: English translation: 20-247; Corresponding Latin texts: I. Ad lectorem 248; II. Disputatio II: Prooemium 250; III. Index Locupletissimus 252; IV. Index Disputationum 390; Persons Mentioned in the Index 410; Bibliography 413; Index of Names 424-426.

"Balancing the system in the *Disputationes*, the Index amounts to a late medieval commentary, "by way of question," on the first 12 books of the *Metaphysics*. Shorter in length than, for example, St. Thomas Aquinas' (1225–1274) commentary on the same 12 books, Suárez's *Ample Index* more than makes up for that by cross-referencing the *Disputationes* itself hundreds of times. In fact, the *Index* and the *Disputationes* are exactly as Suárez intended them to be, complementary of one another and mutually supportive." (Doyle, p. 8).

"However, because there will be very many who will desire that this whole doctrine be collated with the books of Aristotle, not only in order to better perceive on what principles of the so great Philosopher it is based, but also in order that it be more easily and usefully employed for understanding Aristotle himself, I have also sought to provide the reader in this matter with an elaborate index, in which, if it is attentively read, most easily (if I am not mistaken) all those things which Aristotle treated in the books of *Metaphysics* can be comprehended and retained in memory. And again, [with that index] all questions

can be at hand which are customarily raised among the expositors of these books." (Suárez, p. 21).

2. ———. 2021. *Metaphysical Disputation I: On the Nature of First Philosophy or Metaphysics*. Washington, D. C.: The Catholic University of America Press.

Translated and annotated, with corrected Latin text, by Shane Duarte.

"Section 1: Identifying the adequate object or subject of metaphysics.

Suárez classifies metaphysics or first philosophy as a natural science (*scientia naturalis*) (DM 1.2.17). In so classifying it, he in no way means to identify it with a branch of physics or natural philosophy. Rather, "natural" is here contrasted with "supernatural," so that in this sense of the expression mathematics also counts as a natural science, whereas sacred or supernatural theology, based on divine revelation, does not.

Suárez further classifies metaphysics as a real science (*scientia realis*), since it is about things (*res*) or real beings (DM 1.2.13). The implicit contrast here is with a rational science (*scientia rationalis*) such as logic, which is not about any thing or real being, but is commonly thought to deal with objective second intentions (e.g., genus, species, subject, predicate, antecedent, consequent), which are beings of reason or items existing only objectively in the mind as objects of thought. Suárez also classifies metaphysics as a theoretical or speculative science (*scientia speculativa*) (DM 1.2.13), since it has the contemplation of truth as its highest end, unlike the practical and productive sciences, whose truths are ordered to some further goal (i.e., action or production)." (pp. XXVI-XXVII)

3. ———. 1982. *Suárez on Individuation. Metaphysical Disputation V: Individual Unity and Its Principle (De unitate individuali, elusque principio)*. Milwaukee: Marquette University Press.

Translated from the Latin with introduction (pp. 1-27), notes, glossary (pp. 175-279), and bibliography (pp. 281-287) by Jorge J. E. Gracia.

"When thinking about an individual concrete thing such as a man or a tree, one may consider those features that the thing has or seems to have in common with other things, or alternatively, those features that are peculiar or unique to the thing under consideration. If the common features are part of what distinguishes the thing from a larger group of things and at the same time makes it part of a smaller group of things, the members of which can be distinguished only in terms of individual features, then one is thinking of what was commonly known in the Middle Ages as the thing's "nature." If, on the other hand, one considers those features that set a thing apart from all other things, including those falling together with it into a group, then one is considering the thing's individuality. In either case the content of the thought seems to be different. Take Peter, for instance. A consideration of his nature focuses on his humanity; that is, the feature or group of features such as rationality, capacity to laugh, etc., that make him human and in respect of which he is both indistinguishable from other human beings and distinguishable from non-human beings such as dogs, trees and rocks. A consideration of Peter's individuality, on the other hand, will focus only on that feature or group of features which separate Peter from Paul and any other individual being, whether human or not. In the first case we think of the ways in which Peter is the same as other human beings, In the second of the ways in which Peter is unique. The cluster of philosophical problems concerned with the nature of a thing is usually designated as "the problem of universals," those concerned with individuality are gathered under the term "the problem of individuation," Suárez's attention in Disputation V is directed toward the latter.

Contrary to a widespread misconception, the complexity of the problem of individuation was not ignored by scholastics. Most were aware that there is more than one issue related to individuality, and a few of them isolated and discussed the four most important ones. These are, in logical order: the nature of individuality, the extension of individuality, the ontological status of individuality in the individual and its relation to the nature, and, finally, the cause or causes that bring about

individuality. When references to the medieval or scholastic problem of individuation are found in contemporary literature, it is usually the last that is meant. And not without reason because up to the fourteenth century one seldom finds a careful and clear distinction between these four different issues, and much more effort is put into the solution of the last than any of the others. Yet, it is also evident that as the age progresses they become more and more defined until we find late scholastics like Suárez carefully separating them in their discussions. Some never became quite independent in treatment, however. The first one, the nature of individuality, was usually discussed in the context of the second, the extension of individuality. And even the second does not become the subject of separate investigation until late in the Middle Ages. Only the last two issues, the ontological status of individuality and its cause or causes, were generally discussed in isolation from the others. Suárez's treatise is consistent with this practice. He deals with the nature of individuality in the context of its extension (Sect. I), giving separate analyses of the ontological status of individuality (Sect. II) and its cause in various entities (Sects. III-VII). The last two Sections of the Disputation take up a problem related to the individuality of accidents: whether numerically different accidents can be present in the same subject simultaneously and successively." (Introduction, pp. 1-2)

"In Conclusion I would like to stress four important points. The first is the completely philosophical character of Suárez's analysis. Although some theological considerations and examples creep in once in a while, the discussion is guided wholly by philosophical principles. The arguments given are philosophical, and the criteria by which various views and arguments are judged are also philosophical. Often Suárez will explicitly make the point that an argument is not philosophical enough, meaning that it is based on theological assumptions, or that a particular problem that had surfaced in the discussion is theological and therefore outside the scope of his discussion (Sect. II, §§ 30 and 37). It is clear, then, that at this time, and for Suárez at least, philosophy and in particular metaphysics

had a place of its own among the sciences, independent of theology. In this Suárez is no less modern than Descartes or Leibniz who, as it is well known, read the *Metaphysical Disputations* avidly.

The second point is that Suárez's analysis of individuality is ontological in character. He is not primarily concerned with the discernibility of the individual and its cause, although he is aware both of the problems related to the knowledge of the individual and the epistemological problems related to the way we distinguish between two individuals (Sect. III, § 28 and VII, § 4). The roots of discernibility are always referred to by Suárez, as they are in the scholastic tradition dating back to Thomas, as "signs" or "indications" of individuality rather than its causes or principles.(38) The latter are prior to the former both logically and ontologically, even though the former are prior in human experience. This is why Suárez, like most of philosophers who put ontology before epistemology, cannot adhere to what in contemporary philosophy goes by the name of "the principle of identity of indiscernibles," since such a principle implies a reversal of what Suárez would regard as the proper order between these two sciences. His primary concern is with individuality as it independent of human consideration.

Thirdly, I would stress Suárez's contribution to the controversy surrounding the problem of individuation. Besides the subtlety and originality of many of the arguments he proposes, four factors stand out: (1) His identification of the nature of individuality as indivisibility, and of distinction as a result of individuality rather than a constituent of it. (2) His explicit discussion of the extension of individuality, a problem seldom treated separately by his predecessors, whose views on the subject were in many cases no more than implicit uncritical assumptions rather than explicitly discussed philosophical commitments. (3) His original interpretation of Scotus' doctrine of haecceitas as an answer to the problem of the ontological status of individuality rather than to the problem concerned with the cause individuality. (4) The merits of his own view on the causal analysis of individuality, which avoids some of the most obvious pitfalls of other views and presents a

unified and economic solution to this most vexing philosophical problem. The numerous other merits of Suárez's analysis will become evident, no doubt, to the careful reader.

The fourth most important point I would stress in closing is the centrality of this problem within Suárez's metaphysics. This is evident from the place that the discussion of individuation has within the whole framework of the *Metaphysical Disputations*. As a kind of unity, individuality is discussed just after the general notion of transcendental unity in Disputation IV. This indicates that he considered it the most important kind of the first of the three basic attributes of being (unity, truth, goodness). Universal and formal unit are discussed only after individual unity, in Disputation VI. For it is individual unity that makes all other unity possible. As such, the Disputation V reveals the core of Suarezian metaphysics." (Introduction, pp. 23-24)

4. ———. 1964. *On Formal and Universal Unity (Disputatio VI: De Unitate Formali et Universali)*. Milwaukee: Marquette University Press.

Disputation VI. Translated from the Latin with an introduction (pp. 1-27) by James F. Ross.

"The unity of the scholastic tradition on universals is illustrated by a list of metaphysical points on which Aquinas, Scotus, Occam, and Suárez all agree and an indication of the one or two major points on which there is substantial disharmony, although there existed a common tradition as to mode of discussion.

All four authors are agreed that: (1) There are no universals to be found existing independently both of the operations of the mind and of the existence of singular things; and further that such a notion is inconsistent. (2) Anything that really exists (that is, exists independently of consideration by the human mind and of any mind other than the Divine Mind) is a particular or singular thing, a primary substance. (3) Whatever is actually universal is an *ens rationis*, a mental being called a "concept," whose existence (analogically speaking) is derived from the operations of the conceiving mind. (4) There is a

foundation *in re* and independently of the operations of the mind for the universality of the concept which is actually universal. (5) The foundation *in re* is, at least in part, the form found in the individual. (6) The foundation *in re* can be called a universal by extrinsic denomination, i.e., by analogy of attribution based upon the causal relation which holds between the foundation *in re* and the actual universal found in the mind. (48) (7) The universal concept is formed by the mind through a process called "abstraction"; (on this point there are many important distinctions and differences which will not be treated herein). (8) There is a real similarity in things of the same nature, a similarity which is the foundation of the "commonness" of the nature or quiddity.

Other than differences in psychology which we must gloss over, the chief discrepancies among these authors are found in the following areas: (1) the manner in which the forms in individuals are the foundation *in re* for the universal concept and (2) the analysis of the claim that two things are similar because they have something in common. There are several notions of commonness or community involved, several interpretations of the expression "common nature" and consequently several analyses of the expression "the form in the individual is the foundation *in re* for the universality of the concept." These two points are intimately connected, since for each of the four authors, and especially for Suárez, the explanation of the similarity of things is directly connected with the explanation of the foundation of universality.

In brief, Suárez and Scotus are very similar in their psychological doctrine of universals, whereas Aquinas, Occam, and Suárez are all much closer together on the metaphysics of the matter than any one of them is to Scotus, who stands closer to Plato and Augustine. Suárez's view is truly a synthesis of the work of his predecessors, and comparison with those writers should not be used to make him join some older "camp," but should function merely to clarify the various strands of tradition woven into his original design.(49)

Finally a comparison of starting points is useful:

1) Scotus says we must postulate community (which is a logical consequence of possibility) of natures and must seek causal explanations of universality and singularity, which are logically posterior to community.

2) Occam says we must postulate singularity as a principle of explanation, not itself explicable, and proceed to explain universality and community, which are logically posterior.

3) Suarez and Aquinas say we must have a principle of individuation to explain singularity and must also seek explanations of community and universality, which are logically posterior to the principles of composition (essence-existence, matter-form) through which we solve the problem of the one and the many. As a result, all three factors, universality, communicability, and individuation must be explained in terms of prior metaphysical principles." (*Introduction* , pp. 26-27).

(48) At first sight it might appear that Occam would deny this; but his statement that nothing extra-mental is to be called universal, clearly had in mind literal or proper predication. He had no interest in analogous talk and might still have resisted the point; but his own position compels acquiescence, since he holds for causal dependence of concepts upon particular things. Scotus, too, might seem to resist; but by the same arguments would have to agree, since his position is stronger and entails this one.

(49) The richness of Suárez's *Disputation on Universals* cannot be tapped in an introduction. A much more extensive analysis of Suárez's theory will be forthcoming from the author in a general history of the discussion of universals during the middle ages.

5. ———. 1947. *On the Various Kinds of Distinctions (Disputatio VII: De variis distinctionum generibus)*. Milwaukee: Marquette University Press.

Translation from the Latin, with an introduction (pp. 1-15) by Cyril Vollert (reprinted 1976).

"Disputation VII has been chosen as a sample of the metaphysics of Suárez for two reasons. First, it is typical both of

his method and of his philosophical thought; many of his characteristic doctrines are briefly treated in it, or at least are indicated. Secondly, it introduces his teaching on the modes, without which much of his philosophy is unintelligible, and above all propounds his theory on distinctions, a point of capital importance for a grasp of Suarezian metaphysics. As the views of Suarez on distinctions and modes are clearly brought out in the Disputation itself, there seems to be no need of a preliminary exposition of these tenets in survey form.(28)

Suarez treats of distinctions in the context of his discussion on the unity of being, Disputations IV to VII. Disputation IV deals with *unum* in general, Disputation V with individual unity and the principle of individuation, Disputation VI with universals, and Disputation VII with the various kinds of distinctions. The connection between the question of unity and that of distinctions is explained by Suárez himself in the introduction to Disputation VII. Section 3 of this Disputation, on "the same" and "other," is added to the treatise on distinctions in order to round out the general discussion of unity.

The main reason why a philosopher's theory of distinctions is important is that his solution to the problem of distinctions is a key to his concept of being. For distinctions are based on the nature of being; therefore a metaphysician's view of the nature of distinctions leads to an understanding of his doctrine of being itself.(29) In reading Disputation VII, the student can profitably ponder whether any ideas developed in it support the suggestion put forth by a scholar of our own day, who is both a profound philosopher and a shrewd appraiser of intellectual trends:

Everything is accounted for if we recall that Suarez lived in a nominalistic milieu, and that, despite his avowed reaction in favor of realism in logic, he did not fully succeed in keeping his metaphysics free from this influence.(30)"

Indispensable, too, for an appreciation of Suarezian metaphysics, is his modal theory. Suarez perceived that most things are highly complex, composed as they are of distinct entities, substantial and accidental. Hence he concluded that

their essential union is tenuous, or even impossible, without some ultimate bond. This bond is a mode of being. He saw, further, that every created being is subject to numberless determinations which lie outside its essence, but do not contribute new reality to it. The mode supplies the complement of finality. It closes and terminates an essence; it is not a formal, but a completing act.

The Suarezian system is coherent in its complicated structure. Suarez remains faithful to his primary concepts of entity, unity, existence, and distinction, and traces out their implications to the ultimate conclusion. No greater mistake could be made than to attempt to "purify" the system by suppressing the modes. Take away the modes, and the Suarezian structure collapses; just as, in his view, without the unifying function of the modes, finite beings themselves would fall apart. Whether for a mind craving for reality the modes provide satisfying fare, is another question. A study of Disputation VII should help toward an answer." (Vollert, Introduction, pp. 12-13).

(28) A sufficiently detailed account of these two questions may be found in P. E. Nolan, "The Suarezian Modes," Proceedings of the Tenth Annual Convention of the Jesuit Educational Association (Chicago: Loyola U. Press, 1931), pp. 184-200.

(29) This point has been fully discussed by Michael V. Murray, S.J., in his hitherto unpublished doctoral dissertation, *The Theory of Distinctions in the Metaphysics of Francis Suarez*, Fordham University, 1944. Dr. Murray advances cogent reasons, well fortified by historical research, for his conclusion that Suarez was thoroughly imbued with the widespread nominalism of his time.

XXXIII: *De substantia creata in communi*.

Also contains translations of: *Tractatus de divina substantia ejusque attributis*, book III chapter 3, §§ 9-11; chapter 7 §10 and *De divina praedestinatione et reprobatione*, book 1, chapter 5, §§ 2-3; book 3, chapter 8, §§.1-2; book 5, chapter 4, §§ 1-3.

Translation, with introduction (pp. 17-101), notes and glossary (pp. 217-265) by Jorge J. E. Gracia, Douglas Davis.

"The subject matter of Disputations X and XI concerns the metaphysical issues that surrounds good and evil. Other matters, also of interest both to philosophers and theologians, such as the problem concerning the foundation of moral judgments, and the problem that the existence of evil poses for those who believe in the existence of an omnipotent, omniscient, and good supreme being, are largely omitted. These and related issues were as important in Suarez's times as they are today, and he addressed them explicitly and in some detail, but not in the *Disputationes metaphysicae*. Following his lead, we have in general omitted reference to these matters with one exception: in order to give the reader a more complete view of Suarez's overall doctrine of evil, we have selected from his opera various texts that address some theological issues which have received considerable attention in contemporary philosophical circles, and which reveal Suarez's views on these matters and complement the views presented in Disputation xi. These texts have been placed in the Appendix.

In spite of the relative brevity, systematic organization, and clarity of thought of Disputations X and XI, the text is not easy to understand for a modern reader. As in many scholastic texts of the late medieval and Renaissance periods, the discussion is carefully organized, but the issues and arguments are so intricate and the number of technical terms so large, that even those familiar with the philosophical literature of the times are likely to find the text difficult to follow at times. Since the translator should avoid altering the style and general tone of the text, we have had to use other means to facilitate its

understanding: we have added an Introduction, notes where they seemed appropriate and, in order to keep their number down, a glossary of technical terms at the end. The Introduction has been kept general; it presents a summary and interpretation of Suarez's position and places it within a philosophical and historical framework. Its aim is propaedeutic. The purpose of the notes is primarily to identify the references to other authors made by Suarez, but in a few instances they are used also to solve particular problems that arise in the text or to clarify important uses of terms that appear infrequently in the Disputations. The texts contained in the Appendix are presented without notes, except for those that identify their origin, because they are fragments of works which may eventually appear in more complete translations; we leave their annotation then for the translator of the complete works. The Glossary, in contrast with the notes, deals with recurring difficulties of interpretation arising from the use of technical terminology. Its purpose is not only to clarify Suarez's use of these terms, but also to identify the common understanding of them by scholastics and, when possible, to point to their source in Aristotle or in his Latin commentators. It is intended primarily to help non-specialists, and thus also makes clear how particular Latin terms have been translated into English. In the English-Latin Index the reader will find the Latin equivalent or equivalents of the English terms used in the text, which in turn will facilitate the use of the Glossary. Finally, the Bibliography lists the works cited in order to help the location of references, and author and subject indexes should aid the reader in locating pertinent materials." *Introduction* , pp. 14-15).

7. ———. 2000. *On the Formal Cause of Substance. Metaphysical Disputation XV (De Causa formali substantiali)*. Milwaukee: Marquette University Press.

Translated by John Kronen and Jeremiah Reedy; Introduction (pp. 7-16) and explanatory notes by John Kronen.

"The Specific Problems Addressed in Disputation XV

One of the things that made Suárez, a great thinker was his impatience with vagueness of any sort and his systematic thoroughness. In this regard Disputation XV is no exception. Never before or since has there been so thorough a treatment of the Aristotelian notion of form. In the course of the Disputation Suárez considered the existence and nature of substantial forms, their eduction, their causality and effect, and their unity. Finally, to be complete, Suárez, treated what he called the "metaphysical form," though this is only analogous to the substantial form in the proper sense. We shall briefly summarize Suárez's views with respect to each of these issues, and discuss the main reasons he gave for them. But we must warn the reader that no summary of Suárez, much less one this brief, can give any idea of the exhaustiveness and sophistication of his discussion of substantial form; to get the proper sense of these, one must turn to Suárez himself.

Section I: The existence of substantial forms

The first question Suárez treated in Disputation XV concerns the existence of substantial forms. This might seem a rather odd procedure. One might think it suitable first to give a definition of what substantial forms are, before attempting to prove their existence. Disputation XV does have a short section which presents a very thorough definition of substantial form, but it is the fifth section in Disputation XV. Why did Suárez wait so long to give this definition? The reason is simple: substantial forms are inferred entities, not observables. Their very nature, therefore, can only be established on the arguments which present reasons for believing they exist. Accordingly, Suárez first gave arguments for the existence of substantial forms, and answered objections to positing them, before defining them. Furthermore, he regarded some of these objections as important enough to merit sections of their own; hence, he did not give a definition of substantial forms until he had both argued for their existence and responded, to his own satisfaction, to objections against positing them.

The arguments Suárez gave for supposing substantial forms exist are of two sorts, *a posteriori* and *a priori*. The *a posteriori*

arguments briefly are: 1) Human beings are constituted by matter and a substantial form; therefore, other material substances are as well; 2) Substantial forms are necessary to root the various essential properties of things; 3) Substantial forms are necessary to provide an explanation for the return of a thing to its connatural state after it has been altered from without; 4) Substantial forms are necessary to explain why the intense application of one power impedes the application of another power; and 5) Substantial forms are necessary to provide proper termini of substantial changes. The single a priori argument is that substantial forms are not intrinsically impossible, and are demanded by the order of the universe, the perfection of the universe, and the perfection and unity of material substances.

Sections 2-4: The eduction of substantial forms

Suárez gave several objections to positing the existence of substantial forms. The one he regarded as the most grave focuses on their origin. It takes the form of a dilemma: 1) If substantial forms exist, then they come to be either a) by creation or b) not by creation. Not (a), since this would require continual miracles. Not (b), since when substantial change occurs the form itself must come to be from nothing; but to come to be from nothing is to be created. Hence, there are no substantial forms.

Suárez accused this argument of laboring under a false dilemma since it fails to consider that forms could come to be without being either 1) created or 2) made out of something. In the course of making his case, Suárez argued that creation is opposed not only to making something *out of something*, but also to making something *in something*. Thus, though he admitted that substantial forms are not made out of anything, as that would lead to an infinite regress, he argued that they are made in something, that is, in a matter properly organized to receive a them. In so arguing Suárez gave a very clear notion of what it means for a substantial form to be educed from the potency of matter. It is for it to be made with a dependency,

both in coming to be and being, in a properly disposed bit of matter.

After having given a clear account of the nature of eduction in general, Suárez took up some very particular problems concerning the eduction of substantial forms. The first problem is whether or not matter always temporally precedes form in every eduction, and the second is whether or not forms are made as such. Without going into his reasons here, Suárez's answer to the first question is that matter need not *temporally* precede form, but need only *ontologically* or *logically* precede it, insofar as matter is the subject of form. His answer to the second question is that form, as a proper part of a complete substance, is not made as such, though it is itself made from nothing, but rather the composite, which the form partially constitutes.

Section 5: The nature of substantial forms

Having given a barrage of arguments to prove forms exist, and having answered crucial objections against supposing that they exist, Suárez gave a very precise definition of substantial forms. According to Suárez, a substantial form is "a simple and incomplete substance which, as the act of matter, constitutes with it the essence of a composite substance." This differs from the traditional definition of form, which is "an intrinsic cause giving being to a thing." Though Suárez used this definition in defining formal causality in DM XII, he did not favor it here because of his disagreement with Thomistic metaphysics. For Suárez form completes the being of a composite, giving it powers particular to a specific sort of substance, but it does not give complete substantial being to a thing; in particular, it does not give the being of matter to a thing. Since, according to Suárez, the Thomists held that form channels the act of existing to matter and thus, in some sense, gives matter its own proper being,⁽¹¹⁾ Suárez decided not to give the traditional definition of form here, preferring instead one that is more in harmony with his own doctrine of a merely conceptual distinction between essence and existence in finite beings.

Sections 6-9: The causality and effects of substantial forms

In accordance with the general method Suárez adopted in treating the causes of being, after he proved the existence of substantial form and gave a clear definition of it, Suárez went on to treat, in a typically exhaustive manner, of its causality and its effects. The first topic Suárez discussed with respect to a form's causality is its principle of causing. The principle of causing of a thing is the faculty or power *in virtue of which* it causes when it causes. Thus the principle of causing of June Anderson's singing is her vocal chords and her trained musical ability. According to Suárez, the principle of causing of a form is nothing other than the form itself. This is related to the actual causality of the form. For Suárez form, as an intrinsic cause of being, does not cause by creating something distinct from itself in a composite substance; rather, it causes by simply uniting its own essence to the other constituent of the composite. Thus the causality of form is simply its union with matter.

The conditions required for a form to cause are: 1) its existence; (12) 2) its spatial proximity to its subject; and 3) appropriate dispositions on the part of its subject. The first two of these are absolutely necessary (i.e., not even God could bring it about that form causes in their absence); the last is only naturally necessary (i.e., in the natural order dispositions on the part of matter are necessary for the form to inform it, but God could bring it about that form informs in the absence of these. For example, He could bring it about that a human soul informs the body of a cat).

The effects of form are: 1) the actualization of matter and 2) the composite. These are in reality [*ex natura rei*] the same effect taken from the point of view of different relations, in the way that getting a majority of the vote in the general election and being elected president are the same. That is to say, the actualization of matter's potency to be something, say a pig, is *nothing other* than the very constitution of the composite substance of a pig. For Suárez, form gives being to matter only in a certain respect. For example, it may give being to matter by actualizing its potential to be a pig. However, form does not give being to matter by giving matter its own being qua matter.

In this, Suárez disagreed with the Thomists and their doctrine of the real distinction between essence and existence.

Nevertheless, though form does not give being intrinsically to matter by actually constituting that being, matter has such a minimal existence that it cannot naturally exist without a dependency on form; only by the absolute and infinite causal power of God can matter exist denuded of all form.(13)

Section 10: The unicity of substantial form

A much debated question in the middle ages was whether or not there is more than one substantial form to each substance. The Franciscans held that there is more than one substantial form in higher substances such as human beings and animals. (14) Their reasons for holding this were diverse, and each of them was treated by Suárez in section 10. However, there seems to have been two main reasons for their doctrine. The first is that, as higher substances share certain powers and properties with lower beings but also possess powers peculiar to their own levels of being, several forms must be posited in them to account for their similarity with and difference from lower beings. The second main reason is that there is evidence that lower forms remain in compounds (e.g., it seems that water is present in plants, animals and humans); therefore, it would seem that compounds are characterized by the forms of the elements that make them up as well as by their own peculiar forms. Scotus added a new argument for the view that there is more than one form in humans based upon the metaphysical distance between the human soul and the body. The human soul, he reasoned, is too perfect to immediately inform naked prime matter; hence, in order for the soul to inform a certain piece of matter, it is necessary that matter be first informed with the form of corporeity, which gives it extension and the required organic structure. Scotus thought his theory confirmed by the fact that human bodies do not immediately corrupt after death.

The Franciscan tradition came under strong attack on these points from Thomas Aquinas and his followers. Aquinas argued, in the first place, that it is impossible for there to be

more than one substantial form in a single composite since, as substantial form gives substantial being, a plurality of substantial forms yields a plurality substantial beings. But each substance can only have one substantial being since it is impossible for a *single* thing in a category to be *many things* in that category. Further, Aquinas argued that, as a higher form can do anything a lower can, there is no need to posit many substantial forms to account for the higher powers of humans and animals; one form will give the human being, for example, not only the higher powers of reason, but also the lower powers of sensation, growth, reproduction, etc.(15)

Suárez agreed with the Thomistic tradition in holding that there can only be one complete substantial form in each composite, and he further agreed with the reasons the Thomistic tradition gave in support of this view. However, Suárez disagreed with Aquinas and the Thomists in one major respect. Aquinas had argued that all substantial forms are simple and without entitative parts, apparently on account of their function as unifiers of the composite substance.(16) His view seemed to be that a substantial form cannot give substantial unity to a thing unless it is itself fully one. Suárez, however, held that all substantial forms other than the human are composed of parts, and he thought these parts are incomplete substantial forms. This disagreement with the Thomists probably is related to Suárez's view that essence and existence are not really distinct. Such a view forced Suárez to grant more independence to the parts making up a substance, for example, form and matter, and this made him more open to the possibility that a composite substance that is truly essentially one could be constituted out of really distinct, albeit incomplete, substantial parts.

Section 11: Metaphysical form

For the sake of completeness, Suárez rounded off his discussion of substantial form with an account of the nature and reality of metaphysical form. Suárez noted, however, that metaphysical form, in whatever sense it is taken, is not a true form because it is not an entity which, by informing some being really distinct

from it, constitutes a complete substantial essence. Metaphysical form is, then, form only by analogy.

Suárez distinguished two sorts of metaphysical form. The first is the complete essential nature of a thing, taken as an individual. Thus, as a human nature is constituted out of form and matter, an individual person's metaphysical form is her body informed by her soul. Such a "form," though it could be said to give a person being, is not really distinct from the person whose form it is, and it does not constitute the being of anything by informing some subject really distinct from it. Nevertheless, Suárez did not hold that any individual's essence is precisely identical with her since she is constituted, not simply by her essence, but by a substantial mode terminating her essence and making it incommunicable to another in the way in which Christ's human essence was communicated to His Divine Essence. For Suárez complete individual essence along with substantial mode constitutes the supposite or hypostasis.

The second sort of metaphysical form Suárez discussed is logical form. This form is equivalent to the difference in a "genus-difference" definition of a thing. Thus, in the traditional definition of human being as "rational animal," "animal" is the genus which is informed or determined by the difference "rational." So "rational" is said to be the formal element in the definition and "animal" the material element. But, as Suárez did not believe that universals really exist and held rather that they are mind-dependent relations, he did not think of differences as really combining with genera to form the real essences of things. Hence, he did not regard logical form as being a form in the true sense of the word. It is rather a form only by a kind of analogy with real, physical forms, i.e., with forms which actually exist and inform a subject really distinct from themselves." (Introduction, pp. 9-14).

(11) Whether or not Aquinas held this view, Suárez was less certain. But he was certain it was the view of the Thomists. See the present disputation, sect. 8, para. 2.

(12) It should be noted that the existence of the form, though necessary for it to cause, is not a causal condition in the most

proper sense of the word, according to Suárez. The reason is that a causal condition must be really distinct from that of which it is a causal condition, and nothing, according to Suarez, is really distinct from its existence.

(13) For Suárez form gives matter the property "being actualized by such and such a form," and the property "being a human body"; it does not give it the property "being such and such a form" or the property "being the substance constituted by such and such a form and such and such matter." Thus my soul gives my body the property "being actualized by a human form," but it does not give it the property "being a human soul" or the property "being a human being."

8. ——. 1994. *On Efficient Causality. Metaphysical Disputations 17, 18, and 19*. New Haven: Yale University Press.

XVII: De causa efficiente in communi; XVIII: De causa proxima efficiente, ejusque causalitate, et omnibus quae ad causandum requirit; XIX: De causis necessario, et libere seu contingenter agentibus, ubi etiam de fato, fortuna et casu.

Translated with an introduction (pp. XIII-XX) by Alfred J. Freddoso.

"Of the six disputations dealing with efficient causality, the first triad (17-19), contained in the present volume, is concerned mainly with creaturely efficient causality, while the second triad (20-22) deals with the three modes of God's efficient causality: namely, creation, conservation, and general concurrence. Disputations 17-19 constitute, as far as I know, the longest, most profound, and most thorough tract ever written on

creaturely efficient causality from an Aristotelian perspective. Let me briefly describe each of these disputations.

Disputation 17, entitled "On the Efficient Cause in General," provides a general characterization of efficient causality and its various modes. In section 1 Suárez expounds and modifies Aristotle's definition of an efficient or agent cause as that "whence there is a first beginning of change or rest," carefully distinguishing the efficient cause from the other three Aristotelian causes: namely, the formal, material, and final causes. He concludes that an efficient cause is an extrinsic *per se* principle that communicates *esse*, or being of some sort, to an effect by the mediation of an action. In section 2 Suárez goes on to discuss the main divisions of efficient causes: namely, (i) *per se* versus *per accidens*, (ii) physical versus moral, (iii) principal versus instrumental, (iv) univocal versus equivocal, and (v) primary versus secondary. Along the way he also makes some illuminating remarks about the important distinction between agent causes or principles properly speaking and the *sine qua non* conditions required in order for those agents to exercise their causal power.

Disputation 18, entitled "On the Proximate Efficient Cause and on its Causality and on All the Things that it Requires in order to Cause," deals with the metaphysics of creaturely causation in general and especially with the efficient causality proper to material substances and their accidents. Section contains Suárez's reply to occasionalism and other theories that either deny that material substances are efficient causes at all or else severely limit the general range of effects that can be produced by them. Sections 2-6 treat general metaphysical issues concerning the efficient principles involved in the production of new substances and accidents. Then in sections 7-9 Suárez discusses the three most disputed *sine qua non* conditions for efficient causality: namely (i) the condition that the thing acting (agent) be distinct from the thing acted upon (patient), (ii) the condition that the agent be spatially proximate to the patient, and (iii) the condition that the agent be initially dissimilar to the patient. Having completed his treatment of the principles and prerequisites of efficient causality, he next (section 10)

takes up the ontological question of what it is that formally constitutes a substance or accident as an actual efficient cause. Finally, in section 11 he lays out the metaphysics of destructive or corrupting efficient causality.

Disputation 19, entitled "On Causes that Act Necessarily and Causes that Act Freely or Contingently; also on Fate, Fortune, and Chance," turns to issues concerning causal necessity and contingency. In sections 1-3 Suárez gives a precise characterization of the distinction between causes that act by a necessity of nature and causes that act without necessity; in addition, he takes up the disputed question of whether there could be any causal contingency in the created world if, contrary to fact, God acted only by a necessity of nature. Sections 4-9 go into great depth on the nature of free choice and include an extended treatment of controversial issues surrounding the relationship between intellect and will in free action. Finally, sections 10-12 take up a series of questions concerning fate, fortune, and chance." (Introduction, pp. XVII-XIX).

Translation, notes, and introduction (pp. XI-CXXIII) by Alfred J. Freddoso.

"Efficient causality in the *Disputationes Metaphysicae* : context and overview

I will now provide an overview of Suárez's treatment of efficient causality in Disputations 17-22. My intent is to give the reader some initial idea of the range of questions Suárez deals with and in this way to set a context within which to situate my later discussions of scholastic metaphysics and of the disputations

on divine action. I will introduce a few technical terms here, but will defer an explication of them to Parts 2 and 3 of this introductory essay.

The treatment of efficient causality falls into the first half of the *Disputationes Metaphysicae* (Disputations 1-27), which treats of being in general prior to its division into infinite being and finite being and, a fortiori, prior to the further division of finite being into substance and accident. After the initial investigations into the nature of metaphysics in Disputation 1 and into the essential notion of being in Disputation 2, Suárez turns in Disputation 3 to a general discussion of the transcendental properties (*passiones*) of being, which he identifies as one (being as undivided in itself), true (being as an object of cognition) and good (being as an object of love and desire). Disputations 4-7 deal with oneness or unity, focusing on individual unity (or individuality), formal unity (or universality), and the various types of distinctions among beings. Disputations 8-9 deal with truth and falsity and Disputations 10-11 with good and evil.

It is at this juncture, in Disputation 12, that Suárez begins his treatment of the causes of being. Since metaphysical inquiry is often said to aim at a knowledge of the principles of being, he first discusses the notion of a principle and its relation to the notion of a cause. The term 'principle', he tells us, can be used in a wide sense to designate the first element in any sort of ordering, real or merely conceptual, and in this sense it is obviously more inclusive than the term 'cause'. However, 'principle' is used most properly in a narrower metaphysical sense to designate "that which truly and directly communicates (*influens*) some sort of being (*esse*) to that of which it is the principle," or, in other words, that on which a real entity depends in some way for its existence.⁽³¹⁾ Suárez is careful to point out, however, that even on this narrower reading the notion of a principle is still broader than the notion of a cause, since within the Blessed Trinity there is a communication of being without causality. For the Father is a true principle eternally 'generating' the Son, and the Father and Son together are true principles eternally 'spiraling' the Holy Spirit, despite

the fact that these intraTrinitarian 'relations of origin' involve no causality, strictly speaking. The reason for this, Suárez explains, is that in these relations the principle's own being is in no way distinct from the being of which it is the source; that is, the being (or, nature) which the Son receives from the Father is the Father's very own being and nothing else, and the being (or nature) which the Holy Spirit receives from the Father and the Son is their very own being and nothing else.(32)

A cause, on the other hand, is a principle that communicates being or *esse* distinct from its own being to that of which it is a cause.(33) And a cause's causality is just "that influence or concurrence by which a cause, within its own genus, actually gives being to the effect."(34)

These definitions are meant to apply to every Aristotelian genus of cause material, formal, efficient, and final.(35) Material and formal causes are called 'intrinsic' causes because they do in a sense communicate their own being to the composite which they constitute by their union; however, they satisfy the notion of a cause because the being or *esse* of the composite substance which results from their union is distinct from the being of either the matter or the form. Efficient and final causes, by contrast, are wholly extrinsic to the entities to which they communicate being.(36)

)It is within this general framework that Suárez situates his tract on efficient causality, the longest and most meticulous such tract in the history of scholasticism. Of the six disputations dealing with efficient causality, the first triad (17-19) is concerned mainly with efficient causality as exercised by creatures,(37) while the second triad (20-22), contained in the present volume, focuses on the three modes of divine efficient causality that can be investigated by the natural light of reason, viz., creation, conservation, and general concurrence. I will now give brief descriptions of each of these six disputations, bearing in mind that in Parts 5-7 below I will be giving a more detailed analysis of the three disputations on divine action (20-22).

Disputation 17, entitled "On the efficient cause in general," provides a broad characterization of efficient causality and its

various modes. In Section 1 Suárez expounds and modifies Aristotle's definition of an efficient or agent cause as that "whence there is a first beginning of change or rest," carefully distinguishing the efficient cause from the other three Aristotelian causes. An efficient cause, he concludes, is an extrinsic per se principle that communicates esse or being of some sort to an effect by means of an action. In Section 2 he lays out the main divisions of efficient causes, namely, (a) *per se* (immediate) vs. *per accidens* (mediate) causes, (b) physical vs. moral causes, (c) principal vs. instrumental causes, (d) univocal vs. equivocal causes, and (e) primary or first cause vs. secondary causes, where this last distinction is equivalent to the distinction between God as an agent and creatures as agents. Along the way he also makes some illuminating remarks about the important distinction between an agent cause or efficient principle, properly speaking, and the sine qua non conditions that are prerequisites for an agent's exercising its causal power.

Disputation 18, entitled "On the proximate efficient cause, and on its causality, and on all the things which it requires in order to cause," deals with the metaphysics of creaturely causality in general and especially with the efficient causality proper to material substances and their accidents. Section 1 contains Suárez's reply to occasionalism and other theories that either deny that material substances are efficient causes or else put severe a priori limitations on the range of effects that can be produced by them. Sections 2-6 treat certain metaphysical issues concerning the efficient principles involved in the production of new substances and accidents. Then in Sections 7-9 Suárez discusses in detail the three prerequisites for efficient causality that stand in most need of careful unpacking, namely, (a) the condition that the thing acting (agent) be distinct from the thing acted upon (patient), (b) the condition that the agent be spatially proximate to the patient, and (c) the condition that the agent be initially dissimilar to the patient. Having completed his treatment of the principles and prerequisites of efficient causality, he next (Section 10) takes up the ontological question of what it is that formally constitutes a substance or accident as an actually acting efficient cause.

Finally, in Section 11 he propounds the metaphysics of destructive or corruptive efficient causality.

Disputation 19, entitled "On causes that act necessarily and causes that act freely or contingently, and also on fate, fortune, and chance," turns to issues concerning causal necessity and contingency. In Sections 1-3 Suárez gives a precise characterization of the distinction between agents that act by a necessity of nature and agents that act without necessity; in addition, he takes up the disputed question of whether there could be still be causal contingency in the created world if, contrary to fact, God acted only by a necessity of nature. Sections 4-9 go into great depth about the nature of free choice and include an exhaustive treatment of scholastic debates over the relation between intellect and will in free action. Finally, Sections 10-12 take up a series of questions concerning fate, fortune, and chance.

Disputation 20, entitled "On the First Efficient Cause and on his first action, which is creation," begins in Section 1 by asking whether natural reason can prove that creation ex nihilo is possible. Here Suárez argues that (a) there is no incoherence either in the concept of creation itself or in the concept of the power to create, and that (b) if we assume the existence of God, we can prove that such a power in fact exists and has been exercised. Along the way he tries to show, against the ancient philosophers, that matter is created, and he ends with an interesting discussion of whether Aristotle himself believed in creation ex nihilo. Section 2 takes up the disputed question of whether creation requires an absolutely unlimited power, or whether instead some creature could have the limited power to create at least some entities as a principal cause; and in Section 3 Suárez tries to answer the related, but distinct, question of whether any creature could act as an instrumental cause in God's creative action. Section 4 investigates the ontological status of the action of creation, an issue that will become clearer when I talk about the ontology of action in Part 3 of this introductory essay. Finally, Section 5 asks whether creation presupposes the prior non-existence of the thing created, or

whether instead it is possible that some entities should have been created from eternity without any beginning.

Disputation 21, entitled "On the First Efficient Cause and on his second action, which is conservation," begins in Section 1 by investigating whether natural reason can prove that created beings depend for their existence on the continual actual influence of the First Cause. Section 2 explicates the relation between creation and conservation, while Section 3 asks whether conservation is a divine prerogative.

Disputation 22, entitled "On the First Cause, and on his third action, which is cooperation, or concurrence, with secondary causes," begins in Section 1 by asking whether in order for a created agent to act, it is necessary that God, in addition to creating and conserving that agent along with its causal powers, should also cooperate with it in its very acting. After concluding that the answer is affirmative, Suárez asks in Section 2 whether this cooperation on God's part consists in his giving to the secondary cause itself some power or principle of action that it did not previously have on its own, or whether instead God's actual cooperation has its terminus just in the effect produced by that agent. Section 3 pursues this matter further by asking how God's concurrence is related to the secondary cause's action and to the subject of that action. Section 4 turns to the manner in which God concurs. Here Suárez tries to show that God's manner of granting concurrence to freely acting agents must differ from his manner of granting concurrence to naturally acting agents. Finally, in Section 5 Suárez gripes that secondary agents do not depend essentially in their acting on any beings other than God.

With this brief overview in hand, we are now ready to look more closely at the ontological framework within which Suárez works out his account of efficient causality in general and God's causality in particular." (Introduction, pp. XXV-XXIX).

(31) See DM 12.1.25.

(32) See especially DM 12.2.6-10. In a moment I will contrast this intra-Trinitarian communication of being with that of the

'intrinsic' causes of creatures.

(33) DM 12.2.4-7.

(34) DM 12.2.13.

(35) Suárez also asks whether exemplar causes — that is, the ideas that serve as paradigms for intellectual agents and specify their actions — constitute a separate genus of cause. He treats this matter at length in Disputation 25, which is devoted exclusively to exemplar causality. There he identifies the exemplar cause as a certain antecedent condition of efficient causality that precedes the actions of intelligent agents.

(36) In Disputation 23 Suárez argues for the claim that, despite their peculiarities, final causes fully satisfy the definition of a cause.

(37) An English translation of these three disputations is available in Francisco Suárez, *On Efficient Causality: Metaphysical Disputations 17-19*, translated by Alfred J. Freddoso (New Haven, CT: Yale University Press, 1994).

"A Summary of Disputation 28: (11)

As mentioned, the two Disputations that are translated in the present work open the second part of the *Disputationes metaphysicae* and mark the turn from being in general to particular beings. Their concern is with, first in Disputation 28, a comprehensive division of being in general, and after in Disputation 29, the existence of the principal member of this division, namely, that being which is God.

Disputation 28 is divided into three Sections, which ask about the legitimacy and the sufficiency of the division, as well as

whether the dividend, i.e. being, is univocal or analogous between God and creatures. In the first Section (Vives: vol. 26, pp. 1-8), the question is whether being is rightly divided into infinite and finite being? Doubts arise from the fact that "infinite" and "finite" on their face do not appear to cover the whole range of being but rather look to be restricted to accidental being in the category of quantity (§ 1). In addition, the terms of the proposed division seem obscure, especially the term "infinite" (§ 2). Suárez's answer is to analyze the terms (§ 3) and then to defend the division as one that is good and necessary (§ 4) as well as first and most evident (§ 5). It is equivalent to other divisions such as being by itself (*ens a se*) and being from another (*ens ab alio*) (§§ 6-7) or, with clarifications, necessary being and contingent being (§§ 8-12). It is also equivalent to: essential being and being by participation (§ 13), created being and uncreated being (§ 14), or being in act and being in potency (§§ 15-16). Suárez next compares the first division with the rest (§ 17), explains the terms of the first division by comparison with quantity (§ 17), and closes the first Section (§ 18) with a reply to objections raised at its beginning.

Section 2 (vol. 26, pp. 8-13) opens with reasons for doubting the sufficiency of the division. These include that fact that relations, because they are found both in creatures and in God, seem to be neither finite nor infinite and do not therefore fit the division (§ 1). Something akin to this occurs from the case of Christ who is both finite and infinite inasmuch as he is both God and man (§ 2).

Again, there is question regarding the free acts of the Divine Will, which would apparently be at once both contingent and necessary (§ 3). Then there is an opinion of Duns Scotus to the effect that being should first be divided into quantified and non-quantified being, and that the division into finite and infinite is a subdivision of quantified being (§ 4). After addressing this last opinion (§§ 5-6), Suárez goes on to defend the sufficiency of the divisions proposed in Section 1, especially that in terms of being by itself and being from another (§ 7). He then gives extended expositions of and answers to the

difficulties proposed about relations, Christ, and Divine free acts (§§ 8-16).

Section 3 of Disputation 28 (vol. 26, pp. 13-21) begins with a rejection of the view that the term being as used between God and creatures is simply equivocal (§ 1). A quite opposite view, which was held by Duns Scotus (1266-1308), is that being is said univocally of God and creatures (§ 2). After explaining the reasons for this view and for its opposition to analogy in this context (§§ 3-4), Suárez himself presents an opinion that the term being is indeed said analogously of God and creatures (§ 5), discusses arguments in support of this (§§ 6-8), and replies to objections that may be raised against these arguments (§ 9). Subsequently, he inquires about the kind of analogy that is present here (§ 10) and rejects Cajetan's doctrine that there is "a proper analogy of proportionality" between God and creatures (§ 11). Also rejecting any "analogy of attribution to a third thing," that is, any position that would affirm that God and creatures are called being only by reference to something else, he next affirms that there is here "an analogy of one to another," which is to say that creatures are being in reference to God and the term being is said more principally of God than of creatures (§ 12). At this point, he brings in the "Platonic" opinion that God is not being but rather above being, which occasions a brief explanation of the name of God in Exodus 3,14 (§ 13). Following this, he explains and affirms that the analogy of being here is intrinsic inasmuch as creatures are designated beings from their own intrinsic being and not just extrinsically from God (§§ 14-17). Finally, his reply to objections and arguments in support of univocity closes the third Section and the Disputation itself (§§ 18-22).

IV. A Summary of Disputation 29:

Though almost twice as long, Disputation 29 like the one before is again divided into three Sections. Section 1 (vol. 26, pp. 21-34) begins after two introductory paragraphs (§§ 1-2) in which Suárez gives reasons for the location of the subject matter of the Disputation in this place and remarks how he will leave aside as much as possible items which depend for their understanding

on Revelation. The first Section then asks whether and/or by what means the existence of God can be demonstrated. Among the Scholastic Doctors, Peter d'Ailly (1350-1420) has denied the possibility of such a demonstration. To this Suárez makes the brief but revealing reply that already by the various divisions of being that have been presented in the previous Disputation the existence of "some being which is uncreated or not produced" has been proven (§ 1). The obvious implication is that by now the existence of God has in effect been proven. But immediately the question arises: by what means, physical or metaphysical, is this properly done? On one side, the opinion of Averroes is that the means is physical, namely the motion of the heavens (§ 2). The contrary opinion, that of Avicenna and later of Duns Scotus among others, holds that the means must be metaphysical (§ 3) — that is, not motion but being itself. A third and a fourth opinion hold in different ways that the task must belong to both physics, that is natural philosophy, and metaphysics (§§ 4-5). In different ways the means would thus be both physical and metaphysical. In Suárez's judgment the second opinion is certainly the true one but there can be some probability in the fourth position, if it is rightly explained (§ 6).

At this juncture, he examines at length the physical argument that proceeds by the medium of motion and for various reasons he finds it wanting (§§ 7-17). Then he considers another physical argument, from the operations and the essence of the rational soul (§ 18). This too comes up short, unless we first pose a question about the soul's being, which is a metaphysical question (§ 19). Here Suárez gives the metaphysical argument that is based upon a broader and deeper principle than the physical one, "Whatever is moved is moved by another." The metaphysical principle is "Whatever is made or produced is made by another" and the argument itself concludes to an unmade Maker (§§ 20-21). An objection of a possibly circular chain of causes is dismissed as every bit as inadmissible as a thing's causing itself (§ 22). Other objections involve an infinite number of causes that would preclude any arriving at a first uncaused or unmade cause. There are different ways to conceive such an infinity of causes. Suárez explains such ways

in detail and shows their insufficiencies (§§ 23-40). The first Section ends (§§ 41-42) with a brief rehearsal of and summary judgment upon the opinions listed at the beginning.

Section 2 (pp. 34-47) gets more exact and asks: whether one can show in an a posteriori way that there is only one uncreated being which will in fact be God? The thought here is that although the basic demonstration has been displayed in the previous Section or even in the previous Disputation, it needs precision. For it might be the case that while by now an unmade or uncreated being has been proven to exist, perhaps there is more than one such, which would mean that we have not reached the true God, who is unique (§§ 1-2).

In a totally opposite direction is a position, which has been associated with St. Anselm of Canterbury (1033-1109), to the effect that the existence of God is self-evident and therefore need not and in fact cannot be demonstrated (§ 3). Suárez's own view is that the existence of God can be demonstrated but it is necessary first to be clear about what we mean by God, that is to say what it is we are attempting to demonstrate (§ 4). This he tells us is "a certain most noble being which both surpasses all the rest and from which as from a first author all the rest depend, which, accordingly, should be worshipped and venerated as the supreme deity" (§ 5). There are, he says, two ways to prove the existence of such a God: "one is completely a posteriori and from effects; the other is immediately a priori, although remotely it also is a posteriori" (§ 7). In the first way, "the beauty of the whole universe and the wonderful connection and order of all things in it sufficiently declare that there is one first being, by whom all things are governed and from whom they draw their origin" (ibid). Four objections are that (1) this may prove that there is one governor of the world but not necessarily that there is one creator, (2) this proof does not rule out a number of rulers who might govern the world by consensus, (3) it says nothing about spiritual beings themselves or their connection with the present material world, and (4) this proof does not foreclose on there being another world besides this one (§ 8). Suárez goes on in paragraphs following to answer these objections in detail. In reply to the first, he

draws from the ancient Christian writer, Lactantius (ca. 240-320), the lesson that "the universe can be governed only by him by whose counsel and power it has been created" (§ 9). He then devotes eleven paragraphs (§§ 10-20) to further explain this in the cases of the elements, mixed bodies (more or less perfect), and especially the heavens. In this last regard, he pays special attention to the causality between the heavens and sublunar natural things. The second objection is met through nine paragraphs (§§ 21-29) in which Suárez argues that a number of world rulers would require that such be at once intelligent but also imperfect and liable to disagreement among themselves. The third objection is presented in more detail (§ 30) and answered over six paragraphs (§§ 31-36) in which Suárez treats the Aristotelian separate substances. From the motion of the heavens their existence is at best only probable, and even if they do exist they must be creatures of God. Finally, in reply to the fourth objection, Suárez shows the reasonable character of the Christian doctrine that God is not limited to making only one world and could indeed be the creator of any number of worlds besides this one, with the result that the objection has no force (§ 37).

Nevertheless, at this point Suárez tells us: "from this and the preceding objection I am convinced that the reasoning made to prove that there is only one unproduced being and that all the rest of beings have been made by that being does not conclude absolutely about all beings, but only about those which can fall under human cognition by way of natural reasoning or philosophy. Therefore, in order that the argument conclude universally, there necessarily must be employed a demonstration a priori, which ... we will pursue in the following Section" (ibid.)

Section 3 (pp. 47-60) first affirms the impossibility of demonstrating the existence of God in a priori manner from cause to effect, since obviously God has no cause (§ 1). Nevertheless, once He has been, in an a posteriori way, demonstrated to exist, it is possible secondarily to use a priori demonstrations to arrive at some of his properties or attributes (§ 2). However, this is not easy to do, as Suárez shows by

rejecting an argument which has been offered to prove God's unicity on the basis that being can belong first and through itself only to a single unproduced being (§§ 3-7). He then proposes two more arguments that purport to prove that there cannot be several beings that exist of themselves. However, objections can be made to both of these arguments (§§ 8-10). A fourth argument, which Suárez finds "very probative," is to the effect that singularity must belong by nature to an unproduced being; therefore such a being cannot be multiplied (§ 11). While objection may be made to this reasoning, Suárez thinks it can be defended (§ 12) and indeed, if it is rightly understood, it may strengthen the first argument offered (§ 13). He further infers that being can belong to other things only by way of efficient causality or effective emanation from the first unproduced being (§ 14). Suárez then considers at length a fifth argument, which he thinks is "enough by itself and also confirms the preceding argument" (§ 15) to the effect that two or more unproduced beings could be neither the same nor diverse in species (§§ 15-22). This leads to an explanation of a text from Aristotle that seems at variance with this (§ 23). At this point, a sixth argument is introduced to show that a first unproduced being which is supreme and infinite in its perfection and most powerful in its acting produces "all things that are" (§ 24). An objection is raised to the effect that if it were to produce all things it would produce itself (§ 25), which, of course, is absurd. Suárez answers that it belongs to the perfection of that being and subsequently to its power "that it is not itself producible by itself" while all else is produced by it (§ 26). Yet another argument can be taken, says the Doctor eximius, "from the causality of the ultimate end" (§ 27) and objections to this are raised and answered (§§ 28-31). Now Suárez states his conclusion - "From all of this, it has been sufficiently demonstrated that God exists" - and reaffirms its metaphysical character (§ 32). "Lastly," he says, "from all that has been said it can be clear by, so to speak, a certain most evident experience how far from truth is the opinion ... which asserted that the existence of God is so self-evident that, for that reason, it could not be demonstrated" (§ 33). This occasions a final discussion of self-evident propositions (§ 34) as well as of reasons that

could motivate such an opinion (§§ 34-37)." (Introduction, pp. XIV-XVIII).

(11) What follows is meant to be little more than an outline. Readers are advised to look at what Suárez has to say for himself, albeit in the present poor English version, rather than rely upon any synopsis of that.

11. ——. 1983. *On the Essence of Finite Being as Such, on the Existence of That Essence and Their Distinction (Disputatio XXXI)*. Milwaukee: Marquette University Press.

XXXI. De essentia entis finiti ut tale est, et de illius Esse, eorumque distinctione.

Translated from the Latin with an introduction (pp. 3-43) by Norman J. Wells.

"The bulk of Suárez's written work, edited as well as unedited, reflect his various teaching positions as philosopher and as theologian. However, a number are inspired directly by his state as a religious and a member of the Society of Jesus. Still others have their origin in the legal and political disputes of the day. The structure and contents of most of these works, their extent and quality, can be viewed with convenience in the twenty-six (or twenty-eight) volume edition of Vivés.

A. Disputationes Metaphysicae

It is against this over-all backdrop, especially the theological tracts, that Suárez's famous *Disputationes Metaphysicae* must be seen, if for no better reason than that this is the way Suarez viewed his metaphysical investigations themselves. For in both the *Ad Lectorem* as well as the *Prooemium* to this work, Suarez indicates the occasion and purpose of his metaphysical work with explicit consideration of its relation to his theological inquiries.

Sensitive to the pedagogical demands upon a discipline, Suarez confesses that in the course of his theological teaching, he has had to make rather spontaneous, frequent and extensive reference to metaphysical considerations. And this was required for the simple reason that "metaphysical principles

and truths are so closely interwoven with theological conclusions and arguments, that if knowledge and full understanding of the former are lacking, knowledge of the latter must necessarily suffer."(*Prooemium* , XXV, 1ab) Such asides, Suárez finds, are not only burdensome to the *legentes* , but personally embarrassing, since it demanded of his hearers a blind faith in his judgment.

In addition to these immediate pedagogical problems, there are more substantive and overriding reasons presiding at the origins of the *Disputationes Metaphysicae*. Suárez sees clearly that, though sacred and supernatural theology is founded upon divine illumination and principles revealed by God, due to its human condition, such theology must utilize truths which are naturally known as well. It is in this latter area that metaphysics proves so indispensable, for of all the sciences known to man, it comes closest to the science of divine things. Moreover, without any proper knowledge of metaphysical problems, the Christian mysteries could scarcely be probed and discussed. In short, Suárez is convinced that "our philosophy ought to be Christian and the servant of divine theology." (*DM, Ad Lectorem, XXV*).

In the matter of the internal organization of such a discipline as metaphysics, Suárez takes a stand that is significant both historically and methodologically. For he finds himself at odds with the then current practice in the history of Western metaphysics: the medieval technique of commenting on an authoritative text by way of the *quaestio* elaborated, somewhat erratically, within the context of the books of Aristotle's *Metaphysics* . By way of a methodological corrective, Suarez insists that the *ordo doctrinae* , required and demanded by the very object of this discipline, must be heeded in the sequence and hierarchical arrangement of problems and discussions. On this latter score, Suárez also finds himself quite disenchanted and critical of Aristotle's own method, sequence and organization. Consequently, observing the *ordo doctrinae* as Suárez sees it, the *Disputationes Metaphysicae* begin with an initial consideration of the object of the metaphysical enterprise, its dignity and utility. This is followed by an

extensive consideration of the meaning and significance of that object, *ens*, its properties and its causes. This, in turn, is complemented by a consideration of the *inferiores rationes* of *ens*, i.e., the division of *ens* into *creatum-creator* and further divisions including all the special *genera* and grades of *ens*, closing with a consideration of *ens rationis* in Disputation 54.

B. *Disputation Thirty-One*

As part of this latter division, the thirty-first Disputation, comprised of fourteen separate sections of varying length, is explicitly concerned with laying bare the structure of finite being.

The first section serves as a general introduction to the historical as well as the doctrinal dimensions of this problem. Sections two to four constitute a more specialized introduction wherein Suárez's own basic and guiding principles are set down and established. Sections five to seven are, for the most part, of a critical character, negatively as well as positively. The remaining bulk of the discussion, comprising sections eight to fourteen, deal with the consequences and particular difficulties arising from the various historical traditions in this matter. Hence, they are meant to bolster and confirm, directly and indirectly, Suárez's own principles and conclusions as well as support his negative criticisms. (*Introduction*, pp. 4-6, notes omitted).

12. ———. 2006. *On Real Relation (Disputatio Metaphysica XLVII)*. Milwaukee: Marquette University Press.

XLVII: De relationibus realis creatis.

A translation from the Latin, with an introduction (pp. 9-35) and notes by John P. Doyle.

"Summaries of the Sections of Disputation 47.

This portion of my Introduction owes much to the summary given by Sergio Rabade Romeo and his associates in their edition with Spanish translation of the *Disputationes metaphysicae*.(95) As they correctly lay it out, the Forty-Seventh Disputation can be articulated as follows:

1. Relation in general — its existence, its essence, and its division (Sections 1-4).
2. Categorical Relation — its essential definition, its subject, foundation, and terminus (Sections 5-9).
3. The Aristotelian division of relative beings, based on a threefold foundation (Sections 10-15).
4. The question of whether one relation can be the terminus of another (Section 16).
5. The structure of the category of relation (Section 17).
6. The properties of relation (Section 18).

And then descending to the different Sections in turn:

Section I

Beginning with the issue of the real existence of relation, Suárez enumerates up to five reasons for doubting such existence (paragraphs 1-7). He then presents three different opinions: (1) there are no true real relations (paragraph 8); (2) relations exist, but they do not constitute a special category of being (paragraph 9); and (3) in created things there are real relations, which make up a proper and special category (paragraph 10). This last is the most accepted opinion and it is demonstrated by the teachings of the Catholic Faith and by rational arguments (paragraphs 11-15).

Section II

This is the key Section, in which the reality of a relation is directly addressed. It is first necessary to clarify how a real categorical relation is distinguished from substance and all absolute accidents in order to explain the reality and the nature of created relations (paragraph 1). In this regard, Suárez presents and rejects four different opinions (paragraphs 2-10). He then lingers with another opinion—held by many, especially Nominalists—which defends a distinction of reason with a basis

in reality between relation and its absolute foundation (paragraphs 11-17). Next, without approving the distinction between the "being in" and the "being toward" of a relation, he admits the indicated Nominalist opinion (paragraph 22). Finally, he answers the arguments of the other opinions (paragraph 23) and the arguments remaining from Section 1 (paragraphs 24-25).

Section III

The Third Section treats the divisions of relation (paragraph 1). The first division is into real relation and relation of reason. It is only real relation which constitutes the category "toward something" (paragraphs 2-5). The second division is into relation "according to being said" and relation "according to being" (paragraphs 6-9). The third division is into transcendental relation and categorical relation (paragraphs 10-13).

Section IV

Suárez tells us that it is very difficult to explain the difference between categorical and transcendental relations (paragraph 1). It is possible to think of some differences that should be rejected (paragraphs 2-8). Others can be admitted (paragraphs 9-15). From this the inference is that the category "toward something" includes only relations that are categorical in a proper sense (paragraph 16). The remaining paragraphs (17-21) of this Section contain the reply to a difficulty raised in Section 1.

Section V

In this Section the Doctor eximius explains the essence and the proper definition of a categorical relation (paragraphs 1-4), and also explains as well as resolves the difficulties which the mentioned division encounters (paragraphs 5-13).

Section VI

This short Section is limited to proving that a categorical relation requires a subject, a foundation, and a terminus (paragraphs 1-6).

Section VII

As was said in the just preceding Section, a categorical relation needs a foundation (paragraph 1), which in some way is distinguished from the subject of a relation (paragraphs 2-3). This foundation can be either an accident or the substance itself (paragraphs 4-9). Although the question is discussed, Suárez prefers not to separate a foundation from a reason for being founded (paragraphs 10-14).

Section VIII

For a categorical relation there is also required a real terminus (paragraph 1). But must this terminus exist in actuality? There are reasons to doubt that (paragraph 2), and one author has thought that a terminus that is real and really existing is not necessary (paragraph 3). Suárez maintains the contrary, and in so doing he follows the common opinion of philosophers and theologians (paragraphs 4-7). He answers the arguments of Gregory of Rimini (paragraph 8), and he rejects the opinion that the terminus belongs to the essence of a relation (paragraphs 9-12). Finally, he affirms that not even by the absolute power of God can a relation remain without a terminus (paragraphs 13-14).

Section IX

For a real relation it is necessary that the foundation and the terminus, formally considered, be distinguished with a real distinction, although this does not have to be equal in all cases (paragraphs 1-6).

Section X

Suárez proposes to examine the division which Aristotle has made of relation looking at a threefold foundation (paragraph 1). Having first explained the Aristotelian doctrine (paragraphs 2-4), he raises the two main questions which arise with respect to that doctrine: (1) whether each one of the members of the stated division is designated in a fitting manner, and (2) whether the division includes the whole range of categorical relations. With regard to the first, there are various arguments

which present difficulty (paragraphs 5-10), and the same is true with regard to the second (paragraph 11). Nevertheless, the two questions are answered in the sense of approving the division which Aristotle has made (paragraphs 12-16).

Section XI

It is necessary to answer each one of the difficulties of the preceding Section (paragraph 1). Beginning with the first class of relations, which is founded on unity (paragraphs 2-3), it is affirmed that a relation of unity can be founded on the realities of all the categories (paragraph 4) and there is explained the sense in which one relation can be the foundation of another (paragraphs 5-13). In passing, he explains to which class relations of identity, similarity, and equality belong (paragraphs 14-15). The Section ends by affirming that generic unity can found a real relation (paragraphs 16-19) and by indicating the characteristics of relations of the first class (paragraphs 20-21).

Section XII

In order to treat the second class of relations (paragraph 1), the problem is tithed of whether all the relations of this class are real (paragraph 2). Suárez replies by setting up some distinctions (paragraphs 3-4). He concerns himself then with the proximate foundation of paternity (paragraphs 5-6), and of the relation of agent (paragraphs 7-8), whether it is in act (paragraph 9) or in potency (paragraphs 10-14).

Section XIII

Regarding the third class of relations, founded upon the character of measure (paragraph 1), Suárez presents and resolves a difficulty about the authentic ought of Aristotle (paragraphs 2-9).

Section XIV

Is the Aristotelian division sufficient and adequate? (paragraph 1). To answer this question, Suárez indicates how all real relations are reduced to the three kinds, which make up the stated division (paragraphs 2-8).

Section XV

After indicating the double sense in which non-mutual relations can be taken (paragraph 1), Suárez makes a division between reciprocal and non-reciprocal relations (paragraph 2) and raises a difficulty in their regard (paragraphs 3-7). To resolve this difficulty, he affirms that there are some non-mutual relations, which are properly found in the third Aristotelian class of relations (paragraph 8). Then he replies to opposing arguments (paragraphs 9-12) and resolves difficulties proposed at the beginning (paragraphs 13-15). Next, he presents the opinion of the Nominalists about relations in God from time (paragraph 16) and, against them, denies that such relations are real (paragraphs 17-29).

Section XVI

This Section concerns the question of whether the formal terminus of one relation is another relation or has an absolute character (paragraph 1). Having explained the title of the Section (paragraph 2), Suárez presents and explains different opinions (paragraphs 3-5). He crystallizes his thought in the following assertions: (1) in non mutual relatives, the reason why one extreme is the terminus of the relation of the other is not a relation that is opposite to that of the other, but the very entity itself or a property of that terminus (paragraphs 6-13); (2) In mutual relations, the *raison d'être* of a terminus is also some absolute character that constitutes the formal foundation of the opposite relation (paragraphs 14-22). With this an answer is given to the bases of the other opinions, explaining the sense in which relatives are simultaneous in nature, in knowledge, and in definition (paragraphs 23-34), and finally treating of the termini of the divine relations (paragraphs 35-38), and of relative opposition (paragraphs 39-40).

Section XVII

It is proposed to treat the structuring of the category, "toward something" (paragraph 1). The first difficulty is in knowing how all relatives can be reduced to one single genus (paragraph 2). There is accepted the possibility of one single supreme genus

which includes all relatives (paragraph 3) and there is adduced the solution which some offer to the motive for doubting (paragraphs 4-5). This solution is probable even though it supposes a false basis (paragraph 6). Suárez affirms that the relative in general is not in an order to another as to its correlative (paragraphs 7-8), that the relative in general has a terminus in general which corresponds to it (paragraph 8), and that the common character of terminus does not constitute a proper category (paragraph 10). Afterwards, he raises the question of the contraction of the supreme genus of relatives into its inferiors (paragraphs 11-14), the question of the origin of the essential and specific difference of relations (paragraph 15), and the question of the simultaneity of various relations—which differ only numerically—in the same subject (paragraphs 16-23). He ends the Section by rejecting an opinion about the relation that a son has with respect to a father and a mother (paragraphs 24-28).

Section XVIII

This is the shortest Section. It designates as properties of all relatives: not having a contrary; being susceptible of more or less; receiving the designation of "convertibles"; being simultaneous in nature; and also being simultaneous in knowledge and definition (paragraphs 1-6)." (*Introduction* , pp. 28-33).

(95) Cf. Francisco Suárez, *Disputaciones metafísicas*, edición y traducción de Sergio Rabade Romeo, Salvador Caballero Sanchez y Antonio Puigcerver Zanon, 7 vols. (Madrid: Editorial Gredos, 1960-1966), vol. 6, pp. 631-4.

13. ———. 1995. *On Beings of Reason (De Entibus Rationis)*. *Metaphysical Disputation LIV*. Milwaukee: Marquette University Press.

Translated from the Latin with an introduction (pp. 1-56) and notes by John P. Doyle.

"B. The Prologue and Division of the Disputation:

In a brief prologue to his 54th Disputation, the *Doctor Esimius* notes that beings of reason are not real beings and that they are

thus excluded from the direct and proper object of metaphysics. Along with this, however, he remarks how necessary their study is and offers some justification for their inclusion in his metaphysical work.(24) Of interest here is his assessment of them as "not true beings, but as quasi-shadows of being." As such, they have no intrinsic intelligibility, but must be known only indirectly through other things. Immediately flowing from this is the fact that they, like Meinong's later "homeless objects,"(25) are not of direct and primary concern for any science.

All the same, inasmuch as beings of reason are of use in a variety of sciences, they can be grasped and must be treated in some way. In fact, Suarez believes, their treatment is exclusively the concern of the metaphysician. For, even though beings of reason have no true being, they are, as mentioned, "shadows" of being. Like being then they have what he calls a "quasi-transcendentality,"(26) which by itself would remove them from the province of any science other than metaphysics. It is true that more particular disciplines, such as physics or logic, sometimes treat certain beings of reason (e.g., privation, the void, or second intentions such as *species* or *genus*) in connection with their proper scientific objects. But only metaphysics is wide enough to consider, albeit obliquely and concomitantly with its proper object, the whole range of beings of reason as such.

After the *Prologue* , the Disputation splits into six *Sections*. Of these, the first two treat the existence, the nature, and the causes of beings of reason. Sections 3 and 4 consider how such beings of reason are divided. As Suárez sees it, the traditional listing of negations, privations, and relations of reason will exhaust the types that divide beings of reason. Section 5 will then more closely examine negations and privations and Section 6 will go on to treat relations of reason." *Introduction* , 20-21).

(24) For this exclusion and justification, see also DM 1, s. 1, n. 6; XXV, 3-4. For Aristotle's earlier exclusion of "being as true" from the concern of metaphysics, cf. note 10, above [See

Metaphysics VI, c. 4, 1027b 34-1028a 3; *ibid.*, XI, c. 8, 10695a 22 ff.].

(25) For this, see A. Meinong, *Ueber die Stellung der Gegenstandstheorie im System der Wissenschaften* (Leipzig, 1907), pp. 8-27 and "Zur Gegenstandstheorie" in *Die Philosophie der Gegenwart in Selbstdarstellungen* (Leipzig, 1923), translated as Appendix I, "Meinong's Ontology," by Reinhardt Grossmann, in *Meinong* (London, 1974), pp. 224-229. Also cf. Roderick M. Chisholm, *Brentano and Meinong Studies* (Atlantic Highlands, NJ, 1982), "Homeless Objects," pp. 37-52.

(26) Suárez's frequent employment of the prefix "quasi" is worth noting. Thus in the sections to follow, he will speak of "quasi-essence," "quasi-essential features," "quasi-essential foundation," "quasi-disposition," "quasi-difference," "quasi-passion," and a "quasi-material" cause of beings of reason (as well as imply quasi-formal and quasi-efficient causes for them). Again, he will speak of "quasi-induction" as well as "quasi-intrinsic," "quasi-extrinsic," and "quasi-common" characteristics in their regard. Without pushing it, I cannot help but think of Meinong (in *Ueber Annahmen* [Leipzig, 1910]), speaking of *Quasi-Transzendenz* (220, 228), *Quasi-Wirklichkeit* (224, 226, 263-4, 266), *Quasibedeutung* (59), *Quasiinhalt* (264, 277, 286, 312), etc.

14. ———. 2012. *Selections from De Anima*. München: Philosophia Verlag.

On the Nature of the Soul in General - On the Immateriality and Immortality of the Rational Soul.

Translated by John Kronen and Jeremiah Reedy.

Introduction and explanatory notes by John Kronen.

Table of Contents: Introduction 9; Disputation I: On the Substance of the Soul in General; Question 1: Whether the soul is act in the sense of being a substantial form 30; Question 2: Whether and in what way the soul is first act 45; Question 3: Whether the soul possesses an essential ordination to an organic body 65; Question 4: What the quidditative definition

of the soul is and how one definition is proven through another 84; Disputation II 108; Question 3: Whether the principle of understanding in humans is something incorporeal, subsistent, and immortal 108; Bibliography 177-188.

"Suárez's *De anima*, like his *Metaphysical Disputations*, is not a commentary on Aristotle, though Suárez, in a general way, follows the order of topics laid out by Aristotle in his *De anima*, and he refers to Aristotle's seminal work with great frequency. In the first Disputation of Suárez's *De anima*, translated here in its entirety, Suárez treats of living beings taken as a whole. In this Disputation he links his psychology to his general metaphysics. This is particularly clear in the first question of the Disputation, which gives a brief proof of Aristotelian hylomorphism, as well as giving a proof of the existence of a special class of material substances which are distinguished from other material substances in that they are capable of immanent actions, i.e. actions which begin and end in the same substance.(9) Even plants, in this way, are "self moving" in the actions of nutrition and growth. In the later questions of this Disputation Suárez answers questions pertaining to the nature of the substantial form (i.e. the soul) characteristic of all living beings. Throughout the Disputation Suárez is chiefly committed to defending a substantialist view of the nature of the soul and, hence, of the human person, against notions of the person that adumbrate the psychological concept of it found in Locke's writings, and that echo the ancient Buddhist "no-self" doctrine. But Suárez is equally committed to defending, against dualism, that the soul is an incomplete substance, which is by its nature ordered to informing an appropriately disposed matter in order to constitute with it a living substance.

We have translated all of Disputation I because it casts light on how Suárez, and the Scholastics in general, understood the science of the soul. They did not understand it to be an investigation of immaterial substances à la Descartes, because souls are not substances. They are, at best, incomplete substances which, with matter, constitute a living organism. In this respect it might be better to speak of "the science of living beings" or even of "biology", rather than of "the science of the

soul". But even that would not be quite right either since, although the Scholastics were more interested than is often thought with the physical structures of living beings, as well as in the essential roles these structures play in explaining the powers of living beings,(10) they were not very advanced in these questions and, unlike most contemporary biologists, they did not conceive of the "principle of life" in living beings as a complex set of relations between inanimate substances, but as a "thing" or *res*. In short, though for them the soul is an *incomplete* substance, it is nevertheless an incomplete *substance*, not an instance of an especially complex way of arranging inanimate substances." (pp. 16-17)

(9) For an excellent account of the Scholastic notion of "immanent action" see Des Chene, *Life's Form: Late Aristotelian Conceptions of the Soul* (Ithaca: Cornell University Press, 2000), pp. 57-67. Des Chene notes that some Scholastics preferred to define living actions as "intrinsic", i.e. such that no being other than the being doing the action could produce the effect of the action. On this definition, for example, growth would not be a vital action since God could produce in the plant the result of the act of growing (i.e. He could produce the greater quantity), but seeing would be a vital action since not even God could do "my seeing" for me.

(10) See Des Chene, *Life's Form*, pp. 34-39.

"Francisco Suarez (1548-1617) is a major figure in the history of Western thought. His contributions to metaphysics, the philosophy of law, and Catholic theology are well recognized in Continental Europe and Latin America, but they are seldom acknowledged in the English-speaking world. Hopefully, this issue of the *American Catholic Philosophical Quarterly* will help repair the long standing neglect of Suarez among English-speaking scholars.

This collection of articles attempts to present various aspects of Suarez's thought, although it concentrates primarily on metaphysical topics, reflecting current interests in his philosophy. Suarez's political philosophy and the philosophy of law are not represented because the articles commissioned on those topics never materialized, nor were there submissions in those areas. Thus, these important aspects of Suarez's teaching do not receive the attention they deserve in this collection."

5. Aho, Tuomo. 2007. "Suarez on Cognitive intentions." In *Mind, Cognition and Representation. The Tradition of Commentaries on Aristotle's De anima*, edited by Bakker, Paul J.J.M. and Thijssen, J.M.M.H., 179-203. Aldershot: Ashgate.
6. Åkerlund, Erik. 2009. "Suárez on Forms, Universals and Understanding." *Studia Neoaristotelica* no. 6:159-182.

"The interpretations in the secondary literature of Suárez' position in the "classical" debate on the status of universals

vary considerably. In this article, the problem is looked at from a slightly different angle: that of Suárez' basic metaphysics of substantial forms and his views concerning understanding and knowledge. These areas of Suárez' thought are thoroughly analysed and related to each other. Regarding the question of the status of universals it is argued that Suárez' thought in the areas of substantial forms and of understanding generally supports the reading of Suarez as a "moderate nominalist".

7. Ashworth, Earline Jennifer. 1995. "Suárez on the analogy of Being. Some historical background." *Vivarium* no. 33:50-75.

"I argue that Suárez is best read as part of a tradition which predates Cajetan with respect to the classification of types of analogy, and which to some extent predates Scotus in its insistence on a concept of being which is both one and analogical. I draw on three Fifteenth century philosophers and theologians, Capreolus, Dominic of Flanders, and Soncinas, and one Sixteenth century writer, Domingo de Soto."

9. Barrón, Jorge Uscatescu. 1995. "El concepto de metafísica en Suárez: su objeto y dominio." *Pensamiento* no. 200:215-236.

"Se trata de una interpretación de la primera disputation de las *Disputationes metaphysicae* de Suárez. El objeto de la metafísica es el ser real en general con exclusion del ente de razon y del ente "per accidens". Asi pues, el dominio de la metafísica es la totalidad de los entes reales por si. A continuacion se estudia cada uno de los temas que la metafísica debe tratar, lo cual se refleja en la estructura de la mencionada obra de Suárez: propiedades y principios del ser, etc. Al hacer de la inmaterialidad un rasgo del ser se desvirtua el caracter generalisimo de la metafísica, que de por si esta mas alla de la

division del ser material e inmaterial. Por ultimo, se analiza la correspondencia entre los rasgos entresacados de la metafisica como ciencia y el ser real en general."

10. Barroso, Fernández Óscar. 2006. "Suárez, filósofo de encrucijada o del nacimiento de la ontología." *Pensamiento* no. 232:121-138.

"The present work studies the different interpretations proposed in the 20th century concerning the metaphysics of Francisco Suárez. They are divided in three groups: essentialist, existentialist, and

objectivist. The essentialist interpretation has been maintained fundamentally by Thomist authors, the most outstanding scholar among them being E. Gilson. The existentialist interpretation, headed by J. Hellín, can be analyzed as a reaction to the essentialist interpretation. The noetic-objectivist interpretation finds its inspiration in M. Heidegger, and its definitive impetus in the works of J. F. Courtine.

With Courtine, we will maintain that Suárez cannot be classified either as an essentialist or as an existentialist. Efforts to classify him as such will encounter concrete difficulties, since Suárez opens up a new realm for metaphysics, the ontological, situated within the perspective of intentionality and beyond the perspective of effectivity and creation within which medieval metaphysics moves."

13. Blanchette, Olivia. 1999. "Suárez and the latent essentialism of Heidegger's fundamental ontology." *Review of Metaphysics* no. 53:3-19.

"Suárez is viewed by Heidegger and others as having set ontological problems in a form that has marked the whole of

modern metaphysics or ontology. It is in this context that Heidegger himself came to his idea of ontological difference as redefining the question of being in a way that had never been seen before. In his *Marburg lectures* of 1927 Heidegger traces Kant's essentialist conception of being, or rather of reality, back to the late Scholastics who separated essence from existence, which he says was not the same as positing the ontological difference, but which could explain why Kant was unable to raise the question of being in the same way that Suárez would not allow for any real distinction between essence and existence. In his attempt to get beyond the essentialism of modern ontology as found in Kant as well as Suárez, however, Heidegger falls short because he continues to think of "Sein" in essentialist terms as different from being, without ever getting back to the ancient idea of being as act understood as transcending essence in finite being."

14. Burlando, Giannina. 2006. "Suárez on Intrinsic Representationalism." In *Intellect et imagination dans la philosophie médiévale. Actes du XIe Congrès International de Philosophie Médiévale de la Société Internationale pour l'Étude de la Philosophie Médiévale (S.I.E.P.M), Porto, du 26 au 31 août 2002. Vol. III*, edited by Pacheco, Maria Cândida and Meirinhos, José F., 1941-1957. Turnhout: Brepols.

"Does Suárez avoid the criticisms about nonintrinsic representations?"

This paper tries to show how the ontological moves that avoid the Danto-Dennett (D-D) charges of circularity and regress are the ones Francisco Suárez (1548-1617) makes. The author argues that the rejection of the agent intellect, particularly its transduction function and, in general, his conception of *conceptus objectivus* constitutes Suárez's recognition of the D-D problems. Hence, the real issue about representations turns out to be over causation. Suárez's doctrines of harmony, and intrinsic representations are necessarily connected. Secondly, the article also shows that Dennett is confused at a certain point."

16. ———. 2000. "The relationship between God and essences and the notion of eternal Truths according to Francisco Suárez." *Modern Schoolman* no. 77:127-143.

"An understanding of the relationship between God and the essences of His creatures is of vital importance for any contemporary theist in understanding the nature of God and the created world. Historically, this concern received a great deal of attention and has been an essential component of many philosophical systems (e.g. St. Augustine's, St. Thomas' and Ockham's). In contemporary circles, philosophers such as Plantinga have revived the discussion. The difficulties that have permeated the historical and contemporary discussions of this topic are: (1) the nature of essences (i.e. Are they eternal? Are they necessary? What is their ontological status? Do non-existent beings have essences?) and (2) how are essences related to God (i.e. Are they necessary because God willed them as such or is their necessity independent of God's will? Are they ontologically independent of God or are they part of God's intellect?). In this paper, I want to explore the notion of essence and its relation to God in the philosophy of Francisco Suárez and establish three conclusions. First, the major one is that Suárez presents an original doctrine, which differs from the more popular Thomistic doctrine, and can serve as a springboard for new thoughts on this topic. Second, I want to demonstrate that Suárez is able to reconcile the seemingly contradictory position of maintaining the special character of the necessity of essences while not delimiting God's freedom. Finally, I will point out the similarity between Suárez's notion of the necessity of essences, entailed in his doctrine of eternal truths, and Plantinga's "necessity of nature"."

17. ———. 2002. "Ultimate reality in the metaphysics of Francisco Suárez." *Ultimate Reality and Meaning. Interdisciplinary Studies in the Philosophy of Understanding* no. 25:73-92.

"In this paper I examine Francisco Suárez's conception of ultimate reality in his metaphysics. First, I present a succinct biography on Francisco Suárez. Second, I discuss the structure, organization, style and influence of his major philosophical work, the *Metaphysical Disputations*. Finally, I explore Suárez's view on ultimate reality as real being (*ens reale*). I discuss Suárez's view on the relationship between real being (*ens reale*) and possible being (*ens possibile*) and how these relate to being (*esse*). I conclude by discussing God's place in Suárez's conception of reality."

18. ———. 2003. "Suárez on Beings of Reason: What Kinds of Beings (*entia*) are Beings of Reason, and What Kind of Being (*esse*) Do They Have?" *American Catholic Philosophical Quarterly* no. 77:171-187.

"Beings of reason or non-existent objects have always been a source of mind-boggling paradoxes that have vexed philosophers and thinkers in the past and present. Consider Bertrand Russell's paradox: 'if A and B are not different, then the difference between A and B does not subsist. But how can a non-entity be the subject of a proposition?' Or Meinong's paradox: 'There are objects of which it is true that there are no such objects.' At the root of these troubling conundrums are two basic questions: What are beings of reason? What kind of existence do they have? Francisco Suárez was well aware that a solution to the metaphysical questions concerning the essential character of beings of reason and their ontological status would serve as the key to solving the puzzles and paradoxes just described. A solution to these metaphysical questions would also bring about an understanding of how we talk about beings of reason and other problems that they give rise to in the philosophy of language. In this paper, I present Suárez's view on the nature and ontological status of beings of reason and clarify some of the following questions: What kind of beings (*entia*) are beings of reason? What kind of being (*esse*) do beings of reason have? This latter concern is related to the following metaphysical issues: What are real beings? What is the nature and ontological status of possible beings? What is

the distinction between real beings, actual beings, and possible beings?"

26. ———. 2009. "Durée et existence chez Suárez." *Revue Thomiste* no. 109:589-620.

"In the Metaphysical Disputation L, Suárez draws insights from Aristotle and Saint Augustine in order to examine the ontological connection that could be established between duration and existence. This insight opens up into the metaphysical realm by raising an anthropological and theological inquiry about the body, life and death. Our own being is rooted in a sensible reality which is identical to the duration it manifests, simply because it endures in being. Suárez's concept of duration confirms the metaphysical principle according to which any being actually exists in virtue of the fact that it is individual and singular. Thus, the ability to be, which qualifies real being, appears under the mode of what is possible. This, in Suárez's work, is significant both with regards to politics and history."

27. ———. 2012. *Pensée de l'être et théorie politique: le moment Suarézien*. Louvain: Peeters.

Vol. I: "Cet ouvrage se propose d'examiner chez Suárez (1548-1617), comment la théorie du droit et de la loi prolonge la pensée de l'étant élaborée par la métaphysique en une compréhension ontologique du politique. Il s'agit précisément de mener à son terme, dans un système unifié du savoir, la détermination de l'étant en procédant à son extension à la question de l'être de l'homme et de l'être-en-commun propre à la société politique.

Au commencement du XVII^e siècle, une autre direction pour l'accomplissement du projet ontologique non identifiable à celle d'une science mathématique de la nature se profile et préfigure une récurrence persistante des origines de la philosophie. Ainsi, on trouve dans le système suarézien la retranscription originale

et réactualisée d'une ligne de force traversant la pensée antique: l'ontopolitique. Il devient alors nécessaire afin d'explicitier et de justifier cette orientation, de déterminer à la fois le fondement et la spécificité de la relation instaurée par Suárez entre l'ontologie, la théologie, l'anthropologie et le politique; ces domaines demeurent indissociables d'une crise et d'un renouveau de la philosophie première s'énonçant comme accomplissement éthique de la raison métaphysique."

44. Daniel, Stephen H. 2000. "Berkeley, Suárez, and the "esse-existere" distinction." *American Catholic Philosophical Quarterly* no. 74:621-636.

"For Berkeley, a thing's existence "esse" is nothing more than its being perceived "as that thing". It makes no sense to ask

(with Samuel Johnson) about the "esse" of the mind or the specific act of perception, for that would be like asking what it means for existence to exist. Berkeley's "*existere is percipi or percipere*" thus carefully adopts the scholastic distinction between "esse" and "existere" ignored by Locke and others committed to a substantialist notion of mind. Following the Stoics, Berkeley proposes that, "as" the existence of ideas, minds "subsist" rather than "exist" and, accordingly, cannot be identified as independently existing things."

47. ———. 2000. "'*Ens intime transcendit omnia*': Suárez' Modell der transzendentalen Analyse und die mittelalterlichen Transzendentalienlehren." *Freiburger Zeitschrift für Philosophie und Theologie* no. 47:150-172.

"The study seeks an approach to the proper outlines of Suárez's ontology in the context of the scholastic tradition of metaphysics. It shows, that Suárez synthesizes elements from different ontological traditions in a new explanation of the transcendental of being. This explanation does not follow -- as the prevailing interpretation of Suárez's position suggests -- the 'via Scoti'; rather it is unfolded as a countermove to it on a common ground. In consequence of it Suárez replaces Scotus's model of the transcendental analysis by another conception, which takes up the pre-Scotistic doctrine of the transcendentals."

48. ———. 2000. "Suárez' Analyse der Transzendentalien 'Ding' und 'Etwas' im Kontext der scholastischen Metaphysiktradition." *Theologie und Philosophie* no. 75:339-358.

"Some scholastic authors count 'thing' and 'something' amongst the transcendental attributes of being. The study seeks to

explain Suárez's analysis of these attributes with regard to the scholastic debate on the number of the *passiones entis*. It shows that Suárez integrates different traditions on the basis of an original understanding of 'being' or 'thing'. Recent interpretations of Suárez's ontological approach are questioned by the author's conclusion, that Suárez does not take up Henry of Ghent's and Scotus's scheme of the first conceptions and excludes from metaphysics the reduction of being to "'res'" in the sense of the mere thinkable or *possibile logicum*."

49. ———. 2000. "Die Grundlegung einer allgemeinen Theorie der transzendentalen Eigenschaften des Seienden bei F. Suárez." *Zeitschrift für Philosophische Forschung* no. 54:341-364.

"The study seeks to explain the central idea in Suárez's general theory of the transcendental properties of being with regard to its background in the medieval doctrine of the transcendentals. It questions the prevailing view that Suárez adopts Scotus's doctrine of the *passiones entis* and leads to the conclusion that Suárez -- within the new framework of his explanation of real being -- rather takes up and reshapes the pre-Scotist doctrine of the transcendentals."

51. ———. 2003. "Seinswahrheit und Erkenntniswahrheit. Francisco Suárez und die thomistische Lehre von der analogia veri." In *Die Logik des Transzendentalen. Festschrift für Jan A. Aertsen zum 65. Geburtstag*, edited by Pickavé, Martin, 246-265. Berlin: Walter de Gruyter.

"According to Thomas Aquinas 'true' is predicated essentially of things with reference to truth in the intellect. His reflections on the relation between transcendental and cognitive truth raise questions which in later scholasticism -- in connection with difficulties within the doctrine of analogy -- give rise to controversies on the structure and ontological meaning of the *analogia veri*. In the Thomistic tradition Cajetan's solution had a strong influence, although it reduces ontological truth to a mere extrinsic denomination of things.

Against this solution Suárez develops a new interpretation of the order of predication of 'true'. It confirms both (a) the Aristotelian doctrine according to which the original place of truth is the

intellect, and (b) the traditional doctrine of the transcendentals according to which true is not an extrinsic denomination of things, but their inner entity under a certain respect. The study seeks to

explain Suárez's solution against its historical background."

52. ———. 2003. "Eines oder Vieles. Zu einem Grundproblem der scholastischen Theorien über das Eine." *Zeitschrift für Philosophische Forschung* no. 57:27-52.

"On the background of the Aristotelian doctrine of the One which is convertible with being, scholastic theories of the One meet with a difficulty that challenges their underlying ontological principles: how can the doctrine of the convertibility of 'one' and 'being' be reconciled with the Aristotelian doctrine, according to which 'one' and 'many' are first differences or opposites of the first division of being? If one divides being, it cannot be converted with 'being' in a proposition, and vice versa. Among the attempts to solve the problem on the basis of the conception of an essential identity of being and one, two main types of solutions may be distinguished. The study seeks to characterize their outlines and ontological implications and explains, how the different approaches emerge within the framework of the Aristotelian tradition of metaphysics."

Suárez on the Truth of the Proposition, "This is My Body" 235; 10. Suárez on Preaching the Gospel to People like the American Indians 257; 11. Francisco Suárez on the Law of Nations 315; 12. Suárez on Human Rights 333; 13. Francisco

Suárez on the Interpretation of Laws 357; 14. Postscript and Prospectus 389; Bibliography 393; Index of Names 409; Index of Terms 413-416.

"The main theme in these studies is twofold. The first is theoretical, centering on the Suarezian conception of being and metaphysics. As Etienne Gilson pointed out in *Being and Some Philosophers*, this conception had its origin in Avicenna's understanding of Aristotelian metaphysics, an understanding which passed through Duns Scotus to Suarez and then on to Suárez's successors, notably Christian Wolff. I still accept Gilson's basic account of Suárez's lineage, which account was also basic for these studies in their original appearance. But now (in 2010) I would modify it along the line suggested by Rolf Darge, who has emphasized the difference of the Suarezian concept of being and its descent to its inferiors versus the Scotistic concept of being as *simpliciter simplex* as this descends to its inferiors by differences outside itself.⁽¹⁾ The second theme takes up the practical side of Suárez's philosophical and theological interests, including his views on human society, law and morality, Church and state, international law, and human rights. The first theme is represented in different metaphysical and epistemological dimensions through eight studies, while the second is the major concern of the last four essays.

The introduction to the collection attempts to give an overview of Suarez the man, his published writings, his philosophical thought, and some of his influence." (p. XI)

67. ———. 1997. "Las *Disputaciones metafisicas* de F. Suárez S .J., su inspiracion y algunas de sus lineas maestras. En el IV centenario de la primera edicion (1597-1997)." *Revista Española de Filosofia Medieval* no. 4:65-86.

"Four centuries after the first edition of "Disputationes Metaphysicae" (1597), that vast work is still the greatest issue from the Spanish philosophy. F. Suárez is the author of one of the most important synthesis of the scholar philosophy. The key of everything he means and also of Disputationes", can be found in the idea of freedom in causality and action. From this concept, some topics are shown: act and potentiality, cause, creation, etc. We explain Suárez's metaphysics from an existential point of view and refuse the accusation of abstractism."

- "This volume deals with basic questions regarding the philosophical knowledge of God in Suarez and Descartes, two very different, but historically linked early-modern philosophers. It has two parts devoted to Suarez and Descartes respectively. Each section examines the path along which

philosophy can acquire knowledge of God, the adequacy which is ascribed to this knowledge, as well as selected topics of the doctrine of God's attributes.

Special attention has been given to both critical and positive reactions to Suarez and Descartes on the part of seventeenth-century Dutch Reformed theologians.

The author argues that Descartes, in comparison with Suarez, reduced the theological interests of philosophy and also limited the starting points for attaining to a philosophical knowledge of God. On the other hand, Descartes elevated the presumed adequacy of this knowledge."

75. Gracia, Jorge J.E. 1979. "What the Individual Adds to the Common Nature According to Suárez." *New Scholasticism* no. 53:221-233.

"In *Metaphysical Disputation V*, section 2, Suárez criticizes the views of Thomas, Ockham and Scotus on what the individual adds to the common nature. Then he proceeds to state his own view as follows: (1) the individual adds something real to the common nature, (2) nonetheless, what the individual adds is not really or modally distinct from the common nature, (3) rather, it is conceptually distinct from it, since (4) a conceptual distinction does not require that what is added be conceptual. In this paper I examine briefly the nature of the problem at stake, Suárez's view, and the apparent inconsistency between (1), (2), (3) and (4) above. As a conclusion I submit (a) that Suárez's position is fully consistent, (b) although different from those of Thomas, Scotus and Ockham, with which it has been compared often and (c) that the apparent inconsistency is due to an ambiguity in the use of the term 'addition'."

76. ———. 1991. "Suárez Conception of Metaphysics: A Step in the Direction of Mentalism?" *American Catholic Philosophical Quarterly* no. 65:287-309.

"Mentalism in metaphysics is the view that the object of study of metaphysics is something mental rather than something real. Suárez has been identified as a key figure in the development of mentalism in early modern philosophy. Contrary to this view I

argue that Suárez did not take any unambiguous steps toward mentalism and that his position is concordant with the medieval Aristotelian tradition of realism. In the article I examine Suárez's view of the nature of metaphysics, its object, and the ontological status of that object."

77. ———. 1991. "Francisco Suárez: the Man in History." *American Catholic Philosophical Quarterly* no. 65:259-266.

"Suárez decided early in life that he would pursue an ecclesiastical career. Accordingly, he went to Salamanca to study canon law. While engaged in his studies there, he requested admission into the Society of Jesus. At first he was refused admission for reasons of health and what was perceived as a lack of proper intellectual capacity. Insistence paid off, however, and he was allowed to join the order in 1564. After completing his studies, he began a teaching career that would last for over fifty years, taking him to some of the most reknown institutions of his time: Segovia, Valladolid, Rome, Alcalá, Salamanca, and Coimbra. Suárez died in Lisbon, at the age of seventy, on September 25, 1617.

Suárez did not publish early in his life. His first work, *De Incarnatione Verbi*, appeared in 1590, when he was forty two years of age. After this initial publication, however, a steady stream of works followed: *De mysteriis vitae Christi* (1592), *De sacramentis I* (1595), *Disputationes metaphysicae* (1597), *Varia opuscula theologica* (1599), *De sacramentis II* (1602), *De censuris* (1603), *De Deo uno et trino* (1606), *De virtute et statu religionis I and II* (1608 and 1609), *De legibus* (1612), and *Defensio fidei catholicae* (1613). Several other works appeared posthumously: *De gratia I and III* (1619), *De angelis* (1620), *De opera sex dierum*, *De anima* (1621), and *De fide, spe, et caritate* (1621), *De virtute et statu religionis III and IV* (1624 and 1625), *De ultimo fine* (1628), *De gratia II* (1651), *De vera intelligentia auxilii efficacis* (1655), *Opuscula sex inedita* (1859), and *Conselhos y pareceres* (1948). Moreover, there are still numerous manuscripts awaiting editing and publication. Obviously, Suarez was a tremendously prolific author; his published works fill twenty-eight large volumes. A good number of Suarez's works were presented as commentaries on

Thomas's *Summa theologiae*, a clear testimony to the importance that Suarez and his contemporaries attached to the Angelic Doctor. In fact, however, many of these works are largely independent treatises for which Thomas's *Summa* is only a thematic occasion." (pp. 260-261).

78. ———. 1992. "Suárez and the doctrine of the Transcendentals." *Topoi* no. 11:121-134.

"This article discusses Suárez's views concerning the transcendentals, that is, being and those attributes of it that extend to everything. In particular it explores Suárez's notion of transcendental and the way in which he conceived the transcendental attributes of being are related to it. It makes two claims: first, that Suárez has an intensional rather than an extensional understanding of transcendental; and, second, that Suárez's understanding of truth and goodness, as expressing real extrinsic denominations based on real relations, appears to contain an inconsistency."

79. ———. 1993. "Suárez and metaphysical mentalism: the last visit." *American Catholic Philosophical Quarterly* no. 67:349-354.

"This article is a reply to N. J. Wells' article "Esse Cognitum and Suárez revisited" ("ACPQ" 67, 3 (1993): 339-348) prompted in turn by my article "Suárez's conception of metaphysics: a step in the direction of mentalism?" ("ACPQ" 65 (1991): 287-309). I argue that, contrary to what Professor Wells' believes: first, he has not clarified the status of the objective concept, and, second, he must accept that, if his interpretation were correct, metaphysics, for Suárez, would be concerned with what is in the mind, rather than with what is outside it."

80. ———. 1994. "Francis Suárez (b. 1548; d. 1617)." In *Individuation in Scholasticism. The later Middle Ages and the Counter-Reformation (1150-1650)*, edited by Gracia, Jorge J.E., 475-510. New York: State University of New York Press.

"This article presents an analysis of Suárez's position on individuation. It discusses Suárez's views of transcendental

unity and individual unity and their relations, the ontological status of individuality, the individuation of substances (by designated matter, form, existence, and entity), the individuation of accidents (by substance), and the presence of accidents differing only numerically in the same subject. It claims that Suárez's accomplishment is not only to be found in his systematic approach, but also in his abandonment of a reliance on faith in matters philosophical and in the introduction of various precisions which clarify the issues surrounding individuation."

86. Guy, Alain. 1979. "L'analogie de l'être selon Suárez." *Archives de Philosophie* no. 42:275-294.

"Counter to Scotus (who affirms the univocity of the being) and Peter Aureol (who sustains its equivocity), also against saint Thomas (who defends only the analogy of proportion), Suárez, in the 28th of the *Disputationes Metaphysicae* (third section), pleads for "the analogy of intrinsic attribution of the being." His realism is mixed with some Occamism."

Annotated bibliography on the Metaphysics of Francisco Suárez. Second Part: H - Z

Bibliography

1. Heider, Daniel. 2007. "Is Suarez's Concept of Being Analogical or Univocal?" *American Catholic Philosophical Quarterly* no. 81:21-42.

"This article deals with the question of Suárez's conception of being, which *prima facie* seems to oscillate between a Scotistic univocal conception and a conception of being according to the analogy of intrinsic attribution. The paper intends to show that Suárez's doctrine can in no way be interpreted as representative of the univocal conception, and proceeds in six steps. First, it highlights the importance of the "uncommon doctor"'s theory of the unity of both the formal and the objective concepts of being. In the second part, the paper asks how the concept of being can, without any internal differentiation and structure, give rise to the different relations that it has to the natures subordinated to it. In the second and the third parts, this question receives an answer against the background of Suárez's critique of Scotus's conception, and with the help of his theory of the radical intimate transcendence of being. In the fourth section, there follows an exposition of Suárez's doctrine on the explication of the concept of being. The fifth section offers a brief presentation of the significance of *esse* for *ratio entis*.

In the last section, the author places his interpretation in the general context of the *Metaphysical Disputations*."

2. ———. 2009. "The Nature of Suárez's Metaphysics. Disputationes Metaphysicae and Their Main Systematic Strains." *Studia Neoaristotelica* no. 6:99-110.

"The paper presents seven basic features of Francisco Suárez's metaphysics. They are as follows: "Univocalization" of the concept of being and transcendental properties, "reification" of the act-potency doctrine, "ontologization" of individuality, "conceptualization" of the Scotist perspective, "existential" character of the concept of being, "epistemologization" and "methodologization" of metaphysics. Whereas the first five are indicated as remaining in the preserve of the traditional scholastic philosophy, the last two are taken as portending the methodological priority of the subjective states of affairs of early modern "main-stream" philosophy."

3. ———. 2009. "The unity of Suárez's metaphysics." *Medioevo. Rivista di storia della filosofia medievale* no. 34:475-505.

4. ———. 2014. *Universals in Second Scholasticism: A Comparative Study with Focus on the Theories of Francisco Suárez S.J. (1548-1617), Joao Poinsot O.P. (1589-1644), and Bartolomeo Mastri da Meldola O.F.M. Conv. (1602-1673), Bonaventura Belluto O.F.M. Conv. (1600-1676)*. Philadelphia: John Benjamins.

"This study aims to present a comparative analysis of philosophical theories of universals espoused by the foremost representatives of the three main schools of early modern scholastic thought. The book introduces the doctrines of Francisco Suarez, S.J. (1548-1617), the Thomist John of St. Thomas, O.P. (1589-1644), and the Scotists Bartolomeo Mastri da Meldola, O.F.M. Conv. (1602-1673) and Bonaventura Belluto, O.F.M. Conv. (1600-1676). The author examines in detail their mutual doctrinal delineation as well as the conceptualist tenet of the Jesuit Pedro Hurtado de Mendoza (1578-1641), whose thought constitutes an important systematic point of comparison especially with Suarez's doctrine. The book offers the first comparative elaboration of the issue of universals, in both its metaphysical and its epistemological aspects, in the era of second scholasticism."

11. Kainz, Howard P. 1970. "The Suárezian position on Being and the Real Distinction: a analytic and comparative study." *Thomist* no. 34:289-305.

"In elucidating the relationship between "existence" and "essence", it seems that two fundamental options are open: 1) to ground existence in existence itself; or 2) to ground existence in nothingness. Thomas Aquinas, in his doctrine on essence as potentiality, chooses the latter option, for all practical purposes. Suárez, in order to avoid grounding existence in nothingness, chooses the former option. One result of his choice is the purely mental "distinction" between essence and existence."

12. Karofsky, Amy D. 2001. "Suárez's doctrine of eternal truths." *Journal of the History of Philosophy* no. 39:23-47.

"In this paper, I offer an interpretation of Suárez's doctrine of eternal truths expounded in *Metaphysical Disputation XXXI*, Chapter XII, Sections 38-47. There, Suárez considers and rejects several theories before developing his own. Because it is somewhat difficult to determine what view Suárez ultimately adopts, interpretations of this passage tend to vary. I argue that the interpretations of Norman Wells, Armand Maurer and John P. Doyle are inadequate, since Suárez wants a solution to the problem of eternal truths that does not depend upon the will of the divine being and one that avoids any ontological commitment to unactualized, possible success."

13. ———. 2001. "Suárez's influence on Descartes's theory of eternal truths." *Medieval Philosophy and Theology* no. 10:241-262.

"There is a philosophical problem, what I will call the problem of eternal truths, that can be stated as follows: If an unactualized, possible essence has no being and is, hence, absolutely nothing, then what grounds the eternal and necessary truth of propositions that purport to be about them? If there were no men, what would ground the necessary truth, "Man is a rational animal"? And what grounded the truth of

that proposition prior to the creation of the world? (If it was in fact true at that moment?)"

Text based on the partial edition of two Latin manuscripts in the Bibliotheca Universitaria de Salamanca: 1) *Disputationes in octo libros Physicorum Aristotelis et in duo libros De Generatione et Corruptione* and 2) *Disputationes in Metaphysicam, et libros De Anima, quibus adiuncti sunt duo ultimi tractatus Logicae De Interpretatione, et de Priori, et Posteriori Resolutione*.

15. Kronen, John. 1991. "Essentialism old and new: Suárez and Brody." *Modern Schoolman*:123-151.

"A revived interest in essentialism characterizes much recent Anglo-American philosophy. In this article I compare and contrast one of the most articulate and well-argued recent versions of essentialism, that of Baruch Brody, with that of the last great system builder of the Schoolmen, Francis Suárez. I argue that Suárez's account of essentialism has advantages over Brody's because in positing a form that is entitative or thing-like as the chief constituent of the essences of substances Suárez's account is better able to explain the substantial unity of substances."

16. ———. 1997. "Substances are not windowless: a Suárezian critique of monadism." *American Catholic Philosophical Quarterly* no. 71:5-81.

"Recently, Thomas Huffman has defended Leibniz's metaphysics of substance. In this paper I offer a critique of that metaphysics from the point of view of the metaphysics of Leibniz's near contemporary, Francis Suárez. In my critique I show that Suárez's Aristotelianism is better able to account for the existence of composite substances than is Leibniz's metaphysics and that Leibniz's implicit arguments against the Suárezian account of substance fail. I conclude, based upon

this, that Suárez's metaphysics should be preferred to Leibniz's since it better accords with the common sense notion that things such as humans and cats are true substances and not mere aggregates."

18. Lejenhorst, Cees. 2007. "Cajetan and Suarez on Agent Sense: Metaphysics and Epistemology in Late Aristotelian Thought." In *Forming the Mind Essays on the Internal Senses and the Mind/Body Problem from Avicenna to the Medical Enlightenment*, edited by Lagerlund, Henrik, 237-262. Dordrecht: Kluwer.

"In this paper I have to limit myself to only a few late Aristotelian authors.

I shall deal with Thomas de Vio (Cardinal Cajetan) and Francesco Suarez.

Cajetan was one of the key figures in the rise of the so-called *seconda scolastica*, the counter-reformational attempt to build a new Christian philosophy that fused revelation with Aristotelian thought. Moreover, his ideas about sense perception were heavily attacked by Suarez, who is

probably the best known and most influential Jesuit authors, who were so important in shaping late Aristotelianism. In this fashion, our sample of case studies is arguably limited, but nevertheless quite representative for sixteenth-century Aristotelian accounts of sense perception. By way of conclusion, this article ends with a brief exploration of how the debate on sense perception and its relation to the metaphysics of the chain of being changed with the advent of modern philosophy, in particular with Descartes." (p. 241)

26. Miner, Robert C. 2001. "Suárez as founder of modernity: reflections on a "topos" in recent historiography." *History of*

Philosophy Quarterly no. 18:17-36.

"The aim of this paper is to query a notion that appears with increasing frequency in recent narratives of modern philosophy. The notion is that the secret founder of modernity is not Bacon, Descartes or Hobbes, but Francisco Suárez. This paper examines three attempts to make the case of Suárez as the founder of modern philosophy and finds each of them deficient. First, I examine the treatment of Suárez in Etienne Gilson's *Being and Some Philosophers*. Secondly, I consider Alasdair MacIntyre's characterization of Suárez as an essentially antihistorical thinker in *Three Rival Versions of Moral Enquiry*. Thirdly, I attempt to disambiguate several claims about Suárez that are characteristically bundled together by post-Heideggerian readings of Suárez as the founder of a new science of ontology. The conclusion is that while it would be premature to reject the possibility that Suárez is the founder of modern philosophy, the precise sense in which he would fit this description has not been persuasively delineated."

On Suárez see: Chapter 18. *Objective being in Suárez and Descartes*, pp. 147-165.

28. Noreña, Carlos G. 1981. "Ockham and Suárez on the ontological status of universal concepts." *New Scholasticism* no. 55:348-362.

"Ockham's failure to explain the ontological conditions for the possibility of universal predication partially justifies the traditional view of him as a nominalist. Ockham rejected the basic aristotelian and Thomistic doctrines about common natures, the principle of individuation and relations. Suárez avoided both the Platonizing realism of Scotus and the nominalistic leanings of Ockham with his carefully articulated theories on the limitation of the act, the principle of individuation, and the difference between essence and existence. Scholastic thought on the ontological status of universal concepts centers on issues which are fundamental to

the interpretation of Plato and Aristotle and which a comprehensive theory of knowledge cannot avoid."

29. ———. 1983. "Heidegger on Suárez: the 1927 Marburg Lectures." *International Philosophical Quarterly* no. 23:407-424.

"Heidegger's thought on Suarez has been studied for the most part by scholastic philosophers with a particular doctrinal intent, in the context of Heidegger's views on the history of ontology, and on the narrow basis of a few passing remarks in some of Heidegger's works.(1) The 1975 publication of Heidegger's (Summer Semester, 1927) lectures on *Die Grundprobleme der Phänomenologie*, and their recent translation into English by Professor Hofstadter, make possible a better documented and more conclusive analysis of the subject.(2) Unfortunately, other relevant sources still remain unpublished, such as Heidegger's lectures and seminars on the history of philosophy from St. Thomas to Kant, medieval mysticism, St. Augustine, and Renaissance scholasticism. All of them, however, give a clear indication of Brentano's influence upon Heidegger's early thought and demonstrate an interest in medieval philosophy which one seldom finds among contemporary thinkers. In this essay we intend 1) to summarize Heidegger's views on medieval scholastic philosophy in general and those of Suárez in particular, and(2) attempt to retrieve from the Marburg lectures what Heidegger left unsaid and unthought on the scholastic distinction between essence and existence." (p. 407)

(1) Some scholars have argued that Heidegger's criticism of medieval ontology was fully justified when directed against Suárez, but radically unfair to St. Thomas. To this group belong: G. Siewerth, *Das Schicksal der Metaphysik vom Thomas zu Heidegger* (Einsiedeln, 1959); R. Echaury, *Heidegger y la Metafísica Tomista* (Buenos Aires, 1970); B. Rioux, *L'être et la vérité chez Heidegger et Saint Thomas d'Aquin* (Montreal-Paris, 1963); C. Fabro, *Participation et causalité selon S. Thomas d'Aquin* (Louvain, 1961); J. P. Doyle, "Heidegger and Scholastic Metaphysics," *The Modern Schoolman*, 49 (1972), 201-221; O. N. Derisi, "Aproximaciones

y diferencias entre la fenomenología existencialista de Martin Heidegger y la ontología de Santo Tomás,” *Sapientia*, 22 (1967), 185-192; W. R. Korn, “La question de l’être chez Martin Heidegger,” *Revue Thomiste*, 71 (1971), 33-58.

More favorable to Suárez were H. Meyer, *Heidegger und Thomas von Aquin* (Munich, 1968); and M. Schneider, “Der angebliche Essentialismus des Suarez,” *Wissenschaft und Weisheit*, 24 (1961), 40-68.

Finally, there are those philosophers who think that both St. Thomas and Suárez fully deserve Heidegger's criticism. See. e.g., H. Siegfried, *Die Wahrheit und Metaphysik bei Suárez* (Bonn. 1967).

Heidegger's references to Suárez can be found in *Sein und Zeit* (*Gesamtausgabe*, ed. by F. W. von Herrmann, vol. 2, Frankfurt am Main, 1977), 30; *Die Frage nach dem Ding* (Tübingen, 1962). 77; and *Nietzsche* (Pfullingen, 1961), II, 418.

(2) The lectures *Grundprobleme der Phänomenologie* (henceforth GP) were published in 1975 as vol. 24 of the *Gesamtausgabe*. They were reviewed by M. E. Zimmermann in the *International Philosophical Quarterly*, 17 (1977), 235-237. and in *Philosophy and Phenomenological Research*, 39 (1979). 537-550. Professor A. Hofstadter's excellent translation was published in 1981 by Indiana University Press under the title *Basic Problems of Phenomenology* (henceforth BP). I want to thank both Indiana U. Press and Professor Hofstadter for their kind permission to quote the English translation.

 36. Peccorini, Francisco. 1972. "Suárez's struggle with the problem of the one and the many." *Thomist* no. 36:433-471.

"The purpose of this article is to find out whether Suárez's attempt to reconcile analogy with the thesis of the perfect unity of the concept of 'ens' was successful. To this effect, Suárez's basic premises - his theory of the universals and his conception of existence as such - are discussed. The former is dismissed on the grounds that in it the would be link between conceptualism and realism is no link at all because it rests only on an inductive abstraction which in turn is unworkable inasmuch as it is incompatible with the basic Suárezian tenet that the first direct concept is of the individual only. It is shown also how Suárez nullifies his claims of analogy by accounting for the genesis of his concept of 'ens' in terms of his theory of the universals which necessarily opens up to a univocal format. Finally, the article tackles the second premise - Suárez's conception of existence as such understood as a thing and points to its equivocating effect on the concept of 'ens'."

37. ——. 1974. "Knowledge of the singular: Aquinas, Suárez, and recent interpreters." *Thomist* no. 38 (606):655.

"Given the decisive influence of Suárez's conception on modern and contemporary nominalism, a thorough criticism is carried

out on different levels: (1) through a 'prima facie' logical analysis of his arguments; (2) through an exhaustive criticism of José M. Alejandro's interpretation of Suárez's position, which is bent upon updating his mentor's foundation; and finally (3) on the basis of an '*ad hominem*' dialogue centered on Suárez's Thomistic claims. It is the contention of this article that through his eclectic solution Suárez jeopardized both the nature of the agent intellect -- by hollowing out its whole ontological value -- and the thesis of the primacy of the individual in epistemology -- by leaving our knowledge unexplained in its most fundamental respects and providing it only with unrealistic grounds. This makes it incumbent upon the author to show that the Thomistic thesis of indirect knowledge of the singular proves to be fully satisfactory if examined in the light of Bernard J Lonergan and Karl Rahner's writings."

38. Pereira, José. 1996. "John of St. Thomas and Suárez." *Acta Philosophica* no. 5:115-136.

"Classical Thomism, originated by Aquinas, developed by Cajetan and consummated by John of St. Thomas (1589-1644), had many critics, chief among them Francisco Suárez, the prime thinker of Baroque Scholasticism. His critique initiated changes in Thomism, leading John, among other Thomists, to abandon the commentarial method followed by the older Scholastics; to occasionally substitute the Suárezian metaphysical distinction for the real distinction characteristic of Thomism; to concede that the foundational Thomist tenet of the limitation of existence by essence is debatable; and to accept Suárez's definition of God as "ipsum intelligere subsistens" rather than as "ipsum esse subsistens". Gregorianum no. 85:660-688.

"In declaring that 'existence as existence corresponds to being as such, and pertains to its intrinsic significance', Suárez accords to existence a preeminence perhaps not ascribed to it by any Scholastic philosopher. Conceptually distinct, existence and essence are really identical, their identity indicated by the term *essentia realis*, or 'existent essence'. Being (*ens*) is at once unitary in meaning and dyadic; it denotes existence that is both actual (*ens ut participium*) and aptitudinal (*ens ut nomen*). 'Actual' existence is realized extra-mentally, while the 'aptitudinal' is existence insofar it is intelligible to the mind, prescinding from but not denying any extra-mental realization. The terminology that Suárez employs is distinctly his own. Gilson, however, reads him Thomistically, and so interprets his *essentia realis* as a kind of Thomist reified concept affirming the preeminence of essence. More recent commentators, influenced by Heidegger, see in the Suarezian *essentia realis* no more than *cogitabilitas*."

44. Riva, Franco. 1979. "La dottrina Suáreziana del concetto e le sue fonti storiche." *Rivista di Filosofia Neo-Scolastica* no. 71:686-699.

"Suárez's doctrine of concept while historically accepting the contribution of the major philosophical traditions of Middle Ages, has its own originality as it proceeds from the metaphysical fundamental, i.e., from the constant reference to the doctrine of power and act which is only typical of Suárez. Theoretically, Suárez (whom Descartes read at La Flèche) definitely reaffirms the intention of knowledge supporting the

form of immediate realism. Beyond any gnosiological dualism he demonstrates by exclusion the identity of *verbum* and high intellective and proposes (differing in opinion with Thomas Aquinas) to define "the concept of *id quo res concipitur*", reducing it to pure instrument or mere sign, the reality of which all lies in the significance."

45. Robinet, André. 1980. "Suárez dans l'oeuvre de Leibniz." *Cuadernos Salmantinos de Filosofía* no. 7:191-209.

"Statistiquement, Suárez est l'un des auteurs les moins cités par Leibniz (quatorze mentions). Aucune étude directe ne lui est consacrée dans les manuscrits connus. Les références de Leibniz à Suárez sont étudiées autour de sept concepts (métaphysique, principe d'individuation, causalité, harmonie préétablie, *de vinculo substantiale*, eucharistie, *scientia media*) une étude comparative "fondée en réalité textuelle" devient alors édifiable."

48. Ross, James F. 1962. "Suárez on "universals"." *Journal of Philosophy* no. 59:736-747.

"This is an exposition of Francis Suárez's treatment of the following two questions: (1) what sort of "community" obtains among things that are properly said to be of the same sort? (2) in what sense can any "reality" be correctly called universal? The paper explains Suárez's claims that there are real universals and that there is fundamentally but not formally a real community in reality. The pivotal problem is seen to concern the meaning of 'similarity', since it does "not" mean having something in common. The paper offers the only resolution of the problem reconcilable with Suárez's own statements, indicating that it commits him to a very novel (in his time) form of conceptualism."

64. Svoboda, David. 2007. "Francisco Suárez on the Addition of the One to Being and the Priority of the One over the Many." *Studia Neoaristotelica* no. 4:158-172.

"Suárez's solution to the problem of the conceptual Addition of the One to being follows firstly the Aristotelian-Averroistic tradition mediated by Aquinas. According to this tradition, the One adds to being only a negative determination. Suárez claims that the One does not signify any positive perfection either really or conceptually distinct from being as such. Suárez's own solution to the problem is presented in a critical discussion with many different conceptions, but Suárez pays most attention to the theory of certain, mainly Franciscan, authors who hold that the One adds to being a positive perfection which is only conceptually distinct from being as such. The main argument for this thesis is based on the assumption that

indivision is to be taken as a double negation, by which an affirmation is expressed. This concept of indivision was, according to Suárez, also defended by Aquinas, who holds that the negation which is expressed by the One negates the division of one being from another. Suárez rejects this solution and proposes his own conception, according to which the One does not negate the negative moment of the division of one being from another, but the positive moment of an essential division of a being in itself. The One thus negates a real positive division of being in itself. On the basis of this theory, Suárez further rejected Aquinas's (and the Thomistic) conception of a conceptual priority of the One over the Many, which was put forth as an answer to the old Aristotelian problem of a privative opposition between the One and the Many. Suárez defends the real priority of an indivision over a division as well as a real and conceptual priority of the One over the Many. Suárez's conception seems to us to be compatible with his concept of a negative Addition of the One to being. "

"L'article attire l'attention sur l'importance du "tournant" Suárezien dans l'histoire de la métaphysique conçue comme *onto - théo - logie*, mettant en lumière les décisions qui sont prises par Suárez par rapport aux "topoi" les plus importants de la pensée scolastique et de la pensée moderne. L'extraordinaire fortune de Suárez s'explique par le fait qu'il n'est pas seulement le dernier scolastique, mais aussi le premier moderne."

70. Wells, Norman J. 1955. *The Distinction of Essence and Existence in the Philosophy of Francis Suárez*.

Ph.D thesis submitted to the University of Toronto.

Abstract: "The name of Francis Suárez is a famous one in the history of philosophy, not to mention the histories of theology and law. Indeed, his position on the question of the distinction between essence and existence in creatures, the subject matter of this thesis, is especially notorious. However, though his final position on this question is quite well known, the philosophical milieu surrounding that decision and undoubtedly influencing it, is, in contrast, rather obscure. This dissertation is primarily concerned with the latter aspect of the problem.

Suarez himself is our best guide since he lists the three famous traditions on this question up to his day and cites men and arguments on behalf of each. The first tradition, that of the "Thomists", is the real distinction which maintains, for Suarez, that the essence and existence of a creature are really distinct as *duae res* or two beings, and mutually separable, each being able to exist apart from the other. The second tradition, that of the modal distinction, also holds for a similar real distinction in

creatures as between a res or a being and its mode which are not mutually separable. The third tradition, the distinction of reason and the position of Suárez, rejects any kind of real distinction of essence and existence in a creature and affirms a distinction which is the work of the intellect and is not at all present in the thing.

Research into the sources of the five arguments Suárez attributes to the "Thomists" he lists has found that the first two are explicit in such "Thomists" as Giles of Rome, John Capreolus, Paulus Barbus Soncinas, Cajetan, Sylvester of Ferrara and Chrysostomus Javellus. The other three arguments are not found in the texts of these men noted by Suárez. But the common denominator of all the arguments is that they affirm a real distinction between an uncreated esse essentiae or essence and a created esse existentiae or existence. That is, for Suarez, these men distinguish what comes to be by an efficient cause, namely, existence, and what does not come to be by an efficient cause, namely, essence. Thus Suárez sees that the "Thomist" school undergoes the doctrinal influence of Avicenna and this Neo-Platonic tradition through St. Albert, Henry of Ghent, and possibly Meister Eckhart.

On behalf of the second tradition, Suarez cites some texts of John Duns Scotus, Henry of Ghent and Dominicus Soto which purportedly support this modal distinction. In this tradition, esse existentiae, according to Suarez, is a mode which is a positive existential entity in his own right as in the first tradition. However, unlike the latter, it cannot endure apart from the essence of which it is the mode. Thus, the second tradition differs from the first, not so much on the notion of essence which is the same, but on the degree of reality each will attribute to esse existentiae. Of interest is the fact that no such position is found in the texts of Scotus and Henry of Ghent. The texts of Soto do contain a doctrine of esse existentiae as a mode of essence but do not describe it as a positive existential reality.

The third tradition is manifested in the texts of the sixteen men cited by Suarez as its exponents although there is a variety of formulation as to the type of distinction of reason in question.

However, this tradition is one in interpreting the real distinctions of the first two traditions to be between *duae res* or a *res* and its mode. It is also one in rejecting these two traditions. Moreover, this third tradition is one in holding that the essence and existence in question is the actual existing essence and *esse in actu exercito*. It is between these that there is only a distinction of reason. However, these men agree that the essence abstractly conceived or essence as possible is distinguished from actual existence or actual essence as non-being from being. The basic reason for their rejection of a real distinction is that something cannot be intrinsically constituted in the existential order by something really distinct from it. For each is a being in its own right as distinct from the other. More basic than this is the fact that there is no *esse existentiae* in addition to the *esse essentiae* of a creature. Existence means nothing more than the actual existing essence and in no way signifies an existential *actus essendi* nor any accidental accretion. The men of this third tradition are characterized for Suarez by the fact that they are all opponents to some extent of any kind of a Platonic realism within being which is the most manifest feature of the first two traditions on this question.

In explaining the principles behind this third tradition Suarez first takes steps to remove any autonomous essential actuality apart from the divine intellect since he sees very clearly that the first two traditions follow from their doctrine of the divine ideas. For them, the divine ideas are the essences of creatures endowed with an *esse essentiae* in themselves as in Henry of Ghent. In Suarez' eyes this looks too much like the divine ideas enjoying some eternal existential status apart from God or that they have been created from eternity. As his first principle, and that of the third tradition, Suarez maintains that the essences of creatures, prior to their creation, are absolutely nothing in the sense of enjoying no real existential status. Though a critic of this Avicennian tradition on the divine ideas, Suarez still remains within that tradition since he endows the essences of creatures in the divine intellect with an *esse possibile*, an *esse objectivum* or an *esse cognitum* in much the same fashion as Duns Scotus in his critique of Henry of Ghent and as Durandus

in his critique of the same doctrine. Thus, in his critique of any Platonic realism of essence Suarez remains within the tradition of Duns Scotus and Henry of Ghent but much farther along that doctrinal curve which leads to the nominalism of Ockham. Suarez, in his second principle, carries his critique of any realism of essence into the created order of existing things. For, this principle states that *ens in potentia* and *ens in actu* are immediately distinguished as non-being and being. In this Suarez counters those who maintained that *ens in potentia* or essence enjoys some positive mode of being, though diminished, within the existent creature and his critique follows the pattern of the defense of his first principle.

Suarez' criticisms even carry within the tradition on the distinction of reason, rejecting all except the one which enables him to deny that existence is of the essence of the creature. He finds this feature in what he calls a distinction of the reasoned reason -- a distinction of reason with a foundation in reality. Because a creature has been created or is contingent it can cease to be and can found a concept of itself as non-existent. This concept of a creature prescinded from existence outside its causes but apt to exist, unlike a chimera, is signified by *essentia* for Suarez. The same concept of that creature as existing and outside its causes is signified by *existentia*. *Existentia* is denied of *essentia creaturae* because the concept of the possible essence does not explicitly include what is signified by *existentia* or is included in the concept of the actual essence. In a word, the possible essence and the actual essence are mentally distinguished and the concept of the actual essence as possible and the concept of the same essence as actual are likewise so distinguished. Thus Suarez' distinction of reason is a result of a comparison between two concepts or rather, different degrees of contraction or adequation of one concept with respect to the actual existing essence, the one more confused and obscure and less contracted than the other. It is just such a distinction which enables Suarez to deny *existentia* of *essentia creaturae*. Hence, this distinction between essence and existence is said to be in the existent thing and founded on

it by extrinsic denomination from the concepts of this one existent essence.

By way of this extrinsic denomination Suarez can maintain that the existent essence has some internal metaphysical structure of essence and existence. For, on the basis of the two concepts of essence and existence and their degrees of adequation to the existent essence, the concept of existence is said to contract and be contracted by the concept of essence. In this way existence is said to be added to essence. This conceptual structure of the contracted and the contracting is then imposed on the actual essence by extrinsic denomination from these concepts. Thus the constant insistence of Suarez on the intrinsic constitution of the actual essence by existence does not imply any metaphysical structure within the actual existent but is a conceptual structure imposed on this existent. Versus an order of essence within being Suarez offers an order of a radically contingent essence which is being itself, impervious to any existential co-principle as it is to any distinction within it. In this struggle against the Platonic realism of essence in the first two traditions, being, in the hands of Suarez, has lost its metaphysical dimension to the extent it has become an impenetrable, impervious, indistinct essence. Reality is only metaphysical by extrinsic denomination and the science of metaphysics itself becomes nothing more than an analysis of concepts."

72. ———. 1962. "Suárez, Historian and Critic of the Modal Distinction Between Essential Being and Existential Being." *New Scholasticism* no. 36:419-444.
73. ———. 1979. "Old Bottles and New Wine: A Rejoinder to J. C. Doig." *New Scholasticism* no. 53:515-523.

"This paper is a criticism of an article in the same journal by J. C. Doig, *Suárez, Descartes and the objective reality of ideas*. On the basis of primary and secondary source materials, it is made clear that Doig's exclusively extramental interpretation of

Suárez's objective concept is insensitive to the obvious intramental dimensions of that teaching. Thus Doig's claim of a doctrinal discontinuity between Suárez and Descartes is found wanting due to a failure to consider Suárez's position on the realism of the possibles, their role in scientific knowledge in general, and the part they play in metaphysics."

"The purpose of the work is to clarify the ambiguous use, in Suárez, of the terms "*esse cognitum/esse objectivum*" so that no charge of "mentalism" can be brought while, at the same time, it can be acknowledged that "*res*" enjoys an intramental mode of using, i.e., "objectively" ("*conceptus objectivus*") as well as an intramental "normal" mode of being ("*conceptus formulis*")."

"An examination of Suárez's position on the Eternal Truths by bringing to bear upon it a controversy between Chrysostomus Javelli, O. P. (+1538) (who is defending Harvey Nedellec, a.k.a. Hervaeus Natalis, O. P. (+1323) and Paulus Barbus Soncinas, O. P. (+1494) on the issue of efficient causality with respect to necessary essential propositions and the distinction between a non-existential use of the copula "est" vs an existential use thereof."

80. ———. 1994. "John Poinset on Created Eternal Truths *vs* Vasquez, Suárez and Descartes." *American Catholic Philosophical Quarterly* no. 68:425-446.
- "An examination of John Poinset's discussion of created eternal truths wherein he criticizes Gabriel Vasquez's interpretation of Aquinas' position on the eternal truths. What is taken to task is Vasquez's insistence upon a positive eternal aptitudinal truth on the part of necessary as well as contingent truths with regard to creatures. This is such that these truths are not eternal because known by God's eternal intellect. Rather, they are eternally true (aptitudinally) in themselves apart from the divine intellect. Linkage to Suárez's and Descartes' positions on created eternal truths is also considered."

René Descartes. Bibliographie Chronologique et Annotée (Première Partie: 1616-1628)

Introduction

Cette bibliographie des œuvres de Descartes en ordre chronologique tient compte aussi des publications non comprises dans l'édition Adam-Tannery; dans les citations l'orthographe, qu'à la fin du XVII^e siècle n'était pas encore totalement fixée, est modernisée; pour chaque texte je donne la référence aux suivant éditions:

- AT = Charles Adam, Paul Tannery (éds.), *René Descartes, Œuvres*, Nouvelle présentation par J. Beaudé, P. Costabel, A. Gabbey et B. Rochot, Paris: Vrin 1964-1974 (Édition du Jubilé, 1996, 11 volumes); première édition 1897-1913 (Les tomes I-V contiennent la *Correspondance*).
- B Op. I = Giulia Belgioioso (éd.), *René Descartes, Opere 1637-1649*, con la collaborazione di I. Agostini, F. Marrone, M. Savini, Testo francese e latino a fronte, Milano: Bompiani, 2009.
- B Op. II = Giulia Belgioioso (éd.), *René Descartes, Opere postume 1650-2009*, con la collaborazione di I. Agostini, F. Marrone, M. Savini, Testo francese e latino a fronte, Milano: Bompiani, 2009.
- CO = Vincent Carraud, Gilles Olivo (éds.), *René Descartes, Étude du bon sens, La recherche de la vérité et autres écrits de jeunesse (1616-1631)*, Paris: Presses Universitaires de France 2013.

- O I = Jean-Marie Beyssade et Denis Kambouchner (éds.), *René Descartes, Œuvres complètes I. Premiers écrits. Règles pour la direction de l'esprit*, Paris: Gallimard, 2016.
- O III = Jean-Marie Beyssade et Denis Kambouchner (éds.), *René Descartes, Œuvres complètes III. Discours de la Méthode et Essais*, Paris: Gallimard, 2009.

Pour la *Correspondance*, je donne les références aux éditions Adam-Tannery (AT, volume et pages), Armogathe (O VIII, 1 et 2, volume et pages), Belgioioso (B, et le nombre de la lettre).

Pour la liste des éditions de références et des abréviations voir [René Descartes. Outils de recherche: Biographies, Dictionnaires et Lexiques des Ses Œuvres](#)

L'Inventaire des écrits de Descartes

- [Inventaire de Stockholm] *Inventaire succinct des Écrits*. 1656.
- AT X 5-12; *Note manuscrite de Leibniz des papiers de Descartes* (AT X 208-209).

Inventaire des papiers qu'il avait emportés en Suède; un autre inventaire, rédigé à Leyde n'a pas été retrouvé.

"A la mort de Descartes, 11 février 1650, un inventaire fut dressé à Stockholm, le 14 février, des papiers qu'il avait emportés en Suède, et un autre à Leyde, le 4 mars, de ceux qu'il avait laissés en Hollande. Baillet, dans sa *Vie de Monsieur Descartes* 1691, t. II, p. 427-8, et 428-9), nous apprend, avec force détails, comment ont été faits les deux inventaires; mais il ne donne le texte ni de l'un ni de l'autre. Des recherches faites en Hollande (septembre 1894), pour retrouver le second, n'ont pas abouti. Et d'ailleurs nous savons, par des témoignages du temps, que Descartes avait emporté à Stockholm ses papiers principaux."

(Charles Adam, AT X, pp. 1-2, notes omises)

Une traduction latine abrégée de l'inventaire se trouve dans: Pierre Borel, *Elenchus manuscriptorum Cartesii Stocholmi repertorum post Eius obitum anno 1650*, in: *Vitae Renati Cartesii summi philosophi compendium*, Paris 1656, pp. 16-19;

texte français publié en 1887 par Bierens de Haan et, dans un version révisée, par Charles et Henri Adam en 1894 (AT X pp. 5-12).

Dans l' *Introduction* à l'édition critique de la correspondance de l'an 1643, Theo Verbeek a montré que l'inventaire n'a pas été rédigé à Stockholm le 14 février 1650, mais à La Haye avec la collaboration de Christiaan Huygens à la fin du 1653 ou au début du 1654 (*The Correspondence of René Descartes 1643*, édité par Theo Verbeek, Erik-Jan Bos, Jeroen van de Vern, Utrecht, Zeno Institute for Philosophy The Leiden–Utrecht Research Institute, 2003, pp. XV-XXI).

"All this confirms that the 'Stockholm inventory' cannot date from 1650. In fact, it is likely that it was made in The Hague, with the help of Christiaan Huygens, somewhere at the end of 1653 or the beginning of 1654, that is, almost four years after Descartes' papers came into Chanut's possession." (p. XXI).

Bibliographie

1. Armogathe, Jean Robert, Carraud, Vincent, and Feenstra, Robert. 1616. "La Licence en droit de Descartes : un placard inédit de 1616." *Nouvelles de la République des Lettres* no. 2 (1988):123-145.

Retrouvée en 1981 à Poitiers, manque dans AT.

Édition critique du texte latin (pp. 125-131) avec la traduction en français, (pp. 131-133) de la thèse en droit soutenue à Poitiers le 21 décembre 1616.

Première édition : Jean-Robert Armogathe et Vincent Carraud, "Texte original et traduction française d'un inédit de Descartes: *Dédicace du placard de la licence en droit*", *Archives de Philosophie*, 50, 1987, *Bulletin Cartésien* XV, pp. 1-4.

Texte latin et traduction française, CO, pp. 21-29; texte latin et traduction italienne, B Op. II, 1454-1461; nouvelle traduction par Jean-Marie Beyssade et Michelle Beyssade avec la collaboration d'André Laingui, O I, 46-49.

Traduction anglaise dans : Kurt Smith, "Descartes' Life and Works", *The Stanford Encyclopedia of Philosophy*, Edward N. Zalta (ed.), (URL = plato.stanford.edu/entries/descartes-works/).

"Les écrits authentiques du jeune Descartes sont rares : la lettre d'un jeune Descartes, «collégien à La Flèche», devant être attribuée à son frère Pierre, les premiers textes repérés remontent aux manuscrits décrits dans l'inventaire de Stockholm; ils ne nous sont parvenus que par les extraits traduits par A. Baillet dans sa *Vie* ou dans les textes, aujourd'hui perdus, publiés et traduits par Foucher de Careil.

Le document que nous présentons est donc important à double titre: par les renseignements biographiques nouveaux fournis sur une période encore mal connue de la vie de René Descartes, d'une part; par le texte lui-même, d'autre part. Nettement plus longue que les dédicaces habituelles des placards de thèses, la dédicace de 1616 se présente comme une autobiographie intellectuelle, et même comme une «histoire de [mon] esprit» (pour reprendre, en anticipant, l'expression de Guez de Balzac): c'est ce qui nous a autorisé, dans l'annotation, à citer fréquemment la première partie du *Discours de la Méthode*. « Le philosophe qui dit 'je' » est d'abord celui qui «représente sa vie» et écrit l'histoire de ses études jusqu'à ce qu'il fût «reçu au rang des doctes», l'histoire de son esprit. De cette dédicace, Descartes aurait déjà pu dire : «ne proposant cet écrit que comme une histoire»." (p. 123).

2. Descartes, René. 1618-19?; 1628? *L'art de l'escrime (Extraits de Baillet)*.

Baillet I 35, II 407; AT X, 535-538; B Op. II, 916-917.

"Descartes passa l'hiver de la fin de 1612 et du commencement de 1613 dans la ville de Rennes, à revoir sa famille, à monter à cheval, à faire des armes, et aux autres exercices convenables à sa condition. On peut juger par son petit traité d'*Escrime* s'il y perdit entièrement son temps." Baillet I, VIII, 35.

"Nous trouvons aussi parmi les manuscrits de M. Descartes un petit traité touchant la manière de faire des armes sous le titre

de l'*Art d'escrime*, où il paraît que la plupart des leçons qu'il y donne sont appuyées sur sa propre expérience. Après avoir dit quelque chose en général de la qualité de l'épée et de la manière de s'en servir, il divise son traité en deux parties.

Dans la première il fait « voir comme on peut s'assurer contre tous les efforts de l'adversaire, et en tirer de l'avantage pendant qu'on est en *mesure longue*, et comme on peut le mettre sûrement en *mesure courte* ». Dans la seconde il examine comment étant entré en mesure courte, on peut infailliblement vaincre. Et pour cela il suppose deux hommes d'égale grandeur, d'égale force, et d'armes égales, se réservant à marquer ensuite ce qu'il y a à faire en cas d'inégalité."

Baillet II, XX, 407 ; *Abrégé* 23 et 326.

Selon Paul Adam la date de composition de ce petit traité (aujourd'hui perdu) serait le 1628 ; selon Carraud et Olivo, 1618-1619 (CO, pp. 35-36) .

3. Beeckman, Isaac. 1618-19. *Extraits du Journal tenu par Isaac Beeckman*.

Le *Journal tenu par Isaac Beeckman de 1604 à 1634*, (abrégé CDW) a été publié en quatre volumes par Cornelis de Waard, La Haye: Martinus Nijhoff, 1939-1953.

Texte latin AT X : I. *Varia*, 44-66; B Op. II, 1316-1335; II. *Physico-mathematica*, 67-78; B Op. II, 1336-1351; traduction par Frédéric de Buzon, O I, *Notes du Journal (1618-1619)*, 85-97; *Opuscules de Descartes insérés dans le Journal de Beeckman* 98-106.

AT X, I. *Varia* : Angulum nullum esse male probavit Des Cartes 46 ; II. Turbo puerorum, id est *een worptop*, cur erectus flet, cùm vertitur 51 ; III. Chordae majores intactas minores et consonantes tactae movent 52 ; IV. Physico-mathematici paucissimi 52 ; V. Fistula fortius inflata cur in octavam abeat 53 ; VI. Testudinis (*een lute*) chordas disponere 53 ; VII. Quartâ à consonante chorda remota non tremit. — Quarta à quintâ dignoscere 54 ; VIII. Quadratum radici aequale datum 54 ; IX. Mr. Duperon 56 ; X. Bisectio in musicis facillima et gratissima 56 ; XI. Lapis cadens in vacuo cur semper celerius cadat 58 ; XI

bis. Lapidis cadentis tempus supputatum 58 ; XII. Modi non dulces et iclus testimonio probati 61 ; XIII. Modi modorum argumento probati 62 ; XIV. Modi modorum ab objectione defensi 63 ; XV. Ars Lulli cum Logicâ collata 63-66.

AT X, II. *Physico-mathematica* : I. Aquae comprimentis in vase ratio reddita à D. Des Cartes 67 ; II. Lapis in vacuo versus terrae centrum cadens quantum singulis momentis motu crescat, ratio Des Cartes 72-74.

"Une des découvertes les plus importantes pour la compréhension de l'évolution de la pensée cartésienne fut celle du *Journal* tenu par Isaac Beeckman de 1604 jusqu'à sa mort, survenue le 19 mai 1637 (*). C. de Waard retrouva ce manuscrit à la bibliothèque de Middelburg en juin 1905; immédiatement avisé, Ch. Adam en tint compte dans le tome X des *Œuvres* de Descartes. Cela suppose une grande rapidité de travail : le tome X parut en 1908, mais l'*Avertissement* d'Adam est daté du 15 décembre 1905. D'autres fragments du *Journal*, beeckmaniens cette fois, paraissent dans l'édition que le même C. de Waard donne de la *Correspondance* de M. Mersenne à partir de 1933. On peut remarquer qu'à mesure que les textes de Beeckman sont connus, se modifie favorablement l'image de leur auteur ; il est vrai qu'elle était d'assez mauvaise qualité au rapport de certaines lettres de Descartes, et surtout de Baillet. Un témoin de cette évolution est A. Koyré, qui écrivait en 1939 dans les *Études Galiléennes*, p. 108-9 que « la publication par M. Cornelis de Waard de nouveaux fragments du *Journal* de Beeckman (...) a modifié sensiblement l'image que l'on se faisait, ou plus exactement que l'on ne se faisait pas du Physicien hollandais. En effet, Beeckman, on s'en rend compte maintenant, mérite pleinement l'appellation de *vir ingeniosissimus* dont l'avait gratifié Descartes ; et, ce qui plus est, il nous apparaît désormais comme un chaînon de première importance dans l'histoire de l'évolution des idées scientifiques ; enfin, son influence sur Descartes semble avoir été beaucoup plus profonde que l'on n'a pu le supposer jusqu'ici (...). » A fortiori, cette image s'améliore encore davantage grâce à la publication de la quasi intégralité du *Journal* par, encore et toujours, C. de Waard. Les quatre tomes de cette édition

paraissent à La Haye entre 1939 et 1953 ; ils renferment avec l'indication du foliotage l'essentiel des notes scientifiques, à l'exception très notable de la copie que Beeckman fit faire du *Compendium Musicae* vers 1628, de quelques notes d'intérêt divers: détails familiaux, observations météorologiques, informations maritimes etc.

(...)

Le *Journal* est décrit avec une grande exactitude dans le premier tome de l'édition, pp. XXV-XXXIV ; il se compose d'environ cinq cents feuilles contenant de brèves notes de lecture, de pensées propres, et de remarques concernant les rencontres que faisait Beeckman. Les notes relatives à Descartes ont en premier attiré l'attention, et ceci justement. L'intérêt des renseignements fournis par Beeckman est en effet capital. Les textes cartésiens consignés sont les premiers que nous connaissons, et il apparaît invraisemblable que l'on en découvre d'antérieurs. D'autre part, ils occupent une position critique dans la vie du philosophe ; ils terminent les années d'étude, et débutent une production propre. Descartes rencontra Beeckman (1) le 10 novembre 1618 à Breda. Très rapidement une estime mutuelle s'installe : « Ce Poitevin a fréquenté beaucoup de Jésuites et autres hommes de science. Il dit cependant n'avoir jamais rencontré personne, à part moi, qui use, ce dont je me réjouis, de ce mode d'étude, et joigne exactement la physique avec la mathématique. Et moi, je n'ai jamais parlé qu'à lui de ce mode d'étude (2) ». A de nombreuses reprises les suites de cette rencontre ont été décrites (3); en particulier, les commentateurs mettent en relation les fragments cartésiens du *Journal* avec les *Cogitationes Privatae*. C'est le cas de l'ensemble des *Premières Pensées de Descartes*, que M. H. Gouhier publia en 1958 (Paris, Vrin). D'une façon générale, on peut dire cependant que les historiens des sciences ont fait porter l'accent sur des problèmes « nobles » tels celui de la chute des graves; en revanche, sauf exceptions, ont été négligés les problèmes relatifs à l'acoustique, que nous voudrions décrire avec quelques détails." (pp. 1-3; Frédéric de Buzon, *Descartes, Beeckman et l'acoustique*, Archives de philosophie, 44, 1981, pp. 1-8).

(1) La rencontre est racontée par Lipstorp puis Baillet, cités dans A-T, X, p. 47-51. Voir G. Rodis-Lewis, *L'œuvre de Descartes*, Paris, Vrin 1971, p. 25 et note p. 435.

(2) Nous reprenons la traduction de Mme Rodis-Lewis (op. cit., p. 26) en rétablissant, contre une suggestion d'A-T X, p. 52, le texte original: le *g* de *gaudeo* est parfaitement lisible sur le ms.

(3) Voir les notes bibliographiques de Mme Rodis-Lewis, op. cit., et C. L. Thiss-Schoute, *Nederlands cartesianisme*, Amsterdam 1954, pp. 557-560.

(*) [Beeckman était né le 10 décembre 1588]

"Examinons, dans cette masse énorme de documents, ceux qui se rapportent sans conteste à Descartes, puisqu'il y est nommé. Ils se trouvent en quatre endroits différents :

[1618-1619]

1. — Fol. 97 verso, à fol. 118.
2. — Fol. 160 recto, à fol. 178 verso.
3. — Fol. 287 verso, à fol. 290 verso.

[1628-1629]

4. — Fol. 333 recto, à fol. 334 recto, l. 34. — Fol. 338 recto, l. 9, à fol. 340 recto, l. 24. — Fol. 341 verso, l. 16-30. — Fol.* 352 recto, l. 8-24." (Charles Adam, AT X, *Avertissement*, p. 22).
4. Descartes, René. 1618. *Musicae Compendium*.

AT X, 89-141; B Op. II, 30-105; traduction française par Frédéric de Buzon, O I, 149-189.

Le manuscrit original est perdu ; première édition posthume: *Musicae compendium*, Trajecti ad Rhenum: Gisberti a Zyll & Theodori ab Ackersdijck, 1650.

Traduction française sur le manuscrit originel par Nicolas-Joseph Poisson (1637-1710) publiée dans : *Traité de la mécanique composé par Monsieur Descartes. De plus l'abrégé de musique du mesme auteur mis en françois. Avec les éclaircissemens nécessaires* (l'*Abrégé* est à pp. 53-98 ; les

Elucidationes physicae in Cartesii musicam de N.-J. Poisson à pp. 101-127), Paris, 1668 (reprint: *Abrégé de musique*, suivi des *Eclaircissements physiques sur la musique de Descartes*, Paris, Méridiens Klincksieck, 1990, introduction et notes par Pascal Dumont, préface de Joseph-François Kremer).

Édition critique avec traduction, présentation (pp. 5-49) et notes par Frédéric de Buzon, *Abrégé de Musique. Compendium Musicae*, Paris: Presses Universitaires de France, 1987.

C'est la première œuvre de Descartes, rédigée du 10 novembre au 31 décembre 1618 pour son ami Isaac Beeckman.

Le *Journal* de Beeckman contient "la copie du *Compendium Musicae* que Descartes, à Bréda, remit à Beeckman pour ses étrennes de 1619. Celui-ci le confia en 1627 au copiste qui écrivait en gothique et qui copia encore d'autres documents de la même époque (...). Lorsque Beeckman fit relier ses papiers en 1628, cet écrit et ceux du même lot devaient interrompre l'ordre chronologique des notes. Beeckman restitua l'original à Descartes en 1629. Depuis lors divers savants hollandais en prirent des copies : Constantin Huygens en 1637 et Van Schooten vers 1640, dont les exemplaires sont conservés respectivement à la Bibliothèque de l'Université de Leyde et à celle de l'Université de Groningue." (Cornelis de Waard, *Avertissement au premier volume du Journal tenu par Isaac Beeckman de 1604 à 1634. Tome 1 : 1604-1619*, The Hague: Martinus Nijhoff, 1939, p. XXXVIII.)

Sur l'approche mathématique de Descartes à la musique, voir la lettre à Beeckman du 24 janvier 1619: "Si vous considérez cela, et le reste de ma *Musique*, (8) avec attention, vous verrez que tout ce que j'ai écrit des intervalles des consonances, des degrés et des dissonances s'y trouve démontré de façon mathématique, mais en gros, de manière confuse et beaucoup trop concise.

Mais en voilà assez pour aujourd'hui. Le reste à plus tard." (AT X 153; O VIII 2, 320; B 1).

(8) Le *Compendium musicae*, offert à Beeckman quelques semaines plus tôt.

"Comme l'indique son nom, le *Compendium Musicae* est un traité de musique, et non pas d'harmonie ; ce terme même n'apparaît pas. Cette remarque prend de l'intérêt lorsque l'on aperçoit que, situation unique à notre connaissance, le rythme est traité avant les consonances et les problèmes de hauteur. D'autre part, un ensemble de propositions préalables, les *Praenotanda*, définit les limites de l'objet musical, et plus généralement de l'objet esthétique ; ces propositions produisent également la théorie du rythme et la théorie de la consonance. On comprend aussi qu'on ait pu en inférer une esthétique cartésienne (10)." (Frédéric de Buzon, *Présentation*, p. 8).

(10). V. O. Revault d'Allones, *L'esthétique de Descartes*, Revue des Sciences humaines, n° 61, 1951.

"Les commencements d'une méthode.

Lorsqu'il publia une nouvelle édition du *Discours de la Méthode* le P. Poisson remplaça, en quelque sorte, la *Géométrie* par un traité de mécanique, l'*Explication des machines et engins*, et par la traduction de l'*Abrégé*. [*] Ces deux œuvres étaient donc promues au rang d'essais de la méthode, au même titre que la *Dioptrique* et les *Météores*. Il y a là un abus évident, puisque les *Essais* étaient avec le *Discours* œuvres publiques, alors que les opuscules ainsi annexés n'étaient pas évidemment destinés à être publiés ; et l'*Abrégé* moins encore, que son auteur destinait aux seules archives beeckmaniennes. De plus, si l'on admet que la méthode de Descartes est contenue initialement dans les *Regulae*, et si l'on date le plus probablement cet ouvrage autour de 1628, on ne peut croire que l'*Abrégé* soit la mise à l'épreuve d'une méthode que Descartes ne révélerait à lui-même que dix ans après.

Il reste que l'assimilation de Poisson fait signe vers un problème majeur, celui de la méthode de Descartes avant la méthode, qui pourrait contribuer à définir certaines constantes logiques, voire psychologiques à l'œuvre dès 1618. Quelques caractères peuvent sans doute être ainsi décrits.

En premier lieu, on peut noter qu'à la différence des traités de musique antérieurs — que Descartes n'a pas sous la main (43) —, et à l'unisson des productions scientifiques et philosophiques ultérieures, l'*Abrégé* néglige à peu près toute référence historique, et ne fonde jamais la vérité de son discours sur la moindre évocation des autorités passées; le traité est suffisant par rapport à la chose même, et comme dans la *Géométrie*, Descartes laisse à son lecteur le soin de tirer les conclusions des prémisses. Il n'y a là que l'essentiel. Ce qui explique à la fois l'importance du traité dans l'histoire de la théorie (44), et un certain mépris dans la musicologie classique (45).

De plus, si la méthode n'est jamais thématifiée pour elle-même dans l'*Abrégé*, elle offre des analogies intéressantes avec la suite de l'œuvre. On a déjà souligné le fait que Descartes procède constamment du simple au complexe; mais on peut aussi considérer la corde, réduite à sa seule dimension de longueur, comme, précisément une *dimensio*, au sens de la Règle XIV, c'est-à-dire « le mode et la raison, selon laquelle on considère que quelque sujet est mesurable » (46), ou bien une nature simple. Autre nature simple, le temps, et ses divisions qui correspondent aux passions du corps ; l'*Abrégé* ainsi se borne à étudier les paramètres par lesquels la musique est mesurable, en négligeant les qualités (timbres, nuance forte / piano, etc.), laissés aux physiciens (47).

Enfin il est remarquable que Descartes réduise la connaissance de la nature réelle du son et de sa perception par l'oreille au minimum nécessaire à une théorie de l'art. Il y a d'ailleurs une continuité au plan même des exemples avec les textes ultérieurs ; la Règle XIII évoque la question discutée vers 1628 par Mersenne et Beeckman relative aux cordes de grosseur et de tension différentes; comme il l'avait fait en 1618, Descartes met entre parenthèses toute référence à la vibration de la corde, cette donnée n'étant pas conçue comme nécessaire (48).

Ainsi, l'écrit de circonstance qu'est le *Compendium Musicae* a des résonances précises dans l'œuvre ultérieure, tant du côté de l'application de la mathématique à la réalité physique que du

côté de la physiologie et de la théorie des passions. C'est sur ce double registre que joue constamment Descartes ; si l'art a pour fin d'émouvoir les passions, définition commune à Descartes et à Caccini (49), il reste la tâche philosophique de connaître ces passions; les silences de Descartes sur les passions forment ainsi l'indication d'un programme (50).

Il resterait à définir la musique de Descartes après le *Compendium*; elle est connue par la correspondance, et l'on sait le talent de critique déployé par Descartes dans la querelle de Boësset et de J. A. Ban; mais l'ensemble paraît inachevé: « Si je ne meurs que de vieillesse, j'ai encore envie quelque jour d'écrire de la théorie de la musique » (51)." (Frédéric de Buzon, *Abrégé de Musique*, cit., *Présentation*, pp. 16-18).

5. ——. 1619. [*Registre de 1619*].

Le registre autographe de Descartes, légué par Clerselier à l'abbé Legrand, a été perdu après la mort de Legrand dès 1704.

Index des titres: *Parnassus* (18 feuillets); *Praeambula* (4 pages); *Experimenta* (cinq feuillets et demi); *Democritica* (sept ou huit lignes); *Olympica*.

CO, 50-83: Les fragments philosophiques sont édités (52-64), traduits (53-65) et annotés (67-83) dans : "<Registre de 1619> *Parnassus*, *Democritica*, *Praeambula*, *Experimenta*; Parnasse, Démocritiques, <Notes:>, Préambules, Observations, <Inventer>.

"L'article C de l'Inventaire de Stockholm énumère plusieurs titres de petits traités, que Descartes avait écrits, ajoute-t-on, « en sa jeunesse ». Les textes originaux, remis comme nous savons à Clerselier, sont, à l'heure qu'il est, malheureusement perdus. Toutefois quelque chose, et même, on peut le dire, l'essentiel en a été conservé par deux voies différentes. Baillet eut ces textes entre les mains, et il en fit mention, et les traduisit même en plusieurs endroits, dans sa *Vie de Monsieur Des-Cartes* en 1691. D'autre part, les mêmes textes avaient été mis déjà par Clerselier à la disposition de Leibniz, pendant un séjour de celui-ci à Paris en 1675-76 ; Leibniz en avait pris une copie, et cette copie fut déposée plus tard avec ses papiers à la

Bibliothèque royale de Hanovre." (AT X, *Avertissement*, p. 173).

"M. Chanut ambassadeur de France en Suède, et le baron de Kroneberg commis par la reine Christine, pour assister à l'inventaire de ce qu'il avait laissé à sa mort, trouvèrent parmi les écrits de sa composition un registre relié et couvert de parchemin, contenant divers fragments de pièces différentes auxquelles il paraît qu'il travailla pendant ce temps-là. C'était: 1. *Quelques considérations sur les sciences* en général [le titre du manuscrit est *Parnassus*]; 2. *Quelque chose de l'algèbre*, 3. *Quelques pensées écrites sous le titre Democritica*; 4. Un recueil d'observations sous le titre *Expérimenta*; 5. Un traité commencé sous celui de *Preambula: Initium sapientiæ timor Domini*; un autre en forme de discours, intitulé *Olympica*, qui n'était que de douze pages, contenait à la marge, d'une encre plus récente, mais de la même main de l'auteur, une remarque qui donne encore aujourd'hui de l'exercice aux curieux. Les termes auxquels cette remarque était conçue portaient: *XI Novembris 1620, cœpi intelligere fundamentum Inventi mirabilis*, dont M. Clerselier ni les autres cartésiens n'ont encore pu donner l'explication. Cette remarque se trouve vis-à-vis d'un texte qui semble nous persuader que cet écrit est postérieur aux autres qui sont dans le registre, et qu'il n'a été commencé qu'au mois de novembre de l'an 1619. Ce texte port ces termes latins: *X Novembris 1619, cùm plenus forem Enthousiasmo, & mirabilis scientiæ fundamenta reperirem &c.*

Mais le principal de ces fragments, et le premier de ceux qui se trouvaient dans le registre était un recueil de *Considérations mathématiques*, sous le titre de *Parnassus*, dont il ne restait que trente-six pages. Le sieur Borel a cru que c'était un livre composé l'an 1619, sur une date du premier jour de janvier, que M. Descartes avait mise à la tête du registre. Mais il se peut faire que la date n'ait été que pour le registre en blanc, et qu'elle n'ait voulu dire autre chose, sinon que M. Descartes aura commencé à user de ce registre le premier de janvier 1619, pour continuer de s'en servir dans la suite des temps selon ses vues et sa volonté. L'opinion du sieur Borel n'en est pourtant pas

moins probable, puisque M. Chanut a remarqué dans l'Inventaire de M. Descartes que tous les écrits renfermés dans ce registre (a) paraissent avoir été composés en sa jeunesse." (Baillet I, 50-51)

(a) Coté C de l'Inventaire.

"Descartes est mort à Stockholm le 11 février 1650 ; trois jours après, le 14, un inventaire fut dressé des papiers qu'il avait emportés en Suède (*). Il en reste deux copies ; l'une, assez fautive appartenait à Constantin Huygens et se trouve à la Bibliothèque de l'Université de Leyde; l'autre, qui est à la Bibliothèque nationale, vient sans doute de la collection Clerselier. Charles Adam a soigneusement édité ce texte au début du tome X des *Œuvres*.

Cet inventaire contient vingt-trois articles, A à Z, les lettres I et J ne comptant que pour une, et de même U et V. Les écrits les plus anciens de Descartes se trouvent à l'article C (1).

Il s'agit d' « un petit registre en parchemin, quotté en dedans de la couverture: Anno 1619 *Kalendis Januarii* ». Ceci veut dire que Descartes a décidé, le 1er janvier 1619, de se servir de ce registre.

Ouvrons-le. Il se présente ainsi :

1° « 18 feuillets de considérations mathématiques sous un titre : *Parnassus*. »

2° « six feuillets vides »

3° « six feuillets écrits »

4° « En prenant le livre d'un autre sens, le discours intitulé *Olympica*, et à la marge : *XI Novembris coepi intelligere fundamentum inventi mirabilis*. »

5° « Reprenant le livre en son droit sens, sont deux feuillets écrits, de quelques considérations sur les sciences ; »

6° « puis une demi-page d'algèbre »

7° « puis douze pages vides »

8° « puis sept ou huit lignes intitulées *Democritica* »

9° « huit ou dix feuillets blancs » (2)

10° « cinq feuillets et demi écrits, mais en tournant le livre, sous ce titre *Experimenta* »

11° « douze feuilles blanches »

12° « quatre pages écrites sous ce titre : *Praeambula. Initium sapientiae timor Domini.* »

« Tout ce livre cotté C, ajoute l'auteur de l'inventaire, paraît avoir été écrit en sa jeunesse. »

L'examen de ce registre montre deux choses :

D'abord, la plupart de ces écrits semblent n'être que des commencements destinés à recevoir une suite sur les pages blanches que le jeune homme laisse après chacun d'eux.

Ensuite, le cahier a été commencé par les deux bouts."

(1) AT X, p. 7-8.

(2) Les mots « huit ou dix feuillets » peuvent paraître étranges ; en fait, il y a huit feuillets blancs + le verso de la feuille dont le recto porte les *Democritica* + le verso du dernier feuillet des *Experimenta*.

Henri Gouhier, *Les premières pensées de Descartes*, Paris, Vrin, 1979 pp. 11-12.

(*) Sur la date voir la note à l'*Inventaire succinct des écrits* [Inventaire de Stockholm].

6. ——. 1619. [*Registre de 1619:*] *Parnassus (Ms. de Leibniz : Cogitationes privatæ)*.

Première édition (texte latin et traduction française) : Foucher de Careil I, 2-56; AT X, 213-248; B Op. II, 1060-1095; traduction par Frédéric de Buzon et André Warusfel, O I, 198-214.

"Je terminerai complètement mon traité avant Pâques, et si je trouve des libraires et s'il me paraît digne, je le publierai comme je l'ai promis aujourd'hui, 1620, 23 février" (AT X, p.

218, original en latin): nous ne savons pas à quel écrit se réfère Descartes.

"Nous pensons comme Henri Gouhier que la partie physique et mathématique des *Cogitationes privatae* a de bonnes chances de reproduire le *Parnassus*, qui s'ouvre avec le souvenir de la rencontre de Beeckman du 10 novembre 1618 (AT X, 219, 5). "

(CO, p. 67).

"Le texte de ces dernières notes surtout, tel que l'a donné Foucher de Careil, est des plus défectueux. Et comme le manuscrit manque, pour contrôler ce texte et y faire les corrections nécessaires, grand a été notre embarras. Le regretté Paul Tannery eût sans aucun doute réussi à déchiffrer ces énigmes; mais nous l'avons perdu trop tôt, et avant qu'il eût pris la peine d'y regarder de près. Nous avons dû nous adresser ailleurs. Par bonheur, une des lettres à Beeckman, qui viennent d'être retrouvées, nous fournissait la preuve que Descartes s'était encore servi, en ces premières années, de *caractères cossiques* (voir ci-avant, p. 155-156)."

(...)

"Gustav Enestrom, directeur de la Bibliotheca Mathematica, à Stockholm, possède en pareille matière la plus incontestable autorité. Fort obligeamment, il voulut bien se mettre à l'œuvre, et travailler pour Descartes : comme on pouvait s'y attendre, il remit tout en ordre et expliqua fort bien les passages déclarés ailleurs inexplicables. Nous le désignerons, à la fin des notes qu'il a rédigées pour cette édition, par les initiales de son nom G. E."

(Charles Adam, AT X, pp. 211-212).

"Charles Adam avait publié les *Cogitationes privatæ* respectant la structure du texte donné par Foucher de Careil, certes en l'amendant fortement, mais sans tenter de distinguer entre les différents ensembles de notes pour se rapprocher de la description de l'inventaire de Stockholm. Celui-ci, de même que la lecture de Baillet (*Vie*, I, p. 50-51), permet cependant de distinguer des centres d'intérêt et autorise le regroupement des

notes scientifiques sous le titre qui les désignait. La question de savoir ce qui était précisément contenu dans le *Parnassus* est cependant indécidable dans son détail, en raison de l'état des sources et parce que l'on doit reconnaître avec Henri Gouhier que « Leibniz n'a [...] pas suivi l'ordre du registre quand on l'ouvre du côté de la couverture datée » (*Les Premières Pensées de Descartes*, p. 15 : en effet, les premières remarques transcrites par Leibniz ne relèvent pas des mathématiques, même en prenant le terme au sens le plus large, c'est-à-dire associant mathématiques pures et appliquées. L'éditeur doit écarter les textes qui, visiblement, dépendent des autres ensembles du recueil." (Frédéric de Buzon et André Warusfel, *Présentation*, O I, 194).

7. ——. 1619. [*Registre de 1619:*] *Praeambula (Ms. de Leibniz : Cogitationes privatæ)*.

AT X, 213-248; B Op. II, 1060-1095; traduction par Michelle Beyssade, O I, 198-220 et 270-274.

"Les papiers de Descartes, remis par Chanut à son beau-frère Clerselier, et qui n'ont pas été retrouvés, ne nous sont pas connus seulement par les extraits qu'en a donnés Baillet, dans sa *Vie* du philosophe (voir ci-avant, p. 173-177). Le même Baillet prévient le lecteur que, pour l'aider dans sa tâche, l'abbé Nicaise a pris la peine « d'écrire à Rome, d'où M. Auzout, qui a vu M. Descartes à Paris, et M. Leibnitz, qui a eu communication des originaux chez M. Clerselier, ont envoyé ce que la mémoire a pu leur suggérer sur ce sujet ». (*Vie de Monsieur Des-Cartes*, 1691, Préface, p. xxvi.) Leibniz fut, en effet, à Paris en 1675 et 1676; curieux de tout ce qui se rapportait au philosophe français, non seulement il obtint communication des papiers qui restaient de lui, mais il en fit copier et en copia lui-même au moins une bonne partie. Ses copies, qui portent des dates en plusieurs endroits (24 février et 1er juin 1676), furent déposées après sa mort, avec bien d'autres manuscrits, à la Bibliothèque Royale de Hanovre, et y demeurèrent longtemps ignorées. Ce fut seulement vers le milieu du xix siècle, que le comte Foucher de Careil, mis sur cette piste par l'indication de Baillet rappelée ci-dessus, et par quelques déclarations de Leibniz lui-même dans sa

correspondance, réussit à les découvrir enfin. Il les publia aussitôt, avec quelques autres documents (lettres à Wilhem, Huygens, La Thuillerie, etc.), en deux volumes d'*Œuvres inédites de Descartes* (Paris, Auguste Durand, in-8, cxvii-158 et xxii-238 pages, 1859-1860)." (AT X, *Avertissement*, p. 207).

"*Cogitationes privatae* est le titre que Foncher de Careil met en tête de ces fragments. L'avait-il trouvé dans le MS. de Leibniz, ou bien est-ce un titre de son invention? Cette dernière hypothèse est la plus vraisemblable. — Le même éditeur ajoute en note : « Leibniz, qui a copié ce manuscrit, nous avertit en marge qu'il l'a découvert et qu'il en a pris copie le 1er juin 1676, c'est-à-dire pendant son séjour à Paris. » — Nous reproduisons, en haut des pages, la pagination de Foucher de Careil : comme il donne en regard du latin une traduction française, les pages du latin n'ont que des numéros pairs, et les autres des numéros impairs." (AT X, *Avertissement*, p. 213).

8. ——. 1619. [*Registre de 1619:*] *Experimenta*.

AT X, 189-190; Baillet I, 102-103; B Op. II, 892-895; traduction par Michelle Beyssade, O I, 259-260.

"Le fragment intitulé *Experimenta* n'avait que « cinq feuillets et demi » (p. 8 ci-avant, l. 6-7). Peut-être donc l'avons-nous aussi tout entier, dans les deux grandes pages de Baillet, t. I, p. 102-103 ; au moins en avons-nous l'essentiel. Et là encore l'abondance et la précision des détails permettent de croire que le biographe de Descartes a traduit fidèlement, bien qu'on ne puisse jurer qu'il n'a rien ajouté. — Quant à la date, elle se détermine approximativement ainsi. Descartes raconte une aventure de sa traversée, par mer, d'Allemagne en Hollande, exactement, du port d'Embden en West -Frise, peut-être à Amsterdam. Nos idées sur cette première période des voyages du philosophe sont un peu changées depuis la découverte du *Journal* de Beeckman. Nous savons maintenant qu'en 1619, pour se rendre des Pays-Bas dans la Haute-Allemagne, au lieu de prendre par terre directement, il fit un grand détour par le Danemark, la Pologne, la Hongrie, la Bohême et l'Autriche (ci-avant p. 159, l. 2-6, et p. 162, l. 8-13), et s'embarqua le 29 avril à Amsterdam pour Copenhague. Il craignait que les mouvements

de troupes entre les Pays-Bas et la Bavière ne rendissent la route peu sûre. Mais elle ne l'était sans doute pas davantage au retour. Faut-il donc croire que Descartes sera revenu, sinon tout à fait par le même chemin, au moins par la Silésie, le Brandebourg, le Mecklembourg, qui est l'itinéraire que Baillet lui fait suivre, enfin Hambourg et Embden ? Enfin, comme nous savons, par une lettre de lui, que, le 3 avril 1622, il était à Rennes (t. I, p. 1), son retour en France a dû s'effectuer l'automne de 1621, et c'est alors sans doute qu'eut lieu l'aventure, dont le récit fait le principal si non l'unique objet des *Expérimenta*." (AT X, 175-176).

9. ——. 1619. [*Registre de 1619:*] *Democritica*.

"On sait que *Democritica* est le titre de « 7 ou 8 lignes » contenues dans le fameux petit registre en parchemin ouvert en 1619 et coté C dans l'inventaire de Chanut (1), contenant également le *Parnassus*, les *Experimenta* et les *Praeambula*. Rien n'est connu de ce texte, en particulier on ignore s'il s'agit de notes de lecture ; *Democritica* semble signifier, par analogie avec d'autres auteurs, des opinions inspirées de Démocrite (2), et rien chez Beeckman n'indique à l'époque une lecture de la doxographie démocritéenne. Peut-être alors faudrait-il revenir sur la composition du mot et donc sa signification : *Democritica* ?" (p. 41, Frédéric de Buzon, "Democritica: la réfutation cartésienne de l'atomisme", dans: Jean Salem (éd.), J.Salem (ed.) *L'atomisme aux XVIIème et XVIIIème siècles*, Paris: Publications de la Sorbonne, 1999, pp. 27-41)

(1) A.T., X, 8.

(2) *Democritici* signifie, chez Leibniz notamment, les auteurs s'inspirant de Démocrite. — Voir en partic., le fragment *Corpus non est substantia* qui s'applique parfaitement à Descartes (pour la seule première phrase !) : *Intelligo autem per corpus non id quod Scholastici ex materia et forma quadam intelligibili componunt sed quod molem alias Democritici vocant. Hoc ajo non esse substantiam.* («J'entends par corps non ce que les scolastiques composent à partir de la matière et d'une forme intelligible, mais ce qu'autrement les Democritici nomment masse. Je dis que ce n'est pas une substance»); in

Leibniz (G. W. F.), *Nouvelles Lettres et opuscules inédits*, éd. Foucher de Careil, Paris, 1857 (réimpression: Hildesheim, 1971), p. 171. — Voir aussi les notes sur Cudworth (VE 406 p. 1887).

Selon J. Sirven "La seule hypothèse plausible est donc, que l'allusion au songe de 1619 nous donne tout ce que nous connaissons des *Democritica*, tandis que les autres morceaux d'allure psychologique se rattachent à des préoccupations scientifiques. On s'explique sans peine, alors, que Leibniz ait transcrit d'abord la phrase relative à l'année 1620, qui se trouvait dans les *Experimenta* (2), puis nous ait donné une ou deux lignes des *Democritica* et enfin deux fragments de la section qu'il rencontrait en continuant ses extraits. Mais, quand il passa aux *Olympica*, il trouva en marge la réflexion signalée par Baillet, « écrite d'une ancre plus récente, mais toujours de la même main de l'auteur ». Se souvenant alors qu'il venait d'écrire une phrase à peu près identique tirée des *Experimenta*, il se contenta d'ajouter lui-même en marge de sa copie : « *Olympica. X. nov. coepi intelligere fundamentum inventi mirabilis* (3). »"

(2) La place de cette réflexion dans les *Experimenta* coïncide très bien avec l'hypothèse faite par Milhaud sur la nature de la découverte du 11 nov. 1620, dont nous parlerons plus loin.

(3) Leibniz a transcrit : X Nov., tandis que Baillet donne la date du : XI Nov. Est-ce une faute de Baillet, de Leibniz, ou plus probablement de Foucher de Careil ? Le manuscrit de Leibniz ne se trouvant plus à Hanovre, on ne saurait le dire.

Les années d'apprentissage de Descartes (1596-1628) Albi: Imprimerie cooperative du Sud-Ouest 1928, p. 68.

Selon cette hypothèse les sept ou huit lignes des *Democritica* sont identifiées avec le texte de AT X, 216 l. 19-25.

10. ———. 1619. *Olympica (Extraits de Baillet)*.

Première édition: Baillet I, 50-61 / 80-86 / 120; AT X, 179-188; B Op. II, 879-891; CO, 99-108; traduction par Michelle Beyssade, O I, 252-259.

Fernand Hallyn, dans *Les Olympiques de Descartes*, Genève: Droz, 1995, donne trois textes: I. *Le premier récit de Baillet*, (I, pp. 80-86), II. *Le deuxième récit de Baillet*, (Abrégé, pp. 37-39), III. *Cogitationes privatae. Pensées pour moi-même*, (Foucher de Careil, I, 10-12) : "On ne reprend ici que ceux qui faisaient partie des *Olympica* selon l'hypothèse d'Henri Gouhier (*Les premières pensées de Descartes*, Paris, Vrin, 1958 et 1979)." p. 41.

Ce texte contient le récit de trois songes de Descartes la nuit du 10 au 11 novembre 1619 : "s'étant couché *tout rempli de son enthousiasme*, et tout occupé de la pensée d'*avoir trouvé ce jour-là les fondements de la science admirable*". (Baillet I, p. 80).

"Les « Songes » de Descartes

Le texte se trouve dans la biographie de Baillet qui le tire des *Olympica*. Plus exactement, Baillet en donne une traduction paraphrasée avec quelques citations de l'original latin. Il s'agit du morceau qui ouvre le « discours » écrit sous le titre *Olympica* sur le « petit registre en parchemin ». Les pages qui nous le font connaître laissent supposer un récit bien conduit et rédigé avec un certain souci littéraire, non une suite de notes hâtivement griffonnées.

Baillet ouvre donc le cahier de Descartes et écrit : « Il nous apprend que le dixième de Novembre mil six cent dix-neuf, s'étant couché tout rempli de son enthousiasme, et tout occupé de la pensée d'avoir trouvé ce jour-là les fondements de la science admirable, il eut trois songes consécutifs en une seule nuit, qu'il s'imagina ne pouvoir être venus que d'en hauts (80). » (Gouhier, *op. cit.*, pp. 32-33).

(80) Baillet, t. I, p. 81; AT t. X, p. 181. Remarquons que « *ce jour là* » semble ajouté par Baillet qui traduit le texte latin donné plus haut, p. 32.

"Les historiens de Descartes parlent comme s'il n'y avait qu'un seul texte sur les rêves de novembre 1619 : le récit des *Olympica* tel que Baillet nous l'a transmis (86). Or il y en a

deux. Ceci résulte de la comparaison entre un fragment lu dans la copie de Leibniz et les passages des *Olympica* qu'il rappelle.

Voici le fragment tel que Foucher de Careil l'a présenté (87) :

*Anno 1620, intelligere coepi fundamentum inventi mirabilis.**

Somnium 1619, nov. in quo carmen 7 cujus initium:

Quod vitae sectabor iter?...

Auson

*[En marge :] *Olympica, X nov. coepi intelligere fundamentum inventi mirabilis.*

Ce fragment ne vient pas des *Olympica*.

1° La première ligne avec sa note rappelle évidemment le début des *Olympica* :

X novembris 1619, cum plenus forem enthousiasmo, et mirabilis scientiae fundamenta reperirem (88)... Baillet nous dit qu'en marge, « d'une encre plus récente, mais toujours de la même main de l'Auteur », on lisait: *XI Novembris 1620, coepi intelligere fundamentum inventi mirabilis* (89).

La première ligne du fragment n'est pas exactement semblable à celle que Baillet a lue dans la marge des *Olympica* et qu'il déclare être de la main de Descartes. C'est même pourquoi quelqu'un a transcrit en face la phrase lue dans les *Olympica*, substituant involontairement X à XI: est-ce Descartes? ne serait-ce pas plutôt Leibniz? Peu importe : que ce soit l'un ou l'autre, le fragment est tiré d'une page du petit registre qui n'est pas celle où commence le récit des songes.

2° La seconde ligne rappelle l'épisode final du troisième songe : là aussi le rêveur lit le vers d'Ausone. Mais, dans notre fragment, il s'agit d'une simple note sans verbe : « Songe, nov. 1619, là, poème 7 qui commence : Quel chemin de la vie suivrai-je ? Auson. » Ces lignes n'ont pu être découpées dans le récit visiblement rédigé que suit Baillet, même en tenant compte des enjolivements.

Le vers du poète latin, d'ailleurs, n'apparaît lié à une date dans aucun des trois passages où le traducteur le cite ; la première fois, le rêveur « tombe » sur lui en ouvrant au hasard un *corpus poetarum*, la seconde, il essaie vainement de le retrouver dans le même recueil; la troisième, il y reconnaît un « bon conseil » (90). On ne voit vraiment pas comment l'un de ces morceaux pourrait bien être le contexte du fragment.

Le fragment ne vient pas des *Olympica*. D'où vient-il ?

La série B du registre est faite de trois groupes de textes sous les rubriques : *Praeambula*, *Experimenta*, *Olympica*. Ces lignes se trouvent sur la copie avant le premier fragment incontestablement extrait des *Olympica*, mais séparées de celui-ci par deux autres « pensées ». Si, comme c'est vraisemblable, Leibniz suit l'ordre du registre, cette situation porte à croire qu'elles viennent des *Experimenta*.

(...)

Ce fragment serait-il donc une note sur un cas d'*experimentum* ?

Il y a tout lieu de croire que ces deux courts alinéas constituaient un tout sur le petit registre comme sur la copie de Leibniz telle que nous la connaissons par Foucher de Careil. Il s'agit donc d'une note qui rapproche deux faits et c'est le rapprochement de ces deux faits qui est l'objet même de la note.

(...)

La note sur le rêve des *Experimenta* n'est pas un morceau de fable : elle rappelle deux faits et l'un de ces faits est un songe de la nuit du 10 au 11 novembre 1619.

Tout n'est donc pas fictif dans le récit des *Olympica*.

A la fin du troisième rêve, selon le récit, Descartes se réveille en train d'interpréter le vers : *Quod vitae sectabor iter?* Souvenir immédiat qui effleure la conscience et dont elle part pour rappeler ce qui le précède, c'est, dans le rêve reconstruit, le morceau le plus pur du rêve rêvé. Or, d'après la note des

Experimenta, c'est là aussi le souvenir d'un rêve réellement rêvé dans la nuit du 10 au 11 novembre 1619.

Tout le reste du récit serait-il une fable, cela n'empêcherait pas qu'un fragment de vrai rêve ne se trouve au centre, à l'instant où, en droit, tout aboutit et d'où, en fait, tout part dans le déroulement des pseudo-rêves." (Gouhier, *op. cit.*, pp. 40-41).

(86) Sauf Sirven, *Les Années d'apprentissage de Descartes (1596-1628)*, Paris, Vrin, 1928 p. 65 sq.; mais sa restitution du petit registre est tout à fait différente de celle qui a été proposée ici, de sorte que nos interprétations sont divergentes.

(90) Baillet, t. I, p. 83 et 84 (AT t. X, p. 184).

11. ———. 1619 (automne) - 1623 (printemps). *Studium Bonae Mentis (Extraits de Baillet)*.

Première édition: Baillet II 406; Baillet I 26 / 34 / 87-91 / 109-110; II 66 / 477 / 479 / 486-487 / 531 / 545; AT X, 191-204; B Op. II, 897-915; traduction par Michelle Beyssade, O I, 260-268; CO, 127-140 (l'édition la plus complète).

"Un autre ouvrage latin que M. Descartes avait poussé loin, et dont il nous reste un ample fragment est celui de l'*Étude du bon sens*, ou de l'*Art de bien comprendre*, qu'il avait intitulé *Studium bonae Mentis*. Ce sont des considérations sur le désir que nous avons de savoir, sur les sciences, sur les dispositions de l'esprit pour apprendre, sur l'ordre qu'on doit garder pour acquérir la sagesse, c'est-à-dire la science avec la vertu, en joignant les fonctions de la volonté avec celles de l'entendement. Son dessein était de frayer un chemin tout nouveau ; mais il prétendait ne travailler que pour lui-même, et pour l'ami à qui il adressait son traité sous le nom de *Museus*, que les uns ont pris pour le sieur Is. Beeckman principal du

collège de Dordrecht, d'autres pour M. Mydorge ou pour le P. Mersenne."

Baillet VII, chapitre 20, p. 406.

"On peut interpréter d'abord ce terme au sens général d'entreprise, ou d'œuvre, et non au sens d'un ouvrage littéraire ou philosophique particulier. Mais il semble bien que Descartes ait conçu dès ce moment le projet de consigner le fruit de ses réflexions dans un livre et de le publier. En tout cas, il s'est promis à lui-même, quelques mois plus tard, d'achever un livre avant Pâques 1620 et de l'éditer : « Omnino autem ante Pascha absolvam tractatum meum, et si librariorum mihi sit copia dignusque videatur, emittam, ut hodie promisi, 1620, die 23 Febr. » (*) *Cogit. privatae*, t. X, p. 218, l. 3-5.

On ignore ce que peut avoir été ce traité, mais rien ne s'opposerait à ce que ce fût le *Studium bonae mentis* (t. X, p. 191-203), dont ce que nous savons correspond exactement aux préoccupations méthodologiques et morales de Descartes à cette époque : Ce sont des considérations sur le désir que nous avons de savoir, sur les sciences, sur les dispositions de l'esprit pour apprendre, sur l'ordre qu'on doit garder pour acquérir la sagesse, c'est-à-dire la science avec la vertu, en joignant les fonctions de la volonté avec celles de l'entendement. Son dessein était de frayer un chemin tout nouveau ; mais il prétendait ne travailler que pour lui-même et pour l'ami à qui il adressait son traité sous le nom de Museus, que les uns ont pris pour le sieur J. Beeckman, principal du collège de Dordrecht, d'autres pour M. Mydorge ou pour le P. Mersenne (A. Baillet, t. II, p. 406 ; AT X, p. 191). Ces identifications de personnages sont purement conjecturales et il n'y a pas à en tenir compte, d'autant moins que Museus pourrait fort bien n'avoir été qu'un interlocuteur imaginaire ; mais tout le reste s'accorde avec l'élaboration de la méthode et de la morale provisoire que Descartes situe entre novembre 1619 et mars ou avril 1620."

Gilson, *Discours de la méthode. Texte et Commentaire*, Paris: Vrin, 1925 (deuxième édition revue 1926), p. 181 (note a AT VI, p. 17, l. 8 "... l'ouvrage..." [O III, 92]).

(*) *J'ajoute la traduction et les notes de Fernand Hallyn :*
"D'autre part, je terminerai complètement mon traité avant Pâques, et si j'ai matière à livres (1) et si le traité en paraît digne, je le publierai, comme je l'ai promis aujourd'hui, le 23 septembre (2) 1620".

(1) Leçon de Foucher de Careil (« librorum »). AT corrige en « librariorum » en se fondant sur la version de Baillet (« libraires »). Gouhier, *La pensée religieuse de Descartes*, Paris: Vrin 1979, p. 105 (première édition 1924) traduit par « copistes ». Aucune des traductions proposées jusqu'à présent (« livres », au sens courant, pour « librorum », « libraires » ou « copistes » pour « librariorum ») n'est vraiment satisfaisante dans le contexte. Je propose de maintenir « librorum », mais de comprendre le mot au sens de « parties d'un ouvrage », les « livres » dont devrait se composer le traité projeté.

(2) « Février » chez Baillet. Cf. l'introduction (p. 25), où est adoptée la leçon de Baillet mais aussi, ici-même, la contribution de G. Rodis-Lewis, qui maintient « septembre ».

"« La vraie philosophie dépend de l'entendement. » Le *Studium* ne institue pas seulement, comme Étienne Gilson l'avait remarqué, un petit traité *De la philosophie*; il est le premier *traité de philosophie* de Descartes, ouvrant la voie au traité de « vraie philosophie » que seront les *Regulae ad directionem ingenii*. Libérant ce champ inédit pour Descartes est la philosophie, le *Studium bonae mentis* s'avère donc être un texte décisif, en dépit de son inachèvement et de son démembrement — décisif dans son échec même. C'est pourquoi il constitue la pierre de touche la présente édition. C'est un texte difficile aussi, puisque seules les *Regulae* délivrent pleinement le sens de cet échec : à ce titre, le *Studium* et les *Regulae* constituent véritablement un tout indissociable. En charge de li présenter et de l'exploiter tant qu'il restait inédit, Baillet aura baissé les bras, alors même que l'intelligence du *Studium* lui eût ouvert de tout autres perspectives sur le jeune Descartes. Nous osons espérer que les propositions avancées ici pour en restituer le projet parviendront à esquisser la figure d'un Descartes devenant philosophe.

Observons cependant d'emblée que l'ordre et les objets des considérations qui suivent sont encore manifestement d'origine aristotélicienne. Descartes commence en philosophie en répétant à sa manière le livre A de la *Métaphysique*, c'est-à-dire en faisant un *De philosophia* — ce qu'Étienne Gilson avait vu, moyennant un rapprochement avec la *Lettre-préface* aux *Principes* (AT IX-2, 2-8 et 4, 23): Baillet «aurait dû traduire [*Studium Bonae mentis*] par: *Étude de la sagesse*, ou même, plus simplement, *De la philosophie* » *Commentaire*, p. 82, selon AT IX-2, 3 qui reprend en français l'*Epistola dedicatoria des Principia*, AT VIII-1, 4, 24, *studium sapientiae*), suivi à juste titre par Jacques Sirven : «Il y avait là [sc. dans les considérations sur le désir que nous avons de savoir du *Studium*] comme un ressouvenir du premier livre des *Métaphysiques* d'Aristote » (*Les Années d'apprentissage de Descartes (1596-1628)*, Albi: 1928 p. 293). Il ne sera donc pas étonnant que peu après Descartes écrive sa propre *Peri tès alètheias theoria*, *De veritate quidem theoria* (Aristote, *Métaphysique* α 1993 a 30), protreptique qui deviendra recherche de la vérité, *veritatis inquisitio*. Dans la mesure où la *Lettre-préface* obéit à une terminologie scolaire, conformément au genre du manuel, on peut considérer qu'elle reprend le projet du *Studium* comme commencement de la philosophie — à quelque vingt-cinq ans de distance, ces deux textes se répondent silencieusement : c'est pourquoi le livre A y est présent, quoique différemment." Vincent Carraud, note 2 à l'*Étude du bon sens*, dans CO, p. 141.

Dans une lettre à Beeckman du 26 mars 1619 Descartes expose son projet :

"Je suis arrivé ici [à Bréda] il y a six jours, et je me suis remis au culte des Muses avec plus de zèle que jamais. J'ai établi en ce court laps de temps, à l'aide de mes compas (2), quatre démonstrations remarquables et tout à fait neuves.

(...)

C'est autre chose que je cherche maintenant pour l'extraction des racines d'une somme (de plusieurs quantités incommensurables entre elles); si j'y parviens, comme je

l'espère, je mettrai bien en ordre toute cette science, à condition de vaincre mon indolence et si le destin m'en donne le loisir.

Pour ne rien vous cacher de ce que j'entreprends, je voudrais donner au public non pas un *Ars brevis* comme Lulle (7), mais une science toute nouvelle (8), par laquelle on puisse résoudre tous les problèmes possibles, en n'importe quel genre de quantité, continue or discontinue."

(...)

C'est une entreprise infinie, et qui dépasse un seul homme, projet incroyablement ambitieux mais j'entrevois un je-ne-sais-quoi de lumineux dans l'obscur chaos de cette science et je pense pouvoir par ce moyen dissiper les ténèbres les plus épaisses."

(AT X, 156-158, O VII, 2, 321-322; B 2).

(2) Les compas sont ceux que Descartes décrira dans la *Géométrie* II et III (AT VI 391 et 443 [O III, 430 et 471]).

(7) R. Lull, *Artificium sive Ars brevis ad absolvendam omnium artium encyclopædiam*, ou encore *Ars brevis, quae est imago Artis generalis*, écrit en 1308, imprimé à Barcelone, 1481, souvent réimprimé ensuite (voir sa mention dans Beeckman = AT X 63-65).

(8) Note en marge : « méthode générale [*ars generalis*] pour résoudre toutes les questions » (Beeckman IV 59, n. 7).

12. ——. 1619-20 ou 1623?-1625 - hiver 1627-28. *Regulae ad directionem ingenii*.

Rédaction initiée en Allemande en 1619-1620 où à Paris en 1623, interrompue et reprise en France en 1626-1628 et jamais complétée.

AT X 359-469; B Op. II, 684-815; traduction et notes par Jean-Marie Beyssade et Michelle Beyssade, avec la collaboration de Frédéric Buzon et Denis Kambouchner, O I, 324-497.

Une copie (non autographe) du texte latin avec les seize premières Règles (*), a été découverte à la Cambridge

University Library en 2011 par Richard Serjeantson, qui en prépare une édition.

(*) manque la deuxième partie de la Règle IV [sur la *mathesis universalis*].

Je donne en parenthèse les abréviations communément utilisées pour les manuscrits et les éditions anciennes.

(N) = Première publication : Jan Hendrik Glazemaker (1620-1682) traduit le manuscrit latin en néerlandais vers le 1680 ; la traduction fut publiée à Amsterdam en 1684, avec le titre *R. Des Cartes Regulen van de bestieringe des verstants*.

(A) = La première édition du texte latin fut publiée en 1701 in *R. Des-Cartes Opuscula posthuma, physica et mathematica*, Amsterdam : P. & J. Blaeu ; l'édition Adam-Tannery ne tient pas compte de la traduction néerlandaise.

(O) = Le manuscrit original est perdu.

(H) = Nous avons une copie de l'original (manuscrit de Hanovre : première édition par Charles Adam, "Ren. Cartesii Regulae de inquirenda veritate", *Revue Bourguignonne de l'Enseignement Supérieur*, 11, 1901, pp. 1-89) fait en 1678 et acheté par Leibniz.

(L) = Cette copie contient de nombreuses erreurs et Leibniz l'a corrigée.

(R) = Une autre copie faite vers 1680 et qui appartenait à Johannes de Raey (1622-1701), probablement utilisée pour les premières éditions, est aujourd'hui perdue.

Éditions critiques des *Regulae*:

Regulae ad directionem ingenii, Texte critique établi par Giovanni Crapulli avec la version hollandaise du XVIIème siècle, La Haye: Martinus Nijhoff, 1966.

Regulae ad directionem ingenii, Kritisch revidiert und herausgegeben von Heinrich Springmeyer, Lüder Gäbe und Hans Günter Zekl, Hamburg: Meiner, 1973.

Regulae ad directionem ingenii. Cogitationes privatae,
Übersetzt und herausgegeben von Christian Wohlers, Hamburg
Felix Meiner, 2011.

Traductions:

Règles pour la direction de l'esprit, Traduction et notes par
Joseph Sirven, Paris: Vrin, 1945.

Règles pour la direction de l'esprit, Traduction et notes par
Jacques Brunschwig. Préface, dossier et glossaire par Kim Sang
Ong-Van-Cung, Paris: Le Livre de Poche, 2002 (première
édition de la traduction dans F. Alquié (éd.), René Descartes,
Œuvres philosophiques, Paris: Garnier, I, 1963, pp. 67-204).

*Règles utiles et claires pour la direction de l'esprit en la
recherche de la vérité,* Traduction selon le lexique cartésien, et
annotation conceptuelle par Jean-Luc Marion. Avec des notes
mathématiques de Pierre Costabel, La Haye: Martinus Nijhoff,
1977.

La première mention se trouve dans l'*Inventaire de Stockholm*
des écrits de Descartes à la lettre F: "Neuf cahiers reliés
ensemble, contenant partie d'un traité des règles utiles et
claires pour la direction de l'Esprit en la recherche de la Vérité".
(AT X, p. 9).

"En plusieurs endroits de sa *Vie de Monsieur Des-Cartes*
(1691), Baillet donne une traduction française de passages des
Regulae. Le texte latin qu'il avait sous les yeux n'était pas celui
que nous avons publié, et qui se trouvait en Hollande et ne fut
imprimé qu'en 1701, mais le texte original, qui venait de
Clerselier, et qui a disparu depuis lors. La traduction de Baillet
n'en est que plus précieuse, puisqu'elle atteste à la fois
l'existence de ce texte primitif et sa conformité avec la copie qui
nous en a été conservée.

« ...M. Clerselier... s'est trouvé le possesseur unique de tout ce
que M. Descartes avait jamais écrit, tant de ce qui était fini que
de ce qui n'était que commencé. Mais, après une recherche
exacte qui s'est faite de cette Logique prétendue parmi ses
papiers, il ne s'est rien trouvé... qui puisse passer pour Logique,

si l'on en excepte ses *Règles pour la direction de l'esprit dans la recherche de la vérité* (en marge: *C'est un manuscrit latin, non achevé, qui est entre nos mains*), qui peuvent servir de modèle pour une excellente Logique, et qui font sans doute une portion considérable de sa Méthode, dont ce que nous avons d'imprimé à la tête de ses Essais, ne fait qu'une petite partie. »

(Baillet I, p. 282.)

« Parmi ceux (*les de M. Descartes*) que les soins de M. Chanut ont fait échoir à M. Clerselier, il n'y en a point de plus considérable ni peut-être de plus achevé, que le traité latin qui contient des *Règles pour conduire nôtre esprit dans la recherche de la vérité*. C'est celui des manuscrits de M. Descartes, à l'impression desquels il semble que le Public ait le plus d'intérêt. On est déjà prévenu sur sa valeur et son prix par la lecture que M. Clerselier en a communiquée à quelques curieux, et par le témoignage que le célèbre Auteur de l'*Art de penser* (en marge : *Part. 4, chap. 2*) a rendu du bon usage qu'on en peut faire. »

(AT X, 477).

Clerselier a montré le manuscrit aux auteurs de la *Logique de Port Royal* qui l'ont utilisé pour la deuxième édition : "La *Logique de Port-Royal* contient un long passage, qui correspond à une partie des Règles XIII et XIV. Comme nous l'avons expliqué dans l'*Avertissement* (p. 351-2), ce passage a pour nous la valeur d'un témoin : il atteste l'existence d'un texte original, que nous n'avons plus, mais que Clerselier avait encore et qu'il a communiqué à Arnauld pour le traduire. On chercherait d'ailleurs en vain cette traduction dans la première édition : *La Logique ou L'Art de penser contenant, outres les règles communes, plusieurs observations nouvelles propres à former le jugement*. (A Paris, chez Jean de Launay, sous le Porche des Ecoles de Sorbonne, M,DC.LXII. In-12, pp. 473, plus 5 p. Extrait du Privilège, 1er Avril 1662: Permis au sieur Le Bon... Achevé d'imprimer, 6 juillet 1662.) Le passage qui nous intéresse n'apparaît que dans la seconde édition : *La Logique ou L'Art de penser: contenant etc.* (comme précédemment). *Seconde édition, revue et augmentée*. (A Paris, chez Charles

Savreux, au pied de la Tour de Nostre Dame, à l'enseigne des Trois Vertus, M.DC.LXIV.) C'est aussi un in-12; le passage en question s'y trouve, p. 391-397, avec cette note: « La plus grande partie de ce que l'on dit ici des questions, a été tirée d'un manuscrit de M. Descartes, que M. Clerselier a eu la bonté de prêter. » Cette note et le passage visé se retrouvent dans toutes les éditions postérieures de la *Logique de Port-Royal*, à partir de la deuxième, Partie IV, chapitre II." (AT X 470).

Voir l'édition critique : Antoine Arnauld et Pierre Nicole, *La logique ou l'art de penser (dite Logique de Port-Royal)*, édité par Dominique Descotes, Paris: Champion, 2011.

"Le passage suivant du P. Poisson atteste aussi l'existence d'un texte des *Regulae*, autre que celui que nous avons donné ; et cet autre texte était l'original, tandis que le nôtre n'est qu'une copie.

Observation sur la troisième règle de la Méthode de Descartes : Conduire par ordre mes pensées, etc. (Tome VI de la présente édition, p. 18, l.27) :

«... j'ay rencontré dans un Manuscrit, qu'il avait commencé dès les premières années qu'il s'appliqua sérieusement à l'étude, que pour venir à bout de toutes les difficultés qu'on propose, il faut:

- 1, les connaître distinctement chacune en particulier ;
- 2, les dépouiller de tout ce qui ne leur est point essentiel dans le sens auquel on les considère ;
- 3, les réduire et les diviser en petites parties ;
- 4, examiner avec attention chacune de ces parties, commençant par les plus simples ;
- 5, il faut rapporter toutes ces parties, en les comparant les unes aux autres.

Voilà à quoi aboutit toute la finesse des méthodes qu'on a trouvées et qu'on trouvera jamais. Elle est également nécessaire dans la Physique et dans la Géométrie. L'article de ces règles le plus difficile à mettre en pratique, c'est ce dernier : tant parce

qu'on ne connaît pas assez les termes qu'on doit comparer, qu'à cause qu'on a besoin d'un *Moyen*, qu'on appelle *Medium* dans l'École, qui n'est pas aisé à trouver. »

(*Commentaire ou Remarques sur la Méthode de René Descartes*, par L. P. N. I. P. P. D. L., à Vendôme, M.DC.LXX. Partie II, 6e observation, p. 76.)

(AT X, 476).

En 1676 Leibniz rencontrait Clerselier : "J'ai été aujourd'hui avec Mons. de Tschirnhaus, pour lui donner la connaissance de Mons. Clerselier, et pour lui faire voir les relies de Mons. des Cartes.

Il nous montra un discours de Mons. des Cartes *de la recherche de la vérité*; il y avait environ 22 règles expliquées e illustrées. En Latin." (AT X, 208).

Leibniz et Ehrenfried Tschirnhaus (1651-1708) transcrivirent tous les deux des manuscrits : "en particulier Tschirnhaus qui entre 1676 et 1682 en fit parvenir des copies en Hollande à des amis qui appartenaient au cercle spinoziste, et à Hanovre à Leibniz qui avait quitté Paris en novembre 1676. Durant cette période, le projet d'une édition des mss. à dû mûrir chez les deux amis sous l'impulsion ou du moins avec les encouragements de Clerselier. Nous suivons la trace de ce projet, qui en définitive n'aboutit pas, d'abord à Paris, puis à Amsterdam. Ce dont nous sommes en tout cas certains c'est que Leibniz s'est trouvé dès novembre 1676 en possession d'une copie des *Regulae* et que Tschirnhaus dès 1678 montre qu'il a pris connaissance directement du texte.

(...)

A partir des premières années du XVIIIe siècle nous ne possédons plus de renseignements au sujet des mss. cartésiens, passés des mains de Legrand à celles de Marmion, professeur de philosophie au Collège des Grassins, et nous perdons par conséquent la trace du ms. original des *Regulae*." (Giovanni Crapulli, *Introduction* à l'édition critique, René Descartes,

Regulae ad directionem ingenii, La Haye: Martinus Nijhoff, 1966, p. XIII)

13. ———. 1619-20. *De Solidorum Elementis (Ms. de Leibniz)*.

Le texte originel de Descartes "Environ seize feuillets in octavo sous ce titre : *Progymnasmata de solidorum elementis*" (*Inventaire succinct des écrits*, lettre M, AT X 10), est perdu, mais nous possédons la copie faite par Leibniz à Paris en 1672-1676 et publiée pour la première fois par Foucher de Careil, vol. II, pp. 214-226.

AT X 265-276; *Additions* in AT XI 690-692; nouvelle édition par Pierre Costabel dans la *Nouvelle présentation* de AT (1966) X 276 et 687-689; B Op. II, 1224-1237; traduction par André Warusfel, O I, 221-231.

Nouvelle édition avec traduction en anglais par Pasquale Joseph Federico, *Descartes on Polyhedra. A Study of the De Solidorum elementis*, New York, Springer, 1982.

Édition critique, avec introduction, traduction, notes et commentaires par Pierre Costabel, *René Descartes. Exercices pour les éléments des solides. Essai en complément d'Euclide. Progymnasmata de solidorum elementis*, Paris, Presses Universitaires de France, 1987.

"Le présent ouvrage est le résultat d'une longue histoire.

Le manuscrit mathématique de Descartes qui est ici l'objet d'une restitution a eu un sort tourmenté. Conservé dans les papiers de l'auteur pendant plus d'un demi-siècle, il a disparu peu de temps après avoir eu la chance d'être lu par Leibniz à Paris. Mais la transcription effectuée par ce lecteur exceptionnel a connu le silence des pièces d'archives jusqu'au milieu du XIXe siècle, et elle n'est sortie de l'ombre que pour tomber entre les mains de lecteurs plus avertis de la mathématique de leur temps que des précautions à prendre avec des textes anciens. Elle a ainsi davantage retenu l'attention par les suggestions qu'elle paraissait fournir à un moment de l'évolution de la pensée mathématique, moment caractérisé par la prise de conscience de l'importance de l'analyse de la situation (*Analysis situs*), et si elle a joué un rôle dans les

réflexions consécutives, elle n'a pas tardé, au début du siècle actuel, à être objet de graves réserves, réserves dont la pointe acérée n'a cessé de se préciser. Manque de rigueur, absence de point de vue authentiquement topologique, les raisons de renvoyer ce texte au silence sont aujourd'hui pressantes aux yeux de quelques-uns.

L'effort de restitution du texte lui-même, qui a été entrepris vers 1894 et réalisé en 1908 avec le tome X de la grande édition des *Œuvres de Descartes* par Charles Adam et Paul Tannery, est donc survenu dans une ambiance peu favorable à sa consistance propre et à sa réception. Affaire d'érudition cartésienne il est apparu dès le début, et il l'est resté jusqu'à la récente mise à jour de l'édition susdite en 1966.

Principal acteur de cette mise à jour, dans les limites de notes correctrices à apporter à la première édition, le présent éditeur savait dès cette époque qu'il y avait lieu de procéder à une prise en charge réellement convenable et il en a fixé les traits à l'occasion de divers articles tout en préparant l'édition nouvelle, séparée, délivrée des conditions restrictives imposées par l'insertion dans des *Œuvres complètes* monumentales. Il y a près de dix ans que cette édition était prête, mais publier était une autre affaire que d'établir la matière de la publication. Il fallut trouver un éditeur au sens ordinaire et français du terme." (Pierre Costabel, *René Descartes. Exercices pour les éléments des solides, Avertissement*, pp. V-VI).

14. ——. 1628. *Censura quarundam epistolarum Domini Balzacii*.

AT I, 7-11; CO, 194-202, traduction du XVIIe siècle, pp. 195-203; B 14; traduction par Michelle Beyssade et Denis Kambouchner, O I, 285-289; O VIII 2 345-349 (traduction du XVIIe siècle).

Première édition : Claude Clerselier (éd.), *Lettres de mr. Descartes*, Paris, Charles Angot, vol. I, 1657, lettre C (février-mars 1628), pp. 462-471.

1628 est la datation proposée par Clerselier; Balzac en remercia Descartes le 30 mars 1628.

Pour les *Lettres* de Jean-Louis Guez de Balzac (1597-1654), Paris, 1624 (réédition : *Les premières lettres de Guez de Balzac*, voir l'édition critique précédée d'une introduction par H. Bibas et K.-T. Butler, Paris: Droz 1933-34, 2 volumes).

La *Censura* (ou *Jugement de quelques Lettres de Balzac*) de Descartes est aussi publiée dans Guez de Balzac, *Socrate chrétien* [1652], édition critique de Jean Jehasse, Paris: Champion, 2008, avec une nouvelle traduction, pp. 243-249.

15. ———. 1628. [*De la Divinité*].

CO pp. 214-216; ce texte n'a pas été retrouvé.

"Ce fut durant cet été [1628] qu'il voulut écrire *De la Divinité*, voyez ci-après au livre III, chap. Ier." (Baillet I, 153, en marge).

"C'était la chaleur du climat de son pays qu'il ne trouvait point favorable à son tempérament par rapport à la liberté de son esprit, dont la jouissance ne pouvait être quelque trouble, lorsqu'il était question de concevoir des vérités, où l'imagination ne devait point se mêler. Il s'était aperçu que l'air de Paris était mêlé pour lui d'une apparence de poison très subtil et très dangereux ; qu'il le disposait insensiblement à la vanité; et qu'il ne lui faisait produire que des chimères. C'est ce qu'il avait particulièrement éprouvé au mois de juin de l'année 1628, lorsque, s'étant retiré de chez M. Le Vasseur pour étudier loin des compagnies, il entreprit de composer quelque chose sur la divinité. Son travail ne put lui réussir faute d'avoir eu les sens assez rassis ; outre n'était peut-être pas d'ailleurs assez purifié ni assez exercé pour pouvoir traiter un sujet si sublime avec solidité." (Baillet I, 171).

16. ———. 1628? [*De deo Socratis*].

CO, pp. 173-179; ce texte n'a pas été retrouvé.

« L'on nous parle encore d'un autre traité de M. Descartes, intitulé *De Deo Socratis*, où il examinait ce que pouvait être cet *esprit familier* de Socrate, qui fait le sujet de l'entretien des curieux depuis tant de siècles. Mais il paraît que c'était un bien déjà aliéné, lorsque son Auteur fit le voyage de Suède. Aussi ne se trouva-t-il point parmi les autres dans l'Inventaire que l'on

fit de ses écrits après sa mort. Comme il est tombé en d'autres mains que celles de M. Clerselier, nous ne pourrons contribuer à sa publication que par des prières, pour porter ceux qui en sont devenus les maîtres à lui procurer le jour. Voici par avance ce que M. Descartes pensait de cet esprit familier de Socrate, et ce qu'il en mandait à la princesse Palatine sa disciple : « Et ce qu'on nomme communément le génie de Socrate, n'a sans doute été autre chose, sinon qu'il avait accoutumé de suivre ses inclinations intérieures, et qu'il croyait que l'événement de ce qu'il entreprenait serait heureux, lorsqu'il avait quelque secret sentiment de gaieté, et au contraire qu'il serait malheureux lorsqu'il était triste. Il faut avouer néanmoins qu'il y aurait de la superstition à s'attacher à cette opinion autant qu'on dit qu'il y était attaché. Car Platon rapporte de lui qu'il demeurait même au logis toutes les que son génie ne lui conseillait pas d'en sortir. Mais touchant les actions importantes de la vie, lorsqu'elles se trouvent si douteuses que la prudence ne peut enseigner ce qu'on doit faire, il me semble qu'on a grande raison de suivre les conseils de son génie; et qu'il est utile d'avoir une forte persuasion que les choses que nous entreprenons sans répugnance et avec la liberté qui accompagne d'ordinaire la joie ne manqueront pas de nous bien réussir. » (Baillet II, 408: lettre à Elisabeth du novembre 1646, AT IV, 530; O VIII 2, 270; B 578).

René Descartes. Bibliographie Chronologique et Annotée (Deuxième Partie: (1628-1637))

Bibliographie

Pour la liste des éditions de références et des abréviations voir [René Descartes. Outils de recherche: Biographies, Dictionnaires et Lexiques des Ses Œuvres](#)

1. Descartes, René. 1628 (automne) - 1629 (été). [*Traité de métaphysique*].

CO, 217-227; ce traité en latin, aujourd'hui perdu, (son premier projet de métaphysique) est mentionné par Descartes dans :

a) la lettre à Gibieuf du 18 juillet 1629: "Je me réserve à vous importuner lorsque j'aurai achevé un petit traité que je commence (5), duquel je ne vous aurais rien mandé qu'il ne fût fait, si je n'avais peur que la longueur du temps vous fit oublier la promesse que vous m'avez faite de le corriger et y ajouter la dernière main ; car je n'espère pas en venir à bout de deux ou trois ans, et peut-être après cela me résoudrai-je de le brûler, ou du moins il n'échappera pas d'entre mes mains et celles de mes amis sans être bien considéré ; car si je ne suis assez habile pour faire quelque chose de bon, je tâcherai au moins d'être assez sage pour ne pas publier mes imperfections." (AT I 17; O VIII 2, 790-791; B 17);

(5) Les commentateurs rapprochent ce « petit traité » du « petit *Traité de Métaphysique*, lequel j'ai commencé étant en Frise, et dont les principaux points sont de prouver *l'existence de Dieu, et celle de nos âmes*, lorsqu'elles sont séparées du corps, d'où

suit leur immortalité », Descartes écrit à Mersenne, 25 novembre 1630 (AT I 182, [O VIII 1, 85] B 36); voir aussi à Mersenne, 15 avril 1630 (AT I 136, [O VIII 1, 67] B 30).

les lettres à Mersenne du:

b) 15 avril 1630: "Pour votre question de Théologie, encore qu'elle passe la capacité de mon esprit, elle ne me semble pas toutefois hors de ma profession, parce qu'elle ne touche point à ce qui dépend de la révélation, ce que je nomme proprement Théologie; mais elle est plutôt métaphysique (*) et se doit examiner par la raison humaine. Or j'estime que tous ceux à qui Dieu a donné l'usage de cette raison, sont obligés à le connaître, et à se connaître eux-mêmes. C'est par là que j'ai tâché de commencer mes études ; et je vous dirai que je n'eusse su trouver les fondements de la physique, si je ne les eusse cherchés par cette voie. Mais c'est la matière que j'ai le plus étudiée de toutes, et en laquelle, grâce à Dieu, je me suis aucunement satisfait ; au moins pensé-je avoir trouvé comment on peut démontrer les vérités métaphysiques, d'une façon qui est *plus* évidente que les démonstrations de géométrie ; je dis ceci selon mon jugement, car je ne sais pas si je le pourrai persuader aux autres. Les 9 premiers mois que j'ai été en ce pays, je n'ai travaillé à autre chose, et je crois que vous m'aviez déjà ouï parler auparavant que j'avais fait dessein d'en mettre quelque chose par écrit ; mais je ne juge pas à propos de le faire, que n'aie vu premièrement comment la physique sera reçue. (**)" (AT I 143-144; O VIII 1, 72; B 30);

(*) [Première occurrence du terme *métaphysique* dans les écrits de Descartes]

(**) [Descartes se réfère ici au *Monde*, qui ne sera pas publié en raison de la condamnation de Galilée en 1633]

c) 25 novembre 1630 : "J'éprouverai en la *Dioptrique* si je suis capable d'expliquer mes conceptions, et de persuader aux autres une vérité, après que je me la suis persuadée: ce que je ne pense nullement. Mais si je trouvais expérience que cela fût, je ne dis pas que quelque jour je n'achevasse un petit traité de métaphysique, lequel j'ai commencé étant en Frise, et dont les

principaux points sont de prouver *l'existence de Dieu, et celle de nos âmes*, lorsqu'elles sont séparées du corps, d'où suit leur immortalité." (AT I 182; O VIII 1, 85; B 36);

d) Mersenne, vers le 20 avril 1637: "Il y a environ huit ans que j'ai écrit en latin un commencement de Métaphysique (4) (...) et si l'on fait une version latine de ce livre (5), comme on s'y prépare, je l'y pourrai faire mettre." (AT I 350; O VIII 1, 139; B 104).

(4) En 1629 (à Gibieuf, 18 juillet 1629, AT I 17 l. 7, [O VIII 2, 790] B 17; à Mersenne, (15 avril 1630, AT I 144 l. 19, [O VIII 1, 72] B 30).

(5) La traduction latine du *Discours et des Essais* (sauf la *Géométrie*), œuvre d'Étienne de Courcelles, n'apparut qu'en 1644. CM suggère qu'un projet a pu se constituer dès 1637 avec le jeune Van Schooten, qui publia en 1649 une traduction latine de la *Géométrie*.

2. Beeckman, Isaac. 1628-29. *Extraits du Journal tenu par Isaac Beeckman*.

AT X, 331-348; treize extraits mathématiques en latin de 1628-1629; B Op. II, 1352-1379; traduction française par Frédéric de Buzon, O I, *Notes de (1628-1699)*, 107-120.

I. Historia Des Cartes ejusque mecum necessitudo. — Docti cur pauci 331 ; II. Algebrae Des Cartes specimen quoddam 333 ; III. Angulus refractionis à Des Cartes exploratus 335 ; IV. Chordarum musicarum crassitiei ratio 337 ; V. Solis radijs comburere remotissima 338 ; VI. Ellipsis in quâ omnes radij paralleli concurrunt in puncto medij densioris 338 ; VII. Hyperbola per quam radij in unum punctum concurrunt 340 ; VIII. Ellipsis pars per quam radij in aère exacte concurrunt 340 ; IX. Hyperbola per quam omnes radij paralleli in unum punctum exacte incidant demonstrata 341 ; X. Parabolâ duo média proportionalia inveniri posse demonstratur 342 ; XI. Parabolâ æquationes Cosicas lineis exponere 344 ; XII. Lunae an litterae inscribi possint absentibus legendae 347 ; XIII. Consonantias omnes ex continua chordae bisectione 348.

3. Descartes, René. 1629. *Anatomica quaedam ex M.to Cartesii. Problemata* (Ms. de Leibniz).

Anatomica quaedam ex M.to Cartesii AT XI, pp. 549-621; B Op. II, 1104-1197; *Problemata* AT XI, 621-634; B OP. II, 1197-1219.

Première édition du texte latin avec une traduction française dans Foucher de Careil: vol. I. *Observationes Meteorologicae*, 72-100 (AT XI-621-634); *Physiologia* 100-155; Vol. II *Partes similes, et excrementa, et morbi* 66-85; *Anatomica quaedam* 86-134; *Observationum anatomicarum* 134-209.

Nouvelle édition dans René Descartes, *Écrits physiologiques et médicaux*, Présentation, textes, traduction, notes et annexes de Vincent Aucante, Paris, Presses Universitaires de France, 2000.

Dans cette édition la première partie, *La génération des animaux*, contient les fragments 1-44 de 1630-1632, 45-72 de 1637, 73-76 de 1648.

4. ———. 1629. *Remedia, et vires medicamentorum* (Ms. de Leibniz).

Première édition du texte latin avec une traduction française dans Foucher de Careil, vol. II, 210-213.

AT XI, pp. 641-644; B Op. II, 1216-1219.

Nouvelle édition dans René Descartes, *Écrits physiologiques et médicaux*, Présentation textes, traduction, notes et annexes de Vincent Aucante, Paris, Presses Universitaires de France, 2000.

Dans cette édition la deuxième partie, *Fragments de thérapeutique*, contient les fragments T1-T9 de 1628 (*Remèdes et forces des médicaments*) et T10-T14 de 1631.

5. ———. 1629; 1638-40. *Excerpta ex mss. R. Des-Cartes* (Ms de Leibniz).

Première édition dans R. Des-Cartes *Opuscula posthuma, physica & mathematica*, Amsterdam 1701, pp. 1-17 (publié à la fine du volume, avec une nouvelle numération).

AT X, pp. 285-324; B. Op. II, 994-1051; O III, pp. 532-562.

I. Polygonorum inscriptio 285 ; II. Horum Usus Trigonometricus 289 ; ni. Numeri Polygони 297 ; IV. De Partibus Aliquotis Numerorum 300 ; V. Radix Cubica Binomiorum 302 ; VI. Circuli Quadratio 304 ; VII. Tangens Cycloïdis 305 ; VIII. Tangens Quadratariae per Cycloïdem 307 ; IX. Aequationum Asymmetriae Remotio 308 ; X. Ouales Opticae Quatuor 310 ; XI. Earum Descriptio et Tactio 313-324.

"Le volume intitulé : R. Des-Cartes *Opuscula posthuma, physîca & mathematica* (Amstelodami, ex typographia P. & J. Blaeu, MDCCI), donne à la fin, avec une pagination spéciale (p. 1-17), une série de fragments mathématiques sous la rubrique : *Excerpta ex MSS. R. Des-Cartes.*" (AT X, p. 279).

Il s'agit de 12 fragments, la plupart écrits en 1638-1640; le plus étendu, sur les Ouales, a été écrit avant 1629.

6. ———. 1629-48. *Primae cogitationes circa generationem animalium. De saporibus.*

Première édition latine dans R. Des-Cartes *Opuscula posthuma, physîca & mathematica*, Amsterdam 1701, pp. 1-23.

AT XI, pp. 505-538; 539-542; B Op. II, 936-983; 984-987.

Nouvelle édition dans René Descartes, *Écrits physiologiques et médicaux*, Présentation, textes, traduction, notes et annexes de Vincent Aucante, Paris, Presses universitaires de France, 2000.

Voir aussi: Annie Bitbol-Hespériès, "Sur quelques *errata* dans les textes biomédicaux latins de Descartes, AT XI", *Bulletin cartésien XLIV* 2013, *Archives de Philosophie*, 2015/1 Tome 78, pp. 45-55: "En préparant l'édition des textes médicaux de Descartes, à paraître dans le volume II des *Œuvres complètes* de Descartes chez Gallimard (coll. Tel), dirigées par Jean Marie Beyssade et Denis Kambouchner, j'ai été conduite à proposer la correction de quelques coquilles figurant dans les éditions des textes latins des *Primae cogitationes circa generationem animalium* et des *Excerpta anatomica* et reprises dans les traductions. " (p. 45).

7. ———. 1629 (octobre) - 1633. *Le Monde, ou Traité de la lumière.*

AT XI, 3-118; B OP. II, 214-359.

Premières publications :

1) *Le Monde de Mr. Descartes ou le Traité de la Lumière, et des autres principaux objets des Sens. Avec un Discours du Mouvement local, et un autre des Fièvres composez selon les principes du même Auteur*, Paris: Jacques Le Gras, 1664 (le texte est basé sur un copie de l'original, les deux Discours placés à la suite ne sont pas de Descartes).

2) Clerselier 1677, pp. 405-511.

Édition critique : *Le Monde, l'Homme*, Introduction de Annie Bitbol-Hespériès; textes établis et annotés par Annie Bitbol-Hespériès et Jean-Pierre Verdet, Paris: Seuil, 1996.

Titres de chapitres introduits par Clerselier dans son édition du *Traité du monde* : I. De la différence qui est entre nos sentiments et les choses qui les produisent ; II. En quoi consiste la chaleur et la lumière du feu ; III. De la dureté et de la liquidité ; IV. Du vide, et d'où vient que nos sens n'aperçoivent pas certains corps ; V. Du nombre des éléments, et de leurs qualités ; VI. Description d'un nouveau monde, et des qualités de la matière dont il est composé ; VII. Des lois de la nature de ce nouveau monde ; VIII. De la formation du soleil et des étoiles de ce nouveau monde ; IX. De l'origine et du cours des planètes et des comètes en général, et en particulier des comètes ; X. Des planètes en général, et en particulier de la terre et de la lune ; XI. De la pesanteur ; XII. Du flux et du reflux de la mer ; XIII. De la lumière ; XIV. Des propriétés de la lumière ; XV. Que la face du ciel de ce nouveau monde doit paraître à ses habitants toute semblable à celle du nôtre ; XVI-XVII [Ces Chapitres n'ont pas été retrouvés] ; Pour le XVIII Chapitre, voir *L'Homme*.

"Le plan du *Monde* décrit dans le *Discours*

La cinquième partie du *Discours* est consacrée, à un résumé du *Monde*, à la faveur duquel Descartes brosse à larges traits les principaux chapitres et le mouvement général de ce livre où il comptait déposer ses connaissances en physique. De manière

schématique, voici la table des matières reconstituée de ce *Monde* qui n'a jamais vu le jour, sinon plus tard dans les *Principes*.

1. Description de la matière.
2. Les lois de la nature.
3. Description des différentes combinaisons possibles de cette matière originelle selon les lois dégagées au deuxième paragraphe, ce qui donne les différents éléments : cieux, terre, planètes, comètes, soleil, étoiles fixes, lumière, etc.
4. Description du monde visible, en général de tous les phénomènes qui sont au-dessus de la terre (mouvements et qualités des Cieux).
5. Description des phénomènes terrestres : pesanteur, flux et reflux des océans, origine des mers, montagnes, etc., métaux, plantes, sable, feu, verre — métamorphose apparente des éléments.
6. Les êtres animés : les animaux, l'homme, ses fonctions, son anatomie. (*)
7. La conclusion est centrée sur l'immortalité de l'âme humaine que Descartes établit par la différence entre l'homme et l'animal-machine.

Ce plan est guidé par un mouvement ascendant qui, trouvant son origine dans la matière inanimée, s'achève par révocation de l'immortalité de l'âme. L'esprit reconstruit probablement l'univers, en partant de l'évidence fournie par le spectacle de la matière elle-même régie par les lois de la mécanique, et achève son chemin en affirmant sa différence, c'est-à-dire son immortalité.

Une étroite correspondance peut être établie entre cette organisation et celle des *Principes* : à la deuxième partie des *Principes* (« Des principes des choses matérielles ») correspondent les chapitres que nous avons numérotés 1, 2 et 3; à la troisième partie (« Du monde visible ») le chapitre 4; et à la quatrième partie (« De la terre ») le chapitre 5. Les racines

métaphysiques de la première partie des *Principes* sont dispersées dans les quatre premières parties du *Discours*, à condition d'en retirer la morale par provision et les textes biographiques qui expliquent leur genèse."

* A ce moment du développement s'intercale l'explication détaillée de la circulation du sang.

Pierre-Alan Cahné, *Un autre Descartes. Le philosophe et son langage*, Paris: Vrin, 1980, pp. 257-258.

Le Monde est commencé en octobre 1629 : "Je ne laisse pas de vous en avoir très grande obligation, et encore plus de l'offre que vous me faites de faire imprimer ce petit traité que j'ai dessein d'écrire; mais je vous dirai qu'il ne sera pas prêt de plus d'un an. Car depuis le temps que je vous avais écrit il y a un mois, je n'ai rien fait du tout qu'en tracer l'argument, et au lieu d'expliquer un phénomène seulement, je me suis résolu d'expliquer tous les phénomènes de la nature, c'est-à-dire toute la physique. Et le dessein que j'ai me contente plus qu'aucun autre que j'aie jamais eu, car je pense avoir trouvé un moyen pour exposer toutes mes pensées en sorte qu'elles satisferont à quelques-uns et que les autres n'auront pas occasion d'y contredire." (lettre à Mersenne du 13 novembre 1629, AT I 70; O VIII 1, 33; B 23).

Le 22 juillet 1633 "Mon traité (9) est presque achevé, mais il me reste encore à le corriger et à le décrire (10) ; et parce qu'il ne m'y faut plus rien chercher de nouveau, j'ai tant de peine à travailler, que si je ne vous avais promis, il y a plus de trois ans, de vous l'envoyer dans la fin de cette année (11), je ne crois pas que j'en pusse de longtemps venir à bout ; mais je veux tâcher de tenir ma promesse (12)." (lettre à Mersenne, AT I, 268; O VIII 1, 107; B 59).

(9) *Le Monde*.

(10) Comprendre : à *le transcrire* (ou bien, comme le suggère AM, lire *récrire* ?).

(11) Voir à Mersenne, 15 avril 1630 (AT I, 137 l. 16-17; [O VIII 1, 67] B 30) et novembre 1630 (AT I, 179 l. 12-13; [O VIII 1, 83] B

36).

(12) Une lettre de Golius à Huygens (1er novembre 1632, *Brwg*, [De Briefwisseling van Constantijn Huygens, (1608-1687), 6 voll., 's-Gravenhage, Martinus Nijhoff, 1911-1917] t. 1, 375) indique que Descartes en est à rédiger la philosophie de l'âme humaine, qu'il fait remonter à Dieu ; Descartes, dit-il, s'est retiré à Deventer pour rédiger en paix. Dans le *Discours*, celui-ci indique : « J'avais décrit, après cela, l'âme raisonnable et fait voir qu'elle ne peut aucunement être tirée de la puissance de la matière, ainsi que les autres choses, mais qu'elle doit expressément être créée », et il poursuit : « Il y a maintenant trois ans que j'étais parvenu à la fin du traité qui contient toutes ces choses » (AT VI, 59-60 [O III, 430 et 471]).

"... je ne vous promets pas de mettre ici des démonstrations exactes de toutes les choses que je dirai, ce sera assez que je vous ouvre le chemin par lequel vous les pourrez trouver de vous-même, quand vous prendrez la peine de les chercher. (...) Et pour faire ici un tableau qui vous agrée, il est besoin que j'y emploie de l'ombre aussi bien que des couleurs claires. Si bien que je me contenterai de poursuivre la description que j'ai commencée, comme n'ayant autre dessein que de vous raconter une fable." (AT XI, 48).

Dans le *Discours de la méthode*, en se référant au *Monde*: " ... pour ombrager un peu toutes ces choses, et pouvoir dire plus librement ce que j'en jugeais, sans être obligé de suivre ni de réfuter les opinions qui sont reçues entre les doctes, je me résolu de laisser tout ce monde ici à leurs disputes, et de parler seulement de ce qui arriverait dans un nouveau, si Dieu créait maintenant quelque part, dans les espaces imaginaires, assez de matière pour le composer, et qu'il agitât diversement et sans ordre les diverses parties de cette matière, en sorte qu'il en composât un chaos aussi confus que les poètes en puissent feindre, et que, par après, il ne fît autre chose que prêter son concours ordinaire à la nature, et la laisser agir suivant les lois qu'il a établies » (AT VI, 43).

Dans la lettre à Mersenne du 15 avril 1630, après avoir exposé sa théorie de la création des vérités éternelles, Descartes écrit:

"J'espère écrire ceci, même avant qu'il soit 15 jours, dans ma *Physique*;" (AT I, 146; O VIII 1, 73; B 30); on trouve un écho de ces pensées à la fin du chapitre VI et dans le chapitre VII: "Si j'y mettais la moindre chose qui fût obscure, il se pourrait faire que parmi cette obscurité il y aurait quelque répugnance (**) cachée dont je ne me serais pas aperçu, et ainsi que, sans y penser, je supposerais une chose impossible; au lieu que, pouvant distinctement imaginer tout ce que j'y mets, il est certain qu'encore qu'il n'y eût rien de tel dans l'ancien monde, Dieu le peut toutefois créer dans un nouveau, car il est certain qu'il peut créer toutes les choses que nous pouvons imaginer.

(...)

Et il est facile à croire que Dieu, qui comme chacun doit savoir est immuable, agit toujours de même façon. Mais, sans m'engager plus avant dans ces considérations métaphysiques, je mettrai ici deux ou trois des principales règles suivant lesquelles il faut penser que Dieu fait agir la nature de ce nouveau monde et qui suffiront, comme je crois, pour faire connaître toutes les autres." (AT XII, 36-38).

(**) *Au XVIIe siècle, répugnance signifie déjà dégoût, mais aussi contrariété, opposition et contradiction, et c'est le sens qu'il faut ici retenir.* (Note de A. Bitbol-Hespériès, *Le Monde, l'Homme*, cit., p. 24).

Le Chapitre VII donne la définition de Nature : "Sachez donc, premièrement, que par la Nature je n'entends point ici quelque Déesse, ou quelque autre sorte de puissance imaginaire, mais que je me sers de ce mot pour signifier la Matière même en tant que je la considère avec toutes les qualités que je lui ai attribuées comprises toutes ensemble, et sous cette condition que Dieu continue de la conserver en la même façon qu'il l'a créée. Car de cela seul qu'il continue ainsi de la conserver, il suit de nécessité qu'il doit y avoir plusieurs changements en ses parties, lesquels ne pouvant, ce me semble, être proprement attribués à l'action de Dieu, parce qu'elle ne change point, je les attribue à la Nature ; et les règles suivant lesquelles se font ces changements, je les nomme les lois de la Nature." (AT XI, 36-37).

La "fable" du *Monde*.

C'est dans la lettre à Mersenne du 25 novembre 1630 que Descartes use pour la première fois cette expression : "Et je ne pense pas après ceci me résoudre jamais plus de faire rien imprimer, au moins moi vivant : car la fable de mon *Monde* (10) me plaît trop pour manquer à la parachever". (AT I, 179; O VIII 1, 83; B 36).

(10 Voir à Mersenne, 13 novembre 1629 (AT I, 70; [O VIII 1, 33] B 23).

Au terme du chapitre V et au débout du Chapitre VI Descartes écrit : "Il me reste ici encore beaucoup d'autres choses à expliquer, et je serais même bien aise d'y ajouter quelques raisons pour rendre mes opinions plus vraisemblables. Mais afin que la longueur de ce discours vous soit moins ennuyeuse, j'en veux envelopper une partie dans l'invention d'une fable, au travers de laquelle j'espère que la vérité ne laissera de paraître suffisamment, et qu'elle ne sera pas moins agréable à voir que si je l'exposais toute nue.

Chapitre VI

Permettez donc pour un peu de temps à votre pensée de sortir hors de ce monde pour en venir voir un autre tout nouveau que je ferai naître en sa présence dans les espaces imaginaires (*). Les Philosophes nous disent que ces espaces sont infinis, et ils doivent bien en être crus puisque ce sont eux-mêmes qui les ont faits. Mais afin que cette infinité ne nous empêche et ne nous embarrasse point, ne tâchons pas d'aller jusqu'au bout ; entrons-y seulement si avant que nous puissions perdre de vue toutes les créatures que Dieu fit il y a cinq ou six mille ans, et après nous être arrêtés là en quelque lieu déterminé, supposons que Dieu crée de nouveau tout autour de nous tant de matière que, de quelque côté que notre imagination se puisse étendre, elle n'y aperçoive plus aucun lieu qui soit vide." (AT XI, 31-32).

(*) ...*espaces imaginaires*... "dans la philosophie scolastique, où le monde est considéré comme fini, les espaces fictifs que l'imagination seule conçoit au-delà des limites du monde et de l'espace réels. Cf. *Index scolastico-cartésien*, pp. 96-97."
